origi copy which repre	The Institute has attempted to obtain the best priginal copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the eproduction, or which may significantly change he usual method of filming, are checked below.			qu'il de d poin une mod	L'Institut a microfilmé le meilleur exemplaire qu'il lul a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifi une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de filmag sont indiqués ci-dessous.						

M di ei bi rig re m The copy filmed here has been reproduced thanks to the generosity of:

National Library of Canada

The images appearing here are the best quelity possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated Impression.

The last recorded frame on each microfiche shall contain the symbol → (meaning "CONTINUED"), or the symbol ▼ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

Bibliothèque nationale du Canada

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole → signifie "A SUIVRE", le symbole ▼ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents.
Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

" and with a higher and more stubborn spirit, CHAP.

" attached to liberty, than those to the North-

" ward. Such were all the ancient common-

" wealths; fuch were our Gothick ancestors;

" fuch in our days are the Poles; and fuch will

" be all masters of slaves, who are not slaves

" themselves (c)."

Possibly too, the climate itself, by increasing fenfibility, contributes to create an impatience of fubordination. But, whatever may be the cause of this consciousness of self-importance in the West Indian character, the consequences resulting from it are, on the whole, beneficial. If it fometimes produces an oftentatious pride, and a ridiculous affectation of splendour, it more frequently awakens the laudable propenfities of our nature-frankness, fociability, benevolence, and generofity. In no part of the globe is the virtue of hospitality more generally prevalent, than in the British Sugar Islands. The gates of the planter are always open to the reception of his guests. To be a stranger is of itself a sufficient introduction. This species of hospitality is indeed carried fo far, that, as Mr. Long has remarked, there is not one tolerable inn throughout all the West Indies (d). To

(c) Burke's Speech in Parliament, 22 March, 1775.

(d) There are some peculiarities in the habits of life of the White Inhabitants, which cannot fail to catch the eye of an European newly arrived; one of which is the contrast between

BOOK IV. To the same cause may perhaps be ascribed, on the other hand, that eagerness for litigation and juridical controversy, which so remarkably predominates in most of these Islands. From this unfortunate passion, ruinous as it frequently proves to individuals, this advantage however results to the community at large; that the lower orders of men, from their frequent attendance at the courts of law as jurymen, acquire a degree of knowledge, and a clearness and precision of reasoning, which are not generally to

tween the general plenty and magnificence of their tables (at least in Jamaica) and the meanness of their houses and apartments; it being no uncommon thing to find, at the country habitations of the planters, a splendid sideboard loaded with plate, and the choicest wines, a table covered with the finest damask, and a dinner of perhaps sixteen or twenty covers; and all this, in a hovel not superior to an English barn. A stranger cannot fail also to observe a strange incongruity and inconfiftency betweeen the great number of Negro domesticks, and their appearance and apparel. The butler (and he but feldom) is the only attendant that is allowed the luxury of flues and flockings. All the others, and there is commonly one to each guest, wait at table in barefooted majesty; some of them perhaps half-naked. Another peculiarity in the manners of the English in the West-Indies (in Jamaica especially) is the number of nautical expressions in their conversation. Thus they say, hand such a thing, instead of bring or give it. A plantation well stocked with Negroes, is faid to be well honded: an office or employment is called a birth; the kitchen is denominated the cook room; a warehouse is called a store, or store-room; a sopha is called a cot; a waistcoat is termed a jacket; and in speaking of the East and West, they say to windward and Leward. This language has probably prevailed fince the days of the bucaniers.

be found in men of the same rank in England. CHAP. Thus the petty juries in the West-Indies are commonly far more intelligent and respectable than those in Great Britain. Every candid person, who has attended the courts of criminal jurisdiction in both countries, must confirm this observation.

Bur it is to the Creoles or Natives, that we must look for the original and peculiar cast of character impressed by the climate, if indeed the influence of climate be fuch as many writers imagine. For myself, I am of opinion that the climate of the West Indies displays itself more strongly on the persons of the Natives, than on their manners, or on the faculties of their They are obvioufly a taller race, on the whole, than the Europeans; but I think in general not proportionably robust. I have known feveral who were full fix feet four inches in height; but they wanted bulk, to meet our ideas of masculine beauty. All of them, however, are diftinguished for the freedom and suppleness of their joints; which enable them to move with great ease and agility, as well as gracefulness, in dancing. From the same cause they excel in penmanship, and the use of the fmall fword. It has been truly observed, that the effect of climate is likewise obvious in the structure of the eye, the focket being considerably deeper than among the natives of Europe.

Bv

BOOK By this conformation, they are guarded from those ill effects which an almost continual strong glare of fun-thine might otherwise produce; and it is a curious circumstance, that their skin seels confiderably colder than that of a European; a proof, I think, that nature has contrived fome peculiar means of protecting them from the heat, which she has denied to the nations of temperate regions, as unnecessity. Accordingly, though their mode of living differs in no respect from that of the European refidents, they are rarely obnoxious to those inflammatory disorders which frequently prove fatal to the latter.

THE ladies of these Islands have indeed greater cause to boast of this fortunate exemption, than the men; a pre-eminence acquired undoubtedly by the calm and even tenour of their lives, and by an habitual temperance and felf-denial. Except the exercise of dancing, in which they delight and excel, they have no amusement or avocation to impel them to much exertion of either body or mind. Those midnight affemblies and gambling conventions, wherein health, fortune, and beauty, are fo frequently facrificed in the cities of Europe, are here happily unknown. In their diet, the Creole women are, I think, abstemious even to a fault. Simple water, or lemonade, is the strongest beverage in which they indulge; and a vegetable mess at noon, **feafoned**

many of the adherents of Cromwell, after the CHAP. reftoration of Charles II. found protection in Jamaica. At prefent, among the numbers whom accident or choice conducts to the British West Indies, the juniors in the learned professions of law, phyfick, and divinity, conflitute a confiderable body. These men ought to be, and, generally speaking, really are, persons of education and morals. Few places afford greater encouragement to the first and second of these employments; and, as ability is foftered and called forth by exercife, no part of the British dominion has, in my opinion, produced abler men in either (in proportion to their number) than thefe islands. Local prejudice, and bigotry towards great names, may perhaps incline some persons to dispute this affertion; but, prejudice and bigotry apart, it will be found, I believe, that Nature has diftributed the gifts of genius more equally and generally than is commonly imagined: it is cultivation and favour that ripen and bring them to perfection. The British Navy and Army likewife contribute confiderably to the augmentation of the White Inhabitants. Individuals in both these professions, either from the inducement of agreeable connections, which it would be strange if many of them did not form in a long residence in these countries, or captivated by the new profpects which open to their contemplation, very frequently B_3

BOOK frequently quit the business of arms, and the dangers of a tempestuous element, and become peaceful citizens and industrious planters. Next to these may be reckoned the mercantile part of the inhabitants, such as factors, store-keepers, bookkeepers, and clerks; who are followed by tradefmen and artificers of various kinds, fuch as millwrights, carpenters, masons, coppersmiths, and others; most of whom, either through accident or necessity, after some years residence, become adventurers in the foil. Then come the husbndmen, or cultivators of the land, professedly such; who are commonly diffinguished by the appellation of managers, overfeers, and plantation bookkeepers; and they conflitute a numerous body of people, composed of men of all countries and characters; for, unfortunately, every enterprising adventurer, who has either learned no particular trade, or has been brought up to one which is useless in these regions, fancies himself capable of fpeedily acquiring all the various knowledge of the fugar planter, and the right management and government of his fellow-creatures, the Negroes: though in truth a more weighty charge in itself, and one more important in its consequences, can scarcely fall to the lot of man.

> I HAVE, I think, in a former place, affigned the causes to which it is partly ascribable that emigrants from various parts of the mothercountry,

count **fugar** major mann educa descri as a h **ftale** tury a of pir of the pofiti

his e

s, and the nd become rs. Next to part of the pers, bookby tradefich as millmiths, and gh accident ce, become he hufbndfedly fuch; he appellaation bookerous body untries and enterprising o particular ne which is f capable of owledge of gement and e Negroes; rge in itself,

ce, affigned ibable that he mothercountry,

nsequences,

country, fuccessively constitute the bulk of the CHAP. fugar colonists; of whom it is certain that the major part retain, in a confiderable degree, the manners and habits of life in which they were educated. Yet there are authors who affect to describe the inhabitants of all the West Indies, as a herd of criminals and convicts; and cite the stale crimes and violences of lawless men, a century ago, when these islands were the rendezvous of pirates and bucaniers, as a just representation of the reigning colonial habits, manners, and difpositions!

CALUMNIES fo gross, defeat themselves by their abfurdity;—but although it is in the highest degree ridiculous to imagine that a voyage across the Atlantick creates any fudden or radical change in the human mind, yet, notwithstanding what has been just observed concerning local manners and habits in the different classes of European fettlers, it cannot be denied that there prevails besides, something of a marked and predominant character common to all the White residents.

OF this character it appears to me that the leading feature is an independent fpirit, and a display of conscious equality throughout all ranks and conditions. The poorest White person seems to confider himself nearly on a level with the richest, and, emboldened by this idea, approaches his employer with extended hand, and a freedom,

which, B 4

BOOK which, in the countries of Europe, is feldom difplayed by men in the lower orders of life towards their fuperiors. It is not difficult to trace the origin of this principle. It arises, without doubt, from the pre-eminence and distinction which are neceffarily attached even to the complexion of a White Man, in a country where the complexion, generally fpeaking, diftinguishes freedom from flavery. Of the two great classes of people in most of these colonies, the Blacks outnumber the Whites in the proportion of feven to one. As a fense of common safety therefore unites the latter in closer ties than are necessary among men who are differently fituated, fo the fame circumstance necessarily gives birth among them to reciprocal dependance and respect. Other causes contribute to the same end. "Where slavery" (says a great judge of human nature) " is established in " any part of the world, those who are free, are " by far the most proud and jealous of their free-"dom. Freedom is to them not only an en-" joyment, but a kind of rank and privilege.

> " Not feeing there, that freedom, as in countries " where it is a common bleffing, may be united " with much abject toil, with great mifery, with

emigrants

emigrants from North America, and a consi- CHAP. derable body of Jews. In Jamaica, the latter enjoy almost every privilege possessed by the Christian Whites, excepting only the right of voting at elections; of being returned to serve in the affembly, and of holding any office of magiftracy; but they have the liberty of purchafing and holding lands, as freely as any other people; and they are likewise allowed the publick exercise of their religion; for which purpose they have erected two or more fynagogues; and I have not heard that Jamaica has had any reason to repent of her liberality towards them. however, they differ but little in manners and customs from the rest of their nation which are dispersed in all the countries of Europe, I shall pass them by, without further detail. The other White Inhabitants, not comprehended in this enumeration, are too few to merit particular notice (a).

ΙT

(a) The following account of the White Inhabitants, Free-Negroes, and Slaves, in the French West Indies, may serve to gratify curiosity. It is taken from the authority of Mons. Neckar; but I have reason to think that the Negro Slaves are nearly doubled in the French Islands since this account was taken.

HISTORY OF THE

BOOK IV.

Ir may reasonably be supposed that most of the natives of Europe who emigrate to the West Indies, remove thither with the hope of receiving greater encouragement to their abilities and industry than has offered at home. Yet let it not be imagined that the major, or even any confiderable part, of them are desperate and needy adventurers, who feek refuge from a prison, or expatriate themselves in the fond idea of living luxurioufly without labour. These Islands give but little countenance to idleness, nor offer any afylum to vagabonds and fugitives. Many of the British Colonies were originally composed of men who fought, in the wildernesses of the New World, the peaceable enjoyment of those natural or supposed rights of which they were deprived in their native country. I extend this description to persons of opposite political fentiments and connections, to loyalifts as well as to republicans: for it is hoped that fome of each party were men whose principles were honest, though their conduct might have been wrong. The advocates of loyalty fought refuge chiefly in Barbadoes, and

437.736 many feasoned with cayenne pepper, conflitutes their principal repast. The effect of this mode of life, in a hot and oppressive atmosphere, is a lax sibre, and a complexion in which the lily predominates rather than the rose. To a stranger newly arrived, the ladies appear as just risen from the bed of sickness. Their voice is soft and spiritless, and every stranger betrays languor and lassitude. With the finest, ersons, they certainly want that glow of health in the countenance, that delicious crimson (sumen purpureum juventa) which, in colder countries, enlivens the coarsest set of features, and renders a beautiful one irresistible.

Youth's orient bloom, the blush of chaste desire, The sprightly converse, and the smile divine, (Love's gentler train) to milder climes retire, And full in Albion's matchless daughters shine.

In one of the principal features of beauty, however, few ladies surpass the Creoles; for they have, in general, the finest eyes of any women in the world; large, languishing, and expressive; sometimes beaming with animation, and sometimes melting with tenderness; a sure index to that native goodness of heart and gentleness of disposition for which they are eminently and defervedly applauded, and to which, combined with their system of life and manners (sequestered, domestick, and unobtrusive) it is doubtless

BOOK less owing, that no women on earth make better wives, or better mothers (e).

PERHAPS, the circumstance most distinguishable in the character of the Natives to which the climate feems to contribute, is the early display of the mental powers in young children; whose quick perception, and rapid advances in knowledge, exceed those of European infants of the fame age, in a degree that is perfectly unaccountable and aftonishing. This circumstance is indeed too striking to have escaped the notice of any one writer who has visited the tropical parts of America; and the fact being too well established to be denied, the philosophers of Europe have confoled themselves with an idea that, as the genius of the young West Indians attains fooner to maturity, it declines more rapidly than that of Europeans. Nature is supposed to act in this case in a manner analogous to her operations in the vegetable kingdom, where the trees that come soonest to perfection, are at the same time less firm and durable than those which require more time for the completion of their growth. It is indeed certain, that the fubsequent

(e) The Creole ladies are noted for very fine teeth, which they preserve and keep beautifully white by a constant use of the juice of a withe called the Chew-stick; a species of chamnus. It is cut into small pieces, and used as a toothbrush. The juice is a strong bitter, and a powerful detergent.

acquirements

acquirements of the mind in the Natives, do not CHAP. always keep pace with its early progress; but the chief cause (as Ulloa hath observed) of the short duration of fuch promising beginnings, seems to be the want of proper objects for exercifing the faculties. The propenfity also, which the climate undoubtedly encourages, to early and habitual licentiousness, induces a turn of mind and disposition unfriendly to mental improvement. Among fuch of the Natives as have happily efcaped the contagion and enervating effects of youthful excesses, men are found of capacities as strong and permanent, as among any people whatever.

As I cannot therefore admit that the Creoles in general poffess less capacity and stability of mind than the natives of Europe, much less can I allow that they fall short of them in those qualities of the heart which render man a bleffing to all around him. Generofity to each other, and a high degree of compassion and kindness towards their inferiors and dependents, diftinguish the Creoles in a very honourable manner (f). If they are proud, their pride is allied to no mean-

Ramfay, Essay on the Treatment and Conversion of the Slaves, &c.

nefs.

BOOK IV. ness. Instructed from their infancy to entertain a very high opinion of their own consequence, they are cautious of doing any act which may lessen the consciousness of their proper dignity. From the same cause they scorn every species of concealment. They have a frankness of disposition beyond any people on earth. Their considerace is unlimited and entire. Superior to falsehood themselves, they suspect it not in others.

How far this nobleness of disposition may be ascribed to the influence of a genial climate, and how far to education and example, I prefume not to discriminate. The effects of heat on the body are fufficiently visible; but perhaps Philosophers have relied too much on a supposed sympathy between the body and mind. "The Na-"tives of hot climates" (fays one writer) " are "flothful and timid;" but timidity is by no means the necessary consequence of indolence. The mind may require great force to rouse it to due exertion; but, being properly urged, may display qualities very opposite to those of a timid disposition. At least, timidity constitutes no part of the character of the Natives of the British West-Indies. Indolence, I admit, is too predominant among them; but that they are deficient in personal courage, no man, who has the smallest acquaintance with them, will allow for a moment.

moment.

Even

Even the indolence of which they are accused, is CHAP. rather an aversion to serious thought and deep reflection, than a flothfulness and fluggishness of nature. Both fexes, when the fprings of the mind are once fet in motion, are remarkable for a warm imagination and a high flow of spirits. feems indeed univerfally to reign among them a prompitude for pleasure. This effect has been ascribed, and perhaps justly, to the levity of the atmosphere (g). To the same cause is commonly imputed the propenfity observable in most of the West Indians to indulge extravagant ideas of their riches; to view their circumstances through a magnifying medium, and to feaft their fancies on what another year will effect. This anticipation of imaginary wealth is fo prevalent as to become juftly ridiculous; yet I am inclined to think it is a propenfity that exists independent of the climate and atmosphere, and that it arises principally from the peculiar fituation of the West Indian Planters as land-holders. having, like the proprietors of landed estates in Great Britain, frequent opportunities of letting their plantations to substantial tenants, they are, for the most part, compelled to become practical farmers on their own lands, of which the returns are, in the highest degree, sluctuating and uncer-

(g) Moseley on the Climate of the West Indies. Vol. II. \mathbf{C} tain.

воок tain. Under these circumstances, a West-Indian property is a species of lottery, and as such, it gives birth to a spirit of adventure and enterprise, and awakens extravagant hopes and expectations; too frequently terminating in perplexity and difappointment.

> Such are the few observations which I have noted concerning the character, disposition, and manners of the White inhabitants of these islands. I proceed now to perfons of mixed blood (ufually termed People of Colour) and Native Blacks of free condition. Of the former, all the different classes, or varieties, are not easily discriminated. In the British West Indies they are commonly known by the names of Samboes, Mulattoes, Quadroons, and Mestizes (h); but the Spaniards, from whom these appellations are borrowed, have many other and much nicer distinctions, of which the following account is given by Don Anthonio

(h) A Sambo is the offspring of a Black Woman by a Mulatto Man, or vice verfa.

Mulatto of a Black Woman by a White Man.

Quadroon of a Mulatto Woman by a White Man.

Mestize or Mustee of a Quadroon Woman by a White Man.

The offspring of a Mestize by a White Man are white by law. A Mestize therefore in our islands is, I suppose, the Quinteron of the Spaniards.

Ian are white by is, I suppose, the de Ulloa, in his description of the inhabitants of CHAP. Carthagena:

" Among the tribes which are derived from an intermixture of the Whites with the Negroes, the first are the Mulattoes; next to these are the Tercerones, produced from a White and a Mulatto, with fome approximation to the former, but not fo near as to obliterate their origin. After these, follow the Quarterones, proceeding from a White and a Terceron. The last are the Quinterons, who owe their origin to a White and Quarteron. This is the last gradation, there being no visible difference between them and the Whites, either in colour or features; nay, they are often fairer than the Spaniards. The children of a White and Quinteron confider themselves as free from all taint of the Negro race. Every person is so jealous of the order of their tribe or cast, that if, through inadvertence, you call them by a degree lower than what they actually are, they are highly offended. Before they attain the class of the Quinterones, there are several intervoning circumftances which throw them back; for between the Mulatto and the Negro, there is an intermediate race, which they call Samboes, owing their origin to a mixture between one of these with an Indian, or among themselves. twixt the Tercerones and Mulattoes, the Quarterones and the Tercerones, &c. are those called

de

Tente

BOOK Tente en el Ayre, Suspended in the air; because they neither advance nor recede. Children, whose parents are a Quarteron or Quinteron, and a Mulatto or Terceron, are Salto atras retrogrados; because, instead of advancing towards being Whites, they have gone backwards towards the Negro race. The children between a Negro and a Quinteron, are called Sambos de Negro, de Mulatto, de Terceron, &c."

> In Jamaica, and I believe in the rest of our Sugar Islands, the descendants of Negroes by White people, entitled by birth to all the rights and liberties of White subjects in the full extent, are fuch as are above three steps removed in lineal digression from the Negro venter. low this, whether called Mestizes, Quadrons, or Mulattoes, are deemed by law Mulattoes.

> ANCIENTLY there was a distinction in Jamaica between fuch of these people as were born of freed mothers (the maxim of the civil law, partus fequiter ventrem, prevailing in all our co-Ionies) and fuch as had been immediately releafed from flavery by deed or testament of their owners. While the former were allowed a trial by jury in criminal cases, the latter were tried in the fame way as the common flaves, by two juftices and three freeholders. Neither were the latter admitted as evidences against free-born persons, until the year 1748, when an act was paffed

paffe fame

AT the same time, the legal capacities which they possessed, were very imperfectly defined: The Mulattoes were allowed no other privilege than the freed Negroes, concerning whom (few of them being baptized, or supposed to be senfible of the nature of an oath) the courts of law interpreted the act of manumission by the owner, as nothing more than an abandonment or release of his own proper authority over the person of the flave, which did not, and could not, convey to the object of his bounty, the civil and political rights of a natural-born subject; and the fame principle was applied to the iffue of freed mothers, until after the third generation from the Negro ancestor.

THE principal incapacities to which these people are now subject, as distinct from the Whites, are these;

FIRST; In most of the British Islands, their evidence is not received in criminal cases against a White person, nor even against a person of Colour, in whose favour a particular act has been passed by the legislature. In this respect they feem to be placed on a worfe footing than the enflaved Negroes, who have mafters that are interested in their protection, and who,

if their flaves are maltreated, have a right to recover damages, by an action on the case *.

SECONDLY; They are denied the privilege of being eligible to ferve in parochial vestries and general assemblies; or of acting in any office of publick trust, even so low as that of a constable; neither are they permitted to hold commissions even in the Black and Mulatto companies of militia. They are precluded also from voting at elections of members to serve in the assembly. It may be urged, however, that the laws of England require baptism, and a certain degree of property, in similar cases.

THIRDLY; By an act of the affembly of Jamaica, paffed in the year 1762, it is enacted, that a testamentary devise from a White person to a Negro or Mulatto, not born in wedlock, of real or personal estate, exceeding in value £. 2,000 currency, shall be void, and the property descend to the heir at law.

As fome counterbalance however to these reftrictions, the assembly, on proper application, is readily enough inclined to pass private acts, granting the privileges of White people, with some limitations, to such persons of Colour as have been regularly baptized, and properly edu-

cated.

cated.

cated. On the fame ground, private bills are CHAP. fometimes passed to authorize gentlemen of fortune, under particular circumstances, to devise their estates to their reputed Mulatto children, notwithstanding the act of 1762.

Bur there is this mischief arising from the fyftem of rigour oftenfibly maintained by the laws against this unfortunate race of people; that it tends to degrade them in their own eyes, and in the eyes of the community to which they belong. This is carried fo far, as to make them at once wretched to themselves, and useless to the publick. It very frequently happens that the lowest White person, considering himself as greatly superior to the richest and best-educated Free man of Colour, will disdain to affociate with a person of the latter description; treating him as the Egyptians treated the Ifraelites, with whom they held it an abomination to eat bread. To this evil, arifing from publick opinion, no partial interposition of the legislature in favour of individuals, affords an effectual remedy; and the consequence is, that inflead of a benefit, these unhappy people are a burthen and a reproach to fociety. have no motives of fufficient efficacy either to engage them in the fervice of their country, or in profitable labour for their own advantage. Their progress in civility and knowledge is animated by no encouragement; their attachment is re-

C 4

ceived

B O O κ ceived without approbation; and their diligence

1V. exerted without reward (i).

I AM happy however to affert with truth, that their fidelity and loyalty have hitherto remained unimpeached and unfuspected. To the Negroes they are objects of envy and hatred; for the same or a greater degree of superiority which the Whites assume over them, the free Mulattoes lay claim to over the Blacks. These, again, abhor the idea of being slaves to the descendants of

(i) It would furely be a wife and humane law that should grant to every free Negro and Mulatto, the right of being a competent witness, in all criminal cases, and more especially in those of personal injury to himself *.- Perhaps indeed it might be proper to require of fuch persons the proof of Laptism, and the ability to read and write; and I think that some ufeful regulations might be made to apportion greater privileges to the coloured people according to their approximation to the Whites; a fystem which would not serve to confound, but to keep up and render useful those distinctions which local causes have created, and which it is not in the power of man to abolish. To the Quadrons and Mestizes for instance (who possess the necessary qualification in real property) I would grant the right of voting for representatives in the affembly. Such a privilege would give them an interest in the community, and attach them powerfully to its government. In favour of fuch perfons also, the act of 1762 might be modified. Whether it would be wife to repeal it altogether, is a deep and difficult question. Men who are unacquainted with local manners and cufloms, are not competent to pronounce an opinion in this cafe.

flaves.

Thus circumstanced, the general cha- CHAP. racter of the Mulattoes is strongly marked by the peculiarity of their fituation; and I cannot but think that they are, on the whole, objects of favour and compassion.

In their deportment towards the White people they are humble, fubmissive, and unassuming. Their spirits seems to fink under the consciousness of their condition. They are accused however of proving bad masters when invested with power; and their conduct towards their flaves is faid to be, in a high degree, harsh and imperious. I suspect there is some truth in this representation; for it is the general characteristick of human nature, that men whose authority is most liable to be disputed, are the most jealous of any infringement of it, and the most vigilant in its fupport.

THE accusation generally brought against the free people of Colour, is the incontinency of their women; of whom, fuch as are young, and have tolerable persons, are universally maintained by White men of all ranks and conditions, as kept mistresses. The fact is too notorious to be concealed or controverted; and I trust I have too great an esteem for my fair readers, and too high a respect for myself, to stand forth the advocate of licentiousness and debauchery. Undoubtedly, the conduct of many of the Whites

in

BOOK IV.

in this respect, is a violation of all decency and decorum; and an infult and injury to fociety. Let it not offend any modest ear, however, if I add my opinion, that the unhappy females here fpoken of, are much less deserving reproach and reprehension than their keepers. I say this, from confidering their education and condition in life; for fuch are the unfortunate circumstances of their birth, that not one in fifty of them is taught to write or read. Profitable instruction therefore, from those who are capable of giving it, is withheld from them; and unhappily, the young men of their own complexion, are in too low a state of degradation, to think of matrimony. On the other hand, no White man of decent appearance, unless urged by the temptation of a confiderable fortune, will condescend to give his hand in marriage to a Mulatto! The very idea is shocking. Thus, excluded as they are from all hope of ever arriving to the honour and happinels of wedlock, infenfible of its beauty and fanctity; ignorant of all christian and moral obligations; threatened by poverty, urged by their passions, and encouraged by example; upon what principle can we expect these ill-fated women to act otherwise than they do?

NEITHER should it be forgotten, at the same time, that very sew of these poor semales, in comparison of the whole, are guilty of that infamous species fpecies of flourithes the broad of Europe modell, a frequently wards their fomething of their cothough periage; and innocent; (for fo he in flourith of their cothough periage; and innocent;

ill-fated

species of profligacy and prostitution, which CHAP. flourishes, without principle or shame, and in the broad eye of day, throughout all the cities of Europe. In their drefs and carriage they are modest, and in conversation reserved; and they frequently manifest a fidelity and attachment towards their keepers, which, if it be not virtue, is fomething very like it. The terms and manner of their compliance too are commonly as decent, though perhaps not as folemn, as those of marriage; and the agreement they confider equally innocent; giving themselves up to the husband (for fo he is called) with faith plighted, with fentiment, and with affection.

THAT this system ought to be utterly abolished I most readily admit. Justice towards the many beautiful and virtuous young ladies refident in these islands, cries aloud for a thorough reformation of manners: But by whom is fuch a reform to be begun and accomplished? It can hardly be expected, I think, from the objects of our present enquiries, who are conscious of no vices which their christian instructors have not taught them; and whose good qualities (few and limited as they are) flow chiefly from their own native original character and disposition.

Or those qualities, the most striking is tendernels of heart; a foftnels or fympathy of mind towards affliction and diffress, which I conceive

BOOK 1V.

is feldom displayed in either extreme of prosperity or wretchedness. Those who have never experienced any of the viciflitudes and calamities of life, turn averse from the contemplation of them; and those again who are wretched themselves, have no leifure to attend to the sufferings of others: but the benevolence of the poor people of whom I treat, is not merely folitary and contemplative; it is an active principle, in which they may be faid particularly to excel; and I have the authority of a great writer before quoted (Don Anthonio De Ulloa) to support me in this representation. Speaking of their kindness to many poor Europeans, who, in the hopes of mending their fortunes, repair to the Spanish West-Indies, where they are utterly unknown, he has the following account of fuch of them as are called at Carthagena Pulizones; being, he fays, men without employment, flock, or re-" Many of these (he observes) commendation. after traversing the streets until they have nothing left to procure them lodging or food, are reduced to have recourse to the last extremity, the Franciscan hospital; where they receive, in a quantity barely fufficient to preserve life, a kind of pap made of cassada, of which the Natives themselves will not eat. This is their food: their lodging is the porticoes of the squares and churches, until their good fortune throws them

Now it is that the charity of the people of Colour becomes confpicuous. The Negro and Mulatto free women, moved at the deplorable condition of these poor wretches, carry them to their houses, and nurse them with the greatest care and affection. If any one die, they bury him by the alms they procure, and even cause masses to be said for his soul."

I BELIEVE that no man, who is acquainted with the general conduct and disposition of the same class of people in our own islands, will doubt that they would act as benevolently and humanely, under similar circumstances, as chose of Carthagena. Their tenderness, as nurses, towards the sick; their disinterested gratitude and attachment where savours are shewn them; and their peaceful deportment under a rigorous system of laws, and the influence of manners still more oppressive, assorted and liberal policy is not adopted towards them. The ensranchisement of such

BOOK IV. fuch as are enflaved, Christian instruction to the whole, and encouragement to their industry, would, in time, make them a useful and valuable class of citizens; induce them to intermarry with each other, and render their present relaxed and vicious system of life, as odious in appearance, as it is baneful to society (k).

HITHERTO I have confined myself to those people who, having some portion of Christian blood in their veins, pride themselves on that circumstance, and to the conscious value of which it is probable that some part of what is commendable in their conduct is owing. The

(k) The Rev. Mr. Ramfay has enlarged on the same idea concerning these unfortunate people. " Children of Mulatto " women, he observes (meaning, I presume, their children " by White men) should be declared free from their birth. " Intendants should be appointed to see them placed out in " time to fuch trade or bufinefs as may best agree with their " inclination and the demands of the colony: this should be " done at the expence of their fathers, and a fufficient fum " might be deposited in the hands of the churchwardens, " foon after their birth, to answer the purpose; the intendant " keeping the churchwardens to their duty. By these means " the number of free citizens would infenfibly increase in " the colonies, and add to their fecurity and strength. A new " rank of citizens, placed between the Black and White " races, would be established. They would naturally attach " themselves to the White race as the most honourable re-" lation, and fo become a barrier against the designs of the " Black, &c." All this, however, is eafily proposed in theory, but, I am afraid, more difficult to adopt in practice than Mr. Ramfay was aware of.

THE

SABLE VENUS;

An ODE.

(Written in Jamaica.)

Alba ligustra cadunt vaccinia nigra leguntur. VIRG.

BOOK IV. I LONG had my gay lyre forfook,
But strung it t'other day, and took
T'wards Helicon my way;
The muses all, th' assembly grac'd,
The president himself was plac'd,
By chance 'twas concert-day.

ERATO simil'd to see me come;
Ask'd why I staid so much at home;
I own'd my conduct wrong;
But now, the sable queen of love,
Resolv'd my gratitude to prove,
Had sent me for a song.

The ladies look'd extremely fly,

APOLLO's finile was arch and fly,

But not one word they faid:
I gaz'd,—fure filence is confent,—
I made my bow, away I went;

Was not my duty paid?

Come to my bosom, genial fire,
Soft sounds, and lively thoughts inspire;
Unusual is my theme:
Not such dissolving Ovid sung,
Nor melting Sappho's glowing tongue,
More dainty mine I deem.

С Н А Р. І.

Sweet is the beam of morning bright,
Yet sweet the sober shade of night;
On rich Angola's shores,
While beauty clad in sable dye,
Enchanting fires the wond'ring eye,
Farewell, ye Paphian bow'rs.

O fable Queen! thy mild domain

I feek, and court thy gentle reign,
So foothing, foft and fweet;

Where meeting love, fincere delight,
Fond pleafure, ready joys invite,
And unbought raptures meet.

The prating FRANK, the SPANIARD proud,
The double Scot, HIBERNIAN loud,
And fullen English own
The pleasing softness of thy sway,
And here, transferr'd allegiance pay,
For gracious is thy throne.

From East to West, o'er either Ind'
Thy scepter sways; thy pow'r we find
By both the tropicks felt;
The blazing sun that gilds the zone,
Waits but the triumphs of thy throne.
Quite round the burning belt.

When thou, this large domain to view,

JAMAICA's ifle, thy conquest new,

First left thy native shore,

Bright was the morn, and soft the breeze,

With wanton joy the curling seas

The beauteous burthen bore.

Of iv'ry was the car, inlaid
With ev'ry shell of lively shade;
The throne was burnish'd gold:
The footstool gay with coral beam'd,
The wheels with brightest amber gleam'd,
And glist'ring round they roll'd.

The peacock and the offrich fpread
Their beauteous plumes, a trembling shade,
From noon-day's sultry slame:
Sent by their fire, the careful East,
The wanton breezes fann'd her breast,
And slutter'd round the dame.

CHAP. II.

Of Negroes in a state of Slavery .-- Pre" .inary Obfervations .- Origin of the Slave Trade .- Portugueje Settlements on the African Coast .- Negroes introduced into Hispaniola in 1502, and the Slave Trade revived at the instance of Barth. de las Cafas, in 1517.—Hawkins's Voyages to the Coast, in 1562 and 1563.—African Company established by James I .- Second charter in 1631 by Charles I .- Third charter in 1662. - Fourth charter in 1672.—Effect of the Petition and Declaration of Right in 1688 .- Acts of the 9th and 10th of William and Mary, c. 26.-New regulations in 1750.—Description of the African Coaft. - Forts and Factories. - Exports from Great Britain.—Number of Negraes transported annually to the British Colonies .- State of the Trade from 1771 to 1787.—Number of Negroes at this time exported annually by the different Nations of Europe.

 ${f T}$ HE progress of my work has now brought me $\,$ C H A P. to the contemplation of human nature in its most debased and abject state; -to the sad profpect of 450,000 reasonable beings (in the English islands only) in a state of barbarity and slavery; of whom -I will not fay the major part, but-

D 4

great

воок 1V. great numbers affuredly, have been torn from their native country and dearest connections, by means on which no good mind can reflect but with sentiments of disgust, commiseration, and forrow!

I AM not unapprized of the danger I incur at this juncture (a) in treating the subject of African Slavery, and the Slave Trade. By endeavouring to remove those wild and ill-founded notions which have been long encouraged by misinformed writers in Great Britain, to the prejudice of the inhabitants of the British Sugar Islands, I am conscious that I shall be exposed to all that "bitterness and wrath, and anger and clamour, and evil-speaking and malice," with which it has long been popular to load the unfortunate flave-holder: yet nothing is more certain than that the Slave Trade may be very wicked, and the planters in general very innocent. By far the greatest part of the present inhabitants of the British West Indies came into possession of their plantations by inheritance or Many perfons there are, in Great Britain itself, who amidst the continual fluctuation of human affairs, and the changes incident to property, find themselves possessed of estates in the West Indies which they have never feen, and invested with powers over their fellow creatures

(a) Alluding to the petitions depending in parliament (1791) for an abolition of the Slave Trade.

in parliament

there,

there, which, however extensively odious, they have never abused: some of these gentlemen, unacquainted with local circumstances, and misled by the popular outcry, humanely gave orders to emancipate all their flaves, at whatever expence; but are fince convinced that their benevolent purposes cannot be carried into effect confistently even with the happiness of the Negroes themfelves.-The Reverend Society established in Great Britain for propagating the Gospel in foreign parts, are themselves under this very predicament. That venerable body hold a plantation in Barbadoes under a devise of Colonel Codrington; and they have found themselves not only under the disagreeable necessity of supporting the fystem of flavery which was bequeathed to them with the land; but are induced also, from the pureft and best motives, to purchase occafionally a certain number of Negroes, in order to divide the work, and keep up the flock. well know that moderate labour, unaccompanied with that wretched anxiety to which the poor of England are subject, in making provision for the day that is passing over them, is a state of comparative felicity: and they know also, that men in favage life have no incentive to emulation: perfuasion is lost on such men, and compulfion, to a certain degree, is humanity and charity.

CHAP.

THE

BOOK IV. The question then, and the only question wherein the character of the planters is concerned, is this:—Making due allowance for human frailty under the influence of a degree of power ever dangerous to virtue, is their general conduct towards their flaves such only as necessarily results from their situation? If to this enquiry, an affirmative be returned, surely Christian charity, though it may lament and condemn the first establishment of a system of slavery among them, and the means by which it is still kept up and supported, will not hastily arraign those who neither introduced, nor, as I shall hereafter shew, have been wanting in their best endeavours to correct and remedy many of the evils of it.

HAVING premifed thus much, I shall now proceed to lay before my readers some account of the origin and present state of the Slave Trade, between the nations of Africa and such of the States of Europe as are concerned in it: this will constitute what remains of the present chapter. In the next, I shall offer some thoughts on the Negro character and disposition: after which I shall treat; first, of the means by which slaves are procured in Africa; secondly, of the mode of conveying them to the West Indies; and thirdly, of their general treatment and situation when sold to the planters there: an arrangement which will afford opportunities of illustrating the foregoing

going observations, by enabling me to intersperse CHAP. fuch reflections as occur to my mind on the feveral petitions now depending in parliament for a total abolition of the Slave Trade, all or the greatest part of which are grounded on abuses charged to exist under those several heads.

In the year 1442, while the Portuguese, under the encouragement of their celebrated Prince Henry, were exploring the coast of Africa, Anthony Gonsalez, who two years before had seized fome Moors near Cape Bojador, was by that prince ordered to carry his prisoners back to Africa: he landed them at Rio del-Oro, and received from the Moors in exchange, ten Blacks, and a quantity of gold dust, with which he returned to Lisbon.

THE fuccess of Gonsalez, not only awakened the admiration, but stimulated the avarice of his countrymen; who, in the course of a few fucceeding years, fitted out no less than thirtyfeven ships in pursuit of the same gainful tras-In 1481, the Portuguese built a fort on the Gold Coast; another, some time afterwards, on the Island of Arguin; and a third at Loango Saint Paul's, on the coast of Angola; and the king of Portugal took the title of Lord of Guiney.

So early as the year 1502, the Spainards began to employ a few Negroes in the mines of I-Hipaniola: IV.

BOOK niola; but, in the year following, Ovando, the governor of that island, forbad the further importation of them; alledging, that they taught the Indians all manner of wickedness, and rendered them less tractable than formerly (b). So dreadfully rapid, however, was the decrease of these last-mentioned unfortunate people, as to induce the court of Spain a few years afterwards, to revoke the orders issued by Ovando, and to authorize, by royal authority, the introduction of African Slaves from the Portuguese Settlements on the coast of Guiney. In the year 1517, the Emperor Charles V. granted a patent to certain persons for the exclusive supply of 4,000 Negroes annually, to the islands of Hispaniola, Cuba, Jamaica, and Puerto Rico (c). This patent having been affigned to some Genoese merchants, the supply of Negroes to the Spanish American plantations became from that time an established and regular branch of commerce.

> THE concurrence of the Emperor in this measure was obtained at the solicitation of Bartholomew de las Cafas, Bishop of Chiapa, the celebrated protector and advocate of the Indians; and the conduct of this great prelate, on that occasion, has been the subject of much censure and

animadversion. He is charged with the ini- CHAP. quitous abfurdity of reducing one race of men to flavery, while he was concerting the means of restoring freedom to another. "While he contended," fays a late writer (d), "for the liberty of the people born in one quarter of the globe, he laboured to enflave the inhabitants of another region; and, in the warmth of his zeal to fave the Americans from the yoke, pronounced it to be lawful and expedient to impose one, still heavier, upon the Africans." It would be difficult perhaps to fay what yoke could well be heavier than the rigorous one imposed by the Spaniards on the wretched Indians; under which, as the same Historian elsewhere relates, the Natives of Hispaniola "were reduced, in the short fpace of fifteen years, from at least a million, to fixty thousand." But the conduct of Las Casas is not fully and fairly stated in the foregoing representation; for it supposes that each class of pleople (the Negroes and Indians) was found in a fimilar condition and fituation of life, whereas it is notorious that many of the Negroes imported from Africa, are born of enflaved parents, are bred up as Slaves themselves, and as such have been habituated to labour from their infancy. On this account we are told, that one able

(d) Robinson, Hist. Amer.

Negro

BOOK Negro was capable of performing the work of four Indians. On the other hand, the condition of these last-mentioned people was widely re-" The inhabimoved from a state of flavery. tants of these islands," says a cotemporary writer, " have been fo used to the enjoyment of liberty, in a life of plenty and pastime, that the yoke of fervitude is insupportable to them; and asfuredly, if they would but embrace our holy religion, they would be the happiest of human beings in the enjoyment of their ancient free-Las Casas therefore contended, readom (e)." fonably enough, that men inured to fervitude and drudgery, who could experience no alteration of circumstances from a change of masters, and who felt not the fentiments which freedom alone can inspire, were not so great objects of commiseration, as those who, having always enjoyed the fweets of unbounded liberty, were fuddenly deprived of it, and urged to tasks of labour which their strength was unable to perform. Las Casas could neither prevent nor foresee the abuses and evils that have arisen from the system of traffick recommended by him, and is not therefore justly chargeable with the rashness, abfurdity, and iniquity, which have fince been imputed to his conduct.

a short time after his arrival on the coast, got into his possession, partly (says Hakluyt) by the sword, and partly by other means, to the number of 300 Negroes, besides other merchandize, with which he proceeded directly for Hispaniola, and touching at different ports in that island, disposed of the whole of his cargo in exchange for hides, ginger, sugar, and some pearls; and arrived in England in September 1563, after a very prosperous voyage, which brought great profit to the adventurers.

THE fuccess which had attended this first expedition, appears to have attracted the notice, and excited the avarice of the British government; for we find Hawkins, in the year following, appointed to the command of one of the Queen's ships, the Jesus of 700 tons, and with the Solomon, the Tiger, a bark of 50 tons, and the Swallow, a bark of 30 tons, fent a fecond time on the fame trading expedition; but with what part of the profits for his own thare, is not mentioned. He failed from Plymouth, the 18th of October 1564, and the fame day joined at fea the Minion, another of the Queen's ships, commanded by captain David Carlet, and which, with two others, the John Baptist, and the Merlin, were likewise bound for Guiney.

THE history of this voyage is related at large

in Hakluyt's Collection, by a person who em- CHAP. barked with Hawkins; from whose account it appears, that the fleet was dispersed by a violent gale of wind, in the Bay of Biscay; that the Merlin caught fire and blew up; that the John Baptist put back, but that all the other vessels arrived at length at Cape Verde, on the Coast of Africa. "The people of Cape Verde," fays the writer, " are called Leophares, and are counted " the goodliest men of all others saving the "Congces, who inhabit this fide the Cape de " Buena Esperance. These Leophares have wars " against the Jaloffs, which are borderers by " them. These men also are more civil than " any other, because of their daily trafficke with " the Frenchmen, and are of a nature very gentle " and loving. Here we stayed but one night, " and part of the day, for the 7th of December " we came away; in that intending to have " taken negroes there perforce; the Minion's " men gave them to understand of our coming, " and our pretence; wherefore they did avoyde " the snares we had lay'd for them."

IT feems probable from this account, that the captain of the Minion having an independent command, was jealous of Hawkins's authority, or, it is rather to be hoped, was shocked at the excesses to which his avarice urged him, in laying fnares to seize and carry off the unoffending Na-Vol. II. tives. \mathbf{E}

After this, the Minion no longer acted in concert, nor failed in company with Hawkins and his fquadron.

On the 8th of December, Hawkins anchored at a small island called Alcatrasa. At this place we are informed that the Jesus and Solomon riding at anchor, the two barks with their boats, went to an ifland belonging to a people called the Sapies, to see if they could take any of the inhabitants. The English landed, to the number of eighty, with arms and ammunition; but the Natives flying into the woods, they returned without fuccess. A short time afterwards, we find this righteous commander at one of the islands which are called Sambula. " In this " island (says the writer) we stayed certain dayes, " going every day on shore to take the inhabi-" tants with burning and spoiling their towns. His avowe "These inhabitants (who were called Samboes) seize by st " hold divers of the Sapies taken in war as their unfuspection "flaves, whom they kept to till the ground, as Slaves t " of whom we took many in that place, but of purfuit, hi " the Samboes none at all; for they fled into employmen " the maine." The writer then proceeds to give He made an account of the manners and customs of these the same people; and relates, among other particulars, that which the flavery is the established punishment for thest minated n " If a man (fays he) fteals but a Portugal cloth fome years, from another, he is fold to the Portugals for the English

flave." He relates further, that the Samboes, CHAP. in a time of scarcity, devoured their captives, for want of better food.

THE rest of Hawkins's adventures are nothing to my present purpose. What has been quoted, is fufficient to demonstrate that a regular traffick had been established, so early as the year 1564, both by the Portuguese and the French, with some nations of Africa, for the purchase of Slaves; that this intercourse was founded on mutual contract, and tended to civil a ca Natives on the y returned Coast; some nations of whom were possessed of Slaves, which they kept for the purposes of agriculture; and occasionally killed for food; a horrid practice, that, I believe, no longer exists rtain dayes, In this part of Africa. In regard to Hawkins the inhabi himself, he was, I admit, a murderer and a robber. their towns. His avowed purpose in sailing to Guiney, was to dead Samboes, seize by stratagem or force, and carry away, the war as their unfuspecting Natives, in the view of felling them he ground, as Slaves to the people of Hispaniola. In this place, but of pursuit, his object was present profit, and his cy fled into employment and pastime devastation and murder. ceeds to give He made a third voyage to Africa in 1568, for oms of these the same purpose, with a squadron of six ships, iculars, that which the reader will not be forry to find tert for theft minated most miserably; and put a stop, for rtugal cloth some years, to any more piratical expeditions of portugals for the English to the coast of Africa.

E 2

THE

ROOK IV.

THE first notice which I find in history of an actual attempt by the British nation to establish a regular trade on the African Coast, is in the year 1618, when King James I. granted an exclusive charter to Sir Robert Rich, and some other merchants of London, for raising a joint flock for a trade to Guiney: thips were accordingly fitted out; but the profits not being found to answer expectation, the proprietors foon afterwards withdrew their contributions; and the charter was fuffered to expire (f).

In 1631, King Charles I. erected by charter a fecond company for a trade to Africa; granting to Sir Richard Young, Sir Kenelm Digby, and fundry merchants, to enjoy the fole trade to the Coast of Guiney, between Cape Blanco and the Cape of Good Hope, together with the isles adjacent, for 31 years to come. 'As the English had by this time began the fettlement of plantations in the West Indies, Negroes were in such demand as to induce the new company, at a great expence, to erect forts and warehouses on the Coast, for the protection of their commerce; but so many private adventurers and interlopers

(f) Queen Elizabeth is faid to have granted a patent in the 30th year of her reign, for carrying on an exclusive trade from the river Senegal to a hundred leagues beyond Siem Leone; but I do not find that any voyage was ever made in confequence of it.

a patent in the exclusive trade beyond Siem s ever made in of all nations, broke in upon them, as in effect CHAP. to force the trade open, and so it continued until after the restoration of Charles II.

In the year 1662, a third exclusive African company was incorporated, confisting of many persons of high rank and distinction; at the head of whom was the king's brother, the duke of York. This company undertook to supply our West Indian plantations with 3,000 Negroes annually; but in 1664, the king intending to make war on the Dutch, fecretly fent Sir Robert Holmes to the Coast, with orders to seize the Dutch forts near Cape Verde; in which fervice Holmes fucceeded, and built at the fame time a new fort at the mouth of the River Gambia, alled James Fort, which we still hold. Thence failing fouthward, he mastered all the Dutch actories on the Guiney Coast, except St. George D'Elmina and Acheen; all of which were however retaken in 1665, by De Ruyter, the Dutch dmiral; together with the Fort of Koromantyn, belonging to the English company, which (if I mistake not) the Dutch hold at this day, by the name of Fort Amsterdam.

In 1672 (the third company having in this rear furrendered their charter to the crown) the ourth and last exclusive company was established. t was dignified by the title of the Royal African of Company, and had, among its fubscribers, the

King, the duke of York, and many other persons of high rank and quality; and the whole capital of £. 111,000 was raised in nine months. of this fubscription, the late company was allow. ed £. 34,000 for their three forts of Cape Coast Castle, Sierra Leone, and James Fort. The new company foon improved their trade, and increased the numbert of their forts; and, as all former companies were obliged to fend to Holland to make up an affortment for the cargoes of their ships, they now introduced into England the making of fundry kinds of woollen goods, and other manufactures not before known; and they imported from the Coast great quantities of gold, out of which, in 1673, 50,000 guineas (fo named from the country) were coined. There also imported redwood for dyers, ivory, wax, and fome other valuable commodities, and they exported to the value of f. 70,000 annually in English goods.

But the revolution in 1688 changed the fcene; for by the 1st of William and Mary, at the Petition and Declaration of Right is commonly called, the African and all other exclusive companies not authorized by parliament, were abolished: the African trade, therefore, became in fact, free and open; although the company still persisted in seizing the ships of separate traders; a measure which occasioned much cla-

trade. The disputes which this conduct gave hs. Out to be brought again to remembrance.

In 1689 was established the first Assento company for supplying the Spanish West Indies with Negroes from Jamaica; and in 1698 the trade to Africa, which, by the Petition of Right was virtually laid open, was expressly made so, under certain conditions; for by statutes 9 and 10th of Will. and Mary, c. 26. it was enacted—

"THAT for the preservation of the trade, and for the advantage of England and its Colonies, it should be lawful for any of the subjects of his Majesty's realm of England, as well as for the company, to trade from England and the Plantations in America to Africa, between Cape Mount and the Cape of Good Hope; upon paying for the aforesaid uses a duty of 10 per cent. ad valorem, for the goods exported from England or the Plantations, to be paid to the collector at the time of entry outwards, for the use of the company.

The fame liberty was given to trade between Cape Blanco and Cape Mount; but, in addition to the 10 per cent. on exportation, there was to be paid a further fum of 10 per cent. ad valorem, on all goods and merchandize, redwood

BOOK excepted, which was to pay only 5 per cent. at the place of exportation, imported into England, or the Plantations, from the coast between Cape Blanco and Cape Mount. The duties so paid were to be applied to the maintenance of the forts and castles, the providing ammunition, and foldiers. The company were yearly to render an account of the receipt of these duties and their application, to the Cursitor Baron of Exchequer.

> Persons paying these duties were to have the fame protection and defence for their persons, flips, and goods, from the forts and castles, and the same freedom and security for their negociations and trade, as the company. They might fettle factories within their limits, and were to be free from all moleftations from the company.

> No duty imposed by this act was to extend to Negroes exported, or to gold and filver, nor was the act to be so construed as to hinder any one from trading to that part of Africa, commonly called South Barbary, extending foutherly as far as Cape Blanco."

AGAINST the regulations of this law, which was to continue in force for 13 years, both the company and many of the private traders remonstrated without effect; and the company's affairs, in the course of a few years, declined to

fo great a degree, that they were unable either CHAP. to support their factories with new investments, or to pay the debts which they had already incurred. Parliament, at length was induced to give them fome affiftance; and in 1739 voted £. 10,000 for that purpose, and the like sum annually until the year 1744, when, by reason of the war with France and Spain, the grant was doubled. In each of the two fucceding years f. 10,000 was again voted; -but nothing was granted for 1747.

In the year 1750 the African trade, after having passed, as we have seen, through different constitutions and conditions, assumed a new appearance; for in that year the law took place under which it still exists, and is at present regulated. It is entitled, "An act for extending and improving the trade to Africa;" the terms and conditions whereof I need not fet forth, as the act itself is so easily referred to. Of the several countries, however, which with the trade is at prefent carried on, and the state of it for some years past, some particulars may be necessary. count will be brief; there being many descriptions of Guiney extant; and an abridgment and fummary of the best histories (collated and arranged with great judgment and accuracy) are given to the public in Aftley's collection of voyages; wherein

BOOK wherein the reader will find much curious and IV. uleful information (g).

THAT part then of the African coast on the Atlantick Ocean, with which the people of Europe have an intercourse, extends from Cape Blanco, in 21° N. latitude, to a Portuguese settlement called Loango St. Paul's, in the kingdom of Angola, lat. 9° S. comprehending a line of coast of upwards of 1,300 English leagues, and consisting of various countries, inhabited by a great number of savage nations, differing widely from each other, in government, language, manners, and superstitions.

THE first of these countries, in which the British have an establishment, is the province of Senegambia; including the river Senegal, which opens into the Western ocean in nearly 16 degrees, and the river Gambia in 13° ½ N. latitude. Both these rivers are navigable many hundred miles up the country. The Negroes obtained from this part of Africa are known to

(g) In the year 1763 Senegal and its dependencies were vested in the African Company; but in 1765 the same became vested in the crown, and the trade was laid open. Thus the whole African trade is free to all his Majesty's subjects; but that part of it which is carried on between Port Sallee and Cape Rouge is under the direction of government. From Cape Rouge to the Cape of Good Hope, the English forts are under the direction of a committee of the company.

the

of Mandingoes.

From Cape Roxo (or Rouge) to Cape Appollonia, the European fettlements, except a fmall English factory in the river Sierra Leone, are chiefly those of the Portuguese.—The Negroes obtained through their means, as well as from

the English factory, are likewise called Mandingoes—I elieve improperly; as many different languages are spoken on the coast between Senegal and Appollonia. This part of Africa is commonly called the Windward Coast.

THE Gold Coast extends from Cape Appollonia to the river Volta, comprehending a line of 100 leagues. The maritime country is divided into a number of petty states or principalities, feemingly independent of, and often at war with, each other; the chief of which are Axim, Ante, Adom, Jabi, Commani, Fetu, Sabou, Fantyn (a rich and powerful people) Acron, and Agonna; fome of which are faid to maintain a republican, or more properly an aristocratical, form of govern-Of the inland country we know but ment. little more than that it confifts of three extensive kingdoms, called Affiantee (or Shantee) Akim, and Aquambou; each of which supplies the maritime states with great numbers of slaves, which they fell to the Europeans. In the British West Indies, most of the Negroes purchased on the Gold

роок IV. Gold Coast, are known by the general appellation of Koromantees, from Koromantyn, one of the earliest of our factories on this part of the African coast, as liath been already observed, but which is now become an infignificant village, or factory, in possession of the Dutch. It is situated in the kingdom of Fantyn, two miles from the fort of Anamaboe.—I believe that the same, or different dialects of the same language, is spoken throughout all the Gold Coast countries.

From the river Volta to the river Lagos, extends the Whidah country, (at present a province to the king of Dahomey, a great inland kingdom) by fome geographers confidered as part of the Gold Coast; by others denominated The Slave Coast proper. It begins with the small and barren state of Koto or Lampi, next to which is the kingdom of Adra, comprehending the subordinate maritime principalities of Great and Little Popo, or Papaw; from whence the Whidah Negroes are called generally, by the British traders, Papaws. The Whidah language, except as to the inhabitants of Koto, is peculiar and appropriate. The people of Koto fpeak a dialect of the Gold Coast, and there is a tribe of Whidah Negroes called Nagoes, who have a dialect which, though understood by the Papaws, differs from the Whidah language in many particulars.

West of the river Lagos begins the great kingdom

kingdom of Benin, the coast of which forms a CHAP. gulph or bight, ending at Cape Lopez, wherein are situated the trading places (being so many villages on the banks of several rivers) of Benin, Bonny, Old and New Callabar, Cameron, and Gaboon.

The flaves purchased on this part of the coast, have the general denomination of *Ebocs*; probably from Arebo, the name of a village, formerly a considerable town, on the river Benin. Some of them (a tribe, I believe, from the interior country) are likewise called *Mocoes*. In language they differ both from the Gold Coast Negroes and those of Whidah, and in some respects from each other; for from Whidah to Angola, the dialects vary at almost every trading river.

FROM Cape Lopez to the river Congo, distant 140 leagues, I believe the trade is chiefly engrossed by the Dutch and the French. To the southward of this river, very little trade is carried on by any Europeans except the Portuguese, who, as hath been observed, have a large city at Loango St. Paul's, on the Coast of Angola, strongly fortissed; from which place they have penetrated quite through the country to their settlements at, and south of, Mozambique, upon the eastern coast of Africa, where they have caravans constantly going and returning, and by that

means

BOOK means carry on an extensive and advantageous inland commerce.

> THE whole number of forts and factories established on the coast by the different powers of Europe, is I believe forty; of which fourteen belong to the English, three to the French, fifteen to the Dutch, four to the Portuguese, and four to the Danes.

> THE commodities exported by the British traders to Africa, confift chiefly of woollens, linens, Manchester goods, Birmingham and Sheffield goods; East Indian filks and mixed goods; English printed callicoes and cottons; ready-made cloths, mufquets, bayonets, cutlaffes, gunpowder, fhot, wrought and unwrought brass and copper, lead, pewter, wrought and unwrought iron, hats, worsted caps, earthen ware, British spirits, rum and brandy, tea, fugar, coffee and provisions of every kind.—The annual value, of late years, is estimated on an average at about £. 800,000 sterling.

> In some parts of the coast there is a duty paid on each ship, to the king or chief man of the country; which is called his customs. In other parts this is not exacted; but it is only in fuch places as have but little trade. When permiffion is obtained to trade, the flaves are fometimes brought by the Black merchants on board the

ships, and there fold; and fometimes they are CHAP. purchased on shore at the merchants houses, and brought off to the ships by the captains; after which the Black traders come on board to receive payment. In these particulars, circumstances and fituations very often change the mode, just as an opposition among a number of purchasers makes it more or less necessary. Many of the factories on the coast are private property; of course they procure flaves for the ships in their own concern. Sometimes they barter flaves with strangers, in order to enlarge their own affortment of goods, or to procure fome particular commodities of which they are in want. Among the forts, the officers that belong to them carry on trade more or less with the shipping as their circumstances will admit, and according as they are more or less independent; but the Black traders are supposed to sell their slaves about forty shillings each cheaper than the factories.

In those parts of the coast to which shipping duty paid refort all the year, the intercourse between the Black traders within land (for an extent as yet unexplored by any White person) and those on the coast, is constant and regular; but we have no fufficiently precise and particular account of fometimes the manner in which this constant supply of slaves board the for fale is kept up and supported. I shall hereships, after give the best information I have been able

BOOK to collect on this head. I regret that I have not fusficient materials to enable me to furnish an accurate statement of the number of Africans that have been transported to the British colonies fince their first settlement. However, that curiofity may not be wholly disappointed, I have collected fuch materials as I think will enable the reader to form some judgment in this respect, which probably will not be very wide of the truth.

> In the various publications with which the press abounded during the time that the disputes between the African Company and the private traders were an object of national concern, it is afferted by one party, and not denied by the other, that about 140,000 Negroes had been exported by the company, and 160,000 more by private adventurers, between the years 1680 and 1700: Total 300,000. From 1700 to December 1786, the number imported into Jamaica was 610,000. I fay this on fufficient evidence, having in my possession lists of all the entries. Of the number imported during the fame interval into the fouthern provinces of North America, as well as the Windward Islands, I cannot speak with precision; but I am of opinion that the Jamaica import may fairly be reckoned onethird of the whole. On these grounds, the total import into all the British colones of America

This defalcation was unquestionably owing to the late war, on the termination of which the trade immediately began to revive, as appears by the following account of the Negroes imported into and exported from the British West Indian Islands, from 1783 to 1787 (both years inclusive); viz.

Or the miserable people thus condemned to perpetual exile and servitude, though born in various and widely-separated countries, it is not easy to discriminate the peculiar manners and native propensities. The similar and uniform system of life to which they are all reduced; the sew opportunities and the little encouragement that are given them for mental improvement; are circumstances that necessarily induce a predominant and prevailing cast of character and disposition. "The day," says Homer, "which makes man a slave, takes away half his worth," and, in fact, he loses every impulse to action, except that of sear. Nevertheless, there are among several

Mandingoes, or Natives of the Windward Coast.—
Mahometans.—Their wars, manners, and perfons.—Koromantyn Negroes, or Natives of the
Gold Coast.—Their ferocionsness of disposition displayed by an account of the Negro rebellion in
Jamaica in 1760.—Their national manners, wars,
and superstitions.—Natives of Whidak or Fida.
—Their good qualities.—Nagoes.—Negroes from
Benin.—Persons and tempers.—Canibals.—Natives of Kongo and Angola.—Survey of the
character and dispositions of Negroes in a state of
slavery.

B O O K

Most, if not all, the nations that inhabit that part of Africa which lies to the northward and eastward of Sierra Leone, are Mahometans; and following the means of conversion prescribed by their prophet, are, as we are told, perpetually at ar with such of the surrounding nations as refuse to adopt their religious tenets. The prisoners taken in these religious wars surnish, I doubt not, great part of the slaves which are exported from the sactories on the Windward Coast; and it is probable that death would be the sate of most of the captives, if purchasers were not to be met with.

But the Mandingoes have frequent wars with CHAP. each other, as well as with fuch nations as they consider enemies of their faith; and I am afraid that some of these wars arise from motives even less justifiable than religious zeal. An old and faithful Mandingo fervant, who stands at my elbow while I write this, relates, that being fent by his father to vifit a diffant relation in a country wherein the Portuguese had a settlement, a fray happened in the village in which he refided; that many people were killed, and others taken prisoners, and he himself was seized and carried off in the skirmish; not, as he conceives, by a foreign enemy, but by fome of the natives of the place; and being fent down a river in a canoe, was fold to the captain of the ship that brought him to Jamaica. Of his national customs and manners he remembers but little, being, at the time of his captivity, but a youth. He relates, that the natives practife circumcifion, and that he himself has undergone that operation; and he has not forgot the morning and evening prayer which his father taught him; in proof of this affertion, he chaunts, in an audible and shrill tone, a fentence that I conceive to be part of the Alcoran, La illa, ill illa! (a), which he fays they fing aloud at the first appearance of the new He relates, moreover, that in his own moon.

BOOK country Friday was conftantly made a day of ftrict fasting. It was almost a fin, he observes, on that day, to fwallow his spittle,-fuch is his expression.

Besides this man, I had once another Mandingo fervant, who could write, with great beauty and exactness, the Arabick alphabet, and fome passages from the Alcoran. Whether his learning extended any further, I had no opportunity of being informed, as he died foon after he came into my possession.

THE advantage possessed by a few of these people, of being able to read and write, is a circumftance on which the Mandingo Negroes in the West Indies pride themselves greatly among the rest of the slaves; over whom they consider that they poffefs a marked fuperiority; and in truth they display such gentleness of disposition and demeanour, as would feem the refult of early education and discipline, were it not that, generally fpeaking, they are more prone to theft than any of the African tribes. It has been supposed that this propenfity, among other vices, is natural to a flate of flavery, which degrades and corrupts the human mind in a deplorable manner; but why the Mandingoes should have become more vicious in this respect than the rest of the Natives of Africa in the same condition of life, is a queftion I cannot answer.

In their complexions and perfons, the Mandingoes

dingoes are easily to be distinguished from such of the Africans as are born nearer to the equator; but they confift nevertheless of very distinct tribes, fome of which are remarkably tall and black, and there is one tribe among them (called also the Foolalı) that feems to me to constitute the link between the Moors and Negroes properly fo called. They are of a less glosfy black than the Gold Coast Negroes; and their hair, though bufly and crifped, is not woolly, but foft and filky to the touch. Neither have the Mandingoes, in common, the thick lips and flat nofes of the more fouthern Natives; and they are, in a great degree, exempt from that strong and setid odour. which exhales from the skin of most of the latter: but in general they are not well adapted for hard labour *.

AFTER all, they differ less in their persons, than in the qualities of the mind, from the Na-

* There is a remarkable anomaly of nature fometimes feen in the children born of Negro women by black men. Their features are those of the Negro, but their complexions are white: not the white of the European, but a cadaverous paleness without any mixture of red, and their hair is of the same colour, though crisped and woolly. I have inspected feveral of these poor creatures, and always found them weak sighted, and, in general, desective in understanding. These are the people called by the Spaniards Albinos; but that a nation of them exists in any part of the world, as afferted by Voltaire, I do not believe.

BOOK tives of the Gold Coast; who may be said to constitute the genuine and original unmixed Negro, both in person and character.

THE circumstances which distinguish the Koromantyn, or Gold Coast, Negroes, from all others, are firmness both of body and mind; a ferociousness of disposition; but withal, activity, courage, and a stubbornness, or what an ancient Roman would have deemed an elevation, of foul, which prompts them to enterprizes of difficulty and danger; and enables them to meet death, in its most horrible shape, with fortitude or indifference. They fometimes take to labour with great promptitude and alacrity, and have constitutions well adapted for it; for many of them have undoubtedly been flaves in Africa:-I have interrogated great numbers on this subject, and although some of them afferted they were born free, who, as it was afterwards proved by the testimony of their own relations, were actually fold as flaves by their mafters, others frankly confessed to me that they had no claim to freedom in their own country, and were fold either to pay the debts, or to expiate the crimes, of their owners. On the other hand, the Gold Coast being inhabited by various different tribes which are engaged in perpetual warfare and hostility with ach other, there cannot be a doubt that many

many of the captives taken in battle, and fold CHAP. in the European fettlements, were of free condition in their native country, and perhaps the owners of flaves themselves. It is not wonderful that fuch men should endeavour, even by means the most desperate, to regain the freedom of which they have been deprived; nor do I conceive that any further circumstances are necesfary to prompt them to action, than that of being fold into captivity in a diffant country. I mean only to state facts as I find them. Such I well know was the origin of the Negro rebellion which happened in Jamaica in 1760. It arose at the instigation of a Koromantyn Negro of the name of Tacky, who had been a chief in Guiney; and it broke out on the Frontier plantation in St. Mary's parish, belonging to the late Ballard Beckford, and the adjoining estate of Trinity, the property of my deceased relation and benefactor Zachary Bayly, to whose wildom, activity and courage on this occasion, it was owing that the revolt was not as general and destructive as that which now rages in St. Domingo (1791). On those plantations were upwards of one hundred Gold Coast Negroes newly imported, and I do not believe that an individual amongst them had received the least shadow of ill treatment from the time of their arrival there. Concerning those on the Trinity

estate,

воок іv. estate, I can pronounce of my own knowledge, that they were under the government of an over-seer of singular tenderness and humanity. His name was Abraham Fletcher; and let it be remembered, in justice even to the rebels, and as a lesson to other overseers, that his life was spared from respect to his virtues. The insurgents had heard of his character from the other Negroes, and suffered him to pass through them unmolested—this fact appeared in evidence (b). Having collected

(b) Mr. Bayly had himself left the Trinity estate the preceding evening, after having perfonally inspected into the fituation of his newly purchased Africans, and delivered them with his own hands their clothing and knives, little apprehending the bloody bufiness in which these knives were foon afterwards employed. He flept at Ballard's Valley, a plantation of Mr. Cruikflank, a few miles diftant; and was awoke by his fervant at day-break, with the information that his Trinity Negroes had revolted. The intelligence was brought by some of his own people, who had fled in fearch of their Master, and reported that the infurgents were close at their heels. No time therefore being to be loft, Mr. Bayly recommended to Mr. Cruikshank, and some other Gentlemen who were with him, to proceed forthwith, with fuch arms as they could collect, to an effate in the neighbourhood, which having a defentible house, was fixed on as a proper place of rendezvous; promiting to join them in a few hours. He then mounted his horfe, and proceeded himfelf in fearch of the rebels, conceiving (as he knew they had no reason to complain of ill treatment) that his presence and persuasions would reduce them to obedience. As he descended the hill on which Mr. Cruikshank's house was fituated, he heard the Koromantyn yell of war, and faw the whole body of rebel Negroes o'clock i

Negross in full march for the habitation of the Overfeer; a finaller house situated within half a mile of the other. He approached them notwithstanding, and waving his hat, endeavoured to obtain a hearing, but was answered by a difcharge of musquetry, by which his fervant's horse was shot under him, and both himself and the servant very narrowly escaped with life. The Savages then proceeded to the masfacre of the White people in the Overseer's house; and Mr. Bayly rode round to all the different plantations in the neigh. bourhood, giving them notice of their danger, and fending all the Whites to the place of rendezvous. By this measure he had collected before noon about 130 Whites and trusty Blacks, tolerably armed; whom he then led in pursuit of the rebels. They were found at Haywood-Hall, roasting an ox by the flames of the buildings, which they had fet on fire. The Whites attacked them with great fury, killed eight or nine on the spot, took several of them prisoners, and drove the rest into the woods, where they acted afterwards wholly on the defensive, and were foon exterminated. Thus a timely check was given to a conspiracy, which was found to have been general among the Koromantyn Negroes throughout the Island, and the country was probably faved from utter destruction by the prudence and promptitude of an individual.—I have related these circumstances concerning my deceased relation's conduct on this occasion for two reasons: first, because it presents an example to be imitated in similar emergencies; and fecondly, because I have thus an opportunity given me of paying a just tribute to the memory of one, whom I loved and honoured when living, and lamented when dead, with more than filial affection and piety; for he possessed the clearest head, the most enlarged and comprehenfive mind, the fweetest temper, and the kindest and most benevolent disposition, of any man that it has been my fortune to meet with, in my diverlified journey through life! See vcl. i. p. 308.

