		<input checked="" type="checkbox"/>			

12X 16X 20X 24X 28X 32X

The copy filmed here has been reproduced thanks to the generosity of:

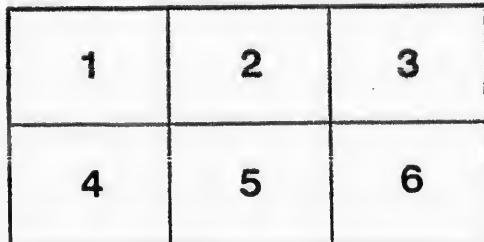

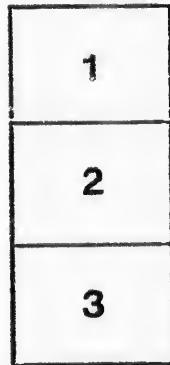

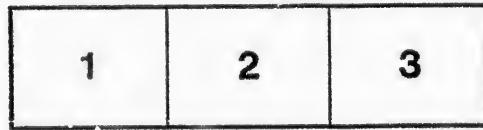

Metropolitan Toronto Library
Canadian History Department

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol → (meaning "CONTINUED"), or the symbol ▽ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

Metropolitan Toronto Library
Canadian History Department

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole → signifie "A SUIVRE", le symbole ▽ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

PREFATORY REMARKS.

This establishment was commenced in 1811 by the proprietor's raising a few trees for his own use, and would perhaps never have been thought of, had there not been such a difficulty in obtaining good kinds by purchase.

Finding his efforts crowned with success and the business delightful, he resolved to extend his nursery, and devote the most part of his time to it, not only from a consideration of the pleasure and advantage he might himself derive, but also from a desire of placing the bountiful gifts of nature within the reach of his friends and neighbours.

It will be seen by the catalogue, that my greatest attention has hitherto been paid to apple trees, because I considered the apple the most congenial fruit to this climate, and the most useful in new countries : there is now in the nursery nearly 20,000 apple trees, the greater part of which are grafted or inoculated with the best and most approved European and American kinds, and are from one to seven years old, and from one to nine feet high. Gentlemen by calling at the nursery can select for themselves---no difference is made in price on account of age or size.

The nursery business is attended with difficulties and disappointments which ought carefully to be guarded against ; mistakes are often made in the proper names of trees, plants &c. by the ignorant and careless, to the great mortification of the purchaser. I have been disappointed in this way myself, but the public may rest assured that the greatest care will be taken to prevent such disagreeable occurrences in this establishment, all the business is done by my own hands and I will be accountable for all mistakes of my own making, but there is one cause of disappointment with which the nursery-man has nothing to do, and for which he is often unjustly blamed. A person gets a fine apple and enquires its name---a wrong one is given, he sends to the nursery and gets trees by this wrong name--after

careful culture the fruit appears, and is not what he expected : to prevent disappointments of this kind a person should be very certain that he has got the proper name of his favourite fruit, before he orders trees from the nursery.

From many experiments I am fully persuaded that the fall is the best time for transplanting fruit trees--the work may be performed any time from the middle of October until the ground freezes.

Transplanting in the spring often succeeds well also, and may be begun as soon as the frost is out of the ground, which often happens before the snow is quite gone, by which means persons in the new settlements have an opportunity of bringing out produce and returning with fruit trees, before the roads break up : spring planting may be continued to the first of May. Produce delivered at the nursery, will be taken from the new settler for trees &c. at cash prices.

The best season for removing bulbous flower roots is from July to October inclusive.

Greenhouse plants may be removed at any time when the weather is warm.

When fruit trees &c. are ordered from a distance they will be carefully packed in boxes or matts so as to arrive safe in any part of the Canadas or the adjoining states ; in this case a small additional charge will be made for package.

Every thing in my line will be delivered at York free of carriage, and every kind kept by itself, tied together, and labelled.

Scions of fruit trees for grafting packed in the most secure and portable manner at two shillings per dozen, no less than half that number can be furnished of any one kind. The prices will in no case exceed those of the nurseries at New York, and in general will be found one third less.

The proprietor has appointed agents through the country, of whom catalogues may be had, and by whom orders will be received and forwarded, it is expected that gentlemen at a distance sending orders otherwise than through an agent, will name some person in York who will be responsible for the payment.

Purchasers residing in York or its vicinity or within the same distance of the nursery in any other direction, may have trees planted and insured for a limited time, on such terms as may be agreed upon, taking into consideration the number of trees wanted and the distance from the nursery.

