Technical and Bibliographic Notes/Notes techniques et bibliographiques

The Institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming, are checked below.

L'Institut a microfilmé le meilleur exemplaire qu'il lui a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifier une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de filmage sont indiqués ci-dessous.

The copy filmed here has been reproduced thanks to the generosity of:

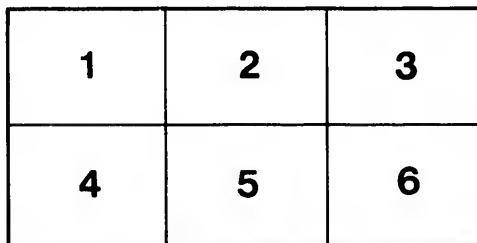

Library of the Public
Archives of Canada

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol ➡ (meaning "CONTINUED"), or the symbol ▼ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

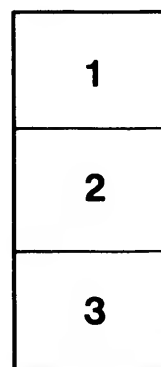

La bibliothèque des Archives
publiques du Canada

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole ➡ signifie "A SUIVRE", le symbole ▼ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

WEATHER GUIDE.

The following Table (the result of many years' actual observation) is ascribed to Dr. Herschel. It is constructed upon a due consideration of the attraction of the Sun and Moon in their several positions respecting the Earth, and serves to show what kind of weather will most probably follow the entrance of the Moon into any of her quarters :—

Moon.	Time of Change.	In Summer.	In Winter.
If New Moon, First Quarter, Full-Moon, or Last Quarter, happens	Between midnight & 2 A. M. }	Fair.	Hard Frost unless wind be S. or W.
	" 2 and 4 A. M. }	Cold with showers.	Snow and stormy.
	" 4 " 6 " }	Rain.	Stormy and rainy.
	" 6 " 8 " }	Wind and rain.	Stormy.
	" 8 " 10 " }	Variable.	Rain if wind W.
	" 10 " 12 " }	Showery.	Snow if E.
	At 12 Noon, and to 2 P. M. }	Very rainy.	Cold and high wind.
	Between 2 and 4 P. M. }	Variable.	Snow or rain.
	" 4 " 6 " }	Fair.	Fair and mild.
	" 6 " 8 " }	Fair if wind be N. W. }	Fair.
	" 8 " 10 " }	Rainy if S. or S. W. }	Frosty if wind N or N
	" 10 " midnight.	Ditto. Ditto.	E. Snow if S or S W
		Fair.	Ditto. Ditto.
			Fair and frosty.

The nearer midnight any of the Moon's changes occur, the finer will be the weather during the succeeding week ; the nearer noon any of those changes happen, the more foul and wet will be the weather that will follow.

EXPLANATORY.

Aphelion—that part of a planet's orbit *farthest* from the Sun.

Perihelion—that part of a planet's orbit *nearest* the Sun.

Elongation—angular distance of a planet from the Sun, as seen from the Earth.

Penumbra—a partial shadow resulting from the diminished light of the sun to the earth or moon, during a solar or lunar eclipse, appearing as partial.

Declination—the distance of a heavenly body from the equinoctial line.

Ecliptic—the plane of the earth's orbit nearest the sun.

☾ Apogee—greatest distance from the earth.

☾ Perigee—least distance from the earth.

The *Astronomical day* is reckoned from Noon to Noon through the 24 hours. Thus July 21, 9h. is 9h. A. of July 21st, and July 21st, 15h. is 3h. M. of July 22.

The Sun's Declination and Equation of Time are given for Noon at Halifax, Apparent Time, i.e. when the True Sun is on the meridian.

The Moon's Southing is given in *Astronomical Time* for the Meridian Passage at Halifax; and her declination when on that meridian.

The rising of the Moon is given from Full Moon to New Moon; and the setting from New Moon to Full Moon.

THE TIDES.

The Tides in the Calendar given for the Ports mentioned, are the tides that occur during the day. In the Tide Table (page 53) will be found constants for finding the time of High Water at each of the places mentioned in the Table.

The Times of High Water given in the Calendar have been corrected for the varying distance of the Moon from the Earth, and also for her angular distance from the Sun. They can now be depended on as accurate to at least the same degree as the Admiralty Tide Tables.

It will sometimes be found that when a constant is added to the time of High Water at Halifax, the sum exceeds 12 hours; in this case subtract 12 hours from the sum, and the remainder will be the time of High Water at the required port on the following afternoon or morning, according as the Tide at Halifax was a morning or afternoon Tide.

EXAMPLE.

High Water at Halifax, Jan. 19th 11h. 34m. M.
 Boston Light, U. S., add 3h. 22m.

14h. 56m.

Subtract 12h.

High Water at Boston, Jan. 13 2h. 56m. A.

