Mr. NOSEWORTHY: I did not make the definite statement that it happened. I made the statement that I have been told that this sort of thing is going on. I have no means of investigating it. The minister has every chance of investigating these things. I am asking the minister what check his department has on the giving of subcontracts. I think if he investigates he will find that numbers of subcontracts are let more than once, and that in many cases it is not the man who first receives the subcontract who finally produces the goods.

Mr. HOWE: I deny that absolutely. If my hon. friend can give me one example of a subcontract being sublet twice or three times, or any other number of times—I will not insist upon seven times—I will apologize to him on the floor of the house.

Mr. NOSEWORTHY: I have to accept the minister's statement and assume that he has sufficient checks to see that this does not happen. I shall see if I can get definite information and give the minister examples as to where I have been informed this has happened.

Another question I should like to ask the minister pertains to a matter which came to my attention in Saint John, with regard to shipbuilding. When I was there in October shipbuilders employed in the harbour brought to my attention the fact that a superintendent, I think brought down from the Toronto Shipbuilding company, ordered practically all the carpenters working on that ship to set about building a superstructure over the deck, notwithstanding the fact that practically all the deck work has been done, and the further fact that these men were accustomed to build ships during the fall and winter months without the protection of any deck structure. My information, gathered at that time, was that practically all the carpenters were taken off the ship and put to work building this structure; that trusses were erected over the deck of the ship; that the legs of those trusses were set in sockets made of steel and welded to the deck of the ship. It was estimated by carpenters employed on that boat that about forty thousand feet of lumber was used in the construction of that structure. Panels were made of matched lumber, much of it long lengths of Douglas fir, matched spruce, four by four timbers and so on. About a month later I learned that practically all the carpenters working on the ships at that point were called in to rush this structure to completion, and that within a matter of days after it was finished the same men were called in to dismantle it because the ship was required to make a trial run, and could not make it with that structure superimposed upon the deck. It was a matter of considerable criticism among carpenters and shipbuilders there, and I think the minister should give us some information on the subject.

There is another matter to which I wish to direct the attention of the minister. Here again I do not want him to consider that I am making a charge against his department. I am passing on to him information that has been given to me.

Mr. HOWE: Is my hon. friend prepared to take the responsibility for the information he is giving? If he is not prepared to take that responsibility, then I suggest he should not give it. My hon. friend is simply spreading gossip as fact.

Mr. DOUGLAS (Weyburn): Has the minister started to make a new set of rules for this house?

Mr. HOWE: No.

Mr. DOUGLAS (Weyburn): Any hon. member can bring any matter before the minister and ask him to look into it.

Some hon. MEMBERS: Sit down.

Mr. DOUGLAS (Weyburn): I will not sit down.

Mr. HOWE: I have the floor.

Mr. DOUGLAS (Weyburn): While I am on my feet might I suggest that the minister might start addressing the Chair instead of saying "you" across the floor of the chamber.

The CHAIRMAN: The minister addressed the Chair when he rose.

Mr. HOWE: I suggest, Mr. Chairman, that my hon. friend is drawing upon all the gossip he has picked up around the country, and is giving it in this house as facts. When an hon. member makes a statement in the house I think he must assume responsibility for it. My hon. friend made the statement here to-day that contracts are passed through six or seven hands before the work is performed. That is a very serious statement. If it were true, my department would deserve from the people of Canada the greatest censure that could be imagined. It is not true; it is wholly untrue, but the hon. member makes the statement. Now he proposes to make another statement. He does not know whether or not it is true; it is just something people have told him. Is this the place to retail irresponsible gossip?

Mr. NOSEWORTHY: The minister knows very well that hon. members have the greatest difficulty in getting accurate information. Rumours can be heard all across this country; I am sure every hon. member must have heard, from men working in various plants, of the things that are going on. These men are under oath not to pass on that information to anyone.

Mr. HOWE: Let me settle that point. So far as I know there is no man in any plant in this country who is under oath, unless he is handling very confidential work. Let us not talk about the ordinary worker in the plant being under oath.

Mr. NOSEWORTHY: Then let me get back to the question. The minister objects to my asking for information on facts that have been laid before me.

Mr. HOWE: You ask the questions and let me give you the facts. You are giving the facts.

Mr. NOSEWORTHY: On Thursday last the hon. member for Lake Centre referred to the situation at the Sutton Horsley plant at Leaside. The minister may have answered the question which was asked, but following the question there was quite a melee, and though I looked through *Hansard* I could not find any answer or explanation by the minister in regard to the situation prevailing there. To-day I have a letter from the president and secretary of lodge 1673 of the International Association of Machinists, which operates in that plant, and they tell me—

Mr. HOWE: Read the letter and then lay it on the table.

Mr. NOSEWORTHY: I am quite prepared to read this letter.

Mr. HOWE: Never mind explaining it.

Mr. NOSEWORTHY: It is written on behalf of the employees and reads:

> We, the employees of Sutton Horsley Limited, Leaside, Ontario, members of Local 1673 of the International Association of Machinists, strongly protest the chaotic condition existing in our plant which is engaged in a vital war industry of manufacturing aircraft instruments, the most important plant of its kind in Canada.
>
> In March, 1943, R. J. Pinchin was appointed by order in council as controller of above company, as we understood, to build this company up. During his controllership things have gone from bad to worse to the extent that out of approximately 1,200 employees we now have less than 400, with layoffs continuing from day to day and rumours that the plant will close down in about six weeks.
>
> It is needless to emphasize the moral effect this has upon the workers in the plant and their families whose sons, husbands and brothers are fighting for the Four Freedoms. This condition is inconsistent with a total war effort and also shows the complete lack of preparation towards a post-war plan of work and security.

This letter is signed by the president and the secretary of the union. I do not know these men, but I draw the matter to the minister's attention, and ask if he will make a statement as to prevailing conditions in that plant.

Mr. CRERAR: Who signed the letter?

Mr. NOSEWORTHY: Do the rules of the committee require that that be given?

Mr. HOWE: Oh, yes.

Mr. CRERAR: They certainly do.

Mr. HOWE: My hon. friend has read the letter. Of course he will table it; that is always done. He need not worry about it, because I got a letter, too. I could table that, as well.

Mr. COLDWELL: I do not think the rules of the house require it; although I believe there is no objection to tabling the letter. I believe the hon. member will do it, voluntarily.

Mr. HOWE: If my hon. friend will read *Hansard* he will find I made a statement a few days ago respecting the situation at that plant. The fact of the matter is that the plant is making instruments for trainer aircraft. The production of trainer aircraft has dropped very sharply and quickly. The result is that fewer instruments are required, and therefore Sutton Horsley is called upon to make fewer instruments. The fact of the controller's being appointed has not much to do with the volume of work. The purpose in having the controller was to straighten out

an unsatisfactory financial condition. That has been done, and Sutton Horsley are doing all the work we have for them to do, and will continue to do so.

Mr. NOSEWORTHY: Will the minister make a statement respecting the other points mentioned?

Mr. CHEVRIER: I can answer the hon. member's first question, namely as to the checks or controls we had over cost-plus contracts. Last year I made a statement in the house respecting the nature of contracts, and the whole purchasing method in the Department of Munitions and Supply. If the hon. member will turn to page 3646 of *Hansard* he will find what those checks are. To speak succinctly, they are three in number, the first of which is the cost accountant, the next the representative of the Department of Munitions and Supply, and the third is the director-general of the programme. Those three officers exercise checks over cost-plus contracts.

The cost accountant is, of course, an officer of the treasury branch, and works hand in hand with our officers. They are found in all our plants across the country. There are hundreds of such cost accountants, in the plants. That officer works in conformity with a strict formula which I placed on *Hansard* on the occasion to which I have referred, giving those things which can be charged as items of cost, and those which could not be so charged. Then I believe the war expenditures committee made a finding that there were not nearly enough cost accountants, and every effort was being made to obtain as many as could be found.

Then, in each plant there is a representative of the Department of Munitions and Supply. Those representatives are officers of our department who worked in conjunction with the cost accountants. Finally, there were the directors-general of each of the programmes in the department.

Those three officers exercised a check or control over cost-plus contracts. Then the hon. member asked a question regarding subcontracts, but I am not in a position to give him the details he sought. He will find that at the last session of parliament the house gave the Department of Munitions and Supply certain powers over subcontracts. That was done under the Department of Munitions and Supply Act. I believe there he will find set out a number of the powers possessed by the department with reference to subcontracts.

Mr. NOSEWORTHY: I have never questioned the fact that there are a number of cost accountants to inspect the contracts. But has the government in those plants engineers who are competent to know whether too many machines or too many tools are being used, or whether too much time has been charged against a government job? Are there any engineers who know what should go into a construction job?

Mr. CHEVRIER: Yes; in almost all plants across Canada there is a resident representative from the Department of Munitions and Supply, and he remains in the plant.

Mr. FURNISS: Since the hon. member for York South has been making statements which have been questioned, I should like to take a few minutes of the time of the committee to correct a statement he made in the house on Thursday afternoon of last week. The statement to which I refer is found at page 1785 of *Hansard* for March 23, where the disposition of the plant at Nobel, Ontario, is being discussed. After the hon. member had described the plant at some length he said this, respecting the industry at Nobel.

> The industry is the only industry between Orillia and Sudbury, a distance of from 175 to 180 miles, the only one from Georgian bay to Pembroke, a strategic position for a peace-time industry.

I understand the hon. member for York South is a schoolteacher, and if he did not know from his knowledge of geography that that was a misstatement, then he should have known from his knowledge of the district. He must know that within the area he mentioned lies practically the whole of the district of Muskoka, and he must know, too, that there are three good-sized towns in that area, namely Gravenhurst, Bracebridge and Huntsville, each of which has industries.

Had the hon. member taken the time or the trouble to find out whether or not there were any industries in that district, he would have found that in the town of Huntsville there is a large tannery operated by the Anglo-Canadian Leather company, the largest producer of sole leather in the British empire. He would have found out further, that in that town there is a large mill and factory operated by the Muskoka Woods company, which claims to be the largest manufacturer of birch and maple hardwood flooring in Canada.

Coming south to the town of Bracebridge, he would have found, among other industries too numerous to mention, the Bird Woollen company, the quality of whose products has a nationwide reputation. Coming down to Gravenhurst, he would have found the Rubberset company, whose products are marketed throughout Canada and part of the United States. In addition to these, it might be of interest for him to know that the boatbuilders

in Muskoka, at Bracebridge, Gravenhurst, Port Carling and Honey Harbour have completed nineteen Fairmiles for the British and Canadian navies. The Fairmile is 112 feet long with a beam of eighteen feet and a top speed of twenty-five miles an hour. It is a splendid craft. In addition to that they have contracts for two mine-sweepers of much larger dimensions. Besides these craft they have completed some 600 smaller craft, including motor-boats, live-saving boats and other types. That is not a bad showing for a district represented by the hon. member as having no industries whatever. I think the statement he made is a reflection upon the enterprise of the people I have the honour to represent. I could not let it pass without comment and I know the people I represent would not want me to. I do not know what his intention was in making such a statement unless he intended to convey the idea that if the plant at Nobel was not put in operation again there would be no industry to absorb these people.

I have listened to hon. members criticizing the industries which have grown up during the last thirty-five years and I cannot help thinking what the course of the war would have been had those gentlemen been on this side of the house and in control of the government. What would have happened if they had dictated the war policy of this country? We know what their policy has been. I shall not go over it again since it has been placed on *Hansard* many times. At a time when Great Britain faced her greatest crisis; at a time when she was suffering for the cause of freedom to an extent never equalled by any other nation, we know they would have denied the people of Great Britain the consolation of knowing there was an air force, a navy and an army being prepared in this country with feverish haste to go to their assistance at the earliest possible moment. No one can say what the course of war might have been if the people of Great Britain had not known they had the support of the first nation in the British commonwealth of nations outside of Great Britain.

I wish to say a word on behalf of the Minister of Munitions and Supply. This is not my word alone; I am passing on the word that comes to me from everyone in my riding with whom I have talked. He is doing a first-class job. Those same words can be said of every member of the cabinet who has anything to do with the war. I have heard friends of mine who are strong Conservatives say that this government is doing a first-class job, and I agree with them. In place of criticizing things that have no bearing upon the course of the war, we should be ready to give more credit to the government for what they are doing.

Mr. NOSEWORTHY: In reply to the hon. member for Muskoka-Ontario may I say that I am sure the people of his constituency will appreciate the way he has come to the defence of his district. Perhaps I should have qualified my statement. When I referred to industry in that district I was referring to the plant at Nobel, which I contended should be retained as a peace-time industry. I have no doubt that the hon. member who has just spoken and all the people in his constituency will agree that there is a great need for a large peace-time industry in that district. I know of no part of Ontario that suffered more in the years before the war because of a lack of employment than the district represented by the hon. member.

Mr. COLDWELL: I should like to ask the minister a question. This is not intended as criticism but is merely a means of getting information which I think will be interesting to all members of the house. This question may have been asked previously, although I did not hear it when I was in the house, nor could I find it in *Hansard*. What is the present position of the Canol project? Is it to be completed? There has been a good deal of discussion about this and I have not heard a definite statement as to just what is the present situation.

Mr. HOWE: I do not know whether I can give my hon. friend the information he requires. The Canol project is a United States project. The only part Canada has in it is that we allow the use of certain of our territory for exploration purposes, and have permitted the United States government to build a pipeline and refinery on Canadian territory. As far as I know the work is in progress.

Mr. COLDWELL: Have we any interest in the ultimate disposition of the project if it is to be completed? If it is completed it seems to me that it will have some bearing upon the matters we are discussing, because it would affect the supply of oil and so on.

Mr. HOWE: The regulations have been tabled and I do not think there is anything new to report. It does not come within the orbit of my department.

Mr. COLDWELL: Has it been completed?

Mr. HOWE: I think the pipeline has been completed and the refinery is in operation. I do not know that the project itself can ever be completed, but I presume that it is being enlarged.

Mr. COLDWELL: Has it been completed up to the point it was intended to complete it?

Mr. GRAYDON: We had better let the hon. member for Yukon answer since he knows all about it.

Mr. BLACK (Yukon): The government has already announced the terms upon which the Canol project is being carried on. I understand that at a certain time after the war representatives of Canada and the United States will value the project. If Canada does not choose to buy it within a certain time, then it will be sold by public tender. The pipeline is only a four-inch line. I understand that it is completed and that the refinery is in a fair way to get into operation in May. Further than that I cannot say anything.

Mr. CRERAR: Perhaps I could add a word to that. There was an exchange of notes between Canada and the United States covering the development. Then regulations were issued in connection with certain areas and were tabled in the house at the last session. Those regulations set out the conditions under which Imperial Oil are operating. The arrangements that Imperial Oil have with the United States war department are, of course, a matter between that company and the war department of the United States.

Mr. COLDWELL: This is in Canadian territory and surely we should be able to get some information about a project of this dimension. Just what is the situation? Has the project been successful in finding sufficient oil to justify the operation of a refinery? Are we interested in the project, as is indicated by the documents tabled at the last session? I ask these questions innocently because I wish to be able to satisfy requests for information which I receive from people who are interested in this particular project.

Mr. CRERAR: I think my hon. friend will recognize just as quickly as anyone in the house that the United States war department are interested through arrangements made with Imperial Oil in a development that was undertaken for the purpose of ensuring a certain oil supply for defence purposes in the northwestern part of Canada and of Alaska. That was undertaken at a time when the Japanese menace looked a great deal more threatening than it is to-day. I do not know how far the government are at liberty to disclose arrangements which involve the government of the United States through its war department. The regulations, which after all are the important thing so far as this country is concerned, were tabled; that is, the conditions under which Imperial Oil undertook the developments. So far as the pipeline is concerned, I believe that it is completed, but I am not in a position to say at the moment whether oil is going from Norman wells to the refinery at White Horse because I have not at the moment information on that particular point. But the whole matter was one which was entered into between the government of Canada and the government of the United States, and if my memory is right, the understanding which was covered by the exchange of notes has already been given to the house. However, my memory on this point may be at fault. If the exchange of notes has not been tabled, there is a very good reason, because the Canadian government would have to have an agreement with the government of the United States on a matter of that kind.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. GILLIS: The remarks I have to make I would prefer to make when the minister is present.

Mr. HOWE: I am always present.

Mr. GILLIS: This afternoon, on the orders of the day, I endeavoured to get from the minister an answer as briefly and as explicitly as possible with regard to this question of closing plants in the maritime provinces. The Minister of Labour (Mr. Mitchell) answered most of that question, but I was not quite satisfied with the replies he gave. As the minister is well aware, there is considerable reason for unrest and apprehension in the maritime provinces with respect to the closing of plants. Not very much industry has been created in those three provinces as a result of the war, and there was very little there prior to the outbreak of the war. During the session of the house, from different sections of the maritime provinces, telegrams of protest and inquiries are being sent in.

The question I attempted to raise this afternoon had reference to the closing down of the Clark Ruse aircraft plant both in Nova Scotia and in New Brunswick. The Minister of Labour, in his reply, ridiculed, in my opinion, those who were sending in the telegrams of protest and tried to make it appear that one man sent in the telegrams and that there was no one in the organization he represented who held the views he expressed in that telegram. I

believe the hon. member for York West asked a question on Friday and read a telegram into the records.

Mr. GRAYDON: No. He did not read a telegram into the record; he just referred to it.

Mr. GILLIS: He summarized it. I did not base my question this afternoon on that particular telegram. The fact is, that I sent that telegram across the floor of the house to the Minister of Labour and asked him if he would check it up and determine whether there was merit in the proposals which it contained with respect to the procedure of lay-off. In addition to that telegram, I had a shower of other messages over the week-end from men, some of whom I know personally and for whom I have a good deal of respect, and the telegrams I received from Moncton and from the province of Nova Scotia were not quarrelling with the administration of the selective service regulations.

We know, and the senders of the telegrams know, that under the selective service regulations a certain definite road must be followed with respect to lay-offs, but the inquiries and the protests I received were as to the future of these plants in Nova Scotia, and as to whether the government had a policy with regard to the utilization of the Clark Ruse aircraft plants in Nova Scotia and New Brunswick. That, I submit, is a question to which the Minister of Munitions and Supply should give an answer to the members of this house.

The Minister of Labour, in his remarks this afternoon, breezily brushed to one side the question of men being laid off, with the observation that a large percentage of them were going into the armed services and would be immediately called up as they were laid off. That I think is a bad answer and a bad attitude to take. If the only redress that the government has to offer men who are being displaced in industry in the maritime provinces, because of the closing down of these industries, is the answer, "Oh, well; immediately you are put out of a job in those provinces we will call you up to the armed services and give you the privilege of going overseas and fighting for the country," it is not a solution. It is a callous way of putting the thing, and one which I think was ill-advised on the part of the Minister of Labour.

What we are concerned to know is whether, after the crown has created these plants at considerable expense to the taxpayers, it is not possible now to utilize both the plant in Moncton and the plant in Dartmouth, Nova Scotia, for other purposes. I feel that all the members from Nova Scotia, New Brunswick, and Prince Edward Island, have, on this particular question, a definite responsibility to those provinces.

These plants were built up, as the minister pointed out, for the purpose of aircraft repairs, and a few days ago he made a statement in the house to the effect that Canada expects to play a definite and important part in civil aviation after the war is over. If that is true, then both the Dartmouth plant and the Moncton plant are strategically located. There are large aerodromes which no doubt will be used in that civil aviation project, and these repair plants would, I think, fit quite definitely into a scheme of servicing aircraft after the war.

Practically every newspaper that one has picked up in the last four or five months has carried a story about the closing down of something in the way of industry in the maritime provinces. During the last session of the house we heard of shipbuilding plants that had been built up—Ferguson Brothers, for example, where there were partly completed boats, with sufficient material to complete them, and overnight the order was cancelled. Partly completed tugs were put on board the train and shipped to Montreal to be completed, and the materials were taken away. Next we hear of the Trenton shell plant. That is down and twelve hundred or thirteen hundred men are thrown out of employment. There is a good deal of the taxpayer's money in that plant. It is just another shut-down.

Telegrams now tell us that aircraft plants are being closed down, and picking up another press clipping of March 22 we find that they are laying off the entire female personnel of Enamel and Heating Products Limited of Sackville, New Brunswick. The whole story all along the line, as far as the industrial set-up in the maritime provinces is concerned, is a matter of going out of production and laying off people, leaving them idle, and no one apparently has plans for the utilization of these plants or of the equipment, or for seeing whether they can be used in the future. It is just a matter of closing them out.

The minister this afternoon made a statement with respect to the fuel policy and definitely stated that certain subsidies are to be established in the west and that a royal commission is to be appointed for the purpose of examining the whole fuel situation of western Canada with the end in view of establishing a peace-time fuel policy in the western provinces. When the hon. member for York-Sunbury asked him whether the Minto field and the fields of eastern Canada

were to be included in this royal commission's probe, with a view to developing a fuel policy for the future, I at least understood the minister to say that the eastern end of the country was not to be included in the investigation.

Mr. HOWE: No. I announced a subsidy policy for western Canada, and I said that consideration had been given to revision of subsidies for the Minto field and that I expected to make a statement on that subject within a day or two. I said that the subsidy situation in Nova Scotia is being studied. As a matter of fact, we have called in experts to make a report on the Nova Scotia situation. I said definitely that the royal commission is for all Canada, to review the coal policy for all Canada and recommend such changes as the situation may call for.

Mr. GILLIS: I beg the minister's pardon. I understood that in replying to the hon. member for York-Sunbury he was referring to the terms of reference of the royal commission to be appointed. I am very glad indeed that the minister has decided to have a complete examination made of the whole fuel situation by a royal commission with a view to recommending a national fuel policy that will be carried into the post-war period. This is a step in the right direction, and I compliment the minister upon taking it.

What I particularly rose to question the minister about to-night was the pulling out of established industries in Nova Scotia. I should like to hear from the minister whether the government has any policy with regard to using the shell plant at Trenton, if not for the production of shells, for any other purpose for which the plant can be used.

I would also like to know what is to be the future of the two aircraft plants at Dartmouth, Nova Scotia, and Lakeburn, New Brunswick. I think the people of the maritime province are entitled to an answer. If these plants are to be closed, the people have a right to know it, so that they can make other arrangements. If they are not to be closed but can be retooled and used for some other purpose, the people who are dependent on these plants as a means of livelihood have a right to know it.

I see the Minister of Labour is here. I made a few remarks in his absence, and so that there may be no misunderstanding I should like him to hear exactly what I had to say. I think the Minister of Labour in his reply to a question this afternoon was not very happy in his answer. I consider that his answer was breezy, ill-advised and ill-considered.

Mr. GREEN: But otherwise all right?

Mr. GILLIS: I refer to this statement with respect to these plants being virtually closed and some three hundred men being laid off at both of them, that selective service was handling the problem as prescribed by the regulations—with that I do not quarrel—and that there was not much to worry about because a large percentage of these men, immediately after losing their employment in the aircraft plants, would be called up for military service. That is the part of his answer with which I quarrel. It was an unhappy remark. It does not induce a very good frame of mind in a man entering the armed service.

Mr. MITCHELL: My hon. friend does not object to a man defending his country, does he?

Mr. GILLIS: I certainly do not, and I do not think anybody would understand me as saying that. The impression of the minister's statement on my mind and on that of the average man—

Mr. GRANT: Oh, no.

Mr. GILLIS: Well, then, say below the average. If I were employed in one of these Clark Ruse plants—and remember I know many of these men who, during the days between the two wars never had a job at all—this is how I would feel. I would say to myself: "I have a family. I have accepted the obligations of doing what I could in the field of production"—a lot of these men were trained for that purpose. Overnight, orders come to close the plant and my job is gone. There is no other job for me to go to in that part of the country because industry which had started up there by virtue of the war has closed down. Now I am told to report to the selective service office. The selective service officer advises me to report for duty. I am not enlisting voluntarily. I am not being given an opportunity to decide for myself whether I am going to fight for my country. In effect I am being forced into the service by virtue of economic circumstances. I am leaving my country to go into military service because there is no job here for me, because a member of the government, who is responsible, makes the observation in the house when discussing this question that that is the solution of the problem caused by the closing down of plants in the maritime provinces.

That is not a very happy frame of mind with which to send a man into the armed services. Certainly it is not a solution of the problem of scrapping industries in a section of the country that is badly in need of stimulation for industry. Is that to be the attitude not only with respect to those now losing their employment, but with respect to post-war employment when the men return from overseas?

In order to clarify things and satisfy the people of the maritimes, who are viewing the situation very seriously, the Minister of Munitions and Supply should make a definite statement one way or the other, so that we may know what to expect in the future and on the basis of that may be able to regulate our lives. If it is the intention to siphon off everyone from that section of the country who is able to work, and bring them into the central provinces, we have a right to know it so that we can make arrangements to move our families and live somewhere else. The trend of events, as I have seen it in the past year at least in the maritime province, is to pull out all war industry that has been created there. There is no thought of expansion or development of that industry but rather the closing of it down. Would the minister make a statement on that question?

Mr. ISNOR: I too, like the hon. member for Cape Breton South, have received telegrams in connection with the closing of the Clark Ruse plant at Dartmouth, and so has my colleague the hon. member for Halifax (Mr. Macdonald). We were naturally concerned because the plant is in our constituency, just as we would be concerned by the closing of plants in any part of Nova Scotia, which would naturally receive our attention. We discussed the matter together, but we did not bring those telegrams here on Friday afternoon and place them before the minister on the orders of the day; we felt there was another procedure which perhaps would give us a better understanding of the situation. My colleague and I got in touch with officials of the Department of Munitions and Supply, who went rather fully into the background of the plant at Dartmouth, as to the purpose for which it was first brought into being. We were told that it was established for the purpose of overhauling and repairing aeroplanes of the type that were used on the Atlantic coast, and we were further informed that a change had been made in the kind of aeroplane used there. I need not give the names of the planes, but we were given that information, I considered in a confidential way, and that was the reason for the situation which then existed at that plant. The Royal Canadian Air Force notified the Department of Munitions and Supply of the change that was to be made in the type of planes to be used, and steps were taken immediately to cut down the number of men employed there because, as they stated frankly, they did not think the people of Canada would want three or four or five hundred men employed for a certain period of time unless there was actually work for them to do, particularly when these men could be placed in useful employment elsewhere.

That was the reason given us, but we were not entirely satisfied that we had the whole story, with due respect to those who gave us that information. Accordingly we went further. I personally took up the matter with the Minister of Labour, who said he could assure me that these men would be placed in other positions. More than that, he said they were immediately taking steps to send officials from the selective service office at Halifax to look after the placing of these men elsewhere. He said, "These men are not going to be thrown out of employment without notice. They have received seven days notice, and even if they have no work to do they will be paid for the seven days which that notice covers." In view of the fact that there was no work for these men, and that the department was endeavouring to find work for them elsewhere, we felt that this was a reasonable stand to take, but we pursued the question further. We went to the director of aircraft production, Mr. Bell, and inquired as to what action was taken to meet the layoff of these five hundred men, and as to whether the plant would be continued even on a temporary basis. We were told that the plant would be continued for a further period of three months with about 250 employees. Then naturally we wanted to know whether the plant could not be used for some other purpose, but he did not see how that could be done nor did the Department of Munitions and Supply. We suggested that it might be used in connection with the ship repair work being carried on in the port of Halifax, but they did not think that was feasible.

I wanted to explain this to you, Mr. Chairman, and to the other members of the committee, to indicate that more than one hon. member was interested in maintaining industries in the province of Nova Scotia, that others were equally interested but approached the subject in a little different manner. I am pleased to say that we have the assurance that the plant will be held as a stand-by. The equipment will be kept there, in case it might be of use at some future date for the work for which it was brought into being, namely, the repair and overhaul of certain types of aircraft; and I am still hopeful that use will be made of this plant. I am just as much concerned as any other hon. member that we should hold on to what industries we have in the maritimes, particularly plants in connection with aircraft and shipbuilding.

I do not wish to deal with the other two plants mentioned by the hon. member for Cape Breton South. He referred to the closing down of the plant at Trenton, and that matter has been brought to the attention of this committee on more than one occasion. It

is under investigation at the present time, and again I say I am hopeful that something may turn up as a result of which work will be continued there. The hon. member has also brought to the attention of this committee in almost the same words the situation prevailing at Pictou in connection with the plant of Ferguson Brothers. The Minister of Munitions and Supply gave a full explanation as to why it was necessary to cancel the contract there and carry on the work elsewhere, so that I do not think it is necessary to go into that question at the present time. I would point out that the same situation will prevail in other parts of Canada. Because of a change in the system of training, numbers of airfields in all parts of the country have been closed. We are bound to see the closing of plants, airfields and schools after we reach a certain stage in our war production and training, and all that has been explained. I do not think the people of Canada expect the minister or this government to carry on any plant in which men cannot be usefully employed, particularly if they can be employed somewhere else to help in our war effort. I do not wish to be unreasonable. I want everything it is possible to get for Nova Scotia, but I do not think the people of that province are going to ask me or any other hon. member from the maritimes to make unreasonable requests. They do expect us to make every effort to find out why a plant is being closed and, if possible, to have that plant continued in operation, even if only in the capacity of a stand-by plant. However, I ask the minister to bear in mind that at Eastern Passage he has what is considered a well-equipped plant, as well as a permanent airfield which no doubt will continue in operation following the war. I suggest to him that this plant might be utilized in connection with the T.C.A. or in some other worth-while peace-time effort.

Mr. HOWE: I should like to point out to my hon. friend, and to all hon. members, that the Clark Ruse plant is not closed. This plant was built to repair damaged aeroplanes. Obviously the work of such a plant must be in proportion to the number of damaged aircraft. At one time the plant was very busy; in fact the capacity has had to be enlarged from time to time. Owing to a change in operational requirements, however, recently the number of crashed aircraft has been considerably less. As a result, the personnel of the plant has been cut down to the actual work requirements. I understand the reduction in Halifax amounts to some 500 men, which leaves about 250 or 300 still employed. I understand there has been a small reduction at Moncton as well; just how large that has been, I do not know, but I do not think it is particularly important. My hon. friend claims that the employees in these plants are absolutely astonished that there should be any reduction. I think they are much more intelligent than he would lead us to believe. Surely people whose livelihood depends upon crashed aeroplanes must know that others are not going to crash aeroplanes in that locality at the rate they have been crashed, forever.

Mr. GILLIS: Were those plants not assembly plants?

Mr. HOWE: They were for a time, yes.

Mr. GILLIS: Yes, they were.

Mr. HOWE: In the early stages there were some planes being brought in from the old country and assembled there. But the main purpose of locating the plant there was to repair certain types of aircraft. That is the only purpose of the plant at this time. The equipment is laid out for certain types of aircraft. The plant carries stocks of spares for certain types of aircraft, and the job is to repair those aircraft. A very considerable part of the personnel was brought there from upper Canada for the reason that men with some training were required. Surely those who went from upper Canada to Halifax to repair damaged aircraft did not go there under the impression that they were going to make a profession of repairing damaged aircraft in that area. They went there to do a war job, and intended to come back to where they came from when the repairs to crashed aeroplanes were finished. Those are not plants suitable for any other work; in fact repair capacity may be needed again. Damage to aircraft may increase; we may have in that area operational requirements which will again make those plants necessary for the purpose for which they were built.

I assume that the Halifax plant, being adjacent to the Dartmouth airport, will probably always be used as an overhaul plant for aeroplanes. Obviously, under peace-time conditions the scale of operations will not be particularly high. I find it extraordinary that an obviously temporary war-time facility should, in the mind of anyone, be converted into a permanent industry, when no such industry of that size could possibly exist in peace time.

The hon. member mentioned the plant of Ferguson Brothers at Pictou. The situation there was that the plant was equipped for ship repairs, a badly needed facility along that coast. By a chain of circumstances, none of which was intended by the department, two tugs were moved into that plant for construction. The department thought they were to be

constructed in another location, but suddenly found that they turned up in the Ferguson yard. Those tugs, had they been built there, would have occupied badly needed facilities which had been created for a special purpose, a purpose having the highest priority. Might I say that the repair of ships has a far higher priority than the building of ships, because it is much more important to keep an existing ship at sea than to build a ship which could be put to sea only after a matter of months.

When it was found that the repair facilities were clogged up with a construction job, we moved the construction job out. Ferguson Brothers were very much disturbed about the situation at the time. But I shall be very glad to lay on the table a letter from Ferguson Brothers, written a year later, in which they said that they had been fully occupied with the repair work, since the tugs were moved out, and that they wished to say that I was right; that they were quite wrong, and that we were fully warranted in taking the tugs out to make way for repair work.

Mr. McIVOR: I have just a word to say. It is only human nature of a certain type that when an air centre or a training centre is shut down there is diappointment. If a war industry is closed, we are disappointed. But there is another type of human nature that is not disappointed. When our shell plant at Fort William was shut down, perhaps I was a little disappointed. But to-day that plant is sold, so that instead of making shells it is going to make foodstuffs. And where is the city in Canada that would not prefer to see the manufacture of foodstuffs rather than that of shells—because there are now enough shells.

Then No. 2 training centre which we had at the head of the lakes was one of the best in Canada, and I say that because of the number of times they took the pennant. Some of the folks there thought it should be about the last closed up, because of its efficiency. But when I spoke to the Minister of National Defence for Air he asked me, "Do you know the reason why it was closed down?" I said I thought I did, but asked, "What is it?" "Because there were not enough casualties in the air." I say to the Minister of Munitions and Supply, notwithstanding any criticism the hon. member for Davenport may level at me, that we thank God that the airmen have been spared so that our training centres can be shut down. It is only a certain type of individual who will find fault with that sort of thing. I am glad that our schools are being closed, because we do not need any more aircrew, and we are going to win the war with practically what we have now. Before we criticize the men in our war cabinet, we should know more than present expressions would seem to show.

Mr. JOHNSTON (Bow River): I wish to say a few words with regard to a very serious condition in the west. I refer to the coal situation. I was pleased to hear the minister say to-night that he was causing to be set up a royal commission which would investigate the whole coal problem from the eastern to the western coast. I may say it was my understanding this afternoon that the royal commission was only going to investigate the coal condition in the west. I am glad, however, that the minister has now corrected that statement. Because of the statement which I understood the minister to make this afternoon, but which he has just now corrected, it was my intention not to discuss the coal question until we were to go into supply, and then to move an amendment which would more or less solidify the whole subject, and bring the matter to a climax.

It is necessary that the coal situation not only in western Canada but in eastern Canada as well should be dealt with, so that there might be some satisfactory conclusion. Chaos will be the result if that is not done. This amendment I intended to move when the house was going into supply:

> That all the words after the word "that" to the end of the question be struck out and the following substituted therefor: this house consider the advisability of formulating a national fuel policy for Canada which will:
>
> (a) Eliminate discrimination in favour of coal imports through subsidies.
>
> (b) Ensure markets for Canadian coal producers.
>
> (c) Provide steady employment for Canadian miners and
>
> (d) Make provision for transportation facilities, either by way of freight rate revisions or through the renewal of subsidies which will enable Canadian miners to compete on an equitable basis of equality in Canadian markets.

I had prepared that amendment because of the very serious situation in the west. In the last few days I have been receiving telegrams and air mail letters in regard to the matter, until now I have quite a pile of them. The situation is becoming serious. I think there is a mistaken idea in the minds of many with regard to the western fuel situation. This has been created largely by remarks made, perhaps unintentionally, in this House of Commons. I believe it was the Minister of Munitions and Supply who criticized some hon. members the other day for making statements which were not well considered. I think his rebuke was well grounded, but I should like to apply his remarks to certain hon. members

on this side of the house. I wish to quote what the Minister of Labour had to say in regard to Alberta coal. I think he made some remarks which were very ill advised. I quote from page 1057 of *Hansard*, where the minister is reported as follows:

> My hon. friends will understand why much of that coal particularly Alberta coal, cannot be piled. It deteriorates, falls to pieces. It is not like Nova Scotia coal.
>
> Mr. MacNicol: It disintegrates.
>
> Mr. Johnston (Bow River): It is good coal.

The minister stated that Alberta coal is not like Nova Scotia coal, that it will not stock-pile. For a long time we in western Canada have been endeavouring to create a market for Alberta coal in Ontario and Quebec. A goodly number of dollars have been spent by the provincial government upon advertising, and a trade commission was set up in this province which spends part of its time in Ottawa and the other part in Toronto in an endeavour to build up a market for Alberta coal. This in turn creates a market for other Canadian products and provides labour for Canadian people. These are things that should be brought about.

Now the Minister of Labour comes along and knocks the props out from under that by saying that this coal will not stock-pile, that it is not like Nova Scotia coal. I have nothing to say against Nova Scotia coal, and there are other hon. members, particularly the hon. member for Cape Breton South, who can deal with that particular commodity. But Nova Scotia coal is bituminous coal; that is the only type of coal produced in Nova Scotia. We produce bituminous coal in Alberta along with other types. I have gone to some pains to investigate the heat units of bituminous coal from western Canada and of bituminous coal from eastern Canada and I find that there is practically no difference. The minister was entirely wrong when he said what he did. He either did not know the coal situation or was deliberately making a misstatement of fact, something which should not be permitted. He says that it falls to pieces, that it deteriorates. Bituminous coal from western Canada will not deteriorate and it will stock-pile just as well as Nova Scotia coal. We should remember this when discussing this matter. Statements such as the minister made are misleading to the public. I heard coal dealers, some of them members of this house, from Ontario say that such statements are not correct.

The other kind of coal that we produce in Alberta is domestic coal, and this is found in a number of types. We get domestic coal from Drumheller, from Lethbridge, from the Saunders area and from the Coalspur area. Each of these domestic coals is an excellent

coal. If the minister was referring to that type of coal when he said that it would not stock-pile, he was entirely wrong. We in the west have had some experience in using this coal and in fact it has been shipped to Ottawa and even a few miles out from this city. A goodly number of tons have been sent down to Toronto in an endeavour to build up a wider market for our coal. Then the minister comes along and makes his statement, and the hon. member for Davenport (Mr. MacNicol) agrees with him by saying, "It disintegrates".

Mr. MacNICOL: I infer from what the hon. member is saying that he charges me with criticizing Alberta coal. There is no hon. member of this House of Commons, including the hon. member, who has done more to advocate the use of Alberta coal than I have. I was partly responsible for bringing down the first 25,000 tons of Alberta coal to Toronto and other points in Ontario. The hon. member must not misquote me. When I said it disintegrates, I mean that it does disintegrate if it is not covered. I have used several carloads of this coal.

Mr. JOHNSTON (Bow River): I was just going to say that on many occasions the hon. member for Davenport had commendably advocated the use of Alberta coal and the development of Alberta industries. We thank him for that; nevertheless when the minister said that it deteriorates, falls to pieces and will not stock-pile, the hon. member said, "It disintegrates." I do not like to make any uncomplimentary remarks about the hon. member, but I do want to stress that if this coal is kept covered, and most domestic coal is kept covered, it will keep just as well as any other type of coal.

Mr. MacNICOL: Exactly. It does not disintegrate when under cover.

Mr. JOHNSTON (Bow River): We in western Canada buy our coal in the fall, especially since the government has advocated getting in an early supply. Two years ago I put Drumheller coal into my basement in the early fall and in the spring it was just as good as when it was put in. When this coal is brought down to eastern Canada and sold to householders and kept under cover it will keep just as well as any domestic coal produced anywhere in Canada. We should not misrepresent the facts and say that this coal will not stock-pile, that it disintegrates, leaving the impression it deteriorates rapidly and soon becomes of no value. We are trying to build up a market for this coal. The bituminous coal to which I referred a moment ago is a different type entirely. This coal is

used for industrial purposes and by locomotives. I wish to refer again to what the minister is reported as having said on page 1057 of *Hansard*.

Mr. HOWE: What minister is my hon. friend talking about?

Mr. JOHNSTON (Bow River): I am talking about the Minister of Labour at this moment.

Mr. HOWE: What has this to do with the estimates of the Department of Munitions and Supply? There are civil estimates which are not now under discussion covering the subsidies on coal. My hon. friend is just building up strawmen and knocking them down. No one has said that Alberta coal will not stand handling or cannot be stored. My hon. friend and everyone else in this house knows that practically every variety of coal is mined in Alberta. There is a high grade domestic coal; there is a bituminous coal and there is a low grade lignite. If he is talking about the lignite coal, then I think he will admit that it will not store. If he is talking about bituminous coal, I think it can be said that it will store. If he is talking about high grade domestic coal, of course it will store.

Mr. JOHNSTON (Bow River): Of course it will.

Mr. HOWE: Why not sit down and let us get on with the estimates?

Mr. JOHNSTON (Bow River): Let me tell the minister that I shall not sit down until he gets a few facts. If he had been listening to what was being said he would know I was referring to the Minister of Labour.

Mr. HOWE: Whose estimates will come up later.

Mr. JOHNSTON (Bow River): The Minister of Labour made remarks about Alberta coal. It was a member of your government, not I, who was saying that it would not stock-pile. If the minister would listen to what is being said instead of being so anxious to rise and "crab" about somebody else, he would hear what is going on.

Mr. MITCHELL: Let me say this, on a point of order. Let the hon. member discuss this when it comes up on my estimates. I shall still be here, I hope, and any statement my hon. friend has to make I shall do my best to answer. He does not need to fear that the Minister of Labour is going to run away. I thought he was talking about some minister of the gospel.

Mr. JOHNSTON (Bow River): Don't ever worry. I was talking about you then. On the question of whether this matter should be discussed under this item, in just about a minute I am going to refer to the Minister of Munitions and Supply. When he was giving his statement the other day he occupied about a page under this very item, and he was talking about coal, so that it definitely does come in this place. But this question was raised by myself a year ago in this chamber, as far as western coal is concerned. I was about to state what the Minister of Labour said with regard to the policy of handling it. As reported in *Hansard* of this year, at page 1057, he had this to say:

> I have a vivid recollection of the hon. member for Bow River rising in his place last session and saying that we had no organization to meet a possible shortage of fuel in the west this winter. In the light of what has taken place, I think it can be said that we were not only prepared but overprepared, having regard to weather conditions, to meet the fuel situation in western and eastern Canada this year.

Mr. MITCHELL: What is wrong with that?

Mr. JOHNSTON (Bow River): I am just going to tell the minister what is wrong with it. As far as this winter was concerned the minister is perfectly right. He was overprepared; I will agree with him there.

Mr. MITCHELL: I wonder what my hon. friend would have said if we had not been prepared.

Mr. JOHNSTON (Bow River): I am coming to that, too. This winter you were overprepared, so that shows a definite lack of policy.

Mr. CLEAVER: Or a mild winter.

Mr. JOHNSTON (Bow River): A year ago you were vastly underprepared. That, too, showed a definite lack of policy. Very likely next year you will be underprepared again. So that it is necessary that a national fuel policy should be gone into carefully and established, and even at this late date it was good news to hear the Minister of Munitions and Supply—the minister, mind you, who says that this does not come under his department—make the statement a few minutes ago that a royal commission is to be set up to investigate this coal situation. It is time it was done, and the Minister of Munitions and Supply, whether it comes under his department or not, is apparently at least moving in the right direction.

Let us see what the Minister of Munitions and Supply, who is so much concerned about the matter being discussed in the wrong

place, had to say about this. The other day, when speaking on his estimates, he said, as reported in *Hansard*, at page 1702:

The coal which is mined to-day, and in the next few months, will be marketed for next winter's supply.

That is an appropriate statement. The coal which is mined to-day will be next winter's supply. If the minister or whoever is responsible for coal production will follow out his policy on that basis, next year we shall not be in the same position as we were in a year ago and as we are in to-day.

Mr. CRUICKSHANK: Not if there is an election you won't.

Mr. JOHNSTON (Bow River): Because surely now is the time, especially when so many miners all over the country are being laid off, to create a national fuel policy for Canada which will put these men in employment. There is no use in saying, as the Minister of Labour said the other day in regard to the fuel policy, that in a little while some of these soldier miners who are laid off will be taken back to the forces and others will be enlisting in the army.

Mr. MITCHELL: I never said that.

Mr. JOHNSTON (Bow River): Yes, the minister did; and that in a little while those miners who came off the farms would be going back to the farms and that that would relieve the unemployment situation. For quite a period men have been walking the streets unemployed. At the time I spoke on this question there were over 700 miners in Drumheller who had applied for unemployment insurance; a thousand of them did not have any work, and conditions were getting worse. Since then, 500 miners have been laid off in Edmonton. The situation is becoming critical. The Minister of Munitions and Supply, again speaking about coal, had this to say on March 21, as reported in *Hansard*, at page 1701

By 1943, our consumption had increased to 46 million tons, of which over 28 million tons have been imported.

That amount of coal was imported last year from the United States or Great Britain. He continued:

These figures will give the house some idea of our coal problem. Despite some improvement in the over-all production picture, there is no doubt that we shall have a serious coal problem on our hands for the duration of the war.

Is the time not opportune for the minister's announcement to-day that a royal commission is to be set up? The matter was so serious that I considered I would be negligent in my duty if I did not bring up this question when Mr. Speaker was going to leave the chair for the house to go into supply, but, the Minister of Munitions and Supply having made the statement that a royal commission is to be set up, I thought that now would be the proper time to discuss the question.

Last year there was an increase over 1942 of 3,243,000 tons of coal which came in from the United States. A subsidy was paid on all that imported coal. Most of it was received by Ontario and Quebec, a market which either Nova Scotia or the western provinces should have for their own. Yet, instead, we are subsidizing all that imported coal, making it still more difficult for our own Canadian mines to keep running, to retain these men in employment, and to hold business within our own country. Some of this coal which was imported and brought to the head of the lakes was taken as far west, on the Canadian Pacific railway, as Saskatchewan, and on the Canadian National Railways, clear into Alberta. Nobody can tell me that that indicates even the semblance of a fuel policy, when in Alberta we have fourteen per cent of the total coal deposits of Canada. Meanwhile mines all over this dominion are being shut down and men are unemployed. I have here a telegram from the board of trade at Drumheller; I have received also airmail letters from various mines, at Lethbridge, Edmonton and elsewhere. These people are greatly concerned over this question. Most of this lack of foresight and judgment, and most of the great unemployment problem that we have been facing could have been and should have been settled long ago if this government had got busy and created a national fuel policy.

Now a royal commission is going to be set up and I wish to commend the minister. The time is long overdue for it, and if a thorough investigation is made on a national scale I believe that this coal problem can be efficiently and judiciously handled. There is no reason why we cannot keep our miners busy, or begin to prepare now under a proper plan to have these miners put back on the job so as to get coal out now for next winter, and I hope that the government will see to it that every assistance is given the commission, and that after the commission has reported the government will get busy and set up an efficient national fuel policy for Canada.

Mr. MITCHELL: I wish to correct a couple of statements that have been made. It was suggested by the member for Cape Breton South (Mr. Gillis) that we had a deliberate policy to force men into the army through these lay-offs that have taken place.

Mr. GILLIS: I did not say you had a deliberate policy to force them.

Mr. MITCHELL: I am glad my hon. friend admits that. I am satisfied there. I believe I stated the facts clearly this afternoon. The hon. member for Cape Breton South will agree with me, I think, that we did move in the right direction in connection with these lay-offs and the selective service replacements which were undertaken in co-operation with the trades union. This is probably the first time in the history of the country when we have been able to move through the selective service for the purpose of making these changes in such replacements, and that is an indication that we have a machine capable of doing the work. I am proud of it, notwithstanding any opinions to the contrary. We can move, as we have done in many places, people from different jobs to other areas where changes are inevitable.

The grand strategy of the war, as the Minister of Munitions and Supply points out, makes it inevitable that industries will be closed down and others started, and the fact that we have a machine that can move in, as in the case of Dartmouth, and undertake this transfer of workers from one point to another, is an indication that we are a long way ahead of the stage we had reached in the last war.

Let me say to the committee that I am responsible for the call-up of men for military service; and let me say further, very frankly, that with the increase in tempo in the war in Europe there will be greater and greater call-ups of men in the age groups liable for military service. Let there be no mistake about that.

When we see the United States at this very moment considering the cancellation of postponements from eighteen to twenty-six years, whether men are engaged in agriculture or in industry, and when we look at the figures with regard to mobilized man-power in Great Britain, it makes our eyes stand out. We have had a staff of industrial engineers and men from the labour department going through the whole industrial structure of the country in the last twelve months with a view to combing out industries in order to meet the requirements of the Department of National Defence.

There may have been in this plant, where we took these 111 men, such a situation as would have necessitated its shut-down in the not distant future. According to our latest figures, however, there are ample opportunities for employment in the maritime provinces in A, B, C, and D priorities. The latest figures we have for the maritime provinces for total man-power requirements are 12,956; in A and B priorities 9,953 men are required and 1,480 women, making a total of 11,433. So that my hon. friend will have some indication that, notwithstanding the fact that there are these shifts in the industrial structure, which are inevitable in a time of war, there is ample employment opportunity even in the maritime provinces to take up any slack we may be faced with there. Sometimes there is a temporary closing down and sometimes, necessarily, it is permanent. The same is true of all industries whether in that part of the dominion or in any other section.

Mr. SOPER: I think I had better put the hon. member for Bow River (Mr. Johnston) straight with regard to the storing of Alberta coal. The minister was quite right when he said that Alberta coal would not store when shipped here. If you put that coal in a damp cellar it will store for a while, but when it is placed in a dry bin it will not store. I was afraid the hon. member for Bow River might be contemplating using some of the money he makes as a member of parliament for the storing of coal under unfavourable conditions.

Mr. BLACKMORE: Will the hon. member tell us what he means by "store"? Does he mean storing for two years, or for two months, or for how long?

Mr. SOPER: Shipping the coal right here at this time of the year and putting it in a dry basement. If you do that it will not stand.

Mr. BLACKMORE: For how long?

Mr. SOPER: It will not stand until next winter. If, however, you put it in a basement where there is a ground floor and a certain amount of dampness, it will store.

Mr. BLACKMORE: It will store for six months?

Mr. SOPER: If you put it into dry bins at this time of year, by next fall, when you start to draw it out, you will have from five to ten tons of slack per car.

Mr. JOHNSTON (Bow River): That is different from what the minister said a moment ago.

An hon. MEMBER: Who is right, you or the minister?

Mr. SOPER: I think I ought to know something about it because it cost me money.

Mr. BLACKMORE: The hon. member should tell us what kind of Alberta coal he is talking about. Alberta has several kinds.

Mr. SOPER: Drumheller coal. Alberta coal, which is one of your best.

Mr. JOHNSTON (Bow River): That is the coal I use and I have no difficulty with it.

Mr. GREEN: We seem to have slipped away from the estimates of munitions and supply into the Department of Labour. There are one or two points arising out of the estimates of munitions and supply which I think should be cleared up by the minister. The first of these points is this: What preparations are being made by his department for the war in the Pacific? Earlier this month the British secretary for war, Sir James Grigg, speaking in the British House of Commons, used these words:

> In one field the ministry (of supply) can expect from us a whole range of new demands —those for specialized weapons and equipment which will be needed when we transfer our main weight to the war against Japan.

Last fall Admiral Sir Percy Noble, head of the British admiralty delegation at Washington, said there would be a vast expansion of naval base and repair facilities on the British Columbia coast in preparation for the all-out drive against Japan. The policy of the government quite clearly is that once Germany has been disposed of, Canada will throw her whole weight against Japan and that, of course, will require careful preparation by the Department of Munitions and Supply so that the various facilities will be ready when the time comes.

It would be of interest to the committee to hear from the minister just what steps have been taken and what plans he has in mind. I think the bases on the Pacific coast will be main operational bases in the north Pacific when Canada strikes against the Japanese. Probably the shortest route from Great Britain to the Pacific area will be across Canada and through the ports on the Pacific coast. Also there will be great need for ship repair facilities and probably there should be stock piles of equipment built up there even now. Material will be required not only for Canada but also for Australia, New Zealand and the United Kingdom.

It would also seem reasonable that there should be some increased production of war material on that coast, that it would be cheaper and more efficient to have some of the goods manufactured there; more gun barrels, for example, and perhaps different types of guns. When the time comes for Canada to throw her whole weight into the war with Japan it would seem a reasonable thing to do to make more of this equipment on the Pacific coast.

There will also be a great increase in the amount of foodstuffs that will have to be handled through Pacific ports, and in the volume of oil. There was some discussion this afternoon about the Canol project; as the minister said, that project was undertaken for the express purpose of supplying oil on the Pacific coast. It may be, too, that there will be need for greatly increased warehousing space and for more camps on that coast.

Therefore in many ways preparation should be made, and I would ask the minister to explain just what steps have been taken by his department.

Another question with which I should like the minister to deal is the present policy of the government with regard to shipping. I thought that policy was fairly well defined last year when the minister said on May 12, dealing with Canada's shipping policy:

> We expect that the Canadian merchant marine will be a substantial source of employment in the post-war years and that it will be of real benefit to Canadian post-war commerce. That is the policy.

Again last year, the minister made a lengthy speech in Toronto on December 13, and by the way I thought it was a very constructive speech. He had nine suggested objectives for the Canadian people, and objective No. 4 was this:

> Canadians should provide a merchant marine worthy of the dominion's export position.

The Minister of Transport (Mr. Michaud), nods his head. Tonight he seems to agree with that policy. I hope he has had a change of heart, because on December 24 of last year, after his colleague had given that splendid objective to the Canadian people the Minister of Transport—and by the way, he is the man who would have to administer the shipping policy for Canada—

Mr. GRAYDON: He will not be there then.

Mr. GREEN: If the government were there. He used these words, and they are serious for those of us who are interested in shipping. They are serious because they are really defeatist. So that I hope the Minister of Transport has changed his mind and that when he used these words he was not stating the policy of the government. He said this:

> I see no future in Canada going into the shipping business on a big scale after the war. Some of the ships might well be used to develop trade between Canada and the West Indies and South America.

That is the smaller ships, I presume. He went on:

> But to enter competition for trade across the Atlantic and Pacific would be a big undertaking.

The Minister of Transport is nodding his head again. I do not know now whether he is with me or against me. I thought he was with me a few minutes ago. At all events, I say

that is a defeatist policy for Canada, and I suggest to the Minister of Munitions and Supply that he make an announcement to-night, or if he does not wish to do it to-night, then to-morrow, as to what Canada's shipping policy is to be.

When he was speaking of his department the other day he said that Canada's merchant navy at the end of February, 1944, comprised fifty-four 10,000-ton ships, of which ten were tankers, and thirteen 4,700-ton ships, making a total of sixty-seven, all built by ourselves in our own yards and by our own workmen. Then he said that by the end of August of this year we would have thirty additional 10,000-ton ships, of which three would be tankers. That would give us at the end of August ninety-seven ships, less whatever number happened to be sunk in the meantime. In addition, we have an unknown number of ships which have been lent or turned over to the British government, but which are to be returned after the war. I would ask the minister, when he replies, to tell us how many ships Canada has on loan to the British.

We have built up a great corps of merchant seamen. *Canada at War*, No. 33, February, 1944, showed that there were then certified in the central registry at Ottawa 44,498 Canadian merchant seamen. So that we have approximately 45,000 merchant seamen, and we have great facilities for training merchant seamen—men for the engine rooms, men for the decks—and also facilities, I think, for training officers. We have a plan for operating these ships under a crown company known as Park Steamships Limited, which turns the ships over to the different shipping firms under agreements which provide for the payment of a fee for operating them.

So that Canada is now in a position to have after the war a fine merchant navy; a merchant navy, as the minister said in his speech at Toronto in December, that is worthy of our export position. I would ask him to-night to tell the committee the government policy with regard to the merchant navy and, if he can, to tell us what the plan is for operating that merchant navy, and for allotting the ships between the two coasts. To date the allotment has been fair I think, about fifty-fifty, half to the east coast and half to the Pacific.

Perhaps the minister would also tell us at the same time whether Canada has decided to build faster merchant ships. Some of us raised that point last year and suggested that it might be wise for Canada to have some faster ships. So far, we have been building ships with a speed of ten or eleven knots, while the British and Americans are building ships which go about fifteen knots. The minister said on June 11 of last year, dealing with this point:

> From the Canadian standpoint the building of faster ships is a post-war rather than a present-day war problem, for which the necessary advice is now being secured from the best sources.

There seems to be a great deal of uncertainty as to whether this is the wise course. The war expenditures committee reported on this question of the type of ships that should be built. It said, and this appears in *Votes and Proceedings* of January 26, 1944;

> We suggest, however, that efforts should be made to ascertain if construction of such a ship—

That is a faster ship:

> —for post-war use is practicable in Canada with a view to keeping as many yards as possible occupied to meet expected commercial requirements.

There is a great deal of doubt in the United States as to the value of the slow ships in post-war trade. I have here a newspaper report with regard to these 10,000-ton ships in the United States. They are called Liberty ships, which is the American equivalent of the slow ship we are building. It says:

> The remainder will be Liberty type ships, which experts says are not suitable for post-war carrying trade.

So that there does seem to be some doubt whether they will be of much use after the war. In view of the fact that Canada exports largely primary products in bulk, I think many of these slow ships could be used by us. I suggest, however, that some attempt should be made to build the faster ships in Canada.

I would ask the minister to tell us something with regard to the two questions I have raised: first of all, as to the preparations that are being made for Canada to take part in the war in the Pacific; and, second, with regard to Canada's shipping policy as it stands at the present time.

Mr. HOWE: In reply to the first question I would remind my hon. friend that the Department of Munitions and Supply does not set the requirements; they are set out by the chiefs of staff. However, the department is doing certain specialized work in connection with the war in the Pacific, in the nature of maintenance ships and victualling ships, definitely for the Pacific; certain landing craft, definitely for the Pacific, and certain types of weapons definitely for the Pacific war. In the matter of overhaul facilities, these are being strengthened gradually and will be kept ahead of requirements, as far as repair work

on the Pacific is concerned. We are in excellent position, I think, to handle repair work there; we have good drydock capacity and good berthing space for repairs. Just as we have looked after the requirements for the war in the Atlantic, I think we shall be able to look after the requirements of the army, the navy and the air force for the war in the Pacific.

Mr. GREEN: Before the minister leaves that point, will there be any extension of the production of war equipment on the coast? Is that in mind?

Mr. HOWE: No; I would not think so. If we had a factory in Montreal or Toronto producing materials for the Pacific, I am sure my hon. friend would not suggest that we abandon that factory and start a new one on the west coast. I doubt if the level of production on the Pacific coast will increase greatly on account of the war in the Pacific. We have an excellent production machine in full gear which will probably supply the equipment. In ship repairs and perhaps shipbuilding there may be a step-up on that account; and there may be greater activity in the movement of troops.

Mr. GREEN: What about storage room, warehouse room?

Mr. HOWE: We are not in bad shape; we are always building a bit more warehouse space there, and I suppose that will continue. As far as the merchant fleet is concerned, as my hon. friend says the Canadian fleet at the moment includes sixty-nine new ships, and thirty more will be added during the current year. The hon. gentleman asked for the number that have been delivered to Britain. That number stands at eighty-eight at the moment, and additional ships will be built for operation by the United Kingdom during the coming year.

Mr. GREEN: Those are all returnable to Canada after the war, are they?

Mr. HOWE: Yes. In addition, we have sold ninety ships to the maritime commission for cash. Of course those have passed out of our possession.

Mr. GREEN: That is to the United States?

Mr. HOWE: Yes. In the early days of the war we sold two ships to Britain for cash, and we have also lent one ship to Australia. The policy of the government is, I think, the same as the policy being followed in the United States and the United Kingdom. The routes for the ships and the trades to be served are determined by a shipping board. The Canadian shipping board determines the services which these boats shall perform. Actually the boats are managed by established operating companies, for a fee. All the earnings of the boats are returnable to the government through Park Steamship company Those earnings are substantial; I notice that Park Steamship company already has turned over to the receiver general some $10,000,000 of earnings from those ships. We expect that at the end of the war, as far as the Canadian fleet is concerned, the cost of the boats will be written down considerably. Possibly some will be fully paid for, which will put the fleet in a strong position for the post-war years.

There is a tendency, and I think an undue tendency, to belittle the type of tonnage that makes up the Canadian merchant marine. The ships that we have built have been progressively improved since we started, and are all first-class tramp tonnage, better than any tramp tonnage that existed before the war. I think every practical shipping man will agree that they are the best design for boats of their class that anyone knows of at this time. They are the type of boat that has always carried eighty-five per cent of Canada's export trade. There is a need, based on pre-war business, for about 150 of these ships, to move exports from the west coast to their markets, and we hope that post-war levels will require an even larger number of these ships. I am happy to say that we shall be able to supply ships of Canadian ownership for these trades.

Mr. GREEN: Did the minister say 150 ships from the west coast alone?

Mr. HOWE: Yes. Similarly, based on pre-war movements, seventy-five ships will be required for export movement from the east coast, for bulk commodities. I think at the end of the war our fleet will be sufficient to take care of both requirements. The cargo that goes into boats of this class is of the type that is handled as freight on our railroads. Express shipments ordinarily would go in faster tonnage. As far as this country is concerned, tramp tonnage in the past has not required subsidy, whereas every boat of the express type has required an operating subsidy from the Canadian government. Further, it is a fact that the high speed boats and express service boats are built for special trades and special operations. They are not boats that can be built under conditions of mass production with any probability that they would suit the requirements of the trade for which they were designed. Therefore it seems to us and to our expert advisers that it is not wise at this time to attempt to go

into the passenger steamship building or the fast freighter building in a big way. We hope the efficiency of our yards will be such that at the end of the war we shall have requests from operators of liner services to build their ships in Canada.

Mr. GREEN: That is passenger boats, as well as fast freighters?

Mr. HOWE: We will welcome that business and do all we can to encourage it. But as far as the present building programme is concerned, we are building a ship that we know Canada will need, ships that will stand on their merits, ships that will be the backbone of any post-war merchant fleet that Canada will require. Does that cover the point?

Mr. GREEN: There is great concern as to whether or not the shipbuilding industry will be able to survive after the war. As the minister knows, after the last war the shipbuilding industry collapsed, and in the back of everyone's mind there is the feeling that the same thing may happen after this war. I am delighted indeed to hear the minister say tonight that the plan is to increase our merchant fleet, and that apparently it is the intention of the government to maintain a Canadian merchant navy. But can he give any assurance to the Canadian people that the Canadian government is determined to maintain the shipbuilding industry after the war? I realize that it could not be on anything like the scale of to-day, but I do hope some definite word can go out to the country that the government intends to see to it that our shipbuilding industry is maintained. Perhaps it would be necessary to subsidize the building of ships; in the United States they have long since decided that this was a wise policy. It might be possible to keep the industry up by government orders. The minister knows, just as I do, and other members of the committee, that it will be a difficult problem to keep the shipbuilding industry going steadily after the war. Yet it does seem to be one of those industries of which Canada has the greatest need. I think it should definitely be a government policy that we are determined to have a shipbuilding industry, even if in the beginning it cost money. Can the minister go so far as to say that it is the intention of the government to foster shipbuilding in Canada in the post-war years, or, in other words, that steps will be taken to see to it that the industry does not shrivel up, once the war is over.

Mr. HOWE: I have always understood my hon. friend to be a great exponent of free enterprise. I can point out to him that we have established in Canada a first-class shipbuilding industry, with extensive facilities that will be written off during the war period. Ours will be low-cost yards, so far as overhead goes. Ours will be efficient yards. Our shipbuilding costs are very satisfactory, and they have been coming down steadily.

Mr. GREEN: What are they now? What is the cost of one of these ships?

Mr. HOWE: I delivered an oration on that subject this afternoon, stating that I do not give costs. I am sorry my hon. friend was absent.

Mr. GREEN: Oh, I was here.

Mr. HOWE: It did not register, then.

Mr. GREEN: Mr. H. R. MacMillan, formerly head of Wartime Merchant Shipping, gave certain figures in Vancouver on January 13. He said that these ships were turned out at from $1,300,000 to $1,500,000 each, as compared with $900,000 in British yards and $2,000,000 in the United States. And, considering everything, he regarded this an excellent showing for Canada.

Mr. HOWE That is not far off. The Canadian position is a little better than that now since each ship costs a little less than the preceding one. Yards that were out of line in the matter of cost are coming into line. We have a very good showing from our shipyards at the present time. Naturally, for the reasons I gave this afternoon, the larger yards build ships more cheaply than do the smaller ones, and the older yards usually do better than the new ones. However, the difference is not great.

Mr. GREEN: Some of them are very efficient.

Mr. HOWE: Yes; there are some very efficient yards in Canada. Our shipbuilders will be in an excellent position to compete. We have taken steps to improve the competitive position. We have brought into Canada a very strong designing firm, so that if anyone comes to Canada wanting a ship for any particular service, and can give us the requirements, the ship can be designed here in an efficient manner.

Mr. GREEN: Does that include passenger ships?

Mr. HOWE: Yes. And we have taken such steps as we can at this stage to place our shipyards in a strong position, so that they may compete. I sincerely hope and believe that a policy of subsidies will not be necessary. I think an aggressive policy of salesmanship will keep our yards busy. I know that at this

time, if the yards were not occupied in war work they would be able to take on a good deal of private work. They have not been able to take such work, on account of the requirements of war. My hon. friend would not ask me to go farther than that, but I hope if he comes into office he will not immediately jump into the business of subsidies.

Mr. GREEN: I agree with the minister; it would be far better if subsidies were not necessary. But I said it might come to that stage, rather than let the industry die out.

Mr. HOWE: That, I understand, is a philosophy of despair. I prefer to be hopeful.

Mr. ROSS (St. Paul's): Do the minister's remarks apply to great lakes points, as well?

Mr. HOWE: Great lakes yards are busy at the present time, and are likely to be busy for some considerable time. The type of boat which can be built on the lakes is restricted, either to tonnage for the great lakes, or to tonnage which can pass through the St. Lawrence canals. There is every indication that there will be business for great lakes yards for some considerable time.

Mr. NICHOLSON: I should like to ask the minister about another matter. Two years ago he discussed at some length the Pogue carburettor. Might I point out to him that another carburettor has been patented by the editor of one of the newspapers in my constituency. I know this public-spirited citizen very well, and I understand he has offered the Department of Munitions and Supply the opportunity to use his discovery. I find that the rural municipality has passed a resolution urging that this gasoline saver, which has been tested and is reported to have done 130 miles to a gallon, should be investigated. In view of the fact that this department is spending over $8,000,000 a day of the people's money, the very small amount of money involved in testing this carburettor would be insignificant.

I believe that some day some person will discover a carburettor which is an improvement on any at present on the market, and there is no reason why the editor of a newspaper in a small country town, a man with a creative mind, and one who has been willing to spend a considerable sum of money, many hours of time and to use a large amount of material, should not discover something of importance. Would the minister make a statement as to the policy of his department? Is it interested in spending small sums of money in testing inventions of this kind?

I understand that Mr. Augustus, who is the editor, and his partner Mr. Melnyk, have offered this invention as a service to the country. They have suggested that if it is of any use the government should pay them how it likes, when it likes and if it likes. Nothing would appear to be fairer, and I should imagine it would be sound policy for the minister's department to test this invention, and satisfy the people in that community as to whether it has or has not any merit.

Mr. HOWE: The policy of the government toward inventions is liberal and advanced. We have a board known as the dominion inventions board, composed of the best scientists in Canada. All my hon. friend needs do is to submit his carburettor to that board, and if the board reports that the invention has promise, he will find large sums of money available for its development. If, on the other hand, the board reports unfavourably, he can do what he likes with his invention, but he can get no help from any department of government in connection with it.

Mr. NICHOLSON: That is fair enough; but my information is that the inventor has offered it to the department, and that nothing has happened.

Mr. HOWE: It is quite useless for your friends to offer it to my department; they must offer it to the inventions board. If the board decides that the invention has merit, my department will then be very much interested in it. But until then we have no interest whatsoever in the invention.

Mr. NICHOLSON: I think the minister's department might show the courtesy of writing the inventor, suggesting what action should be taken, or that it should turn the letter over. My complaint is that he did not receive any information from the department.

Mr. HOWE: Undoubtedly the letter has automatically been handed to the inventions board. All letters of that kind are handled in that way.

Mr. JOHNSTON (Bow River): I should like to say a word about carburettors. A couple of years ago I spoke on several occasions respecting the Pogue carburettor. But, so far as I know, nothing has come of it—although I think the government did spend some money in experiments. May I suggest that this government is not giving enough encouragement to people who have invented carburettors, to see whether or not there is any merit in those inventions.

I know the minister may be irritated at times because a great number of persons come in to him with the information that they have inventions respecting new types of carburettors which will do this or do that. The tendency is to brush them aside, and to put

the onus on them to prove the value of their invention. In my opinion that is not the proper procedure.

Let me tell the committee about an experience I had in this city. Almost a year ago a man who lives here in Ottawa came into my office in this building with an attachment to put on a carburettor. He told me that he was not trying to sell it and that he did not care whether the government used it or whether I used it, but he told me that his experience had been that this attachment would increase the efficiency of the carburettor by twenty to thirty per cent. He gave me this thing and I took it home. I did not brush off the idea lightly; I put it on my car. I did not have all the mechanical things with which to test it, but I filled up my car and drove a hundred miles and I found that this attachment raised the gasoline mileage from twenty to twenty-seven miles a gallon. My car was a 1941 Chevrolet. I was not satisfied with the one test; I tried another and I found it did the same thing.

Mr. McCUBBIN: I would not give that to any government.

Mr. JOHNSTON (Bow River): Probably you would not give it any consideration. That attachment increased the efficiency by twenty to thirty per cent. I venture to say that it would not cost the government more than three cents apiece to make these things. I brought up this matter before because I was much concerned about it. If the government is not concerned in saving twenty-five or thirty per cent of our gasoline, why should anyone else be? If the government wants it, I am ready to give them all the information I have. I will not go any farther than that because I am not concerned with it. I would think that when we are so urgently in need of gasoline it would be worth while to investigate some of these things.

Mr. MARTIN: Was it sent to the inventions board?

Mr. JOHNSTON (Bow River): Not that I know of.

Mr. REID: There is a matter I should like to bring up which is somewhat different from the other questions that have been raised. I refer to the use of daylight saving time. When the regulations putting this time into effect were brought in back in 1939 or 1940, the minister pointed out that this action was being taken because of the necessity of conserving electricity. Many people throughout Canada, particularly those in the country districts, feel that we should go back to ordinary time, especially in the winter time. It has been found extremely difficult to get children off to school in the dark. When one looks around the city of Ottawa and other cities during the winter time it is hard to see where any real saving has been achieved by the enforcement of daylight saving time, because in most buildings, and in this one too, all the lights burn throughout the entire day. I wonder if the introduction of daylight saving has brought about the saving in electricity that was expected. Has any consideration been given to going back to regular time?

Mr. HOWE: Consideration is being given from time to time to requests similar to the one being made now by the hon. member. It might be worth while to tell hon. members what the effect would be. In the maritime provinces it is estimated that the demand for power would be increased by approximately ten per cent if standard time were restored. The existing generating facilities are already heavily loaded and the reserve capacity is barely adequate for present requirements. An increase of approximately ten per cent in the maximum demand would be undersirable at the present time.

In the province of Quebec the demand for power in the metropolitan areas would be increased by over 60,000 horse-power. The reserve generating capacity at present available to the interconnected power systems is not sufficient to permit the absorption of such a large additional demand with safety.

In Ontario the demand for power would be increased by over 75,000 horse-power. At the present time Ontario is short of peak power. An additional demand of 75,000 horse-power would be unfortunate at this time and during certain hours would require reductions of power now being delivered.

In the prairie provinces the power systems have for the most part sufficient generating capacity to carry the increased demand without inconvenience. In British Columbia the demand for power in the Vancouver district would be increased by approximately 13,000 horse-power. The generating stations in the district are already heavily loaded. If the demand should be increased by 13,000 horse-power the amount of power required at times of maximum use would exceed the combined capacity of the available hydro plants and the reliability of service would be endangered. The prairies would appear to be the only area that could go back to old time as far as the power situation is concerned.

Mr. KNOWLES: Mr. Chairman, I should like to complete the remarks I was making this afternoon when I was pointing out the

ways in which government policy in connection with the synthetic rubber plant at Sarnia is concentrating power in the hands of a few private companies. I referred to the manner in which private companies have been called in to operate this government-owned plant and also to the fact that enlargements of private rubber plants were being financed by the government. I referred to the large orders which have had to be given to these companies. The point I was making was that public funds are being used to strengthen the position of a few private companies in the rubber industry. And yet, after the war, the consuming public when purchasing rubber goods will have to pay prices that will provide profits to these private companies despite the fact that the stronger position of these companies has been brought about by the use of public funds which were made available to them in the interests of the war effort.

This recognition of the problem created by the concentration of power in the hands of a few companies is to be found not only in this group, but also in other quarters. I should like to quote from page 31 of *Saturday Night* of March 18, 1944, as follows:

> To an extent as yet undetermined the concentration of industrial capacity has been increased by reason of the unavoidable reliance placed upon large producers in securing war supplies in the shortest possible time.

That is a very good statement of what has actually taken place. If I may quote further:

> This fact must be faced so that we may begin to think of the means which must be developed to ensure that those producers who will hold a monopoly or quasi-monopoly position in the post-war period will make full use of the productive capacity which they will control, and not endeavour to maximize profits by curtailing output or maintaining prices at high levels.

I have given that quotation to indicate that others, like those in this group, are worried about the problem created by this concentration of power in the hands of a small number of private corporations. Hon. members will readily recognize that we do not feel that the proposals suggested in the quotation which I have read will meet the problem. Our view is that when power has been concentrated there is only one place to put it in order to make sure that it will not be used against the public good. The place to put that concentration of power is in the hands of the people themselves.

I should like to take a moment to read briefly from an address given in Washington, D.C., on February 12, 1943, by Wendell Berge, assistant attorney general of the United States. The subject of his address was in the form of a question, "What shall we do about cartels in the post-war period?" I consider that his statement with respect to cartels applies to monopolies in general, and that the points he made are points which indicate what may be the outgrowth of the policy being pursued by the government at the present time. I quote from Mr. Berge:

> In general, cartels restrict rather than promote trade. Cartels typically engage in such practices as dividing fields of operation and market areas between members so as to eliminate competition, restricting production by agreement, and fixing prices so as to avoid price competition. They also promote various kinds of patent licensing contracts which enable them to control and limit the use of new inventions and thus restrict the benefits of technological advance. The effects of these practices include reduced production and employment, higher prices and profits, retarded spread of technological improvements and a lower standard of living.

It is this sort of thing which—frankly—we are afraid of in the post-war period, because of the kind of concentration which has been made necessary by the "unavoidable reliance placed upon large producers for the procurement of war supplies in the shortest possible time." That, indeed, is the reason we have called attention to government policy with respect to the Aluminum Company of Canada, Canadian Industries Limited, Canadian Pacific Air Lines, and, now, the situation with respect to rubber. As I said a few days ago, we are pleased that the government has realized what a private corporation such as the Canadian Pacific is able to do in a short space of time when it is given unlimited opportunity and a free hand. We are glad that the government has decided to take certain steps even though they may not go far enough, in connection with that problem. We feel that this question of rubber calls for the same kind of approach. Our position is that when, under the necessities of war, power has to be concentrated as it is, the people of this country and the government must think in terms of extending the principle of public ownership. That is the only way by which one can make sure that the benefits of modern science and of technological development will accrue to the people as a whole. That is our concern. We feel that we have had an expression of that principle in the period of war. It has been necessary to get goods produced to wage the conflict in which we are engaged, and to the extent that those goods are produced and used for our common defence they are being used for the benefit of the people as a whole. In that sense the benefit of the accelerated war-time production and technological improvements accrues to the people. We want to make sure that these benefits will likewise

accrue to the people of Canada as a whole, not to private corporations or private finance, when the war is over. Therefore, I urge that the house and the country face the fact that, as economic power becomes concentrated, there is only one place to put it so as to be sure that it will be used for the benefit of the people, and that is in the hands of the people themselves. That is our position. We in this group believe that it is the only answer to one of the greatest problems which has been created during the present war.

Mr. HOWE: May I make a few remarks in reply. My hon. friend, I think, has been preparing a speech for the hustings. He cannot be serious about what has happened and what has been done at Polymer.

Polymer is a plant owned by the people of Canada. It is a public ownership plant. I have a good deal of experience with public ownership and with private ownership. I have been an industrial engineer in this country for practically thirty-five years. I have worked almost continuously for governments and for private interests, both. Perhaps I have carried out more work measured in dollar value for private interests, but I have worked for every government in this country during every year, beginning in 1912.

Mr. KNOWLES: We might give you a job, too.

Mr. HOWE: Public interests are just as capable of building a plant as private interests. The whole test is in the operating.

Mr. MacNICOL: Exactly.

Mr. HOWE: If we could guarantee that governments could operate plants as efficiently as private interests there would be a very good argument that public ownership is better than private ownership. That could be argued. The difficulty is this: if a private industry is not well managed—and plenty are not—it will go broke in a short time, be reorganized, and put under more efficient management. Under public operation that usually does not happen.

Mr. BLACKMORE: Hear, hear.

Mr. HOWE: It goes steadily down grade. It is allowed to go down grade, unless it becomes enough of a scandal, when the government is very apt to get rid of it and pass it to private hands.

Mr. CASTLEDEN: Like the Canadian National Railways!

Mr. HOWE: I have started a good many public operations during this war. In every case I have tried to put them under efficient management, the management will make them a public enterprise to serve the country well. My hon. friend is quite wrong about Polymer. The Polymer corporation is operated by a board of directors, men placed there by the government to have an over-all supervision of the business operation of the plant. The board of Polymer recommend to the government the contracts to be made for the purchase of raw materials, and they have full responsibility in advising the government as to the distribution of the product and as to the price. There are certain very involved technical processes in the plant which are divided into three parts: the butadiene production, which is operated by a subsidiary of Imperial Oil; the styrene process, which is operated by a Canadian subsidiary of the Dow Chemical company; and the polymerization plant, which is operated by a company organized by the four rubber companies which have research laboratories in Canada, as well as a complete knowledge of the kind of rubber required by Canadian industry. Why is that so? The reason why Imperial Oil were asked to organize the management of the butadiene end is that Imperial have a very large research staff, a trained organization in that special line of production. It was felt that their management would be progressive; that if improvements were brought into the industry they would be put into the polymer plant; and we would be sure at all times of a modern and efficient operation of the butadiene end. It might be asked, why not pick two or three men from the Imperial organization, hire them and put them in charge? It requires more than the knowledge of one or two men; it calls for the knowledge of a strong organization backed by a research laboratory and by trained research chemists who will advance the art and apply the advancement of industry to the process they have in hand for polymer.

St. Clare Processing company receive a fee for their scientific management of that particular operation. They have nothing whatever to do with the cost of the product at any stage. They simply have a process to manage, and their duty is to carry out that duty as efficiently as possible. The same applies to the Dow Chemical company, which invented the process for the production of styrene. That company is by far the largest producer of styrene on the continent, and the only company that has full knowledge of the art of that particular production. There again we know we have a management that will be as good as any that can be obtained anywhere and that our process will not be allowed to be outmoded. We shall always be up to date on that process.

As regards the polymerization end, we are making rubber to be used by the Canadian

trade. We want to make the kind of rubber that the trade can use for the purpose of making tires and other finished products which the Canadian people will require. Naturally, we choose the operators of that process from among men who know the requirements of the trade, who know what rubber is and what grades of rubber are required for different products. Here again, these men have nothing to do with the distribution of rubber. They simply make rubber of the required grades, and after it is manufactured it is priced and distributed by the directors of the Polymer Corporation or by such agencies as the government may appoint for the purpose.

It is absurd to say that any one of these men profits unduly by the operation or gets any advantage over competitors. It is just as important to the smallest rubber user in the country to have the quality of rubber from polymer suitable to his needs as it is to the largest company, and the people of Canada as a whole will benefit from polymer only as the product is made cheaply and of the best possible quality.

I hope my hon. friend will refrain from using the line of argument he did to-day. I think it is a little beneath him. The only danger to public ownership is that my hon. friend might get into a position of responsibility and allow his prejudices against certain large firms and against combines and cartels, to interfere with his obligations to keep the management of these great plants, built at government expense, in an efficient state. That is the real menace to government ownership.

Mr. KNOWLES: I will not take time to argue with the minister, because as a matter of fact anything I would say I have already said in the course of my remarks this afternoon and to-night. I would comment, however, on his statement, in his reply that I was quite wrong in my understanding of the set-up. Anyone who reads *Hansard* will find that the minister and I have described the set-up in language that is almost identical. Where we differ is in our interpretation as to what will be the post-war result of the procedure the government has adopted. I have placed on *Hansard* my view of what that development will be and I am prepared to let it stand at that.

Mr. HATFIELD: At what speed are cargo vessels being built to-day?

Mr. HOWE: There is little variation between different types. It is between eleven and eleven and a half knots an hour.

Mr. CASTLEDEN: I have a few remarks to make on another phase of the work, namely, the disposal of plant, material, machinery and equipment. Canadians have spent through the department about ten billion dollars on war equipment, and of necessity there will be billions of dollars' worth of material which will be surplus to war requirements. As the war draws to its close, they will become valuable for use in one way or another in Canada. During war time Canadians have been very patient about having certain facts about production kept secret. As the war recedes, people will want to know more and more about what is being done now, and it is necessary that Canadians should be thoroughly informed of the disposal of goods. Canadians would like to feel that they have control of the disposal of these goods. They will want to know what persons decide what shall be done with surplus materials and how those persons have been chosen who have charge of the work. As regards the manner of disposal, do those people who have been given this responsibility ask for tenders in the disposal of goods, or do they make the complete decision as to prices themselves? After they have made that decision, do they keep an itemized statement of accounts of everything, and are those records available to the representatives of the people in the house? What opportunity will the Canadian people have of purchasing these goods for domestic purposes, and who will decide whether or not they shall be so used?

Will the minister give a complete statement on that, particularly that phase of the subject with regard to giving people information as to what has been done? Order in council 9108 was passed in November and the minister said then that there was an emergency. Since that time, pursuant to the order in council, it has been found necessary that a committee be set up to make a report. On February 10 last the report was tabled in this house and it said absolutely nothing with regard to disposal. If there was some emergency at that time with regard to the disposal of some goods, and the disposal was made, what record is there of it?

Mr. HOWE: This is a little aside from the discussion. I made a complete statement on the matter. During this session a bill confirming the disposal arrangements will be before parliament and at that time we can have full discussion. All I can say at the moment is that surplus materials are first examined by a committee, made up largely from the civil service at Ottawa, to determine whether they are surplus, and if they are, they are turned over to the disposal corporation for disposal. The corporation is just getting under way. I assure my hon. friend that there will be the

fullest disclosure of every transaction, and I shall be prepared to discuss the matter in great detail when the bill is before the house.

Mr. CASTLEDEN: Would it be in order to have the order in council put on the record?

Mr. HOWE: It was tabled long ago.

Mr. CASTLEDEN: Could it be put on the record?

Mr. HOWE: I do not know that it can be more on the record than having it on the table. If the hon. member will get it and put it on the record himself it will be all right with me.

Mr. CASTLEDEN: With the permission of the house I should like to have the order in council put on the record complete. I do not want to take the time of the house in reading it. I should also like to put on *Hansard* the first report of the activities of the War Assets Corporation Limited and the Crown Assets Allocation committee.

The ACTING CHAIRMAN (Mr. McCann): Has the hon. member unanimous consent? Then that is agreed.

Mr. CASTLEDEN: Thank you, Mr. Chairman, the documents are as follows:

Order in council establishing The Crown Assets Allocation Committee and authorizing the incorporation of War Assets Corporation, Limited.

P.C. 9108

At the Government House at Ottawa
Monday, the 29th day of November, 1943.

Present:

His Excellency the Governor General in Council:

Whereas the Minister of Munitions and Supply reports that substantial stocks of surplus assets, the property of the government of Canada are currently being created as a result of changes from time to time in war production programmes, the progress of the war, the development of new types of equipment and other factors;

That it is desirable and in the public interest that surplus assets owned by the government should be dealt with in such manner as to cause the minimum of dislocation of the economic structure of the country so as to assist in the orderly transition to a peacetime basis of production, following the cessation of hostilities, of industries which during the war period have been wholly or substantially engaged in production for war purposes; and

That in his opinion, a suitable mode of procedure, to meet the current situation, would be:

(a) for the governor in council to direct, that each government department or agency should survey and investigate all lands, buildings, structures, plant, machinery, equipment, articles and things (including munitions of war and supplies as defined in The Department of Munitions and Supply Act), and any interests therein or parts thereof, which are held or administered by it, with a view to the determination of the types and quantities of such assets which are surplus to the needs of such department or agency;

(b) to constitute an inter-departmental committee which will be charged with the duty of obtaining reports from government departments and agencies with respect to such surpluses and of receiving and dealing with applications from any department or agency for any assets which are surplus to the needs of the department or agency holding or administering such assets, and of formulating and recommending general policies with respect to the disposal of assets which are surplus to the needs of the government;

(c) that the general policy with respect to the disposal of or dealing with such surplus assets should be determined by the governor in council and that the governor in council should give such general or specific directions as may from time to time be necessary with respect to the determination of such surpluses as aforesaid and the use or disposal thereof.

(d) to create a company which will act as the agent of the government and will be charged with the duty of disposing of or otherwise dealing with surplus assets from time to time transferred or consigned to it and of making recommendations on matters of policy and courses of action with respect to such surplus assets or which in the opinion of the company will promote the national well-being of Canada.

Therefore, His Excellency the Governor General in Council, on the recommendation of the Minister of Munitions and Supply and under and by virtue of the powers conferred by the War Measures Act, the Department of Munitions and Supply Act, and the War Appropriation Act No. 2, 1942, is pleased to make and doth hereby make the following order:

Order

1. The term "surplus crown assets" where used in this order means any land, buildings, structures, plant, machinery, equipment, scrap, materials, articles or things, or any interest therein or any part thereof, and all munitions of war and supplies as defined by the Department of Munitions and Supply Act, which are owned or controlled by the government of Canada or any agency thereof and which for the time being, or from time to time, are surplus to the current or probable future requirements of the war programme of Canada or the needs of the government of Canada or any agency thereof.

2. It shall be the duty of each government department and agency from time to time to survey and investigate all lands, buildings, structures, plant, machinery, equipment, munitions of war and supplies, scrap, materials, articles and things, and any interests therein or parts thereof, from time to time on hand in or administered by such department or agency and to report from time to time to the allocation committee hereinafter mentioned the assets which are or are likely to become surplus to the needs of such department or agency.

3. There is hereby established under the Minister of Munitions and Supply, or such other minister as may be hereafter designated by the governor in council (hereinafter referred to as "the minister"), an interdepartmental committee, to be known as the "crown assets allocation committee" (hereinafter referred to as the "allocation committee") having the powers and duties hereinafter set forth.

4. The allocation committee shall be composed of:

(a) a full-time paid member, to be appointed by the governor in council, who shall be chairman;

(b) a member to be designated by the Secretary of State for External Affairs;

(c) a member to be designated by the Minister of Munitions and Supply;

(d) a member to be designated by the Minister of National Defence;

(e) two members to be designated by the Minister of Finance, one of whom shall represent the administrative services of the Department of Finance and the other shall represent the wartime prices and trade board;

(f) a member to be designated by the Minister of Public Works;

(Each of the aforesaid ministers may designate an alternate to act on the said committee in the absence of the member appointed by the said minister respectively.)

(g) the president of the company hereinafter referred to:

(h) a person to represent labour, another to represent agriculture and a third to represent the householders of Canada, all to be designated by the governor in council.

The tenure of office of the members of the committee shall be during pleasure and until parliament shall have passed legislation dealing with the disposal of surplus assets of the crown.

5. The allocation committee shall have power:

(a) to require any person, firm or corporation or government department or agency to furnish such facts, data, reports, information or recommendations with respect to actual or probable stocks or supplies of surplus crown assets, or the disposal thereof, as the committee may from time to time deem fit;

(b) to employ or utilize the services or assistance of any person, firm or corporation whose services or assistance the committee may consider to be necessary or useful in the carrying out of any of the duties or powers from time to time charged or conferred upon or vested in the committee; provided that any remuneration to be paid to any such person, firm or corporation shall be subject to the approval of the governor in council.

6. It shall be the duty of the allocation committee:

(a) to survey and make investigations with respect to lands, buildings, structures, plant, machinery, equipment, munitions of war and supplies, scrap, materials, articles and things, and interests therein or parts thereof, reported by government departments or agencies as being from time to time on hand or which are likely to become available, and to report from time to time to the minister regarding the types and quantities of such assets which are or are likely to become surplus crown assets;

(b) to consider representations made by any government department or agency with respect to surplus crown assets or the disposal or use thereof; to authorize the transfer of assets from one department or agency to another, under such terms and conditions as the committee may decide; and to report to the minister with respect to the foregoing;

(c) to formulate and recommend through the minister to the governor in council general policies or plans for the use or disposal of or dealing with surplus crown assets, and, without limiting the generality of the foregoing, to submit for consideration proposals with respect to surplus crown assets

(i) which might serve administrative needs of provincial governments, municipalities, and other like bodies;

(ii) which might be distributed in distressed areas;

(iii) which, for reasons of public policy, should not be offered for sale in Canada, or should be converted back to basic materials, or should be withheld from the market for the time being, or should severally be the subject of direct action by the governor in council;

(iv) which should be consigned or transferred to, or placed under the control of the company hereinafter mentioned;

(v) in which the crown has only a limited interest;

(vi) which consist of industrial plants, or parts thereof, which are complete operating units; and

(d) to exercise and perform such other duties and make such other investigations and reports as the governor in council or the minister may from time to time direct.

7. Authority is hereby granted to the Minister of Munitions and Supply to procure the incorporation of a company under the name "War Assets Corporation Limited", or such other name as the governor in council may select or approve, for the purpose of holding, managing, disposing of and dealing with surplus crown assets which are consigned to it by the governor in council. The names of the Directors of the said Company shall be submitted to and approved by the governor in council on the recommendation of the minister.

8. The said company shall be deemed to be an emanation of the crown, and, in exercising the powers and/or discharging the duties conferred or charged upon it, the company shall be deemed to be an agent or the servant of His Majesty.

9. The company shall be responsible to the minister and all of the shares in the capital stock of the company, from time to time issued and outstanding, other than the qualifying shares of the directors, shall be held by the minister in trust for His Majesty the King in right of Canada.

10. The minister is hereby authorized to take and cause to be taken all necessary steps to cause the incorporation and organization of the said company to be duly effected and to ensure that it shall be enabled to exercise the powers and perform the duties necessary to accomplish the purposes set out herein. The minister may, for the purpose of providing the company with working capital, make available to the company, by way of payment for shares to be allotted to and held by the minister in trust for His Majesty, or by way of accountable advances, an amount or amounts not exceeding in the aggregate the sum of $5,000,000, such amount or amounts to be allotted or made available for such purposes to the Department of Munitions and Supply out of the moneys appropriated by parliament by means of the War Appropriation Acts.

11. The governor in council may consign or transfer to the company crown assets which have been declared by him to be surplus to the administrative or operative needs of the government of Canada or any agency thereof. Con-

signments or transfers may be made by either specific or general direction, and shall be accepted by the company as being subject to any reservation or direction associated therewith, and to any instructions given by the minister with respect thereto.

12. The company shall have power, subject to the general or specific instructions of the minister,

(a) to hold, manage, operate, dispose of or deal in and with surplus crown assets consigned or transferred to it, in such manner as it may decide, subject only to any conditions and instructions stipulated at the time of consignment or transfer or in any agreement between the company and the crown.

(b) to convert back to basic materials any surplus crown assets consigned or transferred to it;

(c) to withhold from Canadian or world markets, for such time as it may decide, all or any portion of any surplus crown assets consigned or transferred to it;

(d) to effect sales of surplus crown assets consigned or transferred to it, in such manner and upon such terms and conditions as the company may decide;

(e) to create or appoint advisory committees and/or to procure the incorporation of subsidiary companies and to delegate to any such advisory committee or subsidiary company any of the powers or duties conferred or charged upon the company;

(f) to cause the title to any surplus crown assets consigned to it to be vested in the name of the company; and

(g) to do such other acts and things as may be stipulated or authorized by the governor in council or by the minister or as may be incidental or conducive to the attainment of the objects and the exercise of the powers of the company.

13. The company shall advise the minister with respect to any policy or course of action which in the opinion of the company would (a) promote the intent and purposes of its incorporation, or (b) further the purposes of this Order or the national well-being of Canada. The company shall also make such other reports and exercise and perform such other duties as the governor in council or the minister may from time to time direct.

14. Upon the company being incorporated and organized, an agreement with the company, providing for the management and operations of the company and the duties to be performed by it, shall be negotiated by the minister and shall take effect as and when such agreement is approved by the governor in council.

15. This order shall take effect from the date hereof, but until the governor in council or the minister otherwise directs, transfers of inventory items between departments and agencies of the government of Canada, and sales of any such items, may continue to be made under any regulations or authorizations heretofore in force and applicable thereto.

16. The minister shall submit to parliament, within fifteen days after the commencement of the session, a report upon the operations of both the allocation committee and the company.

Certified to be a true copy.

A. D. P. Heeney,
Clerk of the Privy Council.

War Assets Corporation Limited

Pursuant to order in council P.C. 9108, dated November 29, 1943, War Assets Corporation Limited was incorporated under the Dominion Companies Act, by letters patent dated December 8, 1943, with an authorized capital of $5,000,000 divided into 50,000 no par value shares, of which 2,500 shares are issued for an amount of $250,000.

With the exception of directors' qualifying shares the issued stock is held in the name of C. D. Howe, in trust for His Majesty the King in right of Canada.

Following are the directors and officers of the corporation:

Directors: Messrs. J. B. Carswell, Wilfrid Gagnon, Lt.-Col. Goodwin Gibson, A. C. Guthrie, John Knox, Hugh Lawson, J. P. D. Malkin, A. T. O'Leary, J. J. Perrault, R. D. Purdy, J. B. Ward.

Officers: president, J. B. Carswell; vice-president, Wilfrid Gagnon; general manager, Hew M. Scott; secretary-treasurer, F. O. Peterson.

An executive committee of the directors is composed of the president, vice-president, and Messrs. Guthrie, Lawson, and Perrault.

The head office of the corporation is in Montreal.

No surplus assets have been consigned to the corporation and the agencies and methods of disposal in existence at the time P.C. 9108 was passed are still functioning.

The attention of the officers of the corporation has, to date, been devoted almost entirely to the task of setting up, in collaboration with crown assets allocation committee, such operating procedures and controls as seem best designed to accomplish the objects for which the corporation was formed. This has included, *inter alia*, the making of arrangements for the opening of an Ottawa office of the corporation to be located in the buildings occupied by the Department of Munitions and Supply, and to work in close cooperation with officers of that department and of the crown assets allocation committee, thus avoiding duplication of effort and of staff.

Crown Assets Allocation Committee

The committee was established on November 29, 1943, its membership consisting of the following:

Officers: Chairman, J. P. Pettigrew; secretary, C. A. Geoffrion; asst. to the chairman, F. M. Mathias.

Members: Messrs. P. R. Bengough, J. H. Berry, J. B. Carswell, Col. H. DesRosiers, Donald Gordon, W. D. Matthews, E. P. Murphy, B. G. McIntyre, Louis Philippe Roy, Mrs. C. H. Thorburn, Mr. Finlay Sim.

The committee has held three meetings. The committee's work to date has been devoted almost entirely to organization and the development of lines of procedure as between the committee and War Assets Corporation Limited. The committee has been in close touch with officers of the Department of National Defence, and surveys are now under way to determine surpluses of materials and equipment which now exist in those departments due to obsolescence and changes in strategic requirements. Similarly, the committee is working with the Department of Munitions and Supply in an effort to set up a procedure for determining and clearing surpluses which may result from time to time from reductions or changes in production programmes.

Mr. STIRLING: There is a little information I have been waiting to ask the minister for. He made a reference to the destroyer programme; he referred to one having been launched and said that the turbine units will be installed this summer, boilers having been installed. Would he tell the committee to what extent the armament, boilers and fittings of various descriptions including the machinery are Canadian made? Will the destroyers be Canadian-built from hull to topmast?

Mr. HOWE: The purpose of undertaking the building of destroyers in Canada was to develop the art of building destroyers here. The intention was that they should be Canadian built in every particular. We have gone into the building of the type of turbines used in destroyers, we have developed engines for them, and we are developing every item of a destroyer. The purpose is also to be able to make repairs here and to increase the fleet. We did it knowing that the cost would be higher than the cost of building the same ships in England. We think the cost is not going to be tremendously higher. The first ship always costs more than repetitive ships. We estimated that the time required would be about one year longer than in the old country, but the indications are that it will not be as much as that—perhaps eight months longer than the Tribals we have had built in the United Kingdom during the war. We are developing the art of building destroyers in this country. As my hon. friend knows very well, a destroyer is a complicated ship. It is more difficult to build than a cruiser, which is a larger ship but less intricate in its arrangements. I think we are introducing a valuable type of knowledge that will be very useful in our future development.

Mr. STIRLING: Does that cover armament as well?

Mr. HOWE: Yes. I think the biggest gun on a destroyer is a 4·7-inch and we are making 4·7-inch guns here. If we are not, we are capable of making them. I am not sure, but I think I am correct in saying that all the armament is made here.

Mr. STIRLING: On the same page the minister refers to salvage operations having been carried on in conjunction with the control of ship repairs, resulting in the recovery of many valuable cargoes. Does that mean that the minister's department has considerable salvage equipment, or that it has let the job to salvage firms?

Mr. HOWE: As my hon. friend knows, we have two or three salvage companies, perhaps more, but each is operating as it likes on a commercial basis. Some two years ago we found that there was perhaps more work than these companies were capable of handling with the equipment in hand, and that they were picking and choosing their work to a considerable extent. Therefore we appointed a director of ship salvage and made arrangements to increase the salvage equipment in the hands of the salvage companies. We also took authority to direct the order in which they would undertake salvage operations. There were at that time valuable cargoes lying on the bottom of the ocean in known locations, and where salvage was possible by the use of additional equipment these cargoes were salvaged and war materials of great value recovered. My reference was to the fact that the government has taken in hand the responsibility for salvage operations, and with good results.

Mr. STIRLING: Do these companies continue to receive the subsidies which they received in the past?

Mr. HOWE: Yes; I would say that they do. Their earnings are limited under the arrangements, but they are guaranteed against loss. There was no subsidy on the Atlantic coast, but there was in the gulf of St. Lawrence.

Mr. STIRLING: And a smaller one on the Pacific.

Mr. HOWE: There is no salvage tug on the Pacific at the moment.

Mr. STIRLING: The other question I wanted to ask the minister had reference to the report on the "Government-Financed Expansion of Industrial Capacity in Canada" which has been tabled. At page 4 there is a reference under War Supplies Limited to Granby Consolidated Mining, Smelting and Power Company Limited, with a commitment total of $200,000, of which only $27,000 had been expended to December 31. Has the total commitment been expended since then? I presume it is for the purchase of copper?

Mr. HOWE: No, that would be a capital commitment. I am not sure just what is involved there, but I can get the information for my hon. friend.

Mr. STIRLING: I wondered whether it was an obligation to purchase copper ore from Copper Mountain.

Mr. HOWE: It refers to Copper Mountain, but if my hon. friend will let his question stand as a notice I will get the information for him to-morrow.

Mr. STIRLING: If the minister would be good enough, would he also say, if he can, whether there is a possibility of increasing the commitment in the near future? The minister knows from my conversations with him the condition of the mine on the top of the mountain.

Mr. HOWE: I am advised by my officer that this is the cost of the plant at Copper Mountain. Does my hon. friend know the operation?

Mr. STIRLING: I do not understand how the government comes into having a commitment with regard to it.

Mr. HOWE: It was to bring in the copper mine. We built the plant and own it as a government facility.

Mr. STIRLING: Perhaps the minister will look into the matter and make a statement later.

Mr. HOWE: Yes, I will do that.

Mr. MacNICOL: Has the government or the minister's department established as yet a policy in reference to the disposal of single-purpose machinery? A great deal of the equipment that has been used in the production of war munitions is single-purpose machinery, heavy castiron machines. I have observed in more than one place a considerable quantity of single-purpose machines stored up, made largely of castiron, and many of them very heavy. I have wondered on more than one occasion whether it would not be advisable just to smash them up and use them as castiron. They never can be used for any other work than what they were made for. It would be uneconomic to try to make anything else with them, and there is not much else that they could make. Since there appears to be a surplus of these machines I have felt that it would be much better to order them smashed up and melted down to make other machines. Has any policy been suggested or established by the board for the disposal of all such single-purpose machines?

Mr. HOWE: A policy has been established for the sale of government machines. A floor price has been established below which they cannot be sold. Quite a number of machines have been surrendered to War Assets Corporation for sale. As a matter of fact, sales of machines are constantly taking place. So far as single-purpose machines are concerned, some have a future and some have not. The corporation is charged with the responsibility of recommending to the government the destruction of machines if a market cannot be found for them. They cannot be sold below a certain base price; in other words, they are not thrown on the bargain counter. If they are not worth the base price they will be reduced to scrap and returned to the smelter.

Mr. MacNICOL: Take a shell machine, for example. I remember very well that following the last war large numbers of shell machines were sledge-hammered and smashed into scrap iron. At the time the price of scrap iron went very low, and the same thing might happen after this war. If either the department or the board determines that so many hundred or so many thousand of these machines cannot be used for any other purpose after the war, would it not be more advantageous to take that surplus and order it destroyed while scrapiron prices are high, so that the scrap may be used to make something required in the prosecution of the war?

Mr. HOWE: Of course it is a bit early to talk about scrapping single-purpose machines now. The demand for shells may increase and the machines may be required for that single purpose. I can assure my hon. friend, however, that no great accumulation of machines will be permitted, but that there will be a sorting out as between those that can be destroyed and those that cannot.

Mr. DOUGLAS (Weyburn): I should like to ask one or two other questions in regard to this synthetic rubber proposition. I do not think the minister really did himself justice in the differentiation he made between public and private ownership of industry; I believe he said a government could erect a factory but it could not always operate one as efficiently as private industry. As a member of the cabinet the minister has had supervision in turn over the Canadian National Railways, the Canadian Broadcasting Corporation and Trans-Canada Air Lines which, if one may take at face value his speech of the other day, intends to broaden rather than constrict its field of public ownership. So that I do not think the minister was on particularly good ground in advancing the argument that a government could not efficiently operate—

Mr. HOWE: I did not say it could not; I said the test was whether it could or not.

Mr. DOUGLAS (Weyburn): That is the test; and where it has been given a fair trial it seems to me the minister himself is one of the men who have been largely responsible for some very efficient administration of government owned enterprises.

I wonder if the minister could explain the set-up with reference to Polymer and its relations with Imperial Oil and Dow Chemical.

Just what is the situation, and what will be the situation after the war? As I understand it, Imperial Oil are manufacturing butadiene from petroleum, and for that purpose they have a pipeline running into Sarnia. In the event of the government deciding to continue the manufacture of synthetic rubber after the war, or in the event of the government deciding to sell Polymer, what would be the position of Imperial Oil? Would the fact that they have this oil-line put them in a preferred position? Would they be in the position that since they have the only pipeline supplying the petroleum out of which they make butadiene, they alone could buy the assets of Polymer, or they alone could supply or refuse to supply any other company that bought the synthetic rubber plant at Sarnia? It seems to me the fear that is in the mind of many of us, and that the minister could help to clear up, though he has not done so yet, is that the Canadian people have put $48,000,000 into a splendid piece of engineering, but at the same time Imperial Oil, because of their preferred position, because they have a pipeline in there and because of the fact that they will be supplying the butadiene gas to make the synthetic rubber, will be in a preferred position after the war and will have a controlling voice in the industry.

Then the minister said that this Polymer plant is operating for the good of the Canadian people and for the good of all the rubber companies, large and small. Could the minister give the committee some information as to how buna-S, which I understand is the term for the crude rubber, has been distributed as between the different rubber companies in Canada of which, if I am correctly informed, there are some fifty or sixty? Just how has it been distributed; how have the small companies benefited as compared with the larger companies? As my colleague pointed out this afternoon, the president of Polymer is the general manager of Goodyear Tire and Rubber; the assistant rubber controller is vice-president of the Dominion Rubber company, and so far as we know these men still have their business connections. Does that mean these rubber companies are in a preferred position? Are they in a position to get a larger share of the raw rubber than are the smaller companies which are not so fortunately situated?

The third question I wanted to ask the minister was in reference to a statement he made the other day, I think in answer to the hon. member for North Battleford. He compared the cost of producing alcohol from grain and from petroleum, and he said that producing it from grain cost about three and a half times as much. As I understand it, when the synthetic rubber plant at Sarnia was getting under way, in the initial stages they did produce synthetic rubber from grain alcohol until they got the more elaborate process set up for producing butadiene from petroleum. Would the minister have any figures, not as to the cost of producing grain alcohol, but as to the cost of the finished synthetic rubber produced from grain alcohol as compared with synthetic rubber produced from petroleum? The reason why I ask that question is that I think the minister has given the figure for producing grain alcohol, but he has not given it for the rubber. I have been surprised to find the extent to which grain alcohol is being produced in the United States, and apparently produced economically. In the Montreal *Gazette* of March 24 of this year I see the following news item:

> Washington, March 23. The United States war production board has under consideration twenty-eight proposals for expanded production of industrial alcohol, a senate agriculture subcommittee was advised to-day.
>
> Doctor Walter G. Whitman, assistant director of the board's chemicals bureau, submitted details of the proposals, including type of alcohol to be produced, company and location, anticipated annual production and total estimated costs.
>
> The alcohol would be produced from several sources—petroleum, sulphite liquor, wood waste, grains, sweet potatoes and other materials.

Then it goes on:

> Grain proposals outnumber all others, with twelve in all.

In other words, some twelve out of the twenty-eight dealt with the manufacture of alcohol from grain. Then the article proceeds to give the list of plants, the cost of erecting them, and their location, which I do not think is of interest to the committee. The point is that in the United States out of twenty-eight plants they propose to erect twelve for the production of alcohol from grain; and it seems to me that if they can do so economically in the United States, and if they find it beneficial to do so, the minister has not given a satisfactory explanation as to why alcohol cannot be produced from grain in western Canada; not on the basis of $1.40, but produced in western Canada where low-grade wheat can be bought on the prairies for a much lower figure. I would ask the minister those three questions.

Mr. HOWE: In asking his first question about the preferred position of Imperial Oil, my hon. friend is quite mistaken when he says that Imperial Oil sells butadiene to the Polymer corporation. Imperial Oil sells petroleum to the Polymer corporation. It is made into butadiene in the Polymer plant, the technical

management of which is under a subsidiary of Imperial Oil. But it is decidedly separate; the operation is for and on account of, and with equipment owned by the Polymer corporation.

Mr. DOUGLAS (Weyburn): Let me get that straight. The minister means that the petroleum is turned into butadiene by a subsidiary of Imperial, working on a management-fee basis?

Mr. HOWE: Yes; that is correct.

Mr. DOUGLAS (Weyburn): And it is produced by Imperial Oil?

Mr. HOWE: No; it is not produced by Imperial Oil; it is produced by the Polymer corporation. If I manage a plant, I do not produce it; the plant produces it.

Mr. DOUGLAS (Weyburn): The personnel are of Imperial Oil.

Mr. HOWE: The personnel is, yes. The personnel are Polymer, managed by Imperial Oil. But supposing the government owns the Ottawa Car and Foundry; they place a management contract with myself, personally, to manage that plant. The plant is still owned by the crown, and the product is still that of the crown. I simply handle the mechanics, and turn out the product. And that applies at Sarnia. What I am saying is that we have no business dealings with Imperial Oil, so far as the production of butadiene is concerned.

Mr. DOUGLAS (Weyburn): Except to buy petroleum?

Mr. HOWE: We buy petroleum from the plant in the first instance. Imperial Oil is in the business of selling petroleum and petroleum products. I can hardly imagine they would discriminate against the Polymer corporation, any more than they would discriminate against anyone else in Canada. I say they are in no preferred position, so far as any arrangement the government may make with the Polymer plant.

Mr. DOUGLAS (Weyburn): Has anyone else a pipeline over there?

Mr. HOWE: There are only two pipelines into Canada, so far as that goes. There is the pipeline from Portland to Montreal, and to Sarnia from the mid-continent fields of the United States. Those two pipelines come into Canada. But if Imperial Oil refused to sell to Polymer, we could certainly buy petroleum from other sources.

My hon. friend has a very curious idea of business in Canada, if he thinks that one of our big corporations would refuse to sell to one and would sell to another. That process is unthinkable. Therefore I think we can say that Imperial Oil have no proprietary interests in any way in the Polymer plant.

The second question was as to how rubber has been distributed among the manufacturers. Every rubber company I know of, either large or small, has been and is operating at full capacity. And every rubber company I know of in Canada that is manufacturing war goods has been supplied with all the raw material it can convert. The actual distribution of rubber, both the importing of rubber, the stock-piling of it, and the marketing of buna-S rubber, has been handled by a government corporation known as Fairmont Company Limited, which has been responsible for that operation since the period of a scarcity of rubber began. I believe it has handled that situation with great success.

Mr. DOUGLAS (Weyburn): That is mostly natural rubber that they are distributing.

Mr. HOWE: In the early days. To-day they are using almost entirely synthetic rubber. There is a small stock-pile of natural rubber which is being very carefully guarded for such uses as may require natural rather than synthetic rubber.

Mr. DOUGLAS (Weyburn): Has the minister any information with respect to synthetic rubber, since it came into production?