Negrocs

BOOK vided themselves with as great a quantity of arms and ammunition as they could conveniently difa pose of. Being by this time joined by a number of their countrymen from the neighbouring plantations, they marched up the high road that led to the interior parts of the country, carrying death and defolation as they went. At Ballard's Valley they furrounded the overfeer's house about four in the morning, in which finding all the White fervants in bed, they butchered every one of them in the most savage manner, and literally drank their blood mixed with rum. At Esher, and other effates, they exhibited the same tragedy; and then fet fire to the buildings and canes. In one morning they murdered between thirty and forty Whites and Mulattoes, not sparing even infants at the breaft, before their progress was stopped. Tacky, the Chief, was killed in the woods by one of the parties that went in purfuit of them; but some others of the ringleaders being taken, and a general inclination to revolt appearing among all the Koromantyn Negroes in the island, it was thought necessary to make a few terrible examples of some of the most guilty. Of three who were clearly proved to have been concerned in the murders committed at Ballard's Valley, one was condemned to be burnt, and the other two to be hung up alive in irons, and left to perish in that dreadful situation. The wretch that was burnt was made to fit on the ground,

ground, and his body being chained to an iron CHAP. stake, the fire was applied to his feet. He uttered not a groan, and faw his legs reduced to ashes with the utmost firmness and composure; after which, one of his arms by fome means getting loofe, he fnatched a brand from the fire that was confuming him, and flung it in the face of the executioner. The two that were hung up alive were indulged, at their own request, with a hearty meal immediately before they were fuspended on the gibbet, which was erected in the parade of the town of Kingston. From that time, until they expired, they never uttered the least complaint, except only of cold in the night, but diverted themselves all day long in discourse with their countrymen, who were permitted, very improperly, to furround the gibbet. On the feventh day a notion prevailed among the spectators, that one of them wished to communicate an important fecret to his master, my near relation; who being in St. Mary's parish, the commanding officer fent for me. I endeavoured, by means of an interpreter, to let him know that I was present; but I could not understand what he said in return. I remember that both he and his fellow fufferer laughed immoderately at fomething that

SIM STATE OF THE S

BOOK IV.

THE courage, or unconcern, which the people of this country manifest at the approach of death, arises, doubtless, in a great measure, from their national manners, wars, and fuperstitions, which are all, in the highest degree, savage and sanguinary. A power over the lives of his flaves is poffeffed, and exercifed too, on very frivolous occasions, without compunction or scruple, by every master of flaves on the Gold Coast. Fathers have the like power over their children. In their wars they are bloody and cruel beyond any nation that ever existed; for all such of their captives as they referve not for flaves, they murder with circumstances of outrageous barbarity; cutting them across the face, and tearing away the under jaw, which they preferve as a trophy, leaving the miserable victims to perish in that condition. I have collected this account from themselves. They tell me likewise, that whenever a considerable man expires, feveral of his wives, and a great number of his flaves, are facrificed at his funeral. This is done, fay they, that he may be properly attended in the next world. This circumstance has been confirmed to me by every Gold Coast Negro that I have interrogated on the subject, and I have enquired of many (c).

(c) The following particulars I collected from fome of my own Koromantyn Negroes, whose veracity I had no reason to doubt:—Clara, a most faithful well-disposed woman, who was brought

fome of my

no reason to

an, who was brought

brought from the Gold Coast to Jamaica the latter end of 1784, relates, "that she was born in a village near Anamaboo; that her father and mother, and their children (nine in number) were flaves to a great man named Anamoa, on whose death she herself, and two of her brothers (who likewise belong to me) with feveral others of his flaves, were fold to pay his debts. That twenty others were killed at his funeral. I asked her which country she liked best, Jamaica or Guiney? She replied, that Jamaica was the better country, "for that people were not killed there, as in Guiney, at the funeral of their masters." She informed me also, in answer to some other enquiries, of a remarkable fact (i. e.) that the natives of the Gold Coast give their children the yazus (a frightful diforder) by inoculation; and the described the manner of performing the operation to be making an incision in the thigh, and putting in some of the infectious matter. I asked her what benefit they expected from this practice? She answered, that by this means their infants had the diforder flightly, and recovered speedily, whereas by catching it at a later time of life, the disease, she faid, ' got into the bone,' that was her expression.

Cudjoe, aged (as I suppose) about fifty, relates that he was born in the kingdom of Asiantee, the king or chieftain of which country was named Poco. Cudjoe's elder brother having been caught in adultery with the wife of a man named Quastice, was adjudged to pay a fine to the man he had injured; which not being able to do, he delivered over him (Cudjoe) who was at that time, by his own account, a boy about fixteen, as a compensation; and Quashee immediately carried him off, and foon afterwards fold him to a Black flave-merchant, who having purchased many others, carried them all to the fea-coast (they were two months on their journey) and fold them to a Captain Reeder, who brought

Vol. II.

BOOK terrors; and the natives in general, conscious they have no fecurity even for the day that is passing over them, feem prepared for, and refigned to. the fate that probably awaits them. This contempt of death, or indifference about life, they bring with them to the West Indies; but if fortunately they fall into good hands at first, and become well fettled, they acquire by degrees other fentiments and notions. Nature resumes her lawful influence over them. With the consciousness of security, the love of existence also, amidst all the evils that attend it in a state of flavery, gains admission into their bosoms. They feel it, and, fuch is the force of habitual bar-

> them to Jamaica. I asked him, what right his brother had to fell him? ' Because,' faid he, 'my father was dead;' and by his account fathers have an unquestionable right to sell their children, and probably, on the demise of the father, the fame power is affumed by the eldest fon over the younger branches. He relates further, that the king has the power of life and death, and that executions are very frequent, That when the king or any confiderable man dies, a great number of his flaves are facrificed at his tomb. He pretends not to afcertain any particular number, but remembers perfeetly well the death of the old king whom Poco succeeded, and is positively certain that upwards of one hundred people were flaughtered on that occasion. To convince me that he understood what he said when he mentioned that number, he counted the fingers of both his hands ten times. He faith further, that wars are very frequent; that all able men are compelled to bear arms; and that when they take prifoners, the old and infirm are killed, and the young and able preferved to be fold for flaves.

barity, seem ashamed of their own weakness. A CHAP. gentleman of Jamaica visiting a valuable Koromantyn Negro that was fick, and perceiving that he was thoughtful and dejected, endeavoured by foothing and encouraging language, to raise his drooping spirits. Massa, said the Negro (in a tone of felf-reproach and conscious degeneracy) fince me come to White man's country me lub (love) life too much!

EVEN the children brought from the Gold Coast manifest an evident superiority, both in hardiness of frame, and vigour of mind, over all the young people of the same age that are imported from other parts of Africa. The like firmness and intrepidity which are distinguishable in adults of this nation, are visible in their boys at an age which might be thought too tender to receive any lasting impression, either from precept or example.—I have been myself an eyewitness to the truth of this remark, in the circumstance I am about to relate. A gentleman of my acquaintance, who had purchased at the fame time ten Koromantyn boys, and the like number of Eboes (the eldest of the whole apparently not more than thirteen years of age) caused them all to be collected and brought before him in my presence, to be marked on the breaft. This operation is performed by heating a small silver brand, composed of one or two G 2 · letters,

BOOK letters, in the flame of spirits of wine, and applying it to the skin, which is previously anointed with fweet oil. The application is instantaneous, and the pain momentary. Nevertheless it may be easily supposed that the apparatus must have a frightful appearance to a child. Accordingly, when the first boy, who happened to be one of the Eboes, and the stoutest of the whole, was led forward to receive the mark, he screamed dreadfully, while his companions of the fame nation manifested strong emotions of sympathetic The gentleman stopt his hand; but the terror. Koromantyn boys, laughing aloud, and, immediately coming forward of their own accord, offered their bosoms undauntedly to the brand, and receiving its impression without slinching in the least, snapt their fingers in exultation over the poor Eboes.

> ONE cannot furely but lament, that a people thus naturally emulous and intrepid, should be funk into so deplorable a state of barbarity and fuperstition; and that their spirits should ever be broken down by the yoke of flavery! Whatever may be alledged concerning their ferociousness and implacability in their present notions of right and wrong, I am perfuaded that they poffefs qualities, which are capable of, and well deferve cultivation and improvement.—But it is time to conclude my observations on this nation,

tion, which I shall do, with some account of their CHAP. religion; for which my readers are indebted to the researches of an ingenious gentlemen of Jamaica, who is well acquainted with their language and manners. Its authenticity has been frequently confirmed to me, on my own enquiries among the Koromantyn Negroes themselves.

THEY believe that Accompone, the God of the heavens, is the creator of all things; a Deity of infinite goodness; to whom however they never offer facrifices, thinking it fufficient to adore him with praises and thanksgiving.

Assarci is the god of the earth; to him they offer the first fruits of the ground, and pour out libations of the liquors they drink to his honour.

IPBOA is the god of the sea: if the arrival of ships which trade upon their coast is delayed, they facrifice an hog to deprecate the wrath of Ipboa.

OBBONET is a malicious deity, who pervades heaven, earth, and sea; he is the author of all evil, and when his displeasure is signified by the infliction of pestilential disorders, or otherwise, nothing will divert his anger but human facrifices; which are selected from captives taken in war, or, if there be none present, then from their flaves.

Besides the above deities, every family has a peculiar G 3

BOOK a peculiar tutelar faint, who is supposed to have been originally a human being like one of themfelves, and the first founder of their family; upon the anniversary of whose burial, the whole number of his descendants assemble round his grave, and the oldest man, after offering up praises to Accompong, Affarci, Ipboa, and their tutelar deity, facrifices a cock or goat, by cutting its throat, and shedding the blood upon the grave. Every head of an household of the family, next facrifices a cock, or other animal, in like manner, and as foon as all those who are able to bring facrifices have made their oblations, the animals which have been killed, are dreffed, and a great festival follows.

> Among their other superstitions also, must not be omitted their mode of administering an oath of fecrecy or purgation.—Human blood, and earth taken from the grave of some near relation, are mixed with water, and given to the party to be fworn, who is compelled to drink the mixture, with an imprecation, that it may cause the belly to burst, and the bones to rot, if the truth be not spoken. This test is frequently administered to their wives, on the sufpicion of infidelity, and the refemblance which it bears to the trial of jealoufy by the bitter water described in the book of Numbers (chap. v.) is a curious and striking circumstance.

further,

I NOW proceed to the people of Whidah, or CHAP. Fida. The Negroes of this country are called generally in the West Indies Papaws, and are unquestionably the most docile and best-disposed flaves that are imported from any part of Africa. Without the fierce and favage manners of the Koromantyn Negroes, they are also happily exempt from the timid and desponding temper of the Eboes, who will presently be mentioned. The cheerful acquiescence with which these people apply to the labours of the field, and their constitutional aptitude for such employment, arise, without doubt, from the great attention paid to agriculture in their native country. Bosman speaks with rapture of the improved state of the soil, the number of villages, and the industry, riches, and obliging manners of the Natives. He observes, however, that they are much greater thieves than those of the Gold Coast, and very unlike them in another respect, namely, in the dread of pain, and the apprehenfion of death. "They are," fays he, " fo very apprehensive of death, that they are unwilling to hear it mentioned, for fear that alone should hasten their end; and no man dares to speak of death in the presence of the king, or any great man, under the penalty of fuffering it himself, as a punishment for his prefumption." He relates further, that they are addicted to gaming beyond

BOOK any people of Africa. All these propensities, if I am rightly informed, are observable in the character of the Papaws in a state of slavery in the West Indies. That punishment which excites the Koromantyn to rebel, and drives the Ebo Negro to fuicide, is received by the Papaws as the chastisement of legal authority, to which it is their duty to fubmit patiently. The case seems to be, that the generality of these people are in a state of absolute slavery in Africa, and, having been habituated to a life of labour, they fubmit to a change of fituation with little reluctance.

MANY of the Whidah Negroes are found to Whether it be a religious cerebe circumcifed. mony common to all the tribes that go under the appellation of Papaws, I know not. practifed univerfally by the Nagoes; a people that speak the Whidah language; but I have met with Negroes from this part of the coast that disavow the practice.

of Benin, near 300 countries people of from these ribe which Mocoes, are in general t wretched

of

of all the nations of Africa. In complexion they CHAP. are much yellower than the Gold Coast and Whidah Negroes; but it is a fickly hue, and their eyes appear as if suffused with bile, even when they are in perfect health. I cannot help observing too, that the conformation of the face. in a great majority of them, very much resembles that of the baboon. I believe indeed there is, in most of the nations of Africa, a greater elongation of the lower jaw, than among the people of Europe; but this distinction I think is more visible among the Eboes, than in any other Africans. I mean not however to draw any conclusion of natural inferiority in these people to the rest of the human race, from a circumstance which perhaps is purely accidental, and no more to be confidered as a proof of degradation, than the red hair and high cheek bones of the Natives of the North of Europe.

THE great objection to the Eboes as flaves, is their constitutional timidity, and despondency of mind; which are fo great as to occasion them very frequently to feek, in a voluntary death, a refuge from their own melancholy reflections. They require therefore the gentlest and mildest treatment to reconcile them to their fituation; but if their confidence be once obtained, they manifest as great fidelity, affection, and gratitude, as can reasonably be expected from men

are better labourers than the men, probably from having been more hardly treated in Africa.

THE depression of spirits which these people feem to be under, on their first arrival in the West Indies, gives them an air of softness and fubmission, which forms a striking contrast to the frank and fearless temper of the Koromantyn Negroes. Nevertheless, the Eboes are in fact more truly savage than any nation of the Gold Coast; inasmuch as many tribes among them, especially the Moco tribe, have been, without doubt, accustomed to the shocking practice of feeding on human flesh. This circumstance I have had attefted beyond the possibility of dispute, by an intelligent trust-worthy domestic of the Ebo nation, who acknowledged to me, though with evident shame and reluctance, (having lived many years among the Whites) that he had himself, in his youth, frequently regaled on this horrid banquet: and his account received a flocking confirmation from a circumstance which occurred in the year 1770 in Antigua, where two Negroes of the same country were tried for killing and devouring one of their fellow-flaves in that island. They were purchased, a short time before, by a gentleman of the name of Christian, out of a ship from Oid Calabar, and I am told were convicted on the clearest evidence.

OF

OF the religious opinions and modes of char. worship of the Eboes, we know but little; except that, like the inhabitants of Whidah, they pay adoration to certain reptiles, of which the guana (a species of lizard) is in the highest estimation (d). They universally practise circumcision, "which with some other of their superstitions (says Purchas) may seem Mahometan, but are more likely to be ancient Ethnic rites; for many countries of Africa admit circumcision, and yet know not, or acknowledge not, Mahometanism; but are either Christians, as the

(d) I have been affured by an intelligent person who had vilited many parts of Africa, that the Eboes frequently offer up human facrifices in their worship of this animal. Perhaps the certainty of this may be questioned; but the following anecdote is undoubtedly true. In the year 1787, two of the feamen of a Liverpool ship trading at Bonny, being ashore watering, had the misfortune to kill a guana, as they were rolling a cask to the beach. An outcry was immediately raised among the Natives, and the boat's crew were furrounded and feized, and all trade interdicted, until public justice should be fatisfied and appealed. The offenders, being carried before the king, or chief man of the place, were adjudged to die. However, the severity of justice being softened by a bribe from the captain, the fentence was at length changed to the following, that they should pay a fine of 700 bars (about f. 75) and remain in the country as flaves to the king, until the money should be raised. The captain not being willing to advance so large a sum for the redemption of these poor wretches, failed without them, and what became of them afterwards I have not heard.

Cophti,

BOOK Cophti, Abiffinians, or Gentiles. They (the people of Benin) cut or rase the skin with three lines drawn to the navel, esteeming it necessary to falvation."

> NEXT in order to the Whidah Negroes, are those from Congo and Angola; whom I consider to have been originally the fame people. fay but little of them that is appropriate and particular; except that they are in general a flender fightly race, of a deep and gloffy black (a tribe of the Congoes excepted, who very nearly resemble the Eboes) and I believe of a disposition naturally mild and docile. They appear to me to be fitter for domestic service than for field-labour. They are faid however to become expert mechanicks; and, what is much to their honour, they are supposed to be more strictly honest than many other of the African tribes.

> HAVING thus recited fuch observations as have occurred to me on contemplating the various African nations in the West Indies separately and distinct from each other, I shall now attempt an estimate of their general character and dispositions, influenced, as undoubtedly they are in a great degree, by their fituation and condition in a state of slavery; circumstances that soon efface the native original impression which distinguifhes one nation from another in Negroes newly imported,

imported, and create a fimilitude of manners, and CHAP. a uniformity of character throughout the whole body.

Thus, notwithstanding what has been related of the firmness and courage of the natives of the Gold Coast, it is certain that the Negroes in general in our islands (fuch of them at least as have been any length of time in a state of servitude) are of a diffruftful and cowardly difposition. So degrading is the nature of flavery, that fortitude of mind is loft as free agency is reftrained. To the fame cause probably must be imputed their propenfity to conceal, or violate the truth; which is fo general, that I think the vice of falsehood is one of the most prominent features in their character. If a Negro is asked even an indifferent question by his master, he seldom gives an immediate reply; but, affecting not to understand what is said, compels a repetition of the question, that he may have time to consider, not what is the true answer, but what is the most politick one for him to give. The proneness obfervable in many of them to the vice of theft, has already been noticed; and I am afraid that

Ir is no easy matter, I confess, to discriminate those circumstances which are the result of proximate causes, from those which are the effects of national customs and early habits in favage life; but

evil communication makes it almost general.

B O O K IV. but I am afraid that cowardice and diffimulation have been the properties of flavery in all ages, and will continue to be fo, to the end of the world. It is a fituation that necessarily suppresses many of the best affections of the human heart.—If it calls forth any latent virtues, they are those of fympathy and compassion towards persons in the fame condition of life; and accordingly we find that the Negroes in general are strongly attached to their countrymen, but, above all, to fuch of their companions as came in the same ship with them from Africa. This is a striking circumstance: the term shipmate is understood among them as fignifying a relationship of the most endearing nature; perhaps as recalling the time when the fufferers were cut off together from their common country and kindred, and awakening reciprocal fympathy, from the remembrance of mutual affliction.

But their benevolence, with a very few exceptions, extends no further. The fofter virtues are feldom found in the bosom of the enflaved African. Give him sufficient authority, and he becomes the most remorfeless of tyrants. Of all the degrees of wretchedness endured by the sons of men, the greatest, assuredly, is the misery which is felt by those who are unhappily doomed to be the Slaves of Slaves; a most unnatural relation which sometimes takes place in the sugar plantations:

THE

tions; as for instance, when it is found necessary CHAP. to instruct young Negroes in certain trades or handicraft employments. In those cases it is usual to place them in a fort of apprenticeship to fuch of the old Negroes as are competent to give them instruction; but the harshness with which these people enforce their authority, is extreme; and it ferves in some degree to leffen the indignation which a good mind necessarily feels at the abuses of power by the Whites, to observe that the Negroes themselves, when invested with command, give full play to their revengeful passions; and exercise all the wantonness of cruelty without restraint or remorfe.

THE same observation may be made concerning their conduct towards the inferior animal Their treatment of cattle under their creation. direction is brutal beyond belief. Even the uleful and focial qualities of the dog fecure to him no kind usage from an African master. Although there is scarce a Negro that is not attended by one, they feem to maintain these poor animals folely for the purpose of having an object whereon to exercise their caprice and cruelty. And, by the way, it is a fingular circumstance, and not the less true for being somewhat ludicrous, that the animal itself, when the property of a Negro, betrays at first fight that such is his condition; for, losing his playful propensities, he feems

BOOK seems to feel the inferiority of his station, and ac. tually crouches before fuch of his own species, as are used to better company. With the manners, he acquires also the cowardly, thievish, and sullen disposition of his African tyrant.

> But, notwithstanding what has been related of the felfish and unrelenting temper of the enflaved Africans, they are faid to be highly fuscep. tible of the passion of love. It has even been fupposed that they are more subject to, and senfible of, its impression, than the natives of colder " The Negro (fays Dr. Robertson) glows with all the warmth of defire natural to his climate." "The tender paffion (fays another writer) is the most ardent one in the breast of the enflaved African.—It is the only fource of his joys, and his only solace in affliction." Monsieur de Chanvalon (the historian of Martinico) expatiates on the fame idea with great eloquence.-"Love, (fays he) the child of nature, to whom she entrusts her own preservation; whose progress no difficulties can retard, and who triumphs even in chains; that principle of life, as necessary to the harmony of the universe, as the air which we brearhe, inspires and invigorates all the thoughts and purposes of the Negro, and lightens the yoke of his flavery. No perils can abate, nor impending punishments restrain, the ardour of his pastion.—He leaves his master's habitation, and tra-

versing the wilderness by night, disregarding its CHAP. noxious inhabitants, feeks a refuge from his forrows, in the bosom of his faithful and affectionate mistress."

ALL this however is the language of poetry and the visions of romance. The poor Negro has no leifure in a state of flavery to indulge a passion, which, however descended, is nourished by idleness. If by love, is meant that tender attachment to one individual object, which, in civilised life, is defire heightened by fentiment, and refined by delicacy, I doubt if it ever found a place in an African bosom.—The Negroes in the West Indies, both men and women, would confider it as the greatest exertion of tyranny, and the most cruel of all hardships, to be compelled to confine themselves to a single connection with the other fex; and I am perfuaded that any attempt to restrain their present licentious and disfolute manners, by introducing the marriage ceremony among them, as is strenuously recommended by many persons in Great Britain, would be utterly impracticable to any good purpose. Perhaps it may be thought that the Negroes are not altogether reduced to fo deplorable a state of flavery, as is commonly represented, when it is known that they boldly claim and exercise a right of disposing of themselves in this respect, accord-

THAT passion therefore to which (dignified by the name of Love) is ascribed the power of softening all the miseries of slavery, is mere animal defire, implanted by the great Author of all things for the prefervation of the species. This the Negroes, without doubt, possess in common with the rest of the animal creation, and they indulge it, as inclination prompts, in an almost promiscuous intercourse with the other sex; or at least in temporary connections, which they form without ceremony, and dissolve without reluctance. When age indeed begins to mitigate the ardour, and lessen the fickleness of youth, many of them form attachments, which, strengthened by habit, and endeared by the consciousness of mutual imbecility, produce a union for life. It is not uncommon to behold a venerable couple of this stamp, who, tottering under the load of years, contribute to each other's comfort, with a chearful assiduity which is at once amiable and asfecting.

THE fituation of the aged among the Negroes is indeed commonly fuch as to make them some amends for the hardships and sufferings of their youth. The labour required of the men is seldom any thing more than to guard the provision

vision grounds; and the women are chiefly em- CHAP. ployed in attending the children, in nursing the fick, or in other easy avocations; but their happiness chiefly arises from the high veneration in which old age is held by the Negroes in general, and this I confider as one of the few pleafing traits in their character. In addressing such of their fellow-fervants as are any ways advanced in years, they prefix to their names the appellation of Parent, as Ta Quaco, and Ma Quasheba; Ta and Ma, fignifying Father and Mother, by which defignation they mean to convey not only the idea of filial reverence, but also that of esteem and Neither is the regard thus displayed fondness. towards the aged, confined to outward ceremonies and terms of respect alone. It is founded on an active principle of native benevolence, furhishing one of the few exceptions to their general inrelenting and selfish character. The whole body of Negroes on a plantation must be reduced to a deplorable state of wretchedness, if, t any time, they fuffer their aged companions to want the common necessaries of life, or even nany of its comforts, as far as they can procure hem. They feem to me to be actuated on hese occasions by a kind of involuntary impulse, perating as a primitive law of nature, which corns to wait the cold dictates of reason: among hem, it is the exercise of a common duty, which H 2

BOOK 1V. which courts no observation, and looks for no applause (e).

Among other propensities and qualities of the Negroes must not be omitted their loquaciousness. They are as fond of exhibiting set speeches, as orators by profession; but it requires a confiderable share of patience to hear them throughout; for they commonly make a long preface before they come to the point; beginning with a tedious enumeration of their past services and hardships. They dwell with peculiar energy (if the fact admits it) on the number of children they have presented to Massa (Masser) after which they recapitulate some of the instances of particular kindness shewn them by their owner or employer, adducing these also as proofs of their own merit; it being evident, they think, that no fuch kindness can be gratuitous. This is their

(e) The greatest affront (says Mr. Long) that can be offered to a Negro, is to curse his father and mother, or any of his progenitors. It may not be improper in this place to add, that many of the Negroes attain to great longevity.—In February 1792, a Black woman of the name of Flora Gale died at the very extraordinary age of 120, at Savanna-la-Mar in Jamaica. She remembered persectly well the great earthquake in 1692, which proved so fatal to Port Royal. She left a numerous progeny of children, grand and great-grandchildren, and it is remarkable that she always resused to be haptized, assigning for reason her desire to have a grand Negro dance at her suneral, according to the custom of Africa; a ceremony never allowed in Jamaica at the burial of such as have been christened.

usual exordium, as well when they bring com- CHAP. plaints against others, as when they are called upon to defend themselves; and it is in vain to interrupt either plaintiff or defendant. Yet I have fometimes heard them convey much strong meaning in a narrow compass: I have been furprifec by fuch figurative expressions, and (notwithstanding their ignorance of abstract terms) fuch pointed fentences, as would have reflected no difgrace on poets and philosophers. One instance recurs to my memory, of so significant a turn of expression in a common labouring Negro, who could have had no opportunity of improvement from the conversation of White people, as is alone, I think, fufficient to demonstrate that Negroes have minds very capable of observation. It was a fervant who had brought me a letter, and, while, I was preparing an answer, had, through weariness and fatigue, fallen asleep on the floor: as foon as the papers were ready, I directed him to be awakened; but this was no easy matter. When the Negro who attempted to awake him, exclaimed in the usual jargon, You no hear Massa call you? that is, Don't you hear Master call you? Sleep, replied the poor fellow, looking up, and returning composedly to his flumbers, Sleep hab no Massa. (Sleep has no Master.)

BOOK IV. can be attained only in an improved state of society, it is natural to suppose that the Negroes have but little knowledge. An opinion prevails in Europe that they possess organs peculiarly adapted to the science of musick; but this I believe is an ill founded idea. In vocal harmony they display neither variety nor compass. Nature feems in this respect to have dealt more penuriously by them than towards the rest of the human race. As practical musicians, some of them, by great labour and careful instruction, become fufficiently expert to bear an under-part in a publick concert; but I do not recollect ever to have feen or heard of a Negro who could truly be called a fine performer on any capital instrument. In general they prefer a loud and longcontinued noise to the finest harmony, and frequently confume the whole night in beating on a board with a stick. This is in fact one of their chief musical instruments; besides which, they have the Banja or Merriwang, the Dundo, and the Goombay; all of African origin. The first is an imperfect kind of violincello; except that it is played on by the finger like the guitar; producing a difmal monotony of four notes. The Dundo is precifely a tabor; and the Goombay is a rustick drum; being formed of the trunk of a hollow tree, one end of which is covered with a sheep's skin. From such instruments nothing like

THEIR fongs are commonly impromptu, and there are among them individuals who refemble the improvifatore, or extempore bards, of Italy; but I cannot fay much for their poetry. tunes in general are characteristick of their national manners; those of the Eboes being fost and languishing; of the Koromantyns heroick and n rtial. At the same time, there is obfervable, in most of them, a predominant melancholy, which, to a man of feeling, is sometimes very affecting.

AT their merry meetings, and midnight feftivals, they are not without ballads of another kind, adapted to fuch occasions; and here they give full scope to a talent for ridicule and derision, which is exercised not only against each other, but also, not unfrequently, at the expence of their owner or employer; but most part of their fongs at these places are fraught with obfcene ribaldry, and accompanied with dances in the highest degree licentious and wanton.

AT other times, more especially at the burial of fuch among them as were respected in life, or venerable through age, they exhibit a fort of Pyrrhick or warlike dance, in which their bodies are strongly agitated by running, leaping, and jumping, with may violent and frantick gestures

H 4 and

BOOK and contortions. Their funeral fongs too are all of the heroick or martial cast; affording some colour to the prevalent notion, that the Negroes confider death not only as a welcome and happy release from the calamities of their condition, but also as a passport to the place of their nativity; a deliverance which, while it frees them from bondage, restores them to the society of their dearest, long-lost, and lamented relatives in Africa. But I am afraid that this, like other European notions concerning the Negroes, is the dream of poetry; the sympathetick effusion of a fanciful or too credulous an imagination (f). groes,

> (f) Perhaps it was fome fuch imagination that gave rife to the following little poem-the production of early youth. And now published for the first time.

ODE ON SEEING A NEGRO FUNERAL,

MAHALI dies! O'er yonder plain His bier is borne: The fable train By youthful virgins led: Daughters of injur'd Africk, fay Why raise ye thus th' heroick lay, Why triumph o'er the dead?

No tear bedews their fixed eye: 'Tis now the Hero lives, they cry :-Releas'd from flav'ry's chain: Beyond the billowy furge he flies, And joyful views his native skies. And long loft bowers again.

ERAL,

BOOK much less frequent than among the free-born, happy, and civilifed inhabitants of Great Britain. With them, equally with the Whites, nature fhrinks back at approaching diffolution; and when, at any time, fudden or untimely death overtakes any of their companions, instead of rejoicing at fuch an event, they never fail to impute it to the malicious contrivances and diabolical arts of some practitioners in Obeah, a term of African origin, fignifying forcery or witchcraft, the prevalence of which, among many of their countrymen, all the Negroes most firmly and implicitly believe. We may conclude, therefore, that their funeral fongs and ceremonies are commonly nothing more than the diffonance of favage barbarity and riot; as remote from the fond fuperstition to which they are ascribed, as from the fober dictates of a rational forrow.

> HAVING mentioned the practice of Obeah, the influence of which has fo powerful an effect on the Negroes, as to bias, in a confiderable degree, their general conduct, dispositions, and manners, I shall conclude the present chapter by prefenting to my readers the following very curious account of this extraordinary superstition, and its effects: it was transmitted by the Agent of Jamaica to the Lords of the Committee of Privy Council, and by them subjoined to their report on the flave trade; and, if I miltake not,

the publick are chiefly indebted for it to the CHAP. diligent researches, and accurate pen, of Mr. Long.

" THE term Obeah, Obiah, or Obia (for it is variously written) we conceive to be the adjective, and Obe or Obi the noun substantive; and that by the words Obia-men or women, are meant those who practife Obi. The origin of the term we should confider as of no importance in our answer to the questions proposed, if, in search of it, we were not led to disquisitions that are highly gratifying to curiofity. From the learned Mr. Bryant's (g) commentary upon the word Oph, we obtain a very probable etymology of the term-" A ferpent, in the Egyptian language, " was called Ob or Aub."—" Obion is still the " Egyptian name for a serpent."-" Moses, in " the name of God, forbids the Israelites ever " to enquire of the demon Ob, which is trans-" lated in our Bible Charmer, or Wizard, Di-" vinator, aut Sorcilegus."-" The woman at " Endor is called Oub or Ob, translated Pytho-" niffa; and Oubaios (he cites from Horus Apollo) " was the name of the Basilisk or Royal Serpent, " emblem of the fun, and an ancient oracular " Deity of Africa." bably

ıv.

EOOK bably of a very celebrated religious order in remote ages, is now become in Jamaica the general term to denote those Africans who in that island practife witchcraft or forcery, comprehending also the class of what are called Myal-men, or those who, by means of a narcotick potion, made with the juice of an herb (faid to be the branched Calalue or species of Solanum) which occasions a trance or profound fleep of a certain duration, endeavour to convince the deluded spectators of their power to re-animate dead bodies.

" As far as we are able to decide from our own experience and information when we lived in the island, and from the current testimony of all the Negroes we have ever converfed with on the subject, the professors of Obi are, and always were, natives of Africa, and none other; and they have brought the science with them from thence to Jamaica, where it is so universally practised, that we believe there are few of the large estates possessing native Africans, which have not one or more of them. The oldest and most crafty are those who usually attract the greatest devotion and confidence; those whose hoary heads, and a formewhat peculiarly harsh and forbidding in their aspect, together with some skill in plants of the medicinal and poisonous species, have qualified them for fuccefsful imposition upon the weak and credulous. The Negroes in general,

whether Africans or Creoles, revere, consult, and CHAP. fear them; to these oracles they resort, and with the most implicit faith, upon all occasions, whether for the cure of diforders, the obtaining revenge for injuries or infults, the conciliating of favour, the discovery and punishment of the thief or the adulterer, and the prediction of future events. The trade which these impostors carry on is extremely lucrative; they manufacture and fell their Obies adapted to different cases and at different prices. A veil of mystery is studiously thrown over their incantations, to which the midnight hours are allotted, and every precaution is taken to conceal them from the knowledge and difcovery of the White people. The deluded Negroes, who thoroughly believe in their fupernatural power, become the willing accomplices in this concealment, and the stoutest among them tremble at the very fight of the ragged bundle, the bottle or the egg-shells, which are fluck in the thatch or hung over the door of a hut, or upon the branch of a plantain tree, to deter marauders. In cases of poison, the natural effects of it are by the ignorant Negroes, ascribed entirely to the potent workings of Obi. wifer Negroes hefitate to reveal their fuspicions, through a dread of incurring the terrible vengeance which is fulminated by the Obeah-men against any who should betray them: it is very difficult

BOOK IV. difficult therefore for the White proprietor to diftinguish the Obeah professor from any other Negro upon his plantation; and fo infatuated are the Blacks in general, that but few instances occur of their having assumed courage enough to impeach these miscreants. With minds so firmly prepoffessed, they no sooner find Obi set for them near the door of their house, or in the path which leads to it, than they give themselves up for loft. When a Negro is robbed of a fowl or a hog, he applies directly to the Obeah-man or woman; it is then made known among his fellow Blacks, that Obi is set for the thief; and as foon as the latter hears the dreadful news, his terrified imagination begins to work, no refource is left but in the superior skill of some more eminent Obeah-man of the neighbourhood, who may counteract the magical operations of the other; but if no one can be found of higher rank and ability, or if, after gaining fuch an ally, he should still fancy himself affected, he presently falls into a decline, under the inceffant horror of impend-The flightest painful sensation in ing calamities. the head, the bowels, or any other part, any casual lofs or hurt, confirms his apprehensions, and he believes himself the devoted victim of an invisible and irrefiftible agency. But neither the terror of this law, the strict investigation which has ever fince been BOOK ment. made after the professors of Obi, nor the many examples of those who from time to time have been hanged or transported, have hitherto produced the defired effect. We conclude, therefore, that either this feet, like others in the world, has flourished under persecution; or that fresh fupplies are annually introduced from the African feminaries.

> The following is the paper referred to in the preceding account.

OBEAH PRACTICE.

" WE have the following narratives from a planter in Jamaica, a gentleman of the strictest veracity, who is now in London, and ready to attest the truth of them.

" UPON returning to Jamaica in the year 1775, he found that a great many of his Negroes had died during his absence; and that of such as remained alive, at least one-half were debilitated, bloated, and in a very deplorable condition. The mortality continued after his arrival, and two or three were frequently buried in one day; others were taken ill, and began to decline under the fame fymptoms. Every means were tried by medicines,

the lives of the feeblest; but in spite of all his endeavours, this depopulation went on for above a twelvemonth longer, with more or less intermission, and without his being able to ascertain the real cause, though the Obeah practice was strongly suspected, as well by himself, as by the doctor and other White persons upon the plantation, as it was known to have been very common in that part of the island, and particularly among the Negroes of the Paparo or Popo country. Still he was unable to verify his suspicions, because the patients constantly denied their having any thing to do with persons of that order, or any knowledge of them. At length a Negress, who had been ill for some time, came one day and informed him, that feeling it was impossible for her to live much longer, she thought herself bound in duty, before the died, to impart a very great fecret, and acquaint him with the true cause of her disorder, in hopes that the disclosure might prove the means of stopping that mischief, which had already fwept away fuch a number of her fellow-flaves. She proceeded to fay, that her step-mother (a woman of the Popo country, above eighty years old, but still hale and active) had put Obi upon her, as she had also done upon those who had lately died; and that the old woman had practifed Obi for as many years past as she could remember.

I 2

" THE

BOOK

" THE other Negroes of the plantation no fooner heard of this impeachment, than they ran in a body to their master, and confirmed the truth of it, adding, that she had carried on this business ever fince her arrival from Africa, and was the terror of the whole neighbourhood.-Upon this he repaired directly, with fix White fervants, to the old woman's house, and forcing open the door, observed the whole inside of the roof (which was of thatch) and every crevice of the walls fluck with the implements of her trade, confifting of rags, feathers, bones of cats, and a thousand other articles. Examining further, a large earthen pot or jar, close covered, was found concealed under her bed .- It contained a prodigious quantity of round balls of earth or clay of various dimensions, large and small, whitened on the outfide, and variously compounded, some with hair and rags, or feathers of all forts, and strongly bound with twine; others blended with the upper section of the skulls of cats, or stuck round with cats teeth and claws, or with human or dogs teeth, and some glass beads of different colours; there were also a great many egg-shells filled with a viscous or gummy substance, the qualities of which he neglected to examine, and many little bags stuffed with a variety of articles, the particulars of which cannot at this diftance of time be recollected. The house was inftantly

instantly pulled down, and with the whole of its CHAP. contents committed to the flames, amidst the general acclamations of all his other Negroes. regard to the old woman, he declined bringing her to trial under the law of the island, which would have punished her with death; but, from a principle of humanity, delivered her into the hands of a party of Spaniards, who (as the was thought not incapable of doing fome trifling kind of work) were very glad to accept and carry her with them to Cuba. From the moment of her departure, his Negroes feemed all to be animated with new spirits, and the malady spread no farther among them. The total of his losses in the course of about fifteen years preceding the discovery, and imputable folely to the Obeah practice, he estimates at least, at one hundred Negroes.

OBEAH TRIALS.

"HAVING received fome further information upon this subject from another Jamaica gentleman, who sat upon two trials, we beg leave to deliver the same in his own words, as a supplement to what we have already had the honour of submitting.

"In the year 1760, the influence of the pro-

great many of the Negro flaves in Jamaica to engage in the rebellion which happened in that year, and which gave rife to the law which was then made against the practice of Obi.

"Assurance was given to these deluded people, that they were to become invulnerable; and in order to render them so, the Obeah-men furnished them with a powder, with which they were to rub themselves.

"In the first engagement with the rebels, nine of them were killed, and many prisoners taken; amongst the latter was one very intelligent sellow, who offered to disclose many important matters, on condition that his life should be spared; which was promised. He then related the active pare which the Negroes, known among them by the name of Obeah-men, had taken in propagating the insurrection; one of whom was thereupon apprehended, tried (for rebellious conspiracy) convicted, and sentenced to death.

N. B. This was the Koromantyn Obealsman alluded to in our first paper.

"Ar the place of execution, he bid defiance to the executioner, telling him, that "It was not in the power of the White people to kill him." And the Negroes (spectators) were greatly perplexed when they saw him expire. Upon other Obeach

from the ambia, for ary. Cat to Upper Egypt

Having an opportunity, a few years ago, of con- CHAP. fulting a very intelligent person on this point, who had visited many parts of the coast, and appeared to be a man of veracity and candour, I received from him, in writing, an answer, which I shall present to my readers verbatim; and subjoin fuch further information as I have been able to collect. The answer which I received, was given in the words following:-" In all parts of the coast, and I apprehend it to be the same inland, the body of the people are in a state of absolute and unlimited flavery: their children are born to no other inheritance, and are liable to be fold by their owners as they think proper. Most parts of the coast differ in their governments; some are abfolute monarchies, while others draw near to an aristocracy. In both, the authority of the chief or chiefs is unlimited, extending to life, and it is exercised as often as criminal cases require, unless death is commuted into flavery; in which case the offender is fold, and if the shipping will not buy the criminal, he is immediately put to

Egypt with confiderable supplies of Negroes, some of which are fent afterwards to Constantinople. A very curious and interesting account of this traffick is given in the Report of the Lords of the Privy Council. Great numbers of flaves are likewise sent from Mozambique, and the ports on the eastern coast, to Persia, Goa, and other parts of the East Indies. Hence it has been calculated that Africa is drained annually of not less than 150,000 of its natives.

death.

воо к iv.

Fathers of free condition have power to death. fell their children, but this power is but very feldom enforced. I never knew an instance of it but once, and then the father was fo execrated by. his neighbours, for the act of felling a fon and daughter, that he shortly afterwards fell into a state of despondency and died. The family was of fome distinction, and the son and daughter were bought by a friendly captain, who I know afterwards gave freedom to one of them, and I believe he gave it to both. I never knew another instance of this kind, nor do I believe there is one flave in a thousand procured in this way. Neither do I imagine that there are many procured by wars or intestine broils. The truth is, the bulk of the people are born flaves to great men, reared as fuch, held as property, and as property fold. There are indeed many circumstances by which a free man may become a flave: fuch as being in debt, and not able to pay; and in some of such cases, if the debt be large, not only the debtor, but his family likewise, become the flaves of his creditors, and may be fold. Adultery is commonly punished in the fame manner; both the offending parties being fold, and the purchase-money paid to the injured hufband. Obi, or pretended witchcraft (in which all the Negroes firmly believe, and it is generally accompanied with the crime of poiloning) is another, and a very common offence, for which

which flavery is adjudged the lawful punish- CHAP. ment; and it extends to all the family of the offender. There are various other crimes which fubject the offender and his children to be fold; and it is more than probable, that if there were no buyers, the poor wretches would be murdered without mercy.

Such is the account which I received, and it is confirmed by feveral of the witnesses that were examined by the Committee of the Pivy Council, and by others that appeared before the House of Commons; but it is contradicted in some material circumstances by other gentlemen, whose examinations were taken at the fame time, and to whose authority much respect is due. Mr. Penny afferts, that although three-fourths of the inhabitants of the Windward Coast are slaves to the other fourth, yet that these local and domestick flaves are never fold, unless for crimes. is of opinion that in no country, either in the maritime districts or in the interior parts of Africa, are flaves bred for fale, but that most of those which are disposed of to the Europeans, are sold in consequence of delinquency, or captivity in war. The same, or nearly the same, account is given of the Fantyn nation by Mr. Norris; who observes, that "a considerable portion of the community are persons born slaves, but that these have peculiar privileges, and enjoy many advantages.

BOOK advantages, which the flaves of the neighbouring countries do not, and cannot be fold at the caprice of their masters." His opinion is, that the number of flaves furnished in the Fantyn country (about 2,000 annually) is made up by delinquency and debt (b).

> UNDER fuch contradictory information, it occurred to me, during my residence in Jamaica, to examine many of the Negroes themselves. I mean Negroes newly arrived from Africa; for from those who have refided any length of time in the West Indies, it is difficult to obtain, even to enquiries of an indifferent nature, such answers as carry with them conviction of their truth. It is feldom, for instance, that any Guiney Negro will acknowledge that he was in a state of flavery in his native country. Observing the respect and pre-eminence allowed to wealth and confequence among the Whites, and the privileges which attach to freedom in the West Indies, among those of his own colour who are born or rendered free, he is tempted, whether justly or not, to affert his claim

> (b) Several other witnesses speak of the privileges which attach to domestick flaves in Africa, but it is observable that mary of these admit, and not one I believe denies, that the African mafter has the power of putting fuch flaves to death, with impunity, whenever he thinks proper; and it will prefently be shewn from the testimony of some of the Negroes themselves, that it is a mistake to suppose the master cannot fell them at pleafure.

(c) Perhaps the reader will not be displeased to be prefented with a few of these examinations, as they were taken down at the time, and without any view to publication.

Adam (a Congo) a boy as I guess about fourteen, his country name Saori, came from a vast distance inland, was waylaid and stole, in the path about three miles from his own village, by one of his countrymen. It was early in the morning, and the man hid him all day in the woods, and marched him in the night. He was conducted in this manner for a month, and then fold to another Black man for a gun, some powder and shot, and a quantity of salt. He was fold a second time for a keg of brandy. His last-mentioned purchaser bought several other boys in the same manner, and when he had collected twenty, sent them down to the seacoast, where they were sold to a captain of a ship. He relates further, that his father, Scindia Quante, was a chief or captain under the king, and a great warrior, and had taken many people, whom he sold as slaves.

Quaw and Quamina (brothers) from the Gold Coast, one of them, as I guess, about twenty years old, the other eighteen, were born flaves to a man named Banasou, who had a great many other flaves, and fold these two to the captain that brought them to Januaica. On being asked for what cause their master fold them, they supposed the question implied a charge against them of misconduct, and one of them replied with great quickness, that they were not the only slaves that were fold in Gumey without having been guilty of any crime: their master, they said, owed money, and sold them to pay his debts.

Ajiba, a Gold Coast girl, aged about fifteen, was a slave to a man named Quamina Yati. Her master fold her and two others to the same captain, for a quantity of linen and other goods.

and enlightened people, concerning the injustice of a traffick thus supported. To attempt its defence in all cases, were to offer an insult to the common fense of mankind, and an outrage on the best feelings of our nature. Yet a good mind may honeftly derive some degree of consolation, in confidering that all fuch of the wretched victims as were flaves in Africa, are, by being fold to the Whites, removed to a fituation infinitely more defirable, even in its worst state, than that of the best and most favoured slaves in their native country. It is, on all hands, admitted that the condition of those poor people, under their own governments, is the most deplorable that we can conceive a human creature to be subject to. They have no security for property, nor protection for their persons; they exist at the will and caprice of a master, who is not amenable to any law for his ill treatment of them, and who may flaughte them at his pleasure. He has in truth but ven little interest in their preservation, having m means of employing them in profitable labour and when provisions are scarce, he has even strong inducement to destroy them.

THE chief objection to the flave trade arise from the great encouragement which, I fear, unavoidably holds forth to acts of violence, pression, and fraud, among the natives toward each other. Without doubt, this is the strong

part of the fo, with th West Indi it deferve direct and by the Br Europe co afford a re of which admit, and rather, wh (fo inveter them in a

part of the petitioners case; and I admit it to be CHAP. fo, with that frankness which I trust no honest West Indian will condemn. At the same time it deserves very serious consideration, whether a direct and immediate discontinuance . che trade by the British nation only (the other nations of Europe continuing to purchase as usual) would afford a remedy to those miseries, the existence of which every enlightened mind cannot but admit, and every good mind must deplore; or rather, whether a partial and fudden abolition (so inveterate is the evil) would not aggravate them in a high degree.

In confidering this question, we must have in view not only the circumstances attending the Slave Trade on the Coast, but also the situation of the enflaved Negroes already in the Sugar Colonies. On the first head, it is to be enquired whether, fupposing Great Britain should abandon her share in this commerce, a less number of flaves would in consequence thereof be brought down for fale in Africa? Admiral Edwards, who ferved on the station, and was on shore seven months at a time, is decidedly of opinion that, fo long as other nations continue to purchase, the number would not be diminished in the least (d); and a little reflection may perhaps convince us

(d) See his evidence in the Report of the Committee of Privy Council 1789.

Vol. II.

K

that

BOOK

that his opinion is founded in reason, and the nature of the case. Among the commercial nations of Europe, it is true that, in most cases of purchase and barter, the demand and the supply grow up together, and continue to regulate and support each other: but these are the arrangements of well-informed and civilized men. In Africa, it is apprehended the flave merchants possess no ideas of this kind, neither does the nature of their traffick allow of fuch regulations. When two African states are at war with each other, the aim of each undoubtedly is to destroy as many enemies, or feize on as great a number of captives, as possible. Of these last unfortunate victims, all such as are able to travel, are commonly fent down to the coast for sale, the rest are massacred on the spot, and the same sate attends those unhappy wretches who, being sent down, are found unfaleable. The prices indeed on the coast have been known to vary as the market is more or less plentifully supplied; but, fo long as ships from Europe create a market, whether the prices be high or low, it can hardly be doubted, that wars will be as frequent as ever, and that the same acts of oppression, violence and fraud, which are faid to be committed by princes on their fubjects, and by individuals on each other, for the purpose of procuring flaves for fale, will exist, as usual, without regulation or restraint. BEHOLD

ves for fale,

BEHOLD then an excess of 38,000 of these CHAP. miferable people (the present annual export in British shipping) thrown upon the market, and it is furely more than probable that one or the other of these consequences will follow: Either the French, the Dutch, and the other maritime nations of Europe, by feizing on what we furrender, will encrease their trade in proportion to the encreased supply (e), or, having the choice and refusal of 38,000 more than they have at present, will become more difficult to please; confining their purchases to such only as are called prime flaves. Thus the old, and the very young, the fickly and the feeble, will be fcornfully rejected; and perhaps twenty poor wretches be confidered as unfaleable then, and facrificed accordingly, to one that is so considered and sacrificed now.

THAT this latter supposition is not a mere speculative contingency, is abundantly proved by many respectable witnesses, whose examinations were taken by the committee of the privy council:—Being asked concerning the disposal of such slaves as are rejected by the European traders, either because their cargoes are already

(e) Admiral Edwards being asked, Whether, if Great Britain were to relinquish the trade in slaves, the number sold to Europeans would, in his opinion, be much diminished? replied, Most certainly it would not be diminished. The French and Dutch would immediately get possession of this trade.

K 2

afforted,

BOOK IV. afforted, or because the miserable victims are confidered as too old or too feeble for labour, it was given in evidence, as a fact too notorious to be controverted, that they are very frequently, if not generally, put to death. The flave merchant, not having the means of maintaining his captives for any length of time, makes no scruple to avow that it is his intention to destroy them, provided they are not fold by a certain day; and the work of death, on such occasions, is sometimes performed in fight of our shipping. Shocking as this account may feem, it is verified by undifputed testimony; and to suppose that a discontinuance of the trade by one nation only, will put an end to this enormity, is to suppose that the African flaveholder will become more merciful, as his flaves are rendered of less value; a conclusion which I am afraid experience will not warrant (f).

THE

(f) Mr. Newton (an evidence in support of the application to parliament for an abolition of the trade) admits that some of the slaves, that have been rejected by the Europeans, have been knocked on the head with the paddles of the boat that brought them, and thrown overboard. On the Gold Coast, Mr. Miles supposed they are mostly reserved for the purpose of being sacrificed at the burial of great men. One instance of this came within his own knowledge.——Mr. Weuves knew an instance of a woman being destroyed, who was accused of witchcrast, and could not be fold. In order to save her life, he offered to give an anker of brandy for her; but her head was cut off before his messenger arrived. Other instances, similar to this, are related by Mr. Mathews and Mr.

THE effect which a partial abolition would CHAP. probably have in our fugar iflands is now to be confidered; and here it must, in the first place, be observed, that it seems not to be known, or is not adverted to, in England, that the fugar estates are not only very much understocked in general, but that there is scarce one of them, for reasons that will presently be seen, that possesses a sufficient number of Negro women, in

proportion to the men. Of course there being fewer pairs, there are fewer children born. Thus fituated, there must necessarily happen a decrease

on the whole number of the flaves, even under the mildest treatment, and enjoying the greatest

an flaveplenty of wholesome provisions.-Secondly, it is flaves must be remembered, that most of the sugar

estates, having been settled on credit, are burthened with neavy incumbrances to persons in Great

Many planters are under covenants to Britain.

Gandy. Sir George Young faved the life of a beautiful boy, about five years old, at Sierra Leone. The child being too young to be an object of trade, would have been thrown into the river by the person that had him to sell, but Sir George. to fave his life, offered a quarter cask of Madeira wine for him, which was accepted-he brought him to England, and made a present of him to the Marquis of Lansdown .- Admiral Edwards, Mr. Penny, Mr. Dalzel, Mr. Anderson, and others, concur in the same account of the disposal of such as are rejected by the Europeans.

confign thither annually, certain specifick quantities of fugar and rum. The effect therefore of a direct and unqualified abolition would be this, that while the few perfons who have money at command, would be waiting, and perhaps contriving, opportunities to flock their plantations with the flaves of their diffressed and harassed neighbours, the great majority of planters would find themselves in a most cruel and uncomfortable fituation; their eftates already weak-handed, deprived of the poffibility of felling their lands, and no means in their power of augmenting their stock of labourers by purchase; their creditors, at the fame time, clamorous and importunate for produce, which can only be obtained by great exertions of labour: in fuch circumstances what are they to do? I cannot better illustrate this part of my subject, than by the case of the Dutch planters of Essequebo and Demerary: by an impolitick interdiction of foreign flave ships into those provinces, they have, for some time past, felt all the effects of a virtual abolition; and here follows the account which they give of their fituation, transcribed from a late memorial to the States General:-" It is impossible (fay the petitioners) to inform your High Mightineffes of the real annual diminution of our flaves, but it is generally calculated at five in the hundred, or a twentieth part. is little felt the first year: nineteen remaining CHAP. Negroes hardly perceive that they do the work which the preceding year employed twenty. But the fecond year the fame work falls to the share of eighteen, and, if another year passes without an augmentation by purchase, seventeen must do the work first allotted to twenty. This must give rife to discontent, desertion, and revolt; or, if the Negroes put up patiently with this furcharge of labour, illness and an earlier death must be the consequence. Or, lastly, if the planters feek to avoid all these inconveniences, they must gradually contract the limits of their plantations, and of course diminish their produce."-Thus immediate interest in all cases, and urgent diftrefs in many, are opposed to the principles of justice and the dictates of humanity (g)!

WHAT I have thus deliberately written, is not, if I know my own heart, the language of felfish-

(g) The present annual decrease of the Negroes in the British West Indies is estimated at two and a half per cent. on the whole number; but if the fame quantity of labour which they now perform, shall continue to be exacted from them as their numbers diminish, it cannot be doubted that the lofs will be greater every year, and augment with accelerated rapidity. The fugar effates will, undoubtedly, fuffer most, and it is no difficult matter to calculate in what time they will be entirely difmantled. In Jamaica, the number employed in that line of culture in 1780 was 128,729, all of whom, without fresh supplies from Africa, would probably be extinct in lefs than thirty years.

ness

BOOK IV.

ness or party. I confess that, reflecting on the means by which flaves are very frequently obtained in Africa, and the destruction that formerly attended the mode of transporting them to the West Indies, I was at one time of opinion it became this great and renowned nation, instead of regulating her conduct by that of other states, to fet a laudable example to them, by an immediate and unqualified suppression of this reprobated commerce; and I should still maintain and avow the fame fentiments, were I not, on fuller enquiry and better information, led to fufpect that the means proposed are not adequate to the end. I fear that 'a direct and fudden abolition, by one nation alone, will not ferve the purpofes of humanity in Africa; and I am fully convinced that fuch a measure will tend to aggravate, in a very high degree, the miseries of a great majority of the Negroes already in the West Indies; whose decreasing population is at present unavoidable; and who, therefore, unless recruited by supplies from Africa, must find their labours augment, as their numbers diminish.

A question too arises in this place, the discussion of which might probably render all further debate on the subject of abolition superfluous. It extends to nothing less than the *practicability* of the measure. Whether it be possible for any nation in Europe, singly considered, to prevent

preven Africa, a point concern fo purcl in spite man wh habited the facil the prev and hark of foreig contraba pronoun duction would b giving la

prevent its subjects from procuring flaves in CHAP. Africa, fo long as Africa shall continue to fell, is a point on which I have many doubts; but none concerning the poffibility of conveying the flaves fo purchased into every island of the West Indies, in spite of the maritime force of all Europe. No man who is acquainted with the extent of uninhabited coast in the larger of those islands; the facility of landing in every part of them;the prevailing winds, and the numerous creeks and harbours in all the neighbouring dominions of foreign powers (so conveniently situated for contraband traffick) can hefitate a moment to pronounce, that an attempt to prevent the introduction of flaves into our West Indian colonies, would be the that of chaining the winds, or giving law the ocean (h).

(h) It was faid (with what truth I know not) that befides confifcation of ship and cargo, it was meant to consider the clandestine importation of slaves into our colonies as a felonious act, and to punish it capitally. The Spaniards treat many species of sinuggling in this manner, and in no part of the world is the contraband traffick fo prevalent as in the Spanish dominions. It is a curious question, in what manner a cargo of flaves, feized as contraband, would be disposed of? To declare a fet of poor helpless savages free, and turn them loofe in a strange country, without food or clothing, would hardly be thought of, and to fend them back to Africa, befides the expence and length of the voyage, would be to confign them over to certain destruction. This difficulty seems to have been altogether overlooked, during the discussion of the flave business in parliament.

The

The next object to which it was proposed to direct our enquiries, is the mode of conveying flaves from Africa to the West Indies, and their mortality in the voyage; conftituting the fecond ground on which most of the petitioners to parliament for an abolition of the trade, have rested their application. But before I proceed to confider this part of my subject, it may not be improper to offer a few observations concerning the great disproportion of sexes in the purchases that are made on the coast; it being a well-known fact, that of the vast numbers of slaves annually exported from Africa, about one-third only are This circumstance has been tortured into a charge of criminal neglect and improvident avarice against the planters of the West Indies, who are supposed from thence to have no wish of making their flaves even as happy as their fituation will admit, or of keeping up their numbers by natural encrease. How far these charges are founded, let the following testimony of a very competent witness determine:-" The difproportion in the number of male and female flaves exported from Africa (fays Mr. Barnes (i)) appears to me to be imputable to the three following causes: First, to the practice of polygamy which prevails throughout Africa. Secondly, to

is, he has n

fome of the very causes of flavery itself; men CHAP. are more apt to commit civil offences than women, and in all fuch cases, where males and females are involved in the same calamity, the first cause still has its operation: the young females are kept for wives, and the males are fold for flaves. Thirdly, to the circumstance that females become unfit for the flave-market at a much earlier period than the males. woman, through child-bearing, may appear a very exceptionable flave at twenty-two, or twenty-three years of age, whereas a healthy well-made man will not be objected to at four or five-and-thirty; consequently, if an equal number of males and females of like ages were offered for fale, a much greater proportion of the females would be rejected on that account only. With regard to the question, Whether the European traders prefer purchasing males rather than females? I have to observe, that though it is impossible to conduct the business, either of a house or of a plantation, without a number of females, yet as the nature of the flave-service in the West Indies (being chiefly field labour) requires, for the immediate interest of the planter, a greater number of males, the European trader would of course with to purchase his affortment according to the proportion wanted; but the fact is, he has not an option in the case for the reasons already

BOOK already mentioned; so that in most parts of Africa it is with great difficulty he can get as many faleable females as will form any tolerable affortment." The application of these remarks will hereafter be feen.—I now return to the manner of transporting the flaves thus purchased, from Africa to the West Indies.

> IT is difficult, I think, to affign any probable reason or motive why the treatment of these poor people at fea should be otherwise than as humane and indulgent as the fafety of the crew will admit. Many shocking instances were however adduced, in the evidence delivered to the committee of privy council, of most outrageous and wanton barbarity and cruelty exercised towards them in different ships; but, as the witnesses that were brought forward to establish those charges were not the most respectable in point of character; and in some cases were proved to have fuits at law with the captains against whom they gave evidence, I shall collect my account from less disputable authority.

> IT is admitted on all hands that the menflaves are fecured in irons when they first come on board; but Sir George Young, a captain in the royal navy, who appears to be well acquainted with the trade in all its branches, is of opinion, that this is not practifed more than necessity requires. The mode is, by fastening every two

men together, the right ancle of one being lock- CHAP. ed, by means of a finall iron fetter, to the left of the other; and if marks of a turbulent disposition appear, an additional fetter is put on their wrifts. On the passage, when danger is no longer apprehended, these irons are commonly taken off; and women and young people are exempt from them from the beginning (k). They are lodged between decks, on hear hards, the men and women being feparat. fro: ach other by bulk-heads; and fresh air is admitted by means of windfails or ventilators. Covering of any kind, as well from the warmth of the climate as from the constant practice of going naked, would be insupportable to them. Every morning, if the weather permits, they are brought upon deck, and allowed to continue there until the evening. Their apartments, in the mean time, are washed, scraped, fumigated, and sprinkled with vinegar. The first attention paid to them in the morning is to supply them with water to wash their hands and faces, after which they are provided with their morning meal: this, according to the country from whence they come, confifts either of Indian corn, or of rice or yams. Before noon they are constantly and regularly made to bathe in falt-water, and nothing can be more

agreeable

BOOK agreeable and refreshing. Their dinner is varied, confifting fometimes of food to which they have been accustomed in Africa, as yams and Indian corn, &c. and at other times of provisions brought from Europe, as dried beans and peafe, wheat, shelled barley, and biscuit; all these are boiled foft in fteam, and mixed up with a fauce made of meat, with fish, or palm-oil; this last is a constant and desirable article in their cookery. At each meal they are allowed as much as they can eat, and have likewise a sufficiency of fresh water; unless when, from an uncommon long voyage, the prefervation of the ship compels the captain to put them to a short allowance. Drams also are given them when the weather is cold or wet; and pipes and tobacco whenever they defire them. In the intervals between their meals, they are encouraged to divert themselves with musick and dancing; for which purpose such rude and uncouth inftruments as are used in Africa, are collected before their departure; and they are also permitted to amuse themselves with game of chance, for which they are likewise furnished with implements of African invention. ness, the invalids are immediately removed to the captain's cabin, or to an hospital built near the forecastle; and treated with all the care, both in regard to medicine and food, that circumstance will admit; and when, fortunately for the Negroes

FROM this account, which is confirmed by the testimony of a great number of respectable men, many of whom were wholly difinterested in the question, and could therefore have no motive to violate or suppress the truth, it may be supposed that every scheme which can easily be devised to preserve the Negroes in health, cleanliness, and cheerfulness, is adopted in the So dreadful, notwithstanding, has been the mortality in feveral ships, wherein these precautions were used, as to evince, beyond all contradiction, that there was fomething in those instances intrinsically wrong; and it cannot be doubted that the mischief has been ascribed to its proper cause, namely, the criminal rapaciousness of many of the ship-masters in purchasing more Negroes than their accommodations were calculated to convey. It appeared in evidence before the House of Commons, that a ship of 240 tons would frequently be crowded with no less than 520 flaves; which was not allowing ten

BOOK ten inches of room to each individual. consequence of this inexcusable avarice, was oftentimes a loss of 15 per cent. in the voyage, and 4 ½ per cent. more in the harbours of the West Indies, previous to the fale, from diseases contracted at fea; - a destruction of the human species on which it is impossible to reslect without indignation and horror!

> To the feveral arguments, however, which have been raifed on the ground of these abuses, in support of the scheme of abolition, a very thort answer may be given: - Admit all the miferies and destructive wretchedness which have been placed to this account to have existed in full force, and it will still remain to be enquired whether measures of less powerful operation than a total suppression of the trade, will not obviate in future the evils complained of; because, if regulations alone are fufficient for that purpofe, abolition cannot be neceffary. Regulations have accordingly been framed and inforced under the authority of the British parliament, of which the certain effect ought furely to be known, before the evils they are meant to redress are pronounced irremediable. By an act of the 28th year of his present Majesty (since renewed and amended) the flave ships are restricted to the conveyance of five flaves to every three tons; and even this proportion is allowed only as far as 201 tons. For

ons. For every

every additional ton they are limited to one ad- CHAP. ditional flave (1). To these important precautions for fecuring to the Negroes a fufficiency of room, is added the necessary provision of a regularly-qualified furgeon; to whom, as well as to the ship-master, very liberal encouragement is given, to induce both of them to exert every provident endeavour in preferving their unfortunate captives in health and spirits: the sum of one hundred pounds being allowed to the master, and £. 50 to the surgeon, if the loss on the voyage amounts to no more than two in the hundred, and half those sums if the loss shall not exceed three in the hundred.

Or the full effect which this system of restriction and encouragement hath hitherto produced in all the British colonies, I am not informed; but judging by returns which I have obtained from one of the principal marts in the West Indies, it would feem to have been found, in a very eminent degree, advantageous and falutary. At the port of Montego-Bay, in Jamaica, the Negroes imported between the 18th day of No-

(1) It is also provided, that vessels not exceeding 201 tons shall not carry of male slaves (exceeding four feet four inches in height) more than one for each ton, and vessels of larger fize more than three fuch males for every five tons. This regulation feems intended as an encouragement to the export of a greater proportion of females.