It will sometimes be found that a constant to be subtracted is greater than the Time of High Water at Halifax; in this case add 12 hours to the time at Halifax, subtract the constant, and the remainder will be the time of High Water at the required Port for the previous Morning or Afternoon, according as the tide at Halifax was an Afternoon or Morning Tide.

EXAMPLE.

High Water at Halifax, Jan. 20. 0h. 17m. A.
 Add 12h.

Cape Sable Island, S. side, Subtract 1h. 19m.

FORECASTING THE WEATHER.

Men have, from a very early period, studied the weather, on account of its great influence on their pursuits, in order if possible to predict its nature, and prevent those losses to the Farmer and the Sailor which result from violent storms.

The earlier students based their predictions on the phases of the moon, but an examination of the Greenwich observations for more than half a century has shown that this theory is entirely unfounded. Weather prophets like Moore, Zadkiel and Vennor claim in their Almanacs to be able to forecast the weather day by day for a whole year; but meteorological science in the British Isles, and the Signal Service of the United States, with the Weather Bureau of the Dominion, does not claim to forecast, with any certainty, the weather for more than three or four days at the most.

If an observer could obtain, at regular and repeated intervals, readings of the Barometer at stations distributed over a large area, he would be enabled to trace the march of the storm, for it has been found that the wind always blows towards the place of the lowest barometer reading: and so, by means of the telegraph, he may warn those places the storm is approaching. Still, mistakes are often made, and the forecasts are not always infallible, so that much remains to be done before meteorology can be ranked among the exact sciences.

In this Almanac all the times except for Moon's Southing are Mean Time at Halifax, i. e., Civil Time. The Moon's Southing is given for Astronomical Time at Halifax.

Standard Time is 15 minutes earlier than Halifax Mean Time, and the Railway Time one hour later than Halifax Standard Time.

JANUARY.—These Farmer's Foot Notes are intended as a monthly guide or reminder of the field work and farm matters that require attention during the several seasons of the year. They are not written for the purpose of furnishing new or original or theoretical information, but rather as practical hints to intelligent Agriculturists already familiar with the science and practice of the profession. A fact known to every farmer is that no two seasons are the exact counterparts of each other, and the farmer or gardener or fruit-grower will be most successful whose crops are selected and operations carried on in view of the season proving either good, bad or indifferent. Crops that ripen well one season may not do as well on the same farm the next, and hence a judicious choice should be made. The

same applies to modes of culture, and to times of preparing the ground and sowing. These two last operations should always, however, be performed as soon as the soil and weather are fit, with due regard to the temperature of the soil. It is at this comparatively idle season that a plan of the year's work may be carefully prepared, and we commend this as an exercise well adapted for occupying the leisure evenings of January, when the farmer is relieved from field operations. At this season, young cattle should receive special attention, all should be groomed, as well as fed and watered, regularly, and thus prepared for passing through the winter in robust healthy condition. Neglect at this season will show itself all through the winter, and affect the quantity and quality of the dairy produce during the ensuing Summer.

Laurance's Spectacles at SMITH'S DRUG STORE.

FEBRUARY is the trying month for cattle. We would repeat the advice given for their care in January; we cannot in fact too strongly impress the necessity of care in their feeding, watering, and general treatment, at this season of the year. If once allowed to begin to fall off, it will be uphill work to attempt to stop it. Barns may be faulty, and the cold is severely felt, and yet this is one of the least evils in Nova Scotia, for horned cattle require plenty of fresh air, and the winter and spring rates of mortality in cows in the country barns is very low compared to that of the apparently comfortable, substantial, wind-tight stables of the City of Halifax. The root cellar may be troublesome to get at, and the animals may thus miss an occasional meal; the wells may be frozen and the way to watering places may be so slippery that the cattle cannot reach them without discomfort or positive accident. In order to overcome these and many other difficulties that

appear in February, it is a good rule to give extra time and attention to the stock. In feeding grain and meal always mix them into oat hay, moistened. In districts where an Agricultural Society does not already exist this is a good time to organize, Farmers have time to attend a meeting, and take steps for organization, notification of which has to be made to the Office of Agriculture before the end of June, in order to qualify for the grant for the year.

MARCH.—The nature of our climate necessitates the use of a hot-bed for raising seedling plants of those crops that require a long season to mature. A hot-bed is made by piling on successive layers of well chopped horse dung obtained from a stable where oats are freely fed. The manure may be raised to a height of two or three feet above the surface of the soil. On top, spread four or five inches of very fine and rich soil mixed with sand; this should have been prepared in the

Fall, and kept dry under cover all winter,—otherwise it is likely now to be in a hard frozen mass. The glass sashes are then to be put on and kept close till the hot-bed heats; the steam and heat will start the seeds of weeds, which may be allowed to grow. Air is then given, and when the heat modifies, weed and rake the surface; sow your spring seeds,—cauliflowers, cabbages, celery, tomatoes, &c., for the kitchen garden; and stocks, verbenas, petunias, asters, balsams, and such like annuals for flower garden ornament. The seeds will bear a good deal of heat before they emerge from the soil, but, as soon as the first leaves begin to appear, the frame must be aired daily, taking care to avoid draughts and exposure to bright sunshine; a newspaper laid over the seed bed forms a convenient shade.