Mr. HOWE: It has been distributed in Canada. Everyone in Canada has all he can use, all that the capacity of his plant will permit him to use. We never have had a period at any time when we have not been able to supply all the raw rubber required for war needs—and of course I am speaking only of war needs; not peace-time needs—that our plants could fabricate.

With reference to the question in connection with grain alcohol, I may say that I discussed that matter thoroughly the other day. If my hon. friend can tell me how to get more than two gallons of alcohol out of a bushel of wheat, then he will have an argument. But until then, I do not think he has any real argument.

Mr. DOUGLAS (Weyburn): Has the minister any information as to why they are using it in the United States?

Mr. HOWE: They are using it because it can be brought in much more quickly than the butadiene made from petroleum. They have been using it, just as we have been using it, because the butadiene base of petroleum was not available. It is available here now. It is becoming available in the United States, and there will be a changeover.

Progress reported.

SUPPLY

INCOME TAX—EXTENSION OF TIME FOR FINAL PAYMENT—KISKA FORCE

Mr. D. C. ABBOTT (Parliamentary Assistant to the Minister of Finance) moved that the house go into committee of supply.

Mr. S. H. KNOWLES (Winnipeg North Centre): Mr. Speaker, last Monday night at eleven o'clock I was speaking in the debate on the motion to go into supply, and was dealing with a matter of concern to many people. I had hoped that when I had an opportunity to conclude my remarks I would be able to persuade the government that it should meet the request I was making.

I rise to-night to express pleasure that my speech has been taken away from me, by the announcement made at three o'clock this afternoon by the Minister of National Revenue (Mr. Gibson). As hon. members will recall, the point I made last Monday night was that something should be done about the heavy burden facing people in connection with paying the balance of their income tax which would fall due on April 30. I am sure the country generally will be pleased with the decision finally made by the government in this matter, as announced this afternoon by the minister. I wish to express my pleasure that the government saw fit, in connection with this postponement of the final date, to provide that no interest will be chargeable on the balance due.

While I am on my feet I should like to refer to another matter which comes under the heading of the payment of last year's income tax. I shall not take much time, because the matter has been discussed before on two or three occasions. I earnestly hope the department of government responsible will see to it that an announcement is made soon with respect to the income tax status of the men of the 13th Canadian infantry brigade who went to Kiska last year. The Minister of National Defence (Mr. Ralston), who for the moment, is also acting Minister of Finance, perhaps might confer with himself in the matter. He has stated on two or three occasions that an announcement would be made shortly. I would point out to the minister and the government that the men affected, as are other taxpayers, are wrestling with the making out of their returns. Those returns must be completed and filed by the end of April, even though payment may be deferred. I would hope that the announcement we have been looking for might be made at an early date.

It will be noticed that I am not arguing the case to-night. I am going so far as to assume that when the announcement is made it will be favourable, and that the government will decide that these men are to be considered as having gone outside the western hemisphere so far as income taxes are concerned. I earnestly hope that such an announcement will be made before the house rises at the end of the week and that the men who served at Kiska will be told that they do not have to pay income tax for the period during which they were engaged on that expedition.

AGRICULTURAL MARKETING POLICY

Mr. T. C. DOUGLAS (Weyburn): Mr. Speaker, within the next month the farmers of Canada, particularly those of western Canada, will be on the land. It is needless to say that this would be a most opportune time to have a clear statement made by the government with reference to its agricultural marketing policy for 1944. The year which has just passed, 1943, showed a slight falling off in acreage and a material drop in the amount of cereal crops produced in Canada. I should like to direct attention to some figures which appeared in the dominion bureau of statistics crop report issued on January 21, 1944, as follows:

	1942 bushels	1943 bushels
Wheat—		
All Canada	556,134,000	293,660,000
Prairie provinces.	528,450,000	277,000,000
Oats	652,000,000	482,000,000
Barley	259,156,000	215,562,000
Rye	24,742,000	7,143,000
Flax seed	14,992,000	17,911,000

With the exception of flax, which shows an increase of three million bushels over the 1942 crop year, all other cereal grains show a serious decline in production. Part of this was on account of the greatly reduced per unit production.

Mr. GARDINER: Not in marketing.

Mr. DOUGLAS (Weyburn): As I say, part of this was owing to the greatly reduced per unit production, but it was also in part on account of the reduced acreage.

The total acreages for field crops were as follows:

1942	60,809,200 acres
1943	60,345,600 acres

There was a drop of nearly one half million acres cultivated to field crops. Despite the fact that the value of cereal grains per bushel has greatly increased over last year, the aggregate return to the farmer is down slightly owing to the greatly reduced production. The total gross farm value of all field crops produced was $1,179,073,000 in 1942 as compared with $1,104,065,000 in 1943. It is interesting

to see how this works out with reference to the different crops. The aggregate value of field crops for the two years is as follows:

	1942	1943
Wheat	$385,133,000	$298,191,000
Oats	253,620,000	238,728,000
Barley	119,457,000	132,413,000
Rye	11,760,000	5,915,000
Flax	29,912,000	39,379,000

The *Economic Annalist* issued by the Department of Agriculture shows that the index commodity figure for animal products is slightly above parity, while the index commodity figure for field products is still considerably below parity. The field products index commodity figure is 91·7, taking 1926 as the base of 100, whereas the farm cost of living, with a 1935-39 base of 100, is 121·9. The index commodity figure for all farm produce, including animal products which is 126·1, is still only 104·6, which is still somewhat below parity for the price which is paid to the farm population of the Dominion of Canada. Therefore, I desire to move, seconded by the hon. member for Melfort (Mr. Wright):

That all the words after "that" be struck out and the following substituted therefor:

"This house desires to record its opinion that the agricultural marketing policy of the government is detrimental to the public interest, and that steps should be taken to bring it into conformity with the needs of the farming population."

In the few moments I have at my disposal to-night I wish to outline some of the steps which we in this group think should be taken to bring the government's agricultural marketing policy in line with the needs of the farming population of Canada. I am going to confine myself to dealing with grain crops, letting some of my colleagues deal with other aspects of agriculture. I should like to suggest five steps which I think should be taken with reference to the marketing of cereal crops.

The first has to do with grain deliveries. Almost all western members will remember that last fall the farmers living on branch lines experienced great difficulty in delivering their crop. Parts of my constituency off the main line were as late as the first week in December. At that time many of them had been able to deliver less than five bushels per acre of their basic crop. I wired the wheat board and they explained that they were taking most of the wheat off the main line because they had to get it to the head of the lakes before the shipping season was closed. One could not argue against that, but it still did not help the people on the branch lines who had wheat in their granaries or piled in their back yards and were not able to dispose of it while their obligations were piling up at the stores, to their doctors, in the form of taxes to the municipalities and in the way of threshing bills.

The problem of financing has been quite serious, especially in the grain districts. Where farmers were doing a fair percentage of mixed farming they were able to dispose of some of their live stock in order to pay their threshing bills and meet other obligations. They were thus able to wait until such time as they could deliver their grain. But in other districts the farmers were principally grain farmers. In the southern part of the province and in some parts of my constituency the farmers are almost exclusively wheat farmers. In the northern part of the province, in the constituency of the hon. member for Melfort where they produce large quantities of coarse grains, the fact that they could not dispose of these coarse grains or their wheat meant that they had all the expense of taking off the crop and no ready cash with which to meet their many obligations. To deal with that situation we suggest that two things should be done; first, that the government should still give some consideration to a policy which has been followed with success in the United States, of giving the farmer a cash advance for wheat stored on the farm; second, that the government should pay storage, as they did once before, of the same amount per bushel which is paid to line elevator companies, for storing wheat and coarse grains on the farm.

I remember, in the year when the government did pay storage, a very successful farmer in my constituency built a large granary, with a cement floor, a cement wall rising three or four feet around it, a fine frame top and shingled roof. He built it with the idea that he would be able to store his wheat throughout the war period and that, if he were not able to deliver it, at least he could keep it on his farm and, if he stored the wheat over a period of years, the storage charges, which the government were then paying, would make a substantial contribution towards paying the cost of putting up that granary. What happened? The government discontinued the storage payments, and the result is that this man is to-day storing wheat in a first-class granary which is just as safe and just as well kept as if it were in the line elevator two miles down the road; but the difference is that for the wheat in the line elevator the company is drawing two-thirds of a cent per month, or eight cents a year, storage charges from the government of Canada, and the man who built this granary, and has served the country just as well by storing the wheat for the country's convenience, finds he gets no storage payment whatsoever.

Mr. GARDINER: When did he build the granary?

Mr. MACKENZIE (Vancouver Centre): Mr. Speaker, I wish to rise to a point of order. I have just got for the first time a copy of the hon. gentleman's amendment. It reads as follows:

This house desires to record its opinion that the agricultural marketing policy of the government is detrimental to the public interest, and that steps should be taken to bring it into conformity with the needs of the farming population.

I direct Your Honour's attention to page five of the estimates, items 22, 23, 24, 25, 26, 27, and specifically, 28, "marketing of agricultural products, including temporary appointments that may be required to be made. . . ." I suggest that, in consonance with a previous ruling of Your Honour during this session, this amendment is out of order.

Mr. DOUGLAS (Weyburn): Before Your Honour gives a ruling, may I point out, first of all, that this amendment is almost word for word identical with a motion I moved last year, on March 30, 1943, which was also challenged and which was accepted by Your Honour. May I point out in the second place that there is no single estimate which covers the whole field of the government's agricultural marketing policy. If the interpretation which the Minister of Pensions and National Health (Mr. Mackenzie), is now attempting to place on that ruling were accepted, there is no question which by any stretch of the imagination could be discussed by any hon. member on a motion to go into supply.

Mr. SPEAKER: Following the statement made by the hon. member, we have had an illustration to-night from the hon. member for Winnipeg North Centre (Mr. Knowles) of an item which can be discussed on a motion for going into supply. I can recall many other items of the kind. I have already given a ruling with regard to motions which can be and will be brought up in the house for discussion; and when it is pointed out to me that in the estimates, page five, Nos. 22, 23, 24, 25, 26, and 27 all deal with agriculture and marketing service, and especially No. 28, "marketing of agricultural products, including temporary appointments that may be required to be made, notwithstanding anything contained in the Civil Service Act, the amount available for such appointments not to exceed $15,000", I find that the amendment which is proposed: "This house desires to record its opinion that the agricultural marketing policy . . ." are exactly the words used in the item I have just quoted, and fall within the category of those amendments which I have already ruled out of order on the motion that the house go into committee of supply. I therefore must rule this amendment out of order.

Mr. DOUGLAS (Weyburn): Mr. Speaker, in view of the fact that I believe such a ruling will so greatly restrict private members in this house as to make it impossible for them to express any opinion they have, I must regretfully appeal from your decision.

And five hon. members having risen:

Mr. SPEAKER put the question as follows:

The question is that I do now leave the chair for the house to resolve itself into committee of supply, to which Mr. Douglas (Weyburn) moves in amendment:

"That all the words after 'that' be struck out and the following substituted therefor:

"This house desires to record its opinion that the agricultural marketing policy of the government is detrimental to the public interest, and that steps should be taken to bring it into conformity with the needs of the farming population."

I have ruled the amendment out of order on the ground that it falls within the main estimates under items 22 to 28 inclusive, which will be subjects for discussion when these items are before the house.

The house divided on the question: Shall the Speaker's decision be sustained? And the decision of the chair was sustained on the following division:

YEAS

Messrs:

Abbott	McCulloch
Authier	Macdonald (Kingston City)
Bertrand (Prescott)	McIlraith
Blanchette	Mackenzie (Vancouver Centre)
Bonnier	McLarty
Bradette	McLean (Simcoe East)
Chevrier	Macmillan
Cloutier	McNiven (Regina City)
Coté	Marier
Crerar	Martin
Cruickshank	Matthews
Dubois	Maybank
Dupuis	Pottier
Edwards	Purdy
Eudes	Ralston
Evans	Rhéaume
Farquhar	Rickard
Fournier (Hull)	Roebuck
Gardiner	Ross (Moose Jaw)
Gibson	Sissons
Golding	Soper
Hanson (Skeena)	Taylor
Howe	Tremblay
Isnor	Tucker
Jean	Turner
Kinley	Ward
Laflamme	Warren
LaFleche	Weir—59.
Lafontaine	
McCann	
McCuaig	

NAYS

Messrs:

Adamson	Johnston (Bow River)
Bence	Knowles
Black (Cumberland)	MacKinnon (Kootenay East)
Bryce	Noseworthy
Cardiff	O'Brien
Casselman (Grenville-Dundas)	Perley
Castleden	Quelch
Church	Ross (St. Paul's)
Coldwell	Shaw
Douglas (Weyburn)	Stirling
Gillis	Stokes
Hansell	Wright—25.
Harris (Danforth)	

Mr. GRAYDON: I was paired with the right hon. the Prime Minister (Mr. King). Had I voted I would have voted against Your Honour's ruling.

Mr. SENN: I was paired with the hon. member for Hamilton East (Mr. Ross). Had I voted I would have voted against Your Honour's ruling.

On motion of Mr. Douglas (Weyburn) the debate was adjourned.

On motion of Mr. Crerar the house adjourned at 11.15 p.m.

Tuesday, March 28, 1944

The house met at three o'clock.

STANDING COMMITTEES

PUBLIC ACCOUNTS—CHANGE OF PERSONNEL

Right Hon. W. L. MACKENZIE KING (Prime Minister) moved:

That the name of Mr. Bence be substituted for that of Mr. Graydon on the standing committee on public accounts.

Motion agreed to.

HOUSING

COMMUNITY PLANNING AND RECONSTRUCTION

Right Hon. W. L. MACKENZIE KING (Prime Minister): I wish to table the final report of the subcommittee on housing and community planning of the advisory committee on reconstruction.

Mr. NICHOLSON: May I ask the Prime Minister whether consideration could be given to having this report referred to a special committee of the house? I might mention that in 1935 a committee of the house was set up and brought in a report on housing which has been very valuable.

Mr. MACKENZIE KING: I shall be glad to see that consideration is given to the question and give my hon. friend a further reply later.

INCOME TAX

STATUS OF MEMBERS OF CANADIAN KISKA FORCE

Hon. C. W. G. GIBSON (Minister of National Revenue): Various members of the house have made representations concerning the tax status of members of the Canadian Kiska force. I have much pleasure in informing the house that on March 17, His Excellency the Governor General in Council approved an order in council under the War Measures Act that the members of the expeditionary force sent from Canada in 1943 to the island of Kiska in the Pacific ocean be dealt with as provided for in section 4, paragraphs (t) and (v) of the Income War Tax Act, and for the purposes of the said section the island of Kiska shall be deemed to be outside the western hemisphere.

FARM LOAN BOARD

RESIGNATION AND REAPPOINTMENT OF J. L. DOUGANS

Mr. D. C. ABBOTT (Parliamentary Assistant to the Minister of Finance): I beg leave to present parliamentary return, reference 150, asked for by the hon. member for Mackenzie (Mr. Nicholson), for a copy of all letters, telegrams and other documents with respect to the resignation and reappointment of J. L. Dougans.

While there is no objection to the production of the correspondence in this case, nevertheless it is not considered generally in the public interest to produce inter-office correspondence, and the production in this case is not to be taken as a precedent.

It is to be noted that the Canadian farm loan board has been constituted by parliament as a body corporate and politic and is vested with full control over the employment and dismissal of all its employees other than chief executive officers whose appointments are subject to the approval of the governor in council. The board, moreover, is charged with the responsibility of carrying on its operations on a self-sustaining financial basis and does not come to parliament for an appropriation of funds for administrative expenses.

BEEF CATTLE

INQUIRY AS TO REMOVAL OF EMBARGO ON EXPORT TO UNITED STATES

On the orders of the day:

Mr. M. C. SENN (Haldimand): Having regard to the recent announcement by the Department of Agriculture officials that arrangements have been made to export three million pounds of poultry, and its beneficial

effect on the Canadian market, will the government consider similar treatment to overcome the congested and emergent situation in the cattle market by removing the embargo against the export of beef cattle to the United States?

Mr. SPEAKER: I should think this is a question that should be placed on the order paper for a reply by the minister.

Mr. SENN: Mr. Speaker, it is an emergent situation. The congestion is bad.

Mr. SPEAKER: The minister is entitled to some notice in order that he may be able to reply to the hon. member.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Monday, March 27, consideration in committee of a resolution to grant to His Majesty certain sums of money for the carrying out of measures consequent upon the existence of a state of war—Mr. Ilsley—Mr. McCann in the chair.

DEPARTMENT OF MUNITIONS AND SUPPLY

Mr. CHURCH: It is not my desire to delay the proceedings of the committee but may I say there are two or three important matters which have come before the house during the past year. The ministry have made certain proposals with regard to two or three matters in which I am interested, namely, coal, housing, shipbuilding and one or two others relating to the city of Toronto. The minister made a long statement with regard to the coal question. It is now proposed to appoint another royal commission to go into the whole question of our fuel resources and what is to be done during the remainder of the war and long after the war.

This is not a new question or a new topic. The question of a national fuel supply has been raised on other occasions. I hold in my hand a volume of *Hansard* for the year 1923. During that year a debate of two or three days' duration took place on a resolution regarding a national coal supply. I brought that resolution before the house on March 19, 1943. In it I asked that the fuel requirements of Canada should be obtained as far as possible from the British empire, from Alberta, the maritimes and Wales. During the debate it was shown that we were sending $50,000,000 a year to Pennsylvania to obtain anthracite coal from the mines there and in that way we were supporting those mines. The proposal was that Canada should establish a system of bonuses, subventions and subsidies in order that our coal producing provinces may be able to provide us with coal, thereby relieving us from becoming absolutely dependent on a foreign supply of coal from Pennsylvania and other coal producing areas of the United States.

The resolution I proposed at that time was not referred to a royal commission to waste time but was sent to the standing committee on mines and resources. I do not think that committee has held a meeting since the war started. Surely with all the information we have in connection with the problem of a national fuel supply we do not need to send this question to a royal commission. We were fortunate last winter in that we did not have one of the winters that we have experienced in the past when the Canadian people had to fire their furnaces eight or nine months in the year. I remember a few years ago we had to put coal in our furnaces right up to the end of May. There were many other winters just as bad. The government should have formulated a policy long ago. We have heard of meetings with the provinces and the municipalities. As a result of my resolution the government of the day, three or four years late, instituted a policy whereby they paid subventions and subsidies on coal from Nova Scotia to the central provinces. This coal was moved partly by rail and water and all water to the head of the lakes. Hundreds of thousands of tons have been moved by that route in years gone by. Subsidies of a dollar a ton and sometimes more than that, and occasionally less than that, have been paid through the railways by the country.

The production of coal in Alberta is only in its infancy. There was a proposal that we should utilize pipelines for oil and all these things. That started away back in 1923. Little or nothing has been done about it. Inasmuch as it is the poor people who suffer I do hope that something will be done. I should like to refer to the larger cities, and more particularly the city of Toronto. Some $30,000,000 have been spent on the whole waterfront and in the vicinity of Ashbridges Bay to establish facilities for handling coal in that industrial district. Nearly five or six hundred thousand tons of coal are piled in the eastern end of the waterfront in a year. That has helped greatly to relieve the coal situation in that district, but the supply is dwindling. Owing to the strikes and the situation which exists in the United States and the demands of the war we do not know what is going to happen. We do not know whether we are going to have any supply for next winter owing to the changing conditions in that country and the changing war. Where are we to get our substitutes? The other evening the minister referred to a pile of

wood at the head of the lakes. We should like to get some of that wood in Toronto. We understand that during the coming summer barges are going to move that wood to some of the ports down here.

The fuel situation is a world situation. So far as Canada is concerned it depends largely on transportation and the labour situation. I am not going to say very much more on this question but I do hope that some substitutes will be found.

In 1923 I advocated a system of a national hydro policy for this country. It was shown in the returns that were brought down at that time that we had a potential horse-power of 42,000,000 with only about 7,000,000 horse-power developed. Part of it was seasonal, used only in the summer time. Only one sixth or 7,000,000 horse-power had actually been developed. It was shown then that we had not been progressive enough as a country. There should be a further utilization of our hydro resources for heating purposes where possible. There should be a national hydro policy. On my last visit to British Columbia in 1927 I was very much surprised to find that the rich natural resources of waterpower that that province enjoys were not utilized in that way to the extent that they should be in public ownership thereof. We have to do something because before many months are past our fuel supplies will have been exhausted. Many cities and towns are now living from hand to mouth. The control board has brought about more confusion than relief. Delivery is a very important factor to many small dealers in the cities and towns of this country. With the labour situation as it is, particularly in the mines, and with the income taxes which have been imposed on mine workers both here and in the old country, it is difficult for some of the mines I know to secure the proper help. What are we going to do next winter? We are not through this winter yet; we seem to be headed for a belated cold spell during the latter part of March and April, which are the most dangerous months for many of the diseases that prevail in this country, such as pneumonia and so on. There is not a day to be lost in getting ready for next fall. The appointment of a royal commission has been announced, but you might just as well save your money. I see no reason why the committee on mines, forests and waters should not have been meeting throughout the war dealing with questions of this kind. The fuel situation has been made a political football; it has been discussed by three or four committees and commissions which have called witnesses and made reports. One of these was the select committee on reconstruction and security after the war, but I know of no reconstruction which has been brought about in regard to the national fuel policy as a result of the work of these committees. We have the committee on mines; we have three or four departments or branches of departments all interested in the same questions, but nothing seems to be done. I do urge upon the house that this is the most important question we have to face in Canada, especially in connection with the working classes. I do not know how they came through last winter, and no one knows what is going to happen by next September, with our supplies of coal from the United States being curtailed all the time.

Now I should like to say a word with regard to the housing situation. I admit that any discussion of this question is limited to item 3 of the minister's estimates, which deals with housing development in war time, and the amount of which has been reduced to $11,000,000. I would remind hon. members, however, that last Sunday evening the Prime Minister of Great Britain set a goal of 500,000 prefabricated houses for the returned soldiers and working people of his country, and I imagine that actually nearly a million homes will be required. Why are we not doing something about housing in a practical way? We appointed a rent controller, but he has simply tied up real estate in a worse knot than ever, with the result that now no one in the cities and towns wants to own real estate. With all the artificial burdens and barriers placed on home ownership it amounts practically to the confiscation of real estate. According to the assessment commissioner of Toronto, when war broke out over sixty per cent of the people of that city owned their own homes. I believe the latest figures indicate that at a conservative estimate more than one hundred thousand people have been driven from their small homes into apartments. When the war is over these people will want to find small houses in which they may live with their wives and families. Many of these houses will be required by returned soldiers. I understand that according to a recent survey in Toronto some sixteen thousand families will have to find new homes on May 1, and many of them are the families of soldiers who are now overseas. I have some of them in my own constituency, which was referred to in the report on housing prepared under the direction of Lieutenant-Governor Bruce away back in 1934.

I believe the Prime Minister of Great Britain has said on many occasions, in connection with this housing problem, that homes

built during the war should be of such style and construction, and contain such appliances and improvements, as will enable them to fit into the scheme of things when the war is over. Away back on January 24, 1935, I moved a resolution in this house regarding the housing situation and the construction industry. It brought about a very thorough investigation by a committee of the house which sat for some five months, heard witnesses and made a report to parliament. This is the resolution I moved:

> That in the opinion of this house Canada should inaugurate at once a national housing, building and reconstruction policy adapted to its circumstances, and that such a policy is an economic and social necessity and in the best interests of the people of our country.

The debate on that resolution lasted well into the evening, when Mr. Bennett, who was then prime minister, proposed the appointment of a select committee to go into the question. That committee recommended the construction of a large number of small houses. I was a member of the committee; we heard witnesses from all over the world, and the report is just as applicable to-day as it was then. When the present government came in they adopted the suggestion I had made in the committee, that instead of the government creating a large housing department the work should be done by private industry and loans made through the banks. I want to give hon. gentlemen opposite a great deal of credit for what has been done in that connection. Some $83,000,000 has been invested in small homes, with the banks loaning the money and the loans guaranteed by the government. These small homes were well constructed on standard plans at low cost; you can see them all over the city of Toronto now, and they are a credit to the present government and to Mr. Bennett, who supported the scheme.

I wish to help the minister; I do not want to sit here as a private member of the opposition and raise unnecessary objections, because I know what this war business means. I have seen two great wars, and I know the difficulty of carrying on, but I do say that in connection with the housing situation we have had too many people taking a hand, too many committees, too much red tape and too few houses being built. We should get down to some system along the lines suggested by Mr. Churchill the other evening, under which we will provide houses for soldiers and civilians. I would not say twenty-five thousand houses in the Toronto district would be enough; I do not think that number would meet the situation at all, but I think we should do something before we adjourn for Easter, because on May 1 a great many people will be put out by the bailiff. People do not want to own houses to-day, with all the controls that are in existence. You cannot get enough revenue to pay the taxes and interest on the investment, let alone the depreciation, so you make nothing out of the property. In many cases real estate has become a burden because of excessive taxation.

We will have to get down to brass tacks and decide three things in regard to housing and reconstruction. First, what is Canada going to do to see that the industries of this country furnish a large share of the building materials and supplies which Britain will need for the manufacture of these half a million prefabricated homes proposed by Prime Minister Churchill last Sunday evening? We will have to come to a decision in regard to tariffs. What is to become of preferential trade within the empire; what is to become of favoured nation treaties? We have the cart before the horse in appointing these committees; we have to solve these other problems first. Are we going to get the large share we should get in connection with the construction of these homes in the old country and, if so, how is it going to be done? I say to my hon. friends to the left that they have to give the Conservative party credit for a great many things which have been done in the city of Toronto, though of course the Liberals also and others were equally active in public ownership there. Toronto was the pioneer and leader in many of these advances; by its guaranteeing of bonds it financed seventy-five per cent of the initial hydro cheap light, power and transportation programme under which the city went into the building of roads outside the city, purchased the street car lines, gave an improved water supply, developed a fine harbour and provided facilities so that coal could be brought from lake Ontario and lake Erie ports, and in fact right to Mr. Baldwin's own plant in Ashbridge's bay from Swansea, Wales, in 1915-16. During that period many services in transportation were extended to the counties of Ontario and Peel, where my hon. leader lives, by purchase of the radials and by new buses; in fact Toronto took the lead in supplying transportation and other services through the Toronto Transportation commission throughout the area.

What has been done there? We have a housing situation, a coal situation, and a situation respecting improved roads. I do hope something will be done about it. Sometimes the committee on reconstruction seems to be away up in the clouds. It seems never to get down to terra firma. It never gets down to the ground to discuss how houses are to be built so as to house these 16,000 people who are to be out of their homes on

the first of May. Nothing is being done to provide for those among them who may be soldiers.

Sometimes it is and sometimes it is not advisable to criticize the government of the day. But it is a function and a duty of the opposition to criticize, and it is certainly a duty to criticize when we find that when faced with this situation the government does not do anything. We shall have to decide about these problems before very long. So far the government has put the cart before the horse in what it has done. However, this coal and housing question is a world problem.

There is one other matter to which I should like to refer. Some hon. members seem to be able to discuss civil aviation, while others are not allowed to do so. The whole field of civil aviation and its proper solution should be discussed. I believe the leader of the opposition deserved a great deal of credit for his decision that the opposition should give thorough study to the matter before coming to any definite conclusion. I understand an agreement has been reached over parliament's head, as to both domestic and international aviation. For twenty years I have studied the matter, and I believe that before the imperial conference is held some policy should be decided. I shall not discuss it now, because no doubt an opportunity will be given later. But I do believe there should be a discussion before the imperial conference is held. The high court of parliament is meeting, and we must have something to say about it. There was a statement by the prime minister on April 2, 1943, which, in effect, is the gist of the proposals of the present minister on civil aviation with respect to domestic and international affairs. I believe at some other time we should have an opportunity to discuss this matter, and a time should be set aside for the purpose. We should go into all aspects of it, because it is a very involved question. I remember at the close of the last war discussing it with the late Colonel Barker, V.C., and Sir Frederick Handley Page, who came to our city. More than twenty years passed between the two wars; Canada left it to private initiative and forgot all about it. In my view something should be done about it. I do not see why my friends to the left should be permitted to discuss a matter of this kind, while others have to wait until a later time.

A large shipbuilding industry was brought to our city in 1917. At that time I was one of the heads of the harbour development. I remember discussing with the late Mr. Hazen, then minister of marine and fisheries, the matter of shipbuilding in Toronto. At that time a large number of wooden ships were built. One of those ships was of about 9,000 tons. I hope the minister will do something so that wooden ships may be built on the great lakes. The government has spent about $125,000,000 on the deepening of the Welland canal and the improvement of inland waterways in Canada. In view of the coal situation, and many other matters of that kind, I believe the time has come when some of these plants should be converted to peace-time plants, and that the government should consider establishing a system whereby wooden ships would be built to carry the traffic on the inland waterways and coastal traffic along the Atlantic coast after the war.

In 1917 one of those ships was named after me, but unfortunately in 1939 it was sunk on the Atlantic by the Germans three or four days after it put to sea, after the Athenia was lost. I am not much good at having things named after me, because when I was head of the municipality and the Toronto Transportation commission was started to take over the street railway, it was decided that they be called the Toronto Civic Lines. But after the matter was considered I told them they had better not use that name, because sometimes they might be called Tommy Church's lines—which they were, more or less, I may say.

But I do say to the government that all along the great lakes it should get ready for the close of the war, and have these shipbuilding industries established, if we are to be ready for the great trade which will flow to this country after the war by means of water-borne traffic and shipment by rail.

These are the only suggestions I have, and I hope the minister will consider some of them. I should like to see something of a practical nature done immediately along these lines before the end of the war.

Mr. GRAYDON: Before the item carries there is one matter I should like to bring to the attention of the minister. This arose from the debate which took place just before the recess yesterday, in which the hon. member for Yukon took part. He is out of Ottawa this afternoon on important parliamentary business, and has asked that I draw the attention of the minister to an item which deals with a matter often discussed, namely the Canol project.

It would seem that some of the ministers are not completely informed at the moment respecting certain details. For this reason I draw to the attention of the minister an item which appeared in the *Alaska Weekly*, published at Seattle, Washington, on Friday,

March 17, 1944, which, I believe, throws some light on the matter under discussion. This item, under an Ottawa dateline, states:

A vast bloc of territory in the Canadian northwest, including all the Yukon Territories comprising nearly 1,000,000 square miles, has been set aside as an oil reserve for exploration and drilling exclusively by the United States War Department for the duration of the war.

This has been disclosed in official documents relating to the Canol project and other military developments involving United States expenditures in northern Canada.

This, I think, is the important point in the dispatch, and the one concerning which the hon. member for Yukon expressed more than usual interest:

Half of all oil discovered will become the property of the Canadian government within six months of the end of the war.

Nominee of the United States Army for exploration and drilling of oil wells at U.S. expense in connection with Canol has been Imperial Oil Company Limited, which already held leases around Norman Wells area on the Mackenzie river.

The U.S. contract with Imperial Oil was declared by the Truman committee of the U.S. Senate to be improvident, and it is being renegotiated.

The item goes on to deal with other matters. I believe it brings to the attention of the committee some information in addition to that which appears in the *Votes and Proceedings* of Friday, January 28, where we find mention of an exchange of notes between Canada and the United States, constituting an agreement for the construction of a pipeline and refinery in the Yukon Territories, as well as the subsequent exchange of notes between the two countries for the establishment of an oil supply line from Skagway to White Horse. I bring this to the attention of the minister at the instance of the hon. member for Yukon who, because of the business I have mentioned, is unable to speak to the committee at this appropriate time.

Mr. WEIR: I should like to refer to one matter which I do not think has been discussed up to now. I do not see any place where it might properly be discussed later. I refer to the distribution of lumber in the western provinces. It has been brought to my attention, and I have observed myself, that there is a situation developing throughout Canada which is proving to the disadvantage of certain types of lumber dealers. I refer to the independent dealer. There seems to be a distinct difference between the position of the independent dealers and that of the line companies. My own observation has been that the independent lumber dealer cannot get lumber, while the line companies, perhaps because of better connections or something of the kind, seem to be able to get substantial supplies.

In certain communities there is only the one type of dealer, the independent, and the result is that the farmers in those communities are unable to secure lumber for repair work or for the building of granaries and so on. In other communities where line companies are operating they are able to obtain the lumber they require. I do not know whether it is the fact, but complaint is made that the suppliers of lumber are more interested in exporting to the United States than they are in supplying the local market, particularly in the western provinces. Another claim made is that dealers, particularly the independent dealers, are being forced to take off-sizes, boards of the wrong widths, and dimension stuff which is not suitable for their operations.

The lumber dealers are concerned about the situation. Many have spoken to me and pressed for a clarification. Is the minister in a position to tell us just what the situation is with respect to the supply of lumber or the controls that are operating, particularly the controls that affect the independent dealers and the line companies?

Mr. HOWE: The problem referred to by my hon. friend has been receiving the continuous attention of the timber controller for a good many months and every effort has been made to provide adequate supplies of lumber all over the prairies. The difficulty has been to obtain proper distribution. My hon. friend is quite right when he says that the producers of lumber are interested in getting export prices. As hon. members know, prices within Canada are governed by price ceilings, while those across the line are much higher. There has been some trouble with producers cutting lumber to sizes suitable for the export market and unsuitable for the Canadian market. The timber controller in these cases has ordered the lumber recut, and I think the practice referred to is being broken down.

As my hon. friend knows, lumber is cut in the northern part of the three prairie provinces, and the problem has been to get good distribution in the southern part where freight charges are higher. A procedure has been adopted which I think has worked out in the main. Out of four cars produced, a producer may sell two where he likes, and if he ships the third into the southern part of the province as directed by the timber controller he may export the fourth car. That is an arbitrary rule but I think it has worked out fairly well.

We have been informed by reliable sources in Saskatchewan during the past two or three weeks that there is sufficient lumber on the prairies, and requests have been received from there to permit a greater volume of exports. However, the timber controller is not satisfied that there is sufficient lumber on the prairies and this request has not been acceded to. I think the situation has improved. I see no reason why local yards cannot buy as freely as the line companies, because the transactions are between the producer and the retailer. I shall be glad to have my officers make inquiries to see whether there is a real difficulty, and if there is, to take steps to overcome it.

Mr. WEIR: It appears that these people generally buy through brokers, but now that lumber is in a tight position the larger outfits are buying direct and short-circuiting the commission men. The result is that certain dealers cannot get any lumber at all while others are short-circuiting the regulations. Is the minister in a position to state the approximate quantity of lumber that will be available to the western provinces during the coming season?

Mr. HOWE: I am afraid I cannot give the figures. I shall look up that information and try to have it before we finish this evening.

Mr. WRIGHT: Will the minister also inquire about the quality of lumber being distributed in western Canada as compared with the quality of the lumber being shipped to the United States? We have found that the quality of lumber has deteriorated seriously during the last two or three years. Apparently they are exporting the better grades of lumber and leaving the poorer quality for the home market, which is not altogether fair.

Mr. HOWE: I shall be glad to look into that.

Mr. ROSE: I should like to make a few remarks about the shipbuilding industry. We are very much interested in this industry in the province of Quebec and we have made a considerable contribution toward the success of the war in this connection. Our riveters have set up some fine records, but these workers are beginning to wonder what is going to happen in the future. Are we going to have a merchant marine worthy of an independent and strong Canada?

The minister stated that by March 1 we had completed fifty-four 10,000-ton ships, including ten tankers and thirteen 4,700-ton ships, and that these had been delivered to the Park Steamship company. He also estimated that by the end of August an additional thirty 10,000-ton ships, including three tankers, would be added to the Canadian merchant fleet. Therefore by the end of August the Park Steamship fleet will consist of the following: 71 dry cargo vessels of 10,000 tons; 13 tankers of 10,000 tons; 13 dry cargo vessels of 4,700 tons.

The dry cargo fleet will approximate about three-quarters of a million tons dead weight. The minister admits that the 4,700-ton vessels are useful only in the coasting trade. The 10,000-ton vessels, even the Canadian Victory ships, are of a type that will be in tremendous oversupply after the war. They will be utterly unable to compete with the United States, British and other foreign vessels. The Canadian Victory ships are slow—I am informed they can make only ten to eleven knots at best—and are not to be compared with the United States ships of the same name which are of an entirely different type. These United States ships have a speed of from sixteen to eighteen knots and are now being turned out in United States yards in large volume for use both during the war and in the post-war period. The Canadian Victory ship compares with the American Liberty ship, which is now generally known to have little post-war value. Why did we in Canada not turn to the production of a more useful type of vessel for post-war trade, especially as the yards have been cutting down production?

I read a statement in the report of the Canadian Pacific Railway company that they have ordered a number of ships of the Beaver type in England. I do not know the exact speed of these ships; could the minister give it? The recently announced reconstruction programme of the United States Maritime commission for the year beginning next July includes 213 C-type ships whose speed will be faster than that of the Victory ships; 1,131 Victory ships, 372 tankers and only 194 Liberty ships. Other types make up a total of 2,359 ships. The fact is that in the United States they are concentrating on the faster ship, the Victory ship and the C-type ship. But we are to have only slow ships and I am very much afraid they may be useless. We shall only be able to operate them as tramp vessels carrying cargoes at bargain rates, and there will always be arguments over the wages paid on such ships, because it will be said they take so much longer to complete a trip, and the tendency will be for wages on these ships to be lower. We have still time to correct the situation. It is true that we must

build as many ships as are required for victory, but other countries, while producing ships for victory, have also in mind the post-war and are preparing for it by building a faster type of ship. The picture I am painting does not appear to be very bright, but these are the facts.

An article in the *Shipping World* of December 22, 1943, points out that before the war there were about 10,000,000 tons of tramp shipping and that that figure would be increased easily to 21,000,000 at the end of the war. Of that total, 5,000,000 tons will be privately-owned and the rest government-owned. The figures are as follows: United States government, 12,000,000 tons; Canada, 2,000,000 tons; United Kingdom, 1,500,000 tons; continental governments, 500,000 tons. The United States and other countries will have plenty of fast tonnage, and if necessary they will do away with the tramp tonnage altogether, while we shall be left with nothing but tramp tonnage.

An article in the London *Economist* of January 1, 1944, points out that any large scale selling of these ships by the government to private owners would push the bottom out of the freight market as effectively as an attempt by the government to keep these vessels in operation.

I repeat that I am not raising this issue to argue that it was not necessary at a certain time to build the kind of ship we have as rapidly as possible to carry supplies and munitions of war to the armed forces. But we have reached the stage where we must think of the future, and it is only right that Canada should have a government-owned merchant marine. We had one in the past, the C.G.M.M. They were old ships, and we must have better in the future. We should have shipping to be prepared for any emergency. We have the trained men, and we should build up a merchant marine that the Canadian people can be proud of. Young and old would be proud to see a fast fleet of Canadian government merchant vessels flying the flag of their country; and I hope that our ships will fly a truly Canadian flag.

Mr. BLACK (Cumberland): Mr. Chairman, I notice that the first item of the minister's estimates provided the sum of $195,000,000 as the estimated requirements for 1943-44, for additions and extensions to plants with estimated expenditures for 1943-44 of $149,033,690.74, and estimated requirements for 1944-45 of $60,000,000. I would like the minister to give the details of these expenditures as completely as he can.

[Mr. Rose.]

I do not wish to enter into another discussion with respect to the maritime provinces; I think our position is pretty well understood. I want to express my appreciation of what has been done in developing some industries in the maritime provinces during the war, although only a small portion of the war expenditures have been spent in the maritime provinces. It is recognized by the people of the maritime provinces, and I think by people all over Canada, that the maritime provinces and the outlying portions of Canada have not shared in the war expenditures as they should share if there is to be equality of industrial development in Canada. This is unfair to the west, but much more so to the maritime provinces, inasmuch as the west never had established industries, while the maritimes had scores and scores of industries which no longer exist or exist only as very small establishments. They have been absorbed by industry in central Canada or have been crowded out by mass production and mass merchandising. There never was a better opportunity given to a government than during the war years to restore an equilibrium of industrial enterprise in Canada by establishing industries in the maritime provinces. These enormous expenditures by the government have totalled up to the end of 1943 the sum of $714,258,389 in government-owned industry and in assisting private industry. If the manufacturing and industrial situation in the maritime provinces is not improved during the war years by establishing industry with post-war prospects, I do not see that there is any hope in the years that are ahead. I say that it is the responsibility and the duty and the opportunity of the minister and the government to equalize industrial development in this country and establish and revive industries in the maritime provinces.

Unfortunately many of our products in the maritime provinces are basic commodities, such as iron and steel which sell for two or three cents a pound and are shipped elsewhere and manufactured into products costing as much as one or two dollars a pound. The same is true of lumber. It is largely produced and sold as a basic commodity. That applies also to the salt industry. Salt is sold as a basic commodity in our province at from three to four cents a pound, while it should be the basis of a great chemical industry. Our salt industry should be producing at the plant refined salt, soda ash and related compounds, salt cake (sodium sulphate), hydrochloric acid, caustic soda, chlorine, potash and other chemicals which are contained in our big deposits at Malagash. I hope that in these

appropriations we are now considering provision will be made for the development of a chemical industry based upon our salt resources.

Another big product in Nova Scotia is coal. Our coal is shipped at from four to five dollars per ton. Much of this might be converted and made into chemical products, valued up to a thousand dollars per ton. It appears to us that there might be established in Nova Scotia, on the basis of our raw materials, industries that would tend to equalize industrial activities in Canada and to some extent restore the position we held prior to and in the years following confederation. I hope that in the estimates now being considered provision is being made for development of our raw materials, which would be of benefit to Nova Scotia. I shall be glad to have from the minister a schedule of what he proposes under the very large appropriations that are now being considered by the committee.

Mr. HOWE: The expenditures from April 1, 1943 to December 1, 1943 under the general programme would be: General munitions, $75,855,905.39; aircraft, $12,741,249.55; shipbuilding, $7,248,972.33; acquisition of United Kingdom plant, $5,000,000. That is the balance of a transaction carried through a year ago, making a total of $100,846,127.27. For the three months since, bringing it to the end of the fiscal year, it is estimated that $48,187,563.47 will be spent, making a total of $149,033,690.74, as shown in the column under estimated expenditures. It will be noted that the amount is $45,966,309.26 under estimated requirements. This amount represents commitments which will be carried into the new fiscal year, so that the estimated requirements of $60,000,000 for the fiscal year 1944-45 includes $45,966,309.26, left over from commitments made in the vote in 1943-44.

Mr. BLACK (Cumberland): Included in the $60,000,000?

Mr. HOWE: Only $15,000,000 of new money is in the $60,000,000.

Mr. BLACK (Cumberland): In regard to the communication and signal programme, the minister reported to the committee, as appears at page 1696 of *Hansard*. May I ask what proportion if any of these large expenditures has been made in the maritime provinces? I will quote from the minister's statement at page 1696:

> The value of our production in communications in 1940 was one million dollars, in 1942 60 million dollars; and in 1943 136 million dollars. The radio and communications industry is now operating at a level some eighteen times greater than in 1939. We have orders on our books to the value of 400 million dollars, and we do not expect to reach peak production until the second quarter of 1944. To illustrate the diversity of the programme, I might point out that there are approximately 4,500 different items in current production by some fifty prime contractors and several hundred subcontractors.

And the next paragraph:

> Some twenty major types of radar equipment have been developed for a variety of applications, ranging from one type for anti-aircraft defence having 60,000 components, and 270 radio tubes, mounted in several large trucks, to small compact airborne units used for submarine detection at sea and target location on land.

What proportion of that large programme amounting to $400,000,000 has been undertaken in Nova Scotia? I do not want to be sectional; still I wish to point out to the committee and emphasize the fact that for many years we have not progressed industrially in that province. In manufacturing we have lost our position in relation to the rest of Canada. This is an opportunity such as we have never had since the decline of industry in that province, for the minister to do something for Nova Scotia. It is an opportunity that has come to no other government or minister to rectify the unfair conditions under which we have existed in that province. Again I would inquire as to what proportion of this enormous development has taken place in Nova Scotia, a development involving in 1943 $136,000,000 and on our books, for the current year, the enormous sum of $400,000,000.

Mr. HOWE: I do not know that I can give the exact figures, but all that production is being obtained from existing manufacturing plants. The hon. member knows how many such plants there are in the maritime provinces and from that he can compute the probable output there. All suitable facilities of the country are being used for that purpose, including those in the maritime provinces, if any.

Mr. COLDWELL: Following the hon. member for Cumberland, I think it is borne in upon the members of the committee that what should be undertaken without delay is a thorough survey of our resources in various parts of the country. The war has tended to concentrate industry more and more in a few places, and just as in Nova Scotia so in the western provinces, particularly Saskatchewan, we are going to feel after the war increasingly dependent on those parts of Canada where manufacturing industries have been established during the war. It seems to me that without delay there should be a thorough survey of

the resources of the country and we should endeavour to base, upon those resources, any further industrial development we undertake, on the principle of spreading them across the country instead of concentrating everything in one or two areas.

That was not what I rose primarily to say, however. This morning I placed some questions on the order paper and the Clerk of the House, quite properly I think, returned them to me because the questions involved the giving of some information. As we know, the rules of the house do not permit members giving information in the form of questions. But I wanted to find some information which comes under this particular item of the war appropriation, and so, instead of endeavouring to redraft the questions in a manner that might not be altogether satisfactory, I thought I would ask those questions now in the form in which I am going to put them.

I might say to the minister that I put the questions on the order paper because I did not want to prolong the discussion here. But I have had a number of inquiries lately as to whether or not there has been a change in the ownership of one of the companies with which we have been doing some business both in shipbuilding and in manufacturing of war equipment in Montreal. I refer particularly to the Canadian Vickers Limited. What is suggested to me is that a very considerable amount of stock of Canadian Vickers Limited, either a majority or a minority amount, I am not sure which, has passed into the control of a corporation known as Losanac Limited. In turn I am informed that Losanac Limited is a subsidiary of the Solvay Company of the United States; that this company is controlled by a corporation located in Basle, Switzerland, and that the holding company there is a company with a German name in which it is suggested to me there is a considerable amount of German capital even at the present time.

In my opinion it is in the public interest that the government of Canada should endeavour, if possible, to look into this situation to discover the facts, because Losanac is now the largest holder of preferred or common stock, I am told, of the International Nickel Company, and has substantial holdings in the Hollinger mine and other gold mines in the country, and also in the Dominion Steel and Coal Company and Asbestos Corporation. It it is, as I am informed, connected with the Solvay Company, that company had very large and important holdings in some fifteen or sixteen countries, including Great Britain, Japan, United States, Argentina, Brazil, Germany and others. In view of what we have learned during this war, particularly from the investigations of the last twelve months or so in the United States regarding the associations of companies in all these countries with companies that engage in the provision of vital war material, it seems to me that the time has come to make every investigation that we can, to follow every lead that is given to us, in order to protect ourselves in future from the kind of thing that we have suffered from in the past. While this may not fall directly within the estimates of the minister, yet we are dealing with the war appropriation estimate as a whole. What I am about to say now will be said to save time in order to give the government the opportunity to look it up. In a recent official publication I came across a study made for the subcommittee on war mobilization of the committee on military affairs in the United States senate. It goes carefully into the associations of some of the corporations. The ones I refer to now are the I. G. Farben company and a British company known as Sterling Limited, of which some time before the war two of its directors were members of the I. G. Farben corporation. I want to read a statement in order that it may be looked up. The statement is as follows:

> I G. Farben and Sterling also undertook to evade the tax laws of Canada. Under basic contracts, the profits of the Canadian Bayer Company were to be divided equally between Sterling and I.G. To reduce taxation, the payment to I.G. was misrepresented as a royalty, and charged as a cost of doing business. Remittances to I.G. were accompanied by the following statement:
>
> > You will note that the compensation paid to you has been deducted as an expense of the business. In the event that the Canadian government should ever determine that such payment to you is not properly deductible as an expense, and in consequence should require us to pay an additional tax, such tax will, of course, be charged against the total profits of the year in which such additional tax is required to be paid.
>
> A similar practice was followed in the United States between 1920 and 1930. Eventually, however, it was disallowed by the income tax authorities and Sterling was required to pay half a million dollars in back taxes. Thereafter this method of accounting was discontinued in the United States but not in Canada.

I thought that later on when the appropriate minister is before us he might have looked into this situation. If we are able to collect some back taxes from this corporation, it would assist our war effort and our method of raising additional funds therefor. That is why I raise the tax suggestion at this time.

Mr. HOWE: I might say that the department has no knowledge of the stock ownership of Canadian Vickers. There has been no change in the management of the plant since the war began. Like my hon. friend, I saw some references in the newspapers to a

change in control. That affects only the stock ownership of the company, and as none of the stocks of Canadian Vickers have paid dividends for a great many years, it would not affect in any way the financial position of the company, or the interest of my department. So far as the second matter is concerned, I shall be glad to call it to the attention of the Minister of National Revenue.

Mr. COLDWELL: It might be of interest to our combines investigation department.

Mr. HOWE: Possibly.

Mr. COLDWELL: It it were drawn to their attention.

Mr. BRUCE: I do not wish to delay passing of the minister's estimates for more than a moment. I should like to ask a question or two which I think will be of considerable interest to the public. My first question is with respect to a substance known as penicillin, a valuable therapeutic agent which is now being produced in Canada. It is being produced at the Connaught Laboratories in Toronto, I think, at the instigation of the minister himself. This discovery, perhaps one of the most important in recent years, was made by a British scientist. It is on a par with the discovery of the sulpha drugs, and has carried us one stage farther in our armamentarium which enables physicians to deal more effectually with certain heretofore frequently fatal diseases.

Will the minister tell the committee what arrangements he has made not only with the Connaught Laboratories at Toronto but with other laboratories or companies in Canada for the production of the substance known as penicillin? Second, when does he expect there will be a sufficient supply to meet the requirements of our armed forces; and third, when will a sufficient supply be made available for the civilian population?

Will the minister also give the committee an explanation of the crown company known as Defence Communications Limited? I believe it was set up by order in council, but I have not seen the order. Perhaps the minister would explain why this company was organized, what its purpose is, and if it will cease operations at the end of the war. Will he also make available to the committee a copy of the order in council?

Mr. HOWE: With regard to the matter of penicillin, we have been acting under the guidance of the committee of the national research council whose responsibility it was to determine the requirements both of the armed services of Canada and of other uses, and to guide the department in the steps taken to produce penicillin. On the advice of that committee we have established two sources of supply, one, the Connaught Laboratories in Toronto, and the other, a government-owned plant in Montreal operated for the government by Ayerst, McKenna and Harrison. We are now producing penicillin in a considerable quantity. I think we have fairly well taken care of the requirements of the armed forces from our own sources of supply. Production will be greater than was anticipated when the plants were organized. A committee in Washington, on which Canada has representation, is studying the supply situation in order to determine when penicillin can be released for other than military uses. No decision has been reached as yet, but it is my belief that within the next five or six months it will be possible to release penicillin for other than military uses. Does that answer the question?

Mr. BRUCE: Yes.

Mr. HOWE: To answer the other question, Defence Communications is an outgrowth of the requirements of the armed services for communication systems in the eastern provinces. Each service was building its own communication system independently, and it was found that there was a great deal of overlapping. Finally the three services joined in requesting the Department of Munitions and Supply to undertake to provide communication services for all three branches of the armed forces. A crown company was formed called Defence Communications Limited, with which were filed the requirements of the armed services. Appropriations were made from the funds of the three armed services, and through that crown company a unified system of defence communications has been built. The work of the company is practically completed, and it is expected that the organization, which was a construction and not an operating company, can be dissolved within the next few months. I believe the operation of the company has resulted in a very considerable saving to the taxpayers, and I know the armed services are well pleased with the communication system that has ben worked out. The problem was not wholly one of construction; there was a certain amount of construction, but the problem was more particularly that of coordinating the services of private communication companies and combining with them the new construction that was necessary, so that the whole would give satisfactory service for defence purposes.

Mr. ADAMSON: Before the minister leaves the question of penicillin, what is happening to Knox college in Toronto? Is it being rebuilt to manufacture penicillin?

Mr. HOWE: It was taken over by Connaught Laboratories for the manufacture of penicillin, and for that purpose is being remodelled at government expense. It is just a building used by Connaught Laboratories for that purpose.

Mr. ADAMSON: That is the sole use made of that building now?

Mr. HOWE: Yes, as far as I know.

Mr. ADAMSON: Has the minister any idea what the remodelling has cost?

Mr. HOWE: It was three or four hundred thousand dollars; I do not remember the exact figure. I believe our investment with Connaught Laboratories for equipment and for remodelling the building is about $350,000.

Mr. ADAMSON: Has the minister any idea of the expected output?

Mr. HOWE: It is a unit with which I am not very familiar. I can tell my hon. friend there are a great many ciphers in front of the unit, but I am afraid I cannot go beyond that. It will be substantial.

Mr. ADAMSON: Will the production in Toronto be greater than the production at the Ayerst plant in Montreal?

Mr. HOWE: The intention was to have it about fifty-fifty.

Mr. NOSEWORTHY: I should like to revert for a moment to the question of coal, which was discussed this afternoon by the hon. member for Broadview. I should like to ask the minister two questions. First, what steps have been taken by the government to investigate the possibility of producing smokeless domestic coal from our bituminous coal by the low carbonization or other process, and are steps to be taken under any policy adopted or to be adopted by the government for further investigating the possibilities in this field? Second, what has been done, and what does the government propose, in regard to the production of oil from coal by the hydrogenation or any other similar process?

In connection with the first question I placed a question on the order paper last year; the answer was brought down on March 22, 1943, and appears at page 1418 of *Hansard,* as follows:

> Studies of the more promising low temperature carbonization processes in operation in Europe and the United States were made by the mines branch of the Department of Mines during the period 1920 to 1930 when low temperature carbonization was a subject of particularly wide interest. Most Canadian coals were tested on a laboratory scale at the fuel research laboratories and the results of these tests were published in departmental reports. Subsequently arrangements were made to test Nova Scotia coal by one of the most promising processes developed up to that time and operating in South Wales. This test is reported in mines branch report No. 721, investigations of fuels and fuel testing 1929. The report concludes with the following statement: "In conclusion, it might be stated that it appears to the writers that in the case of the Sydney coal field there is an exceedingly good chance of converting bituminous coal into a domestic product, comparable to the existing fuels used for heating in central Canada, economically."

Then the answer goes on to explain that—

> The hoped for development in Nova Scotia did not materialize and the anticipated expansion in low temperature carbonization generally did not take place.

As to the second question, I should like to direct the attention of the minister to information contained in a report made to the United States senate subcommittee on war mobilization, already referred to in this debate—

Mr. HOWE: On a point of order, Mr. Chairman, I would point out to my hon. friend that there is no item in these estimates referring to the carbonization of coal. That would come under the Department of Mines and Resources, and though it is an interesting subject, it has nothing to do with the discussion being carried on to-day. I wonder if my hon. friend would mind waiting and bringing up his question when the estimates of the Minister of Mines and Resources are before the committee.

Mr. PERLEY: The minister made an important statement last Friday, and I should like to have it cleared up a little if I may. At page 1818 of *Hansard* for March 24, 1944, he is reported to have said:

> During the last few months we have had sufficient steel for all reasonable purposes and the restrictions on use of steel in agricultural implements have been removed.

He also said that there was sufficient capacity for the manufacture of malleable castings in Canada to take care of the demand. Are we to understand from this statement that manufacturers in Canada now may obtain sufficient steel to take care of the demand for new agricultural implements, particularly in the west? During what we speak of as the depression years the machinery on the farms were not kept in repair; then the war came along, and much of the machinery is practically worn out. There is quite a demand now for new machines, and they are very difficult to get. Before I left home in January I had some experience with the permits required by the prices board in order to purchase new machines, but if this statement means that the manufacturers will be

allowed sufficient steel to take care of the demand I think it will be a splendid thing, particularly in view of the man-power situation. In the last two years particularly the use of power equipment in the production of grain has considerably increased, and I hope the equipment will be forthcoming to enable this development to continue. It would be a splendid thing also if enough repair parts could be supplied to take care of the requirements in that line.

While I am on my feet I should like to say a word or two with respect to the production of alcohol from grain. There has been a good deal of discussion in that connection, and we know what is happening in the United States. I hope the minister will keep in mind the possibility of permitting some industries to be established in the west, right where the grain is produced, to provide facilities for the production of alcohol from grain to be used in the manufacture of synthetic rubber. I may say also that with the power we will have when the men come back from overseas, and the increased man-power which will be available to operate power equipment, it will be possible to produce grain cheaper than it is being produced to-day. It is not fair to compare the price of grain to-day, when we are considering the cost of producing alcohol from grain, with what the condition will be after the war, because we will be producing grain much cheaper than it is being produced to-day. The committee would be surprised if I were to state the price at which one of my constituents produced 18,000 bushels of wheat last year. He has a record of it. I would not like to say exactly what he produced it for, because it might cause the Minister of Agriculture or the Minister of Trade and Commerce to refrain from increasing the price, as we would like to see it to-day.

This afternoon, the hon. member for Macdonald referred to the lumber question. Certainly the independent dealers have not been getting as much as they would like. But the lumber they are getting, that which is being distributed in the central part of Saskatchewan, is not of the quality it should be. The hon. member for Melfort discussed that question this afternoon. Some action could be taken by those who are in control of the lumber supply to see that the people in the southern part of Saskatchewan get a better quality of lumber. It is available. Of course I can appreciate the fact that for the export market the large dealers have to have a high grade of lumber. I believe, however, that if a check-up were made on those producing lumber in the northern part of the province, a better quality could be produced and could be made available to the interior.

I would ask the minister to make a statement with respect to the supply of steel to the implement companies manufacturing in Canada. Do we understand from his statement that there will be a more liberal distribution of implements available for production in western Canada?

Mr. HOWE: In 1939 the steel used by implement companies amounted to 30,150 tons. For 1944-45 we have released 81,750 tons of steel to the implement companies, which is an increase of 271·1 per cent.

Mr. GRAYDON: In the report of subcommittee No. 4 of the war expenditures committee, which appears in *Votes and Proceedings* for Wednesday, January 26, 1944, there are set out certain shortages which still exist and which retard the production of ample quantities of farm implements. That report shows shortages of malleable castings, ball and roller bearings, seasoned fir and oak required for the production of certain types of farm machinery, and experienced man-power.

I am quite sure that the minister has given some consideration to the recommendations of this committee. I never could quite understand why this committee in its deliberations and in the taking of evidence should have been sitting behind closed doors, as was the case with some of the other committees. That is my view, after looking over the report. I cannot see that much comfort could be given to the enemy by anything that would be discussed so far as farm implements were concerned.

That brings me to this one point: Was it the suggestion of the minister or of the government that rubber production, or synthetic rubber production, particularly the operations of Polymer in Sarnia, should be submitted to the war expenditures committee at this time for consideration? I understand that one of those subcommittees is about to deal with Polymer and synthetic rubber.

Mr. HOWE: I have never at any time made any such suggestion, and I think it is a very improper suggestion to say that I have. These committees are investigating my department. They investigate where they like and as they like. It certainly would be improper for me to send them on a wild goose chase, or otherwise. I do not like the suggestion.

Mr. GRAYDON: The minister is picking up every kind of question that is directed to him, as a suggestion. If he will go over my remarks carefully he will find that I did not even hint that he had made any such suggestion. I only asked him at whose suggestion it was made, and whether he had made it. Because it would seem to me that with the Polymer plant only

starting, and with synthetic production getting under way, there are very many other things at which the war expenditures committees might more properly be employing their talents, and this was one of the things which might perhaps be left over. I never have heard any serious complaint about synthetic rubber production or about the set-up of Polymer—except in some quarters, with respect to the whole matter of government crown companies, which is a general subject, or might be described as a general line of policy which some take. I am glad to hear that it was not the minister who was sending the committee on an investigation of that kind. Even if it were necessary to have this particular matter investigated prior to other matters, it did not seem to me that there was much reason for investigating this plant.

Mr. REID: I am one member of the committee which is going to visit the synthetic rubber plant. I think the suggestion was made—because I was there when it was made—that the product was so good and the output so wonderful that the committee should visit the plant merely in order to see it, not to investigate the output or what was being done.

Mr. GRAYDON: That just raises the whole question. I do not know whether this means now that the war expenditures committee is going on a lot of joy rides so far as this whole question is concerned, that is the way the hon. member indicates it. If this is one of those wonderful plants, I know of no reason why the war expenditures committee, which might be putting its time to better use, I think, need to be taking a trip of that kind at the country's expense.

Mr. REID: A statement of that kind is very much uncalled for. I have been a member of the committee for three years, and I have never had any joy trip yet. But if I took a trip, or took it upon myself at any time to visit a plant, just because I was anxious to get information and see how the work was done, I would resent its being called a joy ride. I say it is most uncalled for to refer to it as a joy ride. Personally I want to see what is deing done.

Mr. GRAYDON: So far as a joy ride is concerned, the hon. member himself was the one who gave the description which led me so to designate it. I was not suggesting that the hon. member was taking a joy ride because of the work he had to do on the committee. It does not reflect upon him. But if the facts are as he has indicated, that we are going to some of our best plants to see what is going on, then surely that is carrying the work of the war expenditures committee much farther than was intended.

Mr. REID: It is going too far to say that the war expenditures committee is to have no opportunity to see what is being done. I believe it would pay you to go and see it. You do not seem anxious to go to see what is being done.

Mr. HOWE: I suggest that this debate is entirely out of order. I cannot see the impropriety of the war expenditures committee, set up to protect the taxpayers of Canada, looking into the expenditure of $45,000,000 of the taxpayer's money. I think that is a very proper excursion.

Mr. ROSS (Souris): I pointed out that there was a variation between the figures of the war expenditures committee and those of the minister. If we could have it clearly stated by the minister that there is no shortage of steel or of other raw materials going into the manufacture of farm implements, then when we come to the Minister of Labour and national selective service and the wartime prices and trade board we may be able to get to the root of this matter. A greater production of farm implements is sadly needed at the present time. We have been led to believe that the chief difficulty is the shortage of steel and raw materials. The farmer has been willing to labour under almost any disadvantage if steel and raw materials are not available, but more labour-saving implements should be made available as soon as possible. If these materials are available, then we can take up the matter when we are dealing with the other departments.

Mr. HOWE: I have just given the figures. I have nothing to do with the production of farm implements, other than to release certain strategic materials, one of which is steel. This year we have allocated 271·1 per cent as compared with what was used in 1939, which was a fairly good year. That is quite a bit of steel, and I dare say that if more is needed we shall be able to allocate more.

Mr. ROSS (Souris): More labour would help production.

Mr. HOWE: I do not know about labour.

Mr. GOLDING: When we made our inquiry into the production of farm implements we received the assurance of the steel controller that he would see to it that the implement producers received sufficient steel to carry on their programmes. But there is a definite shortage of ball bearings and malleable castings. Ball bearings are not produced in Canada, and I know that the plant at home

has had extreme difficulty in obtaining this product as well as malleable castings. We had the officials before us; we endeavoured to point out as best we could the situation in connection with the supply of both these products, and we had their assurance that they would give every consideration to seeing that the implement producers obtained supplies.

I must say that we had the best of cooperation from all officials who appeared before the committee. We carried out an inquiry which I think was very useful. We presented the situation from the manufacturers' viewpoint and we received representations from farmers and from the federation of agriculture. I have spent a good deal of my life in this business and I think I know something about it. I believe I know what the implement manufacturers are up against in getting supplies of certain items. That is one reason why we made the recommendations we did. Because of the greatly increased use of tractors and other implements of the kind, the time has come when Canadian manufacturers should see that more of these items are produced in Canada. I hope that the recommendations we made will have some effect.

Mr. ROSS (Souris): I placed most of the names of those officials on the record when I was speaking previously. Is the hon. member of the opinion that ball bearings and malleable castings will be produced in Canada in the near future?

Mr. GOLDING: Malleable castings are made in Canada at the present time, but they are in short supply both here and in the United States. We felt that it would be in the interests of the farm producers to recommend that a subsidy be paid in connection with the production of malleable castings. We know there is a tremendous shortage of labour and if our farmers are going to produce what we want them to produce they must have these implements and labour saving devices. Every official before us intimated that he would cooperate to the fullest extent.

Mr. WOOD: There is no doubt that there is a shortage of farm implements, but I think it has been due mainly to the greater demand from farmers. Farmers are paying off their mortgages and reducing their debts to the implement firms because of the higher prices they are receiving, and this has created a greater pressure for more implements. I am inclined to think that this shortage of agricultural implements is not an unmixed evil. The fact that we have been able to increase our agricultural production forty-five per cent is a fairly clear indication that we have made good use of the implements we have. I have no doubt a lot of old implements have been taken out of fence corners and repaired. I picked up for $5 an old cultivator of the same make as one I had; by a certain amount of conniving I now have a good cultivator and shall not have to buy a new one. What has happened to me has happened to many other farmers. No one likes to have a new machine more than a farmer, but sometimes he is induced to buy a machine by the brightness of the paint or by a glib-tongued salesman. I have known many farmers who have been kept poor by their purchases of implements. They have been told by these salesmen that the implements would pay for themselves.

Since we are dealing with the question of steel, I should be inclined to think that one of the things our farmers need, especially in Ontario, is more steel for farm roofs and eavestroughs. The situation in this connection is becoming much worse, and more steel should be released as soon as possible. It will be said that there are substitutes for steel roofing, such as manufactured roofing or shingles, but—

Mr. GRAYDON: Brantford roofing.

Mr. WOOD: That would be the very best you could possibly put on a farm building if you wanted roofing of that kind. The trouble is that where you have a barn with open siding it is not as satisfactory as the steel roof. The steel roof will stand higher winds. I know of many buildings that need roofs badly. We are producing many products which must be kept under cover, and serious consideration should be given to this phase of the matter. I have often wondered why more pressure has not been brought to bear upon the minister in connection with this matter.

Another matter was brought to the attention of the committee on Tuesday, March 21, by the hon. member for Lake Centre. He wanted to know what disposition would be made by the government of the temporary buildings which had been built for war purposes. Then he said, as reported at page 1716 of *Hansard:*

> I would point out that I have not yet received an answer to the question as to whether or not it is the intention of this government to operate any industries after the war in opposition to private enterprise.

I consider that that question should not go unanswered. I think the people of Canada are anxious to know which way we are drifting. I have no hesitation in stating where I stand. I take the position that we must do everything possible to protect the principle of free enterprise in the main. Only where free enterprise cannot function in the best interests

of humanity should the government lend its support. I know where the people whom I represent stand on the principle of free enterprise. They are in favour of maintaining this principle which has brought Canada to the high standard of living now enjoyed by our people. True, there must be corrections made from time to time, and I have every reason to believe that we can make those corrections. But I think the minister would be wise in making a declaration of policy, particularly since he has shown himself a master of organized enterprise in accomplishing what he has accomplished in this war. It has been largely done under the policy of free enterprise. Perhaps the fact that Canada's contribution is the greatest per capita of any of the united nations is because in no other country has free enterprise had full sway as it has in Canada. Furthermore, what we have accomplished has been done at far less expense than what has been accomplished in other countries. In spite of our magnificent effort we have kept the per capita debt of our people down; it is much less than the per capita debt of our neighbours to the south and of Australia, New Zealand and almost any other country. That in itself is a credit to the policy of free enterprise under which we have worked and a tribute to the minister in organizing industry in Canada. I have always stood for the principle of free enterprise, and I hope that we shall be able to maintain it in this dominion.

I noticed that the hon. member for Lake Centre, when he asked the minister to make a statement of policy, seemed to have qualms as to the position of his own party on free enterprise. I noticed that the *Globe and Mail* in November last reported speeches in which the Hon. George Drew and his minister of agriculture stated that it was the intention of the Progressive Conservative party in Ontario to go in for making refrigerators, bathtubs and such like, at cost, for the benefit of the farmers. So that we know which way they are going.

Mr. GRAYDON: Are you objecting to that?

Mr. PERLEY: You told us about bathtubs in the first speech you made in this house.

Mr. WOOD: I take issue with the hon. member for Qu'Appelle because I did not. I am afraid he, too, must be suffering from qualms of conscience to bring that up.

Mr. GRAYDON: You have not answered my question yet.

Mr. WOOD: One at a time.

Mr. GRAYDON: Are you objecting to the proposal of lower cost of refrigeration and bathtubs for the farmers?

Mr. WOOD: I did not say that.

Mr. GRAYDON: I think you are wise to keep away from it.

Mr. WOOD: The hon. member has not shown too much wisdom himself, so that I do not think he needs to give advice, much as I respect him and enjoy his friendship. But he does blow a fuse quite often in his remarks.

I was going on to say that the *Globe and Mail* reported the Hon. T. L. Kennedy, minister of agriculture in the Ontario government, as having said:

> It is my idea that the government would finance the manufacture of these—

That is refrigerators.

> —and sell them to the farmers at actual cost price.

Mr. GRAYDON: Is that what you are objecting to?

Mr. WOOD: That is not the point. I am speaking of the principle involved.

Mr. GRAYDON: Are you objecting to the principle?

Mr. WOOD: I would object because I do not think the government can manufacture and sell them at cost as well as private enterprise. I want the farmers to get the best deal possible and I believe it is better to let them get these things through private enterprise. The Retail Merchants' Association was concerned over this proposal of the Ontario government and considerable correspondence passed between them and the minister of agriculture in the Ontario government about it. What I am drawing attention to is that we now have the Progressive Conservative party declaring itself on the principle of going into the manufacture of articles which private enterprise has made a fairly good job of manufacturing in the past. We now know where the Progressive Conservative party stands. We also know where our Cooperative Commonwealth Federation friends stand, because they have declared themselves definitely for the nationalization of industry.

Mr. LOCKHART: What item are we on, Mr. Chairman? How long have we to put up with this?

Mr. WOOD: I do not take up very much of the time of this chamber. As a quiet member, maybe I do a little more thinking than some other hon. members, and these are some of the matters I have been thinking about. I

thought it wise to draw to the attention of the committee the road we are travelling. All we can judge a party by is the things it does, not what its members talk about. I was saying that under the principle of free enterprise we have made a magnificent effort in this war. On the other hand, if the Progressive Conservatives have declared themselves for the nationalization of the refrigeration and bathtub industry and such like—

Mr. GRAYDON: Haldimand-Norfolk, the county next to yours, seemed to like it.

Mr. WOOD: I am not so sure. I would not take too much glory to myself over that. One sparrow does not make a summer by any means.

Mr. STIRLING: Did a sparrow ever?

Mr. WOOD: The fact of the matter is, I think, that the minister should not let this opportunity pass to make a statement of his viewpoint on the principle of free enterprise. Ours has been a magnificent accomplishment to the extent of around five billion dollars under more or less of a mixed policy. I believe we have a right to know what the future has in store for us, and I hope we shall hear from the minister.

Mr. FRASER (Peterborough West): On March 21 I asked the minister for the total amount of purchases for the United States that had been made by the United States purchasing branch of his department.

Mr. HOWE: I told my hon. friend that I did not care to give that figure.

Mr. FRASER (Peterborough West): Coming to another branch, transit control, I have had complaints from dealers who handle fruit that during the summer months when peaches and other crops are coming along they are unable to get fresh fruits into our part of the country unless they can use their trucks, and when they are limited to 35 miles it holds them up.

Mr. HOWE: That problem is not in my department. It comes under the administrator of services, which is under the wartime prices and trade board.

Mr. FRASER (Peterborough West): Does it not come under transit control?

Mr. HOWE: Not trucks.

Mr. FRASER (Peterborough West): I have another item. This is from the Department of Munitions and Supply, being one of its releases in regard to construction and alteration of plants. They have jumped the value from $2,500 to $5,000. Up to $5,000 a permit is not needed. The same change applies to the installation of equipment in plants. What I want to get at is this. There is an order, which I believe is 284, which does not allow a plant to be extended with new machinery being put in. You cannot put new machinery in a new space. Does this do away with that order?

Mr. HOWE: No. If it is all one project it should be so named. If the project extends the plant and installs machinery in the extension, and should it cost more than $5,000, a permit is needed. On the other hand, if it is simply a question of installing machinery in an existing plant, that machinery can be installed up to $5,000 without a permit being required. But each must be a complete transaction.

Mr. FRASER (Peterborough West): Yes; but suppose a firm own a building next to them. They could not take a machine from the building in which that machine is already installed and put it into the other building. Here you are extending the plant; you are allowing them to extend the plant and put in new machinery.

Mr. HOWE: The safest thing for my hon. friend's friends to do is to apply for a permit. Permits are not hard to get.

Mr. FRASER (Peterborough West): This firm applied before the order came out and they were refused permission to put one of their machines into another building which they owned. I want to find out whether this order that has now come out cancels the controls that formerly obtained.

Mr. HOWE: It amends the control order. That is the order my hon. friend has been referring to, but I cannot give interpretations of every order put out.

Mr. FRASER (Peterborough West): Neither can the manufacturers, and that is the trouble. Sometimes they are held up for months, while the firm is anxious to go ahead and manufacture, in most cases munitions.

Mr. ADAMSON: A few days ago I asked the minister about the programme of subcontracting machine shops in mining companies in Canada. They were doing rather extensive retooling work. Was the programme successful or was it gone into?

Mr. HOWE: Yes, the programme was very successful. We have had a great many ship components made by machine shops of the mining industry as well as by machine shops of the pulp and paper industry. That capacity not only has meant a considerable saving in the installation of new machine tools but has

distributed the work where the man-power was available and has been helpful in the whole programme.

Mr. ADAMSON: Is it still going on?

Mr. HOWE: Yes.

Mr. DIEFENBAKER: I should like to secure information in connection with the availability of man-power. The Minister of Labour (Mr. Mitchell) yesterday referred to the need of combing industry in order to secure the necessary men for the armed forces during the months to come. The first question I want to ask in that regard is this: Is there to-day, or has there been within the past three months, any shortage of man-power in any of the key industries under the minister's control? If so, in what industries and to what extent is there or has there been a shortage?

Mr. HOWE: We always have shortages in certain industries. Shortages vary from time to time. In the last two or three months the most acute shortages have been in the malleable casting industry and in the motor vehicle industry. As far as I know, the motor vehicle industry has never had all the men that could be used. There are other industries in which there are shortages from time to time. Certain shortages develop and are corrected, but the main shortages of the past three months have been in the two that I have mentioned. Of course, in lumber we could always use more men than were available. The cut of lumber is proportionate to the number of men engaged in the industry, and if we had twice as many men we could perhaps cut twice as much lumber. There is a demand at home and abroad for all the lumber that can be cut. In base metals the situation was acute but has been largely straightened out. The man-power situation is not bad in the base metal mines; the shortages are in the rougher and heavier jobs.

Mr. DIEFENBAKER: What is the amount of shortage from month to month?

Mr. HOWE: I cannot say; the Minister of Labour could tell the hon. member that.

Mr. DIEFENBAKER: Well, the minister is in charge of the department and he was able to give information to the press as to the shortage a few months ago.

Mr. HOWE: What did I say?

Mr. DIEFENBAKER: In the Toronto *Star*, the minister is reported as having stated on December 2, 1943:

> There is a shortage of 55,000 male workers and 16,000 female workers in the highest priority war industries alone.

[Mr. Howe.]

These figures apparently were available to the minister then. He must have figures showing the situation from month to month in regard to man-power. The allocation of man-power naturally falls on the shoulders of the Minister of Labour. The responsibility for mobilization is his. The question I am asking the Minister of Munitions and Supply is this. Is there a shortage to-day of male and female workers in the war industries? If so, what is the latest available figure on such shortage?

Mr. HOWE: Does my hon. friend wish me to give him the statistics of the Department of Labour? He can get those from the Department of Labour. It happens that I have them, but I do not know why I should give them to him.

Mr. GRAYDON: If the minister has the information, surely he has no objection to giving it.

Mr. HOWE: They are given to us as confidential; I do not know how confidential. However, I will give the figures. On March 10, 1944, unfilled vacancies in A priority industries were 30,411; in B priority industries, 24,408; in C priority industries, 6,115; in D priority industries, 10,158. The total of priority labour requirements was 71,092.

Mr. DIEFENBAKER: I do not know whether this information can be given, but is the minister in a position to advise what is the nature of A, B, C, and D priorities? What industries fall under them?

Mr. HOWE: That is confidential.

Mr. DIEFENBAKER: Well, I will not press that because I can understand that there might be such a situation. The minister is reported to have stated recently that certain single-purpose plants have been closed down and in particular that one or more explosive factories have been changed into fertilizer factories. Have any explosive factories been closed down; if so, where? Which ones have been changed into fertilizer factories? I believe this is the first example of a transition from war-time to peace-time production.

Mr. HOWE: The only plant manufacturing explosives that has been closed down that I know of is the plant at Nobel. We had three plants manufacturing propellants and explosives, one at Winnipeg, one at Nobel and one at de Salaberry. The operation at the Nobel plant was of a type that could best be spared. It was a question of operating each of them at half capacity or closing one and operating the other two at a rate of capacity that would mean efficient production. It was therefore decided to close down

the Nobel plant. The other plants to which my hon. friend refers are plants manufacturing ammonia for explosives. One plant is at Calgary. It is government-owned, and the other is at Welland, also government-owned. The full production of ammonia from those plants was not required for explosives. All surplus ammonia is now being used in making ammonia nitrate by a process worked out in the plants themselves. The ammonia nitrate is found to make a very good fertilizer. The two elements required in the synthetic fertilizer are ammonia and nitrate. The product of these plants has a wide sale at attractive prices.

Mr. DIEFENBAKER: The plant at Calgary is not a government plant?

Mr. HOWE: Oh, yes.

Mr. LACOMBE (Translation): Mr. Chairman the scandals and the shameful favouritism which have been brought to light in war industries are such as to make the government conscious of the distressing deficiencies of the national selective service. An investigation should be held at once by a royal commission about employment at the Bouchard plant. The investigation should also bear upon the administration of the Sainte Thérèse local office of the national selective service. The government should not elude their responsibility by arguing that private companies are involved. The government give those companies financial assistance running into hundreds of millions of dollars. Let the government insist on calling them to account, and the people will be satisfied. Since we are fighting for the triumph of justice and right, unfairness should not be rampant as regards employment in war industries, nor should it prevail in other fields.

Mr. FRASER (Peterborough West): Would the parliamentary assistant to the minister give us some indication with regard to the supply of tinplate for making cans for canning vegetables? Is there a shortage and what will the situation be this year?

Mr. CHEVRIER: I presume what the hon. member for Peterborough West is asking about is galvanized plate.

Mr. FRASER (Peterborough West): No; tinplate for canning fruit.

Mr. CHEVRIER: The position is that tinplate is in short supply all across the country and there is very little hope of its being released.

Mr. FRASER (Peterborough West): When I visited Deep Brook training camp and some of the other training camps I noticed that the canned milk which was supplied to the men was given to them in quart tins, and in one place just before the meal hour they dumped the milk into jugs. There must have been hundreds and hundreds of these quart cans. Would anything be saved if that milk were given to them in gallon cans? I think a lot of tinplate would be saved if the milk were put in gallon cans.

Mr. ROSS (St. Paul's): I do not know whether the minister has made any statement in connection with the importation of domestic coal into Ontario for the coming winter and what the situation is to be. What is the prospect for obtaining coal in large cities like Toronto? I think the citizens of Toronto used a great deal less coal last year than they would otherwise have used, and that was owing to the request that was made. Would the minister make a statement as to what the prospects are?

Mr. HOWE: The coal requirements of Ontario are necessarily imported from the United States. Last year we were able to obtain sufficient bituminous coal for our requirements. In the matter of anthracite we obtained the same proportion of our total requirements as was issued to the citizens of the United States. There was a shortage. I think actually we received about three-quarters of our requirements. I presume that the United States will treat us as one of their own in the matter of coal in future as they did this year. If there is a shortage in the United States we will expect to share that shortage. Whether there will be a shortage or not I cannot say. I referred to the matter when I made my statement in the house and I urged users of domestic coal, particularly in the central Canada area, to be as economical as possible with their coal.

Mr. FRASER (Peterborough West): With regard to coal, I have a letter here from one of the largest dealers in anthracite. It is addressed to one of his dealers and reads in part as follows:

> The new programme readjusts each dealer's tonnage for the current season to approximately eighty-two per cent of his last year's shipments. Until about December 15 . . . anthracite went forward on the basis of a ninety per cent programme. . . .

That would be eighty-two per cent of what they received last year, which was only ninety per cent. The complaint in the city of Peterborough is that some of the coal they are getting there now is unfit to burn. We have practically no anthracite in Peterborough. The burning of soft coal means that at the end of the season practically all homes will have to be

redecorated, because the soft coal makes a mess of the home. They are very anxious to get some of the Alberta coal.

Mr. NEILL: For many years past the government have been paying a subsidy on coal produced at the Comox mine in Cumberland, British Columbia, and possibly also in Nanaimo. That has nothing to do with war services. I should like to ask the minister if they are receiving or if they will receive any subsidy under the war measures that he is handling, and whether it would be affected in any way by the orders in council to which he referred yesterday? I refer to the orders in council which make changes in the war subsidies.

Mr. HOWE: There was no provision for subsidies in the statement I made in the last day or two. It covered only the mainland and prairie mines. I am not sure of the position of the British Columbia mines, but I shall be glad to get the information from the coal emergency board and advise my hon. friend.

Mr. ROSS (St. Paul's): In connection with plants manufacturing munitions of war, and especially in connection with subcontractors, when it is anticipated that some particular article may not be needed in the near future does the department advise the contractor or subcontractor a reasonable length of time ahead, so that the necessary adjustments may be made? As the minister knows, from time to time there have been rumours as to lay-offs at the Toronto Shipbuilding Company, and I understand the mayor of Toronto has taken up the matter with the minister. What is the position there now? What is the backlog of orders? How long will the Toronto Shipbuilding Company be in full operation? Is this advance information, which I think is important, given to the plants concerned, in order that they may adjust their processes accordingly?

Mr. HOWE: When we are notified of a programme change the plant that is interested in that programme is advised immediately; and if a lay-off is contemplated in the near future, selective service is advised at the same time. The hon. gentleman asked about the backlog of orders for the Toronto Shipbuilding Company. Unless there are further cancellations, the Toronto Shipbuilding Company has all the work it can do this season.

Mr. ROSS (St. Paul's): The minister said that his department notified selective service. In order that the organization within the plant may be kept together instead of having the men go elsewhere to work, is any endeavour made by the department to substitute the manufacture of some other article which may be in short supply?

Mr. HOWE: My hon. friend was referring to the Toronto Shipbuilding Company. There is no problem of substitution in that case; the yard is busy at the work for which it was organized. Any lay-offs in the past resulted from the fact that the yard was overstaffed, and in the reorganization of the management the staff was brought down to a normal operating level. There is no shortage of work there.

Mr. ROSS (St. Paul's): I could have mentioned several other plants. For instance, what about the Sutton Horsley plant, where the staff has been reduced by about fifty per cent? The minister stated that this plant had been engaged in the manufacture of instruments for training planes. Is there any reason why it could not have been given other orders instead of laying off those employees? I was not referring particularly to the Toronto Shipbuilding Company; I was using that just as an example. While I am on my feet, the minister said he did not think the great lakes yards would be able to build freighters because of the tonnage and draught.

Mr. HOWE: I did not say anything of the kind.

Mr. ROSS (St. Paul's): Last evening, in answer to a question I asked, the minister said, as reported at page 1896 of *Hansard:*

> The type of boat which can be built on the lakes is restricted, either to tonnage for the great lakes, or to tonnage which can pass through the St. Lawrence canals.

The tonnage really does not affect it; the lake boats are of all sizes, some of them quite large. I was wondering whether in future these yards would be capable of manufacturing lake freighters economically.

Mr. HOWE: The lake yards have built all the lake freighters there are; they are still at least as efficient as ever they were, and I think they will continue to build the lake freighters.

Mr. ROSS (St. Paul's): They have not built them all.

Mr. HOWE: Oh, yes.

Mr. McGARRY: I should like to ask a supplementary question, in regard to the manufacture of tools and small parts by some of the mining plants throughout Canada. At the beginning of the war the mining company at Inverness, which has an efficient

machine shop, made application for work of this kind. I understand that the plant was investigated, but no contracts have been offered. I wonder if the investigation disclosed that this work could not be done economically or satisfactorily, or that the requirements could not be met. Could the minister give some information as to why this plant was not given any contracts?

Mr. HOWE: Of course there are thousands of subcontracts, but I shall be glad to look up the report on that plant and advise my hon. friend later on.

Mr. ROSS (St. Paul's): The minister told us what had been done in connection with coal. Does he know what the prospects are for the future?

Mr. HOWE: No. Future prospects in connection with coal for the Toronto area are beyond my control; we are dependent upon the United States for that coal. We shall do our very best to get the largest possible supply that can be made available.

Mr. ROSS (St. Paul's): The distribution of the coal and the quantities allotted to individuals come under the control of the minister, and people wish to know the prospects of getting coal from the United States. Is the supply going to be long or short? People want to make their arrangements as early as possible.

Mr. TUSTIN: A few moments ago the parliamentary assistant partly explained the situation in regard to tinplate. Last year there was a considerable shortage in the production of canned vegetables in particular. Was there any carryover of tinplate or cans last year? Did I understand the parliamentary assistant to say that tinplate was still in very short supply and there was little chance of an increase in the supply this year?

Mr. CHEVRIER: I did say that tin was still in very short supply. I said nothing about the chance of an increase this year, but I shall be glad to look into the matter.

Mr. TUSTIN: Then could the parliamentary assistant say whether there was a carryover last year of manufactured cans or of tinplate? There is a great shortage of canned fruits and vegetables at the present time, and there was a short crop last year. This year the government is urging greater production, and is increasing the subsidy on some of these commodities. If production is to reach the point it should, it will be absolutely necessary to have a greater number of cans or a greater amount of tinplate for the manufacture of cans.

Mr. CHEVRIER: The Department of Munitions and Supply allocates the raw material used for that purpose, but the question directed to me by the hon. member really deals with a matter under the jurisdiction of the wartime prices and trade board. Since I replied to the hon. gentleman a moment ago I have been advised that there is very little chance of the tinplate situation easing any this year.

Item agreed to.

3. Housing development, $11,000,000.

Mr. WRIGHT: I believe the hon. member for Mackenzie, who is attending a committee meeting this afternoon, desired to have this item left over until this evening so that he might discuss it. I understand he made some arrangement with the minister in that regard.

Mr. CHEVRIER: Would the hon. gentleman allow the item to go through now, with the understanding that the hon. member for Mackenzie will be permitted to discuss the matter on some other item?

Mr. LOCKHART: Would the minister say just what this item covers, and give us some details in connection with it?

Mr. HOWE: It covers commitments for wartime housing made during the past year, together with $1,000,000 for new expenditure if required.

Mr. LOCKHART: Expenditures on what?

Mr. HOWE: On housing.

Mr. LOCKHART: Wartime housing only?

Mr. HOWE: Yes.

Mr. LOCKHART: And nothing to do with any other type of housing?

Mr. HOWE: No.

Item agreed to.

4. Land and other miscellaneous physical property, $3,000,000.

Mr. WRIGHT: Will the hon member for Mackenzie be permitted to discuss this matter when he returns?

Mr. HOWE: Yes, on any other item before the committeee when he comes in.

Item agreed to.

5. Production subsidies and other miscellaneous war expenses, $25,000,000.

Mr. GREEN: Will the minister explain the present position respecting the iron mine at Steep Rock. What progress has been made; what money has been spent, and what are the commitments?

Mr. HOWE: The mine at Steep Rock has nothing to do with these estimates. It is a project brought before the cabinet as a whole by the Canadian National Railways. One difficulty about opening up the mine was that existing freight rates were not competitive with freight rates from the Mesabi range to Duluth. Government assistance was given to equalize freight rates for a period. The rate was equalized for the movement of the first 5,000,000 tons, and by assistance to the extent of twenty cents a ton for that movement. In addition, the government undertook to finance for the railways an ore dock at the head of the lakes to permit ore to be transferred from rail to boat.

Mr. GREEN: What progress has been made?

Mr. HOWE: I know very little more than my hon. friend; all I know is what I have read in the press. I understand, however, that the dewatering process is well advanced. In the last statement I saw, it was predicted that ore would be produced from the mine in August.

Mr. GREEN: In August of this year?

Mr. HOWE: Yes.

Mr. GREEN: I have one other question, respecting subsidies paid on coal. As I understand it, when wages were raised last fall a subsidy was paid on coal imported from the United States which, of course, is used largely in central Canada. The price to the consumer remained what it had been before the increase in wages. But in the west the price of coal was allowed to go up. Will the minister explain why that was done, and whether that is still the position? It would seem to have been an unfair move, so far as the western consumer is concerned. However, there may have been some reason for that action.

Mr. HOWE: The government is subsidizing practically all domestic coal production in the west to-day. I have read in this house the revised subsidies, some of which are substantial. They were built up in order to keep uneconomical mines in operation during a period of great scarcity. I read in the house two or three days ago a revised schedule of subsidies which provide for subsidies varying from sixty-five cents down to fifteen cents a ton. These arose out of increases in the cost of living bonus and in wages, prior to the wage increase to which the hon. member has referred, which increases were beyond the capacity of the mines to meet. The operators could not stand the increased cost of production, and to keep the mines in operation the government paid a subsidy. It was felt that the government could not be put in a position of being forced to subsidize every time a mine found it necessary to increase wages. When the increase came last summer it was pointed out that if more wages were necessary an increase in the price of the product would also be necessary. Then the hon. member referred to a bonus on imported coal in central Canada.

Mr. GREEN: The point I have made is that the price to the consumer was raised in the west, but not in the east.

Mr. HOWE: There was no similar situation in the east. Bituminous coal brought into the central provinces from the United States is not bonused. It is bought by dealers at the going rates, and is resold to the public without any bonus. On anthracite there is a small subsidy.

Mr. GREEN: Is a subsidy paid on it.

Mr. HOWE: No, not on bituminous; but there is a small subsidy on anthracite, amounting to about twenty or twenty-five cents a ton. I cannot tell my hon. friend just how it arises. I think there was at the source of origin an increased cost, which, it was felt, could not be passed on to the producer at the time. The subsidy amounts to something less than twenty-five cents a ton—possibly twenty cents a ton. Certainly it is not more than twenty-five cents. So that the subsidy paid in the east, even on anthracite, is less than the subsidy paid in the west or in the maritimes.

Mr. GREEN: The trouble was that the price went up in the west and it did not go up in the east.

Mr. HOWE: Yes, but when a gun is put to our heads in a time of great emergency, sometimes we have to take what comes. The government cannot be placed in the position of subsidizing a product every time it becomes necessary to raise wages.

Mr. GREEN: What was the basis for subsidizing in the east?

Mr. HOWE: The same basis as for subsidizing in the west. We subsidize western coal to-day, anywhere from fifteen to sixty-five cents a ton.

Mr. ROSS (St. Paul's): The basis for subsidizing soft coal in the east was not the same, because stoker coal has gone up from about $7 or $8 a ton before the war to a present price of $11.

Mr. HOWE: It is not subsidized.

Mr. ROSS (St. Paul's): And the same with steam coal?

Mr. HOWE: It is not subsidized, either.

Mr. ROSS (St. Paul's): The public have to pay the extra cost; that is the answer. I do not quite understand why eastern coal, under the same circumstances, should not have been subsidized.

Mr. HOWE: Eastern coal is subsidized.

Mr. ROSS (St. Paul's): Eastern coal is?

Mr. HOWE: Maritime coal, yes.

Mr. ROSS (St. Paul's): I do not mean that. I mean central coal. Our people in the central provinces have to pay for it. It is a matter of keeping the cost of living down; that is the idea of the subsidy. It is a serious problem, especially in the city of Toronto where rentals are frozen. The Toronto Housing Company, a philanthropic organization with which I am connected, cannot get more rentals, and we are faced with $5,000 or $6,000 a year more than we used to pay in our outlay for coal. The east and the west are subsidized, but we in the central provinces are not. That does not seem to be a position of equality.

Mr. DIEFENBAKER: Will the minister give particulars respecting the estimated total of about $31,000,000 in the current year? To whom were those subsidies paid, and in respect of what production? I refer to the estimated expenditures for 1943-44, amounting to $30,995,435.35.

Mr. HOWE: The total expenditure, to the end of last year, is $24,303,981. My hon. friend will realize that the full period has not yet elapsed.

Mr. DIEFENBAKER: What is the end of the year?

Mr. HOWE: The figure my hon. friend is looking at is that for the end of the last calendar year. The estimated expenditure for 1943-44 is for the fiscal year, which is not yet ended.

Mr. DIEFENBAKER: What are the particulars?

Mr. HOWE: Emergency coal production board, $4,581,198.

Mr. LOCKHART: What kind of coal? In some instances there were drawbacks on bituminous coal and I am just trying to find out what they were.

Mr. HOWE: I cannot give all the details, but I can say that the subsidies provided by the emergency coal production board during the nine months to which I referred were $4,581,198.73. The details are as follows:

Experimental development costs..	$1,205,588 92
Production measures, relocation of oil storage	350,489 11
Duties and taxes re United Kingdom government	1,553,125 26
War risk insurance carried by government plants	1,312,019 00
Administration expenses of non-producing government owned companies	1,641,619 46
Miscellaneous—interest on bank overdraft	972,544 99
—plant payment....	981,800 00
Sundry payments	2,095,662 84

Mr. DIEFENBAKER: Would the cordwood subsidies come under that?

Mr. HOWE: I imagine that they would fall within the period which is not covered. My hon. friend will undertsand that I can bring my figures up only to the end of the calendar year, and I imagine the cordwood subsidies would fall in the last three months of the fiscal year.

Mr. DIEFENBAKER: Then it is correct to say that no cordwood subsidies are included in the $24,000,000 up to December 31 last?

Mr. HOWE: I would not say that.

Mr. DIEFENBAKER: That is what I am trying to get.

Mr. HOWE: I do not know how much they would amount to, but I hardly think they would be large. I have a statement made up to the end of the calendar year and there is no amount included for that purpose. Possibly it may be in the suspense account. Until we get the full record to the end of the fiscal year I cannot give my hon. friend any worthwhile figures on that. The chances are the payments have been made in the last three months.

Mr. DIEFENBAKER: Can the minister not give an approximate figure as to the amount of subsidies paid on cordwood to date?

Mr. CHEVRIER: I put those figures on *Hansard* the other evening in answer to a question asked by the hon. member for York-Sunbury.

Mr. DIEFENBAKER: That was only the amount expended, not the amount for which the department is liable.

Mr. HOWE: I have it as of February 29, 1944, which is later than the figures I was giving my hon. friend. At that time the total subsidies paid amounted to $757,664.15 and the transportation subsidies amounted to $257,639.71.

Mr. DIEFENBAKER: I should like to get some information with regard to the cordwood situation, but I realize that the minister will not be able to give this offhand. I wish to know what quantity of wood has been purchased and delivered in each province since the commencement of the wood subsidy and the announcement of the policy by the minister. How much is on hand in each province and how much has been contracted for but is not yet delivered? Also, how much wood has been purchased in each province from wood dealers and is still on hand? I should like this information about the following types of wood:

Softwoods—	Hardwoods—
Jack pine	Hard maple
Poplar	Yellow birch
White birch	Oak
Soft maple	Beech

I want a statement as to the prices paid in each province for these different kinds of wood, what quantities have been sold by the government and at what prices. I should like a little further information in regard to the 75,000 cords of cordwood produced at the head of the lakes. How much is still on hand; how much was sold as pulpwood; to whom was it sold and at what price?

Mr. HOWE: I can give my hon. friend some information on that. The amount shipped to Winnipeg was 8,733 cords; the amount sold to pulpwood companies was 12,000 cords; the amount at present in storage at the lakehead is 40,000 cords, and the amount shipped east during the winter months was 14,267 cords.

Mr. DIEFENBAKER: Where was that shipped to?

Mr. HOWE: It was shipped to a number of points. I can in time give my hon. friend the freight rates and the selling prices, but it will take some little time to obtain the information.

Mr. DIEFENBAKER: I am not concerned with that at the moment. It was shipped to different points?

Mr. HOWE: To various points.

Mr. DIEFENBAKER: How far east?

Mr. HOWE: I think some was shipped to Toronto. Wherever there was a need that could be supplied more cheaply from Port Arthur than from any other point, it was shipped from Port Arthur.

Mr. STIRLING: Can the minister give me the information I asked for yesterday about the Granby company?

[Mr. Howe.]

Mr. HOWE: The hon. member asked for particulars of the $27,582.30 expended on the Granby Consolidated Mining and Smelting Company's plant. They are as follows:

Fine ore bin extension	$12,164 40
New fifteen-foot air compressor	5,192 72
Installation of 400-horsepower motor	3,339 15
Fine ore bin	1,252 09
Ball mill extension	1,027 28
Ball mill installation	4,606 66
	$27,582 30

The Canadian government has no financial interest in the production of the Granby mine. As my hon. friend knows, the ore is shipped to the United States, and is bought by the Metals Reserve Corporation. Canada was requested by the Metals Reserve Corporation to step up, at its expense, the production of ore by the Granby company. The Metals Reserve Corporation advanced $200,000 for that purpose. Expenditures were made to the extent indicated, but it was found that a shortage of labour prevented any real stepping up of output. When the expenditure noted was made the Reserve advised us that they wished the return of the unexpended balance of the money, and it was returned to them.

Mr. STIRLING: So that the $172,000 would not be spent?

Mr. HOWE: No.

Mr. STIRLING: Would the minister say even approximately at what date this arrangement was entered into? Was it in 1943?

Mr. HOWE: It was on February 3, 1944, that the Metals Reserve Company advised us that they wished the unexpended balance returned.

Mr. STIRLING: As recent as this February?

Mr. HOWE: That is when the expenditure was stopped. It was authorized on December 8, 1942.

Mr. HATFIELD: What are the regulations governing the export of wood from New Brunswick to the United States, and what is the quota basis?

Mr. HOWE: I could not say offhand. The export of fuel wood is by permit and is based on a proportion of the export of earlier years. I shall be glad to get the information for my hon. friend.

Mr. FRASER (Peterborough West): With regard to fuel wood which the municipalities buy, you allow them something for transporting the wood into the municipality, and are they also allowed the one dollar subsidy?

Mr. HOWE: Yes. Cities are classified as dealers if they are actually buying and selling wood. The wood is sold in the locality at the ceiling price there and is resold by the dealer at the retail ceiling price in the locality. We bonus the dealers to the extent of one dollar a cord to keep them in business.

Mr. FRASER (Peterborough West): You do not classify all the cities as dealers?

Mr. HOWE: Not unless they buy and sell wood.

Mr. FRASER (Peterborough West): They have to buy and sell?

Mr. HOWE: Yes.

Mr. FRASER (Peterborough West): And deliver themselves?

Mr. HOWE: Not necessarily.

Mr. GRAYDON: Is the recommendation of the war expenditures committee which was tabled on January 26 for a temporary subsidy on the production of malleable iron castings being acted on? Has any subsidy been paid?

Mr. HOWE: No. My hon. friend means for local production in Canada?

Mr. GRAYDON: Local production of agricultural implements.

Mr. HOWE: No; we do not bonus that. The obvious method of helping would be to increase the ceiling price.

Mr. GRAYDON: You have not done that?

Mr. HOWE: It is not in my department. I do not know.

Mr. FRASER (Peterborough West): The dollar subsidy on wood runs out in March?

Mr. HOWE: No. June 30.

Mr. FRASER (Peterborough West): Is it to be extended?

Mr. HOWE: I could not say.

Mr. FRASER (Peterborough West): Does the department buy back from the different municipalities wood that might be left on their hands?

Mr. HOWE: We undertook to do so, but we have had no request to do so.

Mr. FRASER (Peterborough West): It has to be done by a certain date?

Mr. HOWE: No. We undertook to buy back the wood after a certain date if requested to do so, but we have had no such request. I think any municipality that has wood will be glad to have it on hand for next year.

Mr. FRASER (Peterborough West): They have until May 31, 1944, to apply?

Mr. HOWE: Yes.

Mr. FRASER (Peterborough West): On what basis will you buy back the wood? At cost, or the ceiling price?

Mr. HOWE: I imagine at the same price as we sold it to them.

Mr. STIRLING: Certain financial assistance was given to coal mines in the Princeton area to assist in the production of coal in the four or five coal mines in that neighbourhood. Has the minister the details?

Mr. HOWE: Would my hon. friend say what colliery he is interested in?

Mr. STIRLING: There is the Princeton colliery, the Tulameen, the Nine Mile, and there is one other whose name I have forgotten at the moment. Has the minister not got them by localities?

Mr. HOWE: The total paid to Princeton Tulameen was $68,447.31.

Mr. STIRLING: Is that a finished figure, or is it continuing?

Mr. HOWE: All subsidy arrangements run out on March 31 and are subject to the new regulations I gave here. There has been paid to Telkoal total subsidies amounting to $23,135.60; to Merritt Coal Mines Limited, $5,323.40; to Tulameen Colliers Limited, $13,361.79; to Gething Mine, $3,323.45.

Mr. STIRLING: Is that based on the output?

Mr. HOWE: They are straight production subsidies, worked out to cover the cost of operation. It is an unsound basis.

Mr. STIRLING: It has no relation to the tonnage produced?

Mr. HOWE: No.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. HANSELL: Under this item I should like to refer to the announcement that the minister made yesterday with respect to the revised subsidy policy affecting the western domestic coal fields. I imagine that the outline he gave of subsidies is over and above the regular subsidies that are given for the movement of coal in Canada.

Mr. HOWE: Yes.

Mr. HANSELL: I am very happy to hear the minister say that, because I believe that in war time we have discovered that certain subsidies have to be paid in connection with the coal mining industry. With the announcement of these subsidies the minister also stated that the government will appoint a royal commission charged with the duty of studying all aspects of the production and distribution of coal in Canada and to report to the government with recommendations for such alterations of the pre-war coal policy as its findings may indicate to be necessary or desirable.

I have no objection to another coal commission being appointed to go into the various aspects of the coal mining industry, but I would point out that, as the minister is well aware, this is not the first commission that will have been appointed for work of this kind. If we look back over the history of the coal mining industry in Canada we shall discover that a good many coal commissions have been set up, and I cannot quite understand why it should be necessary now to set up another one. I am not opposing it, but I know that in the past commissions have studied every possible aspect of the coal mining industry. They have investigated and studied the matter of freight rates, the matter of subventions on coal, the matter of the various kinds and types of coal, and I believe the national research council has done considerable work along similar lines. I am tempted, therefore, to ask what action governments of the past have really taken as a result of these various commissions on coal.

Some action may have been taken, particularly with reference to subventions, but I suggest that there is no use in appointing commissions if the government is not going to be sincere in accepting their findings and bringing about, on the basis of those findings, such legislation as will benefit the coal mining industry and the consumers of coal, meaning, of course, everybody.

I said a moment ago that I was not going to oppose the setting up of another commission; but I cannot help feeling that, coming at this time as it does, this is nothing more or less than a political move on the part of the government in order to give the people of Canada the impression that it is going to do something in connection with the coal mining industry. I consider that that is all it is, because if the government wanted to do something it could take the findings of commissions in days gone by and upon those findings bring about a national coal policy.

That is something that Canada has never had. Not only have commissions worked on these matters in the past, but the coal mining industry itself has worked hard to put the industry over in Canada. I recall not so many years ago, since I became a member of parliament, that coal miners and coal operators in various sections of Alberta got together—and that is something, when operators and miners get together on a project—and attempted to form an organization for the purpose of securing markets for Alberta coal.

That was an admirable thing and they tried their best; but the coal situation in Canada being what it was, with various, shall I say, combines, their efforts amounted to very little. The only solution for the coal mining problem is that Canada should have Canadian markets for Canadian coal, notwithstanding anything that anyone might have said with reference to the type of coal that is mined in this country. I am confident that until Canada is reserved as the market for coal mined in Canada the national coal problem will not be solved.

I wish to ask the minister this question: In what way has the situation changed in Canada to necessitate the appointment of another commission? Is the coal situation any different from what it was before the war started? I do not believe it is. If the minister can enlighten us on it, well and good, but I do not think the situation has changed one bit. The war has done something to increase markets for Canadian coal because of the very high productive capacity of Canadian industry at this time; but as far as consumption of coal and employment in coal mines in Canada are concerned, would the minister tell us in what way the situation has changed; what the changes are, and whether the position is any different now from what it was in pre-war days? If he can tell us of the change, then we shall recognize the need for another commission. If he cannot, why not take the findings of past commissions and work on them? Once again I say, unless he can explain that to the committee I regard the setting up of this new commission as a political move to make the people of Canada feel that something is to be done in order to let them down as they have been let down many times before; and we shall still find the coal mining industry trying to get along on crutches. That is the position. I should like the minister to answer that question for us.

Mr. HOWE: The coal situation has changed materially in the course of the war. The principal change has been in the greatly increased cost of producing coal, which increased cost is general in our Canadian mines. The loss of skilled miners has had an effect, and other factors have entered into the situation, so that the markets which can be reached on a competitive basis are quite different to-day from the competitive position of before the

war. Before the war the mines in the maritime provinces shipped coal as far west as Toronto, Sudbury and the lake St. John area. The western limit for maritime coal to-day is about Rivière du Loup; and the maritime mines are hard put to supply the demands of their own provinces.

The western mines have been handicapped, not only by the increased cost of the product at the pit-head, but also by shortages of transportation, owing to the burden that has been put on the railways to move other high priority commodities. To keep the mines going to meet unusually heavy demands, a system of subsidies has been built up, on a more or less haphazard basis. We have been in the position of not wishing to allow any producing mine to close down, and, as costs have risen, we have tried to keep the mine open by paying whatever subsidy has been required. The recent mild winter has allowed us a breathing space to review the situation, and we are revising subsidies that are obviously out of line. We are studying subsidies for other cases which require considerable accounting and auditing, and further revisions of subsidies in those areas will be made. But having in mind the changes in marketing conditions, the change in economic areas for marketing, and the changes in the cost of production, the government believes that a commission is needed now more urgently than at any time in the past. I have every confidence that a commission that can study every aspect of the production and marketing of coal in Canada will bring down a report which will be helpful to the government in formulating a new coal policy for Canada.

While I am on my feet I shall give the hon. member for Comox-Alberni an answer to the question he asked. The new subsidy arrangement does not apply to mines on Vancouver island. Canadian Collieries on Vancouver island is on the old form of subsidy, which will not be changed until the present audit, which is now proceeding, is completed.

Mr. JOHNSTON (Bow River): The minister spoke of assistance by way of subsidies being given to coal mines that are finding it difficult to operate. Does he mean that the assistance was given to them by allowing them to increase the price of coal? Is that what he refers to, or is it a direct subsidy to the mine? The government allowed an increase in price to some of the mines that were finding it difficult to operate. Is that what the minister meant when he spoke of a subsidy?

Mr. HOWE: We have given considerable direct assistance to the mines either by way of subsidy, or by way of new equipment for expanding production.

Mr. JOHNSTON (Bow River): That was in addition to allowing them to increase their price?

Mr. HOWE: The increase in price resulted from one incident, namely, a strike at a critical time. The result of that was an increase in wages. That is compensated for by an increase in the price of the product being permitted.

Mr. JOHNSTON (Bow River): What is the amount of the subsidy paid on imported coal?

Mr. HOWE: I have been over that at least five times to-day, but I shall go over it once more. There is no subsidy paid on imported bituminous coal. A small subsidy, in the neighbourhood of twenty-five cents a ton, is paid on anthracite coal.

Mr. NICHOLSON: When item 3 was reached this afternoon I was in the railway and shipping committee. I wish to thank the minister and the committee for permitting me to discuss the question of Wartime Housing at this time. Each year since Wartime Housing was organized I have discussed the activities of this important crown company. I have made my critical remarks on the score that the cost per unit was excessive, that temporary houses were being built in centres where an acute shortage of permanent houses existed, and that slum areas were being created. However, my protestations were not successful in changing the government's policy. The building activities of Wartime Housing are coming to an end, and therefore I do not think any good purpose will be served by a further reiteration of the points I have made in previous years.

I should like to say, however, that I believe the people of Canada appreciate the fact that the federal government recognized that a serious shortage of housing in the early stages of the war was having an injurious effect on our war production. The people also appreciate the fact that living quarters provided by Wartime Housing were more satisfactory than other quarters available at comparable rents in the centres where Wartime Housing have carried on their activities. It is unfortunate that, after having spent over $70,000,000 and after having built over seventeen thousand units, the Department of Munitions and Supply is not making some plan to extend the activities of this corporation into the post-war period or making some plans to have some government agency prepared to go into the field of providing housing accommodation for people in the lower income brackets, people who cannot hope to find suitable living quarters provided by the private builder. In this country as

in every other country at least one-third of the families are not receiving in peace time and in war time an income sufficiently large to enable them to pay an economic rent. As a consequence, society must provide substantial sums of money every year to maintain slum areas. We pay for these areas in one way or another. At the present time in Canada we are paying to maintain our slum areas through excessive fire protection costs, excessive juvenile delinquency costs, excessive police protection costs, the excessive cost of hospital and medical services to care for people living in slums.