Vol. II. vember

BOOK vember 1789 and the 15th of July 1791, were 9,993, in 38 ships; the mortality at sea, exclufive of the loss of 54 negroes in a mutiny on the coast, was 746, which is somewhat under seven per cent. on the whole number of flaves. This, though much less, I believe, than the average lofs which commonly happened before the regulating law took place, is, I admit, fufficiently great; and, had it prevailed in any degree equally on the feveral ships concerned, might, perhaps, have been confidered as a fair estimate of the general mortality consequent on the trade, notwithstanding the precautions and provisions of the regulating act. But on examining the lift, I find that eight of the 38 ships, were entitled to, and actually received, the full premium; two others received the half premium; and one other (a schooner that sailed from Jamaica to the coast before the act took place) returned without the lois of a fingle negro. Of the 746 deaths, no less than 328 occurred in four ships only, all of which, with five other veffels, comprehending the whole number of thips in which three-fifths of the mortality occurred, came from the same part of the coast, the Bight of Benin; a circumstance that gives room to conclude (as undoubtedly was the fact) that the negroes from that part of the country brought difease and contagion

PERHAPS the truest criterion by which to estimate the beneficial effect of the regulating law, is the comparatively trifling loss that now occurs in the harbours of the West Indies before the Guiney ships open their sales. This mortality, which was formerly estimated at 4 1 per cent. and was manifestly the consequence of sickness or improper treatment in the voyage, is now happily mitigated in fo great a degree, that out of the whole number of 9,993 flaves imported into Montego-Bay as before stated, the loss between the days of arrival and fale, was no more than 69, or not quite & per cent. Enough therefore hath been effected to demonstrate, that it is by no means impossible, nor indeed a very difficult matter, to render the conveyance of Negroes from Africa to the West Indies, as little prejudicial to their healths, as the transportation of any other body of people across the ocean in any part of the world. Few voyages were more destructive to the seamen than that of Lord Anson, and none less so than those of Captain Cook; an incontestable proof that the mortality, which has commonly occurred at fea, has at all times arisen L₂ from

FOOK from ill-conftructed ships, and neglect, or improper was per management on board (m.)

Concerning the West India Planters, as they are entirely innocent and ignorant of the manner in which the Slave Trade is conducted (having no other concern therein than becoming purchasers of what British acts of parliament have made objects of fale) fo it is equally confonant to their interest and their wishes, that effectual means should be pursued for preserving the health of the negroes, by fecuring to them proper and reasonable accommodation on the passage. The affembly of Jamaica, instead of remonstrating against that augmentation in the price of flaves, which they must have foreseen that the act of the British parliament would necessarily create, with the liberality of dignified minds applauded the principle of the measure, declaring it to be founded in necessity, justice, and humanity, and expressed their opinion that the wisdom and authority of Parliament might be beneficially exerted in further regulations of the African commerce, particularly in preventing the deten-

(m) Perhaps no plan is so likely to save the lives and preferve the healths of the Negroes at sea, as that of limiting the slave-ships to 200 tons burthen, and allowing them to receive on board only 2 or $2\frac{1}{2}$ to a ton. Small vessels are soon loaded; and from a multitude of examples that I have seen, it appears to me that the greatest mortality happens in the larger ships.

tion of ships on the coast; in prohibiting the CHAP. purchase of flaves who should appear to have been kidnapped; in compelling the flave-ships to transport an equal number of both fexes, and to provide ventilators and a fufficient quantity of provisions, especially water: such a recommendatic it might be supposed would engage immediate attention, not only as coming from men who are certainly the best judges of its propriety and necessity, but also because the means of enforcing most of the regulations which they recommend are practicable and apparent.

HAVING thus, I presume, sufficiently treated of the means by which flaves are procured for fale in Africa, and the regulations that have been established by the British parliament for their better conveyance to the Sugar Islands, I shall proceed, in the next chapter, to a detail of their general treatment and fituation there, immediately on and after their arrival, and distribution among the planters.

CHAP. V.

Arrival and sale in the West Indies.—Negroes newly purchased, how disposed of and employed.—Detail of the management of Negroes on a sugar plantation.—Mode of maintaining them.—Houses, clothing, and medical care.—Abuses.—Late regulations for their protestion and security.—Causes of their annual decrease.—Polygamy, &c.—Slavery in its mildest form unfriendly to population.—General observations.—Proposals for the surther meliorating the condition of the Slaves, with which the subject concludes.

B O O K
IV.

The arrival of a Guiney ship in the West Indies is announced by publick advertisement, specifying rhe number of Negroes imported, the country from whence, and day of sale. It was the practice until of late, to open the sale on shipboard, the males being arranged in one part of the ship, and the semales in another: but, as visitors of all descriptions were admitted without hesitation or enquiry, it frequently happened, when slave-ships were scarce, that such crowds of people went on board, and began so disgraceful a scramble, as to terrify the poor ignorant Africans with the notion that they were seized on by a herd

unfortuna
exile, exp
like a her
(except it

(a) Soon had the hor which he wadopted, an factors are of their utmost

of cannibals, and speedily to be devoured. The CHAP. wisdom of the legislature of Jamaica has corrected this enormity in that island, by enacting that the fales shall be conducted on shore, and that care shall be taken not to separate different branches of the same family. I am afraid it hath been found difficult, in all cases, to enforce this latter regulation; but it is usual with most planters, I believe, to enquire of the Negroes themselves, by means of an interpreter, whether they have relations on board, and to purchase families together: or, by exchanging with other buyers, to prevent, if possible, that cruel separation between parents and children, and brothers and fifters, which must fometimes, I doubt, unavoidably take place. I never knew an instance where such purchase or accommodation was knowingly declined or refuled (a).

ALTHOUGH there is fomething extremely shocking to a humane and cultivated mind, in the idea of beholding a numerous body of our unfortunate fellow-creatures, in captivity and exile, exposed naked to publick view, and sold like a herd of cattle, yet I could never perceive (except in the cases that have been mentioned of

(a) Soon after this was written, the author of this work had the honour of proposing to the assembly of Jamaica, of which he was a member, an act which was unanimously adopted, and is now an existing law, by which the Guiney factors are compelled, under the solemnity of an oath, to do their utmost to enforce the regulation alluded to.

воок a scramble on shipboard) that the Negroes themfelves were oppressed with many of those painful fensations which a person unaccustomed to the fcene would naturally attribute to fuch apparent wretchedness. The circumstance of being exposed naked, is perhaps of little account to those who were never fenfible of the necessity or propriety of being clothed. The climate requires not the aid of dress, nor are the Negroes, though naked, deflitute of decorations, on which, at their first arrival, they seem to set a much higher estimation than on raiment; most of the nations of Africa having their skin, particularly on the forehead, the breaft, and round the waift, punctured or impressed with figures and representations of different kinds (squares, circles, triangles, and crescents) similar to the practice which prevails in Otalieite, and the other islands of the South Sea, called tatowing, as described in the voyages of Captain Cook. Like those islanders too, fome of the newly-imported Negroes display these marks with a mixture of oftentation and pleafure, either confidering them as highly ornamental, or appealing to them as testimonies of diftinction in Africa; where, in some cases, they are faid to indicate free birth and honourable parentage (b). The Negroes are apprifed also,

before their arrival, that they are to be employed CHAP. in tillage; and, knowing that they were bought with money, expect to be fold in the same man-They display therefore, on being brought to market, very few figns of lamentation for their past, or of apprehension for their future condition; but, wearied out with confinement at sea, commonly express great eagerness to be fold; presenting themselves, when the buyers are few, with chearfulness and alacrity for selection, and appearing mortified and disappointed when refused. If it happens, as it frequently does, when the purchasers have leifure and opportunity to inspect them individually, that some bodily defect or blemish is discovered in any of them, the majority feem highly diverted at the circumstance; manifesting, by loud and repeated bursts of

me to use the same, or nearly the same, marks as the savages of New Zealand; viz. deep incisions on each cheek drawn circularly from the ear to the mouth. (Vide Hawksworth's Voyages, vol. iii. c. 9.) It is ridiculous enough, that some of the writers against the slave-trade should ascribe these marks of superstition or false taste to the cruelty of the planters, and gravely affert that they are the scars of horrible gashes inflicted by the bloody hand of tyranny in the wantonness of punishment. The Reverend Mr. Clarkson catches very eagerly at this idea, and afferts with great solemnity, that "it is "a matter of constant lamentation with disinterested people, who, out of curiosity attend the Negro markets in Jamaica, that they are not able to turn their eyes on any group of Negroes without beholding these inhuman marks of passificon, despotism, and caprice!"

laughter,

IV.

laughter, that reflection conflitutes no very predominant part of their character (c).

THE buyer having completed his affortment, and clothed his newly-acquired subjects with a coarse German linen, called oznaburghs, and provided them also with hats, handkerchiefs, and knives, fends them to the place of their intended refidence (d): and now a practice prevails in Jamaica, which I myself, unacquainted as I then was with the actual management in detail of a fugar plantation, and refiding in a distant country, used to reprobate and exclaim against; but to which I now submit, from a full conviction, founded on experience, of its usefulness and necessity. The practice is that of distributing the newly-imported Africans among the old Negroes, as pensioners (with some little affistance occasionally given) on their little peculium, and provision-

(c) The prices of new Negroes in the West Indies, at this time (1791) are nearly as follows:—An able man in his prime, £.50 sterling; an able woman, £.49 sterling; a youth approaching to manhood, £.47 sterling; a young girl, £.46 sterling; boys and girls from £.40 to £.45 sterling, exclusive of the Colonial tax or duty on importation, about twenty shillings more.

(d) It is the custom among some of the planters in Jamaica, to mark the initials of their name on the shoulder or breast of each newly-purchased Negro, by means of a small silver brand heated in the slame of spirits, as described in a former chapter; but it is growing into disuse, and I believe in the Windward Islands thought altogether unnecessary.

effary. grounds.

This I used to consider as an insup- CHAP. portable hardship on the poor people already fettled and domesticated, and I positively and expressly forbad a continuance of the custom in plantations over which I had authority.

On my return to the West Indies, I was furprifed to find the old-established Negroes, when young people newly arrived from Africa, were fent among them, request, as a particular instance of favour and indulgence to themselves, the revival and continuance of the ancient fyform; affuring me they had the means of supporting the strangers without difficulty. Many who thus applied, proposed each of them to adopt one of their young country-folks in the room of children they had loft by death, or had been deprived of in Africa; others, because they wished, like the patriarchs of old, to see their sons take to themselves wives from their own nation and kindred; and all of them, I prefume, because, among other considerations, they expected to revive and retrace in the conversation of their new visitors, the remembrance and ideas of past pleasures and scenes of their youth. The strangers too were best pleased with this arrangement, and ever afterwards confidered themselves as the adopted children of those by whom they were thus protected, calling them parents, and venerating them as fuch; and I never knew an instance of the violation of a trust thus folicited

BOOK folicited and bestowed. In the course of eight or ten months, provided they are mildly used and kept free of disease, new people, under these circumstances, become reconciled to the country; begin to get well established in their families, their houses and provision-grounds; and prove in all respects as valuable as the native or creok negroes (e).

WHAT has hitherto been observed concerning the disposal of Africans newly in ported, is, I believe, applicable to Wei Indian estates of all descriptions; but, as my own personal attention has been chiefly directed to fugar plantations, I would be understood to speak of those more particularly; and shall now proceed to describe the methodical arrangement and distribution of the labour with which they are conducted, as it is unquestionably more severe and conftant than that on any other species of landed property in the West Indies.

THE Negroes are divided into three fets or classes, usually called gangs; the first confisting of the most healthy and robust of the men and women, whose chief business it is, out of crop-

carpenter well-regul second gas women fa who are ch (f) The at of each able f may be recko reckon thus : favourable foil 16 cwt. annual age value of w flerling the ho ductive, and th payment of co for that purpof profit per hogh value of the la third only of th

clusive of

⁽e) Generally speaking, a Creole Negro is considered as worth more than one imported; but in a valuation, by indifferent persons, of two able well-disposed Negroes, nearly of the same age, the one an African, the other a native, no great difference (if any) would be made. A child just born is valued at £.5. time.

time, to clear, hole and plant the ground; and, chap. in croptime, to cut the canes, feed the mills, and attend the manufacture of the fugar. It is computed that, in the whole body of the negroes on a well-conditioned plantation, there are com-

monly found one-third of this description, exclusive of domesticks and negro tradesimen, viz. carpenters, coopers and masons, with which each well-regulated plantation is provided (f). The

fecond gang is composed of young boys and girls, women far gone with child, and convalescents,

who are chiefly employed in weeding the canes,

(f) The annual profit arising to the owner, from the labour of each able field Negro employed in the cultivation of sugar, may be reckoned at twenty-five pounds sterling money. I

reckon thus:—A sugar plantation, well conducted, and in a savourable soil, ought to yield as many hogsheads of sugar, of 16 cwt. annually, as there are Negroes belonging to it, the aver-

age value of which, for ten years past, may be stated at χ . 15 stelling the hogshead; but as every plantation is not thus productive, and the rum, which is generally appropriated to the

payment of contingent charges, not being always sufficient for that purpose, 1 will allow £. 10 sterling only, as the clear profit per hogshead of the sugar, which therefore is the average

value of the labour of each Negro, old and young; and onethird only of the Negroes being able people, their labour may be put at £. 30 a head; out of which however must be deducted,

the interest on their first cost, and an allowance for the risque of losing them by death or desertion (their maintenance, &c.

being included in the contingent expences of the estate) for both which I allow sifteen per cent. This leaves about £.25

flerling clear, or nearly a fourth part of the actual value of each flave.

BOOK and other light work adapted to their strength and condition; and the third fet confifts of young children, attended by a careful old woman, who are employed in collecting green-meat for the pigs and sheep; or in weeding the garden, or some fuch gentle exercise, merely to preserve them from habits of idlenefs.

THE first gang is summoned to the labours of the field either by a bell or the blowing of a conch-shell, just before sun-rise. They bring with them, befides their hoes or bills, provisions for breakfast; and are attended by a White perfon, and a Black superintendant called a driver, -The lift being called over, and the names of all the absentees noted, they proceed with their work until eight or nine o'clock, when they fit down in the shade to breakfast, which is prepared in the mean time by a certain number of women, whose fole employment it is to act as cooks for the reft. This meal commonly confifts of boiled yams, eddoes, ocra, calalue and plantains, or as many of those vegetables as they can procure; feafoned with falt, and cayenne pepper; and, in truth, it is an exceeding palatable and wholesome By this time most of the absentees make their appearance, and are fometimes punished for their fluggishness by a few stripes of the driver's whip. But I am happy to fay that of late years a very flight excuse is generally admitted. fact

fact is foggy, zone, t beyond frozen . activity and lang will ani revivifie breakfas than ha having r until no bour. 7 and refre spent in 1 addition of Negro re them, how meal at n fleep, or poultry, o many as more indi provisionagain fum refreshed nifest iom plication;

fact is, that when the mornings are chill and CHAP. foggy, as frequently happens even under the zone, the sensations of the Negro are distressful beyond the imagination of an inhabitant of frozen regions. Instead of deriving firmness and activity from the cold, he becomes inert, fluggish and languid; and neither labour nor punishment will animate him to great exertion, until he is revivified by the genial warmth of the fun. At breakfast they are seldom indulged with more than half or three quarters of an hour; and, having refumed their work, continue in the field until noon, when the bell calls them from labour. They are now allowed two hours of reft and refreshment; one of which is commonly fpent in fleep. Their dinner is provided with the addition of falted or pickled fish, of which each Negro receives a weekly allowance. Many of them, however, preferring a plentiful supper to a meal at noon, pass the hours of recess, either in fleep, or in collecting food for their pigs and poultry, of which they are permitted to keep as many as they please; or perhaps a few of the more industrious, will employ an hour in their provision-grounds. At two o'clock they are again fummoned to the field, where, having been refreshed both by rest and food, they now manifest some figns of vigorous and animated application; although I can with great truth affert,

ed. The fact

late years

BOOK that one English labourer in his own affiniste would perform at least three times the wors of any one Negro in the same period. At sun-set, or very foon after, they are released for the night, (the drudgery, fo much complained of in some of the islands to windward, of picking grass, being happily unknown in Jamaica) and if the day has been wet, or their labour harder than usual, they are fometimes indulged with an allowance of rum. On the whole, as the length of the days in the latitude of the West Indies differs very little throughout the year, I conceive they are employed daily about ten hours, in the fervice of their master, Sundays and holydays excepted. In the crop season, however, the system is different; for at that time, fuch of the Negroes as are employed in the mill and boiling-houses, often work very late, frequently all night; but they are divided into watches, which relieve each other, according to the practice among feamen; and it is remarkable, that at this feafon the Negroes enjoy higher health and vigour than at any other period of the year; a circumstance undoubtedly owing to the free and unrestrained use which they are allowed to make of the ripe canes, the caneliquor and fyrup.

> THE practice which prevails in Jamaica of giving the Negroes lands to cultivate, from the produce of which they are expected to maintain

themselves (except in times of scarcity, arising CHAP. from hurricanes and droughts, when affiftance is never denied them) is univerfally allowed to be judicious and beneficial; producing a happy coalition of interests between the master and the slave. The Negro who has acquired by his own labour a property in his master's land, has much to lose, and is therefore less inclined to desert his work. He earns a little money, by which he is enabled to include himself in fine clothes on holydays, and gratify his palate with falted meats and other provisions that otherwise he could not obtain; and the proprietor is eased, in a great measure, of the expence of feeding him. In fome of the Windward Islands they have not land enough for the purpose; nor in any one of them, are the Negroes fo happily accommodated, in this respect, as in the large island of Jamaica; where they are seldom either stinted in quantity of land, or confined as to fituation. In fact, if the owner's territory is fufficiently extensive, the Negroes make it a practice to enlarge their own grounds, or exchange them for fresh land, every year. By these means, having quicker and better returns, they raise provisions in abundance, not only for their own use, but also a great surplus to sell. The misfortune is, they trust more to plantaingroves, corn and other vegetables, that are liable to be destroyed by storms, than to what are Vol. II. called M

EOOK IV.

called ground-provisions; such as yams, eddoes, potatoes, cassad, and other esculent roots; all which are out of the reach of hurricanes; but prudence is a term that has no place in the Negro-vocabulary. To obviate the mischiefs which satal experience has proved to flow from this grosal inattention, the Slave Ast of Jamaica obliges, under a penalty, every proprietor of lands to keep, properly cultivated in ground-provisions, one acre for every ten Negroes, exclusive of the Negro grounds (g).

THE

(g) In Jamaica the Negroes are allowed one day in a fortnight, except in time of crop, befides Sundays and holydays, for cultivating their grounds and carrying their provisions to market. Some of them find time on these days, besides raifing provisions, to make a few coarfe manufactures, such as mats for beds, bark ropes of a strong and durable texture, wicker chairs and baskets, earthen jars, pans, &c. for all which they find a ready fale; but I cannot fay much for the skill and elegance of their workmanship. The most industrious of the Negroes do not, I believe, employ more than fixteen hours in a month in the cultivation of their own provisiongardens (leaving all further care of them to the beneficence of nature) and in favourable scasons this is sufficient. Sunday is their day of market, and it is wonderful what numbers are then feen, haftening from all parts of the country, towards the towns and shipping places, laden with fruits and vegetables, pigs, goats and poultry, their own property, In Jamaica it is supposed that upwards of 10,000 assemble every Sunday morning in the market of Kingston, where they barter their provisions, &c. for falted beef and pork, or fine linen and ornaments for their wives and children. I do not believe that an instance can be produced of a master's interfering

THE cottages of the Negroes usually compose CHAP. a small village, the situation of which, for the fake of convenience and water, is commonly near the buildings in which the manufacture of fugar is conducted. They are feldom placed with much regard to order, but, being always intermingled with fruit-trees, particularly the banana, the avocado-pear, and the orange (the Negroes' own planting and property) they fometimes exhibit a pleasing and picturesque appearance. To affirm that they are very tolerable habitations, according to the idea which an untravelled Englishman would probably form of the word, were an infult to the reader; but it may honeftly be faid, that, allowing for the difference of climate, they far excel the cabins of the Scotch and Irish peasants, as described by Mr. Young, and other travellers. They are fuch, at least, as are commensurate to the desires and necessities of their inhabitants, who build them according to their own fancy both in fize and shape, the

fering with his Negroes in their peculium thus acquired. They are permitted also to dispose at their deaths of what little property they posses; and even to bequeath their grounds or gardens to fuch of their fellow-flaves as they think proper. These principles are so well established, that whenever it is found convenient for the owner to exchange the negrogrounds for other lands, the Negroes must be satisfied, in money or otherwife, before the exchange takes place. It is univerfally the practice.

M 2

mafter

BOOK master allowing the timber, and frequently permitting the estate's carpenters to assist in the building. In general, a cottage for one Negro and his wife, is from fifteen to twenty feet in length, and divided into two apartments. It is composed of hard posts driven into the ground, and interlaced with wattles and plaister. height from the ground to the plate being barely fufficient to admit the owner to walk in upright. The floor is of natural earth, which is commonly dry enough, and the roof thatched with palmthatch, or the leaves of the cocoa-nut-tree; an admirable covering, forming a lafting and impenetrable shelter both against the fun and the rain. Of furniture they have no great matters to boast, nor, considering their habits of life, is much required. The bedftead is a platform of boards, and the bed a mat, covered with a blanket; a finall table; two or three low flools; an earthen jar for holding water; a few fmaller ones; a pail; an iron pot; calabashes (h) of different fizes (ferving very tolerably for plates, dishes, and bowls) make up the rest. Their cookery is conducted in the open air, and firewood being always at hand, they have not only a fufficiency for that purpose, but also for a fire within doors during the night, without which a

Negro cannot fleep with comfort. It is made in the middle of one of the two rooms, and the fmoke makes its way through the door or the thatch. This account of their accommodation, however, is confined to the lowest among the field-negroes: tradesmen and domesticks are in general vastly better lodged and provided. Many of these have larger houses with boarded floors, and are accommodated (at their own expence it is true) with very decent furniture:—a few have even good beds, linen sheets, and musquito nets, and display a shelf or two of plates and dishes of queen's or Staffordshire ware.

Or clothing, the allowance of the mafter is not always so liberal as might be wished, but much more so of late years than formerly (i). Few of the Negroes, however, on Sundays and holydays, appear deficient in this point, or shew any want of raiment, not only decent but gaudy.

THE circumstances wherein the flaves in the West Indies seem mostly indebted to their owners' iberality, are, I think, those of medical attendance and accommodation when sick. Every plantation, that I am acquainted with, is under the daily or weekly inspection of a practitioner in

(i) I believe the Negroes on every plantation in Jamaica, without exception, receive a yearly allowance of oznaburg-linen, woollen, baize, checks, &c. and but very few planters deny them hats, handkerchiefs, and other little articles, as knives, needles and thread, &c. &c.

BOOK physick and furgery, who very frequently resides on the fpot; and the planters, being in general men of education themselves, are not easily reconciled, in fo important a matter, with fuch illiterate pretenders in medicine as are very often found in the country parts of England, to the difgrace of the profession. Young men of skill and science are therefore fought for and encouraged; and as but few fingle plantations can afford a very liberal allowance, they are permitted to extend their practice in the neighbourhood (k).

For

(k) The usual recompense to the surgeon for attendance and medicines, is fix shillings a head per annum for all the Negroes on the estate, whether sick or well. Amputations, difficult cafes in midwifery, inoculation, &c. are paid for exclufively, and on a liberal fcale. A property having 500 Negroes contributes about f. 150 sterling per annum; and the furgeon, if he chufes, is entitled to board, washing, and lodging; and this is altogether independent of the profits of his practice with the Whites. I suppose there are few plantation doctors in Jamaica, that have less than 500 Negroes under their care; feveral (with their affiftants) have upwards of 5,000.

Among the difeafes which Negroes bring with them from Africa, the most loathsome are the cacabay and the yazus; and it is difficult to fay which is the worst. The former is the leprofy of the Arabians, and the latter (much the most common) is supposed, by some writers, to be the leprosy mentioned in Leviticus, c. xiii. Both are very accurately decribed by Doctor Hillary, in his Observations on the Difeafes of Barbadoes. Young Negro children often catch the vaws, and get through it without medicine or much inconveniency. At a later period it is feldom or never thoroughly eradicated;

For and w provide into di or mor proprie rice, fu feldom l afford, L articles;

eradicated once, the (infection doubt if m the greatef arifes from between th of which it dren perish. both the car remain yet aduits, or r become dro the stomach ing fome kin mal-d'eftoma owners and attempt the eating, not extinct. Th fome animai fervice. Of a perfect cur

For the better accommodation of invalids chap. and women in child-birth, every plantation is provided with a fick-house or hospital, divided into different apartments; and over which one or more aged women preside as nurses. The proprietor commonly supplies blankets, slour, rice, sugar, and oatmeal: these things I have seldom known to be denied, and some gentlemen afford, besides fresh beef and mutton, more costly articles; such as spices, sago, and wine.

eradicated; and as, like the fmall pox, it is never had but once, the Gold Coast Negroes are said to communicate the infection to their infants by inoculation. I very much doubt if medicine of any kind is of use in this difease .-- But the greatest mortality among the Negroes in the West Indies arises from two other complaints; the one affecting infants between the fifth and fourteenth days after their birth, and of which it is supposed that one-fourth of all the Negro children perish. It is a species of tetanus, or locked jaw; but both the cause of it in these poor children, and the remedy, remain yet to be discovered. The other complaint affects aduits, or rather Negroes who are past their prime. They become dropfical, and complain of a constant uneafiness in the stomach; for which they find a temporary relief in eating some kind of earth. The French planters call this disease mal-d'estomac, or the stomach-evil. I have formerly heard of owners and managers who were fo ignorant and favage as to attempt the cure by fevere punishment; confidering dirteating, not as a difeafe, but a crime. I hope the race is extinct. The best and only remedy is kind usage and wholefome animal food; and perhaps a feel drink may be of fome fervice. Of one poor fellow in this complaint, I myfelf made a perfect cure by perfifting fome time in this method.

HISTORY OF THE

воок IV. On the whole, notwithstanding some desects, let allowance be made for the climate and soil, and it may be afferted with truth and modesty, that, if the situation of the slaves in the British West Indies were, in all cases, on a level with their circumstances in regard to food, lodging, and medical affistance, they might be deemed objects of envy to half the peasantry of Europe.

AT the same time let it not be forgotten, that the legislative authority in many of the sugar islands, has been, and still is, most humanely and laudably exerted in exalting the condition of the flave in all respects, and circumscribing the power of the master.—" Protection of their slaves (says " the Report of the Privy Council) made but a " very fmall portion of their earlier policy. This " branch has of late been taken up, and express "directions have been given to ensure to the " Negroes, the enjoyment of many advantages " tending to alleviate their condition. In three " iflands particularly (Jamaica, Grenada, and Do-" minica) the wish to soften the rigours of their " fituation has manifested itself more decidedly. " Meafures have been devised by the legislatures " of those islands for placing them in a state of "fociety, where they will be entitled to a pro-" tection that in former times would have been "thought incompatible with the dependance " and subordination of flavery."

. To this diffinguished and honourable testi- CHAP. mony it may be added, as a circumstance of still greater importance, that the age itself is hourly improving in humanity: and that this improvement visibly extends beyond the Atlantick. Its influence is felt where the law is a dead letter. This, however, is to be understood with confiderable allowance; for it is a melancholy truth, that authority over these poor people must, on feveral occasions, unavoidably devolve into hands that will employ it only in its abuse; and in cases too, in which, if redress be sought, the testimony of the injured party is inadmissible in a court of justice. Under those circumstances, while the law loses its authority, I am afraid that the fense of decorum alone affords but a feeble restraint against the corrupt passions and infirmities of our nature, the hardness of avarice, the pride of power, the fallies of anger, and the thirst of revenge.

That the narratives therefore of excessive whippings, and barbarous mutilations, which have lately awakened the sympathy of the publick, are all of them "absolutely faste;"—though it has been afferted by others, shall not be afferted by me. If they have happened but feldom, they have happened too often. The difference between me, and those who, on this ground, continue to urge the necessity of an immediate and

To

total

BOOK total suppression of the flave-trade, is this: they affert that it is not unfrequent, but common, the occurrence of every hour, to behold the miferable Negroes fall victims to a feries of cruelties of which no other age or country affords an example; and they maintain that the planters, in general, are guilty of these cruelties, without commiseration or remorfe. I, on the other hand, aver that, although fuch enormities have certainly fometimes happened, and may happen again, yet that the general treatment of the Negroes in the British West Indies is mild, temperate, and indulgent; that inflances of cruelty are not only rare, but always univerfally reprobated when discovered; and, when susceptible of legal proof, feverely punished (1).

(1) As the latter part of this affertion has been very confidently denied by fome of the witnesses that have appeared before a Committee of the House of Commons, I beg leave to trouble the reader with the following cases in point:

" Spanish Town, Jamaica, Feb. 1777. Thomas Fell was indicted for affaulting a Negro man flave, the property of Richard Welch, Efquire, and found guilty. Sentenced to pay a fine to the king of twenty pounds, and to be imprisoned in the common gaol one week, and until payment of the fine."

" Kingston, Jamaica. At the Surry assize, 1786; George Geddes was tried, and found guilty on two indictments, for cruelly beating and maining two of his own flaves. Sentenced to pay a fine to the king of f. 100, on each indictment, and to be imprisoned fix months in the jail of Kingston, and until payment of the fine, and afterwards to find fecurity for his good behaviour, & c."

66 Surry

THE great, and I fear incurable, defect in the CHAP. fustem of flavery, is the circumstance already mentioned, that the evidence of the flave cannot

" Surry Affize, 1778. John Durant, a free man of Colour, was indicted and found guilty of affaulting a Negro man flave, named Sacco, the property of Eliza Wheeler, a free Negroe woman. Sentenced to be publickly flogged at the Beef market."

"Quarter Session, Kingston, August, 1791. The King verfus Thomfon, for affaulting and falfely imprisoning a Negro boy, the property of Lancis Robertson. Found guilty and fined f. 10.—King versus Bender, for wantonly and immoderately punishing a Negro man, his own property, named Fortune. Found guilty and fined f. 20."

The above are extracts fairly abridged from the records in the proper office in Jamaica. Testimonies of the same kind, more fully flated, from the Island of St. Christopher, appear in the Report of the Committee of Privy Council; to whom evidence was likewife given, that a White man, in the Island of Grenada, was, in the year 1776, convicted of the murder of his own flave, and executed. If many other cases cannot be cited, it may fairly be supposed, from those which have been adduced, that fresh occasion has not often been given. The following shocking instance, however, happened in the Island of Jamaica, in the summer of 1791 :- William Rattray, a carpenter at the port of Rio Bueno, in a fit of drunkenness, threw an axe at a Negro boy, his own flave, which unfortunately killed him on the fpot. The coroner's inquest finding it wilful murder, the man was apprehended, and fent to gool in irons. He was not, it is true, publickly tried and hanged for the crime; for, being well affured that fuch would be his fate, he thought it best to execute justice on himself, and found in fuicide an escape from the gallows. This fact, which is within my own knowledge, is certainly no proof that the murderers of their own flaves escape with impunity.

BOOK IV. be admitted against a White person, even in cases of the most atrocious injury. This is an evil to which, on feveral accounts, I fear no direct and efficacious remedy can be applied. In some of the islands, however, attempts have been made, with an earnestness suited to the importance of the subject, to supply the defect; and expedients have been adopted for that purpose, which, in most cases, it may be hoped, will have the good consequence of a solid protection. By the new flave act of Grenada, the justices are required annually to nominate three freeholders to be guardiens of the flaves; who are to take an oath to fee the law duly executed. They are not only to inspect the provision-grounds, the clothing, and maintenance, and to enquire into the general treatment of the flaves, but also to interrogate on oath the managers and overfeers, concerning the due observance of the law; and in case of breaches thereof, to prosecute the offenders. Of this measure the Report of the Privy Council expresses the highest approbation:-"The obliging managers and overfeers (it obferves) to answer upon oath, gives peculiar efficacy to a regulation intended for the benefit of persons whose testimony, by the law of the country, could not be heard in a profecution against a White perfon."

the same generous end, the legislature of Jamaica CHAP. have constituted the justices and vestry of each parish in that island, a council of protection, expressly for the purpose of making full enquiry into the barbarities exercifed on flaves, and bringing the authors to punishment at the publick expence. With this view, it is enacted, that when any complaint, or probable intelligence from any flave, or otherwife, is made before a justice of the peace, of the mutilation and confinement of a flave, the justice is impowered and required to iffue his warrant to bring the flave before him for inspection. "By this regulation (fay the affembly) it is intended, as far as poffible, to take from the owner the power of concealment; for the magistrate is enabled to obtain a view of the fact, on evidence, which, in other cases, is, and ought to be, inadmissible." By another clause in the same act, in order more effectually to prevent the destruction of Negroes by excessive labour and unreasonable punishments, the surgeon of every plantation is required to produce and deliver in upon oath, to the justices and veftry, an annual account of the decrease and encrease of the flaves of fuch plantation, affigning also the causes of such decrease, to the best of his judgment and belief. STATE OF THE STATE

BOOK nishments which he administers, who considers. that he has a refident inspector into his conduct, and that the punishment of death may follow an abuse of his authority."

Such are a few of the many forcible and decifive testimonies which the resident planters in the West Indies have given to the world of their just abhorrence of all acts of cruelty and oppreffion towards the poor people over whom the accident of birth or fortune have invested them with power.—They have demonstrated that their inclination concurs with their interest effectually to perform whatever humanity and the fense of reciprocal obligation require towards their African labourers; and they have armed the law with additional energy, in the hope of curbing those passions, suppressing those frailties, and preventing those excesses, which the plenitude of power is too apt to encourage. If this effect cannot, in all cases and contingencies, be produced, the failure must be comprized among the many other infurmountable difficulties and irrefiftible evils of life, for which human wisdom has hitherto in vain fought a remedy.

THE grand (and I admit the most plausible) accusation against the general conduct of the planters, arises from the necessity they find themfelves under of having an annual recruit of flaves from Africa, to fill up the numbers that perish

in

in the that t in the pose, i of ittel that it improp power, abused, ceffive, of life. in part proof th tion of t Africa. authorit notwithf or nativ have enc nature, alone, ar 30,000 1 of the ev practice in Africa the Negr conceives

by introd as establi

in the West Indies. So long as it shall appear CHAP. that the natural encrease of the Negroes already in the fugar islands, is infusficient for this purpose, it will be contended that this circumstance, of itself, affords an obvious and undeniable proof that it is not to individuals alone, the blame of improper treatment ought to be attributed. That power, it is urged, must in almost all cases be abused, and that flavery must be universally exceffive, which give occasion to fo dreadful a waste of life. The objection has been anticipated, and in part answered, in the preceding pages, by the proof that has been given of the great disproportion of the fexes in the yearly importations from Africa. It has been thewn from unquestionable authority, that one third only are females. Thus, notwithstanding every allowance for the Creoles or natives, who may reasonably be supposed to have encreased according to the general laws of nature, there was in the year 1789, in Jamaica alone, an excess in its Negro population of 30,000 males. But this is not the whole extent of the evil. It is a truth well known, that the practice of polygamy, which univerfally prevails in Africa, is also very generally adopted among the Negroes in the West Indies; and he who conceives that a remedy may be found for this, by introducing among them the laws of marriage as established in Europe, is utterly ignorant of their

BOOK their manners, propenfities, and superstitions. It is reckoned in Jamaica, on a moderate computation, that not less than ten thousand of such as are called Head Negroes (artificers and others) possess from two to four wives. This partial appropriation of the women creates a still greater proportion of fingle men, and produces all the mischiefs which are necessarily attached to the fystem of polygamy. In Africa, the redundancy of males, occasioned by an unequal distribution of the females, is undoubtedly one of the fources which supplies the European trader with flaves; and the confequences attending it among the Negroes in the West Indies, are a shocking licentiousness and profligacy of manners in most of their women; who are exposed to temptations which they cannot resist. They hold chastity in fo little estimation, that barrenness and frequent abortions, the usual effects of a promiscuous intercourfe, are very generally prevalent among them. To the fame origin may be ascribed that neglect, and want of maternal affection towards the children produced by former connections, observable in many of the Black females.

THE circumstances thus enumerated, operating with combined energy, are abundantly fufficient to account for the annual diminution in the number of the flaves; and I fee no good reason why it should not be frankly admitted,

that

friendly crease i circum in fome its offsp who are is but in timent c

that flavery itself, in its mildest form, is un- CHAP. friendly to population. The human race, to encrease in numbers, must be placed in favourable circumstances; and, unless reason and sentiment in some degree co-operate with corporeal instinct, its offspring is born but to perish. Among men who are deprived of free agency, or by whom it is but imperfectly enjoyed, neither reason nor sentiment can be the ruling principle. It is needless to pursue this argument any farther. Men of reflection, apprized of the fact that fuch difproportion between the fexes exists among the Negroes, will draw the proper conclusions from it, and agree that an abolition of the flave trade will not afford a remedy.

Thus have I delivered, in a detail which the reader will probably find too diffuse and minute, fuch observations as have occurred to me on the feveral matters, of which I proposed to treat. have declined to enlarge on the various calumnies, and groß mifrepresentations, which have been fpread and encouraged against the planters, because it is their misfortune that, on this question, many virtuous, humane and pious men, misled by popular prejudice, openly concur in, and give their fanction to, the malignant efforts, and uncharitable misconstructions of the envious and illiberal: Such proceedings, however, are as impolitick as they are unjust. They are equally in-YOL. II. jurious

BOOK jurious to the master and the slave. By exciting among the Negroes a spirit of discontent and disobedience, they compel, in many cases, the benevolent man to restrain that hand which otherwise would be stretched out for their relief; and thus, by rendering their masters odious in their eyes, these unfortunate people (apprized at the same time that they are held in a subjection which is reprobated in the mother country) may be led to make a general struggle for freedom, through defolation and bloodshed. Far be it from me, however, to impute motives so atrocious to any of those respectable characters whose exertions for an abolition of the flave trade are at this time the object of publick attention. Most of these gentlemen, without doubt, confider this meafure as only the first process in a more extended and liberal plan, which has for its object, by stopping the further influx of Negroes into our islands, to compel the planters to cherish and husband their present stock; and sustain it in suture by natural encrease; until, by milder treatment, and the Christian institutes, the manners of the slaves shall become softened, their vices corrected, and their dispositions gradually prepared for a total emancipation from that absolute slavery in which they are now held. Such is the language, and I doubt not, the fond expectation of many wife and excellent persons. They consider that all this

this will be the necessary effect of the interposi- CHAP. tion of parliament, in prohibiting the further importation of African flaves into our colonies. I have affigned fuch reasons as occur to me for believing that this conclusion is founded in error, and will terminate in disappointment. am no friend to flavery, in any shape, or under any modification, I feel a conscious assurance in my own bosom. Yet that the flavery of some part of the human species, in a very abject degree, has existed in all ages of the world, among the most civilised, as well as the most barbarous nations, no man who has confulted the records of history disputes. Perhaps, like pain, poverty, fickness, and forrow, and all the various other calamities of our condition, it may have been originally interwoven into the constitution of the world, for purposes inscrutable to man. Of this I am certain, that an immediate emancipation of the flaves in the West Indies, would involve both mafter and flave in one common destruction.-Thus much however is allowed; the miferies we cannot wholly remove, we may in some cases mitigate: We may alleviate, though we cannot cure. I have shewn that this has been attempt-

ed, and in many inflances effected too, by the

planters themselves. What yet remains to be done, confiftently with found policy, and a just

regard even to the fafety and happiness of the

Negroes

N 2

воо к IV.

Negroes themselves, is a subject of deep and difficult confideration. Hafty measures, however humane in appearance, and plaufible in theory, may produce the most calamitous of all contests, a bellum fervile; which will probably never end but in the extermination of either the Whites or the Blacks. Among the great variety of schemes which have been offered for further meliorating the condition of the flaves, the most obvious seem to be these: First, to render their labour certain and determinate: in other words, to apportion to each Negro, according to his strength, a specifick quantity of work to be performed in a given time; allowing to fuch of them as shall have finished their task within the time limited, the rest of the day to themselves, and pay them wages for extra labour. This is not always practicable, but when it is, I am inclined to think favourably of the scheme, because it seems calculated to awaken a fpirit of emulation and industry, which the dread of punishment can never produce. At the same time, it will be necessary to secure to the Negroes by law, the little property or peculium which their own industry may thus acquire.—A second proposal is to make them arbiters on the conduct of each other, by instituting a fort of juries among them for the trial of petty offences. It is conceived that fuch a meafure will give them right notions of distributive justice, and operate powerfully

fully and which dent cum and o blish tions extric recom to ren of rest the ma They a if a m courag fome of priated

instead

fully towards their civilifation and improvement; CHAP. and I have heard of two instances in Jamaica in which it has been tried with fuccess; but it is evidently a regulation that must be governed by circumstances, and left principally to the prudence and discretion of the owner: an attempt to establish and enforce it by law, in their present notions of right and wrong, would, I fear, create inextricable confusion. A third measure has been recommended, of less doubtful efficacy. It is, to render the fabbath, what it ought to be, a day of rest and religious improvement; to which end, the markets on Sundays ought to be suppressed. They are a difgrace to a christian country; and, if a market is found absolutely necessary to encourage the Negroes in labouring for themselves, some other day, once a fortnight, may be appropriated for that purpose (m). In the mean time, instead of abolishing the flave-trade by act of

(m) The objection to this fcheme is, that it will deprive the planters yearly of twenty-fix days labour of the whole body of their Negroes, without producing the effect intended, as the whole of each Sunday, will, in fuch cafe, be spent in drunkenness and debauchery at home. If this objection be well founded, let the days which are now given to the slaves (exclusive of Sundays) be the days of market, and compet them to work in their own gardens four or five hours every Sunday morning; and attend divine service in the afternoon. Honest labour must furely be more pleasing to the Almighty, as it is certainly more beneficial to man, than profligacy and riot.

BOOK parliament, further encouragement should be given to the importation of a greater proportion of African women, until the fexes are become nearly equal; after which it is probable that, under the present humane and improved system of laws and manners, their numbers may be kept up by natural encrease. If this good consequence -shall happily be produced, it cannot be doubted that the flave-trade will of itself gradually diminish, and perhaps in a few years cease altogether,

and expire without a struggle.

But these, and all other regulations which can be devised for the protection and improvement of this unfortunate class of people, will be of little avail, unless, as a preliminary measure, they shall be exempted from the cruel hardship, to which they are now frequently liable, of being fold by creditors, and made subject, in a course of administration by executors, to the payment of all debts both of simple contract and specialty. This grievance, so remorfeless and tyrannical in its principle, and so dreadful in its effects, though not originally created, is now upheld and confirmed by a British act of parliament; and no less authority is competent to redress it. It was an act procured by, and paffed for the benefit of British creditors; and I blush to add, that its motive and origin have fanctified the measure even in the opinion of men who are among the loudest of the declaimers

BOOK this! Neither can it be urged, that, like some unauthorized cases of cruelty in the West Indies, it occurs but feldom: unhappily, it occurs every day, and, under the present system, will continue to occur, fo long as men shall continue to be unfortunate.

> LET this statute then be totally repealed. It is injurious to the national character; it is disgraceful to humanity. Let the Negroes be attached to the land, and fold with it. The good effect of a fimilar regulation in the fystem of ancient villenage has been pointed out and illustrated by a great many writers; and those persons who now oppose an extension of the same benefit to the Negroes in the West Indies, would do well to reflect, that, while they arraign the conduct of the refident planters towards their flaves, they are themselves abettors and supporters of the greatest of all the grievances under which those unfortunate people continue to fuffer. *

* It is peculiarly gratifying to the Author of this work that he has the opportunity, in the prefent edition, to inform his readers, that in June 1707, he had the honour and happinefs, as a member of the British parliament, to bring into the House of Commons, and to succeed in carrying it into a law, a bill to repeal fo much of the 5 Geo. II. c. 7. as relates to Negroes in his Majesty's plantations.

CHAP.

A valuable Friend, than whom no man is better acquainted with the Negro character, and the condition of the enflaved Africans, has favoured me with the following observations, which occurred to him on a perufal of the preceding chapter in the first edition.

" That the treatment of the Negroes in the British West Indies, even before what has been lately done by the colonial affemblies to meliorate their condition, was not fystematically bad, is to me convincing from this fact, which all who are acquainted with Negroes on plantations must admit: that the Creole race (with some few eminent exceptions) exceed the African in intellect, strength, and comeliness, in a very remarkable manner. If a better horse is produced from an inferior breed, it is fair to conclude that the colt has had a better groom, and a better pasture than the common on which the dam usually fed. The great object to be wished at present, as it appears to me, is to purify the moral sense of Negroes. Hitherto, with all their improvements, they have caught from the Whites, I am afraid, more of the vices than the virtues of civilization. Correct the idea, which a Negro may be faid to imbibe with his mother's milk, that whatever he can cheat his owner of, in any direction, is clear gain to himself. Make the interest of the master and the slave go hand in hand. Now I think that finall wages, subject to floppage for delinquency, would have this effect. Such a fystem would be laying a foundation on which a large superstructure might be built in the reformation of manners. Even in point of expence, an estate can well afford it; for the aggregate of time wasted in the sick house, on the mere pretence of illness, is equal to a little fortune to every planter.

IV.

BOOK When I was last in Jamaica, I made the experiment with a body of tradefinen, and punctually paid to each at the end of the week (if a week's work was done) Two BITTS (0). The effect in point of labour was wonderful, and I believe that the fystem would in time have taught the Negroes also, that honesty was better policy than thieving, &c. and have led by degrees to consequences still more important and beneficial both to the mafter and the flave."

NUMBER I.

AS a supplement to such part of the preceding APPENbook, as relates to the treatment of the Negroes in the British West Indies, it is thought necessary to present the reader with the CONSOLIDATED SLAVE ACT OF JAMAICA, passed the 2d of March 1792. It is prefumed that this law will demonstrate to general conviction, that the legislature of Jamaica, availing themselves as well of the reproaches of their enemies, as of the suggestions of their friends, have given all possible encouragement to the raising of Negro children in the island, and secured to their labourers as much freedom, and as great a latitude of enjoyment of the necessaries, conveniencies, and comforts of life, as can be done confiftently with their own prefervation. The humane reader will not complain of the length of this Appendix, if he shall hereafter find that the other British Islands in the West Indies, encouraged by the example before them, shall introduce the benevolent provisions of this AEt, into their own Negro code.

BOOK JAMAICA, J.

AN ACT to repeal an act, intituled "An act to repeal feveral acts and clauses of acts respecting slaves, and for the better order and government of slaves, and for other purposes;" and also to repeal the several acts and clauses of acts, which were repealed by the act intituled as aforesaid; and for consolidating, and bringing into one act, the several laws relating to slaves, and for giving them further protection and security; for altering the mode of trial of slaves charged with capital offences; and for other purposes.

Preamble.

HEREAS it is for the publick good, that all the laws respecting the order and government of flaves, should be consolidated, and brought into one law, in order to prevent confusion, and that justice may more effectually be executed respecting slaves; and whereas it is found necessary, for the purpose of giving further fecurity to flaves, that the mode of trial of flavs charged with capital offences should be altered; and whereas, in order thereto, it is necessary that all the herein after-mentioned laws, and clauses of laws, should be repealed; viz. &c. &c. We, your majesty's dutiful and loyal fubjects, the affembly of this your Majesty's island of Jamaica, do most humbly beseech your Majest that it may be enacted, Be it therefore Enacted, by the lieutenant governor, council, and affembly of the fail island, and it is hereby enacted and ordained by the and thority of the same, That from and after the passing this act, all and every the faid herein before-mention laws, and clauses of laws, and every part thereof, be an

Negro burials to be in day-time.

XXIV. And, in order to prevent riots and nightly meetings among negro and other flaves, to the diffurbance of the public peace, and the endangering their healths, Be it further Enacted by the authority aforesaid, That all negro burials shall in future take place in the day-time only, fo that the fame may be ended before funfet; and if any master, owner, or possessor of slaves, his or her overfeer, or chief manager, shall knowingly suffer or permit the burial of any flave otherwife than as before directed, he shall forfeit the sum of fifty pounds.

Imprisonment for negroes fuffering affemblies at their houses.

XXV. And be it further Enacted by the authority aforeiaid, That if any Indian, free negro, or mulatto, shall hereafter fuffer any unlawful affembly of flaves at his or her house or fettlement, every such Indian, free negro, or mulatto, shall, upon due conviction thereof, suffer imprisonment, not exceeding fix months; Provided neverthelefs, That information thereof shall be given, on oath, within five days of fuch unlawful meeting.

Slaves not to keep fi.earms.

XXVI. And be it further Enacted by the authority aforefaid, that all flaves who shall hereafter be found to have in his or their custody, any fire-arms, gun-powder, flugs, or ball, fuch flave, being thereof convicted before two justices, shall suffer such punishment as the said justices shall think proper to inslict, by whipping or hard labour in the workhouse, not exceeding the term of six months.

XL. And be it further Enacted by the authority aforefaid, That the keeper of every workhouse or gaol in this island shall, under the penalty of ten pounds for every neglect, provide and give to every flave confined in fuch workhouse or gaol, a sufficient quantity of good and wholesome provisions daily; that is to say, not less than one quart of unground Guinea or Indian corn, or three pints of the flour or meal of either, or three pints of wheat flour, or eight full-grown plantains, or eight pounds of cocoas or yams, and also one herring or shad, or other falted provisions equal thereto.

XLI. And be it further Enacted by the authority afore- and not faid, That no gaol-keeper in this island, or any person out. asting under him as clerk or deputy, shall, on any pretence whatfoever, work or employ any flave or flaves fent to his cuftody, upon any plantation, pen, or fettlement,

Vor. II. belonging

allow them,

BOOK IV. belonging to or in the possession of any such gaol-keeper, nor hire or lend such slave or slaves out to work for any other person or persons, during such time such slave or slaves shall be in his custody, but that all such slaves shall be and remain in the common gaol of the county or parish, in order to be inspected by any person or persons desiring the same; and in case any gaol-keeper shall offend herein, he shall, for every offence, forseit the sum of sity pounds.

Certain runaways, how liable to be punished. XLII. And be it further Enacted by the authority aforesaid, That all slaves who shall have been in this island for the space of two years, and shall runaway, and continue absent for a term not exceeding six months, shall be liable to be tried by two justices; and, upon conviction thereof, such slave or slaves shall suffer such punishment as the said justices shall think proper to inslict.

Runaways absent fix months, how punishable. XLIII. And be it further Enacted by the authority aforefaid, That if any flave shall run away from his owner or lawful possellor, and be absent for more than six months, such slave, being duly convicted thereof, shall be sentenced to be confined to hard labour for such time as the court shall determine, or be transported for life, according to the magnitude of the offence.

Slaves guilty of Obeah, how punishable. XLIV. And, in order to prevent the many mischies that may hereafter arise from the wicked art of negroes going under the appellation of Obeah men and women, pretending to have communication with the devil and other evil spirits, whereby the weak and superstitious are deluded into a belief of their having sull power to exempt them, whilst under their protection, from any evils that might otherwise happen; Be it therefore Enacted by the authority aforesaid, That, from and after the passing of this act, any nave who shall pretend to any supernatural power, in order to promote the purposes of rebellion, shall, upon conviction thereof, suffer death, transportation, or such other punishment as the court shall think proper to direct;

any thing in this, or any other act, to the contrary in anywife notwithstanding.

XLV. And be it further Enacted by the authority aforefaid, That if any negro or other flave shall mix or Slaves attempting prepare, with an intent to give, or cause to be given, any policon, to poison or poisonous drug, or shall actually give, or cause to be given, any such poison or poisonous drug, in the practice of Obeah or otherwise, although death may not enfue upon the taking thereof, the faid flave or flaves, together with their accessaries, as well before as after the fact (being flaves) being duly convicted thereof, shall suffer death, or transportation for life, as the court shall determine; any thing in this, or any other act, to the contrary not with standing.

XLVI. And whereas great number of horned cattle, Slaves pufheep, goats, horfes, mares, mules, and affes, are frequently nishable in found in ftolen and killed by negro and other flaves, in fo fecret and poffeffion private a manner that it is with the greatest difficulty they quantities of can be found out and discovered, in such manner as to fresh meat. convict them of fuch offence, although large quantity of beef, mutton, and the flesh of other valuable animals, are found upon him, her, or them; in order, therefore, to prevent fuch evils in future, and to punish the perpetrators of such acts, agreeably to their crimes, Be it further Enacted by the authority aforesaid, That if any negro or other slave shall fraudulently have in his, her, or their custody or possession, unknown to his or her master, owner, overseer, or other person, who shall have the overlooking or employing of fuch flave, any fresh beef, veal, mutton, or goat, or the flesh of horse, mare, mule, or ass, in any quantity exceeding five and not exceeding twenty pounds weight, fuch negro or other flave, upon due conviction thereof before any two magistrates, shall be whipped in such manner as such magistrates shall direct, not exceeding thirty-nine lashes; and if there shall be found in his, her, or their custody or possession, a larger or greater quantity than twenty

BOOK IV.

pounds weight of fresh bees, veal, mutton, or goat, or the slesh of horse, mare, mule, or ass, and such slave shall not give a fatisfactory account how he or she became possessed of such meat, that then such negro or other slave, upon conviction thereof, shall suffer such punishment as the said two justices shall think proper to direct, not extending to life, or imprisonment for life.

Slaves stealing horned cattle how punished. XLVII. And be it further Enacted by the authority aforefaid, That if any negro or other flave shall, after the passing of this act, steal any such horned cattle, sheep, goat, horse, mare, mule, or as, or shall kill any such horned cattle, sheep, goat, horse, mare, mule, or as, with intent to steal the whole carcass of any such horned cattle, sheep, goat, horse, mare, mule, or as, or any part of the sless thereof, such negro or other slave shall, on conviction thereof, suffer death, or such other punishment as the court shall think proper to inslict.

Slaves guilty of crimes how tried.

XLVIII. And whereas it is necessary to declare how, and in what manner, flaves shall be tried for the feveral crimes which they may hereafter commit, Be it Enacted by the authority aforesaid, That from and after the passing of this act, upon complaint made to any justice of the peace of any felony, burglary, robbery, burning of houses, cane-pieces, rebellious conspiracies, compassing or imagining the death of any white person or persons, or any other offence whatfoever committed by any flave or flaves, that shall subject such slave or slaves to suffer death or transportation, such justice shall issue out his warrant for apprehending fuch offender or offenders, and for all perfons to be brought before him, or any other justice of the peace, that can give evidence; and the evidence of flaves against one another, in this and all other cases, shall be received; and if, upon examination, it appears probable that the flave or flaves apprehended is or are guilty, the justice before whom such examination shall be had and taken, shall commit him, her, or them, to prison, and bind

END OF THE APPENDIX TO BOOK IV.

CIVIL AND COMMERCIAL,

The British Colonies in the West Indies.

BOOK V.

AGRICULTURE.

CHAP. I.

Sugar cane.—Known to the ancients.—Conjectures concerning its introduction into Europe.—Conveyed from Sicily to the Azores, &c. in the 15th century, and from thence to the West Indies .-Evidence to prove that Columbus himself carried it from the Canary Islands to Hispaniola. - Summary of P. Labat's reasoning to demonstrate that it was found growing spontaneously in the West Indies.—Both accounts reconciled.—Botanical name and description.—Soils bests adapted for its cultivation, and their varieties, described.—Use and advantage of the plough.—Usual method of holing and planting.—Season proper for planting. -Blast.-Manures.-Improvements suggested.

BOOK IN treating of the agriculture of the West Indian Islands, the first object that naturally excites attention is the cane which produces

their gr which, f neral uti of the n cient nai word was charum, a niards it Sugar. was proba immemori in the Old chandize; which feen the juice time; for h pearance of

their great staple commodity, sugar; -a plant CHAP. which, from its commercial importance and general utility, we may venture to pronounce one of the most valuable in the creation. The ancient name of the cane was Saccharum. word was corrupted, in monkish Latin, into Zucharum, and afterwards into Zucra. By the Spaniards it was converted into Açucar, from whence Sugar. The plant is a native of the east, and was probably cultivated in India and Arabia time immemorial. The fweet-cane is mentioned twice in the Old Testament *, as. an article of merchandize; and there is a passage in Dioscorides which feems to imply, that the art of granulating the juice by evaporation was practifed in his time; for he describes sugar as having the appearance of falt, and of being brittle to the teeth,

Salis modo coactum est; dentibus ut sal fragile.

Lucan, enumerating the eastern auxiliaries of Pompey, describes a people who used the canejuice às a common drink,

Quique bibunt tenera dulces ab arundine succos.

LAFITAU conjectures, however, that the plant itself was unknown in Christendom, until the time of the Croifades. Its cultivation, and the method of expressing and purifying the juice, as

practifed by the inhabitants of Acra and Tripoli. are described by Albertus Aquensis, a monkish writer, who observes, that the Christian soldiers in the Holy Land frequently derived refreshment and support, in a scarcity of provisions, by sucking the canes *. It flourished also in the Morea, and in the Islands of Rhodes and Malta, and from thence was transported into Sicily; but the time is not precifely ascertained: Lasitau recites a donation of William, the fecond king of Sicily, to the monastery of St. Bennet, of a mill for grinding fugar-canes, with all its rights, members, and appurtenances. This happened in 1166.

From Sicily, the Spaniards are faid to have conveyed the cane to the Azores, Madeira, the Canary and Cape-de-verd Islands, foon after they were discovered in the 15th century; and from fome one of those islands it has been supposed to have found its way, at an early period, to Brasil and the West Indies; "producing a commerce (fays Lafitau) which has proved more valuable than the mines of Peru."

Such is the commonly-received opinion refpecting the history of this valuable production.

The fame author, in his account of the reign of Baldwin, relates, that the Crusaders took eleven camels, laden with fugar, so that it must have been made in considerable quantities.

Herrera positively afferts, that the sugar-cane was transplanted into Hispaniola from the Canary Islands, in the year 1506, by a Spaniard of the name of Aguilon (a); but in this instance the respectable historian, however correct in general, is clearly mistaken; it appearing by the testimony of Peter Martyr, in the third Book of his first Decad, written during Columbus's second expedition, which began in 1493, and ended in 1495, that the sugar-cane was, at that period, sufficiently known in Hispaniola.

THE fact feems to have been, that Columbus himself carried it thither among other articles and productions which he conveyed from Old Spain and the Canary Islands, in his second voyage. Martyr's account is as follows:- " Ad fœtus " procreandos, equas, oves, juvencas, et plura " alia cum fui generis masculis: legumina, tri-"ticum, hordeum, et reliqua ijs fimilia, non " folum alimenti, verum etiam feminandi gratia, " præfectus apparat: vites et aliarum nostratium " arborum plantaria, quibus terra illa caret ad " eam important: nullas enim apud cas infulas " notas arbores invenêre præter pinus palmafque " et cas altissimas, ac miræ duritiei et proceritatis " ac rectitudinis, propter soli ubertatem; atque " etiam ignotos fructus alias plures procreantes.

of Baldwin, laden with rable quan-

Herrem

" Terram aiunt effe terrarum omnium quas am-" biunt sidera, uberrimam." Although in this paffage the fugar-cane is not expressly enumerated, it is evident that it was not confidered by Columbus as a native of the country; for he could not possibly have been unacquainted with this production, which grew in great perfection in Valencia, and other parts of Spain; yet he found, it seems, on his arrival, no trees or plants in the newly-discovered country, of which he had any previous knowledge, excepting only the pine and the palm. That the cane was then there, appears from a subsequent passage; in which, fpeaking of fuch vegetable productions as the Spaniards had fown or planted in an inclosed garden immediately after their arrival, Martyr has these words, which, combined with the former, are, as I conceive, decifive of the queftion.—" Melones cucurbitas, cucumeres et alia id genus, in diem sextum et trigesimum carpferunt. Sed nusquam se meliores unquam comedisse aiebant. Hæc hortensia, toto anno habent recentia. Cannarum radices ex quarum succo faccarum extorqueter, fed non coagulatur fuccus, cubitales cannas intra quindecimum etiam diem emiferunt."

On the other hand, there are authors of great learning and industry, who maintain that the fugar-cane is a native both of the islands and the continent

continent of America, within the tropicks. They CHAP. affert, that it was found growing spontaneously in many parts of the new hemisphere, when first explored by the Spanish invaders. P. Labat, who appears to have confidered the question with a laborious attention, is decidedly of this opinion (b), and he quotes, in support of it, among other authorities, that of Thomas Gage, an Englishman, who went to New Spain in 1625, and of whom I have had occasion to speak in a former part of this work. Gage's voyage is now before me, and it is certain that he enumerates fugar-canes among the fruits and provisions supplied the crew of his ship by the Charaibes of Guadaloupe. " Now," observes Labat, " it is a fact that the Spaniards had never cultivated an inch of ground in the smaller Antilles. Their thips commonly touched at those islands indeed, for wood and water, and they left swine in the view of supplying with fresh provisions such of their countrymen as might call there in future; but it were abfurd in the highest degree to suppose, that they would plant sugar-canes, and put hogs ashore at the same time to destroy them.

" NEITHER had the Spaniards any motive for bestowing this plant on islands which they

BOOK confidered as of no kind of importance, except for the purpose that has been mentioned; and to suppose that the Charaibes might have cultivated, after their departure, a production of which they knew nothing, betrays a total ignorance of the Indian disposition and character.

> "But," continues Labat, "we have furer testimony, and such as proves, beyond all contradiction, that the fugar-cane is the natural production of America. For, besides the evidence of Francis Ximenes, who, in a Treatife on American plants, printed at Mexico, afferts, that the fugar-cane grows without cultivation, and to an extraordinary fize, on the banks of the river Plate (c), we are affured by Jean de Lery, a protestant minister, who was chaplain, in 1556, to the Dutch garrison in the fort of Coligny, on the river Janeiro, that he himself found sugarcanes in great abundance in many places on the banks of that river, and in fituations never visited by the Portuguese. Father Hennepen, and other voyagers, bear testimony in like manner to the growth of the cane near the mouth of the Mississippi; and Jean de Laet to its spontaneous production in the Island of St. Vincent. It is not for the plant itself, therefore, but for the

THE botan do Saccharifer in leaves or b sharply serrate but brittle, an inclinable to y lubstance, wh

fecret of making fugar from it, that the West CHAP. Indies are indebted to the Spaniards and Portuguese; and these to the nations of the east."

Such is the reasoning of Labat, which the learned Lafitau has pronounced incontrovertible; and it is greatly firengthened by recent discoveries; the fu ar-cane having been found in many of the islands of the Pacifick Ocean, by our late illustrious navigator Captain Cook.

In these accounts, however, there is no contradiction. The fugar-cane might have grown spontaneously in many parts of the New World; and Columbus, unapprized of the circumstance, might likewise have carried some of the plants to Hispaniola, and such I believe was the fact. But be this as it may, the industry with which the Spanish settlers applied themselves to its cultivation, affords a wonderful contrast to the manners of the prefent inhabitants; it appearing by the testimony of Oviedo, that no less than thirty ingenios, or fugar-mills, were established on that island so early as 1535.

THE botanical name of the fugar-cane is Arundo Saccharifera. It is a jointed reed terminating in leaves or blades, whose edges are finely and sharply serrated. The body of the cane is strong but brittle, and when ripe of a fine straw colour, inclinable to yellow; and it contains a foft pithy substance, which affords a copious supply of juice

BOOK V. juice of a sweetness the least cloying and most agreeable in nature. The intermediate distance between each joint of the cane varies according to the nature of the soil;—in general it is from one to three inches in length, and from half an inch to an inch in diameter. The length of the whole cane depends likewise upon circumstances. In strong lands and lands richly manured, I have seen some that measured twelve seet from the stole to the upper joint. The general height however (the slag part excluded) is from three seet and a half to seven seet, and in very rich lands the stole or root has been known to put forth upwards of one hundred suckers or shoots (d).

(d) The tops of canes fometimes shoot up in arrows, decorated at the top with a pinnacle, the glumes of which contain a whitish dust, or rather feed; yet these being sowed never vegetate, as I have heard, in the West Indian islands; a circumstance which perhaps may be adduced as a proof that the cane is not the spontaneous production of this part of the world. In Abyssinia and other parts of the East is is eafily raised from the seed. Vid. Bruce's Travels. Since the first edition of this work was published, Sir Joseph Banks has fatisfied me that there are feveral varieties existing in the cane with which we are wholly unacquainted in the Well Indies. I have feen, in his possession, a dried specimen that was brought originally from the South Seas, which, as far can be judged by its present appearance, is of a far superior fort to the species cultivated in our islands. It is not on of greater length in the whole, but the distance between the joints is nearly twice as great as in the finest canes I en beheld.

It may be supposed that a plant thus rank CHAP. and fucculent, requires a ftrong and deep foil to bring it to perfection, and, as far as my own observation has extended, I am of opinion that no land can be too rich for that purpose.-When bad fugar is made from fat and fertile foils, properly fituated, I am inclined to impute the blame, rather to mismanagement in the manufacturer than to the land. The very best foil however that I have feen or heard of, for the production of fugar of the finest quality, and in the largest proportion, is the ashy loam of St. Christopher's, of which an account has been given in the hiftory of that island. Next to that, is the soil which in Jamaica is called brick-mold; not as resembling a brick in colour, but as containing such a due mixture of clay and fand, as is supposed to render it well adapted for the use of the kiln. It is a deep, warm and mellow, hazel earth, eafily worked; and though its furface foon grows dry after rain, the under stratum retains a confiderable degree of moisture in the drieft weather; -with this advantage too, that even in the wettest season, it seldom requires trenching. Plant-canes in this foil (which are those of the first growth) have been known in very fine seasons to yield two tons and a half of sugar per cre (e). After this, may be reckoned the black

(e) This species of soil abounds very generally in the rench part of Hispaniola—which gives that noble island so Vol. II.

BOOK V.

mold, of feveral varieties. The best is the deep black earth of Barbadoes, Antigua, and some other of the Windward Islands; but there is a species of this mold in Jamaica that is but little, if any thing, inferior to it, which abounds with limestone and flint, on a substratum of soapy marle. Black mold on clay is more common, but as the mold is generally shallow, and the clay stiff and retentive of water, this last forc of land requires great labour, both in ploughing and trenching, to render it profitable. Properly pulverized and manured, it becomes very productive; and may be faid to be inexhaustible. It were endless to attempt a minute description of all the other soils which are found in these islands. There is however a peculiar fort of land on the north fide of Jamaica, chiefly in the parish of Trelawney, that cannot be passed over unno. ticed, not only on account of its fcarcity, but its value; few foils producing finer fugars, or fuch (I have been told by fugar refiners) as answer s well in the pan - an expression, fignifying, as l understand it, a greater return of refined sugar than common. The land alluded to is generally of a red colour; the shades of which however

vary confiderably, from a deep chocolate to a CHAP. rich scarlet; in some places it approaches to a bright yellow, but it is every where remarkable, when first turned up, for a glossy or shining furface, and if wetted, stains the fingers like paint. I have felected specimens which are hardly diftinguishable by the eye or the touch, from the fubstance called gamboge. Earths of various shades of red and yellow, are found indeed in many other parts of the West Indies, but in none of them are observed the same glossy appearance and cohesion as in the soil in question, which appears to me to confift of a native earth or is easily worked, and at the same time so tenacious, that a pond dug in this foil in a proper situation, with no other bottom than its own natural texture, holds water like the stiffest clay. It is remarkable, however, that the fame degree of ploughing or pulverization which is abfolutely necessary to render stiff and clayey lands productive, is here not only unnecessary, but hurtful;-for though this foil is deep, it is at the same time far from being heavy; and it is naturally dry. As therefore too much exposure to the scorching influence of a tropical sun, destroys its fertility, the system of husbandry on fugar plantations, in which this foil abounds, is his fort of large o depend chiefly on what are called ratoon R 2 canes.