APRIL.—Spring ploughing, seeding, and planting, all commence in April, and should be pushed on with as much expedition and vigor as the weather will allow. In 1886, ploughing commenced early in April, in dry soils in favourable situations as early as the first of the month, in 1887 it was not general till the early part of May; but the farmer should be ready to anticipate the advantages arising from early work. Early in the month, if the fields are not fit for ploughing or sowing, preliminary operations may be performed. Manure under cover may be carted out on the frozen soil to where it is to be used. In fields seeded down with timothy last fall, it will now be time to sow clover,—a mixture of red and alsyke is the best for hay, as the white clover does not grow tall enough for cutting. Where early potatoes are required, the seed should be kept in a warm

place so as to start the eyes, and, whenever the ground is dry enough, they may be planted. This advice if not heeded will lead to potatoes coming up scantily, many rotting in the ground. If farmers, instead of planting inert seed potatoes, taken out of a cold cellar, would first allow the eyes to start, there would be fewer complaints of the seed perishing in the soil. Peas and Broadbeans may be sown at the very beginning of the month; onions, parsnips, and carrots as soon as the ground is fit to give them the more delicate seed-bed they require. Beets and mangel wurzel are usually sown at the end of the month or early in May. All gooseberry and currant bushes should be dressed, apple and pear trees gone over, and generally the whole kitchen garden and orchard thoroughly cared for. Remove the boughs from the strawberry plants gradually, and make

MAY.—The work of crop raising, commenced in April, has now to be carried on with increased vigour. The success of the farmer's year depends so much upon the month of May and the work that can be then accomplished, that every hour should be highly valued. If any ploughing has still to be done, let it be done at once; if manure has to be taken out for crops, don't wait for a more convenient season; if the weather is not all that can be desired, proceed nevertheless with your work, vary it to suit the state of the soil and atmosphere. Men cannot fight successfully against the operations of nature, but they can very often turn them to advantage by consideration and forethought. What has to be sown and planted this month? Everything, except what has either already been committed to the soil, or is too

tender to withstand the coldness, or the probable frosts. Such exceptional crops are bush-beans, pole-beans, corn, tomatoes, cucumbers, squash; it is only in warm sandy soils that such things can be safely put out before the end of the month. Turnips also should not be sown in May. One of the principal marketable crops in Nova Scotia is the potato. It has been found advantageous of late years to plant as early as possible; as soon, therefore, as the ground is in fit condition, commit the potato to it; see however, that the eyes of the seed have started into growth, otherwise it will be apt to rot in the cold seed bed. In light land the manure (old and well rotted) may be ploughed in before planting. In heavy soils, put the manure in the drills, so that the warmth of the air may counteract the deadening effect of the cold wet clods. Superphosphate and other artificial fertilizers may also be used. Finish all top dressing of grass land if this

been neglected in autumn, when it should have been done; keep down weeds in gardens, give more air to hot-bed frames, so that the plants may grow strong and hardy, see that all fences are secure before you let out any cattle into the pastures, clear out cellars and yards, whitewash buildings, and put the whole homestead in summer order.

JUNE.—Planting and sowing will still continue, and much of such work has, in favorable seasons, to be accomplished in June. Corn for ensilage, and Swedish and yellow turnips should now be sown. But, whilst these spring operations have to be continued and finished this month, there are others appertaining more especially to the summer that have also to be attended to. Small fruit and garden crops will require hoeing and weeding, potatoes also, when sufficiently advanced. It should not be forgotten that we have not only to sow and cultivate, but also to

protect our crops, if we would gather in a profitable harvest. Last year (1887) June frosts made havoc in the potato fields and bean patches, especially on the night of 14th-15th June. It is easy to protect early crops by throwing some spruce or other brush over them on cold nights, or burning brush to windward so as to cover the field with a cloud of smoke. The Colorado bug is not likely to appear as early as June; if it should, be very careful to pick off by hand, or dust with Paris green before the dew has gone off the vines. As soon as the currant and gooseberry bushes have pushed out their leaves and early blossoms, it will be found advantageous to give them a sprinkling of white hellebore powder in the early morning before the dew is off. This will destroy the first crop of currant worms, and thus preserve the bushes and the fruit crop for the season. Summer bedding plants are set out in the flower garden as early this

month as the weather will allow; verbenas may be put out very early, and thrive rather better in the moist cool weather of early June, than later, when the soil is apt to be baked by the sun. Stocks are also very hardy. Balsams, Phloxes, Petunias, Geraniums, Heliotropes, and other tender things need not be put out so early.