Just before Christmas I had the good fortune to visit a number of centres in the United States where the public authorities have embarked upon slum clearing projects. I understand that the general manager and president of Wartime Housing also visited some of these centres, and after I have finished I should like to hear something from the minister in regard to any reports he may have received from these gentlemen. The committee might be interested to hear something of the development in the city of Boston, for example. I understand that the minister was a student at M.I.T. a number of years ago, and possibly he will recall the very large slum area out in the Charlestown district. If you go to this area and drive down Bunker Hill you will find on one side of the street the century old slums that have been a disgrace to that country for so long, and on the other side a twenty-five acre plot where the slum dwellings have been levelled to the ground and modern fireproof apartment buildings erected, so designed that every family has sunlight at some time during the day. They have running water, frigidaire, heat and light, all supplied by the Boston housing authority, which is supported partly by federal funds and partly by funds of the city of Boston. The housing authority was required to build according to certain regulations, which stipulated that the cost of a housing unit should not exceed a specified amount. Consequently the units are more crowded than people accustomed to the wide open spaces of Canada might wish, but the remarkable thing is that living quarters have been provided at such reasonable rentals. A family enjoying an income of $750 a year can rent a modern four-room apartment for $15 a month, with light, heat and other services supplied. A larger family occupying a five-room house would pay $16 a month. If you had a larger income you would pay $24. The largest apartments, which have six rooms, rent for from $17 to $25 per month, and in all cases the rental includes light, heat and all other services. In addition to these very comfortable quarters, people living in the project have access to playgrounds so that children may be kept away from heavy traffic. In the summer time the children may use wading pools, and fountains play while they bask in the sunlight. In the fall of the year the boys play rugby on the project grounds. At three o'clock I found some of the children, whose parents were working in war industries, in a bright room under the supervision of a trained nurse. Three of the little tots were fast asleep on cots provided by the authority. At four o'clock I saw the children hurrying from school to the library, which is located in the basement of one of the buildings; in another room teen-age girls were being taught sewing, while in the community theatre the boys were rehearsing a minstrel show. It is true that the federal government provides a subsidy to bridge the difference between the rents paid by the people in the community and the cost of amortizing the entire project over a sixty-year period, at very low interest rates, but my information is that if the cost of maintaining those slum areas were taken into consideration the federal subsidy would be of very small proportions.

Near Washington there is another project that is of great interest. I refer to the Greenbelt community, twelve miles from the centre of Washington. Again federal funds were used to make it possible for people in the low income brackets to have up-to-date, convenient quarters at rents averaging not more than twenty per cent of their monthly income. Several thousand acres of farm land were purchased at a low cost and a modern community has been planned, with something over one thousand units to begin with; but recently the size of the project has been doubled. The housing units are situated around the rim of a horseshoe, in the form of a garden city, with underpasses under busy thoroughfares, which make it possible for the children to travel from home to school in safety. Shopping areas have been planned as part of the project, and the people living in the community have been allowed to operate their own cooperative stores in buildings erected with federal funds. It is true that the cost per unit in the Greenbelt area has been higher than in most other centres in the United States, but experimental work has been carried on there which will be of real value in the post-war period.

I appreciate that with Canada at war, the Minister of Munitions and Supply could not have been expected to build houses of the style of those in the Greenbelt area, but greater precaution might have been taken to see that the rows upon rows of houses erected in Canada should not have been built in areas

where there is a serious shortage of permanent houses, and where the tendency will be for these units to develop into slum areas. I do not see how this parliament can separate the work which has been done by Wartime Housing from the work which must be done very soon by some department of government to provide homes for those who are fighting for our freedom. It was originally planned that the houses built by Wartime Housing would be demolished within six months after the conclusion of the war. I should like to remind the committee that seventy thousand people are occupying these houses at the present time and that with very few exceptions, which would be in isolated places where war industries have been located, there is a serious shortage of houses in every centre. It just would not be practical to ask these seventy thousand people to move to the parks or on to the streets while their houses were being demolished in order that the terms of the contract might be fulfilled. It seems to me that now, when we are having layoffs in many industries, many of those who otherwise may be in the ranks of the unemployed should be able to find work in providing suitable housing in strategic centres of this country, as part of a national, provincial or federal plan.

Unfortunately governments in Canada have not had very much imagination in dealing with housing needs. In my province we had some experience in rural housing when hon. gentlemen to my right were in office a number of years ago. Several hundred families were reestablished in the northern part of Saskatchewan during the depression years, when a great many builders were out of work and Canada's construction programme was practically at a standstill. The most ambitious rural housing programme that the federal and provincial authorities could provide in those days called for an expenditure of $50 per unit. Of course the logs were available, free for the cutting; but all the hardware, windows, shingles and flooring had to be purchased with the $50. It does not require much imagination to visualize the type of quarters built for hundreds of families in Saskatchewan under the plan worked out jointly by the Bennett government in Ottawa and the Anderson government in Regina.

When I was home at Christmas I stayed in one of those $50 homes, located twenty-seven miles from the nearest railway station and the nearest doctor. The family living there had enjoyed prosperity in Saskatchewan some years ago. They had gone north in the early thirties when the drought and the depression made prospects in the south look very dull. While they are having more prosperous days now than they had when they first came in, they are still living in the $50 house. They do not know whether to go back to the prairies or whether to stay, in the hope that conditions may improve.

In Saskatchewan we had a change in government in 1934, and there was a change at Ottawa in 1935. More generous housing programmes were then introduced. The ceiling for rural housing was increased from $50 to $75. This increase did make possible a considerable improvement in living quarters. It meant that one could put shingles on the roof, instead of slabs from the nearest sawmill. But I hope that people in Canada will not be compelled to live in a country where $50 or even $75 houses are the order of the day.

I find that two valuable reports have recently been released in the United States, dealing with their immediate housing needs. One, by the C.I.O., is entitled "A Housing Programme for an Economy of Abundance." It points out that the primary responsibility for filling shelter needs of the people of the United States is a public one which must be met by government action. They call for 500,000 units of so-called public housing a year, and more if private housing fails to do its job. That is the whole question —whether private builders can make good their boast and be able to make good the housing needs of the country. If they cannot, public housing and cooperative housing will have to take that responsibility.

Further on in the report they say:

> In respect to shelter, such production levels call for a completely new orientation. The fundamental question will no longer be: What kind of housing can we afford? The issue before us will be: What kind of housing, within reason, do we desire? . . .
>
> The conditions of life which have dictated this attitude of submission to private interest and accidental circumstance no longer exist. It will shortly be within our power to determine for ourselves the nature of all the surroundings amid which we live our lives.

Then, Harry C. Bates, chairman of the housing committee of the American Federation of Labor presented before the house committee on public buildings and grounds in Washington on February 10, 1944, a most interesting brief. In it he says:

> Housing has long remained the most neglected part in the improvement of the American standard of living through either private or public action. Before the war we were too far behind in the volume of housing construction to even hope to catch up with the need in the near future. The war has set us back even farther.

Then he points out it was not until trade union leaders forced the issue that a national survey was carried out in 1940, to find out really what the housing situation was in the United States. They found that:

A dwelling either in need of major repairs or without a private toilet or private bath, was classed as substandard. If the American standard of living means anything, this test is certainly sound. The census showed that in 1940 in our town and cities alone there were over 6 million homes classed as substandard by this test. In addition, there were over 5 million non-farm homes in rural communities in this substandard condition. To top this we also had nearly 7 million farm dwellings which failed to measure up to this simple minimum standard. In the case of farm homes, even if we disregard the absence of sanitary facilities, 34 per cent or over 2½ million farm houses, were in unsafe and unlivable substandard condition.

We have not gone as far as they have in the United States. We have not compiled any accurate statistics showing the number of housing units built in Canada in the thirties. While some progress was made in connection with the 1941 census, there still is not available in Canada any satisfactory picture of the housing needs of the country.

However, I must congratulate the government upon making a start. I have not had a chance to look at the very large volume tabled to-day by the Prime Minister, but the table of contents suggests that it is at least a start. I find in the contents a reference to housing legislation in Canada, housing legislation in Great Britain and in the United States, urban housing, post-war housing needs, town planning, home ownership and related programmes, low rental housing, farm housing, reduction in housing costs, and so on. I hope that this report may be printed and made available to hon. members and those who are interested, as are other reports which have been tabled by the Prime Minister.

Mr. FRASER (Peterborough West): It is only a report.

Mr. NICHOLSON: I am glad the hon. member mentions it is just a report. It is on paper, and I think at this stage we should be much farther along than we apparently are, if any action is to be expected in time to meet serious trouble in the post-war period.

Before concluding, I should like to congratulate, as other hon. members have done, the Minister of Munitions and Supply upon the imaginative job he has done since taking over his portfolio. Only members of his department and members of parliament who have had an opportunity to travel from coast to coast and to visit some of the war industries have any adequate appreciation of what has been done in his department. But I would suggest that if the minister would like to make a permanent name for himself in the annals of Canadian history, he might do so by showing the same imagination in facing up to a housing programme for the years which are to come. He might be able to keep the present government in office, and he would find thousands of people across this country who, for the first time in a lifetime, would be able to say, "Well, at last we are able to have a decent house, thanks to C. D. Howe."

But this is not going to happen by accident. Unless the minister is going to make plans and spend funds in the same reckless fashion as has obtained in connection with the huge expenditures which have been made for war purposes, his munitions achievements will have been forgotten in a very few years. It is only natural that many people working in these industries see the local problems, and find it difficult to see the larger picture of Canada's production. They know something of the bottlenecks. They know something of the problems which develop when materials have not moved along in time, and when it seemed as though they were being paid for very little work. But I thing, if we look at their picture, we shall understand that and appreciate the difficulties experienced. Those who are working in these large industries will not remember very long the Minister of Munitions and Supply, who has provided leadership in this particular field. But if he could carry out the programme suggested by the Minister of Labour, that of having 100,000 houses built each year for the next ten years, he would have a million families in Canada in a ten-year period, or 100,000 a year who would be living in better quarters than ever before. I do not think there is a chance in the world to have such a programme carried out by private industry or by the machinery set up under national housing. I need only remind the committee that in the past under its activities our best performance was about 6,000 houses a year and a total of 25,000 houses for some eight years. Wartime Housing has built only 17,000 houses in two and a half years, or at the rate of less than 10,000 houses a year. How small this total is when compared with the figure of 100,000 houses used by the Minister of Labour.

I should like now to make some recommendations to the minister. A conference should be called immediately at which provincial, municipal and federal authorities could discuss housing problems exclusively. I think one of the mistakes that Wartime Housing made was to fail to recognize that under the British North America Act certain powers belong to the federal government, certain powers belong to the provincial government

and certain powers belong to the municipal government. No federal authority should ride roughshod over either the provincial or the municipal authority without due consultation.

My second recommendation is that plans be made for a complete revamping of the National Housing Act and reorganization of the national housing administration. When the government found it necessary to build houses to meet war-time needs, for some reason or another the staff at national housing administration headquarters were not satisfactory. That was a question of government policy. If the national housing administration staff were not sufficiently efficient in 1941, some policy should be laid down by the government for a reorganization which would make available a satisfactory administration.

A research staff should be set up to go into the different aspects of housing and find out whether home ownership is the only method that should be adopted. They should find out whether there is not a place for low rent houses and they should do some work on town planning. Consideration should be given to the improvement of rural housing, for of all our houses in Canada those which cry out most loudly for improvement are our farm homes. Plans should be made for the extension of the home improvement plan and research should be carried on in building designs. A recent number of *Engineering and Contract Record* contains an article in connection with increasing the efficiency of the construction industry. Men in the construction industry are seriously considering new techniques that must be used if Canada is to keep pace with modern trends and modern requirements. They suggest that research should be carried on for the manufacturer with a view to (a) Eliminating duplication in stock sizes; (b) A solution for the problem of standardization which various industries manufacturing building supplies are trying to solve individually; (c) A stimulated demand for stock sizes in preference to special sizes, as a result of their more convenient and economical field erection; (d) Lower costs of manufacturing against stock as compared with the custom manufacture of special sizes and details; (e) Improved precision and uniformity of quality that result from improved manufacturing processes; (f) A market for standardized building materials where the cost of special detailing or field cutting would be prohibitive; (g) Standard assembly details which would help the manufacturer to control the installation of his products and thus avoid complaints that arise from faulty workmanship. Research is suggested also for the architect and the builder and contractor as well as for the consumer.

If the cost of housing can be reduced, more houses will be built and more contented Canadians will be living in them. I notice the national housing administration and the code and specifications section of the national research council have put out an interesting book on the national building code. However, it seems rather difficult to secure a copy of this book. This is one of the few instances where I have asked for a copy of a publication and been requested to state whether it is for myself. That is a most unusual question to be asked by any government authority issuing a publication. Publications like this should be supplied to members of parliament as a matter of course.

Could the minister make some statement as to what the plans are at this stage with regard to disposing of the 17,000 houses built by Wartime Housing? Could he give a report to the committee in connection with the findings of the president and general manager of public housing in the United States? Has any consideration been given to retaining the staff of Wartime Housing with a view to having them engage in the type of research I have outlined?

Mr. HOWE: My interest in housing is confined to Wartime Housing, which programme has been largely completed. It has been the duty of this deparment to find housing for employees in war industries, in order to make sure that war industries can operate efficiently. The government as a whole is greatly absorbed in the matter of a post-war housing. Other departments are conducting studies of the type referred to by my hon. friend. I do not know that the complete post-war programme of the government can be announced, but I think I am safe in saying that the housing of Canadian citizens will have an important part in that programme.

My hon. friend asked what our plans are for the disposing of war-time houses after the war. Our agreement with practically every municipality in which wartime houses have been built provides that at the end of the war, the houses will be dismantled and moved away. I am not sure just what will be done when that day comes. These are quite comfortable houses, and I imagine that the eventual disposal will be to put good basements under them, install heating plants and regard them as permanent houses. However, that will be up to each individual municipality. The government will be prepared to carry out its agreement if the municipality so

desires. With that uncertainty, it would be quite improper for me to discuss any disposition of the houses, other than to carry out the agreements which stipulate that the houses will be removed at the end of the war.

Mr. NICHOLSON: I understand from the minister that the programme of Wartime Housing is almost completed, and I should like to know if he is retaining the staff and, if so, what type of work he has in mind for them to do from now on?

Mr. HOWE: The staff of Wartime Housing has been reduced, to some extent. This has not been done deliberately; the reduction has taken place in this staff as in all staffs which are not being expanded. My hon. friend will understand that there is a considerable administration work involved in operating our housing projects. Studies have been made in the past, along the lines suggested by my hon. friend, and these will be made available to whatever department assumes responsibility for the post-war programme. I have no doubt that a number of the staff of Wartime Housing will be needed by the department which takes this programme in hand. In my opinion the staff of Wartime Housing has been most efficient, and has used excellent judgment in its operations. Personally I would be sorry if the talents of that organization are not used to the fullest extent.

Mr. GRAYDON: The minister has referred to the possible cessation of the activities of Wartime Housing. Will this apply to Malton, for instance, where staff houses are to be erected in connection with the influx of further employees in the Victory aircraft plant?

Mr. HOWE: My hon. friend will have noticed that we put in an additional one million dollar appropriation. When I said that the programme had ended, I did not mean a sharp cut-off. We have a small provision for new facilities that may be required, and Malton is a place where new facilities may be required. We have a programme there which will be going on for some time. The need for housing reaches somewhat beyond the local situation. If the employees are housed in Toronto, and are moved to Malton by rail, we shall not require additional facilities at Malton; but if we move in new employees from a distance, requiring additional housing there, housing will be built.

Mr. GREEN: I realize that the minister is not responsible for the administration of the national housing act, and that his department is not responsible for the administration of the home improvement loan plan. But is it not a fact that restrictions on building materials come under the Department of Munitions and Supply?

Mr. HOWE: Yes.

Mr. GREEN: I believe that a little less than a year ago the department placed restrictions on the building of homes, making it practically impossible at that time to get the materials required for home building. More recently some change has been made in those restrictions, presumably as supplies became available. Could the minister tell the committee this evening just what the present position is with regard to the availability of supplies and equipment for building homes in Canada? Then we shall have a better idea of what can be done now in the way of starting to rehouse the Canadian people. I urge upon the minister that he review these restrictions again to see whether it would not be possible to relax or wipe out altogether some of these restrictions. If that were done, private contractors would greatly increase the number of homes built, and many of our people would be given some place to live. The minister realizes, I suppose, just as well as the rest of the hon. members do, that the present housing situation is very difficult. People are living in garrets, garages and basements, and whole families are living in one room. This must have an effect on the war effort because it lowers the morale of our people, and I am sure it is seriously injuring the health of the Canadian people as a whole. In addition, it would be very difficult under present conditions to reestablish the men who come back from the war. I would be the last one to urge any action that would interfere with the war effort, but surely the time has now come when we should start on a deliberate campaign to rehouse the Canadian people. It would be well worth while. In some centres—I know it is the case in Vancouver, here in Ottawa and certainly in Halifax—the positon is almost impossible. Some consideration might be given to declaring certain areas emergency areas and allowing special housing provisions to be made applicable there. Would the minister tell us the present position with regard to the restrictions on the materials and equipment needed for the building of homes?

Mr. HOWE: The policy of the department has been to encourage the building of small homes to the full extent that the materials situation would permit. Even in the days of greatest scarcity, the department has recognized emergent situations in particular localities and has diverted available supplies of materials to those areas in preference to less urgent areas. The shortages to-day are

more particularly bathroom fittings, and certain other essential components of a modern home. The supply situation has eased to a point that permitted us in January to relax the restrictions and increase the size of home that could be built without a permit. I think we have been able to supply the necessary materials for the homes that have been built, and as the supply of materials permits there will be a further relaxation of the restrictions. We are just as anxious as my hon. friend to encourage the building of small homes as rapidly as possible, and the only purpose of the regulations to-day is to distribute the available supplies fairly.

Mr. GREEN: That is, permanent small homes?

Mr. HOWE: Yes. We do not wish to encourage the undertaking of home building that cannot be carried out for lack of materials. That is not helpful to anyone. I can assure my hon. friend that we shall take steps to encourage home building just as soon as we can increase the supply of materials.

Mr. GREEN: Would it be possible to arrange for some factories in Canada to step up the production of bathroom fittings and other materials in short supply, just as was done with certain urgently required war materials?

Mr. HOWE: As my hon. friend knows, the factories that make bathroom supplies also make shipbuilding components. We can hardly divert effort away from the war to undertake peacetime requirements. It seems reasonable to ask our people to undergo discomfort for a little longer, in order that the war programme may not be dislocated. My hon. friend also knows that the man-power situation is still difficult in most areas. We do not wish any large diversion of man-power to the building of homes. But the house building is enlarging each month and will continue to do so.

Mr. GREEN: Is there any intention of extending the provisions of the National Housing Act so that ninety per cent instead of the present eighty per cent can be borrowed from the government for the building of a home? Is there any prospect of having the interest rate on the loans reduced?

Mr. HOWE: I understand that a new national housing act will be brought down this session, and I would prefer my hon. friend to obtain the information when the bill is brought down.

Mr. LACOMBE: Mr. Chairman, I would draw the attention of the government and of parliament to a grievance of a serious nature. I refer to the disastrous situation falling upon the producers of maple syrup and maple sugar caused by the new regulations of the wartime prices and trade board.

The rationing of these products and the necessity for the producer to request coupons from consumers means that the producer either cannot develop his sugar bush or can sell only a very small portion of his products.

On March 13 last, the Minister of Trade and Commerce, in asnwering questions I put on the orders of the day, stated that Canada exported during 1943 only 3,959,647 pounds of maple sugar and 181,596 gallons of maple syrup. Why, then, ration these products in Canada? There is no reason for doing so. Therefore I request the government to redress immediately this unfortunate state of affairs caused by the rationing of maple products both for the producers and for the consumers.

(Translation): There is another matter with which I desire to deal briefly. It is the necessity of sending back to the farm all farmers at present in the army. If the army and the civilian population are to obtain necessary supplies. it is imperative to take such a step.

Agriculture is deprived of more than 600,000 workers, male and female. These persons were absorbed by the army and by war industries. However, the government continues to call up farmers' sons for training. Even when they have been granted deferments, they must undergo another medical examination which is given the ridiculous name of "revision." When will the authorities realize that more than ever agriculture needs all available help? Why did they not leave the medical examinations of called-up men to the family physician, as was formerly the case? No matter how well qualified he may be, a medical officer can never replace the family physician who is well acquainted with the personal history of the men who are called up. Thus, the government causes a heavy loss of time to agriculture and to over-burdened farmers. Must I once more point out to the government that agriculture is in urgent need of help and that it would be preferable to return to civilian life all the farmers now in the army? This would be one of the best ways to avoid the numberless pitfalls of the post-war period. In the course of the transition period, for which we should prepare immediately, agriculture must play a major part in the world's economic reestablishment. Losing sight of these facts would constitute a fatal mistake. Let us now return to the land those farmers who have been forced to forsake it on account of the war.

Mr. Chairman, before closing my remarks, I shall quote an extract from *Hansard* of March 30, 1939. In it the Right Hon. Prime Minister (Mr. Mackenzie King) opposes Canadian participation in the war. Let us not forget, that he made this speech only five months before his government assumed a share in the world conflict and before they bought two destroyers from Great Britain. Here are the words of the head of the present government, on this occasion, as reported on page 2426 of *Hansard* for 1939:

One strategic fact is clear: the days of great expeditionary forces of infantry crossing the ocean are not likely to recur. Two years ago, I expressed in this house the view that it was extremely doubtful if any of the British dominions would ever send another expeditionary force to Europe.

He had previously said, as may be seen on page 2419:

We have tremendous tasks to do at home, in housing the people, in caring for the aged and helpless, in relieving drought and unemployment, in building roads, in meeting our heavy burden of debt. . . .

At that time it stood at one and a half billion dollars.

. . . in making provision for Canada's defence, and in bringing our standards of living and civilization to the levels our knowledge now makes possible.

Mr. Chairman, was there, at that time, a single hon. member who did not realize that the increased military estimates were being voted not only to ensure the defence of Canada but also with a view to participating in foreign wars I repeated that statement time and again, at that period. The right hon. Prime Minister added:

There is no great margin of realizable wealth for this purpose; we must, to a greater or less extent, choose between keeping our own house in order and trying to save Europe and Asia.

How can one reconcile such a solemn statement uttered by the Prime Minister with the actions by which he followed it a few weeks later? For my part, I have kept faith with the word I had pledged. I have long since withdrawn from that atmosphere strewn with falsehood.

Let him who laughs interrupt me and ask me a single question on the position I have taken. Does the hon. member for Sherbrooke (Mr. Gingues) wish to do so? Let him go ahead!

Mr. GINGUES (Translation): All in good time.

Mr. LACOMBE (Translation): Do those who, on September 9, 1939, did not lift a finger in support of my amendment against participation in war, feel satisfied now with their doings?

[Mr. Lacombe.]

At this stage of my remarks I must recognize the Canadian spirit, the loyalty and the honesty of the hon. member for Quebec-Montmorency (Mr. LaCroix), who alone supported me. Is any satisfaction felt by our colleagues who voted for the mobilization act on June 19, 1940, overwhelming my amendment by a vote of 202 against 2? On that occasion the hon. member for Quebec-Montmorency was again alone in supporting me. Do our colleagues derive any satisfaction from what they have done?

I am blaming neither the government supporters in this house nor the opposition, but I do blame the hypocritical members who denied us their support and who divided us on that question. I have more compliments to offer to the government supporters than to the opposition. I remind those members that they protected, in their own way, our young men and our farmers, by mobilizing and conscripting them. They are now protesting against a dreadful situation which they have themselves brought about, of their own free will and wittingly. The time will soon come, Mr. Chairman, when we shall let the people know about the devious and knavish stand of the false prophets of the day. The people do not know them yet. We will put them in the limelight. My first duty is to denounce the would-be patriots who have left nothing undone in order to foment disunion among true Canadians, especially in the province of Quebec—as was pointed out by the right hon. the prime minister—not only some time ago but during the last few sessions. Divide and govern, such was their only goal. They care not a whit about disinterestedness, and sincerity is with them a lacking virtue. Their patriotism is limited to fine speeches broadcast over the air lanes. Open at random the debates of the house and you will be amazed at the unmatched hypocrisy of these elected representatives who are responsible for the distressing situation which prevails in agriculture and all over civilian industry in Canada. To all these sham patriots, I prefer a man sincere, honest and true who faces his opponent squarely and strives against policies he cannot countenance.

Mr. ROSS (St. Paul's): As I said last year, the housing situation in Toronto is still bad. If any more people come to the city we shall have to have war-time housing. Toronto has never had any war-time housing. The only thing we have had is some money to convert a few apartments. I am glad to

hear that the government are going to bring in some measures so that houses can be erected after the war. The situation in some parts of Toronto is far worse than the minister realizes. In certain slum districts we have families of five or six living in one room. The by-laws of the city cannot be enforced, because, if they were, there is no place to which these people could go. I do not know what is going to happen. I imagine, as time goes on, there will be relief to a certain extent. Certainly the situation that exists to-day should not be allowed to continue. When I brought the conditions to the minister's attention last year he said he did not understand why he should have to do anything about housing in the city of Toronto. On the other hand, he has done something about housing in other cities.

Mr. FRASER (Peterborough West): Last year Wartime Housing gave prizes for beautification of homes and victory gardens. I hope the minister will see to it that prizes are given again this year for similar work, because it certainly improved the houses. I know it helped a great deal in the districts around Peterborough. Instead of the homes being allowed to remain in a plain condition, they were really beautiful. Some of the people worked very hard on their homes. The prizes that were given were worth while and the people who received them certainly earned them. They were wonderful prizes and the homes were very much improved. I hope the minister will look after this during the present year.

Item agreed to.

7. Departmental administration, $9,000,000.

Mr. GREEN: On March 2, an answer was brought down to a question asked by the hon. member for New Westminster. It will be found at page 1080 of *Hansard*. It shows the number of gasoline ration cards issued in the different provinces. In British Columbia the ratio of AA, A and B is ten, two and one respectively. There is no other province in which the percentage of AA licences is anything as high. In fact, in two provinces, Alberta and Prince Edward Island, there are more A ration cards than AA. The percentage in British Columbia seems to be entirely out of line. I presume the reason for that is that we have a very tough deputy oil controller in that province. That may or may not be the explanation. Can the minister tell us whether there is any other reason why there should be such a very large percentage of AA ration cards in British Columbia.

Mr. HOWE: I think the percentage of farmers in the province would have some bearing on the situation. The categories of farmers are more generous, because the farmers use their automobiles for business purposes to a greater extent than do ordinary city dwellers. That may be the explanation. I know it is the intention of the oil controller to administer the regulations equitably as between all parts of Canada.

Mr. GREEN: Would the minister mind checking that up?

Mr. HOWE: Yes; I shall be glad to look into it.

Mr. FRASER (Peterborough West): What is meant by "revolving funds"?

Mr. HOWE: Those are funds made available to the department to enable it to carry on the day to day operations; to provide funds for payrolls and manufacturing expenses until these can be billed out to the buyers. Revolving funds are the equivalent of the working capital of a private business, covering all the operations of the department.

Item agreed to.

DEPARTMENT OF TRANSPORT

Air services branch—

3. Civil aviation: operation and maintenance of municipal (terminal) airports, $398,260.

Mr. HOWE: I think we had passed the first sub-item of item 3 and were on the second sub-item, dealing with the operation and maintenance of municipal airports.

Mr. DIEFENBAKER: This evening I intend to refer to the address of the minister on March 17 in connection with the subject of post-war aviation. The minister's speech unfolded a pattern and formula for international control, coupled with a draft international convention, timely because the questions raised are in a state of flux at this time and also because nations all over the world are formulating conventions and making plans for the post-war solution of this great problem.

In its domestic as in its international aspects the enunciation of policy was made by the minister without benefit of discussion in parliament. I make that statement without any wish to enter into a political discussion, for I believe that a debate on this important matter should be free of any partisan considerations, and that discussion should be constructively designed to advance the cause of post-war aviation. The minister properly referred to the history of civil aviation and sketched something of the progress of the past few years in connection with the development of

airways, for without a knowledge of the past and of the incidents that have occurred since the last war this subject becomes even more difficult of comprehension.

As I see it, the problem divides itself into three classes or aspects, namely the international and, within the international, our relationship to the United States of America; second, the interempire or commonwealth relationship, and, finally, the domestic relationship. To-day we find ourselves, as does the world, on the threshold of a great evolutionary change in world commerce. A third dimension has been established in world travel; hours, not miles, are now the measure of distance. The result is that isolationism and the sense of security that was based on oceanic barriers are to-day as dead as belief in the invulnerability of the Chinese wall. This is a tremendous problem. As far as I am concerned I have not had the advantage of the help of technicians in carrying on research, but I found the discussion by the minister most interesting and most complete, and I must pay my compliments to those who assisted him in the preparation of the draft convention. Air transport has no antiquity; only the future can tell the degree and extent of its impact upon civilization. To base a policy now on prophecy is out of the question. We must face the problems as we see them to-day, as they are now; and in evolving a policy provision must be made for changes and developments as they may become necessary.

One general criticism I offer as to the policy announced by the minister is that it is too inflexible, rigid and uncompromising to meet the needs of a problem as comprehensive and changing as the air problem. There are some matters upon which there is general agreement as, for instance, Canada's strategic position in the routing of international traffic west to the orient, east to the continent of Europe and north to Europe and Asia. While this factor may be too greatly emphasized, on the other hand I take it that hon. members on all sides of this house are now in agreement that Canada must not allow herself to become in the modern world what Asia Minor was in past ages, an area to be crossed over by other nations or, in the present era, an area to be flown over. I believe we all agree that an international set-up controlling aviation is indicated as the only solution of this problem in its broad aspects. Every country has its own particular problems. Every country has its political, military and economic interests in air transport, for all recognize to-day that while planes carry passengers they also carry bombs. After the last war, in spite of the many conferences that took place, nations refused to accept the principles of freedom of transit and international control, with the result that air development was obstructed internationally. Competition in Europe was between France, the Netherlands and Germany; in the east it was between Britain, France and the Netherlands, while in South America Germany achieved a wide measure of control. Prior to this war the attitude of most nations was that air lines were arteries of national policy and empire, and all nations, in their own interests and in the interests of their defence, claimed ownership of the air above their territories. Commercial planes of all nations were denied the right to pass over or land in foreign countries, even for rest, refuge or refueling, except by agreement. The right to take on or discharge passengers or traffic was a matter of national policy. The attitude of the nations in this way was that national exclusion rather than international cooperation prevailed, and that deterred development of the airways between 1919 and 1939. All plane companies in Europe were controlled by the state, directly or indirectly, and air transport was a phase of national development. In the United States private ownership was encouraged to develop airways, and at the outbreak of the war no country in the world had a civil system of air transport in excess of that developed in the United States.

I am not going into details of the various routes which were established by nations in Europe and beyond. Suffice it to say this, that restrictions were universal, because nations feared the destructiveness of air power rather than the benefits to mankind in its extension. For example, the United States refused rights to foreign airways to fly over Hawaii. In a route of one thousand miles from Lisbon to Warsaw, there were four changes of planes. United States planes had to discharge their passengers in Ireland en route to Britain, and take other planes to complete their journey to their destination. The fear of bombs, the distrust between nations, and nationalistic policies designed to deny international control, built up an international philosophy of non-cooperation and restriction.

Possible disagreements between nations and the necessity for air transport being made available everywhere in the world make international control desirable and necessary; for history teaches that if aviation is to be nationally controlled on a narrow basis, the seeds of a future war to secure freedom of transit or freedom of the air will have been planted.

Aviation, properly controlled, can be made mankind's handmaiden for peace; uncontrolled, it will remain a potential destroyer of mankind.

I think no better summary of the matter can be found than in a recent book, "The Air Future", in which the author, Burnet Hershey, said this:

> The important thing to remember about aviation is its universal character. It can be destructively annihilating or almost superhumanly beneficent; but it can never be subjected to localized restriction. To aviation political boundaries are obsolete absurdities. Above the clouds the earth itself is out of sight, and at 400 miles an hour the crossing of an imaginary line drawn arbitrarily across an invisible planet far beneath, is of less consequence to pilot and passenger than the blowing of the wind and the direction of the wind.

The difference between freedom of the air and freedom of transit is that between licence and liberty. The war's outcome is even now being determined by the superiority of air power, and I believe that air transport after the war may well determine the future of mankind. I agree with the minister's viewpoint that international freedom, rather than selfish national aspirations, must be the foundation stone upon which a new world order will be built. In enunciating an international air policy at this time Canada has assured the world that, as far as she is concerned, located on the airways of the world, occupying a position unequalled in those airways, she intends not to allow herself to become a national instrument for international rivalry, but means to devote herself to the principles of peace, through international action. To this end there will have to be international recognition by all nations, and there is the inescapable fact that the experience in the twentieth century is that no nation can live unto itself alone while desirous of trading by air with other nations.

That brings me to a principle which is rather difficult to understand, namely the doctrine of freedom of transit or freedom of innocent passage, sometimes mistakenly called freedom of the air. Britain calls it the open sky, as distinguished from the sovereignty of air policy, the closed sky policy. Freedom of the air denies international control, when freedom of the air is used in its wider sense. It means that the atmosphere is open to the planes of all nations without control. What that would mean is again set out in the same book to which I referred a moment ago, in these words:

> In essence freedom of the air means exactly the same thing as freedom of the road, the free right of the driver of any motor vehicle to use any road anywhere on earth without buying any licence, taking any operator's examination, or otherwise submitting to any regulation in the interest of public safety. Such a state of anarchy applied to surface transportation is obviously absurd. It is even more ridiculous when carried to the skies.

Much discussion has taken place on this principle, and it seems now generally agreed that freedom of the right of transit should be recognized by all nations, great and small, but that the right of foreign nations to take on cargoes and passengers must remain a matter of agreement between nations affected. Those who desire freedom of the air at once must remember that it took more than 350 years to establish the somewhat correlative doctrine of freedom of the seas. The adoption of freedom of the air to-day, in its widest sense, would in my opinion destroy Canada's chance of participation on a world basis, in international airways. Canada would be put in competition with subsidized airways of countries operating national routes. I should like to ask the minister what provision is made in the convention, and what his ideas are in connection with the matter of preventing or at least controlling subsidization by nations of the air routes which are set up. Freedom of the air is impossible, if national safety is to be considered. On the other hand, the closed sky policy is not open to Canada to adopt, because of the danger to international peace that such a policy would result in. The intermediate principle of freedom of transit would appear to be the solution.

The minister, in speaking the other day, used these words at page 1579 of *Hansard*:

> Each nation should at least possess the right to carry passengers and cargo from its own territory to other countries, and to bring back from those other countries passengers and cargo which are intended for its own territory.

With that view I disagree for, in my opinion, it is altogether too wide in its scope. The adoption of this principle would destroy the possibility of the Canadian air industry drawing a fair share of cross-frontier traffic. Take our position during the past few years, when we have had an equality with the United States of America on trans-frontier routes. Yet to-day we operate but one route, compared with eight operated by the United States of America into Canada. Experience in the operation of the airways during recent years between these two countries denies the application of the principle enunciated by the minister respecting our relations with the United States of America.

I believe that the principle of an international air transport authority rather than an international air transport system represents the viewpoint of the people of this nation, as

of other nations. But I see objection in supersovereignty being set up under powers contained in the draft convention. I refer to article 7 section 1, wherein the authority of the super-body to control activities within the nations making up the international set-up is provided for. Is there to be internationalism or trusteeship in connection with our strategic bases? Does the government favour supersovereignty of a united nations' government such as is advocated by Governor Stassen to administer the international airports and airways of the world?

When the hon. member for Winnipeg North Centre (Mr. Knowles) was dealing with this question the other day, apparently he did not take the same view as do the labour party groups in Great Britain where their policy is that they will support an internationally owned and operated air transport company for the whole world or, if that is not possible, for Europe. The principles enunciated by the labour party in Great Britain apparently are not being accepted by my hon. friends in so far as this country is concerned.

In connection with international control I ask the minister: Have all the major nations within the United nations agreed to participate in an international set-up? If not, which ones have been consulted and have any refused? Who are the eight nations referred to in the convention? What is the attitude of the U.S.S.R.? Have they been consulted and have they subscribed to the principles? It must be remembered that the U.S.S.R. do not require freedom of transit in order to fly directly from their own country to adjoining countries such as China, Japan, Iran, Turkey, Roumania, Poland, the Scandinavian countries, the United States and Canada. Before any international organization on air can be brought into being, there must be cooperation on the part of the U.S.S.R. in order to ensure its success. If there is to be set up a world system of aviation with international control, and if we are to ensure that the sacrifices of this generation shall not be repeated in another generation, that international control must have within its confines the U.S.S.R. After the last war Russia did not participate in the international convention in 1919 in connection with aviation. China was denied the opportunity to become a party.

If international agreements are to be effective, they must be secured now. Otherwise there will be terrible competition after the war. To-day some sixteen United States companies are seeking international transoceanic licences. Recognizing the seriousness of the situation potentially, a joint committee of the Association of British Chambers of Commerce, the Federation of British Industries and the London Chamber of Commerce have asked, in order to prevent unbridled competition which will sow the seeds of future war, that a unified air policy should be effected with each country having a fair allotment of planes.

As I read the minister's speech; as I looked over the convention, one thing that stood out more saliently than any other was the fact that no reference has been made to the British empire or the British commonwealth of nations within the international set-up. I do not know whether article X, providing as it does for pooling, is intended to cover possible agreements between various parts of the British empire. The minister was a representative at the Beaverbrook conference in October, 1943, and yet to this date Canada has had no report as to the decisions arrived at or the principles adopted.

Does the convention, which is to be found in *Hansard* of March 17, represent the consensus of agreement of the nations of this empire? If it does, it is not so indicated by a reading of the press of the United Kingdom. I ask the minister to explain whether the government, in adopting the policy that she has, in placing this convention before the country, is taking a position in keeping with or adverse to that taken at the conference by other parts of this empire? What about international transoceanic routes? Nowhere is there any reference by the minister to the means whereby Canada intends to operate a national transoceanic system of airways.

Is she going to do it by herself? Is she going to do it in cooperation with other nations? Is she going to embrace the world? Is she going to do it within the empire? All we know is that the chosen instrument is the TCA. Other than that we have no information as to the plans of the government in that connection. General Critchley, president of the British Overseas Airways Corporation, stated recently that as far as his corporation is concerned, it no longer wants to be the chosen instrument. I think this committee and this country have a right to know why Canada is going to adopt the chosen instrument policy internationally when Great Britain and the United States are apparently not accepting that principle.

If the chosen instrument of international transoceanic routes is followed by Canada, it will mean that Canadian companies desirous of operating internationally will have to join with British steamship companies under British registry, will have to go to the United States and incorporate there and act under the national control of that country, or go to other countries such as Luxembourg, Panama

or Mexico in order to have an opportunity to operate Canadian aircraft in all parts of the world. I do not think Canada as a nation wants to see Canadians except as Canadians in the international field. I believe we have the right to demand that, as Canadians, having regard to the status that our nation enjoys. Under the scheme as it is now planned internationally, we should see to it that Canadians can fly Canadian machines without the necessity of operating under the auspices of other countries, and thus be able to take their place in the post-war air transport world.

I ask the minister to give us the picture of what he anticipates Canada's contribution will be to the international field when the war is over. Doctor George Weir recently said that twenty-five thousand airmen would be employed in civil aviation after the war. How that can be brought about, I do not know. To-day, even with the increased traffic of war time, TCA and Canadian Pacific Air Lines together in the domestic field do not employ more than 3,000 men.

Mr. HOWE: Oh, oh.

Mr. DIEFENBAKER: Those are the figures given the other day. What numbers do the government experts believe will be employed in the international field during the first few years? These figures must be in the possession of the government and should be made available. I unhesitatingly accept the principle of an international set-up, but I suggest that further discussion should take place in order that matters like super-sovereignty and the like may be resolved, so that they will meet with the approval of our people and of other nationals composing the international set-up.

What is the alternative? If the great nations do not enter this scheme, aye, if they do not accept this convention, what is the alternative? Unless the U.S.S.R. accepts it, I ask, what is the alternative? We are informed that for a period of from four to five or ten years after the war there will be no peace conference. What will the international set-up be at that time? Is there to be uncontrolled competition in the airways of the world during that period? During that period international transport will be developed, and unless Canada and the British commonwealth have their share of the business then a setback will be suffered from which there will be small hope of recovery. I ask the minister this: Has consideration been given to the setting up of an empire organization to operate during the period prior to the peace conference, and after the peace conference as supplementary to and within the aegis of and under the control of an international world organization? Has consideration been given to an empire and commonwealth scheme? Is there any reason why an empire scheme should not be constituted to operate within the framework of and without prejudice to the acceptance of the principle of an international authority and international control? I may be told that sixteen international set-ups under the draft convention will come into effect immediately the war ends. Not according to my reading of the convention, for article IX, section 1, shows clearly that the convention is entirely dependent and is predicated upon the setting up of a world security plan under which it would operate. What, I ask, is to be done in connection with world and empire airways during the cooling off period before the setting up of the international security organization?

As to the empire and the commonwealth I ask this: Are not our relationships bound up in our decision in this regard? I ask again, why is there no reference to the British commonwealth or empire? I believe this, that the empire must be kept strongly united not only in its own interests but in the interests of world peace, and that can be effected now only through the instrumentality of air transport.

In May, 1937, the imperial conference of that year recommended earth-embracing air services within the empire. I believe that the strength and the predominance for good of the empire in the after-the-war period will be in direct proportion to the vitality, vigour and imagination that is displayed in civil aviation. All of us believe in closer communications. The British commonwealth, in the interests of survival, must have parity with the other great nations. She cannot have that parity unless the dominions and all parts of the empire work together. Has any arrangement been made for the post-war pooling of transports with the United States, which produces the greatest majority of the transports being produced? There is no threat against any nation in empire air cooperation, least of all against the United States, with which we must live in the closest cooperation. Our hopes and our ideals demand it. The people of the United States admit with us that the future of world peace depends in large measure upon the cooperation of the English-speaking world.

Our air policy is inextricably bound up with our foreign policy. It depends upon our foreign policy. It depends also upon the degree of our desire for a closer relationship with other parts of the empire.

This matter was discussed in the British house, and Captain Harold Balfour, joint under-secretary of state for air, used these words with regard to foreign policy which, I think, are applicable to-day. He said:

> Our traditional foreign policy has been based on sea power, the possession of naval bases, and the protection of our sea commerce; now post-war minds will have to think in a new dimension. When directing our foreign policy we shall have to incorporate into it the knowledge that we must preserve civil air communications for the benefit of ourselves in particular and humanity in general.

On March 15, 1944, Sir Archibald Sinclair made this statement in the British House of Commons with reference to post-war air policy:

> Britain and the dominions had reached a broad measure of agreement.

We have a right to know the measure of that agreement, circumscribed by only one consideration, the safety of the state. If there is an agreement, why should our representatives not speak at once and give us the agreement in so far as it can be revealed? I ask the minister, as Canada's representative at the Beaverbrook conference, to tell this country whether or not an empire air scheme was proposed at the conference and whether or not it was accepted or refused by Britain, New Zealand, Australia and South Africa? In my opinion the British commonwealth air training scheme, bringing together as it does in Canada representatives of all parts of this empire, fits exactly into the picture of an empire transport system, operating again, I repeat, within the control of an international body, and leaving to each of the component parts of the empire the right to determine its relationships with reference to neighbours whose territories are contiguous.

In the convention, reference was made to the fact that while this international body shall have wide and comprehensive powers, it shall not have the right to dictate as between contiguous powers, mentioning specifically as an example the United States and Canada.

I think our post-war transport policy is important in that it cannot be dissociated from the trade policy of the various self-governing dominions and other parts of this empire; it cannot be dissociated from an empire policy, and it cannot be dissociated from the question of empire defence.

How should we go about it? I suggest that consideration be given to the setting up of a commonwealth air board, having as members the United Kingdom, the self-governing dominions and the empire of India. There is no reason why in cooperation there should not be achieved a uniform air policy for the empire, or why the various parts of the empire should have a divergent air policy. I again repeat that there are no insuperable difficulties in an empire policy being arrived at, reserving to each of its members the right to control its relationship with neighbouring countries.

We must realize to-day that air power will become more important as the years go by, that our survival will depend possibly again in the future upon air power, and that Canada cannot afford to take the attitude which she did prior to the present war, of refusing to consult with or to demand consultation with the other parts of the British empire. Canada cannot afford the luxury of isolationism after this war. We must never lose sight of the fact that history does not record that empires, any more than individuals, are given a third chance. I think we have an opportunity in the British commonwealth air scheme to build up an empire system of airways in no way hostile to those of any other part of the world. We have the personnel; we have the technical ability; we have the skill; we have the air factories; we have the trained men.

There are those who would say that the adoption of an empire scheme would imply domination by the empire. No such thing. What it would imply, Mr. Chairman, is negotiating on a larger basis with other nations. Think of the position of the commonwealth. It has within its territories many of the world's greatest bases. Canada has a strategic air position certainly unexcelled anywhere in the world. The British commonwealth scheme has a valuable trained personnel. Canada by herself could not hope to maintain routes on a world basis on a scale large enough to sustain a world scheme. That is shown by the fact that she has been unable to compete on equal terms with the United States, or at least has not done so on cross-frontier routes.

Empire trade must be encouraged to parts of the empire which are our greatest customers. We cannot afford to adopt an attitude of aloofness and allow our communications to be broken down, and expect a continuation of that trade. I think all will admit that Canada, however important she is, cannot take a major part in world transport system, neither by themselves can other parts of the empire. An empire scheme built up around a world system can now be made to include Australia and New Zealand; for with the universal adoption of the principle of freedom in transit, Hawaii may become a port of call for the airways of the future, which she was not in the past.

Australia and New Zealand have declared for an international system or, in its absence, an empire system, no doubt realizing that there might exist some opposition to an

empire scheme. Canada is the centre of the airways of the future. Should we not become the centre of an empire scheme comprising the whole world? That is the challenge I give to members of this house at this time, and again I say there is implied in that, no threat to any one, but rather unified collaboration in the interests of the control of aviation after the war, and in the interests of universal peace.

The establishment of the scheme would allow Canada to maintain Trans-Canada Air Lines. An empire corporation set up in this way could well adopt Canada as the headquarters for the system. It may be said that this is a new system. In general it was suggested, in part, on May 11, 1918, during the last war, but not followed, when the civil aerial transport committee met. In 1926, in a report to the imperial conference, the British Secretary of State for Air stated these matters as fundamentals in the building up of a great system of air transport, namely: The empire is in need of better communications, and if the communications are to be improved, a sustained and united effort will be required.

Now I come closer home and I refer to the 120,000 employees in the aircraft factories of the country to-day. We have in recent days asked the minister, what about the production, after the war, of aircraft? How many of the workmen will be employed? Promises of employment will not ensure the employment of the men.

The ACTING CHAIRMAN (Mr. McCann): The hon. gentleman has exhausted his time.

Some hon. MEMBERS: Let him finish.

Mr. DIEFENBAKER: I thank the committee. How many of these employees in the aircraft factories of Canada will be employed unless we set up such a scheme to ensure continuance of the plants in the production of commercial transports? I do not know whether our aeroplane factories can compete with factories in other parts of the world, though the minister said yesterday that the production curve indicated that we were doing a good job in that direction, but I believe that in a commonwealth scheme we shall assure employment for many thousands of these men who to-day are working in the aircraft factories of the country, and for many thousands of those who are overseas at the present time in the service of their country.

To adopt such a scheme would not clog the development among the various dominions, nor would it in any way create antagonisms; for regional considerations such as are advocated by the convention would still govern as between parts of the empire, and their contiguous national neighbors.

If we wait for five, six or seven years after the war is over before an international body is set up, then in my opinion there will have been such competition in the airways of the world that the control which is demanded to-day by the people of all the nations may in fact never be brought into effect.

There is one other matter I should like to deal with, and possibly I shall have to discuss it at another time. However, I will just sketch it. I refer to the domestic situation. I accept as axiomatic the principle that Canada's interest as a nation is paramount to the interests of any private companies, and that we have to ensure that our men who return shall be guaranteed employment. I do not, however, lose sight of the fact that private airway companies have opened up Canada. I remember the companies in the northern part of Saskatchewan where I live that started after the last war and pioneered those trails into the north when no public enterprise would have been able to undertake the work. I believe that private companies deserve the right to continue on the feeder routes, controlled in order to prevent a monopoly privilege from being established in this country. In my opinion, the time has come for a revision of the Transport Act, chapter 53 of the statutes of 1938. This is an act under which a quasi-judicial body is set up, a transport board. It has the power to-day to grant a licence to anyone over routes that have once been established by the government, and the board may grant it regardless of government policy. It may grant licences against government policy; for the granting of the routes is made dependent upon public convenience and necessity. That act was passed by parliament, and parliament is the place where it should be changed. This act of parliament has been emasculated by an order in council, P.C. 2200, which was passed on March 18, 1943, while parliament was in session. What was done was concurred in by the Minister of Munitions and Supply. For public convenience letters patent may be granted to any company having as a principal object or purpose the operation of aircraft either in Canada or between Canada and other countries. I repeat, the act was an act of parliament. In doing what was done by the minister, or with his concurrence, there was revealed by him a contempt of this parliament in that, while parliament was in session and without regard to submission to the people's representatives, there was thereby destroyed an important provision in a statute passed by the people's representatives.

Mr. HOWE: May I point out to my hon. friend that he did not read the whole effect of

the order in council. It provides that a patent shall be issued only after a hearing by the railway committee of this house. That, I think, is hardly undemocratic.

Mr. DIEFENBAKER: I am speaking about the action of denuding an act of parliament of its provisions by the indirect method of order in council while parliament is sitting.

Mr. HOWE: May I point out to my hon. friend that the incorporation of companies had nothing to do with the Board of Transport Commissioners Act. The transport commission has nothing whatever to do with the incorporating of companies.

Mr. DIEFENBAKER: The minister did by indirect means what he did not dare do by direct means. That is what I am objecting to.

Mr. HOWE: Tommy-rot.

Mr. DIEFENBAKER: I am glad to have the concurrence of the minister in the point I am endeavouring to make. Let me go on to show the attitude of the minister in the new transport board that is to be set up. The minister has set himself up as believing that he is above parliament. Could one expect sound judgment to be exercised by the courts if they were to be subject to dictation by a minister or by the executive? Under the plan announced by the minister a new transport board will be set up. This new board is shorn of its vitality before its conception by reason of its dependence on the executive being specifically provided for. The minister sets forth the situation in these words which are found at page 1574 of *Hansard* of March 17, 1944:

> It is proposed to establish a new board, to be called the air transport board, which will confine all its activities to air traffic, and which, in addition to performing the regularity duties now lodged with the board of transport commissioners, will be charged with the responsibility for advising the government on ways and means of bringing about a rapid and well-planned expansion of transport by air. The proposed board will examine the needs for new commercial services.

And so on.

> It is felt that the creation of a board, to be concerned solely with transport by air will ensure prompt attention to all matters affecting air transport, that may call for consideration by the government, and be of great assistance to government, and to private enterprise, in the post-war period.

These are its powers. It "may make recommendations." "It may advise the government." "It may report on the need." "It may perform such other allied duties as may be determined." That board, if set up, would not be an independent board, but would be a powerless tool in the hands of the executive. I protest against the principle of setting up boards with judicial functions, and at the same time denying them independence and power to carry out the recommendations that they make. As far as the general principle in Canada's domestic airways is concerned, the minister has adopted the principle that TCA shall have exclusive authority in so far as the Trans-Canada routes are concerned. The minister says that there is an opportunity to private enterprise in the feeder routes and accordingly the government recognizes the necessity of competition. Is the government going to subsidize these young men who come back from overseas? How are these young men to finance themselves in the setting up of these air routes? What provision is to be made for inter-city traffic? Is that to be under the government? The other day I read an article which indicated that during the next few months it is expected that there will be established in the United States a helicopter set-up, and that there are over some thousand applications for routes on hand to date. Will there be such a development in Canada? If so, will it be under government control?

The minister stated at page 1574 of *Hansard* of March 17, 1944:

> A vigorous aeroplane construction industry is an essential complement to Canada's post-war aviation plans.

Where will the demand be for these planes? How many of the factories are to be maintained? How many of the men will be employed? The minister says that the railways companies must dissociate themselves from air expansion. He will be able to explain the reason for that, no doubt, for the explanation that he has given so far does not fit very well into the explanation that he gave in 1937 when he said that the airways should be under the railway corporations.

What is the attitude in Britain? They are changing their attitude. They are giving the railway companies an opportunity to expand air services within the country and even on to the continent. The United States has declared for private ownership as far as foreign airways are concerned, although it is believed that so far as transoceanic airways are concerned they will be pooled as between the various companies. I ask this question: Where are the young men coming back from overseas to secure the opportunity that is promised them by the minister in the air development of the future unless there is continued in this country private enterprise alongside of state development? In my opinion, imagination, resourcefulness and initiative can come only

through a degree of competition, wherein the best benefits are secured from both state and private enterprise. There are fields for both. There is need of both, but there should be rigid control to prevent abuse, to assure competition in the interests of efficiency and to control monopoly. The rights of companies to develop new routes with reasonable service and at reasonable prices should be encouraged; and assurance should be given that the companies that develop shall be subject not to penalization when they have success, but to a continuation in the work that they have undertaken so long as they furnish good, efficient service at reasonable rates.

There is a definite change in the attitude of the minister in regard to railways. In 1937, the minister announced his views as reported in *Hansard* at page 2216. At that time he set out the reasons why the railway companies should operate. Why has he changed his views? These are matters on which we should like to have information. What has happened that has resulted in the necessity for the divestment of railway companies of their airway interests? Without the minister's answer to that question we cannot discuss the matter at any great length. Suffice it to say that, as far as this party is concerned, we believe that Canada should maintain control over the further developing of her vital position in national and international air transport. We believe that all internal air domestic aviation should remain under the board of transport commissioners or a board with similar powers, and not under the control of the executive. We believe that the existing TCA lines should be maintained and reasonably expanded; that privately owned commercial aviation should be allowed to expand and to open up new routes.

I again wish to thank the committee for having permitted me to speak beyond the forty-minute period. The science of aeronautics has developed in the laboratory of war. It becomes a matter of world importance that it shall be utilized and extended into the world of peace. Canada, with courage and skill and her strategic world position, has earned the opportunity to achieve a great destiny in postwar air development. But I warn this committee that we must be careful in the decision at which we arrive. Hon. members should discuss this problem freely and untrammelled, because we must make sure that Canada becomes more than a cross-roads, for Canada must be a factor in world and empire air development. What I have said is far from the final word that can be said on the subject, as I am sure the minister would admit that what he said was far from the final word. It is too early yet for anyone to speak with finality on the course of the airways after the war; but frank, free and unprejudiced discussion now may well bring about the creation of a path that will lead Canada to the goal of world peace, empire cooperation and the assurance to the Canadian people of domestic happiness and prosperity.

Mr. COLDWELL: I am going to take a minute or two, since the hon. member for Lake Centre referred to the statements made in this house by my colleague the hon. member for Winnipeg North Centre (Mr. Knowles) and myself on March 20. The hon. gentleman pointed out, as is done so frequently in this chamber, that we have very much in common with the British labour party and the labour parties of the commonwealths of New Zealand and Australia; and he went on to say that the British labour party had taken the position that international ownership as well as international control of the main air routes of the world might be undertaken. Just to keep the record straight, I should like to quote what I said in the course of my remarks, at page 1656 of *Hansard:*

> I think in the field of civil aviation we must have international understanding, international operation and international control. I should like to see the world go beyond where I think it can go to-day. I should like to see an international system owned internationally; but I realize that under present world conditions not only is that improbable but it is quite out of the question. Hence I believe we must have an intergovernmental regulatory body, one which will license and regulate and enter into arrangements with the nations, so that we may achieve the results we desire, namely efficient transportation, rapid transportation, comfortable transportation, safe transportation—and peace at the end of it all.

When that statement was made I was thinking that we do not know where Russia stands, as the hon. member for Lake Centre has said. We read of a considerable discussion of international airways in the United States of America, and it seems—unfortunately, I think —that the best we can hope for from the United States is international control, intergovernmental agreement. While I should like to see a wider scheme, we have to be realistic about the matter and get the best we can. I am glad the government has gone as far as it has in that respect; I wish that it might go farther. I realize there are others who wish to place the views of their particular parties or groups before this committee, so that while I should like to comment farther on what the hon. member for Lake Centre has said, I do not believe that at this time I should take more of the time of the committee.

Mr. CHURCH: Mr. Chairman, I have followed with the greatest interest the question of civil aviation ever since the last war, during which eighteen thousand cadets and mechanics of the Royal Air Force were trained in the city of Toronto. After the war many prominent people, including the late Colonel Barker, V.C., Air Marshal Bishop, Sir Frederick Handley Page, Air Marshal Collishaw and others came back to Toronto—and as mayor I discussed the matter with them for months—that Canada, which had done so splendidly in the last war, should continue with a programme of civil aviation during the time of peace. As an example, I refer to the progress that had been made three hundred years before on the high seas, when Britain, of her own volition, went out and created an oceanic empire through sea power, when she had only one rival, Portugal, and later on the Dutch. Britain gained command of the sea and built up her magnificent empire.

I am very much disappointed with the secret policy of the government in this connection. Why did Canada not seek first a conference with the other dominions in order to formulate an empire policy as a unit? What was the need for all this secrecy in regard to a public matter such as this, which is of the utmost importance to the future of the world and the future of our empire? Why were all these star chamber proposals made, when we had the minister and his staff in London at a time when there were also in that city representatives of nearly all the countries of the world trying to devise some definite plan for the progress of civil aviation and the progress of the world in general? One objection I have to this internationalization of bases is that Russia, our great ally, will have nothing to do with the idea, because they believe in collectivism. The United States will have nothing to do with internationalization; Washington almost shudders when one mentions it and international aviation. They are going to act separately in civil aviation. It is all very well to come here and appeal for this sort of thing, but after all we are only a nation of ten million people. Why should we go outside the empire and make international treaties with these world powers on one of the most important matters ever to come before the people of this country? It is dangerous to plan to share these bases with any other and give them sovereignty, while allowing user. I referred to this matter on July 15 of last year, when the estimates of the Minister of Trade and Commerce were under consideration. At page 4868 of *Hansard* I said:

If we had had an international policy which meant the giving up of empire ports like Gibraltar and Suez, the Cape, the far east and the West Indies, where would we be to-day? The empire would have been destroyed, and that would have meant the fall of civilization.

Already we have given the United States bases for ninety-nine years, reaching from Newfoundland to British Guiana, and no doubt they will want to hold on to them. Let us see what that will mean to this country. The bases which it is proposed to share are the backbone of the British empire on the seven seas. Upon them the security of the British empire has depended for some two hundred years, as it will depend in the future. Just fancy what would have happened to the mother country in the present war without these bases! The commonwealths and colonies would be adrift; the empire would become a perfect absurdity on the map; it would be a body without arteries. Just imagine what would have happened in 1940 if we had been compelled to share Gibraltar, Malta, the Cape, Alexandria and these other bases around the seven seas with the United States and Russia, two neutral powers for two years, and all the other powers that were afraid to provoke Germany. Our position would have been impossible. We should have been under pressure to keep neutral. Internationalization presupposes a perfect world of the future. It is one of those dangerous principles. The policy of the government is one of the most dangerous for the mother country that we have had in the last two hundred years. We are prepared to let trusted allies use our bases, as I said on July 15 last—even in peace. But beyond that concession there are dangers. We have to get back and look at the basic principles behind this policy of internationalization. We have to stop and listen, and go back to the very concept of the British nation, united and strong, to defend itself as a unit, existing as an influence among the powers of the world, and ready to cooperate with others on a self-respecting and honourable basis.

Imperial defence should be strengthened. I spoke in the house on July 15 last, after April 2, when the Prime Minister announced the policy which, in my opinion, has prevented an empire conference since then on this important matter of civil aviation. Civil aviation is to be the transport of the future. The Prime Minister practically threw cold water on the whole thing through the following words, which have been quoted in the British House of Commons. He said on April 2:

The Canadian government strongly favours a policy of international collaboration and cooperation in air transport and is prepared to support in international negotiations whatever international air transport policy can be demonstrated as being best calculated to serve not

only the immediate national interests of Canada but also our overriding interest in the establishment of an international order which will prevent the outbreak of another world war.

What was the result of that policy, which was quoted in England, in the British House of Commons? In my opinion, it was quoted by the acting leader of the government as one of the reasons why no empire conference on civil aviation should be called. True it is that some time in October, I believe it is the minister and some of his staff went over and had a conference over there. But there were no practical results from that conference. It was said then that under the statute of Westminster each of the dominions is responsible for its home defence, to three miles outside boundary lines. In addition to that, each dominion retains its status, autonomy and sovereignty, and has to look after its own domestic affairs. So much is that so that even in its air policy the domestic policy of Canada is that, following the statute of Westminster we are to set up a vast monopoly in this country, with hidden subsidies, something which will lead to untold error in connection with this work of civil aviation.

I referred to this speech of the Prime Minister when, speaking in the house on July 15 last, I said that the domestic policy of Canada in the air should be based on a well known policy in navigation laws and lease-lend, and that—

> We should be ready to cooperate with our allies and allow them to use these air bases, but we should not give away sovereignty over them. The empire has thrown back its enemies from without and in my opinion she will go on to destroy them. Now is the time that we should try to recapture the spirit of empire and our faith and pride in our dominions and in our trade and commerce. The empire is a living thing and should not be allowed to go by default or into liquidation.

That is what you are prepared to do now. You are prepared by this policy to allow this empire to go by default and into liquidation with a war on, instead of being a unit as an empire as to civil aviation. I said further on the same date:

> The mother country and the dominions fought this battle alone for two years. Our soldiers carried on with those from India, New Zealand, South Africa, Australia and the empire training plan. We stood shoulder to shoulder in the snows of Labrador and Newfoundland and in the heat of India and the far east.
>
> In the days before the war you could go into any large port and find fifteen or sixteen ships from different parts of the empire carrying on their trade.

I have seen that in Halifax, Victoria and Vancouver.

> I believe that this same spirit of empire co-operation will continue in the years that are to come. Canada should be ready to go along with the dominions and the empire. The time has come when the Minister of Trade and Commerce should tell this committee and the country what our relations are with the other sister dominions who fought along with us for two years to save civilization. One of our great allies stood aside for two years with Germany, but Russia has since made a glorious record. To-day she is practically fighting her battles alone except for some supplies and munitions that are being sent in.

I went on record to the effect that the policy should be to allow these bases to be used by all the world in the future. But sovereignty—no. They should be retained by the mother country and by the British empire. That is why I have objected to such secret policies in the house.

Had the same energy been put into civil aviation in the period between the two wars that has been put into it in the empire air plan since the war started, we never would have had a second war. I have followed this civil aviation question, right from the start of the last war, and I have been very much disappointed in what I have seen.

The minister of Munitions and Supply on the 17th of this month gave a fine history of civil aviation. He placed on record a splendid summary of the progress of civil aviation. He pointed out what had been done by private enterprise and private initiative. Then he went on to refer to many other matters, pointing out that a reduction had been made in the estimates in 1935, and then went on to a reference to Trans-Canada Air Lines, and how Canadian Pacific Air Lines would not come in.

Did this international agreement he quoted ever come before the other dominions? I am referring to this international agreement given out secretly at Washington, over the heads of parliament, behind our back, when parliament was in session, which decided on a domestic policy involving the greatest monopoly this country has ever seen, and for the payment of hidden subsidies to a corporation whose civilian heads had had very little training. There was one exception, because the head of Trans-Canada Air Lines, Philip Johnson, had come from the United States, and was an able business man who had had experience in aviation.

But Canada's policy of not calling an empire conference on civil aviation will have unfortunate results, because she has been advocating a policy of internationalization. No definition has been given with respect to what internationalization is, and no one understands what it is. The House of Commons has never seen this particular agreement, and I doubt if some of the dominions have ever

read it. I doubt if the British parliament has ever seen it or discussed it, because they had a debate over there last June.

Some form of internationalization is no doubt necessary. Some form of private enterprise, or a mixed form of private and public enterprise, might be considered. But I believe the whole policy of the government is entirely wrong and a leap in the dark, and it is one which will not commend itself to the wisdom of the country. After all is said and done, if that is the view of the government, then there is very little hope for civil aviation in Canada in the future of Canada or the empire. I never have been able to see how this secret conclusion was ever reached. Civil aviation should not be a political question, nor should it be the plaything of any political party. It should be considered on its merits. In the great future which lies before this country we must wrap ourselves up with the mother country and the dominions, as a unit, in a joint empire air scheme, as we did in war.

As far as domestic aviation goes it is wrong to create a monopoly in this and other countries. The government is just drawing red herrings across the track, with a war on, and creating unnecessary dog-fights between these two companies. All this is being done when the war is not yet won. We should get back to basic things, namely, what the British empire as a unit should do in connection with civil aviation with an all-empire plan.

Instead of sticking to the main policy and the main task that is before us, instead of considering what is best to be done, we start off by creating a dog-fight between the two transportation systems in this country which have been doing glorious work in this war.

I was interested in civil aviation many years ago in connection with the policy of the present government and the government before it. Little or nothing was done, before the two wars, about civil aviation; it was left to private enterprise. The means by which we were able to obtain a technical victory in the battle of Great Britain were made possible by the information obtained in the Schneider race in 1931. The British government were able to obtain information which laid the foundations for the winning of the battle of London in 1940. The low-wing monoplane was born in that race, and this was the ancestor of the Spitfire and the Hurricane. Many great inventions followed out of the information obtained from those races. But there has been a complete lack of policy on the part of this government and that of the mother country in connection with civil aviation.

[Mr. Church.]

I am dissatisfied with the policy of this government because it will not solve the problem. The two transportation companies are to be put out of existence in the air and all surface road transport, and a new company is to be substituted. They do not say how Canadian Pacific Air Lines are to be liquidated, and they fail to recognize the findings of the council of British shipping. This is an important body which has done much to help to win the battle of the Atlantic and keep the empire trade routes open in war. Their experience dates back for 200 years in providing sea services, and they outline the part they feel they can play in civil aviation. The report of that body in 1944 reads:

> Our problem in this matter is greater, but our opportunities are also greater than those of any other great power. The shipping industry does not pretend to any specialized knowledge of aviation, but it possesses experience of travel.
>
> What it does possess and what it offers as a practical contribution to this task is a wealth of experience derived from our generations of successful management of overseas services; an efficient organization already dealing with those classes of passengers and freights likely to be borne by air; and a network of branch offices and agencies all over the world.
>
> That contribution, the result of vast experience, was at first gained in monopoly before other countries took to overseas ventures, and then in competition with shipping subsidized by foreign governments. Having watched the effects of subsidies and of monopoly, the shipping companies believe that they should not be established for the air. They also believe that "persistent subsidy would retard genuinely healthy progress." . . .
>
> The war itself is both a forcing house for the development of the aeroplane and an agent for the wholesale destruction of ships. What might therefore have been a gradual, will become an abrupt transition. British shipowners, when tackling the rehabilitation of their traditional services after the war, will be presented also with an unusual opportunity to convert them spontaneously from the old medium to the new, in whatever respects and in whatever proportions their respective characteristics and the requirements of each trade or group of trades may suggest.
>
> But any such spontaneous conversion is faced immediately by two obstacles. First, there is the risk under present legislation that shipowners may find themselves in competition with their own government in the shape of British overseas airways corporation.
>
> This corporation holds a legal monopoly of all British services which are subsidized from public funds. The council of British shipping hold that their experience is of great value to the future.
>
> A far wider and more varied deployment of experience, resources and individual enterprise would appear to be required, and British shipowners, in technique and experience and in their long established position in international transport, should be able to make certainly not

an executive but a substantial contribution to the sum total of British air commerce. Ships and aeroplanes are by no means mutually exclusive. On the contrary, experience has shown that they can, and ideally should, be operated in a sense complementary to each other.

The conduct of a regular air line and that of a regular sea line have wholly systematic characteristics. Each calls for long term policies; each requires an international outlook; in each rigid technical discipline is essential to public safety; each finally succeeds only by capturing and retaining the goodwill of the travelling public or the consignor of freight.

In this remarkable memorandum the council of British shipping have made a real contribution to our understanding of the subject of air and sea transport. They end with suggesting that there should be a national empire board and they say:

In its twenty-five years of existence the national maritime board, on all questions of seagoing conditions and pay, has not only acquired confidence and authority, but has developed within itself a happy combination of mutual respect, commonsense and an absence of rhetoric.

New Zealand and Australia have attempted to do something in connection with air routes and civil aviation. Mr. Curtin and Mr. Fraser appealed to Canada, last January when they met, to hold a meeting in order to bring about a unified policy for the empire. When I spoke on this matter here two weeks ago I quoted the speeches of Mr. Curtin and Mr. Fraser of January last and also referred to what the war correspondent of the Sunday *Times* said in his dispatch dated January 16. I repeat:

It is not generally realized at home that America has a Pacific air route which is marvellously well organized. On the day after war ends the same pilots, planes, air crews, ground organization, wireless and meteorological services will be available to begin commercial air services between Canada, America, Australia and New Zealand.

The British empire will not be in this lucrative traffic because nowhere on the Pacific route during war is there one British plane, pilot, meteorological expert or radio operator. Unless Britain places air crews on this route in 1944 she will be left at the post as far as experience and good will of services go, if peace comes in 1945.

The Prime Ministers of Australia and New Zealand made an appeal to Canada to send delegates to an empire conference, and urged that serious consideration be given to the question.

The United States have been progressive in civil aviation. Many of the prominent men in this industry gained their experience in the R.A.F. in Toronto during the last war. The Americans have a tremendous hold over the Pacific, and they did not get it by accident but by enterprise, at a time when Canada was asleep. They have made great concessions to travellers. The United States air service over the Pacific is free, every military or civilian traveller having the benefit of that route at no cost to himself.

The Prime Ministers of Australia and New Zealand had a conference on the 17th of January at which they agreed on an airways plan and made an appeal for an empire air policy. Canada has ignored it all, and has done nothing about it. Now Canada announces an international air policy as though she were a first-class power. I can tell you this, that America will have nothing to do with internationalization, neither will Russia. Russia has an agreement with the mother country for after the war to which the dominions are not a party.

I am very much disappointed with the whole air policy of the government, and I do not believe it will ever be consummated. In Canada we should have a chair in civil aviation in every large university, especially after the glorious record that Canada has made in this war with the empire training plan, which cost the taxpayers of this country close to a billion dollars. But we shall get little value out of it all under the domestic and international policies of this government. How does it come about that this policy is announced over the head of parliament and that a secret international document like this was produced in Washington over our heads and put into the record? It was done over the head of this parliament while in session, and over the head of the mother country, over the head of Australia and New Zealand and the other dominions which have been fighting with Canada in this war. Imagine the future for our young aviators coming back from this war if we have no settled air policy! This policy has been got up by a minister of the crown over the head of parliament. How many members have read this secret international proposed agreement? I have read it three or four times and I as a simple Canadian citizen am shocked by it. It goes over the head of Britain, which stood alone in the battle of Britain. This policy is got out over the head of parliament while our young aviators are fighting overseas. I doubt if few members have read the policy. It is, in my opinion, a shock to the people of the empire, and I have made a study of civil aviation ever since the magnificent record Canada made in the air in the last war.

I have waited for over twenty years for this day, to see that civil aviation would at least get a break here and that we could have

a discussion in this house of this matter. Hitherto we have had no chance to discuss the future of aviation and the place it will occupy in our life when our young men come back from the war. How many of them, when they return, will have one hundred dollars in their pockets to finance a feeder line? What is the use of talking about their coming home as owners to enter an air industry? They will have twenty-five dollars in their pocket to buy a suit of clothes, but not sixty dollars, and yet we have squandered millions on camps all over this country without suitable sewers or water in them. Is that what our pilots are fighting for? Is that what we are doing for them, instead of calling a conference with the other dominions with a view to action along the lines I have indicated?

We have a navigation policy under which any ship can enter our harbours and land its cargo. They cannot enter our coastwise trade on the Atlantic or Pacific, but they can land their goods at our ports. That policy has proven in navigation a success for two hundred years, and has made Great Britain the great ocean-going country she is. The same principle should be applied to civil aviation, which should be free the world over. I regret that, instead of sticking to the large issue, the government has brought in these irrelevant matters when the war is on, and at a time when the railways are doing magnificent work they are to be deprived of any share in civil aviation. At a time when railway facilities in this country are choked, the ministry says: Nobody shall engage in civil aviation except the government, and they shall have a monopoly of it. I am not a Canadian Pacific man or any other kind of man, but one of independent mind, but I do say that this policy is a mistake. The government has got out a political report on civil aviation in the domestic and in the international field. Civil aviation should rank next to agriculture in providing work and employment for our young men when they return from this war after writing the most glorious page in the history of the world. I still have ten to fifteen minutes, Mr. Chairman, and I will continue my remarks when this question comes before us again, since I see it is now eleven o'clock.

Item stands.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

[Mr. Church.]

Wednesday, March 29, 1944

The house met at three o'clock.

THE ROYAL ASSENT

Mr. SPEAKER: I have the honour to inform the house that I have received the following communication:

Ottawa, March 29, 1944.

Sir:—I have the honour to inform you that the Hon. Thibaudeau Rinfret, Chief Justice of Canada, acting as deputy of His Excellency the Governor General, will proceed to the Senate Chamber on Friday, 31st March, at 5.45 p.m., for the purpose of giving the royal assent to certain bills.

I have the honour to be,
Sir,
Your obedient servant,
F. L. C. Pereira,
Assistant Secretary to the
Governor General.

The Honourable
The Speaker of the House of Commons,
Ottawa.

JUDGES ACT

JUDGES NOT TO ACT AS COMMISSIONERS OR ARBITRATORS—TO BE BOUND BY DECISION OF COURT OF FINAL APPEAL

Mr. T. L. CHURCH (Broadview) moved the first reading of Bill No. 52, to amend the Judges Act.

He said: This bill consists of two clauses and is the same as the one I introduced last year. The first section prohibits judges from acting as commissioners or arbitrators. The second section states that judges are to be bound by decision of court of final appeal.

Motion agreed to and bill read the first time.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

INCOME TAX—COMPULSORY SAVINGS

Mr. ROEBUCK:

1. Has written acknowledgment of amount of compulsory savings standing to their credit been given taxpayers by the government?

2. If not, when will it do so?

Mr. GIBSON:

1. Yes, already over 800,000 certificates of compulsory savings have been issued in connection with the 1942 income.

2. Answered by No. 1.

WARTIME HOUSING—NORTH VANCOUVER

Mr. SINCLAIR:

1. What is the amount of money spent by Wartime Housing in north Vancouver on, (a) houses; (b) staff houses; (c) roads, sewers, etc.?

2. What is the unit cost of, (a) the six-room house; (b) the four-room house?

3. What is the monthly rental of, (a) the six-room house; (b) the four-room house?

4. What is the total annual payment made to the city of north Vancouver by Wartime Housing in lieu of taxes?

5. What are the names, addresses and places of employment of all occupants of the houses as at February 29, 1944?

Mr. CHEVRIER:

1. (a) $1,913,480.75.
   (b) $ 80,507.

Note—special buildings—$147,299.

   (c) $ 793,546.34.

2. (a) $ 3,138.
   (b) (i) 4-roomed house, small—$2,674.
   (ii) 4-roomed house, large—$2,816.

3. (a) $27.
   (b) (i) 4-roomed house, small—$20.
   (ii) 4-roomed house, large—$22.

4. $19,524.

5. As over 700 houses are involved, the information asked for is not readily available. A very careful investigation is made of all prospective tenants to insure 100 per cent occupancy by war workers only in houses built by wartime housing limited.

PRODUCTION OF GIN AND WHISKY

Mr. McGREGOR:

What amount of, (a) gin; (b) whisky, was produced in Canada during the year 1943?

Mr. GIBSON: During the calendar year 1943, 24,315,935.23 proof gallons of spirits were produced in Canada. We have no information regarding the class or character of spirits produced.

R.C.A.F.—BOMBING AND GUNNERY SCHOOLS

Mr. BENCE:

1. How many R.C.A.F. bombing and gunnery schools were in service in Canada on January 1, 1944?

2. What were the numbers of such schools, and where were they located?

3. Which of such schools are being closed in 1944?

4. How many hours during the calendar year 1943 were the trainees in each of such schools prevented from performing their bombing exercises through poor visibility?

Mr. MACMILLAN:

1. 10.

2. Bombing and gunnery school
No. 1—Jarvis, Ont.
No. 2—Mossbank, Sask.
*No. 3—Macdonald, Man.
No. 4—Fingal, Ont.
No. 5—Dafoe, Sask.
No. 6—Mountain View, Ont.
No. 7—Paulson, Man.
No. 8—Lethbridge, Alta.
*No. 9—Mont Joli, P.Q.
*No. 10—Mount Pleasant, P.E.I.

*At these three schools, air gunners are trained only and no bombing exercises are flown.

3. No. 2 bombing and gunnery school, Mossbank, Sask.; No. 8 bombing and gunnery school, Lethbridge, Alta.

4. Shown in Appendix "A" below are the numbers of days and nights during the year 1943 which were unfit for flying bombing exercises. Weather records show only the number of half-days and half-nights which were unsuitable for flying and do not specify the definite reason, such as, low visibility, low cloud height, snow conditions, etc.

Appendix "A"

Summary of Unfit Flying Weather

R.C.A.F.

Bombing and Gunnery Schools

Period—Jan. 1, 1943 to Dec. 31, 1943

School	Days	Nights
No. 1 B.G.S., Jarvis, Ont.	128	189
No. 2 B.G.S., Mossbank, Sask.	89	101½
No. 4 B.G.S., Fingal, Ont.	111½	119½
No. 5 B.G.S., Dafoe, Sask. ...	103	130
No. 6 B.G.S., Mountain View, Ont.	80	146
No. 7 B.G.S., Paulson, Man. ..	45	113½
No. 8 B.G.S., Lethbridge, Alta.	74½	93

PRISONERS OF WAR—MEDICAL AND DENTAL SERVICES

Mr. NICHOLSON:

What is the ratio of Canadian medical doctors and dentists per thousand German prisoners-of-war in the internment camps in Canada?

Mr. MACDONALD (Halifax): R.C.A.M.C. medical officers, 1 to 1292; C.D.C. dental officers, 1 to 3507.

In addition to caring for the health of the prisoners of war, the medical and dental

officers are responsible for attending to the medical and dental needs of the army guards stationed at prisoner of war camps.

WARTIME INFORMATION BOARD—ABBE KOTOWSKI

Mr. DORION:

1. On what date did Abbe Kotowski enter Canada?

2. Where did he come from?

3. What were his domiciles or residences since August, 1939?

4. What is his nationality?

5. Is he still in Canada? If not, when did he leave?

6. At whose request did he come to Canada?

7. At whose suggestion did he come to this country?

8. What was his work before arriving in Canada?

9. What were the conditions of his entry to Canada?

10. What were his activities in Canada?

11. Did he perform any work in connection with the wartime information board?

12. If so, of what nature, and what were his instructions from the said board?

13. Has a report been made to the wartime information board or to the government by Abbe Kotowski, or by someone else, in connection with his activities?

Mr. MACKENZIE KING:

1. Reverend Kotowski entered Canada on December 8, 1942.

2. Brazil.

3. See answer to 8 below.

4. Polish.

5. No. Reverend Kotowski left Canada on June 7, 1943.

6. & 7. Reverend Kotowski came to Canada at the invitation of the former Department of Public Information, (the functions of which were taken over by wartime information board), with the concurrence of the Department of External Affairs.

8. Reverend Kotowski is a doctor in political and social sciences. 1920-1925 he pursued advanced studies in philosophy at Poznan and Lyon. In 1926 he was a member of the Polish mission in France (Lyon). In 1927, Cardinal Hlond, Primate of Poland, assigned him the spiritual ministration of Poles in Belgium, the Netherlands and Denmark. In 1929 he was professor at the Lycee Stefan Zeromski and a member of the Institute of Social Sciences at Warsaw. In September 1939, he was in Warsaw and escaped to eastern Poland where he was interned for six weeks. He finally reached Paris via Sweden. Between February and June 1940, he was chaplain of the Polish Mission at St-Maur-des-Fosses, suburb of Paris, and later at Biarritz. From October 1940 to November, 1942, he was in Brazil attached to the Barnabite Fathers and Chaplain of the Notre-Dame de Lourdes Order as professor of Philosophy and Moral Theology.

9. Reverend Kotowski entered Canada in compliance with the usual immigration requirements.

10. Reverend Kotowski came to Canada to give a first hand account of the events in Poland since the outbreak of the war.

11. Answered by 7 and 10.

12. Reverend Kotowski received no special instructions from wartime information board.

13. A report was made to the wartime information board by Father Kotowski on the meetings he addressed in Canada.

LABOUR CONDITIONS—EQUAL WAGES TO MEN AND WOMEN

Mrs. NIELSEN:

According to information on wage rates collected by the Department of Labour or the national war labour board—1. Taking a representative sample of firms employing more than 100 workers each, what proportion are paying equal wages to men and women on similar jobs?

2. How many women are employed in those firms which the sample showed to be paying equal wages to men and women on similar jobs?

Mr. MARTIN: The hon. member has spoken to me about this question. I believe I represent her wishes when I ask that the question be dropped.

Question dropped.

LABOUR CONDITIONS—EDMONTON COAL MINES

Mr. JOHNSTON (Bow River):

Will provision be made to give immediate employment to the 500 miners who have been dismissed from the Edmonton coal mines?

Mr. MARTIN:

1. Five hundred coal mine workers have not been dismissed from the Edmonton coal mines. Dismissal notices effective March 31, have been served on approximately that number.

2. Certain of these men will be returning to farm work for the summer season following the regular practice in this area, and employment will also be provided for the balance of the men concerned.

INDUSTRIAL ALCOHOL

Mr. BENCE:

1. How much industrial alcohol was produced in Canada in the year 1943?

2. How much of such industrial alcohol was exported to the United States of America during the said year?

3. What was the total amount paid therefor?

4. How much of the said industrial alcohol produced in Canada was purchased by the federal government?

5. What was the total amount paid therefor?

6. From what product was such industrial alcohol manufactured?

7. Was any industrial alcohol imported from the United States of America to Canada during the year 1943, and if so, in what quantity?

8. What plan, if any, has the government for the increase of industrial alcohol from grain in this country?

Mr. CHEVRIER:

1. 14,554,582 imperial gallons.

2. 6,451,955 imperial gallons.

3. The price paid by the United States government for alcohol exported by Canada is on the basis of cost plus 5 per cent with a ceiling on the profit per gallon payable to the distiller.

4. 8,341,999 imperial gallons.

5. The price paid by the Canadian government is on the basis of cost plus 5 per cent with a ceiling on the profit per gallon payable to the distiller.

6. Wheat.

7. No.

8. Because the supply of industrial alcohol exceeds the demand there are no projects under consideration at the present time by the department using grain as a source of alcohol. Improvement in operation and in set-up by various distillers will result in a substantial increase in production of industrial alcohol during 1944.

WARTIME HOUSING LIMITED—SEA ISLAND, BRITISH COLUMBIA

Mr. REID:

1. How many houses have been constructed by Wartime Housing Limited at Sea Island, British Columbia?

2. What has been the total cost of this project to date, giving, (a) cost of land; (b) cost of houses?

3. How many of these houses have been rented up to February 29, 1944?

4. What will be the total amount of rents collected when all the houses under this project are occupied?

5. Has any arrangement been made between Wartime Housing Limited and the municipality of Richmond in regard to school accommodation for the children in this area?

6. If so, what arrangement has been made for school accommodation, and under what arrangement with the municipality is the school accommodation being provided?

7. How many schools have been built by Wartime Housing Limited under the various projects throughout Canada?

8. Where are these located, giving size and cost of same?

Mr. CHEVRIER:

1. As of March 20, 1944—192 out of 300 contracted for.

2. (a) $19,203.60; (b) $727,354.66, inclusive of services, etc.

3. 111.

4. Potential rent—$7,777 per month.

5 and 6. Negotiations are proceeding with the wartime housing administrator, The Richmond Transportation Company, the transit controller, and the city of Vancouver, in order that arrangements can be made to convey children from homes to their schools. Schooling has been arranged with the school board of the city of Vancouver and wartime housing limited has agreed to pay a cover rate of $6 per month per pupil up to 150 pupils, for the period covering commencement to June 30, 1944. The Richmond school board will, as requested, provide schooling accommodation for not more than 150 pupils until June 30, 1944, but not afterwards, at the rate mentioned.

7. Thirty-one, including those built by wartime housing limited through contributions.

8. Location	Size	Contribution	Completed cost	Estimated cost
Esquimalt, B.C.	4 rooms			$ 46,350 00
North Vancouver, B.C.	10 rooms		$70,000 00	
North Vancouver, B.C.	4-roomed addition			43,250 00
Prince Rupert, B.C.	6 rooms			50,000 00
Arvida, P.Q.	10 rooms			88,000 00
Beauharnois, P.Q.	2 rooms	$11,000 00		
Cartierville, P.Q.	10 rooms			107,300 00
Chicoutimi, P.Q.	4 rooms			48,550 00

8. Location	Size	Contribution	Completed cost	Estimated cost
De Salaberry, P.Q.	8 rooms		53,605 00	
Jonquiere, P.Q.	4 rooms			43,550 00
Hamilton, Ont.	6 rooms		61,828 00	
Hamilton, Ont.	6 rooms			42,000 00
Hamilton, Ont.	2-roomed addition			21,030 00

Windsor, Ont.	4-roomed addition		22,998 00	
Windsor, Ont.	4-roomed addition		22,153 00	
Moncton, N.B.	4 rooms		38,350 00	
Dartmouth, N.S.	6 rooms		49,431 00	
Halifax, N.S.	5 rooms		44,479 00	
Halifax, N.S.	5 rooms		44,997 00	
Halifax, N.S.	10 rooms			97,680 00
Pictou, N.S.	6 rooms			46,750 00

INTERNMENTS—JOHN LORRIMER AND JOSEPH FARR

Mr. ROSE:

1. Were John Lorrimer and Joseph Farr interned under the defence of Canada regulations for fascist activities?

2. Have they been released?

3. If so, what is the reason for their release?

Mr. ST. LAURENT:

1. John Lorrimer and Joseph Farr were detained under the authority of regulation 21 of the defence of Canada regulations.

2. Yes.

3. Recommendation of an advisory committee.

BUTTER

Mr. HANSELL:

1. What was the total production of butter in Canada for the years 1940 to 1943 inclusive?

2. How much butter was exported, (a) to Great Britain; (b) to other countries, during the years 1940 to 1943 inclusive?

Mr. MacKINNON (Edmonton West):

1. Production of creamery butter in Canada for the years 1940, 1941, 1942 and 1943:

Calendar year	Cwt.
1940	264,724
1941	285,848
1942	284,591
1943	312,310

2.

Statement Showing Canadian Exports of Butter to Great Britain and to Other Countries, During the Calendar Years 1940 to 1943

R.C.A.F.—OTTAWA BUILDING

Mr. BENCE:

What was the total cost of the air service building constructed for the Department of National Defence on Cartier Square, facing Lisgar street?

Mr. MACMILLAN: $641,902.58.

CONSCIENTIOUS OBJECTORS

Mr. REID:

1. When a conscientious objector is directed to employment in agriculture, (a) how much is the employer required to pay for his services; (b) what does the conscientious objector receive; (c) what is done with the balance of his earnings?

2. When a conscientious objector is directed to employment in industry, (a) how much is the employer required to pay for his services; (b) what does the conscientious objector receive; (c) what is done with the balance of his earnings?

3. What is the total amount that has been paid by employers of conscientious objector labour to the chartered banks for the credit of the Canadian Red Cross society up to and including February 29, 1944?

Mr. MARTIN:

1. (a) The prevailing wage rate.

(b) $25 monthly together with board and lodging.

(c) The employer, on receipt of billing from district treasury officer, deposits the balance

of the conscientious objector's salary in a chartered bank for the credit of the Canadian Red Cross Society, after deduction has been made therefrom, for any dependent's allowances that may have been authorized.

2. (a) The prevailing wage rate.

(b) $25 monthly plus reasonable living allowance in lieu of board and room.

(c) The employer, on receipt of billing from the district treasury officer, deposits the balance of the conscientious objector's earnings in a chartered bank monthly for the credit of the Canadian Red Cross Society after deduction has been made for any dependent's allowance that may have been authorized together with any amounts which he is required to pay by law to other persons.

3. $348,460.16.

PRAIRIE FARM ASSISTANCE—ONE PER CENT LEVY ON GRAIN SALES

Mr. FAIR:

What amount was collected in each province as a result of the one per cent levy on grain sales under the Prairie Farm Assistance Act?

Mr. MacKINNON (Edmonton West): One percentum levy—Total collections for four years from August 1, 1939, to July 31, 1943:

Manitoba	$1,510,211 26
Saskatchewan	4,952,763 56
Alberta	2,728,078 85
Total	$9,191,053 67

QUESTIONS PASSED AS ORDERS FOR RETURNS

GOVERNMENT-OWNED FACILITIES AND ADVANCES TO PRIVATELY-OWNED PLANTS

Mr. NOSEWORTHY:

1. What is the number, and what cost of government-owned facilities that come within the following industrial classification (by classification only—not by individual facilities), (a) aircraft, aircraft parts and accessories; (b) ship construction and repairs; (c) combat transportation and other motorized vehicles; (d) guns; (e) ammunition, shells, bombs, etc.; (f) explosives and ammunition loading and assembling; (g) iron and steel products; (h) non-ferrous metals and products; (i) machine tools and metal-working equipment; (j) machinery and electrical equipment; (k) chemicals; (l) synthetic rubber; (m) gas and oil products; (n) other miscellaneous manufacturing; (o) non-manufacturing, mining, pipe-lines, etc.?

2. (a) What is the amount of government money advanced since the beginning of the war to privately-owned firms engaged in production in each of the above-listed industrial classifications; (b) what is the number of such firms in each classification to which government money has been provided; (c) on what terms or conditions has such government money been provided in each classification?

3. (a) In what government departments, commissions or other government agencies is the ownership of these government-owned facilities vested; (b) what is the number of projects owned by each department, commisison or other government agency; (c) what is the cost of the projects owned by each of these government departments, commissions or agencies; (d) which of these facilities in each classification are operated by the government, and which are operated for the government by private companies?

FOREST RESEARCH—BRITISH COLUMBIA—LUMBER FOR DOMESTIC AND EXPORT USE

Mr. CRUICKSHANK:

1. Have any representations been made to the federal government regarding the establishment of a forest products research institute at the University of British Columbia? If so, what steps are being taken in this connection?

2. What percentage of the production of lumber in Canada has been produced in British Columbia for, (a) domestic use; (b) export?

CONTROL BOARDS

Mr. LECLERC:

1. How many control commissions has the government of Canada instituted since the beginning of the war?

2. What are the names of the chief officials of such commissions?

3. What are their salaries?

EXPROPRIATION OF LANDS—SESSIONAL PAPER 259

Mr. HATFIELD:

1. Per sessional paper No. 259 of May 4, 1942, have the parcels of land expropriated and marked "unsettled" yet been settled?

2. If so, what are the prices paid for each parcel?

3. To date, what amount of money was paid to Clovis P. Richard, in searching the title, attending to the execution of the title deed, etc., for each parcel, showing detailed statement?

DUNDURN, SASK., MILITARY CAMP

Mr. DIEFENBAKER:

1. From whom was coal purchased for Dundurn military camp in the province of Saskatchewan during the year 1943, and to date?

2. What were the grades supplied, and the price per ton?

3. In what mine or mines is such coal mined, and what are the names of the several companies owning the said mine or mines?

4. What is the price per ton at the mine-head of the several grades supplied?

CANADIAN FORCES—PENSIONS

Mr. QUELCH:

1. How many men and women serving in the armed services in Canada have, (a) died; (b) been discharged due to a disability?

2. (a) In how many of these cases were the dependents of those who died refused a pension on the grounds that death was not incurred as a result of military duty; (b) how many pensions were granted on compassionate grounds?

3. (a) How many of those discharged due to disability were refused a pension on the grounds disability was not due to military service; (b) how many were granted pensions on compassionate grounds?

LEGAL SERVICES—QUEBEC PROVINCE

Mr. LACOMBE:

1. What are the names of the lawyers and the legal firms in the cities of Quebec, Lévis and Montmagny, (a) receiving fees from the dominion government or any of its commissions from the 1st January, 1937, to date; (b) to whom any fees are still due and payable?

2. What amounts have been paid to each of them, in what year, and for what services?

3. What amounts are still due to each, and for what services?

4. What are the names of the lawyers and the legal firms at present employed by the dominion government or any of its commissions in the cities mentioned?

MOTIONS FOR PAPERS

PENSIONS—OLD AGE AND BLIND

Mr. KNOWLES:

For a copy of all correspondence dated since January 1, 1943, between the federal government and the governments of the several provinces and/or the provincial pension authorities, relating to the filing of liens against the property of old age and blind pensioners; also for a copy of all correspondence between the same dated since January 1, 1943, relating to the interpretation of subsections (2) and (3) of section 9 of the Old Age Pension Act.

SOLDIER SETTLEMENT—DEDUCTIONS FROM DEPENDENTS' ALLOWANCES

Mr. FAIR:

For a copy of an order in council passed during the early months of the war which made provision for deducting a certain amount each month from the dependents' allowance of wives or other dependents of soldier settlers who enlisted in the present war and applying such certain amount on the indebtedness of the soldier settlers concerned to the soldier settlement board.

Mr. CRERAR: Return tabled.

BUSINESS OF THE HOUSE

EASTER ADJOURNMENT

Right Hon. W. L. MACKENZIE KING (Prime Minister) moved:

That when the house adjourns on Friday, March 31, it stand adjourned until Monday, April 17, 1944.

Motion agreed to.

LOAN OF $800,000,000

MUTUAL AID—UNITED NATIONS RELIEF AND REHABILITATION AGREEMENT

Hon. J. L. RALSTON (Acting Minister of Finance) moved that the house go into committee at the next sitting to consider the following resolution:

That it is expedient to introduce a measure to provide:

1. That sums not exceeding eight hundred million dollars ($800,000,000) be granted to His Majesty for the purpose of making war supplies available to any of the united nations, other than Canada, and of fulfilling any obligations arising out of the united nations relief and rehabilitation agreement;

2. That the governor in council may determine the terms and conditions upon which such war supplies are made available to any of the united nations and may require in certain cases payment or repayment in kind of property or reciprocal action or provision of supplies or other direct or indirect benefit as may be deemed appropriate;

3. That the Canadian mutual aid board be authorized to carry out the purposes of this resolution;

4. That the governor in council be empowered to raise by way of loan under the provisions of the Consolidated Revenue and Audit Act, 1931, such sum or sums of money not exceeding in the whole the sum of eight hundred million dollars ($800,000,000) as may be required for the purpose of defraying the expenditures herein mentioned and for purchasing or otherwise acquiring or procuring war supplies in Canada through the agency of the Minister of Munitions and Supply, the principal and interest of any such loan to be a charge upon and payable out of the consolidated revenue fund.

He said: His Excellency the Governor General, having been made acquainted with the subject matter of this resolution, recommends it to the consideration of the house.

Motion agreed to.

INCOME TAX

REQUEST FOR EXTENSION OF TIME OF FILING FINAL RETURN

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): Before the orders of the day are called I should like to direct a question to the Minister of National Revenue. I have not been able to give the minister notice of the question, but I believe he already has notice of it. It comes from the Retail Merchants' Association of Canada, by whom the suggestion is made, that, because of the scarcity of accountants and auditors, the time for filing the 1943 income tax returns be delayed for a matter of, I believe, two months. May I ask the minister what consideration is being given this request, and whether there are any reasons why it might not be granted?

Hon. C. W. G. GIBSON (Minister of National Revenue): I understand that the representation has been received. It is receiving consideration at the present time but no decision has been reached.

AUDIT OF WHEAT BOARD ACCOUNTS

On the orders of the day:

Mr. E. E. PERLEY (Qu'Appelle): I wish to direct a question to the Minister of Trade and Commerce. Are the accounts of the Canadian wheat board audited by an officially appointed auditor? If so, who is the auditor and when will the last audit of the 1942-43 crop year be made available?

Some hon. MEMBERS: Order.

Mr. PERLEY: I think the minister is prepared to answer that.

Mr. SPEAKER: In my opinion the question is one that does not need an immediate answer.

Mr. GRAYDON: May I suggest to Your Honour, with great deference, that we are nearing the Easter recess and a number of matters such as the one raised by the member for Qu'Appelle have an urgency which otherwise they might not have. I should be glad therefore if Your Honour would, from now until the recess, consider the advisability of a little more latitude towards such questions.

Mr. SPEAKER: I think the point taken by the leader of the opposition merits consideration, but such a question as the one now asked, inquiring about the name of an auditor, is not of sufficient urgency to call for an immediate answer.

Mr. LOCKHART: May I suggest, Mr. Speaker, in addition to what the leader of the opposition has said, that there are a number of accountants in the armed forces who might easily be excused. I would ask the minister to take it up with the proper member of the cabinet to see if something could not be done, because there is a dearth of chartered accountants to prepare corporation statements.

SUPPLY

Hon. J. L. RALSTON (Acting Minister of Finance) moved that the house go into committee of supply.

Mr. GORDON GRAYDON (Leader of the Opposition): Before we go into interim supply there are one or two matters which I should like to bring up at this stage. If it is desirable to postpone my remarks, I have no objection to bringing the subject up later, but perhaps it might be just as well for me to proceed now.

In going into interim supply I realize that there is no necessity for any extended discussion of the resolution which the Acting Minister of Finance is about to introduce. Formal government requests of this kind have been granted time after time and we have no objection to that procedure being followed on this occasion. I take it the minister is asking for one-sixth of the regular civil estimates, including the supplementary estimates which were tabled the other day. The amount no doubt will be smaller than might appear from the total of the estimates themselves, since some of the estimates of the civil departments are statutory.

I hope the minister will be able to give to the house some plan or scheme being pursued as a policy by the government in connection with economies to be applied this year to civil estimates. We should like to know how they compare with last year's estimates. We want to know what is and what is not controllable. We want to know how the interest on the national debt, which, if my memory serves me correctly, was included last year in non-war estimates, compares with the interest in the year before the war, and last year as well.

I would ask the minister at this stage to inform the house as to what plans are being laid down by the government in connection with a post-war taxation policy. That is one of the things we will need to know, so far as our committee is concerned. While economies are essential, and while we are anxious that not a cent will be wasted so far as non-war expenditures are concerned, at the same time I hope that consideration will be given to such matters as increase in old age pensions. We are hopeful that the age will be reduced, that the rate will be increased, and that due consideration will be given to the contributory feature mentioned in the speech from the throne.

The public accounts committee, which deals with matters relating to civil estimates, was set up at the beginning of the session. On February 25, the Prime Minister referred to that committee the public accounts and the auditor general's report. The committee has not yet met. I understand that one of the members of this party has already asked that the committee be convened. I suggest to the government that some other means ought to be made available under which, upon matters being submitted to them for consideration, this committee would automatically convene. I am hopeful that the committee on public accounts will begin its work, and that it will not be necessary on other occasions, as it was last year and has been again this year, to call attention to its failure to sit.

The public accounts committee has a big job on its hands. Many examinations are to be made. It is in that committee that the bulk of the work of examination of expenditures must be done. I refer, of course, to expenditures envisaged by the supply measure

now being introduced. I hope that the government will give some further latitude in respect of the type of material allowed to go before that committee. I remember that last year the public accounts committee was not allowed to deal with the wartime information board. That matter was referred to another committee and was not dealt with.

This party is anxious to facilitate the passage of interim supply. We reserve, however, our right to discuss any items in the various parts of supply as proceedings go on. I believe that is the undertaking which has always been given, and it is one I now ask the acting minister to give. May I caution the minister and the house that at a time like this members of the opposition and members generally must watch with ever-increasing care for waste and extravagance. For that reason we hope that when these estimates come down they will be in keeping with the general spirit of the times.

Motion agreed to and the house went into committee of supply, Mr. McCann in the chair.

INTERIM SUPPLY BILL

Mr. RALSTON moved:

Resolved, that a sum not exceeding $46,331,283.90, being one-sixth of the amount of each of the several items to be voted, as set forth in the estimates for the fiscal year ending 31st March, 1945, laid before the House of Commons at the present session of parliament, be granted to His Majesty, on account, for the fiscal year ending 31st March, 1945.

He said: The proposal this afternoon, as the leader of the opposition (Mr. Graydon) has said, has come to be a part of the regular course of financial procedure owing to the fact that the sittings extend considerably into the new fiscal year, making it impracticable to wait until the whole estimates are passed. The bill which will be founded on the resolution is to provide one-sixth of the items to be voted in the main estimates for the fiscal year 1944-45, which were tabled by the Minister of Finance on February 11, 1944, and which cannot be passed through all stages before the beginning of the new fiscal year, on Saturday, April 1. I think the leader of the opposition was in error when he suggested that this bill is one-sixth of the main estimates, plus the supplementary estimates. It is in fact one-sixth of the main estimates. The further supplementary estimates which were tabled the other day are supplementary with respect to the year 1943-44, and do not apply to the new fiscal year.

This is the usual proportion which is granted at the beginning of the year, and the amount asked is necessary not only to cover salaries and other normal costs of government for the first two months of the year, but also to enable initial advances to outside offices, in order that their operations may be undertaken without delay. There are certain seasonal operations on which the heaviest expenditures occur in the early months of the year, and these have also to be financed. They include agricultural services, surveys and explorations, and sessional expenses of parliament, for which one-twelfth would be inadequate to provide for urgent requirements.

I want immediately to give to the house the undertaking mentioned by the leader of the opposition, namely that it is understood that the passing of this bill will not prejudice the rights and privileges of members to criticize and discuss any item in the estimates when they come up for discussion from time to time throughout the session. The usual undertaking is hereby given that such rights and privileges will be respected and will not be curtailed or restricted in any way as a result of passing this measure.

My hon. friend has asked for certain things and, in what he has said, has dealt with two or three matters. As the committee will see, the total estimates this year amount to $702,369,000. This represents an increase of $54,455,000 over the appropriations for the current year 1943-44, which were $647,914,000. The committee will be interested in knowing how that increase was brought about. It is accounted for by additions to various expenditures which relate solely to the war or which result directly or indirectly from war conditions. The items are:

Increase of interest on public debt and other debt charges	$75,344,000
Increase in cost of administration of income tax and excess profits tax	1,199,000
Increase in post office service expenditures	2,511,000
	$79,054,000

The first item answers the question asked by the leader of the opposition with regard to the increase in debt charges. This total will be compared with the net increase of this year's estimates over last year's of $54,455,000.

My hon. friend will not expect me this afternoon to go into details of possible economies. I am sure that these matters will be gone into fully when the estimates are being considered. In general, the policy of restricting normal peace-time expenditures to the minimum required for the maintenance of essential services is being continued. It is, however, considered necessary and desirable at this time to make provision for gradually intensifying certain scientific investigations and research as well as preparing the ground

for the orderly expansion of our commercial and other relations at home and abroad. Preliminary steps along these lines are reflected in relevant appropriations throughout the estimates.

My hon. friend has indicated that there should be economy and paring of expenditures, but at the same time he has indicated that there should not be too many economies, that there are some items in connection with which he thinks increases should be made.

Mr. GRAYDON: I just wanted common sense applied.

Mr. RALSTON: My hon. friend mentioned old age pensions. Old age pensions of course will be discussed at the appropriate time when whatever measure there is in that respect is brought down. I am not in a position this afternoon to make any announcement with respect to that. Neither am I in a position to accept my hon. friend's invitation to make an announcement with regard to the taxation policy. That is distinctly a budget announcement which will be made in due course.

Mr. GRAYDON: I was dealing only with the post-war period.

Mr. RALSTON: My hon. friend asked what were the uncontrollable expenditures in these estimates. He brought that up, of course, because he realizes, as we all do, that there are certain expenditures with respect to which economies, or at least paring, cannot be practised. The larger uncontrollable expenditures are as follows:

Interest on public debt and other debt charges	$307,058,000
European war pensions (1914-18)	37,000,000
Government contribution to unemployment insurance fund	15,000,000
Old age pensions	31,526,000
Other pensions and superannuation	5,623,000
Care of returned soldiers (1914-18)	15,584,000
Subsidies and special compensation to provinces	98,876,000
Maritime Freight Rates Act	4,400,000
Sundry other items	3,508,000
	$518,575,000

In the fiscal year 1938-39 interest on public debt and other debt charges required an expenditure of $133,147,000. The present estimates provide for an increase of over $174,000,000 in this item alone as compared with pre-war expenditures. I think that gives my hon. friend the comparisons he wanted. The first was a comparison of the debt charges of a year ago and those of to-day, and in this item the increase is roughly $75,000,000. The other was a comparison between the debt charges of 1938-39 and those of to-day, where the increase is about $174,000,000.

[Mr. Ralston.]

After deducting the total of uncontrollable items, namely $518,575,000, from the total of these estimates, there remains an amount of $183,794,000 from which reductions are theoretically possible. However, even in this sum are many services, such as those rendered to our primary industries, which it would be unwise to reduce even at this time.

I do not think my hon. friend will expect me to go into the matter of the public accounts committee. He knows and the committee knows that each committee is master of its own procedure. I understand that it is in order, as soon as the committee is set up, for any member of it to give the clerk of the committee a notice which I believe the clerk acts upon and calls the committee together to give consideration to whatever business may be before it. He spoke also of enlarging—I think that was the word he used, or something to that effect—the scope of the committee or the type of reference which shall be made to the committee. In this respect I am not in position to say anything further than that the committee has the widest powers in respect to the examination of public accounts. The policy will be adopted which has been adopted in the past of giving the committee full scope in that respect.

Mr. GRAYDON: I was not asking for any enlargement of the powers of the committee. I was asking only that the government accept the reference to the committee of such things as I referred to, such as the wartime information board, which was refused last year.

Mr. RALSTON: I am not familiar with the circumstances regarding the wartime information board. All I can say is that the committee has the right, subject to the usual rules of the house and to the rights of other committees, to consider any matter which is properly the subject of consideration by the public accounts committee and that those subjects are very broad. I do not think I have anything to add to this statement, unless there are some questions hon. members would like answered at this stage.

Mr. DOUGLAS (Weyburn): It was very difficult to hear the minister and I did not catch the figure he gave when he was dealing with uncontrollable expenditure. He referred to the interest on the funded debt, and I believe he mentioned $317,000,000.

Mr. RALSTON: The figure was $307,058,000.

Mr. DOUGLAS (Weyburn): On March 20, as reported on page 1668 of *Hansard*, the parliamentary assistant to the Minister of Finance gave the figure as of January 31, 1944,

as $268,312,935.81. Perhaps the figure the minister gave includes interest on the railway debt.

Mr. RALSTON: Interest on public debt and other debt charges.

Mr. DOUGLAS (Weyburn): That would include interest on railway bonds?

Mr. ABBOTT: The figure of $268,312,935.81 which I gave the other night represented the annual interest payable on the net funded debt as of January 31, 1944. As my hon. friend knows, it is going up all the time.

Mr. DOUGLAS (Weyburn): The minister is suggesting now that the figure of $307,000,000 is the estimate of what will be required for the coming fiscal year which will end March 31, 1945?

Mr. RALSTON: Right.

Resolution reported, read the second time and concurred in.

WAYS AND MEANS

INTERIM SUPPLY

Hon. J. L. RALSTON (Acting Minister of Finance) moved that the house go into committee of ways and means.

Motion agreed to and the house went into committee, Mr. McCann in the chair.

Mr. RALSTON moved:

Resolved, that towards making good the supply granted to His Majesty on account of certain expenses of the public service for the fiscal year ending March 31, 1945, the sum of $46,331,283.90 be granted out of the consolidated revenue fund of Canada.

Resolution reported, read the second time and concurred in. Mr. Ralston thereupon moved for leave to introduce Bill No. 53, for granting to His Majesty certain sums of money for the public service for the financial year ending March 31, 1945.

Motion agreed to, bill read the first and second times and the house went into committee thereon, Mr. McCann in the chair.

Bill reported, read the third time and passed.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY —INTERIM APPROPRIATION

Hon. J. L. RALSTON (Acting Minister of Finance) moved that the house go into committee to consider the following resolution:

Resolved, that it is expedient to introduce a measure to provide that a sum not exceeding $850,000,000 be granted to His Majesty towards defraying any expenses or making any advances or loans that may be incurred or granted by or under the authority of the governor in council during the year ending the thirty-first day of March, 1945, for the purposes and subject to the terms, conditions and limitations set out in the resolution on the orders of the day, to provide that sums not exceeding $3,650,000,000 be granted to His Majesty.

Mr. GORDON GRAYDON (Leader of the Opposition): Mr. Speaker, perhaps at this stage, as at a similar stage of the previous resolution, I should say a word or two.

There should be no unnecessary delay in passing this interim war appropriation. A pretty full discussion has already taken place with respect to war departments and there will be an opportunity, of course, to discuss the other departments later; therefore I shall not discuss at any length the resolution now before us.

I would say to the minister, however, that for our protection we make the same reservation as to the position of the opposition so far as the rest of the war appropriation estimates are concerned, and I assume the minister is prepared to give the usual undertaking before this resolution passes.