HISTORY OF THE

E 0 0 K V. ✓

canes (f). Ratoons are the sprouts or suckers that fpring from the roots, or stoles of the canes that have been previously cut for sugar, and are commonly ripe in twelve months.-Canes of the first growth, as hath been observed, are called plant-canes. They are the immediate produce of the original plants or gems placed in the ground, and require from fifteen to feventeen months to bring them to maturity. The first yearly returns from their roots are called first rations; the fecond year's growth, fecend rations; and fo on, according to their age. In most parts of the West Indies it is usual to hole and plant a certain proportion of the cane land (commonly one-third) in annual fuccession. This, in the common mode of holing the ground by the hoe, is frequently attended with great and excessive labour to the negroes, which is faved altogether by the fystem we are treating of. By the latter method, the planter, instead of stocking up his ratoons, and holing and planting the land anew, fuffers the stoles to continue in the ground, and contents himself, as his cane fields become thin and impoverished, by supplying the vacant spaces with fresh plants. By these means, and the aid of manure, the produce of fugar per acre, if not

apparently

appar canes run fu dering expenc commo feven h which a

In th especially late years tage; bu will admi being mu and I am a practice properties would exha is that of pl ridging, and to year, or fording ma this method fecond grow deed aftoniff ing or observ nicious a sy late manage stiff and clay

⁽f) So called from being rejettons or sprouts, rej'ttons, ristons, rattons; or more probably from a corrupt pronunciation of the Spanish word brotones, which has the same signification.

apparently equal to that from the best plant- CHAP. canes in other foils, gives perhaps in the longrun full as great returns to the owner; considering the relative proportion of the labour and expence attending the different systems.-The common yielding of this land, on an average, is feven hogsheads of fixteen cwt. to ten acres, which are cut annually.

In the cultivation of other lands (in Jamaica especially) the plough has been int duced of late years, and in some few cases to great advantage; but it is not every foil or fituation that will admit the use of the plough; some lands being much too stoney, and others too steep; and I am forry I have occasion to remark, that a practice commonly prevails in Jamaica, on properties where this auxiliary is used, which would exhauft the finest lands in the world. is that of ploughing, then crofs ploughing, roundridging, and harrowing the fame lands from year to year, or at least every other year, without affording manure: accordingly, it is found that this method is utterly destructive of the ratoon, er fecond growth, and altogether ruinous. It is indeed aftonishing that any planter of common reading or observation, should be passive under so pernicious a fystem. Some gentlemen however of late manage better: their practice is to break up stiff and clayey land, by one or two ploughings, R 3

early in the fpring, and give it a fummer's fallow. In the autumn following, being then mellow and more eafily worked, it is holed and planted by manual labour, after the old method, which shall be presently described. But in truth, the only advantageous fystem of ploughing in the West Indies, is to confine it to the simple operation of holing, which may certainly be performed with much greater facility and dispatch by the plough than by the hoe; at 'the relief which, in the case of stiff and dry soils, is thus given to the negroes, exceeds all estimation, in the mind of a humane and provident owner. fubject I speak from practical knowledge. At a plantation of my own, the greatest part of the land which is annually planted, is neatly and fufficiently laid into cane-holes, by the labour of one able man, three boys, and eight oxen, with the common fingle-wheeled plough. The ploughshare indeed is somewhat wider than usual, but this is the only difference, and the method of ploughing is the simplest possible.—By returning the plough back along the furrow, the turf is alternately thrown to the right and to the left, forming a trench feven inches deep, about two feet and a half wide at the top, and one foot wide at the bottom. A space of eighteen or twenty inches is left between each trench, on which the mould being thrown by the share, the bankş

banks are properly formed, and the holing is com- CHAP. plete. Thus the land is not exhaufted by being too much exposed to the fun; and in this manner a field of twenty acres is holed with one plough, and with great eafe, in thirteen days. The plants are afterwards placed in the trench as in the common method, which remains to be defcribed.

THE usual mode of holing by manual labour is this: - The quantity of land intended to be planted, being cleared of weeds and other incumbrances, is divided into several plats of certain dimensions, commonly from fifteen to twenty acres each; the spaces between each plat or division are left wide enough for roads, for the conveniency of carting. Each plat is then fubdivided, by means of a line and wooden pegs, into small squares of about three feet and a half. Sometimes indeed the squares are a foot larger; but this circumstance makes but little difference. The negroes are then placed in a row in the first line, one negro to a square, and directed to dig out with their hoes the feveral squares, commonly to the depth of five or fix inches. The mould which is dug up being formed into a bank at the lower fide, the excavation or cane-hole feldom exceeds fifteen inches in width at the bottom, and two feet and a half at the top. The negroes then fall back to the next line, and proceed as

R 4

before.

BOOK before. Thus the feveral fquares between each line are formed into a trench of much the fame dimensions with that which is made by the plough. An able negro will dig from fixty to eighty of these holes for his day's work of ten hours; but if the land has been previously ploughed and lain fallow, the fame negro will dig nearly double the number in the same time (f).

> THE cane-holes or trench being now completed, whether by the plough or by the hoe, and the cuttings felected for planting, which are commonly the tops of the canes that have been ground for fugar (each cutting containing five or fix gems) two of them are fufficient for a canehole of the dimensions described (g). Thefe, being

> (f) As the negroes work at this bufinefs very unequally, according to their different degrees of bodily firength, it is fometimes the practice to put two negroes to a fingle square; but if the land has not had the previous affiftance of the plough, it commonly requires the labour of \$0 or 60 able negroes for 20 days to hole 20 acres. It is reckoned a tolerable day's work for 40 negroes to hole an acre in the course of a day. In Jamaica, some gentlemen, to ease their own flaves, have this laborious part of the planting bufiness performed by job work. The ufual price for holing and planting is from eight to ten pounds currency per acre. The cost of falling and clearing heavy wood land is commonly as much more.

> (g) It is a maxim with fome people te plant thin on poor lands, and thick in rich; but it is a maxim founded in error. They suppose that the richer the soil is, the greater number of plants it will maintain; which is true enough; but they

being placed longitudinally in the bottom of the CHAP. hole, are covered with mould about two inches deep; the rest of the bank being intended for future use. In twelve or fourteen days the young fprouts begin to appear, and, as foon as they rise a few inches above the ground, they are, or ought to be, carefully cleared of weeds, and furnished with an addition of mould from the banks. This is usually performed by the hand. At the end of four or five months, the banks are wholly levelled, and the spaces between the rows carefully hoe-ploughed. Frequent clean-

forget that the plant itself will, in such soils, put forth shoots in abundance; most of which, if the lands are not over planted, will come to perfection; whereas from thick planting in rich mould the fhoots choke and destroy each other. On the other hand, in foils where the canes will not Rock (viz. put out fresh shoots) the overfeer must supply the greater number of plants in the first instance, or the produce will be little or nothing. To what has been faid in the text concerning the method of holing, it may not be improper to add the following particulars: - A square acre contains 42,560 feet; therefore, to know the exact number of holes which an acre will admit, the rule is, to multiply the length of each hole by the breadth, as thus: Suppose you line four feet one way, and three-feet the other, then four multiplied by three, makes twelve square feet, and 43,560 divided by 12, gives 3,630 holes. These are large holes, and if the land is dry and stiff, an able negro will not be able to dig more than 60 fuch in his day's work. It will require, therefore, in fuch land, just 60 negroes to hole an acre in a day. The richer the land is, the wider you line, of course the sewer holes to an acre; four feet by four feet gives 2,722 holes.

BOOK ings, while the canes are young, are indeed to effentially necessary, that no other merit in an overseer can compensate for the want of attention in this particular.—A careful manager will remove at the same time, all the lateral shoots or fuckers that fpring up after the canes begin to joint, as they feldom come to maturity, and draw nourishment from the original plants.

THE properest season, generally speaking, for planting, is unquestionably in the interval between August and the beginning of November. By having the advantage of the autumnal feafons, the young canes become fufficiently luxuriant to shade the ground before the dry weather fets in. Thus the roots are kept cool and the earth moist. By this means too, they are ripe for the mill in the beginning of the second year, fo as to enable the overfeer or manager to finish his crop (except as to the few canes which are referved to furnish cuttings or tops for planting) by the latter end of May. Canes planted in and after November lose the advantage of the autumnal rains, and it often happens that dry weather in the beginning of the ensuing year retards their vegetation, until the vernal feafons, or May rains, fet in; when they sprout both at the roots and the joints; fo that by the time they are cut, the field is loaded with unripe fuckers, instead of fugar-canes. A January plant, however, commonly turns out well; but canes planted very good time the

late in the spring, though they have the benefit CHAP. of the May rains, seldom answer expectation; for they generally come in unfeafonably, and throw the ensuing crops out of regular rotation. They are therefore frequently cut before they are ripe; or, if the autumnal feasons set in early, are cut in wet weather, which has probably occafioned them to fpring afresh; in either case the effect is the same: the juice is unconcocted, and all the fap being in motion, the root is deprived of its natural nourishment, to the great injury of the ratoon. The chief objection to a fall plant is this; that the canes become rank and top heavy, at a period when violent rains and high winds are expected, and are therefore frequently lodged before they are fit to cut. The observation, when applied to canes planted in rich and new lands, is just; and on this account, fome gentlemen have introduced the following fystem: They plant in August and September, clean the young sprouts, and give them mould occasionally, until the beginning of January, when they cut the young plants close to the ground with knives, and level the bank; spreading the remainder of the mould over the roots; which foon afterwards fend out a number of vigorous and luxuriant shoots all of an equal growth. It is alledged, that by this means the cane is not too rank in the stormy months, and nevertheless comes to perfection in good time the fucceeding fpring.

On

₿ 0 0 K V.

On the whole, it is a striking and just remark of Colonel Martin, that there is not a greater error in the system of planting, than to make fugar, or to plant canes, in improper feafons of the year; for by mismanagement of this kind every fucceeding crop is put out of regular order. A plantation, he observes, ought to be considered as a well-conftructed machine, compounded of various wheels turning different ways, yet all contributing to the great end proposed; but if any one part runs too fast, or too slow, in proportion to the rest, the main purpose is defeated. It is in vain, continues he, to plead in excute the want of hands or cattle; because these wants must either be supplied, or the planter must contract his views, and proportion them to his ability; for the attempt to do more than can be attained, will lead into perpetual disorder, and terminate in poverty.

UNFORTUNATELY, however, neither prudence in the management, nor favourable foils, nor feasonable weather, will at all times exempt the planter from misfortunes. The sugar-cane is subject to a disease which no foresight can obviate, and for which human wisdom has hitherto, I fear, attempted in vain to find a remedy.—This calamity is called the blast; it is the aphis of Linnæus, and is distinguished into two kinds, the black and the yellow; of which

the latter is the most destructive. It consists of myriads of little insects, invisible to the naked eye, whose proper food is the juice of the cane; in search of which they wound the tender blades, and consequently destroy the vessels. Hence the circulation being impeded, the growth of the plant is checked, until it withers or dies in pro-

HITHERTO, I have faid nothing of a very important branch in the fugar-planting, I mean the method of manuring the lands. The necessity of giving even the best soil occasional affistance is universally admitted, and the usual way of doing it in the West Indies is now to be described.

The manure generally used is a compost formed.

1st. OF the coal and vegetable ashes, drawn from the fires of the boiling and still-houses.

2dly. FECULENCES discharged from the still-house, mixed up with rubbish of buildings, white-lime, &c.

3dly. Refuse, or field-trash, (i. e.) the de-

(h) In some of the Windward Islands, the cane, in very dry weather, is liable to be destroyed also by a species of grub called the borer. This calamity is fortunately unknown, at least to any extent, in Jamaica; and never having seen it, I can give no certain description of it. I conceive the insect to be the eruca minima e rubro suscept of Sloane. In Tobago they have another destructive insect called the Jumper Fly.

cayed

BOOK cayed leaves and stems of the canes; so called in contradiffinction to cane-trash, reserved for fuel, and hereafter to be described.

> 4thly. Dung, obtained from the horse and mule stables, and from moveable pens, or small inclosures made by posts and rails, occasionally shifted upon the lands intended to be planted, and into which the cattle are turned at night.

> 5thly. Good mould, collected from gullies, and other waste places, and thrown into the cattle-pens.

> THE first, (i. e.) ashes, is commonly supposed to be a manure of itself, well adapted for cold and stiff clays; and in some parts of Jamaica, it is the practice, in the fall of the year, to carry it out unmixed, in cart loads, to the land where it is intended to be used. It is left there (or in fome fpot adjoining) in large heaps, until the land is holed; after which a basket full, containing commonly from fifteen to twenty pounds, is thrown into each cane-hole, and mixed with the mould at the time the plants are put into the ground. It may be doubted, however, whether ashes, applied in this manner, are of much advantage: I have been told, that if the land is opened five years afterwards, they will be found undiffolved (k). At other times, wain loads of

⁽k) On wet lands, not easily trenched, ashes may be useful in absorbing superfluous moisture, and may therefore fometimes prove a good top drefling.

the compost, or dunghill before-mentioned, are CHAP. carried out and used in nearly the same manner as the ashes.

But the chief dependence of the Jamaica planter in manuring his lands, is on the moveable pens, or occasional inclosures before described; not so much for the quantity of dung collected by means of those inclosures, as for the advantage of the urine from the cattle (the best of all manures), and the labour which is saved by this system. I believe, indeed, there are a great many overseers who give their land no aid of any kind, other than that of shifting the cattle from one pen to another, on the spot intended for planting, during three or four months before it is ploughed or holed (1).

WHAT

(1) This, however, is by no means sufficient on plantations that have been much worn and exhausted by cultivation, and perhaps there is no branch in the planting business wherein attention and fystematick arrangement, as faving both time and labour, are more necessary than in collecting and preparing large quantities of dung from the fources and materials before described. In spreading the manure thus collected, the common allowance in the Windward Islands, (where this part of husbandry is best understood) is a square foot of dung to each cane-hole; fo that by knowing the number of holes in an acre of land, and the number of fquare feet in a dung-heap, the manure may be proportioned to the ground. Nothing is more easy than to ascertain the number of square feet in a dung-heap. Multiply the length by the breadth, and the produce by the height. Thus, 30 feet, the length, multiplied by 30 feet, the breadth, gives 900 feer, which

воо к v.

WHAT has hitherto been said, however, relates folely to the method of preparing lands for plant-canes. Those who trust chiefly to rations, find it as necessary to give their cane-fields attention and affistance from the time the canes are cut, as it was before they were planted. It is the advice of Colonel Martin, fo foon as the canes are carried to the mill, to cut off, by a sharp hoe, all the heads of the cane-stools, three inches below the surface of the soil, and then fill up the hole with fine mould; by which means, he thinks that all the fprouts rifing from below, will derive more nutriment, and grow more equally and vigorously than otherwise. I know not that this advice is adopted in any of the fugar iflands. It is the practice, however, in many parts of Jamaica, to fpread baskets full of dung round the stools, fo soon after the canes have been cut as circumstances will admit, and the ground has been refreshed by rains: In dry and scorching weather it would be labour loft. The young fprouts are, at the fame time, cleared of weeds; and the dung which is spread round them, being covered with cane-trash that its virtues may not be exhaled by the fun, is found at the end of

which being again multiplied by four feet (the height) gives 3,600 feet, the full contents. This explanation is added for the use of the plain practical planter, who perhaps has had no great opportunity of studying arithmetical calculation.

three

three or four months, to be foaked into and in- CHAP. corporated with the mould. At this period the ratoons are again well cleaned, and the spaces between the ranks effectually hoe-ploughed; after which very little care is thought requifite until the canes are fit for cutting; the ancient practice of trashing ratoons (i. e.) stripping them of their outward leaves, being of late very generally and justly exploded.

Such is the general system of preparing and manuring the lands in Jamaica. I have been told, that more attention is paid to this branch of husbandry, in some of the islands to Windward; but I suspect that there is, in all of them, very great room for improvement, by means of a judicious rotation of crops, and artificial affiftance. Why, for instance, are not the manures of lime and fea-fand, which abound in thefe iflands, and have been found fo exceedingly beneficial in Great Britain, brought into use? Limestone alone, even without burning, (the expence of which might perhaps be an objection) has been found to answer in cold, heavy, and noist lands; no other trouble being requifite than merely to spread it over the ground, and break it into small pieces by fledge-hammers. Of this, the quantities are inexhaustible. Marle, is another manure of vast and general utility in Great Britain. It enriches the poorest land, opens the stiffest, VOL. II. and

BOOK V. and fweetens and corrects the most rank. Lands have been raised by the use of this manure, from two shillings per acre, to a guinea, annual rent. Now there is no country under the sun, wherein a soft unctuous marle more abounds than in Jamaica. To the question, rehy no trial has yet been made of it? no better answer, I believe, can be given, than that the planters in general have no leisure for experiments, and that it is difficult to make exents and servants (who have every thing to risk and nothing to gain) walk out of the sure and beaten track of daily practice. Every man's experience confirms this observation.

But it is not my province to propose systems, but to record sacts;—to describe things as they are, rather than as I conceive they ought to be; and it is now time to conduct the reader from the field into the boiling-house, and convert the farmer into the manusacturer.

m C\,H\,A\,P}$. feafon of gladness and festivity to man and beast. So palatable, falutary, and nourishing is the juice of the cane, that every individual of the animal creation, drinking freely of it, derives health and vigour from its use. The meagre and fickly among the negroes exhibit a furprifing alteration in a few weeks after the mill is fet in action. The labouring horses, oxen, and mules, though almost constantly at work during this feason, yet, being indulged with plenty of the green tops of this noble plant, and fome of the fcummings from the boiling-house, improve more than at any other period of the year. Even the pigs and poultry S 2 fatten

k o o k fatten on the refuse. In short, on a well-regulated plantation, under a humane and benevolent director, there is such an appearance during croptime of health, plenty and busy cheerfulness, as to soften, in a great measure, the hardships of slavery, and induce a spectator to hope, when the miseries of life are represented as insupportable, that they are sometimes exaggerated through the medium of sancy (a).

 $T_{\rm HE}$

(a) "He" (fays honeft old Slare the physician) "that "undertakes to argue against fiveets in general, takes upon "him a very difficult task, for nature seems to have recommended this taste to all forts of creatures; the birds of the "air, the beasts of the field, many reptiles and flies seem to be pleased and delighted with the specifick relish of all structure, and to distaste its contrary. Now the sugar-cane, or sugar, I hold for the top and highest standard of vegetable sweets." Sugar is obtainable in some degree from most vegetables, and Dr. Rush of Philidelphia, among the many advantages attending the use of it in diet, enumerates the following:

"1st. Sugar affords the greatest quantity of nourishment in a given quantity of matter of any substance in nature. Used alone, it has fattened horses and cattle in St. Domingo for a period of several months, during the time that the exportation of sugar and the importation of grain were suspended, from the want of ships.

" 2dly. The plentiful use of sugar in diet is one of the best preventatives that ever has been discovered of the diseases which are produced by worms. Nature seems to have implanted a love for this aliment in all children; as if it were on purpose to defend them from those diseases.

eight parts of pure water, one part of fugar, and CHAP. one part made of gross oil and mucilaginous gum, with a portion of effential oil. The proportions are taken at a medium; for some juice has been fo rich as to make a hoghead of fugar from thirteen hundred gallons, and fome fo watery as to require more than double that quantity.-By a hogshead I mean fixteen hundred weight. The richer the juice is, the more free it is found from redundant oil and gum; fo that an exact analysis of any one quantity of juice, would convey very little knowledge of the contents of any other quantity (c). THE

ment, the addition to the middle roller of a lantern-wheel, with trundles or wallowers, was purely his own. These act as so many friction-wheels, and their utility and importance are best demonstrated by their effect. A cattle or mule-mill on the old model was thought to perform exceedingly well if it passed sufficient canes in an hour to yield from 300 to 350 gallons of juice.-The common return of a mill on Mr. Woollery's construction is from 4 to 500 gallons.- I have authority to fay, that one of these mills in particular, which is worked with ten mules, produces hourly 500 gallons; at this rate, allowing four hours out of the twenty-four for loss of time, the return per diem is 10,000 gallons; being equal to 36 hogheads of fugar of 16 cwt. for every week during the crop, exclusive of Sundays.-Few water-mills can exceed this. The iron-work of the mill in question, as well as of most of those which have been made on Mr. Woollery's model, was prepared at the foundery of Mr. Thomas Goulding, of the Bank Side, Southwark, to whom I owe it in justice to declare, that his work is executed with fuch truth and accuracy, as reflect the highest credit on his manufactory.

(c) A pound of Jugar from a gallon of raw liquor, is S 4. reckoned

BOOK V.

THE above component parts are natural to, and are found in, all cane-juice; besides which, the following matters are usually contained in it. Some of the bands or green tops, which ferve to tie the canes in bundles, are frequently ground in, and yield a raw acid juice exceedingly difposed to ferment, and render the whole liquor Some pieces of the trash or ligneous part of the cane; fome dirt; and lastly, a substance of fome importance, which, as it has no name, I will call the crust. The crust is a thin black coat of matter that furrounds the cane between the joints, beginning at each joint and gradually growing thinner the farther from the joint upwards, till the upper part between the joints appears entirely free from it, and refumes its bright yellow colour. It is frequently thick enough to be scaled off by the point of a penknife. It is a fine black powder, that mixes with the clammy exudations perspired from the cane, and is most probably produced by animalcula. As the fairness of the fugar is one of the marks of its goodness, a small quantity of such a substance must confiderably prejudice the commodity.

THE process for obtaining the fugar is thus conducted. The juice or liquor runs from the receiver to the boiling-house, along a wooden

reckoned in Jamaica very good yielding. Sugar, chemically analyfed, yields phlegm, acid, oil, and fpongy gloffy charcoal.

gutter

gutter lined with lead. In the boiling-house it CHAP. is received (according to the modern improved fystem which almost universally prevails in Jamaica) into one of the copper pans or cauldrons called clarifiers. Of these, there are commonly three; and their dimensions are generally deter-

mined by the power of fupplying them with liquor. There are water-mills that will grind with great ease canes sufficient for thirty hogs-

heads of fugar in a week. On plantations thus happily provided, the means of quick boiling are

indispensibly requisite, or the cane-liquor will unavoidably become tainted before it can be exposed to the fire. The purest cane-juice will not

remain twenty minutes in the receiver without fermenting (d). Clarifiers, therefore, are fometimes feen of one thousand gallons each. But as

powers of the extent described are uncommon, I shall rather confine myself to such properties as

fall fible after they are cut, and great care taken to throw afide those which are tainted, which may afterward be ground

Perhaps it is not an extravagant hope that the time will come, when the falt of the cane which we call fugar, will be made to chrystallize, by the action of fire on the juice of the cane, in as pure and transparent a form, as the falt of seawater is frequently made to do in these climates, by the action of the fun's rays. The brown colour of muscovado fugar,

(d) As cane-juice is fo very liable to ferment, it is netellary also that the canes should be ground as soon as pos-

On such estates, three clarifiers of three or sour hundred gallons each, are sufficient. With pans of this size, the liquor, when clarified, may be drawn off at once, and there is leisure to cleante the vessels every time they are used. Each clarifier is provided either with a syphon or cock for drawing off the liquor. It has a stat bottom, and is hung to a separate fire, each chimney having an iron slider, which being shut, the sire goes out for want of air. These circumstances are indispensible, and the advantages of them will presently be shewn (e).

Cur.

feems to me to be derived chiefly from the effect of fire, operating on the gummy parts or mucilage of the raw juice; to defroy or feparate which, in the first clarifier, is the great defideratum. If this could be accomplished, the more watery particles might afterward be evaporated without injuring the colour of the effential falt, which would then strike into chrystais nearly transparent.

(e) The clarifiers are commonly placed in the middle of at one end of the boiling house. If at one end, the boiler called the teache is placed at the other, and several boiler (generally three) are ranged between them. The teache is ordinarily from 70 to 100 gallons, and the boilers between the clarifiers and teache diminish in size from the first to the last. Where the clarifiers are in the middle, there is usually a fet of three boilers of each side, which constitute in estate a double boiling-house. On very large estates this arrange

THE stream then from the receiver having CHAP. filled the clarifier with fresh liquor, and the fire being lighted, the temper, which is commonly Bristol white-lime in powder, is stirred into it. One great intention of this is to neutralize the fuperabundant acid, and which to get properly rid of, is the great difficulty in fugar-making. This is generally effected by the Alkali or lime; part of which, at the same time, becomes the basis of the sugar. The quantity necessary for this purpose, must of course vary with the quality both of the lime and of the cane-liquor.-Some planters allow a pint of Bristol lime to every hundred gallons of liquor; but this proportion I believe is generally found too large. The lime is perceptible in the fugar both to the fmell and taste, and precipitates in the copper pans a black infoluble calx, which fcorches the bottom of the veffels, and is not detached without difficulty. I conceive therefore that little more than half the quantity mentioned above, is a better medium proportion, and, in order that less of it may be precipitated to the bottom, an inconveniency attending the use of dry lime, M. Bousie's method of dissolving it in boiling water,

ment is found useful and necessary. The objection to so great a number is the expence of fuel, to obviate which in fome degree, the three boilers on each fide of the clarifiers are

(f) This gentleman (Mr. Bousse) to whom the affembly of Jamaica gave f. 1,000 for his improvements in the art of fugar-boiling, in a paper diffributed by him among the members, recommends the use of a vegetable alkali, or ashes of wood calcinated, fuch as pimento-tree, dumb-cane, ferntree, cashew, or logwood, as affording a better temper than quick-lime; but he was afterwards fenfible that fugar formed on the basis of fixed alkaline salts never stands the sea, unless some earth is joined with the falts. Such earth as approaches nearest to that which is the basis of allum, would perhaps be most proper. As sugar on a vegetable alkaline basis, is generally as much superior in colour, as that on lime is in grain; how far a judicious mixture of vegetable alkaline falts and lime, might prove a better temper than either lime or alkaline falts alone, is an enquiry that ought to be purfued. If there were no redundant acid in cane-liquor, lime and any other alkali would be hurtful, as may be fliewn by adding a few grains of lime or alkali to a clear folution of refined fugar: 1 precipitation will enfue. In fome parts of Jamaica, where the cane-liquor was exceedingly rich, Mr. Bousie made very good fugar without a particle of temper. I have faid, that too much temper is perceptible in the fugar, both to the finell and tafte; it might be added, and also to the fight. It tinger the liquor first yellow, and if in excess turns it to a dark red Too much temper likewise prevents the melasses from separating from the fugar when it is potted or put into the hogfliead.

to within a few degrees of the heat of boiling CHAP. water. The liquor must by no means be suffered to boil: it is known to be sufficiently heated when the feum begins to rife into blifters, which break into white froth, and appear in general in about forty minutes. The damper is then applied, and the fire extinguished; after which, the liquor is suffered to remain a full hour, if circumstances will admit, undisturbed; during this interval great part of the feculencies and impurities will attract each other, and rife in the The liquor is now carefully drawn off, either by a fyphon, which draws up a pure defecated stream through the scum, or by means of a cock at the bottom. In either case the scum finks down unbroken as the liquor flows, its tenacity preventing any admixture. The liquor is received into a gutter or channel, which conweys it to the evaporating boiler, commonly called the grand copper, and, if originally produced from good and untainted canes, will now appear almost, if not perfectly, transparent (g.)

THE advantage of clarifying the liquor in this manner, instead of forcing an immediate ebullition, as practifed formerly, is visible to the

most

⁽⁸⁾ The merit of introducing into Jamaica the clarifiers at present in use, with syphons and dampers, was claimed by Mr. Samuel Sainthill, and an exclusive patent, to fecure s from fepa. is claim, was granted to him in 1778 by an act of the put into the

BOOK

most inattentive observer. The labour which it faves in fcumming is wonderful. Neither car. fcumming properly cleanse the subject; for when the liquor boils violently, the whole body of it circulates with fuch rapidity, as to carry down again the very impurities that had come up to the furface, and with a less violent heat would have staid there.

In the grand, or evaporating, copper, which should be large enough to receive the net contents of one of the clarifiers, the liquor is fuffered to boil; and as the scum rises, it is continually taken off by large scummers, until the liquor grows finer and fomewhat thicker. This labour is continued until, from the scumming and evaporation, the subject is sufficiently reduced in quantity to be contained in the next or fecond copper, into which it is then laded. The liquor is now nearly of the colour of Madeira wine. It the fecond copper the boiling and fcumming an continued; and if the subject is not so clean a is expected, lime-water is thrown into it. addition is intended not merely to give more temper, but also to dilute the liquor, which some times thickens too fast to permit the teculences to run together and rise in the scum. Liquor to obtain a cool stands faid to have a good appearance in the second rain is injured copper, when the froth in boiling arises in large convinced of bubbles, and is but little discoloured. BOOK judging when the subject is sufficiently evaporated for firiking, or become fit for being laded from the teache to the cooler. Many of the negro boilers guess solely by the eye (which by long habit they do with great accuracy) judging by the appearance of the grain on the back of the ladle; but the practice most in use is to judge by what is called the touch; i. e. taking up with the thumb a fmall portion of the hot liquor from the ladle; and, as the heat diminishes, drawing with the forefinger the liquid into a thread. This thread will suddenly break, and thrink from the thumb to the suspended singer, in different lengths, according as the liquor is more or less boiled. The proper boiling height for ftrong muscovado fugar, is generally determined by a thread of a quarter of an inch long. It is evident that certainty in this experiment can be attained only by long habit, and that no verbal precepts will furnish any degree of skill in a matter depending wholly on constant practice (i).

I NOW

(i) It is probable that from this practice of trying by the touch (tactio) the vessel called the teache derives its name. A method more certain and fcientifick was recommended form years ago to the publick, by my learned friend John Proculus Baker, Esquire, Barrister at Law, in the Island of Jamaica, in a Treatife published by him, in 1775, intituled An Essay on the Art of making Muscovado Sugar. It is as follows:-" Provide a finall thin pane of clear crown glass, set " in a frame, which I would call a tryer; on this drop two

I NOW

I now return to the curing-house, which is a CHAP. there is a frame of massy joist-work without boarding. On the joists of this frame, empty hogsheads, without headings, are ranged. In the bottoms of these hogsheads eight or ten holes are bored, through each of which the stalk of a

plantain leaf is thrust, fix or eight inches below "three drops of the fubject, one on the other, and carry your " tryer out of the boiling-house into the air. Observe your " fubject, and more particularly whether it grains freely, and whether a fmall edge of melasses separates at the bottom. " I am well fatisfied that a little experience will enable you to "judge what appearance the whole skip will put on, when " cold, by this specimen, which is also cold. This method is "used by chemiss, to try evaporated solutions of all other " falts, it may feem, therefore, fornewhat strange, it has not " been long adopted in the boiling-house."—I cannot mention Mr. Baker's Treatife, without observing, that I am considerably indebted to it in the course of this chapter, having adopted (with fome fmall variation, founded on late improvements) his account of the process of boiling fugar. But the inhabitants of the fugar iflands are under ftill greater obligations to Mr. Baker; - for it appears to me, that the prefent improved fystem of clarifying the cane-liquor, by means of vessels hung to separate fires, and provided with dampers to prevent ebullition, was first suggested to Mr. Sainthill (who three years afterwards claimed the merit of the invention) by the treatise in question; a performance that, for useful know. ledge, lucid order, and elegance, both in arrangement and composition, would have done honour to the first writer of the age. Vol. II. \mathbf{T} the

large airy building, provided with a capacious melasses cistern, the sides of which are sloped and lined with terras, or boards. Over this ciftern

BOOK the joists, and is long enough to stand upright above the top of the hogshead. Into these hogsheads the mass from the cooler is put, which is called potting; and the melasses drains through the spungy stalk and drops into the cistern, from whence it is occasionally taken for distillation. The fugar in about three weeks grows tolerably dry and fair. It is then faid to be cured, and the process is finished (k).

Sugar, thus obtained, is called muscovado, and is the raw material from whence the British fugar-bakers chiefly make their loaf, or refined lump. There is another fort, which was formerly much approved in Great Britain for domestick purposes, and was generally known by the name of Lisbon sugar. It is fair, but of a soft texture, and in the West Indies is called clayed sugar; the process is conducted as follows:-

A QUANTITY of fugar from the cooler is put into conical pots or pans, called by the French formes, with the points downwards, having a hole about half an inch in diameter at the bottom, for the melaffes to drain through, but which at first is closed with a plug. When the fugar in these pots is cool, and become a fixed body, which is discoverable by the middle of the top falling in (generally about twelve hours from the

first potting of the hot sugar) the plug is taken CHAP. out, and the pot placed over a large jar, intended to receive the fyrup or melasses that drains from In this state it is left as long as the melasses continues to drop, which it will do from twelve to twenty-four hours, when a stratum of clay is spread on the sugar, and moistened with water, which oozing imperceptibly through the pores of the clay, unites intimately with, and dilutes the melasses, consequently more of it comes away than from fugar cured in the hogshead, and the lugar of course becomes so much the whiter and purer. The process, according to Sloane, was first discovered in Brasil, by accident; "a hen," fays he, " having her feet dirty, going over a pot " of fugar, it was found under her tread to be "whiter than elsewhere." The reason assigned why this process is not univerfally adopted in the British sugar islands, is this, that the water which dilutes and carries away the melaffes, diffolves and carries with it so much of the sugar, that the difference in quality does not pay for the difference in quantity. The French planters probably think otherwise, upwards of four hundred of the plantations of St. Domingo having the necessary paratus for claying, and actually carrying on

(1) The loss in weight by claying is about one third; thus por of 60 lbs. is reduced to 40 lbs. but if the melasses which

OF RUM.

HAVING now furnished the reader with the best account I am able to give of the art of making sugar from the cane-juice, I shall proceed to a subsequent process, to which this invaluable plant hath given birth; I mean that of extracting from it, by fermentation and distillation, one of the purest, most fragrant, and salutary spirits in the world; a process of far greater curiosity than the somer, and of almost equal importance in point of value, considering that the spirit procured by its means, is obtained from the very dregs and seculencies of the plant.

THE still-houses on the sugar-plantations in the British West Indies, vary greatly in point of size and expence, according to the fancy of the proprietor, or the magnitude of the property. In general, however, they are built in a substantial manner of stone, and are commonly equal in extent to both the boiling and curing-houses together. Large stills, by which I mean such as

is drawn off in this practice be reboiled, it will give near to per cent. of fugar; so that the real loss is little more than one fixth; but the distillery in that case will suffer for want of the melasses, and on the whole I believe that the usage of the English planters in shipping Muscovado sugar, and distilling the melasses, is more generally prostable than the system of claying.

contain from one to three thousand gallons, have CHAP. this advantage over small ones; that they are purchased at first at a less proportionate expence. A still of two thousand gallons, with freight and charges, will cost but little more than one of one thousand five hundred gallons, and is besides worked with but little more fuel. But as it is not every proprietor that has the means of employing stills of that magnitude, I shall consider such as are fitting for a plantation making, communibus annis, two hundred hogsheads of sugar of fixteen hundred weight, and proceed to describe, according to the best of my observation and experience, the mode of conducting fuch an apparatus on fuch a property, in making rum to the greatest advantage.

For a plantation of that description, I conceive that two copper stills, the one of one thoufand two hundred, and the other of fix hundred. gallons, wine measure, with proportionate pewter worms, are sufficient. The size of the tanks (or tubs) for containing the cold water in which the worms are immersed, must depend on circumlances: if the advantage can be obtained of a unning stream, the water may be kept abunlantly cool in a vessel barely large enough to ontain the worm. If the plantation has no ther dependence than that of pond-water, a one tank is infinitely superior to a tub, as being

воок

longer in heating, and if it can be made to contain from twenty to thirty thousand gallons, the worms of both the stills may be placed in the same body of water, and kept cool enough for condensing the spirit, by occasional supplies of fresh water.

For working these stills, it is necessary to provide, first, a dunder-cistern, of at least three thoufand gallons; fecondly, a ciftern for the fcummings; lastly, twelve fermenting vats or cisterns, each of them of the contents of the largest still, viz. one thousand two hundred gallons. In Jamaica, cifterns are made of plank, fixed in clay; and are univerfally preferred to vats, or moveable vessels, for the purpose of fermenting. They are not so easily affected by the changes of the weather, nor so liable to leak as vats, and they last much longer. But in the British distilleries, fermenting cifterns are, I believe, unknown. complete the apparatus, it is necessary to add two or more copper pumps for conveying the liquor from the cifterns, and pumping up the dunder, and also butts or other vessels for securing the spirit when obtained; and it is usual to build a rum-store adjoining the still-house.

THE ingredients, or materials, that fet the various apparatus I have described into action consist of,

1st. Melasses, or treacle drained from the sugar, as already described.

the land

4tl

3dly. LEES, or, as it is called in Jamaica, dunder (m).

4thly. WATER,

THE use of dunder in the making of rum, answers the purpose of yeast in the fermentation of flour. It is the lees or feculencies of former distillations; and some few planters preserve it for use, from one crop to another; but this is a bad practice. Some fermented liquor, therefore, composed of sweets and water alone, ought to be distilled in the first instance, that fresh dunder may be obtained. It is a diffolvent menstruum, and certainly occasions the sweets with which it is combined, whether melasses or scummings, to yield a far greater proportion of spirit than can be obtained without its affistance. The water which is added, acts in some degree in the same manner by dilution.

In the Windward Islands the process, according to Colonel Martin, is conducted as follows:

Scummings, one-third.

LEES, or dunder, one-third. WATER, one-third.

BOOK

When these ingredients are well mixed in the fermenting cisterns, and are pretty cool, the fermentation will rise, in twenty-four hours, to a proper height for admitting the first charge of melasses, of which six gallons (n) for every hundred gallons of the fermenting liquor, is the general proportion to be given at twice, viz. 3 per cent. at the first charge, and the other 3 per cent. a day or two afterwards, when the liquor is in a high state of sermentation; the heat of which, however, should not in general be suffered to exceed from ninety to ninety-four degrees on Fahrenheit's thermometer (o).

WHEN the fermentation falls by easy degrees from the fifth to the seventh or eighth day (p), so as then to grow fine, and throw up flowly a few clear beads or air globules, it is ripe for distillation; and the liquor or wash being conveyed into the largest still, which must not be filled higher than within eight or ten inches of the brim, lest the head should sly, a steady and regular fire must be kept up until it boils, after

which a little fuel will serve. In about two hours the vapour or spirit being condensed by the ambient sluid, will force its way through the worm in the shape of a stream, as clear and transparent as crystal; and it is suffered to run until it is no longer inflammable.

The spirit which is thus obtained goes by the appellation of low-wines. To make it rum of the Jamaica proof, it undergoes a second distillation, of which I shall presently speak; but previously thereto, I shall point out some little variation between the practice of the Jamaica distillers and those of the Windward Islands, observable in the first process. This consists chiefly in a more copious use of dunder (q). The sollowing

(q) As the use of dunder is to dissolve the tenacity of the faccharine matter, it should be proportioned not only to the quantity, but also to the nature of the sweets. Thus, when the fweets in the fermenting ciftern confift of melasses alone, as generally happens after the business of sugar-boiling is finished, when no feurmings are to be had, a greater proportion of dunder is necessary; because melasses is a body of greater tenacity than cane-liquor, and is rendered fo vifcons and indurated by the action of the fire, as to be unfit for fermentation without the most powerful saline and acid slimulators. For the same reason, at the beginning of the crop, when no melasses is to be had, and the sweets consist of cane-juice or foummings alone, very little dunder is necessary. In such case I should not recommend above 20 per cent. at the utmost. Dunder, in a large quantity, certainly injures. he flawur, although it may encrease the quantity of the spirit. We are informed by Dr. Shaw, that the distillers in England

HISTORY OF THE

v. lowing being a very general, and, I believe, an improved method, in Jamaica, of compounding the several ingredients, viz.

Dunder

add many things to the fermenting liquor, or wash, in order to augment the vinosity of the spirit, or give it a particular flavour. He observes, that a little tartar, nitre, or common falt, is sometimes thrown in at the beginning of the operation, or in their stead a little of the vegetable or finer mineral acid, These are thought to be of great use in the fermenting of folutions of treacle, honey, and the like sweet and rich vegetable juices, which contain a small proportion of acid. I have heard, that a fimilar practice prevails among the distillers in St. Christopher's; some of whom consider an addition of fea-water to the fermenting liquor (in what proportion I cannot fay) as a real and great improvement. Shaw recommends the juice of Seville oranges, lemons, and tamarinds, or other very acid fruits, and, above all other things, an aqueous folution of tartar; but I conceive that dunder alone answers every purpose. He likewise recommends to the distiller to introduce into the fermenting cistern a few gallons of the rectified spirit, which he says will come back, with a large addition to the quantity of spirit that would otherwife have arisen from the distillation. - As I have tried none of these experiments, I can say nothing in their sayour of my own knowledge; but I believe that a finall quantity of vegetable ashes, thrown into the rum-still, will be found serviceable. The alkaline falts are supposed to attenuate the spirit and keep back the grofs and fetid oil, which the distillers call the faints; but if used in too great a quantity, they may keep back also a proportion of the fine effential oil, on which the flavour of the rum wholly depends. Perhaps the most important object of attention, in the making rum of a good flavour, is eleanlines; for all adventitious or foreign substances destroy or change the peculiar flavour of the spirit. In truth, it should be a confiant rule with the manager or distiller to set

100 gallons.

Or this mixture (or wash, as it is sometimes called) one thousand two hundred gallons ought to produce three hundred gallons of low-wines; and the still may be twice charged and drawn off in one day. The method of adding all the melasses at once, which is done soon after the fermentation commences, renders the process safe and expeditious; whereas by charging the melasses at different times, the fermentation is checked, and the process delayed.

LET us now complete the process according to the Jamaica method. The low-wines obtained as above, are drawn off into a butt or vessel, and, as opportunity serves, are conveyed into the second still of six hundred gallons, to undergo a further distillation. The steam begins to run in about one hour and a half, and will give, in the course of the day, two hundred and twenty gal-

that the cifterns are fealded, and even cleanfed with firong lime-water, each time they are used; not merely on account of the rum, but also because it has frequently happened that the vapour of a foul ciftern has instantly killed the first person that has entered it without due precaution.

lons,

BOOK lons, or two puncheons, of oil-proof rum, i. e. of spirit in which olive oil will fink; and thus the manufacture, if it may be so called, is com-There will remain in the still a considerable quantity of weaker spirit, commonly about feventy gallons, which is returned to the lowwine butt. Thus two hundred and twenty gallons of proof rum are, in fact, made from five hundred and thirty gallons of low-wines; or about one hundred and thirteen of rum from one thoufand two hundred of wash (r).

By means of the apparatus and process which I have thus described, the Jamaica distiller may fill weekly, working only by day-light (a necesfary precaution in this employment) and at a fmall expence of labour and fuel, twelve puncheons of rum, containing each one hundred and ten gallons of the Jamaica standard. The proportion of the whole rum to the crop of fugar, is commonly estimated in Jamaica as three to four. Thus a plantation of the above description is supposed to supply annually one hundred and fifty puncheons of rum of one hundred and

(r) Proof spirit of any kind weighs seven pounds twelve ounces per gallon. According to the English hydrostatical table, the cubic inch of proof spirit weighs 9 p. wt. 19.73 gr. troy, or 8.62 dr. avoirdupois. But it has been found that a cubic inch of good brandy is 10 grains heavier in winter than in fummer, and that 32 gallons of spirits in winter will make 33 in summer.

THE reader will please to recollect, that me this, and the preceding chapter, the observations which I have made, both concerning the cultivation of the fugar-cane in the field, and the fubfequent processes of the boiling house and distillery, have been drawn chiefly from the practice of Jamaica. Some felection was necessary, and I could refer to no mode of conducting a fugar plantation, with fuch propriety as to that with which I am myself practically acquainted.-My next enquiries will relate to the particulars of the first cost of this species of property, to the current expences attending it, and to the returns which may be reasonably expected from a capital thus employed; and here again my estimates will refer chiefly to Jamaica. That there is a confiderable variation in fome of the Windward Islands, I have no doubt. In St. Christopher's, for instance, some of the lands are certainly more valuable than the very best in Jamaica; but, on the other hand, Jamaica is exempted from the duty of 4 ½ per cent. and has other advantages; which probably make the fcale even.

firength of spirit, what is lost in quantity: and there are managers who make it a rule to return the scummings to the clarifiers, instead of sending them to the still-house. This last mentioned practice reduces the crop of rum more than one-third; but is supposed to yield in sugar more than is lost in rum; and if the price of sugar is very high, and that of rum very low, it may be prudent to adopt this method.

from the

lvantages;

BOOK it requires a capital of no less than thirty thous fand pounds sterling to embark in this employment with a fair prospect of advantage. To elucidate this position, it must be understood that the annual contingencies of a small or moderate plantation, are very nearly equal to those of an estate of three times the magnitude. A property, for instance, producing annually one hundred hogsheads of sugar of fixteen cwt. has cccasion for fimilar white fervants, and for buildings and utenfils of nearly the fame extent and number as a plantation yielding from two to three hundred fuch hogsheads, with rum in proportion. speaking of capital, I mean either money, or a folid well-established credit; for there is this effential difference attending loans obtained on landed estates in Great Britain, and those which are advanced on the credit of West Indian plantations, that an English mortgage is a marketable fecurity, which a West Indian mortgage is In England, if a mortgagee calls for his money, other persons are ready to advance it: now this feldom happens in regard to property in the West Indies. The credit obtained by the fugar-planter is commonly given by men in trade, on the prospect of speedy returns and considerable advantage; but as men in trade feldom find it convenient to place their money out of their reach for any length of time, the credit which

calls for his

they give is oftentimes fuddenly withdrawn, and CHAP. the ill-fated planter compelled, on this account, to fell his property at much less than half its first cost. The credit therefore of which I speak, confidered as a capital, must not only be extenfive, but permanent.

HAVING premised thus much, the application of which will hereafter be feen, I shall employ my present enquiries in ascertaining the fair and well-established prices at which a sugar estate may at this time be purchased or created, and the profits which may honeftly and reasonably be expected from a given capital fo employed; founding my estimate on a plantation producing, one year with another, two hundred hogsheads of fugar of fixteen cwt. and one hundred and thirty puncheons of rum of one hundred and ten gallons each: an estate of less magnitude, I conteive, for the reasons before given, to be comparatively a lofing concern. Afterwards I shall endeavour to account for the eagerness which has been shewn by many persons to adventure in this line of cultivation.—I begin then with the

LANDS.

On a furvey of the general run of the fugar states in Jamaica, it is found that the land in anes commonly constitutes one-third of the Vol. II. plantation; U

BOOK

plantation; another third is appropriated to palturage and the cultivation of provisions, such as plantains (a hearty and wholesome food) eddoes, yams, potatoes, caffada, corn, and other vegetable esculents peculiar to the country and climate; and which, with falted fish, supplied the negroes weekly, and fmall flock, as pigs and poultry, of their own raising, make their chief support, and in general it is ample. The remaining third is referved in native woods, for the purpose of furnithing timbers for repairing the various buildings, and supplying fire-wood for the boiling and distilling-houses, in addition to the cane-trash, and for burning lime and bricks.—As therefore a plantation yielding, on an average, two hundred hogsheads of sugar annually, requires, as I conceive, not less than three hundred acres to be planted in canes, the whole extent of fuch a property must be reckoned at nine hundred acres. I am perfuaded that the fugar plantations in Jamaica making those returns, commonly exceed, rather than fall short of, this estimate; not, as hath been ignorantly afferted, from a fond and avaricious propensity in the proprietors to engross more land than is necessary; but because, from the nature of the foil, and rugged furface of the country, the lands vary greatly in quality, and it obtain, fourte is feldom that even three hundred acres of foil in therling per ac contiguity, fit for the production of tugar, cares £.8,400 cu

he procured. A purchaser therefore must take CHAP. the bad with the good. Nevertheless, as it is my intention to give as precise an idea as I can of the profits to be made in the fugar-planting business, under the most favourable circumstances, I will allow nothing for a dead capital vefted in unproductive woodland, but fix on fix hundred acres, as fufficient for all the purposes that have been mentioned; appropriating one-half of the whole, inflead of one-third, to the culture of the

THE price of woodland in Jamaica depends chiefly on its fituation. In feafonable parts of the country, and in the vicinity of the fea, I conceive it would be difficult to purchase a quantity of a fugar land sufficient for a good estate, unless at a very high price. On the north fide; in a fertile and seasonable parish, I have lately known a tract of eight hundred acres, with a fine river running through it, fell for ten pounds currency per acre, but it was at the distance of ten miles from the sea; and the purchaser had a new and difficult road to make for three miles of the way. Such another territory, without the inconveniencies to which this was subject, would, as lands fell in Jamaica, be well worth, and eafily lity, and it obtain, fourteen pounds currency, or ten pounds ferling per acre. Six hundred acres at this price fugar, can s £. 8,400 currency. The cost of clearing onebe salf, and planting it in canes, including four cleanings,

воок

cleanings, would be f. 12 currency per acre, or £. 3,600. Clearing and planting 100 acres in provisions, would be f. 7 an acre, or f. 700; the same for clearing and planting 100 acres in Guiney grass. Inclosing and fencing the whole would cost, on a moderate estimate, f. 700 more. -Total f. 14,100 currency, being equal to f. 10,071 sterling.

BUILDINGS.

THE buildings which will be found necessary on a plantation of the magnitude described are,

1st. A water-mill, (if water can be Jamaica obtained) the cost of which, confidering that a great extent of stone guttering is commonly requifite, may be stated, on a very low estimate, at f. 1,000 sterling. In case no water-mill can be erected, I do. not conceive that a fingle mill, whether worked by cattle, mules, or wind, is fufficient to take off the crop in due time, a most important object, on which the future fuccess of the plantation depends. I allow therefore for a wind-mill and one cattle-mill, or for two cattle-mills without a wind-mill, a fum equal to the cost of a water-mill, or

STOCK

STOCK.

The stock on a plantation of the magnitude described, cannot prudently consist of less than two hundred and sifty negroes, eighty steers, and sixty mules. It is not sufficient to object, that two hundred hogsheads of sugar have been produced by the labour of a less number of negroes than is here allowed. I am treating of an estate which produces that quantity on a medium; consequently, as, from droughts and unfavourable

duced by the labour of a less number of negroes than is here allowed. I am treating of an estate which produces that quantity on a medium; confequently, as, from droughts and unfavourable seasons, the crops will sometimes fall short of, at other times they must greatly exceed the numbers prescribed; and under these circumstances, I do not believe a plantation will easily be named that possesses (or employs, in job work and otherwise)

a less number of negroes annually. If such an estate there is, I hesitate not to pronounce that it is in improvident hands; for what management can be worse than that which, by over-working the negroes, sacrifices the capital for the sake of a

temporary augmented income?—The cost of the stock, therefore, may be stated as follows:

					13;
25	o Negro	es, at £. 70			Jamaica Currency

Which is only £. 520 short of £. 42,000 Jamaica currency, or £. 30,000 sterling, the sum first mentioned; and I am further of opinion, that if the owner of fuch a property were to fell it by appraisement, the valuation would amount to nearly the fum expended. It would therefore be more adviseable, undoubtedly, to purchase a plantation ready fettled, rather than attempt to create a new one from uncleared lands; inafmuch as the labour and risk of the undertaking would be thereby avoided:—but, however this may be it must be considered as a fixed and well-established fact, that a fugar plantation of the extent and returns which have been supposed, whether acquired by purchase, or by the risk and labour of clearing the lands, will unavoidably cost (the necessary buildings and stock included) £. 30,000 sterling, before any adequate interest can be received from the capital.

sioned by fires and hurricanes, destroying in a few CHAP. hours the labour of years) it is not wonderful that the profits should frequently dwindle to nothing; or rather that a fuger estate, with all its boasted advantages, should fometimes prove a mill-stone about the neck of its unfortunate proprietor, which is dragging him to destruction (b)!

ADMITTING even that his prudence, or good fortune, may be such as to exempt him from most of the loffes and calamities that have been enumerated, it must nevertheless be remembered, that the fugar planter is at once both landlord and tenant on his property. In contrasting the profits of a West Indian plantation with those of a landed estate in Great Britain, this circumstance is commonly overlooked; yet nothing is more certain than that an English proprietor, in flating the income which he receives from his capital, includes not in his estimate the profits made by his tenants. These constitute a distinct object, and are usually reckoned equal to the clear annual rent which is paid to the proprietor. Thus a farm in England, producing an income of 3½ per cent. to the owner, is in fact proportionably equal to a fugar plantation yielding

(b) In Jamaica, the usual mode of calculating, in a general way, the average profits of a fugar estate, is to allow L. 10 sterling per annum for every negro, young and old, eniployed in this line of cultivation.

double the profit to the planter; and possessed befides all that flability, certainty and fecurity; the want of which is the great drawback on the latter. An English gentleman, when either extreme of dry or wet weather injures the crop on his lands, has no other concern in the calamity than fuch as the mere feelings of humanity may dictate. Nor is he under the disagreeable necessity in time of war, of paying large premiums for infuring his estate from capture by a foreign enemy. This is another tax, which the unfortunate West Indian, resident in Great Britain, must add to his expences; or fubmit to the difagreeable alternative of paffing many an uneafy day and fleepless night, in dreadful anxiety for the fate of his poffessions, and the future subfishence of his family;—haraffed, perhaps, at the fame time; by creditors whose importunity increases as their fecurity becomes endangered.

Bur there is a question, naturally arising from the premises, to which it is proper that I should, in this place, give an answer; and it is this: Sceing that a capital is wanted which few men' can command, and confidering withal, that the returns are in general but finall, and at best uncertain, how has it happened that the fugar iflands have been fo rapidly fettled, and many a great estate purchased in the mother-country, from the profits that have accrued from their cultivation?

enq man triev tion quate taking fortun raifed mand: advanta behold : the fan peafants coast, an participat fometimes wary adve if he has a out with. ment give practitioner what very purchase of tions of clear ing the build One-third of perhaps furni

It 1

It were to be wished that those who make such CHAP. enquiries would enquire, on the other hand, how many unhappy persons have been totally and irretrievably ruined, by adventuring in the cultivation of these islands, without possessing any adequate means to support them in such great undertakings? On the failure of some of these unsortunate men, vast estates have indeed been raised by persons who have had money at command: men there are who, reflecting on the advantages to be derived from this circumstance, behold a fugar planter ftruggling in diftress, with the same emotions as are felt by the Cornish peasants in contemplating a shipwreck on the coast, and hasten with equal rapaciousness to participate in the spoil. Like them too, they sometimes hold out false lights to lead the unwary adventurer to destruction; more especially if he has any thing confiderable of his own to fet out with. Money is advanced, and encouragement given, to a certain point; but a skilful practitioner well knows where to stop: he is aware what very large fums must be expended in the purchase of the freehold, and in the first operations of clearing and planting the lands, and erecting the buildings, before any return can be made. One-third of the money thus expended, he has perhaps furnished; but the time foon arrives when

when a further advance is requifite to give life and activity to the system, by the addition of the negroes and the stock. Now then is the moment for oppression, aided by the letter of the law, and the process of office, to reap a golden harvest. the property answers expectation, and the lands promise great returns, the sagacious creditor, instead of giving further aid, or leaving his too confident debtor to make the best of his way by his own exertions, pleads a fudden and unexpected emergency; and infifts on immediate re-payment of the fum already lent. The law, on this occasion, is far from being chargeable with delay; and avarice is inexorable. A fale is hurried on, and no bidders appear but the creditor himself. Ready money is required in payment, and every one fees that a further fum will be wanting to make the estate productive. Few therefore have the means, who have even the wish, efficaciously to affift the devoted victim. Thus, the creditor gets the estate at his own price, commonly for his first advance, while the miserable debtor has reason to thank his stars if, consoling himself with only the loss of his own original capital, and his labour for a feries of years, he escapes a prison for life.

THAT this is no creation of the fancy, nor even an exaggerated picture, the records of the courts

of i

of law, in all or most of our islands (Jamaica CHAP. especially) and the recollection of every inhabitant, furnish incontestable proof. At the same time it cannot justly be denied that there are creditors, especially among the British merchants, of a very different character from those that have been described, who, having advanced their money to resident planters, not in the view of deriving undue advantages from their labours and neceffities, but folely on the fair and honourable ground of reciprocal benefit, have been compelled, much against their inclination, to become planters themselves; being obliged to receive unprofitable West Indian estates in payment, or lose their money altogether. I have known plantations transferred in this manner, which are a burthen instead of a benefit to the holder; and are kept up folely in the hope that favourable crops, and an advance in the prices of West Indian produce, may, some time or other, invite purchasers. Thus oppression in one class of creditors, and gross injustice towards another, contribute equally to keep up cultivation in a country, where, if the niques and losses are great, the gains are sometimes commensurate; for sugar estates there are, undoubtedly, from which, instead of the returns hat I have estimated as the average interest on he capital, double that profit has been obtained. t is indeed true, that fuch instances are extremely X rare i

Thus fine fugar has been known to yield a clear profit to the planter of no less than f. 1,500 sterling on 200 hogsheads of the usual magnitude, beyond what the fame number, where the commodity is inferior in quality, would have obtained at the same market. To aver that this difference is imputable wholly to foil and feafon in the West Indies, or to the state of the British market, is to contradict common observation and experience. Much, undoubtedly, depends of skill in the manufacture; and, the process being apparently fimple, the beholder (from a propenfit natural to the busy and inquisitive part of man kind) feels an almost irrefistible propensity to a gage in it. In this, therefore, as in all oth enterprises, whose success depends in any degree ble to colle on human fagacity and prudence, though perha

THAT the reasons thus given, are the only ones that can be adduced in answer to the question that has been stated, I presume not to affirm. Other causes, of more powerful efficacy, may perhaps be affigned by men of wider views and better information. The facts however which I have detailed, are too striking and notorious to be controverted or concealed.

HAVING now, I believe, fufficiently treated of the growth, cultivation, and manufacture of fugar, &c. and pointed out with a minuteness (tedious perhaps but) suited, as I conceive, to the importance of the subject, the first cost, and current contingencies attending the establishment and profitable maintenance of a fugar plantation, together with the risque and gains evenpart of man qually arising from this species of property, I hall proceed, in the following chapter, to furnish in all otherny readers with fuch information as I have been in any degree ble to collect concerning the minor staples,

COTTON.

THAT beautiful vegetable wool, or substance CHAP. called cotton, is the spontaneous production of three parts of the earth. It is found growing naturally in all the tropical regions of Afia, Africa, and America; and may justly be comprehended among the most valuable gifts of a bountiful Creator, superintending and providing for the necessities of man.

 X_3

THE

V. V.

THE cotton-wool, which is manufactured into cloth (for there is a species in the West Indies, called silk or wild cotton, unsit for the loom) consists of two distinct kinds, known to the planters by the names of GREEN-SEED COTTON, and SHRUB COTTON; and these again have subordinate marks of difference, with which the cultivator ought to be well acquainted if he means to apply his labours to the greatest advantage.

GREEN-SEED cotton is of two species; of one of which the wool is so firmly attached to the seed, that no method has hitherto been found of separating them, except by the hand; an operation so tedious and troublesome, that the value of the commodity is not proportionate to the pains that are requisite in preparing it for market. This sort therefore is at present cultivated principally for supplying wick for the lamps that are used in sugar-boiling, and for domestick purposes; but the staple being exceedingly good, and its colour persectly white, it would doubtless be a valuable acquisition to the muslin manufactory, could means be found of detaching it easily from the seed.

THE other fort has larger feeds, of a duller green than the former, and the wool is not of equal fineness; though much finer than the cotton-wool in general cultivation; and it is easily separated from the seed by the common method.

method, hereafter to be described. I have been CHAP. told that this species of the green-seed cotton is not fufficiently known to the planters in general, (being usually confounded with the former) or that probably it would be in high estimation.

BOTH the species above-mentioned, though they produce pods at an early stage, when they are mere shrubs, will, if suffered to spread, grow into trees of confiderable magnitude, and yield annual crops, according to the feafon, without any kind of cultivation. The bloffoms put forth in fuccession from October to January, and the pods begin to open fit for gathering from February to June. I come now to the

SHRUB COTTON, properly fo called. shrub itself very nearly resembles an European Corinth bush, and may be subdivided into several varieties, all of which however very nearly resemble each other (a). These varieties (such of

(a) The flowers are composed of five large yellow leaves, each stained at the bottom with a purple spot. They are beautiful, but devoid of fragrance. The piftil is strong and large, furrounded at and near the top with a yellow farinaceous dust, which, when ripe, falls into the matrix of the pistil. This is likewise surrounded, when the petals of the slowers drop, with a capfular pod, fupported by three triangular green leaves deeply jagged at their ends. The inclosed pod opens, when ripe, into three or four partitions, discovering the cotton in as many white locks as there are partitions in the pod. In these locks are interspersed the seeds, which are commonly fmall and black.

them at least as have come to my knowledge)

1st, THE Common Jamaica; the seeds of which are oblong, perfectly smooth, and have no beard at the smaller end. The staple is coarse, but strong. Its greatest defect is, that the seeds are fo brittle it is scarce possible to render it perfeetly clean; on which account it is the lowestpriced cotton at the British market. Such however is the obstinacy of habit, that few of the British cotton planters give themselves the trouble to felect a better fort, or feem indeed to wish for it.

2d, Brown Bearded.—This is generally cultivated with the species last-mentioned, but the staple is somewhat finer, and the pods, though fewer in number, produce a greater quantity of The shrub gives likewise a better ratoon. It is therefore the interest of the cotton planter to cultivate it separately. The only disadvantage attending it is, that it is not so easily detached from the feed as the other, and therefore a negro will clear a few pounds less in his day's work.

3d, Nankeen.—This differs but little in the feeds or otherwise from the species last-mentioned, except in the colour of the wool, which is that of the cloth called Nankeen. It is not so much in demand as the white.

4th, French or Small-seed, with a whitish beard.

hitish beard. This

This is the cotton in general cultivation in Hif- CHAP. Its staple is finer, and its produce equal to either of the three species last-mentioned, as the shrub is supposed to bear a greater number of pods than the Jamaica, or the Brown Bearded, but is less hardy than either.

5th, Kidney Cotton, to called from the feeds being conglomerated or adhering firmly to each other in the pod. In all the other forts they are separated. It is likewise called Chain Cotton, and, I believe, is the true Cotton of Brasil.-The staple is good, the pod large, and the produce considerable. A single negro inay clear with ease fixty-five pounds in a day, besides which, it leaves the feeds behind unbroken, and comes perfectly clean from the rollers. It is therefore improvident, in the highest degree, to mix this species with any other.

On the whole, the most profitable forts for general cultivation feem to be, the fecond of the Green-seed, the French or Small-seed, and the Brasilian. The mode of culture is the same with all the different species, and there is this advantage attending them all, that they will flourish in the drieft and most rocky foils, provided fuch lands have not been exhausted by former cultivation. Dryness, both in respect of the soil and atmosphere, is indeed essentially necessary in all its stages; for if the land is moist, the plant expends itself in branches and leaves, and if the rains are

heavy,

BOOK

heavy, either when the plant is in bloffom, or when the pods are beginning to unfold, the crop is loft. Perhaps, however, these observations apply more immediately to the French cotton than to any other.

THE plant is raised from the seed, the land requiring no other preparation than to be cleared of its native incumbrances; and the season for putting the feed into the ground is from May to September, both months inclusive. This is usually done in ranks or rows, leaving a space between each, of fix or eight feet, the holes in each row being commonly four feet apart.—It is the practice to put eight or ten of the feeds into each hole, because some of them are commonly devoured by a grub or worm, and others rot in the ground. The young sprouts make their appearance in about a fortnight, but they are of flow growth for the first fix weeks, at which period it is necessary to clean the ground and draw the supernumerary plants, leaving two or three only of the strongest in each hole. One plant alone would be fufficient to leave, if there was any certainty of its coming to maturity; but many of the tender sprouts are devoured by the grub. At the age of three or four months, the plants are cleaned a fecond time; and both the stem and branches pruned, or, as it is called, sopp'd; an inch (or more if the plants are luxuriant)

riant) being broke off from the end of each shoot; which is done in order to make the stems throw out a greater number of lateral branches. This operation, if the growth be over luxuriant, is fometimes performed a fecond, and even a third time. At the end of five months, the plant begins to bloffom and put forth its beautiful yellow flowers, and in two months more, the pod is formed. From the feventh to the tenth month the pods ripen in succession; when they burst open in three partitions, displaying their white and gloffy down to the fight. The wool is now gathered, the feeds being enveloped in it; from which it is afterwards extricated by a machine resembling a turner's lathe. It is called a gin, and is composed of two small rollers placed close and parallel to each other in a frame, and turned in opposite directions by different wheels, which are moved by the foot (b). The cotton being put by the hand to these rollers as they move round, readily passes between them, leaving the feeds, which are too large for the interspace behind. The wool is afterwards hand-picked, that it may be properly cleared of decayed leaves, broken feeds, and wool which has been stained and damaged in the pod (c). It is then packed

(6) It is a very flight and simple instrument, and costs only from two to three guineas.

v. and fent to market.

THE finest grained and most perfectly cleaned cotton, which is brought to the English market, is, I believe, that of the Dutch plantations of Berbice, Demarara, and Surinam, and of the island of Cayenne; but before the year 1780 England had no fine manufactories. In the latter end of that year, however, cotton wool of all kinds found a ready sale at the following prices:

s. d.

Berbice - - 2 1 per lb.

Demarara - - 1 11 to 2 s. 1 d.

Surinam - - 2 —

Cayenne - - 2 —

St. Domingo - 1 10

Tobago - - 1 9

Jamaica - - 1 7

Since that time the prices have indeed varied, but the relative value has continued nearly the same; that is, the difference of price between the cotton of Berbice and that of Jamaica has been from 25 to 30 per cent. in savour of the former; a circumstance which alone should con-

1780, hath made a rapid improvement, owing to the large spinning machines which are worked by water. These require the cleanest cotton, as the smallest particle of a broken seed breaks the thread in this mode of spinning.

of cotton, chased, in a maica espe acre; and change the fresh land

(d) If the la annual crops ar plants; after w

vince the most bigotted planter of the British CHAP. West Indies that, if he wishes to turn his labours to account, the choice of a better species of cotton, at least of a fort more easily cleaned than that in general cultivation, is indispensably requisite.

I SHALL now bring into one point of view the feveral particulars attending the first cost and fettlement of a plantation in this fort of hufbandry, and the returns which may reasonably be expected from a fmall capital thus employed. I fix on a finall capital; because I conceive that a cotton plantation may be established on a more moderate fund than any other; and it is for the interest of the community that men of small fortunes should be instructed how to employ their time and labours to the best advantage; fince it is to fuch men chiefly that the West Indies are to look for fafety in the hour of

Tr is prefumed that land proper for the growth of cotton, fituated near the fea, may be purchased, in many parts of the West Indies (Jamaica especially), at £.5 Jamaica currency per acre; and as it is prudent, in most cases, to change the foil after the third crop, by replanting fresh land (d), I will allot fifty acres for the first

purchase, (d) If the land is extraordinary good, four and even five annual crops are fometimes gathered from the same original plants; after which, inflead of replanting, it is not un-

common to cut the cotton bushes down to within three or four inches of the ground, and mould the stems in the May rains, and treat them afterwards in the same manner as plants. Some labour is undoubtedly saved by this practice, but, in nine cases out of ten, it will be found more profitable to refort to fresh land, every third or fourth year. I consider, a the same time, land to be fresh enough which has lain fallow, or been used in a different line of culture for three or sour years together, the great intention of changing the land being to get rid of that peculiar fort of grub or worm which prepon the cotton-plants.