JULY.—Ploughing, sowing, and planting have been completed in the months of May and June,—this month is especially devoted to the cultivation of the various root crops. Cultivation, in this restricted sense, means the hoeing of crops, clearing by cultivators and harrows, and such like implements, between or over the drills, hilling up and moulding. The objects of these operations are to destroy weeds, to keep the soil open, and thus to promote the decomposition of the manure, enable the soil to obtain moisture, allow free access of air, and by these

means to ensure the growth of the crops. We are apt to have a good many rainy days in July, and, as most of the hoeing work has to be compressed between planting time and haying time, haying has occasionally to be begun before potato hoeing is completed; this occurs on many of the best regulated farms. In ordinary seasons it is sure to occur on a farm where foresight is not shown, hence the miserable root crops we so often see. Let our farming readers then be careful to forecast the weather probabilities in light of the July work to be done on the growing crops, and thus avoid the disastrous loss that comes from neglect. The sowing of turnips is usually recommended for the month of June, but, as the

ground has to be remarkable fine for this crop, and as turnips are often put in to all up land that was originally intended for the earlier sown roots, it frequently happens that turnips have to be sown in July. Some even prefer to sow their Swedes this month, and the soft turnips for immediate feeding need not necessarily be sown till the end of July, although, if they get warm genial weather to start with, they do much better earlier. The ground should have undergone a thorough pulverization. Light sandy soil is the best for turnips; They start best after the ground is warm, but the bulbs swell most rapidly during the cool dewy nights in Autumn. The soil cannot be worked too deep or made too fine for turnips. Town manures are valuable for this crop; and crushed bones have been applied with best effects, either when covered in the drills in the manner of ordinary dung, or, preferably, when sown by machine along with the seeds, so as

to be in immediate contact with the latter. Guano has been largely used, but not so much of late years. Superphosphate is very efficacious.

AUGUST.—Haymaking usually begins about the second or third week of July, sooner or later, according to locality, climate and season, but it is in most districts carried over into the month of August. Where suitable implements and appliances are used, there is now no difficulty in securing the crop. Of late years a pest has appeared in our potato fields, which requires looking after this month; we refer to the Colorado beetle or bug. There are two remedies: either pick the Coloradoes off the plants, or poison them by sprinkling. The most convenient method of picking is to walk along the rows, with a tin milk pail, striking the

Insects off the potato tops with a shingle, lath, or light stick. The substances used for poisoning are Paris green and London purple; the powder may be thrown upon the plants before the dew is off in the morning. A new and natural remedy suggested is the field Milkweed, which the potato bugs attack when growing in the fields, and, as it is a very poisonous plant, it kills them. We have in former years recommended our readers to note at this season how convenient it is to have a field of tares, or green oats, or barley, or Indian corn, or rape, or any other green eatable thing for the cattle to grow or fatten upon when the pastures are all burnt up. After haying there will be work in the garden, and especially in the orchard. Where the trees are in grass they will benefit by a rich top-dressing around their roots. Look after the ripening fruit, destroy caterpillars, if any still remain; pick the early August apples, and send them into a local market, or to the pie-nio. When

the rains come, beds of strawberries may be made up. See that the ground is well drained and enriched with old manure. Mushrooms now appear in the horse pastures, house flies become troublesome, and the swallows congregate in flocks and leave us. The calving of cows for the season will now be over. All thoroughbred calves should be at once registered in the Stock Register. For grade stock the farmer should keep himself a record for after reference. In the midst of haying work one important matter is apt to be neglected.

SEPTEMBER—This month should be specially devoted to the gathering in of Crops. Haying has been finished in August, and probably all the grain has also been harvested. Orchard fruit requires special attention. Early in the month Indian Corn will have to be cut and put into the Silos; fortunately these are now on the increase in this Province. The ensilage forms an excellent supplement

to the hay and roots upon which our cattle were fed too exclusively in former years. Later in the month Potatoes of the earlier kinds and early planted will be ready to be taken up; but, whilst the weather remains warm, they should be well dried and aired before being put into the cellar, and only in small quantities at a time. The farmer's year is a complete circle, and, before one year's annual harvest is taken in, it is needful to be preparing for the next. In fact it is already time, by the beginning of September, to sow Winter grains, and some early farmers will even have done that in August. Winter Wheat is not grown so much in Nova Scotia as formerly; but Winter Rye is a favourite crop with some of our farmers. Winter Oats were first introduced by the Government in the Autumn of 1887, and must still be considered an experimental crop. They should be sown about the end of August, or as soon as harvested and threshed, or early in September. It is thought that, if this oat can be successfully grown in Nova Scotia,

It will prove valuable. Winter Oats are preferred in England as horse feed. They should be sown in well-prepared land, and, as far as possible, on fields from which the winter snow does not readily blow off. Last year, Winter Oats were ripe and ready to out in England, before the end of July.