The resolution deals entirely with matters pertaining to the war. Those in this country and in any others of the united nations engaged in this war who are apt to say in an unguarded moment that the war is nearing its end must now be ranked as real dangers themselves to the cause of the united nations. I am hopeful that this country yet will be aroused from its complacency with respect to the possibility of an early ending of hostilities. Our people have perhaps been depending too largely upon statements which have been made in other parts of the world because, while we have passed the preparatory stages of the war, I think it may properly be said that we still have before us the most challenging and fiercest period of the war. This nation, this government, this parliament have to steel themselves not only against the great period of danger and peril which appears to lie immediately ahead, but against many blows, many losses, perhaps some reverses, before victory finally comes to our cause. I hope there will be an end of complacency among our people. Of necessity plans must be laid for the post-war period, and no one will object to a reasonable amount of legislation of that kind, but we must recognize that the first and the major issue which faces us is the winning of the war. To this end, subject to the right of criticism to ensure full prosecution of the war, this opposition is prepared, as it always has been, to give assistance in full measure to the government.

There are matters in this connection which the opposition cannot ignore if it is to discharge its duty. This leads me to bring to the

attention of the government, and more particularly to the minister who is piloting this resolution, some matters in connection with which remedial action is required in the interests of the preservation and maintenance of our democratic way of life. An answer which was given the other day to a question by the hon. member for Lake Centre (Mr. Diefenbaker) shows that over 42,000 orders in council have been passed by this government since the war broke out. It stretches the imagination to accept the theory that every one of these orders was of the necessary and emergent type that the War Measures Act contemplates. There is a tendency on the part of governments, perhaps during peace, but especially in time of war, under the cloak of urgency, to pass legislation behind the closed doors of cabinet meetings without reference to the people as a whole. I hope the government will take into consideration the feeling which exists across this country in opposition to this movement which has gained so much impetus in the last few years, to legislate by orders in council rather than through parliament. Legislation by order in council is occasionally necessary; certainly there are times of national emergency when it is warranted. But there is an added responsibility upon the government to see to it that the people, when their representatives have not first been taken into consideration, are informed as to what that legislation is, and how the law is affected after the orders in council have been passed. That is not always done. Canadians will stand for this board-room legislation or these semi-baked laws so long as it is necessary for the winning of the war, but if it oversteps that mark popular opinion will rebel against the usurpation of authority and power. One of our jobs as members of His Majesty's Loyal Opposition is to draw to the attention of the government such abuses when they arise.

I shall take only a moment at this stage to give an illustration of board-room bureaucracy in operation. Yesterday's *Globe and Mail* reports a court case in Toronto, having to do with a question of permits for materials which are restricted during war time. Judge James Parker, who was trying the case, said he viewed the offence as a technical breach of a federal order in council, which, he noted, had precipitated a condition of confusion and of misunderstanding. Apparently the secretary of a company had read the *Canada Gazette* to find out whether the law permitted the company to make a certain purchase, and, not having found anything to prohibit it, they went ahead and made the purchase. A case was brought and came up on one or two occasions. It was the subject of an application to the Supreme Court of Ontario, and Chief Justice Robertson, eminent jurist that he is, is reported as follows: He branded this as a very vicious principle, a tendency he noted in government orders in council of reversing a principle of justice and compelling people to come to court to prove their innocence. In this case the trial judge observed that there is confusion in all these orders in council. That is an example of the type of thing against which Canadians rebel when the opportunity is given them to voice their sentiments. I ask the minister and the government, in connection with war preparations, where things of this kind are normally likely to occur, to see to it that legislation by order in council and by war order shall be reduced to a minimum in the interest of the preservation of our democratic way of life.

Having criticized the government in this regard, I want to say a word or two with respect to another matter. In a few short weeks we shall be in the middle of a great campaign, the campaign for the sixth victory loan. Regardless of their views, political or other, the people of Canada can be counted upon to make a full and prompt response. We talk very lightly about equality of service, equality of sacrifice and equality of contribution. I often wonder if those of us who sometimes make these statements fully realize just what the terms actually mean to many of the Canadian people. When the sixth victory loan campaign is opened the Canadian people may well consider this: If everyone in Canada were to give, not just loan at interest, but every material thing we possessed, would anyone in Canada rise and say that that equalled the sacrifice, the service, and the contribution of the men and women who have given their lives or who are prepared to offer their lives upon the altar of sacrifice that we may have freedom, righteousness and liberty in the days that lie ahead?

With this plea to the people of Canada on the eve of the sixth victory loan I say that we ought to consider the position in which we find ourselves, which is one of safety and security, and compare and contrast it with what the No. 1 branch of our citizens overseas are now going through; we should then make up our minds as to what we shall do in connection with the lending of material things to help to see them through.

In conclusion I wish to say this to the government, as I said in a previous speech when the ordinary estimates were before the house. We are prepared to give the government all the cooperation it deserves and needs

to win this war; but we reserve our right to criticize. That is in the interests of the government and in the interests of Canada as a whole. But I do think it means that our responsibility as a party, the government's responsibility, yes, the responsibility of those to the left of us and of all groups in Canada, is a very heavy one, calling for the greatest sacrifice and the greatest effort on the part of all of us.

Mr. T. C. DOUGLAS (Weyburn): Some time ago the Minister of National Defence for Air (Mr. Power) placed an answer to some questions on *Hansard*. He said at that time that he was going to answer some other questions. He has not been back before the house since, and I thought I should take this opportunity of bringing the matter to the attention of the government and asking that the Minister of National Defence for Air make some statement before the house rises for the Easter recess.

The minister placed on *Hansard* at page 1401 an answer to a question by the hon. member for Rosthern (Mr. Tucker) dealing with the closing of certain airports across Canada. Some twenty-nine airports in Canada are to be closed. Since that answer was given there has been considerable discussion in the press, and I am sure that most members have been in receipt of a great many communications asking for further particulars. I think there are one or two things that ought to be stated by the government. It should be pointed out to the public just why the closing of these airports has suddenly been made necessary. Last fall—

Mr. RALSTON: Not suddenly.

Mr. DOUGLAS (Weyburn): Last fall the minister was making frantic appeals for aircrew. There was talk about the need for tremendous expansion of aircrew; that we were at the bottom of the barrel. We find now that there is a surplus of aircrew and that we do not need to train any more because we now have enough not only to take care of additional requirements but to take care of replacements in the event of losses. I know that the government of Canada cannot be fully responsible for that. This government is only a part of a great scheme being carried on by the British commonwealth of nations and the united nations; consequently they have to adjust their plans to the plans of the other members of the British commonwealth. Nevertheless, in fairness to the country generally, the minister ought to make a statement as to what changes in circumstances have brought about the need for closing these twenty-nine airports. He ought to make a statement to the house and to the country as to what basis was used in determining which airports would be closed. Was it on the basis of efficiency, or of proximity to points of embarkation?

In looking over the list I notice that eight airports are to be closed in Saskatchewan, eight in Ontario, eight in Alberta, two in Quebec, two in Manitoba and one in New Brunswick. It can be seen that most of the airports to be closed are in western Canada. Because our industrial facilities are extremely limited, the airports are about the only part of the war activity that has found its way on to the prairies. The closing of airports in eastern Canada would hardly work any economic hardship on the communities involved, because most of these communities are suffering from a lack of housing accommodation. But the closing of airports on the prairies will cause an economic readjustment in the communities involved. I am not complaining about that, because some time or other they have to be closed, and we shall all welcome the day when the war is over and we shall be able to turn the efforts and energies of this country to other purposes. But I do think it would help if the minister made some statement as to the basis used in deciding what airports should be closed and what airports should be kept open. It does seem to those of us who come from the west that it has thrown an unnecessarily heavy burden upon western Canada as compared with other parts of the country.

The government ought to make a statement very soon as to what could be done with the airports. In the town in which I live it will mean that some fifty or a hundred civilians will be thrown out of work. Rumours are going around to the effect that these airports may be reopened for vocational training; that the government will use them for the training of men who are being returned to civilian life. I would favour that. If the government plans to do that, however, the plans ought to be so dovetailed that when an airport is closed as a training centre it will be opened as soon afterwards as possible for the purposes of vocational training. If that were done the fifty or a hundred or more men affected would not be scattered all over the country looking for work. What is apt to happen if these airports are closed is that trained mechanics, electricians, carpenters and firemen will be allowed to move elsewhere looking for work, and then six or eight months later an attempt will be made to assemble a group of trained men to maintain the airports. If they are to be used for some other

purpose, a liaison between the various departments, a dovetailing of their plans, could be arranged so that when an airport is closed for one purpose it can be kept ready to be opened for some other useful purpose. If the government finds that is not feasible, I hope plans are under way to move to some other centre the civilians employed in the airports to the end that their skill can still be made use of by the country in its war effort.

Hon. R. B. HANSON (York-Sunbury): I wish to make some inquiry of the Department of National Defence for Air with respect to one of the airports that has been closed in my province. The minister is not in his seat, but his parliamentary assistant (Mr. Macmillan) is, and I therefore desire to direct my inquiry to him and to ask him if he can tell me why the Pennfield airport was closed and what is proposed to be done about it.

I am not quarrelling with the decision to close the airport. I have no knowledge of the pros and cons of the question, but I would like to give something of the history of this airport. In the early stages of the war, when engineers from the Department of Transport were sent out to scout for probable airports in Canada, the location at Pennfield Ridge was indicated to them as being desirable for the establishment of an airport. I myself took some interest in the matter, because I was familiar with the terrain of the locality. When I found that there had been an adverse report from the engineer of the Department of Transport—I believe his name was McLean, if I remember rightly—I asked him and the deputy minister to come and see me in regard to the matter. They explained to me the conditions of the situation and the reasons which actuated them in making an adverse report upon this location. There were reasons of climatic conditions. Contiguity to the fogs of the bay of Fundy was alleged as a substantial reason why this airport should not be opened. After a good deal of doubt, after consulting with my friend, the member for Charlotte (Mr. Hill), who was more directly interested than I was from the standpoint of representation, I reluctantly came to the conclusion that possibly the report of the engineers was correct.

Imagine however my surprise when a few weeks later the announcement was made that an airport was to be established at Pennfield Ridge, that contracts were let to a contractor in New Brunswick on unit prices, without any competition, at a cost of millions. The history of that airport has been varied. At one time a navigation school was established there for men in the R.A.F.; then one day, coming from New Brunswick, I noticed on a siding alongside the train on which I was travelling a special train loaded with airmen. I made inquiries and ascertained that the whole navigation school from Pennfield was being transferred to a point in the prairie provinces. That was no doubt done for good and sufficient reasons. Subsequently another school was set up there, largely composed, I believe, of personnel of the R.A.F. I am not sure whether there were any of the R.C.A.F. men there, or what the position was. That school has now been closed down but—and this is the point of the remarks I desire to make—just previous to the closing down of the school, I am informed, a contract was let to a contractor without any tenders being called for, on unit prices, which would double the surface areas of the runway, at a cost of half a million dollars. The school is closed and no announcement has been made as to the purpose of this installation, which now must have cost more than $3,000,000. That is a guess on my part. I have no figures available, but judging from what has been done and what I know of the area and the extent of the installation, there cannot have been much less than $3,000,000 spent on that airport. And the work is going on. This half million expenditure has not been suspended. I think some explanation is due to the public and the country.

Mr. RALSTON: Does my hon. friend know—

Mr. SPEAKER: In the matter before the house, which is a motion that I leave the chair for the house to go into committee of the whole, the leader of the opposition (Mr. Graydon) took the opportunity to say that he had a few remarks to make, but they extended further than I thought they would have been. He did indicate, however, at the beginning of his address that he would reserve the right to criticism of such expenditures as may be contained in the amount of $3,650,000,000 that is asked for under the war appropriation.

When the house is going into committee of the whole on such a matter as this, which is by leave of the house, and which deals only with the vote on account asked for by the government, it does so without debate. The feeling of the house, however, is seemingly that this matter is debatable and that all questions may be brought within the range of the discussion. I point out that the right of discussing all these matters which hon. members are now seeking to deal with can be exercised in committee of the whole where the war appropriations are now being considered and also when the bill is before the house.

Mr. HANSON (York-Sunbury): There will be a bill after this.

Mr. SPEAKER: There will be a bill after this, yes.

Mr. HANSON (York-Sunbury): I was about to conclude what I had to say, but I must confess that I do not quite understand the ruling. If Your Honour says that I am out of order, I abide by the decision; but shall I have the opportunity of concluding what I have to say when the bill which is to be founded on this resolution is before the house?

Mr. SPEAKER: This is a resolution antecedent to a bill which provides for interim supply. It is part of the appropriation that is being asked for under the war appropriation measure of $3,600,000,000. All the matters which hon. members are now seeking to discuss can be taken up when the war appropriation bill is under consideration.

Mr. HANSON (York-Sunbury): May I ask this question for information. Does it follow that on this interim bill I cannot discuss these matters now? I do not understand Your Honour to say that. To me it is a strange proceeding if on a bill for interim supply I cannot discuss this matter to-day because it is held that it can be discussed on a later occasion.

Mr. SPEAKER: May I point out that the leader of the opposition, when he was making his remarks, while giving assent to the passing of this bill as an interim supply measure, did reserve the right to criticism of all expenditures that may come under the war appropriation bill.

Mr. HANSON (York-Sunbury): That is understood.

Mr. SPEAKER: It was by leave of the house that this matter is being brought before the house now, but in spite of the reservation made a discussion ensued. I assumed that the reservation made in regard to the resolution would also apply to the bill when it comes in.

Mr. HANSON (York-Sunbury): But Your Honour has not answered my inquiry, and I rise again to ask whether it is out of order for me now to discuss any matter of war expenditure at this stage of the proceedings, or at any stage of the proceedings, for that matter. If it is, it is a limitation of debate that I have never heard of in this house, and I do protest.

Mr. RALSTON: I thought there was general agreement.

Mr. HANSON (York-Sunbury): We were going to give you supply, but surely we have a right to talk on it.

Mr. RALSTON: Not on X Y Z airport.

Mr. HANSON (York-Sunbury): I will not be stifled by that.

Mr. SPEAKER: Interim supply is usually granted by leave of the house and no debate takes place. If the hon. member says that he wishes to speak on matters generally, and proposes to do so, I cannot prevent him from proceeding. But the understanding I gathered from the house and from the leader of the opposition was that the reservation made applied to all matters which could be discussed under the war appropriation bill, and therefore I understood that there would be no debate. But if the hon. member feels that he cannot allow this to pass without discussion, then he has the right to do so.

Mr. GRAYDON: On the point of order may I say, so that there may be no misunderstanding, that last year in connection with interim supply for the war appropriation the debate was of considerable length. I am hoping that that will not be so this time, and I do not believe it will be. The hon. member for York-Sunbury (Mr. Hanson) was discussing only one isolated case. But there does not seem to be any reason why, in respect of an interim supply bill such as this, debate could not take place. In general, however, I think most hon. members would like to have the debate kept within limits, and that is what we are trying to do.

I am quite sure, however, that Mr. Speaker would not think of limiting the hon. member, because I am equally certain that the rules of the house would not so provide.

Mr. SPEAKER: I think I have indicated to the hon. member for York-Sunbury that if the reservation made by the leader of the opposition is not to be maintained in the debate on this resolution, then the hon. member for York-Sunbury, if he wishes, is entitled to discuss the matter, both on the resolution and on the bill.

Mr. GRAYDON: With respect to the reservation made, may I say that it is not restrictive. Rather it is a reservation, so that discussion may take place afterwards. I am quite sure there has never been any suggestion either in the present instance or in respect of previous debates to the effect that a reservation might be regarded as restricting anyone from discussing what he wished to discuss.

Mr. HANSON (York-Sunbury): I desire to make only one observation respecting the point of order. The reservation asked for by the leader of the opposition and the answer given by the minister involved only a preservation of the rights of members to discuss every item, notwithstanding the present

granting of supply. It has no connection whatsoever with the limitation of debate, on matters concerning the war, to the resolution now before us. I think I am right about that. After the leader of the opposition had spoken I had not intended to say anything this afternoon. But the hon. member for Weyburn (Mr. Douglas) discussed a question, and I thought that what was sauce for the goose was sauce for the gander. If he had a complaint to make and was permitted to make it, then I thought this was an opportune time for me to make my complaint, or at least to make an inquiry of the administration respecting a certain matter.

That is all I was proposing to do, and I was about to conclude what I had to say by asking the assistant to the Minister of National Defence for Air (Mr. Power) to make a statement, possibly by to-morrow, at least before the house adjourns for the Easter recess, as to why the Pennfield airport was closed and, particularly, why a huge expenditure of half a million dollars is being made there for the purpose of doubling the runway surface of an airport which is now being closed. I have had letters about this matter. The public are inquiring about it. They cannot understand why this sum of money is being spent, if the airport is not to be used.

That was why I rose to speak and, having said that, I shall resume my seat. I do not ask for a reply to-day.

Mr. SPEAKER: May I point out to the hon. member for York-Sunbury my understanding, namely that the matter of which the hon. member has been speaking anticipates a discussion which, I recall, the Minister of National Defence for Air said would take place. We shall be discussing the same matter when the war appropriation measure is before the committee.

Mr. HANSON (York-Sunbury): The rules of the house are strange; I do not pretend to understand their application.

Mr. MacINNIS: I understand that there is no point of order before the house. This is part of the annual war supply, and we understand that everything contained in a war appropiration resolution is subject to discussion at this time.

Mr. HANSON (York-Sunbury): That is what I thought.

Mr. MacINNIS: That does not mean that I have any wish to debate the subject at this time. If we had come to the conclusion that we were going to let these appropriations pass, we should let them pass. But when the leader of the opposition rises in the house and makes a speech, other hon. members may feel that they, too, should speak, because they also wish to go on record in respect of various matters. So that once the debate is started—and I admit it was quite in order—there is no way of stopping it. Therefore it would be up to the leaders of the opposition in the house to discipline themselves in matters of debate. In that way we shall get somewhere.

Mr. GRAYDON: I do not like that word "discipline".

Motion agreed to and the house went into committee, Mr. McCann in the chair.

Mr. RALSTON: Mr. Chairman, with regard to the reservation to which reference was made by the leader of the opposition, I should like to give the committee an undertaking similar to that given in connection with interim supply respecting civil estimates. The undertaking is that the passing of the interim supply bill to be founded on this resolution will not prejudice the rights and privileges of members to criticize and discuss fully the provisions of the main resolution. The undertaking is hereby given that such rights and privileges will be respected and will not be curtailed or restricted in any way as a result of passing this measure.

The leader of the opposition referred to one other matter, namely legislation by order in council. I shall not deal with that because, while under the strict rules of the house, it may be quite in order to discuss something germane to the war, at the same time I did think that under the convention which I thought was arrived at, such matters would be discussed on some other occasion.

However, since my hon. friend has mentioned the matter of legislation by order in council—board-room legislation, as he described it—I would say this, that notwithstanding what my hon. friend may think, every effort is made to restrict to the minimum legislation by order in council. May I add only a few words to what he said. His statement was to the effect that we were perfectly justified in passing legislation or, as he said, in legislating by order in council under a state of urgency or emergency. I believe those are the words he used. But there are two other conditions to be kept in mind, namely, states of necessity and security. That of security applies particularly to the department with which I am connected, and it is a factor which makes it necessary at times to proceed by way of order in council. And at times some of those orders in council are not published.

Mr. GRAYDON: It was not the use of them, rather it was the abuse of them with which I was concerned.

Mr. RALSTON: I say to my hon. friend and the committee generally that not in one single instance does the government confess to any abuse of powers given under the War Measures Act for the purposes of proceeding according to the necessities of war. We proceed in that way because we believe, to use my hon. friend's expression, that there are urgencies, emergencies or necessities which require expedition, and also require facilitating and getting on with the job. At times there is the necessity to get things done, when it would be impossible or would take too long to move otherwise. Those are the considerations of which account must be taken by the government in exercising its power.

Mr. HANSON (York-Sunbury): Does the minister consider that the order in council of March 18, 1943 amending the Companies Act, *qua* the incorporation of an aircraft company, comes within the ambit of the limitations he has laid down? That was entirely a civil matter; it was outside of war altogether; it was an abuse of the executive functions of government.

Mr. RALSTON: In the first place, the urgency was apparent because applications were being made for the incorporation of companies. The merits of the case were based upon the necessity of bringing that in as a war measure because of the situation which existed in regard to aviation in this country.

Mr. HANSON (York-Sunbury): Parliament was in session.

Mr. RALSTON: Parliament was in session, but perhaps an example of what would have happened is what is happening this afternoon in dealing with an interim measure with regard to the war appropriation.

Mr. GRAYDON: Considering the amount involved, we have not been very long this afternoon.

Mr. RALSTON: If there had been a full-dress debate in connection with the matter to which my hon. friend referred it might have been some weeks before the necessary legislation was put through to restrict the rights of companies to take out charters.

I come now to the third matter mentioned by the leader of the opposition, which had to do with the text that the war is not yet won. I agree with him, and I have endeavoured to preach as serious sermons as I possibly could along those same lines. When the Minister of Finance introduced this measure in the first place he referred to the same subject, as reported on page 391 of *Hansard,* as follows:

I need not assure the house that this probable reduction in direct war expenditures, like the corresponding decrease forecast by President Roosevelt in connection with United States war expenditures, does not represent any slackening in the war effort, but rather merely the result of the stage of the war and of our preparation for war which has now been reached. The speech from the throne clearly indicated that while the war situation has improved from the point of view of the united nations during the past year, nevertheless the duty of the government is to see that Canada's war effort is firmly maintained until the enemy is defeated in Europe and in Asia. The winning of the war clearly remains the first of all our objectives.

I agree thoroughly with my hon. friend. Too many people are thinking that the war is won, but all they need to do is to ask the men who are in front of Cassino, the men who are on the Anzio beachhead, the men who are on the right flank near Ortona, the men who are in the air flying over Germany and Europe, many of them not coming back, the men who are risking their lives ploughing the seas to protect our men and munitions in transit. All they need to do is to look back at the same period in the last war. They will realize that the situation is not the same. The German is far from beaten; he does not consider he is beaten and he fights on. The Jap is quite willing to die as he always has been in order to maintain his place in the sun. Progress in Italy has been quite gratifying, but we are still 800 or 900 miles from Germany, and there is a long hard road ahead of us in the south of Europe. On the north we find that at the same period in the last war we were in control of probably three-quarters of France, but to-day we have not even a toe-hold on the north west coast of Europe. The whole of Europe still has to be regained.

We pay tribute to our gallant allies the Russians. The fighting of the Russians will probably have to be matched this year. In the far east China is overrun. Hong Kong must be avenged, and Singapore, the Malaya peninsula, the Philippines and those islands in the southwest Pacific must be retaken. That is what we must do before we finally bring our enemies to unconditional surrender. That is quite a task. I refer those who think the war is nearly won to the statement made a day or two ago by the director of aircraft production, that by this time next year we may quite possibly have to be building planes just as hard as we are to-day. Let us hope that that will not be so.

I agree wholeheartedly with the hon. member for Weyburn when he says that we will welcome the day when the war is over and we can turn our energies toward the constructive work of peace. I am glad to hear that

declaration made. We hear complaints when this or that activity is not being kept up. One would almost think that some people wanted the war to continue in order that certain war activities might be kept going. What we want is to end the war just as soon as possible. The sooner we can get it over, the sooner we can relax our efforts. However, the more we intensify our efforts at this time, the shorter will be the war and the quicker and surer the victory that is to come.

The hon. member for York-Sunbury referred to a particular airport. Without accusing him of unfairness, I think he need not have brought that up this afternoon. The Minister of National Defence for Air is not in the house at present. I am sure my hon. friend knew of the circumstances to which he has referred when the estimates of the Minister of National Defence for Air were before the committee. That was the time to have brought them up. I can say to my hon. friend that a statement will be made in due course with regard to that matter. I say to the hon. member for Weyburn that a statement will be made in due course with regard to the matter of closing airports.

I do not know whether any statement can be made as to the method adopted to establish what particular airport will be closed and what particular airport will be kept open, but if any statement can be made I am sure it will be made when the time comes. The hon. member inquired as to what would be done with the airports when they are closed. I am sure that that matter was discussed by my colleague, the Minister of National Defence for Air, when his appropriations were being considered and I assume that there will be an opportunity for further discussion before the session is over.

Mr. DOUGLAS (Weyburn): I was particularly anxious to have a statement made, not necessarily to-day but as soon as possible, about the disposition that will be made of the civilian personnel who might become unemployed.

Mr. RALSTON: There may be an opportunity for them to join the army.

Mr. DOUGLAS (Weyburn): The minister surely does not think the Department of National Defence for Air would employ men who should be in the army. I think the minister is being facetious. I want to tell the minister that every man employed at the Weyburn airport is a veteran of the last war.

Mr. RALSTON: That is splendid.

[Mr. Ralston.]

Mr. DIEFENBAKER: I do not quite understand the attitude taken this afternoon by the minister. It seems that every time a matter is brought before the house the opposition is criticized for endeavouring to have it elucidated.

Mr. RALSTON: My hon. friend seems to have a vivid imagination. I have not heard anyone criticized this afternoon.

Mr. HANSON (York-Sunbury): You accused me of unfairness.

Mr. RALSTON: I did not accuse you of unfairness; I left it to you.

Mr. DIEFENBAKER: We take second place to no one in our desire for the mobilization of this nation for victory, but we seem to be always met with criticism, either direct or veiled, when we bring up matters. The attitude taken is that we should be shoved aside, that when we offer criticism, whether it is constructive or not, we do so for some ulterior purpose. I thought I would see what Sir Wilfrid Laurier said during the last war about the attitude of the opposition. I think his words summarize and epitomize the attitude that should characterize us all in endeavouring to assist the government when it needs assistance. This is what Sir Wilfrid Laurier said on March 10, 1915, as reported on page 834 of *Hansard*:

> . . . it was never intended by me nor by any of those who sit around me that, when we were summoned to parliament and called upon to pass judgment, to sanction or not to sanction the measures brought down by the government, we were to abdicate our judgment and to sit here as recording machines, simply to register the decisions of the government.

I re-echo those words. Sir Wilfrid Laurier has epitomized the attitude of the opposition in war time. He continued:

> We are still of the opinion that the war is the supreme issue—

That attitude is the attitude to-day of those in opposition.

> —but if we believe that in the method of carrying on the war, in the policy proposed by the government, there be errors of judgment or otherwise, then it is our imperative duty to cry halt, to show the mistakes, to point out the true course and to use every endeavour to prevent mistakes from being carried into effect.

That is the attitude of this opposition. There has been altogether too much of an attitude on the part of the government of castigating members of the opposition when we, with the same desire as the government to assist in the winning of the war, bring forward what we believe to be constructive criticism.

Mr. RALSTON: After this rather heated statement by my hon. friend, may we get back to just what we are doing here this afternoon. Nobody has criticized anybody for raising any matter which he felt it was necessary to raise. I have suggested to the hon. member for York-Sunbury that the question raised this afternoon was one that he might have raised when the Minister of National Defence for Air was present, and he had full opportunity of doing that. I am sure that he will not say that he did not have the facts before him that he has now.

Mr. HANSON (York-Sunbury): Yes, I will say that. I did not know that the new contract had been let until after the Minister of National Defence for Air had got his estimates through.

Mr. RALSTON: That is only one of a chain of circumstances which my hon. friend brought forward this afternoon, and I do not think it adds very much to it. All that I have said to my hon. friend is that at a time like this he might have refrained from dealing with a specific problem. However, he was given that right, and that is all there was to it. The hon. member for Lake Centre has quoted Sir Wilfrid Laurier as asserting the right of an opposition to criticize. Is there anybody anywhere in the house who has not freely and fully accorded them that right? All that my hon. friend was doing this afternoon was to set up a straw man in order to knock him down again.

Mr. HANSON (York-Sunbury): You are adept at that yourself.

Mr. RALSTON: What is happening here is this. We have had before us for some time the main war appropriation resolution. Every member has had and will have the opportunity of discussing with the minister interested any item in his estimates. After that is done the resolution is passed. Then we go into committee on the bill, and once more hon. members of the house have the fullest opportunity, if they so desire, to discuss every item of war expenditure in every department that is affected. Has that right been taken away by what we are doing this afternoon? Not in the slightest. But because we need a portion of the money to make urgently needed immediate payments the hon. member for Lake Centre would suggest that some right is taken away from him. He has all the rights I have mentioned. He has his opportunity to discuss every one of the items of the war appropriation on the main resolution itself and again when the war appropriation bill is before the house. But because he cannot have two more opportunities to discuss these items he complains that we are taking away the rights of an opposition which were asserted by Sir Wilfrid Laurier. My hon. friend has a vivid imagination. I repeat that all he is doing is to set up a straw man in order to knock him down again. The opposition still has its full right to criticize any item of the war appropriation, but I thought there was a general understanding that in order that we might get along with the business of the country and the prosecution of the war $850,000,000 out of a total war appropriation of $3,650,000,000 should be granted now so that we could make immediate payments, reserving full rights to the whole house to discuss everything. I say to my hon. friend that I do not think Sir Wilfrid Laurier whose statements he has quoted would ask for anything more than that.

Mr. CASTLEDEN: In spite of what the minister has just said, I still think we are entitled to a statement from the Minister of National Defence for Air or his parliamentary assistant, and it seems to me that when this interim appropriation is being granted the minister for air should at least be here.

In 1943 airports were being erected in different parts of Canada. The province of Manitoba had one at Gimli. The cost of these airports runs into millions of dollars. The minister for air stated in the house on February 29 that some of the airports would be closed, but he did not indicate how many. On March 13, it was announced that twenty-eight airports were to be closed. If there has been a sudden reversal of policy in the matter of airports we should be told about it. There was a conference held at Quebec last August and September which cost this country $366,000. What was the policy then laid down with regard to airports? At that time the minister was still asking for an expansion of the air training programme and he continued to do so until November of that year. This year there was a sudden reversal of policy and it was announced in February that twenty-eight airports were to be closed this year. The people of Canada are asking the reason for this sudden change of policy, and I think they are entitled to an answer. The Canadian people have questioned very little the expending of money to be used in the winning of this war, but they certainly are critical of what appears to them to be unnecessary waste, and I think a statement is due from the minister to the committee.

Mr. SENN: I wish to bring a matter of some little urgency to the attention of the

minister. It will take only a minute or two. I promise that I am not going to be critical; rather I want to be helpful. I would not have brought the matter up to-day except that in view of the Easter recess and our adjourning this week I presume there will not be another opportunity for me to do so.

In the war appropriation estimates of the Minister of Agriculture there is an item, "Subsidies to producers of food products," for a considerable sum. So far the subsidies have been paid over the last two or three years but I am sorry to say that I now have complaints that these subsidies are very much in arrears, somewhat to the embarrassment of the processors of milk, butter and other food products. I would ask the minister to bring this matter to the attention of the Minister of Agriculture with a view to seeing that the subsidies are brought up to date. I am not blaming the officials of the department in any way because I know they are capable, and it is undoubtedly true that complicated calculations have to be made and a good deal of time is required for scrutiny of the accounts. Without further delay, and not to hold up the war appropriation I would ask the minister to see if something cannot be done to ensure that the subsidies are brought up to date.

Mr. RALSTON: I shall be glad to take the matter up at once with my colleague the Minister of Agriculture.

Mr. McNIVEN: May I bring to the attention of the Minister of National Defence a matter of serious concern to Saskatchewan and one over which he has supervision. I assume that some of the money which is now being appropriated will be used to further the plan already well under way. There is an extensive military establishment at the town of Maple Creek, Saskatchewan, where a basic training centre has been established. That is now virtually closed. There are only enough men left in that centre to look after it. Then we have that great thriving centre in the northern part of the province, the city of Prince Albert, where there are splendid barracks and other accommodation, used last winter for experimental purposes. The only ones left there now are a few men to guard the place. Complaints are now coming in to me that the military camp at Dundurn is fast dwindling in importance and that units will shortly be moved from that centre. To cap the climax of a woeful tale, the great metropolitan centre, the queen city of the west, Regina, is fast dwindling in military importance.

[Mr. Senn]

Mr. GRAYDON: I hope only in military importance.

Mr. McNIVEN: Certainly. I bring these matters to the minister's attention, matters that I have frequently brought to his notice during the last three or four years, only to emphasize that in the matter of military development the people of our province have not been given an opportunity to pull their full weight and to give expression to that assistance that they would like to give in military affairs. There seems to be some reason why our province was the last to be developed in that regard and the first to suffer from limitations or restrictions. There are now only some 4,800 troops all told in Saskatchewan, whereas in the neighbouring province of Manitoba there are some 14,000, and in the neighbouring province of Alberta there are over 11,000; and I am informed that there are approximately 225,000 troops in the whole of Canada. I hear rumours that military district No. 12, which has been in existence since 1917 or 1918, is, because of the facts which I have related, about to disappear. In recent weeks, when told of the continued existence of M.D. No. 12, military officers raised their eyebrows in an expression of astonishment that the district was still in existence.

I am making these remarks now because I assume that some of the money which is being appropriated will be applied to continue the use of military structures in Saskatchewan. I hope that what I have anticipated is not the fact, and that continued and greater use will be made of those splendid buildings at Maple Creek and the equally fine buildings at Prince Albert.

Mr. GRAYDON: Who is the member for Prince Albert?

Mr. McNIVEN: One of the finest in this country.

Some hon. MEMBERS: Hear, hear.

Mr. GRAYDON: You will have to get more applause than that.

Mr. McNIVEN: You will find it all through this country, everywhere.

Mr. GRAYDON: I did not.

Mr. McNIVEN: You did not look in the right place.

Mr. GRAYDON: I looked in Regina.

Mr. McNIVEN: I hope also that continued and greater use will be made of Dundurn military camp, which military experts have described to me as one of the finest sites for a military camp anywhere in Canada.

Mr. KNOWLES: Included in the war appropriation measure, one-sixth of which vote we are passing now, is an item to cover the additional five dollars which was granted last year to old age and blind pensioners. It was done by virtue of order in council P.C. 6367, dated August 10, 1943.

There are a number of matters related to this subject in which I am interested, but I wish to ask the government to-day only one question. My question is this: Is consideration being given by the government to raising the ceiling on the total income allowed to old age pensioners so that all of them may get the benefit of the five dollar increase which was announced in the house last July 24 and provided for by order in council on August 10? I realize, Mr. Chairman, that we shall have an opportunity of discussing this matter again when we get to this item under the war appropriation resolution; but although we can discuss the matter then, if the government's mind is already made up when we come to that, it will be difficult to have any change made. My hope is, by asking the question now as it has been asked on a number of occasions, that if consideration is not being given at the present time it will be given in the meantime. It seems to me most unfair that when this five dollar increase was provided for, no change was made in the ceiling; the ceiling was left at $365, and that meant that many old age pensioners do not get the full amount of the five dollar increase, and many received no increase at all. I know that the government of at least one province, Manitoba, has made the very reasonable appeal to the government that this ceiling be raised from $365 to $425 a year. These figures are still so low that one dislikes quoting them; but I say at least that much ought to be done. I wonder whether the government has given consideration to this matter.

Resolution reported, read the second time and concurred in. Mr. Ralston thereupon moved for leave to introduce bill No. 54, for granting to His Majesty aid for national defence and security.

Motion agreed to, bill read the first and second times and the house went into committee thereon, Mr. McCann in the chair.

Section 1 agreed to.

On section 2—$850,000,000 granted for 1944-45.

Mr. KNOWLES: Before the item is carried, would the minister give an answer to the question I asked a moment ago?

Mr. RALSTON: All I can say is that consideration is being given to all aspects of the old age measure, as was indicated in the speech from the throne. I am not in a position to designate any particular feature of it which is having special consideration.

Mr. KNOWLES: If I might point this out, the reference in the speech from the throne was to another plan, of contributory old age pensions, which might be brought in at some future date, when there is agreement among the provinces and the federal government. My question is with respect to the administration of the act which is now in force, and particularly with respect to the sum of five dollars, provided for by order in council, covered by the bill which we are now passing.

Mr. RALSTON: I cannot add anything to what I have said to my hon. friend.

Section agreed to.

Bill reported, read the third time and passed.

LOAN OF $1,000,000,000

TO MEET LOANS OR OBLIGATIONS, TO PURCHASE UNMATURED SECURITIES AND FOR PUBLIC WORKS AND GENERAL PURPOSES

Mr. D. C. ABBOTT (Parliamentary Assistant to the Minister of Finance) moved the second reading of Bill No. 38, to authorize the raising, by way of loan, of certain sums of money for the public service.

Motion agreed to, bill read the second time, and the house went into committee thereon, Mr. McCann in the chair.

Section 1 agreed to.

On section 2—Loan authorized.

Mr. CHURCH: I should like to ask a question of the parliamentary assistant to the minister with regard to this section. What is the method of financing this particular transaction of $1,000,000,000? The section authorizes the loan. In what form is the loan to be? It is under the Consolidated Revenue and Audit Act and, as I understand it, some of it is permanent finance authorized in the resolution and consists of the sale of bonds and other securities. Some of it is temporary and refunding finance. Is that not true? Is not some of it to be in the form of treasury notes? We are talking about a billion dollars. The function of an opposition is to find out something about it. The resolution and all of that is all right, but when the bill is before parliament, which binds future generations yet unborn to pay back the loan, it is the duty of the opposition to find out something about the method and manner of financing.

In addition to that, I should like to know what kind of audit we have. As I understand it under the Consolidated Revenue and Audit

Act the auditor general cannot do a thing about this billion dollars. The parliamentary assistant to the minister, if he had been in the house in the last two years when the minister was asked these questions, would have found out that since the war started there has been substituted for the auditor general who audits the revenues and expenditures of the country, and has done so since confederation, a comptroller of the treasury. As long as the comptroller of the treasury finds that any item in this particular billion dollar loan is within the four corners of the resolution on war appropriation expenditure which has been adopted, he has to pass it. As was said by the hon. member for Témiscouata in the last two sessions—and I agreed with him—the comptroller of the treasury is more or less an official of the Minister of Finance. He is appointed by the minister and is under his control. Under the Consolidated Revenue and Audit Act he has not the power which the auditor general used to have in days of peace.

What is the practice with regard to financing? Once upon a time we used to borrow money through the medium of treasury notes. In the last war we got money at the lowest of costs, less than one per cent on treasury notes, from Chase's bank and the National City bank of New York. We borrowed large sums of money at a time when the provinces and the municipalities were in the market and they could not borrow in any shape or form without the consent of the Minister of Finance of Canada. That may or may not have been a good policy. In some respects it was no doubt a good policy; but at the same time I wish to point out what was said at that time. We borrowed money on treasury notes and refunded at a loss. I think it was the present Minister of Finance who preceded the present minister who said that we borrowed money at the rate of less than one per cent. It was in the form of treasury notes and other negotiable instruments. We are in the fifth year of the war and we have a new victory loan coming on. I say that the parliamentary assistant to the Minister of Finance should, before Easter, make a further statement with regard to the resolution which preceded this bill and the coming victory loan. No doubt a part of it will be taken care of by the billion dollars and other matters in the coming fiscal year.

All these victory loans have cost us too much. The method of financing has cost us too much. The public is being charged too much and future generations are being charged too much. The interest rate is too high, and there are a great many unnecessary expenditures incurred in connection with these loans. They will have to be met out of section 2 of this bill which authorizes short term loans and long term loans. Before the Easter recess the finance department should issue a statement in connection with the loan and the matters to which I have referred to-day, because in my opinion this large expenditure of a billion dollars is costing Canada too much. We should have a lower rate of interest, one or one and one-half per cent. No doubt some of the money will come from the Bank of Canada and the chartered and affiliated banks. Some of it may be a straight loan. No doubt different methods will be adopted. In the fifth year of the war I think we can get money at a far less rate of interest than we are paying up to date. Future generations will have to pay for this war. In my opinion a great part of the expenditures which are the basis of this loan is not for war at all. If we go over the various bills which are passed here and if we examine the appropriation bill of one billion dollars we shall find a great many items in them that have nothing to do with war. Wars are won by soldiers, sailors and airmen at the scene of combat, not at home. You do not win wars by a whole lot of expenditure at home on matters that will not do very much to win wars.

What is Mr. Morgenthau, the treasurer of the United States, doing? Recently he took a trip to Italy. While there, he met soldiers and when he came back he told a committee of congress that the soldiers were objecting to suffering in flesh and blood in this war and then being asked to pay for the war when they came home. I think the time has come to put the brakes on the high rate of interest that is being charged and other extravagant costs of loans.

The large standing national committees across Canada are spending money like water in many unnecessary ways.

The parliamentary assistant may smile at this kind of thing, but I can point out to him instances where money has been wasted in connection with loans. I have seen wooden platforms, which the newspapers said cost $10,000, erected for the purposes of parades, speeches, actresses who have been brought from the United States—and that during this strenuous period of the war. More than that, expenditures have been incurred for transportation, staterooms, meals, luncheons, hotel bills, and many other things which the war expenditures committee long ago should have stopped. I do not wish to criticize the national committee; far from it. But I do say that these are expenditures that should be investigated. I have spoken to many business men, some of them connected with

banks and others representing large taxpayers in the city I come from, and this is their view.

I am not one of those who are eager to criticize the loan; not at all. But there are a great many people who are suggesting that the time has come now to cut out the frills, because we are in the fifth year of the war, and it should not be necessary for us to go to Hollywood to get actors and actresses to help us to sell bonds to the Canadian people. I do hope that the loan will be a great success. That hope is shared by everyone else. I repeat, however, that the time has come for us to cut down materially on these unnecessary expenditures. That sort of thing may have been all right in the first two or three years of the war, but the Canadian people realize now that the winning of the war is the main thing. That is our sole objective at the moment. Nothing else matters. There will be no financing of anything, and life itself will be unbearable, if we do not win the war. All domestic matters, however important they may be, must be subordinated to this end. They can wait.

I suggest to the acting minister that some new and more modern method of financing ought to be announced, and it should be an improvement on some of the practices that we have followed in the past. I would point out that this is a changing war. As I say, we are in the fifth year of the war and changes are being made from week to week, from month to month, in machines in the air, on land and on the sea, and in connection with equipment and supplies of various kinds. Many things which were perfectly legitimate, many things which were in every way modern and efficient but a short time ago, have been rendered obsolete by research and scientific investigation generally in this changing war.

I see the financial critic of the opposition, the hon. member for Danforth (Mr. Harris), is here, and I appeal to him, as I do to every other member of the house, to urge upon the government the importance of giving to the public, before the first day of the victory loan campaign, a comprehensive statement along the lines I have indicated from someone in the finance department. I am not saying all this merely to indulge in destructive criticism. I would not have said anything but for the fact that myself I have noticed some of the things I have pointed out. I may say, I noticed some of it in the last war also. My object is to see if we cannot effect some economies.

Mr. MacNICOL: I have just one or two questions to ask. I have forgotten what the debate was when the resolution was before the house. I do not remember whether the parliamentary assistant told us anything of the nature of the public works.

Mr. ABBOTT: I covered that.

Mr. MacNICOL: I notice in the last five lines of section two that the money apparently is to be divided among four different objectives: first, for paying or redeeming the whole or any portion of loans or obligations of Canada; second, for purchasing and withdrawing from circulation from time to time unmatured securities of Canada; and for the third and fourth objects, public works and general purposes. Would the parliamentary assistant tell us something about the provision for general purposes?

Mr. ABBOTT: Gladly. Probably my hon. friend was not in his place when I spoke on the resolution. I made an explanation at that time.

Mr. MacNICOL: If it is in *Hansard,* never mind.

Mr. ABBOTT: I explained to the hon. member for Yale (Mr. Stirling) that the language in this bill is the same as that used in similar bills in the last ten or fifteen years. It is entirely for refunding purposes, maturing securities. This general language is and has been used in all these loan acts going back to the late twenties. I pointed out, at page 1664 of *Hansard,* that while the language is "for public works and general purposes", any moneys received from the proceeds of such loans must be paid into the consolidated revenue fund and can be paid out of that fund only by virtue of parliamentary authority. If my hon. friend will look at page 1664 he will see that I explained the situation in answer to a question asked by the hon. member for Yale.

Mr. MacNICOL: I am sorry to have taken up the time of the committee.

Mr. DOUGLAS (Weyburn): The other evening I asked a question of the parliamentary assistant. I wonder whether he has an answer.

Mr. ABBOTT: My hon. friend asked with regard to the national debt in September, 1939 and 1919. He wished to know whether the federal government at any time during the last twenty-five years has paid off maturing obligations out of assets other than borrowings. I indicated at the time that it had, but I did not have the figures available. I have here

a table showing the funded debt and treasury bills of Canada as at March 31 of each year from 1914 up to January 31, 1944. It shows the amount outstanding of funded debt on those various dates, and annual interest charges. That table will give all the information which my hon. friend asks for, and it would save time if, with the permission of the committee, I put it on *Hansard:*

Dominion of Canada Funded Debt, including Treasury Bills Outstanding and the Annual Interest Charges Thereon

March 31st	Amount outstanding	Annual interest charges
1914	$ 311,833,272	$ 11,162,047
1915	358,659,932	13,075,447
1916	508,000,366	20,499,696
1917	893,208,877	39,098,579
1918	1,472,098,608	71,121,368
1919	2,035,218,097	102,218,489
1920	2,596,816,821	134,559,302
1921	2,520,997,021	130,416,007
1922	2,564,587,671	133,482,113
1923	2,547,105,821	131,476,511
1924	2,504,033,820	128,571,337
1925	2,503,763,169	125,928,071
1926	2,484,410,336	125,108,738
1927	2,439,340,736	123,399,911
1928	2,377,581,086	119,479,400
1929	2,325,413,986	116,843,934
1930	2,250,837,286	112,942,215
1931	2,320,832,286	115,491,955
1932	2,579,238,724	128,188,969
1933	2,715,977,874	132,866,543
1934	2,858,624,524	132,354,806
1935	3,061,955,821	127,074,870
1936	3,265,314,332	128,598,908
1937	3,337,358,832	125,095,381
1938	3,314,558,032	117,062,907
1939	3,385,722,462	119,198,476
1939 (August 31)	3,433,059,035	116,270,698
1940	3,695,705,919	125,575,106
1941	4,371,990,592	133,969,735
1942	5,865,264,293	170,217,845
1943	7,893,478,423	204,895,893
1944 (January 31)	10,561,454,024	266,312,936

Mr. DOUGLAS (Weyburn): Does the table answer the question brought up a moment ago as to meeting maturing obligations?

Mr. ABBOTT: It may interest the committee to know that from 1914 to 1922 the amount of net funded debt outstanding steadily increased. From 1922 to 1930 it decreased. From 1931 to 1936 the debt increased, and from 1937 to 1938 it decreased. Then of course, since the beginning of the war, it has increased; and as these figures indicate, naturally the decrease means that the amounts repaid were paid out of budget surpluses.

Mr. ADAMSON: Would it include the funded debt of the Canadian National Railways as well?

Mr. ABBOTT: No. It includes the direct funded debt.

[Mr. Abbott.]

Mr. QUELCH: While the national debt decreased from 1924 to 1930 and we had a balanced budget during that period, nevertheless the provincial debt increased during the period by about half a billion dollars. The national debt decreased about $250,000,000, but the provincial debt increased half a billion, so that naturally we had, during that period, an increase of $250,000,000 in public debt.

Section agreed to.

Sections 3 and 4 agreed to.

Bill reported, read the third time and passed.

CANADIAN NATIONAL RAILWAYS

PROVISION TO MEET CERTAIN EXPENDITURES AND GUARANTEE OF SECURITIES AND INDEBTEDNESS

Mr. D. C. ABBOTT (Parliamentary Assistant to the Minister of Finance) moved that the house go into committee to consider the following resolution:

That it is expedient to bring in a measure to provide for the refunding of matured, maturing and callable financial obligations of the Canadian National Railways and for the issue of securities guaranteed by the Dominion of Canada in respect of such refunding to an aggregate principal amount not exceeding $200,000,000.

Motion agreed to and the house went into committee, Mr. McCann in the chair.

Mr. QUELCH: What is the existing rate of interest on the obligations it is proposed to refund?

Mr. ABBOTT: Perhaps I might make an explanatory statement of the bill founded on the resolution. The bill to be based on the resolution is to provide for the refunding of Canadian National Railways bonds in the years 1944 to 1950. The last refunding act was passed in 1938 for the same amount, namely, $200 million. Canadian National Railways bonds that mature or are callable up to the end of 1950 totalled $257,575,477.47. The procedure outlined in this measure is for the meeting of these maturities by either refunding issues or by way of loan from the government. There have been no public issues of Canadian National Railways bonds since the outbreak of war; all maturing issues have been met by loans from the government.

On February 29, 1944, loans by the government to the Canadian National Railways under the refunding act of 1938 totalled $105,719,032.65. Of this amount $24,689,392.53 bears interest at the rate of two per cent per annum, and $81,029,640.12 at the rate of 3½ per cent per annum, all loans made since the

outbreak of war bearing interest at 3½ per cent per annum. There have been repayments applied to loans under the refunding act of 1938, arising out of cash surpluses of the railway company in 1941, 1942 and 1943. Portions of these surpluses applied to such loans totalled $22,622,073.15. The remainder of cash surpluses have been applied to loans for capital purposes. The railway company has not retained any portion of the cash surpluses of 1941, 1942 and 1943, all having been paid over to the government in repayment of loans.

Mr. JOHNSTON (Bow River): Are any perpetual bonds of the Canadian National Railways still outstanding?

Mr. ABBOTT: Yes. As of December 31, 1937, there were outstanding in the hands of the public Canadian National perpetual issues totalling $279,447,713.25. That amount has now been reduced to $15,787,422.86 or, as my hon. friend will appreciate, a reduction of some $260,000,000.

Mr. JOHNSTON (Bow River): What is the rate of interest on those still outstanding?

Mr. ABBOTT: There is still outstanding $1,566,288 of Grand Trunk Railway five per cent perpetual capital stock; $7,228,143.67 of four per cent consolidated debenture stock of the Grand Trunk Railway; $1,002,582 of Great Western five per cent debenture stock, $38,000 of Northern Railway four per cent debenture stock, $2,433 of Northern Railway six per cent bonds, $4,190,964 of Canadian Northern Railway four per cent debenture stock, $972,998 of Canadian Northern Ontario Railway four per cent debenture stock, $470,212 of Canadian Northern Quebec Railway four per cent debenture stock and $315,272 of Quebec and Lake St. John four per cent debenture stock.

Mr. JOHNSTON (Bow River): Apparently quite a few were called in by the government.

Mr. ABBOTT: There were over $260 million called in.

Mr. JOHNSTON (Bow River): What was necessary in order to redeem those on the part of the government?

Mr. ABBOTT: I am advised that was part of the repatriation of securities held in Great Britain.

Mr. HARRIS (Danforth): In 1938, legislation was passed providing that the railways could take care of maturities to the extent of $200 million. There is still some $50 million of the 1938 appropriation available. With the passing of this legislation $250 million will be available. In my opinion it is not necessary that we should ask at this time for $200 million, in view of the fact that we already have $50 million. The very most that the railway company can to-day find available for discharge is $145 million, and I would ask the minister if he would put on record the maturities which are callable and which are being taken care of, or which will be taken care of out of this $200 million.

Just why we should leave a matter of $145 million, over and above the amount mentioned in this resolution, with the railway company to take care of obligations in 1950, I cannot say. I do not understand why we should project ourselves so far ahead. Parliament will be meeting again, and the railway will come forward with its requirements from year to year.

At the same time I make the observation that there are only $15 million of the high cost perpetuals left to take care of. What are the other high cost securities which will be taken care of by this $200 million plus the $50 million they have at present available? Would it not be better policy to clean up the first $200 million before we go ahead with another $200 million, so that we might start on each occasion with a clean sheet.

Mr. ABBOTT: As I said a moment ago, there are $257,575,477.47 of securities which mature or are callable up to the end of 1950.

Mr. HARRIS (Danforth): The depositions given elsewhere are to the effect that there are only $145 million.

Mr. ABBOTT: I have the particulars before me, and I am emphasizing that they mature or are callable.

Mr. HARRIS (Danforth): Yes.

Mr. ABBOTT: I have the data here. It is rather lengthy, and perhaps it would serve my hon. friend's purpose if I were to place the table on *Hansard*.

Mr. HARRIS (Danforth): I think it ought to be placed on *Hansard*. How many of the $247 million are in the years 1948 to 1950?

Mr. ABBOTT: There are $15 million in 1946, $23,754,000 in 1946 and $971,785.73 in 1950.

Mr. HARRIS (Danforth): What is the rate of interest?

Mr. ABBOTT: I can give my hon. friend the list he desires. I have the table here giving details of the issues and maturities of the securities which are maturing or callable up to and including 1950. As I have said, the total is $257,575,477.47. Would it serve my hon. friend's purpose if I placed this table on *Hansard,* with the permission of the committee?

Mr. HARRIS (Danforth): Is any provision made for the negotiating of some of the longer term securities which carry high rates of interest? Has the railroad system the power to negotiate some of the long term securities which go beyond 1950? Is it the policy to discharge those obligations during these times of greater revenues?

Mr. ABBOTT: I am not quite sure that I understand what my hon. friend means when he refers to negotiating the extension of these securities.

Mr. HARRIS (Danforth): Negotiating a discharge of the obligation by paying it off.

Mr. ABBOTT: The railroad has authority to pay off maturing obligations. Many of the securities referred to in this table which I am placing on *Hansard* do not mature prior to 1950, but they are callable prior to that date. The reason for asking for statutory authority to enable the railroad to make refunding loans is to enable the railroad, if market conditions are such that it would be advantageous to do so, to call in high coupon securities and refund with lower coupon securities. The table follows:

Canadian National Railway Company Maturing or Callable Bond Issues, 1944-1950

Date	Issue	Int. Rate per cent	Where payable	Amount outstanding
July 1, 1969 (callable July 1, 1944)...	Can. Nat. Rly. Dom. gtd.	5	Canada, London or New York	$ 56,704,000 00
Dec. 15, 1950 (callable Dec. 15, 1945)..	Can. Nat. Rly. Dom gtd.	3	Canada	50,500,000 00
Jan. 15, 1946.....	Can. Nat. Rly. Dom. gtd.	2¼	Canada	15,000,000 00
July 1, 1946.....	Can. Northern Rly. Dom. gtd.	6½	New York	23,754,000 00
Feb. 1, 1952 (callable Feb. 1, 1948)...	Can. Nat. Rly. Dom. gtd.	3	Canada	20,000,000 00
Feb. 1, 1953 (callable Feb. 15, 1948)..	Can. Nat. Rly. Dom. gtd.	3	Canada	25,000,000 00
Oct. 1, 1969 (callable Oct. 1, 1949)...	Can. Nat. Rly. Dom. gtd.	5	Canada, London or New York	57,728,500 00
Apr. 2, 1950.....	Can. Northern Pacific Rly. Gtd. by prov. of British Columbia	4	London	971,785 73
Apr. 2, 1950.....	—do—	4½	London	1,165,819 74
July 1, 1950.....	Grand Trunk Western Rlrd.	4	New York or London	6,551,372 00
Oct. 1, 1950.....	Montreal & Province Line Rly.	4	New York	200,000 00
				$257,575,477 47

Recapitulation:

Payable in Canada	$110,500,000 00
Payable in New York	23,954,000 00
Payable in London	2,137,605 47
Payable in Canada, London, or New York	114,432,500 00
Payable in London or New York	6,551,372 00
	$257,575,477 47

Mr. CHURCH: The resolution provides for the refunding of matured, maturing and callable financial obligations of the Canadian National Railways and for the issue of securities guaranteed by the Dominion of Canada in respect of such refunding, to an aggregate principal amount not exceeding $200,000,000. The volume of business of the railroads during this war in terms of trains, coaches, rolling stock, freight, ocean, and land services such as hotels, is sky-high as compared with the volume of business in the last war. The railroads of Canada and the United States have been making considerable money out of this war. A pamphlet was issued by the national city bank of New York, which has large investments in United States and Canadian railroads, outlining the comparison in traffic in the two wars and the methods of financing.

A return was made to the house last session showing the earnings of the two railroad systems during the present war. Up to the close of 1940, the first fifteen months of the war, the Canadian National Railways, a public utility, had made $2,500,000, and I believe the earnings of the other railroad were about $2,750,000. These railroads have made more in fifteen or sixteen months of this war than they did during the whole of the last war.

Some of these securities should have been retired out of earnings. Why should we pyramid interest and principal sky-high and not pay something off? The earnings are so large that they could easily have paid off half of these maturing and callable financial obligations. The day of payment is being postponed and the interest debt for generations yet unborn will be fabulous.

We have the committee on railways and shipping which used to be set up by means of a resolution. However, at the last session and the session before, the committee was appointed simply by not giving notice in votes and proceedings. It is now a standing committee and no resolution needs to be passed by the house. When a resolution was presented there was an opportunity for debate and the company had to put their cards on the table. Now all we know about it is a resolution like this one, to pay in the future. If it is passed a report will come in the dying days of the session from this useless select committee. I doubt whether any of the reports were concurred in last session.

Some of the obligations herein were incurred during the days when the company had very big eyes, when they were building branch lines and duplicating hotel and other ocean and land services without any hope of ever being able to pay the fixed charges. Ontario is the forgotten province as far as rolling stock and other matters are concerned. Some of the subsidiaries which operate in the United States have the best of rolling stock and equipment, but all Ontario gets are the old rattle-box cars with which to move troops and civilians. The troops, as soldiers, should be given cut rates, but this public utility and government railway is charging very high rates. No week-end rates for soldiers are given even in the Toronto district or in the district represented by you, Mr. Chairman.

This is not the kind of government financing we should have in the fifth year of the war. Part of these obligations should be paid out of earnings. I doubt whether there is sufficient security for many of the subsidiaries of this company. The hon. member for Lincoln (Mr. Lockhart) is familiar with one subsidiary of this railway. There are two old boats running between Toronto and Port Dalhousie. Fifteen or twenty years ago one of these boats was not considered good enough to run between Prince Edward Island and the mainland. But it is dumped down in Toronto and is now considered good enough for Ontario.

The members who represent Ontario do not act as a unit like the maritime members and those who come from the Pacific coast or the prairies. Ontario has to put up with these things because nothing is said here about them. There is no doubt that the railroads have made a magnificent and glorious showing in this war. The load in passengers and freight they have been carrying constitutes a marvellous record. I submit that the railways and shipping committee should be asked to make a report on this particular matter because if they are going to function, they should function properly.

The hon. member for York-Sunbury (Mr. Hanson) was absolutely right when he suggested that the auditors' report should be referred to the committee. Parliament appoints the auditors and they are supposed to be responsible to parliament, but we never see the audit. How many members of this House of Commons have seen it? I know I have never seen it. This committee should be set up the first or second day of the session. This railroad has been making tremendous earnings and it should be giving some of them back to the people who will have to pay this debt. Some relief should be given from the high rates that are being charged, especially at week-ends. There should be relief granted in freight rates also. Our soldiers and civilians should not have to ride in the rattle-boxes in which they often are forced to ride while United States subsidiary lines, on which a large sum of money has been spent by this

government, are using luxurious trains. I have seen them coming into the depots over the right of way. We should have details of expenditures by the railways. After all is said and done, who can answer any questions about this railway? If you ask for information about it, you are told that it is not in the public interest to give it. The railway is investigated secretly by a committee, which brings down a report a day or two before the session ends.

There should also be an improvement in the method of financing. They are paying from 1 to 1½ per cent too much in interest rates. The loans which have been made should have cost the country less through a better interest rate.

Mr. HARRIS (Danforth): I endorse a great deal of what the hon. member who has just taken his seat has said. I would like the minister to confirm the figure that he gave a moment ago as to the rate of interest in refunding Dominion of Canada securities.

Mr. ABBOTT: The loans which are now being made by the government are at 3½ per cent interest.

Mr. HARRIS (Danforth): I would make this observation. There is a loan of $20,000,000 callable February 1, 1948, and due February 1, 1952, at three per cent; another one due February 1, 1953, callable February 15, 1948, for $25,000,000. Is it the intention that these loans will be called on the callable date in view of the fact that we have to pay 3½ per cent interest now?

Mr. ABBOTT: I cannot say whether they will be called on the callable date. Obviously that would depend on the interest rate prevailing at that time. If the interest rate then was the same as it is to-day, 3½ per cent, I think it is fair to say that they would not be called. If on the other hand, the rate should be two per cent, as it was before the war, perhaps it is a fair assumption that they would be called.

Mr. HARRIS (Danforth): That was the deposition I wanted to get from the parliamentary assistant that they would not be called, because over and above the amount of the interest rate, there is the cost of issuing new securities, brokerage and what not, which runs into sizable figures.

Mr. KNOWLES: Can the parliamentary assistant give the total debt of the Canadian National Railways, including bonded indebtedness and any moneys owing to consolidated revenue fund? I understand the practice has been followed during the war of lending money directly from consolidated revenue to the Canadian National Railways to make it unnecessary for them to sell bonds in competition with the government. Would the parliamentary assistant also give the comparative figure before the war to show what the trend is?

Mr. ABBOTT: I am afraid I have not comparative figures to show what it was before the war. I can give the total funded debt of the Canadian National Railways as of December 31, 1943, and the other information could be given when the bill is in committee. The total funded debt as of December 31, 1943 was $744,232,472.60, made up as follows: Guaranteed by the Dominion of Canada, $685,290,924.76; guaranteed by the provinces, $2,786,056.20; unguaranteed, $33,479,491.64; unguaranteed serial equipment issues, $22,676,000; totalling the figure I have mentioned.

Mr. DOUGLAS (Weyburn): That is only funded indebtedness?

Mr. ABBOTT: Yes.

Mr. DOUGLAS (Weyburn): It does not include any money the railway borrowed from the government, does it?

Mr. ABBOTT: I think I would have to ask my hon. friend to let that question stand.

Mr. DOUGLAS (Weyburn): What is the amount of interest paid by the railway per annum?

Mr. ABBOTT: The total annual interest charges as of December 31, 1943, were $30,725,526.

Mr. FRASER (Peterborough West): When will this loan be made?

Mr. ABBOTT: This is an enabling measure, similar to the act passed in 1938, to authorize the railway company to issue from time to time refunding loans to take care of other issues which mature or are callable between now and the end of 1950.

Mr. FRASER (Peterborough West): The rate is 3½ per cent? Does that interfere with the victory loans? These railway issues are guaranteed by the government.

Mr. ABBOTT: At the present time that is the interest rate being paid by the railway on advances made by the government. It is somewhat higher than the rate which the government itself is paying for the money it is borrowing through the victory loans.

Mr. McNEVIN: What amount of profit did the railway turn into consolidated revenue fund this year?

Mr. ABBOTT: I will answer my hon. friend in this way. As I stated in my opening

remarks the cash surpluses for 1941, 1942 and 1943 have been applied to the extent of $22,622,073.15 in repayment of loans made by the government, under the refunding act of 1938. The surpluses for those three years aggregate—I have not the exact figure here—in excess of $60,000,000. The balance of approximately $40,000,000 has been applied to reduce sundry advances made to the railway by the government for capital purposes. The point I emphasized before was that the railway company has not retained any portion of its surpluses during those years.

Resolution reported, read the second time and concurred in. Mr. Abbott thereupon moved for leave to introduce Bill No. 64, respecting the Canadian National Railways and to provide for the refunding of matured, maturing and callable obligations.

Motion agreed to and bill read the first time.

EXCHEQUER COURT ACT

AMENDMENT TO PROVIDE FOR APPOINTMENT OF THIRD JUDGE

The house resumed from Friday, March 24, consideration in committee of bill No. 35, to amend the Exchequer Court Act—Mr. St. Laurent—Mr. McCann in the chair.

On section 2—Power to appoint a deputy judge.

Mr. CHURCH: I should like to know from the Minister of Justice whether the only change is the adding of another judge to the court?

Mr. ST. LAURENT: That is all.

Mr. CHURCH: I think another judge is necessary. We all know that after the last war a large number of contracts were involved in proceedings before the court, and many years elapsed before they were all settled. The government has announced a new policy by which a certain percentage is paid—I suggest fifty per cent; in the United States, I believe it is sixty per cent, which will mean a great deal more work for the court. As I understand it, this court is excluded from the provincial field as regards royal commissions appointed by provincial attorneys general under the Inquiries Act, which is both federal and provincial in its application, and these judges will not be liable for commission duty, whether federal or provincial.

Mr. ST. LAURENT: I have not looked at the exact terms of the statute, but I do not know of any case of a judge of the exchequer court having been requested to act as a commissioner under the Inquiries Act; and no change is being made by this bill. But I should need to look at the terms to see whether the president and a puisne judge of the exchequer court would be competent to be called. I know of no case in my experience at the bar where it has happened.

Mr. CHURCH: It seems to me that in view of the work which the exchequer court is doing, and which is largely financial, business and commercial, there should be a much higher scale of fees. The revenues of the court should be very considerable in view of the magnitude of the contracts and other business involved, and so far as I know they have not been raised, at any rate very much, since the last war. Surely the country should not have to pay the whole of the bill for a court like this. In my opinion it should be self-sustaining.

Mr. ST. LAURENT. A great many cases which come before the exchequer court are claims by the subject against the crown, and I do not know that it would be proper to increase the scale of fees which the subject would be called upon to provide when making a claim against the crown. There are other fields of jurisdiction where, perhaps, the suggestion of the hon. member could very well be considered, and I should be glad to take it up with the officers of my department. But I should not like to give the impression that there is any intention of increasing the cost to the subject when prosecuting a claim against the crown.

Mr. DIEFENBAKER: The services of exchequer court judges have been used on occasion on royal commissions, have they not? As a matter of fact, they have been used on provincial royal commissions as well as federal royal commissions. I thought, in view of the statement made by the minister, there might be some misunderstanding in that connection. I have here a return, No. 182 of 1941, dealing with the question of royal commissions, a matter which I brought up the other evening. From 1923 to the date of the return there were, I believe, eighty-one royal commissions set up upon which judges have sat, and some very large fees have been paid to judges in this connection in addition to their salaries. In one case the fees during the period amounted to over $40,000, and in one or more other cases exceptionally large fees or allowances have been paid. So far as the exchequer court is concerned, at least two commissions—one under the Department of Fisheries, another under the Department of Labour—were presided over by a judge of the exchequer court. I think, having regard to the fact that there is such a considerable body of work to be done by judges, they should not

be utilized in connection with royal commissions. According to the last figures available the number of judges in Canada is 278. Some of them are sitting on government boards, others on commissions and the like. I again bring to the attention of the minister the need of making a provision that, in the interests of their own independence, if for no other reason, judges should not be allowed to accept extra allowances by occupying positions on royal commissions. This is a practice which is productive of considerable criticism. The other night mention was made of a situation in the province of Saskatchewan. I suggest to the minister that he give consideration to making provision that the judiciary shall be used exclusively as a judiciary and that its services shall not be used in connection with commissions, particularly those involving political considerations of any kind.

The ACTING CHAIRMAN (Mr. McCann): Shall the section carry?

Mr. DOUGLAS (Weyburn): No. It is six o'clock and I do not see any reason why we should go on. Would the minister entertain an amendment to this bill along the lines I suggested the other evening? It seems to me, if another judge is required in the exchequer court, because of the extra business during the war and in the immediate post-war period, that a time limit should be set. An appointment could be made for, let us say, three or five years, and if at the end of that time it were found that there was still sufficient work to warrant another judge in the exchequer court a bill could be passed by the house for another period. What we are doing now is creating a position in perpetuity. If, after the war, we should come to a time when there would be a small amount of work in this court we shall still have this position, and it is very unlikely that we shall reduce the size of the exchequer court to what it was in the days before the war when we had only two judges. Would the minister consider that suggestion before the legislation is finally passed?

Mr. ST. LAURENT: I should not like to undertake to find a judge who would accept an appointment to the exchequer court for any period such as the hon. member mentions. The experience of the last several years has shown that there is more war work there than the two judges of the court can perform as expeditiously as those who have to come before the court would like to see generally; and it has been felt that it would be in the public interest to provide an additional judge in that court. I do not think it would be possible to do so if the legislation were to have a limitation as to time. I do not think the House of Commons would be well advised to try to determine at this time what should be done a few years hence. I know it is always difficult to reduce the complement of a court; but should a situation arise in the future when Canadian citizens and those having claims against the crown or those against whom the crown has claims felt they no longer required a court to deal with such matters, the matter might properly be brought up, but I should not like to put a limitation upon a bill of this kind, if as is generally recognized there is requirement for an additional judge.

Section agreed to.

Bill reported, read the third time and passed.

At six o'clock the house adjourned, without question put, pursuant to standing order.

Thursday, March 30, 1944

The house met at three o'clock.

ORDERS IN COUNCIL

AMENDING, SUSPENDING OR ALTERING OPERATIONS OF STATUTES

Right Hon. W. L. MACKENZIE KING (Prime Minister): I table return to an order moved by the hon. member for Lake Centre (Mr. Diefenbaker) for a copy of all orders in council passed since July 15, 1943, which amend, suspend or otherwise alter the operations of statutes, and so on. The hon. member will remember asking me last year if the government would not consider having these amendments presented in a form which would make them readily available to members of the house. I am glad to be able to inform him that this has been done. I would inform my hon. friend and other hon. members that a consolidated table of contents and reference index published quarterly by the privy council office as an appendix to the weekly publication "Canadian War Orders and Regulations" contains these various amendments to statutes. This is a quarterly consolidation including specific reference to statutes amended, suspended or referred to by order in council. The latest consolidation covers the last quarter of 1943. The consolidation for the first quarter of 1944, up to March 31, 1944, will be published shortly.

PRIVATE BILLS

SENATE BILLS—FIRST READINGS

Bill No. 55, for the relief of Julia Menard Mills.—Mr. Hill.

Bill No. 56, for the relief of Vera Esteri Seppala Vuorimies.—Mr. Hill.

Bill No. 57, for the relief of Violet Magdalen Johnson Overall.—Mr. Hazen.

Bill No. 58, for the relief of Adélard Bélanger.—Mr. Hill.

Bill No. 59, for the relief of Edna Lyall Burgess Lambert.—Mr. Boucher.

Bill No. 60, for the relief of Barbara Hellen Smith Dodds.—Mr. McIlraith.

Bill No. 61, for the relief of Ellen Margaret Doris Sheehan Décary.—Mr. McIlraith.

Bill No. 62, for the relief of Kathleen O'Raw Major.—Mr. Fulford.

Bill No. 63, for the relief of Vernon Oswald Marquez.—Mr. Fulford.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

PRICES—FARM IMPLEMENTS AND REPAIR PARTS

Mr. TUCKER:

1. Has a ceiling price been imposed upon farm implements and repair parts for same?
2. If so, when was it imposed?
3. Has it been enforced in regard to all farm implements and spare parts whether manufactured in Canada or imported?
4. What relationship does the present price of farm implements and repair parts bear to prices for same on September 10, 1939?
5. What relationship does the present prices of staple farm products bear to, (a) the average price of same in 1926-29 inclusive; (b) to the price of same on September 10, 1939?
6. What quantities of farm implements and repair parts will be released for sale in Canada during the year 1944?

Mr. CHEVRIER:

1. Yes.

2. Prices of farm implements and repair parts were frozen at the level of those prices in effect during the basic period—September 15 to October 11, 1941—with a few exceptions, covered by Order No. A8, issued to permit slight revisions in prices.

3. Yes.

4. The wartime prices and trade board has only controlled retail prices of farm machinery effective during or subsequent to the basic period—September 15 to October 11, 1941—and it has not made any investigation as to prices charged for farm implements and repair parts prior to that time. It is known that, apart from a few adjustments made under order A8, farm machinery prices have not risen since the basic period.

5. (a) The Dominion Bureau of Statistics index of farm products' prices as of the week ending March 17, 1944, shows an increase of 3·9 per cent over the average for 1926 to 1929.

(b) The Dominion Bureau of Statistics index of farm products' prices as of the week ending March 17, 1944, shows an increase of 63·0 per cent over the average for September, 1939.

The farm products index covers milk, eggs, grains, livestock, etc., that is, the main staple farm products and it is based on returns received by farmers so that the present prices include subsidies and other government payments now being paid to farmers on milk, barley, oats and pork. No index was prepared for September 10, 1939. The average for the month of September is taken which would differ only slightly from the prices on September 10.

6. Approximately 80 per cent of the average of the total tonnage of farm implements released in the years 1940 and 1941 will be available during the calendar year 1944 and 156 per cent of one-half the average of repair parts distributed in the years 1940 and 1941 will be available during the year 1944.

MUNITIONS AND SUPPLY—EXPENDITURES IN SASKATCHEWAN

Mr. BENCE:

What is the total amount of money spent by the Department of Munitions and Supply in the province of Saskatchewan since the commencement of the present war?

Mr. CHEVRIER: Please refer to Report on the government-financed expansion of industrial capacity in Canada, as at December 31, 1943, tabled by the minister. Reference page 1691, *Hansard*, March 21, 1944.

Note: It is impossible to give a money breakdown by provinces, that will properly reveal the extent to which each province is participating in war orders made possible by (a) government-financed expansion of industrial capacity, (b) the operations of crown companies, (c) by ordinary award of contracts.

RATIONING—PAYMENTS TO BANKS

Mr. HOBLITZELL:

1. What is the total of payments or remuneration paid to the chartered banks for services in connection with the handling of coupon rationing?
2. What period does this cover?
3. What is the basis of payment?
4. Is any of this work being done by the small business man or firms?
5. If not, what is the reason for their not being allowed to do it?

Mr. RALSTON:

1. The total paid to date to the chartered banks of Canada for services in connection with the handling of ration coupon banking is $575,046.84. In addition the Montreal City and District Savings bank and La Caisse d'Economie de Notre Dame de Quebec have been paid $2,729.55 and $1,389.32 respectively.

2. This covers the period from March 1, 1943 to January 31, 1944.

3. The wartime prices and trade board reimburses the chartered banks monthly on the basis of staff salary costs plus specific out-of-pocket expenses incurred as determined by time studies conducted by the banks in cooperation with the board.

4. Every consumer, and every person engaged in the business of manufacturing, processing, or selling rationed foods handles coupons or some other form of ration document, but only the banks supply the service of coupon banking, which is a service provided by the government for the purpose of relieving traders from handling coupons in bulk.

5. Coupon banking is a specialized banking service.

RATIONING—GASOLINE—ARRANGEMENTS WITH BANKS

Mr. HOBLITZELL:

1. Has the government made any arrangement with the Canadian banks with reference to the gasoline coupon rationing?
2. If so, what arrangements have been made?
3. What is the particular function or the service they render in this regard?
4. What remuneration will they receive?
5. What is the basis of payment?
6. Is any of this work being done by the small dealers distributing gasoline?
7. If not, what is the reason for their not being allowed to do so?

Mr. CHEVRIER:

1. Yes.

2. Arrangements have been made with the chartered banks to open gasoline rationing coupon bank accounts for all gasoline dealers selling 12,000 gallons or over per annum of graded gasoline and to all bulk stations.

3. The banks, by intercepting gasoline rationing coupons from dealers and bulk stations, will take into custody and dispose of great numbers of coupons which, during the past year, have attracted the attention of racketeers and dealers in the black market.

4. See answer to No. 5. No remuneration has been paid as yet.

5. The basis of payment is as follows: 25 cents per account opened; 6 cents per debit or credit entry; 12 cents per 1,000 coupons handled. The basis of these charges is subject to review following an analysis to be made within a few months after gasoline rationing coupon banking becomes effective.

6. No.

7. The object of gasoline rationing coupon banking is to take the coupons out of the hands of the dealers as soon as possible.

MOUNTED POLICE—PENSIONS, ETC.

Mr. HANSELL:

1. Respecting assistance to ex-members of the R.C.M.P., is there any fund, apart from pension or retirement, available for assistance to aged members of the force who are not on pension and have been rendered indigent?
2. If so, what is this fund, and how is it administered?
3. Is there any system of assistance in hospitalization for ex-members of the R.C.M.P.?

Mr. ST. LAURENT:

1. No. None, except that established by section 21 of the R.C.M. Police Act, which is known as the Royal Canadian Mounted Police benefit trust fund, and which is composed of awards, portions of fines, seizures, etc., granted to serving members of the Force. From this fund, grants may be made, under the authority of the Minister of Justice, in accordance with regulations laid down by the governor in council in the following cases:

(a) to any member of the force who, through disability, not due to his own fault, is discharged therefrom without being eligible for pension or gratuity, a sum not exceeding $200; or to any ex-member of the force who is in receipt of pension or compensation not exceeding $500 per annum and who, by reason of sickness or any cause not due to his own fault, is financially embarrassed, a sum not exceeding $200.

(b) to any member of the force, who by reason of sickness or accident to a member of his family, or from any cause not due to his own fault, is financially embarrassed, a sum not exceeding $200, but any payment for this cause shall be made only when for the direct benefit of the family.

(c) to any member of the force, in recognition of outstanding acumen, zeal or resourcefulness in bringing an important investigation to successful conclusion, a sum not exceeding $200.

(d) to any member of the force, as recognition of any act of special endurance or bravery in the execution of duty, a sum not exceeding $200.

(e) to any person designated by the minister, an amount not exceeding $75, to be applied on account of the burial expenses of any ex-member of the force who dies without leav-

ing sufficient means to provide for the cost of reasonable burial expenses, if no other source is available from which the necessary moneys may be obtained.

(f) if a member of the force dies in the service and his widow and/or children may not be granted a pension or gratuity, if in need of financial assistance, there may be paid an amount not exceeding $300 in any one year to the widow, and to each child under fifteen years of age an amount not exceeding $60 in any one year.

(g) for the purchase of recreation and mess equipment for the general benefit of any post or detachment, an amount not exceeding $3 per head in any year, the distribution to be based on the average strength of personnel for the post or detachment.

(h) to members of the force generally, a lump sum annual payment, the amounts, basis of distribution and the date to be determined by the Minister in control of the Royal Canadian Mounted Police.

(i) for the purpose of purchasing clothing, comforts, smoking material, or similar articles, for any members of the force on leave from the Royal Canadian Mounted Police, or who leave that force with the definite intention of proceeding on active service either in the naval, military or air forces of His Majesty, an amount not exceeding $3 per head, in any calendar year.

(j) to any member of the force who sustains a loss or damage to personal effects or property in the performance of duty whilst attempting to make an arrest, or as the result of a motor-car accident, or any other cause or similar circumstance while on duty, and in which the Canadian government may either be unwilling or unable to reimburse him—an amount not exceeding $100.

(k) to any member of the Royal Canadian Mounted Police who may be discharged from the force while still in hospital or who may be invalided from the force and who may still require medical and hospital treatment, if he is unmarried, a grant not exceeding $150 in any one year but if he is married, an amount not exceeding $500 in any one year and to each child under fifteen years of age an amount not exceeding $60 in any one year, irrespective of the fact that the member of the force concerned may be eligible for a pension.

Each case in which a grant is recommended is investigated by the force and is dealt with according to its merits and within the limits of the regulations set by order in council.

As the Royal Canadian Mounetd Police benefit trust fund only began in 1921, it is not yet twenty-three years old, and it is obvious that any ex-member of the force who left it more than twenty-three years ago did not make any contribution, either directly or indirectly, to the fund.

2. Answered by No. 1.

3. No, except as stated in Nos. 1 (a) and 1 (k).

M. & C. AVIATION COMPANY, PRINCE ALBERT

Mr. DIEFENBAKER:

1. What is the amount of capital assistance or other allowances granted to date to M. & C. Aviation Company Limited, Prince Albert, Saskatchewan?

2. How much has been paid to date to the said company for aircraft repair and overhaul by the Department of Munitions and Supply?

Mr. CHEVRIER:

1. The federal government built and equipped a plant for overhaul and repair at Prince Albert at a cost of $206,971.72. This plant and equipment is wholly owned by the Canadian government. M. & C. Aviation Company Limited were given a contract for the repair and overhaul of aircraft, and the facilities of the foregoing plant have been made available to them to carry out the work.

2. Payments for work on the overhaul and repair of aircraft are not made by the Department of Munitions and Supply. The Department of National Defence for Air have paid this company for such work $2,490,319.67.

SUBSIDIES TO WESTERN COAL OPERATORS

Mr. CASTLEDEN:

What reduction in the retail price of coal will result from the proposed payment of subsidies to western Canada shaft coal operators?

Mr. CHEVRIER: No reduction in price is expected to be made in the retail price of coal as the new subsidies to Western Canada coal operators only reimburse those who are in a loss position for limited out-of-pocket expenses incurred and which have not been taken care of by means of price increases for coal.

WHEAT PRICES

Mr. DONNELLY:

1. What price is paid to producers for their best grade of wheat, 1943 crop, by the grain regulating board of Argentina, basis Buenos Aires?

2. What is the export price paid by the grain regulating board for the same wheat, basis Buenos Aires?

3. What price is paid to producers for their best grade of wheat, 1943 crop, by the Australian wheat board, basis country sidings?

4. What is the price paid for the same grade of wheat for home consumption, basis f.o.b. Williamstown, Australia?

5. What is the initial advance paid by the Canadian wheat board for the 1943-44 crop, basis Fort William?

6. What is the commercial export price to countries not under Canadian mutual aid, basis No. 1 northern, Fort William?

Mr. MacKINNON (Edmonton West):

1. Price paid to producers by the grain regulating board for the 1943 crop, bulk, basis Buenos Aires: 8 pesos per quintal (64·8 United States cents per bushel).

2. Export price quoted by grain regulating board on January 5, 1944, for 1942 crop wheat, bulk, basis Buenos Aires: 10 pesos per quintal (81 United States cents per bushel).

3. Price paid to producers for first 3,000 bushels by the Australian wheat board, bulk, basis country sidings: 3 shillings and 11½ pence per bushel (74·1 United States cents per bushel f.o.b. seaboard).

4. Home consumption price, basis f.o.b. Williamstown: 5 shillings and 2 pence per bushel (83·4 United States cents per bushel). Australian wheat board export prices are not published.

5. Canadian wheat board initial advance on 1943-44 crop deliveries, basis No. 1 Northern Fort William: $1.25 per bushel (113·6 United States cents per bushel).

Mutual Aid shipments, same basis as above.

6. Commercial export prices to countries not under Canadian Mutual Aid, basis No. 1 Northern, Fort William, January 25, 1944: $1.46 per bushel (132·7 United States cents per bushel).

AIR TRAINING PLAN—CLOSING OF AIRPORTS

Mr. CASTLEDEN:

How many airports were closed under British empire joint air training plan in each province during 1942 and 1943?

Mr. MACMILLAN: No main airports of the B.C.A.T.P. were closed during 1942 and 1943. However, the following relief fields were closed:

(a) In April, 1942, relief field No. 1 to Boundary Bay, B.C., situated at Langley, B.C., was closed.

(b) In March, 1943, relief field No. 1 to No. 36 O.T.U., Greenwood, N.S., situated at Waterville, N.S., was closed.

(c) In April, 1943, relief field No. 1 to No. 9 E.F.T.S., St. Catharines, Ont., situated at Thorold was closed being replaced by R.1 at Willoughby, Ont.

(d) In April, 1943, relief field No. 1 to No. 19 E.F.T.S., Virden, Man., situated at Hargrave, Man., was closed being replaced by R.1 at Lenore, Man.

[Mr. Donnelly.]

WARTIME HOUSING LIMITED—PRINCE RUPERT

Mr. HANSON (Skeena):

1. What is the total expenditure by Wartime Housing Limited at Prince Rupert, British Columbia, (a) cost of land; (b) cost of houses?

2. How many residences have been built?

3. What is the cost of each type of house?

4. How many staff houses have been built?

5. Have satisfactory arrangements been made with the city of Prince Rupert, (a) for taxes; (b) school accommodation; (c) sanitary purposes?

Mr. CHEVRIER:

1. (a) $14,450; (b) $1,512,304.

2. 501.

3. 2-bedroom house, small, $2,813; 2-bedroom house, large, $3,161; 4-bedroom house, $3,402. These costs are inclusive of all services.

4. Nine staff houses and two bunk houses.

5. (a) Wartime Housing Limited are carrying out the terms of the municipal agreement signed by the proper authorities, whereby payment in lieu of taxes is made at the rate of $24 yearly for the small house and $30 for the large house.

(b) Wartime Housing Limited have built a 6-roomed school at an estimated cost of $50,000.

(c) Houses built in Prince Rupert are standard in every way, with every sanitary convenience, and in addition Wartime Housing Limited have built a general sewage system at an estimated cost of $75,000.

The foregoing are in accordance with the terms of the agreement between Wartime Housing Limited and the city of Prince Rupert.

ELDORADO MINING AND REFINING LIMITED

Mr. ROSS (St. Paul's):

1. Has the government acquired the property of the Eldorado Mining and Refining Limited?

2. If so, did the government acquire the property through an agent?

3. What company or person acted as agent for the government?

4. Was any commission paid to any person or company in the purchase of the property or the shares of the Eldorado Mining and Refining Limited; and, if so, what was the amount of the commission, and to whom was it paid?

5. Has the government or its agent, or a crown company, acquired the shares of the Eldorado Mining and Refining Limited; and, if so, how many shares have been purchased, and how many shares remain unpurchased as at March 25, 1944?

Mr. CHEVRIER:

1. Yes, by P.C. 535, January 27, 1944. See minister's statement, page 6, *Hansard*, January 28, 1944.

2. No.

3. Answered by 2 and 4.

4. No commission was paid, but the Trusts and Guarantee Company Limited, the transfer agent, will be paid a small fee as a service charge for receiving share certificates and issuing cheques to the holders.

5. Yes, by P.C. 535, dated 27th January, 1944. All shares were automatically appropriated to the crown as of 3 o'clock eastern daylight saving time, January 28, 1944.

QUESTIONS PASSED AS ORDERS FOR RETURNS

MARBLE ISLAND PROJECT, QUEEN CHARLOTTE ISLANDS

Mr. HANSON (Skeena):

1. What was the total amount spent by the government on the Marble island project, Queen Charlotte islands?

2. Was this work done by tender? If not, why not?

SWITLIK CANADIAN PARACHUTES LIMITED

Mr. LACOMBE:

1. Has Switlik Canadian Parachutes Ltd., whose offices are located at No. 3575 St. Lawrence street, Montreal, obtained any contracts from the dominion government?

2. If so, for what amount, in what year, and at what date?

3. What kind of work has been done by this company for the government?

4. What is the name of the president of this company, and what is his profession or occupation?

5. What are the names of the vice-president and each of the directors of the said company, and what are their respective professions or occupations?

USE OF FLAG AT MILITARY FUNERALS

Mr. LaCROIX (Quebec-Montmorency):

1. At military funerals, are the coffins of members of the Canadian armed forces overseas covered with a flag?

2. If so, what flag?

Mr. CHURCH: Mr. Speaker, I would ask what was done with this question. I understand it was passed as an order for return. The question is an insult to our glorious dead, to our soldiers who will never return, and to their families. Army ritual is carried into effect in British countries, and the army rules comply with the regulations in force. I would like to have some reply from the government.

Mr. SPEAKER: It was passed as an order for return.

Mr. CHURCH: These are soldiers who will never return, and it is an insult to them and their families.

CONTRACTS WITH J. FRANCOIS LEDUC

Mr. LACOMBE:

1. Has J. François Leduc, consulting engineer and associates, whose offices are located at No. 354 Ste. Catherine street east, Montreal, obtained any contracts from the dominion government during the years 1939, 1940, 1941, 1942, 1943 and 1944?

2. If so, for what total amount?

3. What amount has been paid to them up to the present time by the government, and how much money was paid them during each of the above-mentioned years?

CANADIAN FORCES—LOSSES BY FIRE IN CANADIAN CAMPS

Mr. CHURCH:

1. What has been the total loss from fire in the various camps in Canada since the war started, by years, and at what camps of the three military forces, by provinces?

2. What insurance was carried on each camp loss by fire, and the net loss to the government?

3. What has been done to increase fire precautions and increased fire protection at these camps?

4. Were fire inquests held into the cause of each fire, and with what results?

LABOUR CONFERENCE

PERSONNEL OF CANADIAN DELEGATION AT MEETING OF INTERNATIONAL LABOUR ORGANIZATION

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): I should like to ask a question of the Prime Minister. According to the consitution of the International Labour Organization, Canada's delegation to the session of the international labour conference to be held in Philadelphia on April 20 will be composed of four delegates—two government delegates, one delegate representing employers and one representing workers. Will the Prime Minister indicate to the house the names of the four delegates who have been so chosen to represent Canada at the conference?

Right Hon. W. L. MACKENZIE KING (Prime Minister): The delegates representing the government will be Mr. Paul Martin, parliamentary assistant to the Minister of Labour, Mr. Brooke Claxton, parliamentary assistant to the President of the Privy Council. The Minister of Labour (Mr. Mitchell) himself will be present at the conference, as Minister of Labour. The delegate representing employers will be Mr. W. C. Coulter, and the delegate representing workers will be Mr. Percy Bengough.

There are as well alternate delegates, a number of advisers, and also provincial representatives. However, I believe I have answered my hon. friend's question.

MEAT

ACTION TO SAFEGUARD FEEDERS AGAINST LOSS

On the orders of the day:

Mr. J. H. BLACKMORE (Lethbridge): Mr. Speaker, before the orders of the day are called I should like to ask a question either of the Minister of Agriculture or, in his absence, the Acting Minister of Finance. In view of the precarious position in which beef feeders of southern Alberta and other parts of Canada find themselves, will the minister make a statement to the house to-morrow, Friday, setting forth the measures the government is taking to safeguard those feeders against serious loss in this year's operations?

Hon. J. L. RALSTON (Acting Minister of Finance): I have taken note of the question.

Mr. BLACKMORE: I asked that the answer be made to-morrow.

Mr. RALSTON: I understand that.

PRICES AND TRADE BOARD

CHARGES AGAINST REPRESENTATIVE AT MONT-LAURIER

On the orders of the day:

Mr. MAURICE LALONDE (Labelle): Mr. Speaker, before the orders of the day are called would the Acting Minister of Finance be good enough to tell the house what steps have been taken by the wartime prices and trade board against J. Alphonse Forget, local representative of the board at Mont-Laurier, who has been found guilty of favouritism and complicity?

Hon. J. L. RALSTON (Acting Minister of Finance): I shall make a note of the question, and answer it to-morrow. Or, if my hon. friend wants it answered earlier, I shall write him.

WHEAT

WHEAT BOARD—ACTION IN COURTS FOR ACCOUNTING—PARTICIPATION CERTIFICATES

On the orders of the day:

Mr. E. E. PERLEY (Qu'Appelle): A day or two ago the Minister of Trade and Commerce stated he would answer a question I asked. I believe there were two questions. Will he be prepared to make a statement to-morrow?

Hon. J. A. MacKINNON (Minister of Trade and Commerce): I am not ready to make a statement in connection with the question asked by the hon. member for Qu'Appelle (Mr. Perley). I was rising, however, to make a brief statement in connection with participation certificates. Various members on both sides of the house have asked questions regarding the date of issuing and the amount of participation certificates in connection with the 1940, 1941 and 1942 wheat crops. I had hoped, and so stated, that I expected to be in a position to give the house this information before the end of the month. I am now informed, however, that it has been found a physical impossibility to arrive at the exact amount of this participation payment before the end of the month, to-morrow. I am advised that it will be about the middle of next week before this information is available. A recent decision that certain administrative expenses, that is, the cost of work on quotas, wheat acreage reduction and transportation, should not be charged against this grain upon which participation is about to be paid, has been partly responsible for this further delay. Although the house will not be in session, I have made arrangements to make public at the earliest possible moment the amount of the participation certificates. As soon as this figure is arrived at, payments in volume will immediately proceed.

POSTAL SERVICE

CANADIAN FORCES OVERSEAS

On the orders of the day:

Mr. D. G. ROSS (St. Paul's): Mr. Speaker, I should like to ask a question of the Postmaster General. My reason for doing so is the approach of the Easter recess. I have had several letters and many complaints with respect to the question of mail for overseas. Many examples have come to my notice, one in particular respecting a mother who has two boys in Italy. One of those boys received the odd letter, but he has not received one parcel since last July. The other boy has received neither letter nor parcel for months, and she writes them once or twice a week, as well as sending them parcels. Another woman whose husband is overseas writes him quite often, but he has had only four letters in the last four or five months from her. Another mother sent parcels overseas for Christmas. Those parcels were posted in October. She knows that fifteen of them were sent, but up to date the boy has received only two. Would the minister state what is being done about this condition?

Hon. W. P. MULOCK (Postmaster General): If the hon. member will give me particulars of the cases he has mentioned, I shall have investigations made. He will

understand, however, that it is impossible to deal with an isolated case of the kind. I do not know the names, and I would have to have them before an investigation could be made. If he will let me have the necessary information I shall be glad to have inquiries made at once.

Mr. ROSS (St. Paul's): In answer to what the minister has said I would point out that this is only one of many complaints which have been made.

Some hon. MEMBERS: Order.

SUPPLY

The house in committee of supply, Mr. McCann in the chair.

DEPARTMENT OF AGRICULTURE

Marketing service—

417. Marketing service administration—further amount required, $2,275.

Mr. SENN: Is the Minister of Agriculture likely to be here to-day?

Mr. MACKENZIE KING: No.

Mr. SENN: I should like to have some information about this item. When the minister spoke some time ago he referred to the floor prices on beef. I understand that the meat board has the power to set minimum prices for beef, but up to the present I have been unable to secure any information other than that contained in the minister's statement the other day. If the minister in charge cannot answer my question, I suppose it will have to be left until some other time, but I should like to know when these floor prices were set and what they are. Perhaps we could be given a general statement on the matter. The public is entitled to know what is being done. When the minister referred to floor prices on beef he stated that the meat board would be in position to buy cattle and freeze the beef and ship it to England. So far as I can find out, the public does not know what these floor prices are, or whether they vary from time to time or remain constant.

Hon. T. A. CRERAR (Acting Minister of Agriculture): I am afraid I cannot give my hon. friend all the information he has asked for; I have not had an opportunity to go into the details. I believe there is a sort of scale of prices so far as beef is concerned, but I cannot be certain even about that. Am I right?

Mr. SENN: I think you are.

Mr. CRERAR: I would suggest that perhaps a discussion on general marketing services might be left until the Minister of Agriculture has before the committee that particular item, which has not yet been reached in the consideration of his 1944-45 estimates. I believe there is an arrangement by which some board under the Department of Agriculture can exercise an influence on prices if they become unduly low, but I regret I cannot give further details with any certainty.

Mr. HANSON (York-Sunbury): If the Minister of Agriculture is not here, and if the minister taking his place does not know anything about this item, it would not seem to be profitable to go on with it. Unless there is some insurmountable reason why these items have to pass before the end of the fiscal year, I suggest that they stand.

Mr. CRERAR: The supplementary estimates have to pass before March 31.

Mr. HANSON (York-Sunbury): It is rather late to bring them down.

Mr. CRERAR: If my hon. friend wants to press the matter, I shall endeavour to get in touch with the deputy minister and see if I cannot furnish the information.

Mr. SENN: I do not want to press the matter, but I had hoped to have this information. Will the minister be here to-morrow?

Mr. CRERAR: I am afraid not. I forgot to mention that in replying to the hon. member for York-Sunbury.

Mr. GRAYDON: In view of the fact that there is no minister in charge of these items and my hon. friend is not as familiar with this matter as he is with some of the others, perhaps an arrangement could be made to have the deputy minister of agriculture here as he is when the ordinary items are being discussed. Is it possible to arrange that?

Mr. CRERAR: Of course that is possible if my hon. friend wishes further information. I notice that the estimate last year for marketing services was $101,314. When you get down to $314 in an item of that size it is some indication as to how closely the departmental officials estimated. However, it is found that a further amount of $2,275 is required.

Mr. SENN: I think the minister is at fault in making that statement, because the money required for the establishment of floor prices would not be included in that item. However, I do not wish to press the matter, and perhaps we can get the information in some other way. This is important with the Easter recess coming along. The public should know how these floor prices were

established. There are a number of other questions I could ask on this marketing item, but I do not want to hold it up.

Mr. CRERAR: The explanation of this item which appears on page 6 indicates that it is made up of cost of living bonus and other paylist items. I do not know just what would be included in paylist items, but probably it would cover additional staff. It is obvious that while an endeavour was made a year ago to estimate closely, the department underestimated this item to the extent of $2,275, and that part of it is made up of cost of living bonus.

Mr. PERLEY: That would apply just to employees of the department?

Mr. HANSON (York-Sunbury): That explanation is quite simple mathematically.

Mr. CRERAR: One at a time, please. I did not catch the question of the hon. member for Qu'Appelle.

Mr. PERLEY: I said that that affected only the employees; it has nothing particularly to do with the marketing of products.

Mr. CRERAR: Evidently they did not estimate sufficient for cost of living bonus for the employees in this particular branch of the department.

Mr. HANSON (York-Sunbury): That explanation is accepted, but in the interim certain questions have arisen with regard to administration on which the hon. member for Haldimand wishes information. This is the only chance he has of getting it.

Some hon. MEMBERS: No.

Mr. HANSON (York-Sunbury): Hon. members say "no", but that is the only way he can get it at this time.

Mr. CRERAR: At this precise moment, yes.

Mr. HANSON (York-Sunbury): I suggest that the item stand until the deputy minister is here.

Mr. CRERAR: I shall meet my hon. friend's wish if he presses it, but I submit that any discussion on the marketing service of the Department of Agriculture can take place when the items in the main estimates for the coming year are under consideration. I do not know why, if I may respectfully say so to my hon. friend, we should get into an involved discussion of marketing service when the item is simply to provide cost of living bonus for the employees of the branch, which apparently was underestimated when the estimates were prepared last year.

[Mr. Senn.]

Mr. HANSON (York-Sunbury): That is a bad position for the minister to take. It is a simple thing to provide a little more money for cost of living bonus and the pay list of the department, but I submit that the hon. member for Haldimand is entitled to the information which he desires, arising out of a situation which has been created and now confronts the producers.

Mr. CRERAR: I suggest, Mr. Chairman, that the item stand.

Mr. HANSON (York-Sunbury): I think it should.

Mr. CRERAR: Perhaps they had all better stand.

Mr. FRASER (Peterborough West): Including item 415?

Mr. CRERAR: Item 415 was passed.

Mr. FRASER (Peterborough West): Then it was passed when hon. members in this part of the house could not hear what was going on.

Mr. CRERAR: That is a matter for the Chair to rule on.

The ACTING CHAIRMAN (Mr. McCann): Item 415 was carried.

Mr. FRASER (Peterborough West): Then it was passed when we could not hear what was going on at all.

Mr. DOUGLAS (Weyburn): While it is true, as the minister says, that item 416 is to provide for the cost of living bonus, the fact remains that these items present the only opportunity hon. members will have before we adjourn for the Easter recess of discussing government policy on marketing. It is the only opportunity we have had this session. For two weeks we have been in committee on the agricultural estimate. Last Monday night we tried to initiate a discussion on agricultural marketing with a view to getting a statement from the government, because very soon the farmers will be on the land and they want to know something of the government's marketing policy for the crop year 1944-45. We were prevented from having that discussion, and so far we have not had it. Judging by what the Minister of Justice announced last night as the business for to-day, we are not going to get that discussion on the government's marketing policy before we adjourn for Easter. We shall not come back here until the middle of April, so that if we do not have a discussion to-day it will mean that we shall not know at the earliest until the middle of April what the marketing policy of the government is to be. Here are the only estimates

which give us an opportunity of asking the government what its marketing policy is; the minister most concerned is not here, and the minister who is in charge of the estimates says he does not know much about them. Certainly that is not satisfactory.

Mr. MACKENZIE KING: May I say just a word about these estimates. In the first place the committee understands that these estimates are for the present fiscal year which ends on March 31—that is to-morrow. They are in the nature of the additional amounts required to pay some of the expenditures of the present fiscal year. They do not touch matters relating to the next fiscal year. It is on matters that relate to the next fiscal year that the main estimates have been prepared, and it is on the main estimates that questions of government policy and the like are appropriately discussed. Hon. members know that in dealing with estimates the rule is that discussion must be confined to the item before the committee, but on the main estimates there is not infrequently an understanding that a general discussion shall be permitted on one of the items. That rule does not apply to individual items in supplementary estimates dealing with the present fiscal year.

I have no objections to hon. members, if they so desire, seeking to have it appear that ministers may not be wholly prepared to answer every question asked at this time. The ministers have taken into consideration the character of the estimates, namely that they are simply supplementary amounts required to make good small amounts needed to square accounts. The details given in the statement before us are in themselves pretty nearly enough to explain the items, which for the most part are for the payment of bonuses, for temporary assistance and things of the kind. Clearly it would be quite wrong to expect a discussion of general policy relating to agriculture or other subjects under items of this kind.

May I say to my hon. friend in regard to agriculture that there has been more time taken up in the house with the estimates of the Department of Agriculture for the coming year than with respect to any other department. The minister has devoted three, four or five sittings to discussions of agricultural estimates. As I recall it, he had two sittings before he could get a single item through, and hon. gentlemen were at that time questioning him with regard to matters of general policy. I submit that the time of this house is precious at the moment and it is not in order to expect the ministry to go beyond the items that appear on this particular paper in giving such explanations as can be given.

Mr. HANSON (York-Sunbury): Is the Prime Minister asking that these items automatically pass? Is that his position?

Mr. MACKENZIE KING: My hon. friend has sat on this side; he knows the responsibility of ministers, and knows that what I am saying is perfectly correct.

Mr. HANSON (York-Sunbury): I notice that one item, 442, under public works for Ontario, is for a garage in Ottawa, $24,000. Is that not a new item? No further amount is being asked, simply the $24,000.

Mr. FOURNIER (Hull): I am ready to explain that item.

Mr. HANSON (York-Sunbury): I assume the minister will be. We shall expect an explanation. I am not complaining about the item.

Mr. SENN: May I add just one word? I am sorry to have created this discussion. I had no intention of embarrassing the government. But item 416 is for marketing service administration, and we have had no chance yet to discuss the government's marketing policy—none whatever. This is the only chance we will have until we get back after the Easter holidays.

Mr. MACKENZIE KING: Let me ask my hon. friends what will be the effect of not passing these estimates? It will be that some civil servants will not get that part of their salaries for some time to come.

Some hon. MEMBERS: Oh!

Mr. MACKENZIE KING: That is exactly what it amounts to. My hon. friend knows that this is not the time to expect a general discussion of agricultural policy.

Mr. SENN: Let me remind the Prime Minister that I was not asking for a general discussion, but only for some information in relation to a statement which the Minister of Agriculture made some little time ago, and which was not clear. I had no opportunity of questioning him at the time about his statement, for the simple reason that he made it on the orders of the day. All I was asking for was a simple statement to let the farmers and producers and others interested in marketing, the marketing of beef cattle particularly, know just what the position is. I am not going to carry the matter any further.

Mr. HANSON (York-Sunbury): I have suggested to the Prime Minister that these items stand and we can come back to them when the deputies are here.

Mr. MACKENZIE KING: That is what the minister has already suggested.

Mr. HANSON (York-Sunbury): All four items.

Mr. MACKENZIE KING: The minister has suggested that the agricultural items stand.

Item stands.

External Affairs Department—

420. Portion of expenses of the intergovernmental committee on refugees, $5,789.

Some hon. MEMBERS: Carried.

Mr. HANSON (York-Sunbury): The mechanical majority had better keep quiet.

Mr. STIRLING: Would the Prime Minister be good enough to bring public information up to date with regard to this matter? So far as I am aware we have the statement of the Prime Minister in July last, and the statement of the Minister of Mines and Resources in early November when he said that an official of the Department of Immigration would go to Lisbon and look into the question, and that the representatives of forty-four allied countries had been invited to join in a committee—perhaps this is the committee—to look into the various possibilities in regard to the movement of refugees. That statement of the Mines and Resources also included information with regard to separate activities of Canada in this regard outside of the operations which the committee was supposed to carry on.

Mr. MACKENZIE KING: I came prepared to give an explanation of the item, and in order to be perfectly accurate I have the figures in front of me.

The present supplementary estimate is to provide for Canada's share of the administrative expenses of the intergovernmental committee on refugees. Hon. members will recall that the committee was organized at Evian, France, in 1938, to take action to assist refugees from Germany and Austria. Originally twenty-nine governments were members. After the Bermuda conference on refugees last year steps were taken to enlarge the membership of the committee and also to enlarge its field of action to cover refugees from any part of Europe and not merely from Germany and Austria. It is expected therefore that the committee will be more active in the future than it has been in the past.

It is estimated that the total administrative expenses of the committee until December 31, 1944 will amount to £26,000. The basis of allocation between member governments is the same as that which was used for the expenses of the league of nations. On this basis Canada's share is £1,295.

I might add that the committee will in future take the responsibility for the transportation of the refugees and for providing them with food and other necessities during transfer to places of refuge. Previously the work of the committee had been limited to acting as an intermediary between governments and other organizations which arranged themselves for the movement and care of the refugees. This change means that in future there will be operational as well as administrative expenses for the committee. This will not, however, come under the sharing basis of which I have spoken. As a temporary expedient, the governments of the United Kingdom and the United States have underwritten the operational expenses. Canada, along with other member governments, may be asked for a contribution at a later stage, but I cannot say anything definite about this at the moment.

I expect later on in the session to make a full statement with regard to the refugee situation. All I am really prepared for to-day is a statement explanatory of the item which is before the committee.

Answering my hon. friend's further question, the immigration branch has a representative at Lisbon at the present time, and a number of refugees I understand have left for Canada from Lisbon since that officer was appointed. But the total number is restricted; it is not very large at the present time.

Mr. STIRLING: May I draw the Prime Minister's attention to the fact that in the February number of "Canada at War" it is stated that, I believe, twenty-five such families had left for Canada on January 25. When I made inquires of the immigration branch with regard to that I found that it was an inaccurate statement, and that none had yet left. I am speaking of two weeks or perhaps ten days ago. One of my reasons for asking the question I did was to endeavour to find out whether any actually have come or are in process of coming, because nothing seems to have developed from the visit of the immigration official to Lisbon.

Mr. CRERAR: Is my hon. friend speaking of movements from Portugal and Spain?

Mr. STIRLING: Yes.

Mr. CRERAR: I understand that within the last two or three weeks a substantial number—my recollection at the moment is three

hundred, including family members—have left, and I was under the impression that they are here now. I can ascertain whether that is so.

Mr. STIRLING: I wish the minister would clear it up, because, as I say, I was in touch with his department within the last two weeks, and the statement in "Canada at War" was definitely contradicted. The further statement was made that it was not improbable that a few family units would start to move from there during the month of March.

Mr. COLDWELL: I do not wish to prolong the discussion on this item, but I suggest to the Prime Minister that as soon as we possibly can, after Easter, a day should be set aside for the discussion in this house of matters relating to the Department of External Affairs. An item in the estimates for the Department of External Affairs has already been called, so that the department is in; on that occasion, while some of us would have liked to ask questions regarding Canada's external relationships, we refrained from doing so because we realized that the government wanted to get that department into supply. But last year it was pretty well toward the end of the session before we were able to discuss the many matters in which hon. members ought to be interested, and in which many of them are interested, dealing with our external relationships.

This is only, of course, one phase. I think personally that we have done very badly by the refugee. I think that when the story of this part of our war assistance is written it will be a pretty sorry story so far as Canada is concerned. But at the moment I am speaking more particularly of the international situation, and the fact that Canada has played an important part in this war. I have followed with a good deal of misgiving the recent developments in the international field. International relationships, among the great powers particularly, have deteriorated in the past three or four months, and it is time that some of the smaller nations—if you will—gave much more attention to external affairs than they have been giving to that subject. I notice that the Prime Minister of Great Britain said two weeks ago that the principal powers would have to do something. It is not good enough to leave these matters in the hands of the so-called principal powers. This house should seriously consider and discuss Canada's position in relation to external affairs, giving full support to every measure and every necessary step for the winning of the war, yet considering also the problems which are arising and will arise. I ask the Prime Minister that as early as possible after the recess we have a day to discuss external affairs, so that it may not be left until near the end of the session.

Mr. HANSON (York-Sunbury): After that lecture to the government and to the principal powers, I desire to ask the Prime Minister a concrete question. What is the status of these refugees who are coming or have arrived, whichever it may be? Are they to be temporary guests of Canada, or are they to take up their domicile here permanently?

Mr. CRERAR: I might say in response to the previous question asked, that I telephoned the director of immigration and am informed that a party of refugees from Spain and Portugal, to the number of two hundred and fifty-six, is on its way and is expected in North America within a few days.

With regard to the question just asked by the hon. member for York-Sunbury, the situation is this. These refugees for the time being are being given an asylum in Canada; that is, they can remain here until the war is over and later on their status if they then desire to remain here, can be considered and determined. For the moment they are coming in simply as refugees; that is they are getting asylum in Canada for the duration of the war.

Mr. HANSON (York-Sunbury): They are temporary guests.

Mr. GRAYDON: Are any members of the party which the minister has mentioned going to the United States, or are they all coming to Canada?

Mr. CRERAR: I am speaking only of those who are coming to Canada. What the United States may be doing in the matter I am not in a position at the moment to say.

Mr. CHURCH: This is the forty-first day of the session, and this item is the first regarding external affairs which has appeared. True, the particular item is a five or six thousand dollar vote for an intergovernmental committee regarding refugees; but one of the most important subjects we have to consider is the whole question of external affairs, our relation to foreign policy, to empire policy, to refugees and the other subjects with which the department deals. There was a good deal of immigration from Continental Europe before the war and people are asking questions that should be answered. I moved for a return this session and it was brought down, and I think that the minister should make a statement not only about refugees but on the broader question about what is going to be

done first regarding immigration from the British isles, where people have suffered from the war more than they have anywhere else, and regarding migration within the empire.