THE returns are now to be considered: - CHAP. In Jamaica it is commonly reckoned that one acre of cotton will yield annually 150 pounds weight, and in fome years nearly twice as much; but I am afraid that, on an average of any confiderable number of fuccessive crops, even the former is too great an allowance. By accounts which I have procured from the Bahama islands, it appears, that in 1785, 1786, and 1787 (all which years were considered as favourable), the produce of the cotton-lands, on an average, did not exceed one hundred and twelve pounds per

In 1785 - 2,476) 1786 3,050 acres produced \$2,480 Cwt. of

THE price in the Bahamas and Jamaica was the same, viz. 1s. 3d. sterling per pound. Allowing therefore the average produce per acre to be one hundred weight, the returns are these; viz.

(e) The maintenance, &c. of the negroes, after the first Which year, is not charged, because it is conceived, that the land in otton not being fufficient to find them in full employment,

BOOK Which gives an interest of upwards of fourteen per cent. on the capital; arifing too from the lowest-priced cotton. If the same calculation be applied to cotton-wool, of two shillings per pound value (the present price of the cotton-wool of St. Domingo) the profit on the capital is twenty-four per cent.

FROM this display, the rapid progress which the Dutch and French planters have made in the culture of this commodity, cannot be thought extraordinary; but there remain some circumstances, of a less favourable nature, to be taken into the account. Of all the productions to which labour is applied, the cotton-plant is perhaps the most precarious. In its first stage, it is attacked by the grub; it is devoured by caterpillars in the fecond; it is fometimes withered by the blaft; and rains frequently destroy it both in the bloffom and the pod. The Bahama islands afforded a melancholy instance of the uncertainty of this production in 1788; no les than 280 tons, on a moderate estimate, having been devoured by the worm, between September and March, in that year. After this the reader will hardly suspect me of having rated the aver-

they may raife corn and other articles on the remaining twenty-five acres, more than fufficient to pay for their clothing and support. It is usual even to raise corn, potatues, &c. between the ranks of the cotton bushes.

WITH every disadvantage, however, the demand for cotton-wool, for the British manufactories, encreases with such rapidity, that it cannot be doubted the cultivation of it, with the cautions recommended, will be found highly profitable; the British dominions not supplying, at present, much more than one-fourth part of the home demand. If, fer a careful felection and trials of the difference of the feeds arready in our possession, the cotton-wool of the British West Indies shall still be found inferior to that of the Dutch, no difficulty can occur in obtaining from them a better fort. It is evident that the French cotton loses its superiority in our islands, by being fown promiscuously with an

THE

324

воок V. THE water-mills work 286,000 spindles, and the jennies 1,665,100—Total of spindles 1,951,100.—And it has been afferted, that a pound of raw cotton-wool from Demarara, has been spun into 356 hanks, each hank being 840 yards; so that the thread would have extended 169 miles.

On the whole, it is computed that not less than three hundred and fifty thousand people in Great Britain find full employment in the cotton manusactory. In point of importance, therefore, even the produce and manusacture of the great staple commodity of this kingdom, wood, does not exceed it in a two-fold proportion. According to the information of a very able and diligent enquirer, there are from ten to twelve millions of sheep in England. The value of their wool may, one year with another, amount to £.3,000,000; the expence of manusacturing this is probably £.9,000,000, and the total value £.12,000,000.

tured *) grows spontaneously in all the West CHAP. Indies. In the British, Sugar Islands, they reckon three distinct species: the Wild, Guatimala, and French. The first is said to be the hardiest, and the dye extracted from it is supposed to be of the best quality, both in colour and closeness of grain; but one of the other two species is commonly preferred by the planter, as yielding a greater return; and of those, the French surpasses the Guatimala in quantity; but yields to it in fineness of grain and beauty of colour (f).

THAT the richest soil produces the most luxuriant plant, and that good feasons accelerate its growth, cannot, I think, be doubted; but, obferving its long tap-root, and spontaneous growth, in almost every dry and barren savannah, I am convinced it will thrive on foils that are fit for

· L'Abbé Raynal by a gross mistake afferts, that the plant inelf was originally carried to the West Indies from the East. It was found growing spontaneously in all parts of St. Domingo, by Columbus himfelf, on the first discovery of the West Indies; and was indigenous also in Mexico, and other parts of the Continent, as appears from the testimony of Pet. lartyr and all the early Spanish writers, not one of whom loes it feem that L'Abbé Raynal ever read.

(f) The wild indigo (indigofera argentea) has short moked pods and black feeds: the Guatimala is distinguished whe redness of the stalk, and the colour of the seeds, which named from green. This is the indigofera diperma of Linnæus. The inch is a flort bufly plant, with roundish leaves. It has be manufacting crooked pods, and its feeds are yellow. The French it Indigo franc. It is the indigofera tinctoria of Linnæus.

BOOK nothing else. The longest dry weather will not totally kill it; though much water will have that effect, if suffered to remain long on the plant.

THE cultivation and manufacture are conducted in the following manner:

THE land being properly cleared of weeds, &c. is hoed into small trenches of two or three inches in depth, and twelve or fourteen inches asunder; in the bottom of which, the feeds are strewed by the hand, and covered lightly with mould; but as the plants shoot, the field must be frequently weeded and kept constantly clean, until they rife and spread sufficiently to cover the ground. A bushel of seed is sufficient for four or five acres of land.

In the West Indies, the best season for planting is supposed to be the month of March, but the plant will flourish at any other period; and, if fown in new land, will come to full bloffom (and it is then in perfection) in about three calendar months. In the fouthern provinces of America, the feason for planting depends greatly on the nature of the spring, which varies much in those countries. If the plants appear above ground by the first day of March, they will be fit for cutting about the twentieth of August; and are sometimes equal to the best in the Wes Indies.

THERE is this difference, however, betwee the two countries; that in the West Indies, seasonable

rever, betwee Vest Indies, i seasonabl teasonable situations, they have sometimes sour cuttings in the year from the same roots, whereas in North America they have never more than two, and not often more than one. The plant is a child of the sun, and can be cultivated, I doubt, with great advantage, no where but within the tropicks (g).

But that fun which thus improves and invigorates the plant, propagates at the fame time an infect destructive to it. This is a species of grub or worm, which becomes a fly, and proys on the leaves, and never fails, in the West Indies, to disappoint the planter's expectations the second year upon the same land: the only remedy is to change the foil every year. The want of due attention to this important circumstance, has probably been one of the causes that so many persons have failed of late years in their attempts to revive the culture of this valuable commodity.

If this destructive pest be happily prevented, or greatly mitigated, the produce per acre of the first cutting, will be about eighty pounds weight of what the French call pigeon's-neck; or about fixty pounds of a quality equal to the Guatimala. The produce in North America is sometimes

(g) The ratoons, or subsequent growths from the same plants, ripen in fix or eight weeks; but the produce diminishes fast after the second cutting, so that it is absolutely necessary to sow the seeds anew every year.

Y 4

nearly

BOOK nearly as much; but when Fahrenheit's thermometer falls to 60°, the returns there are very uncertain, both in quality and quantity; a greater heat being absolutely necessary both for vegetation and maceration. The yielding for the subfequent cuttings fomewhat diminishes; but in Jamaica and St. Domingo, if the land is new, about 300 lbs. per acre of the second quality, may be expected annually, from all the cuttings together, and four negroes are fufficient to carry on the cultivation of five acres, befides doing other occasional work, sufficient to reimburse the expences of their maintenance and clothing.

> THE process for obtaining the dye is generally conducted in two cifterns, which are placed like two fleps, the one ascending to the other. The highest (which is also the longest) is called the fleeper; and its dimensions are about fixteen feet fquare, and two feet and a half in depth. is an aperture near the bottom for discharging the fluid into the fecond, which is called the battery, and is commonly about twelve feet square, and four and a half in depth. Cifterns of these dimensions, are proper for about seven acres of the plant: but if stone work cannot easily be erected for want of materials, vats of strong timber, well fecured from leakage, will answer as well (h).

⁽h) There is also required a lime-vat, six by eight feet fquare, and four feet deep; and it may be proper to observe, that the tap or plug hole ought to be placed at least eight inches

THE plants are cut with reap-hooks or fickles, CHAP. a few inches above the root (i), and placed by strata in the steeper, until it is about three parts They are then strongly pressed down by boards or planks, which are wedged or loaded, to prevent the plants from buoying up; and as much water is admitted as the weed will imbibe, until it is covered four or five inches deep, and in this state it is left to ferment, until the pulp is extracted; but the utmost attention and nice management are now required; for, if the fluid is drawn off too foon, much of the pulp is left behind; and if the fermentation is too long continued, the tender tops of the weeds occasion putrefaction, by which all the dye is destroyed.

To obtain a certain knowledge therefore of the proper degree of fermentation, has hitherto

inches from the bottom, to leave sufficient room for the lime to subside, before the lime-water is drawn off into the

(i) Some persons are of opinion that the plants should not be cut nearer the ground than fix inches, and that a few branches should be left on the stem .- This practice, they say, will draw up the sap better, and produce a more luxuriant ratoon than when a naked stalk only is left. During the first cutting it is usual to leave some of the most stourishing falks for feed, which ought not to be gathered until it is well lardened in the pod .- It generally requires ten bushels of he pod to produce a fingle bushel of clean dry seed fit for owing. It may also be observed, that many indigo planters ave a notion that the plant yields the greatest quantity of bedye, when cut at the full of the moon. (h). THE ey eight feet r to observe, at least eight inches B 00 K V. been the grand desideratum of the cultivator. Repeated experiments for this purpose, were made some years ago in the island of Hispaniola, under the fanction and encouragement of the Chamber of Agriculture, and instructions (which were said to be practised with great success by Messirs. Dangdale and Mongon, indigo planters in that island) were published by authority, to this effect:

"AFTER the Indigo has been steeped in the cistern eight or nine hours, draw off a little of the water, and with a pen dipped into it, make a sew strokes upon white paper. The first will probably be high coloured, in which case the indigo is not sufficiently fermented; this operation is to be repeated every quarter of an hour, until it loses its colour; when it is arrived at the true point of fermentation."

It is aftonishing that an experiment so simple in itself, if it answers, should have been for so many years unknown to the indigo planters in general; and I confess, that, although I have had no opportunity of giving it a trial, I am myself somewhat doubtful of its efficacy. The following method, which I give on the authority of Mr. Lediard, is, I conceive, attended with much greater certainty:

"LET a finall hole be made in the steeper, fix or eight inches from the bottom, exclusive of the opening

na with fire After the find and a it dree perifficular wards is perceived.

opening or aperture for drawing off the impreg- CHAP. nated water; let this hole likewite be stopped with a plug, yet not fo firmly but that a fmall ftream may be permitted to ooze through it. After the plants have been steeped some hours, the fluid oozing out will appear beautifully green, and at the lower edge of the ciftern, from whence it drops into the battery, it will turn of a copperish colour. This copperish hue, as the fermentation continues, will gradually afcend upwards to the plug, and when that circumstance is perceived, it is proper to stop the fermentation.

" During the progress of this part of the business, particular attention should be paid to the finell of the liquor which weeps from the aperture; for should it discover any sourness, it will be neceffary to let the fermented liquor run immediately into the battery, and lime water of fufficient strength must be added to it, until it has loft its fourness As it is running off, it will appear green, mixed with a bright yellow, or straw colour, but in the battery it will be of a most beautiful green."

THE tincture being thus discharged into the battery, it is there churned or agitated, until the dye hegins to granulate, or float in little flakes on the water. This was formerly done in Jamaica with manual labour, by means of paddles,

BOOK and, in the French islands, by buckets or cylinders fixed to long poles;-but far more convenient machines are now constructed, in which the levers are worked by a cog-wheel, and kept in motion by a horse or a mule. When the sluid has, by fuch means, been well churned for the space of fifteen or twenty minutes, and, being tried in a cup or plate, appears curdled or coagulated, a strong impregnation of lime-water is gradually added, not only to promote a feparation, but likewise to fix the colour and preserve from putrefaction. But the planters (as Brown observes) " must carefully distinguish the different stages of this part of the operation also, and attentively examine the appearance and colour as the work advances, for the grain passes gradually from a greenish to a fine purple, which is the proper colour when the liquor is fufficiently worked; too small a degree of agitation leaving the indigo green and coarfe; while too vigorous an action brings it to be almost black."

> THE liquor being properly and fufficiently worked, and the pulp granulated, it is left undisturbed until the flakes or floculæ settle at the bottom, when the incumbent water is drawn off, and the indigo distributed into small lines bags to drain, after which it is carefully put into little square boxes or moulds, and suffered to

dry gradually in the shade; and this finishes CHAP. the manufacture *.

To what has been faid above of the nature of the plant, fuiting itself to every soil, and producing four cuttings in the year, if we add the cheapness of the buildings, apparatus and labour, and the great value of the commodity, there will seem but little cause for wonder at the splendid accounts which are transmitted down to us concerning the great opulence of the first Indigo planters. Allowing the produce of an acre to be

 The following observations of Dr. Roxburgh of Bengal, concerning the first process, seem to have been made with great accuracy: "When the indigo plant is committed to cold water in the steeping vat, the following appearances take place: in a few hours a flight motion begins to shew itself throughout the body of liquor-the bulk encreases confiderably, with fome additional heat; air bubbles are generated, some of which remain on the furface, and gradually collect into patches of froth—a thin violet or copper coloured pellicle or cream makes its appearance between the patches of froth, and foon after, the thin film which forms the covering of the bubbles composing the froth begins to be deeply tinged with a fine blue: the liquor from the beginning will have been acquiring a green colour, and now it will appear, when viewed falling from one vessel to another, of a bright yellowish green, and will readily pass the closest filter until the action of the air makes it turbid, a proof that the base of the colour is now perfectly diffolved in the watery menstruum. This is the time for letting off the vat-the fermentation however continues, and large quantities of froth are formed. The smell now becomes very offensive," &c. &c.

BOOK 300 lbs. and the produce no more than 4s. sterling per pound, the gross profits of twenty acres will be £. 1,200, produced by the labour of only fixteen negroes, and on a capital in land and buildings, scarce deserving consideration.

Such, without doubt, will be the reader's first reflections. Unhappily, however, the golden hopes which speculations like these have raised in the minds of thousands, have vanished on actual experiment, like the visions of the morning. I think I have myself, in the course of eighteen years refidence in the West Indies, known at least twenty persons commence Indigo planters, not one of whom has left a trace by which I can now point out where his plantation was fituated, except perhaps the remains of a ruined ciftern covered by weeds, and defiled by reptiles. Many of them too were men of knowledge, forefight, and property. That they failed is certain, but of the causes of their failure, I confess I can give no fatisfactory account. I was told that disappointment trod close at their heels at every step. At one time the fermentation was too long continued; at another, the liquor was drawn off tool Now the pulp was not duly granulated, and now it was worked too much. To these in conveniences, for which practice would doubtless have found a remedy, were added others of much greater magnitude: the mortality of the negrod

negroes from the vapour of the fermented liquor, CHAP. (an alarming circumstance, that, as I am informed both by the French and English planters, constantly attends the process) the failure of the feafons, and the ravages of the worm.—Thefe, or some of these evils, drove them at length to other pursuits, where industry might find a surer

causes from which the general culture and manufacture of Indigo, was relinquished in Jamaica. enough has been faid by other writers: yet the same arguments which induced the British Government to burthen this commodity with duties under which it funk, are still urged in the case of other colonial products, and will continue to be urged, until the fame fate attends many of them as attended Indigo. Of the monstrous folly and impolicy of loading with high duties an article fo effentially necessary to the British woollen manufactory, (putting colonial confiderations out of the question) the Mother Country is, I believe, at length fufficiently convinced, the quantity of Indigo annually imported into Great Britain, from all parts of the world, being, I believe, one million and a half of pounds, of

BOOK which five parts in seven are purchased with ready money of strangers and rivals (k)!

> (k) Soon after the second edition of this work was printed, my learned friend, Dr. Edward Bancroft, F. R. S. favoured the publick with his "Experimental Researches concerning "the Philosophy of Permanent Colours," a work of infinite refearch and merit; in an Appendix to which, he gives an abstract of a botanical description, by Dr. Roxburgh of Bengal, of a new species of nerium (nose bay) found in the East Indies, the leaves of which yield excellent indigo. This account however is chiefly interesting to the planters of the West Indies, as containing some experiments and opinions which lead to an improved method of extracting the common indigo by means of a boiling prices; for it being found that the leaves of the nerius would not yield their colour except to boiling water, it was judged by analogy that the scalding procefs might be advantageously applied also to the common indigo plant, and the refult has exceeded expectation: "by "the scalding process (observes Dr. Roxburgh) I have " always, on a fmall scale, made from the common indigo " plant, better indigo than I could by fermentation, and in " one fourth of the time; and what is also of great im-"portance, without the smallest degree of the pernicious " effluvia which attends the manufacture of indigo by fer-"mentation; and moreover, the twigs and leaves themselves " of the indigo plant burn fiercely, after having been well "dried, and will carry on the operation without requiring " any great addition of other fuel."

In another place Dr. Roxburgh observes, " that the "Hindoos throughout the northern provinces or circan "make all their indigo by means of hot water, and pre-" cipitate with a cold infusion of the bark of the jambalong " tree, yet, notwithstanding the inferiority of this bark as an " aftringent, when its effects are compared with those of lime-"water, I have always found their indigo to be of a very " excellent quality, and very light; a cubic inch weighing the planters in

COFFEE.

SO many treatises have been written on the CHAP. history of coffee; its introduction into the West Indies has been fo fully traced by some writers, and its properties so ably investigated by others, (above all, by my learned friend Dr. Benjamin Moseley) as hardly to leave me the possibility of offering any thing new on those subjects. few observations therefore which I shall present to my readers concerning this berry, will relate principally to its culture; and these being chiefly founded on actual experience, may perhaps afford some useful information.

"only about 110 grains, and being of a blue violet colour. "The fuperior quality of this indigo must alone be imputed

"to the nature of the process by which the colour, or "rather base of the colour, is extracted from the plant; for "their apparatus is very inconvenient."

"Besides the superior quality of the indigo obtained by " the fealding process, the quantity is generally increased by "jt; moreover the health of the labourer in this way is not endangered, as in the fermenting process, by constant and "copious exhalations of putrid miasma: the heat employed expels most of the fixed air during the scalding, which renders a very finall degree of agitation, and very little of the precipitant necessary. The operation can also be performed two or three times a day upon a large scale; and lastly, the indigo itself dries quickly without acquiring any bad finell, or putrid unwholesome tendency."

Surely these observations deserve the most serious attention the planters in the British West-Indies!

BOOK V. THE admirers of coffee have long lamented the inferiority of the West Indian to that of Mocha. That many of the complaints with which the publick are amused on this subject, arise from affectation, I have not a doubt. At the same time, it must be admitted that the charge is not entirely without soundation, inasmuch as the West Indian coffee is frequently drank within twelve months after it has been gathered from the tree; and that the slavour improves by age, there is not a coffee planter in the West Indies so bigotted to his own possessions, as wholly to deny.

But the notion that the coffee itself is naturally inferior to that of the East, as being the production of a coarser and less valuable species of the tree, needs no other resultation than the circumstance related by the celebrated gardener, Mr. Miller, "that from plants brought from the "West Indies, and raised in English hot-houses, "cossee berries have been produced, which, at a "proper age, were found to surpass the very best "Mocha that could be procured in Great Bistrain." It is evident therefore that the whole difference depends on the soil and climate, mode of curing, and age.

Ir appears, on the authority of Le Roque and other writers, that the Arabian coffee is produced in a very dry climate; and flourishes me

West In concession more opeduties and fumption Britain we then mark its cultivat the Americas that of I duction of duties, cres

on a fandy soil, or on mountainous slopes, which CHAP. give an easy conveyance to the rains. The propriety of choosing similar situations in the West Indies (if a small berry, best suited for the English market, is expected) is justified by the experience of every coffee planter.

A RICH deep foil, frequently meliorated by showers, will produce a luxuriant tree, and a great crop; but the beans, which are large, and of a dingy green, prove, for many years, rank and vapid. It is fingular, however, that the North Americans prefer this fort to any other, and, as they have hitherto been the best customers at the West Indian markets, the planters naturally enough have applied their labours to that cultivation which turned to the best account.

HAPPILY for the coffee planters of the British West Indies, the English market, by a prudent concession of Government in 1783, was rendered more open to them. Before that period, the duties and excise on the importation and confumption of British plantation coffee in Great Britain were no less than 480 per cent. on its then marketable value. Under fuch exactions, its cultivation in our fugar islands must (but for the American market) have shared the same sate as that of Indigo. The great and important reduction of one shilling a pound from the excise duties, created an immediate and wonderful

change;

BOOK V. change; and while it promoted the interest of the planter, it even augmented the revenue of the state; more than double the quantity of cossee having been brought to entry in 1784 than was entered in the year preceding; increasing the sum total of the duties (though reduced two-thirds) from £.2,869. 105. 10 \(\frac{1}{2}\)d. to £.7,200 155. 9d.; an important proof, among others, how frequently heavy taxation deseats its own purpose!

As the British demand has thus increased, so, on the other hand, the American has declined, having, as I conceive, been transferred in a great measure to the foreign islands. It is now therefore become the interest of the planter to change his system, by suiting the nature of his commodity to the taste of his new customers.

This, it is true, is not within the power of every man, whose plantation is already fettled, to accomplish; but assuredly it is a very important object to such persons as may have it in contemplation to adventure in this line of cultivation (in a country, where every species of soil, and choice of situation, may be found) to know beforehand how to employ their money and labour to the greatest advantage.

the leaves turn yellow, and the trees perish, or CHAP. produce nothing; but the best and highest-stavoured fruit is unquestionably the growth of either a warm gravelly mould, a fandy loam, or the dry red hills which are found in almost every island of the West Indies, Jamaica especially. Frequent showers of rain, however, are friendly to its growth, but if water remains long about the roots, the tree will decay and perish.

Ir the land be fresh and naturally good, coffee plants may be set out at all seasons of the year, even in dry weather, and they will thrive in any situation, provided it be screened from the north winds, which often destroy the blossom; and fometimes, in the after part of the year when those winds prevail most, entirely strip the tree of both fruit and leaves; blasting in a moment all the hopes of the planter,

THE usual mode of planting is, to line out the land into squares of eight seet; in other words, to fow the feeds, or fet out the young plants, eight feet distant from each other on all sides, which gives fix hundred and eighty trees to each acre; and, where young plants are easily procured, they are preferred to berries. The plants which are intended to be set out are generally selected of about two feet in height. They are cut off ten inches above the furface of the ground, and care is taken to dig them up with the roots as entire

BOOK as possible. The holes in which they are set, are made large enough to hold the lower part of the ftem and all the roots; and the upper fibres are buried about two inches under the furface. But, although eight feet be the usual distance of setting out the plants in all foils, it is frequently found, in rich lands, that the trees, as they grow to maturity, become, from their luxuriance, fo closely intermingled together, as to impede the free passage of the air: In such cases it is thought adviseable to cut down every second row, within ten or twelve inches of the ground, and by well moulding the stumps, they will furnish a succesfion of healthy young trees, while the rows which are left will bear much better for the room which is given them. Old plantations (or walks as they are called) cut down in this manner, not dug up and replanted, will give a tolerable crop the fecond year; and the operation may be frequently repeated.

In the cultivation of a young walk, the general and most approved system is to keep the trees perfectly clear of fuckers, and to rear one stem only from one root. If, therefore, a healthy shoot springs near the ground, all the original plant is cut off close above it, by which means, when the plant is moulded, the root becomes well covered. At the height of five or fix feet, which the plants generally attain the third year,

in point of flavour. The following is, I believe, on a medium, as accurate a calculation as the subject will admit. Coffee trees raised from old trees, in lands neither very poor nor very rich, bear the second year from the new growth 300 pounds weight per acre, 500 pounds the third year, and from 6 to 700 pounds the fourth. If the trees are raifed from young plants, no produce is to be expected until the third year from the planting; when they will yield very little; the fourth year, about 700 pounds. The average annual produce per acre after that period, if the walk is properly attended to, may be reckoned at 750 pounds: and one negro is well able to take proper care of an acre and a half.

ZA WE

WEST INDIES. FROM what has been faid concerning the effect of a difference of feafons, it must be difficult to fix on the average produce of a coffee plantation by the acre. In rich and spungy soils a single tree has been known to yield from fix to eight pounds of coffee: I mean when pulped and dried. In a different situation, a pound and a quarter from each tree, on an average, is great yielding; but then the coffee is infinitely better

WE are now come to the most important bufiness of the coffee planter, i. e. the gathering in his crop, and the mode of curing it for market. The practice in Arabia, according to Le Roque, is as follows:—" When the planters perceive that the fruit is come to maturity, they spread cloths under the trees, which they shake from time to time, and the ripe fruit drops off. berries thus collected are afterwards spread upon mats, and exposed to the fun with the pulp on the berries, until they are perfectly dry, which requires a confiderable time; after which, the beans are extricated from its outward incumbrance by the pressure of a large and heavy stone roller, when they are again dried in the fun; for the planters confider, that, unless coffee be thoroughly dry, there is danger of its heating. It is then winnowed with a large fan, and packed for fale."

It cannot be denied that this simple method must be infinitely superior to any other for preferving the genuine slavour of the berry; but it may well be doubted whether the additional price which the planter might obtain at the British market for coffee thus gathered and prepared, would be adequate to the value of the time and labour which so tedious a method would necessarily require. The usual practice in the British West Indies is as follows:—

THER drying the coffee in on a flop the pulp on and dischas and in this feetly dry, will be in afterwards mill hereaf

pounding t

wooden m

As foon as the berries acquire the colour of a CHAP. black red on the trees, they are supposed to be fufficiently ripe for picking. The negroes employed in this business are provided each with a canvas bag, with a hoop in the mouth to keep it open. It is hung about the neck of the picker, who empties it occasionally into a basket, and if he be industrious, he may pick three bushels in the day. But it is not very provident to urge him on too fast, as probably a great deal of unnpe fruit will in that case be mixed with the ripe. The usual practice is to pick the trees at three different stages of ripeness. One hundred bushels in the pulp, fresh from the tree, will give about one thousand pounds weight of merchantable coffee.

THERE are two methods in use of curing or drying the bean: The one is, to spread the fresh coffee in the fun, in layers about five inches deep, on a floping terras, or platform of boards; with the pulp on the berry, which in a few days ferments and discharges itself in a strong acidulous moisture, and in this state the coffee is left, until it is persectly dry, which, if the weather is favourable, it will be in about three weeks. The hufks are afterwards separated from the seeds by a grinding mill hereafter to be described, or frequently by pounding them with pestles in troughs or large wooden mortars. Coffee thus cured, weighs four

perceive

ey spread

ting. It is packed for ple method her for pre-

erry; but it litional price the British nd prepared, he time and would necesin the British

four per cent. heavier than if cured without the BOOK

> THE other mode is to remove the pulp immediately as it comes from the tree. This is done by means of a pulping mill, confifting of a horizontal fluted roller, about eighteen inches long, and eight inches in diameter. This roller is turned by a crank or handle, and acts against a moveable breast-board, which being fitted close to the grooves of the roller, prevents the berries from passing whole. The mill is fed by a sloping trough and the aperture of the trough, from which the berries drop into the mill, is regulated by a vertical fliding board. By this simple machine a negro will pulp a bushel in a minute. The pulp, and the bean (in its parchment skin) fall promiscuously together. The whole is then washed in wire sieves, to separate the pulp from the feeds, and thefe are immediately spread open to the fun to dry.

THERE prevails great difference of opinion among the coffee planters on the subject of these two different methods of curing raw coffee. The latter is perhaps the most profitable, as being more expeditious; but I have no doubt that the former would give the best flavoured coffee, provided the fermentation, which always takes place when the raw fruit is placed in heaps on the platform, could be prevented, which might he coffee, for

easily be done at the expence of a little more CHAP. room. The blue dingy green, which to the American is the test of good coffee, is considered by the London dealer as a proof that it has not been sufficiently cured. From both methods, however, the coffee may prove very good with the powerful affiftance of its great improver, age.

HITHERTO, I have described the pulping mill only. There yet remains the operation of grinding off the parchment skin, or membrane which immediately envelopes the bean, and is left after the pulp is removed. It is done by a machine which will also separate, at the same time, the dried pulp (if the former mode of curing has been adopted) much more expeditiously than 1e pestle and mortar.

THE grinding mill confifts of a perpendicular axis, furrounded at some distance by a circular trough, into which the coffee is thrown, and about a foot above the level of the furface of the trough, there are commonly four horizontal arms or sweeps, tenanted into the axis, and stretching some feet beyond the trough, and on them are four rollers, fitted to run in the trough on the arms being turned round with the axis, which is done by mules yoked to the extremity. The rollers, which are generally of confiderable weight, moving round in the trough, bruise the skins of which might the coffee, so as to render them separable by the

fan, though there is always a proportion left untouched. When it appears sufficiently bruised, it is taken out of the trough and put to the fan, which clears the coffee from the chaff, and the feeds remaining unground are separated by sieves and returned to the mill; which will clear 1,500 pounds of coffee in a day.

THERE is still another mode of curing coffee, both with and without the pulp, and that is by means of stoves. But it is practifed by very few planters; it requiring an expensive apparatus in the first place, and in the second, it is said that the finoke of the fire gives a difagreeable fmell and tafte to the berry. I know not if this affertion be true: it is certain, however, that nothing imbibes the finell or taste of any thing near it, sooner than coffee.

For the same reason it is a matter of great confequence that proper care should be taken, in shipping it for Europe, that it be not put info parts of the ship where it may receive the effluent commodity of other freight, "Coffee berries (fays Dr. Mole To fay (as i ley) are remarkably disposed to imbibe exhala-duties on go tions from other bodies, and thereby acquire an confumer, as adventitious and disagreeable flavour. placed near to coffee, will in a short time so im omes so hig pregnate the berries, as to injure the taste in lase, the ef high degree, and it is related by Mr. Miller, the wor, as if

a few bags of pepper on board a ship from India, CHAP. fome years fince, spoiled a whole cargo of coffee." THE few preceding observations are all that occur to me concerning the mode of cultivating, and preparing for market, this far-famed berry. I shall conclude the subject by offering a short

estimate of the expences and returns attending its culture, which I conceive tends more to the encouragement of industry, and of course to the increase of white population in the West Indian islands, than that of any other of their staple coinmodities; its produce being more equal and certain than that of any plant in cultivation, and its average profits more confiderable in proportion to the capital employed.

Ir will be urged, perhaps, that if fuch were the fact, its culture would have been more general in the British West Indies. This objection has been anticipated and answered by what has been related of the heavy excise duties on this commodity in Great Britain previous to 1783. To fay (as is commonly faid in the case of all nbibe exhala duties on goods imported) that they fall on the by acquire an confumer, and not on the planter, proves nothing; Rum or if the price, in confequence of the duties, bet time so im somes so high as that the consumer ceases to purthe taste in lase, the effect is equally ruinous to the cultiir. Miller, the stor, as if they fell immediately on himself.

Nothing

BOOK Nothing more clearly demonstrates that the cultivation of this article was greatly affected by the British duties, than the comparative quantities imported into France and England; the whole annual import into Great Britain, on an average of five years (1783 to 1787), not exceeding five million fix hundred thousand pounds weight; whereas the island of Hispaniola alone has produced an annual fupply of feventy million of pounds and upwards.

IT is likewise apparent, that fince the reduction of the duties in 1783, the cultivation of coffee in the British West Indies, in Jamaica especially, has made a more rapid progress than in thirty years preceding. Yet, (as Dr. Moseley has observed) even the present duty of fixpence per pound is too high to admit the general use of this fragrant beverage among all classes of What then must be thought of the former exaction of three times that duty, which continued for fifty-one years? So little has the science of colonial commerce been understood adverted to!

114 It ought to have been observed in 1 edition of this work, that I am indebted for the estimates in this and the two preceding pages, to my worthy friend SAMUEL VAUGHAN, Efq. of St. James's parish Jamaica, Member of the Assembly of that island, who has directed his attention to the cultivation of Coffee with great affiduity and fuccefs. He has fince favoured me with the following interesting obfervations, which I have great pleafure in laying before the

OBSERVATIONS concerning the cultivation of COFFEE in St. Domingo, and its probable increase in Jamaica, if the Slave Trade shall not be abolifhed by Act of Parliament.

THE French part of St. Domingo, in 1770, sported only five millions of pounds of coffee, 63 at in 1784, a bounty of 40 livres per ton havg been allowed to flave veffels arriving from Africa,

23 WEST MAIN STREET WEBSTER, N.Y. 14580 (716) 872-4503

BOOK Africa, and in 1786, a further bounty of 200 livres per head on flaves imported, the import of negroes increased annually from 12 and 15,000 . to 25 and 30,000; and the effect in that colony of this augmentation of African labourers was a very rapid progress in every species of cultivation; but that of coffee almost exceeds belief; for the export of this article in 1789 had increased to above 76 millions of pounds, which, valued at the present price (90 shillings per cwt.), is equal to f. 3,420,000 sterling! Of this enlarged export, no less than 25 millions of pounds (worth f. 1,250,000 fterling) were produced between the years 1786 and 1789; and it was supposed that the crop of 1792 (if the troubles had not intervened) would have been 80 millions, fo little had the depreciation at market, from the additional quantity brought to fale, affected the cultivation. It feems probable, that the excessive price of the Mocha and Eastern coffee had formerly the effect of a prohibition of the use of this beverage among the middling and lower classes of people in Europe; for the quantity raised in this single island of St. Domingo was fo great, the increase of its cultivation fo rapid, and the price of West Indian Vest In coffee, though 2 s. 3 d. per lb. less than that of roubles, Mocha, still continuing, at the time of the greatest with, w export, at a profitable height for the cultivator price w that it is difficult to account for these facts, bu additid

by supposing the consumers to be augmented by CHAP. new and numerous people. On this supposition, it is impossible to foresee the extent to which the cultivation of this article in the West Indies may be carried. It is not enough to fay, it will equal that of fugar, nor is it likely, as in the case of fugar, to be checked by importation from the East, inasmuch as it has risen to its present wonderful importance in the West Indies, notwithstanding the rivalry of both the East Indies and the Levant.—The diminution of the quantity of coffee produced in St. Domingo (upwards of one thousand coffee plantations having been destroyed) will most certainly be felt in a remarkable manner for fome years to come: many persons from thence are of opinion, that the exportation will be reduced at least one half (that is, forty millions of pounds) supposing even that the present rebellion was to terminate without further devastation. The export from the whole British Colonies in 1787 did not amount to four millions of pounds; and therefore, excepting by new cultivation, they this fingle island cannot supply the deficiency occasioned by the the increase of its roubles in St. Domingo, nor is the rest of the ce of West Indian West Indies able to make it up; for since these less than that of publes, the price has augmented near oneime of the greatest purth, viz. from 70 s. to 90 s. This advance or the cultivators price will, if not (as in former times) checked for these facts, but additional duties, be a premium to all West Aaz

India

воок v.

India Islands where there are mountains; and, as cultivation cannot be carried on in St. Domingo, for some time, to its former extent, for various reasons, it is likely to be a premium of some degree of permanency. Let us now turn to Jamaica: the export of coffee from thence, before 1783, never exceeded 850,000 pounds, notwithflanding the feveral measures that were taken by the Assembly to encourage its cultivation. reduction took place in 1783, of the excise, to 6½d. per pound, and this seems to have had an immediate influence; for at the fourth year from this event, when we should naturally expect the first appearance of an effect, there was a considerable increase of export; and in three years more, the produce was nearly trebled, it exceeding 21 millions. In this fituation we flood when the disturbances took place at St. Domingo: it is now fixteen months fince the commencement of that rebellion, and by the returns just made from the feveral parishes, it appears, that 21,011 negroes are employed in the cultivation of coffee in Jamaica. I will suppose, however, that one fourth of these may be engaged in other objects connected with coffee, still there will remain 15,750 negroes employed folely in raifing of this article: who, according to common calculation w' in the plants are all at full growth (viz.) 1 /) should make a return of about fixter

millions of pounds; that is above eighteen times CHAP. as much as was produced before 1783, and feven times as much as was produced last year. It may be added, that the lowlands of Jamaica are already fettled, the highlands, generally speaking, are improper for fugar, but proper for coffee; they are new, they are equal to near two thirds of Jamaica: the island is now well intersected with roads, &c. &c. In short, the country is prepared, and the time is proper for it.

FROM all these circumstances, taken together, it is reasonable to conclude, that if labourers shall continue to be procured from Africa at moderate prices, and every advantage be made of the present moment, we shall establish in Jamaica a most extensive cultivation of cossee, which, as an export staple, will be of the utmost consequence to Great Britain, perhaps, exceeding in value the staple of fugar. But this new and important commerce is entirely dependent on a continued importation of labourers. increase of the cultivation of coffee to the extent here suggested is, in the present times, of peculiar consequence in two other points of view: First, it will augment the number of that middle class of Whites who, though not rich enough to live in a diffant country, are fufficiently opulent and independent to support their families in comfort and competence in a residence on their own Aa3 estates;

BOOK estates; secondly, mountain settlements in general increase in Negro population, being more healthy than the lowlands. The first circumstance will add to our fecurity, so necessary at present, and which, at all periods, we have in vain attempted, by other means, to effect. The fecond opens a prospect of an abolition of the Slave Trade, and that at no distant period of time, by natural causes, which will gradually take place without giving reason for complaint to any body of men.

Jamaica, 1793.

HAVING thus copiously treated of the cultivation of those products which chiefly give value and importance to the British colonies in the West Indies, and contribute, in a very eminent degree, to the wealth, commerce, and navigation of the parent state, it is the less necessary for me to dwell at great length on minor staples; yet these cannot be wholly overlooked in a comprehensive survey of the tropical kingdom; neither indeed are they to be confidered as unimportant, except by comparison with those rich and profitable commodities of which so much has been said in this and the preceding chapters. remaining classes, of which I shall briefly CHAP. treat, are cacao, ginger, arnotto, aloes, and piemento. As my observations will be few, they will be chiefly practical and commercial; a systematical description of each being to be found in Sloane, Brown, Hughes, and other writers.

CACAO.

THE cacao or chocolate nut, a production equally delicate, wholesome and nutritive, is a native of South America, and is faid to have been originally conveyed to Hispaniola from some of the provinces of New Spain; where, besides affording to the natives an article of nourishment, it served the purpose of money; and was used by them as a medium in barter; one hundred and fifty of the nuts being considered of much the same value as a royal by the Spaniards. From this circumstance it seems probable, that if the ancient inhabitants of South America were emigrants from Europe or Afia, they must have detached themselves at an early period, before metals were converted into coins, or from some society which had made but moderate advances in civilization.

Among the Spaniards, with whom the cacao h has been faid kill forms a confiderable article of commerce, its ultivation is conducted in the following manner.

Aa4 Having

BOOK Having chosen a spot of level land (a deep black mould is preferred) sheltered round with a thick wood, so as to be well screened from the wind, especially the north, and caused it to be cleared from all manner of stumps and weeds, the planter digs a number of holes at eighteen or twenty feet distance, each hole being about a foot in length and width, and fix or eight inches deep. In the mean time, having felected the largest and fairest pods of the cacao when full ripe, he takes out the grains and puts them into a vessel of water. Such of them as swim are rejected; the others, being washed clean from the pulp and skinned, are suffered to remain in the water till they begin to sprout, at which time they are fit for planning. The owner then takes the banana, or some other large leaves, and places one leaf within the circumference of each hole: fo as to line it round; leaving however the fides of the leaf some inches above the ground, after which he rubs in the mould, very lightly, till the hole is filled. He then felects three nuts for each hole, and plants them triangularly, by making a small opening for each with his finger, about two inches deep, into which he puts the nuts, with that end downwards from which the sprout iffues, and having lightly covered them with the eig mould, he folds over the leaf, and places a final produce vielding stone on the top to prevent its opening. this manner he plants his whole walk, or orchard. CHAP. At the end of eight or ten days, the plants will generally be found to rife above the earth. The leaves are then opened, that their growth may not be impeded; but, in order to shelter them from the fun, other leaves or branches are placed round the hole; for which purpose those of the palm kind are generally chosen (for having a strong stem, they are easily fixed in the earth) and they are changed as often as they decay, for the space of five or fix months. It is also thought advisable to plant some other tree (the erythrina or bean-tree is generally chosen for this purpose) to the fouth-west of the cacao plant, which may grow up with it, and serve it for shelter; -for it must always be remembered, that young cacao trees will flourish only in the shade.

IF all the three nuts placed in each hole fpring up, it is thought necessary, when the plants are eighteen or twenty inches high, to cut one of them down. The other two, if they spread different ways, are sometimes suffered to remain; but it feldom happens that all the nuts, or even more than one of them, will take root, which is the reason of planting three in a hole.

THE fifth year the tree begins to bear, and the eighth attains its full perfection: it then produces in general two crops of fruit in the year, its opening. It yielding at each, from ten to twenty pounds

weight,

BOOK weight, according to the foil and featons; and it will fometimes continue bearing for twenty years; but the same delicacy of stamina which marks its infancy, is visible in all the stages of its growth. It is obnoxious to blights, and shrinks from the first appearance of drought. happened that the greatest part of a whole plantation of cacao trees have perished in a single night, without any visible cause. Circumstances of this nature, in early times, gave rife to many superstitious notions concerning this tree, and, among others, the appearance of a comet was always confidered as fatal to the cacao plantations.

> In spite however of the influence of comets, and notwithstanding the care and precaution that are requisite in the first establishment of a cacaq plantation, it is certain that the cultivation of this plant was both extensive and successful in the British sugar islands, for many years after they had become subject to the British government. Blome, who published a short account of Jamaica in 1672, speaks of cacao as being at that time one of the chief articles of export: "there are, fays he, in this island, at this time, about fixty cacao walks (plantations) and many more now planting." At present I believe there is not a fingle cacao plantation from one end of Jamaica to the other. A few scattered trees, here

and there, are all that remain of those flourishing CHAP. and beautiful groves which were once the pride and boast of the country. They have withered, with the indigo manufacture, under the heavy hand of ministerial exaction. The excise on cacao, when made into cakes, rose to no less than twelve pounds twelve shillings per cwt. exclusive of eleven shillings and eleven pence halfpenny, paid at the custom-house; amounting together to upwards of four hundred and eighty per cent. on its marketable value!

Ir is to be hoped that the error of imposing such heavy impositions on our own colonial growths, is at length become sufficiently ma-

AFTER all, there is reason to apprehend that our fugar islands can never again enter into competition with the Spanish Americans in the cultivation of the article of which I treat. At prefent the only cacao plantations of any account, in our colonies, are in Grenada and Dominica; and the quantity annually exported from both those islands cannot, I believe, be estimated on an average at more than four thousand bags of one hundred weight each, which may be worth, at the London market, between ten and eleven thousand pounds sterling (f).

(f) The cacao tree, both in fize and shape, somewhat reembles a young blackhears cherry. The flower is of a faffron

GINGER.

BOOK V. THIS grateful aromatick root had a very early introduction into Hispaniola, and I should not have supposed it an exotick, but that Acosta relates it was conveyed from the East Indies to New Spain, by a person named Francisco de Mendoza.

IF

colour, extremely beautiful, and the pods, which in a green state are much like a cucumber, proceed immediately from all parts of the body and larger branches. As they ripen, they change their colour, and turn to a fine bluish red, almost purple, with pink coloured veins. This is the common fort; but there is a larger species, which produces pods of a delicate yellow or lemon colour. Each pod may contain from twenty to thirty nuts or kernels, not unlike almonds, which are again inclosed in a white pulpy substance, fost and fweet, and immediately enveloped in a parchment shell. These nuts, being first simply dried in the sun, are packed for market, and require very little preparation, after removing the shell, to be made into good chocolate. The cakes which are generally used under this name in England, appear to me to be composed of not more than onehalf genuine cacao; the remainder I take to be flour, and Castile soap. Confidered medicinally, chocolate is faid to be too heavy for weak and relaxed fromachs; but in the Well Indies, experience abundantly demonstrates that it is in the highest degree balfamick and restorative.—Colonel Montagu James of Jamaica, who was the first white person born after the conquest of the island by the English, lived to the gra age of one hundred and four, and for the last thirty years his life used scarce any other food than chocolate.

The this name in Eng. not more than onetake to be flour, and hocolate is faid to be chs; but in the West rates that it is in the -Colonel Montague hite person born after ish, lived to the great he last thirty years chocolate.

Is such was the fact, the Spanish Americans CHAP. must have entertained very high expectations of profit from its culture, and carried it to a great extent in a very short space of time; it appearing from the same author, that no less than 22,053 cwt. were exported by them to Old Spain in the year 1547.

GINGER is distinguished into two forts, the black and the white; but the difference arises wholly from the mode of curing; the former being rendered fit for prefervation by means of boiling water, the latter by infolation; and, as it is found necessary to select the fairest and soundest roots for exposure to the sun, white ginger is commonly one-third dearer than black in the market.

In the cultivation of this root no greater skill or care is required than in the propagation of potatoes in Great Britain, and it is planted much in the same manner; but is fit for digging only once a year, unless for the purpose of preserving it in fyrup. In that case, it must be taken up at the end of three or four months, while its fibres are tender, and full of sap. Ginger thus prepared makes an admirable fweetmeat; but it is too well known to require description.

Ir feems to me that this commodity is growing greatly out of use in Europe, and its cultivation in the West Indies decreases in consequence. The average quantity exported annually from the

British

₩ 0 0 K

British islands may be stated at ten thousand bags of one cwt. of which 6000 are the produce of Barbadoes, and the remainder (except a very small part from Dominica) is raised in Jamaica. Its medium price at the London market, is forty shillings the hundred weight (g).

ARNATTO.

This production is indigenous, and was called by one class of Indians roucou, and by another achiotte. Of its present name I know not the derivation. Its botanical name is bixa orellana. It is a shrub which rises to the height of seven or eight feet, and produces oblong hairy pods, somewhat resembling those of a chesitat. Within these are thirty or forty irregularly sigured seeds, which are enveloped in a pulp of a bright red colour, and unpleasant smell, in appearance like the fort of paint called red lead when mixed up with oil; and as paint it was used by some tribes of the Indians, in the same manner as woad by the ancient Britons.

Of the cultivation of this plant I know nothing, because most of the arnatto, shipped at present from our own islands, is I believe gathered

from trees growing spontaneously. The method CHAP. of extracting the pulp, and preparing it for market, is fimply by boiling the feeds in clear water, till they are perfectly extricated; after which the feeds are taken out, and the water left undisturbed for the pulp to subside. It is then drawn off, and the sediment distributed into shallow vessels, and dried gradually in the shade.

ARNATTO thus prepared is mixed up by the Spanish Americans with their chocolate; to which it gives (in their opinion) an elegant tincture, and great medicinal virtue. They suppose that it firengthens the stomach, stops fluxes, and abates febrile symptoms; but its principal consumption, I believe, is among painters and dyers *. I am informed that it is fometimes used by the Dutch farmers, to give a richness of colour to their butter, and very small quantities of it are said to be applied in the same manner in English dairies. On the whole, however, it is an object of no great commercial importance, and the demand for it is not sufficient to encourage much attention to its cultivation.

* The liquid fold in London by the name of "Scott's nankeen dye," is faid to be arnatto, dissolved in water by means of pot-ash.

Bancroft's Philosophy of Colours.

ALOES.

BOOK

THE most valuable species of aloes is that of the island of Socotora in the East Indies, the introduction of which in our West Indian colonies, has hitherto been unaccountably neglected. The species called the hepatick, is the only fort known to our planters, and even of this, the cultivation in the British dominions is, I believe, at present, wholly confined to the island of Barbadoes, where it is said to have been originally introduced from Bermudas. It is propagated by suckers, and will thrive in soils the most dry and barren. The mode of extracting and preparing the juice is as follows:

THE plant is pulled up by the roots, and carefully cleanfed from the earth, or other impurities. It is then fliced, and cut in pieces, into small handbaskets or nets. These nets or baskets are put into large iron boilers or cauldrons with water, and boiled for ten minutes, when they are taken out, and fresh parcels supplied, till the liquor is strong and black.

Ar this period the liquor is thrown through a strainer into a deep vat, narrow at bottom, where it is left to cool, and to deposit its feculent parts. Next day the clear liquor is drawn off by a cock and again committed to the large iron vessel

PIEMENTO, or ALLSPICE.

I CLOSE my catalogue with one of the most elegant productions in nature; a production which rivals the most valuable species of the East, combining the flavour and properties of many of those spices; and forming (as its popular name denotes) an admirable substitute, and succedaneum for them all.

THE piemento trees grow spontaneously, and in great abundance, in many parts of Jamaica, but more particularly on hilly fituations near the lea, on the northern side of that island; where they form the most delicious groves that can possibly be imagined; filling the air with fragrance, and giving reality, though in a very distant part of the globe, to our great poet's description of those balmy gales which convey to the delighted voyæer

BOOK V.

This tree is purely a child of nature, and feems to mock all the labours of man, in his endeavours to extend or improve its growth: not one attempt in fifty to propagate the young plants, or toraile them from the leeds, in parts of the country where it is not found growing spontaneously, having succeeded. The usual method of forming a new piemento plantation, (in Jamaica it is called a walk) is nothing more than to appropriate a piece of wood land, in the neighbourhood of a plantation already existing, or in a country where the fcattered trees are found in a native state, the woods of which being fallen, the trees are suffered to remain on the ground, till they become rotten and perish. In the course of twelve months after the first season, abundance of young piemento plants will be found growing vigorously in all parts of the land, being, without doubt, produced from ripe berries scattered there by the birds, while the fallen trees, &c. afford them both shelter and shade. At the end of two years, it will be proper to give the land a thorough cleanfing, leaving fuch only of the piemento trees as have a good appearance, which will then foon form fuch groves as those I have described, and, except perhaps for the first four or five years, require very little attention afterwards.

I Do not believe there is, in all the vegetable creation, a tree of greater beauty than a young piemento.

piemento. The trunk, which is of a grey colour, CHAP. smooth and shining, and altogether free of bark, rifes to the height of fifteen or twenty feet. It then branches out on all fides, richly clothed with leaves of a deep green, somewhat like those of the bay-tree; and these, in the months of July and August, are beautifully contrasted and relieved by an exuberance of white flowers. It is remarkable, that the leaves are equally fragrant with the fruit, and I am told, yield in distillation a delicate odoriferous oil, which is very commonly used, in the medicinal dispensaries of Europe, for oil of cloves.

Soon after the trees are in bloffom, the berries become fit for gathering; the fruit not being fuffered to ripen on the tree, as the pulp in that state, being moist and glutinous, is difficult to cure, and, when dry, becomes black and tafteless. It is impossible however to prevent some of the ripe berries from mixing with the rest; but if the proportion of them be great, the price of the commodity is confiderably injured.

It is gathered by the hand;—one labourer on the tree, employed in gathering the small branches, will give employment to three below (who are generally women and children) in picking the berries; and an industrious picker will fill a bag of 70lbs. in the day. It is then spread on a terrace, and exposed to the sun for about seven days, Bb 2

v. colour, and becomes of a reddish brown, and when perfectly dry it is fit for market.

The returns from a piemento walk in a favourable feason are prodigious. A single tree has been known to yield 150lbs, of the raw fruit, or one cwt. of the dried spice; there being commonly a loss in weight of one-third in curing; but this, like many other of the minor productions, is exceedingly uncertain, and perhaps a very plenteous crop occurs but once in five years. The price in the British market, as may be supposed, sluctuates accordingly, but I believe its average, for some years past, may be put at ten-pence the pound, including the duty, which is three-pence.

This, though certainly a much greater price than the commodity bore in former years, gives however so little profit to the owner, compared with that of some other productions, that the growth of piemento decreases every year; many beautiful walks being daily cut down, and the land appropriated to the cultivation of sugar. Its annual export from Jamaica (the only one of our colonies which produces piemento) is about fix thousand bags of one hundred and twelve pounds each.

I HAVE now finished all that I proposed to offer on West Indian productions and agriculture. The subject is naturally dry and forbidding, and having wearied myself, I have no doubt that I have exhausted the patience of others. Let it not be forgotten, however, that I have had to conduct my readers through a path—not strewed with roses, but—perplexed with briars, and hitherto almost untrodden. In such a pursuit, I may perhaps be content to give up all pretensions to the happy talent of blending pleasure with instruction, satisfied with the homely praise of being useful to the most useful part of the community.

* To the productions of the British West Indies, imported into Great Britain, might be added turmerick, cinnamon and cloves. Plantations of each are established; but they are yet in their infancy. Enough however has been produced of each of those commodities, and the quality such, as to demonstrate that they can be raised in our sugar islands, in as great plenty and perfection as in any part of the world,

APPENDIX

T

BOOK V.

CONTAINING

Some Account of the Cultivation of the CLOVE TREE, in the Island of Dominica, by William Urban Buce, Esq. of that Island; from a Nemoir presented by him in 1796 to the Lords of the Committee of Council for the Assairs of Trade and Plantations.

B O O K V.

ABOUT the month of July 1789, a friend of mine in Cayenne sent me, as a present, a clove tree about fix inches high, having fix or eight leaves, and accompanied with a printed paper respecting the cultivation of it. It was required by my friend's paper, that the tree should be planted in a rich foil, and in a moist and cool fituation, and in the shade of some trees round it. It was also obferved, by my friend, that the tree would thrive best, if it were planted between four plantain trees. The continent of Cayenne being free from hurricanes, and the island of Dominica being, on the contrary, exposed to them, I thought that the plantain trees were of too tender a nature to afford a sufficient shade; because with the least gust of wind they might fall on the clove tree and destroy it: in consequence, I selected one of the richest spots on my estate, being a rich black soil, where I had fixteen thousand coffee trees growing most luxuriantly; between four of those coffee trees I planted my clove tree with great care; I furrounded it with sticks to prevent it from being trod upon; the coffee trees ferved as a shade, and my intention was, when the clove tree should 3

The concanes, and the ry, exposed to e of too tender cause with the clove tree and of the richest il, where I had oft luxuriantly; anted my clove th sticks to pree trees served as clove tree should extend

extend itself, to lop or cut down the coffee tree nearest APPENto it. Every possible care was taken of this plant; it was kept clean, and every time I went on my estate I visited it; knowing of what consequence it would be to the publick in general, and to me in particular, if I could bring this experiment to fucceed. It may be eafily supposed with what anxiety I viewed the growth of the plant; but, alas! what was my grief, when I found the clove tree hardly vegetating, lofing its old leaves, as new ones fprung at the top; and, in the long space of near fix months, not gaining an inch in height: disappointed in my hopes, I informed my friend of the little fuccess I had had, and intreated his affiftance in procuring other trees, if possible. In the month of December 1789, two more trees were fent to me. From my first disappointment, I wished to plant these new trees nearer to my house, and in a place that would be convenient for watching and promoting their growth. My dwelling-house is fituated on a hill, to the eastward, which hill is composed of a stiff, red-clay soil; at the foot of this hill, and on the east side, is situated my garden; to obtain a flat of about one hundred and twenty feet square, one part of that hill has been dug and levelled, which in some parts has made a bank of nearly eleven feet high; the ground was spread over, in order to fill up the inequalities of the furface: it will readily be observed how poor some part of that furface must be, particularly on that side, where eleven feet were cut from the hill. Here, I planted the above mentioned two trees, but, at the same time, took care to place them as far as I could from that fide of the hill, which had been pared down, as I had observed its soil was a stiff, red-clay; I therefore dug two holes at about twelve feet from each other, of about eighteen inches diameter, and two feet deep; finding the substratum to be of a yellow, strong, gravelly nature, I filled up these two holes with fome good mould, and in each of them I planted a clove tree; they grew fast and with luxuriance; B b 4 which

B O O K

which induced me to transplant the first clove tree I had received into the same garden, observing the same treatment; but whilst that tree was growing to my satisfaction, an insect destroyed the top of it, and occasioned its death.

In the month of November 1791, being at Martinico, I visited the different gardens in and about the town of Saint Pierre: as I was walking in the garden belonging to the Dominican friars, I remarked feveral young clove trees, each in a separate basket; they were the property of a gardener from Cayenne, and were to be disposed of. I purchased the whole of them, consisting of fourteen trees: after collecting, from the generofity of my friends, different other plants, I returned to Dominica, rich with my new acquisition of clove trees, and determined to try different foils. Holes were dug in feveral parts of my garden, from twelve to fourteen feet distance, and of about the fame dimensions as those mentioned before: on examining the foil, I found some of a stiff gravelly nature; in other parts, the substratum was of a yellow fandy kind; in some holes, after taking out about six inches of the furface, I found a stiff red-clay; mixing fome black mould with the different earths taken out of thefe holes, I filled them up, and planted in them ten out of the fourteen trees, referving four trees for that. part of the garden nearer the foot of the hill, where ten or eleven feet had been cut from the furface; there I dug no more than was necessary to plant my trees; the ground was a close, compact, stiff, red-clay. In order to make an experiment, I mixed no mould, dung, fand, or other foil, with defign to open the pores of the clay, but planted these last four trees in that clay, without the assistance of any thing whatever; abandoning their fate to nature, being refolved to run the rifk of lofing them, for the purpose of ascertaining, whether the clove tree required a rich foil or not. At the moment I now write, (October 1793,) twenty-three months have elapsed, fince the planting

Although these trees were planted with the others in November 1791, one of the two declining trees is not above fix inches high, and the other twelve inches, whilst the other trees are three feet in height; this is a sufficient proof, that the clove tree requires a dry fituation, and dreads a springy damp soil; though a certain degree of moisture will promote its growth.

In the month of January 1793, with much trouble and expence, (I say trouble, because the exportation from the French islands is prohibited), I procured two boxes of mather of cloves *: the berries were packed, some in sand, others in loose earth: upon receiving them, I ordered beds to be prepared in my garden, and in different parts of my estate, for the conveniency of transplanting, and of saving distance, when the nurseries should be fit for that purpose. I planted these seeds at about six inches distance, covering them with about one inch of earth. I ad been previously told, that the clove tree, when young, equires to be sheltered from the sun; but ressecting on helatitudes of Cayenne, and of the Moluccas, which are not the fourth and sisth degrees, the one north, the other

· Berries of the clove tree ripe and fit for vegetation.

fouth,

APPEN DIX.

fouth, and the latitude of Dominica, which is between the fifteenth and fixteenth degrees north, I knew that ten degrees would make a material difference in the climate, particularly on Montpellier effate, which is fituated on an elevated fituation, and about three miles diffant from the fea. I thought, that if I could rear those feeds without the affiftance of any shade, they would, from their infancy, be inured to the fun and air, would be more hardy, and consequently, would bear transplanting with less risk and danger; but in this I was deceived. The mother of clove, on its first visible vegetation, appears like a small, ifraight, red dart; when it comes to two inches high, two small red leaves are seen on its top; on the first appearance of these leaves, when hardly perceptible to the naked eye, I found, that on the fun thining with any degree of heat, the plants drooped and perished; whereby many feeds were loft: I therefore caused small frames to be erected over all the beds, about three feet high from the ground, and I spread on them plantain leaves, in order to shade the young plants: I kept supplying those leaves for near nine months; after which time I suffered the leaves to decay gradually, that the fun might be admitted to the plants, as they acquired strength; and in the space of twelve months, they were fit to be transplanted. Out of fix thousand mother of cloves, I saved from fifteen to fixteen hundred trees, which I began to transplant in January 1794, in the open field, at fixteen feet distance They are growing very luxuriantly: I have lost but few, and none but fuch as were in places, where the water collected. They are now fifteen months old, from the day they were transplanted, and most of them are be tween three and four feet high, apparently very health The ground, wherein they are planted, had been und coffee for forty years; the coffee trees had decayed, which I tried in vain to replace, but they would not grotheir natural Being disappointed, I turned it into a pasture, which from neglect, was covered with guava bushes, a plan

very prejudicial to any foil; I then refolved to clear it, and plant my clove trees in it. This pasture ground, on the whole, is of a compact, strong, gravelly soil; in some parts it is of a clayey nature; but the trees grow well in both.

As Abbé Raynal has been very exact in his description of the clove, I shall adopt the same from his history. " The flowers of the clove tree are disposed in a corymbus u terminalis; they have each of them a long quadriful " calix, which bears as many petals, and a great number " of flamina; the piflil, inclosed at the bottom of this calix, " becomes along with it an oviform fruit, filled up with a " fingle kernel, and known by the name of mother of clove; u this same calix, gathered before the unfolding of the petals " and the fecundation of the pissil, is the clove as sold in the a hops. The clove is fit to be gathered when it has ac-" quired a reddish cast, and a certain degree of sirmness." The two clove trees, which I planted in December 1789, appeared with clove buds, on or about the 20th January 1795; some of the cloves were sit to be gathered in May and June following; and such of the cloves as were left on the trees for the purpole of obtaining the mother of cloves, for feeds, acquired a proper degree of maturity, in July and August: so that allowing those two trees to be about one year old, when they came to me, from the feeds, which I planted, I judge they were of that age; I think the clove tree becomes productive, in the course of little more than fix years, instead of nine years, as mentioned by Abbé Raynal.

the old, from the I have this year (1795) but two clove trees that are for them are becaring; in the year 1796, I shall have twenty-four had been under trees, and in the year 1799, I shall have from fifteen to ad decayed, which the trees, as are situated in state of production. BOOK

vity, I shall top at eight or nine feet, for the convenience. of gathering. Having few cloves to gather this year, (1705), they were picked with the hand. In the Moluccas, the planters either spread cloths on the ground, or fweep the ground clean under and about the trees, and with the affiftance of reeds they cause the cloves to fall down; after which they expose them, for a few days, to imoke upon hurdles, which are covered with large leaves: and this fumigation is followed by drying the cloves in the fun.

In order to afcertain the best mode of rendering the cloves merchantable, I tried feveral ways of deficcating them when gathered. The first, that I cured, in the shade, and in a warm room, were a fortnight before they appeared dry; and on breaking them with the nail, the ball, which is on the top of the clove, I found in the infide to be mouldy; and on chewing the clove, they had a musty taste: I from these circumstances found, that this mode of curing the cloves would not answer.

The fecond gathering of cloves, I deficeated entirely by the heat of the fun. When dried, they appeared of a blacker hue than the East India cloves, but, of a stronger

and more pungent tafte.

The third trial, after gathering the cloves, on a very rainy day, I put them in a stove which I had constructed for that purpose, and left for two nights and a day: the heat was rather strong, and the rainy weather having prevented me from going to town, hindered me from getting a thermometer to afcertain the degree of heat of the stove. At the end of the second night, I took the cloves from the stove, and completed the desiccation by the fun; which operation, when perfected, gave the cloves a brownish hue, a good pungent taste, but not so strong a flavour, as those that had been desiccated by the sun only.

The fourth deficcation was nevertheless done in the sime way; but, having got a thermometer, I observed

tha onl had in th degr. the h was, o'cloc the da dégree: equal t the stov I found ish hue, fun only, nights ar than thefe shade, I he three last to whose j will decide ll of which ency, to th ear to me hen expose lential oil i e case with ve bought, m with mi In curing t

ntion by the fun; e the cloves a not fo strong a nted by the fun

eless done in the eter, I observed this

this difference: After putting my green cloves in the stove, I took care that the heat was more moderate than that of the third trie; I left the cloves in the stove for only one night, and nalf a day, until they were faded, and had acquired a brown colour. I hung my thermometer in the stove, and found the heat to vary from 120 to 130 degrees: this done, I took out the thermometer, and let the heat decrease to the usual degree of my estate, which was, on that day, seventy-six degrees; after this, from one o'clock to two, I exposed the thermometer to the sun; the day was fair; and the thermometer getting up to 128 degrees, this shewed the heat of the stove to be nearly equal to that of the fun. After taking the cloves out of the stove, the rest of the desiccation was done by the sun. I found these cloves, when perfectly dry, to be of a brownish hue, not so strong in taste as those desiccated by the fun only, but stronger than those that had been, for two nights and a day, exposed in the stove to a greater hear than these last. Having set aside the first curing by the shade, I have numbered the cloves that underwent the three last desiccations, No. 1, 2, and 3: the persons, to whose judgment these specimens will be submitted, will decide on the best quality amongst the three sorts; ll of which are far superior in their strength, and punency, to those that come from the East Indies, and apear to me to contain a great deal more essential oil: for, hen exposed to heat, on pressing the nail on a clove, the fential oil is perceived to come out of it; which is not e case with the East India cloves, at least such as I ve bought, in this island, for the purpose of comparing

In curing the clove, I find it indispensable to have a we, for the following reasons: After gathering cloves, perceived that if they were not, within a short time of such gathering, saded, either by the heat of the sun, being dried afterwards, acquired a light brownish

hue

воок v. hue, lost their firmness, strength, or pungency; and many appeared as damaged cloves, and, as the weather is exceedingly variable in this part of the world, and the air, in general, damp, particularly in the country, it will be absolutely necessary to have a stove heated to the degrebefore mentioned, and to leave the cloves in it till they are faded, I mean, until they have acquired a brown hue; after which, the rest of the desiccation may be done at ease, by the heat of the sun, or by exposure in a dry airy room.

The annual production of a clove tree in the Molucca Islands, according to Abbé Raynal's account, is about three pounds for each tree. There, they are topped, at from eight to nine feet, for the conveniency of gathering; but, in Cayenne, where they are left without topping, and where there are clove trees larger than our orange trees, it is reported, they produce from forty to fifty pounds each tree.

The two trees, which, under my management, have produced cloves this year, on the Montpellier eltate, have netted me four pounds and a half of cured cloves, befides two pounds, at least, of cloves, which I have lest on the trees, to obtain mother of cloves, for the multiplication of that spice; and besides this, I have about ha a pound of cloves, which having fallen on the ground before their degree of maturity, have been dried, and are very good for domestic use: these last are strong, be small; so that these two trees have produced more the seven pounds of cloves. As this is the first time of the production, and they are young, it may be reasonably a pected, that when older, they will acquire more strengt and more branches; and consequently, will be a greater more productive.

APPEN-

To the preceding Extract it is thought necessary to add the following Letter to the Earl of Liverpool.

Soho Square, August 11, 1796.

MY LORD,

I BEG leave to acquaint your Lordship, that I have read with attention the paper on the successful culture of the clove tree in Dominica, which your Lordship did me the honour of referring to me, and am of opinion, that it ought to be printed for the information of His Majesty's subjects in the West Indies, and other intertropical colonies.

Mr. Buée is, as far as I know, the first person, who has observed, that the pimento tree prospers best in those steril soils where trees whose wood is of a hard texture abound, and that sugar cannot be cultivated to advantage in such places; also, on the other hand, that where trees whose wood is soft, are naturally found, pimento trees rarely are met with, and sugar plantations will succeed; on such steril soils he has tried clove trees, and found them congenial to its nature.