OCTOBER.—Now that the season's work is well nigh over, the young man on the farm may repair to the School of Agriculture, at the Normal School, Truro, where instruction is given in the Art of Agriculture and the sciences bearing upon it. The Fruit Crop is yearly acquiring increased importance in Nova Scotia, now that the markets of the world are open to our fruit growers. The fruit harvest is now being gathered. Fruit growing forms one of our great industries; we feel therefore, in view of the importance of promoting and extending

it, that no better advice can be given to our orchardists at this season than that which appeared in the *London Garden* from a prominent London firm of fruit dealers: New York State Apples a few years ago occupied the leading position in the trade, but have been steadily losing prestige, and goods packed in the Western and New England States and Canada have steadily gained in popularity and prices. These results have been caused by the style of packing; the New York barrel contains about 23 bushels, has flat hoops, whilst the others hold fully three bushels and have round hoops. Baldwins in the former sell in London at 18s. per barrel, whilst in the latter they bring only 15s., 17 p. c. less, whilst the difference in quantity is only 8 p. c. A large portion of the receipts last season were 'stuffed,' the middle of the barrel containing inferior fruit." The advice

following from all this is, use the right kind of barrel, pack it carefully with honest fruit, and Nova Scotia will maintain her reputation for apples, and her farmers acquire wealth. Of late years the increase of orchards in our two great fruit Counties, Kings and Annapolis, has increased very much, and other counties are coming to the front.

NOVEMBER.—The improvement of cattle has at length taken a secure hold upon the people of Nova Scotia, and is carried out to some extent through the agency of Agricultural Societies. Every Society keeps, or ought to keep, a sufficient number of male animals for the use of members. If the selection and purchase of these be deferred till Spring time, large prices have to be paid, and suitable animals are not always obtainable. For beef cattle the Short Horn Durham breed

is the best, their growth is more rapid than that of any other kind. For milk alone, Ayrshires are to be preferred, Devons make the best working oxen, are quick, active, and easily fed, and soon fatten in the wild pastures for beef. For domestic cows in the city the creamy Guernseys or Jerseys are the most suitable. The Jerseys are at present the greatest favourites, and their increase, whilst it will promote the manufacture of butter, threatens to lessen our capacity for beef production. Holsteins are also, however, becoming great favorites in a few localities, and the same may be said of Polled Angus. A few Herefords have been introduced. As soon as the root crops are cleared off the fields, and the weeds and potato vines are put into heaps to rot, the farmer should employ his whole strength of man and beast in fall ploughing. Whether on old or new land,

fall ploughing is a most important operation. Without it, a farm cannot be worked to advantage. After ploughing, do not forget to go carefully over the water furrows to make way for the exit of the rain and melting snows that are sure to flood your fields before seed time. A well ploughed, well drained, field may be sown in spring as soon as the frost is gone, whilst one that is irregularly ploughed, or has no water furrows, may long remain a puddle, defying every attempt to improve its condition. The best part of what is too often left to be "Spring work," can be done in the month of November. All land intended for the spring sowing of oats, peas and horse beans, should be effectively worked this month.

Province, with a membership of about six thousand farmers; each Society is entitled to draw from the Provincial Treasury an annual grant in aid to promote its operations. The special purpose of a Society is to improve the live stock of its district, which is accomplished by obtaining and keeping for the use of members, superior male animals, such as bulls, rams and boars. Societies may also introduce seeds of new varieties of grain, roots, and also imported implements, and sell them to members at cost and charges. The whole of the Societies of the Province meet annually, on the *first Tuesday of November* (not December, as formerly) each in its own District, when the members receive the Directors' Report, and select officers for the ensuing year. Full information as to the method of organizing Societies may be obtained on application at the Office of Agriculture, Province Building, Halifax.

Winter Blooming Plants, WILLOW PARK NURSERY, HALIFAX.

JANUARY.—During this month the day lengthens 56 minutes—18 in the morning and 38 in the evening. Venus, Mars and Jupiter are all morning stars.

FEBRUARY.—During this month the day lengthens 79 minutes—41 in the morning and 38 in the evening. Venus, Mars and Jupiter are all morning stars.

MARCH.—During this month the day lengthens 1 hour 33 minutes—55 minutes in the morning and 38 in the evening. Venus, Mars and Jupiter are still morning stars.

APRIL.—During this month the day lengthens 1 hour 22 minutes—49 minutes in the morning and 38 in the evening. Venus and Jupiter are morning stars; by the end of the month Mars may be seen as an evening star.