The same practice is being followed this session as was followed at the last session, because then it was only on the 114th day of the session that external affairs were discussed. I have every respect for the Prime Minister and I know that he is carrying a heavy load, but I suggest that shortly after the Easter recess there should be a day or two devoted to this very important topic, which we have been ignoring right along. The question of refugees comes under the department.

The other day we had a statement before the Empire club by a Mr. Kirkconnell, who in 1942 was engaged by the Minister of National War Services to write a book on continental and other immigration. He told the Toronto Empire club last week that there was no room in Canada for these refugees, but I do not pay a great deal of attention to that because he said the same thing on January 14, 1942, in Convocation hall. He said there was no room for any more British born in this country—and I may say that his book was widely distributed in England after the battle of Dunkirk.

The people should know the facts; they should know what is going on in this important department of immigration. I do not object to this item; in fact, I would like to see all these supplementary items pass as quickly as possible. But with all due respect to the cabinet, and admitting the work they have to do, I suggest that they might have set aside one or two days for external affairs, which is one of the most important matters before us. All others are subsidiary to it, and the refugee question is coordinated with it. I hope that the government will see fit to set aside a specified time for the discussion of these external affairs matters.

Mr. MACKENZIE KING: In reply to the leader of the Cooperative Commonwealth Federation party (Mr. Coldwell) and to my hon. friend, who evidently did not hear his remarks, which were the same as his own—

Mr. COLDWELL: Not quite the same.

Mr. MACKENZIE KING: —may I say that I am as anxious as anyone to oblige hon. members, but I would point out that it is not possible to oblige everyone and at the same time have a programme which it would be possible to carry out.

With reference to external affairs, the main policy of the government is to win the war, and the first step in that direction is to have supplies voted by this house for war needs. The war appropriation measure was among the first brought before the house this session and it has not yet been concluded. At the present time we are discussing the resolution which precedes the war appropriation bill, and until that bill is passed we should not, except for very special reasons, consider taking up the time of the house in the discussion of other matters which, though all important, are not as important as the necessity of giving an assurance to our armed forces everywhere that this House of Commons is giving its first attention to their needs. That is the line on which we have been proceeding. If we had begun by taking up external affairs and discussing policies with regard to Canada's relations with other countries, the first criticism would have come, and rightly so, from hon. gentlemen opposite, or if not from them, certainly from those who are fighting the battles of the country. And that criticism would have been this, "Why can you not give your attention to the practical question of supplying the needs of those who are fighting the battle of freedom at the front?"

Mr. COLDWELL: I suggested, as soon after the Easter recess as possible, after we had disposed of this measure.

Mr. MACKENZIE KING: The hon. gentleman did not say after the conclusion of the war appropriation measure.

Mr. COLDWELL: That is what I had in mind.

Mr. MACKENZIE KING: If that is what the hon. member has in mind, that is all right; but we must get on more rapidly with our programme if he expects it to be immediately after Easter, when we shall have concluded the war appropriation measure. I had hoped that we would have concluded that measure before Easter.

I should have welcomed a discussion on external affairs at a fairly early stage of the session—I would not say at the very outset—but hon. gentlemen are asking, for instance, when the budget will be brought down, that now seems to be the most urgent question at the moment. It must be an urgent question if the country wishes to have the budget brought down at an early date; but are we to delay the bringing down of the budget to discuss external affairs? These are questions which the government has to face in a practical way.

It is not correct to say that we have left until a late stage in the session the discussion of external affairs. But even if we had, as long as there was full opportunity given to discuss these matters during the session, the house could not say its members had been

denied that privilege. I am anxious to have a discussion on external affairs at a fairly early stage of the session, but in respect of some things at the present time I cannot control my own engagements.

As hon. gentlemen know, I expect to visit England very shortly. That may be immediately after the Easter recess, or it may be a month or two months hence, but if there is a chance I shall seek to bring on an early discussion.

Mr. GRAYDON: You had better not make it too definite.

Mr. MACKENZIE KING: It may be during the Easter recess; it may be a week or two after, or a month or two months after. I therefore cannot say at what time some of these matters may be taken up.

Mr. ROWE: It is a forthright answer.

Mr. HANSELL: We have listened to a beautiful speech by the Prime Minister. I say beautiful because it has portrayed the beauties of parliament, and so forth and so on, and the Prime Minister has attempted to show us the various criticisms that might come if we act now, and so forth and so on. But we all know that it is just so many words. He spoke as though we might lose the war if we did not have a certain item passed, or that somebody would go short of his salary if we did not move quickly to vote a certain sum of money, which we all know is just so many words. These things just do not happen. The war is going on whether we sit here or not; civil servants are going to be paid whether we sit here or not; and with all due respect to the Prime Minister I might even suggest that if there was a pretty good chance of the Liberal party winning an election he would not think twice about proroguing to-morrow. Now that would not mean that the war would be lost or that some civil servants would go without money.

Mr. GRAYDON: It would mean a change of government, though.

Mr. HANSELL: Let me remind the government that there is precedent for this; for if ever we wanted to get a move on in a hurry it was in 1940, just a few months after the war started. We all know what happened on January 26, 1940. Well, the war did not stop. Civil servants got their money and there was no money voted until we met late in the spring. However, we know what the Prime Minister means, and we can assure him that we want to facilitate the procedure in this house. We want to win the war, and nobody is going to act in any other manner.

So far as the principle of voting money is concerned, I think that is a thing we have to consider. My understanding is that when the government comes to parliament asking for money it is tantamount to His Majesty asking the people for money, and that at that time the representatives of the people have a right to lodge their complaints at the foot of the throne. That is my understanding of the principle involved. Therefore I say no item should be passed without members of parliament having ample opportunity to lodge complaints, though I have no objection to facilitating the work of the house by consenting to an item being passed if we are given the assurance that we may talk about it at some other time.

Dealing with this particular item I should like to ask one or two questions of the Prime Minister or the Minister of Mines and Resources; if they are not prepared to answer them at the moment I shall place them on the order paper. I understand that the large proportion of the refugees seeking asylum in Canada have come from the western part of the European battlefront, coming through Spain and Portugal to England and thence to North America. I understand, on the other hand, that quite a number of refugees from the eastern part of the European front have had to move over to certain sections of Asia, to Iran and India and perhaps to Turkey. I should like to know whether any of those refugees are finding asylum on this continent.

Having asked that question, would the minister mind telling the committee the procedure that should be followed when people in this country desire to have their relatives who are refugees in some other part of the world come to this country. I have a case in point which perhaps will serve as a more direct illustration. I have an inquirer who came originally from Poland. His relatives are understood to be somewhere in the east. They are destitute, and the inquirer in this country also is without money. There has been an exchange of correspondence, however, and the people here would like very much to have their relatives come to Canada. What is the procedure in a case of this kind?

It is the general impression in this country that those who have been able to gain asylum in Canada or in North America are people with some means. Of course I have no objection to any refugee coming here, but I do think something should be done to facilitate the movement of the more unfortunate, of whom there must be many, who have no money at all. If I were a refugee somewhere I should think I would feel much safer if I had my

pockets full of money, so it would seem only common sense to assume that the people who really need help are those with no money at all. I do wish something could be done for them.

Would the minister mind answering the question in regard to the procedure that should be followed? If he wishes me to place on the order paper a series of questions on these matters in order to give him time to look them up, I shall be pleased to do so.

Mr. MACKENZIE KING: My hon. friend will recognize that the exigencies of war impose certain definite limitations upon what any government can do in seeking to meet the laudable wishes of many members of the community. For example, my hon. friend has referred to some persons who would like to leave India and come to Canada.

Mr. HANSELL: From anywhere.

Mr. MACKENZIE KING: Very well; make it from anywhere. The first problem that presents itself is how and where they are going to secure the necessary transportation to bring them to Canada, with the position as it is at present on all the oceans of the world and transportation for war purposes having the priority which necessarily it must have. Definite limitations arise from that fact; one of the greatest of the problems to-day is that of transport. A great many people in the British isles would like to come to Canada; a number of people in Canada are very anxious to get back to the British isles. Not a day passes when a request does not come to the Department of External Affairs asking if transportation cannot be arranged for someone; and in nearly every case the reply has had to be that at present it is impossible to arrange any transportation. That is the first limitation, and it is one that has operated in a definite way. There have been one or two cases where something has been arranged, as for example the exchange of nationals with Japan. It was possible to make special arrangements in those cases, but they were limited and were made under great difficulty. As to the method of procedure, I would say that inquiries should be made of the Department of Immigration, and that department will give such information as can be given at the time. I do not think I can say more than that.

Mr. COLDWELL: There have been times, though, when shipping could be arranged. If my recollection serves me aright, shipping was arranged at one time, and we had a shipload of refugees seeking asylum in many countries. At that time we did not offer any asylum to the refugees.

[Mr. Hansell.]

Mr. MACKENZIE KING: I am giving the reason that prevails at the moment.

Mr. WHITE: I understand some arrangement has been made under which the Italian war prisoners who are now in Canada are to be given the opportunity to remain in this country after the war is over. If this is correct, will the Prime Minister give us some explanation in regard to it?

Mr. MACKENZIE KING: I have not heard of an arrangement of that kind, and I should be surprised if any had been made.

Mr. KNOWLES: There is another aspect of the refugee problem I should like to draw to the attention of the Prime Minister, on which he may care to make a statement. A number of times to-day, in another connection, it has been stated that to-morrow is the last day of March. That is the day when the full effect of the white paper of 1939 comes into operation with respect to Palestine. As the Prime Minister knows, that white paper has the effect of closing the doors of Palestine to any further Jewish immigration. I realize, as the Prime Minister does, that some permits which have been issued have not been acted upon as yet; in other words I believe it will still be possible for persons holding those permits to enter Palestine if they are able to get there. Apart from that, however, the door closes to-morrow. As the Prime Minister knows, there is a good deal of feeling among members of the Jewish community in regard to this white paper. The feeling is that it is in contradiction to the Balfour declaration, which was made not only to the Jewish people of the old country but to the Jewish people of a number of countries involved in the drafting of the original Balfour declaration. Perhaps I should qualify that a bit and not say they were involved in the drafting of the declaration; the British government consulted the allied governments of that time before the declaration was announced, and it had their concurrence. After the declaration was made, other governments, notably the congress of the United States, issued a statement in full support of the principle of the Balfour declaration. I have digressed to this extent simply to point out that although it was a British government declaration, other countries, including Canada, are concerned. In a sense a commitment was made to the people of this country, as well as to those of Great Britain and other countries.

Has the Prime Minister any information he could give the house on this point? Can he tell us whether the government of Canada has made any representations to the British

government in the matter? The question has been raised in the house before, both last year and this year, as the Prime Minister will recall. In the debate on the address in reply to the speech from the throne the hon. member for Trinity stated the case quite fully. Now that the urgency of the matter has come to our attention—because to-morrow the doors of Palestine close to any further Jewish immigration—I should appreciate it if the Prime Minister would make a statement.

Mr. MACKENZIE KING: As the hon. member has just said, the agreement was one which was made by the United Kingdom, and naturally it is of very special concern to the United Kingdom government. As my hon. friend knows, there is shortly to be a meeting in London of the prime ministers from different parts of the commonwealth. This is one of the questions which I expect will be considered there. I think until that conference takes place, and there is an opportunity to confer with those who may be present, it would be wiser for me not to make any statement.

Mr. KNOWLES: If the Prime Minister could say to-day that if the question is not on the agenda when he gets to London he will see to it that it is raised, I am sure it would mean a great deal to the Jewish community of Canada.

Mr. MACKENZIE KING: Within the last day or two I have been waited upon by representatives of the Jewish community, and those who are interested in the question that has been raised, namely that of Palestine as a home for the Jews. I believe that to-morrow again I am to meet another delegation. To those who have waited upon me I have said that it was a matter I intended to see would be considered at the meeting of prime ministers. I do not think I ought to go further than that at the present time.

Mr. HANSON (York-Sunbury): I have looked through the supplementary estimates to see if there is anything in connection with immigration, and I find that there is not. Therefore I cannot pursue what I had in mind. However I would draw the attention of the appropriate minister to a leading article in this morning's *Globe and Mail* which calls for an explanation by the government with respect to the treatment of a Chinese lady by Canadian immigration authorities. As the newspaper puts it, the treatment accorded that young lady is quite different from the statement made by the Prime Minister on the occasion of the visit of Madame Chiang Kai-shek to this city. If it is true, it does not reflect any—

Mr. CRERAR: It is well that my hon. friend has seen fit to add that qualification.

Mr. HANSON (York-Sunbury): I am not suggesting it is true; I hope it is not. But articles such as this, if untrue, do inestimable damage to our reputation as a free and a liberty-loving country. If the statement is not true, it should be refuted. I would ask the minister to give the facts as soon as possible.

Mr. CRERAR: I presume the case to which my hon. friend has referred is one that was brought to my attention within the past week or ten days.

Mr. HANSON (York-Sunbury): It has reference to an American citizen of Chinese origin.

Mr. CRERAR: Precisely. The statement I received was based upon an article appearing in the *New Republic*, printed in New York.

Mr. HANSON (York-Sunbury): Correct.

Mr. CRERAR: I presume it refers to the same action. The lady in question was of the Chinese race, and an American citizen. But while there may be certain disabilities in Canada against Chinese, in this particular instance she was not asked to leave the train by any Canadian immigration officer. According to the information and advice I have received, that step was taken by some railway officials who were in charge of the train upon which she travelled. I understand the lady was going from Buffalo to Detroit.

Mr. HANSON (York-Sunbury). Ann Arbor.

Mr. CRERAR: I do not wish to say anything further about it, but my hon. friend knows that for many years we have had legislation in Canada affecting Chinese immigration to this country, and restricting movements very greatly. In this particular case the fault did not lie with any official of the Canadian government.

Mr. COLDWELL: Will the railway officials take it upon themselves to do that?

Mr. POULIOT: If my memory serves me correctly, this is the first time that refugees have been mentioned in the estimates. Therefore we have a new policy. Prior to this time refugees have been under the control of the Minister of Mines and Resources, and have been admitted under the regulations of the immigration branch. What is a refugee? What is the difference between a refugee and an ordinary immigrant? What is the difference between a refugee and an exile? That is the term used in some places. Outsiders whose transportation to Canada is facilitated or who

are helped to return to their country of origin are not refugees any more, nor are they exiles or immigrants or emigrants. According to the designation given by the League of Nations Society, they are evacuees.

Does the term "refugee" apply to only one race, or does it apply to all those who are coming to this country from occupied Europe? It would be well to know the kind of people we are talking about, and what the money is voted for. Some people believe that those who are dealing with the problem of immigration in war time are anti-Semitic. That is not the question at all. The question is to know who is coming here and how they come here. I listened to the hon. member for Macleod (Mr. Hansell), who is one of the best debaters in the house, and I heard him mention refugees who have no money. If they have no money, how are they able to travel such a long distance to Canada? Some differentiation should be made between refugees, immigrants and exiles who are self-supporting and who are not self-supporting. As I say, I wonder how those who are not self-supporting can come so far to Canada and then become a charge on the country.

Canadian people are kind-hearted; they are generous; they are Christians, and they suffer because of the sufferings of others. Those of us who have read reports of the miseries of people in other parts of the world are ready to help them. But before this money is voted I think we should decide that the first immigrants to be cared for will be the Canadian boys who have fought overseas for this country and who cannot get satisfactory pensions when they come home. They should be the first immigrants to be looked after. There is no excuse for not giving priority to these boys or to these girls and women who have been in our armed forces. That is my first point.

It is pitiful to think of the men who have been in our armed forces and who cannot get pensions. How is it that we have to look after people who are not our own people? We should be ready to help to a certain extent, but I think we should look after our own people first. I shall have a lot to say when the estimates of the Department of Pensions and National Health come up. We live in a strange world here in Canada, as I said when speaking on another matter not long ago. Apparently we think more of people outside our country than we do of the people within our borders. It seems to be considered bad manners to refer to the troubles of red-blooded Canadians. Apparently we are supposed to think only of the people outside our country. That is what is called external affairs. It is said that people who think like that are internationally minded. Let us get down to brass tacks. Let us remember that charity begins at home. Let us not be ashamed of looking after our own people who are in distress.

Mr. HANSON (York-Sunbury): Let us go back to Riviere du Loup.

Mr. POULIOT: It would be via Fredericton. Sometimes the hon. member for York-Sunbury speaks quite sensibly and it is unfortunate that he should spoil his reputation by making wise cracks which are rather hard to justify at times. I regret that a man of his age and ability has not given this problem the consideration it deserves. I would not want to joke about a matter like this; it is too serious, because it concerns the future of this country. There may be jibes from hon. gentlemen; others may laugh or cast aspersions—that is their right and I will not complain, speaking from my own point of view. But I do regret that the hon. gentleman does not give more serious attention to a problem of this scope.

We have an empire parliamentary association made up of people who hope to be the future rulers of the world. I see one hon. gentleman who probably expects to be the minister of external affairs when his leader comes to power. He is internationally minded. The leader of the C.C.F. is internationally minded. He thinks that Canada will play a great role among the nations of the world, and with that I agree, although I am not as internationally minded as he is. But Canada cannot play a great role among the nations of the world unless we have a definite Canadian policy. The principle of numerical strength seems to apply to any meetings attended by Canada, and the result is that the voice of Canada is not always heard. The Canadian policy should be drafted at home. When international meetings are held, representatives of Canada should be able to explain just what our policy is.

This item covers the portion of expenses of the intergovernmental committee on refugees. Who sits on that intergovernmental committee? Is it a Canadian committee made up of representatives of all the provinces, or is it a committee made up of representatives of the different governments in the world? When we know that, we shall be in position to ask what happened at the conference held last year in Bermuda at which Canada was not represented, and rightly so. No definite conclusions were reached at that meeting.

We do not want to see any trouble caused to Jews or to any other race, but we do not

want to see Canada run by foreigners and outsiders, by men from Geneva or other places who occupy key positions in Canada and who boss Canadian affairs. This should be of great concern to us all. How is it possible to have a Canadian policy when the Department of External Affairs is composed of men from all parts of the world who act as advisers to the government on international issues? I admit that a man may come from outside Canada and still be a good Canadian. On many occasions I have said that some of the people born in the British isles or other places outside of Canada were better Canadians than those born in the country. But those people have the happiness of this country at heart. What they had in view was to serve this country before all others. The people who are afraid of the propaganda of these international organizations for refugees, those who bend before those who take the lead in this movement, now say that the situation in the province of Quebec is unfortunate, that the French-Canadians are against the Jews, that the French-Canadians are against one class of the population, that they do not want refugees who want to take control of the whole country. That is not true at all. But how is it possible for men who have no experience of Canada to come here and take control of all the important positions there are, not only in the civil service, but in the government?

So long as a man comes here from outside, he is apparently all right. I remember the case of Alexander Gunn, that great expert who was called from London, not as a refugee, not as an immigrant, not as an exile, but as a kind of missionary from the British government, to tell us, to tell all Canadians what were essential positions and what were non-essential positions from which men should be transferred to the essential positions. That man was called here for the very reason that more importance is attached in this country to anything said by an outsider than to what is said by a good Canadian.

Not only that, but you know what happened with respect to the anti-nazi camp at Sherbrooke. I spoke about that last year. After Dunkirk there was a panic in England and there was a round-up of all men of central European origin who were in London. They were sent here and the government put them in a concentration camp. Think of that—anti-nazis being put in a concentration camp in Canada. I asked the Minister of National Defence last year if he knew anything about it, and he said no. But afterwards what did I see? I saw that an order in council had been passed precisely to give a chance to these men who had entered Canada contrary to the provisions of the Immigration Act. They should have been returned to their country of origin. As I said to the Minister of Mines and Resources two or three years ago, where shall we send refugees from occupied Europe who have entered Canada illegally? There was an uproar of laughter at my question and it was not answered. I should like it answered.

I have no racial animosity in speaking as I do. I have a profound love of my country and of my fellow-citizens, and I am ready to accept the rule of any Canadian in any high post in this country, but I deny any outsider the right to boss us in this country. I think the man who has lived his whole life in this country has the right to attain to the highest positions of responsibility in this country, but I deny to the newcomer and a migratory bird the same right.

Moreover, I learned some time ago that a person who sits in the other house used to have fits when she spoke of refugees, and it was said to me by someone in authority that she cried, that she thought only of the refugees. Well, if one is to be in the other house to represent only those who do not belong to this country, there should be some means of stopping that. I know whereof I speak.

I hope, sir, that in the future those who speak of international affairs and the like will have a programme ready to submit to the house, and be ready to explain what is their stand on any item for the purpose which appears in the estimates. If some of those refugees were not so rugged when they come to this country, if they were not taking possession of Canada when they come here, they would be tolerated, but the man with the worst possible manners that I have ever seen was a millionaire refugee from France. He was eating in the dining room of the Ritz-Carlton in Montreal, and everyone was shocked by his bad manners. He was powerfully rich; he belonged to one of the richest families in the world, but I have never seen before a man who looked like him. Which means that it is not only wealth that we should bring here. It is all right to help other peoples. We have been giving billions of dollars to help other countries, and we have no objection to helping other peoples. We will do our best for them, as much as we can. But we must look after our own people in the first place, and then we must be very careful that we are not ruled by the bold refugees who come here from outside to take hold of this country, or then we shall be slaves in our own country. We cannot have that.

What is the policy of other peoples? What do they do for Canada, these refugees? When I asked for help here for poor settlers who need help for themselves and their children, I could not get it. The Indians get help, but I could not get it for my own people, and I do not see how the refugees can get it. I hope that the government will take that into consideration and will not press further for the passing of this item.

The United States is a large country, and it puts quotas on immigration. But so-called anti-nazis are sent here and we accept them. They jump the fence and get in. They were accepted here in spite of the laws of the land. There will be no end to it if we do not put a stop to it.

One other thing I will mention in passing. Why is it that those young men who were not originally residents of this country, young men who have come here from all over as guests in this country, are not subjected to the mobilization act? Why is that? If I am told that they are, I say that a number of those boys who have come here since the passing of the mobilization act have no trouble at all in continuing at their civilian work and are not called up by the registrars of the various military districts. That also is stupid. How is it that a man who comes here for shelter is not bound by the ordinary obligations of a Canadian citizen? I know that by speaking like this I shall scandalize some virgin souls who do not like plain talk about these matters. In external affairs we have gone far backwards. I regret it, and I hope that the policy of the government will be so changed as to be along the same lines as—

Mr. McIVOR: I wonder whether the hon. member would allow me to ask a question?

Mr. POULIOT: Surely.

Mr. McIVOR: If he were a member of the British house, what would his attitude be to Viscount Bennett, who was born in New Brunswick and schooled in this country?

Mr. GRAYDON: That question is too easy!

Mr. McIVOR: There is a certain attitude of reciprocity as between England, Scotland, Ireland and Canada, and I am curious to know what the hon. member's position would be under these circumstances toward Viscount Bennett.

Mr. POULIOT: Mr. Chairman, I cannot reply to the hon. member for Fort William, because this item refers to refugees and he is speaking of an evacuee.

I hope that the matter to which I have been referring will be considered on its merits. I appreciate the kindness of the committee in listening to my views, which I express in all earnestness. I trust that the government will not be too quick in pressing the adoption of this item, for the reasons I have mentioned, and many others which I will give in due course.

Mr. GRAYDON: I should like to suggest to the Prime Minister that, since there is a question which I desire to ask the Minister of Mines and Resources, who at the moment is not in his place, and which—

Mr. MACKENZIE KING: He is trying to get a little lunch. He has not had any yet. The cabinet meeting lasted until three o'clock.

Mr. GRAYDON: I hope that the Prime Minister is not taking umbrage at what I am saying.

Mr. MACKENZIE KING: Oh, no, but my hon. friend was drawing attention to the absence of the minister, and I was saying that the minister had been to my knowledge in the cabinet until nearly three o'clock this afternoon and has had no lunch. He slipped off for a minute to get a bite to eat.

Mr. GRAYDON: I am not raising any question about the minister going out to his lunch.

Mr. MACKENZIE KING: My hon. friend drew attention to his absence from the chamber, and I am giving him the reason.

Mr. GRAYDON: My right hon. friend need not be so touchy.

Mr. MACKENZIE KING: I am not touchy, but part of my duty is to defend my colleagues during their absence, and when my hon. friend puts on *Hansard* the statement that a particular minister is not here, and my hon. friend knows the significance of that, I am giving him the explanation.

Mr. GRAYDON: I merely innocently rose to ask the Minister of Mines and Resources a question. I cannot ask the question if he is not here, but if the Prime Minister wants to answer it I will tell him what it is. He may clear it up and the matter will then be concluded.

When the hon. member for York-Sunbury rose in his place to bring to the attention of the Minister of Mines and Resources the incident of an American girl travelling from New York to Ann Arbour, Michigan, I thought the minister did not make a clear explanation of the situation, because there is a serious aspect of this particular complaint. I wish to put on the record one sentence in connection with the report which was published in the *New Republic,* and which was

mentioned by the hon. member for York-Sunbury during the debate. That publication refers to—

> . . . this piece of startling governmental stupidity and brutality (which) occurs over and over; No American citizen who looks like a Chinese, we are told, is allowed to pass through Canadian territory on an American train even though the points of departure and arrival are in the United States. Canada has a good record in this war; and it is a little startling to find her deliberately going out of the way to insult and humiliate citizens of an allied country, the United States.

The reason why I rose at this time was to give the Minister of Mines and Resources, or the Prime Minister if he chooses—perhaps the Prime Minister is the one to do it—an opportunity of making a categorical denial of the entire statement and a proper explanation of what happened, because I do not think what has been said goes far enough, in view of the serious charge which is made in a United States magazine with a wide circulation. I believe the Prime Minister and every member of the house wants to repudiate any suggestion that this country would treat nationals of another country in the manner alleged, and in my opinion the Minister of Mines and Resources should have gone farther than simply to say that no Canadian immigration official was involved; he should have told the whole story. What I intended to suggest at the beginning of my remarks was that the item might be allowed to stand until the Minister of Mines and Resources returned to the chamber. If the Prime Minister desires to make an explanation, that is satisfactory to me; but the article should not go unchallenged, because it contains a reflection on our relationship to other countries, and I should like to see the matter satisfactorily cleared up.

Mr. MACKENZIE KING: The minister, I thought, made it quite clear that such action as was taken was not by any Canadian government official, and that any such action on the part of any of its officials would not be countenanced for one moment by our government. Possibly the minister, for reasons which he had better explain himself, deemed it inadvisable to place the responsibility where, perhaps, it exclusively belongs. I will allow him to answer that part himself. So far as the government is concerned I can assure my hon. friend that every member of the government would take the strongest exception to any action of the kind on the part of an official, and in this particular instance the government officials were wholly innocent of any such act.

Mr. GRAYDON: Our position is one of friendship toward nations which are friendly with us.

Mr. MACKENZIE KING: Certainly. The incident was most regrettable.

Mr. LECLERC (Translation): Mr. Chairman, I have just a few words to say on the question of refugees. That matter is closely connected with the immigration question. During the war we have had to admit into Canada a large nmber of so-called refugees, who have been expelled from their own country by the invader but who may wish to become permanent residents of Canada. Despite the kind-heartedness of the Canadian citizens, that question is, in my opinion, one of very great importance and we should not exclude reason from our feelings. We must not forget that the post-war period will probably be marked by widespread unemployment and that we shall then have to take care of hundreds of thousands of demobilized soldiers and laid off workmen apart from those refugees and of the immigrants whom some may wish to send here.

I ask the government to take my remarks into serious consideration. I agree with what the hon. member for Temiscouata (Mr. Pouliot) has said a few moments ago, and I must say that the government has received numerous petitions and that I have also received some which indicate the general feeling in Shefford county. I ask the government, once again, to consider the question of post-war immigration and to make sure that the number of immigrants admitted is commensurate with the employment available at that time. Without any doubt, we shall then have very serious problems to solve in connection with the Canadians who will have to be provided for. I ask the government that before they take care of European refugees, they provide for Canadian-born citizens.

Mr. ROEBUCK: In view of some of the remarks that have been made with regard to this small item, I should like to be heard. The hon. member for Témiscouata (Mr. Pouliot) commented that the matter should be considered on its merits, and of course with that statement I entirely agree.

Let us see what the problem is that we are considering on its merits. I understand that an intergovernmental committee has been set up to consider at some length continuously a problem which is on the hands of all the nations of the world, those of good will at all events, those on the united nations side, with respect to people fleeing the wrath of the nazi murderers in Germany and other occupied territories in Europe.

My good friend the hon. member for Témiscouata says that charity should begin at home. Of course that is right, but unfortunately he has not finished the quotation: It should not stay at home. The remarks made by that hon. member reminded me of the little couplet:

Me and my wife, John and his wife.
Us four and no more.

It is a matter of judgment. It is true that, as he says, our first concern in this country is the returned men from the front, that they have priority on all occasions, and that of course they be given reasonable treatment in the matter of pensions. But it can hardly be contended that the question of giving a sufficiency in pensions to our returned men in any way depends upon or is influenced or affected by the $5,000 appropriation in order that Canada may take her place and her proper place among other nations in doing the right thing by poor people.

It does seem to me, however, looking at the matter entirely from the point of view of the boys who are returning, that were we in this chamber to take a miserable, mean attitude, that charity stays at home, exclusively in Canada, and that we cannot afford $5,000 in order that Canada should take her place on an intergovernmental committee, these boys returning here would blush with shame that they come from Canada rather than from some of the other nations that are playing a proper part.

The hon. member for Témiscouata said that Canadians are a kind-hearted people, and that is true. We are a self-respecting nation, and it would not, it seems to me, be in keeping with our self-respect if we even questioned this amount, much less if we rejected it.

I compliment the government upon taking its proper place on this international committee for the handling of this most important world problem. If the item is to be criticized at all, it is only because it is so small.

Mr. MacNICOL: I just wish to add a word along the line taken by the hon. member who has just sat down (Mr. Roebuck). In his part of Toronto and in my part as well there are people of all races, and I have found sons and daughters of all races, no matter what their language was, no matter where they came from, rendering good service to the country. I, too, congratulate the government upon carrying out its agreement, in fact on entering into an agreement even in a small way, and it is only in a small way, to relieve the unparalleled and almost unmentionable distress that refugees of all races in Europe have gone through. It is a small item which does not mean very much in money, but I am happy to support it.

Item agreed to.

Mr. MACKENZIE KING: The next item is one which relates to the Department of Finance, the estimates of which have not thus far been called. If hon. gentlemen wish to obstruct or to delay the proceedings of the house—

Mr. HANSON (York-Sunbury): Do not use that word "obstruct."

Mr. MACKENZIE KING: I am not saying that they will, but if anyone wishes to delay the proceedings of the house, the business of the country, he may take exception at this moment to our discussing on a Thursday, when Mr. Speaker leaves the chair without question put an item in a department that has not already been called. I am obliged to leave the chamber shortly and I wish to make a statement on this before withdrawing. Hon. members will have noticed that since the beginning of the session the government has sought on a Monday, or Tuesday or Wednesday to have the different departments called in as expeditious an order as possible, but we have been prevented time and again, particularly in the last two weeks, from getting any additional departments into supply. It has not been the fault of the government that all departments have not been called up to this moment. It has been owing to the fact I have mentioned, that motions have been put which have made that impossible. I do not take exception to that; that is the right of the opposition.

Mr. GRAYDON: I hope you are not referring to the opposition, because we did not raise any questions.

Mr. MACKENZIE KING: I regard everyone who is not for the government as being opposed to it.

Mr. GRAYDON: If that is the situation the Prime Minister had better withdraw his remarks about the opposition having brought in amendments to the motion for supply, because we have not.

Mr. MACKENZIE KING: I regard those who are not for the government as opposed to it, and when I speak of the opposition I do not mean my hon. friend only. I mean particularly some of those hon. gentlemen who belong to other groups and who have been—

Mr. HANSON (York-Sunbury): Do not class us with them, please.

Mr. MACKENZIE KING: My own belief is that there should be simply one government and one opposition. I think it is a mistake having the house divided into the government and its supporters and three or four oppositions, so that each time one of that number speaks the other three feel that they must also put in their oars or say something.

In the years I have been in parliament there have always been, just before the beginning of the new fiscal year, some estimates brought down in the nature of further supplementary estimates to cover small amounts that may be outstanding to meet accounts for the current year. I have never once seen the house refuse to give unanimous consent to the consideration of these estimates on the score of any rule that may appear in the rules of procedure of the house, and I hope that we may take it as assumed that hon. members opposite of all parties are prepared to allow the government to proceed with a discussion of any items that may appear on this supplementary list.

Mr. HANSON (York-Sunbury): Speaking on behalf of the official opposition, I wish to assure the Prime Minister at once that no objection will be taken to any item of any department which has not yet been called, but I would point out to him that he has a good many departments in already. As far as my recollection goes, he has more departments in than is the case in the ordinary session of parliament. It is the right and the duty of the opposition to see that too many departments are not brought in too soon. My hon. friend knows that, and nobody was more dexterous in preventing that sort of thing than the right hon. gentleman when he sat on this side, and especially some of his henchmen who sit around him, in days gone by. I have reason to remember that.

Mr. MACKENZIE KING: Speaking of the rights of the opposition and of the government, I would say to my hon. friend that the government has a perfect right, once in supply, to call an item in every department if it so desires. There is no rule of the house which says the opposition has the right to prevent the government from obtaining supply in any way it can, consistent with the rules. It has been to help meet the wishes of hon. gentlemen opposite that the government has not called every department once it has been in supply. I should like to have that clearly understood. Once the house is in supply the government has a perfect right to call any item in any department it pleases; and if we had wished to stand strictly on our rights, the first day the house met we could have called an item in each department and been free to go into supply any Thursday or Friday on the estimates of any department. But that is not the way in which business can be carried on as between a government and an opposition.

May I take advantage of this opportunity to point out what I think is in the interests of all hon. members, namely, that we cannot make progress unless each member assumes a real responsibility and restricts on his own part the amount of time to be taken in discussion. If this afternoon the Chairman had ruled strictly, as I think he should have done—if he will not mind my saying so—this discussion might have been held down to the simple question of whether a small amount still owing by Canada to an international organization should be paid. The broad discussion in regard to immigration, refugees and the like, has not been strictly relevant to the item before us. The time to take up those matters would have been when the main estimates are being discussed.

Mr. STIRLING: But the Prime Minister will agree that this is a new item; it is not a further item.

Mr. MACKENZIE KING: It is an item which has arisen during the year, which there has not been a chance to meet before this; it belongs to the current year. In a word what I want to say is this. Hon. members are asking, and rightly, that we should shortly begin a discussion on external affairs, that we should bring down the budget, and that other measures should be brought down; yet discussions such as that which has taken place this afternoon make it wholly impossible to do any of these things. We have been sitting for two hours, but up to the present we have passed only one item. I think, without injury to any living soul, the whole lot of them might have been passed in ten minutes. I am perfectly certain that is what, in similar circumstances, they would have done in the British parliament. There is a vast amount of legislation still to be brought before the house, and before we get much further with the session hon. members are going to be asking the government, "Cannot this be expedited; cannot that be expedited?" This is the time for expedition, if it is to amount to anything in the long run.

Mr. MacINNIS: If the Prime Minister does not mind, may I suggest that the estimates are not going through faster largely because of his own attitude in the matter.

The ACTING CHAIRMAN (Mr. McCann): Order. There is absolutely nothing before the committee; no item has been called. The dis-

cussion that has been going on has taken place between the calling of items. I should like to know what item to call.

Mr. RALSTON: Item 421.

The ACTING CHAIRMAN (Mr. McCann): Very well; 421.

DEPARTMENT OF FINANCE

421. Departmental administration — further amount required, $76,200.

Mr. MacINNIS: I understood that we were talking on item 421.

The ACTING CHAIRMAN (Mr. McCann): That has just been called.

Mr. COLDWELL: There was a discussion as to the propriety of taking up this item at all. We are not objecting to it, but my hon. friend would like to speak to that point. As the Prime Minister has pointed out, this house might stand on its rights and refuse to recognize this item at all, because as yet the Department of Finance has not been put into supply. We are not going to do that, of course, but at the same time I think my hon. friend has a right to discuss the point, which he was rising to do.

Mr. MacINNIS: As a member of this house, Mr. Chairman, I object to being lectured by the Prime Minister or anyone else. The right hon. gentleman rose and very properly drew to the attention of the opposition the fact that they could have refused to allow this item to come in, because the Department of Finance has not as yet been brought into supply. But he did not simply make the statement and leave it to the opposition to agree or not to agree. I am satisfied that the opposition would have agreed, but he went on and on and on, lecturing hon. members about their duties in the house; he went on to tell us that the government had the right to bring in all the departments on the first day of the session, after the estimates were introduced. Of course that is so, but it would be so only if the opposition allowed that to be done. The opposition could carry on a discussion for weeks, and under those conditions the government would not be able to bring in anything at all. I have said time and again, as the Prime Minister has said, that if we are to make progress here we must discipline ourselves and agree, as among the various groups, how much discussion shall take place on various subjects. I am absolutely in accord with that idea. The attitude of the Prime Minister reminds me of a statement which the late Henry Labouchere is said to have made in regard to the late Mr. Gladstone, who used to lecture the British House of Commons in somewhat the same way. He said he did not mind the old man, as he called him, having the ace of trumps up his sleeve every time, but he did object to the old man saying that God Almighty had put it there. That is the way I feel in regard to these matters. Let the Prime Minister put the point to hon. members, and if it is put fairly nicely, as the right hon. gentleman can put it if he wishes, I am quite satisfied that we shall agree and let the item go through.

[The Chairman.]

Mr. GRAYDON: Let me point out to the Prime Minister what the hon. member for Vancouver East omitted to say. I think if *Hansard* were to be checked it would be found that the Liberals, including the Prime Minister, have had more to say than perhaps all the rest of us combined.

Mr. KNOWLES: Speaking to the point of order which the Prime Minister suggested could be raised—

The ACTING CHAIRMAN (Mr. McCann): Order. There is no point of order before the committee.

Mr. KNOWLES: Taking part in the discussion—

The ACTING CHAIRMAN (Mr. McCann): Will the hon. gentleman please sit down. There is no point of order before the committee. The item under discussion deals with the departmental administration of the Department of Finance, and I shall have to insist that the discussion be relevant to that item.

Mr. KNOWLES: I just wish to say to the Prime Minister that I think we should have an understanding—

Some hon. MEMBERS: Order.

Mr. KNOWLES: We in the opposition have been asked to agree to a matter of procedure, and we have stated our willingness to do so.

Mr. GRAYDON: We object to your being called the opposition, for one thing.

Mr. MACKENZIE KING: What do you call them?

Mr. GRAYDON: Give them any name you like, but you cannot call them the official opposition. They are with the government more than they are with the opposition.

Mr. KNOWLES: I am sure the Prime Minister is prepared to give an undertaking that the calling of this item does not constitute the opening of the Department of Finance in all its estimates.

Mr. MACKENZIE KING: Certainly not.

Mr. KNOWLES: As long as we understand that it will still be necessary to call, on a Monday, Tuesday or Wednesday, the estimates of any department not yet in supply, even though we pass these supplementary items to-day—

Mr. MACKENZIE KING: Certainly.

Item agreed to.

422. Royal Canadian Mint, including the Dominion of Canada assay office—further amount required, $54,241.

Mr. ADAMSON: Do I understand that the mint makes a charge for refining gold bullion, at the rate of one per cent of the value of the bullion so refined? Is that so?

Hon. J. L. RALSTON (Acting Minister of Finance): I cannot tell my hon. friend the rate; but I shall get that information for him.

Mr. HANSELL: I should like to ask a question about the Royal Mint. Does any government department or organization print paper currency? It is my understanding that the government lets out contracts to private companies for the printing of bank notes.

Mr. RALSTON: There are contracts with the bank-note companies for the printing of bank notes.

Mr. HANSELL: It is not done by any department of government?

Mr. RALSTON: No.

Mr. ADAMSON: Are all the coins, including the nickel coins, made at the mint?

Mr. RALSTON: I think so, but I cannot tell my hon. friend for certain.

Mr. ADAMSON: Has there been a shortage of coinage recently?

Mr. RALSTON: Not that I know of.

Item agreed to.

DEPARTMENT OF MINES AND RESOURCES

432. To provide for the expenses incurred under the agreement between the dominion, Ontario and Manitoba confirmed by the Lac Seul Conservation Act, 1928, moneys expended to be largely reimbursed—further amount required, $2,270.43.

An hon. MEMBER: Explain.

Hon. T. A. CRERAR (Minister of Mines and Resources): As hon. members are aware, the Lac Seul Conservation Act was passed in 1928. Under that act certain works of a conservation character were erected at the outlet of Lac Seul. This involved an arrangement between Ontario, Manitoba, and the dominion government. This government pays over to Ontario certain sums which it collects from Manitoba. Apparently last year, for some reason or another, an insufficient amount was voted, and this is to make up the deficiency. The disbursements we make to Ontario are all collected from Manitoba.

Mr. ADAMSON: Is it for power purposes?

Mr. CRERAR: Yes, for power purposes.

Item agreed to.

LEGISLATION—HOUSE OF COMMONS

429. To provide an additional amount, and under the same terms and conditions, to that provided under vote 475 of the Appropriation Act No. 5, 1943, for transportation and living expenses of members of the House of Commons during the Easter recess, 1943—further amount required, $250.

Mr. HANSELL: Although this is a vote for merely $250, I believe it is the only place at which I could make the observations I wish to make—and perhaps what I am about to say will not be any too popular. However, the present high taxation imposed upon incomes is affecting members of the House of Commons to the point where, unless they have certain expenses paid, this parliament will result in a rich man's parliament. I say that because, while some members have other interests, such as professions or businesses, quite a number make the business of being members of parliament a full-time job. In so doing they have no other income.

I am suggesting that if only a slight investigation were made it would be discovered that some members of parliament who attend parliament, with all the expenses involved—and they amount to a considerable sum, because a member has a certain kind of life he must lead—have to get along on a very small amount of money. I know, in fact, that some members have to draw on their indemnities long before they are due.

I understand I have some small support, because I have read, in some of Canada's leading daily papers, several editorials in which the same view has been expressed. I believe the country is gradually realizing the truth of what I have said. Especially is this true in war time, when taxation is high, and when the work of the member of parliament, somehow or another, is doubled. In war time he must attend to many things which in peace time he need not attend to. For instance, I have in mind particularly members who represent large constituencies, some of which are two or three hundred miles in diameter. A member in such a constituency may be requested to address a Red Cross or

salvage meeting, or to appear before a board of trade or a council, and to do so he must travel the width of his constituency. Nevertheless he receives no out-of-pocket expenses. He has to do this on the indemnity he receives, one which, in reality, is supposed to indemnify him against loss of time during a parliamentary session.

I believe it would be only fair if the government were to give some consideration to this matter. We want to bear our fair share of the burden of taxation, but the situation is such that I think we are bearing more than our share, because no consideration is given to our expenses outside the session. I believe it would be only fair if the government were to allow members of parliament a certain amount to cover expenses involved in carrying on their work. I am not alone when I make these observations, because I think almost every member of parliament agrees with what I have said, and I would urge that the government do something about the matter.

Mr. FRASER (Peterborough West): What does the hon. member think would be a fair amount for expenses?

Mr. HANSELL: I do not know; I am afraid I cannot answer that. I do not think any member of parliament wants to make money out of it; but I am of opinion that some regulation could be arrived at which would be fair to all members. On the one hand we may find a city member, the length and breadth of whose constituency would not cover more than a mile or so. On the other hand we find another member who must travel a couple of hundred miles to cover his constituency. From one end of my constituency to the other is a distance of 200 miles. The people at one end of my constituency have just as much right to my services as any organization in the constituency of a city member, but I may have to travel a couple of hundred miles while the other fellow needs only to hop on a street car.

Mr. FRASER (Peterborough West): What would the expenses here in Ottawa be worth?

Mr. HANSELL: I do not know about that. If a member of parliament cannot bring his family to Ottawa he must keep two homes going. No member can live in Ottawa and keep up the position he should at less than what it costs him to live at home, even though he has his family here with him. I am sure if the people were aware of these expenses they would not object to the government allowing hon. members out-of-pocket expenses.

[Mr. Hansell.]

Mr. O'BRIEN: I should like to approach this problem from another point of view. Two or three sessions ago I referred to the matter of taxation, and I was criticized severely by the press, it being intimated I was trying to avoid the payment of the tax. This time I should like to approach the matter from the constitutional point of view. Up to a certain time members of parliament received indemnities, but now they receive salaries. I submit it is entirely unconstitutional for a member to be sitting here representing the people and receiving a salary. Apart altogether from the matters referred to by the hon. member who has just taken his seat, I submit that a most serious situation exists in this parliament at the present time. It should be cleared up. If the tax is to be taken off the indemnity, it should be done by an amendment to the House of Commons Act, which originally gave hon. members their indemnities.

Mr. JAQUES: I should like to associate myself briefly with the remarks of the hon. member for Macleod (Mr. Hansell) and with those of the hon. member who has just taken his seat (Mr. O'Brien). If a member of the House of Commons is paid an indemnity for his services, either the indemnity was too large before the war or, if it was not, it is too small to-day. Because of added taxation, the increase in the cost of living and the extra work that must be performed as a consequence of the war, it would seem to me that the indemnity received by hon. members to-day is much too small.

Item agreed to.

430. To provide an additional amount required for expenses of the special committee on war expenditures under the same terms and conditions as provided under vote 476 of the Appropriation Act No. 5, 1943—further amount required, $1,600.

Mr. GRAYDON: My remarks will be brief, but they would be much longer if it were not for the circumstances. In my opinion this is a good example of wasted money. It is not very often that I make a charge as bluntly as that, but that is what this actually means. Apart altogether from the uselessness of certain parts of the work of this committee, which I am not going to deal with because I have referred to it before, the main reason for this expenditure is the fact that this committee was set up in the dying days of the last session. Therefore it had to sit between sessions and incurred expenses which had to be paid by the taxpayers of Canada.

I doubt if there is anything we can do at this stage except to protest, as I have protested before, against this situation. When this committee was set up so late in the last session

every hon. member must have realized that it would mean money out of the taxpayers' pockets. Had the war expenditures committee been able to sit while the house was in session there would have been no need for these extra expenses. The Prime Minister is not at the moment in the house; so that I shall not press for further details. The most charitable view that can be taken of this expenditure is that it is attributable directly to the situation I have described. I simply wish to make this vigorous and vehement protest against what I think is a waste of public funds.

Mr. GOLDING: That is your opinion.

Mr. GRAYDON: I think my opinion ought to be heard in the House of Commons and I do not want the hon. member to challenge it.

Mr. CHURCH: This committee was appointed some three years ago to carry on a definite task in the darkest hours of the war, but it has outlived its public usefulness. The committee and the system have been weighed in the balance and found wanting. In saying that, I do not wish to reflect upon the hon. gentlemen who compose the committee. It was a very good body of men. However, I protest against the useless system. In the olden days we used to have an auditor general, a Mr. McDougall, who made a great name for himself because of the way in which he checked expenditures. He had the power to veto expenditures which he considered were not within the four corners of the law as it then was. But then the great war came along and that practice was discontinued. Last session I read a letter from the auditor general in which he stated that he had no power to investigate any account incurred under the war appropriation bill which called for four billion dollars. Last year the hon. member for Temiscouata (Mr. Pouliot) referred to this, as did the hon. member for Davenport (Mr. MacNicol) and myself. A comptroller of the treasury was appointed. This officer is a civil servant appointed by the Minister of Finance and under his control. He passes upon all accounts which come within the four corners of the resolution upon the order paper, which is divided into paragraphs (a), (b), (c) and (d). Would any business firm conduct a four billion dollar business like that, without any checks and balances? I do not object to the trips that the committee take, although they are not authorized to take Cook's tours all over Canada. I do not object to that. I have not been able to take any myself. But I am glad that the members see Canada and learn something about the country. It may in the end save some money. But there is a war on and the public think we should have a system of checks and balances over our expenditures. I have had many business men write me on this subject.

The public usefulness of the committee has gone. As I suggested the year before last, we should change our system. At the other end of this building we have what is technically called another place, a very good body of men; sometimes they call it a house. It is not a house at all; it is only half of parliament; you would not call it a house. But it is there, without war work to do, although willing to do it. Why could they not be given the opportunity of doing some more useful work? I read a report of its meeting the other day. They said prayers, took in four new members from Quebec, and then adjourned—and they call that a day's work. The whole business of parliament should be reconstructed and divided in war time. In England, three years before the war, they had long debates on this subject of parliamentary reform, and they reformed the upper chamber and gave it more legislative work to do, looking into accounts and all that kind of thing. They have a real system of checks and balances.

When the Tupper government left office in 1896 our expenditures were $36,000,000 a year, and under Laurier they were $37,000,000. We are now spending that much in three or four days, and when the taxpayer gets his bills he is beginning to wonder about all this expenditure in the fifth year of the war. I do not object to members of the committee taking Cook's tours to the sun or the moon if we are getting value for it, but it was not the intention that the committee should travel around the way it does. They should sit down like the British committee and go over the expenditures. The British committee gets results and changes; it has a big staff of accountants and outside auditors checking the expenditures, and it meets the whole year round and gets some place. But the committee here sits one day and then departs to Montreal or for parts unknown, and then some of them go by aeroplane to Halifax. Let them take all the trips they like. I am not objecting to that. What I am objecting to is the system under which we spend over four billion dollars a year, without any check on it. Any large departmental store that had such a system would go bankrupt, with everybody spending money just as he likes. A letter was read in the house by me not long ago in which the auditor general said he had not control over some expenditures.

The time has come to take action. I move, Mr. Chairman, that this item be reduced to

one dollar. That will give this committee an opportunity to express its dissatisfaction with the conduct of the war expenditures committee. It holds its meetings behind closed doors, like the Star Chamber. I asked in the house the other day if a private member could go into the committee and the answer was: no; you cannot go into the committee. The doors are closed and locked and no private member can get in. But in 1923 when the Canadian National railway estimates were under consideration I asked the late respected Right Hon. George Graham if a private member could go into the select committee on railways and shipping and ask questions, and he announced that any private member could go into the committee and ask questions on any railway matter in which he was interested.

Certainly a change is needed in the system. We should get some public-spirited business men in Canada to act as a committee or royal commission and go over the accounts and make recommendations for retrenchment looking toward a better business system. That would strengthen the hands of the Minister of Finance. I advocated in 1924 and 1925 that we should adopt the municipal system, and the hon. member for Wellington South has been taking that up in the last three or four years. That would enable us to reduce and strike out various items of the estimates. But that policy has not been adopted. We follow the old practice of two hundred years ago under which a minister resigns if his estimates are reduced. To show disapproval I move that this item be reduced to one dollar.

Mr. CLEAVER: Mr. Chairman, on behalf of the members of the committee I think a word should be said. Members of the committee and I are getting fairly well fed up with the constant charges of Cook's tours, giving the impression that the different inspection trips made by members of the committee are not made at their own expense. I want to say positively that every trip made at any time by the war expenditures committee has been made at the personal expense of the members of the committee. The committee members receive a per diem allowance of $12 for every day they are away from home at Ottawa or otherwise on committee business, when the house is not sitting. When the house is sitting and trips are made the members make them in their own time and at their own expense, and no expense account of any kind is payable to any member of the committee when he goes to Vancouver or Halifax or any other place in Canada.

[Mr. Church.]

The hon. member for Broadview says that the Canadian committee is not functioning as the British committee is functioning. In his very next breath he complains of in camera meetings. The British committee has held all its meetings ever since the outbreak of war in camera. He cannot have it both ways. My hon. friend knows better than to make a statement of that kind. Time and again in debates on the subject this house has been told that the Canadian committee is functioning as nearly as can be after the manner in which the British committee is functioning. One feature of the Britsih committee is the fact that all its meetings are held in camera. Our meetings are held in camera, not that we have anything to conceal, but simply that we can better do our job in in camera meetings.

The hon. member for Broadview also stated that the British committee employed accountants, auditors and the like. I took the trouble to have an interview with the chairman of the British committee when he visited this country a year ago, and I was told by him that the committee does not make a practice of hiring accountants and auditors, but is doing exactly as we are doing here. When they need professional assistance or the help of accountants they call them in just as we call in men who are already in the employ of the government in the various departments to assist us in our work. The members of the war expenditures committee were asked to take this work on as a war task and we have approached it entirely from that viewpoint. It is not an easy thing for a member of that committee to spend weeks and months of his time in between long sessions doing this work, which is quite often tedious and tiresome, but I wish to assure the committee that we are approaching it from the point of view of a war duty. We are trying to do our best, and while I do not mind fair criticism I do not like this constant unfair criticism as though the committee simply were going on joy rides and the like.

Mr. FOURNIER (Hull): I was sorry that the leader of the opposition spoke in the way he did about the war expenditures committee. In 1941 this committee was set up, I would say at the request of the leader of the opposition of the day. I recall speeches he made at that time telling us about the war expenditure committee in Great Britain, and that during war time members of parliament should devote some of their time toward assisting the war effort, and that to set up a war expenditures committee here would be one fine way to help the country

in this respect. That year the committee was set up at an early date. They sat until the close of the session, by which time they found that the field they had to cover was so large that it would be well to do what was done in Britain, namely, to sit the year around. The government at the end of the session brought in a supplementary estimate of $25,000 to pay a living allowance to members who during the recess would sit on the committee. That committee sat from July 7, 1941, to some time in September; that is, although it had sat during the session it continued its sittings afterwards. The following year it was again set up at any early date and functioned during the session, and a supplementary estimate of $30,000 was passed at the end of the session to permit sittings during the recess. That fall the committee sat for two and one-half months or thereabouts. The members were not paid any expenses other than an allowance of $15 per diem.

Mr. MacINNIS: Less taxes.

Mr. FOURNIER (Hull): The $30,000 was expended and no further vote was asked for. At that time members of the opposition did not criticize these two estimates. They conceded that it was a good committee, and that it was useful to the government to have a committee of that kind, because the reports it produced served as advice and as a check to the defence departments and the Department of Munitions and Supply, helping them to find ways and means of curbing expenses.

Last year the committee was set up at a late date, but that was not the reason why it sat during the recess. It sat the two previous years during the recess. Another supplementary estimate for $30,000 was voted.

As the hon. member who spoke before me has pointed out, travelling expenses are not paid to the members. Last year, I believe, they received $12 a day when they were on committee work in Ottawa.

I disagree completely with the leader of the opposition when he says that this committee has no useful purpose. If he had experience in that committee; if he knew the work which is done there and followed the procedure, he would find that it is a useful organism of government. Members of the opposition say that it has lost its use because it sits in camera. My goodness, we went over that objection in 1941, 1942, 1943, and it has come back this year. We are convinced and the government is convinced that the committee could not do its work properly if it sat in public. Much of the information given is of a secret nature. We can advise the government as to what should be done to try to economize on some of the expenditures. I have sat on that committee for over two years, and I am still convinced that it is useful and that we should continue to follow the same procedure as we have followed hitherto. Furthermore, I believe the committee should sit during the recess, although it has been appointed early in the session. If one glances over the formidable list of expenditures made by the government in the prosecution of the war effort, it seems evident that this committee should be continuously looking into these expenses and advising the government thereon.

Mr. HANSON (Skeena): This committee, I believe, is one of the best committees which has ever been set up in this house. One reason is that each year since the committee has been set up, all hon. members are advised that if any irregularities have come to their notice in their constituencies it is hoped that they will take the matter up with the committee. Every year I have had a letter from the chairman to that effect, and any time in my territory, which is a big one, irregularities are reported to me, I forward particulars of the complaint to the committee for investigation. I am wholly in favour of the committee being maintained. It is a great help to the individual member, and a great advantage to the general public who are thus enabled to put grievances before a committee of parliament.

Mr. RALSTON: I wish to say one word before the item passes, and that is with reference to what was said by the hon. member for Broadview. I got the impression that in his view this committee was the only agency which stood between the taxpayer and anyone who was spending money, and that it was the only check which was made on the public accounts in so far as war expenditures were concerned. If that is the effect of what the hon. member said, I believe he is entirely in error. I have before me the combined public accounts in their new form for 1943. My hon. friend suggested, I believe, that war expenditures were not under the auditor general, and that this committee was the only checking agency in regard to war expenditures which was available for the benefit of the taxpayer. I would refer my hon. friend to pages 8 and 9 of part II of the public accounts for 1943. There he will find not simply the ordinary expenses but the special expenditures and the war appropriations, all set out on those two

pages, and at the bottom appears the certificate of the official who, the hon. member says, has nothing to do with these war expenditures. That certificate reads:

The accounts of expenditure, which are associated with the foregoing statement, have been examined under my direction, and subject to the relative observations in my report to the House of Commons made in accordance with the provisions of the Consolidated Revenue and Audit Act, 1931, I certify as the result of my audit that the statement is correct.

That is signed "Watson Sellar, Auditor General".

I hope my hon. friend will be relieved by that of his misapprehension that the committee is the only form of check which the public have.

I do not think I need add anything at the moment to what has been said about the committee and its work. For some reason or another the work of the committee is minimized by some hon. members, particularly by the leader of the opposition and the opposition generally. I do not understand why they reiterate that it is not doing effective work because it is sitting in camera. That is just an instance of how the repetition of a fallacy develops in the minds of some people the idea that it is the truth. As a matter of fact, this committee has done exceedingly valuable work. It has been stated time and time again that it is set up and functions exactly as the committee at Westminster does, and that statement has been verified in interviews with those who have had to do with the committee's work at Westminster and know the procedure which is adopted there. The question being raised on this particular item with regard to expenses is a reflection on the committee, because, as has been pointed out, travelling expenses are paid by the committee members themselves. I do not think the committee needs any defence at my hands; its members, and in particular the chairman, are quite capable of taking care of themselves; but I simply wish to assure them that the opinion expressed in some quarters with regard to their work is not held by the people of Canada generally or by the great majority of the members of this house. They work diligently, and while they cannot go over all accounts, at the same time they provide a means of checking on certain accounts and no one knows where they will strike next. All of that helps toward the proper keeping of public accounts and the maintenance of regularity in public expenditures.

[Mr. Ralston.]

I rose particularly to put on record the real situation with regard to the check provided by the auditor general not only in connection with ordinary expenditures, but in connection with war expenditures as well.

Mr. MacINNIS: I do not rise to discuss the work of the war expenditures committee particularly. I do not think it would be wise for us to turn down the appropriation since it is for work that has already been accomplished, for expenditures that have already been incurred. For that reason I think this committee should pass this item.

As regards the work of the war expenditures committee itself, having been a member of that committee the first year it sat, 1942, I am quite convinced that it can render an important service. I am also of opinion that much of the reason for holding the committee meetings in camera has disappeared, and now that the war work has been got well under way there is every reason why these hearings should be held in public. There are certain matters that should not be divulged in public and they could be discussed in camera. It has been said that possibly one reason why the meetings were held as they were was that we could get more information from subordinates in departments. There is a way in which that can be remedied. A man coming before the committee can be sworn—I do not know whether that is done—and when he gives evidence he will give evidence of that which he knows, and does not hold anything back. I pass that on to the members of the committee as my own opinion. I do not think we should hold up the item.

Amendment negatived: Yeas 12; nays 73.

Item agreed to.

GENERAL

431. Printing of parliament, including salaries of staff of the joint distribution office—further amount required, $15,000.

Mr. FRASER (Peterborough West): There is a standing committee on printing which sits for about fifteen minutes each session. It never discusses any printing of the house except sessional papers, to ascertain whether they shall be printed or not. In my opinion the committee should have some say as to what is printed. Members always see copies of divorce bills, but I do not think there are more than five or ten members who read them at all. It is an absolute waste. It should be done away with, or members should be asked whether they want them or not.

Item agreed to.

DEPARTMENT OF NATIONAL REVENUE

Income tax division—

433. District offices—further amount required, $138,500.

Mr. FRASER (Peterborough West): Will the Minister of National Revenue consider putting in a branch office in Peterborough, and perhaps in other places as well? Other members may want offices in their ridings, but we have a large industrial city, and with income tax papers as they are at present, though the forms are supposed to be very simple, I believe that even some of the income tax officers would find it difficult to make up some of them.

Hon. C. W. G. GIBSON (Minister of National Revenue): The matter will, of course, receive consideration, but at the present time the difficulty of securing qualified accountants militates against opening up new offices. It would be difficult to get sufficient qualified staffs to man any more offices than we have at present. It is quite difficult to keep up the staffs in the offices we already have.

Mr. FRASER (Peterborough West): I made a suggestion to the Minister of Munitions and Supply with regard to muntions plants in places where that department has offices of its own. I suggested that those offices have men there to look after the income tax forms of workers in the plants. The workers in the plant at Peterborough have to make out their forms and then buy money orders and send them to Belleville along with their income tax forms. That puts a double tax on the wage-earner.

Mr. BURTON: The sum of $138,500 seems a rather large amount for a supplementary vote. Would the minister be good enough to explain how it comes about that he was not able to make a closer estimate?

Mr. GIBSON: The increase has occurred chiefly through the greatly increased number of taxpayers and the new method of collecting the tax. Postage alone amounts to $100,000 to take care of a very large number of additional returns that are being filed, which are collected by the district offices and sent to the head office. That is the largest item of the total amount. Travelling expenses amount to $22,000, and that again is occasioned by the increased number of taxpayers, which has caused higher travelling expenses.

Mr. HANSELL: This is a tremendous amount, which appears to be an expansion of the income tax division. I would suggest that one thing that would be acceptable to perhaps 100 per cent of the people of Canada would be that the income tax division be done away with altogether.

Mr. TUSTIN: The minister said that there was a great shortage of chartered accountants. What would be the percentage of accountants in each district office?

Mr. GIBSON: It varies with the size of the office. Some offices have a larger number of accountants, while in smaller offices we probably have only one or two.

Mr. TUSTIN: How often are the district income tax inspectors called to Ottawa to be given instructions or to get an interpretation of the income tax law? Are they all called at certain times? I ask this question because it seems to me that in some of these offices there are no two employees who can figure an account exactly the same. I suggest, therefore, that the income tax inspectors should be brought in to what one might call a school, at least once a year, and given instructions which they could impart to the employees.

Mr. GIBSON: That has been done. They were all in during the past year. In addition, we have three regional inspectors for central, western and eastern Canada who visit the local offices.

Item agreed to.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

DEPARTMENT OF NATIONAL WAR SERVICES

434. National film board, including the motion picture bureau—further amount required, $104,000.

Mr. ADAMSON: For some time there has been a growing feeling that the work of the national film board has been devoted to a type of propaganda far beyond and in excess of the reasons which brought about the creation of that board in the first instance. There has been a growing suspicion that the film board has become a propagandist for a type of socialist and foreign philosophy; heretofore it was merely an instrument of propaganda for the government. It is still an instrument of propaganda for the government, but it has become an instrument for the spreading of propaganda which is foreign to our Canadian way of life, and in a moment I shall show the minister what I mean.

I should like to point out why I regard this matter so seriously. The film has come to be the supreme vehicle of propaganda to-day. It takes precedence over the written word in the newspaper and the spoken word

on the radio. Not only does it combine the written word with visual action; it takes in also the spoken word, and it does all this in surroundings which lull the subject into a sense of confident security, and put him into a receptive frame of mind. The Wallman theory shows a direct ratio between the efficiency of the newspaper, the radio and the film; and I feel safe in predicting that, as time goes on, the newspapers of the country will have reason to appreciate fully the seriousness of what is happening. This is a most sinister situation, because they get the adolescent mind in a receptive mood, in comfortable surroundings, and spray it with an anaesthesia of propaganda which in most cases it is not capable of resisting. The function of the film board in England has been merely to assist the government and to explain various government policies. It has done excellent instructional work concerning rationing, health measures, security regulations and other matters. No doubt our film board has done similar work, but the Canadian board has stepped out of character and undertaken to promote a philosophy foreign to the Canadian philosophy.

Before continuing with this discussion, I should like to quote from an article written by one who is considered perhaps the best moving picture critic in the city of New York, appearing in this week's issue of the *New Yorker* and dealing with documentary films. The first part of the article deals with "Desert Victory," and the new picture, "Tunisian Victory," and then goes on with this interesting paragraph, which I shall read to the committee because I think hon. members will be interested:

> Speaking of documentaries, the latest "World in Action" short is Russia's foreign policy, the strongest statement of the Russian point of view that has come from any place but the U.S.S.R. It maintains—and it will take no back-chat—that the comintern was a protective measure, as was the German-Soviet pact, and that Russia is a youthful, zestful, oppression-hating state with a spirit that should be shared by the rest of the world. The film is typical of the "World in Action" series in its smoothness and economy of expression. Every foot of the film makes a point, and the editing of dozens of library shots —news reels and Russian movies of all ages—has been canny. Russia's foreign policy toward the national film board of Canada, which makes this series, should be fairly amiable.

This publication certainly has no political animus; this is merely a factual criticism of this series, which is put out by the national film board. Perhaps the more that is known about Russia, the better; and from time to time I have advocated that a chair of Russian studies might be inaugurated at one of our universities, because this is an interesting and very important social experiment. My objection is that we have a national instrument of government that is obviously putting out soviet propaganda. I feel strongly that it is not the duty of any vehicle of government to put out propaganda concerning any foreign country. The film board should be a Canadian film board and it should put out Canadian propaganda. If we have anything to sell, it is ourselves. The whole trend of this propaganda is dangerous because it is not delivered solely to adult minds. I would suggest to the minister that very careful investigation be made into the operation of this board. This is not the first time that this question has been brought up. There was another film put out called "Our Native Land". It was released by a French motion picture company in New York and released in Canada by the film society. Paul Robeson took a prominent and leading part in that film. There is nothing wrong with the showing of a film on Soviet Russia or even showing films on anybody else's philosophy; in fact the more accurate information we can get, the better; but my objection is that it is not the function of a government-controlled operation to undertake this work, which is being done, according to the information I have.

Hon. L. R. LaFLECHE (Minister of National War Services): Would the hon. member for York West be kind enough to give me the name of the picture which has offended him? If he does so, I assure him that I shall see the film and, if necessary, will have other gentlemen see it, so that I also may have an appreciation of its value or otherwise.

I think it must be granted by all concerned that one cannot go to a radio producer and say, "I want the equivalent of a tailored suit of clothes." Necessarily a great deal must be left to the man who writes the script. The same thing applies to the production of the film. I agree that one philosophy should be followed by the national film board, namely, Canadian. May I say that if we are strong Canadians we, at least the adults, shall be strong enough to see some of the things that are going on in other parts of the world. I am sure my hon. friend agrees with me there. I come back to my original question. I ask him to be good enough to give me the names of the films and I shall have a look at them.

Mr. ADAMSON: "Our Native Land" is one of them and "World in Action" is the other. I agree with the minister that we should have information concerning other lands, but I disagree with him that it is the function of a department of this government to do that

work. That is my objection. I have no objection to communist propaganda. It is an interesting subject and we should know more about it. No matter what the foreign philosophy is, we should study it; but my objection is that it is not the function of this government or any other Canadian government to undertake that task.

Mr. LaFLECHE: I shall look into the matter and give it very careful consideration.

Mr. GILLIS: I did not intend to say anything on this matter, but the remarks of the hon. member for York West have placed most of us in the position where we should say something.

Since the present session of parliament opened, the national film board has made it possible for hon. members to assemble every Tuesday in a room in this building to get some knowledge of the work they are doing. Personally I am very well pleased with the contribution that the national film board is making toward clarifying the minds of the Canadian people with respect to what is going on in the Soviet Union. I do not agree with the statement that was made by the hon. member for York West. He said it was not the duty of a department of government to take the responsibility of clarifying the minds of the Canadian people, poisoned over a number of years, with respect to what was going on in Russia. It definitely is the government's responsibility. If it is not, whose responsibility is it? Does the hon. member for York West want to place the education of the Canadian people with regard to the affairs of one of our most important allies at this time back in the hands of those who carried on that education for the past twenty-five years? If he does, I think he is going too far. I believe that the Canadian government should have interested itself in this question many years ago. Members of this House of Commons are under a debt of gratitude to those who are conducting the operations of the national film board. They are making one of the most important educational contributions to the Canadian people that could be made at this time. It is definitely the responsibility of the Canadian government to place every facility necessary and available at their disposal in order that they may do that job fairly and impartially.

If the economy of our country and the philosophy behind it is correct; if there is nothing wrong with it; if we have nothing to fear in comparison with any other country, the national film board are telling the truth in their films. They are showing the situation as it actually exists. I have sufficient confidence in the judgment and the intelligence of the Canadian people to believe that, regardless of anything they may see or hear with respect to the organization of this country in the future, they will do their job in their own way. I definitely deprecate the remarks made by the hon. member for York West. I consider it is an insult to the intelligence of the Canadian people.

Mr. McIVOR: I suggested last year and the year before and I would suggest again that the film board should take pictures of perhaps the most beautiful scenery in Canada, Kakabeka falls with a 90-foot head, lough Lomond, Mirady park and mount McKay, which would show well all over Canada. It would not only advertise the head of the lakes but all of Canada.

Mr. GRAYDON: Would you have the hon. member's picture with it?

Mr. ROSE: I have thought it my business to go down on Tuesday and Thursday nights to see some of the pictures. They were fine pictures. I have read reviews in the United States papers about different pictures and they offer high praise for the films put out by the national film board. However, I am surprised when I find people attacking a picture about the Soviet Union, an ally that is doing so much fighting, an ally for whom we have a lot of admiration, but an ally for whom some people have nothing but a good word now and then, and no more. They will not let the people find out anything about that country. A continuation of this policy will lead to catastrophe. We should fight it every time we see any signs of it coming back to life.

I visited the Soviet Union in 1930 and I was in Stalingrad when the great tractor plant there first started producing. Lately I saw a film which showed that there was nothing left of the Stalingrad plant. The people of Russia have paid with their plant and with their blood. When I came back to this country in December, 1930, and told people what I had seen they said, "You have been looking through rose-coloured glasses; you saw what you wanted to see." A few weeks after that the Bennett government put on an embargo against products from the Soviet Union. This was sheer stupidity because we were importing very few commodities from the Soviet Union. Canada produces about ninety per cent of the world's asbestos, and shortly after that time I visited the asbestos producing area and was told by the people there that this action had been taken because

Russia was dumping asbestos in Canada. This was because of the lies spread about that country. To-day some people still try to slander the soviet people. This sort of action comes from the hon. members to my right. It appears that the spirit of Bennett is prevalent in their ranks.

Mr. HANSEL: I was not in the house when the hon. member for York West (Mr. Adamson) was speaking, but apparently he referred to certain films which have been shown lately and which depict life in the Soviet Union during these war days. I have no objection to seeing a good show or a good war picture, whether it shows activities in Russia, Italy, North Africa or any other country. In motion pictures we have a most powerful medium of propaganda and I think we should try to arrive at a proper balance in the pictures shown. Recently I saw a picture; I believe its title was "Russia at War", and I must confess that I was tremendously impressed with the fortitude of the Russian people. It was a most powerful picture, and it was powerful propaganda. All pictures of that type are propaganda, whether they are meant to be or not.

As I saw that picture I asked myself, how many pictures showing Canada's war effort or pictures showing the war efforts of Great Britain and the United States are being shown in the theatres of the Soviet Union? We have produced some good pictures of our own war effort. Not many months ago a picture was shown entitled "London Can Take It", showing London after the terrible bombardment of the blitz. Pictures of that kind should be shown in other countries, including the Soviet Union.

I ask the minister, how many pictures produced in Canada—I do not confine my question to the "Canada Carries On" series, although that should be included—have been exported to be shown in other countries, and in what countries have they been shown? If the minister cannot give the information to-night, perhaps he will furnish it at some other time.

Mr. LaFLECHE: I am sorry I cannot tell the hon. member for Macleod the number of Canadian pictures that have been exported. Many have been exported, especially to the United States. Canadian pictures go to the British isles and to the British dominions. Our trade commissioners and diplomatic corps see to the distribution of Canadian pictures. There have been some inquiries about, if not orders for, Canadian pictures for Russia. I regret I have not the figures this evening, but if they are required I shall be glad to make them known later on.

[Mr Rose.]

Mr. HANSELL: A moment ago I said that motion pictures constituted a most powerful medium of propaganda. What I am going to say now is not said in any sense of harsh criticism of the government. At the present time the government is in a rather preferred position with respect to propaganda. Any picture that portrays Canadian war industry has a psychological effect upon the people. They are inclined to think what a good government they have.

Mr. GRAYDON: They would not take on a big task like that, would they?

Mr. HANSELL: I do not mean this as harsh criticism because I suppose it is quite natural. I imagine any government in power would make use of such a department to propagandize its own work.

An hon. MEMBER: They would not do that.

Mr. HANSELL: I would not say that. For instance, we see a picture of a factory going at full blast; perhaps the factory is just being officially opened, and on the screen we see the smiling countenance of the Minister of Munitions and Supply (Mr. Howe) who makes a speech into the microphone. Whether we like it or not, there is a psychological reaction in favour of the present government. Of course, it would depend upon whose face is shown on the screen, because it could work the other way. I would suggest that in any pictures which the national film board may take in future of the various political groups in Canada, it be fair to all groups. I could illustrate what I mean, but I shall not take the time to do so now.

I think we are all interested in our Canadian institutions, and one of our Canadian institutions is the Canadian Broadcasting Corporation. I visited Toronto a few weeks ago and met some of the officials, the men who are in harness operating the Canadian Broadcasting Corporation's programmes. I must confess that the C.B.C. was sold to me, and I determined that I was going out to try to sell the C.B.C. to the country, provided that it does not make any mistakes to cause me to do the very opposite. I suggest that the national film board could do something to put over the Canadian Broadcasting Corporation in Canada. A film showing some of the equipment used, for instance, or the way in which electrical equipment is worked would be interesting. That is one way in which they could be of service to the Canadian people.

Mr. GRAYDON: If they could get a picture of the general manager, that would help, too.

Mr. HANSELL: We might have that picture one of these days. I understand that the national film board or some department of government assigns somebody to travel and show these motion pictures. I do not know what pictures they show, but I would make this observation and give this warning that if we are not very careful, the circuits can become propaganda media for the government that is in office. With that observation I would ask the minister how many of these circuits there are in Canada and what type of film is shown by the men who are employed going around the circuits.

Mr. LaFLECHE: I presume it is rural circuits the hon. member has in mind. There are over sixty of them. My hon. friend need not fear that these circuits will be used for government propaganda. The pictures are chosen to meet the wishes of the local audience, scenes that will interest them. If there were anything of that nature to fear, I think the national film board had better be afraid of the possibility of using the circuits for propaganda purposes. But I do not like to have the feeling that it is necessary always to be fearing this or that. We are dealing with Canadians who are capable of thinking and dealing with matters for themselves, and they certainly warrant our having confidence in them just as we hope they will have confidence in us in this House of Commons.

Mr. HANSON (York-Sunbury): Did the minister never hear of the power of suggestion and of psychology?

Mr. LaFLECHE: Yes, I have.

Mr. HANSON (York-Sunbury): It is a very important factor.

Mr. CASTLEDEN: As an influence in education in Canada the national film board stands very high, and its vast possibilities are just beginning to be realized. I think Canada has been fortunate in having Mr. Grierson to lead in the growth of that organization. He appears to have imagination, ability and a knowledge of his work. It is most important, it seems to me, since these films are such an influence in our Canadian life, that they should at all times portray the truth. The trouble in the past with so much of our education in Canada by way of the press, particularly with regard to such things as the story of what was happening in Russia, is that it has not, I am afraid, been based on the truth, and we have later found out to our sorrow that the Canadian people were being fooled. I had hoped that the minister, when he replied this afternoon to the hon. member for York West, would have given the assurance to the committee that the films used in this country by the national film board have been based on the very latest facts that it is possible to obtain. If that is the case, we need have no fear of the consequences. Canada is fortunate if she can present the truth in this fashion at a time when the world is influenced so much by propaganda.

Mr. ADAMSON: The hon. member for Cape Breton South and the hon. member for Cartier have misinterpreted my remarks as being a criticism of the Soviet Union. They certainly were not so intended. I was the first member of this house to advocate the official recognition of the Soviet Union by the Dominion of Canada. My reason for bringing the matter to the attention of the minister was this. I still do not think it is the duty of a government body to put out films concerning the foreign policy of any country. We have seen magnificent Russian films, the story of Stalingrad, the story of the Red Army, the navy film—"The Red Poppy" I think it is called—excellent documentary Russian films, but still I do not think it is our business to portray the way of life of the Russians or the French or the Americans or any other nation. It is up to them to tell their own story, and it is up to us to tell ours. That is the reason why I brought the matter to the attention of the minister.

Mr. LaFLECHE: May I assure my hon. friend that that is what I am going to study. I will see the picture and look into the matter. May I remind hon. gentlemen that twice a week the national film board comes to this house and shows pictures, so that members of parliament, of both houses, may learn what is being done by the board. May I say, in addition, that if any hon. member desires to see a particular picture which is in the library of the national film board, it will be shown here with great pleasure.

Item agreed to.

POST OFFICE DEPARTMENT

436. Post offices, including salaries and other expenses of headquarters and staff post offices and supplies and equipment for revenue post offices—further amount required, $676,000.

Mr. MacNICOL: Sometimes we criticize the ministers, but occasionally we have an opportunity to say something in their favour. A few days ago on the train to Toronto I sat behind two gentlemen who were praising the Postmaster General very highly. I asked one

of them if he knew the Postmaster General. He said: "Yes; I am a postmaster myself"; and the gentleman sitting beside him said the same thing. I said, "How do you find the Postmaster General?" "Well," he said, "he has been a great help to us." I made up my mind that on the first occasion I would bring that tribute publicly to the Postmaster General. In doing so, I hope he will not compare me with a Greek bearing gifts if I ask a favour for the Toronto "posties." The minister knows well the situation in Toronto, and he will agree that there is no part of the public service which does a better and more onerous job, and whose members are more faithful, than the postmen not only of Toronto, but of all the great cities. The burdens they carry are terrific, particularly around Christmas time. I have attended a number of their meetings and heard them tell of their remuneration, which is so small that I could hardly believe it. All I have to ask the minister, and that as a favour not to myself but to a large body of faithful government employees who richly deserve much more than they get, is that between now and the bringing down of the main estimates he carefully look into and review the remuneration paid to the "posties," and if he concurs in what I have said, that he bring in supplementary estimates, if sufficient is not provided in the main estimates, to give fitting and fair remuneration to the postal service of Canada.

Mr. ROSS (St. Paul's): I brought this matter to the attention of the house on February 3. The wages paid to postmen are out of line with those received by all other public servants in our city, particularly firemen and policemen. This question has been brought to the attention of the minister for several years, but nothing has been done about it. The whole range of salaries of the postal service in Toronto is long overdue for overhaul and a change. These fellows are doing a wonderful job, especially in war time. I agree with the hon. member for Davenport that something should be done; I know he has brought this subject to the attention of the minister before now. It has always been a surprise to me that we have not been able to get some action in this matter.

Mr. BURTON: I find myself somewhat at a loss to understand why, in an old-established department, a supplementary vote should be as large as $676,000. Would the minister care to explain it? When I turn to page 7 of the further supplementary estimates for an explanation, I find, "cost of living bonus and other pay-list items, $211,000," which is a brief explanation; then there is, "temporary assistance" amounting to nearly half a million dollars. Is it not possible for the minister and his department to estimate their requirements a little closer, or why is so large a supplementary vote found necessary now?

Hon. W. P. MULOCK (Postmaster-General): May I deal first with the question of the hon. member who last spoke? That $676,000 is divided into three items. The first one, $115,000, is for salary expenditure exclusive of increases granted under the provisions of order in council dated November 17, 1943. It is expected to be in the neighbourhood of $15,640,000, whereas the vote is only $15,524,995, leaving a shortage of $115,000. The reasons are these: first, the increase in temporary staff over and above the provision made in the main estimates, which were prepared in the fall of 1942; second, assistance required to handle the Christmas rush of work cost $470,000, whereas only $350,000 was included in the salaries in the main estimates for that purpose. The shortage cannot be adjusted by transfers from a vote on the estimates of one branch to that of another. The second item is $350,000. This is required to pay increases granted to permanent and temporary employees under the provisions of order in council P.C. 194-8855, dated November 17, 1943. This takes care of 2,089 employees, of whom 630 are permanent and 1,459 are temporary. The third item is $211,000. This is for the cost of living bonus. The The shortage in the ordinary expenditure is estimated at $188,000, owing to the fact that treasury board directed that provision in the 1943-44 main estimates be restricted to the amount payable on September 30, 1942; therefore no provision could be made for the larger staff which we thought would be needed. The additional bonus payments resulting from increases granted under order in council P.C. 194-8855 are expected to reach $23,000, making the total expected shortage of $211,000. That makes up the $676,000.

Mr. TUSTIN: When I look at this amount of $676,000, and then at the detail on page 7, I am somewhat surprised that the minister did not see to it that greater detail was given on this page. The item states, "including salaries and other expenses of headquarters and staff post offices and supplies and equipment for revenue post offices," but in the detail nothing is stated about supplies to these revenue post offices, and the item of $465,000 is stated to be for "temporary assistance". Surely a department such as the minister presides over should not have to carry

an item of that size for temporary assistance. If it is necessary to have that amount of assistance, I suggest to the minister that they should be permanent employees.

In the next item in "details" it says, "cost of living bonus and other pay-list items". One question I wish to direct to the minister is, are the rural mail carriers included in the cost of living bonus; if not, has any increase or bonus been paid to them since the war began? Then I should like to direct to the minister a question which I believe was put to him and to this parliament by the leader of the opposition at the last session. The suggestion of my leader was that a parliamentary committee be set up to study the problems of rural mail carriers. If I remember aright, the minister at that time said that he would give consideration to the matter. Has that consideration been given; has the minister decided to set up that committee, and if not—

Mr. HANSON (York-Sunbury): Why not?

Mr. TUSTIN: —what conclusion has the minister arrived at; and, as my hon. friend says, why not?

Mr. MULOCK: In these further supplementary estimates there is no item for rural mail carriers, but I shall be glad to consider the question on the main estimates.

Mr. HANSON (York-Sunbury): This is a post office estimate.

Mr. TUSTIN: I am asking whether a cost of living bonus is paid to rural mail carriers and, if not, why not, when other employees are paid such a bonus.

Mr. MULOCK: I have certain items to deal with and I have the information regarding them, but I did not expect the hon. member would be asking questions about matters that are not included in these estimates.

Mr. TUSTIN: I am not asking about any items not included in this estimate. This speaks of a cost of living bonus, and the question is whether rural mail carriers are included in that bonus. If not, why not?

Mr. MULOCK: No.

Mr. HANSON (York-Sunbury): The minister complains that he should not be asked about increased compensation to rural mail carriers because it is not in this item. It is the privilege of the opposition to inquire why not, why provision is not made for some increases for rural mail carriers. There is not a class of people in the public service of this country who are more poorly paid than the rural mail carriers. Our page boys get more money than the rural mail carriers and it is an everlasting disgrace to the country and to the department. I know at once what the answer is, that they are not employees but contractors. That may be good enough in normal times, but with the cost of operation going as high as it is in this war, some consideration must be given to the plight of some of these people who are being held strictly to a contract. I believe that in some cases that has happened, and I suggest to the minister that the whole policy should be reviewed for the period of the war.

I am sure there is not, within the sound of my voice, a member representing a rural constituency who does not agree with the principle for which I am pleading to-night, that these people who took their contracts pre-war at low prices, in competition if you will, and who are now bound by the terms of a legal contract, should have the right to a reinvestigation and renegotiation of their contracts in the light of what they are asked to do.

I do not believe there is an employee in this house who receives a lower rate of compensation than the rural mail carriers, and it does not reflect very much credit on us, and certainly not on the department.

While I am on my feet there is another matter to which I would refer. A few weeks ago I made an inquiry of the Postmaster General with reference to the plight of certain railway mail clerks in my own province who, on what they considered the best of advice, did not elect to take advantage of the offer held out by the government twenty years ago to come in under the new scheme of the Superannuation Act, and who to-day find themselves in a precarious position with respect to their retiring allowances or whatever comes to them when they go out of office, because of reduction in the rate of interest allowed.

I am not going to go into into any further details. The minister is quite familiar with the matter, and the assistant deputy minister was good enough to explain to me the legal aspects and the effect on the men. At that time the Postmaster General indicated that it was a matter of policy for the Department of Finance. I suggest to him that he has some responsibility in trying to convince his colleague of the justice of the claim of these men. I could put the whole matter on *Hansard* in detail, but I am not going to do so. The minister knows the problem to which I refer and I bespeak from him, not generosity but justice for these men, who after all are really only a small group and whose request would not represent a great charge on the public revenue. I ask for justice for them and I ask for justice for the rural mail carriers of Canada.

Mr. MULOCK: The hon. member for York-Sunbury will be glad to know that a substantial number of contracts with rural mail carriers have been reviewed where men have written in and stated that under present conditions they were unable to carry on because of increased cost. They have been given increases. I think it is probably well known to a large number of members of the house that where a man has claimed that he is not fairly treated his contract is reviewed and in many cases an increase has been given.

Mr. TUSTIN: He was not asked to resign from his position or to give up his contract before the increase was made?

Mr. MULOCK: It is given as a war bonus. It is not a permanent thing and does not affect his ordinary contract. He gets the bonus on account of war conditions.

Mr. TUSTIN: That is the question I was trying to ask the minister, if any of these men were given cost of living bonus—

Mr. MULOCK: It is not a cost of living bonus.

Mr. TUSTIN: —and if not, why not? When every other employee in the government receives a cost of living bonus, why should not such a bonus be given to the rural mail carriers?

Mr. MULOCK: As a matter of fact, many of these men are a great deal better off under this arrangement than they would be under the one suggested by the hon. member. The cost of living bonus would be of very little help in many of these contracts. It might be in some, but in some of the more difficult contracts it would not, where men with competitive tenders went very low in certain cases. The hon. member for York-Sunbury knows they had the same problem when he was a minister. Unfortunately, a man thinks he can make money but does not realize the expenses of carrying on, so that he undercuts somebody else, gets the contract and then finds that he is losing money. It is a very difficult matter. The government has studied it and tried to bring about an improvement, and we think the fairest way is what is being done now. We are giving what one might call a war bonus. These cases are investigated by the department and, where the claim is borne out, consideration is given. We do not want persons to be slaving and losing money on a contract. If we are to give the people of Canada good service we have to have contented employees, and as far as I am concerned I will do what I can to see that they are fairly treated and are contented.

[Mr. R. B. Hanson.]

Mr. GRAYDON: May I ask the minister what has happened to the suggestion I advanced last year, referred to by the hon. member for Prince Edward-Lennox, with respect to a special committee of the house in regard to the rural mail carrier problem. I make the suggestion because, whatever the palliative may be, it is a war time palliative at best, and the whole problem will be on the doorstep of the administration. It may not be on the doorstep of the administration now in office, because we have to look a little farther than that. I would like the minister to reconsider the problem in the light of present circumstances. Perhaps he would consider setting up a special committee of the house to deal with it. Surely there cannot be anything wrong with that suggestion, because after all I do not see why the minister should refuse to allow a committee of members who know a good deal about this matter to review and study the whole problem in the hope of proposing a solution satisfactory both to the treasury and to the contractors themselves.

Mr. HATFIELD: Have any increases been given contractors unless the contracts have been renewed? The increases I have heard of have been given only where contracts have run out and have had to be renewed at higher prices. Hundreds of men took these contracts in 1941 at low rates, and they have received no increases at all.

Mr. HANSON (York-Sunbury): How many rural mail contractors are there, and how many have received increases under the circumstances to which the minister has referred? The number is relatively small, I think.

Mr. MULOCK: I shall be glad to get that information and give it to the committee.

Mr. HANSON (York-Sunbury): What about the other request I made of the minister in regard to the railway mail clerks, who consider that they have a substantial grievance. Is the minister promoting their claim with the government, and will he continue to do so until success crowns his efforts?

Mr. McILRAITH: Since the question of the retirement fund and the Superannuation Act has been opened up under this item, I presume we are at liberty to discuss those matters fully. I take it that the hon. member for York-Sunbury has in mind the right of the railway mail clerks, who are contributing under the old retirement fund, to re-elect for the right to come under the Superannuation Act of 1924.

Mr. HANSON (York-Sunbury): That is it exactly.

Mr. McILRAITH: If that is the question it is most interesting. I had hardly expected that a discussion of it would have been permitted under this item.

The ACTING CHAIRMAN (Mr. McCann): The hon. gentleman is out of order in discussing superannuation under this item. I might have called the attention of previous speakers to the fact that they were also out of order in discussing rural mail contracts, but having failed to do so is no reason for letting this go further. A discussion of superannuation does not come within this item.

Mr. HANSON (York-Sunbury): I am obliged to the Chairman for his forbearance.

Mr. McILRAITH: I merely wanted to discuss the exact point raised by the hon. member for York-Sunbury, Mr. Chairman. Do I interpret your ruling to mean that I am not entitled to pursue that subject farther?

The ACTING CHAIRMAN (Mr. McCann): It is out of order.

Mr. NEILL: May we proceed with the debate in connection with the rural mail carriers?

The ACTING CHAIRMAN (Mr. McCann): No; it is out of order.

Mr. NEILL: I put it to the committee if I am not as much entitled to speak on this matter as were hon. gentlemen who preceded me. I think some hon. gentlemen to my left do not thoroughly grasp the situation, nor do I think the minister was quite as frank as he might have been in describing it. Most of us will remember that last session the minister announced, much to our gratification, that certain orders in council had been passed dealing with this situation. He took credit to himself and to the government, quite naturally, for his generosity in dealing with the matter, as a result of which the lot of these men would be improved. But he was not quite so altruistic in his actions as it might appear. The real reason why increases were given—and they were given, or at least arrangements were made for some increases—was that the government found they would save money by doing so. The cost of living, and expenses in connection with running a car, have increased so enormously that men were throwing up their contracts. Perhaps they would come to the government and say, "We cannot carry on like this", but the government would reply, "Well, we have two sureties." Often, one of them might be a parson, who would not know anything about running a rural route; but the government would add, "We will hold you to it". A great many of the rural carriers quit, and then the government had to put up the routes at public auction. As a result they had to pay much larger sums than they had been paying previously. Therefore they said, "We do not want to do this. If a route is put up at auction we will have to let it for four years at a high rate, so that perhaps we had better compromise". Accordingly they made inquiries and found that many of the rural carriers, who always take their contracts at less than they should, were willing to compromise. They said, "If you will give us a little extra money while the war is on, to meet the extra cost, we will not mind going back to the original lower rate at the end of the war". That seemed reasonable, and orders in council were passed providing that some official of the Post Office Department should consider the situation and, where it was found that the rural carrier was doing the work for a price at which he could not really work, with the increased cost of living, then he would be given more money for the duration of the war, with the understanding that after the war was over he would have to go back to the lower rate.

This satisfied the government, because as a result they had to pay the extra money only during the war and were not saddled with a four-year contract. It satisfied the rural carrier, because he had been willing to carry on the work at a low rate previously, and when costs went down he would be willing to continue at that low rate again. That would have been satisfactory if the arrangement had been carried out in the right spirit, but that was not done. The hon. member for York-Sunbury wanted to know how many rural mail carriers there are. I think the number is around thirteen thousand. We know that the price of a rural route is decided by public competition; the public decides what it is worth. It may be a little higher in this part of the country and a little lower in another part, but it is worth whatever the public says it is worth, at a very low estimate. It is always taken at below a reasonable price. I said to one man, "Instead of being helped, you should be ashamed for taking the contract at such a low rate". He replied, "Well, I had a Ford car and a bit of a pension, and I thought it would work out all right". He is not paid a pension in order to permit him to operate a rural mail route at less than its value.

To my mind it would have been a reasonable thing—and I spent most of last fall arguing this matter—for the government to take the prices which the public had made these routes worth. Then they would have had a guarantee that the price in future would be in proportion to what the public had said

it should be originally, whether that price was fifteen cents a mile in one place or twenty cents in another. Then I suggest the fair way would have been to say, "Well, we will raise all of you five or ten or whatever percentage is thought reasonable." That was not done. The matter was put into the hands of one official, probably a very fine official. I know him personally, and I am glad to say that I think he is my friend, but he had not been over all these routes. As far as my district is concerned, I have been over every rural mail route in it. This official went to work and said to one man, "You are getting fourteen cents a mile now and you want eighteen cents. Well, you will not get it; I think fourteen cents is enough." Then he would buttress his case by saying, "The man next to you is getting fourteen cents, and so is a man somewhere else," but as far as I could ascertain it was not worked out by any definite process of arithmetic. I know of one case where two rural routes ran out of one small village. One man was given an increase of seventy-two or seventy-four per cent, while the man operating the route which ran in the other direction was refused any increase at all, though his rate was lower than that of the first man. That was the sort of thing that caused all the trouble; instead of giving satisfaction it created a great deal of dissatisfaction. Most of the carriers put in for increases; those who did not get them, but saw others getting them, of course became dissatisfied. I think it would have worked all right if the government had said, "The public have beaten down the prices; this is what the public think these routes are worth, and we will give you an increase of ten per cent," or whatever increase was thought sufficient.

An hon. member to my left asked how many rural routes there were and how many carriers had been given increases. If you went into that aspect of the question you would get into a lot of trouble, because it would require an enormous amount of labour and then you would reveal percentages, which would not be very satisfactory.

If the order in council is to be believed, it was the intention of the government to relieve these men. The men would have been relieved. They would have got something to keep them going through these expensive times. The government would have been better off because, when the men threw it up, the contract had to be let at public tender; the government paid a great deal more, and then it was let for four years, whereas now it runs for only a year and a half or until the end of the war. That is the situation as I know it.

[Mr. Neill.]

Mr. NOSEWORTHY: Since this debate has gone into the question of rural mail carriers perhaps I—

The ACTING CHAIRMAN (Mr. McCann): The debate will not go farther along the line of rural routes. I would ask the cooperation of the committee in obeying the rule with reference to debate, that the discussion must be relevant to the item under review. I think the committee will agree that quite enough latitude has been allowed and that if we propose to pass these estimates, the discussion will have to be confined to the matter under review.

Mr. NOSEWORTHY: I agree with the fairness of the ruling at the beginning of the debate, but Mr. Chairman, I should like permission to ask the minister a couple of questions. Has any consideration been given to representations made by the rural mail carriers' association?

The ACTING CHAIRMAN (Mr. McCann): I have already declared that that discussion is out of order.

Mr. GILLIS: An hon. member has just spoken for twenty minutes on that subject.

Mr. BREITHAUPT: I should like to ask a question which I think is in order. I believe it has some urgency. I understand that the mails have been used for chain letters to further the sale of war savings stamps and certificates. I believe the people sending those letters are acting in what they think is the best of faith, but I would ask the Postmaster General—by the way, it has been outlined in the Kitchener *Daily Record*—if this procedure has the approval of the Post Office Department.

Mr. MULOCK: It has not.

Mr. HANSON (York-Sunbury): Why not?

Item agreed to.

PUBLIC PRINTING AND STATIONERY

441. Printing and binding official publications for sale and distribution to departments and public—further amount required, $18,000.

Mr. TUSTIN: What is meant by "printing and binding official publications"? Why is another $18,000 required?

Hon. N. A. McLARTY (Secretary of State): This is a matter where it is most difficult, if not impossible, to estimate at the time the general estimates are passed the demand which there will be for the official documents printed; consequently, this being pretty well a self-sustaining item, it is thought better to make

the closest possible estimate and to include in the supplementary estimates any deficit which may have to be made up.

Mr. TUSTIN: Then there is some return from this item?

Mr. McLARTY: Undoubtedly. I cannot give the exact figure, but it is not a matter where the documents are printed and distributed without some remuneration to the printing bureau.

Item agreed to.

DEPARTMENT OF PUBLIC WORKS

Chief architect's branch—

442. Ottawa—Garage, carpenter's shop, etc., for the printing bureau, $24,000.

Mr. FRASER (Peterborough West): Is this the new garage?

Hon. ALPHONSE FOURNIER (Minister of Public Works): It is for replacing the old shop which was demolished on Sussex street to make room for the women's hostel. We have built the new shop behind the printing bureau.

Item agreed to.

Chief engineer's branch—

443. Esquimalt graving dock—further amount required, $19,200.

Mr. BLACK (Cumberland): Would the minister tell us where the department draws the line in these appropriations? Would he tell us where the payments are made out of ordinary account and where they are paid out of war expenditure appropriation?

Mr. FOURNIER (Hull): Yes. When we made out the estimates last year we asked for $84,280. During the year more warships and vessels were brought into the dock to be repaired, and we had a further expenditure of $12,500 for electric power and $6,700 for materials and repairs. The money was allotted from the war appropriation, on condition that we come back to the house for this further supplementary estimate.

Mr. BLACK (Cumberland): I do not understand why this comes out of the ordinary expenditures for which the Department of Public Works is responsible, while like expenditures are made out of the war expenditures appropriation. I know there are expenditures made under the war expenditures appropriation which have less to do with the prosecution of the war than this estimate has, according to the explanation given to us by the minister.

Mr. FOURNIER (Hull): This dry dock is of a permanent nature. Before the war we had this dock which came under the public works department. We had our estimate every year. The dock is now used for war purposes and ordinary purposes. That is the explanation I give for having it in the civil estimates. However, when we needed the money it was allotted to us from the war appropriation. During the year this dock brings in revenue. Speaking from memory, during peace years I think it had a revenue of from $30,000 to $39,000. In 1942-43 I believe the revenue was $96,225 and in the preceding year, around $100,279. All our expenditures for maintenance are covered by the revenue that we receive.

Mr. BLACK (Cumberland): This is the regular standard that designates under which expenditure the money is voted. That applies not only to this case but to all like cases in the department and under the defence minister and the war expenditures appropriation?

Mr. FOURNIER (Hull): No. The public works department has its ordinary estimates amounting to some $13,000,000. Then it has estimates under the war appropriation. The department acts as a service department for the other departments on construction and so forth. The work is divided into three phases: ordinary work, war work and work for other departments.

Mr. BLACK (Cumberland): As I understand the minister, every expenditure made for improvement or repairs to a public work that has a peace-time value or service to perform is paid directly by his department.

Mr. FOURNIER (Hull): Expenditures not made exclusively for war services or war work come under the ordinary estimates.

Mr. HANSON (York-Sunbury): Is this work done by contract?

Mr. FOURNIER (Hull): For the dry dock?

Mr. HANSON (York-Sunbury): Excuse me, I thought we were on another item.

Mr. FOURNIER (Hull): All the work was done by contract.

Item agreed to.

DEPARTMENT OF TRADE AND COMMERCE

444. Commercial intelligence service—further amount required, $50,000.

Mr. FRASER (Peterborough West): Is this item to take care of the new places that have been opened up in South America and Central America?

Hon. J. A. MacKINNON (Minister of Trade and Commerce): There is an amount of $19,000 for temporary assistance. That is to cover officers who have been on active service but who have returned to the department; trade commissioners and assistant trade commissioners who have been sent to offices already opened, and personnel of new offices.

Mr. JOHNSTON (Bow River): How does the $8,000 for cost-of-living bonus come in?

Mr. MacKINNON (Edmonton West): That is to cover the amounts paid to trade commissioners and assistant trade commissioners who are located in countries where the cost of living has risen.

Mr. JOHNSTON (Bow River): On what is the increased cost based?

Mr. MacKINNON (Edmonton West): We receive representations from the particular office in connection with wages paid by offices maintained by other countries, and we also receive particulars of the cost of living.

Mr. JOHNSTON (Bow River): They make their own representations about the increased cost of living and you accept it?

Mr. MacKINNON (Edmonton West): We would take that into account when considering wages paid to other representatives working along the same lines in the same country.

Mr. HANSON (York-Sunbury): What is the total under the five headings?

Mr. MacKINNON (Edmonton West): $50,000.

Mr. HANSON (York-Sunbury): That is the further amount required. There is an amount of $10,000 for travel and removal. What was the vote in the main estimates, and what is the total amount of this item? What travel and removal has there been to occasion an expenditure of $10,000? I thought most of these men were back home.

Mr. MacKINNON (Edmonton West): I have not the figures for the total departmental estimates for travel and removal, but they are quite large. This particular item is caused largely by increased travelling by trade commissioners in making preparations for the post-war period.

Mr. HANSON (York-Sunbury): Missionary work for the post-war period?

Mr. MacKINNON (Edmonton West): That is the item of $10,000.

Mr. HANSON (York-Sunbury): In the main estimates this year you are asking for $8,120,786 for the department, but I wish to know how much is proposed to be voted for this particular item and how much was voted last year. What I am trying to get at is how much money was spent on travel. Unless the minister watches this item it may increase considerably. Instead of these men taking a hotel suite, perhaps they should take an ordinary room like other travellers. I am not finding fault with the men because as a rule they are good men, but travel runs into a great deal of money and I think the minister should give us a little more detail in connection with this service.

Mr. MacKINNON (Edmonton West): I agree with the remarks of the hon. member for York-Sunbury. This is one of the items that impressed itself on my mind when I was dealing with the ordinary running expenses of the Department of Trade and Commerce. It seems that there has to be a certain amount of going about a country or from one country to another, and these expenses, particularly at this time, have been quite heavy. However, they have been carefully scrutinized, and the remarks just made are quite proper. I have not the total travelling cost for the year, but when the main estimates are before the committee that information can be given.

Item agreed to.

Mail subsidies and steamships subventions. Eastern local services—

445. Murray Bay and north shore, winter service between—further amount required, $10,000.

Mr. HATFIELD: What is this Murray Bay service?

Mr. MacKINNON (Edmonton West): It is the Murray Bay-north shore winter service.

Mr. HANSON (York-Sunbury): Mail subvention?

Mr. MacKINNON (Edmonton West): Mail subvention.

Mr. FRASER (Peterborough West): Is that by plane?

Mr. MacKINNON (Edmonton West): No; by ship. This service has been operated by the Bras d'Or Bay Navigation Company Limited of Quebec, each winter since the winter of 1930-31, at a subsidy of $40,000 for the winter period of four months. This service is essential to the welfare of the inhabitants of the coast, extending a distance of over 400 miles east of Murray Bay. Calls are made at nearly twenty ports under severe winter ice conditions, which frequently result in damage to the vessel.

The service has been operated at a loss since the beginning of the war, operating

costs having increased, while the regulations of the wartime prices and trade board prevent the contractors from making any increase in their passenger and freight rates.

Mr. HANSON (York-Sunbury): This is a war casualty and you are helping him out?

Mr. MacKINNON (Edmonton West): Exactly.

Canada Grain Act—

446. Operation and maintenance, including inspection, weighing, registration, et cetera—further amount required, $90,585.

Mr. PERLEY: The details of this item appear on page 8 of the further supplementary estimates, and one item covers the cost of living bonus. We have an item of $118,000 in the main estimates for the cost of living bonus, and here we have another $9,000. There is also $19,000 for temporary assistance, and there is $5,000 for travelling expenses. I should like to have some explanation of these four items. Why should the amount for the cost of living bonus be so great when $118,000 is provided in the main estimates for the same purpose?

Mr. MacKINNON (Edmonton West): I was not quite able to follow the questions asked by the hon. member for Qu'Appelle, but he did refer to the extra amount for cost of living bonus. That is in connection with additional temporary employees, whose services were necessitated by the exceptionally heavy movement of grain from the head of the lakes by rail and lake. As a matter of fact, practically all these increased expenditures are necessitated by the heavy movement of grain to Fort William and Port Arthur during the 1943 season of navigation, the second largest movement on record. This exceptionally heavy movement was not anticipated when the estimates for the current fiscal year were submitted. The total lake shipments for the season were 344 million bushels as compared with 211 million bushels in the previous season. Increased shipments to eastern Canada were also made by rail. This increased activity is reflected in the revenue of the board, the total of which for the first nine months of the current fiscal year is $1,304,977.43, or an increase of $418,983.06 over the same period in the previous fiscal year. All this increased work has necessitated increased expenditures.

As to the item of $5,000 for travelling expenses, war conditions have necessitated the temporary transfer of employees for longer periods on account of changes in the routing of the grain. Congestion in storage necessitates more supervision, and audits of stocks in eastern elevators have necessitated increased travelling expenses for this year.

Mr. PERLEY: The minister emphasizes the increase for temporary assistance. I cannot see the force of his argument, because there have been many years in which the movement of grain has been practically as heavy as this last year. It is based on the amount of the crop harvested, and large stocks of coarse grains were marketed this year. I would not think there would be very much more work involved than usual. The work is principally issuing licences and regulating the marketing of the grain, and that has not much to do with travelling expenses. A considerable amount, over $75,000 of this $90,000, is for temporary assistance.

Since there will not be another opportunity until after the Easter recess, I would ask the minister to make a statement now with respect to the auditing of accounts. Is the auditing done by an official duly appointed by his department? Is it the same auditor who audits the books of the wheat board? The minister has promised a statement with respect to that, and this might be a good time to give it.

I also asked one or two other questions which I was not allowed to put on the orders of the day because they were declared out of order, and they were not allowed to go on the order paper. Perhaps the minister would make a statement now.

Mr. MacKINNON (Edmonton West): I did not anticipate being asked about the auditors on this item and have not that information before me, but I will get it and give it to my hon. friend later.

Mr. PERLEY: That is an interesting statement from the minister who is carrying on a department, that he does not know who the auditors are.

Mr. MacKINNON (Edmonton West): I am a little surprised at the hon. member. I do not consider it necessary for him to take that attitude at all.

Mr. PERLEY: I was a little surprised at the minister's answer, that he did not know who the auditors were.

Mr. HANSON (York-Sunbury:) Is there a firm of chartered accountants making the audit? I presume there is an audit made?

Mr. MacKINNON (Edmonton West): Most certainly.

Mr. HANSON (York-Sunbury): It is a long time since I was in charge of the department and I do not expect to be back there again,

so that I may be pardoned if the matter has slipped my memory. I do not know whether a firm of chartered accountants makes the audit or whether it is done by the auditor general's department.

Mr. MacKINNON (Edmonton West): A firm of chartered accountants, I believe.

Mr. HANSON (York-Sunbury): A reputable firm I presume?

Mr. MacKINNON (Edmonton West): Certainly.

Mr. PERLEY: The minister must have accepted a recommendation for their appointment.

Mr. MacKINNON (Edmonton West): It is the same firm of auditors who have been actively engaged at that work since I came into the department.

Mr. BURTON: Thousands and thousands of farmers in the west and in other parts of Canada are producing grain, and I suggest that the information given here is meagre when we take into consideration that the returns from our labours are practically decided by men in the employ of this department. Under the item for the Canada Grain Act, there is an amount of $90,000 for operation and maintenance, including inspection, weighing, registration, et cetera. That covers a very large field, and the details on page 8 after further supplementary estimates are meagre. Then there is an item of over $75,000 for temporary assistance, and $8,000 for cost of living bonus, and other items such as office rents, travel and removal. Does the inspection of quota books come under this item?

Mr. MacKINNON (Edmonton West): No.

Mr. BURTON: Then we can let that go for the time being. The item of $75,000 for temporary assistance seems large. Is no provision made for employing seasonal help, so that the department has all at once to go out and get help where it can be found? There is a considerable amount of grain to handle at all seasons of the year. Do those who are giving temporary assistance receive the cost of living bonus?

Mr. MacKINNON (Edmonton West): The hon. member will have an opportunity to get information on a number of points he has raised, some of which have to do with the operations of the Canadian wheat board and some with the board of grain commissioners, when the main estimates of the department are up for consideration. This is a relatively small extra amount that is required at this time which was not provided for when the estimates for this year were being prepared. As the hon. member knows, there were some difficult problems to deal with in handling the western grain crop this year, and the expenses were considerably higher than it was anticipated. This item is to take care of unforeseen expenses.

Mr. BURTON: Are the temporary employees given the cost of living bonus?

Mr. MacKINNON (Edmonton West): The new employees.

Mr. JOHNSTON (Bow River): There is an item for $5,000 for travelling expenses. How is that amount made up? What is the scale of travelling expenses?

Mr. MacKINNON (Edmonton West): These people are required to submit details of their travelling expenses.

Mr. JOHNSTON (Bow River): How much do you allow them, for instance, for car expenses per mile?

Mr. MacKINNON (Edmonton West): I do not think it is that kind of travelling, but it may be in this particular case, if this has to do with the board of grain commissioners.

Mr. JOHNSTON (Bow River): This includes, I think, inspectors carrying on registrations and so on. I imagine it has to do with inspectors travelling from one place to the other, and they would be allowed so much per mile if they owned their own cars, or be subject to some other arrangement if they did not.

Mr. MacKINNON (Edmonton West): I have not that information before me, but there will be an opportunity for me to give the hon. member the facts on the main estimates.

Mr. HANSON (York-Sunbury): Does the department provide government cars for these inspectors? I know that was a vexed question ten years ago. Every man wanted to have his own car and be paid for it. I came to the conclusion that sooner or later the inspector would own the car and the government would pay for it. I did not think that was very good policy, but I know the problem is a difficult one. What is the policy at the present time? Does the department encourage employees to use their own cars; does the government provide cars; does it hire cars, or what does it do?

Mr. MacKINNON (Edmonton West): Speaking from memory, I think cars are handled in different ways, but the policy of the department has been to encourage a man to own his own car, the department to pay

him a per mile rate. I shall, however, be glad to take note of the hon. member's question and give him full information later.

Mr. HANSON (York-Sunbury): The minister is not able to state to-day the rate per mile?

Mr. MacKINNON (Edmonton West): Not at the moment.

Mr. HANSON (York-Sunbury): If the minister has not the information here I am not going to press the question.