These observations open to the cultivators of hot climates a new source of wealth, which will not probably be confined to the growth of cloves; other spices may also prosper best in the barren soils of the West Indies, as lavender, thyme, and other aromatic plants, are known odo in those of Europe.

I have the honour of sending to your Lordship, with his, a paper containing samples of cloves received by sentioned by him p. 19, (381.) are mixed; No. 3, his best through a sentioned by him p. 19, (381.) are mixed; No. 3, his best der a comparison to be made, by some dealers in spice, tween these and the cloves we usually receive from the

Dutch

Dutch: I shall only add, that when I applied for informa. BOOK tion on the same subject to an eminent wholesale dealer

in that article, the only answer I obtained, was, that he thought me grievously deceived, in supposing the cloves to be the produce of the West Indies, he being absolutely

certain they came from the East.

I have the honour to be, With infinite regard and esteem,

Your Lordship's obedient humble servant,

JOS. BANKS.

BOOK VI.

GOVERNMENT AND COMMERCE.

CHAP. I.

Colonial Establishments.—Of the Captain General or Chief Governor; his Powers and Privileges .-Some Reflections on the usual Choice of Persons for this high Office.—Lieutenant General, Lieutenant Governor, and President. - Of the Council, their Office and Functions. - Origin of their Claim to a Share in the Legislature.—Its Necessity, Propriety, and Legality considered .- Some Correc. tions in the Constitution of this Body proposed.

THE British establishments in the West CHAP. Indies are commonly termed king's governments, in contradistinction to the proprietary and harter governments which were known in North America; and, from what has been stated in ome preceding parts of this work, the reader C_c

BOOK VI.

must have observed, how very nearly their internal constitutions conform to that of the mother-country. Their different orders of judicature are exactly like those of England, and their legislatures, in general, respectively consist of three distinct branches; i. e. a governor, representing the crown, a council or upper house, and a body of delegates reprefenting the people at large. The two first are necessarily imperfect, because they are not independent; but the members of the last are more fairly and equally chosen by their constituents, than those of the British House of Commons by the people of Great Britain. Of the powers and privileges claimed and exercifed by these several branches respectively, in' their own little fystem, and whence derived, I shall now briefly treat. And first of the

GOVERNOR.

EVERY chief governor in the British West Indies is appointed by letters patent under the great scal of Great Britain. He receives through courtesy the title of Excellency, and is vested with the following powers:

FIRST, as captain-general and commander in chief, he has the actual command of all the land forces within his government (except only when a general officer is employed on the staff) and he commissions all officers of the militia. He appoint

cause a not uni duced t instructi with fuc has auth fummon place of t (a) By act to mak and respecta but by the I manual. the confent of pleasure be vering to the or fuch suspe his act in a g

points the judges of all the different courts of CHAP. common law, and even these gentlemen, in all the islands, I believe (Jamaica excepted(a)) hold their feats during the governor's good pleasure. He nominates and supersedes at will, the custodes of the several parishes, justices of the peace, and other subordinate civil officers; and although in respect to some of the above appointments and difinissions, he is directed to ask the advice of his council, this direction is of little avail, inafmuch as the members of this body are themselves liable to be fulpended by the governor, on the most frivolous pretences, or even without any cause assigned; a circumstance, by the way, which not unfrequently happens; and having thus reduced the board under a number limited by his instructions, he can fill up the vacancies instanter, with fuch persons as will be properly obedient. He has authority, with the advice of his council, to summon general assemblies; he appoints the place of their meeting, and when met, he possesses

(a) By an act passed in Jamaica in 1781, intituled, "An aft to make the places of the judges, &c. more permanent and respectable," it is declared, that no judge shall be removed but by the king's pleasure, signissed under his majesty's sign manual. It is provided however that the governor, with the consent of five of his council, may fufpend, until the king's pleasure be known, accounting to his majesty for, and delivering to the party suspended a copy of his reasons in writing or fuch suspension. This proviso seems to me to render He ap this act in a great measure nugatory.

a negative

BOOK a negative voice in the legislature, for without his consent, no bill passes into a law; and he may, from time to time, as he alone shall judge needful, adjourn, prorogue, and dissolve all such general affemblies. He has the disposal of all such civil employments as the crown does not dispose of; and with respect to such offices as are usually filled up by the British government, if vacancies happen, the governor appoints pro tempore, and the persons so appointed are entitled to all the emoluments, until they are superseded at home, and until the persons nominated to supersede them, arrive in the colony. The governor claims the privilege also, in extraordinary cases, and has been known frequently to exercise it, of suspending fuch civil officers even as act immediately under the king's authority, or by commission from the boards of treasury and admiralty, in high and lucrative employments, as the attorney and advocate-general, the collectors of the customs, &c. and of nominating other persons to act in their room, until the king's pleasure shall be known therein. To all which is added authority, when he shall judge any offender in criminal matters a fit object of mercy, to extend the king's gracious pardon towards him, except only in cases of murder and high treason; and even in these cases, the governor is permitted to reprieve until the fignification of the royal pleafure.

SECONDLY

B O O K judge of the court of vice-admiralty, to grant comvi. missions to privateers (b).

LASTLY, a colony-governor, besides various emoluments arising from sees, fines, forseitures, and escheats, has an honourable annual provision settled upon him by act of assembly, for the whole term of his administration in the colony. For, in order that he may not be tempted to prostitute the dignity of his station by improper condescensions to leading men in the assembly, he is restrained by his instructions from accepting any salary, unless the same be settled upon him by law, within the space of one year after his entrance into the government, and expressly made irrevocable during the whole term of his residence in the administration. And this, in my opinion, is a wise and most necessary restriction.

ARMED with fuch various authorities, and posfessing such transcendent pre-eminence and privi-

(b) It may not be improper to observe in this place, that the court of vice-admiralty in the Colonies, by the iv. of Geo. III. chap. 15, is invested with a concurrent jurisdiction with the courts of record, in cases of forfeitures and penalties in curred by the breach of any act of parliament relating to the trade and revenues of the British colonies in America; and in prosecutions in this court, all questions, as well of fact a of law, are decided by the judge alone, without the intervention of a jury. The judge is nominated by the crown. The colonists complain with great reason of this law, as a dired violation and infringement of their best and dearest consists tional rights.

lege

leges as I have described, it is not to be expected, from the common fallibility of human nature, that every colony-governor (placed at fo great a distance from the mother-country) should, on every occasion, bear his faculties meekly. Great caution is therefore undoubtedly necessary, on the part of a British minister, in the choice of persons for a trust of so great weight and dignity; the powers with which our plantation-governors are invested being more extensive than those which the laws of England allow to the fovereign himfelf. It is however a melancholy truth, that party merit, and connections, are commonly the most forcible recommendations with which a candidate for a distant government can present himself; and that persons equally devoid of character, ability, and fortune, have fometimes been fent to preside in our most important settlements, as if justice and publick virtue were best administered and promoted by men most distinguished for ignerance and profligacy, and that they would prove the best protectors of other people's fortunes, who by vice and profusion had dissipated their own!

In nominating to an office which is a constituent part of the legislature, which has power to controul the administration of executive justice, and, in most cases, has the sole exercise of the vast and extensive jurisdiction appertaining to a

CHAP.

Cc4

court

court of equity, it might be supposed that a prudent minister, among other qualifications in the person sclected, would consider that some little knowledge of the laws and conftitution of England is indiffenfably requifite. It is remarkable, however, that the military professions (which certainly are not eminent for such kind of knowledge) are found to supply most of the gentlemen who are elevated to this high station. It were unjust, at the same time, not to allow that fome of these have acquitted themselves in the civil department with extraordinary reputation and honour. Both the late Sir William Trelawney, and Sir Basil Keith, who successively administered the government of Jamaica, were educated from early youth in the navy; yet posfeffing found judgments and upright intentions, their conduct as governors gave abundant fatisfaction to the people of the colony, without incurring the disapprobation of the crown; and their names will be remembered there with reverence, fo long as worthy governors shall be numbered among the benefactors of mankind (c).

(c) Soon after the above was written, the inhabitants of Jamaica had the misfortune to lofe, in an untimely grave, their highly-valued and most lamented governor, Thomas Earl of Effingham, who was appointed captain-general of that island in the beginning of 1790, and died in his government in October 1791. This nobleman was educated in 3

But these are rare instances; and it must generally CHAP. be admitted, that the appointment to high civil

the army; and, with the frankness and firmness of the foldier, possessed very extraordinary talents for civil employment .- His merit as Chancellor furpassed all that the warmest of his friends had predicted. He displayed a calmness of temper, and a clearness of conception, which the captious and fubtle perplexities of forenfick argument could not difturb or clude. His mind was strong, quick, penetrating, found, and decifive; but the prominent feature of his character, which displayed itself in all cases and on every occasion, was a manly and unshaken intrepidity. He neither courted nor dreaded any man living; proceeding straight forward in the plain path of his duty, without fear, favour, or affection. -At his first entrance into the government, his manners were thought ungracious; but his talents and virtues were foon happily experienced, and he then became the most popular of all governors. The Roman people displayed not greater affliction at the death of Germanicus, than was manifested by the inhabitants of Jamaica for the loss of Lord Effingham. The affembly voted a magnificent funeral for the remains of his Lordship, as they had for those of the Countels of Effingham, who died a fliort time before him. They likewise ordered a monument to be erected to perpetuate the memory of their virtues, and the author of this work had the honour of drawing up the inscription thereon; which is as follows:

To the Memory of THOMAS, Earl of EFFINGHAM, Baron Howard, Captain-General and Chief Governor of this Island, in the years 1790 and 1791; And of KATHARINE his Wife. The latter, departed this life on the 13th day of October, 1791,

Persons of this class, with the purest intentions, are easily misled by selfish and interested men, whom the consciousness of their own deficiencies compels them to confult.—Even while actuated by honest and laudable motives, they may violate irreparably the first principles of law and a free constitution, by establishing fatal precedents which no integrity of intention can fanctify, Mr. Stokes, the late chief justice of Georgia, relates, that a governor of a province in North America (at that time a British colony) ordered the provost-marshal to hang up a convict some days before the time appointed by his fentence, and a rule of court for his execution. meant well, fays Stokes, but, being a military man, conceived that as he had power to reprieve after sentence, he had power to execute also when he pleased; and the criminal was actually hanged as the governor ordered, nor could his excellency be perfuaded, that, by this very act, he was himfelf committing felony."

An anecdote not less curious than the former is related by the fame author of another military governor, who, it feems, took it into his head to suspend a gentleman from his seat in the council, for no other reason than marrying his daughter without his consent.

IT may be faid, perhaps, that in these cases the mischief to the publick, exclusive of the precedent,

ment.

ed esteem

BOOK dent, was not very great. I could produce, however, many an instance, in the conduct of governors, in which fomething more would appear, I am afraid, than mere folly, and the ignorant misapplication of authority. But the task is invidious, and I willingly decline it.

LIEUTENANT GENERAL, LIEUTENANT GOVERNOR, AND PRESIDENT.

In a government comprehending feveral islands, as that of the Leeward Charaibean Mands, there is commonly appointed, together with the captain-general or chief governor, a lieutenant-general, who is next in fuccession. He is usually lieutenant-governor likewise of one of the islands included within the general government, each of which, in the absence of the captain-general from that particular island, has its affairs administered by a lieutenant-governor, or the prefident of the council, most commonly the latter, as it is not often that the lieutenant-governor is on the spot; this appointment, in fact, being nothing more than the grant of a pension of 2001. a year, which is paid by the crown. In Jamaica it is seldom that a lieutenant-governor is appointed during the residence on the island of a captain-gene ral, there being no cstablishment or provision for duct of Lord fuch an officer holding a dormant commission dable, and b

wł is fea *fen* gov who and

men

eralislands, lands, there th the capeutenant-gele is usually of the islands nent, each of general from s administered resident of the er, as it is not is on the spot; nothing more . a year, which ca it is seldom ointed during captain-gene. or provision for t commission;

Who

who has therefore neither power nor profit. He is not, as lieutenant-governor, entitled even to a feat in the council. On the refignation, or abfence on leave, of the captain-general, a lieutenant-governor, if not present, is frequently sent over, who then succeeds to the supreme command, and receives the full emoluments of the government (d).

MR.

(d) The following instance of ministerial economy may amuse, but cannot surprise, my readers in the colonies.-About the year 1767, when the Marquis of Lansdowne, then Earl of Shelburne, was Secretary of State, an application was made to his lordship by some gentlemen of Jamaica, then refiding in England, for a provision for a lieutenant-governor, who should reside within the island at the fame time with the captain-general. The reason assigned was, to prevent a devolution of the government to the prefident of the council. Lord Shelburne had no other objection to the measure than an unwillingness to faddle either the mother-country or the colony with additional expence.—But finding, among other emoluments of the captain-general, that he derived about 1000 l. sterling per annum from the command of a fortification at Port Royal, called Fort Charles, and conceiving the other apppointments of the chief governor to be fufficiently liberal, his lordship stipulated with the next governor, Sir William Trelawney, that he should resign Fort Charles to lieutenant-governor Dalling, on condition of refidence. Thus were the wishes of the gentlemen gratified, and a provision made for a lieutenant-governor, without expence either to Great Britain or Jamaica; and, confidering withal that Sir William Trelawney was the minister's friend, the conduct of Lord Shelburne in the bufiness was highly commendable, and bore the features of honour.—But mark the refult.

HISTORY OF THE

BQOK VI. MR. Long is of opinion that a president of the council, taking upon him the government on the demise or absence of a governor or lieutenant-governor, cannot legally dissolve the house of assembly, nor issue writs for calling a new one; because he has no express commission from the Sovereign under the great seal of Great Britain, giving authority for that purpose.

THE COUNCIL.

THE members of this board are severally appointed by the Royal mandamus, directed to the governor, and countersigned by the secretary of state, and the names of the several members for the time being are inserted in the governor's instructions. In Jamaica their full complement is twelve: in some of the smaller islands ten, and in case of as many vacancies, by death, absence,

fult. In the administration of Lord George Germain, General Dalling, by the demise of Sir William Trelawney, succeeded to the chief command: and the new minister, considering 1000 L. per annum no despicable object, instead of continuing Fort Charles as a provision for a lieutenant governor, seized on it for his own use, and soon after affigned it profits over to one of his dependents, who has enjoyed ever since. Thus the Island suffers the same inconvenieng it complained of before, with the burthen of providing 1000 a year for a person who neither resides within the island, no has any other connection with it; for the fort is generally commanded by his deputy's deputy, with whose very name it is probable, the principal himself is unacquainted.

of fulpension, as reduce the board under feven, the governor or commander in chief is impowered to fill up to that number, but no further. Their privileges, powers, and offices, are these:

FIRST. They are by courtefy severally addressed, in the colonies, *Honourable*; they take precedency next to the commander in chief; and, on the death or absence of the governor, lieutenant-general, and lieutenant-governor, the eldest member of the council succeeds to the government, under the title of *President*.

SECONDLY. They are a council of state, the governor or commander in chief presiding in person, to whom they stand in the same relation as the privy-council in Great Britain does to the Sovereign. But although every plantation-governor is directed by his instructions to advise with his council on most occasions, I do not know that, in his executive capacity, he is absolutely bound to abide by their advice. I conceive that he is competent to act, in most cases, not only without, but even against their concurrence: he may, it is true, by so doing, incur the king's displeasure; but his proceedings are nevertheless efficient and legal within the colony.

THIRDLY. They are named, in every commission of the peace, as justices throughout the colony to which they belong.

FOURTHLY.

C H A P.

BOOK VI. FOURTHLY. The council, together with the commander in chief, fit as judges in the court of error or court of appeal in civil causes from the courts of record; and in some of the islands two or more of the members sit with the governor in the court of chancery, as affishant commissioners of the great seal, as I have elsewhere related; appeals from chancery therefore lie not before them, but are, by the king's order, avoked before his majesty himself in council.

FIFTHLY. The council is a constituent part of the legislature; their consent being necessary in the enacting of laws. In this capacity of legislators, they sit as the upper house, and in most of the colonies, distinct from the governor; claim privilege of parliament, order the attendance of persons, and the production of papers and records, and commit for contempts; enter protests on their journals after the manner of the house of peers, and have their chaplain, clerk, usher of the black rod, &c. &c.

It has been thought strange that one and the same body of men should act in two such different capacities and functions, as a privy-council sworn to secrecy and sidelity, and an upper house of legislature; "the admitting such a distinction, says a late governor, may be supposed even to see them from all obligations of the oath they take

it one and the two fuch difprivy-council an upper house h a distinction, ed even to free oath they take

as counsellors: because their duty to the people, CHAP. as legislators, may seem to oblige them very frequently to support opinions repugnant to a governor's schemes (e)."

But to this it may be answered, that if the governor's schemes are, in the opinion of the council, repugnant to the true interests of the people, their opposition to such schemes cannot be deemed a violation of their oath of fidelity; neither does it necessarily follow that they thereby divulge what they have sworn to keep secret.

IT appears to me, that the people at large residing within the colonies, have much more cause of apprehension than their governors, from the existence and exercise of legislative authority, in so unstable a body as the board in question: For although its individual members ought to be, and I believe indeed commonly are, men of weight and property in their respective countries, yet a territorial qualification is not indifpensably necessary to their appointment, as in the case of members chosen into the assembly. Perfons therefore may be, and I am afraid in former times have been, nominated to the council, who pave no natural concern in the welfare of the plony, no community of interests with its inabitants, and who confider themselves wholly at

(e) This opinion of Governor Lyttelton is quoted more large in the History of Jamaica by Mr. Long, vol. i. p. 156.

BOOK the governor's disposal, and bound to support all his measures, however incompatible with the general good. Again: From the power which the governors assume of arbitrarily inflicting the rod of suspension, the board has not stability sufficient to insure respect to its resolutions. neither strength nor independency. Such of the members therefore as have property in the country, may perhaps fometimes find themselves in a more difagreeable predicament than even those who have none; for they may be compelled to vote as a governor shall dictate, in support, possibly, of measures ruinous to the community in which all their concerns are centered, or be exposed to the affront of publick degradation; to the consequent malignant misconstructions of the vulgar; and perhaps to the contempt of their own minds, in having accepted a station which subjects them to censure, for honestly discharging the duties of it.

I Do not indeed know that many great evils have actually been felt by the colonists at large, from the inefficiency and instability of this body. However, as it is the excellency of the British government, not merely to correct existing abuses but also to obviate and prevent (as far as human forefight will permit) fuch as may possibly or probably happen; many intelligent persons have been lature, di led to controvert the claim of the council a

tly discharging

together to a participation in the legislature. CHAP. They deny that this claim derives any just support either from analogy to the constitution of the parent state, from the royal delegation, or from any law of fufficient comprehension and efficacy to warrant fuch a pretention in a body fo constituted.

THE principal arguments which have been advanced in support of this opinion, are to this effect.

THE peers of Great Britain are hereditary members of the legislature, and sit in parliament for the support of their own great interests and inherent dignity, and as an intermediate body between the crown and the people. In civil process their persons are facred, and in criminal, they are tried by their own order. Neither can their privileges be taken from them but in extraordinary cases, and then only by the sentence of the whole house, as a court of the highest jurisdiction, or by an act of the whole legislature. The fovereign, it is true, can create as many new peers as he pleases, but having once raised a subject to this high dignity, his privileges thenceforward, as a peer of parliament, are his own; founded, not on royal concessions, but on the ancient fundamental constitution of the realm. Thus, the house of lords forms a separate branch of the legislature, distinct from, and entirely independent of, Dd 2 the

BOOK the crown on the one hand, and the commons on the other. Now, in all these respects, it is maintained, that a colonial council has no conformity or fimilitude with, and therefore could not originally have been intended to form a separate estate, and supply in the colonies the place of, the house of peers in Great Britain.

> IT is contended further, that the power of the crown is not of itself sufficiently extensive to conflitute such a legislative branch, or separate estate in the colonies. The king, it is true, has a negative in legislation, but the king has no right to propose a law to, or to alter a law proposed by, the lords or commons. His power is the power of rejecting, and nothing more; which therefore is not so properly a legislative power, as a negative on the legislation of the other branches; a mere defensive privilege to enable him to withstand the encroachments of the legislature, and preserve the government entire. As the king cannot confer on others what he possesses not himfelf, nothing less than a folemn and precisely declaratory law, proposed by the representatives of the people, and confirmed by the crown, could, it is pretended, have given the shadow of authority to a colonial or provincial council to form themselves into a distinct legislative estate. It follows, that their claim to legislative powers, thus Ireland, a unsupported, is usurpation and tyranny.

 T_{I}

These arguments, or arguments to the same CHAP. effect, are urged with great ability in Mr. Long's History of Jamaica. I shall not attempt to controvert them by elaborate discussion, but content my felf with briefly stating the origin, as it is in fact, (according to my conception) of the pretentions of this branch to a distinct share in colonial legislation. If it be shewn that the exercise of these pretentions may, on several occasions, be abfoliately necessary to the welfare and fafety of the community; a very few words will suffice on the question of their constitutional legality.

THAT it was originally intended to establish in any of the colonial governments three diffinct independent legislative powers acting on the spot, in the view of forming constitutions on the model of England, I do not however believe; because, while the crown retains its necessary and constitutional right of disannulling all acts of the provincial legislatures, and while the privilege of giving a negative is likewise exercised by its governors in the colonies, independent of the council, there are four distinct estates, instead of three. The case feems to have been, that there being no order of hereditary nobility in the plantations, out of which to constitute a dignified and efficient intermediate body, like the peers of England and Iteland, a legissative authority was at an early peiod entrusted to the governors and their council, Dd3

BOOK acting conjointly, and forming a middle branch between the crown on the one hand, and the representatives of the people on the other. presence and concurrence of the governor were probably thought adviseable, in the view that the interests of the crown might generally preponderate; while by felecting the members of the council from men of the first consequence in each colony, it was perhaps conceived that a falutary check was contrived against those abuses to which power, in the best hands, is fornetimes liable; and on this plan the colonies possessed the semblance, at least, of an English legislative constitution (f).

THAT fuch was the first intention in the formation of all or most of the king's governments in the plantations (imperfect as the system confessedly is, from the instability of the council) appears from the instance of Barbadoes, where this arrangement still exists; the governor and council, in matters of legislation, constituting, not 1200 separate and distinct bodies, independent of each other, but one constituent branch only, fitting and deliberating together.—And fuch too, for some years, was the practice of Jamaica, and

(f) Every governor is expressly instructed to transmit from time to time to his Majesty the names of such of the prin cipal inhabitants as are best qualified to supply vacancies the council, and it is rarely that any perfon is appointed wh is not previously recommended by the governor.

h

I believe of all or most of the rest of the royal CHAP. governments; but as it sometimes became necesfary to reject popular bills, the governor, to divert the displeasure of the assembly from himself to the council, declined by degrees attending on fuch occasions; leaving it to the board to settle matters with the affembly as they could, without his interference. The council concurred, readily enough, in the governor's views, because his absence removing a restraint, gave them the semblance of a distinct independent estate; and the crown, perceiving the utility and advantage of the measure, confirmed and established the practice by degrees in most of the royal governments throughout the British plantations. If the people's representatives had confidered this exclusive interpolition of the council as an innovation, then was their time to have opposed it; but it has not appeared to me that the affembly of any one colony, at any one period, denied a right in the council to negative bills in the first instance, without the governor's consent or participation. Now the right in the council to reject bills altogether in the first instance, necessarily comprehends the privilege of offering amendments to particular clauses, (money bills are always, and very properly, excepted) the exercise of which privilege is in truth nothing more than an offer of compromise between the council and affembly.

I believ

BOOK The former may fay, "we propose such and such amendments; adopt them, or we use our power of rejection." And this I take to be the plain origin and actual rife of the privileges enjoyed, I believe, by the council-board in every British colony in the West Indies (Barbadoes excepted) of deliberating apart from the governor on all bills fent up by the affembly; of proposing amendments to fuch bills, and of rejecting altogether, and without any participation with the governor, fuch of them as they disapprove. Further than this, I do not know that the legislative authority of the council extends, and I have no hefitation in pronouncing the exercise of such an authority, when enforced freely and independently, a most necessary and useful expedient, tending to prevent violent and mischievous disputes between the delegates of the people, and the representative of the crown. Its origin may have been illegitimate; but its adoption in the colonies for a century at least, and recognition by the crown, have given it such a prescriptive establishment, as I conceive constitutes law (g).

> (g) In truth the colonies gained a very important acquifition by this separation of the governor and council from each other in matters of legislation, for, obtaining by this means the semblance of three distinct estates, it enabled them the more eafily to secure the privilege which they claimed, that their laws should be immediately in force as foon as confented to by the governor, without waiting for the royal confirmation.

AFTER

in na de. anc the pro to h its re the f tion. should poffef fome g tion, fc might | tizen, a like the

AFTER all, the objections which have been CHAP. made to the present constitution of this body, arifing from its want of fufficient stability and independence, are of an important and ferious nature. Men are very unfit for legislators, whose deliberations are liable to be biaffed by external

and improper influence. If, on fome occasions, they are inftruments of good, on others they may prove instruments of great evil. Yet I am willing

to hope that even this inconvenience might find its remedy, if the colonial affemblies would take the fubject into serious and temperate considera-

tion. Were it required by law that no person should be appointed of the council who was not

possessed of a landed estate within the colony to some given value, as an indispensable qualifica-

tion, fo that the private interests of the members might be blended with those of every other citizen, and were the terrors of fuspension, which,

like the fword of Damocles, hangs but by a thread, removed from them, they would become a respectable and most useful body (h). At the same

(h) There arises, however, some difficulty in considering time. this point. While the council are liable to be suspended at the will of an arbitrary and capricious governor (and I remember an instance in Jamaica, of seven members being suspended in one day, on a very frivolous pretence) their authority is very lightly regarded, and sometimes they are even treated with contempt and infult. On the other hand, if they were appointed for life, they might, in their legislative

If the council, independent of the governor and the people, shall once posses themselves of the smallest share in this most important of all popular rights, they will become from that moment, a standing senate, and an insolent aristocracy.

capacity, become formidable both to the king's representative and the people. They might obstruct the supplies for no better reason than to get a new governor. I am of opinion, therefore, that they flould still be amoveable, but, in order to give them greater weight than they possess at present, they should be amovable only by the king's express order, in confequence of a joint address from the commander in chief and the house of assembly. Their present constitution certainly requires fome correction and amendment; the more fo, as in some of the colonies they have set up pretentions of a very wide and extraordinary nature. They have, at different times, claimed and exercifed the power of arbitrarily imprisoning for contempt, and formerly even for fines laid by their own authority. They have claimed a right of onginating publick bills at their board, and even of amending money bills passed by the assembly. They have also claimed the right of appropriating the publick revenue, &c. &c. All thefe, and other pretentions, are equally inconfittent with their original appointment of a council of affifiants, to the go vernor, and with the tenure by which they at present exist and ought to be constantly and firmly refisted by the people's representatives.

(a) In this chapter, the nature and necessary uniformity of my work, compel me to tread over a field wherein the footsteps of a great many preceding writers are still visible. I prefume not therefore to fancy that I can produce many new arguments myself, or give additional weight to those which have been advanced by others, on fubjects fo well understood, and so frequently and freely canvassed during the late unhappy disputes with America. My aim will be answered, if, instead of originality and novelty, I am found to possess perspicuity and precision. Happily, the great rights of mankind are fufficiently apparent, without the aid of logical deduction, and abstracted hypothesis. claim

BOOK claim of the colonists to legislate for themselves. by means of those affemblies, and to display the principles on which this claim was confirmed by the mother-country. Afterwards, I shall enquire by what means their allegiance to the crown of Great Britain, and profitable subordination to the British parliament, are secured and maintained.

> From the arguments that have been urged in the latter part of the preceding chapter, concerning a prerogative in the crown to invest the colonial council-boards with some share of legislative authority, I trust it will not follow that the English constitution has at any time lodged in the king the still greater prerogative of establishing in the British dependencies, such a form and fystem of government as his Majesty shall think best. It is furely one thing to fay, that the crown may introduce into the plantations such checks and controuls as are congenial to those institutions by which freedom is best secured in the mother-country, and another to aver that the crown may withhold from the colonies the enjoyment of freedom altogether. Nevertheless, were the maxim well founded, that the prerogative of the crown in arranging the fystem of colonial establishments is unlimited, no conclusion could amaica i be drawn from it that would impeach, in the tained b fmallest degree, the claim of the British colonist

and

BOOK and it appears to me to be clear and uncontrovertible, that the royal proclamations and charters which guaranteed and confirmed to the first planters, emigrating to America and the West Indies, all the liberties, franchifes, and immunities of free denizens remaining within the kingdom, were, and were meant to be, declaratory only of ancient rights; not creative of new privileges. They were nothing more than royal recognitions, expressive of a reciprocal relation between the fovereign and his subjects, notwithstanding their removal, conveying the confent of the king, as head and representative of the English state, to their emigration; and affuring them, expressly, or by evident implication, fo long as they preserved their allegiance, the full and undisturbed enjoyment of those inherent rights, which no climate nor compact can take away or diminish.

Such, I conceive, was the ground on which the first English colonists claimed, amongst other rights, the great and important one of affenting to all laws by which they were to be bound; or to speak somewhat more suitably to the actual tituation of the people of England, of being bound by fuch laws only, as in their operation, should extend to, and bind the governors equally with the governed; the framers equally with all the reft inflone, E.

the kingdom (e) : and hence, the establishment CHAP. in all the British provinces of North America, and islands of the West Indies, of assemblies, or houses of representatives, which, being freely chosen by the people, forming a part of, and living among the people, and occasionally to be resolved into the general mass, must necessarily participate, with a tender interest, in every thing that concerns the people.

PERHAPS, instead of confirming to the colonists this liberal system of self-government, it was, or might have been contended on the part of the crown, that the permission of returning representatives to the British parliament, was all that on their own principles, they could pretend to claim; and the examples of Durham and Chefter might have been adduced in support of this argument. Those counties being counties pa-

(e) By the principles of the British constitution, every man hould be represented; but the deviation from a rule too nice or practice is fafely borne, because the interest of every parcular member of parliament stands as a pledger that no inividual in the kingdom can be oppressed. In other words, e great security which the people of Great Britain have, at their representatives shall not abuse their trust, is, that es cannot impose on others what they are not to feel themselves. f an act of parliament was made (fays judge Hobart) conluting a man a judge in his own cause, it would be void the law of nature. See an excellent speech of George Instone, Esquire, in the Parliamentary Debates for 1775, erein this argument is enforced.

VOL. II. lating

BOOK

latine, had complained, that, " for lack of knights and burgeffes, they were touched and grieved with acts and statutes made within the court of parliament;" and they pleaded that all acts and statutes so made, "were derogatory unto their most ancient jurisdictions, liberties and privileges." Their plea was allowed, and parliamentary representation granted them. It is observable too, that Barbadoes and the Charaibean Islands, as well as some provinces of North America, were at first created into counties palatine, expressly after the model of Durham. But the king and parliament probably thought, what all who duly confider the subject must now think, that a parliamentary union with a kingdom three thousand miles distant, was impracticable to any good purpose. It is most certain, that the British parliament, from first to last, consented that the king should govern his subjects in America (so far at least as related to their own internal concerns) as he governed his subjects in Ireland, by parliaments of their own. Nor, if the election of representatives is "an original right, vested in, and infeparable from the freehold," as it hath been pronounced by the highest authority (f); and king's rep the impracticability of the colonists being ade as a gran quately represented in the British legislature by and to co

admitted, could fuch a confent be withheld from them on any principle of reason and justice; unless indeed it be reasonable and just to contend, that the colonists, as having, from their remote fituation, need of greater protection than their fellow-subjects at home, are on that account entitled to less.

PROVINCIAL parliaments, or colonial affemblies (it matters not by what name they are called) being thus established and recognized, we shall find that in their formation, mode of proceeding, and extent of jurisdiction within their own circle, they have constantly copied, and are required to copy, as nearly as circumstances will permit, the example of the parliament of Great Britain. The freeholders are affembled in each town or parish respectively by the king's writ; their suffrages are taken by an officer of the crown, and the persons elected are afterwards commanded, by royal proclamation, to meet together at a certain time and place in the proclamation named, to frame statutes and ordinances for the publick fafety. When met, the oaths of allegiance, &c, are administered unto each of them; and a speaker being chosen and approved, the fession opens by a speech from the king's representative. The affembly then proceed, as a grand provincial inquest, to hear grievances, and to correct such publick abuses as are not coghizable before inferior tribunals.—They commit Ec2 for

for contempts, and the courts of law have refused, after folemn argument, to discharge persons committed by the speaker's warrant. - They examine and controul the accounts of the publick treafurer;—they vote fuch supplies, lay such taxes, and frame fuch laws, statutes, and ordinances, as the exigencies of the province or colony require. Jointly with the governor and council, they exercife the highest acts of legislation; for their penal laws, which the judges are fworn to execute, extend even to life; many persons having suffered death under laws passed in the colonies, even before they had received the royal affent. On the whole, subject to the restriction that their trade-laws are not repugnant to those of Great Britain, there are no concerns of a local and provincial nature, to which the authority of the colonial laws does not extend (g).

⁽g) The following account of the proceedings of the legislature of Jamaica in 1766, while it illustrates this part of my subject, cannot fail to prove highly intereshing to every inhabitant of the British colonies.

To his honour Roger Hope Ellerson, Efquire, his majefty's Lieutenant Governor and commands in chief, in and over this his majefty's island of Jamaica, &c. &c.

⁴ May it please your Honour,

^{&#}x27;We, his majesty's most dutiful and loyal subjects, the

affembly of Jamaica, thoroughly convinced of your honour

This restriction was intended probably as an CHAP.

readiness to hear, and inclination to redress, as much as in you lies, every grievance that may affect any of his majesty's fubjects, beg leave to represent to you one which calls aloud for immediate relief, it being in itself of the most dangerous and alarming nature, and having already given birth to such confusions and distractions in this unhappy country, as have not at any time before been known in it.

Our ancestors, fir, who settled this British colony, were Englishmen, and brought with them a right to the laws of ' England as their inheritance, which they did not, nor could forfeit by fettling here. Ever fince civil government was first 'established among us, which was very foon after the restoration of king Charles the Second, we have enjoyed in this colony a constitution and form of government as nearly refembling that of our mother-country as it was perhaps poffible to make it; our lives, our liberties, and our properties, fecured to us by the same laws, have ever been determined and adjudged by fimilar jurifdictions, and fuch monies as 'have been necessary for the support of his majesty's govern-'ment here, have, as in England, ever been raifed upon the people with their own confent given by their representatives in affembly; our courts of justice, where life, liberty, and property are adjudged, are governed by the fame laws, and fland in the same degrees of subordination to one another, as the courts which they respectively stand for, do in England; our house of assembly, as representing the whole body of our people, does and ever did hold the fame rank in the fystem of our constitution, as the house of commons does in that of our mother-country; here, as in England, our representatives in assembly are the grand inquest of our community; they have the power, and it is their duty to enquire into the corruptions of office, the abuses of government, and the ill administration of justice, and for that purpose it is E e 3

LLETSON, Efquint nor and commander njefty's island of Ju

loyal fubjects, the ced of your honour reading book of the empire, and maintaining the superintending vI.
and controuling power of the mother-country in matters

that this body has here, as in our mother-country, ever enjoyed a superiority over all the courts of justice, and a power of examining their conduct; and all judges, magistrates, and publick officers, have ever been amenable to the assembly, and their conduct liable to its inspection; and here, as in England, we owe it to the wholesome and frequent exertions of such a power in the representative body of the peo-

of ple, that we are at this day a free people; without it we can have no fecurity or defence against the corruption of

judges, and the abuses which may happen in every depart ment of administration.

'It is against a most flagrant, unprovoked, and unprecedented attack and violation which Mr. Lyttelton, our late chancellor, made upon this indubitable right of the people, that we now resort to your honour for redress.

' In December 1764, Pierce Cooke and Lachlan M'Neil, two men who had been committed by the affembly for breach of privilege, and were in custody of Edward Bolt, the messenger of the house, by virtue of the speaker's warrant, ' did, in contempt of the power and jurisdiction of the house, apply in the first instance to Mr. Lyttelton as chancellor, for Writs of Habeas Corpus upon the statute of the thirtyfirst of Charles the Second, and upon the return of the said writs, he did, in a court of Chancery which he called for that purpose, release the prisoners, and declare as follows: "That it did not appear to him from the words of any aft " of parliament, or of any act of the governor, council, and "affembly of this island, or of his majesty's commission of " instructions to his excellency as governor of this island, "by any other means whatfoever, that the commitment " the faid Pierce Cooke into the custody of the faid Edward "Bolt is legal; and his excellency the chancellor was then " fore pleased to order, adjudge, and decree, and it is here " ordered, adjudged, and decreed, That the faid Pie

y, ever enind a power gistrates, and he affembly, here, as in equent exerly of the peawithout it we corruption of every depart-

, and unprecettelton, our late nt of the people, :ſs.

Lachlan M'Neil, the affembly for of Edward Bolt, fpeaker's warrant, Rion of the houle, ton as chancellor, tute of the thirty. e return of the fail hich he called for declare as follows: e words of any aft ernor, council, and fty's commission a or of this filand, the commitment of of the faid Edward hancellor was there ree, and it is hereb hat the faid Pier ee Cool matters of trade; but it implies also a reciprocal CHAP. engagement or obligation on the part of the Bri-

tish

"Cooke be, by the authority of this court, released and "discharged from the custody of the said Edward Bolt; and "did also make the same declaration and order as to the said "Lachlan M'Neil," which orders and declarations of his, ne did most irregularly call decrees, and order them to be enrolled among the records of the court of Chancery.

' It is evident from the opinions of the ablest lawyers in England, ever fince the paffing of that statute, from the opi-'nions and declarations of judges, the uniform determina-'tions of all the courts in England, and the constant decla-'rations and practice of the house of commons, that the said ' flatute was not, nor could be, intended to extend to com-'mitments by either house of parliament, and that the house f of commons is the only proper judge of its own privileges 'and commitments; this determination of Mr. Lyttelton's 'tends, therefore, manifestly to degrade the representatives of the people, in the fystem of our constitution, from that 'rank and authority which is held by the like body in our mother-country, and if fuffered to remain, would fubvert the fundamentals of that fystem, by giving the court of chan-' cery a power to controll the proceedings of the affembly, and 'by reducing them to a dangerous and unconstitutional dependance upon governors, would leave the people without that protection against arbitrary power, which nothing but a 'free and independent affembly can give them.

' Every court of justice, from the meanest quarter session up to the two houses of parliament, has a power of com-'mitting for contempt, and this power requires no act of 'parliament to confer it, it being incident to the inftitution 'of every court of justice, and necessary for its existence, 'for it' would be impossible to support any authority with-

out it.

'The courts of justice here, standing in the same degrees of subordination to one another, as they respectively do in England; commitments by the inferior, may be, and fre-4 quently Ee 4

HISTORY OF THE

BOOK tish parliament, not to interpose its authority in matters to which the colonial assemblies are sufficiently

quently are, examined and determined by the superior courts;
and as commitments by the house of commons cannot be,
nor ever were, discharged by any of the inscrior courts, so
this extraordinary act of Mr. Lyttelton stands in our country
without a precedent, such a thing having never before his
time been attempted.

'The power of commitment by the house of commons is their's by the common law, as well as their privileges, of which they are the only competent judges, for they judge of these matters by the law and usage of parliament, which

is part of the common law.

As all the inferior courts here enjoy and exercise the same powers with those they stand for in England, it is surely reasonable and just that the representatives of the people here, called by the same authority, and constituted for the same ends, should also enjoy the same powers with those of Great Britain.

We beg leave to represent further to your honour, that by the thirty-first clause of an act of the governor, council, and affembly of this island, intituled, "An act for granting a revenue to his majesty, his heirs, and successors, for the fupport of the government of this island, and for reviving and perpetuating the acts and laws thereof," which has received the royal approbation, it is declared, "That all fuch laws and statutes of England as have been at any time efteemed, introduced, used, accepted, or received as laws in this island, shall and are hereby declared to be and con finue laws of this his majesty's island of Jamaica for ever;" and that the affemblies of Jamaica, as appears by their mi-' nutes, confidering it their duty to affimilate their proceed-'ings to those of the house of commons, have constantly gowerned themselves in cases of commitment, and in the exercife of their jurisdiction, by the law and usage of parliament, which being undoubtedly part of the law of England, the

4 use and benefit thereof was confirmed to them by virtue of 4 the above act beyond a possibility of doubt.

'This arbitrary measure of Mr. Lyttelton, so totally unprecedented either in England or here, so repugnant to reason,
to justice, and law, and so evidently subversive of our rights,
liberties, and properties, will therefore, we doubt not, be
considered by your honour as it deserves to be; and as it
marks that gentleman's administration with the most odious
colours, so, we trust, that the destruction of it will diffinguish
and adorn your's.

It is in full confidence of your honour's justice and love of liberty, that we this day, in the name and behalf of ourfelves, and of all the good people in this colony, lay before your honour the ill confequences and injustice of the aforesaid determination, and befeech you, as the only means of quieting the disturbance and apprehensions they have raised in the minds of his majesty's most loyal and faithful subjects, to give orders that the same be vacated, and the enrolment thereof cancelled from the records of the court of Chancery, in such a way, that no traces may remain of so wicked and dangerous a precedent.

The preceding application from the house of affembly having been submitted by the lieutenant-governor to the council for their advice, the board addressed him as follows:

May it please your Honour,

'We, his majesty's most dutiful and loyal subjects, the council of Jamaica, have, agreeably to your honour's message, laying before us the address of the house of assembly to your honour, taken into our serious consideration the subject-matter thereof: we have also examined and considered be proceedings now in the office of the register of the court of Chancery, and the determination of his excellency the

be fovereign and supreme within their own jurifvi. diction; unobstructed by, and independent of

Lachlan M'Niel, from a commitment of the assembly. Although we have the most favourable opinion of the late chancellor's intention in that decision, yet finding that no chancellor or judge in this island, ever before took upon himself to make any determination upon a warrant or commitment of either branch of the legislature, it is with concern we observe, that such proceeding of the late chancellor in so new, in so delicate a case, by discharging the said

In 10 new, in 10 delicate a cate, by discharging the faid
Pierce Cooke and Lachlan M*Neil from the commitment
of the house of assembly, was unprecedented and irregular.
It is also with forrow of heart we have seen and felt this
his majesty's colony, ever since that determination, labouring

under a variety of distresses, slowing chiefly from the apprehensions of his majesty's subjects, that the establishing a
precedent of this nature in the court of Chancery, might
lay a foundation for chancellors and judges of inserior
courts to interfere in, and to take upon them to determine

courts to interfere in, and to take upon them to determine
 on the privileges of the legislative bodies of this island.
 Permit us therefore to recommend it to your honour, a

the only expedient which we conceive will be effectual to quiet the minds of the people, to unite the feveral branche of the legislature, and to restore peace and tranquillity this country, that you will be pleased to cause the said detainmination made by the late chancellor, whereby the said Pierce Cooke and Lachlan M'Niel were discharged from their commitment, and all their proceedings thereon, to be brought before you, and in the presence of the council as a said affembly, that you will be pleased to cause the register the said court of Chancery to enter a vacatur on the said determination, or otherwise reverse it in the most effects the cedent in future.

On receiving this address, the lieutenant-governor con

into council, and having commanded the attendance of the Assembly in the council-chamber, was pleased to make the following speech:

Gentlemen of the Council, Mr. Speaker, and Gentlemen of the Assembly.

' In confequence of the addresses I have received from each of your bodies, I now meet you here, and as the determina-' tion upon record in the office of the register of the court of 'chancery, appears to have been irregular and unprecedented, ' whereby the minds of the people have been greatly disquieted, and many distresses and evils have arisen to this country; and having nothing fo much at heart, as the supporting the 'honour and dignity of the crown, and promoting the peace 'and happiness of the people, I have, agreeably to your re-' quests, taken, as chancellor, such order therein, that the said 'proceedings, and the entry upon record thereof, are vacated, 'annulled, and made void, to all intents and purposes what-'soever; and for your further fatisfaction herein, I have 'ordered the register to attend forthwith in the council-'chamber with the faid proceeding, and the book of 'records in which the fame are entered, and that he do, in 'prefence of the three branches of the legislature of this illand, enter a vacatur in the margent of the faid feveral proceedings, and the entries of the fame in the faid book of 'records, and that he do in your presence draw cross lines over the faid proceedings and the entries thereof, in the

'This measure, adopted upon your united recommendation, cannot, I am persuaded, fail of producing every happy 'consequence, by restoring and sirmly establishing that harmony and unanimity so earnestly wished for, and so essentially necessary to his majesty's service, and the welfare of this community.'

The

Воок

subject to two different legislatures, exercising at the same time equal powers, yet not communicating with each other, nor, from their fituation, capable of being privy to each other's proceedings.

The register of the court of chancery attending, being called in, and having produced the records, and read the feveral proceedings in the faid address mentioned, he did then, by the command, and in the presence of his honour, and in the presence of the council and affembly, enter a vacatur in the margin of the faid feveral proceedings, and draw cross lines over the faid proceedings and the entries thereof, and cancelled the feveral papers relating thereto.

It was after a long and arduous ifruggle, that the peo. ple of Jamaica obtained this great victory; no less than five different affemblies having been called, and abruptly diffolved, because they refused to raise the supplies, unless satisfaction was given them in this business. At length, on a change of eninisters in Great Britain, the Governor (Mr. Lyttelton) defired to be recalled, and the lieutenant-governor was directed to comply with their wishes, in the manner we have feen.

The author of this work was one of a finall minority in the house of assembly that supported the administration of Mr. Lyttelton, whose abilities and virtues were acknowledged even by his enemies; yet is he free to confess, that, being present when the proceedings in chancery were solemnly annulled and vacated in the manner related, in the presence of a thousand spectators, he could not but participate in the general triumph and enthusiasin which prevailed on that occafion amongst all ranks of people. The towns were splendid wernments; ly illuminated, the shipping in the ports were dressed in the proprietary go gayest colours, and fuch joy and fatisfaction appeared in every to the restri countenance, as we may imagine were displayed by the Engld in two of th lish Barons on receiving magna charta from the reluctant hand cers, except of king John.

It has, I know, been urged, that the principles CHAP. colonies, tend immediately to fovereign and national empire, distinct from, and independent of, the government of the parent state. It will be found, however, that the dependency of the colonies on, and their allegiance to, the crown of Great Britain, and also their proper subordination to the British parliament, are fee ired by sufficient ties, regulations, and restraints; some of which feem at first inconsistent even with the premises I have stated. Thus, as to the supremacy of the crown: among various other prerogatives, the king referves to himfelf, not only the nomination of the feveral governors, the members of the council, and most of the publick offices of all descriptions (h), but he possesses also at the same time, as we have feen, the right of disallowing and rejecting all laws and statutes of the colonial assemblies, even after they had received the affent and approbation of his own lieutenant in the colony. Hence, the affirmative voice of the people in their

(h) This is spoken of those colonies which are called king's ns were splendid evernments; for, before the late civil war, the governor, in re dressed in their proprietary government, was named by the proprietor, subappeared in every fit to the restrictions contained in 7 and 8 W. 430

BOOK

representatives is opposed by three negatives; the first in the council, the second in the governor, and the third in the crown; which possesses likewife the power of punishing the two former branches by dismission, if they presume to act in opposition to the royal pleasure.

Nor is the regal authority less efficient and extensive over the executive power within the colonies, than over the legislative. The governor, as I have shewn, is commonly chancellor by his office; but wheth affisted by his council, or prefiding folely in this high department, an appeal lies to the king in council, in the nature of a writ of error, from every decree that he makes; and the like liberty of appeal is allowed from the judgment or fentence of the governor in council, fitting as a court of error (i). The reason assigned in law authorities for allowing fuch appeals is this:-That without them, the rules and practice of law in the colonies might by degrees infenfibly deviate

(i) It is necessary however in either court, First, That in cases of property the matter in dispute should be to the value of f.500 sterling, to be ascertained by astidavit. Secondly, That the appeal be made within fourteen days after judgment in the court of error, and within one month after the determination of the court of chancery, by giving fecurity for the profecution of it; and it is required by the lords of appealin England, that the party appealing must proceed within twelve months after the appeal is allowed in the plantations, or the lictatorial. appeal is dismissed of course. A cause cannot be transmitted for difficulty, but must be determined one way or other.

from those of the mother-country, to the diminu- CHAP. tion of her superioity (k).

AGAIN: the king, as fupreme head of the empire, has the fole prerogative of making peace and war, treaties, leagues, and alliances with foreign states; and the colonists are as fully bound by, and fubject to, the consequences thereof, as the inhabitants within the realm. So far is readily admitted; but another claim of the crown, supposed to result from the prerogative last mentioned,-I mean, that of regulating all the colonial military establishments both by sea and land, quartering troops in fuch towns and places in the plantations as the king fees best, augmenting them at pleasure, and retaining them in the colonies at all times and at all feasons, as well in peace as in war, not only without, but against the consent of their affemblies, must be admitted with fome limitation.

It is indeed afferted in all our law books, that the fole supreme command and government of all the forces by sea and land, and of all forts and places in all parts of the British dominions, ever was, constitutionally and legally, the undoubted and exclusive prerogative of the crown; but, against the abuses which might possibly result rom the exercise of a power thus extensive and istatorial, the subjects residing within the realm

(4) Vaughan's Reports 402. Show. Parl. C. 33.

BOOK have this fecurity, that their representatives retain in their own hands the means of supporting all the British forces, both maritime and military. Thus, though the king has the prerogative of commanding armies and equipping fleets, yet without the concurrence of parliament he cannot maintain them. He can declare war, but without the affistance of parliament he cannot carry it The royal prerogative in these respects is aptly compared by De Lolme to a ship completely equipped, but which the parliament, by drawing off the water, can at pleasure leave aground.

IT seems therefore naturally and necessarily to follow, that if the inhabitants of the colonies are entitled to the fame rights, and to have equal fecurities for those rights, as are enjoyed by their fellow subjects in Great Britain, there must exist fome restraint against the exorbitance and abuse of the power contended for in the present case. It is to little purpose to tell the colonists, when groaning under the pressure of military government, that no military force, however legally raised and maintained, can be lawfully employed to violate their rights; as whoever holds the fword will decide upon the question of law (1).

(1) It is observable, that this claim in the crown wa admitted to be a grievance by the commissioners appointed in April 1778, for restoring peace in America. In a letter

Vol. II.

To as little purpose may our remaining colo- CHAP. nies be told, that the parliament of Great Britain will never fuffer a precedent of arbitrary power to be established in any part of the British dominions. They will probably infift, that the British parliament is not competent to judge for themat least in the first instance. They may contend that those who feel, or are in danger of feeling oppression, can best determine when it may be proper to refift its attack, or to guard against its approach.

IT cannot however be denied, that if parliament should be apprifed that the just authority of the crown over the colonies has degenerated into tyranny, it is not only their right, but their duty to interpose, even on their own account; for it has been well and eloquently faid, that whenever the liberties of Great Britain shall be devoted, it is probable her diffolution will not begin in the centre: She will feel subjection, like the coldness of death, creeping upon her from her extremities.

HAVING thus pointed out some remarkable inflances of colonial fubordination to the king,

from the earl of Carlifle, Messieurs Eden and Johnstone, three of the faid commissioners, to the president of the congress, dated the 9th of June 1778, they declare a disposition to toncur in such an arrangement as should provide that no To military force should be kept up in the different states of in the crown was orth America, without the consent of the general congress nerica. as the fovereign head and fur eme executive in the government of Great Bursia and its dominions, I shall proceed to another enquiry, of no less importance (and to which indeed some of the last observations naturally lead) and that is, how far the joint authority and collective power of king, lords, and commons, constitutionally extend, and, on the principles of a free government, ought to be exercised in supporting the unity of the empire, and preferving that fubordination and dependence which the colonists, as fellow subjects with the inhabitants of the kingdom, owe to Great Britain and its government, in return for protection received.

It is a maxim maintained by political writers, that in all focieties there must exist somewhere an absolute and despotick jurisdiction, unlimited and irrevocable. "This absolute and despotick power (fays Judge Blackstone) is, by the British constitution, entrusted to parliament:" But I conceive that the learned judge has not expressed himself on this occasion with his usual accuracy: inasmuch as all "entrusted" authority is necesfarily accountable, and therefore not "absolute and despotick." The truth is, that this despotick respect e and unlimited power is referved by the people in hight and their own hands (not to be reforted to indeed but which the in the last extremity) and it never was the interest and irrefra tion of any fociety of free agents, from the creation all laws

with it.

Cons the Briti cult to existing of the po that the tations, w

of the world to this day, to delegate to any man, CHAP. or body of men, an absolute and despotick authority in all cases over them. Such a delegation indeed, if ever it had been made, would have manifested infanity in the agents, and, on that account alone, must have been void from the beginning.

As the legislative power of Great Britain therefore is supreme only in a relative sense, even within the realm, where the people themselves participate in its authority, much less can it be faid to be supreme, in all cases what soever, over the colonies. It has indeed been folemnly declared by parliament itself, that parliament has such a power: but if parliament had not the power before, certainly their own declaration could not invest them

Considering the constituent branches of the British legislature separately, it will be difficult to point out any just authority whatever, existing either in the peers or the representatives of the people over the colonies. We have feen that the first settlers in most of the Eritish plantations, were a part of the English people, in every this despotick respect equal to them, and possessed of every by the people is eight and privilege at the time of their emigration, ed to indeed but which the people of England were possessed of, r was the intended irrefragably to that great right of consenting rom the creation all laws by which they were to be governed.

are (

tion which they receive in the name of the fove- CHAP. reign, as afforded by the state, and that the colonies are parts of one great empire, of the various branches of which the king in parliament, is arbiter, controuling and regulating all intercourse with foreign nations, they readily admit that they fland towards the British legislature in the degree of fubordination, which implies every authority in the latter, effential to the preservation of the whole; and to the maintenance of the relation between a nother-country and her colonies. "We are (faid the Americans) but parts of a whole, and therefore there must exist a power somewhere, to prefide and preferve the connection in due order. This power is lodged in the British parliament." In all matters therefore, to which the local jurisdiction of any one particular colony is not competent, the superintending controul of Great Britain is necessarily admitted; and they likewise admit that each and all the colonies owe contribution for protection (m).

(m) The nature and extent of the subordination here contended for, was clearly understood, and is well explained, in the case of Ireland, by Davenant, in a treatise published by him foon after the revolution.—His words are thefe:

"The inhabitants of Ireland, from ancient concessions, have a privilege perhaps above the Roman colonics, namely, to tax themselves by their own suffrages, within their own limits; but this is no more than what is claimed by feveral provinces of France, which nevertheless account themselves subordinate to the sovereign power of the whole state.

eless, the protec-

воок

To ascertain the various contingencies and circumstances wherein, on the principles stated, the British legislature has, and has not, a right to interpole, is perhaps impossible; because circumstances may occur to render its interposition necessary, which cannot be foreseen. "though it may be difficult (fays governor Pownall) " to draw the line of limitation, yet some such " line there certainly must be, and I think those " are not to be heard who affirm, that no line "can be drawn between the supreme authority " of parliament, and no authority at all."

NEVERTHELESS, it were not difficult to point out many cases, and to imagine others, wherein the authority of parliament has been, and may

"There is a part of empire not communicable, and which must reside sovereignly somewhere; for there would be such a perpetual classing of power and jurisdictions, as were inconfiftent with the very being of communities, unless this last refort were somewhere lodged. Now this incommunicable power we take to be the supreme judgment of what is best and most expedient for the whole; and in all reason of government, this ought to be there trufted and lodged from whence protection is expected.

"That Ireland should judge of what is best for itself, this is just and fair; but in determinations that are to reach the whole, as, namely, what is most expedient for England and Ireland both, there, without all doubt, the supreme judgment ought to rest in the king, lords, and commons of England, by whose arms and treasure Ireland ever was, and must always be defended."-Vide Davenant's Works, published by Sir Charles Whitworth, vol. ii. p. 247.

again be, constitutionally exerted, in regard to the CHAP. colonies, without abolishing every restriction on the part of governors, and extinguishing every right on the part of the governed (n). Previously excluding,

(n) Such is the general system of the laws for regulating the commerce of the colonies; and I will now add fome instances of parliamentary interference, on other occasions, which I conceive to be confistent with the principles I have laid down. They when the first princes of the Stewart family affected to confider the plantations as their own demefnes, with a view of making them a fource of revenue to themfelves, the commons opposed and defeated a claim which, if it had been established, might have rendered the king indcpendent of the British parliament. (See the Journals of 1624 and 1625, and Vaughan's Reports, 402.) Nobody doubts the propriety of the commons' interpolition on this Again, we have feen in the History of Barbadoes, a great minister (the Earl of Clarendon) impeached by the house of commons, among other things, for introducing an arbitrary government into the plantations. It was never alledged, that the house in this business exceeded the limits of its proper and constitutional functions. Soon after the revolution, fome laws were passed by one or two of the provincial affemblies, which were supposed to weaken the chain that holds the colonies dependent on the mother-country. This gave occasion to a clause in the 7 and 8 of W. III. c. 22, which declares, "that all laws (meaning the laws for regulating trade) which are any ways repugnant to the laws of England, shall be deemed null and void." This, though a strong, was certainly a justifiable exertion of English supremacy. By the 6 Anne, c. 30, a general post-office is established in the colonies. This may be deemed an internal regulation; but, as Dr. Franklin observed, it was a regulation which one colony could not make for another; and as the revenue which it raised was considered in the nature of a Ff4

> quantum meruit, a reward for fervice (a fervice too which the colonists were not bound to accept, for a man might, if he had thought proper, have fent his letters as before by a private mellenger) the act was submitted to. After this, some laws were paffed, which were thought to bear hard upon the rights of the colonists. By the 5th Geo. II. c. 7. in consequence of some petitions from different bodies of English merchants, complaining that the colonial laws afforded but an inadequate remedy for the recovery of debas; it is enacted, "that lands, houses, negroes, and other 66 hereditaments, and all real estate whatever, should be " liable to, and chargeable with, all debts, due either "to the king, or any of his subjects, and be atlets for the " fatisfaction thereof." And by the 24th Geo. II. c. 53. "the governors and affemblies of the respective provinces " are restrained from passing any act, order, resolution, or "vote, whereby paper bills, or bills of credit fliall be in-" creafed or iffued." As both thefe laws were passed in fayour of English merchants, who had advanced money for the use of the colonists, it was thought dishonourable to object to the regulations which they established. The laws were therefore submitted to, but not without murmurs on the part of the provincial legislatures, who confidered them as infringing their liberties. Their fubmission to them, though on very laudable principles, was afterwards quoted against them, and affigued as the boft of all possible reasons for requiring unconditional fubmission on all other occasions.

From what has been faid above, and what will hereafter be stated on the subject of the commercial system, the reader will be enabled to form fome idea of the boundary contended for, between a constitutional, superintending, controlling power in the British parliament, and a system of perfect unqualified tyranny, the power of binding the colonies in all cafe whatfoever.

are sufficiently competent; for, to the reason of HAP. already stated for this absolute exclusion, may be added, the utter impossibility that two different legislatures can, at all times, and in the same moment, enforce their authority on the same object, in as much as they may happen to differ in opinion, and in that dilemma, this consequence must follow; either the British must yield to the provincial, or prevail over it in points, for which, from the practical or constitutional unfitness of the former, the latter was formed. Such inconfiftency would render government at once oppreffive and ridiculous (o).

(0) If Great Britain had no right to interfere with the internal legitlation of the colonies, she could have had no posfible right to tax them for the purpose of revenue; yet, it does not follow, that the would have had a right to tax them, even if flie had possessed just authority to make laws for their internal government. " Taxation (faid Lord Chatham) " is no part of the governing or legislative power. Taxes are "a voluntary gift and grant of the commons alone. In legif-"lation, the three estates of the realm are alike concerned: "but the concurrence of the peers and the crown to a tax, "is only necessary to clothe it in the form of a law. The " gift and grant is of the commons alone." It is unnecessary to fay more concerning the right of parliamentary taxation of the colonies, because parliament itself (when indeed it was too late) has formally relinquished the claim. By the 18 Geo. III. c. 12. the king and parliament of Great Britain declare, that from thenceforth they will not impose any duty, tax, &c. payable in any of the king's colonies, provinces, and planding, controlling dations in North America and the West Indies, except for he regulation of commerce: the produce whereof is always be applied to the use of the colony in which it is levied.

HISTORY OF THE

BOOK VI.

But, in a government of which freedom is the basis, and of which it is the boast that it promotes, equally and impartially, the happiness of all its fubjects, it might be supposed that no other authority over its dependencies could be necessary, than that which effectually provides, that every addition to their wealth and greatness should contribute, at the fame time, to the augmentation of its own riches and power. And fuch, before the late unfortunate divisions, was the commercial fystem adopted by Great Britain, and submitted to by her American colonies. To discriminate the feveral parts, properties, and effects of this great arrangement of restriction and monopoly; to fnew that it fecured every degree of authority in the parent over the child, which is confistent with the happiness and freedom of mankind, (the ends of all just government); and finally that it might have answered, in the fullest degree, even the objects of revenue and contribution, if Great Britain had happily confined her pretenfions to the limits originally prescribed by herselffor these purposes it would be necessary to enter into a large and comprehensive discussion, to which the defign of my work does not extend How far the British sugar islands constituted: part of, and were comprized in, the general fystem. I shall endeavour to point out in the subsequent chapters.

CHAP. III.

Principles on which the Nations of Europe fettled Colonies in America. — Commercial Regulations of Great Britain .-- Remarks on the Acts of Navigation .- Admission of foreign-built Vessels eventually beneficial.—Exports from Great Britain to the Sugar Islands, and their Value .- The same from Ireland.-Wines from Madeira and the Azores .- Other Profits .- Summary of the whole. -Imports from the West Indies to Great Britain and Ireland, and their Value according to the London Prices.—Amount of British Capital vested in the Sugar Islands .- Shipping and Seamen .-General Observations .- Appendix.

THE establishment of colonies in America by CHAP. the nations of Europe (fays Montesquieu) was contrived, not in the view of building cities and extending empires; but for the purpose of carrying on trade to greater advantage than could be done with rival states. Commercial monopoly therefore, and with great reason, is the leading principle of colonial intercourse.

THIS account, with some little qualification, may be admitted; and a very flight enquiry will demonstrate that it applies as pointedly to the

English.

m is the romotes, of all its other aunecessary, hat every ould conentation of before the commercial d submitted discriminate ffects of this monopoly; of authority n is consistent of mankind, nd finally that fullest degree, ontribution, if her pretentions herselfceffary to enter discussion, to es not extend. s constituted a general system,

the subsequent

BOOK English, as to any other nation. The means indeed which Great Britain has adopted for retaining to herself the full benefit of the monopoly, have, in some cases, proved more liberal than those of rival states; but the principle by which the various nations of Europe were influenced, was precifely the fame: To fecure to themfelves respectively, the most important of the productions of their colonies, and to retain to themselves exclusively, the great advantage of fupplying those colonies with European goods and manufactures, was the chief aim and endeayour of them all.

> WHETHER the feveral parts of this fystem, as adopted by the British government, and its confequent train of duties, restrictions, and prohibitions, were originally as wife and politick, as they are evidently felfish, is a question that of late has been much controverted. But this is a discusfion into which it can answer no good purpose to enter, because the present arrangement has been too long, and is now too firmly established amongst us to be abrogated; and thus much at least has been truly faid in its favour, that it is calculated to correspond with the regulations of foreign flates: for fo long as other nations confine the trade of their colonies to themselves, to affirm that Great Britain derives no advantage from following

their example, is to contradict both experience CHAP.

Of the commercial regulations of this kingdom, the memorable law which was passed in the 12th year of King Charles II. chap. 18, commonly called, by way of eminence, THE NAVIGATION Act, may be confidered as the foundation. this law it is, among other provisions, declared,

FIRST, That no goods or commodities should be imported into, or exported out of, any of his Majesty's plantations or territories in Asia, Africa, or America, but in ships belonging to the subjects of England, Ireland, Wales, or Berwick, or in fuch as are of the built of, and belonging to, fuch plantations, and whereof three-fourths of the mariners and the mafter are English subjects, on pain of the forfeiture of ship and cargo; and all admirals and commanders of king's thips are authorized to make feizure of ships offending herein.

plantations, and lading

on board fuch commodities, for the due observance CHAP. of this part of the law.

Such, together with the conditions under which foreign-built ships were to enjoy the privilege of English ships, are the chief restrictions and provisions of this celebrated statute, fo far as they relate to the plantation trade, and they are extended and strengthened by a law which passed three years afterwards, which the plantation governors are also sworn to enforce; for by the 15th of Cha. 2. c. 7, it is enacted, that no comodity of the growth, production, or manu are of Europe, shall be imported into the British plantations, but such as are laden and put on board in England, Wales, or Berwick; and in English-built shipping, (or ships taken as prize, and certified according to a former act) whereof the mafter and three-fourths of the mariners are English, and carried directly to the faid plantations. There is an exception however as to falt for the fisheries of New England and Newfoundland, wines from Madeira and the Azores, and horses and victuals from Ireland and Scotland; and the preamble to the act, after stating that plantations are formed by citizens of the mother-country, affigns the motive for this restriction to be, "the mainaining a greater correspondence and kindness bety is required from all ween the subjects at home and those in the plantations,

STATE OF THE PROPERTY OF THE P

BOOK tations, keeping the colonies in a firmer dependance upon the mother-country, making them yet more beneficial and advantageous to it in the further employment and encrease of English shipping, vent of English manufactures and commodities; rendering the navigation to and from them more fafe and cheap, and making this kingdom a staple, not only of the commodities of the plantations, but also of the commodities of other countries and places for the supply of

themselves (a).

TEN years after this, another act passed (25 Cha. II. c. 7.) imposing duties on sugar and other

them, it being (continues the preamble) the usage

of other nations to keep their plantation trade to

(a) The defign of this act, fays Postlethwaite, was to make a double voyage necessary, where the colonies used any commodities of the growth and manufacture of Europe but British: for if they could not be shipped in Great Britain, they must first be brought thither from the places of their growth and manufacture, and Great Britain would confequently have the benefit, not only of that freight, but of as many fhips and failors as must be employed in bringing them from thence. It is remarkable, that by this act Ireland was indirectly deprived of the benefits allowed that kingdom by the act of navigation, for it is required, that none of the enumerated goods fliall be carried from the plantations to any country or place whatfoever, until they have been first unladen and put ashore in some port or haven in England, Wales, or Berwick. By a subsequent act this intention was avowed, and Ireland was expressly shut out from a direl trade with the plantations.

commodities

commodities (b) exported from one colony to CHAP. another, and the following is affigned as the reason: " that the inhabitants of some of the said colonies, not content with being supplied with those commodities for their own use, free from all customs, had, contrary to law, exported confiderable quantities to divers parts of Europe, and did likewise vend great quantities to the shipping of other nations, to the great injury of the trade and navigation of the parent state." For the prevention of this inconveniency in future, the duties in queftion are laid on the export of those commodities from the plantations; unless security be given to transport them directly to England, Berwick, or The duties were the fame, I believe, as were then paid in England on most of those commodities imported for home confumption.