MAY.—During this month the day lengthens 1 hour 5 minutes—32 minutes in the morning and 38 in the evening. Venus is a morning star; Mars an evening star. Jupiter shines through the whole night.

JUNE.—To find the length of the day,—subtract the time of sunrise from 12 hours, and to the difference add the time of sunset.

EXAMPLE.

	12 h. 0 m.
Sunrise, June 20th	4 h. 19 m.
Difference	7 h. 41 m.
Sunset, June 20th	7 h. 44 m.

Length of day, June 20th 14 h. 25 m. The longest day.

Venus is too near the Sun to be seen. Mars is a morning star. Jupiter still shines through the greater part of the night.

JULY.—To find the length of the night,—Subtract the time of sunset from 12 hours, and to the difference add the time of sunrise next morning.

EXAMPLE.

	12 h. 0 m.
Sunset, July 1st	7 h. 43 m.
Difference	4 h. 17 m.
Sunrise, July 2nd	4 h. 26 m.

Length of night, July 1st 8 h. 43 m.

Venus is still hidden in the Sun's rays. Mars and Jupiter are evening stars.

AUGUST.—The difference of 12 minutes in the decrease of morning and afternoon during this month is caused by the Sun being six minutes slower than the clock at the beginning of the month, and agreeing with it at the end. Venus may be seen as an evening star towards the end of the month. Mars and Jupiter are evening stars.

SEPTEMBER.—The time of sunrise added to the time of sunset is equal to 12 hours, only when the time by the sun and clock is the same, as it nearly is on the 1st of this month. Mars, Venus and Jupiter are all evening stars.

OCTOBER.—In this month the day decreases in length 1 hour 30 minutes—39 minutes in the morning and 51 in the evening. Venus, Mars and Jupiter are still all evening stars.

NOVEMBER.—In this month the day decreases in length 1 hour 3 minutes—37 minutes in the morning and 26 in the evening. Venus and Mars are evening stars. Jupiter is by the middle of the month beginning to be lost in the Sun's rays.

DECEMBER.—The length of the shortest day—December 21st—is 8 hours 36 minutes. By the end of the month the day has lengthened 4 minutes. Venus and Mars are evening stars. By the end of the month Jupiter may be seen a short time before sunrise.

Religious and Literary Institutions.

COLLEGE AND SEMINARY OF ST. FRANCIS XAVIER.—Established in the town of Antigonish. Rector, Rev. Dr. N. McNeil, Professors, Rev Alex. McDonald, D.D., Rev A. Chisholm, D.D., J. D. Copeland and D. Cameron, Esqs.

THE TRAPPIST MONKS, at Tracadie, have a flourishing establishment. The Monks are principally natives of Belgium. Here also, there is a Convent of the Trappistine Sisters, all natives of the place, and generally of French and Scotch origin.

THE SISTERS OF THE CONGREGATION OF NOTRE DAME, of Montreal, have flourishing academies for female education of the highest order at Arichat, Antigonish, Pictou, West Arichat, Sydney, Port Hood, New Glasgow and Mabou. Besides, there are throughout the diocese several academies, and superior and common schools, partly supported by government, and partly by contributions of the people. There are also superior schools at Stellarton and North Sydney, conducted by the Sisters of Charity.

NOVA SCOTIA INSTITUTE OF NATURAL SCIENCE.—*Patron*, His Hon the Lieut. Governor. *Pres.*, John Somers, M.D. *Vice-Presidents*, Wm Gossip. Prof MacGregor. *Secretaries*, Rev. Dr. Honeyman, D.C.L., and Alex McKav. *Treasurer*, W. C. Silver. *Council*—M. Murphy, C.E., E. Gilpin, M.A., Geo Lawson, LL.D., M. Bowman, J. J. Fox, S. D. Macdonald.

ROYAL NOVA SCOTIA YACHT SQUADRON.—(Established 1875—Station, Halifax.) *Commodore*, His Excellency the Marquis of Lansdowne, K. C. M. G., Governor-General. *Vice-Commodore*, A. C. Edwards. *Rear-Commodore*, W. H. Troop. *Secretary*, H. M. Wyld. *Treasurer*, J. W. Stairs.

NOVA SCOTIA BIBLE SOCIETY.—*President*, Hon S. L. Shannon. *Treasurer*, S. H. Black. *Secretary*, James Farquhar. *Agent*, T. M. Mackelvie. A large committee of gentlemen of various religious denominations is appointed annually. Its object is "to encourage a wider circulation of the Holy Scriptures without note or comment."

HALIFAX LADIES' BIBLE ASSOCIATION.—*Pres.*, Mrs Liddell. *Sec'y*, Miss F. Pryor. This Society collects funds for the purpose of circulating the Scriptures among the poor and destitute. When a balance remains in the Treasurer's hands at the close of the year, the amount is given to the Nova Scotia Society.