Mr. DONNELLY: There is a board of grain commissioners, with an assistant board of grain commissioners in each of the western provinces. I imagine these travelling expenses are the expenses of these grain commissioners and assistant grain commissioners in the course of their duty in the different parts of the country. A lot of it would be railway fares. I am inclined to think a larger proportion is represented by railway fares than by the cost of driving cars.

Mr. ROSS (Moose Jaw): And hiring vehicles to carry weights for the weights and measures branch.

Item agreed to.

DEPARTMENT OF TRANSPORT

Marine service—

448. Marine service steamers, including icebreakers—maintenance, operation and repair—further amount required, $24,000.

Mr. HANSON (York-Sunbury): Will the minister state how many icebreakers the government owns, operates and maintains and where they are operated?

Hon. J. E. MICHAUD (Minister of Transport): There are five icebreakers. All operate in the gulf of St. Lawrence, and the Atlantic —Nova Scotia, New Brunswick, Prince Edward Island, and some other points in the Atlantic, during the war.

Mr. HANSON (York-Sunbury): What icebreaker is operating on the New Brunswick coast this year?

Mr. MICHAUD: Of course, there was the car ferry from the mainland. Then for a while, early in the winter, there was the old *Lady Grey* and the *Saurel* between New Brunswick, Prince Edward Island, Newfoundland and Cape Breton.

Mr. HANSON (York-Sunbury): During a recent period there has been a great deal of interruption of the car ferry service between the mainland and the island, but no icebreaker was available. Yet I am told that we have five in operation, and certainly those out of Sorel could not have beeen operating very much. Why was there a lack of foresight in not having an icebreaker available to keep the Northumberland strait clear, having regard to the—shall I say—ineffectiveness of the old car ferry to maintain the service? The state of communications between the mainland and Prince Edward Island is little better than a scandal, having regard to the obligation of Canada to the island. I know the difficulties very well, and I am going to refer to them a little later, when another item is up, but at the moment I want to confine my questioning of the minister to the failure of his department to provide an icebreaker as an all-time supplement to the Prince Edward Island car ferry. During the months of January, February and March not a single icebreaker has been available for that service; yet there was an icebreaker at Quebec, where she must have been doing nothing or next to nothing. The only service I have heard of that is being performed is the rescue of the lives of the three Quebec Airways men, which of course was most commendable, and from that point of view it was very fortunate that she was available. But we have at least two big icebreakers with headquarters in the lower St. Lawrence or in the vicinity of Quebec, and after navigation closes they cannot have anything to do for months. My complaint against the minister's department is that one of these icebreakers should have been kept available in the Northumberland strait to take care of the greatly increased heavy traffic or to keep open the channels for the greatly increased heavy traffic which has developed. Unless relief comes very soon there will be an enormous loss to the shippers of Prince Edward Island, and there will be great difficulty in obtaining transit of the large numbers of cars of fertilizer which have arrived at Tormentine for transmission across the strait. I think the service has not been good enough, and I suggest that it could have been greatly improved if the minister had had foresight enough to have had in Northumberland strait during this season one of those big icebreakers which have probably been tied up at the wharf at Quebec or Sorel for the last several weeks.

Mr. MICHAUD: Evidently the hon. member is misinformed, because there is no icebreaker at Sorel.

Mr. HANSON (York-Sunbury): Well, where are they?

Mr. MICHAUD: There is an icebreaker called the *Saurel* which was and is almost always in the winter time in the gulf of St Lawrence.

Mr. HANSON (York-Sunbury): I misunderstood the minister. Where was she.

Mr. MICHAUD: She was working between Halifax, Sydney and Newfoundland, and she left Newfoundland to come to the rescue of the three men who were saved last week in the gulf of St. Lawrence. There are no icebreakers tied up at any wharf, whether at Quebec or at any other place, during the winter.

Mr. HANSON (York-Sunbury): Was she breaking ice in Halifax harbour, or outside Halifax, or between Halifax and Sydney?

Mr. MICHAUD: Between Halifax, Canso, Sydney and Newfoundland, and late in the fall, between Prince Edward Island, Pictou and the Magdalen islands. But during the months of January and February that icebreaker was detailed to do some special work in the gulf of St. Lawrence towards Newfoundland.

Mr. HANSON (York-Sunbury): That is one out of five. Where are the rest of them?

Mr. MICHAUD: Two were employed as usual, breaking a channel from Quebec to Montreal.

Mr. HANSON (York-Sunbury): In the winter time?

Mr. MICHAUD: In the winter time. That has been done for years, and it is a necessity.

Mr. HANSON (York-Sunbury): I have no doubt it has been done for years, but why the necessity? There is no winter shipping into Montreal.

Mr. MICHAUD: Oh, no, but there would be floods in the spring all along the banks of the St. Lawrence, and especially around the island of Montreal, if that work were not done in the winter time.

The other icebreaker was recalled from Cape Breton to help in certain war work in the gulf of St. Lawrence. My hon. friend says that there was negligence or lack of foresight on the part of the department in not bringing a powerful icebreaker to the rescue of the *Prince Edward Island*. I must inform him that early in the winter, when the *Prince Edward Island* began to have difficulties in crossing, suggestions were made to the engineers and officials of the department to bring an icebreaker to break the channel to help her. I was informed by officers of the department in whom I have full confidence that the *Prince Edward Island* was just as powerful an icebreaker as there was in the government service, and, second, that the bringing of another one into that area would be simply a nuisance to her and would not help a bit in clearing the channel. For that reason, no other icebreaker was taken into that area, and this was confirmed, I am told, by the captain of the *Prince Edward Island,* who did not want to be bothered by having another icebreaker in his way.

I agree that this has been a very severe winter, owing to ice conditions and adverse winds, which kept the channel practically full of ice, so that on many days the service was interrupted. There were very few days on which there were no crossings; on many days there were a few crossings, and it took all the power of the boat to wade her way through the ice, so that hardly any load of freight could be taken off.

This is a situation over which we have no control. Every consideration was given to cope with it, and officers of the department, who have been in the service for many years, engineers, marine agents, ship captains, were all consulted and all gave the same opinion.

The situation with regard to the ferry between New Brunswick on the mainland and the island since last Saturday up to yesterday had fortunately improved greatly, and on three days during this week the ferry took an average of 100 cars each way every day.

Mr. HANSON (York-Sunbury): Well, spring is here.

Mr. MICHAUD: But it was not spring there yesterday, unfortunately, if the hon. member wants to know. However, I hope that next week the situation will have cleared sufficiently to enable the car ferry to take its full quota of freight cars on each trip and carry on its average of from ten to fourteen trips a day, thus relieving the congestion of traffic on either side of the channel.

Mr. GRAYDON: My information last week, when I raised the question on the orders of the day, was that there were between 500 and 1,000 cars of farm products, to a large extent potatoes for seed for other parts of Canada. Could the minister indicate that the present position is in regard to the congestion? How many cars are waiting at Borden for shipment to Tormentine and vice versa?

Mr. MICHAUD: My hon. friend is slightly off in his estimate of the cars that were waiting for shipment to either side.

Mr. GRAYDON: I believe it was Premier Jones of Prince Edward Island who gave the figures, though I am not sure.

Mr. MICHAUD: On one day about two weeks ago there were 565 cars awaiting shipment to the island from the mainland, but they were cars of material which had not first or second priority for transshipment. During the winter, provisions and coal got

first priority to the island, and coming this way, potatoes and agricultural products of all kinds had priority.

I have the record for practically every day of the last two months. Of course, there may be 6,000 or 7,000 cars of goods on the island, not loaded. There might be a quantity sufficient to make up 6,000 or 7,000 cars; but as far as the records show, on March 27, three days ago, there were awaiting shipment at Borden six cars and no empties, and at Tormentine there were 182 loads ready to be taken over. At one time two weeks ago there were 565 carloads of goods waiting for shipment to the island, and that number was reduced to 182

Mr. GRAYDON: That would be natural. If such a large number of cars were waiting to go over to the island, there would not be such a large number waiting on the island because they could not have crossed to get their load.

Mr. MICHAUD: But the record shows that for days prior to the 27th the Canadian National Railways carried over empty cars which enabled them to cross over many more times than had the cars been full of merchandise, because the load was less on the boat, and this helped the farmers of the island to move their goods. For the last ten days the average of empty cars taken over was fifty a day, but for three days there were 100 cars each day taken over and for three days 100 cars each day taken back. I admit that if there had been more cars over and greater facilities, if all the cars which are loaded for transshipment had been taken over before the 27th, it would have greatly relieved the situation on the island.

Mr. GRAYDON: Whoever is responsible, I think it is generally recognized by those of us who do not come from that part of Canada, that the situation is at best terrible so far as the island is concerned. Anyone who goes there recognizes at once that the place is insular not only from the point of view of geography but from the point of view of confederation itself, and something will have to be done pretty soon, having in mind what the premier himself says. When the premier of a province starts talking about damages which that island could claim against confederated Canada the situation must be pretty serious, and I think the minister must have been well apprised of that.

Mr. MICHAUD: I have been apprised of the situation.

Mr. HANSON (York-Sunbury): I am sorry I have not with me at the moment the language used by Premier Jones of Prince Edward Island. Everything I have said relative to this service would be trite in comparison with what he has said about it, and I have no doubt the minister fully understands his language. The trouble, however, is that they did not do very much about it; they waited for nature to take care of the situation. What the minister told me about the icebreaker was just that he allowed his own judgment and that of his officials to be overruled by the master of the *Prince Edward Island* and the other engineer. The minister's own instincts were good, but he did not follow them up. They never tried the experiment of having the *Saurel* or some other icebreaker in there. That is the fault I find with the minister. They allowed the condition to remain and did not even experiment in trying to break up this ice in the winter months. Therefore I think the minister is reprehensible for not having tried to carry out his own suggestion. I suggest that the *Prince Edward Island* is an old ship. How many times has she broken down this winter? How many days' delay has been due to break-downs in the mechanism of the ship herself? If the minister has the record with him I think it will show that a good many trips were lost because of break-downs in the mechanism of this old ferry which is now in use.

I do not know what the war necessities are of which the minister speaks in connection with the use of bigger icebreakers out in the St. Lawrence, and possibly it is not proper that he should tell us, though I cannot conceive why. I do not think there are any enemy submarines in the St. Lawrence in midwinter. Of course, if merchandise has to be taken to Newfoundland, as I assume is the case, an icebreaker is necessary to keep open the lines of transportation. But I suggest that the people of Prince Edward Island are equally concerned about their communications and their right to uninterrupted traffic. I know that no fighting is going on in Newfoundland; I know we have a number of draftees there; I know there are United States armed services in Newfoundland, and I suppose the Canadian government has some obligation to them, though I do not know just what it may be. I suggest to the minister that he has failed in his duty in not making an attempt that he himself thought was the right thing to do. Therefore I say he deserves the censure of this committee.

Mr. MICHAUD: Nevertheless I submit that I did not fail. If my views were not carried out it was because of the advice and counsel

of experienced men in charge not only of the icebreakers but of the ferry as well. I could not prevail upon men with years of experience in winter navigation on the St. Lawrence to do things which, in their very best judgment, they would not want to do. I made a suggestion which as a layman I thought was feasible and practical, but I was told by men who were supposed to know better that it was not practical, and I accepted their views.

Mr. BLACK (Cumberland): I have had many communications this year and in previous years with respect to the inadequacy of the service between Prince Edward Island and the mainland. The people of the maritime provinces are not satisfied; certainly the people of Prince Edward Island have no reason to be satisfied with what has been done to serve their necessities during the last two years. The general opinion, which is widely supported, is that steps should have been taken to meet the situation immediately after the *Charlottetown* was lost. I believe that ship was lost through gross carelessness, while the person responsible for the loss was bonused or subsidized or pensioned off as a result. A new boat should have been arranged for immediately. Every person in the maritime provinces was pleased when it was learned that an appropriation was being provided and a new boat was being contracted for, but this house has been given no definite information with respect to what has been done. On February 1, at the instance of people in Prince Edward Island, I placed some questions on the order paper, asking for particulars with respect to this new boat, which I understand is now under contract. Those questions remained on the order paper until February 11, when they were made an order for return. Some weeks later I asked when that information might be expected, and the minister informed the house that it was on its way, but up to the present it has not been brought down. That information is desired by everyone in Prince Edward Island and the people of the maritime provinces generally; it is due the members of this house, who are responsible for voting this very large amount of money. A clerk in the office of the minister could give us the information in reply to the questions I asked. The first was:

1. Have tenders been called for the construction of a ferry boat to serve Prince Edward Island?

That can be answered by yes or no; I should say the answer would be yes.

2. If so, who were asked to tender, stating tender prices of each?

That question could be answered without waiting two months.

3. If contract has been let, what is the date, name of firm, contract price and time of delivery?

Those are simply questions of fact, which members of this house and those interested should have.

4. What is the tonnage, dimensions and speed?

Those questions could be answered in a few minutes.

5. What type of power plant is called for, stating horse-power and names of builders?

Hon. members are entitled to that information, and the producers of coal in the maritime provinces are entitled to it. Some time in December a delegation of four specially appointed delegates of the United Mine Workers of America, interested in the production of coal in the maritime provinces, from Springhill, and other representative citizens waited upon the minister at Moncton to make representations that this new ferry boat should have a power plant using coal rather than oil. Rumours were current that it was to be an oil-driven boat. It was pointed out to the minister that according to the best information the supply of oil from all known sources in North America will last for a matter of only about fourteen years. Therefore it is simply a business of precaution to have a coal-operated boat, especially when this would provide a home market, practically at the bank-head of the mines, for up to forty thousand tons of coal. Not only are the miners as a body interested in this matter; the association of mayors, the maritime board of trade and other public bodies have asked that this boat be operated by coal. We are entitled to that information but we have not yet received it.

Mr. HANSON (York-Sunbury): What date?

Mr. BLACK (Cumberland): February 11.

Mr. HANSON (York-Sunbury): Two months, and it would take ten minutes to answer it.

Mr. BLACK (Cumberland): Question No. 6 is:

Is the boat to be completed by one contractor? If not, state names or any other tenderers of components with cost and description of such equipment.

What is the power plant, the boilers and the engines? Steam engines, I hope, or otherwise diesel engines. That is just a matter of fact. We should have that information and, if it is not available, answers should have been brought down as complete as possible. We are entitled to the information.

Question No. 7 was:

What will be the total estimated cost of the boat fully equipped and delivered?

If the department is entering into the contract, the minister must have that information, but it is denied to the membership of this house. It is denied to the people of Prince Edward Island and the people of the maritimes.

Question No. 8 read:

Who are the architects and designers, and what fees will they receive?

This is a matter which a clerk in the office could furnish. It is a matter of record. Surely we should have the information. We should not have to wait until April Fool's day or after to get the information. That is the situation. I should like to know from the minister why the information to which the members of this house and the people of Prince Edward Island are entitled has not been brought down.

Mr. MICHAUD: Whatever information was available to the department in reply to the question asked by the hon. member for Cumberland was sent out of the department early this week to the usual channel, the Department of the Secretary of State. I am surprised that the information has not yet been tabled. It was sent out and approved by the deputy minister.

Mr. HANSON (York-Sunbury): Why was it made an order for return in the first place? It all referred to one department. Why should it take eight weeks to get this information? It must be a matter of immediate record in the office of the Minister of Transport; yet we have been denied it. That is the way the minister is treating parliament. It is not good enough. Certainly it is not good enough for the people of Prince Edward Island to have this information remain sealed within the offices of the minister and his department for eight solid weeks. Why all this secrecy about this matter. They know they have let a contract to a shipbuilding company on the St. Lawrence to build this boat. They know exactly what the terms of the contract are. They know whether she is to be an oil burner or a coal burner. The minister must know the answer to that question and I would put it to him now. Is this boat to be an oil burner or a coal burner?

Mr. MICHAUD: It is to be an oil burner.

Mr. HANSON (York-Sunbury): That is the answer. What about the other questions? Give me the list and we shall have them all. On the 11th of February the following questions were passed as an order for return:

1. Have tenders been called for the construction of a ferry boat to serve Prince Edward Island?

Mr. MICHAUD: No tenders were called for the boat.

Mr. HANSON (York-Sunbury): No tenders were called, but a contract was let?

Mr. MICHAUD: Yes.

Mr. HANSON (York-Sunbury): After the debate on this very question in the house last session?

Mr. MICHAUD: Yes.

Mr. HANSON (York-Sunbury): Who fixed the price of the boat, because a figure was arrived at? I assume that the contract calls for a specific figure. How was that reached?

Mr. MICHAUD: The contract is cost, plus fixed fee for construction.

Mr. HANSON (York-Sunbury): Cost, plus fixed fee?

Mr. MICHAUD: Cost estimated by marine architects and officers of the department.

Mr. HANSON (York-Sunbury): And employed by the government. What is the fee?

Mr. MICHAUD: It is $250,000.

Mr. HANSON (York-Sunbury): On an estimated cost of what?

Mr. MICHAUD: Of $4,500,000.

Mr. HANSON (York-Sunbury): Five per cent?

Mr. MICHAUD: Nearly five per cent.

Mr. HANSON (York-Sunbury): I suggest that fee is too high on a contract of that size. I speak subject to correction. The Minister of National Defence laughs.

Mr. RALSTON: I do.

Mr. HANSON (York-Sunbury): When I asked his colleague the other day what commissions were paid on cost-plus contracts he said five per cent was the maximum but that on large items the fee was generally much less.

Mr. RALSTON: I am laughing at my hon. friend being so anxious and so sceptical as to whether there was a contract with reference to a ferry service to Prince Edward Island. Now he finds that a contract has been made or is being made and a fee is being paid, and he is starting to kick about it.

Mr. HANSON (York-Sunbury): I am not kicking about it. I am just saying the fee is too high. Of course, I realize that a large amount of this fee will come back in taxation; I hope it will.

Mr. RALSTON: He is sorry that the contract is made.

Mr. HANSON (York-Sunbury): No; I am not sorry the contract is made. The minister has no right to impute motives to me.

Mr. RALSTON: That is just what I am doing. I never saw so many tears shed by anyone as are being shed by my hon. friend about Prince Edward Island until it happened that he found out that the people of Prince Edward Island were unfortunate enough to have lost a boat.

Mr. HANSON (York-Sunbury): I speak for the people of Prince Edward Island because the hon. members for Prince Edward Island are consistently silent.

Mr. RALSTON: The hon. members for Prince Edward Island do not take up the time of the house in talking about it. They do something. They are making every possible effort to get service to that island, but they are not advertising it the way it is being done on the other side of the house.

Mr. HANSON (York-Sunbury): They are concealing their activities.

Mr. RALSTON: I will tell my hon. friend about activities when the time comes.

Mr. HANSON (York-Sunbury): I do not care what the minister says; he cannot abuse me.

Mr. RALSTON: I know he does not care.

Mr. HANSON (York-Sunbury): I am not shedding any tears, but we have been communicated with by the residents of Prince Edward Island. I will say this to the minister: no one has condemned this government any more than has the Premier of Prince Edward Island in the statement which he made the other day.

Mr. RALSTON: I saw the statement.

Mr. HANSON (York-Sunbury): So did I. How did the minister like it?

Mr. RALSTON: I enjoy all the statements made by the Premier of Prince Edward Island.

Mr. HANSON (York-Sunbury): Now we are getting somewhere. I repudiate the suggestion that I am sorry a contract was made. I say it should have been let eighteen months before.

Mr. RALSTON: Where would you put it? What yard would you put it in?

Mr. HANSON (York-Sunbury): That is a question I cannot answer; but if I had the responsibility I would have seen that it got into some yard.

Mr. RALSTON: You would?

Mr. HANSON (York-Sunbury): Make no mistake about that. Now we have some information with regard to the price of the boat. We have the price of the fee. The minister has not yet told me what the estimated cost is to be.

Mr. MICHAUD: Yes; I said $4,500,000.

Mr. HANSON (York-Sunbury): I beg your pardon. I take that back. The minister is quite right. I am wrong. When is the time of delivery to be?

Mr. MICHAUD: If everything goes well, November, 1945.

Mr. HANSON (York-Sunbury): If there are no more acts of God that enter into the matter?

Mr. MICHAUD: That is right.

Mr. HANSON (York-Sunbury): It is now contended that the last ferry was sunk by an act of God notwithstanding the findings of a judge appointed by this government to inquire into the matter. Will the minister answer question No. 4, which is:

What is the tonnage, dimensions and speed?

Mr. MICHAUD: Yes.

Mr. HANSON (York-Sunbury): That is good.

Mr. MICHAUD: Length 348 feet between perpendiculars, and 272½ feet over all.

Mr. HANSON (York-Sunbury): Quite a big boat?

Mr. MICHAUD: Oh, yes. The *Charlottetown* was 310 feet, and the *Prince Edward Island* is 285 feet. Beam, sixty-one feet. The *Charlottetown* was fifty-nine feet and the *Prince Edward Island* is fifty feet. Draught, nineteen feet; that cannot be changed because of local conditions.

Mr. HANSON (York-Sunbury): I can understand that.

Mr. MICHAUD: Power: 12,000 horse-power. The *Charlottetown* was 8,000, the *Prince Edward Island* is 7,000. The new car ferry is supposed to take nineteen loaded modern freight cars. The capacity of the *Charlottetown's* load was sixteen and the *Prince Edward*

Island's is ten. Automobiles: The new car ferry will take sixty cars. The *Charlottetown* took about fifty-six cars, and the *Prince Edward Island,* I think, takes forty cars.

Mr. HANSON (York-Sunbury): I ask the minister this question: Was not all this information sent down to a little country newspaper in Summerside and published to the world, while the department refrained from giving the information to the hon. member for Cumberland. It was published to the world at a time when they would not give the information to the hon. member for Cumberland. I read a Canadian Press dispatch, dated three or four weesk ago, in a paper called the Summerside *Pioneer,* giving this information at a time when these questions were lying unanswered in the minister's office. Did that information come from the department?

Mr. MICHAUD: I do not know.

The ACTING CHAIRMAN (Mr. McCann): I would call the attention of hon. members to the rules of the house which state that speeches in committee of the whole must be directly relevant to the item under consideration. Both the minister and the hon. member for York-Sunbury are entirely out of order, and they both know it. The item before the committee has to do with an entirely different expenditure from one on an ice-breaker which will be made in 1945.

Mr. HANSON (York-Sunbury): Mr. Chairman, technically speaking you are right, but my remarks arose quite naturally and I should like to say this in extenuation. If you will apply your same ruling to the Minister of National Defence and the tongue-lashing he gave me, I shall be content.

Item agreed to.

449. Construction, maintenance and supervision of aids to navigation, including salaries and allowances to lightkeepers—further amount required, $21,000.

Mr. MacNICOL: This item refers to lightkeepers, and I should like to know if it covers those in the lighthouses on the Mackenzie River?

Mr. MICHAUD: No.

Item agreed to.

Railway service—

450. Hudson Bay railway—to provide for the difference between expenditures for operation and maintenance, and revenue accruing from operation during the year ending March 31, 1944—further amount required, $141,000.

Mr. PERLEY: Can the minister tell us just how near the expenditures and revenues are.

Mr. MICHAUD: The following is a comparison between the estimated operating results for 1943-44 and the original estimates:

	Estimated results 1943-44	Original estimate 1943-44	Increase over amount provided
Maintenance ...	$418,856	$367,856	$ 51,000
Operation	580,000	446,000	134,000
	$998,856	$813,856	$185,000
Less gross revenue	644,000	600,000	44,000
Deficit	$354,856	$213,856	$141,000

Item agreed to.

Civil aviation division—

454. Airways and airports—operation and maintenance, including lighting, radio and meteorological services—further amount required, $47,000.

Mr. HANSON (York-Sunbury): This item will not preclude any discussion on civil aviation on the war appropriations of the Minister of Munitions and Supply?

Mr. MICHAUD: No.

Item agreed to.

Radio division—

455. Administration of the Radiotelegraph Act and regulations—further amount required, $11,695.

Mr. GRAYDON: Is there any special reason why these items should have been taken out of the Department of Transport and placed under the supervision of the Minister of Munitions and Supply?

Mr. MICHAUD: The leader of the opposition will see by a note in the estimates that this was done under order in council dated July 8, 1940. Most of the aviation services were used almost exclusively for war services; the Minister of Munitions and Supply was supervising the maintenance and expansion of these services, and therefore they were placed under his department.

Item agreed to.

DEPARTMENT OF AGRICULTURE

Marketing service—

416. Marketing service administration—further amount required, $2,275.

Mr. SENN: Is the minister in a position to answer the question I asked about floor prices?

Mr. CRERAR: I have some additional information which I think will help to answer the question asked this afternoon by the hon. member for Haldimand. This matter was explained in a food bulletin issued by the

wartime prices and trade board on June 7 last, and I do not think I can do better than read the statement contained in this bulletin on floor and ceiling prices on beef. The statement reads:

Steps to ensure a steady supply of beef for the meat trade have been completed by the wartime prices and trade board, which has also finalized regulations for year-round pricing.

Last October the board stated that wholesale ceiling prices for beef reached on May 27 would remain in force for an indefinite period. These prices were defined for carcasses, sides and quarters in order 252 in March. Ceilings on wholesale cuts are now set in order A.734, covered elsewhere in this bulletin.

At any time in the coming year when the market is not well supplied, retailers will be protected by these wholesale ceilings.

Wholesalers and producers also are protected. Floor prices have been set on dressed beef which next fall and winter will correspond to the seasonal ceiling prices of last fall and winter. The Department of Agriculture will prevent beef prices from falling below these levels by buying dressed beef whenever a surplus supply appears to endanger the market. Otherwise the market will be permitted to take its normal course.

From these purchases the department will build reserves. The reserves will be used in periods of scarcity to meet requirements of meat dealers under rationing. What is left will be used for possible Allied needs.

From May 27 to August 14 the floor price for carcass beef will be one-quarter cent per pound less than the wholesale prices set in order 252. From August 16 to September 18 the floor price will be one cent below the ceiling and from September 29 to December 18 it will be at the level of last year's ceiling for the same period, that is, two and one-quarter cents below this year's ceiling. On December 20 the floor price will be raised by one-half cent per pound. Further one-half cent increases will take effect February 7, March 20 and April 24. On April 24, 1944, the floor price will be back to one-quarter cent below the ceiling.

That, I think, gives the information which was asked for by my hon. friend. The ceiling price on beef is a flat price and it applies, I understand, the year round. The price of beef wholesale cannot go above the ceiling price fixed. That naturally governs the retail price, and in that way the consumers are protected. When the wholesale price of beef declines according to the terms of these orders, the element of competition comes in and the sale price of beef in the butcher shops falls owing to the operation of ordinary competition. I believe it is correct, although I have not verified it, that the prices are checked through steps taken by the wartime prices and trade board. If the price of beef in any one of these periods goes below the base set the Department of Agriculture through the meat board steps in and buys the beef.

Mr. SENN: They are supposed to, but they do not.

[Mr. Crerar.]

Mr. BLACKMORE: They do not, and that is the trouble.

Mr. CRERAR: The deputy minister of agriculture is in the gallery and I will ask him to come down. The maximum price is in May, and as the months go by, the wholesale price for beef declines until it reaches the low point in December. Then it commences to rise again. Increases have taken place in the price on February 7 and on March 20 and another increase will take place on April 24. These are the orders issued by the wartime prices and trade board, after the subject had been under discussion between the board and the Department of Agriculture. I hope I have made the procedure reasonably clear to the committee.

Mr. ROWE: Can the minister say whether the Department of National Defence has purchased meat at other than the floor price?

Mr. CRERAR: The Department of Munitions and Supply does the buying for the defence services, and I am informed that a good deal of their purchases are made at the ceiling price.

Mr. FRASER (Peterborough West): And above the ceiling.

Mr. SENN: I have listened with a good deal of attention to the minister's explanation, and I am glad to know that a bulletin was issued setting out the prices that were to be paid at different times, and that floor prices at least were put into operation at different times. But this year is not through yet, and our freezers are full of beef and our barns and stables full of cattle which the farmers find it almost impossible to sell. A short time ago, when the Minister of Agriculture was speaking on this very subject, he stated that the farmers should hold their cattle until perhaps a better price was to be had, but unfortunately, as the minister knows, and as every producer and every feeder knows, cattle, like hogs and almost every other line of farm products, must be sold at a certain time if the farmer is to reap the most benefit from his labours. It is true that the meat board has purchased a certain amount of beef for export to the United Kingdom, but I believe that the Minister of Agriculture made the statement some time ago that it was mostly what he called cow beef. He stated that some eleven million pounds had been sent to the old country. I do not think that is good for the reputation of our beef in that market, because it is not the best quality of beef by any means. I am sure it will give our beef a black eye in the motherland. I do not think the minister

will be able to state for a moment that all the beef that is around the market to-day for sale is being purchased by the meat board. As I understand it, they have the power to buy this beef only when it gets below the floor price.

Mr. RALSTON: To the floor price, not below.

Mr. SENN: Within a quarter of a cent of the floor price, or at the floor price. I do not think that has been done. It has not been possible for the government or the meat board to do it. I wish the minister would state whether they have done it or not, because unfortunately our barns and stables are full of cattle.

Mr. RALSTON: Does my hon. friend mean that the board is not prepared to buy when the price gets down to within one quarter of a cent of the floor price?

Mr. SENN: I do not think it is possible for them to do it.

Mr. RALSTON: Why is it impossible?

Mr. SENN: Because the freezers are full and they have not the transportation facilities to ship it to the old country.

Mr. RALSTON: In that event it would not make any difference what the price is.

Mr. SENN: If they are going to stabilize the price—and that is their duty—I can only say that that has not been done. Our barns are full of cattle that have to be held because the farmers cannot get a price that will pay.

Mr. RALSTON: Does the hon. member say that there is not an offer out by the board to buy it?

Mr. SENN: There may be. If the minister says that that offer stands good and that they are prepared to buy all this beef, that is a different story.

I should like to ask one more question of the minister. One of the powers of the meat board is to determine prices to both packers and other persons as provided for, to establish the differentials in prices which will be paid for official grades. Has that been done? As I understand it, there are only one or two different price ceilings for the different grades. If these floor prices are to be governed by the official grade, as the minister well knows, there are a dozen grades of meat and there has not been that number of ceiling prices set. Will the minister explain just how they do determine the prices as mentioned?

Mr. CRERAR: The first point raised by my hon. friend may be answered in this way. It is well to understand the principle upon which these prices operate; that is, there is a ceiling price for beef which remains stationary throughout the year.

Mr. ROWE: That is for the retailer.

Mr. SENN: How many different grades?

Mr. CRERAR: For both the retailer and the wholesaler. That is what I am advised, and I think it is correct.

Mr. ROWE: Not for the producer, though.

Mr. CRERAR: There are times when these prices decline, and then ordinary competition will bring the retail price of beef below the ceiling price for beef. That continues until a certain period, and then prices commence to rise again. That means this, as I understand it, that there is a ceiling price and a floor price, and the floor price is the essential thing. Some may think there is too great a difference, that the floor price should be higher, but the basic fact is that there is a floor price of beef below which it is not permitted to go. I am advised that the prices have not reached the minimum point, and that is why the activities of the board of the Department of Agriculture which supervise this have not been greater than they have been. I think that is a correct statement. The thing to remember is that there is a floor price. If the price tends to drop below the floor price, the government through the Department of Agriculture steps in and buys the beef, and maintains the price, and it ships the beef overseas or makes what disposition it can of it. I understand that there has been, largely because of difficulties of transportation, an accumulation of beef. Those are difficulties which probably are inherent in the kind of situation and the sort of conditions under which we live and work, but the probability is that that condition will clear up. I believe it is clearing up now. I have noticed, for instance, on the Winnipeg market that certain classes of beef cattle have advanced in price in the last several weeks, and I dare say that that is true elsewhere. The important thing to keep in mind is that there is a floor price and that the price of beef will not be allowed to go below the floor price.

Mr. BLACKMORE: With respect to the minister's remark, may I read part of a statement which was recently submitted to the government by representatives of 289 farmers who met in Lethbridge on March 15. It was presented by three men called E. Burton, A. B. Haarstad and R. H. Dahl. I quote from page 3:

. . . prices offered for fat cows ranged between $6.50 to $7.25 per hundredweight. These values

are below the level at which it had been promised by Ottawa that market supporting purchases by the wartime food corporation would be made.

That is conclusive evidence, if it is true, that this ideal which was to be built up just simply was not working in practice. There is no time this evening to go into considerable detail on this question, but I promise that I will bring this matter up and we will go into detail just as soon as the opportunity arrives. The minister, however, has been misinformed: he has been told how the thing ought to work, but he has not been told how it has worked. There was reported a great shortage of space and the packing plants were all supposed to be filled. It is observable all through my area, however, that whenever the price went down low enough, packers could buy the cattle all right whether they could ship them or not, and the policy of the packers was to force prices down so that farmers in many cases were compelled to sell at a loss.

Mr. CRERAR: I see that several hon. members are anxious to participate in the discussion, but I wish to clear up these points as we go along. On the point made by the hon. member for Lethbridge, I am advised it has this much foundation, that there was one period, several weeks ago, when because of congestion in shipments the condition which he refers to did happen, but only for a very short time.

Mr. BLACKMORE: It is happening now, in respect of fat steers.

Mr. CRERAR: My information is different. It is all very well to have statements appear in the newspapers—

Mr. BLACKMORE: We can support it.

Mr. CRERAR: But statements made, one way and the other, should be carefully checked and verified—

Mr. BLACKMORE: We are going to check them.

Mr. CRERAR: —before they are made on the floor of the house.

Mr. ROWE: The best way to check them is to try to sell a few cattle.

Mr. BRYCE: I am very sorry this has come at this late hour. We do not have an opportunity to say what we want to say about it. The minister has explained the scheme which was intended to work, but it did not work, because there was only a ceiling and a floor on dressed beef. The farmer does not sell dressed beef; he sells cattle, sheep and hogs. The minister pointed out that on March 20 there was a rise in the price of beef of one dollar per hundredweight. That day on the Winnipeg market cattle went down fifty cents per hundredweight; that is, the same price. That system did not work. So that we have the situation which the hon. member to my left referred to at Lethbridge when the congestion occurred there. That congestion has come about by the farmers supplying the government with what they wanted. A year ago they asked us to keep back our light steers and feed them another year to get that extra meat. We have done that, but the government has failed to make arrangements to take these cattle off our hands. I was ruled out of order the last time I spoke in this chamber, because I referred to seventy-cent sheep. Where was the meat board when you could buy a whole sheep in Winnipeg for seventy cents? There is something radically wrong with our system when that takes place. I wrote to the Minister of Agriculture and pointed out where cattle were selling on the Winnipeg market below the floor. When you have no floor on live cattle the price can go anywhere. The situation in the west now is that pressure has been brought to bear on the government to take some of that cow beef which has come along. What has happened? The price of our steers has dropped. I ask the minister if the government or the meat board are still carrying on the system that they will not buy red or blue ribbon beef, they are only buying commercial beef to-day. If they are doing that, that good beef we produce, through lack of space, is left on the farmer's hand. Food is getting short, and men in the west are feeding nothing but wheat and straw because the cattle should have been away two months ago. I do not want to take up the time of the committee. I am sorry that the Minister of Agriculture is not here, and what the other minister has said does not explain the situation.

Mr. AYLESWORTH: The minister has explained that the government has not been able to see anything but floor prices, and in answering an hon. member over here, in regard to the condition we find ourselves in at the present time, I am sure that everyone in this chamber will agree that the trouble goes back to the time when this government took steps to prevent our cattle from going out of Canada and at the same time instituted the rationing system. When one considers that we produce over 250,000 head of cattle a year more than we can consume, it does not take a lawyer to figure out that in a short time, in the course of a very few weeks or a few months, we were bound to find ourselves in the very mess that we are in to-day. We have more meat in this country at the present time than either the government or the packers or the

people of Canada know what to do with. There are only two ways of getting rid of that meat; and if the government, through the meat board, is not able to ship this beef out to Britain, then in my opinion our only hope is to allow the cattle which have been coming east from Alberta and Saskatchewan in the last few months to go back to the market in the United States which the farmers have had for many years.

The whole set-up has been wrong from start to finish, and the longer it continues the worse it becomes. As far as the ceiling price is concerned, as I said two years ago it has never been fair. It has not been equitable from the very start. There is something which I cannot understand, and which I submit the minister ought to explain, namely, why, when we have a ceiling fixing a certain price for the producer, that ceiling is not kept. The first one who broke these regulations in regard to ceiling prices was the government itself. The government in the past two or three months have been setting a very bad example to other buyers of beef. They have been buying nearly all their beef, not at the ceiling price, but at floor prices. I refer to beef that has been purchased for the armed forces both here and elsewhere. In my opinion, if that beef had been brought at ceiling prices, the situation would not have been as bad as it is to-day. If the government had been paying ceiling prices, it would have avoided a great deal of dissatisfaction among the stock raisers of Canada.

What the producer receives and what the consumer pays are altogether out of line. As I said two years ago, the price the consumers pay could have been left at the same level and the producer could have been allowed a cent on the ceiling, because we all realize that there has never been such a spread in the history of the country as there is between the price which the producers receive and the price which the consumers have to pay. I am sure that if the government had set the ceiling on beef at a cent higher that ceiling could have been observed for the benefit of the producers, and yet the consumers would not have had to pay more.

Hon. members realize, I am sure, that with the retail price that is being charged to the consumer and the price that is being paid on the ceiling, the retailers of this country have never made as much money as they are making under the present set-up.

The time is coming when the government should see that there is a more equitable spread between the price the producer receives and the price the consumer pays. I repeat, in my opinion the price to the producer could have been a cent higher and yet the price need not have been raised one cent to the consumer.

Mr. SENN: There were a number of other questions that I should have liked to ask in regard to dairy products and other matters, but I have refrained from doing so because I do not want to hold up the estimates.

Mr. CRERAR: I thank my hon. friend. The agriculture estimates for the next year have still a good many items to pass and these points can be cleared up when the minister of Agriculture deals with them.

Mr. GRAYDON: Do not hold up the estimates.

Mr. CRERAR: There will be full opportunity to discuss those questions, and I thank the leader of the opposition for the suggestion.

Item agreed to.

Resolutions reported, read the second time and concurred in.

WAYS AND MEANS

SUPPLY BILL

Hon. J. L. RALSTON (Acting Minister of Finance) moved that the house go into committee of ways and means.

Motion agreed to and the house went into committee, Mr. McCann in the chair.

Mr. RALSTON moved:

Resolved, that towards making good the supply granted to His Majesty on account of certain expenses of the public service for the fiscal year ending 31st March, 1944, the sum of $2,754,162.56 be granted out of the consolidated revenue fund of Canada.

Motion agreed to.

Resolutions reported, read the second time and concurred in. Mr. Ralston thereupon moved for leave to introduce Bill No. 65, for granting to His Majesty certain sums of money for the public service for the financial year ending the 31st March, 1944.

Motion agreed to, bill read the first and second times, and the house went into committee thereon, Mr. McCann in the chair.

Bill reported.

Mr. RALSTON moved the third reading of the bill.

Mr. COLDWELL: Before third reading is given, I hope that another year we may have the supplementary estimates brought down a little earlier than this, and that the ministers who are to be questioned will not be going

away to the west before the house rises. I do not think the house has been treated fairly in this respect to-day.

Mr. CRERAR: The Minister of Agriculture (Mr. Gardiner) has not left for the west; he is on business in the province of Ontario.

Mr. COLDWELL: That is what I was told.

Motion agreed to and bill read the third time and passed.

On motion of Mr. Crerar the house adjourned at 11.07 p.m.

Friday, March 31, 1944

The house met at three o'clock.

RAILWAYS AND SHIPPING

Mr. J. P. HOWDEN (St. Boniface) presented the second report of the standing committee on railways and shipping, owned, operated and controlled by the government.

REFERENCE TO COMMITTEE OF SUPPLY

Mr. RALSTON moved:

That Nos. 387, 388, 408 and 409 of the estimates for 1944-45, approved and reported upon by the standing committee on railways and shipping owned, operated and controlled by the government be referred to the committee of supply.

Motion agreed to.

UNITED NATIONS

REHABILITATION AND RELIEF ADMINISTRATION—PROPOSED MEETING IN MONTREAL IN JUNE

On the orders of the day:

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, on March 24, in reply to an inquiry by the leader of the opposition, I said that the government had cordially welcomed the proposal that the council of the United Nations Relief and Rehabilitation Administration should hold its next meeting in Canada. Hon. members will have noticed that the acting director general of the administration, Sir Arthur Salter, has announced in Washington that the next session of the council will open in Montreal on June 23. I am sure that the people of Canada are glad to know that arrangements have been made for this important international body engaged in a great humanitarian task to meet on Canadian soil. I feel that I can promise a warm welcome to the members of the council and the officers of the administration.

[Mr. Coldwell.]

POST-WAR CIVIL AVIATION

MEETING OF COMMONWEALTH PRIME MINISTERS

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): The Prime Minister of New Zealand, Mr. Peter Fraser, is reported to have stated in the New Zealand parliament yesterday that as an alternative to international ownership and control of post-war civil aviation New Zealand is prepared to support a system of imperial air trunk routes across the Pacific, owned and operated by British and dominion governments. In view of this announcement would the Prime Minister inform the house whether or not civil aviation will be one of the subjects on the agenda for discussion at the forthcoming meeting of commonwealth prime ministers?

Right Hon. W. L. MACKENZIE KING (Prime Minister): My hon. friend was kind enough to tell me that he intended to ask this question. In reply I would say that the meeting of prime ministers which is to be held in London will not be in the nature of an imperial conference at which subjects would be considered in detail, with the presence of experts and advisers, but will be in the nature of an exchange of views between the prime ministers of the different nations of the commonwealth on the general war situation, war policy and post-war problems.

I doubt if I should at the moment attempt to go further in indicating the general nature of the meeting.

Mr. GRAYDON: This would be a post-war problem, and perhaps it would come within the ambit of the discussion to be carried on.

Mr. MACKENZIE KING: That is right.

BEEF CATTLE

EXPORT OF SURPLUS—EMBARGO ON SHIPMENTS TO UNITED STATES

On the orders of the day:

Mr. R. W. GLADSTONE (Wellington South): Mr. Speaker, I desire with the support of the hon. member for Lambton-Kent (Mr. MacKenzie) and other members, to direct a question to the acting Minister of Agriculture. In view of the fact that large numbers of heavy cattle are now ready for marketing, and of the inability of the producer to sell these cattle on existing live stock markets, will the Department of Agriculture through the meat board arrange to take our surplus beef off the market immediately for export at ceiling prices? Also will the govern-

ment refer the whole matter of marketing beef cattle and prices to the committee on agriculture for study and recommendations?

Hon. T. A. CRERAR (Acting Minister of Agriculture): I am not in position to give a definite answer to either of the questions asked by my hon. friend, but I shall draw them to the attention of the Minister of Agriculture (Mr. Gardiner). In any case the latter part of the question could be dealt with after the Easter recess.

Mr. ROWE: As the hon. member for Wellington South (Mr. Gladstone) has said, many cattle at this season are heavy and are finished and the farmers' feed is becoming exhausted, with market conditions unfavourable for selling at a profit. I would therefore urge upon the government that they give consideration to lifting the embargo on cattle going to the United States.

Hon. J. L. RALSTON (Acting Minister of Finance): Perhaps I can answer that, as it has to do with the wartime prices and trade board. The matter has been and is still under consideration.

LABOUR CONDITIONS

MOVEMENT OF MAN-POWER FROM INDUSTRIES TO FARMS

On the orders of the day:

Mr. KARL K. HOMUTH (Waterloo South): I have a question I should like to direct to the Minister of Labour. I am sorry I could not get in touch with him at his office, but it may be sufficient if I refer to a telegram which I sent him the day before yesterday. This is a matter of urgent public importance, but I did not move the adjournment of the house because I thought it would delay the proceedings this afternoon. Perhaps if I read the wire the minister could give an answer. It is addressed to the minister and reads:

> Many farmers holding important jobs in industry must return to farms end of this month. Impossible to get on land for some weeks yet. Cannot time be extended? Local officers say they have no power.

Can something be done in regard to this matter?

Hon. HUMPHREY MITCHELL (Minister of Labour): Action along the lines suggested by my hon. friend was taken before the receipt of his communication and directions have gone out to selective service officers to time the movement from industry to the farm in conformity with weather conditions.

CANADIAN ARMY

BEET SUGAR INDUSTRY IN ONTARIO—USE OF DRAFTEES FOR FARM LABOUR

On the orders of the day:

Mr. H. A. MacKENZIE (Lambton-Kent): I should like to direct a question to the Minister of National Defence. The sugar beet acreage contracted for up to date in southwestern Ontario is only a quarter of the maximum acreage called for. This is due mainly to the doubt of sufficient labour supply being available to harvest the crop, and seeding time is at hand. In view of the rationing and scarcity of sugar I should like to ask the Minister of National Defence if he will release enough draftees with some farm experience from adjacent training centres to assure the growers that the crops will be harvested, if the Department of Labour are unable to supply sufficient help in the hoeing and harvesting season.

Mr. PERLEY: Put it on the order paper.

Mr. SPEAKER: Perhaps the question asked by the hon. member for Lambton-Kent should be placed on the order paper, but the leader of the opposition on Wednesday suggested that some latitude should be given because of the Easter recess. I agree, and I think perhaps this question might be answered now by the minister.

Hon. J. L. RALSTON (Minister of National Defence): Mr. Speaker, the hon. member was kind enough to let me know that he intended to ask this question. This is really a matter for my colleague, the Minister of Labour (Mr. Mitchell). However, I can say that representatives of the industry had an interview with me and also with the adjutant-general. To answer my hon. friend's question specifically, the answer would be in the negative—that is, men in training centres could not be made available for this purpose. I can say further that the responsible officers, in conference with the Department of Labour, are exploring the possibility of arranging to make available a considerable number of prisoners of war. However, this would be dependent upon security arrangements being approved by the Royal Canadian Mounted Police.

REQUEST FOR RELEASE OF CERTAIN CATEGORIES FOR FARM WORK

On the orders of the day:

Mr. W. F. RICKARD (Durham): Mr. Speaker, can the Minister of National Defence not give us an assurance that some of these B-2 and C men in the army will be released for farm operations in general? A great many men in those categories who are perhaps none too necessary in the army would be of great assistance to the farmers.

Hon. J. L. RALSTON (Minister of National Defence): I think the parliamentary assistant made a full statement with regard to the position which the department takes, and I would rather hope that my hon. friend after reading the statement will realize that we are doing everything possible in connection with that matter. As a matter of fact we are going farther than we did last year. But my hon. friend will remember, of course, what year this is.

CHINESE NATIONALS

REMOVAL FROM TRAINS PROCEEDING TO CANADA FROM THE UNITED STATES

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): During the debate yesterday I directed a question to the Minister of Mines and Resources which subsequently was partly answered by the Prime Minister. The question was based upon a communication stating that citizens of Chinese origin allegedly had been taken off trains when entering Canada. This matter formed part of the discussion yesterday but I do not think it was cleared up. It may be that neither the Prime Minister nor the Minister of Mines and Resources can do that, but perhaps the Minister of Transport ought to look into the matter to see just what is the position of the railway companies. If there is something relating to international matters which should not be made public, I have no objection to the government's taking that position. But at the moment everyone is confused as to just what happened, and I think we ought to have a statement from one department or the other.

Hon. T. A. CRERAR (Minister of Mines and Resources): I stated yesterday that the lady had not been asked to leave the train by any Canadian government official. I would say further for the information of my hon. friend that she was not at any time on Canadian territory. The assumption therefore, although we have no definite information on this, is, it was by the railway officials of the United States line carrying her to the border point that she was asked to leave the train. Apparently no official of a Canadian railway had anything to do with the matter, any more than had any official of the immigration department.

Mr. GRAYDON: In other words, no Canadian had anything to do with it at all?

Mr. CRERAR: That is my understanding.

Mr. GRAYDON: That is fine.

[Mr. Rickard.]

Mr. CRERAR: I am advised definitely of this, that she was not on Canadian territory at any time, and if she was not on Canadian territory it is a reasonable assumption that she was asked to leave the train proceeding to the border probably by officials of the train.

Mr. GRAYDON: And it was an American train?

Mr. CRERAR: Of course, it was an American train.

PRICES AND TRADE BOARD

CHARGES AGAINST REPRESENTATIVE AT MONT-LAURIER

On the orders of the day:

Hon. J. L. RALSTON (Acting Minister of Finance): Mr. Speaker, yesterday the hon. member for Labelle (Mr. Lalonde) asked me what steps had been taken by the wartime prices and trade board regarding J. A. Forget, local representative of the board at Mont-Laurier. I am advised that the board has dispensed with Mr. Forget's services.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Tuesday, March 28, consideration in committee of a resolution to grant to His Majesty certain sums of money for the carrrying out of measures consequent upon the existence of a state of war—Mr. Ilsley—Mr. McCann in the chair.

DEPARTMENT OF TRANSPORT

Air services branch—

3. Civil aviation: operation and maintenance of municipal (terminal) airports, $398,260.

Mr. CHURCH: Mr. Chairman, last Tuesday night I had risen to take part in the debate on civil aviation, although I had had no previous knowledge that it was coming up. There always seems to be a mystery as to when this subject will come up, yet there has never been a more urgent matter of national and international importance on which there has been such a wide division of public opinion. The minister and the government need not criticize the opposition, because, after all, what we are doing is submitting constructive suggestions. Let it not be forgotten that a whole year has been wasted in dealing with this problem, ever since April 2 of last year when the policy was announced in which the empire was not linked up at all as a unit. It will be April 2 next Sunday again, and in all that year nothing has been done about this problem. True, the

minister did go to London last May and a conference was held there and an announcement made, but the announcement does not go far enough.

Between these two great wars, Mr. Chairman, the question of civil aviation has been almost a forgotten topic, and any work done in civil aviation has been done by private enterprise and by private companies with little or no support from the government, even in the old land. In this country civil aviation was left to private enterprise entirely. Those great war pilots, Bishop, Barker, Collishaw and Frederick Handley Page, were in Toronto after the last war and I discussed the matter of civil aviation for many days with them then and there and with Frank McGill. But as a dominion we seem to have forgotten all about civil aviation ever since the last war. We left civil aviation to struggle as best it could. Very little money was provided for it in the estimates; it was left, like John Brown's body, to hang on a sour apple tree. Then came the great war, and we have seen the glorious achievements in the air of the young Canadians who joined the Royal Canadian Air Force and the Royal Air Force. In the battle of Britain our very existence was at stake, and we as a nation owe an unrepayable debt to those brave young men who went up by night and day to save the world and civilization.

In the domestic aspect of this question, in my humble opinion, mistakes have been made. In the period before the great war and between the two wars the national railways spent large sums of money on useless branch lines and duplication of facilities, while the rival road pursued the policy of private ownership. What I object to in connection with this particular policy of the government is that it is a small nation policy. I tell the government that the day of small nations is over, and that this war has shown it. Mechanized hordes have trampled down small nations all over Europe. Our resources as a people are limited; we cannot compete with the great powers; our only course is to play the game cooperatively, to lay all our cards on the table, and unite on this great problem as a unit with the mother country and our sister dominions. True it is that I approve, as I believe my party on this side of the house approve, of continuing Trans-Canada Air Lines. But one of the weaknesses of the government policy is that it omits entirely any reference to the empire as a unit, and little or nothing was said about the London conference—which had to be continued at Washington—except a quotation from Lord Beaverbrook. I have urged for four years a unified empire policy. We as part of the empire should not forget that it is through Britain's command of sea power for the past three hundred years that the oceanic empire was developed. Let it be so again in the air.

I believe also that the Canadian Pacific Railway through its affiliations should be allowed to carry on its airways and continue the good work it has done. I do not urge this as an opponent of public ownership. I have been a real public ownership man all my life—not a supporter of public ownership in the sense that the national railways sometimes have been carried on in the past, but favouring real public ownership, for instance, of light, power and transportation utilities in the city I come from, where they were taken over and are operating at a large profit. I believe the Canadian Pacific Railway has done a great deal for the British empire on land, sea and in the air., and particularly in uniting the empire before the war through their magnificent ocean services.

So far as our domestic policy is concerned, there has been no interference by the mother country with the dominions. Each has its own status, its own sovereignty, its own autonomy. Under the statute of Westminster each dominion looks after its own home defence and domestic affairs along the lines indicated. Let us not forget that.

I repeat that we must regard the British commonwealth of nations as an air unit. No part of that empire is more than two thousand miles away from another part. I am wholly in favour of developing an interlocking empire service. By so doing we shall forge a strong link to hold the empire together. This can be done in a whole-hearted cooperative way, and if that atttiude is taken I am sure the cooperation of the other dominions will be obtained. Mr. Fraser and Mr. Curtin, those two great imperial statesmen who are the prime ministers of New Zealand and Australia, have shown and led the way. But this can only be accomplished by subordinating sectional interests in the empire sense and not trying to gain local advantage for this country or that. Let us cut red tape and seek to deal with the matter on the principle of lease-lend, which has been so effective hitherto in this war. The dominions expect the mother country to take the lead, and if they are given an energetic lead all will be well. The position of Britain and of the empire and of this country as a world power depends upon the place it holds in the air. The greatness of Britain as the centre of the commonwealth of nations arose from the fact that for two

hundred years she was predominant upon the sea, and she can be equally dominant in the air if only she rises to the occasion.

As regards air transportation, I think that our officers and men of the air force should be allowed to transfer to the civil organization. As regards management, I could never understand why a public ownership body like the Canadian National and T.C.A. had to go to private ownership for an air leader, nor do I understand why they should continue that policy in future. Why should they not look to the thousands of young men who are protecting us in the air overseas? Many of the best business executives we have in the country are serving us in the skies overseas. After all, who is paying for our part in this war but the Canadian taxpayer? In my opinion Trans-Canada Air Lines should be reorganized, and somebody put at the head of it who is a real public ownership man, who is not satis- a real public ownership man, who is not identi- support it from beginning to end.

It will be one year next Sunday, April 2, since the Prime Minister made an announcement of air policy. There are two or three things I like about it, but I oppose its isolation and lack of empire outlook.

Reference has been made to the selection of the Douglas DC-4 by the Trans-Canada Air Lines. It is obsolete. They say that the Lancaster is unsuited for civilian purposes, but it has been shown by Handley Page and others in the old land that some of the bombers can be readily adapted in a few days for use as transports, and also Lancasters by simple changes in design by research at Malton.

I do not believe that in connection with this aviation problem we have given sufficient attention either in this war or the last, to scientific research. As I said last evening, one needs at each large university a chair in this particular work. We know what science properly applied has done in the last seventy-five years in the utilization of oil, gas and falling water and many other agents of power and industry. It has won the admiration of the whole civilized world. Why? Because science argues from fact; it does not argue in the realm of doubt and opinion. Look at the progress which medicine has made in the last fifty years. Properly stimulated, similar progress could be made in research in the air. I believe that the government will waste a lot of money by utilizing the Douglas DC-4 for its civilian air service. A much better plan could be worked out along the lines I have indicated. Canada should try to take the lead in the field of design and should prepare a definite policy for the next twenty-five years. Fundamental changes will occur in the future. Aviation in Canada is yet only in its infancy. Research, design and experimentation will be more important than ever. In Canada and in the empire we are on the threshold of a grand new age which will revolutionize aeroplane construction and the development of aeroplane engines. In this field high speed is essential to supremacy. Problems of all sorts arise; science and research will provide even lighter alloys and new types of wings, engines and parts which will withstand various climatic conditions the world over.

I do not think Canada should have a monopoly in connection with civil aviation, any more than she should have a monopoly in connection with design. No doubt immediately after the war improved aircraft for the transportation of passengers, emergency foods and many other articles will be absolutely necessary, because when the war is over the railways and other forms of transportation will be choked. So it will be of the utmost importance that there be close cooperation and mutual understanding between Great Britain, the United States and the dominions.

I believe this question, instead of being a secret with the minister and the government, should be considered by the committee on railways and shipping, which dealt with one aspect of this question the other day. It should hear all sides of the question. Trans-Canada Air Lines, Canadian Pacific Air Lines and private lines in this country, which carried on the work of civil aviation between the two wars, should be heard and a proper policy should be adopted. We are now embarking upon a policy of complete isolation from the mother country; we are going over the heads of Australia and New Zealand, and I say we are at the parting of the ways. I warn hon. members of the danger; I say we should stop, look and listen to the advice of those who have seriously considered this matter. When the young people come back from the war and look for employment, where will they find it? The other night reference was made to Russia. That country will have nothing to do with this internationalization of air routes; neither will the United States. Washington simply shudders, as does the Republican party, at the mention of any sort of internationalization which will lead to another war. I believe we should clean our domestic house first of all. We should solve the domestic air problem; then we should move into the imperial problem in consultation and collaboration with the other dominions. After that is done, and we have a real empire policy, we can move into the international sphere. The mother

country led the world on the sea for two hundred years; she will lead the world in the air in the days that are to come.

I suggest to the administration that one of the most important things to be done is completely to reorganize Trans-Canada Air Lines. One of the greatest mistakes we made in this war as a people was to surrender too much military, financial, economic and social initiative to Washington. It is of the utmost importance that we should come to an agreement and understanding with the United States, our great ally, and I believe one can be reached quite easily; still I say we were asleep between the two wars. This empire came into being because of the sea and it cannot exist except by the sea. As far as the personnel of T.C.A. is concerned, I think both officers and men agree that after the war in Canada the civil service of the air should be a fine field for them, with steady work. The situation in regard to the management is most important also, and I hope the government will see that those charged with this duty will get the very best men available, whether it be left with the present minister or transferred to someone else or some other department.

Having laid down some principles as to policy, the first question to be considered will be that of the freedom of the air. The closed air doctrine following the last war gave rise to a great deal of trouble internationally. There seemed to be a great fear of allowing the passage of aircraft over countries, as by our navigation laws ships are allowed to pass over the waters of the oceans to our ports. The main point is that we should decide on the right policy and carry it through. At the present time this empire needs another Joseph Chamberlain to carry this great empire air scheme to the dominions. He was a pathfinder for the empire, and at the present time we need some great statesman as a pathfinder to deal with this air question, as it has been dealt with by Mr. Curtin in Australia and Mr. Fraser in New Zealand. The new empire in the world to come after the war is over will be held together largely through the air, and Canada will not be able to exist or prosper without a proper policy in that regard. There is no use starting out to hog all the rights in the air. The air should be free for all who wish to use it, under our domestic law; the laws of the air should be on the same basis as the laws relating to navigation by ships. Canada must not say, "We want it all in home affairs; we will not have any domestic competition." Competition is the life of free transportation, and there must be freedom of the air under drastic regulation, in both domestic and international affairs. No one in Canada wants a mad race in connection with air transportation; that will only lead to the kind of waste we saw for thirty years in connection with rail transportation. If we follow that policy we will be back where we were in 1920 and 1922, when the two great railways in this country were so shortsighted that they did not see what highway transportation by buses and trucks would mean in the way of competition. These bus and truck lines would have been feeders for the steam lines if the problem had been faced intelligently, as the Toronto street railway solved it in 1921. So in the future world these small air lines and both our large ones will be feeders in connection with the air routes of the world.

Mr. HOWE: My attention has been drawn to a statement made by Premier Drew, in the legislature of the province of Ontario, on Tuesday last. I have not read the complete text of the statement, but I have before me certain excerpts as contained in a press report of the *Globe and Mail*. Premier Drew stated that it was the intention of the Department of Munitions and Supply to place the contract for the manufacture of the DC-4 aircraft in the government-owned aircraft plant at Malton, Ontario, which is operated by the crown company, Victory Aircraft Limited. He charged, on what authority I have no way of knowing, that the contract was switched from the Malton plant to the plant operated by Canadian Vickers Limited in Montreal, because Mr. H. J. Symington, who is president of Trans-Canada Air Lines, which will be the chief user of the DC-4, is also an officer of the Royal Securities Corporation, a Montreal investment firm, which—and I quote Premier Drew's words—was heavily interested in the financing of Canadian Vickers Limited. Premier Drew stated further that, and I quote his words again:

> Canadian Vickers Limited, by a recent deal, had passed out of the control of those who organized it and is not now controlled by Canadians, Britishers, or United States citizens.

I shall deal first with the charge that there was a change in plans on the part of the Department of Munitions and Supply with regard to the placing of the contract for the manufacture of DC-4 aircraft. A few months ago it was decided that we must undertake the manufacture of a transport aircraft for use by Trans-Canada Air Lines in services operated on this continent. It was decided, after very thorough investigation, that the type of aircraft most suitable for such service was the DC-4. Manufacturing rights

were obtained from the Douglas Aircraft Company Inc., of the United States, and immediate plans were made for production. In selecting the plant in which the DC-4 would be manufactured, we had to be very certain that the production did not interfere with urgent war programmes. We selected the government-owned plant in Montreal, which is operated by Canadian Vickers Limited, because the programme on which that plant is now engaged will terminate late this year. The government-owned plant at Malton is just coming into volume production on a very large order for Lancaster bombers. The Lancaster bomber is, as I have already told the house, the airplane that now has the highest priority in Canadian production. We could not possibly have given consideration to the placing of the DC-4 contract in the Malton plant under these circumstances, and I may say that at no time was there any intention of doing so. The only interpretation I am able to place on Premier Drew's remarks is that we should have permitted the production of an aircraft for civilian use to take precedence over the production of a bomber aircraft which at this very moment is the most urgent of all aircraft requirements overseas, and this as a concession to sectional interests. Since Premier Drew has made reference to the question of employment I may say that the Lancaster programme in terms of dollar value is the largest aircraft programme we have undertaken. So far as we can now estimate, the dollar value of production at the Malton plant of the complete programme will be in the neighbourhood of 200 million dollars. The contract for the production of the DC-4 is a small contract as aircraft contracts go, having a dollar value in the order of fifteen million dollars. The employees of the Malton plant, to whom Premier Drew obviously has directed certain of his remarks, will appreciate the significance of these figures in terms of continuous employment. So much for the placing of the contract.

I come now to the second of Mr. Drew's charges, that concerning Mr. H. J. Symington. Mr. Symington is president of Trans-Canada Air Lines, a director of Canadian National Railways, and also power controller. In all these positions he has rendered distinguished service to Canada. I have no hesitation in saying that he has been one of my most valued advisers, both during my term of office as Minister of Transport and during the years I have been Minister of Munitions and Supply. He has never hesitated to undertake any public responsibility I have entrusted to him, even when this involved great personal sacrifice. I would remind the house that this is the second occasion on which Premier Drew has made a personal attack on Mr. Symington. The specific charge is that Mr. Symington has used his office as president of Trans-Canada Air Lines to further the interests of a private corporation with which he is associated. What are the facts? The Royal Securities Corporation, of which Mr. Symington is an officer, has no financial interest in Canadian Vickers Limited. When the bonds of Canadian Vickers were first offered to the public, in 1927, the Royal Securities Corporation was one of a number of financial houses which distributed these bonds. Otherwise the company has not had any connection with either the financing or the management of Canadian Vickers. Further, I may state categorically that Mr. Symington was not consulted about the placing of the DC-4 contract, nor had he any knowledge of the intention of this department with regard to the placing of the contract until the contract had actually been placed.

The third charge of Premier Drew was that the control of Canadian Vickers Limited had passed into the hands of persons who are not British or United States citizens. The committee will recall that this question was raised a few days ago by the hon. member for Rosetown-Biggar. I stated at the time that it was not the practice of the Department of Munitions and Supply to inquire into the stock control of its contractors, since companies incorporated in Canada were subject always to the provisions of the Companies Act. However, in view of Premier Drew's charge, I have investigated the stock control of Canadian Vickers Limited. Of a total issue of 19,000 preferred shares, residents of Canada hold 13,614; residents of the United States hold 413; of Newfoundland 167; of England 83; and of Bermuda 35. The remaining 4,688 shares, or 24·67 per cent, are held by a Canadian investment corporation known as Losanac Limited. Of a total issue of 52,000 shares of common stock, Canadian residents own 36,680; residents of the United States 3,302; of Bermuda 325; of England 253; and of Newfoundland 20. The remaining 11,420 shares, or 21·96 per cent of the total issue of common stock, are also held by Losanac Limited. It will be seen from this analysis of stock control that 75·33 per cent of the preferred stock and 78·04 per cent of the common stock is held by British and United States citizens. Colonel Drew's statement that the stock control is now in the hands of persons who are not British or United States citizens is, to say the least, something of an exaggeration. Since the hon. member for Rosetown-Biggar inquired into the ownership of Losanac Limited, I have also investigated the control of this company. It is owned by Solvay et Cie., a Belgian banking

firm, whose affairs are now administered by Baron Rene Boel. Baron Boel is a resident of London, England, and is adviser to the Belgian government (appointed by order in council to that official position), which is now located in that city. Losanac Limited has not now and never has had any connection with any holding company in Basle, Switzerland. There is not now and never has been any German interest of any kind in the company. The Belgian banking firm, Solvay et Cie., decided to invest Belgian funds in Canada. For this purpose a Canadian company, Losanac Limited was incorporated. The president of this company and its officers are Canadians. Since reference was also made to the holdings of Losanac Limited in the International Nickel Company, Hollinger Consolidated Gold Mines, Dominion Steel and Coal Company, and the Asbestos Corporation, I have also ascertained that the company is not a large holder of the preferred or common stock of the International Nickel Company or Hollinger Consolidated Gold Mines Limited. The company has substantial holdings in the Dominion Steel and Coal Company and the Asbestos Corporation, but these do not approach control of the stock of these corporations.

The Belgian ambassador has drawn my attention to the statement made in the House of Commons on March 28 with reference to Losanac Limited. He was much concerned with the implications attached thereto, as they were likely to cast aspersions on the Belgain interests concerned. He expressed the hope that they might be corrected and assured me that Baron Boel has rendered and is rendering distinguished services to his government.

The facts which I have submitted to the committee will indicate how much truth there is in the charges made by Premier Drew. These facts were available to Premier Drew, but with his customary omniscience in all matters affecting the conduct of the war he has thought it desirable to make his charges without ascertaining the facts. I suggest, Mr. Speaker, that irresponsible statements of this kind are most damaging to Canada's war effort, particularly when they come from one who occupies a high position in Canadian public life.

Mr. GRAYDON: I had not intended taking any part in this debate until the minister made his almost unprovoked attack upon the premier of Ontario.

Mr. HOWE: What about his attack?

Mr. GRAYDON: I did not interrupt the minister when he was making his speech, and I want to make mine with as few interruptions as the minister can possibly arrange. May I say—

Mr. HANSELL: I rise to a point of order. I understood that we were discussing civil aviation. I believe the Minister of Munitions and Supply interrupted the debate to make a statement. As a courtesy we give that right to the ministers. If the statement is to be debated I am afraid we shall go off on a long course and may not be able to return to civil aviation this afternoon. I do not want to prevent the leader of the opposition from speaking. I think perhaps he should answer the minister, but let us not get off on a sidetrack now. Let us return to civil aviation when the leader of the opposition gets through.

The ACTING CHAIRMAN (Mr. McCann): Does any other hon. member wish to speak to the point of order raised by the hon. member for Macleod? I think the minister was quite within his rights in speaking as he did, because in my opinion, the matter to which he refers comes within the purview of civil aviation.

Mr. GRAYDON: I shall not be very long. As I stated at the beginning, I had no desire to take part in the debate at this stage. But the points which the minister injected into this discussion require some comments, I believe, from the official opposition. Not only did the minister make certain statements that I think were unbecoming to him, but he went too far in the remarks he made. So far as the Malton situation is concerned I do not think Premier Drew of Ontario, or any other premier of that province, needs to have anyone offer any apologies for him when he attempts to be the spokesman for what he considers to be in the best interests of the province of which he is head at this time.

I have not, nor apparently has the minister, seen any exact record of what Premier Drew said, except what appeared in the press. But on that statement we must rely, so far as this discussion goes. It seems to me that the premier of Ontario was definitely drawing to the attention of the minister and the government the fact that the Victory Aircraft plant at Malton is a plant which perhaps has no peer or parallel in the whole of Canada, in the production of aeroplanes. I think the minister himself will admit that.

Not only is the Malton plant in an excellent position for future production, but it has turned out in production a kind of plane which we, in the Malton area, have felt would be utilized in connection with what the minister said last spring—for civil aviation in the future, and for the great development of air transports in the peace-time period that, let us hope, will follow. I think the minister, in

making the charge he did against the premier of Ontario to-day does a disservice not only to Ontario, but also to the Dominion of Canada, so far as his allegations went.

We have at Malton some 9,000 employees who are working on Lancaster planes. It is a production which is gradually being stepped up, and that production was brought about under circumstances which in years prior to this presented certain difficulties. The Malton plant is situated contiguous to perhaps one of the greatest airports on the continent. There is no other plant in the whole of Canada in a better position geographically, and from the production point of view, to turn out that type of plane, to serve the post-war trade in the manufacture of planes, than is the Victory Aircraft plant. And upon that basis—well, I do not wish to be uncharitable to the hon. member for Fort William, but he will do the minister a favour if he does not interrupt me at this time.

I wish to say this to the minister, that with regard to the position of that plant, there was every reason for the premier of Ontario to take the position he did with respect to the post-war period as it will affect Malton. There has been a tremendous development there. Many people have been brought in. The whole district is developing, and is looking forward with eager expectancy to the post-war manufacturing of planes. That has been the whole —shall I say—Malton idea, from beginning to end, so that it may not be a mushroom settlement, and so that it will be more than a temporary move.

When the minister announced, quite out of the blue, to the house that the DC-4 was being made at Vickers in Montreal, I fancy—and I think most hon. members will agree—that that was greeted with dismay by those in the Malton area, and others in that particular part of Canada, where they are looking forward with keen anticipation to what will happen in the post-war period. They have the right to hope that the wheels will be turning to the manufacture of peace-time planes in that area, as they are turning at this time of war to the manufacture of Lancasters.

In addition to that there was the feeling, and I think perhaps with justification, that the Lancaster has no peer in the way of performance in that type of aviation, or in the same type of aviation as will be required for civil aviation when the war is over. When Premier Drew undertook to champion—and that is the word, "champion"—the plant at Malton, and the Victory Aircraft company, he was trying to make sure that those 9,000 men and women would be kept working when this war is over, in a civil aviation plant, as they are now working in the war-time period.

[Mr. Graydon.]

That is why I do not think anyone need apologize for the stand Premier Drew took in the Ontario legislature, and I am not going to do so. I am going to commend him for having done it.

Mr. HOWE: Go to it.

Mr. GRAYDON: May I say this, that when the Minister of Munitions and Supply in his reply to Premier Drew which appeared in the press—as I read it—in connection with the Lancaster matter, talked about transferring and changing the orders—well, I do not know whether he was serious. I certainly hope he was not serious when he made the suggestion with respect to changing and transferring orders at this time from Lancasters at Malton to DC-4's at Malton.

I think the minister must have been pretty hard up for an argument, when he used that, after all the tooling up that has been done at Malton during all these years. I say that because the minister must have known, as every member who read the statement by Premier Drew knew, that the premier had no intention, nor have I the intention this afternoon, of suggesting that we should at this moment change the manufacture of Lancasters in Malton during a war-time year into peace-time production, nor would any responsible citizen suggest that.

But the Minister of Munitions and Supply, apparently for his own purposes, and to bolster up and support his argument, attempted to place another interpretation upon the words of the premier. That is not the way to meet Premier Drew's arguments. The way to attempt to meet his arguments is to try to bring the true facts to bear with respect to the whole problem under discussion.

Mr. HOWE: Premier Drew made no argument.

Mr. GRAYDON: Well, let me tell the minister that the premier is able to look after himself very well, so that we will all go on our way together.

When the minister speaks of the premier of Ontario as being irresponsible, then I say the minister knows full well that that is not right. Premier Drew of Ontario is as responsible a public man as there is in the whole Dominion of Canada. More than that, the premier of Ontario has, I think, the confidence of his province in a way that the minister and his followers would like very much to have in that province to-day.

Mr. HOWE: We will look after ourselves.

Mr. GRAYDON: Perhaps the reason why the minister, who comes from Ontario, may

feel keenly about this matter, is that he is afraid of losing his seat, and the same would apply to the hon. member who was going to rise—

An hon. MEMBER: Haldimand-Norfolk.

Mr. GRAYDON: —and to the hon. member from the Cooperative Commonwealth Federation who has just spoken, that the Haldimand-Norfolk seat was just taken from his party, too. May I say to the government whip, over there, that he is representing Norfolk, and must know what his situation is in relation to that seat.

Mr. HOWE: This whole thing is political, is it not?

Mr. GRAYDON: Let me say this, that when the minister talks about irresponsibility, that is a reflection not only upon the premier, but also upon his legislature and upon his government. More than that, it is a reflection upon the people of Ontario who sent the Minister of Munitions and Supply to this house.

I want to say this, that when we talk about a contribution, and the position taken by the premier of Ontario, and when the minister says he has been damaging Canada, then I say that the record of the premier of Ontario is of such a character both in war and in peace that no one can stand up honestly and draw the interpretation, as the minister has done to-day that George Drew is not a patriotic, honest and well-meaning citizen, one who is trying to do his best, and has tried his best through all these years to prod a very dull, stolid and slow government into war-time action.

Mr. SHAW: Mr. Chairman, now that there is a lull in the Ottawa-Ontario battle, I hope to be able to direct attention back to civil aviation. On March 17 the Minister of Munitions and Supply gave to the House of Commons the government's views regarding civil aviation, both domestic and international. At the conclusion of his presentation he placed upon the record a draft of an international air transport convention, which I judge was the government's contribution to future international discussion. As I approach the question of civil aviation I consider it imperative that I bear in mind that the minister indicated that the views which he expressed and the convention which he tabled must be regarded as tentative or preliminary, and may be rejected at a future date—this is my view and perhaps not the minister's—by the partners in the commonwealth or by any of the allies with whom we are now associated. During the short time at my disposal I shall try to place some of my views before the committee.

Upon more than one occasion I have stated in this chamber that I condemn centralized monopoly control, whether by a private corporation or by a government, whether on land or in the air. I consider it to be totalitarian in nature and anti-democratic in operation. Of the two I fear government monopoly more than I fear private monopoly. So far as private monopoly is concerned, there is always the hope that the government, which should be the supreme authority in the state since it is the people, may legislate or act under existing legislation to break a private monopoly. As I say, there is always that hope. On the other hand, so far as government monopoly is concerned, there is no force within the country, unless the people reach the stage where they rise in revolution, to break the monopoly. I repeat that I fear government monopoly more than I fear private monopoly, but I have absolutely no use for either.

I do not think I am going too far when I assert that anyone who subscribes to a form of state monopoly is extolling the virtues of countries such as those against whom we are warring to-day. The Minister of Munitions and Supply, I judge—I have the right to my own opinion—was making a complete denunciation of the principle of competition. I would assert that as a result of the minister's declaration the government has gone on record as favouring at least a degree of state monopoly. It is strange for one sitting over here to understand how a minister of the crown or a private member of the government party can stand up and criticize, let us say the Cooperative Commonwealth Federation party, for advocating state control and then, by approving the action of the government with which he is associated, take rapid strides in that direction.

I do not know by what reasoning or calculation it can be argued that a government which, either through lack of vision or through lack of energy of management, cannot manage an enterprise in competition with another enterprise yet hope, after the elimination of the competitive enterprise, to render to the people of the country a superior type of service at prices which would be established by competition or which would satisfy the public interest to a greater extent. I am not sure that I have made my point clear. Let me repeat. If we have a government owned enterprise and a privately operated enterprise, and the government, because of the nature of its operations, cannot compete with the private enterprise and render the necessary

service, then I cannot see how they can eliminate the other and hope to render a higher type of service.

The Minister of Munitions and Supply referred to our airmen and many hon. members have referred to our airmen on previous occasions. We have a great deal of admiration for their magnificent accomplishments and we look forward to the day when they will return. We realize that they have had considerable training and naturally when they return will be intensely interested in civil aviation. Their exploits demonstrate that they have been properly trained. There is also the fact that the commonwealth air training scheme has been in operation in this country. This has instilled in the minds of the Canadian people a great enthusiasm with respect to post-war aviation possibilities. Added to this we know the Canadian people are fully aware of the extent and development of transport services during the war. We know they recognize that all services have been speeded up as a consequence of the utilization of air transport.

When these lads return after the war they are going to look for opportunities to engage in aviation. After the last war this was true. Many of our pilots, mechanics and others returning at that time undertook the carrying on of their interests in the northland, but so far as I have been able to ascertain these boys in almost every instance were financed or at least employed by mining companies, petroleum companies and other companies interested in the development of the northland, and these enterprises themselves were also assisted by the government by the granting of mail contracts. I am not aware that many of these young men returning from the last war were able to finance the establishment of any air routes in any part of Canada.

After this war we look, according to the minister's statement, to a rich new opportunity for our airmen so far as branch air routes are concerned. I am sure that these boys when they come back will not have very much money, and I am sure they will look for assistance if they engage in aviation. I wonder if it is the government's intention to finance the establishment of companies in which these boys might be interested, operating over unprofitable routes. I wonder if we may have in civil aviation after the war something comparable with what happened in land settlement after the last war, when many men were put on unproductive land, placed upon farms on which no one should have been placed. I wonder if we shall have a repetition of that so far as civil aviation is concerned after this war. In other words, is the government going to purchase unprofitable feeder lines or establish new lines of an unprofitable nature? If it purchases unprofitable feeder lines or establishes new lines that are unprofitable, I fear, too, that we shall have a situation where ultimately privately owned lines will be taken over by the government at an over-capitalized valuation. We have had that experience in connection with the railroads. The government undertook to engage in that enterprise and purchased over-capitalized railways which plunged the country into debt, where incidentally it remains. Surely if we are not careful in regard to civil aviation, the Canadian people are in for a most disillusioning experience.

As I said a few moments ago, Canadians are intensely interested in post-war aviation possibilities. The present working range of transport aircraft fascinates the Canadian people. I recall reading only a few days ago about the transport aircraft recently manufactured by the Glenn L. Martin Aircraft Company of Baltimore. Many have no doubt read about this machine, known as the Mars, with a wing spread of two hundred feet and a capacity equal to almost fifteen rooms of a dwelling, a craft which is able to lift a load of seventy-four tons, including the weight of the ship, the crew, the gas and the cargo. Only recently this aircraft flew non-stop to Brazil and returned non-stop, a total distance of 8,972 miles. That and other experiences and other knowledge in connection with air transport developments have interested our people greatly.

The Canadian people also know that the most economic air routes to Europe and Asia will traverse Canadian territory and/or the British possessions, namely, Labrador and Newfoundland. We know that the much discussed great circle route over the north polar regions to Europe and Asia also crosses Canada. It has been suggested by some that from a geographical point of view the city of Winnipeg will become the aviation centre of North America. But I prefer to look upon Edmonton as the logical jumping-off point, so that naturally I see a greater future for that city so far as civil aviation is concerned.

Our Canadian people know that after this war we shall have in this country those vast installations, many of them in the northwest, which have been established by the United States government but become the property of Canada after the war. This ground apparatus throughout the northwest is on a direct route to Europe and Asia.

As I have already said, the British commonwealth air training plan will turn out for us approximately one-quarter of a million young

men who will have developed aviation skills. That number is exclusive of aircraft construction employees.

There are a number of difficulties in the way of developing our civil aviation, and these are matters to which we should give consideration and about which the minister should make an explanation. My observations lead me to believe that Canada has not, I think it is fair to say, what might be called an integrated aircraft industry. I am not familiar with the fact, if it is a fact, that we are manufacturing anywhere in Canada aircraft engines which by the wildest stretch of imagination could be used in commercial aircraft. Moreover, I think it is quite true that we have had no experience in the commercial construction of such aircraft, or in connection with their designing. We shall have to look to other countries in order to secure at least parts of the aircraft which we shall find it necessary to use if we are to play any part at all in commercial aviation immediately after the war.

That brings me to this question. I have heard some people say: We will go to Britain and get our aircraft engines and our aircraft there. Others say: We will go to the United States and get our aircraft engines and our aircraft there. But what is the situation in Britain? Let me quote a short item which I read not long ago in connection with Britain:

> The British realize that unless they secure a position in the air commensurate with the position which they have held on the seas, the systems of communication binding them to their colonies and dominions must rapidly deteriorate.

In Britain they have developed a tremendous aircraft industry, but their manufacture of aircraft has been confined largely to the bomber and fighter types, types which will not be of value in commercial aviation after the war. Moreover, the need for bombers and fighters, as we all realize, will continue until the last day of the war. Therefore, when we pass into the day following the cessation of hostilities Britain is not going to be able to step out and undertake extensive commercial aviation projects without help herself. I think it is only reasonable to suppose that Canada will not be able to look to Britain for the aircraft which she will of necessity need in order to engage in commercial aviation on an international scale, yes, even on a domestic scale, at least for some years. Some say: We will get the aircraft in the United States. Anyone who has read at all will realize that in vast urban sections of the United States the people have seen their lives violently changed during this war by the growth of the aircraft industry. It is said that over two and one-quarter millions of young people in that country have been trained as pilots, navigators and maintenance crews.

Here is the important feature: the United States has specialized in the construction of modified commercial aircraft during this war. In other words, the United States has already a five year lead in the manufacture of commercial aircraft. I do not believe it is large enough to absorb the entire production of the aircraft industry which has been developed there during this war. There is going to be economic pressure applied because of wartime investments in this industry in the United States, and a concerted effort made to force it beyond the bounds of the country. In making this statement I do not want to be misunderstood. If they utilize the facilities which they possess there will not be business enough in the country to occupy more than a part of those facilities. Therefore they will look elsewhere with a view to broadening out and utilizing the commercial aircraft which they will have the day the war ends. In passing, may I point out that under the united nations relief and rehabilitation administration the United States is granting $1·35 billions worth of food stuffs and other materials to nations that will require her help, every dollar of which, do not forget, will be a calling card in connection with the development of United States commercial aviation outside its own country. Is it or can it be considered fantastic for me to assume that the United States will hasten to establish a type of air supremacy after the war which it did not hold on the sea before the war? Would it, on the other hand, be fantastic for me to assume that Great Britain, in an endeavour to break what I may call a monopoly which it is quite conceivable the United States will undertake to establish, will abandon any connection or association with a policy such as that to which Canada is at present committed?

The hon. member for Lake Centre, during the course of his remarks the other day, referred to Russia. I also am intensely interested in the attitude of mind which Russia may have towards Canada's proposal. It is certain that the government has in mind some indication of the feelings which may be expected in that quarter, because it can hardly be possible that Canada would advance a proposal for international aviation unless she was reasonably assured as to the reception it would have in other important countries.

The whole matter of civil aviation, domestic and international, should be most carefully scrutinized. We must have a complete picture. From time to time, I am sure, representatives of the government will meet with

others in regard to the matter, not only those representing the nations of the commonwealth and the allies, but the neutrals.

Moreover, it is difficult to anticipate the possibilities either under this proposal or any other, because any policy we lay down will develop only as world circumstances permit. If there is to be war after war, or threat of war after threat of war, it is futile for us to deceive ourselves into believing that any country which feels itself threatened will permit foreign aircraft to fly over its land at will or pick up passengers or any private cargo.

One wonders, too, what consideration has been given to this question in its relation to those countries which now are our enemies. I know it is stated in the convention that it is assumed that an overriding treaty of peace will determine the obligations and rights of the defeated powers under this convention. Well, the thought which comes to my mind, as we try to build a picture of this whole thing is, what is the attitude toward Germany and Italy likely to be after the war? There are some, of course, who foolishly believe that it is possible completely to exterminate a nation. No matter how bitterly one may feel toward a nation, it is utterly inconceivable that anyone who has given it a thought would believe extermination possible or desirable. I do not want to have that statement misunderstood. But if these countries are to continue to exist after the war, as they will, most careful consideration must be given to the parts they may play in such a scheme. If you are not going to let them take part they will force their way in, and as soon as they undertake to do that we shall have a repetition of the conditions which we have already experienced.

We believe firmly in cooperation among the nations. We believe firmly that without cooperation we cannot succeed in any international aviation policy. We are opposed to coercion and to the imposition by any power bloc of its will upon other countries, because there will be no cooperation as far as some nations are concerned once they realize that such a power bloc is endeavouring to impose its will upon them. Every possible avenue should be explored to encourage cooperation. I think that as the days and months go by we shall be able to form a better picture of the degree of cooperation which may be expected. But what we are intensely interested in is the possible reaction of the United States and Great Britain to this Canadian proposal. We read a good deal, but we do not always believe what we read. Men make observations, but of course we do not always know who these men are or whether they speak with authority.

[Mr. Shaw.]

Let me repeat, Mr. Chairman, we are intensely interested in the development of domestic civil aviation after this war. We are very much opposed to the government endeavouring to establish any monopoly. We are very much opposed to any private enterprise establishing a monopoly in this or any other field. In the international field we believe there should be the utmost cooperation. We realize that it is imperative for the countries to get together in connection with this matter; but at the same time we are opposed to power tactics in an effort to impose upon certain weaker countries conditions which ultimately will lead to world conflict.

Mr. GREEN: Mr. Chairman, in rising to take part in this discussion on Canada's air policy I must say that I feel this to be one of the most important subjects that could be considered by the Canadian House of Commons, and I have no doubt that thought is in the minds of all other hon. members here to-day. We on the Pacific coast are particularly concerned about air policy. Out there Trans-Canada Air Lines has meant a great deal, because it has drawn us so much nearer to the centre of Canada. The air line from the coast into the Yukon, now operated by Canadian Pacific Air Lines, also has meant a great deal to us; and the different routes that have been flown along our coast and into our hinterland have aided a great deal in developing our province.

For many years we have been particularly concerned about the establishment of an air route that would run from British Columbia to our sister dominions of Australia and New Zealand, so that to-day I was pleased to see a press report to the effect that the Prime Minister of New Zealand was ready and willing to negotiate an agreement with Canada, Great Britain and Australia, under which an air route would be established across the Pacific ocean to those dominions. He even went farther and stated that his dominion would be willing to have the United States a party to any such agreement. That is a significant development and means a great deal to Canadians not only on the Pacific coast but also in other parts of our country.

This whole question of our air policy lies very near to our hearts, as the hon. member for Red Deer has so aptly said, because young Canadians have taken so well to flying. We all know the record they made in the last war; we know the large number of Canadians who belonged to the Royal Flying Corps and the wonderful deeds they performed. Then, when they came back they opened up our north country by their bush flying. In fact, at the time Trans-Canada Air Lines was established Can-

ada flew more freight and express, and I think more mail, than any other nation. Practically all that flying was into our northern country, and it was all carried on by these bush pilots. In the present war the young men of this generation have carried on the traditions of the young men of the last war, and perhaps have even exceeded the wonderful deeds of those who took part in that war. Flying seems to be in line with the courage and initiative of the Canadian people. Therefore I suggest that any air policy to be adopted by this nation must be a bold policy first and last, whether it be in the domestic or in the international field.

With that thought in mind, that a Canadian air policy must be first of all a bold policy, I should like to turn to the policies that have been announced by the government, dealing first with the domestic air policy. I have been surprised and disappointed to find in this domestic air policy signs that the government is becoming hesitant about flying, that the policy is becoming ingrown and petty. I say that for these reasons. In the first place, throughout his statement the minister stressed competition. He seemed to be very much afraid of competition in Canada, afraid that Trans-Canada Air Lines could not compete with Canadian Pacific Air Lines. Right through the picture there seemed to be the fear that there would be too much flying in Canada, more than we could stand; and really I thought he displayed an inferiority complex in discussing flying within our own country. Then he emphasized the danger of letting our railways have anything to do with air travel. That was really amazing, for it was a direct reversal of his statement at the time Trans-Canada Air Lines was set up. I have in my hand *Hansard* for March 25, 1937, where the minister dealt with this very point. At page 2216 he said:

> In my view it is only reasonable that the railways should have a part in the development of air transportation. In the first place they are in the transportation business; and in the operation of air lines there are problems in common with the operation of railways. For instance, both must have ticket offices; both must have facilities for soliciting express and passenger business. The legal problems of both are more or less on a par, and a legal staff trained to railway transportation matters would be valuable in air matters. I could set out many other points where the services are more or less parallel.

The next year he shepherded through the house what was known as the Transport Act, which set up a board of transport commissioners for Canada. One of the main features of that act was that it gave what had formerly been known as the railway commission jurisdiction over the air lines. In section 3, subsection 2 of that act we find these words:

> It shall be the duty of the board to perform the functions vested in the board by this act and by the Railway Act with the object of coordinating and harmonizing the operations of all carriers engaged in transport by railways, ships and aircraft and the board shall give to this act and to the Railway Act such fair interpretation as will best attain the object aforesaid.

In other words, the position then was that it was wise to have a transportation company handle air transport, and I suggest for the consideration of the committee that nothing has happened in the interim to change that position. Another sign of hesitancy was that the minister stressed the danger of letting feeder or pioneer lines become strong. As reported at page 1573 of *Hansard* for this year he said:

> The government believes that feeder line operations, and pioneer lines into our northland, can best be developed as small operations.

Apparently the minister is no longer satisfied that the board of transport commissioners should be in charge of the airways, for he wants to have what is to be known as an air transport board. It all looks as though the minister were afraid of his own transport board. Then he proposes to push the Canadian National Railways out of the air picture. So far as I know they have done a grand job in operating Trans-Canada Air Lines, but now they are to go out of the picture. He proposes also to smash Canadian Pacific Air Lines. Again at page 1573 of *Hansard* he said:

> Steps will be taken to require our railways to divest themselves of ownership of air lines, to the end that, within a period of one year from the ending of the European war, transport by air will be entirely separate from surface transportation.

I thought the minister showed a vindictive spirit towards the Canadian Pacific Air Lines in several parts of his speech. Frankly I do not believe that a sound, stable policy of government can be based on spite or vindictiveness. Yet altogether too much of that appeared throughout the minister's statement. For example, he said that the Canadian Pacific Railways had not been willing to come in when Trans-Canada Air Lines was formed. He said that they had been getting more equipment than Trans-Canada Air Lines, although he did go on to explain that probably the reason they were able to do so was that they had been doing so much flying into the Yukon and the Mackenzie river basin, helping the Americans in the development of the Alaska highway and the Canol project and got planes through the United States Army to do that work. However, he seemed to be very much hurt and very vindictive because they had been able to get planes. He then said

they were competing too much and challenging Trans-Canada Air Lines. Well, we have the Transport Act and the board of transport commissioners whose duty it is to prevent things like that. Surely all the minister had to do was to see that the board carried out its duties. There is an atmosphere of spite throughout the whole thing which I greatly deprecate.

In fact the domestic air policy of Canada as announced by the minister the other day is a government monopoly of all routes in Canada except the small operations. Anything that looks like a real airline or an efficient company is not to be allowed to exist under this policy. Therefore I repeat that the domestic air policy is becoming ingrown and petty and, I think, also dictatorial. I do not believe the Canadian people will approve it when they understand what the policy means.

What is the picture of flying in Canada at the moment? Trans-Canada airways, as the name implies, was founded to fly the Trans-Canada route. That was made very clear at the time the line was set up. The Trans-Canada Air Lines Act was passed in 1937 and is chapter 43 of the statutes of that year. It sets out in several places that the line is to extend across Canada; that it is to be a coast to coast line. The minister also made it clear during the course of the debate in that session. I refer to page 2042 of *Hansard* for 1937, where the minister used the following language:

> This company will fly only the main artery of traffic across the country, and such other arteries of traffic as are designated by the government as being of national importance. It is not the intention to interfere with any existing operations. The company will not undertake other than interurban services.

The Prime Minister in announcing Canada's air policy a year ago repeated in effect the statement made by the minister in 1937. At page 1777 of *Hansard* of 1943, the Prime Minister said:

> The development of supplementary routes will continue to be left to private enterprise, unless considerations of public interest indicate that certain of these routes should be designated by the government as routes to be operated by T.C.A.

And again at page 1778 he said:

> There will remain a large field for the development of air transport in which private Canadian companies may participate, and, while preventing duplication of services, the government will continue to encourage private companies to develop services as traffic possibilities may indicate.

Apparently that policy has been changed within the last year. Trans-Canada has gone on as was intended, and has made great progress. It has extended its lines by flying to the United Kingdom and one line to the United States. It is doing a grand job under the supervision of the Canadian National Railways. There seems to be no reason why it cannot continue to progress as it has done in the past. In the meantime the Canadian Pacific Air Lines are operating strong feeder lines. I hold in my hand the annual report of the Canadian Pacific Railway Company. A map appears in this report showing the air lines, and shows practically all of them are north and south lines. They are operated by some of the leading bush pilots of earlier days; some of these young men who showed the courage and the initiative to go out and fly these bush routes are now air executives of the Canadian Pacific Air Lines. It may be that the directors of Trans-Canada Air Lines have not given a similar chance to their bright young flyers. It might be a good idea for the minister to check that to see whether old age is not holding back the energy of the boys who fly in his own Trans-Canada Air Lines. In any event the Canadian Pacific Air Lines are providing an efficient service. These lines have meant a great deal in the development of northern Canada and in the war years to the construction of the Alaska highway and the Canol project. Most of the lines were formerly flown by Canadian Airways Limited, which was the great pioneer in the air routes of the north. Incidentally that line was developed by the late James Richardson of Winnipeg who perhaps deserves as much credit as any other business man of Canada for the development of flying in this nation. So much for the Canadian Pacific Air Lines.

As far as the pioneer lines are concerned I realize that there are very few small bush lines in operation at the present time. The reason for that is that gold mining is down. Very little gold mining is being done and therefore there is very little work for these bush pilots to do. But as soon as gold mining revives there will be more scope for operations of that type.

In the air picture as it exists at present we also have the board of transport commissioners, an independent board set up as a judicial body. They are not supposed to be influenced by the government and I do not think they are. I sometimes suspect the fact that they are not sufficiently under the government's wing is one of the reasons why the minister wants to get a new board. Section 5 of the Transport Act sets out how this board of transport commissioners must treat an application. It reads as follows:

Before any application for a licence is granted for the transport of goods and/or passengers under the provisions of this act, the board shall determine whether public convenience and necessity require such transport, and in so determining the board may take into consideration, inter alia,—

(a) any objection to the application which may be made by any person or persons who are already providing transport facilities, whether by rail, water or air, on the routes or between the places which the applicant intends to serve on the ground that suitable facilities are or, if the licence were issued, would be in excess of requirements, or on the ground that any of the conditions of any other transport licence held by the applicant have not been complied with;

(b) whether or not the issue of such licence would tend to develop the complementary rather than the competitive functions of the different forms of transport, if any, involved in such objections;

(c) the general effect on other transport services and any public interest which may be affected by the issue of such licence;

(d) the quality and permanence of the service to be offered by the applicant and his financial responsibility, including adequate provision for the protection of passengers, shippers and the general public by means of insurance.

In other words, the board of transport commissioners have power to see that all these companies are fair in their operations. Even Trans-Canada Air Lines has on occasion run foul of the board of transport commissioners. About a year ago they applied for a licence to fly passengers from Vancouver to Victoria, and the board held at that time that public convenience and necessity did not require further air transportation facilities for carrying passengers or goods between those two points, there having been for some years a line operated, first of all by Canadian Airways, and then by Canadian Pacific Air Lines. It may be that the board of transport commissioners require more power to meet present-day conditions. If so, let us give it to them.

But I do suggest that in the domestic field there is plenty of room for all three. If we have any kind of bold air policy for Canada, then I say there is plenty of room for all three—for Trans-Canada Air Lines, for strong, well-run feeder lines and for pioneer lines. And by the way, the pioneer lines might very well be helped by the industrial development bank being set up at this session. The policy should be that of helping each of those to expand, the board of transport commissioners keeping each in its proper sphere. If that is done, if a policy of that kind is attempted, I am sure Canada will be far better served than she would be under the domestic air policy which the minister has offered the nation in the last few days.

Then, to come to the government's announced international air policy, we note that that policy paints a very rosy picture. In that regard it is just like my good friends in the C.C.F. They are always experts at painting rosy pictures over the river, but they never say how we are to get across.

Mr. GRAYDON: You might get drowned.

Mr. GREEN: The international air policy is much like that. Unfortunately the rosy picture it paints is a long way off. Not only is it after the war, but also it is after an international air transport authority has been set up. Perhaps it may not be in effect until after an international security organization has been established—in other words, some sort of league of nations. That is probably decades away from the present time. There will be a period of years in which all that will be done will be the building up of a protecting wall behind which some world peace organization can be established; but the government's policy is good only for a time after a world-wide organization has been established.

I do not suppose there is a member in the chamber who does not favour this rosy picture, or who is not in favour of some such sort of plan. But in the meantime I suggest the government should come down to earth, and give Canadians a little guidance, give us some policy for the present so far as international airways are concerned, and for the period from the cease-fire until the setting up of this international air transport authority.

We have got down to earth only in our dealings with the United States. No doubt it was the Americans who forced the government to get down to earth—and quickly—on that subject. With the United States we have bilateral agreements covering routes between the two nations. As the minister said the other night, under these agreements Canada has one route, and the Americans have eight. Up to the present they are not doing badly. Canada has a route from Toronto to New York, and the Americans have routes from Moncton to Bangor, New York to Montreal, Buffalo to Toronto, Buffalo to Windsor, Fargo to Winnipeg, Great Falls to Lethbridge, Seattle to Vancouver, and Fairbanks and Juneau, Alaska, to Whitehorse. In addition the minister said there was a war-time agreement with the Americans by which they got permission to fly an air route from Seattle to Juneau. Canada, on the other hand, is proposing to ask some day—apparently she has not yet done so—for a route from Whitehorse to Fairbanks.

That is the position between Canada and the United States, brought about by these bilateral agreements. Under the international air policy now advocated by the government, air traffic between Canada and the United States has been carefully excluded from the proposed convention. It will still be arranged by bilateral agreement. There is in the convention a provision for what are known as contiguous states, and the minister mentioned the example of Canada and the United States as contiguous states, under the convention.

There is no provision in the convention for dealing with the empire. At page 1576 of *Hansard* the minister said that Canada was scrapping the north Atlantic agreement, which was negotiated between the United Kingdom, Canada, Ireland and Newfoundland in 1935 and 1936, and provided for the flying of that route. That agreement is to be scrapped. This is what the minister had to say on the point:

> In view of the fact that the joint-operating company envisaged in the 1935-36 agreement was never set up and in view of the material changes in circumstances which have already taken place since the agreement was drawn up, the Canadian government is of the opinion that the agreement can no longer be considered applicable to present conditions. The other parties to the agreement have been notified of our views.

There is no mention of any agreement being negotiated to replace it. Actually there are certain key routes in the empire which are of vital interest to Canada. For example, I have in mind this north Atlantic route between Canada and the United Kingdom. Then there is the Pacific route, about which I spoke, extending between Canada and Australia and New Zealand. In January of this year Australia and New Zealand negotiated a treaty in regard to civil aviation under which they provided that—

> In the event of failure to obtain a satisfactory international agreement to establish and govern the use of international air trunk routes the two governments will support a system of air trunk routes controlled and operated by governments of the British commonwealth of nations under government ownership.

And as I have mentioned yesterday the Prime Minister of New Zealand went farther, and said that he would be glad to have Canada join in such an arrangement.

Then there are the routes from Canada to the West Indies and from Canada to South America. With regard to these three routes, namely the Pacific route, the Canada-West Indies and the Canada-South American, it would be necessary for us to make some sort of agreement with the United States. I suggest that in return for an agreement by which they get into Alaska, Canada should be able to get across to Australia and New Zealand, and also to the British West Indies and South America. Agreements with respect to these key routes are fundamental, and we should not have to wait for the setting up of an international air transport authority, which may take decades. We should be negotiating now for these agreements.

Neither should we have to obtain the approval of an international authority before we can fly those routes. I suggest to the minister that the routes to the British countries mentioned should be treated in the same way as those between contiguous states. In other words, so far as Canada is concerned, Great Britain, Australia and New Zealand should be treated as contiguous states, and our services to those fellow British countries should be excluded from the provisions of the convention. It is most important that we get in on these key routes as quickly as possible. If we have an agreement with Great Britain we could then share in the British business. We could fly British passengers across Canada, whereas under the convention, as I read it—the minister can correct me if I am wrong—Great Britain would have the right to fly her own planes right across Canada without any Canadian planes appearing in the picture. She would have the right to drop passengers from Great Britain anywhere in Canada and to pick up Canadian passengers for Great Britain. Looking at it from the practical point of view, I think Canada would be well advised to have a bilateral agreement with Great Britain.

If, as and when the convention becomes effective there are certain features of this government international air policy of which the Canadian people should be made fully aware. Every opportunity should be given to the Canadian people to understand exactly what this plan means because it is of great importance to them. The first thing that should be explained to them is that an all red British route would be difficult to establish under this convention. It would be almost impossible because the international air transport authority would have exclusive jurisdiction over such air services.

Another point that should be explained is in connection with routes from Canada to the United Kingdom. If they are to come under this convention these routes would have to be granted by what is known as the regional council. This regional council grants licences, sets rates and conditions, determines how many times a route may be flown and how many planes shall fly from each country. Canada and the United Kingdom would be

given the same terms, would have to be on an equal basis with Sweden, the Netherlands, Spain or any other country interested in flying that route.

Under the proposed plan Canada would be in the north Atlantic region. It includes Canada, the United States, Great Britain, the northern part of Europe and the Soviet Union; in fact nearly all of the civilized population or advanced population of the world. The council of a region is to be composed of from six to nine members, one-third of whom would be appointed by the international air transport board and must not be nationals of any nation in the region; two-thirds of the members would represent nations in the region. Of course the council would be controlled by representatives who were not nationals of countries in the region and those from the United States and Russia. One-half of the membership of the council is to constitute a quorum; in other words, if there were six members, three would be a quorum; further the majority of votes are to decide, which means that two members of the council could decide what is to be done as between Great Britain and Canada. I submit that that situation should be carefully considered by the Canadian people before they agree to these terms.

The decisions of the regional council are subject to appeal to the international air transport board, but the same rules with regard to quorum and majority apply there. This board is to be composed of twelve members, six constituting a quorum, four of whom could reach a decision.

Another thing to be remembered is that any negotiations with Australia and New Zealand for air routes under this convention can be carried on only through the international air transport board. There is no regional council in this case because Australia and New Zealand are in another region. Where two regions are involved, action must be taken by the international transport board. A licence can be granted subject to all the conditions and terms just as in the case of a regional council. In effect it would be very difficult under this plan for Canada to deal directly with Great Britain or with Australia or New Zealand; those latter countries would have had great difficulty dealing with each other in January if they had been working under a convention such as is now proposed. We would have to deal either through a regional council or the international board.

Some attention should also be paid by the Canadian people to the provisions of the draft international air convention dealing with contiguous countries, such as Canada and the United States. Services between two such countries are to be dealt with by direct agreement between the nations. There is no jurisdiction in the international air transport authority. There is a clause in the convention providing for a fair distribution of routes. Article I, section 2, reads:

> The authorities shall plan and foster the organization of international air services so as (c) to ensure that, so far as possible, international air routes and services are divided fairly and equitably between the various member states.

Canada could not take advantage of that provision because she and the United States are contiguous. We would have to make the best deal we could with the United States. As I have mentioned before, the results of such deals in the past seem to have been not very good for Canada. Perhaps it would be better if dealings with the United States were brought under the international transport authority as far as Canada is concerned.

Another point to be kept in mind is that no definite provision is made for enemy countries. The only thing I can find is a note at the beginning of the convention which reads:

> It is assumed that an overriding treaty of peace will determine the obligations and rights of the defeated powers under this convention.

Before the Canadian people can decide wisely what terms they will agree to, they must have some idea just how easy it is going to be for German or Japanese planes to fly over Canada. We are entirely in the dark at the moment with regard to such provisions and yet they are among the most important.

We must realize that if we are to work under an international air transport authority we shall have to give up some of our rights. I am not saying that that is a bad thing because I think every nation that adopts this convention should be prepared to give up something. But Canadians should know just what they are giving up in going into any such arrangement. Under the proposed convention the licensing authority, whether it be the regional council or the international board, may review routes designated by a nation. For example, Canada might say that all outside planes had to fly along the present Trans-Canada route. If any nation flying that route complained to the international authority, that authority would have the right to step in and say whether those planes had to fly that particular route or had to use the airports Canada had designated. The international authority would have the power to step in and make Canada open up certain ports or routes which she might not want to open to

planes flying in from other countries. The board might go farther than that. When a complaint is made by another country whose planes are flying over Canada, the board may request Canada to expand her facilities. The board may decide that the facilities we are supplying are not adequate and may order us to extend them, under certain conditions advancing the costs. It may also require a reasonable share in supervising the construction, and not only that but actually share in control of the airports and other facilities. It may demand a share of the revenues derived from flying. In other words, this international authority can, under certain conditions, step in and assume some control of certain of Canadian airports.

Mr. HOWE: Only if they pay the cost of building them.

Mr. GREEN: I may have misinterpreted the provisions, but that is the way I read them. There is a further provision in the convention that once an international security organization is set up—it does not say a united nations organization, but an international security organization, which I presume would be some sort of league of nations—if it decides that world security is involved it may order the international air transport authority, which under the convention is made subject to the world-wide security organization to withhold licences in certain cases. That must be done immediately and without any formal hearing. It also has power to set up an operating organization which under certain conditions could, as I understand it, actually operate planes flying across Canada without Canada being able to do anything about it. The reason for that, of course, is to secure world peace, and it may very well be wise to agree to some provision of that type.

The ACTING CHAIRMAN (Mr. McCann): I must remind the hon. gentleman that he has already exhausted his time.

Mr. GREEN: I was just going to sum up, Mr. Chairman.

The ACTING CHAIRMAN: With the consent of the house.

Mr. GREEN: To sum up, firstly, in her air policy, domestic and international, Canada cannot be too bold. Secondly, at home we need strong trans-Canada lines, strong feeder lines and many pioneer lines. Let us encourage them all. Thirdly, we need an international policy for the period from the "cease fire" until the setting up of this international air transport authority, and in that connection we must be more realistic. Fourthly, certain agreements with other British nations are absolutely fundamental at this particular time. Fifthly, Canadians should study the proposed convention and be given time to decide where they stand in regard to it. The whole question of air policy is so vital to Canada; it means so much to us, for I believe Canada can be a leader in the air among the nations of the world, and I urge that we keep that objective continually before the Canadian people. I thank the members for giving me these few extra minutes.

Mr. POULIOT: Mr. Chairman, this is a draft international air transport convention. I leave aside the fine speeches that have been made by members of all parties concerning this important matter. It is so wide in scope that it is most difficult to deal with it completely in the short time we are allowed to express our views. This afternoon I have listened to my hon. friends from Broadview, Red Deer and Vancouver South, and I congratulate them warmly on the efforts they have made to make useful suggestions for the future. I thought that the little interlude between the Minister of Munitions and Supply and the leader of the opposition was refreshing.

But, sir, we are in Lent and it is an appropriate time to make an act of humility, the more so because there is a reference in the draft to the importance of the various nations. Who will decide upon the importance of nations? And what is the importance of our own country? Here we think, and rightly so, that Canada is an important country. But what will the international air transport authority think of the importance of our country? Who will compose that authority? I am not impressed by big names—hon. gentlemen must know that. The minister has mentioned Lord Beaverbrook, a former Canadian citizen, and Mr. Churchill, and responsibility for the coordination of post-war civil air transport authority. Those are two great names. But unfortunately in his last broadcast Mr. Churchill mentioned all countries of the world except Canada, which shows that in his mind at the time Canada was not so important as Australia, New Zealand and any other country. By the way, it is unfortunate that the censor did not act with his scissors to cut out the whole speech, because if Mr. Churchill thought it proper to mention some countries of the world, Canada deserved a place on his lips and he had no reason to omit Canada. It shows the importance of our country. One day Canada is told that she is an important country, and the next day she is ignored. We must take it as it is. It is an act of humility which may not please proud people. But we must get down to facts. On Sunday last Canada was not important in the mind and on

the lips of the Prime Minister of Britain. It may be some day. I do not say that what happened last Sunday will happen again, just because it is being mentioned in the House of Commons right now, but it may.

What I find strange is that this draft is considered as if it were a contract. It is discussed as if it had been accepted by some other states. Was it submitted to any other state? We have the pronouncement made by the Prime Minister last year on civil aviation, and here we have a plan. What is the reaction in the United States? What is the reaction in Russia? What is it in Great Britain? No one knows. If this draft is approved by parliament it will bind no one except those who find it satisfactory, and if they do not find it satisfactory we shall have to accept their amendments before they can bind us. That is an elementary principle of law. Is it not of the utmost importance to know what are the views of the states which are considered important in the field of aviation, before discussing in this chamber a draft which no speech of any private member will ever change? I know very well that whatever suggestions are made by any member of parliament, the time spent in making them will be pure waste. If I rise to-day to speak on this matter, it is not in the hope that the minister will agree to change his draft, but that hon. members will awake to their full responsibility and will advise the minister to be very careful about this agreement and to keep it in the cupboard, or in a drawer of his desk.