This act was foon found to require explanation and amendment; for the payment of the aforefaid duties having been confidered in the colonies as an exoneration from giving security not to go to any foreign market in Europe; it was provided by the 7 and 8 W. III. c. 22, that, notwithstanding the payment of the duties in question, the same security should be given as was required by former acts; and it was enacted and declared,

(b) White fugar 5 s. and muscavado 1 s. 6 d. per cwt.; tobacco 1d. cotton-wool 1d. indigo 2d. cacao 1d. per lb.; logwood £. 5. ginger 1 s. the cwt.; fustick, &c. 6 d. Vol. II. that

that no commodities of the growth or manufacture of the plantations, should, on any pretence whatfoever, be landed in Ireland or Scotland, unless the same were first landed in England, and had paid the rates and duties wherewith they were there chargeable by law.

By the same act it is declared, that no goods or merchandize whatever shall be imported into, or exported out of, any British colony or plantation, but in ships built in England, Ireland, or the plantations, wholly owned by English subjects, and navigated as before; and provisions are established concerning the registering of ships, to prevent the fraud of passing foreign-built ships as English; together with various regulations to prevent counterfeit certificates, and frauds in the import and export to and from the colonies; for all which, reference must be made to the act at large, which is fyftematick and comprehensive in a high degree.

THESE acts therefore, and some intermediate ones, which it is not necessary to particularise, may be confidered as supplemental to the navigation act, and they form altogether the foundation of our colonial code; most of the subsequent acts now in force, being framed in the fame spirit, and intended to enforce and strengthen the system; with fome few alterations and exceptions only however do not extend to any great and fubstantil

Тне

(c) The following, I believe, are the chief additions, alterations, and exceptions, so far as the British sugar islands are principally concerned. If the reader is desirous of the sullest and most correct information on this head, he is referred to a late History of the Law of Shipping and Navigation, by John Reeves, Eq. an admirable work, in which the driest subjects are treated with such clearness, precision, and elegance, as to render the book not only instructive, but in a very high degree entertaining and interesting.

By flatute 3 and 4 Ann, c. 5. Rice and melasses were put into the enumeration, and by c. 8. Irish linens, laden in Ireland in English-built shipping navigated according to law, were admitted into the plantations.

By 7 Ann, c. 8. Jesuits bark, and all other drugs, are permitted to be imported into Great Britain from the British plantations, on payment of the same duties as if imported directly from the place of their growth.

By 13 Geo. I. c. 15. and 7 Geo. II. c. 18. Cochineal and indigo were allowed for a certain time to be imported from any port or place, in British or other ships; which acts were afterwards renewed, and are now in force.

By 3 Geo. II. c. 28. Rice was permitted, under certain conditions, to be carried from South Carolina to any port of Europe fouthward of Cape Finisterre; a privilege afterwards extended to North Carolina and Georgia.

By 4 Geo. II. c. 15. Non-enumerated goods (viz. goods not enumerated in the 12 of Cha. II. c. 18.) are admitted to be imported directly into Ireland from the colonies, notwith-standing the 7 and 8 of W. III. c. 22.—Hops, by a subsequent statute, are excepted out of this indulgence.

By 12 Geo. II. c. 30. Sugars, under certain regulations and restrictions, are permitted to be carried immediately from the British plantations to any port or place southward of

BOOK VI. THE reader will find that the system embraces two distinct objects; first, the augmentation of our

Cape Finisterre, and also to any foreign port of Europe in licensed ships, which are to call first at some port in Great Britain.—This was considered as a great indulgence, but the conditions and regulations on which it was granted were so strict and numerous, as to defeat in a great measure the intention of the legislature.

By 4 and 5 Geo. III. fect. 27. British plantation coffee, piemento, and cacao-nuts are put into the enumeration; as are likewise whale fins, raw filk, hides, and skins, pot and pearl ashes; and by sect. 28. security is required that no iron, nor any fort of wood called lumber, the growth, production, or manusacture of any British colony or plantation, shall be landed in any port of Europe except Great Britain; an exception however was afterwards made by 5 Geo. III. c. 45. by which iron might be carried to Ireland, and lumber to Madeira, the Azores, or any part of Europe southward of Cape Finisterre.

By 5 Geo. III. c. 39. Bond is required to be given in the British plantations, that no rum or other spirits shall be landed in the Isle of Man; and by the 6 Geo. III. c. 52. security is required for all non-enumerated goods, that the same shall not be landed at any port of Europe to the northward of Cape Finisterre, except in Great Britain, and (by a subsequent law) Ireland.

By 5 Geo. III. c. 52. Any fort of cotton wool may be imported in British-built ships from any country or place, duty free.

By the 6 Geo. III. c. 49. was established the measure of opening free ports in Jamaica and Fiminica. By this act, live cattle, and all manner of goods and commodities whatfoever (except tobacco), the produce of any foreign colony in America, might be imported into Prince Rupert's Bay and Rosseau in Dominica, and into Kingston, Savanna-la-

our naval strength, by an entire exclusion of fo- CHAP. reign shipping from our plantation trade; secondly,

Mar, Montego Bay, and Santa Lucea in Jamaica, from any foreign colony or plantation in America, in any foreign floop, schooner, or other vessel, not having more than one deck. This act was temporary, but was afterwards continued, until materially altered by the 27 Geo. III. c. 27. wherein, among fundry other regulations, two more ports are opened in addition to the former, viz. St. George, in the island of Grenada, and the port of Nasiau, in the island of New Providence, one of the Ba hamas, into which cotton wool, indigo, cochineal, drugs of all kinds, cacao, logwood, fuffick, and other dye woods, hides, and tallow, beaver, and all fort of furs, tortoifeiliell, mill timber, mahogany, &c. horfes, affes, mules, and cattle, being the growth or production of any colony or plantation in America, belonging to or under the dominion of any foreign European sovereign or state, and all coin and bullion, &c. may be imported in any foreign floop, schooner, or other vessel, not having more than one deck, and not exceeding the burthen of feventy tons, and provided also that fuch veffel is owned and navigated by the fubjects of some foreign European fovereign or state. It is permitted also to the same description of persons and vessels to export from these parts British plantation rum, negroes, and all manner of goods that had been legally imported, except naval stores and iron. The foreign articles thus permitted to be brought into the free ports by this act, may be exported again to Great Britain or Ireland; and by a subsequent law (30 Geo. III. c. 29.) the restriction in regard to the tonnage of foreign vessels is taken off, but these vessels are still limited to one

The next great measure was, the opening the plantation trade to the people of Ireland, which was first partially done by the 18 Geo. III. c. 55. and more fully by the 20 Geo. III. c. 10. under which they enjoy the like unlimited intercourse

BOOK condly, the fecuring to Great Britain all the emoluments arifing from her colonies, by a double monopoly over them: viz. a monopoly of their whole import, which is to be altogether from Great Britain; and a monopoly of all their export, which (as far as it can ferve any uleful purpole to the mother-country) is to be no where but to Great Britain. On the fame idea, it was contrived that they should send all their products to us raw, and in their first state; and that they should take every thing from us in the last slage of manufacture.

> Most of our commercial writers, and many of our statesmen, have considered the two great leading principles above-mentioned to be fo closely interwoven together, and dependent on each other, as not to be disjoined without violence to both; whereas, in truth, the monopoly of our colonial products, and the advantages arising from the fupply of the wants of the colonists, might not only be supported, even though foreign-built veffels

with the colonies, both in respect of import and export, as Great Britain; on condition only that the goods so imported and exported are made liable to equal duties and drawbacks, and fubject to the fame fecurities, regulations, and restrictions as in Great Britain; a condition to which the Parliament of Ireland confented, by passing an act imposing duties on the imports, conformable to those of Great Britain.

The regulations with regard to America, fince the independence of the United States, will be discussed in a subsequent chapter.

therefor

" "T

veffels were incorporated into the great body of CHAP. our shipping, but it may eventually happen, that both our trade and navigation would be greatly improved and extended by fuch a measure *.

THAT the maintenance of our naval strength is one of the most important objects to which the British government can direct its attention, no person of common understanding will venture to dispute; and so long as Great Britain can herself furnish shipping on the cheapest terms, sufficient for all the great branches of her commerce, every possible encouragement ought undoubtedly to be given to our own shipwrights, and every discouragement to the participation of foreigners in the ship-building trade: but it is the interest of the merchant to get his freight as cheap as possible; it is equally so of the manufacturer; because every increase in the price of shipping and freight, operates as a tax upon the commodities shipped, and affects the foreign demand in proportion. If therefore, from progressive improvements in our

• "There are fome who confound commerce and navigation together, as one and the fame thing: but the one is only an instrument of the other, and not always an essential one. Commerce confifts principally in the exchange of commodities, if it exists in inland countries, where there can be no navigation. China has a commerce with all Europe extremely beneficial to her, but she has no navigation to any part of Europe. The ships of Europe are her carriers." Smith of S. Carolina.

NAVIGATION and naval power are the children, not the parents, of commerce; for if agriculture and manufactures, and mutual wants, did not furnish the subject-matter of intercourse between distant countries, there must be an end to navigation. The remark therefore of a very distinguished senator (e), concerning that branch of our commercial system of which we are now treating, appears to be undoubtedly true, "that if

(d) "Can it be reconciled to common fense to affert, that if the Americans, or any other people, were to offer us 500 sail of vessels every year gratis, it would be against the interest of the nation (as a nation) to accept them, because it might prove detrimental to some individuals among us (our shipwrights, &c.)? If the argument will not hold good, considered in this extended light, it can never, by parity of reason, be admitted in cases where vessels can be purchased at one half the price it would cost to build them."—Vide a short Address from a manusacturer, on the Importance of the Trade of Great Britain with the United States of America.—Printed for Stockdale, 1785.

HAVING

(f) An American writer of a periodical work called the Museum, published at Philadelphia in 1791, having been informed, that France had permitted the introduction of American vessels into her trade (in which, however, he was mistaken) expresses the following sentiments; which, to my understanding, convey conviction in every word. "If France " (faith he) had rejected American vessels, she would have " fo far facrificed her carrying-trade to the manufacture of "fhips. She wisely purchases, upon the cheapest terms, the "cradles for her marine nurfery. The first and great object " of the maritime powers ought to be, the increase of the "number of their failers, which is best done by multiplying the "chances of their employment. Among the means of doing "this, one of the most obvious and rational is, the multipli-"cation of veffels. The French-built ships cost from fifty-" five to fixty dollars per ton, when fitted to receive a cargo, "exclusive of fea-stores, infurance, the charges of lading, "outward pilotage, and other expences incidental to the em-"ployment, and not to the building and outfit of a veffel. "The American live-oak and cedar ships, to which none are "fuperior, cost in the same situation, from thirty-three to "thirty-five dollars, finished very completely. If the French "require 10,000 tons of new vessels, on any occasion, or in "any term of time, they may be procured in the United States, on a computation of the medium price of thirtyfour dollars per ton, for the fum of 340,000 dollars: but, if "bought at fifty-five dollars, the lowest price in France, they would cost the much greater fum of 550,000 dollars. No argument is necessary to shew, that such a nation, cateris

ill not hold good, ever, by parity of an be purchased them."-Vide a mportance of the es of America.-

VI.

HAVING observed thus much on the leading principles, or general system of our colonial trade, the application whereof will hereaster be seen, I shall now proceed to the more immediate object of our present researches, and endeavour to surnish the reader with some leading data, or sacts, whereby to appreciate the value and importance of the British sugar islands, and the commerce which they create; by investigating,

1st. THE nature and annual amount of the export trade from Great Britain and her dependencies, for the supply of their wants, and the profits of the British merchants and ship owners thereon.

2dly. The particulars and value of the various rich commodities, the growth of these islands, annually imported into Great Britain, Ireland, &c.

3dly. The value of the fugar islands confidered as so much British capital.

4thly. A STATE of the shipping and seamen to which the British sugar islands afford employment.

A FULL

" paribus, must produce seamen more rapidly than those who "refuse these cheap vessels. It would appear much less un. "reasonable, that the government of the United States should "prohibit the sale of ships (the means of obtaining naval strength) "to foreign nations, than that any of them should reject the "great advantage of so cheap and excellent a supply." Such is the reasoning of this author, and it is no proof that his arguments are weak, because the circumstance which gave rise to them did not exist.

dly than those who pear much less un-Inited States should ining naval strength) m should reject the cellent a fupply." it is no proof that circumstance which

A FULL enumeration of the various articles CHAP. which furnish the ships bound to the West Indies with an outward freight, would indeed comprise a considerable proportion of almost all the productions and manufactures of this kingdom, as well as of many of the commodities imported into Great Britain from the rest of Europe and the East Indies. The inhabitants of the sugar islands are wholly dependent on the mother-country and Ireland, not only for the comforts and elegancies, but also for the common necessaries of life. In most other states and kingdoms, the first object of agriculture is to raise food for the support of the inhabitants; but many of the rich productions of the West Indies yield a profit so much beyond what can be obtained from grain, that in several of the sugar islands, it is true œco. nomy in the planter, rather to buy provisions from others, than to raise them by his own labour. The produce of a fingle acre of his cane fields, will purchase more Indian corn than can be raised in five times that extent of land, and pay besides the freight from other countries. Thus, not only their household furniture, their implements of husbandry, their clothing, but even a great part of heir daily fustenance, are regularly sent to them iom America or Europe. On the first head herefore, it may generally be observed, that the manufacturers

BOOK VI.

manufacturers of Birmingham and Manchester. the clothiers of Yorkshire, Gloucestershire, and Wilts, the potters of Staffordshire, the proprietors of all the lead, copper, and iron works, together with the farmers, victuallers, and brewers, throughout the kingdom, have a greater vent in the British West Indies, for their respective commodities, than perhaps they themselves conceive to be pos-Who would believe that woollens constitute an article of great consumption in the torrid zone? Such however is the fact. coarfer kinds especially, for the use of the negroes, the export is prodigious. Even fugar itself, the great staple of the West Indies, is frequently returned to them in a refined state; so entirely do these colonies depend on the mother-country; centering in her bosom all their wealth, wishes, and affections. "Why should England (fays an "old planter) grudge at the wealth and prof-" perity of the plantations, fince all that is our " fhe may account her own, not only because we " are a part of England as it is taken largely, but " also because all comes to the kingdom of Eng-" land, properly fo called? By a kind of magnetic " force, England draws to it all that is good in "the plantations: it is the centre to which all "things tend. Nothing but England can we " relish or fancy; our hearts are there, wherever of century.

To the laudable researches of the lords of the committee of council on the subject of the slave trade, the publick have been lately indebted for such a body of evidence and information respecting the general commerce of the British West Indies, as could not possibly have been collected by any exertions less extensive and efficient than those of government (g). I have frequently had recourse to their lordships report in former parts of this work, and shall refer to it on this occa-

From that authority it appears, that the value of the exports from Great Britain to the British West Indies, in the year 1787 (since which time they certainly have not diminished) amounted to f. 1,638,703. 13s. 10 d. the whole of which except about L. 200,000) confifted of British goods and manufactures. The exports for the ame year to Africa, which, with all subsequent sofits, must be charged to the same account,

ingland can we Groans of the plantations, published the latter end of the

66 Out (8) Report of the Lords of the Committee of Council on e Slave Trade, 1789.

amount

BOOK amount to £.668,255. 14s. 4d. (h). Besides this, the cost is to be stated of manufactures and provisions from Ireland, and of wines from Madeira and the Azores; the fame having hitherto been purchased by British capitals, and conveyed to the West Indies in vessels trading circuitously from British ports, and the returns likewise made, for the most part, to Great Britain. For the same reason, the cost and freight of lumber, fish, and other productions of America, both from the American states and the British provinces, transported from thence to the British fugar islands, in British vessels, must likewise be added to the estimate.

> CONCERNING Ireland, I have no account for 1787, but the reader will find, in an Appendix to this volume, official accounts for the years 1790, 1791, and 1792, as well of the exports from that kingdom to the British West Indies, as of the imports received from thence in return; both in a direct trade. Of the former, the average value is £. 294,353 Irish, being equal to £.277,218 sterling: the amount of the imports will be given hereafter.

(h) The goods shipped for the purchase of gum, ivon and gold, in the trade direct between Africa and Great Bit tain, constitute some small part of this; but I make no deduce tion on that account, because the freight of, and merchant commissions on, such part as are applied to the purchases flaves, and the profits on the fale of those flaves in the We Indies, not being charged in the Inspector General's books fet one against the other.

(i) Jan itself for fl this time, Great Brit supply, is f Mr annum.

OF wines, from Madeira and the Azores, the CHAP. yearly confumption in these islands may be estimated, on an average, at f. 30,000.

RESPECTING America, the supplies that were annually furnished by those provinces which now constitute the United States, were valued, at the places of delivery, at no less than £.720,000 flerling; and they confifted of articles fo effentially necessary, that the restrictions to which this trade is now fubject (how grievously soever they are felt by the planters) have not, I think, diminished the demand, or lessened the import (i). Official accounts of the present state of this intercourse are no where given to the publick: a retrospective survey of its nature and extent, as it subsisted previous to the war, will be given in the subsequent chapter.

THERE are yet to be reckoned the imports from the American provinces which still remain to Great Britain, including Newfoundland; of which, in like manner, no account, that I have feen, has been published. Supposing they were equal in value to the West Indian commodities shipped thither in return (a conjecture probably

n is for fish from e from thence into five years (1783to 545 quintals, worth he quintal.

PERHAPS it were no excess to state the whole CHAP. amount at this time at four millions of pounds sterling. Hence then appears the vast dependence of the British West Indian colonies on their parent country, for almost every thing that is useful and ornamental to civilized life; and it was justly observed, by the accurate and intelligent Mr. Glover, that fuch a market for the vent of our manufactures, furnishes irrefragable proof, that, through whatever channel riches have flowed into those colonies, that influx hath made its paffage to the mother-country, "not (continued he) like the dash of an oriental torrent, but in falubrious, various, placid, and copious streams; refreshing and augmenting sober industry by additional employment to thousands and ten thousands of families, and lightening the burthen upon rents, by reducing the contributions of parishes to poverty unemployed."

AFTER all, it is not fo much by the exports to, as by the imports from, the fugar islands, that we are to judge of their value: every article of their products and returns being in fact as truly British property, as the tin which is found in the mines of Cornwall; and their staples are the more valuable, inasmuch as they differ from the commodities produced at home: for they supply the mother-country, not only with what she must Vol. II. Hh otherwise

BOOK VI.

otherwise purchase from foreigners for her own use, but with a superfluity besides for foreign confumption. Let us now then, as proposed, enquire into the particulars, and estimate the value of their various productions and commodities with which Great Britain and her dependencies are annually supplied. Here too, I might refer to the year 1787, and avail myself, as I have done in the history of each particular island, of the very exact, comprehensive, and valuable statement of the returns of that year, as prepared by the Inspector General of the exports and imports, with the marketable prices of each article, and annexed by the committee of the privy-council to their report on the flave trade; but I choose rather to look to the year 1788, chiefly because the exports of any one year are fet properly against the imports of the succeeding one; it being usual, in most articles of British export to the West Indies, to give twelve or fixteen months credit.

THE imports into Great Britain from the British sugar islands in 1788, and the value thereof, will appear in the following table. The quantities are taken from the Inspector General's return (1); but that officer has not, in this case, as in the account of the former year, affixed the

marketable prices (m). These therefore are col- CHAP. lected from the opinions of respectable brokers, on a low average of the year; the miscellaneous articles excepted, which stand as stated by the Inspector General with the addition of one-third, being the usual disproportion between the actual prices current, and those in the custom-house books.

(m) The marketable prices, are the current prices after the duties have been cleared, and these are paid on importation, except as to the duties and excise on rum, which is permitted to be bonded. The latter therefore cannot be faid to be paid by the planter in the first instance, as in the former case they certainly are, and nine times out of ten are not refunded by the confumer, as will hereafter be demonfirated.

one hundred and eleven pounds for each white CHAP. person, and thirteen pounds eighteen shillings and fix pence per head per annum, for man, woman, and child, black and white, throughout all the British West Indies.

FROM this immense supply, the revenues of Great Britain and Ireland received, in groß duties, upwards of £.1,800,000 sterling, exclusive of the duty of 4 } per cent. collected in Barbadoes, and some other of the islands, and which being paid in kind, is, I presume, included in the general imports above stated. Of the remainder, we have already feen how large a share was the property of the manufacturer, the merchant, and the navigator. A further fum, not less than f.1,037,000, must be placed to the fame account, for freights and infurance homewards, commissions on the sale, and a long train of other charges. The balance, reduced, as it necessarily must be, by such a multiplicity of claims and deductions, to a very small proportion of the gross returns, is paid over to the planters, their agents, mortgagees, or annuitants, most of whom are resident in Great Britain, and by whom it is partly employed in extending cultivation in the West Indies, and partly expended or invested named to 2. 1090 in the mother-country; in the one case giving vigour Hh4

VI.

vigour to industry, in the other upholding the price of British lands, or the credit of the British stunds. With great truth, therefore, did the merchants and planters declare to the house of commons, "that the sugar colonies, and the commerce thereon dependent, have become the most considerable source of navigation and national wealth out of the limits of the mother-country; and that no part of the national property can be more beneficially employed for the publick, nor are any interests better entitled to the protection of the legislature, than theirs (p)."

I SHALL now state the value of this great property, considered as British capital. In the re-

⁽p) The following are the particulars of freight and infurance homewards, commissions, &c. as enumerated in the valuable chain of evidence by George Hibbert, Esquire, before referred to, viz.

ANOTHER mode proposed by their Lordships of ascertaining the capital, is to reckon twelve years purchase on its annual produce, it being, they observe, not unusual in the West Indies, to fell estates at that price. I think that the fale of West Indian estates at ten years purchase, is much more common; and reckoning the mercantile value of the capital at seven millions per annum, the refult, by this mode of calculation, agrees precifely with the former; a circumstance which gives room to conclude, that it is nearly as ac-. curate as the subject will admit: There can be no possible inducement to exaggerate, where acknowledged facts are of fo much weight.

THERE yet remains to be added a brief state of the shipping and seamen to which the sugar colonies directly give employment; and it appears that

that the number of vessels which in the year 1787 cleared from the feveral British West Indian islands for Great Britain and Ireland (including 14 from Honduras) were 689, containing 148,176 tons, and navigated by 13,936 men, being about nine feamen to every 100 tons: an extent of shipping nearly equal (as I have elsewhere obferved) to the whole commercial tonnage of England a century ago. At the fame time it is not to be overlooked, that the feamen fo employed, being in constant service, are always at command: and on this account, they are a more valuable body of men than even the seamen employed in the Newfoundland fishery; of whom a great proportion remains in the country during the winter, and cannot therefore, on any fudden emergency, be added to the naval force of the kingdom (q).

(a) The French writers state the number of ships emploved in their West Indian trade at 600, and the average of their burthen at 300 tons one with another: their feamen at 15,000. The following account of the average imports from the French fugar islands, and the duties paid thereon, was published in 1785; viz.

CHAP.

On a retrospect of the whole it may be truly affirmed, that the British sugar islands in the West Indies (different in all respects from colonies in northern latitudes) answer in every point of view, and, if I mistake not, to a much greater extent than is commonly imagined, all the purposes and expectations for which colonies have been at any time established. They furnish, as we have feen, a fure and exclusive market for the merchandize and manufactures of the mother-country and her dependencies, to the yearly amount of very near four millions of pounds sterling. They produce to an immense value, and in quantities not only fufficient for her own confumption, but also for a great export to foreign markets, many valuable and most necessary commodities, none of which interfere in any respect with her own productions; and most of which, as I shall demonstrate hereafter, she cannot obtain on equal terms elsewhere: -accompanied too with this peculiar benefit, that in the transfer of these articles from one part of her subjects to another part, not one shilling is taken from the general circulating wealth of the kingdom. Laftly, they give fuch employment to her ships and seamen, as while it supports and encreases her navigation in time of peace, tends not in the smallest degree to obstruct, but on the

contrary, contributes very eminently to aid and

invigorate, her operations in war. It is evident

therefore, that in estimating the value and importance of fuch a system, no just conclusions can be drawn, but by furveying it comprehensively, and in all its parts, confidering its feveral branches as connected with, and dependent on, each other, and even then, the fum of its advantages will exceed calculation. We are told indeed, among other objections which I shall consider more at large in the concluding chapter of my work, that all the products of the British West Indies may be purchased cheaper in the colonies of foreign If the fact were true, as it certainly is not, it would furnish no argument against the propriety and necessity of settling colonies of our own; because it must be remembered, that foreign nations will allow few or none of our manufactures to be received in their colonies in payment: that their colonists contribute in no degree, by the investment and expenditure of their profits, to augment the wealth of the British nation, nor finally do they give employment exclusively to British shipping. To what extent the naval power of Great Britain is dependent on her colonial commerce, it is difficult to afcertain: If this trade be considered in all its channels, collateral and direct, connected as it is with our fisheries, &c. perhaps it is not too much to affirm, that it maintains a merchant navy on which the maritime strength of the kingdom fo greatly depends,

tons. But the great difference arises from the circumstance that the trade to the West Indies is carried on with our own colonial possessions, which the settlements in the East never were, nor even can be considered.

APPENDIX

CHAP. III. OF BOOK VI.

BOOK THE following authentick statement of the exports and imports between the West India Islands and Great Britain, in the year 1795, was read in the House of Commons by the Right Honourable Mr. Secretary Dundas, in his speech on the Slave Trade (April 1796.) It displays such an astonishing encrease as might appear utterly incredible, were it not recollected that in 1795 many of the French sugar islands were in our possession:

1795.	Value in pounds ferling.
Exports of British Manufactures	3,212,431
of Foreign Manufactures	531,000
Total of Exports from Great Britain for 1795 }	3,743,431
Imports of West India produce into Great Britain for 1795 }	8,881,673
Value of West India produce re-ex-, ported in 1795 to foreign markets	

Mr. Dundas, in the very eloquent speech which he delivered on this occasion, after introducing the preceding statement, made the following important observa-

"If any person shall tell me, that some of these advantages would be enjoyed by us even if the West In-

othe oper dom come can e would portar which this co would. be one and fuc existing lonies. Is it t in this ca from whi Is it a cr

dies stood in the same relation to this country as America stands at this moment, I shall readily admit, that as much of this account as arises out of the exportation and sale of our manufactures might possibly be the same in case of a separation. I do not think the manufacturers of America are yet, nor indeed likely to be for a great many years, in a state to rival the manufacturers of Great-Britain. But when I have admitted thus much, it must, on the other hand, be allowed, that fuch an event, befides the operation it would have on the navigation of this kingdom, would put out of our power the whole produce that comes from the West-Indies, and for which the planters can eafily find a market elsewhere. Such a consequence would inevitably follow, and does it not form a most important confideration? We should lose all the surplus which makes so great an article in the foreign trade of this country. The whole of that important advantage would, by fuch an event, be lost for ever. Such would be one of the consequences of West-India independance, and fuch, as I have stated, is de fasto the relative fituation existing between the mother-country and her fugar co-

Is it then, Sir, a crime in any Member of this House in this case to talk of policy? Is this the only question from which all considerations of policy are to be excluded? Is it a crime in me to call on Gentlemen, who, past the levity of youth, have arrived at a more sober and deliberate mode of thinking, maturely to weigh the consequences of rash and intemperate councils on this occasion. Shall it be said, that I do not consult the interests of humanity, because I, who have attained a more advanced period of life, do not rush precipitately on, with-

This leads me, Sir, to another confideration, which I wish to press upon the attention of the House,—and this consideration relates to America. Gentlemen should recollect,

peech which he icing the preportant observa-

me of these adf the West Indies BOOK VI. recollect, that the independance of America is already established. The separation of the West-India islands from the mother-country is, therefore, at this time, a very different question from what it would have been, if the connexion between Great-Britain and America had still fublisted; -before Gentlemen permit themselves to think fuch an event possible, before they revolve in a fit of generolity, or in a moment of anger, to declare the West-India colonies independant, I wish they would at least confider, what fecurity there is, that those islands would continue in that state of independance in which we might place them, if they were absolved from their allegiance and difinified from the patronage of this country? I would ask, whether there is no other power in the world to be found, who would stretch out a fatherly hand for their protection? If, by the egregious folly and the madness of this country, such an event should occur, if any unjust and intemperate decision of this House should unfortunately produce the independance of the fugar colonies, it is but too probable, that, with exultation over our folly, some other nation would read such a paper as I have this day produced, to demonstrate to the world the consequences of our infanity, by displaying the extent of our losses, and the magnitude of their gains! I feel myself impelled, by the importance of the subject; to press this again and again upon the minds of the House, and to inform them how greatly they are mistaken, if they think they are confulting the true interests of this country in giving the smallest encouragement to the most distant idea of West-Indian independancy!"

Ably as the foregoing confiderations were enforced by the Right Honourable speaker, it may be useful to suggest some views of the subject which he omitted, and,

APPEN-DIX.

First, It is a conclusion not logically just, that, because the commerce of Great-Britain has been prosperous and progressive since the separation of the North-American colonies, it is, therefore, indebted to that separation for any part of its prosperity, and might not have arrived to a much higher pitch if fuch an event had not happened. Do the American States use none but British manufactures, employ none but British agents, enrich none but British capitalists? Are they not become formidable rivals to us in commercial navigation, and has not France in the present war, found in their neutrality a powerful resource? Their advance in population and wealth, for feveral years immediately preceding the revolution, was fo obvious and rapid, that, confidering the drains and burthens which the war imposed, it would be too much to fay, that their independance has given a peculiar spurto their advancement, from which Britain, as a trading should occur, if nation, has derived a compensation for her loss of their is House should exclusive trade. Could any probable expense of their of the fugar coprotection have nearly reached the amount of that debt exultation over incurred in the war by which they were loft? The arfuch a paper as guments by which free trade is usually recommended do ate to the world not apply to this case. Such arguments imply a general aying the extent liberation, but here there was no quid pro quo. Someeir gains! I feel thing, doubtlefs, was conceded, and nothing obtained in the subject; to ds of the House, are mistaken, if interests of this

Secondly, Whatever may be determined respecting the advantages which Great-Britain derived from her North-American colonies, no fair conclusion can thence be drawn as to the value of those she possesses in the West-Indies, in so many and such material points dissimilar in nature and fituation. So early as the time of Sir Jofiah Child, who wrote in 1660, while the colonies of both kinds were yet in their infancy, this distinction was marked; their relative fitness for raising rival manufactures, building rival shipping, and draining the mother-

country of people, are by him stated in plain, but forcible, terms. (See Child on Trade, cap. 10.) It should never be forgotten, that the cultivation of the West-India islands is entirely devoted to objects which the mothercountry cannot produce, yet cannot do without, and which, from their extensive confumption, afford the furest means of balancing her foreign trade;—those colonies possess no exclusive shipping, and their acquirements centre, not by indirect channels, but immediately, in the bosom of Great-Britain. Political economists may theorize concerning the utility of colonies, and the preference of concentring the national industry and wealth, but they forget that such establishments are inseparable from the genius of a maritime people, and effential to its prosperity. And, if the comparative merit of colonies be examined, we may fafely affert, that none ever existed so reconcileable with the best principles of political economy as those which the European nations posfefs in the West-Indies.

Thirdly, The independancy of the West-India islands, all things confidered, is not a subject of probable speculation; they are constituted for an interchange of exclusive benefits, like that in which they now exist, and have hitherto flourished; and Great-Britain would impose a talk upon herself greater than any she ever undertook, were the to attempt to counteract their natural bias in that respect. Now, if any of our political economists should be disposed to maintain, that, in a state of dependance upon some other nation, Great-Britain might derive advantages from their commerce, let him be asked, what benefits did she derive from the trade of Martinique and St. Domingo ten years ago? Those which France enjoyed from her exclusive colonies are stated very clearly in the valuable Analysis of the French Commerce published about the time of the revolution, by M. Arnould. It is there shewn that France imported from

nerica.—The

merica.--In-

barate discusbetween the erica, I shall e and extent, unfortunate civil

civil war: and offer some considerations on the CHAP. policy of Great Britain, in the regulations and restrictions (as they affected the sugar islands) which government afterwards thought proper to adopt concerning it, in consequence of the ackowledgment of American independency: after which, I shall endeavour to furnish an account of the present state of the West Indian trade, both with the United States, and the continental colonies yet remaining to Great Britain.

IT may, I think, be affirmed, without hazard of contradiction, that if ever there was any one particular branch of commerce in the world, that called less for restraint and limitation than any other, it was the trade which, previous to the year 1774, was carried on between the planters of the West Indies and the inhabitants of North America. It was not a traffick calculated to answer the fantastick calls of vanity, or to administer gratification to luxury or vice; but to procure food for the hungry, and to furnish materials (scarce less important than food) for supplying the planters in two capital objects, their buildings, and packages for their chief staple productions, fugar, and rum. Of the necessity they were under on the latter account, an idea may be formed from the statement in the preceding chapter of the importation of those commodities

Ii 3 into BOOK VI.

into Great Britain; the cultivation of which must absolutely have stopped without the means of conveying them to market.

For the supply of those effential articles, lumber, fith, flour, and grain, America seems to have been happily fitted, as well from internal circumstances, as her commodious situation; and it is to a neighbourly intercourse with that continent, continued during one hundred and thirty years, that our sugar plantations in a great measure owe their prosperity; insomuch that, according to the opinion of a very competent judge (a), if the continent had been wholly in the hands of a foreign power, and the English precluded from all commerce or intercourse with it, it is a very doubtful point, whether, in such case, we should at this hour have possessed a single acre of land in the West Indies.

THE following is an official account of the total import from North America into the British West Indian islands for the years 1771, 1772, and 1773, attested by Mr. Stanley, secretary to the commissioners of the customs in London, dated the 15th March 1775.

BOOK VI. Or this great fupply, the value at the ports of delivery, including freight, was £.2,160,000 fterling, or £.720,000 annually; confifting of about 1,200 annual cargoes; but it is proper to observe, that the vessels employed in this trade (which were generally floops and schooners, fingle decked, and without topmasts) commonly made two, and sometimes three, voyages in the year; so that the actual number never exceeded in any one year 533, which were navigated by 3,339 seamen, including negroes: of the latter, the number was estimated at about 1,000. Thus, the shortness and cheapness of the navigation in a great degree supported the trade.

The chief articles with which the British West Indian islands supplied America, in return for the produce of that continent, were sugar, rum, melasses, and coffee. Of rum, the quantity annually shipped thither, before the war, on an average of three years, was 2,800,000 gallons; and the quantity of melasses was 250,000 gallons. This last may be considered as so much additional rum, each gallon of melasses producing an equal quantity of spirit of the American proof, which augmented the annual supply of that article to 3,050,000 gallons. The supply of sugar was estimated at 5,000 hogsheads, of 16 cwt.; and of coffee, at about 400,000 lbs. The value of the whole (including some other small articles)

was

was £.420,000 sterling, leaving a balance of CHAP. £.300,000 in favour of the Americans, which was commonly paid in dollars, or bills of exchange, furnishing them fo far with the means of remittance to Great Britain, in reduction of their debts to the British merchants.

FROM this account of the exports from the British West Indies to the continental colonies, it appears that America, befides affording an inexhaustible source of supply, was also a sure market for the disposal of the planters surplus productions; fuch, I mean, for which there was no fufficient vent in Europe, especially rum; the whole importation of that article into Great Britain and Ireland, having been little more than half the quantity confumed in America. On whatever fide therefore this trade is confidered, it will be found that Great Britain ultimately received the chief benefits refulting from it; for the fugar planters, by being cheaply and regularly fupplied with horses, provisions, and lumber, were enabled to adopt the fystem of management not only most advantageous to themselves, but alfo to the mother-country. Much of that land which otherwise must have been applied to the cultivation of provisions, for the maintenance of their negroes and the raifing of cattle, was appropriated to the cultivation of fugar. By these means, the quantity of fugar and rum (the most profitable

BOOK profitable of their staples) had increased to a furprifing degree, and the British revenues, navigation, and general commerce, were proportionably augmented, aggrandized, and extended. Having an advantageous market for their rum, the planters were enabled to deal fo much the more largely with the mother-country. On the other hand, the Americans, being annually indebted to Great Britain for manufactures, in a larger fum than their returns of tobacco, indigo, rice, and naval flores, were fufficient to discharge, made up the deficiency, in a great degree, by means of their circuitous trade in the West Indies, foreign as well as British; and were thus enabled to extend their dealings with Great Britain. Thus the effect was just as advantageous to her, as if the fugar planter himself had been the purchaser to the fame amount, instead of the American (b).

Such

(b) Dr. John Campbell in his treatife, intituled, Candid and impartial Confiderations on the Sugar Trade, (1763) has confidered this subject in the same light, and expressed himfelf as follows: " As the inhabitants of the Sugar Colonies are continual purchasers from such as are settled upon the continent of America, the amount of their purchases constitutes a balance from them in favour of those of whom they purchase. But on the other hand, the inhabitants of the northern colonies drawing large and constant supplies of commodities and manufactures from hence, we, for the fame reason, have a like balance in our favour against them. It is evident, therefore, that by their transferring the balance

intituled, Candid rade, (1763) has and expressed him. Sugar Colonies e settled upon the ir purchases conose of whom they inhabitants of the at supplies of comve, for the same against them. It rring the balance due

Such having been the nature, necessity, and advantage of this commercial intercourse, there was certainly every reason to expect that, on the termination of hostilities, the system which had unavoidably been interrupted and disarranged during the war, would revive as of course, and be re-established under every possible encouragement. Accordingly, the liberal and accomplished minister, who was in the direction of the sinances, lost no time in presenting to parliament a provisional bill for that purpose; a copy of which the reader will find in a note (c).

Вv

due to them in fatisfaction of that which is due from them to us, the whole accumulated profits ultimately center with the juhabitants of Great Britain."

(c) The following is a copy of the American Intercourse Bill which was brought in by the Right Honourable William Pitt, Chancellor of the Exchequer, March 1783.

"A Eill for the provisional establishment and regulation of trade and intercourse between the subjects of Great Britain and those of the United States of North America.

"WHEREAS the following thirteen provinces of North America, namely, New Hampshire, Massachuset's Bay, Rhode Island and Providence Plantations, Connecticut, New York, New Jersey, North Carolina, Delaware, Maryland, Virginia, Pennsylvania, South Carolina, and Georgia, have lately been folemnly acknowledged by his Majesty to be, and now are, free, independent, and sovereign States, by the name and description of the United States of America:

"Be it therefore enacted and declared by the King's Most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament

os and vessels belong he said United State to any port of Great together with the ime flips and velles

with America. As, however, it was indiffeenfably CHAP. necessary to repeal the prohibitory laws which had existed during the war, this was done by an act passed for that purpose; but as to the rest, parliament took the shortest course possible to fave themselves trouble, by vesting in the crown, for a limited time, authority to regulate the commerce with America in fuch mannner as his majesty in council should deem expedient (d).

New and extraordinary as it certainly was, that fuch extensive authority should be delegated by parliament to the executive power, neither this circumstance, nor the proclamation, or order of council, that iffued in consequence of it, on the 2d July 1783 (afterwards renewed annually) excited much inquiry. Although by this proclamation, the importation into the British West Indies of every species of naval stores, staves, and lumber, live flock, flour, and grain of all kinds, the growth of the American states, was confined to British ships legally navigated; and the export to those states of West Indian productions, was made subject to the same restriction; while many necessary articles (as falted beef and pork, fish, and train-oil) formerly supplied by America, were prohibited altogether, it was confidered as a meafure merely temporary and experimental; and

until

with

BOOK until a plan of permanent regulation should be agreed to by both countries, it was thought neither impolitick nor unjust, that Great Britain should referve in her own hands the power of restraining or relaxing her fystem of commercial arrangements, as circumstances might arise to render the exercise of such a power prudent and neceffary.

> In these reasons the West Indian merchants, and fuch of the planters as were refident in Great Britain, acquiefced; but on the first meeting of a new parliament, in May 1784, (another change having taken place in the mean time in the British administration) (e) the business of a commercial intercourse between the West Indies and the States of America, prefled itself on the attention of government with a force which was not to be refifted. Petitions, complaints, and remonstrances, were poured in from every island in the West Indies. Some of the petitioners represented that they had not fix weeks provisions in store, and all of them anticipated the most dreadful confequences, if the fystem of restriction should be much longer perfifted in; expecting nothing

less than a general revolt of their flaves, in the CHAP. apprehension of perishing of barger.

On the other hand, the inhabitants of the remaining continental colonies, especially such of the new fettlers there as were emigrants from the United States, promifed to themselves the acquisition of sudden and immense riches from the vast advance of price which it was foreseen their few exports, when no longer depressed by competition, would obtain at the West Indian markets. Every exertion, publick and private, was therefore made by their friends in Great Britain, to convince administration, and innumerable pamphlets were circulated to fatisfy the publick, that the West Indies might be very amply supplied with every article of North American produce (rice excepted) from Canada, Nova Scotia, and the island of Saint John. Hence they not only strenuously recommended a steady adherence to the fystem of restriction on the part of Great Britain, but openly expressed their wishes, that the United States, might retaliate, by prohibiting, in return, British ships from trading in the ports of America. The complaints and remonstrances of the West Indians, they treated as the turbulence of disappointed faction. They accused them of having abetted the American rebellion, and their apprehensions while wallowing in wealth, Vol. II. Kk of

BOOK of a scarcity of food were spurned at and ridiculed, as if hunger was no part of our nature.

> IT is impossible, I think, not to perceive in these, and similar arguments, a lurking taint of refentment and malignity, the relicks of former provocation against the Americans; and at least as ardent a defire to wound the new republick, through the fides of the West Indians, as to benefit Nova Scotia at their expence. These passions are among the frailties of our nature, and may be forgiven. But there was another, and a numerous class of people, who stood forward on this occasion, in support of the system of restriction and monopoly, on different ground: these were the ship-builders, ship-owners, and their various dependants in London; who affected to believe, that if American ships were suffered to take fugar from our islands, they would convey it-not to America, but-to foreign countries. and rob us of the carriage of it; or they might, it was alledged, enter into a competition with British ships for the freight of goods to Great To this it was answered, that a limitation of tonnage to ships employed in the American intercourse, to which the planters would not object, confining it to veffels having only one deck, and not exceeding feventy or eighty tons, must fatisfy the most scrupulous on that head; inafinuch

inasmuch as such vessels could never be employed CHAP. in transporting fugar across the Atlantick, nor could they be got infured if fuch attempts should be made. But although this answer must have fatisfied every well-informed and confiderate perfon, it was found insufficient to silence the clamour which at that time was industriously propagated on the subject of the carrying-trade, as if the future existence of the commercial navigation of Great Britain had been involved in the difcuffion.

So vehement was the uproar, that the minister himself was compelled to give way to the torrent. Although Mr. Pitt was now placed at the head of the British administration, he found himself unable, on his return to power, to enforce his first intentions on this subject. Instead of reviving the provisional bill which, a few months before, he had presented to parliament, he thought it adviseable to refer the consideration of the whole matter to the lords of the committee of privy council for the affairs of trade, by whom many of the West Indian merchants and planters, resident in Great Britain, were interrogated on the subject; and the writer of this had the honour to be of the number. It was readily admitted by the fugar planters, that on every principle of honour, humanity, and justice, the unfortunate loyalists of Canada and Nova Scotia were entitled

Kk 2

Soc

BOOK to a preference of their custom, provided those provinces possessed, in any degree, the means of supplying their wants; but this, they contended. was the main point in dispute. They therefore requested, that before any permanent regulations should be adopted by government, enquiry might be made, ist. How much of the annual confump. tion of American staples those provinces had sup. plied hitherto? and, 2dly, how far, from their present, or probably suture, situation, they might be supposed capable of exceeding their former produce and exports?

Such an enquiry was accordingly entered upon, and abundance of evidence collected on the fubject; when it appeared, from the custom-house returns, that of 1208 cargoes of lumber and provisions imported from North America into the British sugar colonies, in 1772, only seven of those cargoes were from Canada and Nova Scotia; and that of 701 topfail veffels, and 1681 floops, which had cleared outwards from North America to the British and foreign West Indies, only two of the topfail vessels, and eleven of the sloops, were from those provinces. It stood therefore incontrovertibly proved, that, previous to the war, the supplies which they afforded, did not amount to a proportion of the whole confumption of the fugar islands, in any degree worthy national attention; and, on the fecond ground enquiry

enquiry, it was shewn respecting Canada, not only CHAP. that the navigation of the river Saint Lawrence was fo greatly obstructed by the ice in the winter, and by westerly winds in the summer, as to render more than one voyage in the year impracticable; but that in the province itself, the climate renders the crops of wheat altogether precarious. was proved, that in the years 1779, 1780, 1781, and 1782, the scarcity in Canada had been such, as to occasion the export of all bread, wheat, and flour, to be prohibited by authority; and it was shewn that, at the very time of the enquiry, a ship in the river Thames was actually loading with flour for Quebec. On the whole, it appeared that, although in favourable seasons (as in 1774) there might sometimes be found an overplus of grain, beyond the confumption of the inhabitants, yet that a regular and fufficient fupply could by no means be depended on from that province; that the frequency of disappointment must prove an infurmountable obstruction to new inhabitants fettling there with a view to the cultivation of wheat; and, with regard to lumber, the price of labour in Canada was fuch, as to cut off all hopes of supply from thence, even if the navigation had been subject to no delay and obstacle whatever.

RESPECTING Nova Scotia, it was shewn that it never had, at any one period, produced grain Kk 3 **fufficient**

BOOK sufficient for the sustenance of its inhabitants; it had never exported any lumber worthy the name of merchandize; and fo far from having any to export, it appeared that a confiderable importation into the province was at that time taking place, from the opposite side of the bay of Fundy, to enable the new fettlers at Port Roseway to build houses for their own residence.

> LASTLY, as to the island of Saint John, it was proved that, like Nova Scotia, it had never yet furnished food enough to keep its few inhabitants alive, nor exported any one article the produce of the island. Its situation, within the gulph of Saint Lawrence, thut it up from all intercourse during five months of the year; and its fogs, more prevalent and durable than even those of Nova Scotia, rendered the country too uncomfortable for population, while land remained unoccupied in happier climates.

THE advocates for the prohibitory system, however, were not easily filenced. They declared it would be more for the interest of Great Britain, that the West Indians should be deprived of American supplies altogether, rather than, by receiving them from the United States in Ame rican vessels, contribute to aggrandize the nava power of the new republick. They maintained that the fugar islands had resources within them felves, which, with occasional aid from Gra

nibitory system, They declared of Great Britain, be deprived of rather than, by States in Ame. andize the nava They maintained, ces within them aid from Great Britain

Britain, might enable them to exist very comfort- chap. ably, even though the accustomed intercourse with all parts of the American continent was entirely cut off. If not, it was triumphantly asked, in what manner were they supported during the war, when all regular communication with the United States was suppressed?

In reply to this objection, it was proved that the British sugar islands, during the war, had been very badly supplied, both with lumber and provisions; and at an expence which, if it had continued, would have been equally ruinous with the not being supplied at all. Their chief refource was the American vessels that had been captured in their way to the French islands; a resource which had terminated with the war, and at best proved so uncertain and inadequate, that many of the British islands had been driven by necessity to the worst of all applications (as British colonists) of their labour; the raising provisions, and cutting lumber upon their own estates. Inflead of directing their attention to the culture of those valuable and bulky staples which contribute, in so eminent a degree; to form the dignified mass of support which the British navigation derives from her distant colonies, they had been compelled to change their system: They had abandoned the cultivation of fugar, and applied their land and labour to the purposes of raising

K k 4

BOOK raising food. In what degree the British navigation and commerce had fuffered by this measure, the custom-house books would demonstrate:-From that authority it would appear, that in 1777, previous to the capture by the French of any of the fugar islands, the import of fugar into England only, had fallen short of the import of 1774 upwards of 45,000 hogsheads, of 16 cwt.; in value nearly one million, creating a loss in freight of £.150,000 on that article alone, and a defalcation in the publick revenue of £.300 a day, for every day in the year! Here then, it was faid, was a full and fatisfactory refutation of the popular clamour on the subject of the carryingtrade. Compared with these losses, and their consequences to every part of the empire, so inconfiderable, fo truly contemptible was the trifling interference of American shallops, carrying food to invigorate the hungry labourer, and timbers to repair mills and houses, that it seemed not to be an object deserving a moment's solicitude in the breast of a great nation.

> Such were, in part, the evidence and arguments offered on behalf of the West Indies; and if the question had met with unprejudiced and temperate discussion, I am inclined to think, notwithstanding the jealous and monopolizing spirit of traffick, that regulations widely different from the present system of restriction and exclu-

ment's folici-

fion towards America, would have been esta- CHAP. blished; but, unfortunately, the private interests of some, and the prejudices and passions of others, were allowed to mingle in the investigation. I am aware that, in common cases, it ill becomes an undistinguished individual to arraign the wifdom and propriety of the national councils; but although there is a degree of respect due to men in authority, which I would willingly preserve, yet I dare not maintain it either by the violation or the suppression of truth. The consequences which flowed from the proceedings recommended and adopted on this occasion, will presently be feen; and they cannot be remembered with indifference. To suppress facts, therefore, in which the incrests of humanity are fo deeply confor facrifice both the dignity and utility of history; the great end of which is to make the errors and misconduct of one set of men, a lesson and a warning to their fucceffors.

THE case was, to speak plainly and undisguisedly, that the committee of council, to whom the consideration of this important business devolved (with the best intentions I believe, for it cannot be supposed that they wished to injure the West Indian colonies) suffered themselves to be guided in their refearches by men who had resentments to gratify, and secret purposes to promote. Some of these, were persons whom Ame-

BOOK rica had profcribed for their loyalty, and unjustly deprived of their possessions. That they had become, on this account, objects of compassion, and claimants on the publick of Great Britain, I have no wish to deny; but, without doubt, they were the last men in the world whose opinions should have been adopted, concerning the establishment of a system of reciprocity and conveniency between the mother-country, and that which they had To suppose that such men were capable of giving an impartial and unbiaffed testimony in fuch a case, is to suppose they had divested themfelves of the common feelings of mankind.

THE first enquiries of the committee of council (thus influenced) were directed to disprove the affertions contained in an address of the affembly of Jamaica, concerning the diffress in which that island was stated to be, at that time, involved. from the want of provisions and lumber. though those affertions were abundantly confirmed by the declarations and fubsequent conduct of the governor himself, to whom the address was presented (e); their lordships reported, that the affembly were by no means warranted in the strong terms they had used; it appearing, they faid, "from private letters laid before them, that the scarcity complained of did not exist."

their lordships were humbly desired to communicate the names of the parties who had written such letters, that some judgment might be formed what degree of credit was due to their testimony, against that of the legislature of the colony, they resuled, with tokens of manifest displeasure, to disclose them.

THEIR lordships, in the next place, proceeded to estimate the resources of Canada and Nova Scotia; and in contradiction to the evidence and conclusions which had been given and adduced by the West Indian merchants and planters, they afferted, in general terms, "that the exportation of grain from Canada would revive and increase, provided the West Indian market was secured to the inhabitants of that province;" and they added, "that several persons of great experience, were of opinion, that an annual export of 300,000 bushels might in a few years be depended on." They admitted that the natural impediments in the navigation of the river Saint Lawrence, might affect the fupply of lumber, but denied that this circumstance would injure the trade in flour. They stated, "that Nova Scotia would be able in about three years to fupply great quantities of lumber, and most of the other articles which the West Indies are in want of from North America, provided grants of land were properly

arranted in the appearing, they fore them, that exist." When

properly made and secured to the inhabitants; for that (although the sea-coast is rocky and barren) the interior parts, and the banks of the rivers, have as fine a soil as any part of the world, admirably sitted for dairy farms, and the growth of garden vegetables."

They averred, "that the climate of Nova Scotia is fine and healthy; that the new fettlers were industrious, and that the neutral French who still remain (when no longer in a precarious state with respect to the government under which they are to live) would probably follow the example of the new settlers, and learn from them to improve the country; especially if due encouragement should be given to their industry, by securing them proper markets." Their lordships were further assured, from good authority, that upon the like encouragement, the population of Nova Scotia would be increased.

SUCH a detail of probabilities, provisoes, and possible contingencies, with the mention, among other resources, of dairy farms and garden vegetables, seemed, to the disappointed planters, something very like derision and mockery. They complained, that instead of assurances of relief, they were put off with airy conjectures, with frivolous ifs and may be's; with promises inconsistent with the laws of nature, and with declarations negatived both by experience and reason!

N

e V pl ric rea

whi the

Reference to the course of the

indced, the Un in retu between feemed bable, i

now be

States we more tha

In truth, the argument which appeared to have CHAP. most weight with their lordships themselves, was that which (tacitly admitting all expectation of fupply from Canada and Nova Scotia to be chimerical and delusive) took for granted, that by excluding American ships from the ports of the West Indies, Great Britain would find full employment for as many a ditional vessels as Ame rica formerly em that commerce, and reap all the profits which America reaped, of which they calculated the freightage alone, at

the annual fum of £.245,000 sterling.

On the whole, the lords of the committee strongly recommended a strict and rigid adherence to the measure of confining the intercourse between our West Indian Islands and America, to British ships only, as a regulation of absolute necessity; considering any deviation from it, as exposing the commerce and navigation of Great Britain to the rivalry of revolted fubjects, now become ill-affected aliens. They expressed, indeed, some apprehension, lest the congress of the United States might retaliate, by prohibiting, in return, British vessels from being the carriers between them and the British West Indies; but seemed to think this circumstance not very probable, inasmuch as the people of the United States would, in that case, they said, suffer much more than any of his Majesty's subjects; a conclu-

B O O κ fion not very decifive; the experience of all ages abundantly proving, that confiderations of interest are frequenly overpowered by motives of resentment.

> THESE doctrines and opinions of the lords of the committee of council were unfortunately approved and adopted in their fullest extent by the British government; and the only solitary hope which now remained to the inhabitants of the West Indies was, that the apprehension of their lordships, concerning American retaliation, was ill-founded; and that the United States, notwithstanding the prohibitory system of Great Britain, would still open their ports to British shipping; and freely indulge them with the liberty of importing the products of the British fugar islands; carrying away American produce in return. The planters could not indeed but foresee a very great expence, delay, and uncertainty attending fuch circuitous navigation; but to this they were prepared to fubmit, as the only alternative of escaping inevitable and impending destruction.

> Bur there was this misfortune attending the fugar planters, that their wants were immediate; and of a complexion affecting not only property, but life. Whatever resources might ultimately be found in the opulence and faculties of the mother-country, it was impossible, in the nature of things,

attending the

things, to expect from so distant a quarter an CHAP. adequate supply to a vast and various demand, coming fuddenly and unexpectedly. Many of the fugar islands too had suffered dreadfully under two tremendous hurricanes, in 1780 and 1781, in consequence whereof (had it not been for the casual assistance obtained from prizeveffels) one half of their negroes must absolutely have perished of hunger. Should fimilar visitations occur, the most dreadful apprehensions would be realized; and I am forry to add, that realized they were!

I HAVE now before me a report of a committee of the affembly of Jamaica, on the subject of the flave trade, wherein the loss of negroes in that island, in consequence of those awful concussions of nature, and the want of supplies from America, is incidentally stated. It is a document of the best authority; and the following extract from it while it abundantly acquits the West Indian merchants and planters from the charge of turbulence and faction, which on this occasion was illiberally brought against them, will, I hope, serve as an awful leffon to future ministers how they re immediate; fuffer the selfishness of party, and the prejudice only property, of personal resentment, to have an influence in ght ultimately the national councils. ties of the mo-

"WE shall now (say the committee) point the nature of ut the principal causes to which this mortality

of our flaves is justly chargeable. It is but too well known to the house, that in the several years 1780, 1781, 1784, 1785, and 1786, it pleased Divine Providence to visit this island with repeated hurricanes, which spread desolation throughout most parts of the island; but the parishes which suffered more remarkably than the rest, were those of Westmoreland, Hanover, Saint James, Trelawney, Portland, and Saint Thomas in the East. By these destructive visitations, the plantain walks, which furnish the chief article of support to the negroes, were generally rooted up, and the intense droughts which followed, deftroyed those different species of ground provifions which the hurricanes had not reached. The storms of 1780 and 1781 happening during the time of war, no foreign supplies, except a trifling affiftance from prize-veffels, could be obtained on any terms, and a famine enfued in the leeward parts of the island, which destroyed many thousand negroes. After the storm of the 30th of July 1784, the lieutenant-governor, by the advice of his council, published a proclamation, dated the 7th of August, permitting the free importation of provisions and lumber in foreign bottoms, for four months from that period. As this was much too short a time to give sufficient notice, and obtain all the supplies that were no ceffary, the small quantities of flour, rice, an

other provisions, which were imported in confequence of the proclamation, foon role to so exorbitant a price as to induce the affembly, on the 9th of November following, to present an address to the lieutenant-governor, requesting him to prolong the term until the latter end of March 1785; observing, that it was impossible for the natural productions of the country to come to fuch maturity as to be wholesome food, before that time. The term of four months not being expired when this address was presented, the lieutenant-governor declined to comply therewith; but on the 1st of December following, the house represented, that a prolongation of the term was then absolutely necessary: They observe that, persuaded of the reluctance with which his honour would be brought to deviate from regulations which he felt himfelf bound to observe, it would give them much concern to address him on the same occasion a second time, were they not convinced that it was in a case of such extreme necessity as to justify fuch a deviation. Accordingly, the lieutenantgovernor, by the advice of his Majesty's council, directed, that the time formerly limited should be extended to the 31st of January then next ensuing (1785): but, at the same time, he informed the house, that he was not at liberty to deviate any longer from the regulations which had been sholished in Great Britain.

"FROM

BOOK VI.

" From the 31st of January 1785, therefore, the ports continued thut, and the fufferings of the poor negroes, in confequence thereof, for some months afterwards, were extreme: Providentially, the feafons became more favourable about May, and confiderable quantities of corn and ground provisions were gathered in by the month of August; when the fourth storm happened, and the lieutenant-governor immediately shut the ports against the exportation of any of our provisions to the French and Spanish islands, which were fupposed to have suffered more than ourselves; but not thinking himself at liberty to permit the importation of provisions in American vessels, the productions of the country were foon exhausted, and the usual attendants of scanty and unwholefome diet, dropfies and epidemic dyfenteries, were again dreadfully prevalent in the fpring and fummer of 1786, and proved fatal to great numbers of the negroes in all parts of the country.

"On the 20th of October in that year, happened the fifth dreadful hurricane, which again laid wafte the leeward parishes, and completed the tragedy. We decline to enlarge on the confequences which followed, left we may appear to exaggerate; but having endeavoured to compute, with as much accuracy as the subject will admit the number of our flaves whose destruction may be fairly attributed to these repeated calamities

and the unfortunate measure of interdicting fo- CHAP. reign supplies, and for this purpose compared the imports and returns of negroes for the last seven years, with those of seven years preceding, we hesitate not, after every allowance for adventitious causes, to fix the whole loss at fifteen thousand: THIS NUMBER WE FIRMLY BELIEVE TO HAVE PERISHED OF FAMINE, OR OF DISEASES CON-TRACTED BY SCANTY AND UNWHOLESOME DIET, BETWEEN THE LATTER END OF 1780, AND THE BEGINNING OF 1787."

Such (without including the loss of negroes in the other islands, and the consequent diminution in their cultivation and returns) was the price at which Great Britain thought proper to retain her exclusive right of supplying her sugar islands with food and necessaries! Common charity must compel us to believe (as I verily do believe) that this dreadful proscription of so many thousand innocent people, the poor, unoffending negroes, was neither intended nor foreseen by those who recommended the measures that produced it. Certainly no fuch proof was wanting to demonfirate that the resentments of party too frequently superfede the common feelings of our nature. It is indeed true, that the evil did at length in some measure furnish its own remedy: The inhabitants of Jamaica, by appropriating part of

their lands and labour to the raifing of provisions, Lla

fyftem became recognized and confirmed by the

within themselves; and, happily for the other islands, the United States did not, as was applied hended, adopt any scheme of retaliation; so the British vessels ultimately obtained the profits of the carriage (whatever it was) between the West Indies and America; and thus at length the

But, whatever benefit has accrued to the CHAP. mother-country, from the regulations and arrangements which the British parliament thus confirmed and perpetuated, it is certain that her r-maining colonies in North America, at whose instance and for whose benefit the scheme of exclusion and restriction was principally promoted, derived few or none of those advantages from the measure, which they had promifed to themselves in the outfet. They discovered, when it was too late, that the decrees of Providence were irrevo-The river Saint Lawrence remained, as usual, locked up seven months in the year by an impenetrable barrier of ice; and Nova Scotia ftill continued inexorably sterile; so much so indeed, that the very men who, in 1784, had confidently represented this province as being capable,

be brought from any of the foreign islands, under the like penalty, except in times of publick emergency and distress, when the governors of any of our islands, with the advice and confent of the council, may authorize the importation of them by British subjects in British-built ships for a limited time." Such is the law as it now stands with regard to the import of American articles into the British West Indies: ; Concerning the export of British West Indian produce to the United States, it is permitted to export, in ships British-built and owned, any goods or commodities whatfoever, which were not, at the time of passing the act, prohibited to be exported to any foreign country in Europe, and also sugar, melasses, coffee, cocoa-nuts, ginger, and piemento; bond being given for the due landing of the same in the United States.

BOOK in the course of three years, of supplying all the West Indies with lumber and provisions, found it necessary, at the end of those three years, to apply for and obtain the infertion of a clause in the prohibitory act, to authorize the admission of both lumber and provisions into that province from the United States. On this circumstance it is unnecessary to anticipate the reflections of the reader!

> In consequence of this permission, there were fhipped in the year 1790, from the United States to Nova Scotia alone, 540,000 staves and heading, 924,980 feet of boards, 285,000 shingles, and 16,000 hoops; 40,000 barrels of bread and meal, and 80,000 bushels of grain; an irrefragable proof that Canada had no furplus of either lumber or grain beyond her own confumption, or undoubtedly the Canadian market would have been reforted to, in preference to that of the United States. And thus vanished all the golden dreams and delufive promifes of a fufficient fupply from Canada and Nova Scotia to answer the wants of the West Indies; and the predictions of the planters and merchants have been verified and confirmed by the experience of years. I regret that I am unable to furnish the reader with an accurate account of the actual exports from those previnces to the West Indies since the war (the report of the committee of council on the flave trade.

The quantity of this latter article imported into the British West Indies from Newsoundland, on an average of sour years (1783 to 1786, both inclusive) was 80,645 quintals (g).

THE exports, for the year 1787, from the British sugar islands to all our remaining American possessions, Newsoundland included, consisted of 9,891 cwt. of sugar, 874,580 gallons of rum, 81 cwt. of cacao, 4 cwt. of ginger, 26,380 gallons of melasses, 200 lbs. of piemento, 575 cwt. of coffee, 1,750 lbs. of cotton wool, and

(g) The imports, into Jamaica from Canada, St. John's, and Nova Scotia, between 3d of April, 1783, and the 26th of October 1784, have been stated in a report of the Assembly of that Island. The "negative catalogue" is very copious. No flour, -no ship-bread or biscuit, no Indian-corn, or other meal, -no horses, cattle, sheep, hogs, or poultry. - The only provisions were, one hundred and eighty bushels of potatoes, and 751 hogheads and about 500 barrels of falted fish,rather a fcanty allowance for the maintenance of 30,000 white people, and 250,000 blacks, for the space of nineteen months !---Of lumber, &c. the quantity was 510,088 feet, 20 bundles of hoops, and 301,324 flyingles. --- Previous to the war, on an average of the five years from 1768 to 1772, the whole imports into Jamaica from Canada, Nova Scotia, and St. John's, were 33 barrels of flour, 7 hogsheads of fish, 8 barrels of oil, 3 barrels of tar, pitch, and turpentine, 36,000 shingles and staves, and 27,235 seet of lumber.

LI4

fome

воок VI. fome small articles, fruit, &c. of little account; the value of the whole, agreeably to the current prices in London, was £.100,506. 175. 10 d. sterling, and the shipping to which it gave employment was nominally 17,873 tons, navigated by 1,397 seamen. As this however includes repeated voyages, the quantity of tonnage and the number of men must be reduced one-half.

To the United States of America the same year the exports in British shipping were these: 19,921 cwt. of sugar, 1,620,205 gallons of rum, 124½ cwt. of cacao, 339 cwt. of ginger, 4,200 gallons of melasses, 6,450 lbs. of piemento, 3,246 lbs. of cossee, 3,000 lbs. of cotton wool, 291 hides, and 737 barrels of fruit.

THE value in sterling money, according to the prices current in London, was £.196,460. 8s. as hath been stated in the former chapter (h). The amount of the freight on these exports, and also on American productions supplied the West Indies, is the monopoly which Great Britain has exacted by her late regulations. It cannot therefore be said, that if she has lost much, she has gained nothing; but estimating her profit at the utmost, to what does it amount, compared with the cost of the purchase? Admitting it even to stand at the sum fixed by the committee of coun-

cil (i), how subordinate is such a consideration, CHAP. when placed in competition with the future growth and profitable existence of our sugar islands, the whole of whose acquirements center in the bosom of the mother-country, enriching her manufactures, encouraging her fisheries, upholding the credit of her funds, supporting the value of her lands, and augmenting, through a thousand channels, her commerce, navigation, revenues, strength, wealth, and prosperity!

On the whole, it is a confideration of very ferious importance that the benefits of the present restraining system are by no means commensurate to the risk which is incurred from it. it is true, in time of scarcity, may find some resource within herself, and America has not yet adopted, and perhaps may not adopt, measures of retaliation; but it must always be remembered, that every one of the West Indian islands is occafionally fubject to hurricanes, and many of them to excessive droughts, which, by destroying all the products of the earth, leave the wretched negroes no dependence but on imported provisions supplied them by their owners. Antigua has been frequently rendered by this calamity a scene of desolation, as it was particularly in 1770, and twice again, in the years 1773 and 1778.

BOOK Should the same irresistible visitation overtake these unfortunate countries hereafter,—as the planters have no veffels of their own, and those of America are denied admittance into their ports, -how are even the most opulent among them to avert from their unhappy labourers the miseries of famine, which in a like case swept off such numbers in Jamaica? Concerning the permission that is held out to the planters to refort, in time of emergency, to the foreign islands, it is so manifeftly nugatory, that I choose not to speak of it in the language which my feelings would dictate (k).

> COMPARED with the danger thus impending over the feeble and defenceless Africans, the inconveniency which of late has been felt and complained of in Great Britain, from the high price of West Indian commodities, deserves not the confideration of a moment. It is the necessary and unavoidable consequence of our own arrangements. Yet, perhaps, it is this circumstance alone that comes home to our feelings; and to this

(k) Under the present limited intercourse with America (exclusive of the uncertainty of being supplied at all) the West Indians are subject to three sets of devouring mone polists. 1st. The British ship-owners, 2d. Their agents at the ports in America. 3d. Their agents or factors at the chief ports in the islands, all of whom exact an unnatura profit from the planter; by which means those most effential necessaries, staves and lumber, have rifen in price no less that

APPENDIX

CHAP. IV. OF BOCK VI.