An allowance equal to ten per cent will be made to those who purchase by the quantity at the nursery.

Very considerable additions have been lately made to this establishment by importations from some of the foremost nurseries and seed shops in the United States and in England, and it is intended that neither pains nor cost shall be spared in making annual additions of such trees, shrubs, plants &c. either ornamental or useful as may best agree with our climate.

The proprietor embraces with pleasure the present opportunity of returning his thanks to those gentlemen who have fostered his establishment by presents of plants, seeds, &c. which perhaps he could not otherwise have obtained: to his customers he is grateful for former favours, and hopes to render his nursery still more worthy of *public patronage*.

WILLIAM W. CUSTEAD.

DIRECTIONS FOR PLANTING FRUIT TREES.

In planting out trees, let the hole be dug sufficiently large to admit the roots in their natural position; particular attention should be paid, that all the wounded parts of the roots are cut off; if a hard marly soil, it would be advisable to have the hole much larger than is required to receive the roots. Then fill in good earth from the surface up to the proper height. Before introducing the tree especially if tall it is advisable to drive down a stake, placing the tree close to it on the north east side to which let the tree be securely tied after planting. Care must be observed not to plant the trees too deep; the upper roots when planted, should have about three inches of earth over them, which will generally make it about two inches deeper than it stood in the nursery. Fill in the hole with rich mould, and if required, some well rotted manure. After covering the roots, shake the tree, that the earth may be admitted among all the small roots; then fill up, treading round the tree, leaving a basin round it to conduct the water to the roots. In dry seasons, watering will be of service: the head of the tree should be cut off in proportion to the size, say one third though not until May. Much of their doing well depends upon attending to this.

I would recommend to those planting out young trees, to keep the ground cultivated for a few years in succession. From observation, I have found that trees thrive much better in cultivated ground, than if planted in grass or uncultivated: a few

years, say four or five, of cultivation, will richly pay the planter, as the trees in that time will generally get in a thrifty growing state : after which they will only require ordinary care.--- Experience has proved the utility of soft soap to trees, and I highly recommend the washing of the bodies and branches, as high as can be conveniently got at, of all sorts of fruit trees.--- The soap may be diluted with water, to the consistency of thick paint, and applied with a brush. The effect is very evident, making the bark smooth and pliable, trees thrifty, destroying any small insects that may be feeding on the sap, to which the apple and the pear tree are particularly subject.

DIRECTIONS TO PRESERVE PEACH TREES IN A HEALTHY STATE.

Let every tree which has been known to produce its fruit prematurely, be immediately removed ; and if it is desired to have a peach tree planted in the same place where a diseased tree has been removed from, let a large hole be dug, so as to remove all the roots, that the roots of the new planted tree may not, in one season, come in contact with them. But new ground is to be taken, in preference to that on which peach trees have been. Let the greatest attention in summer, be paid to the ripening of the fruit, and where fruit is found to ripen two, three or four weeks before the usual time, you may conclude that the tree has taken the infection ; and as it gives you notice one whole season previous to its power of spreading the contagion, you can, by removing it, prevent its injuring the other trees ; or if the tree has taken the infection when in blossom, and has lost its fruit before it ripened, it will show that it has become diseased, by pushing out small slender shoots, and frequently in bunches of a pale yellow colour, from the body and branches ; and by observing the same appearance on those trees that have ripened their fruit prematurely, you will soon be able to distinguish the trees that are diseased, from those which are in a healthy state, and by removing them before they blossom, prevent their spreading the infected farina.

Ashes and lime, a small quantity placed as near the trunk of the tree as possible, have been used with good effect, in preventing and destroying the worms at the roots of peach trees. Tobacco leaves and stems, put round the trunks of peach trees

at the roots, have also been found beneficial in destroying the worms, as well as preventing their getting in the trees.

To have thrifty peach trees, and fine fruit, the ground should every year be kept cultivated, by planting it with corn, potatoes, or other vegetables, and every autumn or spring, have some rotten manure dug in round the trees. Peach trees remaining more than one year in grass or soil ground, become unthrifty and yellow, it is therefore easier to distinguish the diseased from healthy, in cultivated ground.

N. B. To those that order fruit trees &c. who are not acquainted with the different sorts of fruits by name, I would recommend that their orders specify the number of the different species of trees wanted, and leave the selection to me, as in all such cases I should feel myself bound to send none but what I know to be of approved sorts, and that ripen in succession, or as may be requested.