I have tried to find in this draft any mention of Canada. I do not see it. Perhaps it is somewhere. I complain of the fact that this important draft is printed in very small type. Usually agreements or similar papers are published as an appendix or schedule to the *Votes and Proceedings,* and in type sufficiently large that we do not need a magnifying glass to read them. Hon. members who have read that draft as it is printed in *Hansard* deserve special credit; I wonder if they will not have to consult an eye specialist, for their eyes must be very tired. I confess that I did not read it all, but I read enough of it to warn the minister of the danger of suggesting such a policy. That does not mean that I am opposed to international aviation; for I am not. But this is devised for post-war trade with all nations, including the enemy—who I hope and have every reason to believe will be defeated. There are commodities which it will not be possible to carry by air. Coal will not be transported by air, and it is more than doubtful whether aviation will serve for the transportation of grain and timber. I do not see telegraph poles on aeroplanes. We shall continue to need ships. But according to news in the press the ships we shall have after the war will not be so fast as those owned in competitor states, particularly the United States. Ours will be much slower and therefore will transport less. And where will our aeroplanes come from? How long will it take to get back those which are now in Great Britain and other parts of the world? That is another problem. We need more information before we are in a position to discuss this post-war aviation scheme.

Looking at the convention, one observes in the first place that it establishes an "international air transport authority". It is the first time I have seen the word "authority" used with this meaning in any piece of legislation or in our *Hansard.* It is an English term, used, for instance, in the title of the "Port of London Authority", which is the Port of London Incorporated or the Port of London Corporation. It is never used here in that manner. That shows that the convention has been drafted by someone who has an English training and who has been at some time either at Oxford, or Cambridge, or Edinburgh. But that is not the question. The question is, what will be the powers of such authority? It seems to me that this air draft convention is very "draft-y". First, it establishes an international air transport authority. Second, it gives it a constitution. Third, it endows it with powers. And what is that authority? It is an assembly representing all member states. Then there is a small executive committee with a board of directors; and there is a regional council. What is a "region"? It is not defined. A region is supposed to be a district, a smaller area, but according to this draft convention it may comprise several states. Quite a region!

And then there is the regional council. What are the duties of the authority? It is to make the most effective contribution to the establishment and maintenance—"maintenance," mark you—of a permanent system of general security, a new league of nations, as the hon. member for Vancouver South has aptly said. Is it to be expected that guns will be placed on the aeroplanes which carry passengers and freight, to maintain security and to chastise all those who infringe upon such security? That is the first thing. The second purpose is to meet the needs of the peoples of the world—mark you, sir, "the peoples of the world"—for efficient and economical air transport. It is not for Canada; it is for the peoples of the world. I have enough of "the peoples of the

world"; I want Canada to be served first and then to see what can be done by Canada with the other peoples of the world. Canada should be on a sound basis first. It is a new league of nations which we are launching in the air.

And the third purpose is to ensure that so far as possible international air routes and services are divided fairly and equitably between the various member states. Everybody remembers the difficulty which arose at Westminster over the United States aviation scheme. It was denounced in England, I remember, by Lady Astor, who is a member of the British parliament. Trouble arose especially in connection with aviation. The United States and the British schemes regarding money, the sterling area proposals and so forth, did not cause so much resentment as the suggestion that the United States were to lead the world in the domain of aviation. The reaction came at once from Westminster, and then we did not hear of it again until the Prime Minister mentioned that scheme last year. Now we have it in writing. Why not let those big countries, Russia, Great Britain and the United States, come to an understanding about this matter?

Mr. HOWE: If my hon. friend will permit me to interrupt, we are to be called to another place shortly, and I wonder if he would object if I asked the committee to rise, report progress, and ask leave to sit again.

Mr. POULIOT: I never object to going to the Senate to attend the sanctioning of bills.

The ACTING CHAIRMAN (Mr. McCann): Shall the resolution carry?

Some hon. MEMBERS: No.

Item stands.

Progress reported.

THE ROYAL ASSENT

A message was delivered by Major A. R. Thompson, Gentleman Usher of the Black Rod, as follows:

Mr. Speaker, His Honour, the deputy of His Excellency the Governor General, desires the immediate attendance of this honourable house in the chamber of the honourable the Senate.

Accordingly, the house went up to the Senate.

And having returned,

Mr. SPEAKER informed the house that the deputy of His Excellency the Governor General had been pleased to give in His Majesty's name the royal assent to the following bills:

An Act to authorize the raising, by way of loan, of certain sums of money for the Public Service.

[Mr. Pouliot.]

An Act to amend the Technical Education Act.

An Act to amend the Exchequer Court Act.

An Act for granting to His Majesty certain sums of money for the public service of the financial year ending the 31st March, 1945.

An Act for granting to His Majesty aid for National Defence and Security.

An Act for granting to His Majesty certain sums of money for the public service of the financial year ending the 31st March, 1944.

On motion of Mr. Crerar the house adjourned at 6.05 p.m. until Monday, April 17, at three o'clock in the afternoon.

Monday, April 17, 1944

The house met at three o'clock.

THE LATE HUGH B. McKINNON

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, hon. members will have learned with deep regret of the passing, during the Easter recess, of the hon. member for Kenora-Rainy River, Mr. Hugh McKinnon.

Before resuming our sessional duties, I should like to express the sense of loss we experience to-day as we realize he is no longer with us.

Mr. McKinnon was a member of this house for nearly ten years, having been first returned to parliament in a by-election in September, 1934. He was reelected at the general elections in 1935, and again in 1940.

Mr. McKinnon was born in Kenora, and at the time of his death had all but completed his fifty-ninth year. His interest in public life first manifested itself in municipal affairs and, later, in provincial affairs. He was, for a time, member of the town council of Kenora, and at the age of forty-one was a candidate for the Ontario legislature. Though unsuccessful in the contest, he lost none of the personal popularity he enjoyed among those who knew him best, and when first nominated as a candidate for the federal parliament he carried the constituency by a majority of over six thousand.

Mr. McKinnon will be remembered by his fellow-Canadians for his deep interest in and practical knowledge of the problems of labour, and of railway labour in particular. He himself had become a locomotive engineer when he was scarcely twenty-one years of age, and his knowledge of our country's political as well as industrial problems was gained in the school of practical experience. He was a devoted member of the Brotherhood of Loco-

motive Engineers. There could be no higher testimony to his ability and fidelity than the regard in which he was held by the entire membership of this enlightened and powerful organization. Recognition of this confidence found expression as early as 1928 in his appointment as one of the technical advisers to the Canadian delegation to the conference of the International Labour Office of the League of Nations, which was held at Geneva that year.

As we in this parliament recall our association with the late Mr. McKinnon, we think of him as one of the kindliest and most modest of men, faithful in his attendance at house sittings, constant in his interest in its proceedings, and deeply solicitous in his own quiet and unassuming way, of the well-being of his fellowmen wherever opportunities to serve their interests arose.

In my last conversation with him in one of the lobbies of this house, he spoke with great earnestness of some of the problems he saw looming on the horizon and of the manner in which he believed they could be most effectively met. I need hardly add that our conversation had to do with the closest possible cooperation of all classes in the prosecution of the war, and in the solution of post-war problems.

Our country and our parliament owe a great debt to men of the type of the late Mr. McKinnon, who look to what is best in human nature, and whose constant effort it is to remove distrust, and to establish confidence wherever that is possible in the affairs of industry and of the state.

I personally feel very deeply the loss of so loyal a supporter and so true a friend as Mr. McKinnon was to me at all times. This sense of loss I know is shared to the full by my colleagues and by all hon. members who sit on this side of the house. I know I can say, wholly irrespective of party political affiliations, that Mr. McKinnon's passing will be felt by all hon. members as a distinct loss to the membership of this house.

Mr. McKinnon is survived by his wife and seven children, four daughter and three sons, two of whom, still young in years, are serving in the armed forces, both have been overseas.

I would ask you, Mr. Speaker, to convey to Mrs. McKinnon and to all the members of her family, the expression of the great respect in which her late husband's memory is held by all members of this house, and of the deep sympathy felt by hon. members for her and for all the members of her family in their bereavement.

Mr. GORDON GRAYDON (Leader of the Opposition): Mr. Speaker, the friendship of the various men with whom one comes in contact is one of the treasured prizes of public life. Hugh McKinnon was a member of the house whose friendship I was honoured to have. I liked his approachability, his open manner, and regardless of any political divisions in this parliament I am sure he was beloved by all hon. members. He was one of the workers of Canada who had been raised to high positions of honour by those who knew him best. He was in every respect what is known as a self-made man, and for this we in the House of Commons honour him.

As the Prime Minister has pointed out, Hugh McKinnon was a great exponent of the principles and ideals of the Labour movement. He was a member of that movement, and the very last time I heard him speak in this chamber was in connection with that beloved topic of his. His words always carried exceptional weight in this house, despite the fact that the opportunity of debate was not always his, because every member believed that when he spoke he expressed his true convictions.

Mr. McKinnon represented one of the great developing constituencies in Canada, and his friendship particularly for those who worked with him through the years in the railway brotherhood was something which I think all of us would wish to have brought to the attention of the house, as the Prime Minister has done to-day. His only two sons of military age are in the armed forces, and two sons-in-law have been overseas in this war, so that what the late Hugh McKinnon himself contributed by way of public service to his country is being continued, and the torch carried by his family to-day.

I want to extend to the Prime Minister and to the government on behalf of His Majesty's Loyal Opposition our sympathy in their great loss of a respected and beloved colleague. To Mrs. McKinnon and the family goes out our deep and genuine sympathy, and I should like to be associated with the Prime Minister, Mr. Speaker, in the message of sympathy which you have been asked to convey to the bereaved wife and family.

Mr. M. J. COLDWELL (Rosetown-Biggar): Mr. Speaker, we wish to join in this expression of sympathy for Mrs. McKinnon and the family, and also to associate ourselves with those who have expressed sympathy with the Prime Minister in the loss of a faithful friend and follower. From time to time when we

reassemble after an adjournment we are shocked to find that one or more of our membership have passed to the great beyond. Indeed, in the midst of life we are in death, and I think that is brought home to us in this house more directly than in most other spheres of peaceful activity.

Mr. McKinnon, as the Prime Minister has said, was a good member of this house, and a good representative of the calling which he followed. I have heard engineers of the town of Kenora say, when I have been visiting there, that Mr. McKinnon was one of the best engineers who served the great railway system which he joined many years ago. I had the privilege of meeting him on the committees of this house more frequently than perhaps in any other parliamentary activity, and I always appreciated his kindly manner and the sense of responsibility which he displayed under all circumstances. We of this party wish to join in the expression of sympathy which you will convey, Mr. Speaker, to his widow and family.

Mr. J. H. BLACKMORE (Lethbridge): Mr. Speaker, the words of the Prime Minister and of the two other hon. members who have preceded have pictured a very fine man. I knew Mr. McKinnon personally and have a similar opinion of him, and I desire to join with the Prime Minister and those who have already spoken in words of appreciation of this good man's good life and in words of sympathy to those who are bereaved.

Mr. J. H. HARRIS (Danforth): Mr. Speaker, may I be permitted to add a word of tribute to the late Hugh McKinnon? It was my privilege four or five years ago to have him at my home in the city of Toronto for a week, at which time he was very much interested in the transportation problem that we had in that centre, and I must say that we enjoyed having him with us. He was a Christian gentleman of the highest order. He had intensely studied the subject in which he was interested, and it was a great pleasure to be associated with him. While he was in Toronto he gave his earnest attention to some of the industrial problems of that great centre, for he had a conception of what the industrial life of the centre of the central province means to his own community.

I have felt keenly the passing of the late Hugh McKinnon, and I desire that it go on record that we thought highly of him, and that we extend to his good wife and the members of his family our sincere condolences. I trust that you, Mr. Speaker, will find a way of embodying these sentiments in the records of the House of Commons.

[Mr. Coldwell.]

MUTUAL AID

TABLING OF AGREEMENT WITH THE FRENCH COMMITTEE OF NATIONAL LIBERATION

Right Hon. W. L. MACKENZIE KING (Secretary of State for External Affairs): Mr. Speaker, I should like to table copies of the mutual aid agreement which was signed on Friday last with the French Committee of National Liberation.

Hon. members will recall that on March 16 I gave a lengthy statement on the mutual aid agreements with the United Kingdom, the Union of Soviet Socialist Republics, and Australia. Since that time a similar agreement has been signed with China. The present agreement with the French committee is thus the fifth to be concluded. All agreements are substantially the same in form and are identical in purpose and principle. The present agreement differs from the agreement with the United Kingdom only in a few minor particulars—chiefly matters of terminology—arising out of the fact that the committee has not the formal status of a government.

The agreement which I am tabling sets forth the general terms and conditions under which war supplies are being transferred under the Mutual Aid Act. The fact that no agreement has been signed until now does not, of course, mean that no supplies have yet been sent under the principles of mutual aid. The agreement merely sets out in formal terms the conditions under which such aid has already been sent and under which it will continue to be sent in future. As I pointed out on March 16, there will be an opportunity of discussing the terms of the various agreements when the mutual aid legislation is before the house, and at the moment I wish only to acquaint the house with the fact that this further agreement has been signed, and to make public the terms.

It gave me particular pleasure to sign this agreement, just as it now does to lay it before the house. We have, in the provision of mutual aid, a tangible and most practical demonstration of the cooperation between Canada and the French committee in the prosecution of the war. The committee is carrying forward the great traditions of France in its unrelenting fight against our common enemy, and it will be, I am sure, a source of satisfaction to all the people of Canada that we are able to help in this direct and practical way.

Mr. HANSON (York-Sunbury): May I ask the Prime Minister to make a statement of some kind with respect to what, if any, extraterritorial rights Canada had in China?

Mr. MACKENZIE KING: My hon. friend has anticipated the next subject on which I wish to speak.

Mr. HANSON (York-Sunbury: I beg pardon. Great minds run in the same channels.

Mr. POULIOT: Regarding the agreement which has just been tabled between Canada and the French Committee of National Liberation, Major-General Vanier is the ambassador of Canada in Algiers, and I see that the agreement is signed for and on behalf of the French Committee of National Liberation by "G. Bonneau." I wonder what is the title of Mr. Bonneau, and how it is that the committee has no ambassador here, as we have one there. I wonder also if the ambassador over there represents the King of Canada as well as the territory of Canada, and what would Mr. Bonneau represent, and why it is not an ambassador who signs? Why does not the French Committee of National Liberation treat Canada as well as Canada treats it?

Mr. MACKENZIE KING: General Vanier has the status of an ambassador, but he is not sent as an ambassador to the French committee. The committee, as I have mentioned, is not in the same position as a recognized government, and Mr. Bonneau in Canada is the representative of the committee. Canada will welcome the opportunity of receiving in accordance with customary diplomatic practice, an ambassador from France just as soon as France again has a duly constituted government.

Mr. POULIOT: Has Mr. Bonneau the status of an ambassador also?

Mr. MACKENZIE KING: No, he has not the status of an ambassador. He has the status of a representative in Canada of the French national committee.

INTERNATIONAL AGREEMENTS

CANADA-CHINA—RELINQUISHMENT OF EXTRA-TERRITORIAL RIGHTS

Right Hon. W. L. MACKENZIE KING (Secretary of State for External Affairs): Mr. Speaker, I desire to table three copies of the treaty between Canada and the Republic of China concerning the relinquishment of extra-territorial rights and the regulation of related matters, with exchange of notes, signed at Ottawa on April 14, 1944.

With respect to the treaty which I have just tabled, it is similar in its terms to the British extraterritorial treaty concluded on behalf of the United Kingdom, Northern Ireland and India on January 11, 1943, and to the United States treaty with China, concluded on the same day.

On the coming into force of the treaty, all international agreements which authorize British or Canadian authorities to exercise jurisdiction in China over Canadian nationals are abrogated. The government of Canada agrees to cooperate with the government of the Republic of China, to the extent that any Canadian interest may be involved, in arrangements for the abandonment by foreign govenments of special privileges hitherto held by them in Peiping, Shanghai, Amoy, Tientsin and Canton.

The relinquishment of extraterritorial rights does not affect existing rights of Canadian nationals with regard to real property in China. It is agreed that Canadian property in China will be subject to Chinese laws concerning taxation and national defence. Real property held by Canadian nationals in China may not be alienated to the government or nationals of a third country without the consent of the government of China. The Chinese government agrees to apply this restriction on alienation in an equitable manner, and undertakes to take over the property in question and pay adequate compensation therefor, if the right to transfer is refused.

Canadian nationals in China are to be accorded the right to travel, reside and carry on trade in China. Each country is to endeavour to accord to nationals of the other, treatment not less favourable than that enjoyed by its own nationals in regard to legal proceedings, the administration of justice and the levying of taxes.

Consular officers of each country may re side in such places as are agreed on. They are to have the right to interview and to communicate with nationals of their country, are to be informed whenever any such nationals are under arrest, and may visit such nationals and receive communications from them.

The treaty provides that, not later than six months after the cessation of hostilities, the two governments will enter into a comprehensive modern treaty of friendship, commerce, navigation and consular rights; meanwhile, questions affecting the rights of Canadian nationals in China and questions affecting the sovereignty of the republic of China, which are not covered by this or previous treaties, will be decided in accordance with generally accepted principles of international law.

This treaty forges yet another bond with our great ally China, which has so long resisted our common enemy. It is evidence, not only of the solidarity of the united nations in the present struggle, but of their determination to preserve the good relations which have been built up during the war and to continue them into a lasting peace.

With regard to the question which the hon. member for York-Sunbury (Mr. Hanson) asked a few moments ago, I would say that the treaty will be brought before parliament for the purposes of approval, and will subsequently be ratified. At the time that the treaty is before the house for approval I shall seek to give my hon. friend the answer to the question he has asked.

CHINESE IMMIGRATION

DRAFT TREATY FOR RECIPROCAL ADMISSION OF NATIONALS FOR TEMPORARY RESIDENCE

Hon. R. B. HANSON (York-Sunbury): When the Prime Minister makes the statement which he has promised, will he tell the house and the country what consideration, if any, was given, at the time of making the treaty, with respect to the Chinese exclusion bill which was passed by his government in the early twenties.

Mr. MACKENZIE KING: My hon. friend's thoughts and mine are running along the same line.

On January 17, 1944, we presented the Chinese minister with a draft of an immigration treaty, which, if approved and implemented by Canadian legislation, would supersede the Chinese Immigration Act of 1923 against which so many protests have been made.

The draft treaty provides for the admission to either country on renewable permits for temporary residence of nationals of the other country belonging to approved categories (merchants, doctors, ministers of the gospel, et cetera). The treaty is entirely mutual and reciprocal and will, we hope, meet Chinese views without causing opposition in any part of Canada.

The draft treaty has no parallel in any other country. The United States is meeting the same problem by admitting a small number of Chinese as permanent immigrants under the American quota system.

We are now waiting for a reply from the Chinese government to our proposals.

[Mr. Mackenzie King.]

WHEAT BOARD

QUESTION AS TO ACTION IN COURTS FOR ACCOUNTING

Hon. J. A. MacKINNON (Minister of Trade and Commerce): On Friday, March 24, the hon. member for Qu'Appelle (Mr. Perley) gave me notice of the following question:

Has any action been brought in the courts against the Canadian wheat board for an accounting? If so, by whom was such action brought, on what date and in what province? If action has been brought, has any judgment been rendered, and what is the effect of that judgment?

I am informed that an action for an accounting was commenced by Arthur Henry Oatway of Lilyfield in Manitoba against the Canadian wheat board on the 18th day of October, 1943, but that the action has not yet been tried.

PRIVATE BILLS

FIRST READING—SENATE BILLS

Bill No. 66, for the relief of Wilson Allan Martin.—Mr. Fulford.

Bill No. 67, for the relief of Victoria May Larkin Kirkcaldy.—Mr. Casselman (Grenville-Dundas).

Bill No. 68, for the relief of Nellie Blinkhorn Cowie.—Mr. MacInnis.

Bill No. 69, for the relief of William Mace.—Mr. Casselman (Grenville-Dundas).

Bill No. 70, for the relief of Pauline Hislop Ralph.—Mr. Casselman (Grenville-Dundas).

Bill No. 71, for the relief of Ethel Mary Moffatt Shaw.—Mr. Whitman.

QUESTIONS

(Questions answered orally are indicated by an asterisk).

SYNTHETIC RUBBER

Mr. DOUGLAS (Weyburn):

1. What is the total cost of erecting and equipping the synthetic rubber plant at Sarnia, Ontario?

2. How much of this cost was borne by the Canadian government?

3. By whom is this plant now being operated, and on what basis?

4. What is the cost per pound to the Canadian government of synthetic rubber manufactured in the above named plant?

5. What is the total amount paid by the government to the firm operating this plant as at December 31, 1943?

Mr. CHEVRIER:

1. Approximately $49,500,000. This includes all units in the self-integrated plant.

2. Entirely.

3. (a) The responsibility for operating the various units has been delegated as follows:

Dow Chemical of Canada Limited—Styrene plant.

St. Clair Processing Corporation Limited—Feed preparation units; butadiene plant; butyl rubber plant; steam and power plant; pumping station maintenance buildings.

Canadian Synthetic Rubber Limited—Buna S. copolymer plant.

(b) Each of the above operating companies operates its respective unit or units on a management-fee basis for Polymer Corporation Limited, which is a government-owned corporation, all the shares of which are held in trust by the Honourable the Minister of Munitions and Supply for the Canadian government. The Polymer Corporation Limited assumes, on behalf of the Department of Munitions and Supply, general responsibility for coordination and supervision, engineering approval, purchasing, financing, accounting, and sale and servicing of products. The operating companies assume direct responsibility for production, plant management, requisitions for supplies, employment and direction of operating personnel.

4. It is not considered in the public interest to give specific costs at this time on rubber production. Please refer to the minister's statement on approximate costs page 1774 *Hansard,* 1944. Also please refer to page 1872 *Hansard,* 1944, regarding the giving of cost figures on critical munitions and commodities.

5. The only operating company to have received a management fee as at December 31, 1943, was the Dow Chemical of Canada Limited. Payment was as follow:

Ethyl benzene management fee (for ethyl benzene produced over and above that required for the manufacture of styrene, which surplus was shipped to the Rubber Reserve Co.)	$ 1,250 81
Styrene management fee	41,143 20
	$42,394 01

No management fee has yet been paid to Canadian Synthetic Rubber Limited or to St. Clair Processing Corporation Limited. In the case of the former, the management fee was under negotiation at December 31, 1943 and was only recently agreed upon. In the case of the latter, the operating contract has not yet been settled, although the basis for determining the remuneration for its services will be similar to that applying to the other two operating companies in that it will be paid its costs and a reasonable management fee for its services and technical skill.

OTTAWA NAVAL SERVICE BUILDING

Mr. BENCE:

What was the total cost of the naval service building constructed for the Department of National Defence on Cartier Square, facing Elgin street?

Mr. MACDONALD (Kingston City): $885,369.63. In addition, there is an outstanding settlement at present under negotiation of approximately $3,000, the exact amount of which has not yet been determined.

AIR TRAINING PLAN—AIRPORTS

Mr. CASTLEDEN:

1. What new airports under the empire air training plan were opened in Canada during 1943?

2. What was the total cost of building each of these airports?

3. Upon what date were these airports opened for training?

Mr. MacMILLAN:

1. Souris, Man.; Mohawk, Ont.; Abbotsford, B.C.; Gimli, Man.; Mount Pleasant, P.E.I.

2. See Appendix "A" below.

3.

	Commencement date for training
Souris, Man.	8 March, 1943.
Mohawk, Ont.	12 April, 1943.
Abbotsford, B.C.	6 Sept., 1943.

WHEAT—STORAGE AND CARRY-OVER

Mr. PERLEY:

1. What is the volume of wheat in storage and in transit to the account of the Canadian wheat board as at March 1, 1944, and what is the estimated value of same?

2. What is the volume of other grains in storage and in transit to the account of the board as at March 1, 1944, and the estimated value of same?

3. What is the volume of wheat from the 1942-1943 crops still in the growers' hands to be delivered to the board in accordance with its purchase arrangements with the farmers, and what is the estimated value of same?

4. What is the volume of other grains from the 1942-1943 crops still in the growers' hands to be delivered to the board, and what is the estimated value of same?

5. What is the estimate of the probable wheat carry-over as at June 30, 1944, and the estimated value of same?

6. What is the estimated carry-over of other grains for which the board is the purchaser as at June 30, 1944, and the estimated value of same?

7. What is the estimated gross purchase cost to the board of such wheat carry-over, and the estimated purchase cost to the board of other grains carry-over?

8. What is the gross aggregate sum in dollars at prevailing market prices as represented by the carry-over of both wheat and other grains?

9. How is this gross amount being financed by the wheat board, and what is the estimated interest-rate cost of financing?

Mr. MacKINNON (Edmonton West):

1. Wheat in storage and in transit at 29th February, 1944—264,620,636.53 bushels. Estimated value—$325,155,387.31.

2. Flaxseed in storage and in transit at 29th February, 1944—6,661,206.39 bushels. Estimated value—$16,576,094.06.

3. Not ascertainable.

4. Not ascertainable.

5. Not ascertainable.

6. Not ascertainable.

7. Not ascertainable.

8. Not ascertainable.

9. Grain values, as shown in answers to "1" and "2", are financed by the banks either by direct loans to the board or to the companies, who are agents of the board, and from surplus funds. Interest rates are from 3 to 4 per cent depending on location of stocks.

N.B. 3. A Canadian Wheat Board survey indicated that as of March 17 there remained to be marketed during the present crop year 91,000,000 bushels. The Dominion Bureau of Statistics estimate as of March 31 indicated 210,000,000 bushels was still on farms, but only part of this amount would be deliverable under the 18 bushel quota per authorized acre. The balance would be used for seed, feed and farm carry-over. Because the grades are unknown, no estimate of the value is obtainable.

4. According to the Canadian Wheat Board survey as of March 17: barley 27,000,000; oats 65,000,000; rye 1,000,000; flaxseed 1,000,000 bushels. The Dominion Bureau of Statistics estimate of March 31 farm stocks was barley 83,000,000; oats 194,000,000; rye 2,450,000; flaxseed 3,100,000 bushels, but these stocks also include seed, feed and farm carry-over stocks, as well as grain to be delivered. Likewise, because the grades are unknown, no estimate of the value is obtainable.

5. The Dominion Bureau of Statistics forecast of the July 31 wheat carry-over in all positions is 375,000,000 bushels. The amounts in each position ranging from farms to seaboard are not ascertainable in advance, and no estimate of the over-all value is obtainable.

6. The Dominion Bureau of Statistics has made no forecast of the July 31 carry-over of other grains.

WOOD FUEL SUBSIDY—YUKON

Mr. BLACK (Yukon):

1. What wood fuel dealers in Yukon have applied for subsidy on wood fuel?

2. What amount of subsidy has each applied for?

3. Who, of those who have applied for subsidy, have been paid, and how much has been paid to each?

Mr. ABBOTT:

1, 2 and 3. The total amount paid by way of subsidy on wood fuel to dealers in the Yukon to March 28, 1944, is $180. A statement of government policy in connection with revealing the names of applicants or recipients of subsidy appears on page 2672 of *Hansard* for May 14th, 1943.

SUBSIDIES ON PRODUCTION OF FOODSTUFFS

Mr. HATFIELD:

1. How much in subsidies has been paid by the Commodity Prices Stabilization Corporation on the import, domestic and export production of the following foodstuffs, (a) fresh meats; (b) canned vegetables; (c) canned fruit; (d) fresh fruit; (e) tea; (f) rice; (g) prunes; (h) coffee; (i) grapefruit juice; (j) raw sugar; (k) refined sugar; (l) potatoes?

2. How much in subsidies have they paid on the import, domestic and export production of the following manufactured goods, (a) fertilizer; (b) fertilizer material?

3. How much have they paid in subsidies on all the imports, domestic and export production of all foodstuffs?

4. How much have they paid in subsidies on all the import, domestic and export production of all manufactured goods?

Mr. ABBOTT:

1, 2, 3 and 4. A complete list of import and domestic subsidies paid by the Commodity

Prices Stabilization Corporation from the inception of the price ceiling, December 1, 1941 to December 31, 1943, is to be found in appendix F on page 55 of the report of the wartime prices and trade board, April 1, 1943 to December 31, 1943.

The Commodity Prices Stabilization Corporation has no authority to pay subsidy on goods for export.

CANADIAN ARMY—DOCTORS

Mr. LACOMBE:

1. What are the names of the doctors who examine young men called for training at Longueuil?
2. What is the racial origin of each of these doctors?
3. What remuneration is received by each of these doctors for professional services?

Mr. MACDONALD (Halifax):

1. Army medical officers—

Rank and name	Speaks English, French or both languages	Rates of pay per diem	Dependents' allowance per month

Capt. R. Cote	English and French	7 50	66 12
Civilian doctors			
Dr. P. Archambault	English and French		
Dr. A. Carreau	English and French		
Dr. J. T. Ryan	English and French		
Dr. P. Prendergast	English and French		
Dr. A. Roy	English and French		
Dr. H. Aubry	English and French		
Dr. H. Michaud	English and French		
Dr. J. Kolber	English		
Dr. J. E. Bernier	English and French		
Dr. P. Salgado	English and French		
Dr. S. S. Sperber	English and French		
Dr. S. Venne	English and French		
Dr. A. Issenman	English and French		
Dr. J. E. Racicot	English and French		

2. Army documents do not show racial origin, but indicate whether personnel speak English, French, or both. See answer to question 1.

3. Army medical officers—see answer to question 1.

Civilian doctors—the civilian doctors enumerated in question 1 are all paid at the rate of $9.70 for six hours' work. They are employed as required. Their employment depends on the number of men reporting for examination and they are only paid for the work done by them.

[Mr. Abbott.]

ALLOTMENTS OF RUBBER FOR MANUFACTURING AND PROCESSING

Mr. KNOWLES:

1. What companies in Canada during the year 1943 were allotted rubber for manufacturing and/or processing purposes?

2. What quantities of rubber were received by each of the above companies during the twelve months ending May 31, 1941, (a) for civilian purposes; (b) for defence purposes?

3. What quantities of, (a) crude rubber; (b) reclaimed rubber; (c) buna-S rubber, were received by each of the above companies during the year 1943, (i) for civilian purposes; (ii) for defence purposes?

Mr. CHEVRIER:

1. A. C. Rubber Mfg. Co. Ltd., The Acton Rubber Limited, American Wringer Co. of Canada Ltd., Armstrong Cork & Insulation Co. Ltd., Asbestonos Corporation Ltd., The Ault & Wiborg Co. of Canada Ltd., B.B. Chemical Co. Ltd., Backstay Standard Co. Ltd., Barringham Rubber Co. Ltd., Bata Shoe Co. of Canada Ltd., Biltrite Tire Co., M. Bloomfield & Son Ltd., Boston Insulated Wire and Cable Co. Ltd., British Rubber Co. of Canada Ltd., Cambridge Rubber Ltd., Campbell Mfg. Co. Ltd., Canada Wire and Cable Co. Ltd., Canadian Carborundum Co. Ltd., Canadian Colloid Products Ltd., Canadian Durex Abrasives Ltd., Canadian General Electric Co. Ltd., The Canadian General Rubber Co. Ltd., Canadian Industries Ltd., Canadian Johns-Manville Co. Ltd., Canadian Raybestos Co. Ltd., Canadian Triangle Wire and Cable, Chamberlain Engineering, Chemicals Limited, Dewey & Almy Chemical Co. of Canada Ltd., Dominion Oilcloth and Linoleum Co. Ltd., Dominion Rubber Co. Ltd., Dowsewell, Lees & Co. Ltd., Dunlop Tire and Rubber Goods Co. Ltd., Federal Wire and Cable Co. Ltd., Firestone Tire and Rubber Co. of Canada Ltd., Francis, Perry & Co. Ltd., B. F. Goodrich Rubber Co. of Canada Ltd., The Goodyear Tire & Rubber Co. of Canada Ltd., G. L. Griffith & Sons Ltd., Gutta Percha and Rubber Ltd., W. H. Hodgson, Holtite Rubber Co. of Canada Ltd., Jem Rubber Company Ltd., Johnson & Johnson, Ltd., Kauffman Rubber Co. Ltd., I. F. Laucks Ltd., Meredith, Simmons & Co. Ltd., The Miner Rubber Co. Ltd., National Tent and Awning Co., Northern Electric Co. Ltd., Novelty Rubber Co., Panther Rubber Co. Ltd., Phillips Electrical Works Ltd., St. Lawrence Rubber Co. Ltd., St. Maurice Chemicals, Seiberling Rubber Co. of Canada Ltd., The Sherwin-Williams Co. of Canada Ltd., The Singer Mfg. Co., A. G. Spalding & Bros. of Canada Ltd., Stedfast Rubber Co. (Canada) Ltd., Sterling Rubber Co. Ltd., Jos. Stokes Rubber Co. Ltd., Tillotson Rubber Co., Viceroy Mgf. Co. Ltd., Western Rubber Co. of Canada, S. C. Williams, F. E. Woodward & Sons Ltd.

2. Inasmuch as rubber is an extremely critical commodity, it is not in the public interest to give the information requested. This information was made available to the war expenditures committee (of which the hon. member is also a member) in secret session, but it should not otherwise be made public.

3. See answer to No. 2.

PENSIONS—OLD AGE AND BLIND

Mr. KNOWLES:

1. Are any of the provincial governments now paying supplementary grants to old age and blind pensioners beyond the amount provided by subsection (1) of section 9 of the Old Age Pensions Act, as amended by order in council P.C. 6367, dated August 10, 1943?

2. If so, which provinces are paying such supplementary grants, and what are the amounts of the same?

Mr. ABBOTT:

1. Yes.

2. According to information given by the provincial authorities, supplemental allowances are paid as follows:

British Columbia—$5 a month to each pensioner.

Alberta—$5 a month to each pensioner plus an amount up to $5 a year where income is less than $365 a year.

Saskatchewan and Manitoba—An amount up to $1.25 a month is paid to certain pensioners not entitled to an increase in pension under order in council P.C. 6367 of $1.25 a month or more.

Ontario—15% of the amount of pension payable under the Old Age Pensions Act prior to the passing of order in council P.C. 6367.

Nova Scotia—The pension authority has discretionary power to pay a supplemental allowance not exceeding $10 a month to any pensioner provided his total income does not exceed $365 a year. The increase in the maximum pension payable under this act has reduced the maximum amount of the supplemental allowance from $10 to $5 a month.

SUBSIDY ON IMPORTED POTATOES

Mr. CRUICKSHANK:

1. On what basis was the subsidy paid by the Commodity Prices Stabilization Corporation Limited on imported potatoes?

2. What amount was paid to each individual or corporation in this connection?

3. How are the records kept as to expenditures for subsidies paid on imported potatoes?

Mr. ABBOTT:

1. A subsidy was paid by the Commodity Prices Stabilization Corporation Limited on

imported new potatoes ordered on and after May 3, 1943 and entered for consumption between June 3 and 6 p.m. July 3, 1943. Potatoes for which forward contracts had been placed prior to July 3, 1943 were eligible for subsidy if entered for consumption or shipped on a through bill of lading before midnight, July 8, 1943. Imports up to and including July 31, 1943 were eligible for subsidy only if a permit for the importation had been obtained from the Foods Administration. Subsidy was payable to the importer obtaining title from the supplier in the U.S.A.

The subsidy payable was the amount by which the laid-down cost of the potatoes at the Canadian distribution point to which the potatoes were shipped by the foreign supplier exceeded the wholesale ceiling price for carload lots at that point as set by order 236 of the wartime prices and trade board and its amendments. Applicants were permitted to claim, in addition, a shrinkage allowance equal to 5 per cent of the total value of the potatoes at ceiling prices. Orders on and after June 3, 1943, were ineligible for subsidy if the price per 100 lbs. f.o.b. foreign supplier's shipping point exceeded either (i) the OPA ceiling price plus brokerage and other charges recognized by the OPA, or (ii) $3 (U.S. currency) including brokerage, whichever was the lesser.

2. A statement of government policy in connection with revealing the names of applicants or recipients of subsidy appears on page 2719 of Hansard for May 14, 1943.

3. The records of the Commodity Prices Stabilization Corporation Limited on expenditures for subsidies paid on imported potatoes are set up on the basis of the dollars and cents value of claims paid to each individual applicant.

VETERANS' LAND SETTLEMENT ACT, 1942

Mr. ROSS (Souris):

1. How many parcels of land have been purchased to March 1, 1944, in the province of Manitoba, under Veterans' Land Settlement Act of 1942?

2. What is the highest price per acre paid for a parcel of land, and in what municipality is it located?

3. What is the lowest price per acre paid for a parcel of land, and in what municipality is it located?

4. How many applications have been received from veterans for land settlement in Manitoba?

Mr. CRERAR:

(As at February 29, 1944)

1. (a) For full time farming, 33; (b) for small holding settlement purposes, 5.

2. (a) For cultivated land for full time farming purposes $22 an acre in the municipality of Portage La Prairie; (b) for cultivated land for small holding purposes $200 an acre in a municipality adjacent to Winnipeg.

3. (a) For cultivated land for full time farming purposes $10 an acre in the municipality of Dauphin; (b) for cultivated land for small holding settlement purposes $40 an acre in a municipality adjacent to Winnipeg.

Note: The average price paid for cultivated land for full time farming purposes in Manitoba up to the end of February, 1944, was $15.17 per acre and the average price paid for cultivated land for small holding settlement purposes was $125 per acre.

4. Forty-five.

WHEAT BOARD—COSTS AND LOSSES

Mr. PURDY:

What has been the total cost of the Canadian wheat board and its operations to the treasury of Canada from inception to date, including an estimate of losses, if any, which as yet have not been finalized?

Mr. MacKINNON (Edmonton West): Total cost to the dominion treasury of the wheat operations of the Canadian wheat board from its inception to 31st July, 1943:

1935 crop deficit		$11,858,104 18
1936 crop deficit		49,574 88
1938 crop deficit (together with accrued interest to date of funding)		61,525,691 19
1939 crop deficit		8,816,210 36
		$82,249,580 61
Less:		
Surplus from the operations of wheat holdings acquired from the Canadian Co-operative Wheat Producers Limited...	$24,809,988 42	
Surplus from the operations in respect of special account—P.C. 1803	1,990,310 13	
		26,800,298 55
		$55,449,282 06

CHARLOTTE COUNTY, N.B., TRAINING CAMP

Mr. HATFIELD:

1. Did the government purchase land in Charlotte county, New Brunswick, for the training camp known as "Utopia"?

2. If so, from whom did the government purchase the land?

3. What price was paid for the land?

Mr. MACDONALD (Halifax):

1. Yes.

2 and 3.

Bridges Brothers	$39,384.80
Arnold Alexander	2,000.00
Trynor Brothers	4,817.40
Harry Fraser	2,080.20
Robert Spear	255.20
Mrs. Margaret Mitchel	322.96
Alva L. Langmaid	199.32
Harold Gillespie	338.84
Mrs. Amanda Hunter	133.32
Joseph Jack	585.30
Leslie Armstrong	341.74
Mabel Spear	110.00
Connors Bros. Ltd.	1,102.20
James Boyd	1,274.59

WARTIME SALARIES ORDER—INCREASES AUTHORIZED IN NOVA SCOTIA

Mr. PURDY:

Under P.C. 1549, wartime salaries order, how many salary increases have been authorized in the province of Nova Scotia, and how many in each county in that province in, (a) concerns engaged entirely in war work; (b) concerns engaged partially in war work; (c) concerns whose normal activities have been greatly increased by war work?

Mr. GIBSON: 137. No records are kept in respect of counties.

(a) 28.

(b) No records are kept in respect of these concerns.

(c) No records are kept in respect of these concerns.

UNIVERSITY SCIENCE STUDENTS REGULATIONS, (U.S.S.R.)

Mr. TUSTIN:

1. What are the names of the universities which have engineering faculties recognized by the university science students regulations (U.S.S.R.)?

2. How many graduated in engineering in each of these universities in 1943 and 1944?

3. How many of these graduates volunteered for technical appointments in the three services under the provisions of the university science students regulations (U.S.S.R.)?

4. How many of these were found to be medically unfit?

5. How many received technical appointments?

6. How many enlisted in the services in non-technical capacity?

Mr. MARTIN:

1. The University of British Columbia, The University of Alberta, The University of Saskatchewan, The University of Manitoba, The University of Toronto, Queen's University, McGill University, Ecole Polytechnique de Montreal, Laval University, Nova Scotia Technical College, The University of New Brunswick.

2. In 1943, the University of British Columbia, 95; the University of Alberta, 55; the University of Saskatchewan, 63; the University of Manitoba, 46; the University of Toronto, 205; Queen's University, 118; McGill University, 99; Ecole Polytechnique de Montréal, 39; Laval University, 11; Nova Scotia Technical College, 28; The University of New Brunswick, 30.

In 1944, no information available.

3. 623.

4. 97.

5. 401.

6. 7.

WHEAT DELIVERIES—WESTERN DIVISION

Mr. PERLEY:

What is the total number of bushels of wheat of each of the standard grades delivered to the Canadian wheat board in the western division in, (a) crop year 1940-1941; (b) crop year 1941-1942; (c) crop year 1942-1943?

Mr. MacKINNON (Edmonton West):

Statutory grades delivered by producers—

(a) Crop Year 1940-1941	Bushels
No. 1 Hard	363,325-20
No. 1 Northern	213,675,719-20
No. 2 Northern	126,176,972-05
No. 3 Northern	30,679,056-10
No. 4 Northern	3,289,637-30
Other grades	21,170,811-55
	395,355,522-20

(b) Crop Year 1941-1942	Bushels
No. 1 Hard	1,334-10
No. 1 Northern	23,411,259-15
No. 2 Northern	41,073,310-10
No. 3 Northern	19,625,167-30
No. 4 Northern	1,452,214-45
Other grades	13,977,205-30
	99,540,491-20

(c) Crop Year 1942-1943	Bushels
No. 1 Hard	176-20
No. 1 Northern	12,723,085-30
No. 2 Northern	48,832,727-00
No. 3 Northern	63,505,527-55
No. 4 Northern	18,307,139-10
Other grades	24,137,875-50
	167,506,531-45

CANADIAN ARMY—MEDICAL CORPS, VALCARTIER CAMP—DR. J. N. FORTIN

Mr. LACOMBE:

1. Was Captain J. N. Fortin attached to the medical corps at Valcartier camp from January 30 to March 10, 1944?
2. Is Captain J. N. Fortin a physician or a chemist?
3. What were his duties during his stay at Valcartier camp?
4. Why did he leave Valcartier camp?

Mr. MACDONALD (Halifax):

1. Yes, from 20th September 1943 to 15th February 1944.

2. He is a physician, duly registered with the College of Physicians and Surgeons of the province of Quebec.

3. He performed the normal duties of a regimental medical officer.

4. He left Valcartier camp to proceed to duty at the army reception centre in Montreal.

CLARK-RUSE REPAIR PLANT, LAKEBURN, N.B.

Mr. EMMERSON:

1. Was there a lay-off of employees at the Clark-Ruse Limited repair plant at Lakeburn? If so, when?
2. How many men were laid off?
3. How many women were laid off?
4. Through what medium of selection for lay-off were the employees named?
5. Were maritime employees laid off and outsiders retained? If so, why?
6. What disposition has been made of those employees who were laid off?

Mr. MARTIN:

1. Yes. Started March 21, 1944; ended March 28, 1944.

2. 180 males.

3. 92 females.

4. 1st—Those on military deferment except key personnel
2nd—Seniority under collective labour agreement
3rd—Efficiency.

5. In some cases maritime employees were laid off and outsiders retained. The cases where this occurred were those where the outsiders were senior to the maritimers and protected in their seniority rights under the collective labour agreement; and those where skilled workers who were outsiders could not be laid off and replaced by maritimers because the maritimers laid off were not qualified by training or skill to take the place of these skilled workers.

6. Male employees—33 immediately called to the armed forces; 30 placed on local orders; 43 transferred to other aircraft plants in Ontario; 24 returned to their home territory (trainees who had been taken on, having just completed their course. These will, within a matter of a few weeks, be placed with Victory Aircraft, Malton, Ont.); 31 were refused permits outside agriculture (these returned to their farms); 19 returned to fishing.

Female employees—62 placed with Victory Aircraft, Malton, Ont; 9 placed on local orders; 1 returning to school teaching; 2 voluntarily enlisted W.R.C.N.S., Saint John, N.B.; 5 refused to take work and returned to homes vicinity of Moncton; 13 placed with Goodyear Rubber Company, Toronto.

MINISTERS OR MEMBERS TRAVELLING OUTSIDE CANADA

Mr. ROY:

1. Since 1936, did any ministers of the government or members of the House of Commons travel outside of Canada at the expense of the government?

2. If so, (a) what are their names; (b) at what dates, and on what occasions; (c) what were the duties or mission of each; (d) what was the amount of expenses incurred and paid for each of them?

Mr. McLARTY:

1. Yes.

2. All the information requested and which is available in the records of all departments of government in respect to the answer to this question has been published in the reports of the auditor general each year.

UNEMPLOYMENT INSURANCE—CONTRIBUTIONS BY INCOME CLASSES

Mr. ROSE:

1. Does the unemployment insurance commission compile monthly figures of the number of contributors or the proportion of total contributors to the unemployment insurance fund by income classes?

2. If so, what is the number or proportion of contributors for each month by income classes since the start of the unemployment insurance commission?

3. What are the results of question 2 for, (a) maritime provinces; (b) Quebec; (c) Ontario; (d) the prairie provinces; (e) British Columbia?

4. Are these figures available by industrial classifications?

5. What was the total number of contributors to the unemployment insurance fund by months since its inception?

Mr. MARTIN:

1. Yes.

2. See statement below.

3, 4 and 5. Not available.

Proportion of Contributors for Each Month by Contribution Classes from July 1941 to February 1944

Per cent of the total in each class

1941

MOBILIZATION ACT—REJECTIONS—NUMBERS IN DIFFERENT CATEGORIES

Mr. WHITE:

1. What is the total number of persons in Canada who have been examined as to fitness for military service under military service regulations from September 1, 1939, to date?

2. How many persons so examined have been rejected as unfit for military service?

3. How many persons examined for medical rating have been placed in each category?

Mr. MARTIN:

1. The total number of persons in Canada who have been examined under mobilization regulations from the beginning of operations to February 29, 1944 is 1,014,498. This does not include men examined by army boards on applying for voluntary enlistment.

2. The number of persons so examined who have been found unfit for active service is 562,150.

3. The number of persons placed in each medical category is—A. Fit for front line combatant duty, i.e. active service, 452,348; B. Fit for ordinary general duty but not for full combatant duty, 123,364; C. Able to stand home service conditions, 130,316; D. Temporarily unfit, 23,415; E. Unsuitable for army service anywhere in any capacity, 285,055—Total 1,014,498.

CHRISTIE STREET HOSPITAL, TORONTO

Mr. BRUCE:

1. Have plans been completed for all the units of the new Christie street hospital to be built at Sunnybrook Park?

2. Have contracts been called?

3. When will contracts be let?

Mr. FOURNIER (Hull):

1. No, but well under way.

2. No, but expect tenders will be called for the grading and road diversion within three weeks.

3. This contract should be let within three weeks.

FUEL CONTROL—NEW BRUNSWICK—EXPORT OF FUEL WOOD TO MAINE

Mr. HATFIELD:

1. Has J. C. Veness been appointed fuel controller for the province of New Brunswick?

2. Was he asked to make a recommendation or a brief in regards to the export of fuelwood to the state of Maine during the season 1943-44?

3. If so, what plan did he recommend?

4. Was his plan put into operation by the fuel controller at Ottawa? If not, why not?

Mr. CHEVRIER:

1. Mr. J. C. Veness served as regional wood fuel officer for the maritime provinces from April 1, 1943, until March 31, 1944, on which date he returned to his former position with the Department of Mines and Resources.

2. The matter of the export of fuel wood to the state of Maine was receiving consideration by the fuel controller and in his capacity as regional wood fuel officer, Mr. Veness made certain proposals to the wood fuel controller.

3. His plan contemplated the issuance of permits for exports of fuel wood to the United States in proportion to the quantity of fuel wood placed on the Canadian market by each exporter.

4. The proposal was modified by the controller at Ottawa with the concurrence of the then acting regional wood fuel officer in favour of regulations which in all the circumstances met the situation more adequately.

AMMONIUM NITRATE

Mr. HATFIELD:

1. Since the beginning of the war, what amount of ammonium nitrate was produced in the following plants: Alberta Nitrogen Products Ltd., Consolidated Mining & Smelting Co., Ltd., St. Maurice Chemical Ltd., and Welland Chemical Works Ltd.?

2. Of this, how much was exported to the United States for use as commercial fertilizer?

3. What quantity of the production of each plant was sold in Canada as commercial fertilizer?

4. What was the price per ton of the ammonium nitrate exported to the United States?

5. What was the price per ton of the ammonium nitrate sold in Canada?

Mr. CHEVRIER:

1. No ammonium nitrate is produced by St. Maurice Chemicals Limited. The other three government-owned plants specified in the question produced a total of approximately 425,000 short tons to March 31, 1944. It is not considered in the public interest to state separately the production at each plant.

2. Approximately 130,000 short tons to March 31, 1944.

3. The total quantity sold in Canada was approximately 23,000 tons to March 31, 1944. It is not considered in the public interest to state separately the quantity shipped by each plant.

4. Prices in the United States vary according to destination and are within the ceiling price set by the U.S. Office of Price Administration.

5. The base price in Canada for ammonium nitrate sold as fertilizer containing 32½ per cent nitrogen is $49.85 per ton f.o.b. Toronto, Ont. When deliveries are made from plants in Western Canada, prices on the above basis are arranged to get the same delivered cost to the buyer.

MANUFACTURE AND IMPORT OF MOTOR VEHICLES

Mr. HANSELL:

How many automobiles were, (a) manufactured in Canada; (b) imported, for private use in the years 1940 to 1942?

Mr. MacKINNON (Edmonton West):

(a)

Year	Passenger Cars No.
1940	109,911
1941	96,603
1942	12,236

No passenger cars produced since June, 1942.

(b) No information.

SELECTIVE SERVICE EMPLOYEES

Mr. DIEFENBAKER:

What are the names, addresses and salaries of all officials and employees of national selective service receiving $3,000 and more per annum?

Mr. MARTIN: Names, addresses and salaries of all officials and employees of N.S.S., receiving $3,000 or more per annum:

Ball, Gordon, Lord Elgin Hotel, Ottawa, Ont.	$3,600
Buss, P., 20 Vine st., Thorold, Ont.	4,200
Caron, G., 1637 Sherbrooke st. W., Apt. 6, Montreal, Que.	3,000
Christie, Dr. H. H., Chelsea road, Quebec	5,000
Cowel, J. B., 2745 West 38th ave., Vancouver, B.C.	4,500
Crumb, Robt. Whitney, 111 Woodfield rd., Toronto, Ont.	3,600
David, E. V., 292 Strathmore blvd., Toronto, Ont.	3,600
Davidson, Lt.-Col. R., 394 Avenue road, Toronto, Ont.	3,600
Davis, R. J., 263 First ave., Ottawa, Ont.	3,600
Deas, Geo., 107 Bellwood ave., Toronto, Ont.	3,600
de Gaspe Tache, A., 365 Chester ave., Town of Mount Royal, Que.	4,500
Desaulniers, Dr. R., 3488 Laval ave., Montreal, Que.	3,600
Dupuis, Hector, 1461 Ste. Catherine st., Montreal, Que.	4,800
Eaton, Mrs. F., 275 Friel st., Ottawa, Ont.	4,800
Edwards, E. W., 303 Wolseley st., Port Arthur, Ont.	3,000
Paid by Dept. of Labour	1,449 96
English, Robert, 12510-106th ave., Edmonton, Alta	4,020

Thomas, W. R., Suite 8, Frontenac apt., Winnipeg, Man.	3,000
Wadge, Herbert Wm., 148 Maryland st. W., Montreal, Que.	4,020
Westman, L. E., Chateau Laurier hotel, Ottawa, Ont.	6,000
Wilson, F. C., 2217 Argyle st., Regina, Sask.	4,020

FARM MACHINERY

Mr. DIEFENBAKER:

What is the value of, (a) farm machinery, including tractors and threshing machines; (b) parts thereof, sold in each province during each of the years 1938 to 1943 inclusive?

Mr. MACKINNON (Edmonton West):

(a) Sales of farm machinery including tractors and threshing machines by regions for the years 1938 to 1943 are shown below. Separate figures for each of the maritime provinces are not available. The sales figures shown are at wholesale prices to dealers or agents and do not represent the retail value to the farmer. Figures for 1943 are preliminary and subject to revision.

Sales of Farm Machinery and Equipment, 1938-1943

Province	1938 $	1939 $	1940 $	1941 $	1942 $	1943 $
CANADA	36,213,382	34,060,447	47,747,865	52,106,069	51,036,373	28,463,000

Note: Figures for years 1938 and 1939 not available.

TRANSFER OF EMPLOYEES FROM NOBEL TO VICTORY AIRCRAFT, MALTON

Mr. NOSEWORTHY:

1. How many employees have been transferred from Nobel to Victory Aircraft at Malton?
2. For how many of these were travelling and moving expenses paid, and by whom, and what amounts are involved?
3. How many of these have been assisted by the government in finding homes for their families in the vicinity of Victory Aircraft?
4. How many of those whose families have remained at Nobel are receiving assistance by way of bonuses for the extra expenses in living costs created by reason of the transfer?
5. What are the amounts of these bonuses?
6. Have any adjustments been made in rent by wartime housing for those families remaining in those houses at Nobel?

Mr. MARTIN:

1. 475 men and 46 women—total 521.

2. Train fare from Nobel, Ont., to Toronto, Ont., in each individual case amounted to

$5.15. This multiplied by 521 equals $2,683.15. The aforementioned amount was charged to Victory Aircraft. No other expenses were paid by either the government or the employer.

3. Employees were assisted in finding suitable locations for room and board by company officials, Y.W.C.A. and Y.M.C.A. and the housing registry. However, employees were fore-warned that a housing shortage existed in the Toronto area and were advised through a special agreement with wartime housing that they may leave their families at Nobel until such time as other suitable accommodations can be found for their families. No other action was taken on the part of N.S.S. or the government to assist these people in locating homes for their families.

4. Bonuses and supplementary living allowances are not being paid.

5. Nil.

6. No adjustments were made in the rental costs of the wartime houses in the Nobel village. The amount involved for small houses is $23 a month. For the larger two-story homes, of which there are few, $31 per month. Of 200 homes originally occupied by D.I.L. employees 146 have been vacated since the first of January, leaving a balance of 54 still occupied. Of this balance 27 are occupied by ex-employees' families and the other 27 by maintenance men and guards who are still with D.I.L.

R.C.A.F.—No. 7 EQUIPMENT DEPOT, WINNIPEG

Mr. KNOWLES:

1. What was the total number of civilian personnel employed at No. 7 equipment depot, R.C.A.F., Winnipeg, as at December 31, 1941; June 30, 1942; December 31, 1942; June 30, 1943, and December 31, 1943?

2. What is the total number so employed at the present time?

3. Of the above, how many were classified civil servants, and how many were unclassified personnel as at each of the above dates, and what are the figures for each of these groups at the present time?

4. Have any civilian personnel at No. 7 equipment depot been replaced by service personnel during the past twelve months? If so, how many, month by month?

Mr. MacMILLAN:

Date	Classified	Non Classified	Total
December 31, 1941	224	217	441
June 30, 1942	255	272	527
December 31, 1942	275	301	576
June 30, 1943	293	302	595
December 31, 1943	374	248	622
March 31, 1944....	385	178	563

4. None.

[Mr. Martin.]

GASOLINE

Mr. DIEFENBAKER:

How many gallons of gasoline were sold in Canada in each of the years 1938 to 1943 inclusive, (a) by retail; (b) by wholesale?

Mr. MacKINNON (Edmonton West):

*Sales of gasoline in Canada.

	Gallons
1938	762,592,300
1939	807,446,999
1940	883,158,020
1941	977,882,073
1942	896,871,545
1943	903,549,709

*Separate retail and wholesale data are not available. Exports are excluded.

PORT ELGIN, ONT., HARBOUR—DREDGING

Mr. NOSEWORTHY:

How much money was spent by the government on dredging, dock repairs and other harbour improvements on Port Elgin harbour in each of the years 1930 to 1940 inclusive?

Mr. FOURNIER (Hull):

Fiscal Year	Dredging	Construction & Improvements	Repairs
1929-30.....	$ 27.75	Nil	$ 1,428.70
1930-31.....	2,870.00	Nil	17,916.53
1931-32.....	Nil	Nil	529.79
1932-33.....	Nil	Nil	Nil
1933-34.....	Nil	Nil	Nil

QUESTIONS PASSED AS ORDERS FOR RETURNS

AIR TRAINING PLAN—SCHOOLS

Mr. HANSELL:

1. What is the estimated cost to date of the building and equipping of each of the air training schools in Canada under the Commonwealth air training plan?

2. What is the location and type of each school?

3. When was each school officially opened?

CANADIAN ARMY—HEADQUARTERS—OFFICERS IN M.G.O.'S BRANCH

Mr. ROSS (Souris):

1. Since the outbreak of war, how many officers with services with field units overseas have been appointed to the M.G.O.'s branch at N.D.H.Q.?

2. How many in this branch at the present time have had such experience?

3. What are the names in each case?

WAR MATERIALS, EQUIPMENT AND FOOD—PAYMENTS BY CANADA

Mr. LaCROIX (Quebec-Montmorency):

1. Is the government obliged to purchase from England the bombers of Canadian squadrons overseas?

2. Are the airplane engines built in England and not manufactured in Canada supplied to Canada on a gratuitous basis?

3. Are the British destroyers that have been added to the Canadian fleet coming under the British mutual assistance, or must Canada pay for them?

4. Is the Canadian army overseas supplied the necessary food free, or obliged to purchase same?

MOBILIZATION ACT—PROSECUTIONS OF DEFAULTERS

Mr. DIEFENBAKER:

1. How many prosecutions by provinces or military districts have been taken against defaulters under the National Resources Mobilization Act?

2. How many convictions have been registered?

PAYMENTS FOR LEGAL SERVICES

Mr. BLACK (Cumberland):

1. What payments have been made or authorized for legal services by the Department of Justice since the outbreak of the war to the following solicitors or their firms, stating the subject matter of the employment: Mr. R. M. Fielding, K.C., M.L.A., barrister, Halifax, Nova Scotia; Mr. J. E. Rutledge, K.C., M.L.A., barrister, Halifax, Nova Scotia; Mr. J. W. Godfrey, K.C., barrister, Halifax, Nova Scotia?

2. What additional accounts have been rendered by each and not yet paid?

3. What additional instructions have been given involving legal services to each?

Mr. ST. LAURENT: Return tabled.

NATIONAL HARBOURS BOARD

Mr. DORION:

1. Does the government or the national harbours board own cold storage plants in Canada? If so, where are they situated?

2. What is the value of each?

3. What salary rates are paid to the employees of such cold storage plants?

DEFENCE COMMUNICATIONS LIMITED

Mr. BLACK (Cumberland):

1. When was Defence Communications Limited organized by the government?

2. Who were appointed general manager, chief engineer, assistant chief engineer, and the executive officers?

3. What are their salaries, and what have been their expenses to date?

4. What expenses have been incurred by each of these executive officers and this organization at the Lord Nelson hotel, Halifax, Nova Scotia?

NATIONAL WAR SERVICES—NATIONALITIES BRANCH—PROFESSOR WATSON KIRKCONNELL

Mr. ROSE:

1. Is Professor Watson Kirkconnell, of McMaster university, a member of the nationalities branch, national war services?

2. If so, since when?

3. How much salary and how much expense money has he received as a member of this branch?

4. Has he ever been in the employ of any other government department?

5. If so, in what capacity?

UNEMPLOYMENT RELIEF

Mr. HANSELL:

1. What was the total amount of money spent by the federal, provincial and municipal governments for the purpose of relief during each of the years 1930 to 1940 inclusive?

2. What was the federal government's share of this expense in each of these years to each province?

3. Are the provinces considered to be in debt to the federal government for these advances?

4. If so, how much has each province paid, and how much is still owing by each province?

MOBILIZATION ACT—NUMBER CALLED UP, ETC.

Mr. DIEFENBAKER:

1. How many men in each administrative district have been called up for medical examination under the National Resources Mobilization Act from the commencement of the act to January 31, 1944?

2. Of these, how many have been found physically fit?

3. Of those found physically fit, how many are now members of the armed forces, (a) for service anywhere; (b) for service in Canada only?

CANADIAN VICKERS LTD.—CANADIAN BAYER COMPANY

Mr. COLDWELL:

1. Has the government made inquiry into the ownership of Canadian Vickers Limited, together with alleged associations of Losanac Limited, as recorded at page 1920, *Hansard*, March 28, 1944?

2. Has the Minister of National Revenue inquired into tax evasion practices alleged to be followed by Canadian Bayer Company, as directed by I. G. Farbenindustrie and Sterling Limited, as reported by subcommittee on war mobilization, of the committee on military affairs, of the United States senate, referred to at page 1920 *Hansard*, March 28, 1944?

Mr. COLDWELL: May I suggest that part one of this question was answered by the Minister of Munitions and Supply on March 31, as appears on page 2048 of *Hansard;* therefore it need not be included in the return.

MOTIONS FOR PAPERS

COLUMBIA RIVER WATERSHED

Mr. COLDWELL:

For a copy of all letters, telegrams and other correspondence between the federal government, the government of the United States, the province of British Columbia and any electric power interests, together with any reports by or references to the international joint commission, on matters concerning the Columbia watershed and those tributary thereto, from January 1, 1940, to date.

UNITED NATIONS RELIEF AND REHABILITATION ADMINISTRATION—RESOLUTIONS OF ATLANTIC CITY MEETING

Mr. QUELCH:

For a copy of the resolution passed by the united nations relief and rehabilitation administration at Atlantic city in December, 1943.

PURCHASES OF PROPERTIES IN PRAIRIE PROVINCES

Mr. DIEFENBAKER:

For a statement showing location of and price paid for all properties purchased by any department of government in the provinces of Manitoba, Saskatchewan and Alberta during each of the years 1941, 1942 and 1943.

HYDE PARK DECLARATION

PRESS REPORTS AS TO SUSPENSION

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): Press dispatches during the Easter recess have indicated that the government is preparing to issue a statement announcing the suspension of the Hyde Park agreement, which was entered into between Canada and the United States earlier in the war. I should be glad if the Prime Minister will inform the house whether or not this agreement is to be suspended, altered or revoked, and at the same time inform the house of the reasons behind such a move.

Right Hon. W. L. MACKENZIE KING (Prime Minister): As my hon. friend perhaps is aware, the Minister of Finance (Mr. Ilsley) at the present time is absent from Ottawa in connection with business related to the forthcoming victory loan. I should like to consult with him before making any statement on this matter. As soon as the minister returns I shall see that the house is informed of the situation.

CONFERENCE WITH PROVINCES

INQUIRY AS TO PROBABLE DATE

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): Is the Prime Minister yet in a position to announce the date of the proposed dominion-provincial conference?

[Mr. Coldwell.]

Right Hon. W. L. MACKENZIE KING (Prime Minister): No doubt my hon. friend has read the return which was tabled shortly before the recess, in which was included the correspondence between the federal government and the governments of the provinces with respect to the dominion-provincial conference and the efforts being made to find a date that will be generally convenient. From that correspondence it is apparent that the task has not thus far been too easy. Up to the present the government has not been able to fix a definite date.

Mr. GRAYDON: May I suggest to the Prime Minister the fact that there are prospects of three provincial elections being held may be a factor in delaying the calling of the conference? Would that in any way be a factor?

Mr. MACKENZIE KING: My hon. friend evidently has more knowledge about the prospects of elections than I have. I cannot tell him whether there are to be any or not, but I do know that, at the present time, representatives, I think, of the treasury departments of all the provinces but one are working on preparatory material for the dominion-provincial conference. Though no date has been fixed I hope it will not be felt that any time is being lost in getting together in advance as much information as possible, so that when the conference does take place all governments may be supplied with the material which will be required in carrying on discussions.

Mr. GRAYDON: I thank the Prime Minister for his compliment in suggesting that I may know more than he does with respect to elections. Of course, that would obviously be impossible. I heard the suggestion made that the delay may have been occasioned by the fact that the government here felt it possible that there would be three changes in governments when those elections took place.

POST-WAR CIVIL AVIATION

CANADIAN REPRESENTATION AT LONDON CONFERENCE

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): During the Easter recess newspaper reports indicated that Lord Beaverbrook, Britain's cabinet minister in charge of aviation, and Adolf Berle, the State Department's assistant secretary, together with seven other United States and British aviation experts, conferred in London with respect to post-war civil aviation. Was Canada invited to this conference, and, if so, who represented us? If Canada was not represented, has this govern-

ment been advised as to the conclusions and decisions reached at the conference? If this government has been so advised, will the minister give a statement to the house in regard to the matter.

Hon. C. D. HOWE (Minister of Munitions and Supply): The conference referred to between Mr. Berle and Lord Beaverbrook was one of a series of bilateral conferences that are being held on this subject. In the conference between Canada and the United States, the United States was represented by Mr. Berle and Mr. Warner, and Canada was represented by myself, Mr. Robertson and Mr. Symington. The Canadian conference was held prior to the London conference. We were not invited to the London conference, of course since it was a bilateral conference, as was ours. We did not invite Britain to our conference and naturally Britain did not invite us to theirs, but there has been a full exchange of information. A statement of the subject matter of both the Canadian and British discussions has been published in the press. I believe there is nothing that can be added usefully at this time.

Mr. GRAYDON: What I read in the papers was not a very comprehensive report of the discussions. I had hoped that I might be able to elicit something further from the government with respect to the matter.

HOUSING

EVICTIONS ON MAY 1 NEXT

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): Has the Parliamentary Assistant to the Minister of Finance anything to add to the statement he made to the house on March 27 in connection with the present acute rental situation?

Mr. D. C. ABBOTT (Parliamentary Assistant to the Minister of Finance): No, I have nothing further to add.

Mr. GRAYDON: Has the parliamentary assistant anything to add as to the possibility of the government doing something in connection with temporary housing for these people?

Mr. MACKENZIE (Vancouver Centre): Order.

Mr. ABBOTT: I have no statement to make on that at the moment.

Mr. GRAYDON: Does that mean the government has no policy with respect to that?

Some hon. MEMBERS: Order.

Mr. GRAYDON: Mr. Speaker, I still have some rights in the House of Commons, and I have always found that you have protected me in that regard. Surely I have the right to ask a supplementary question of the parliamentary assistant without a general harangue of "order" from all parts across the way. I think, Mr. Speaker, that there will have to be an end to that sort of thing, because the questions I have asked are an accumulation built up during the Easter recess, and we desire information on them. I do not think I have overstepped the mark in that regard. I have asked a civil question of the parliamentary assistant and I have a right to have it answered.

Mr. ABBOTT: I thought I gave an answer; I said I had no statement to make in answer to my hon. friend.

Mr. GRAYDON: I could not hear the hon. gentleman because of the number of people who were calling "order" at the same time.

Mr. FRED ROSE (Cartier): I should like to ask the parliamentary assistant to the Minister of Finance if any negotiations are under way with the Montreal city council regarding the acute housing situation facing the people of that city on May 1.

Mr. ABBOTT: As far as I am aware there have been no negotiations between the city council of Montreal and the federal government.

Mr. LOCKHART: Since we are talking about housing, hon. members have been supplied with copies of the five or six reports on reconstruction but as yet we have not received the report on housing. I understand that such a report has been prepared. Why has it not been supplied to us along with the others? Perhaps some member of the government could answer that question and tell us when we may expect it.

Mr. BROOKE CLAXTON (Parliamentary Assistant to the President of the Privy Council): I understand the report is in the hands of the printer and will be printed just as soon as facilities are available to turn it out.

FISHERIES

PRAIRIE PROVINCES—PRODUCTION, MARKETING AND RETURNS

On the orders of the day:

Hon. ERNEST BERTRAND (Minister of Fisheries): If the house will bear with me for a few moments I should like to make a short statement on a question of interest to the prairie provinces. Following special investigations made last summer into questions

connected with the marketing of prairie province fish, which have an important place in our export trade with the United States and in interprovincial trade, a conference was held in Ottawa last week to consider what action might best be taken to maintain and improve the quality of fish production in these provinces, to increase the handling and marketing efficiency, and thus to increase the return to the fishermen. I had the privilege of presiding over the conference, which was attended by Hon. Mr. McDiarmid, minister of mines and natural resources of Manitoba, which department is concerned with fisheries matters; Hon. Mr. Kerr, who is the Saskatchewan minister of natural resources, and other fisheries advisers from all three of the provinces, as well as by officials of my department and of several other federal services. Hon. Mr. Tanner, the Alberta minister of lands and mines, had expected to be present but later found it impossible to be in Ottawa at the time. He was represented by Mr. E. S. Huestis and Doctor Miller.

Briefly, the conference decided that for the present attention should be given particularly to whitefish production and marketing, and three major steps were unanimously agreed upon. First, the provinces will make surveys of their whitefish-producing waters, under the guidance of the federal fisheries research board; second, the board will undertake a programme of fresh water fisheries research; third, machinery will be set up, by my department and the provinces jointly, under which all whitefish intended for shipment out of any of these provinces will be subject to inspection.

The conference was assured by the provinces that the lake surveys will be started this summer. As for research, I expect in the next few days to be able to announce the appointment of a highly competent chief biologist. The research programme in the provinces thereafter will be developed as quickly as may be efficiently possible. In connection with this, though I do not mean that this particular step can be undertaken at once, we intend to establish in the prairie provinces a permanent fisheries research station, broadly similar to stations such as the research board now operates on the two coasts.

CARTELS

INQUIRY AS TO DEALINGS BETWEEN BRITISH, AMERICANS AND GERMANS

On the orders of the day:

Mr. J. SASSEVILLE ROY (Gaspe): A dispatch from London to the Canadian press, dated April 5, quotes a Russian magazine which accuses British and American cartels of continuing to deal with German cartels under certain agreements, operating through Switzerland. Is the Prime Minister prepared to make a statement on this very grave accusation?

Right Hon. W. L. MACKENZIE KING (Prime Minister): My hon. friend has asked me a very large question, dealing with international affairs and concerning, as I understand it, Russia, Britain, Germany and Switzerland in relation to cartels. Not only should I want time to prepare an answer; I should want a great deal of time, and I am not sure that even then I could give an answer. The hon. gentleman has referred to an accusation or an assumption, and whether it is the one or the other I cannot say.

RECONSTRUCTION

ESTABLISHMENT OF DEPARTMENT TO FORMULATE AND CARRY OUT RECONSTRUCTION PLANS

Right Hon. W. L. MACKENZIE KING (Prime Minister) moved that the house go into committee to consider the following resolution:

That it is expedient to introduce a measure to establish a Department of Reconstruction with authority to formulate and coordinate reconstruction plans and carry out such plans during a certain number of years following the cessation of hostilities to provide for the employment of officers, clerks and servants necessary for the proper conduct of the department; and to provide for the proper and efficient administration of the act.

Mr. GRAYDON: I take it that either now or after we have gone into committee on the resolution the Prime Minister will make a statement with respect to this matter.

Mr. MACKENZIE KING: Yes.

Motion agreed to and the house went into committee, Mr. Bradette in the chair.

Mr. MACKENZIE KING: As I indicated on the eve of the recess, Mr. Chairman, the government is bringing forward the different resolutions appearing on the order paper to-day to enable the bills based upon these resolutions to be brought before hon. members at the earliest moment possible. I hope it will suit the convenience of the house to have the discussion on these matters of social legislation take place on the bills rather than on the resolutions. Unless we agree to that I am afraid a great deal of the time of parliament will be taken up in discussion which will be duplicated when we are on the bills, and this at a time when it is necessary to make as much headway as possible unless the session is to be very greatly prolonged. The

bills with respect to most of the resolutions have been prepared and could be introduced as soon as the resolutions are carried.

The resolution now before the committee relates to one of three measures mentioned in the speech from the throne, each having to do with the broad field of post-war planning. Hon. members will recall that the speech from the throne mentioned that it was intended to establish the following departments of government:

(1) A department of veterans' affairs to have charge of the rehabilitation and reestablishment of members of the armed forces, and the administration of veterans' pensions and allowances;
(2) A department of reconstruction to promote and coordinate planning for national development and post-war employment; and
(3) A department of social welfare to organize and to assist in administering activities of the federal government in the fields of health and social insurance.

The resolutions on the order paper immediately following the one now before the committee relate to the departments of veteran's affairs and social welfare. If the resolution respecting the department of reconstruction is carried and the bill introduced, the next order will be the resolution relating to the department of veterans' affairs. I do not think it would be advisable to proceed at present with the third resolution, respecting the department of social welfare. We should, I think, wait for the further reports of the special committee on social security, since matters may come from that committee which it might be desirable to have incorporated in the bill. The necessity of establishing a department of reconstruction is, I believe, self-evident. I imagine that there is no difference of view as to that—as between any of the parties in this House of Commons.

As an illustration of the need for this department of government I might mention briefly two or three essential considerations. The problem of reconstruction will involve the re-employment of nearly two million Canadians now in the armed forces, the merchant navy or war industry. Employment must be productive and must contribute to a rising standard of living. The great industrial plant created for war purposes must be transformed to meet peace time demands in Canada or abroad. Markets must be found and retained for our greatly increased food production unless we are not to face an agricultural depression. Railways, highways and other capital equipment which has suffered the strain of war must be repaired. Civilian aviation and other new means of transport and communication must be developed. Public works and conservation and developmental projects will be required, particularly while private industries are being converted to peace time operations. New housing, both urban and rural, improvements to existing housing and community planning can contribute at once to the volume of employment and the improvement of the standard of living.

These are merely a few of the directions in which reconstruction planning requires to be carried on. Obviously most, if not all, of these functions relate specifically to some existing department of government. A question naturally arises as to why, if that is so, the planning should not be left to each separate department? It will be, I think, obvious that if the government were to proceed in that way there would be the possibility of much duplication and there would not be the opportunity for the coordination of post-war planning which is essential. Moreover, the problem is so large and at the end of hostilities it will be so urgent, that some special agency is necessary to see that plans are made and action is being taken in all the varied fields in which action will be required if we are to achieve and maintain the full employment and full production which are essential to secure the prosperity and welfare of our people.

The bill which will be based upon this resolution, what it sets forth of the method of proceeding with regard to industrial reconstruction, provides for action similar to that which has been taken in the United Kingdom. There, as hon. members know, Lord Woolton has been selected as minister of reconstruction. Lord Woolton has not a department of government of his own, rather he presides at meetings of his colleagues representing other departments of government. Along with the experts by whom he is surrounded, he meets with these ministers and brings forward plans of reconstruction, obtains information from the different departments of government as to the projects that are already being proceeded with, and makes suggestions as to methods by which existing and other plans can best be furthered and developed.

In Canada, we propose to have, in addition to a minister, a department of reconstruction, in order that there may be, so far as this country is concerned, the necessary machinery of government to effect the coordination that will have to take place, not only between the departments of government at Ottawa but also between the dominion government and the several provincial governments as well as municipalities in the provinces. The intention is to make provision for a minister of reconstruction, a deputy minister, and such staff as may be needed to carry on the work.

Mr. GRAYDON: No parliamentary assistant?

Mr. MACKENZIE KING: It will be necessary to have a parliamentary assistant. I think this is one case where a parliamentary assistant will be of great assistance to the minister and to hon. members of the house. I would say that most certainly there will be a parliamentary assistant.

Perhaps I could indicate, by reading from a section or two of the bill, which will later be introduced if the resolution is carried, the scope of the work for which the minister will be responsible. The interpretation section defines what is meant by "reconstruction," and I shall read that section because it gives the comprehensive picture which I think hon. members will wish to have. It reads:

"Reconstruction" means the reestablishment in civil life and reemployment on demobilization of the men and women of the armed services, reestablishment of persons released from war industries, and the reorganization of industry, in order to provide maximum production and full employment during and following the change over from war time production of industry to peace time production, and includes every undertaking by dominion, provincial or municipal authority or by any corporation or other person which may contribute to such reorganization.

Industry is defined in the following comprehensive terms:

"Industry" includes merchandising, manufacturing, trading, engineering, construction or building operations, the operation of public utilities, transportation and the production of all natural products including the products of farms, forests, mines and fisheries and also any other undertaking by any person including His Majesty in right of Canada or of any province involving the employment of persons during reconstruction.

It is not the intention under this legislation to appoint as minister, for the present at least, anyone from outside the present membership of the cabinet. It is intended that one of the members of the present administration will be appointed minister of reconstruction and will have that responsibility. The reasons for this will be quite clear. It is obvious that the minister who is to be in charge of reconstruction should be a member of the government who is already familiar with the work of the administration. Equally important, he should be one who knows his colleagues intimately, that he will be in a position to confer readily with the ministers of all departments in a manner which will best serve to gain their full cooperation in carrying out the government's policies with respect to reconstruction.

I should like to read what Lord Woolton had to say in the House of Lords in describing his functions. Under the proposed legislation the Canadian minister of reconstruction will have functions which are very similar. The wisdom of following a similar course will be admitted when hon. members hear what Lord Woolton has said. Speaking in the House of Lords on December 8 last, Lord Woolton gave the following indication of the scope of his functions:

The preparation of plans, the primary responsibility for formulating the plans rests with the ministers in charge of the departments. These plans of reconstruction are not going to be carried out by me. They are going to be carried out by a number of ministers and government departments. The primary responsibility for executing them, must continue to rest with the departments concerned, working under the direction of their ministerial chiefs. That is why there is not going to be any ministry of reconstruction. There is going to be no minister of reconstruction with a large staff attached to it. What I have to try to do is to see the reconstruction plan as a whole, to lay out the various parts which have to be worked out by the departments, to bring the plans of the various departments in relation with one another and to make sure that there are no gaps, no overlapping, no conflict.

The responsibility therefore of the minister of reconstruction is quite clearly defined. It is his business, with his colleagues, to see that all these plans come into one orderly whole and that nothing is left undone by his colleagues that ought in the opinion of the war cabinet to be done.

In our case it will not be the war cabinet, it will be the full cabinet.

In doing so I shall be helped by a very strong committee of the war cabinet.

In the procedure that we intend to follow, the minister will be assisted by a committee of the cabinet which will be formed subsequently. The names of its members are not set forth in the proposed legislation.

I have received the following additional information about Lord Woolton's functions through the Canadian high commissioner in London, with whom I communicated some time ago:

He has, of course, to keep in touch with a numerous body of committees, both governmental and extra-governmental, who are concerned with the problems of reconstruction. He has to be in continual consultation with his colleagues in the government, and to deal with the innumerable private interests involved in any far-reaching scheme of national planning. Not the least difficult part of his task is that he must induce the various government departments involved in any one aspect of reconstruction to maintain the same tempo in their planning and execution of reconstruction policies, so that no one part of a given scheme lags behind the other.

In this work, he is assisted by a very small staff of four specialists, in addition to his secretaries and personal assistants.

The staff contemplated for the Department of Reconstruction is a deputy minister, and

such other officers, technical assistants, clerks and employees as are necessary for the proper conduct of the business of the department.

I think I have sufficiently indicated the functions of the minister. His powers will extend to the right to institute inquiries, to require return of information, to consult with representatives of producers, industry, science and labour, to establish committees and inaugurate conferences. The minister will also be obliged to submit an annual report to parliament. Provision is also made for the transferring of civil servants from other departments, and equally there is the power to transfer certain branches of departments, if that be thought advisable, to carry out some of the work that may have to be undertaken by the new department.

Mr. GRAYDON: If I may be permitted a question at this point, the new department as envisaged from the statement of the Prime Minister will differ from other departments of government because it will have a sort of supervisory character and give directives to other departments. Is that the principle that is followed under Lord Woolton's plan?

Mr. MACKENZIE KING: The principle is the same. As to giving directives, I am not just sure that that is the word I would use. My hon. friend will recognize at once that all government departments are pretty sensitive about their own prerogatives.

Mr. GRAYDON: That is what I was thinking.

Mr. MACKENZIE KING: That is one of the reasons why it is thought advisable, in the early stages at all events, to entrust the position of Minister of the Department of Reconstruction to a member of the government who is already known to be persona grata to his colleagues, as all members of the present government certainly are.

Mr. GRAYDON: Would it not mean that the new minister would have some superpower over and above that of the ordinary cabinet minister if the present proposal is carried out?

Mr. MACKENZIE KING: No. Decision on policy will rest, as it does in all matters, with the cabinet as a whole. The directions that will be given to other departments, if there are directions—I would prefer to say the procedure expected to be adopted—will be given by decision of the cabinet as a whole. Matters will be discussed in council and ministers informed as a result of a round-table discussion of what will be expected of them in their respective departments. The minister will probably also have plans of his own which he may wish to submit, involving, for particular purposes, the expenditure of public money. Just under which particular department work of the kind would be carried out would depend on the decision that would be reached by the cabinet. All moneys will necessarily be appropriated by parliament. There are in the civil estimates expenditures for public works and other basic services, many of which will fit into a scheme of reconstruction. There are also in the war appropriation estimates, items for many projects that will relate themselves to the work of reconstruction, and the minister himself may bring forward to parliament a bill to appropriate money for reconstruction purposes, a bill similar in form to the war appropriation bill of to-day, or he may seek to have necessary expenditures provided by supplementary estimates. Hon. members will realize that certain projects in connection with the work of reconstruction will necessarily run over a term of years before being finally completed.

Mr. GRAYDON: Such a bill would be different from the war appropriation bill, for which the Minister of Finance is responsible?

Mr. MACKENZIE KING: There would be amounts placed in the estimates for the projects for which it was desired to have public funds appropriated, or a bill for the sums needed for reconstruction might be introduced. By either method the necessary amounts would be asked for from the house, so that there would be opportunity for members of parliament to discuss the projects fully on the floor of the house.

As I have said, some of the projects may run over a term of years. For such projects it may not be possible to limit the required amount to one specific fiscal year. There would have to be some leeway in the matter of expenditures. For the present, until at least we get into the period after an armistice, I do not think that much will be required in the way of expenditures; but certainly expenditures, if they are to be effective and we are to see to it that when our men return from the front there will be no lack of employment, will have to be thought out with a great deal of care.

Mr. HANSON (York-Sunbury): I desire to ask a few questions of the Prime Minister in connection with this matter.

Mr. MACKENZIE KING: May I add one sentence as to the duration of the measure. It is proposed that the duration of this measure will be for four years after the end of hostilities between Canada and Germany and also Japan; that is, four years from the end of the session that we may be in at the time that hostilities cease.

Mr. HANSON (York-Sunbury): That last statement of the Prime Minister's is I think rather a vain hope. My experience in connection with government and departmental matters is that once we establish these bureaux they strive valiantly to live, and it is pretty difficult to extinguish them or extinguish a department. Other ministers have tried it in the past, and they have run up against a stone wall. However, bureaucracy was ever thus.

What I desire to say to the Prime Minister is this. I am left rather confused because in the earlier part of his remarks he stated, as I interpreted his remarks, that this new minister would have no administrative functions. To use the words of my colleague the leader of the opposition, it was largely consultative and directive. Now, I understand, that is not to be the case, but this department is to ask parliament for an appropriation for schemes of reconstruction to provide employment. Are these schemes to be carried out under the aegis of this proposed department, or are they to be carried under departments already established, such as public works and pensions and national health? I think we need some clarification of that point.

I wonder whether the Prime Minister heard the broadcast over the C.B.C. on Sunday morning. Perhaps he was at church. Air Marshal Bishop, V.C., made a speech in New York, I believe on Saturday night, to some military or veterans' organization.

Mr. MACKENZIE (Vancouver Centre): A United States branch of the Canadian Legion.

Mr. HANSON (York-Sunbury): The New York branch of the Canadian Legion. He deprecated so much attention being paid to the post-war period and to blueprints for post-war reconstruction, when this war is not yet won. He advanced a theory which I have advanced in this chamber on many occasions, and which I reaffirm to-day. The primary and fundamental duty of parliament, the government, and of every one of us is to keep an eye on the ball, and to win the war before we start to revolutionize the world. I hope that hon. members will pause and consider the underlying theory which I am trying to state. As I look over the war fronts and visualize what may take place almost immediately, I say that this nation requires to concentrate its courage, its industry and its every thought upon what is about to happen in the summer of 1944. Anyone who thinks that the war is over is living in a fool's paradise. Anyone who believes that victory is in sight ought to have his head examined. The longest and the hardest pull on the part of the united nations is still ahead, and the people of Canada are being lulled to sleep by too much talk about post-war rehabilitation and reconstruction. I am all for post-war rehabilitation of the armed forces, but is it not our immediate duty as members of this house, and particularly is it not the duty of the government of the day—I am sure the Prime Minister will agree with this—to insist that the main and fundamental objective of parliament at this time is to concentrate on the winning of the war? I do not mean that we should obliterate from our minds all thoughts about the post-war period; of course we must think about it. But the setting up of a ministry merely for the purpose of consultation, and without any administrative functions, if I correctly interpret the Prime Minister's statement, is not going to carry us very far. I would ask the Prime Minister to clarify this matter a little more, because, I confess, my mind has been left confused, and I think the mind of the country will be confused, as to just what the functions of this new ministry are to be. It will be established at considerable expense. We are to have a minister and all the paraphernalia and the bureaucracy which go with the minister, and the staff will grow—make no mistake about that. We are to have a parliamentary assistant, another fifth wheel of the coach, and the first thing we know we shall have a huge structure without any administrative functions. I believe the people of Canada are looking for something more than that. It seems to me that the formation of a ministry without administrative functions is premature. I leave that thought with the Prime Minister.

Mr. MACKENZIE KING: May I answer my hon. friend at once. To-day the departments of government are carrying on different kinds of work, all of which will relate also to work in the future. The question which the administration had to ask itself in framing this legislation was, first of all, shall we make as much use as possible of existing departments, and seek in that way not only to avoid unnecessary waste and expense, but to get the benefit of the experience of expert administration, or shall we create a new department which will duplicate what is being done in other departments of government? I cannot think of any single branch of reconstruction which would of itself necessitate the creation of a new department of government. Viewed collectively, all branches of national work are, I think, one way or another included in the existing departments of government.

Mr. HANSON (York-Sunbury): True.

Mr. MACKENZIE KING: My hon. friend has mentioned public works; there are also mines and resources and trade and commerce;

and at the present time the Housing Act is being administered by the finance department. One might run through the entire list of departments. He would discover that somewhere in one or the other will be found a branch of government which could appropriately administer any conceivable reconstruction projects. But it must be equally obvious that to allow departments of government each separately and individually to make plans and carry them out without any form of consultation to effect the coordination of effort, or to prepare plans without first having a general scheme of reconstruction carefully thought out, and accepted, would be to ignore what will be exceedingly important in the period of reconstruction. Perhaps I might indicate the minister's functions by quoting from the clause of the bill which mentions his duties:

4. The minister shall prepare, formulate and coordinate plans and projects for reconstruction, and, with the authorization of the governor in council, provide for the carrying out thereof.

5. It shall be the duty of the minister:

(a) to inform himself fully of the needs for new employment of the men and women in the armed forces and in industry and the opportunities that will be available to meet those needs as men and women are demobilized from the armed forces and as war production declines;

(b) to coordinate the actions of other departments and agencies of the government of Canada for the purpose of ensuring that the transition from a wartime to a peacetime economy shall be effected as quickly and as smoothly as possible;

(c) to formulate plans for industrial development and conversion, public works and improvements, housing and community planning, research and the conservation and development of natural resources, and with the authorization of the governor in council, to provide for carrying out such plans;

(d) to correlate information relating to plans for reconstruction.

I cannot imagine that there will be any difference of view on the part of hon. members, first, as to the wisdom of having as much of the work of reconstruction carried out as may be possible, by departments already established, and second, as to the wisdom of having some agency which will be responsible for the proper co-ordination or integration of all reconstruction work to be carried on, and responsible to this House of Commons for what is being done in that way.

As to my hon. friend's other remark, he is quite right when he says that I feel very strongly, as he does, that all of us must keep our minds concentrated, that we cannot keep them too much concentrated, on the war and on the necessity of winning the war. Very few people, I believe, appreciate how very heavy is the task that lies ahead before victory is achieved. I would be the last to ask parliament to consider any measure at this stage if I felt that it was going to have the effect of taking the minds either of members of parliament or of the people away from the war effort as the first of all our national obligations. I realize, however, as hon. members will, that we owe everything to the men who are fighting at the front, and among our obligations one of the greatest, I think, is to give those men, in the fullest measure possible, the assurance that we are thinking of them while they are fighting our battles and that we are making provision for them when they return, which will help to ensure better conditions than they have hitherto known.

Nothing would more discourage the fighting forces of the country than the thought that this parliament did not have them and their future continually in mind. I appreciate the stress which my hon. friend lays upon the importance of not allowing discussions in this parliament even to assume an emphasis, with respect to post-war matters, which would cause anyone to believe that the war is going to be over soon; and that we can take it for granted that there is not a long and arduous road to be traversed before some of these projects can begin to be put into effect. But our duty, as I see it, is not to delay in the endeavour to make our plans as complete as possible, and to get under way whatever measures we can that will help to give that assurance to those who will be seeking above all else steady employment when they return to this country, and as well new employment, not only for those in the armed forces, but for workers in industry who, during the period of war, have lost or been transferred from their former fields of activity and will have to enter upon new occupations once we return to the days of peace.

Mr. POULIOT: We must come to an understanding about this proposal. The hon. member for York-Sunbury (Mr. Hanson) and the Prime Minister (Mr. Mackenzie King) spoke very well about the soldiers and what is to be done for them. But they are not to be fed with words. Soldiers are realists. Once over the Columbia Broadcasting System network I heard a soldier who was returning from somewhere in the South sea islands making this statement: We are not interested at all in what we may have later on after the war; we want to know what the government is ready to do now for us. He was an American speaking to Americans.

We have heard a good deal about a new order. Will the foundations of the new order be the same as those of the old order? That

is one point. It is impossible to satisfy the minds, the legitimate desires, of those in the army by telling them of future happiness when there is nothing to give them when they come home right now. I shall have a good deal to say about the resolution concerning the new department of pensions. Now, sir, what is the idea of this department? It will not be an administrative department. The minister will be a kind of liaison officer between heads of departments. The Prime Minister said that this minister will be naturally a member of the cabinet who is familiar with his colleagues, who will speak to them about what they should do with regard to so-called reconstruction.

All the members of the cabinet meet in the council room. Why, therefore, should they need a liaison officer? Why should there be a minister acting as a liaison officer when he is on good terms already with all the ministers and may speak to them about reconstruction? I presume all ministers are on speaking terms. Therefore, why should they not speak to each other about their own problems?

My idea of the cabinet is that the ministers meet together to discuss their own problems and that they accept the decision of the majority of themselves. Why should there be a minister who is just a messenger of council, who goes to the Minister of Mines and Resources (Mr. Crerar) and says, "My dear colleague, why do you not do so-and-so for the miners", and then goes to the genial Minister of Fisheries and says, "I have here a problem for you to consider in regard to the fishermen". And then take the farmers. No minister would speak to the Minister of Agriculture (Mr. Gardiner) except the liaison minister, who would go to him and say, "My dear Jimmie, I think you should do so-and-so for the farmers; is it not a good thing for you to do for them?" And he will do that on the suggestion of experts, brain-trust men.

Have we not enough plans now? We are submerged by plans that come from every part of the country. There is not a board of trade, not a chamber of commerce, not a municipal council, not an organization or society in this country that is not planning something for reconstruction after the war. Is it possible to apply all these plans? A selection will have to be made and the selection should be made by the ministers in council, not by one man but by all of them together, subject to the majority of themselves. That is my idea of government.

Why should the government delegate its authority to one minister who will be spokesman, to speak to each one of them? That is the destruction of the principle of government as it has been established in England, a principle which has functioned so well for so long a time. Of course, we have heralds who speak over the radio. I do not know whether they speak officially, but they speak over the radio and announce policy. They announce policy before we know it in the House of Commons.

My great fear is the fear of bureaucracy. As was said in the *Quarterly Review* of the university of Toronto by Professor MacGregor Dawson in the spring of 1941—he is a sensible man although he is in the university of Toronto—we are facing a crisis of authority. No one is ready to take responsibility for what is being done. It is the old story of the little boy who breaks the window. You ask him who did it and he says: "It was my little friend." "Who is that little friend?" He says: "He was passing by and he did not do it himself, but the stone was thrown by the neighbour of my little friend." You ask him: "Who was that neighbour?" He says he does not know. No one knew. It is like that. No one is responsible for anything. If we are to have new departments let us have departments where the ministers have authority to do something and where they will be responsible to the House of Commons. It is impossible now to get any information. How often have I asked the Prime Minister to give me some information about expenditures in each department? It is no better now than it was before although fine promises were made.

We are here to maintain at all costs the principle of responsible government. We are here to maintain that during war as well as in peace time, and there is no reason why that should not be done. I see my hon. friend the leader of the Canadian Commonwealth Federation across the way, who has visions and a mirage in mind for this country. When he sees someone suffering he says: "Here I am, I shall make you recover. I have a cure for you." When you ask him what that cure is, it is impossible for him to tell you.

The reason why I object to his policy is that he stated not so long ago that he would use the same people in the service that we have now to promote his own policy. I find that they are not good. I find that most of them should be kicked out. I said that to the hon. member for Parry Sound and the hon. member for Vancouver-Burrard. I said: "The trouble with you, gentlemen, is that you are two great lawyers. The trouble with you is that you consider the matter as expert legal minds. You make such subtle distinctions! The thing for you to do is to buy a pair of lumberman's boots, take a fork and a

shovel and shovel those people out." That is the way I understand it. What can you do with bad tools? What could the leader of the C.C.F. group or any leader do with the tools that we have now? They come from universities and they have no practical experience. They have those dreams, but they are far from being equal to Plato, the great Greek philosopher, who thought of an ideal state. What most of them do is to have a scheme, or plan, that will give them the opportunity to have two maids instead of one and change their old car for a brand new one. It is a scheme they turn to their own advantage because parliament has no control over bureaucracy. That is it.

What is the use of speaking of parliamentary rights and of the supreme control of parliament when we are treated like children? When we come here it is to impose taxation and approve the spending of money. To-day we have a resolution to constitute a new department. After the bill is passed and the department is constituted, the minister will be just as independent of parliament as any one of his colleagues. We shall have no return. We shall have no public accounts. We shall have no information, and when we ask for some information we shall be told it is too expensive to give it. That is it.

I shall tell the Prime Minister and the Leader of the Opposition, as well as the leaders of other groups that it is time to apply the scissors to bureaucracy. It is time to stop. It is time to think of the date when bureaucracy will be reduced at least by one-half and when we shall dispense with all the fine brains produced by the universities. Some years ago I complained of the teachings that were given especially at the university of Toronto by King Gordon and at Queen's university by another gentleman and at McGill university. What happened? Sir Edward Beattie did not say anything to the students at McGill, but he went to Queen's university and gave a calling-down to the students there. I asked him for a copy of his speech. He sent me others but he did not send me that one. Then what happened? It was the ambition of the key men of the C.C.F. to shape the minds of the university students, to shape them like their own. Then what happened? What happened is that business has taken over the control of universities. The young men who are now students in political economy and political science and like subjects are not used any more by private concerns for statistical work or private planning. They are sent here to the government to look after the interests of big finance. I denounce them now for that very purpose. I knew that most of the Canadian universities are controlled by big finance. If I am told that the chancellor of Toronto university is the venerable Sir William Mulock I reply that it is easy for anyone to look at the board of governors to see that I do not exaggerate in any way when I speak of the role of high finance on the board there; not only on the board but also on the teaching staff and in the formation of students who come out of that university.

Now, sir, it is time to think deeply. We are here as private members, all of us. The members on the treasury benches as well as those on the opposition benches and back benches are here to discuss the problems of the future of this country. We wonder what will happen. Nothing will be decided by fine phrases or by eloquent speeches. We have to come down to facts. We must be realistic. We must realize that the first thing to do for this country is to cut down the dominion civil service to the minimum, to make a selection and then to have the courage to dispense with those who are useless. How is it that some people who do absolutely nothing in their own offices are kept here? They are kept here because the minister knows them and is afraid to receive complaints from those people if they are fired. In my view it will be a benefit to the country to dispense with a few men at the top and some others at the bottom in order to give the country a breathing spell.

Can we continue to institute new boards, new organizations, new departments? How would it be possible for a businessman to pay for all that? Where is the businessman who is not handicapped by taxes? He has to pay for social work; and if we have so much social legislation, it is precisely due to the increasing taxation. Before taxation was at such a height it was possible for private charity to do marvellous things. It was possible for private charity to help a large number of people that no government could provide for. With the burden of taxation ever increasing the Canadian people are becoming slaves in their own country. That is why the government is going after social legislation. I am not against the social happiness of the people. I am all for it. I remember the time when I asked the Prime Minister to help me to prepare statistics with regard to hours of work and minimum wages in the various cities of Canada. I did that before Tom Moore ever spoke of it. I did it before the C.C.F. party ever spoke of it in the House of Commons. I think it was in 1928; anyway, it was a long time ago. I did that with the help of the Prime Minister. I was rebuffed by Tom Moore and the trades and labour congress because I was not a labour man. I was not of the type of Dorothy

Thompson who makes a million dollars a year and belongs to the C.I.O. in the United States, I am not a hypocrite like that. I was doing that for the welfare of my own people.

What help have we had from the other groups in regard to the welfare of Canadian citizens? They are like Moses; they want to lead the Canadian people into the promised land, but the leader of the C.C.F. party must remember that Moses never got there. What is their suggestion in regard to reconstruction? How do they want to reconstruct this country? Should it be done, as Mr. Woodsworth said during the special session of 1939, by conscripting bank accounts? Is it to be done by preventing people from having any profits? In my view the Canadian people should be just as wealthy as they deserve to be. Every citizen should be entitled to a profit, to enable him to live decently. We must have private initiative. A man has a right to what he earns; a man has a right to save money in order that he may enjoy the comforts of life. A labouring man has as much right as a millionaire to the comforts of life, though he may not have so much money with which to get them. Every man must be enabled to bring up his children decently, to live well, to have all the clothing he and his family needs, and to enjoy at least the life of a decent citizen.

I think this department should be called the pigeon-hole department. It is not that I am against social reconstruction or against the welfare of the Canadian people. I see one of my hon. friends laughing; let me tell him that what I say now is what I have been thinking ever since I read his description of our future happiness. It is dangerous to lead people to expect more than it is possible to give them. That is what creates communism and disrespect for parliamentary institutions. The situation is so bad that the committee to consider the rules of the house, which was presided over by Mr. Speaker and on which were at least two ministers, the Minister of Pensions and National Health and the Minister of Justice, stated that there was general criticism of parliament throughout this country. We have to think of the safeguarding of our national democratic institutions. A faux pas might have the most serious consequences, and before they go farther I hope the members of the cabinet will think seriously not of what I have said but of the facts I have presented. I am tired of playing the role of Cassandra in this house. I hope what I foresee never will come about, but we must visualize the worst and must act in such a way as not to disappoint the men who are fighting with the Canadian army and who have every right to expect decent treatment from this country when they return, even before the war is over.

If this proposal goes through, someone will be appointed as minister of reconstruction. In that connection I should like to bring a certain matter to the attention of the Prime Minister, and this will conclude the remarks I have to make at the moment. The late Senator Dandurand described himself in the "Parliamentary Guide" as president of a bank, director of an insurance company, and so on. At the present time one of the Prime Minister's colleagues describes himself as director of the Great West Life company. I see no wrong in that as long as the fact is made public that a cabinet minister is a director of a company. Other ministers, however, have resigned their directorships of banks and other companies before entering the cabinet. I wonder which policy is right, to retain a directorship and make that fact public so that all may know it, or to resign that directorship. Then there are ministers who inform us only through British publications as to the directorships they hold. They form a third class. I ask the Prime Minister to tell me what is the policy of the government concerning ministers who are on the boards of banks, insurance companies, and so on.

Mr. COLDWELL: I was hoping that we might discuss the appointment of the minister and the setting up of the department when we had the bill before us, because I think that would have facilitated the business of the house and would have given us an opportunity of seeing exactly what is contained in the bill and therefore of discussing the matter more intelligently. I am not going to say very much at this stage. While I agree that the war is not yet won and that we must make it our business to provide everything necessary in order to win it, nevertheless I regard it as imperative that at the same time we should lay the foundations of reconstruction as rapidly as possible. Indeed, throughout the war I have held, as I hold to-day, that the preparations for the prosecution of the war and the foundation of the reconstruction period ought to be considered indivisible.

This afternoon the Prime Minister stated the problem in a very few words. He drew to the attention of the house the fact that at some time we shall have to find something like two million jobs for those who to-day are engaged in war industry or who are serving in the various branches of the armed forces. I am quite in agreement that a minister of reconstruction shall be appointed, but I do think we need to do more than appoint a minister. I am not quite clear as to what

will be the duties of this minister, nor shall I be clear about it, of course, until I see the bill. However, it does seem to me that it is not the coordination of the work of the established departments that is necessary but rather that we should be sure we comprehend both the resources we have and the possibilities of using them in the post-war period. It is all very well to say, as the hon. member for York-Sunbury did, "Well, we have to win the war. Meantime these other things may wait." The war is not yet won, but I suppose no problem is more in the minds of the young men and women who are in the armed forces than the problem of what is to become of them when the war ends. Yesterday on the train coming to Ottawa I was talking to two or three men who were sitting in the sleeper. I was not paying particular attention to a young man sitting on the opposite side of the aisle, but all of a sudden he chipped in. He heard us talking about the war and the possibilities of the post-war period. He was a young airman and he said, "Like millions of other boys I am thinking of what is going to happen to me when this war ends if I come back again." It is all very well to say that we have to win the war first, but we should make some adequate preparations so that when people are let out of war industry or return from war service they will not have to go in the bread lines and be put on relief or have to take all kinds of unproductive jobs. The people of Canada are expecting this government and this house to take these matters under consideration now and to be thoroughly prepared when the time comes.

No one will ever be able to make the excuse again that Canada cannot provide for her people. No one ever again will be able to say that there is no money to maintain the essentials of life and to provide a reasonable standard of living for everybody in this country. We have demonstrated in this war, even with the type of planning that has been done—it has been rather haphazard—what might be done in a peace-time period. The first task given to the minister of reconstruction should be that of making a thorough survey of all our resources, both human and material, the laying down of some plans to utilize our material and human resources and to absorb the labour of two million people when this war ends. I believe we can do this if we make up our minds that we will lay down, adopt and follow a far-reaching national plan for the conservation and development of the natural resources we have in this country. This does not mean that this can be done without some attention being given to external problems of trade and so on, but I believe trade problems can be solved by coming to proper types of agreements with those who are willing to trade with us as we are willing to trade with them.

Mr. MARTIN: Much of the former has been done already.

Mr. COLDWELL: I have not seen very much of it. We are being told constantly that this kind of thing has been done, but I should like to see some real evidence of its having been done. I have just come back from the west where I spent a few days. After leaving Ottawa and the other centres in this part of Canada and going out on the prairies I could not help noticing some of the farm homes that I saw. I found some conditions appalling. Of course, some are also appalling in some of our cities, but on the prairies I saw unpainted villages and tiny homes on the farms with very little in them. A few days ago I was in the home of a mother whose son had recently been taken prisoner of war. I saw a tidy, clean, humble home with very little in it, and I realized that while that mother had sacrificed a boy, this country had given her very little in the way of human and material comfort as compensation for the loss and anxiety that she has undergone. As I say, I should like to see a thorough survey made of the possibilities of this country, including rural rehabilitation. I notice the hon. member for Essex East looks rather worried or hurt when I say that.

Mr. MARTIN: Not hurt. May I say what is in my mind?

Mr. COLDWELL: The hon. member can reply in a moment, if he does not mind. Let me say to the hon. member for Essex East that it is no use just having a blueprint unless we are prepared to carry it out.

Mr. MARTIN: I agree with that.

Mr. COLDWELL: The hon. member for York-Sunbury (Mr. Hanson) pretty well expressed the psychology that is abroad when he said this afternoon, "Why consider these matters now; why not leave things more or less to work themselves out?" I suppose we are to leave things to so-called private enterprise. May I say again that in my opinion along those lines lies disaster. I have on my desk a quotation from a statement made by one of the great students of social and economic relationships. On May 24, 1943, Sir William Beveridge was interviewed in this city by one of the local newspapers and, on

being asked whether he thought private enterprise could cope with the post-war problems, made this statement:

I am not at all sure that private enterprise can take the responsibility of both maintaining enterprise and showing a profit. It seems to me difficult, perhaps impossible, thus to serve two masters. I doubt if employment can be maintained without a very considerable proportion of public monopoly in the national economy.

He was then asked, "Don't you think private enterprise should be given a chance?" and he replied:

No, I don't. Not if it can't do the job. I want to take no chances on the maintenance of employment—it's far too important a matter. I would not entrust it blindly to private enterprise any more than private enterprise should be trusted to run a war.

I fear that that is what we are inclined to do as a country, to leave too much to what sometimes is called private enterprise.

As I said, I did not rise to enter into a prolonged debate on the setting up of this department. I think it should be done, but from what I have heard this afternoon I do not think the functions of the department are sufficiently wide. I do not think they are sufficiently comprehensive. The hon. member for Témiscouata (Mr. Pouliot) has referred to bureaucracy. I dislike bureaucracy and I believe that in the future we shall have to devise ways and means of making democracy work. Let me add that we have never been under a greater bureaucracy than the bureaucracy of big business, of private monopoly and of international cartels.

An hon. MEMBER: And of the financial houses.

Mr. COLDWELL: And of the financial monopoly. It seems to me that the time has come when we must devise democratic methods in order to control these great economic functions in the interests of the people. And it can be done. When the bill comes down I shall look it over carefully to see just what hope there is in it for the planning of the post-war period in the interests of those who have served in this war and for all those who will expect opportunities for an adequate livelihood when peace comes.

Mr. MacNICOL: Mr. Chairman, I am going to support the resolution. In my opinion, next to the national defence departments, of which there are three, the munitions department and the finance department, the proposed reconstruction department will be the most important. I am one of those who firmly believe that next to the prosecution of the war the preparation for peace is the most important. In supporting any plans for the preparation for peace I do not intend for one moment to neglect anything I can do to prosecute the war. For the last three years I have been advocating the doctrine of war first and the preparation for reconstruction second.

I believe, further, that this resolution is in line with what was sent from the reconstruction committee which was headed by the hon. member for Cariboo (Mr. Turgeon), who made an excellent chairman. I am sure that he and the other members of the committee, including myself, have done our best to search out from among the proposals that came before us those that would be the most effective in providing employment after the war. I cannot for a minute see why this department should not have been set up some time ago, as the reconstruction committee recommended a year ago, or at least during last session.

I remember very well what happened in 1918. I was in big business then. I quite agree that no one can say that the war is going to end this year, but on the other hand no one can say that it may not end this year. It may end as suddenly as it did in 1918, and suppose it did end this fall, are we ready? We certainly are not. We certainly have not anything ready that I know of, and if this new department can have something in shape and ready it will have done a good job. We should have many projects ready to send thousands and thousands of men to work upon as soon as the war ends, to provide employment while industry is retooling.

I know something about industry; I ought to. I do not for one minute endorse what the hon. member who has just sat down has said about industry. I am going to discuss that for a moment because I am getting tired of listening to that kind of talk. Anyone who has served in big industry for years should know something about it. The man who has not can have his own opinion, but his opinion does not influence mine one iota. Canada owes a great deal to big industry, for the honesty of purpose of big industry and for what it has done for this country. If industry had not given employment to hundreds of thousands of men and women before the war and during the war I should like to know what would have happened to the prosecution of the war. Neither will I endorse what my hon. friend said about private enterprise. I am in favour of private enterprise. I have seen too much waste and too much excessive costs through government conducting business that should have been conducted by private enterprise. But that is not what I rose to say.

People all over this country have been confused over where to send their recommendations on reconstruction, and perhaps the bill

to be founded on this resolution will settle some of this confusion that I have found everywhere across Canada, and I have been over most of it. Boards of trade and municipal councils have asked me to whom they should send their reconstruction recommendations. They say that we have three or four committees working on reconstruction, the cabinet committee, the Doctor James committee, the Senate committee and the House of Commons committee on rehabilitation and reconstruction. If this new department will mean the concentration of recommendations and representations before one body, well and good. That will be better than it is to-day, and in saying that I am not casting reflections on any of the committees that have been set up.

Someone has said something about blueprints and specifications. There have to be blueprints and specifications; and if the new minister, whoever he may be, and this new department that is to be set up will take some little advice from the humble member for Davenport they will make many blueprints and many specifications, go into many details and have their plans and projects ready. I could give them a hundred projects myself, every one which is absolutely necessary and for which blueprints and details could and should be prepared now, so that the projects will be ready to start when the war ends. The blueprints and specifications could in the meantime be pigeon-holed after all the details have been worked out, so that when the war ends all that it would be necessary to do in order to have this or that project started would be to call for tenders and get the men on the job. It would not be necessary to order production of the material in advance, for it would have to be ordered some time; and if everything is in readiness when the war ends, the new department could announce at once that so many million brick would be required for this project, so many thousands of tons of steel for that project, so many million feet of timber for the other project, and so on all down the line. I endorse the proposal, and if the department has not the necessary authority—and the hon. member for York-Sunbury seemed to doubt that it had the necessary authority—I hope that before the bill passes the house the Prime Minister will see to it that the department is given absolute authority to make all preparations necessary for providing men and women with jobs following the war.