BRITISH AMERICAN BOOK AND TRACT SOCIETY.—*Pres.*, T. A. Brown. *Treas.*, R. T. Braine. *Honorary Secretary*, Rev Robert Murray. These office-bearers with a Board of Directors composed of clergymen and laymen of various denominations, are elected annually. The Society was incorporated in 1872. Its expenditures in nineteen years amounted to about \$500,000. It received in donations over \$71,000; and it circulated publications to the value of nearly \$385,000. About \$96,000 have been spent in Colportage,—and 206 years of labour were devoted to this object. Religious Books, Tracts, Magazines, Sabbath School Papers, Libraries at half price, &c., are specialties of the Society's Depository.

EVANGELICAL ALLIANCE.—*President*, Hon S. L. Shannon; *Sec'y*, Rev. Robert Murray. The Evangelical Alliance is a Society intended to promote united action among christians of different denominations in so far as they are agreed.

YOUNG MEN'S CHRISTIAN ASSOCIATION.—*President*, J. S. Maclean. *Treasurer*, S. H. Black. *Sec'y*, Henry Theakston. The Halifax Young Men's Christian Association was organized in December, 1853. Its object is the improvement of the "spiritual, moral, mental and social condition of the young men of the City of Halifax." It owns a handsome building which has cost over \$37,000. It has a large Library and a spacious and well supplied Reading Room: also Committee Rooms, Class Rooms, Parlor, Lecture Hall and Dining Room.—Any person of good moral character may become a member, but no one can serve on committee or be an officer of the Association without being a member in good standing of some Evangelical Church.

CONVENTION OF THE Y. M. C. A. OF MARITIME PROVINCES.—*President*, J. E. Irvine, St. John. *Secretaries*, H. H. Diston, St. John; D. Stewart, Summerside.

WOMANS' CHRISTIAN ASSOCIATION.—*President*, Mrs J. Farquharson. *Treasurer*, Mrs C. C. Blackadar. *Secretary*, Miss F. Pryor.

Small Fruits Stock, WILLOW PARK NURSERY, HALIFAX.

DRY GOODS, ST. JOHN, N. B.

This Society aims at promoting the welfare of young women in the City, by means of a night school, libraries, &c., &c. **WOMENS' HOME.**—*Chairwoman*, Mrs. John Starr. *Secretary*, Mrs. E. C. Fairbanks. *Treasurer*, Mrs. J. F. L. Parsons. *Matron*, Miss Bentley.

HALIFAX INFANTS' HOME—The object of this Home is to receive and care for destitute infants. Its affairs are managed by a Committee of ladies. The annual expenditure amounts to about \$3000. The number of infants in the Home at any one time is about forty-five. When the children are about two years old they are given out to be adopted by families in the country. Nearly two hundred have been thus provided for within the past twelve years. *Miss Nordbeck, Treas.*, Studley. *Mrs E. M. Saunders, Sec'y.*, Carlton Street.

DEAF AND DUMB INSTITUTION—(Gottingen Street.) This Institution has been in operation for twenty-five years. It is supported partly by grants from the Governments of the Maritime Provinces, and partly by voluntary contributions—most of the pupils being too poor to pay for their board and education. The pupils range in age from five years up to twenty-five. Those who have the full benefit of an education here are able to express themselves with fluency. *Patron*, His Honor the Lieut.-Governor of Nova Scotia. *Chairman*, Hon D. McN Parker, M.D. *Treas.*, A. K. Mackinlay. *Sec'y*, President Forrest, D. D. *Principal*, J. Scott Hutton, M. A. *Matron*, Mrs Vincove. *Physicians*, Hon D. McN. Parker, M.D., Dr. Campbell. *Dentist*, Dr Alfred Cogswell.

HOME FOR THE AGED—This place is intended to afford a comfortable retreat to respectable women of advanced years whose means of livelihood are very limited. Eighty dollars a year paid by the inmate or by a friend secures all the comforts of a home. The Institution owes its existence to the thoughtful liberality of the late William Murdock, Esq. *President*, Mrs J. Scott Hutton. *Secretary*, Miss Forrest. *Treas.*, Miss A. Nordbeck.

PROTESTANT ORPHANS' HOME—Protestant orphans, two years old, and upwards, are admitted to this Institution. It enjoys considerable endowments. Comfortable homes in the country are sought out and secured for boys and girls as they grow up. *Secretary*, Mrs R. Pickford. *Treasurer*, Miss B. Naylor.

PROTESTANT INDUSTRIAL SCHOOL—Intended to teach and train for some useful occupation boys who might otherwise be left to grow up as "roughs" and criminals. It is under the management of a committee of gentlemen and ladies. *Secretary*, E. D. Meynell. *Surgeon*, Dr. Lindsay. *Superintendent*, Mr Norman.