BOOK THIS work having (1799) reached a third edition; it is with infinite fatisfaction the author has an opportunity, in this place, of | inting to his readers the 12th article of the treaty of amity, commerce, and navigation between his Britannick Majesty and the United States of America, concluded at London the 19th of No. vember 1794, and finally ratified by the American House of Representatives on the 30th of April 1796. What effect the author's arguments in the preceding chapter produced on this occasion, he presumes not to say. That some of the facts which he stated had a very considerable influence on the minds of his Majesty's ministers, he has been affured from high authority; and indeed it were injurious to the character of those ministers to suppose that they had not. The 12th article is expressed in the words following: "XII. His Majesty confents, that it " shall and may be lawful, during the time hereinafter " limited, for the citizens of the United States to carry "to any of his Majesty's islands and ports in the West "Indies from the United States, in their own veffels, not " being above the burthen of feventy tons, any goods or mer-"chandizes, being of the growth, manufacture, or pro-"duce of the faid States, which it is or may be lawful "to carry to the faid islands or ports from the faid States " in British vessels; and that the said American vessels shall " be subject there to no other or higher tonnage duties " or charges than shall be payable by British vessels in

Charges brought against the Planters introductory of Opinions and Doctrines the Design of which is to prove, that the Settlement of the British Plantations was improvident and unwife. — Testimony of the Inspector-General on this Subject, and Animadversions thereon.—Erroneous Idea concerning a distinct Interest between Great Britain and her Sugar Islands.—The National Income and the Profits of Individuals arifing from those Islands considered separately.—Opinions of Poslethwaite and Child.—Whether the Duties on West Indian Commodities imported fall on the Consumer, and in what Cases?—Drawbacks and Bounties: Explanation of those Terms, and their Origin and Propriety traced and demonstrated. Of the Monopoly-compact; its Nature and Origin.—Restrictions on the Colonists enumerated; and the Benefits refulting therefrom to the Mother Country pointed out and illustrated. -- Advantages which would accrue to the Planter, the Revenue, and the Public, from permitting the Inhabitants of the West Indies to refine their raw Sugar for the British Consumption. Unjust Clamours raised in Great Britain on any temporary Advance of the West Indian Staples.—Project of establishing Sugar Plantations,

Plantations in the East Indies under the Protection of Government considered. - Remonstrance which might be offered against this and other Measures .- Conclusion.

BOOK AFTER so copious a display as hath been given of the prodigiously increased value of these important islands, during the space of a century and a half, which have nearly elapfed fince their first fettlement, it may be supposed that the conduct of Great Britain towards them (notwithstanding . the proceedings on which I have prefumed to animadvert in the foregoing chapter) has generally been founded in kindness and liberality; and that the murmurs and complaints which have fometimes proceeded from the planters, when new and heavy duties have been laid on their staples, have been equally ungrateful and unjust; the fastidious previshings of opulent folly, and furfeited prosperity.

> CHARGES to this effect have indeed been frequently uged against the planters of the West Indies, with a spirit of bitterness and rancour, which inclines one to think, that a small degree of envy (excited, perhaps, by the splendid appearance of a few opulent individuals among them resident in Great Britain) is blended in the accu-They would therefore have remained unnoticed by me, were they not, on frequent occa-

fions, introductory of doctrines and opinions CHAP. as extraordinary in their nature, as dangerous in their tendency; for, supported as they are by persons of ability and influence, they cannot fail, if adopted by ministers, and carried from the national councils into measures, to widen our recent wounds, and make a general maffacre of our whole fystem of colonization.

OF these doctrines and opinions, so far as they concern the British plantations in the West Indies, the following is a fair abstract and abridgement:

FIRST. That the fugar islands have been fettled by British capitals which might have been employed to greater advantage at home, in carrying on and extending the manufactures, the commerce, and agriculture of Great Britain.

SECONDLY. That the money expended upon West Indian estates, is in general far from yielding a profitable return to the nation, inafmuch as even a good crop does not leave the owner so much as fix per cent. on his capital, after payment of expences.

THIRDLY. That the duties on West Indian commodities fall altogether on the confumer.

FOURTHLY. That the feveral prohibitory laws which have been made, tending to force the consumption of British West Indian produce Vol. II. Mm

BOOK upon the inhabitants of Great Britain, have vested in the planters a complete monopoly of the British market, at the cost, and to the manifest injury, of the British consumer, who might otherwife purchase sugars, &c. from the foreign islands, 20 or 30 per cent. cheaper than in those of Great Britain.

> FIFTHLY. That from this great disparity of price between British and foreign sugars, the former cannot be made an object of export from Great Britain, by any other means than by granting drawbacks and bounties out of the exchequer; the British exporter being otherwise unable to stand the competition of prices in the foreign market:—a policy, which is pronounced to be dangerous and destructive.

> THE inference which is drawn from these premifes is plainly this, that, confidering the expence of protecting them in war, the fettlement of fugar plantations in the West Indies was improvident and unwife; and that their further extension and improvement would not promote the general interests of the British empire.

> It is probable that thefe, and fimilar notions of the same tendency, but of more extensive application, were originally differinated with no other view, than, by depreciating the value and importance of all colonial fettlements, to reconcile the nation to those rash and inconsiderate proceedings,

proceedings, which terminated in the loss of chap. America. They have had their day; and, like other speculations and endeavours as vain and ineffectual, might have been consigned, without injury, to oblivion. As, however, the manifest aim of such doctrines is to induce the legislature to adopt measures that in their consequences may check and impede the further progress of the colonists in a line of cultivation, in which, under the express encouragement of government, they have already embarked their fortunes, and applied their faculties, it becomes necessary, in a work of this kind, to consider them with some degree of attention.

In might indeed be alledged, and with great truth, that nothing can more clearly expose the nakedness of that doctrine which affects to consider the sugar islands as unprofitable to the nation, than a plain and simple display of the productions which they furnish, the market which they create for our manufactures, and the shipping to which they give employment. And such a display hath already been exhibited in the preceding chapters: but, unfortunately, there prevail many popular prejudices against the colonies, which are difficult to remove, because they are founded not in reason but self-sishness. Opinions thus entrenched, are only to be encountered by

M m 2

recalling

VI.

recalling to the publick attention, such established principles and facts as, being built on experience, neither sophistry can perplex, nor self-interest elude.

In most of the late speculative systems that I have seen, which have treated of the British colonies, there appears this great and sundamental error, that their interests in general are considered as distinct from, and in some respects opposed to, the general interests of the empire. We speak of them indeed as our colonies, and of their inhabitants as our subjects; but in our dealings, we are apt to regard them with a spirit of rivalry or jealously, as an unconnected or hostile people, whose prosperity is our detriment, and whose gain is our loss.

INTIMATIONS to this effect were, I admit, promulgated by very able writers at an early period, concerning new England, and some other of the colonies in North America; but none of those writers ever considered the plantations in the West Indies in the same point of view. They knew that the greatest benefit of colonies, is the production of staple commodities different from those of the mother-country; an advantage almost peculiar to such of our plantations as are situated in the southern latitudes. This necessary distinction seems however to have escaped the no-

tice even of those who admit that the money CHAP. which is vested in the sugar islands, is in fact British property, and that the profits and returns arifing from it, center in Great Britain, and no where else; another advantage peculiar to our West Indian settlements. Yet the truth undoubtedly is, that the fugar planters, generally speaking, are but so many agents or stewards for their creditors and annuitants in the mothercountry; or if, in some few instances, they are independent proprietors themselves, it is in Great Britain alone that their incomes are expended, and their fortunes ultimately vested. The produce of the fugar islands therefore ought, in all reason, to be considered as standing precisely on the fame footing with the produce of the mother-The fugar made in them is raifed by British subjects, and the sale of it (as far as it can answer any profitable purpose to Great Britain) confined to the British market. In the actual confumption of the commodity within the king-Jom, the money which it costs is only transferred from the hand of one inhabitant into that of another: hence, be the price high or low, the nation at large is not one shilling the richer nor the poorer on that account. But, of whatever is confumed at home, the value is faved, and of whatever is exported abroad, and paid for by foreigners, M m 3 the

BOOK the amount is fo much clear gain to the kingvi. dom (b).

> NEITHER ought the national profits arifing from their cultivation, to be estimated, in any degree, by the profits which are made by the feveral individual cultivators. The income which the nation derives from her fugar plantations, comprehends the whole of their produce. income of the cultivators confifts only of the very fmall proportion of that produce which is left to them, after paying duties to government, freights and commissions to the British merchants, and the interest of their debts to British creditors. It is indeed very possible that a concern may be lucrative to the publick, which is ruinous to the individual. That the nation has been benefited in ten thousand ways from her plantations in the West Indies, no man of common sense or com-

(b) It is the practice with some writers, in treating of foreign commerce, to consider every branch of it as unsavourable to the nation, in which the imports are of greater value than the exports; that is, they strike a balance on the custom-house entries, and consider the excess either way, as the measure of the national advantages, or disadvantages, of such a trade. Perhaps the application of this rule to most branches of foreign commerce (rightly so called) is not improper; and it will extend, I am afraid, in a great degree, to our trade with the East Indies; but from what has been said in the text, the reader will perceive the gross absurdity of bringing our intercourse with the West Indies to the same standard; and that our import from, and not export to them, is to be considered as the measure of their value.

mon candour eyer denied, until the motives that CHAP. I have already affigned, gave birth to a contrary pretence; and that many individual proprietors have, at the same time, suffered considerably by adventuring therein, I am afraid it is too notorious to dispute.

Bur the argument that comes more immediately home to the bulk of the community, is the very prevalent idea which I have before flightly noticed, that all the products of the British West Indies, and more especially the great article sugar, are from twenty to thirty per cent. dearer than those of the foreign plantations. Against this circumstance, (if it were well founded) it might feem fufficient to oppose the national benefit arifing generally from the whole fystem; but the confumer, mindful of himfelf only, conceives that he ought to have permission to purchase sugar at the cheapest rate, wherever he can procure it. The refiner, whose aim it is to buy cheap and fell dear, claims the same privilege; to which indeed there would be less objection, if he would confent that another part of his fellow-subjects, the growers of the commodity, should enjoy the fame freedom from commercial restraint which he requires for himself. Unluckily however, the fact itself is altogether destitute of foundation. The existence of such disparity of price, independent of accidental and temporary fluctuations,

Mm 4

BOOK is neither true nor possible, as is demonstrated by the magnitude of the British export, both of raw and refined fugar, for the fupply of foreign markets; it being evident, that foreigners would not refort to our market for the purchase of a commodity, which they might buy cheaper at home (c): Nor do I recollect when it was otherwife.

> (c) Respecting the French sugar islands, I can speak of my own knowledge. Most of their largest planters having adopted the practice of claying, they pay less attention to the manufacture of good muscavado than is given to it in our islands. This latter therefore, being generally of inferior quality, may be fold proportionally cheaper than ours; but whenever it is of equal goodness, the price also is equal, and fometimes higher. Of twelve famples of mufcavado fugar produced to me in Saint Domingo, as of the best quality of fuere brei made in that island, I could not honestly pronounce that any one was well manufactured; and I am perfuaded I could have purchased better sugars in Jamaica at a less price than was asked for those. This was in 1791, foon after the revolt of the flaves, when it might have been supposed that the distresses of the French planters would have compelled them to fell their fugars more reasonably than they had done for feveral years before. In fact, the only datum for afcertaining the relative value of foreign and British sugar, is the price of each at the colonial market; instead of which, the price always referred to, is the price in Europe, after the charges of freight, duty, &c. are added to the original cost. The not attending to this necessary distinction, has probably given rife to the very erroneous idea above noticed, which has occasioned mere ill-will and groundless complaint against the British fugar planter, than any other circumstance. While I am on this fubject it may not be improper to take some notice of the disparity between the profits obtained on their fugar by

of the two nations

those days, we had not only our naval stores, but CHAP. our ships, from our neighbours. Germany furnished us with all things made of metal, even to Wine, paper, linens, and a thousand other things, came from France. Portugal supplied us with fugar. All the products of America were poured into us from Spain; and the Venetians and Genocle retailed to us the commodities of the East Indies, at their own price." The same account is confirmed by Sir Josiah Child. "Portuguese sugar (says this author) before we had plantations of our own, fold for feven and eight pounds sterling the quintal or cwt.;" and it is a remarkable and well known circumstance, after that the cultivation of indigo in Jamaica, was fuppressed by an exorbitant duty of near £.20 the hundred weight, Great Britain was compelled to pay to her rivals and enemies £. 200,000 annually for this commodity, so essential to a great variety of her most important manufactures. At length, the duty being repealed, and a bounty, fome time after, substituted in its place, the provinces of Georgia and South Carolina entered upon, and fucceeding in the culture of this valuable plant, supplied, at a far cheaper rate than the French and Spaniards (receiving too our manufactures in payment) not only the British consumption, but also enabled Great Britain to export a surplus at an advanced price to foreign markets.

IF these writers then were well informed, and the commercial world has thought highly of their industry and knowledge, it would be difficult to prove (though it is eafily faid, and as eafily denied that the fettlement of the British sugar plantation was unwife or improvident; nor will it be found very eafy to point out any other channel in which the money which has been expended in their improvement, could have been applied to greater national benefit. Against advantages of such magnitude and permanence as I have shewn to refult from those colonies, and the various branches of our commerce dependent thereon, neither the lofs to individuals in the plantations, by improvident schemes in the outset, or improper conduct in their subsequent pursuits, nor the temporary inconvenience which is fometimes fuftained by the purchasers and confumers at home, from an occasional advance of price in some few of the colonial products, outweighs in the scale of reason a feather!

I SHALL now proceed to confider those other positions and doctrines which have been advanced concerning the duties that are paid, and the drawbacks that are granted on the products of the British sugar islands, and shall afterwards treat somewhat largely of the monopoly compact, of the privilege which the planters of those islands possess, of supplying exclusively the British confumption

THIRDLY, That the monopoly of supply CHAP. vested in the planters is partial, oppressive, and

I SHALL confider these several positions in the order in which I have placed them. The inveftigation of them is necessary to the completion of my work, and, with a few general observations, will conclude my labours.

Is daily experience did not evince that argument has very little effect on the avarice of government, and the felfish prejudices of individuals, it might be a matter of wonder that the first of these positions (in the full extent to which it is carried) should ever be seriously repeated, after the clear and unanswerable resutation which has been given to it, both in parliament and from the press, a thousand times; and what is more, by fad experience in a thousand instances! So long, however, as it continues to be the language of prejudiced or interested men, it is the duty of the planters to give it attention; and although they may have nothing new to offer on a queftion which has been fo frequently and fully investigated,

duty of L. 1. 7s. 2d. and white or clayed fugar of foreign growth to L. 2. 5 s. 6 d. the cwt; East Indian fugar being ranked among the company's imports as manufactured goods, pays £.37. 16 s. 3 d. per cent. ad valorem. It is all white or

BOOK tigated, they have no reason on that account to be filent; inasmuch as the doctrine itself has not, unfortunately, the grace of novelty to recommend it.

> THE planters then have affirmed, and they repeat, that there is not an axiom in mathematicks more incontestible than this maxim in commerce, that the value of all commodities at market depends entirely on their plenty or scarcity, in proportion to the demand or consumption.—If the quantity at market is not equal to the demand, the feller undoubtedly can, and always does, fix his own price on his goods. On the other hand, when the quantity at market greatly exceeds the vent or demand, then it is out of the feller's power to influence the price, for the plenty will necessarily keep it down in spite of his utmost endeavours to raise it.

> THE truth therefore undoubtedly is, that in the latter case the original cost of the goods, and all subsequent charges thereon, such as freight, warehouse rent, duties and taxes of all kinds, are objects of no concern to the buyer. The quantity, and the quantity alone, regulates the price at market, and augments or diminishes the profits of the feller. If the demand be great, and the quantity finall, the feller has fometimes an opportunity not only of reimburfing himself the original

dly is, that in he goods, and ch as freight, f all kinds, are The quanlates the price hishes the probe great, and fometimes an ng himfelf the original briginal cost, and all subsequent charges and CHAP. duties, but likewise of making great profit befides. Reverse the circumstances, and he finds himself a considerable loser. All this is the neceffary and unavoidable nature of commercial adventure, which is only prosperous as it contrives to feed the market properly; or, in other words, to make the fupply no more than adequate to the demand: Thus the taxes on leather, foap, candles, malt, beer, and spirits, by enhancing the price to, may be faid to fall on, the confumers: for as the manufacturers have it in their power, fo they proportion the fupply to the demand, and bring to market no more than fufficient to answer the confumption, and if, after all, they cannot obtain a living profit, they cease to deal in those commodities.

IT is the same in regard to tea, wines, and other commodities, the growth or manufacture of foreign nations, over whose exports we have no controul. The merchant importer governs his imports by the demand which he computes there will be at the British market for the commodity; and ceases to import such goods as he finds will not yield him a profit, after the duty and all other charges are reimburfed.

But, in the case of articles which the situation and necessities of the owner bring to sale, and for which no other vent can be found, it is impossible Vol. II. Nn that

that any duties or taxes which the commodity may have paid in its way to market, can have any effect on the price; for the price arises from the demand, and the demand from the buyer's wants, which it would be abfurd to fay the laying any duty can create, or the not laying it diminish.-Thus, when wheat is fcarce, the price rifes; and two or three good harvests make it cheap again, without any reference to the land-tax whether it be 3 s. or 4 s. and without any regard to the farmer's expences. Nor will corn afterwards bear a good price, until the flock is leffened by exportation, or otherwise, to such a quantity as is barely sufficient for home consumption. Hops, hay, cyder, and a thousand other commodities, are fubject to the fame rule.

Such too is precifely the fituation of the West Indian planters: they are compelled to send their goods to market, or starve; and (with a sew unprofitable exceptions) there is no market to which they are permitted to resort but that of Great Britain. Their produce therefore, when brought to sale, can obtain no other than its natural price, I mean that price which a greater or less supply necessarily and naturally creates. The consumers of sugar neither care for, nor enquire after, its original cost, or the duties and charges which it has paid in its way to market. The importer however must pay the duties before he

nmodity have any from the r's wants, lying any minish. rifes; and eap again, whether it ard to the afterwards lessened by quantity as tion. Hops, commodities,

n of the West d to send their ith a few unarket to which that of Great when brought an its natural greater or less creates. r, nor enquire es and charges market. The uties before he can

can bring his fugar to fale, for no man will buy CHAP. unless the duty is first cleared; and whether the importer can compet the buyer to refund the whole, or any part of it, by adding it to the price of the commodity, depends altogether, as I have observed, on the quantity at market; it being an absolute contradiction to affirm that great plenty and a high price on the one hand, or on the other, great scarcity and a low price, can exist at one and the same time. That sugar, like other commodities, is fometimes bought up in Great Britain by engroffers on speculation, may be very possible; but this is a traffick in which as neither the planters in the West Indies, nor their factors at home, have any concern, so neither are they answerable for any consequences arising from it.

It is true that, when providential calamities have overtaken the West Indies, the evil has fometimes been remotely felt by the inhabitants of Great Britain. When it pleafed the Almighty to lay waste the sugar islands by a succession of tremendous hurricanes, it was reasonable to expect that the reduced state of their exports, would enhance their value in Europe. It might then perhaps be faid that the confumer of fugar reimbursed in some degree the charges and expences of its culture and transportation, and the duties Nn 2 which

BOOK

which had been levied upon it. It was the natural and only relief (inadequate at the best) which the fugar planters could receive; but if, from some occasional increase of price on such emergencies, they are made subject to permanent burthens, founded on the vain and fallacious idea that, because the consumer has replaced them once, he will replace them again; the devastations of the elements are only the leffer evil.

ADMITTING however that the confumer really does, in a great many cases, pay the duty, or, in other words, that the vender has it very frequently in his power to force his own price; who does not see, as an inevitable consequence, that a decrease in the confumption will soon bring the price back to its level? The products of the West Indies are rather among the luxuries than the necessaries of life, and the great confumption of fugar especially, is with the middle and lower classes of people, who can, and undoubtedly will, lay it afide when reasons of frugality require it. If any one doubts that this will be the effect, let him only enquire of any country grocer as to the fact, at a time when Muscavado sugar, in confequence of the calamities that have been stated, and from captures in war, rose suddenly onefourth in value: he will find that the diminution in the confumption in many parts of the king-

plenty

dom, was in a much greater relative proportion; CHAP.

—a more fatal fymptom cannot attend any branch of commerce.

If the arguments which have thus been stated are not sufficient in themselves to justify the remonstrances which the planters of the West Indies have thought it incumbent on them, from time to time, to urge against the increase of duties, there are facts to be adduced, which must convince the most selfish and incredulous.

The inftance of indigo has been mentioned already; and it cannot be repeated too often.— The planters complained of the duties on that article, as they have fince complained of those on sugar, and they were told then, as they are constantly told in other cases, that the duties fell ultimately on the consumer. Government however at length, by abrogating all the duties, saw, and acknowledged its error; but the remedy was applied too late; for if the duties had either been taken off in time, or if the weight of them had fallen on the consumer, instead of the planter, the cultivation of indigo, beyond all dispute, had never been wrested out of our hands.

CACAO, or chocolate, furnishes another instance of the fatal effects of high duties on importation. Strange as it may seem that an article which our own colonies can raise in the greatest plenty and persection, should be subject to a

higher proportionate duty than the foreign commodity tea (the place of which chocolate or coffee might have supplied;) such however was the case even when the duties on tea were nearly double what they are at present! The consequence was. that whether the duties on cacao fell on the confumer or the planter, the effect on the latter was precifely the same; for if through want of a living profit, the planter could not afford to continue the cultivation; or if, in exacting a living profit, he loft his customers, because they could no longer afford to purchase, his situation became equally distressing; until necessity compelled him to change his fystem, and apply his land and labour to other objects. Thus the growth of cacao, which once constituted the pride of Jamaica, and its principal export, became checked and suppressed beyond the power of recovery. I think I have elsewhere observed, that there is not at this day a fingle cacao plantation, of any extent, from one end of the island to the other.

THE cultivation of ginger succeeded that of cacao, and met with a similar sate: but perhaps the instance of coffee will come more immediately home to the imagination of ministers, because the proof which it affords arises, not from what has been lost by impolitick taxation, but from what has been gained by a prudent reduction of existing duties. In the one case, the lesson it

affords is too mortifying to be acceptable: the CHAP. other they will receive as a compliment to their wisdom. Having however stated the circumstance in a former part of this work (e), it is unneceffary to enlarge upon it here.

From the whole of what has been observed on the question of duties, this conclusion appears to me to be incontrovertible; that in nine cases out of ten, the duties which are paid on the products of the British plantations, fall chiefly (either immediately or eventually) on the colonist in the West Indies, who is commonly the importer, and not on the confumer in Great Britain; - and it is equally certain that, in the tenth case, when the confumer pays them, he ought to pay them; inafmuch as all taxes should in justice press with equal weight on every member of the community, in proportion to his ability to fustain them; of which, in the case of taxable commodities, confumption is the criterion. To this confideration must be added the well-known and established axiom, that taxes paid by the publick at large distribute themselves so equally on the whole, as eventually to raife the price of all other commodities; each man repaying himself for taxes which he pays on other articles, by advancing the price of his own. Let the planters then no longer be

ceeded that of e: but perhaps ore immediately inisters, because not from what ation, but from ent reduction of nse, the lesson it affords

BOOK contemptuously told (for such has been the language of their adversaries) that they have groaned without a grievance. I have shewn that they have been driven, from time to time, by duties accumulated on duties, from the cultivation of one production to another; and if (apprehensive that the few valuable staple commodities which now remain to them are in danger of being facrificed, as others have been, to a system of impolitick taxation) they state their apprehensions to ministers, by a recital of plain facts, and a perfeverance in well grounded complaints, it feems to me they are equally ferving government, and defending their own rights and properties.-Supplies must necessarily be raised; they admit it; but contend that there is a point at which taxation on any particular object must stop, or it will not only defeat its own purpose, but have the effect also of endangering all former duties laid on the same object, by totally destroying its cultivation or manufacture. The subject now naturally leads me to the confideration of drawbacks and bounties, on the re-export of British plantation products, the fecond head of our prefent enquiries; and as the principal of those products is fugar, I thall confine my remarks to that article.

he language of the tax repaid upon

remarks to that

upon the exportation of raw fugar, and the word CHAP. BOUNTY to the money which is paid upon the exportation of what is refined, and exported in loaf unbroken. The word drawback fufficiently expresses its meaning; for (excepting the gain to government by interest, in consequence of having had a deposit of the tax for some time in its hands, and excepting the duty retained on the quantity wasted while the sugar continued in a British port) the original duty paid at importation, is refunded on exportation, without diminution or addition. This at present (including the last duty of 2 s. 8 d. laid in 1791, and declared to be temporary) is 1'5 s. the hundred weight. But as to the bounty, the case was once different. To encourage the refining trade in Great Britain, government gave an actual premium on the export of refined fugar in loaves, in addition to the drawback, and the collective fums fo refunded and paid, amounting together to 26 s. the hundred weight, obtained generally the name of bounty; a name which is still retained, although in fact, fince the last duty was laid, the extra sum which is paid beyond the drawback, is but little, if any thing, more than a compensation for the duty which is paid on the extra quantity of raw sugar expended in producing a given quantity of refined,

refined, and lost by pilferage and waste, between the importation and day of fale, as will prefently be demonstrated (f). HAVING

(f) The statute book denominates that species of refined fugar upon which what is called the bounty is granted, " Sugar in the loaf and whole, being nett." Upon the export of this fort of fugar the bounty was raised by the 5th George III. c. 45. to 14s. 6d. and a further bounty of 11s. 6d. was granted by the 21 George III. c. 16. making together 26 s. per cwt. and so it continues at present. The last bounty of 11 s. 6d. was granted in confequence of an additional duty of 6 s. per cwt. laid in 1781, on raw fugar imported, when Lord North was Chancellor of the Exchequer, who frankly declared that he proposed the aforesaid bounty purposely to remunerate the planters from the import duty, which he admitted they were unable to bear. It is evident however, that the duty is permanent and certain; the relief, temporary and cafual; inafmuch as the export of refined fugar is altogether occasional, depending on the fluctuating state of foreign markets. Should the foreign demand fail, on whom will this additional duty fall but on the planter? This confideration alone is a good reason why the bounty should be more than proportionate to the drawback. Yet when parliament, in 1791, by the 31 George III. c. 15, laid a further duty of 2s. 8 d. per cwt. on raw fugar imported from the British plantations (appropriating the fame, for the term of four years, towards the difcharge of certain exchequer bills) making the import duty 15 s. per cwt. in the whole, no addition was made to the bounty on the export of refined loaf. All that could be obtained was an addition of 3 s. 4 d. to the drawback, on what the statute calls bastards, and ground or powdered Sugar; and also on refined loaf broke into pieces, and all sugar called candy. Upon the export of these species of sugar, the drawback previous to the 31 Geo. III. stood at 11 s. 8 d. only, while the

HAVING thus explained what is meant by the CHAP. terms dawback and bounty, in the case of fugar exported, I shall now endeavour to prove that the repayment of the duties, under either appellation, is not a matter of favour to the colonist or importer, but of rigourous justice, and is founded on a strict and conscientious right which he possesses, and of which he cannot be deprived, fo long as a fense of moral duty, and a regard to equal justice, shall be found among the principles of a free government.

An importer of merchandize either comes voluntarily into our ports, to feek the best market

dutypaid on raw fugar imported was 125. 4 d. and it being but just, that the drawback should at least be equal to the duty paid, 3 s. 4 d. was added in that act; which, with 11 s. 8 d. makes 15 s. per cwt. the precise amount of the import duties paid fince that act took place. The minister who moved the additional duty of 2 s. 8 d. in 1791, proposed also at first to augment the bounty in the usual proportion; but the sugar refiners remonstrated against the measure, as being, they faid, beneficial only to the planters. It is remarkable however, that in the memorial which they prefented on that occasion to the chancellor of the exchequer, they furnish an unanswerable argument in support of an actual bonus on the export from Great Britain of refined fugar; for they admit that a greater proportion of the refined article is now made from muscavado than was formerly produced, owing, they fay, to improvements made by the planters in the raw commodity. As those improvements were not effected but after many costly, and some fruitless, experiments, it seems no way consonant either to justice or reason that the refiners alone should reap the advantages of them, and the planters, who fuftained the risk, fit down quietly under the expence.

BOOK for the fale of his goods; or is compelled to enter them, that the nation may fecure to itself the pre-emption at its own market. If he comes voluntarily, he is apprized of the regulations and duties to which, by the laws of the port, he will be subject; he makes his option, and if he meets with disappointment, has no right to complain; much less to expect a return of the duties which he has paid on importation, in case he shall afterwards find it more to his advantage to re-ship his goods, and try another market. He comes in the spirit of adventure, and as his profits, however great, are wholly his own, if his adventure proves fortunate; so it is but reasonable that he should submit patiently to his loss, if loss is the consequence of his experiment. This conclusion is, I think, too evident to require farther illustration.

> On the other hand, the case of those who are compelled to bring their goods to our ports is widely different. The fugar planter, for instance, is not only obliged to bring his fugar at all times and feafons to a market which perhaps is already overloaded; but to bring it too in British ships, that the mother-country may have the benefit arifing from the freight. On the supposition that the whole may be fold for home confumption, he is furthermore compelled to pay down the duties on the full quantity imported, before he is permitted

ed to enter mitted to fell any part. The home confump- CHAP. o itself the tion is then supplied; and a surplus remains, for comes vowhich a vent offers in a foreign market. The lations and foreign purchaser, however, buys nothing for ort, he will which the people of Great Britain choose to pay if he meets an equal price: they have the first offer, and recomplain; fusal of the whole. Under what pretence then luties which can the British government, whose language it is e shall afterthat all duties are, and ought to be ultimately o re-ship his paid by the confumer, retain the duties on fuch Ie comes in part of the goods as are not purchased for the rofits, howhome supply? The mother-country has already is adventure received the benefit of the freight; has had a able that he preference in the fale of the goods, and obtained if loss is the other mercantile advantages from its importation; is conclusion and the owner has fuffered the inconveniency of rther illustraadvancing a large fum of money for duties on goods which she refuses to purchase, -an inconveniency of no small account, inasmuch as, besides the loss of interest, should the goods perish by fire, he would lose both his goods and the duty(g);

-perhaps, as an interested man, I am not com-(g) Since this work was first published, the author has had reason to speak feelingly on this point. In the month of December 1793, no less than 1,600 hogsheads of sugar, lying in the London warehouses, were consumed by fire, on which there had been paid in duties to government upwards of L. 17,000; all this was a loss to the unfortunate owners, exclusive of the goods. The author's share of this loss was £. 1,200.

petent

those who are our ports is , for instance, ar at all times aps is already British ships, e the benefit pposition that nsumption, he own the duties fore he is per-

mitted

BOOK petent to decide impartially on this question; but to me, it appears that a final retention of the duties here spoken of, would be an outrageous exercise of power, without a shadow of right; a proceeding in the highest degree unjust, fraudulent, and oppressive.

As the foreign market will not bear the addition of the English duty, fifteen shillings per cwt. if the money is not refunded, are taken from the colonist, for having, against his will, and at a great expence of freightage, fent his fugar circuitously through Great Britain. Such an extortion for passing through a market to which he does not voluntarily refort, is virtually fixing a forced price upon the commodity; and to do this, or by force to take the commodity from him, without giving any price for it,-what is it but an act of the same nature, differing only in degrees of violence?—The plea of necessity is not applicable to the case; the object not being, as in the case of corn, a necessary but a luxury of life; and the colonists, to whom it belongs, have no share in the power of regulating, if regulations are to be made concerning it.

Ir it be urged that foreigners have otherwise the advantage of fometimes buying British plantation fugar on cheaper terms than the people of Great Britain, it is answered that this is a circum-

stance for which the planter is no way responsible, CHAP. and in truth it is in itself but little to be regarded; fince whenever it happens, the national gain is fo much the greater; because the kingdom profits much more by the quantity purchased, and paid for in money by foreigners, than it would have done, if the same quantity had been consumed at home.—Government has no means in this case of taxing the confumption of foreign nations, for if the duty be added to the price of the commodity, the foreign demand is at an end (1).

HITHERTO,

(h) Since the foregoing was written, an act of the British legislature has passed, intituled, " An Act for regulating the "allowance of the drawback, and payment of the bounty on " the exportation of fugar, and for permitting the importation " of fugar and coffee into the Bahama and Bermuda islands "in foreign ships." Concerning the latter part of the act, as the foreign fugar and coffee are not to be confumed in Great Britain, but put en depot in warehouses until re-exported, the planters of the Britisis West Indies have no right to object to its provisions; but with regard to the regulations of the drawback, &c. the case is widely different. By this law it is enacted that " after the year 1792, whenever the average of the prices of brown or muscavado fugar (to be taken weekly upon oath before the Lord Mayor of London, and publiflied in the Gazette) shall exceed, in the fix weeks which respeclively precede the middle of February, June, and October, the amount of fifty shillings per cwt. (exclusive of the duty) the drawback on raw fugar exported is immediately to cease or four months, and the bounty on refined is to cease during like term, but commencing after an interval of one month."

Such

HITHERTO, I have spoken of the drawback on raw sugar only. I am now to shew that my observations apply equally to that which is refined; by proving that what is called the bounty, is but little more than merely a modification of the drawback; the money allowed beyond the original duty being an allowance not more than adequate to the loss of weight in the raw commodity for which the full duties have been paid by the importer, and the loss of interest thereon, between the time of the payment thereof, and the time of the receipt of the bounty.

THE proportions of refined fugar &c. procured by melting 112 lbs. of raw fugar, have been afcertained

Such is the outline of this act, on which what I have already faid in the text, is perhaps a fufficient comment; yet it may not be improper to take fome notice of the great argument which was urged in support of the measure in the House of Commons; namely, that it was formed on the model of the corn trade fystem. But the corn trade laws, though designed to reduce prices, are also contrived to encourage production. They therefore check exportation when the prices are high, and give a bounty on exportation when the prices are low. If the fugar bill had been formed on the fame principle, and had been meant to keep the price of the commodity at a fair medium between the publick and the planter, it would have reduced the bounty when above the standard, and either raifed the bounty, or taken off the home duty when below it in fuch proportions as to keep the balance even. In its prefent shape the act operates wholly against the planters.

ing

On

Duty

So the from the more. I fiderably before it by the puthe duty the cafks

Vol. I

tertained by the committee of London refiners as CHAP. follows; viz.

Refined fugar in loaves	and	İun	ı p s	-	lbs. 56 - 5
Bastard or ground sugar Melasses or treacle	r -	-	-	-	22 30
Scum and dirt	-	-	-	÷	28 15
	•	•	-	-	4 20
					-
Phy					112 lbs.

The bounty and drawback therefore, according to this calculation, will stand as follows; viz.

	17. VIV.
On loaf fugar - lbs baftards -	£. s. d. $56\frac{s}{20}$ - at 26 s. — 13 — $\frac{1}{4}$ $22\frac{s}{20}$ - at 15 s. — 2 11 $\frac{1}{4}$
Duty paid	——————————————————————————————————————
	Difference 1 -

So that the apparent loss to the revenue arising from the bounty is one shilling the cwt. and no more. But as every hogshead of sugar loses considerably in weight, after the duty is paid, and before it is either exported or worked up, and as by the present strict regulations respecting tare, the duty is frequently paid for more fugar than the casks really contain, it is but a moderate cal-Vol. II. culation

BOOK culation to fay that every hogshead (taking good fugars and bad together) lofes 56 lbs. which at 15 s. per cwt: the import duty, makes 7s. 6d. per hogshead loss to the planter, and a clear and certain gain to the revenue, let the fugar be difposed of as it may. Thus therefore is government reimburfed for a confiderable part of what it appears to lofe by the bounty, and the interest which it gains by a deposit of the whole duties on importation, makes up the remainder. average annual import of raw fugar is about 160,000 hogsheads of 12 cwt. nett: now supposing every ounce of this was to be exported, and receive the drawback of 15 s. per cwt. yet from the difference of weight alone in the same sugar, occasioned by an unavoidable waste, government would have received in duties, from this fingle article, between 50 and f. 60,000 per annum more than it refunds in drawbacks and bounties on the farne commodity.

THE above is a plain statement of facts concerning the drawbacks and bounties allowed by government on the export of fugar from Great Britain .- Of the fystem at large, or general practice of allowing the duties on the home confumption, to be drawn back on the export of goods to foreign markets, enough has been faid by other writers.—If it be true, as it is generally allowed to be, that Great Britain by this mean

establishes between her plantations and foreign countries, an advantageous carrying trade, the profits of which center in herself, she has no just reason to repine at the encouragement which is thus given to foreigners to refort to her markets. It is paying money with one hand, to receive it back, in a different shape perhaps, but in more than a tenfold proportion, with the other; and no considerate statesman will easily be persuaded to think such a system improvident and prejudicial (i).

IAM

(i) Thus, in a tract by William Penn, intituled "The Benefit of Plantations or Colonies," that celebrated legislator expresses himself in the following terms:

"I deny the vulgar opinion against plantations, that they "weaken England; they have manifestly enriched, and fo "frengthened her, which I briefly evidence thus: First, "those that go into a foreign plantation, their industry there, " is worth more than if they stayed at home, the product of "their labour being in commodities of a fuperior nature to "those of this country: for instance, what is an improved " acre in Jamaica or Barbadoes worth to an improved acre in "England? We know it is three times the value, and the "product of it comes for England, and is usually paid for in "English growth and manufacture. Nay, Virginia snews, "that an ordinary industry in one man produces three thou-" fand pounds weight of tobacco, and twenty barrels of corn "yearly: he feeds himself, and brings as much of the "commodity into England befides, as being returned in the "growth and workmanship of this country, is much more "than he could have spent here: Let it also be remembered, "that the three thousand weight of tobacco brings in two " thousand 002

The

in by this mean establishe

I AM now brought to the third ground of objection; comprehending a subject of wider extent and more important consideration, than either of those which I have discussed in this chapter; and

"thousand two-pences by way of custom to the king, which makes twenty-five pounds; an extraordinary profit. Se"couldy, more being produced and imported than we can spend here,
we export it to other countries in Europe, which brings in money,
or the growth of those countries, which is the same thing; and this
is the advantage of the English merchants and seamen."

To the same purport writes Doctor Charles Davenant, who, if I militake not, held the very fame employment of Inspector of the exports and imports which is now exercifed with tuch Superior ability by Mr. Irving. " By whatever the returns (meaning the returns from our own plantations) are worth (faid Dr. Davenant) beyond the goods exported thither, the nation is, by so much, a gainer. There is a limited stock of our own product to carry out, beyond which there is no passing. As for example, there is such a quantity of woollen manufacture, lead, tin, &c. which, over and above our own confumption, we can export abroad; and there is likewise a limited quantity of these goods which foreign consumption will not exceed. Now, if our expenditure of foreign materials be above this, and more than our own product will fetch, for the overplus we should be forced to go to market with money, which would quickly drain us, if we did not help ourselves other ways, which are, by exchanging our plantation geods for their materials," &c. In another place, Davenant states the imports from all the plantations at the Revolution at £. 950,000 per annum, " whereof (faith he) £.350,000 being confumed at home, is about equal to our exports this ther, and the remainder, viz. f. 600,000 being re-exported, is the national gain by that trade."

To the foregoing authorities might likewife be added those of the honest and intelligent Joshua Gee, and the learned and accurate Doctor John Campbell; but perhaps, to a common understanding.

wile be added those and the learned and haps, to a common understanding,

on which, prejudice, self-interest, ignorance, and CHAP. misinformation, have jointly contributed to throw a veil of obscurity; I mean the privilege which is vested in the planters of the British West Indies, of supplying the British market with their chief staple commodities, in exclusion of foreigners; the high duties on foreign fugars, and fome other products of the West Indies, operating (as they were meant to do) so as to prohibit their impor-

THE leading principle of colonization in all the maritime states of Europe, Great Britain among the rest, was, as I have elsewhere observed, commercial monopoly. The word monopoly, in this case, admitted a very extensive interpretation. It comprehended the monopoly of supply, the mo-

nopoly understanding, the conclusion is too clear and felf-evident to require illustration or authority; namely, that the export from Great Britain to foreign markets of her colonial products, is just as beneficial to the British trade as the export of corn, or any other production of the mother-country, and equally encreases the balance of trade in her favour. I thall therefore only observe further, that the export of fugar alone from this kingdom for the supply of the foreign European markets during the years 1790 and 1791, was 277,656 cwt. of raw, and 278,391 cwt. of refined, which, at the rate of 45s. per cwt. for the raw, and of 90 s. per cwt. for the refined, added £. 1,600,000 sterling to the balance of trade in favour of the mother-country, and mabled her to pay more than one-half the fum which is annually drawn out of the kingdom for the interest or divilends of money lodged by foreigners in the British funds,

BOOK nopoly of colonial produce, and the monopoly of manufacture. By the first, the colonists were prohibited from reforting to foreign markets for the fupply of their wants; by the fecond, they were compelled to bring their chief staple commodities to the mother-country alone; and by the third, to bring them to her in a raw or unmanufactured state, that her own manufacturers might fecure to themselves all the advantages ariting from their further improvement. This latter principle was carried fo far in the colonial fyftem of Great Britain, as to induce the late earl of Chatham to declare in parliament, that the British colonists in America had no right to manufacture even a nail for a horse-shoe.

As a compensation for these restrictions and prohibitions on the colonies of Great Britain, to favour the navigation, revenues, manufactures, and inhabitants of the mother-country, the colonists became possessed of certain commercial advantages; among others, of the privilege beforementioned—the subject of our present discussion -that of an exclusive access to the British market for the fale of their produce. Thus the benefits were reciprocal; and each country, Great Britain and her colonies, became a permanent staple, or mart, for the products and trade of the other.

To double monous, Great Britain, Great Britain,

in the plenitude of her imperial capacity, thought c n A P. fit, to establish. It was the basis of her commercial intercourse with her trans-atlantick plantations, and the terms it herfelf a fystem of "correspondence and kindness (k)." Whether it was an arrangement founded in wifdom and found policy, it is now too late to enquire. It has existed, it has been confirmed, it has been admired, it has been imitated; and the colonists have embarked their fortunes upon the faith of All therefore that remains, is to point out the value and importance of the colonial contribution. It is prefumed that nothing more than this, is necessary to demonstrate that, if there is any fecurity in the national faith, folemnly pledged and repeatedly ratified, the fystem is become a fixed and permanent compact; which cannot now be violated by either party, without the fullest compensation to the other, but on principles which, if admitted, may ferve to justify a departure from the ordinary rules of justice on any occasion.

First then, as to the monopoly exercised by Great Britain of supplying their wants:—The colonists are prohibited from purchasing of foreigners, not only those articles which Creat Britain can supply from her own resources, but also

(k) Preamble to the 15 C. II. Ch. 7.

O 0 4

many

vı.

BOOK many which she is herself obliged to purchase from foreigners. Thus a double voyage is rendered necessary, that Great Britain may benefit by the freightage; the expence of which, and all other profits, being added to the cost of the goods, the extra price which the colonists pay is clearly fo much profit to her, and loss to them. The commodities, which the British colonies in the West Indies might purchase on cheaper terms than at the British market, are various. Indian Goods, including tea, might at all times have been obtained from Holland, and of late may be bought very reasonably in America (1). Germany would fupply the coarfer linens, an article of vast consumption in negro clothing, and France would furnish soap and candles, silk manufactures of all kinds, cambricks, wines, and a thousand other articles of less importance. From the United States of America also might be obtained bar and pig-iron, falted beef and pork, falted and pickled fish, train and spermaceti oil, and some few manufactures, as beaver hats, and spermaceti candles, &c. (m). All these are arti-

cles of vast confumption, and are now supplied CHAP. exclusively by Great Britain and her dependencies to an immense amount, and in British vessels c ly; and fo rigidly have the laws of navigation been enforced by the mother-country, that not only the convenience and necessities of the colonics have given way to them, but a dreadful facrifice has even been made to the fystem, of the lives of 15,000 of their miscrable negroes, as the reader has elsewhere been informed!

On the fame principle, to increase the shipping and naval power of the mother-country, the colonists are not permitted, even in time of war, to avail themselves of the cheapness and security of neutral bottoms, in fending their produce to the British-market. By this second monopoly, Great Britain has secured to herself a preference of the whole world in the fale of their staple commodities, and is thus rendered independent of those nations from whom she was formerly supplied, (as the Portuguese for instance, who had the original monopoly of fugar) and over whose exports she has no controul. That this is an advantage of no fmall account, appears from the following circumstance recorded by the author of an Inquiry into the Wealth of Nations. " About the beginning of the prefent century (fays that writer) the pitch and tar company of Sweden endeavoured to raise the price of their commodities

воок dities to Great Britain, by prohibiting their exportation, except in their own ships, at their own price, and in fuch quantities as they thought proper. It is furely unnecessary to observe, that no fuch felfish policy can at any time be displayed by the fubordinate and dependent governments of the colonies.

> Bur the circumstance that presses with the greatest weight on the British planters in the West Indies, is that branch of the monopoly, which, referving for the manufacturers in Great Britain, all fuch improvements as the colonial produce is capable of receiving beyond its raw state, or first stage of manufacture, prohibits the colonists from refining their great staple commodity (fugar) for exportation. This is effected by the heavy duty of f.4. 18s. 8 d. the cwt. on all refined or loaf fugar imported, while raw or muscavado pays only 15s. The difference operates (as it was intended) as a complete prohibition. "To prohibit a great body of people (fays the author before quoted) (n) from making all they can of every part of their own produce, or from employing their stock and industry in the way that they judge most advantageous to themselves, is a manifest violation of the most facred rights of mankind." To this violation however the West Indian planters have

hitherto

hitherto fubmitted without a murmur, confidering CHAP. it as one of the conditions of the compact, or reciprocal monopoly.

THE great hardship on the planters in this case is, that the loss to them by the prohibition, is far more than proportionate to the gain acquired by Great Britain. As this circumstance is not fully understood, the subject not having, to my knowledge, been discussed in any of the publications that have treated of colonial commerce, I shall point out a few of the many advantages of which the planters are deprived by this restriction.

THE first advantage would be an entire faving of the loss which is now fustained in the quantity of raw fugar, between the time of shipping in the West Indies, and the day of sale in Great Britain, arising chiefly from unavoidable waste at sea by drainage. To ascertain this loss with all possible exactness, I have compared in a great many instances, the invoice weights taken at the time of shipping, with the sale weights of the same goods in the merchants' books in London; and I will venture to fix the loss, on the average of good and bad fugar, at one-eighth part: in other words, a hogshead of sugar weighing nett 16 cwt. when shipped in Jamaica, shall, when sold in London, be found to weigh 14 cwt. only. The difference therefore is a dead loss both to the publick and the

VI.

BOOK the planter. The former lose the use of two hundred pounds weight of fugar, and the latter, is deprived of its value, which, at 40 s. per cwt. may be stated at f. 3. 6 s. per hogshead, the merchant's charges deducted.

> Bur this circumstance requires further illustration. The quantity of raw or muscavado sugar imported into Great Britain, on an average of four years, (1787 to 1790, both inclusive) was somewhat more than 140,000 hogsheads of 14 cwt. at the King's beam. The drainage at fea amounted therefore to 280,000 cwt. being in value f. 560,000 fterling.—Such is the loss to the publick; and let it be remembered, that this loss is not merely contingent or possible, but plain, positive, and certain; it being as undeniably true, that 280,000 cwt. or 14,000 ton, of fugar was funk into the sea, in the transportation of 140,000 hogsheads of the raw commodity, as that this number was imported into Great Britain; and it is equally certain, that every ounce of it would have been faved, if the planters had been permitted to refine the commodity in the colonies. consequent loss to the revenue is easily calculated.

> Concerning the planter however, other circumstances are to be taken into the account; for in this case he has a right to reckon not only on what he positively lost in the first instance, but

alfo,

age of four was someof 14 cwt. amounted £.560,000 blick; and not merely sitive, and at 280,000 k into the hogsheads umber was t is equally have been rmitted to nies. afily calcu-

, other circcount; for not only on stance, but alfo,

also, on what he might probably have gained CHAP. under a different fystem of regulations. I have stated his actual loss (the merchant's charges deducted) at £. 3. 6 s. per hogshead; but another and a very confiderable lofs, is the melaffes, of which 112 lbs. of raw fugar yield in the London refinery 28; lbs.: I will fay 28 lbs. only. this proportion, a hogshead of raw sugar at the shipping weight (16 cwt.) would, if refined in the colonies, yield the planter 448 lbs. being equal to 64 gallons. This, valued at 9 d. sterling per gallon, gives £.2. 8s. It will be faid perhaps that the British refiner includes the value of the melasses produced in the refinery, in the estimate of his profits, and is thereby enabled to give a larger price for raw fugar to the planter, who thus receives payment for the article faid to be loft. It must be remembered, however, that the fugarplanter in the British West Indies is his own distiller; and having the necessary buildings, stills, &c. already provided, would convert this melaffes into rum, without any additional expence; and by this means add to its value fomewhat more than one-third. This additional value therefore would be clear profit. Thus, allowing 64 gallons of melasses to produce only 40 gallons of rum of the Jamaica proof, these, at 15. 10 d. sterling the gallon, would yield f. 3. 13s. 4d.: from which the original melasses being deducted, there will remain

BOOK remain f. 1. 5 s. 4 d. which may therefore be estimated as the loss now sustained by the planter in the article of melafles, on every hoghead of muscavado sugar shipped to Great Britain, exclusive of the loss in the raw material before stated.

> To the foregoing might perhaps be added the faving of freight, on the difference between the weight of raw and refined fugar; but I will reckon nothing on this account, because I am of opinion that any given quantity of refined fugar made into loaves, though less in weight, will nevertheless occupy more space than the full quantity of raw fugar from which it is made. It is therefore reasonable to suppose, that the price of freight would be advanced in proportion; a circumstance which ought to obviate all manner of objection to the fystem, from the owners of ships employed in its transportation.

> But the great and decifive advantage that would accrue to the planter from refining his own fugar in the colonies, arifes from the circumstance that his capital, or flock, is already provided to his hands; without which the favings that have been stated would avail him but little. I mean, not only that he possesses the raw material, but alfo, that the buildings and apparatus of all kinds which are requifite for the manufacture of muscavado fugar, are, with a very fmall addition, all

vantage that ining his own circumftance y provided to ngs that have ttle. I mean, material, but us of all kinds cture of muf-ll addition, all

that are wanted for the business of refining (o). The necessary additions on each plantation would confift chiefly of a drying-house, provided with floves for baking the loaves, and an annual supply of earthern veffels or moulds in which the loaves are formed; with the further provision of negro labourers to be employed folely in the branch of the manufacture. The whole must be proportioned to the extent of the property. have endeavoured to ascertain some rule for judging of this with as much precision as the fubject will admit, and, without perplexing the reader with a variety of dry calculations, will obferve generally, that an allowance of forty shillings fterling for each hoghead of mufcavado fugar, I find to be abundantly liberal. This fum therefore I shall deduct from the difference of price at the British market between raw and refined fugar, which otherwise would be so much clear profit to the planter. The English refiner

(o) The planters of Jamaica frequently refine fugar for domeftick use, and I have seen it done in as great perfection as in London. In St. Domingo a process has been discovered of refining muscavado with the juice of limes and lemons. A refiner from thence of the name of Millet came to Jamaica in 1790, and introduced this practice with great success. I saw myself refined sugar made by him at Hyde Hall plantation in Trelawny, with no other material than the juice of limes and Seville oranges, which for transparency and elegance surpassed the finest treble refined produced by the London refiners.

not

BOOK not having the fame advantages, has to deduct the interest of a much larger proportionate capital and far greater expences in conducting the manu-Now 112 lbs. of raw fugar fold in London may be reckoned, when the prices are favourable, to yield the planter clear of all charges f. 1. 13s. The fame quantity refined, would yield of loaves and bastards to the value of f. 2. 1 s. 5d. exclusive of the melasses. The difference is 8 s. 5 d. per hundred weight, or f. 5. '17 s. 10 d. the hogshead of 14'cwt. Deduct from this the extra expence of refining in the colony (40 s. per hogshead) there remains f. 3. 17 s. 10 d. which being added to the former fums, it will be found that the whole loss suftained by the planter for the fake of the British refinery, is not less than £. 8. 9 s. 2 d. sterling on every hogshead of his sugar of 16 cwt. which he fends to the English market, amounting on 140,000 hogsheads to the prodigious sum of f. 1,184,166. 13 s. 4 d. sterling money! Perhaps the circumstance may come more immediately home to the reader, by shewing how this los affects an individual. For instance, the average returns of Mr. Beckford's plantations are, if I mistake not, about two thousand hogsheads of fugar annually. He fuftains therefore a loss of £. 16,916. 13 s. 4 d. per annum, that the British

British refiners may get about one-third of the CHAP.

IT is however to be remembered, that the preceding calculations are founded on the supposition that leave was granted to import refined fugar into Great Britain, from the British colonies, at the duties which are now paid on raw or muscavado. I am apprized that the revenue would, in that case, sustain a loss proportionate to the diminution in the quantity of fugar imported, unless it was (as undoubtedly it would be) made up by an adequate increase of the duties on the improved commodity. With every allowance however on this account (as well as for an increased rate of freight) the planter's profits would be sufficiently great; and, in truth, refined fugar imported from the colonies, would afford to bear a much heavier duty than merely fuch a rateable contribution; fo that the revenue would not be injured, but greatly improved, by its importation, while the publick at large would obtain fugar in its best state much cheaper than they obtain it at present (p).

THUS

(p) It is not my business to seek out resources for increasing the publick revenue, but as a matter of curiofity, I beg leave to subjoin the following facts: The quantity of raw or muscavado sugar imported from the British plantations into Great Britain in the year 1787, was 1,926,121 cwt. and the gross duty paid thereon was £. 1,187,774. 12 s. 8d. If this

this fugar had been kept to be refined in the plantations, it would have been one-eighth more in quantity; that proportion having been loft at fea by drainage. This would have made 2,166,886 cwt. which according to the computation of the London refiners, would have yielded 1,083,443 cwt. of loaf, and 425,638 cwt. of baftards (excluding fractions.) Now supposing the ôthy on loaf sugar had been only to sper cwt. more than the present duty on muscavado (which it would have well afforded) and the bastard sugar to have continued at 15s per cwt. the British revenue in that case would have received as follows: (both the publick and the planter being at the same time benefited in a high degree) viz.

e planters of the in, in supporting ate body of peonever the casualve overtaken the ry advance in the raise a clamour against modities. It is monopoly for monopoly; an arrangement not framed by the colonies, but by the mother-country herself, who has suffered it to grow facred by time, has recognized it by a multitude of laws, and enforced it by stricter ties and recent provisions. Well, therefore, did a great

CHAP.

against the monopoly of supply enjoyed by the planters, themselves at the same time possessing the monopoly which I have described! It may not be usetess to add, that those people are, in a proportion unknown in any other branch of trade, foreigners; who live in the most frugal way in England (about one thousand in the whole) and retire with their favings to their own country. There are few operations more fimple, or which require a lefs expensive apparatus, than that of refining fugar. Can it then be just or reasonable to facrifice to a manufacture, thus subordinate in its nature and limited in its extent, the effential interests of 65,000 British fubjects in the West Indies, and half a million of money, which is now annually loft to Great Britain, that this manufacture may be supported? It is remarkable that the same observation occurred to Davenant, who wrote foon after the revolution in 1688. Speaking of the impropriety of laying heavy duties on the produce of the British West Indies, he proceeds in these words: " And here it may not be improper to take notice particularly, of the high imposition laid upon refined fugars imported hither, upon a wrong notion of advancing our manufactures, whereas in truth it only turns to the account of about fifty families (for the refiners of England are no more) and is greatly prejudicial, and a bar to the industry of at least 14,000 persons, which are about the number of those who inhabit our islands producing fugar." (Davenant, Discourse 3, or the Plantation Trade.) What would this author have faid, had he known the fact which I have flated above? P p 2

BOOK great statesinan (q) observe, "that it was a compact more folemn than any that an act of parliament could create;" and when speculative men affert, and interested men complain, that a com-. pact thus founded and supported is at this time not sufficiently favourable to Great Britain; the answer is obvious: If Great Britain regrets its operation and wishes to dissolve it, let her first make compensation to the colonists for all that they have undertaken, and the facrifice they have made, under it; and next, when the releases herfelf from all future obligation to observe it, let the release be reciprocal; extending equally to one party and the other. This done, the colonists will have no cause to accuse her of injustice, -but this not done, they will affert that the has violated her faith with them; that her conduct is oppressive and fraudulent; and her statutes fnares to the unwary.

> In the mean time, it is impossible not to consider as exceedingly partial and unjust, those clamours and attempts by which, on any temporary advance in the prices of West Indian products, the publick discontent is pointed towards the inhabitants of our fugar iflands. They are partial, inasmuch as their authors consider the burthens and wants of the confumers on one fide, without ad-

verting to the burthens and diffreffes of the colo- C HAP. nists on the other. They are unjust, as their manifest aim is to extend to rivals and foreigners, whose trade is not subject to be controuled by British laws, those advantages which have been purchased by, and stand exclusively pledged to, the British West Indies, whose trade is still to be left bound by our regulations,—At this juncture indeed, now that the largeness of the exportation has demonstrated, that no foreign colonies in the West Indies can supply us with sugar, cheaper than our own, another project, of more fatal and extensive mischief, is resorted to; and the national attention is awakened by the hopes of a vast and profitable sugar culture, under the softering protection of government, in the boundless regions of the East Indies. Those plantations which have hitherto proved more than adequate to our wants; which from proximity and infular fituation, are eafily defended; which enrich our manufacturers, encourage our fiftieries, and return all their acquirements into the bosom of their alienated parent, are it feems to be neglected, and the national encouragement diverted to diftant independent countries, whole inhabitants purchase but sew of our commodities, and confume none of our fish, but take bullion instead of them; who rather fend manufactures to our markets, than receive them from us; and whose

P p 3

BOOK exports may be checked and controlled by a thousand accidents which, at this distance, can neither be obviated nor foreseen. In short, by recommending the fettlement of fugar plantations beyond the Cape of Good Hope, this project maintains that it is wife to remove encouragement from proximate and dependent colonies, to countries which, being placed beyond the reach of civil regulations from hence, can be governed only by the fword, and which, at no very remote period, may regain their independence;when however it will be too late to refort back to our ruined and deferted colonies in the West Indies!

> If the reader imagines that the intention of this scheme is to open a sugar trade with the East Indies, to British subjects without distinction, it is necessary he should be informed that nothing is farther from the thoughts of its advocates and promoters. Their aim is to transfer the monopoly of the West Indies, to the monopolists of the East; being well apprized that a great importation of fugar, for a few years, from India, would effectually stop the cultivation of this article in the British colonies, after which the market would be their own; and the fupply, as in the case of all other articles of foreign growth, be encreased or diminished, as the interest of the importer, not of the publick, should regulate and direct.

For myself, I am unwilling to believe that the CHAP. British government has at any time meditated intentional injury towards the fugar islands; and therefore cannot be perfuaded that fuch a project will ever receive the fanction and support of administration. The planters however, judging of the future by the past, have abundant cause for anxiety and alarm; and if it were permitted to an uncourtly West Indian to expostulate, freely and explicitly, with the king's ministers on the treatment which those colonies have experienced from the mother-country, during the last twenty years, and on the danger to be dreaded from in-. novation, he might display a statement of facts, -unpleasant indeed to hear, -but extremely difficult to controvert or clude. Such a person might, without any deviation from truth, present them with a detail not unlike the following (r):

fufferings of those colonies which fell under the dominion of France were very great; and that at the conclusion of the war, such of the planters as furvived the vexations of the enemy, and were not actually bankrupts in their fortunes, as a great many were, were reduced to embarraffments nearly approaching to it. For the honour of the

" It is well known (he might fay) that the

tions of one kind or another. The first measure CHAP. by which they were annoyed, arose in the policy of the state. It was thought necessary to disfolve their connexion with the continent of North America. The confequence of which was, that Jamaica, being deprived of its produce of negro provisions by a series of tempests and unfavourable seasons, lost fifteen thousand of her

flaves by famine. And yet you talk of humanity

as if it were a national virtue!

" WHAT fince has been the disposition of Great Britain towards us, may be learnt from the popular conversation at this day, from the conduct of large bodies affociated for the abolition of the flave-trade, and ultimately of flavery itself; from the establishments projected and in execution, on the coast of Africa, with views declaredly hostile to our interests; from the numbers of inflammatory paragraphs and calumnious pamphlets that daily iffue from the press to prejudice the West Indian planters in the publick opinion; from the indefatigable circulation of addresses, exhorting the people to the difuse of West Indian fugar; and lastly, from various proposals with respect to the reduction of the price of the commodity. In so many shapes does this spirit manifest itself, as to give just grounds to conclude, that fomething like a decided purpose is entertained for the total ruin of the fugar colonies, and that

y of 1782 to North o the fugar

from that with vexations

BOOK that the vexations we have hitherto experienced. are only preliminaries to the fystem which is to be confummated by the grand measure of raising up rivals to our monopoly in your establishments in the east.

> " It has been imputed as a reproach to the fugar colonies, that they are expensive, and that they engage you in war. Never were the West Indian colonies the cause of war; but whenever the two nations of France and England are engaged in any quarrel, from whatever cause it may arife, thither they repair to decide their differ-They are made the theatre of war; they are the victims, but never the origin of the conteft. The inhabitants of the French and English islands live in an habitual intercourse of good offices, and would wish for eternal peace; and they have reason for it, for what are they to gain by war?

> "WHEN therefore we reflect upon the various means which have been employed to prejudice the West Indian planters, we find ourselves totally at a loss to conjecture what it is that could excite so much acrimony against us; as there exists none of those causes, which usually provoke the envy of men, and exasperate their malignity. West Indians are not remarkable (with very few exceptions) either for their gigantick opulence, or an oftentatious display of it. They do not emerge

(with very few ck opulence, or do not emerge rapidly rapidly from poverty and infignificance into con- CHAP. spicuous notice. Such of them as possess fortunes of diffinguished magnitude, as some gentlemen of Jamaica are happy enough to do, are not the creation of a day. Their names are to be found in the earliest records of the island, and their adventures were coval with the first establishment of the colony, and of course their properties, such as we now find them, are the fruits of the toil of fuccessive generations. Many there are indeed who have competencies that enable them to live, with occonomy, in this country; but the great mass of planters are men of oppressed fortunes, configned by debt to unremitting drudgery in the colonies, with a hope, which eternally mocks their grasp, of happier days, and a release from their embarrassments. Such times as we have lately feen, if fuffered to continue, might possibly have given effect to their exertions, and have lifted them out of their diffresses. But it feems that poverty is confidered as the legitimate heritage of every West Indian planter. They may encounter loss, and struggle with adverfity; but never are they to profit of contingencies that may enable them to repair the difafters of adverse fortune, to which they are peculiarly subjected by their position.

" IF the minister means the ruin of the West Indian colonies, he may effect it by promoting the extensive

BOOK VI.

extensive cultivation of the sugar-cane in the East Indies, with a view to the supply of any part of the European market; and we have only equity to oppose to power, for we cannot repel injury. Murmurs would be unavailing, and our refentments impotent; but it would be a base desertion of interest, to suffer ourselves to be intimidated into a voluntary furrender of right. We protest therefore against any innovation, and adhere to the fystem of double monopoly: there we are at anchor; and if there is no fecurity any where against the storms and afflictions of Providence, so neither is there against the injustice of men; but we shall at least have the consolation of not fuffering the reproaches of our own bofoms, or of leaving accusers in our posterity!"

To fuch a remonstrance as the foregoing, respectfully but firmly delivered, it is difficult to fay, what reply could be given. If, however, it is not the wish or intention of government to violate the national faith with the colonies, by depriving them of their monopoly, their apprehenfions on that head may be eafily removed. this important business satisfaction being given, to the rest, if candour were to dictate an answer, although much must be admitted, much too might be faid, and honeftly faid, to foften and conciliate. It may be urged that, however harsh and unkind the conduct of the mother-country has occafionally

fionally been thought, the colonies ought not to CHAP. forget that they are indebted to her for all that they posses; their birth and origin, laws, government, religion and liberty; deriving from her parental folicitude and powerful protection, every circumstance that renders them prosperous in themselves, and enviable to others. If, during the fatal and destructive war which terminated in the difmemberment of the empire, they had their share—perhaps more than their share—of the general calamity, they will not forget that all of them that had fuffered by capture (Tobago excepted) were restored by the peace to the blesfings of a British constitution and government. Perhaps, fince that time, a more liberal policy, a more generous freedom, might in some points have been wished and expected; but it should be remembered, that they enjoy, and have long enjoyed, as a compensation for commercial restraint, the privilege of the British market, and the benefit of the British capital. They possess too, every characteristick mark of a free people in their internal concerns. They are taxed folely by their own reprefentatives, and have not only the image, but the substance also, of an English conflitution. This whole state of commercial fervitude and civil liberty (as a great writer (s) hath well observed) taken together, though certainly (s) Mr. Burke.

not

BOOK VI. not perfect freedom, yet comparing it with the ordinary circumstances of human nature, may be pronounced a happy and a liberal condition.

To the candid and ingenuous, I trust I need not offer any apology for thus having fuggefted confiderations, which may tend to obviate misapprehenfions, remove prejudices, and mitigate anger between those, who though divided by local fituation, are allied to each other by the dearest ties of interest, affection, and confanguinity. I have thought this the more necessary, as it appears, by the bitterness and acrimony with which some men speak of the fugar colonies, that their aim is to instigate the national refentment, and heighten the publick animofity towards them. Instead of maniteffing a disposition, "fond to spread friendships and to cover heats," these gentlemen seem to me to exert their talents in mifrepresentations, which can answer no other end than to set the remaining parts of the empire at variance with each other. I look not in this place to any of those fanatical writings on flavery and the flave trade, which, equally difgraceful to humanity and letters, propagate the most daring and outrageous falsehoods' without scruple or shame. I allude to authors of a very different stamp; to persons who, having the means of better information, and possessing abilities to influence the publick opinion, have fuffered

fuffered the prejudices of party to bias their CHAP. judgment. As a man personally interested in the welfare of the tugar colonies, I have attempted, by displaying their impertance and value, to point out the wisdom and necessity of lenient councils, and a liberal indulgence in the government of this kingdom towards them. In aiming however to encourage forbearance and kindness on the one fide, I have, as a loyal and dutiful fubject, endeavoured to conciliate affection, and promote filial obedience on the other. If the colonists reflect foberly, I am perfuaded they will perceive that, in a contest with the mother-country, they have nothing to gain, and every thing to lofe. Reflections of this kind, it is hoped, may dispose to mutual confidence and moderation; and tend equally to promote the welfare of the colonies, and the strength, prosperity, and glory of Great Britain.