I believe there will be about two million jobs required; if you do not make preparations, exactly the same thing may happen that happened after the last war, and there is not a man or woman in this house who wants to see that occur again. When I say that, I am not blaming any previous government because they had no experience in after-the-war matters. But now we have had the experience of not being ready, and this government has seen what happened through not being ready. I endorse this attempt to get ready, so that when the men return from overseas there will be jobs for them, and jobs in the meantime for men who have already returned and for men who are thrown out of employment from industry. Some days ago I was in an industrial plant which employs several thousands of men and women. Ordinarily, that plant would not run twenty-four hours after the war is over, for the very good reason that it is making things that are wholly needed for the prosecution of the war. I know that some people say: Oh, you will have to keep these plants running, producing munitions and guns that probably will not be needed again for one hundred years, and the guns will be obsolete by that time. That, to me, is not sound economics. I would rather see this new department prepare to do something for Canada, by making plans and preparations for projects all over this country where men and women can be put to work. Many of these projects will be self-liquidating, and a great many of them should have been started years and years ago, projects which in the long run will not cost the country a dollar. When the department is set up I shall be glad to send it lists of projects which I have surveyed myself here and there across this dominion, because I am absolutely sincere in believing that all preparations should be made ahead of time and everything be ready when the war ends. Of course, it will be some time before the soldiers start to return after the war, but many of them have already returned. The hon. member for Témiscouata mentioned, and I had intended mentioning it myself, that many of those who have returned are not working, and if this new department can provide them with jobs and provide with jobs those who are let out from industry, that will be a start. What preparations are made for them? Every day men and women are being released from industries throughout this country. Where are they to be sent? The department should make plans to provide employment not only for those who are returning from overseas but for the great number who are engaged in making munitions of war.

I should like to ask a few questions. When the bill comes down I shall have much more to say. As I understood the Prime Minister, he intimated, although he may not have used these words, that there would be an effort by this department to invite new lines of

industry. Certainly a vast number should be introduced, for there is much opportunity for them in Canada. Perhaps this department will enable many industrial organizations now established on the other side of the water, and with a number of which I am acquainted, to set up their activities here for this market. I believe that, operating with the consent and assistance of other government bodies, this new department will find here a wide field of usefulness. Some person or some committee having the authority could make a survey of, say, a thousand and one new lines of industry for this country, many of which, if the proper surveys are made beforehand, could be installed in munition plants which, being single purpose plants, will likely close when the war ends, and for which, otherwise, no use might be found. If that is to be part of the work of the new ministry it will have my heartiest support. I am sure that thereby much employment will be provided.

I should like to know also whether this new reconstruction department will be empowered to dig into and set on foot the St. Lawrence deep waterways power project. If that programme, which is known to almost every hon. member as well as to most engineers, were comprised in the activities of the new department, there would be fifty thousand jobs to begin with. Further, the electricity produced by the deep waterway on the St. Lawrence river would provide hundreds of thousands of jobs in new industries. The international section of the St. Lawrence deep waterways alone can generate an additional million cheap horse-power for Ontario, and the Quebec section would allow for the production of another three million horse-power, apart from what will be produced in the United States. This means great numbers of additional jobs.

In my opinion the new department will have to be ready when the war ends to furnish employment for hundreds of thousands of people. I do not believe that the men who come back from this war will tolerate what their fathers had to put up with following the last war, and nobody in this chamber would want them to do so.

I should like to know whether the new department will have any power to associate itself with the vast transportation project which has received the endorsation of engineers and economists, namely the construction of the St. Lawrence deep waterways, which would open up a vast transportation route all the way from Fort William to the strait of Belle isle, a distance of two thousand miles, and, according to the best authorities, would add from three and one-half to five cents to the value of every bushel of wheat produced in the west. We all know that anything which improves the lot of the western wheat grower will increase purchasing power throughout this country and provide thousands of jobs in industry. Will the new department have anything to do with the construction of the great lakes-St. Lawrence seaway?

One other question. Will the department have anything to do with the programme which, though I make not the slightest claim to its initiation, I strongly supported on February 3, of a giant irrigation project in the west? This would mean directly or indirectly the provision of another hundred thousand jobs. Will the department have anything to do with providing water for the cities of the plains? I have here numerous clippings from western papers in reference to the situation of some cities—Moose Jaw, for one—in respect of water supply. Will the new department be able to initiate a programme of damming the South Saskatchewan river, irrigating the land between Riverhurst and Regina, and providing water in abundance for Regina and Moose Jaw? I am not finding any fault with Prairie Farm Rehabilitation Act, which has done a fine job. This is not the time to digress and deal with its work, but on an appropriate occasion I shall compliment P.F.R.A. for the work it has done in the matter of dug-outs and small irrigation projects. This new department should be enabled to tell the P.F.R.A. administration to "go ahead and construct the ten thousand projects they have surveyed and approved but which they cannot carry out for lack of money." There, again, would be thousands of jobs. Will the new department be permitted to throw its weight behind projects to rehabilitate the west by providing water where water should be provided? If so, there is another important programme in which it can engage.

I shall not take up the time of the committee to mention other projects, though when the bill comes down I may have more to say along that line. I agree with the Prime Minister that all the work cannot be done in one year or in two years. A large programme must be laid out, perhaps for a period of ten years, and provision must be made for men who will need positions during the after-the-war interim. It will be remembered that after the last war, when the factories were retooled and had caught up with the demand for consumer goods, another big depression came.

If the Prime Minister and the government have the vision which I have of what a department like this can do there will not be an unemployed man or woman in Canada.

Employment will be available for everybody at good wages. Contracts could be let to provide everybody with jobs. There should not be an unemployed man or woman in a country like ours, filled to overflowing with resources. No country in the world has the resources which Canada has, but access is denied to many of them because of lack of transportation. I believe the Prime Minister mentioned roads. There is room for vast development in that direction. Will the new department have to do with providing the facilities by which these vast resources can be reached?

Further, what cooperation will it have with the provincial governments and the municipal authorities? Apart from the very large projects which will be purely federal government business, will ordinary works be constructed by the provincial governments and the municipalities under the direction of the new ministry? Will the ordinary works, municipal and provincial, be constructed by the municipalities and the provincial governments under the direction of the new ministry, or what will be the association of the new ministry with the provincial governments and the municipalities? I presume it would not really have any association with the municipalities but it could at once do something of vital importance. It could advise the provincial governments and, through them, the municipalities how much money they can have.

If the chairman of the reconstruction committee says a word, as he may, he will tell the committee what I will tell it now, that delegations that came before the house reconstruction committee asked this question: How much money are we going to be allowed, and where is the money coming from?

I would like to have the Prime Minister amplify his remarks in that regard. Where is the money to come from? What is the programme for providing the money, or advising the provinces and the municipalities as to how much money they can have? We all read daily of the various provinces setting up reconstruction committees and some have already gone so far as to say that they will put the matter under a minister. They will, therefore, wish to know immediately the programme in reference to finances for the provincial reconstruction departments.

I feel that if the government is sincere—and I have no reason to suggest that it is not; I should not like to suggest such a thing—then, next to the prosecution of the war, we have here the biggest thing it can do, namely, to make preparations to provide employment for the glorious sons of Canada who have demonstrated on fields throughout the world that no soldiers anywhere can surpass them in valour, or all equal them. That is about all I have to say. When the bill comes before us I shall go farther in reference to some of these items, but in the meantime I should like to have answers to some of these questions.

Mr. BLACKMORE: There are two matters which will have to be taken care of in connection with post-war rehabilitation. I do not know who is looking into these matters, but the first question to be answered is this: Where is the money to come from to do all the things which it is proposed shall be done? You can pretty well gather together a committee of fourteen-year-old boys from all parts of Canada and they will tell you what should be done. They would know the roads that need to be built, the irrigation projects that should be constructed, the forests that have to be planted, and all the other things which it is necessary for us to do in order to rehabilitate the country. Similarly, there would not be a combination of eleven-year-old boys who would not know that it is necessary to provide jobs for all the people who come back. What is needed, however, is intelligence in high places to tell the people where the money will come from to pay for all these things, and until that question is answered all talk about reconstruction and rehabilitation is, to use the Prime Minister's favourite phrase, idle and futile.

The second question is this: Where are you going to find markets in which to sell the goods that will be produced? In other words, how do you propose to distribute the production which the country is capable of producing? The hon. member for Rosetown-Biggar (Mr. Coldwell) is fond of telling us how private enterprise has failed. Private enterprise, so far as I have been able to discover in the moderate amount of study that I have given the matter, has never failed when it could obtain markets for its goods. A private coal mine, granted plenty of markets, will provide all the jobs that a coal mine can be expected to provide, just as many jobs as ever a government could provide if it owned the coal mine. Then how it is that people fancy that government ownership of industry would provide jobs where private ownership fails to provide them, granted the same market conditions, I simply cannot see.

Certain it is that in this country there must be provided a method of distribution. Distribution means money once more. Not only must money be found for the construction of great irrigation projects and the like, but it must be found to provide purchasing power in the hands of the people to enable them to consume the goods which industry stands ready to produce. I submit, therefore, that until

the Prime Minister explains where the money can be found for these two purposes, he is simply wasting his own time and the time of the house and the country in talking about reconstruction and rehabilitation. If he pretends that the mere appointment of a ministry of reconstruction and rehabilitation will solve the problem, then I am very much afraid that one would have to apply to him a harsher word than I should care to use. I am not questioning the need of a department or a minister to take care of the manifold jobs which are required; but I am saying that until the two main requisites are provided for, this is mere shadow-boxing. It is mere pretence.

I shall say one more thing before I resume my seat and it is this. When the money is being provided, the money must be provided without additional taxation and without additional debt; for we have reached the point now at which it is exceedingly dangerous to add a dollar to the debt of the country, and we have also reached the point at which it is exceedingly dangerous to add a dollar to our tax structure. Hon. members might just as well face the facts. If the money which I have referred to in the earlier sentences of my remarks cannot be found without additional debt and additional taxation, then I contend that what this House of Commons needs to do, what the government needs to do, is to appoint a committee to find out where the money can be got without additional debt or taxation. If we knew where the money could be got we would have very little trouble in taking care of post-war rehabilitation and reconstruction.

I propose to support the Prime Minister's proposal to appoint a minister and build up a department, but I say positively that unless the difficulties to which I have referred are taken care of, I can see quite clearly that the whole thing is idle and futile.

Mr. LOCKHART: I want to make one or two comments on this resolution, and I would call the Prime Minister's attention to the words in the latter part of it, to provide for the employment of officers, clerks and servants necessary for the proper conduct of the department. There are strong feelings throughout the country about the present set-up of government departments, such as the wartime prices and trade board and others, the army of controllers and deputy controllers and assistants, and the office accommodation and thousands of telephones that must be provided.

Let me take a minute or two to direct the attention of the committee to the type of situation which is developing in connection with these top-heavy departments. I think the country is beginning to wonder when there is to be a curtailment in some of the branches of the service that have outlived their usefulness and at the present time are trying to justify their existence. How soon will there be a curtailment in these activities?

I wish to give one or two illustrations and then I shall postpone any further remarks I have to make to a later stage when the bill is introduced. I desire to direct the attention of the Department of National Defence for Air to a development that is going on in connection with the wartime prices and trade board and other groups that are, I repeat, top-heavy in personnel. I am in total agreement with private enterprise. I shall give one illustration of private enterprise that looked after the needs of elementary schools and the like during the past four years of warfare. Recently what do we find? We find that the Department of National Defence for Air formerly called upon private enterprise to furnish coal necessary for the running of elementary schools. They are now proceeding to buy their own coal and asking private enterprise to become cartage agents only for the distribution of these materials. If the Prime Minister or any other department wants to know the facts I am prepared to give them.

I wish to say to the Minister of National Defence that nobody in this country ever heard of that department buying the coal direct as necessary to heat an armoury. Dealers are now being asked to tender on the cartage only, the coal to be bought here in Ottawa by controllers. Before we start setting up machinery to provide for the employment of officers, clerks and servants necessary for the conduct of a new department, we had better look well to the present set-up to see when we are to give the Canadian people evidence that there is some curtailment of unnecessary expenditures being made. I just wish to leave that thought with the Prime Minister. I am prepared to give him evidence of the facts that I have stated. It is high time that somebody in these departments stepped in and, as the hon. member for Temiscouata said, used the scissors, and used them liberally. The time has arrived when there must be a reduction in this type of thing.

In conclusion, may I say this in connection with a later resolution dealing with social welfare. I did not hear the Prime Minister say anything about holding that up until after the dominion-provincial conference. He referred to other delays which may be necessary. These are the kinds of things that are upsetting the people to-day. The sixth victory loan is about to be launched, and when you look around you hear some of the wartime

prices and trade board personnel referred to in the municipalities as derelicts. It is about time we used the paring knife on some of the present departments that should have long since ceased to exist, since they have served the purpose for which they were appointed.

Mr. GRAYDON: I shall take just a few moments in connection with the resolution that is before us. First of all may I say I agree with some of those who have spoken previously with respect to the confusion and conflict which seem to exist in many of our minds in regard to the real position of the new minister of reconstruction when he takes his position in the cabinet.

When the bill comes up for consideration I should like the Prime Minister to make clearer than he has been able to do on the resolution the exact position of the minister of reconstruction in his relationship to the other members of the cabinet. To use a term which is very often used in construction and not reconstruction, it looks to me as though he will be a sort of straw boss in the cabinet. Whether he will be a deputy prime minister or whether he will have an over-riding supervision over other members or not is a matter which I think the Prime Minister might properly clarify, because I am not clear where the minister's position begins and where he relinquishes the authority at the proper time in the cabinet councils.

One thing that disturbed me a little in connection with the explanation of the Prime Minister is that he spoke again of blank cheques being issued to the government with respect to matters in the post-war period. I hope that he has not any thought of carrying the blank cheque system into the period beyond the war. There have been many reasons, and perfectly cogent ones, why that should be done in a war-time period. Perhaps the war appropriation bill is a very good indication of the necessity of that being done where the urgencies and stringencies of war are so evident. But I do hope that the Prime Minister will make sure that we shall not be subjected to such matters as the blank cheque business in the future. I trust that such a provision will be placed in the bill. I am, however, somewhat fortified in my own mind with respect to that because perhaps—and may I say a little more than perhaps—that will be taken care of in due course by the new government which will assume office at the appointed time.

I wish to say to the committee and to you, Mr. Chairman, that as regards reconstruction and the preparations for peace I find myself largely in agreement with the Prime Minister and some others who have spoken. Our first job is to win the war. That has become almost a hackneyed phrase. There is probably no need of repeating it except for the possibility that there seems to be evident in certain parts of the country a spirit of complacency which, I hope, will shortly be dismissed in so far as the public is concerned.

We must remember that the war has cost us a lot in men, money and materials, largely because we were unprepared for war. When we speak of reconstruction let us remember that we must not enter a period of peace unprepared for it, because that may be just as costly as being unprepared for war. I have that definitely in mind. In bringing forward plans for the post-war period we must see to it that when peace comes—let us hope it comes quickly—no matter how quickly or how unexpectedly it may come, we are not caught as unprepared as we were when war broke out in 1939. That, I believe, is consonant with our plans for the prosecution of the war. I do not think there need be any feeling that our preparations for peace may interfere in any way with the prosecution of the war itself.

In closing, Mr. Chairman, I want to emphasize one thing. Many times I have said in this house that I am proud to have a very heavy correspondence with boys who are serving overseas. I could show the Prime Minister and other hon. members scores and literally hundreds of letters received during the last two or three months which deal not only with the part these boys are playing in connection with the war but also the deep concern they all feel as to what preparations we at home are making for their return. That is one thing which should guide us in our deliberations with respect to the reconstruction period. For that reason I shall support the resolution now before the committee to set up a new ministry, but I want to make this reservation. I hope that when peace comes we are not going to have a great many additional departments of government. If rumour has it correctly the minister in charge of this department is to be the present Minister of Munitions and Supply, whose department probably will no longer require a minister once the war is over. Naturally I cannot ask the Prime Minister a question to that effect, nor can I expect any information on the point; I am simply repeating a rumour I have heard. If that be the case, however; if we are substituting one department for another which will not be required, then I think in the interests of economy, in the interests of the solution of post-war problems, and in the national interest generally we can support this measure. However, I should like to reserve to myself and this party the privilege of

further criticism after we have seen the bill itself and have had an opportunity of examining its proposals.

Mr. CLAXTON: It is evident from the actions of the government, as well as from the speech from the throne, that the winning of the war remains the first of all objectives. It is equally clear that the second objective of the government is the institution of measures to provide full employment after the war. That point is dealt with in the speech from the throne in these words:

> In the opinion of my ministers plans for the establishment of a national minimum of social security and human welfare should be advanced as rapidly as possible. Such a national minimum contemplates useful employment for all who are willing to work. . . .

It is in order to implement this statement that the resolution, and the bill which will be based upon it, are brought before the house. Several questions have been asked about the role which will be occupied by the minister in charge of the proposed department. From what the Prime Minister has said it is obvious that the minister will have to coordinate the plans of other departments. He will have to work through other agencies, if there are any other agencies; he will have to see that a particular plan is carried out by an appropriate agency, governmental or otherwise; he will have to cooperate with provincial and municipal governments, and if no other way is found to carry out a task he must be ready to do it himself. The powers which were read by the Prime Minister provide for that being done.

It should not be thought that the new department and the new minister start from scratch. As hon. members know, a great deal of work has been done in this connection by parliamentary committees, by interdepartmental committees and by the advisory committee on reconstruction and all its subcommittees, the reports of which have been tabled in the house. All that work has been done and will be available to the new minister when he is appointed. From that starting point he can go forward.

Mr. GRAYDON: Is it to be a new minister?

Mr. CLAXTON: It is to be a new minister of reconstruction, though not necessarily a new minister.

Mr. GRAYDON: That is as clear as the Prime Minister's explanation of his position.

Mr. MACDONALD (Kingston City): An old minister with a new name.

Mr. CLAXTON: The leader of the opposition knows very well that we are debating a resolution preceding the introduction of a bill to set up a new department, over which there will be a new minister who will be the first minister of reconstruction. That should be clear enough for him.

In conclusion, may I say that during the war the people of Canada have become conscious of their resources to a degree they have never known before. We now see something of what the people of Canada can do. We have seen an enormous increase in our industrial capacity and in the skills of our people; and I think most Canadians have faith that these resources and skills can be put to use after the war is over. Useful jobs can be provided for all Canadians willing to work, and that will be the object of this new department.

Mr. MACKENZIE KING: I should like to express my appreciation of the attitude of hon. members toward the resolution which is before the committee, and to thank them for the support they have given the principle of the establishment of a new department of government specially concerned with reconstruction. My old friend the hon. member for Davenport has asked me to answer one or two questions. I think they help to elucidate the significance of the work of the minister of the department of reconstruction. The hon. member asked whether the department would be concerned with seeking to have new industries developed in Canada, with furthering the possible development of the St. Lawrence waterway, with the matter of irrigation in the west, and projects of the kind. These questions serve to illustrate exactly what I have said, that all matters which relate to the development of resources, of industry and the like will be part of the work of reconstruction. It will be a part of the duty of the minister of reconstruction to seek to gather from his colleagues of the other departments information as to the projects which they feel should be developed in the interests of the country. He will bring such matters before the cabinet, together with his recommendations, after consultation with the other ministers as to whether or not they should be proceeded with. All the subjects mentioned by my hon. friend would in my opinion be among those which, at some time, would find a place somewhere in a general plan of reconstruction. Then I was asked as to the possibility of providing roads. That question illustrates another phase of the work of the minister. That is, he is not merely to be concerned with matters exclusively within the jurisdiction of the federal government but by conference with the provincial governments, and through cooperation with

them, work out means whereby plans of theirs might come to be associated or coordinated with plans the dominion government might have under way. Cooperation with provincial governments generally would be part of the work of a minister who would seek to coordinate matters as a whole.

Then my hon. friend the leader of the social credit party asked where the money was to come from, and said that when the time came to administer the act there would have to be intelligence in high places. I will not say anything about where I think the most intelligence will be found in the matter of finding the means essential to carry out a reconstruction programme, but my intelligence would cause me to hesitate somewhat in accepting the proposals that are made by his party to carry on government, as he says, without increasing debt or taxation. I do not think anyone could undertake sincerely to carry on government to-day without debt or without taxation. I think I added the word "increasing." If I am not mistaken my hon. friend's original statement was, "Where is the money coming from? We could have it, but without debt or without taxation." I cannot see that it is going to be possible to do any work of government without having some taxation or incurring some debt.

My purpose in speaking in answer to my hon. friend was, however, to point out that if it has been possible in this time of war for this country to raise the enormous sums which have been raised to help pay the cost of the war, running into billions of dollars, if it has been possible to raise at least half of the total cost of the war at the time of the war itself, it should be a very much easier task for the government to raise the money that will be necessary for the purpose of reconstruction. It should be easier for this reason. The money we are raising to-day is being raised unfortunately for the purposes of destruction of human life and property, and this on a colossal scale. The money that we will have to raise for purposes of reconstruction will be money that will be used for purposes of construction, used to further increase all commodities in order to satisfy human wants. Once a human want is satisfied, it seems to be the case that new wants are thereby created which will also have to be satisfied. I think it will be possible to satisfy many wants by maximum production of useful and usable commodities. It should not be difficult to obtain the money, in other words the effective demand, which will be essential, and at the same time I would hope to reduce taxation and also debt.

Just a last word to my hon. friend the leader of the opposition who has referred to the minister of this new department as a straw boss. I prefer the term which has been used in the British parliament in reference to Lord Woolton, who has been referred to as the coach of the team. If my hon. friend ever comes to have any experience with government I think he will come more and more to realize that there should be no bosses, but that "whosoever will be chiefest shall be servant of all."

Resolution reported, read the second time and concurred in. Mr. Mackenzie King thereupon moved for leave to introduce bill No. 82, to establish a Department of Reconstruction.

Motion agreed to and bill read the first time.

At six o'clock the house took recess.

After Recess

The house resumed at eight o'clock.

VETERANS' AFFAIRS

ESTABLISHMENT OF DEPARTMENT TO DEAL WITH THE CARE, TREATMENT, TRAINING OR REESTABLISHMENT OF MEMBERS OF THE ARMED FORCES

Right Hon. W. L. MACKENZIE KING (Prime Minister) moved that the house go into committee to consider the following resolution:

That it is expedient to provide for a Department of Veterans' Affairs to replace in part the Department of Pensions and National Health and to assume the management and control of and to consolidate in such department all matters not by law assigned to any other department relating to the care, treatment, training or reestablishment of members and former members of the armed forces and other persons and all such other matters as may from time to time be assigned; and to provide further for the appointment of such officers, clerks and employees as are necessary for the proper and efficient administration of the act.

Motion agreed to and the house went into committee, Mr. Bradette in the chair.

Mr. MACKENZIE KING: Mr. Chairman, hon. members will, I believe, agree that having regard to the experience we have had since the last war in dealing with veterans' affairs and realizing what the war veterans' problems are likely to be after the conclusion of the present war, the time has come when there should be established in Canada a department of veterans' affairs which will have immediate supervision, control and direction over matters of concern to the war veterans. The parliament of Canada, in recognizing an obligation of this kind, will again be giving to our armed forces an assurance that this parliament at this time has very much in mind these matters which will be of

the deepest concern to them and that parliament is anxious to make the fullest provision for all matters that are likely to arise which may have a bearing upon their interests through the period that is to follow at the conclusion of this terrible war.

My colleague the Minister of Pensions and National Health has, as hon. gentlemen know, had more to do than any other member of the government with the administration of veterans' affairs during the last few years. He himself some time ago proposed the establishment of a department of veterans' affairs, and has had much to do with the preparation of the bill which is to be based on this resolution. I would ask the committee if before beginning to discuss the resolution at any length they would permit my colleague to make a statement on the resolution which will, I am sure, help to clarify discussion.

Mr. MACKENZIE (Vancouver Centre): Mr. Chairman, following the remarks of my right hon. leader, I believe it will be recalled that when we had a select committee of this house studying the question of land settlement in 1942, in giving evidence on June 30 of that year I suggested that it might be appropriate to set up in Canada a department of soldiers' or veterans' affairs. That suggestion received, I think, universal commendation, not only from veterans' organizations across Canada but from every political party represented in this house. It is not necessary at this stage to enter upon any prolonged discussion of the adequacy or inadequacy of the preparations made for the rehabilitation of those who are at present serving Canada in the various armed forces. There will, of course, be other occasions when ample opportunity will be given for such discussion. This resolution is merely to set up a new ministry, and possibly it might be of interest to recall for a moment or two the various changes that were made by parliament in regard to meeting the problems of the last war and of this war.

Early in 1918 we had formed in Canada the Department of Soldiers' Civil Reestablishment, with two branches, the first known as the invalided soldiers' commission and dealing with hospitals, sanatoria and other services, and the second continuing the board of pension commissions already in existence, and reporting to the privy council through the Minister of Soldiers' Civil Reestablishment.

After the war, as hon. members are aware, the hospitals which were under the control of members of the Royal Canadian Army Medical Corps became civilian hospitals, and in 1920 this parliament gave statutory authority to pension regulations which were passed during the great war. At the same time in 1920 pensions arising out of the Northwest rebellion and the South African war were brought into line, as regards the scale, with the great war pensions, and questions in regard to pensions for militia men in training were adjusted in this house in 1921.

The Department of Soldiers' Civil Re-establishment was responsible for many services in connection with the placement of discharged men in civil life with one definite exception, that of land settlement, which was placed under the Minister of the Interior. The measure to be based upon this resolution will place both the Veterans' Land Act and the other soldier settlement system under the Department of Veterans' Affairs. That was one of the recommendations, hon. gentlemen will recall, that was made to this house by the same select committee which studied the question of land settlement and which was responsible for the amendments to the Veterans' Land Act adopted by the house at that time.

Mr. GRAYDON: The present Department of Pensions and National Health passes out of existence with the setting up of these two new departments?

Mr. MACKENZIE (Vancouver Centre): Consequent upon the passing of this measure, part 1 of the act of 1928 setting up the Department of Pensions and National Health will be repealed. Part 1 of that act deals with soldiers' affairs, hospitals, pensions, treatment, rehabilitation and the like. That part of the act will be repealed and the new measure based upon this resolution will be substituted therefor.

Mr. GRAYDON: Why was the word "pensions" left out of the wording of this resolution? That was one of the reasons why I asked my question.

Mr. MACKENZIE (Vancouver Centre): That is something I was not really aware of. The resolution was carefully considered and the measure will certainly deal with all aspects of pensions and all aspects of treatment and of rehabilitation. The changes are more necessary now than ever because of the expansion of hospital work during the present war and the development of pensions. Already the number of pensions is becoming substantially large. It is due also to the scope and the sweep of rehabilitation measures which this house has dealt with from time to time, mostly in select committees.

Mr. GRAYDON: I am sorry to interrupt, but the minister's answer to my question with respect to the passing out of existence of the present Department of Pensions and National

[Mr. Mackenzie King.]

Health was not very clear to me, particularly his reference to part I and part II of the act. I should like to have this made clear: when these two new departments, that of veterans' affairs and that of social welfare, are finally constituted, will there still be the Department of Pensions and National Health?

Mr. MACKENZIE (Vancouver Centre): No. But this particular measure deals only with part I of the act of 1928 which is entitled, "An Act respecting the Department of Pensions and National Health." Part I confines itself to peculiarly soldier problems; and Part II may be merged in any social welfare legislation which may subsequently be brought down in this house. Therefore, unless the two bills would be enacted concurrently it might be necessary to enact this present measure by proclamation. So that the part of the pensions and national health measure dealing with national health would remain as such unless the house were ready to deal with social welfare legislation at the same time as we deal with and assent to this legislation.

The department will deal, as I said, with pensions, demobilization, medical care, vocational guidance and training, the rehabilitation of our men in civil life, the War Veterans' Allowance Act, and allowances to non-pensioned widows, and will also take over the Veterans' Land Act, the Soldier Settlement Act and such other measures as may be referred to it from time to time, the idea being that all measures affecting generally the welfare and rehabilitation into civil life of the members of our forces will be embraced within the ambit of the measure which will follow upon the resolution which is now before the committee. I believe that if hon. members will compare the sections of the new bill with the sections of part I of the Department of Pensions and National Health Act they will find that many sections are the same. Some have been modified to a slight extent, and some have been completely recast as a result of the changes which have taken place since 1928.

That is, as succinctly as I can make it, an explanation of the structure of the legislation; and I hope that, just as all the veterans' organizations through Canada have endorsed the principle of this bill, every hon. member will give it his support.

Mr. REID: I rather gathered from the minister's remarks that the old Soldier Settlement Act will be included in the provisions of the new bill, and that the Veterans' Land Act will remain under the minister.

Mr. MACKENZIE (Vancouver Centre): I beg pardon; evidently I did not make myself clear. Both these land settlement bills will be under the minister of veterans' affairs.

Mr. GRAYDON: I have no desire to enter to-night upon a lengthy discussion of soldier re-establishment or rehabilitation, because an opportunity to do so will be presented on other occasions, particularly when the second reading of the bill takes place, and during the committee stage. There are, however, one or two matters of sufficient importance to be raised at this preliminary stage.

I was interested in the minister's explanation of the manner in which two departments will replace the present Department of Pensions and National Health. Under the wording of the resolution it was not clear to me that this did include the Pension act and the present Department of Pensions and National Health, although I recognize that the term used, namely re-establishment of members and former members of the armed forces, may cover it in a general way. I was about to raise objection, were two departments to be added to the present departmental set-up.

During the debate which was concluded just before the dinner recess to-day, it appeared that the resolution which forms a basis for a new department provides that it shall take the place of a department which would normally pass out of existence with the war, the reconstruction department then taking its place. I look with some jealousy upon increases in departments such as might be envisaged by changes of this kind. We now have nineteen cabinet ministers if we include, besides the Prime Minister, the leader of the Senate, and also seven parliamentary assistants. We are now to lose one department, although, to judge from the interest which the present Minister of Pensions and National Health takes in this legislation, and the pleased way in which, in collaboration with the Prime Minister, he helped to introduce the measure, it would not appear that we are likely to lose the minister, at least until the appeal to the people comes. In any event we are adding another department to the government, and so continuing to encroach markedly upon the private membership of the government forces. I presume that this process meets with considerable approval on the government benches, but from the point of view of economy and general organization so far as the ministry is concerned, I regard this as a good time to caution the government not to set up too many departments. Some holders of existing portfolios cannot be said to be overworked. Indeed, there is not enough work for them to do; their jobs could be doubled up. I say that plainly and frankly, without making any reflection upon any minister. It comes down to this, that there should be a reorganization of the cabinet to take care of this situation properly. I raised the question once before, because we have

voted from time to time increases in the number of junior cabinet positions which brought them to the number of seven, and now will increase them to eight. I think the Prime Minister should conduct a reorganization of cabinet positions. The duties involved in some of these posts are hardly more than formal. One recognizes that this condition may change in peace time, but we are now making provision for the perpetuation of some jobs which started in the war era, and carrying on at the same time the peace-time cabinet positions. I protest, therefore, against the appointment of additional cabinet ministers so far as this government goes. I would not object to a rearrangement of cabinet posts, but there is no justification or excuse for adding to the number of cabinet ministers and parliamentary assistants that we already have, in view of the fact that a good deal more work could be added to some of the existing portfolios.

I see clearly, and it seems to me a move in the right direction, that there should be a department devoted especially and particularly to veterans' affairs. I have always had due sympathy for the Minister of Pensions and National Health, though I have never felt that he needs very much. At one time in the course of certain remarks I was making he suggested that he needed a parliamentary assistant, but that is one of the luxuries which every minister feels that he should have. I have some sympathy for him, not because I have ever thought that he was overloaded with work in the two portfolios but rather because his special line seemed to be that of veterans' affairs rather than looking after the medical interests of government enterprises. When he was being examined in committee from time to time with regard to his estimates I always felt that while he was able to reflect fairly well the views of his departmental heads, there was at the same time need for a separation of these two departments, that of health and that of pensions, as previously constituted. That becomes more particularly necessary now in view of the fact that under the old health department there will be jurisdiction with regard to the administration of the various measures which will be introduced in connection with social security legislation which it is hoped the government will implement. That is a matter, however, which can be discussed afterwards.

In the meantime, perhaps one ought to say a word with respect to veterans' affairs. In this connection may I say seriously that in a large measure the future of Canada will depend upon how well the department of veterans' affairs handles the requirements and the needs of those who come back to take their place in the civilian activities of the country.

After this war we cannot afford to have our veterans complaining that the dominion had not offered them the kind of practical gratitude, if you like to put it that way, which is so essential if there is to be a contented population coming back from overseas service. The men who are serving have never asked for any concessions from government; all they have asked for is a decent opportunity, a fair chance to make a living, without being penalized as a result of their service in more dangerous fields of activity. I shall deal in greater detail with this aspect of the subject on another occasion, but I think the government should take into consideration changing the approach of the department to the applications or the claims for pensions and other considerations which may be brought forward by the men in the armed forces after this war. Instead of the applicant for a pension having to prove certain things, going to considerable trouble in having his claim substantiated, I suggest that after the war we ought as a nation to make sure that whatever is coming to the men of the armed forces who have served this country will be coming to them with the least possible effort or expense or trouble on their part.

I wish to leave this thought with the minister, having in view the time when we come to solve the problems of pensions after this war, if he is then in charge of the department. Let him consider this point. When a man is accepted into the armed services of Canada in accordance with the physical and medical standards that are set; when he is accepted by the army, the navy or the air force, then whatever may happen thereafter, during his service, he should not have to prove that it was attributable to his war service. That should follow automatically. I hope that when the new set-up is made and a new department of veterans' affairs is established there will be a complete reversal of the old idea, according to which a man coming back as a veteran from active service had to prove that his disability was attributable to service. Instead of that, the government must assume from now on that whatever happens, resulting in a diminution in the man's health, is actually attributable to his service. That, I submit, must be the assumption, and the onus of proof must be on the government rather than on the man himself. He should not be called upon to prove his case in that respect.

I trust that the whole attitude of the government and of the department will be entirely

changed, that there will be a new approach and that all the old cobwebs will be swept away, because this is a new war, a new era, and we are dealing with different people. Let us be guided by the experience of the past and not repeat the mistakes that we have made in the past.

Before concluding I should like to make a suggestion to the minister. It might properly be made at another time but I bring it up now because of the urgency of the matter. I have had occasion before to bring this matter to the attention of the government and I repeat it now. Some things that affect the men in the armed services may be regarded by some people as little things. I deprecate the idea that what to us or to some people may seem little things, but which mean a great deal to the men themselves, should be in any way minimized. I do not suggest that the government is minimizing any of the matters affecting the soldiers and I simply want to warn them against such a tendency.

If there are little things which the men in the services require and which they feel are big things, then in my opinion that should be taken as the yardstick for us to use and we should treat them as big things from the point of view of the nation. These things may not be very significant to some people and yet may be of vast consequence to many members of the armed forces who are being discharged.

Let me mention briefly now and in a sketchy way, because I do not want to prolong the debate, one matter which I regard as quite important. I am bringing it up at this early stage not because I am anxious to criticize the government but because I wish to bring pressure to bear to get them to change the present regulations. If the minister will give some consideration to the matter I shall be happy because I do not want to be in the position of having to criticize the government farther in this regard.

I refer to what I think has been the inadequate provision for clothing allowance for the men who have been discharged. I know the question has been brought up before and I bring it up again to-night because I want to give it the sort of setting which will emphasize its importance. I am not saying this by way of criticism, because I can find plenty of other things to criticize the government about, but so far as clothing allowance is concerned I should like the government to change the present regulations even before the bill is brought in for second reading.

As the committee knows, there was at one time an allowance of $35 for clothing for discharged men—a pitifully small amount. Then, of course, the government, seeing that there had to be an additional amount, made an increase, not to an adequate figure but to the sum of $65 for the non-commissioned officers and for the men. I do not wish to do more than say to the goverment that I believe that double the amount of $65 is perhaps still inadequate with which to send a man out into the world. I believe the government will recognize that fact. It is not right to send our men who have had to fight, into the world with an amount inadequate to supply clothing—because they are being sent out to secure jobs. If they are to be rehabilitated and reestablished, then in all fairness they should be at least comfortably and well dressed.

In conclusion, may I say that in making a survey of the various items which go to make up the outfit of a soldier who would be entering civilian life, an outfit which would include a suit, an overcoat and various other items of wearing apparel, I find that the amount for the ordinary person would amount to well over $200, perhaps to $213. Then, for a summer outfit, without having regard to clothing for any other season of the year, the cost would be about $107. For winter attire alone, the cost would be about $121.60. I realize that prices may change, but I wish to leave this one thought in the mind of the government, namely that the amount of $65 is inadequate for our men who are coming out of the services. I would ask the government to make an investigation, as I have done. Find out what it costs to buy a decent suit of clothes, and these other things which are required. If the government finds that $65 is sufficient, then my objection vanishes. But I may say this, that I believe it will find that double $65 is little enough to take care of the ordinary requirements of the ordinary man who will come out of the army and compete once again in civilian life.

I make this sincere and honest appeal to the minister, because I believe it would be in the government's interests, in the interests of the nation and the interests of parliament if he would accede to the request I have made.

Mr. MACKENZIE (Vancouver Centre): My hon. friend knows that is the responsibility of the Department of National Defence—although, of course, it is a government responsibility.

Mr. GRAYDON: Yes, it is the government's responsibility, and since it comes under veterans' affairs I thought this was perhaps the time when I should discuss it. In this way it will come to the ears of the government which, in any event, has the responsibility.

Mr. MACKENZIE KING: There is one matter to which my hon. friend referred upon which I believe hon. members will expect me to comment. I refer to his statement that the creation of this new ministry may be adding to the total number of departments of government.

May I say to him, to make the position clear, that when war came on, and as it has progressed, it was found necessary to increase the number of departments of government. There was at the outbreak of war one Department of National Defence. For some little time we continued with the single department; but it was found necessary to expand, and to create a separate department which would have to do with air defence—National Defence for Air. Then there was a necessary further expansion in the creation of a separate Department of National Defence for Naval Services. As the war continued, it became necessary to create a Department of Munitions and Supply.

All of this was anticipated when the war began. It was not possible at the outset to see what departments might have to be added; but that some would necessarily be added was self-evident. However, at the time of the expansion of departments I made it quite clear that when the war was over, there would necessarily be a reorganization of government, either by the present government or by a government which might succeed it, and that undoubtedly at that time there would be contractions in the number of departments—just as there were expansions at the beginning of the war.

I cannot say how soon any of these newly-created departments may pass out of existence. But I should not like to wait until that moment before anticipating the new departments which will be absolutely essential if we are to deal adequately with the problems which will present themselves in the period of transition from war to peace. For example, as my hon. friend has pointed out, the department which was dealt with this afternoon is essentially a new department. But it does not increase the size of the ministry. The present department we are discussing does not mean an additional minister.

Mr. GRAYDON: May I say to the Prime Minister it may mean an additional minister, in the light of the new social welfare ministry, which is now to be appointed.

Mr. MACKENZIE KING: My hon. friend means that there will have to be a new ministry for social welfare. But he will see that if the department of social welfare is to be concerned with post-war problems, by that time possibly there will no longer be the necessity for the Department of National War Services. Therefore the establishment of a new department would not mean an increase in the number of ministries.

May I point out that in other respects this ministry has not any departments of government which did not exist prior to the time that it took office. We continued with the departments which were found necessary under previous administrations, and which have been found necessary for a great many years past. What I would like my hon. friend to do, if he thinks that we should get rid of certain departments of government, is to tell us which of these departments he thinks are superfluous.

First, in the ministry are my own department, which—

Mr. GRAYDON: Is my right hon. friend asking which ministers I think are superfluous —or ministries?

Mr. MACKENZIE KING: Which departments; I would not be as personal as that, nor do I think my hon. friend would expect me to be.

Mr. GRAYDON: I would not think so.

Mr. MACKENZIE KING: And I should think he would be polite enough not to ask anything of the kind.

However, the departments which for years past this country has found necessary are the Department of Mines and Resources; the Department of Public Works—which, by the way was joined with the Department of Transport, at the beginning of the war. The two were brought together because we thought we could effect an economy in that way during the war-time period.

Mr. GRAYDON: Does my right hon. friend say that the Department of Public Works and the Department of Transport had been amalgamated?

Mr. MACKENZIE KING: They were for a time. As the war developed and the work of transport and of public works became increasingly important, we had to separate them. Then, there is the Department of Pensions and National Health, with which we are now dealing; the Department of National Defence; the Department of Finance; the Department of Fisheries; the Department of Agriculture; the Department of the Secretary of State; the Department of Trade and Commerce; the Post Office Department; the Department of National Revenue; the Department of Justice and the Department of Labour.

I do not imagine that any new ministry in office would find it possible to abolish any of those departments of government, no matter how much it might wish to do so, having

regard to the requirements and problems of the country, and the matters requiring the special attention of those ministries. I must say I do not think the ministry exceptionally large having regard to the problems with which Canada is faced at the present time.

I mention this because I think the public rather expect my hon. friend, quite as much as myself, to keep before the people of the country what is necessary in the matter of government administration; and unless he is prepared to say that some of these departments are superfluous and to tell us which they are, I do not think he should say we ought to get rid of them. If I misunderstood him; if he said he thought there were certain ministers who should be changed, I differ with him absolutely in that regard. I do not share that view; and, if he can, I should like him to substantiate his statement that any of the ministers might be said to be formally holding office. I know something of the work the ministers are doing, and I want to say that every one of my colleagues is pulling his full weight in the war effort of Canada at the present time. There is not one of them who is not working to the limit of his time and energy, not only in his own department but in assisting those in other departments to carry on their work. If my hon. friend had been in office at any time in the past I think he would weigh his words more carefully when he begins to criticize the burdens that fall upon a ministry, and the number of competent persons who are required to carry on the business of government in Canada, with the problems as they have become.

I wish to take exception to another comment made by my hon. friend this evening, a comment which he has made once or twice previously. I have in mind his references to parliamentary assistants. Either in regard to them, or in regard to the ministers, or in regard to both, the hon. gentleman used words to the effect that it was a matter of furnishing so many jobs.

Mr. GRAYDON: No.

Mr. MACKENZIE KING: Those are the words my hon. friend used, "more jobs". If he says he did not say so I shall be most happy to accept his statement at once.

Mr. GRAYDON: My recollection of what I said in that regard is that I referred to the encroachment made by the appointment of parliamentary assistants upon the general rank and file of the government supporters in the house. I shall always be guided by what *Hansard* says, but I cannot recall having made mention of jobs; in fact I am quite certain I did not, and I do not think the Prime Minister would want to quote me as having done so. Already he has misquoted me or misinterpreted what I said in regard to the first point he brought up, and I want to correct both matters now.

Mr. MACKENZIE KING: What my hon. friend now states just illustrates what I believe happens on occasions; that is, he speaks without thinking and does not really realize what he has said. This time, fortunately, we shall have *Hansard* to prove it. If my hon. friend will look at *Hansard* to-morrow he will find he made reference to "jobs." I took down the word and put it in quotations when my hon. friend used it, feeling that it was part of my duty to take exception to that term. I hope he will not say that I am trying to misrepresent him, because he will find the record of *Hansard* this evening precisely as I have indicated.

In regard to the parliamentary assistants I want to say that for far too long this country has gone without the additional assistance which a ministry should have in this parliament. Instead of believing that we have too many persons concerned with the administration, especially that part of it which has to find its representation in parliament, I think we have too few, and that we have had too few for a long time. The British government have parliamentary assistants in all their departments. In addition, some departments have financial assistants and assistants to assistants; ministers have also parliamentary secretaries as well as private secretaries. This has been found necessary in the parliament at Westminster because of the increase in business and the necessity that parliament should be given as much information as possible and its affairs conducted as efficiently and as effectively as possible. I am sure that having given that aspect of our procedure in this parliament the trial we have thus far given it, hon. members generally—unless they are thinking in terms of jobs—will readily say that this addition has been of value to the parliament of Canada and should be retained and enlarged. I know the value the parliamentary assistants have been to the ministers. They have not all taken the part in the affairs of this house which would begin to indicate the services they have been rendering; but if opportunity were given for them to speak for themselves, or others to speak for them, I venture to say that hon. members would be surprised at the extent of the assistance they have given since they have been appointed.

I want to add this further thought. The public life of our country is becoming more and more difficult, and will become increasingly difficult as the years go by. I hope that by

degrees we may get at least far enough away from purely party considerations to believe that because a ministry has some of its younger supporters brought in as assistants, they are not merely seeking to give them jobs but are helping to prepare men more effectively to play a larger part in the public life of our country. This House of Commons will change considerably after the next general elections; and while many of us who have had to do with this strenuous period of parliamentary activity will be prepared to serve as long as there is a possibility of service and as long as the public wish us to serve, and will be ready to do our part at all times, yet it would be most unfortunate for this country if younger men were not learning to-day from the inside, and from their intimate association with the ministers, something of the manner of meeting problems which will have to be dealt with in this parliament in the years to come. I must say that I am disappointed in my hon. friend, in references he has made time and again which I regard as a belittlement of the position of the ministry and others associated with the ministry. I say to him in all kindness that it does not make for the stability of government, in the broad sense of the word, throughout the country to have a minister of the crown referred to as he referred to one this afternoon, as a man of straw; or to have assistants to ministers of the crown referred to as they were tonight, as men holding jobs.

Mr. GRAYDON: The Prime Minister has outdone himself in misinterpreting—I do not say intentionally—the whole situation with respect to the various matters he has brought up. I am quite at a loss to understand the motive of the right hon. gentleman in attributing to me certain statements or certain thoughts on certain matters which he must know were not in my mind at all. He mentioned the words "straw man," for instance.

Mr. MACKENZIE KING: I think the words were "straw boss."

Mr. GRAYDON: Well, as the Prime Minister ought to know, a straw boss is something less than a superintendent, and for that reason I was referring to the hon. gentleman in question as an understudy of the Prime Minister. I think the right hon. gentleman should have understood the implications of the words "straw boss," because they are very different from the implications of the words "straw man," though, of course, if the Prime Minister had the latter idea in his mind I do not want to be the one to make him change it. But I wish to say that I, too, am disappointed with the Prime Minister's attitude to-night. This is not the first time this session that this attitude has been made manifest.

The government owes the opposition a little cooperation, and the opposition is going to ask for that cooperation. As leader of the opposition I have a perfect right to criticize the structure of the government if I so desire. I have done that to-night in the national interest and I shall do it again, just so long as I regard it to be in the national interest to do so. When the Prime Minister speaks of which one of these portfolios he is to do without, which one he should disband and abolish, he knows full well that I made no such implication, that I did not suggest he should abolish or abandon any particular one of the portfolios that we now have. What I had definitely in mind was the fact that there are some portfolios which I think could be combined. There would then be fewer ministers of the crown because of that combining. The Prime Minister must have known that, and in his own way he should not attribute to me the statement that we ought to do away with some of the portfolios that at present exist.

When I ask for economies and the better organization of the cabinet surely I should not be treated by the Prime Minister in the way he has treated me to-night. I want to have fair play the same as he does, and I do not want to be criticized because of the attitude I take with respect to the government itself. I know there are certain touchy things about the Prime Minister, and this seems to be one of them. I did not intentionally try to touch a sore spot with respect to this matter to-night, but I should like him to understand that so long as I hold the position of leader of the opposition I am going to criticize the structure of this government and the government itself, and this is going to be done in each and every case as it has been done to-day, not for political considerations as the Prime Minister has dragged in in his statement to-night, but in the national interest. If he were sitting on this side and there were another government over there I believe he would be the first one to say it was in the national interest that similar criticism should be offered.

There is a disposition on the part of the Prime Minister and the government—I do not say it is intentional because if I did so I would be attributing motives to the government—to bully the opposition once in a while. I know the Prime Minister would not want to have that motive imputed to him, but nevertheless that is the fact. We may have only thirty-nine members in His

Majesty's loyal opposition as opposed to the one hundred and seventy-five or so members over there, but let me point out to the Prime Minister that although we have only that membership in the House of Commons it does not represent the situation so far as the dominion and the electorate generally are concerned. The Prime Minister knows and the government knows that they have a mechanical majority behind them, a fictitious one at that.

An hon. MEMBER: Order.

Mr. GRAYDON: We have our rights the same as the Prime Minister and we want to be free to criticize where criticism is due and where it is in the national interest.

I think the Prime Minister knows there is no one more anxious than I—this applies to the opposition as well—to cooperate with the government in connection with war-time activities. We have done that on every measure. But in asking for cooperation the Prime Minister must not assume that we are going to surrender. We are not prepared to surrender, but we are going to cooperate and carry out our duties as an opposition as we think they should be carried out.

Having said this to the Prime Minister I do not want him on future occasions to rise in his place and place upon certain remarks certain interpretations which he knows should not be placed.

Mr. MACKENZIE KING: May I say to my hon. friend that I hope when he speaks he will speak sufficiently clearly that it will not be possible for me to place upon his words an interpretation which it is not intended they should convey. I am quite prepared to leave it to *Hansard* to make clear whether or not I placed a false interpretation upon any words that he used to-night. I was very careful in listening to him and it was only the surprise that I experienced to-night as he went on speaking that caused me to feel it necessary to rise and take exception to what he was saying.

May I say something to my hon. friend which I hope he will not misunderstand. I have noticed that while he feels free to make criticisms of the government, he invariably seems to resent very strongly any exception we may take to those criticisms. He seems to feel that he has the full right to say what he likes and that on our part we have no right to take exception to what he says. I have noticed the tactics he adopts and I point them out to him so that he will not think I am wholly blind to the purpose of some of the things he says.

In replying to me to-night he referred to having touched "a sore spot" and he has also spoken about the government "bullying" the opposition. I leave it to hon. members to say whether any sore spot has been touched or whether there has been any bullying. The purpose underlying what my hon. friend says in this way has no reference to what takes place in this house. He is thinking of the headlines that will appear in his press to-morrow. We have seen, for example, references to the effect that the Prime Minister lost his temper. When my hon. friend opposite said that I had lost my temper I am sure the committee did not think that was what had happened. I will not say it was imagination or fiction on the part of my hon. friend, but I will say it was something intended to influence public opinion beyond the borders of this House of Commons.

I say this to-night because this evening he has again skilfully endeavoured to say a few things which he thinks may attract the attention of the country. I hope he will not feel that in anything I have said I have more than the wish to make perfectly clear the position of the ministry so that the true situation will be understood from now on.

Mr. POULIOT: Mr. Chairman, acting again as peacemaker I think I can summarize this little discussion by saying that both the Prime Minister and the leader of the opposition have been at their best to-night. Now let us come to the resolution. This provides merely for a change in the name of a department. Will it be of any use? I have no objection to having any number of departments, provided each one serves the purpose it is intended to serve. If the veterans are receiving good service from the Department of Pensions and National Health, then I do not see any use in changing the name of the department. But if they are not, then it is not a question of changing the name, it is a question of changing the staff. That is where reforms are needed.

I have not made any speeches denouncing bureaucracy, but I must say that bureaucracy is at its worst in the Department of Pensions and National Health. The only pensions given are those that were granted a long time ago, and the cheques go out automatically from the Department of Finance to those veterans who were fortunate enough to secure pensions in the good old days prior to a general election. Now it is impossible to get any satisfaction from the department of pensions. I know whereof I speak because I am in contact with my electorate. What I say now I have said to the big bugs of the army not long ago. The county of Temiscouata has given more

boys to the army than any other rural county in Canada so that I feel I have a right to speak. I look after the boys who are in the army.

There is to be a change in the name. If there are to be no more pensions granted then I do not see why this department should be called the department of pensions any longer. It is impossible to get any satisfaction from the department. Many times in the House of Commons I have denounced the manner in which veterans are dealt with by the department of pensions. But always the same answer is given, that I am unfair to the poor and honest civil servants who are doing so much for their country.

We should get rid of the department of pensions. The salaries that are paid to these useless nonentities who are no good at all should be given to the men who have been in the service, to the men who have been wounded in the service. I have taken up many cases and I have always received charming letters from the minister, but they do not mean anything. If he would spend on his own department the time that he wastes on the future happiness in the three Thursdays week, it would be much better. We must go to the root of the problem and fire the nonentities that are in all departments. I know that if I said that to a crowd of veterans I would be cheered to the echo because there is not a veteran who is satisfied with the treatment he has received from those men.

We hear it said: Oh, but there are veterans from the first war or from this war who are on the board. That is all right. I know that those men deserve consideration, but it does not follow that because a man has served his country well during the first war or during the present, he is a universal genius. We know that the civil service preference is used sometimes to give to veterans, simply because they are returned men, positions for which they are not qualified. I agree that the state should do everything for the returned men, but I say that we should put them in positions where they can render the greatest service to the state. Not only that, but it is not by putting a veteran in a position for which he is not qualified that the country is rendering service to the veterans. I know it is a most difficult problem but there should be a system of selection by which a man who is discharged from the army after serving overseas will be put in a position where he can render the best possible service to the community.

[Mr. Pouliot.]

The resolution deals with a lot of other matters. It provides for a department of veterans' affairs—

> . . . to assume the management and control of and to consolidate in such department all matters not by law assigned to any other department relating to the care, treatment, training or reestablishment of members and former members of the armed forces and other persons— .

Who are the other persons who will receive military pensions if they have not served in the previous war or in this war? It goes on:

> —and all such other matters as may from time to time be assigned.

Then it goes on to provide for the creation of a new department—with the old timber.

We have tried to find out the meaning and the purpose of this resolution. We have already stated in the House of Commons that those who have a right of priority over all other immigrants, all refugees, and all war guests in this country are precisely the veterans of the Canadian army. We moreover have the profound conviction that the first reforms to be made should be to improve the functioning of the Department of Pensions and National Health, and that they should start with the army itself. We have amply shown to the house that military doctors have often put in category "A" draftees who were physically unfit. I have put my files at the disposal of the Minister of National Defence in asking for the elimination of all incompetence in the army medical corps. A soldier who is not in good health is only a useless burden to the army and to the taxpayers.

According to paragraph 2 of section 11 of the Pensions Act, soldiers who have been in service in Canada are entitled to a pension—

> . . . when the injury or disease or aggravation thereof resulting in disability or death in respect of which the application for pension is made arose out of or was directly connected with such military service.

When a soldier is put in category "A" or "B" by the medical examiner and taken into the army and is afterwards put in a lower category or discharged, is there not a presumption that that soldier is entitled to a pension in virtue of the law? If he was in good health before his enlistment or training and then afterwards he was declared physically unfit upon discharge, is it not to be presumed that he contracted that disability during his military service? That is the reason why it is so difficult for military doctors to admit their errors of diagnosis in their speedy examinations. Certain officers show a zeal that is untimely and uncalled for in suggesting to soldiers who are physically unfit that they sign their application for discharge and resign

from the army without any provision being made for a pension. Such officers pretend that they are doing this to save the taxpayers' money.

Here is an actual case. A man was found unfit and the officer came to him and said: "Now sign your discharge application," and the soldier signed it. Then he lost all his rights to a pension. That is robbery. It is most unfair to the man, and while the officer says he is saving money to the country, actually he is depriving the man of the pension to which he is entitled. It is a grave injustice to the soldier, and it is precisely to protect themselves against this sort of thing that many soldiers who could easily obtain their discharge stay in the army because, if discharged, they could not get a pension. That is a fact which anybody who is in contact with the soldiers knows. It may be denied by the officials of the department. The minister may say that I am wrong, but I know that what I say is correct because I am in contact with the men themselves.

Let me recall the case of the soldier whose regimental number was changed from E554765 to E109063. He had just received the last rites of the church at the camp, and while he was at the last extremity some officer made him sign his resignation from the army, thus depriving his widowed mother of his pension. He died a few days afterwards. His mother was an old widow whom I knew well. I wrote to the minister and asked him to reconsider the case, and on my representations he ordered that the mother should receive a temporary pension of forty dollars a month. I give credit to the minister for that. I appealed to his good heart and he realized that it was a case of patent injustice. But I think the pension of forty dollars a month should be paid personally by the officer who went to that man when he was ill and made him sign his resignation from the army to deprive his mother of a pension.

The deputy minister of national defence forced a commanding officer in British Columbia to pay the fare of a soldier from British Columbia to Temiscouata county because the officer had not respected a ruling under the mobilization regulations. It was the right thing to do to punish the officer personally. In the meantime I give credit to the minister for the temporary redress he has granted in this case. But is it not shameful? This is one of the worst cases which has came to my notice. I do not know whether it makes any impression on the committee, but to me it is incredible that an officer should go to see a man who is so sick, and practically holds his hand to make him sign his resignation from the army in order to deprive the mother of a pension. Let us speak of veterans' affairs. This is a case where an injustice was done, and it was corrected by the minister, but if I had not seen to it, the injustice would still persist.

The creation of a new department will be of no use to the veterans so long as the necessary reforms are not made in the medical corps of the army, so long as certain unscrupulous officers are in a position to make soldiers renounce their rights to their pensions by having them sign documents which deprive them of assistance. What I have said indicates the two main reforms which are needed to safeguard the rights of veterans.

In March last, Mr. Millard W. Rice, of Washington, director of national service of disabled American veterans, congratulated the *American* magazine for having published an article by the Minister of Pensions and National Health entitled, "Canada Looks After Her Heroes". But newspapers have published photographs of a veteran, Joseph-Moise Robillard, of Billing's Bridge, who walked the streets of Ottawa as a sandwich-man with posters showing the way he was ill treated by the Department of Pensions and National Health when he returned from overseas.

There is also the case of veteran Peter A. Leclerc, who receives only $18.75 a month.

Veteran No. 4040395 in the last war went to England and France and was wounded in his right foot. He had a tumour, his foot is in very bad shape, and he cannot walk. In December, 1918, he was treated at the Red Cross hospital, Saffon Walden, England, for fracture of the foot. The pension commission decided first that the wound was anterior to his enlistment, but on appeal, it was decided that the wound was due to service, and his disability was fixed at five per cent, which gave him $3.75 a month for that invalidity. He tried twice to enlist in this war, but he was not accepted, he was found physically unfit, and was placed in category "C-1". Finally he obtained a temporary allowance of $20 a month.

A parish priest of the diocese of Rimouski has quoted the case of one of his parishioners, No. 23203 of the last war. This veteran served in the army from 1914 to 1919 in Canada, in England, in France and in Belgium. The parish priest wrote me that this man, having been at the front during the whole of the last war, came back unfit, suffering from the effects of gas. He has a pension of $7.50 and a veteran's allowance of $40, or $47.50 a month to provide for a family of twelve people.

Draftee E621251 was in very good health when he began his training. At Debert he contracted a bad case of the grippe, which finally affected his lungs. Finally he was discharged with two months' rest at home. The pension commission decided that he suffers from spontaneous pneumo-thorax, which arose during his service in Canada, but gives no right to pension according to section 11, paragraph 2 of the Pension Act, because the evidence does not establish that it is a consequence of his military service. Here it is admitted that he contracted this pneumothorax during his service; yet they deny him a pension. We have to fight that case, because it seems to me that the man should have his pension immediately, without any undue discussion.

Private E621922 had suffered from pleurisy of the right lung before his training. The military doctors accepted him just as he was. He was sent to Debert, where he had pleurisy of the left lung. While on leave he was X-rayed, and the plate was shown to the doctors at Debert, who told him that he could go home if he signed a renunciation of his pension. Actually he is convalescing at home, and the pension commission has not yet decided his case, which has continued since last year.

In October, 1942, soldier E100251 had shoes which were too small and injured his feet; his size was eight, and he had shoes which were sixes. He asked that they be changed, but the sergeant refused. He was kept on guard for several months wearing shoes which were too small for his feet. Finally he was taken to hospital, and was allowed five per cent for his pension, or $3.75 a month. He is a big man, and suffers so much from his feet that during whole weeks he is unable to work. He is the father of a family.

One of the saddest cases I have is that of E554528. While this draftee was doing commando drill he was required to ride a motorcycle at Valcartier. He had never been on it before; the non-commissioned officer put it in high gear; the motorcycle went forward while he was sitting on it, overturned, and the soldier broke his leg, the femur and tibia, in three places. Several inches of his tibia were so badly broken as to resemble dust. After six months in the hospital he walks with difficulty, using a crutch and a cane. On September 27, 1943, the Minister of Pensions and National Health wrote me, "I have now the pleasure to inform you that the Canadian pension commission has granted this soldier the right to a pension for fracture of the femur and the left tibia." We are now in mid-April, and the man has got nothing yet. He went to Quebec city to see a doctor, who first told him that it was of no use for him to go to the hospital again, but afterwards offered to admit him. The soldier said, "You told me it was of no use for me to go to the hospital. What I want is my pension. They cannot give me another bone to replace the part which has been broken."

I am quoting these and they are enough to show that what is most urgent for the rehabilitation of veterans is not the creation of a new department but a change of personnel. That is the reform which is urgent and which the army is asking for. To replace the present department of pensions by a new department, if the personnel is the same, would only change the place of the evil. To improve the conditions of the veterans it is not necessary to change the law. The only thing needed is to understand it and apply it according to its letter and spirit.

The soldiers I have met are all totally indifferent to fine promises that may be realized at the time of the millennium. All they want to know is what will happen to them the day they are demobilized.

Mr. KNOWLES: We of the Cooperative Commonwealth Federation would like to express approval of the general principle of establishing a department of veterans' affairs. From the point of view of efficiency of operation, we think it is a particularly good idea to bring all matters relating to veterans under the direction of one department, and because of that we have no hesitation in supporting the resolution that is before us at the present time. However, we want to point out that the creation of a new department, the setting up of machinery, and even the replacing of personnel in the department, as suggested by the last speaker, are not sufficient unless there goes with all these things a change of policy, and I would characterize the kind of change that is needed by using one word and saying that the policy should be far more generous in its treatment of veterans than has been the case thus far.

There are some things I should like to say of a general nature in connection with our proposal that the policy of the government towards veterans should be more generous, but before I do so I wish to report to hon. members something I learned a few days ago in the city of Winnipeg. I find that there are eight veterans of the present war on relief in that city, young men who have served in the forces, whose health or other conditions are such that they have had to be discharged, but for whom this government has made no provision. The conditions are also such that they are unable to secure employment. There they

are, eight men who have served in the forces during the course of the present war, young men, on relief in the city of Winnipeg.

Mr. MACKENZIE (Vancouver Centre): Are those the men referred to in St. Boniface?

Mr. KNOWLES: No. They are in Winnipeg, on the relief rolls of the public welfare department of that city. Their cases were brought to my attention by members of the city council who are on the public welfare committee, and these same members pointed out to me that the feeling of that committee and of the council as a whole is so keen on the matter that they are considering cutting these men off relief. Hon. members will recognize immediately that if this action is taken by the city council of Winnipeg it is not because the members of that council want to see these men destitute; it will be because they feel that something drastic should be done to bring to the attention of the government the shame that veterans of the present war, even now while the war is on, even while the government is talking about the wonderful things it is prepared to do for the men, even now while other departments are speaking of the need for man-power, should be on relief. So far as I know that action has not yet been taken by the Winnipeg city council, but I understand it is under consideration and it indicates how keenly the people of that area feel about this matter.

I said that we of this group heartily approve the policy of bringing under one department all matters relating to veterans, but none of us in this house should carry on under the illusion that by doing this by itself we shall satisfy the men in the armed services. What they are interested in is not the kind of machinery that we set up or even necessarily the personnel administering that machinery. What they are interested in is the policy behind it all and the results of that policy.

At the present time we are engaged in a terrific struggle. We are conscious of how important it is to the future of Canada that that struggle be won. Because of that recognition we are prepared to mobilize everything; we are prepared to spend all the money that is necessary. So far as this parliament is concerned, there is no limit at all. We are prepared to spend every dollar running as it does into billions, for the sake of winning the present war. That involves the payment of pay and allowances, provision of clothing, medical and dental services and other things to the men in the services; these things in thousands of cases represent far more than they had before they went into the forces. We are not only glad to do it; we feel it is our duty; we feel it is part of the price we must pay to make sure that we win the conflict in which we are engaged.

May I point out that so far as our future in Canada is concerned, of equal importance with the winning of the struggle in which we are engaged is the kind of men these chaps will be in the years that lie ahead after the war is over. If these men come back and are discouraged, disillusioned by policies that they feel reflect ingratitude or lack of appreciation of what they have done, it is not only a matter of the loss of a generation, so far as the men themselves are concerned, but the future of Canada as a whole will suffer.

I feel, therefore, that we in this parliament should realize that if it is necessary to spend millions and billions, as is now the case, to enable these men to defend the country, we must also be prepared to spend millions and billions, if necessary, to rehabilitate these same men physically, psychologically, economically and in every possible way to make sure that we shall not have any disillusionment or discouragement, any soured generation, in the period that immediately follows this war. I feel that generosity most certainly should be the keynote in the years immediately following the cessation of hostilities. All of us are aware, although we in the house cannot fully appreciate it, what these men are going through. We are aware of the mental upsets that are taking place, as our young men engage in operational flights, night after night. We can sense something of what it means to these people to go through the experiences in which they are now engaged.

To many of these young men, not only has it been a period of stress and strain, but also it has been one in which they have been given something to do, something to work, to struggle and to fight for, and, if necessary, to die for. In that sense it has done something for them. It has lifted many of them from the uselessness they had experienced in the thirties, and has made them feel that they are part of the life of Canada. If, after the experiences they have had, these men have to return to ingratitude or to a lack of appreciation, we shall be storing up for ourselves very real and difficult problems. I would hope that we in parliament would see to it that we tackle the problem of rehabilitating the veterans economically, physically, psychologically and in every other possible way. I would hope that we would tackle that problem as one which is every bit as important as the problem of the defence of our country.

There will be some who, while prepared to admit the justice of the cause, and that these men are deserving of proper treatment, will

complain that the spending of money will impoverish the country and will demoralize the men. May I point out that that has not been so during the war. We took these young men, many of whom were riding the rods and were unemployed during the thirties and, for purposes of war, we have made available to them more goods and services than they had ever dreamed of. That has not impoverished Canada. At the present time our country has a higher level of production and a higher standard of living than at any time in her history. Neither has that policy demoralized our men but, as I have already said, it has given them something to live, fight and work for and, if necessary, to die for.

I am convinced these same men will not be demoralized by generous treatment when the war is over. I am equally satisfied that Canada's economy would not be impoverished by such generous treatment. Therefore I express the hope that we will not imagine we have done a complete job merely by setting up more efficient machinery, as we are doing by bringing veterans' affairs under the direction of one department. We must go farther and, so far as our treatment of these men is concerned, we must infuse generosity into that policy. We must also realize that the problem of the rehabilitation of veterans is one of tremendous importance to the future welfare of our country.

While I am on my feet I should like to add my support so some things that have been said by other hon. members. I believe it was the leader of the opposition who spoke particularly about the constant use of the expression "pre-enlistment origin." It does seem to me that that is one place where generosity might be infused into government policy immediately. As members of parliament we have brought to our attention over and over again cases with respect to men who were accepted in the armed forces as "A-1", but who upon discharge are told that no pension is available because their ailments are of pre-enlistment origin. I need not stress the matter in this chamber because I am sure all hon. members know of many such cases. I am sure, too, that if the matter were put to a free vote of the membership of the house there would be no question but that there would be a wide change in policy in connection with the awarding of pensions to men discharged from the forces for medical reasons.

I would stress, too, the importance of liaison between the new department of veterans' affairs and the department of reconstruction, which it is proposed to set up. Indeed, to go farther, one might point out that there is need for special liaison between the department of veterans' affairs and the government as a whole, for if we are to be able on a long-term basis to do anything for the men discharged either now or at the conclusion of the war, it will depend to a very large extent upon our whole economy. It is exceedingly important that we pay particular attention to the whole problem of reconstruction, and I would urge a close liaison between the department of veterans' affairs and the department of reconstruction. In fact, more than a liaison is required. It is necessary that the government realize that any successful handling of the rehabilitation of veterans will depend upon the effectiveness of the reconstruction programme of whatever government is in power.

May I express the hope that when this new department is set up it will be the occasion for revising many of the details of administration of matters affecting veterans. At the present time our thoughts turn naturally to those who are now being discharged, and to others who will be discharged when this conflict is over. Let us not, however, forget the veterans of the last war. When I say that I do not mean merely that we should continue paying to them those pensions or allowances they are now receiving. Rather I urge that we give consideration to a revision of the Pension Act and the War Veterans' Allowance Act with a view to providing a better deal for those men who served a generation ago.

When the Minister of Pensions and National Health was speaking he made reference to widows who receive allowances under orders in council tied into the War Veterans' Allowance Act, but I did not hear clearly what he said. I would express the hope, however, that this might be the occasion for a revision of that act and a revision of the orders in council which govern the payment of allowances to widows of veterans of the last war. It is my hope that this might be the time when all these matters will be considered. I would hope that these matters might be brought to the new department of veterans' affairs, not just as a technical procedure of transferring from one branch to another, but with a view to bringing about an upward revision of the benefits and considerations given to these people. Hospitalization is another matter which must be thoroughly considered.

I have taken these few minutes to say that we in this group without any question welcome the introduction of this resolution. We agree that it is a good idea to bring under one department all matters relating to veterans, but we urge upon the government and hon. members generally that they must realize that is not the

whole story. What counts is the policy to be administered by the new department, and we urge that it be administered generously.

Mr. MACKENZIE (Vancouver Centre): The hon. member referred to eight cases on relief in Winnipeg. I had a report on March 3 from the superintendent of public welfare. Immediately we sent a welfare officer to Winnipeg to make an investigation. My information is that six of these are looked after. One is looking after a dependent mother, and his allowances are affected by that condition. The other two are problem cases, which I should be very glad to discuss with my hon. friend if he would be good enough to see me about them. I do not wish to mention the names here.

Mr. KNOWLES: If the minister is referring to the same cases I have in mind, I am very glad something has been done about them; I heard about them only last week. If it is true that the efforts of the Winnipeg city council in behalf of these men have resulted in action being taken, that is fine, but it is too bad it was necessary for that sort of action to be taken.

Mr. MACKENZIE (Vancouver Centre): Will my hon. friend give me the names privately some time?

Mr. KNOWLES: Yes.

Mr. FAIR: I do not consider it necessary to enter upon a long discussion of soldiers' affairs at this time, since I believe we shall be given ample opportunity for discussion on the motion for second reading of the bill, and also when the bill is being considered in committee, but I believe, it is our duty to talk freely openly and frankly. In past years we have discussed at great length what we were going to do for our veterans when they came home. Now we are trying to put something in the form of legislation, and I hope that legislation will not be a let-down to the men and women who will be coming back from the fight in the very near future. We in this group welcome the introduction of his resolution. We believe that much can be done by having all veterans' problems under one administration, and for that reason we are going to support this measure. Personally I believe the present Minister of Pensions and National Health should be and will be in charge of this new department. I believe he has the welfare of the veterans at heart; he is himself a veteran of the last war and has had brought to his attention many of the unnecessary hardships which have been endured by those who came back from great war No. 1.

One of the first things that should be done after this new department is organized is to get rid of some of the blots that now appear on the record of the administration of the problems of soldier settlers in this country. I hope that in the very near future either the Prime Minister or the Minister of Pensions and National Health will tell us that clear title is being granted to those veterans of the last great war who have remained on the land. I am not going to discuss this point at length to-night; I intend to discuss it on the second reading of the bill. When the motion for second reading is before the house I intend also to offer some suggestions with regard to the improvement of the Veterans' Land Act. If those who are to be settled under that act are to make a success of their venture I feel that some improvements are necessary; and if we are to take advantage of the experience gained under the old soldier settlement board legislation, I believe we must make some drastic changes in the Veterans' Land Act. When the new crop of veterans returns I think we shall have rather a different problem to deal with than we had in connection with the veterans of the first war. This time we shall have to deal with a number of highly educated men and women, as a result of the work they have been doing. The cream of the country have been enlisted and sent overseas. When these men and women come back we shall have many discontented individuals with whom to deal, and unless their problems are properly dealt with, this country can look for trouble, which can be avoided if the government will do the job right.

The question of the clothing allowance was brought up by the leader of the opposition. Just in the past three or four days, when returning to Ottawa, I discussed this question with men of the three services, and I hope that in the very near future the government will see fit to raise that allowance from $65 to at least $100. We have shown the men and women of our armed forces that when they are on active service we can provide them with more than one uniform. Therefore, let us see to it that they are given more than one suit of clothes when they resume civilian life. Then I believe it will be necessary to provide positions which will guarantee these men and women a decent standard of living, and when I say "a decent standard of living" I mean just that. I realize that the Prime Minister and the Minister of Pensions and National Health have not ventured into the sphere of the full life, but I trust that they will not subject the returning men and women to allowances only as individuals. These men and women must be provided with a living for

married couples and families, and I hope the government will see to it that jobs are provided which will guarantee these people that decent standard of living for themselves and their families.

Mr. WHITE: I should like to add just a word to what has been said already. I am sure all hon. members will welcome this change if it is to be for the good of the returned soldier. For a long time I have felt that most of the difficulty lies in the administration of the Pension Act. No doubt the provisions of that act are wide enough to cover all cases, but I am sure all hon. members have had cases brought to their attention which show that in many instances the intent and purpose of the legislation are not being properly carried out. I should like to draw to the attention of the minister the very long delay that takes place in dealing with claims for pensions in the present war. It seems to me that at the present time the number of pension applications being dealt with must be very small. Therefore it is difficult to understand why, after the soldier is discharged, there should be such delay before he has his pension board and a decision is reached. Then, if there is an appeal from that decision there is another very long delay before the appeal is heard. I also hope that when this bill is in the committee stage the minister will be able to give the house and the country a statement as to what has been done to improve the conditions that existed at Christie street hospital last year. I hope he will be able to tell the house that many changes have been made, both in the way the hospital is run and in the conditions under which soldiers have to obtain treatment there. I think the house also will be interested to hear from the minister how far along the plans are for the new hospital at Sunnybrook.

I do not like to repeat what has been said already, but I wish to concur in the remarks of the leader of the opposition on one very important matter. I refer to the onus of proof being on the soldier, who has to prove his claim before the pension board. It has always seemed to me that pensions are handed out to returned soldiers in a most grudging manner, as though it were an act of charity. A pension to a returned soldier is something to which he is legally entitled, and I shall always contend that the onus of proof should be on the pension department, because when a man joins the armed forces he passes a most rigid examination, in the course of which he is often examined by at least three doctors. He is X-rayed and he must pass the most rigid examination. As has just been said by the hon. member for Winnipeg North Centre (Mr. Knowles), in too many of these cases where a man goes before the pension board he receives in due course a letter which is already printed and which states that his disability was not due to war service, but is a pre-enlistment disability. I cannot understand why a private or a non-commissioned officer should have to fight the entire pension board. Everything seems to be set against him before his case is even heard.

Once a man is accepted in A-1 category I think it is only fair and just that any future disability should be considered a disability attributable to war service. There have been many soldiers in this war who have suffered from mental and nervous conditions, and I hope that when the bill is before us the minister will give us the number of these cases and whether they are being reviewed. In reply to a question which I asked some time ago a return was brought down which stated that the scale of pensions had been set some fifteen or so years ago and that there had been no change in the scale or rate of pension since that time. Since 1939 cost of living bonuses have been paid and other financial arrangements have been made for other people, but there has been no change in the rate of pension paid to soldiers. The pension for total disability is still $75, the same as it was when it was set fifteen years ago.

I should like to say a word about what the hon. member for Temiscouata said. He claimed that his county has supplied more recruits for the armed forces of Canada than any other county in Canada. Each one of us likes to feel that his county has supplied the largest number of recruits, and I think it would be most interesting and instructive if the Minister of National Defence once and for all would break down the statement and give us the exact number of enlistments by provinces.

In conclusion, I should like to bring to the attention of the minister the question of clothing allowances. It seems unfortunate that in many of these cases changes are made only when it is too late. First I should like to refer to the clothing allowance granted to officers. Up until some two or three months ago when a man received a commission he was given a clothing allowance of $150, and this was increased at that time to $250. However, as usual the change was not made retroactive. The number of officers who will now be taken into the army must necessarily be quite small. When the estimates of the Minister of National Defence under the war appropriation bill were before the committee

I asked the minister if he would place on *Hansard* the means by which the department figured out the amount of $65 allowed to a soldier to refit himself for civilian life, but the minister did not care to do so. I appreciate what the minister said a moment ago that the matter of clothing allowance does not come under his department; yet this question is tied up closely to soldier rehabilitation. I trust that when the bill comes down the minister will be able to tell us that he is at least going to take up this matter and attempt to do something about it. There are other matters having to do with benefits to soldiers which I could take up, but I shall leave them until the bill is before the house.

Resolution reported, read the second time and concurred in. Mr. Mackenzie King thereupon moved for leave to introduce bill No. 83, to establish a Department of Veterans' Affairs.

Motion agreed to and bill read the first time.

UNITED NATIONS

RELIEF AND REHABILITATION ADMINISTRATION—IMPLEMENTATION OF AGREEMENT OF NOVEMBER 9, 1943

Right Hon. W. L. MACKENZIE KING (Prime Minister) moved that the house go into committee to consider the following resolution:

That it is expedient to bring in a measure for carrying into effect the agreement for the establishment of a united nations relief and rehabilitation administration, signed on the 9th day of November, 1943, and to provide that interim expenditures not exceeding $10,000,000 for carrying out the said agreement be defrayed out of moneys provided under the War Appropriation (united nations mutual aid) Act, 1943, and that all other expenditures incurred in carrying out the said agreement be defrayed out of moneys to be voted by parliament.

Motion agreed to and the house went into committee, Mr. Bradette in the chair.

Mr. MACKENZIE KING: Mr. Chairman, the purpose of the bill which will be based upon this resolution is to enable the government of Canada to give effect to the agreement for the establishment of the united nations relief and rehabilitation administration. This agreement, to which the united nations were the signatories, was signed in Washington on November 9, 1943. The text of the agreement appears as a schedule to the bill. On June 18, 1943, I made a statement at some length on the draft agreement for the establishment of a united nations relief and rehabilitation administration. The draft agreement was printed in *Votes and Proceedings* of that day. On January 28 of this year I tabled a copy of the agreement itself, as signed in Washington on November 9, 1943. This will be found in the treaty of Canada series, 1943, No. 16. It is therefore not necessary to do more at the present than to mention the most important features of the agreement.

I should first of all like to say that a meeting of the council of the united nations relief and rehabilitation administration took place in Atlantic City from November 10, 1943, to December 1, 1943. The head of the Canadian delegation was Mr. L. B. Pearson, minister-counsellor, Canadian embassy at Washington. The alternate was Mr. Brooke Claxton, M.P., member for St. Lawrence-St. George, who is parliamentary assistant to myself as president of the privy council. The other delegates were the Hon. Cyrille Vaillancourt; Mr. George Bouchard, assistant deputy minister of Agriculture; Mr. John Deutsch of the Department of External Affairs; Mr. A. W. Plumptre, financial attaché of Canadian embassy, Washington; Mr. George Patterson of the Department of Agriculture, and Dr. L. B. Pett, of the Department of Pensions and National Health.

The united nations relief and rehabilitation administration has been set up in the expectation that the military victory of the united nations will be followed by a period during which many, if not all, of the countries liberated from the enemy in Europe and in the far east will stand in need of assistance in the form of food, clothing and other basic necessities.

The period in question is distinct from the period prior to military victory during which relief in various forms will have to be administered by the military forces of the united nations as part of the operations of war. The UNRRA will begin its work in each area as soon as it is practicable for it to take over from the military authorities. The form of its activities within the territory of a member government in which that government exercises administrative authority is to be determined after consultation with that government and with its consent.

The main purposes of the united nations relief and rehabilitation administration are:

(a) To plan, coordinate, administer, or arrange for the administration of measures for relief of victims of war in any area under the control of the united nations through the provision of food, fuel, clothing, shelter and other basic necessities; medical and other essential services.

(b) To formulate and regulate measures for individual or joint action by any or all of the governments for the coordination of purchasing, the use of ships and other procurement activities;

(c) To study measures proposed by any member government for individual or joint action by any or all of the member governments and make recommendations on the basis of its experience in planning and performing the work of relief and rehabilitation.

The bill based on the resolution empowers the governor in council to do whatever may be proper and expedient for giving effect to the agreement. The agreement is limited to setting up the administration, and the operative action will be taken by the UNRRA council and its committees. It is, therefore, also provided in the bill that the governor in council may do whatever is proper and expedient to give effect to any resolutions of these bodies made in carrying out the provisions of the agreement.

The council, which is the policy-making body of the administration, consists of one representative from each member government. The central committee of the council consists of the representatives of China, the Union of Soviet Socialist Republics, the United Kingdom, and the United States of America, with the director general of the UNRRA presiding without vote. Between sessions of the council this committee may make policy decisions of an emergency nature.

Mention should be made of another committee of the council, the committee on supplies, which consists of the members of the council representing those member governments likely to be principal suppliers of materials for relief and rehabilitation. Canada is obviously one of these countries and when the committee on supplies met, the Canadian member was chosen as chairman. The Canadian member was Mr. L. B. Pearson, the Minister Counsellor at the embassy at Washington. This committee is of particular importance because of the provision that the central committee of council shall invite the participation of the representative serving as chairman of the Committee on Supplies of the Council, at those meetings at which policies affecting the provision of supplies are discussed.

Article V of the UNRRA agreement provided that, in so far as its appropriate constitutional bodies shall authorize, each member government will contribute to the support of the administration. At the first session of the council, which was held in Atlantic City, New Jersey, from November 10 to December 1, 1943, it was recommended that each member government whose home territory has not been occupied by the enemy should make a contribution for participation in the work of the administration approximately equivalent to one per cent of the national income of the country for the year ending June 30, 1943, as determined by the member government. It was further recommended that as much as possible, but not less than ten per cent, of the amount contributed by each member government should be in such form of currency as can be expended in areas outside of the contributing country; and that the balance thereof should be in the form of a credit in local currencies which should be available for the purchase of the contributing country's supplies and services.

[Mr. Mackenzie King.]

When the Mutual Aid appropriations for 1944 are introduced provision will be made for the Canadian contribution to UNRRA. The present bill provides that interim expenditures, not exceeding $10,000,000, incurred in carrying out the agreement may be defrayed out of moneys provided under the War Appropriation (united nations mutual aid) Act, 1943. The purpose of this provision is to enable Canada to make a cash contribution at once for the administrative expenses of the organization in Washington, and to finance any orders for supplies that may be placed in Canada before next year's appropriation is voted.

It is particularly fitting that Canada should act promptly in this matter. Among the active belligerents Canada is one of the countries which have suffered the least material damage in the course of the war. The Canadian people, moreover, are well able to realize the enormous importance of relief and rehabilitation, not only from a humanitarian standpoint, but in order that the full fruits of victory may be garnered, and conditions established in which the constructive measures essential for the creation of a better world order can be undertaken.

I should add that the United States congress and the parliament of the United Kingdom have respectively approved of their countries contributing one per cent of national income for united nations relief purposes. I believe what I have said covers what is essential for the committee to know in connection with the resolution and the bill to be based upon it. As I have mentioned, the hon. member for St. Lawrence-St. George, the parliamentary assistant to myself as president of the privy council, was an alternate representative at the meeting which was held at Atlantic City, and he is very familiar with all aspects of this important matter. During the course of the discussion he perhaps may wish to add something to what I have said.

Mr. GRAYDON: The interim expenditures not exceeding $10,000,000 to carry out the agreement does not represent more than one per cent of the gross national income?

Mr. MACKENZIE KING: I think the statement is correct. I am giving the committee the information that the officials of my department give me. When we come to the bill itself, if there is any change needed, I shall be glad to see that it is made.

Mr. GRAYDON: I find I was wrong in my calculations with respect to the one per cent.

Mr. STIRLING: Mr. Chairman, if I remember aright, there are forty-four nations included in this arrangement. The Prime Minister has referred to the fact that there has been one meeting of the council. I wonder whether anything like forty-four nations were represented at that meeting, and whether it will be humanly possible in the future to hold meetings at anything like regular intervals of the representatives of so large a number of nations.

The Prime Minister also mentioned, as though it were an executive body, the representatives of the four nations, China, the Soviet, the United Kingdom and the United States. I take it that they will take charge of the necessary implementing of policy when it is not possible for the larger body to meet.

There are also to be two regional committees, of one of which Canada is a member—a collection of nations among the allied nations who are contributors and will be recipients. Canada, Brazil and the United States are included in the European regional bodies, are they not? But Canada is not included in the other regional bodies which take in the Asiatic and Pacific nations which will be recipients. I wonder how possible it will be for those various bodies to meet at anything like stated intervals and with sufficient representation of the nations interested; and where they will meet; and with regard to the sub-committees—technical affairs, supplies, and a third whose name I forget at the moment. Canada is particularly interested in the one dealing with supplies because the chairman chosen is a representative of the Department of External Affairs. Has that committee already located an office for itself, and set up and started the investigational work which, I take it, alone is possible at the present time, for I think that the preliminary operations of these various committees are largely those of collecting information, finding out what supplies will be available, and being ready when the time comes to give that information to the full council?

Mr. CLAXTON: If I may answer the hon. member: it should be understood that the policy-making body of the united nations relief and rehabilitation administration is the council. That corresponds in a sense to a legislative body.

Mr. STIRLING: The forty-four nations?

Mr. CLAXTON: The council consists of one representative of each of the forty-four nations. At the first meeting of the council, held between the 10th of November and the 1st of December at Atlantic City, all the forty-four nations were represented; all of them took a very active part; and the committee can appreciate the extent of that representation when I say that there were 374 representatives of the forty-four nations present. Some of the delegations extended to twenty or thirty members; no country was represented by less than three or four. The second meeting of the council is to take place at Montreal on the 23rd of June, and it is expected that all forty-four nations will be represented there.

The Prime Minister referred in the house to the desire of all Canadians to welcome UNRRA and our satisfaction that the first meeting of the council outside the United States should be held in Canada. If I may be permitted I should like to express my own pleasure, because it is going to be held in the division which I represent, and I had something to do with the preliminary arrangements.

With regard to the committees of UNRRA, the committee on supplies, to which the hon. member referred, has as chairman Mr. L. B. Pearson. That committee's function is defined by the agreement; it is that of advising generally on policies relating to supplies. The committee has met so far at Washington; it has held a great number of meetings, certainly more than ten when I last heard of it; and it is very active in advising the administration on supply questions.

Mr. STIRLING: There is something like a score of representatives on that committee, is there not?

Mr. CLAXTON: There are eleven representatives of the principal supplying countries and also one or two representatives of recipient countries. I could give the names of the countries if the committee wants them. In addition, there is the regional committee for Europe, which has on it the members of the council representing the countries located in Europe, and in addition, as the hon. member has said, three members representing the principal supplying nations—the United States, Brazil and Canada. That committee has met in London, where it has a secretariat and is established. It is a going concern, and its function is to survey relief requirements and forward them to the administration's headquarters at Washington. The regional committee of the far east consists of the countries situated in the far east. I

do not know whether that committee has met yet. The situation in the far east is far more uncertain than it is in Europe.

Mr. STIRLING: Is India represented on that?

Mr. CLAXTON: India is represented on that one. The administration itself has its headquarters at Washington, and there is seated the headquarters and executive of the administration under its director general, the former Governor Lehman, who has been in active control of its affairs ever since he was appointed by the unanimous vote of the nations at Atlantic City.

The administration is a going concern. As the hon. member indicated, its principal purpose now is to survey requirements and make its claims on the combined boards for requirements. That work is actively being carried on. A very large part of the staff necessary to do the work has been recruited. At the same time the work is being carried on in London with relation to requirements for Europe. So that the work of UNRRA is actively being carried on to-day.

Mr. KNOWLES: Could the Prime Minister or his parliamentary assistant give some idea of the proportion of this ten million dollars which is required for administrative purposes and the proportion which is allocated for the purchase of Canadian goods? I believe the Prime Minister said that the money would be divided between these two purposes.

Mr. CLAXTON: The administrative budget of UNRRA was approved by the council at its first meeting at Atlantic City and it totalled ten million dollars. That was the estimate made by the director general in the light of the information then available to him. The total income that UNRRA expects to receive in consequence of the contributions of the member nations is in the neighbourhood of $2,000 millions, so that hon. members can easily calculate what portion of the total income of UNRRA is to be spent in administrative expenses.

Mr. KNOWLES: And the administrative budget is allocated in proportion to the contributions?

Mr. CLAXTON: That is not quite so. The administrative budget is allocated between the countries on a different basis from their contributions. I can give my hon. friend some information as to the basis arrived at if he wants it. The proportion of the administrative expenses payable by Canada is three per cent of the total of ten million dollars, but Canada, in making her contribution, can count the amount allocated to her in the administrative budget on account of the total that Canada decides to give.

Mr. DIEFENBAKER: I should like to ask a question with regard to administrative staffs. From a reading of the debates in the United States it is indicated that quite a number of persons are being trained there for the purpose of taking positions in the administrative staffs. I should like to know whether any Canadians are being trained to-day, and the numbers of Canadians who may reasonably be expected to secure positions once the administration is in full swing, also the qualifications for the positions in connection with the administration.

Mr. CLAXTON: One of the resolutions laid down at Atlantic City by the council was that the staff should be recruited as a genuine international staff. I can quote the resolution if my hon. friend wants it. So far as I know, that resolution is being carried out by the administration. Director general Lehman, in recruiting his staff, is endeavouring to secure the people who are best qualified to do the job, without regard to the country which they represent. But at the same time he is endeavouring to see that the genuine international character of the staff is maintained. The list of the deputy directors general would indicate that. Sir Arthur Salter is the senior deputy director general. He is a member of the British house and a former minister of the crown in the United Kingdom, having great experience in transportation and other work. The other deputy director generals, I believe, come from seven or eight different countries. Sir Frederick Leith Ross is deputy director general for Europe, and a Canadian, Mr. Van Gelder, is deputy director general in charge of administration. There are a number of other Canadians on the staff of UNRRA already. When it is said in the newspapers that UNRRA is recruiting a staff for training for service abroad, I think the newspapers are rather in advance of the administration in that regard, because so far the administration has not been actively engaged in recruiting staff for service abroad. It has been engaged in organizing its work at Washington. To-day it has most of the staff necessary to carry on all the work it is carrying on. I am not quite sure how many additional people will be required, but if any Canadians do wish to apply they should apply directly to the UNRRA administration at duPont Circle building in Washington and their applications will be considered like anyone else's. It is not expected that any staff will be recruited by UNRRA for service in Canada.

Mr. STIRLING: Will the deputy directors to whom the hon. gentleman referred remain resident in their own countries and be contact points for Governor Lehman, or will they come and live in Washington and do their work there?

Mr. CLAXTON: That will depend entirely on their functions. In the case of Mr. Van Gelder and the others having to do with either survey of requirements or provision of supplies or administration or personnel or finance, they will be located at Washington, but the deputy director generals engaged in the survey of requirements, such as Sir Frederick Leith Ross, will be located in London, and there will be others located in various countries in Europe when it is possible for them to get there. Similarly in the far east, their locality will depend on their functions. At the present time the majority of the senior personnel as of other personnel administration are located at Washington.

Mr. ROSE: There have been disquieting rumours to the effect that the military authorities have been holding back UNRRA from going into action. A few months ago I heard that they were told to go to the far east and to leave Europe alone. These statements may be only rumours, but they are going around and people believe them, and perhaps they have reason to believe them. Certain military leaders have said, "After we are finished with our military activities you people can step in." Well, that may be a long time, and in the meantime the situation in Italy has proved that if UNRRA had gone in in the first place, instead of leaving it to Amgot to look after feeding and supplying the people with the necessities of life, the situation in Italy might have been better.

Disquieting rumours are going around even to the effect that some of those belonging to UNRRA have become quite pessimistic. I am not making this statement because I am opposed to what UNRRA intends to do. In fact, we should all welcome every measure that is brought forward to help the people of Europe to rehabilitate themselves. Our own prosperity depends to a large extent upon what happens there. If there are people who are holding back UNRRA from going into action, it will be necessary for the government of Canada to speak up and to protest against those elements that tend to retard things.

There was a disquieting editorial in the Toronto *Star* in which it was said that the meeting of UNRRA which was to have taken place at the Seigniory club would not be held there for reasons of anti-Semitism and consequently they had to go elsewhere.

Mr. MACKENZIE KING: Nonsense.

Mr. ROSE: I am quoting from the Toronto *Star*. This appeared in an editorial. I am glad to hear that it is not so, though, as I say, I am quoting from that newspaper.

I have read of the history of the Hoover commission and it seems to me that they got entangled in the political situation in Europe, with unfortunate results, because quite often, instead of supplying food to those who were in need, they devoted their attention to those elements that formed reactionary movements in Europe. I suggest that we should have progressive, broad-minded leadership in this matter so as to avoid political interference on the part of UNRRA in Europe.

There are many more problems in connection with UNRRA which I should like to discuss, but I will leave it to a later stage. We are all interested in these questions. For instance, there is the problem of UNRRA in relation to the Ribar and Tito Assembly in Yugoslavia. We must look upon that as a very serious matter, and then again there is the problem of UNRRA in relation to certain sections of China, especially in the area controlled by the Fourth and Eighth Route armies. There is a good deal of suffering there, although these people fight against a substantial part of the Japanese army. They are not getting medical or any other relief from the Chungking government. These are all matters that will have to be discussed when the bill is presented.

Mr. CLAXTON: I should like to answer some of the remarks made by the hon. member for Cartier (Mr. Rose). He has referred to certain rumours and I think I should deal with them. In the first place he mentioned the failures to go to the Seigniory club to hold the meeting there, on the ground that the club did not admit people of the Jewish faith. I can say at once that there is not a word of truth in that rumour. I was present with the representatives of UNRRA when they interviewed representatives of the Canadian Pacific hotels in Montreal, and when we spoke about the Seigniory club they said it was out of the question because the premises could not accommodate a meeting of that size. No other reason was given, and if you appreciated the size of the conference and contemplated the demand for meeting rooms, you would recognize at once that the Seigniory club is not a suitable place. The Windsor hotel was chosen because it had suitable accommodation.

With regard to the rumour that UNRRA is not allowed to enter the field because of difficulties with the military authorities, there are no difficulties that I have heard of, and I am assured by our representatives at Washington, and by the chairman of the committee on supplies, that there is the closest cooperation. Misunderstanding occurs by reason of a misapprehension of the agreement. Article 7 reads:

> Notwithstanding any other provision herein contained, while hostilities or other military necessities exist in any area, the administration and its director general shall not undertake activities therein without the consent of the military command of that area, and unless subject to such control as the command may find necessary. The determination that such hostilities or military necessities exist in any area shall be made by its military commander.

That is part of the agreement signed by forty-four nations, and hon. members will recognize that that is an essential condition for the operation of relief in an area that is liberated. That provision is supplemented by various resolutions passed at Atlantic City.

Finally, my hon. friend referred to the use of relief supplies for political purposes. Two resolutions prohibiting that were adopted by council. It is the intention of all the nations who are members that it shall be prohibited and, so far as the administration can do it, that will be done.

Mr. BLACKMORE: I should like to know whether the food and other supplies to be advanced to needy nations are to be given to those nations, or only lent to them? For instance, we will suppose that France asks for assistance under UNRRA, and we will say that assistance to the extent of $50,000,000 is given. Is that given, absolutely, or is it only advanced with the idea that at some time France will pay it back?

Mr. CLAXTON: The relief is to be made available to countries needing it, as they are liberated, and as they come within the terms of the agreement, without regard to their ability to pay. But a resolution adopted at Atlantic City provided that countries which are able to pay for relief will pay for it. France is such a country, as was indicated by their representatives at Atlantic City. She expects to pay in international currency, from resources which she has available outside France, for all the relief she gets. That is true of three other nations. They will pay for the supplies they get. But their requirements will be cleared through the combined boards, after consultation with the administration. So that the administration will look at the overall requirements of all the nations requiring relief, and see that they are met proportionately in accordance with the need.

Mr. BLACKMORE: Some nasty rumours have come to my notice, and I shall mention one or two of them. All one has to do is to read some of the current literature, and he finds enough proposals to make a person's hair turn gray. We hear suggestions on what is to be produced, what is not to be produced, where it is to be produced, whether there will be a high or a low tariff, and on what commodities, what the financial policy shall be, and whether there will be a central bank—and so on, and so on. I would like to know this: is it proposed to require that any applicant submit to any such restrictions, or any such agreement? I am very much concerned, because if this thing is being used—and I have heard such a rumour—to bludgeon the needy nations into an agreement to certain pernicious commitments, that is something which should be fully known. And this parliament is in duty bound to see to it that no such condition exists.

Mr. MACKENZIE KING: Mr. Chairman, I feel I ought to say a word to my hon. friend in regard to what he has just said. In the first place, I think it would be wise not to attach too much importance to rumours. By stressing rumours certain impressions grow, and in the minds of some people they become convictions. It would indeed be a great misfortune if those countries in Europe, which are suffering the worst possible kinds of torture, should have added to their agony, as coming from the parliament of Canada, even the thought that this or other governments with which they are connected were seeking not to assist them in their distress but were bludgeoning them. I am sure my hon. friend does not attach much importance to those rumours, and I hope he will not lend his position to giving emphasis to them by even assuming for one moment that they could possibly be correct.

Mr. BLACKMORE: I think the Prime Minister will agree it would be a great deal more calamitous if nations did unsuspectingly commit themselves to an agreement the full implications and extent of which they did not appreciate, and then found themselves suffering, after it was too late to effect a remedy. In consideration of the fact that so many different kinds of proposals have been put forward in so many different magazines, proposals purporting to be of authentic origin, I say the fullest, frankest and most definite understanding should be had by all members of parliament, and all nations of the world. I do not think there is any doubt that there

is a body of men who are seeking to use this war, and the peace which will follow the war, to foist upon the world a set of conditions which will make a worse mess than we have ever known before.

Mr. MACKENZIE KING: There are scoundrels and skunks everywhere.

Mr. BLACKMORE: Exactly; and we want to find out where those scoundrels and skunks are, so that we may draw their teeth.

Mr. MACKENZIE KING: That is right.

Mr. GRAYDON: Well, that would not do much good, so far as the skunk is concerned.

Mr. CLAXTON: It would be unfortunate if the impression were to get abroad that the administration could be used for the purposes indicated in the rumours mentioned by my hon. friend. Forty-four nations were represented at Atlantic City. This was my first experience at an international conference in an official capacity, although I have been at many of them unofficially. I can assure the committee that nations could not have worked together in greater harmony than did the nations at the Atlantic City conference. The attitude throughout was one of complete cooperation. They recognized that they had a big job to do, and they set up the administration to do it. The atmosphere was one of whole-hearted cooperation by the nations to do a job which they could do only through working together.

Resolution reported, read the second time and concurred in. Mr. Mackenzie King thereupon moved for leave to introduce bill No. 84, for carrying into effect the agreement for united nations relief and rehabilitation administration between Canada and certain other nations and authorities.

Motion agreed to and bill read the first time.

Mr. SPEAKER: When shall the bill be read a second time?

Mr. MACKENZIE KING: Mr. Speaker, I do not wish to press hon. members unduly, but this is a short bill. The agreement is attached. It has been before the house for some months. I believe what has been said with respect to the resolution covers practically everything that is likely to be said on the bill. If the house would grant its consent we might proceed with the second reading.

Mr. BLACKMORE: I am sorry, but I cannot consent to second reading until I have a chance to see the bill. This is a very important measure.

Mr. MACKENZIE KING: All right.

Mr. SPEAKER: Next sitting of the house.

JUDGES' ACT

AMENDMENT TO PROVIDE FOR SALARY OF THIRD JUDGE OF THE EXCHEQUER COURT OF CANADA

Hon. L. S. ST. LAURENT (Minister of Justice) moved that the house go into committee to consider the following resolution:

Resolved, that it is expedient to introduce a measure to amend the Judges' Act to provide for the salary of an additional puisne judge of the Exchequer Court of Canada.

Motion agreed to and the house went into committee, Mr. McCann in the chair.

Mr. ST. LAURENT: Mr. Chairman, this is a resolution asking for leave to introduce a bill to carry out the terms of a bill to which royal assent was given on March 31, amending the Exchequer Court Act and providing for the appointment of an additional judge to that court.

Mr. GRAYDON This is the companion bill?

Mr. ST. LAURENT: This is the companion bill to amend the Judges' Act to provide the salary for the additional judge of the exchequer court. The bill will merely change the Judges' Act by taking out the words, "a puisne judge, $9,000" and inserting the words, "two puisne judges at a salary of $9,000 each." That is the sole purpose of the measure.

Resolution reported, read the second time and concurred in. Mr. St. Laurent thereupon moved for leave to introduce bill No. 85, to amend the Judges' Act.

Motion agreed to and bill read the first time.

Mr. SPEAKER: When shall the bill be read the second time?

Some hon. MEMBERS: Now.

Mr. GRAYDON: Would there be any objection to allowing this motion to stand for the time being? I think perhaps we would like to see the bill.

Mr. SPEAKER: Next sitting of the house.

CANADIAN NATIONAL RAILWAYS

PROVISION TO MEET CERTAIN EXPENDITURES AND GUARANTEE OF SECURITIES AND INDEBTEDNESS

Right Hon. W. L. MACKENZIE KING: (Prime Minister) moved the second reading of bill No. 64, respecting the Canadian National Railways and to provide for the refunding of matured, maturing and callable obligations.

Motion agreed to, bill read the second time and the house went into committee thereon, Mr. McCann in the chair.

On section 1—Short title.

Mr. GRAYDON: Is this bill in the same terms as the last bill of the kind that was passed by parliament?

Mr. ABBOTT: Yes, Mr. Chairman; the terms of this bill are identical with those of the last refunding bill, which was passed in 1938.

Section agreed to.

On section 2—Power for refunding.

Mr. BLACKMORE: May I ask if any considerable number of these bonds are held in Britain, or outside Canada?

Mr. ABBOTT: I cannot give my hon. friend the information as to what portion of these maturing securities are held in Britain. When the measure was in the resolution stage I pointed out that the great bulk of the perpetual issues of the C.N.R. which had been held in Britain had been redeemed since the beginning of the war, leaving a comparatively small number outstanding. Speaking from memory, I think the great majority of the Canadian National issues held in Great Britain have been repatriated, but I am not in a position to give my hon. friend definite figures as to that at the moment. I did not anticipate that this question would be asked, and I have not the figures before me.

Mr. HARRIS (Danforth): Perhaps the parliamentary assistant could inform the committee why they project this so far into the future. This goes beyond 1953, though if I remember correctly they still have some $75,000,000 left from the previous transaction, which involved some $200,000,000. Why is it necessary to project this so far into the future?

Mr. ABBOTT: I do not think $75,000,000 is left from the previously authorized issues. As I remember it, two issues mature either this month or within the next two or three months. There either have matured or will mature during the period contemplated by the previous bill securities totalling $196,220,709.23. As to projecting oneself so far into the future, this bill is for $200,000,000, the same amount as the previous bill, as my hon. friend will recall.

Mr. HARRIS (Danforth): The previous $200,000,000 was not all used up.

Mr. ABBOTT: No; a very small portion of the amount authorized under the 1938 act is still available.

Mr. HARRIS (Danforth): Quite a substantial portion. What portion is left over?

[Mr. Mackenzie King.]

Mr. ABBOTT: Including the maturity on May 1, 1944, of $35,000,000, the Canadian National Refunding Act, 1938, will then have been availed of to the extent of $196,220,709.23, which would leave roughly $4,000,000 available.

Mr. HARRIS (Danforth): Plus the $35,000,000 maturing on May 1?

Mr. ABBOTT: Yes.

Mr. BLACKMORE: Would the parliamentary assistant give the committee some idea of the average interest rate obtaining on these bonds?

Mr. ABBOTT: The average interest rate now is 4·13 per cent.

Mr. BLACKMORE: And could the parliamentary assistant give us some idea of what the average rate will be under the proposed refunding scheme?

Mr. ABBOTT: I cannot give that information, other than to say that since the beginning of the war, as I pointed out when this resolution was in the committee stage, moneys have been advanced by the government instead of going into the open market, and the rate charged has been 3½ per cent.

Mr. KNOWLES: When we were in committee of the whole on the resolution which preceded this bill I asked the parliamentary assistant a question relating to the matter to which he has just referred. I asked if he could give us the total indebtedness of the Canadian National Railways before the war and at the present time, breaking it down into funded debt and the debt to the consolidated revenue fund. I was anxious to see the trend; I believe one figure goes up as the other goes down.

Mr. ABBOTT: I have that information. On December 31, 1938, the end of the last fiscal year of the railway before the war, the funded debt in the hands of the public amounted to $1,249,996,422.59. Loans from the government amounted to $48,144,804.73, making a total of $1,298,141,227.32. At December 31, 1943, the funded debt in the hands of the public was $744,232,472.60. Loans from the government totalled $537,323,765.07. The total indebtedness of funded debt and loans from the government amounted to $1,281,556,237.67, or an over-all decrease of $16,584,989.65. I think that was the information the hon. member asked for.

Mr. HARRIS (Danforth): I did not have an opportunity when the resolution was before the committee to point out certain things I had in mind, because the statement with regard to maturing or callable bond issues was not available. This was placed on *Hansard*

during that particular session of the committee. I endorse what the parliamentary assistant has to say with regard to maturing obligations. Many of the securities referred to in this table which was placed on *Hansard* do not mature before 1950 but are callable prior to that date. The parliamentary assistant is reported on page 1984 of *Hansard* as saying:

> The reason for asking for statutory authority to enable the railroad to make refunding loans is to enable the railroad, if market conditions are such that it would be advantageous to do so, to call in high coupon securities and refund with lower coupon securities.

With that policy I am quite in accord, but I should like to make a comment. We have maturing on July 1, 1969, but callable on July 1, 1944, some $56,704,000 of five per cent, dominion government guaranteed. I think we will all agree that those should be called. We come now to an item of $20,000,000 which is due February 1, 1952, but callable February 1, 1948. These bonds are three per cent, government guaranteed. On the surface it would not seem to be sound business to refund those three per cent bonds at three and a half per cent, and I presume that after a study is made by those in charge of the railroad these will not be called with the resultant expense that would occur. I think the same would apply to the next item of $25,000,000 which is due February 1, 1953, but is callable February 15, 1948. I appreciate the opportunity of placing these remarks on the record at this stage.

Sections 3 to 6 inclusive agreed to.

On section 7—Loans authorized to national company not exceeding aggregate amount of $200,000,000.

Mr. HARRIS (Danforth): I think in fairness to the committee and the house there should appear within the confines of the annual report to parliament a statement of what has been called and what it is proposed to call when the budget is presented for the coming year. The transactions of the current year are embodied in the railway report, but the budget does not give any idea of what the policy for the year following will be. As I say, I think the railroad should recite their policy so that we may have some idea of what it is to be with regard to financing from year to year.

Mr. JACKMAN: During the sittings of the railway committee I believe an item came up in connection with some two per cent C.N.R. bonds or C.N.R. equipment certificates which came due. Instead of the railway being allowed to go to the public market to replace these bonds with bonds bearing a similar rate of interest, they had to borrow from the government at three and a half per cent, the rate just mentioned by the parliamentary assistant. I do not think any such discrimination would be allowed against a private railway company. While I am not one who believes that the public is best served by public ownership I see no reason why there should be discrimination in the case of this refunding when it is not likely that any private company would be so discriminated against, particularly in connection with the refunding of an equipment issue.

I like to see the things owned by the public and those owned by private enterprise kept on an even keel so that a fair comparison can be made. For instance, recently I was in the North Bay office of the T.C.A. and I saw there a safe marked "C.N.R." At Lethbridge and Calgary the trucks which refueled the plane were United States army trucks. How are we to know that the accounts of publicly owned corporations such as the T.C.A. or the C.N.R. are on a fair or comparative basis unless they are treated in the same way as our private companies? I would suggest to the Minister of Transport or the Minister of Finance or the parliamentary assistant that the C.N.R. be allowed to refinance its maturing obligations in the same manner as a private company.

I realize that it makes no difference to the people of Canada whether the financing is done by the government at three and a half per cent or whether the railway company is allowed to go directly to the financial market to raise its own funds, but I think each compartment, if you like, should stand on its own feet. The C.N.R. should not be discriminated against in a special field of this kind.

WATER METERS INSPECTION

REPEAL OF ACT ASSENTED TO IN 1905

Hon. C. W. G. GIBSON (Minister of National Revenue) moved the second reading of bill No. 36, to repeal the Water Meters Inspection Act.

Motion agreed to, bill read the second time, and the house went into committee thereon, Mr. McCann in the chair.

On section 1—Act repealed.

Mr. POULIOT: Mr. Chairman, this is the kind of bill that I like, since I have moved similar bills to repeal some of Bennett's rotten social legislation. I was however, unsuccess-

ful. There should be a cleaning up of the statute book, and all pieces of legislation that are useless should be repealed. It is not a question of water meters. It is a question of cleaning up the statute book now. The practice—Senator Dandurand explained it well in the other chamber—is that when a government brings in legislation that is considered bad by the opposition, the opposition condemns it, but when it comes into power, all that legislation which has been so bitterly criticized is still left on the statute book, and the same thing happens when there is another change of government. Therefore, in the old cupboard we find dirty sheets piled up over clean sheets. What a mess! There is nothing clean at all. I submit that this bill should serve as a precedent and that lots of bills of the same sort should be passed to clean up the whole statute book.

Bill reported, read the third time and passed.

BUSINESS OF THE HOUSE

Mr. MACKENZIE KING moved the adjournment of the house.

He said: I should like to thank the hon. members for the cooperation they have given during the day in getting through the various measures that have been carried this afternoon and to-night.

Motion agreed to and the house adjourned at 11.05 p.m.

END OF VOLUME II.