HALIFAX VISITING DISPENSARY—Medical aid is afforded by this Institution to hundreds of poor patients. Those who need such attention are visited by Physicians at their homes. Those who can come to the Dispensary at the proper hour are duly attended to there. *President*, W. C. Silver. *Treas.*, J. F. Kenny. *Sec'y*, W. H. Wiswell.

HALIFAX ASSOCIATION FOR IMPROVING THE CONDITION OF THE POOR—The aim of the Association is to aid the poor by giving them employment whenever it is possible to do so, and securing that only the deserving poor shall be aided. Every case is investigated before aid is given. *Pres.*, Jno Doull. *Secy.*, R. J. Sweet.

TEMPEBANCE DIRECTORY.

SONS OF TEMPERANCE.—The first Division was organized at Ya mouth, Nov. 17, 1847. The Grand Division was organized April 22, 1848, incorporated in 1851. There are now three hundred and seven- teen (317) Subordinate Divisions with eighteen thousand (18,000) members,—50 Bands of Hope with 4000 members; and four Sections of Cadets with 140 members; *Grand Worthy Patriarch*, Robert L. Black, River Philip; *Grand Scribe*, Rev R. A. Temple, Halifax. *Agents and Lecturers of Grand Division*, Thomas M. Lewis and Rev Joseph Coffin. Geo. H. Mackinlay, Halifax, *Secretary of Juvenile Organizations*. Quarterly sessions of G. D. are held in different parts of the Province, in January, April and July. The annual session is held each Autumn in Halifax.

INDEPENDENT ORDER OF GOOD TEMPLARS.—The first Lodge in this province was organized at Economy, Colchester, July 4th, 1864. The Grand Lodge was formed February 5th, 1867. In 1876 the disruption occurred on the "colored membership" question, and the N. S. Grand Lodge went with the British and other Grand Bodies and were known as "I. O. G. T. of the World." In November, 1876, a new Grand Lodge was formed of "Loyal" members to the Original Order "American," and two Grand Lodges conducted the Templar movement for eleven years.

Union was constantly talked and worked for, and on 7th July, 1887, in New Glasgow, was consummated. The R. W. G. Lodges coalesced the same summer amid great rejoicing wherever Templarism exists.

The chief officers of the United Grand Lodge are *G. W. Chief Templar*, D. C. Fraser, New Glasgow; *Secretary*, I. J. Hingley, Oxford; *Sup. of Juvenile Templars*, B. D. Rogers, Stellarton. No. of Lodges, 190, with membership of 9500; No. Juvenile Templars 35, with 1500 members. The next Annual Ses-ion will be held in Halifax, commencing the second Tuesday in July, 1888.

THE BLUE RIBBON CLUBS, under various names, have footing in many towns, and keep up courses of local public meetings which, with the **WOMEN'S TEMPERANCE UNIONS**, are largely instrumental in advancing Temperance sentiment.

THE WOMEN'S CHRISTIAN TEMPERANCE UNION (WHITE RIBBON), has over 500,000 members throughout the world, and is rapidly increas- ing into every country. Miss Frances Willard of Chicago, is at head of this movement. Miss A. Johnstone of Dartmouth is President of the Halifax Union.

THE N. S. BRANCH OF DOMINION TEMPERANCE ALLIANCE con- sists of delegates from all other Societies combining for united action to secure advanced legislation and to enforce existing laws. The officers are:—*President*, Rev. Joseph Coffin, Amherst. *Vice-Presi- dents*, R. L. Black, Pugwash; R. T. D. Hart, Kings Co.; P. A. Mc- Gregor, New Glasgow; Rev. J. Murray, Sydney; Austen Locke, Lockeport; W. C. Bill, Billtown; Rev Dr Burns, Halifax. *Secretary*, John H. Hickman, Amherst. *Treasurer*, W. C. Silver, Halifax.

At this date (Autumn of 1887) the enrolled membership of the various Temperance organizations in Nova Scotia is about 51,500.

SYDNEY COAL.

This Coal is mined by the General Mining Association, Limited, of London, G. B., at North Sydney, Cape Breton. To prevent other Coals trading upon the reputation of "Sydney," the name "SYDNEY COAL" was some years ago registered as a trade mark. The public are cautioned that any Coal advertised with the word "Sydney," along with another word referring to Mine is not "Sydney Coal," and has no connection whatever with it. "SYDNEY" and "VICTORIA" Coals are the only Coals mined on Sydney Harbor.

"SYDNEY COAL" has long stood alone in its reputation for HOUSE USE. It is also an excellent STEAM COAL.

VICTORIA COAL.

This Coal is mined by the Low Point, Barrasois, and Lingan Mining Co., L'td, at the Victoria Mines on Sydney Harbor, C.B. VICTORIA COAL is very good for STEAM purposes, and is a favorite HOUSE COAL.
