CANADA

HOUSE OF COMMONS DEBATES

OFFICIAL REPORT

THIRD SESSION—TWENTY-SECOND PARLIAMENT

4-5 ELIZABETH II

VOLUME II, 1956

COMPRISING THE PERIOD FROM THE THIRTEENTH DAY OF FEBRUARY, 1956,
TO THE FIFTEENTH DAY OF MARCH, 1956, INCLUSIVE

INDEX ISSUED IN A SEPARATE VOLUME

EDMOND CLOUTIER, C.M.G., O.A., D.S.P.
QUEEN'S PRINTER AND CONTROLLER OF STATIONERY
OTTAWA, 1956

HOUSE OF COMMONS

Monday, February 13, 1956

The house met at 2.30 p.m.

PRIVILEGE

MR. GARDINER—REFERENCE TO REMARKS IN DEBATE ON FEBRUARY 10

Right Hon. J. G. Gardiner (Minister of Agriculture): Mr. Speaker, I rise on a question of privilege. When discussing the cost of the present butter policy on Friday, February 10, I pointed out the plan under which institutions had been allowed a discount of 21 cents a pound may cost $1,500,000. Then I went on to say this:

> The important thing about the matter is we started out to prove to our satisfaction one of two things: Either that people or institutions use more butter when they are getting it cheaper or that they may use more butter and less margarine when they get it—

Meaning butter.

> —cheaper. The statistics do not indicate that they have done so in this case. They are using just about the same proportion of butter—maybe a little bit more in some places and a little bit less in others—at 40 cents a pound as they used previously at 61 cents and they are using about the same amount of margarine now as they used previously.

At this point the hon. member for Quebec West (Mr. Dufresne) asked a question:

> Mr. Dufresne: Has the minister the figures for each province?
> Mr. Gardiner: Yes.
> Mr. Dufresne: Can he say whether, in the province of Quebec, this arrangement of giving butter to institutions at 40 cents a pound has increased the consumption of butter?

The effective part of my answer was as follows:

> As of March 4 . . . in Quebec the number of institutions there was 236 . . . They used 154,000 pounds of butter that month . . . 6,000 pounds of margarine. Then they had other fats, neither margarine nor butter, amounting to 53,000 pounds.

I stated that for the last month:

> . . . there are 777 institutions in Quebec now which is about three times as many, and in the last month they used 297,000 pounds of butter, 13,591 pounds of margarine and 103,146 pounds of other fats.

About an hour later, following my address, the hon. member for Vancouver South (Mr. Philpott) said, as recorded at page 1064 of *Hansard* for February 10, 1956:

> Could I ask one question about the figures for margarine in Quebec? Some of us were under the impression that the sale of margarine in Quebec was illegal.

I did not answer, but as soon as I could leave the house I attempted to get full information to give to the members, but because the staff had gone I was unable to receive full information. I, therefore, interviewed the *Hansard* editor who informed me the report had already gone to the press. He suggested I should see the Speaker, which I did. I suggested that I be permitted to withhold a small part of the information used in answering the question. I suggested this would necessitate my stating to the members full information regarding the matter, and stated I would make a complete statement to the house when the house opened on Monday. That is what I intend to do at the moment.

I understand the Speaker complied with my suggestion and arranged to have the statistics relating to Quebec and margarine left out of Friday's *Hansard* on the understanding I would replace them on Monday with full particulars.

I saw the Canadian Press and was told that the report had already gone out to the Toronto office. It was suggested later that I might make a statement which would be published along with any report which they put out. I have read the Canadian Press report as it appeared on Saturday morning in the Montreal *Gazette*. In it is a statement which I made to the reporter who saw me in the dining room while I was eating dinner. I stated this to him: "I just read the answer from a record that was placed in my hands, and I would not like it to be considered authentic until I have an opportunity of checking it." They put that in their report, just as I said it, and used the reference to it in the lead to the article. Then, they went on to cover what happened in the house in connection with it.

At this point, I want to thank the Canadian Press for the manner in which they dealt with the whole matter, and the way it was reported, particularly in the only paper in which I read the report. It was probably in all the papers that they supply with reports in much the same language, but they gave a perfectly correct report of what I had said to them and what I said in the house. They added something of their own, which I presume they got in Quebec. They added a statement which was not mine, and I assume

therefore they took the trouble to find out what the facts were. The last sentence of the article is this:

> Quebec law prohibits manufacture and sale of spreads manufactured from vegetable oils. It does not apply to spreads made from animal or fish oils or fats.

Well, that does correspond with the facts as we know them, but I have no comment to make upon that; that was not my suggestion when the article was written.

I have checked the records and wish to put the following statement on *Hansard*. After the plan to provide butter at a price reduced by 21 cents a pound to institutions was first set up on January 20, 1955 and an institution made application to be supplied at the reduced price, a printed form was sent to that institution asking for, first, the quantity of butter used monthly—that was, used monthly before they made the application—the quantity of margarine used monthly, again before they made the application, and the quantity of other fats used monthly before they made the application. Then, there are two lines left for remarks at the end of that. I have no record of any remarks that were made; but the record for the last month before the officials of each institution made application shown in the statistics from which I quoted the amount of butter, margarine and other fats used in Quebec at the time the institution first came under the plan.

I should say at this point there is no difference between the province of Quebec and any other province in that regard. Exactly the same forms went to all the provinces, and the returns came in from those provinces, giving the position which existed when the institution came under the plan. From the time the institution came under the plan the record of butter used is the actual amount for which we made the 21 cents deduction. Hon. members will see that there is no difficulty about that because month by month we had to pay 21 cents a pound on all the butter that was used by the institutions, so we make our own records with regard to that. It is not necessary to get the facts from the institutions.

The total of the number of institutions and the amounts of margarine and other fats for the province of Quebec are listed on the first return on the file, which would be at the beginning of February of 1955: Number of institutions, 199; butter, 133,166 pounds; margarine, 5,408 pounds; and other fats, 46,680 pounds.

Then, as new institutions came under the plan the amount of margarine and other fats they were using at the time they came in was added to the total of those already in. That is the figure which is shown for each succeeding month. I should like to point out that does not mean that those institutions are still using margarine in any quantity; it does not mean that after they came into the plan they used margarine, and we have no record as to what they did do after they came under the plan. It only indicates that before they came under the plan at all they were using margarine in some form. Again, I would remind hon. members of the distinction made in the *Gazette* report as to the two different types of margarine. Their contention is that margarine which is made from anything other than vegetable oils is not illegal in the province of Quebec. That is something that will have to be determined by others. I am not offering an opinion on it.

The last statement which I had on my desk when the quotation was asked for was that of January 27, 1956, and it reads as follows: Institutions, 777; butter, 297,313 pounds; margarine, 13,591 pounds. Again I repeat, that does not mean that those institutions are using that much margarine or any margarine since they came under the plan. That is the total amount that was used by all institutions before they came under the plan from February 1 last year down to January 27 this year.

I now have a report for February 10, 1956, which is two weeks later, which illustrates the practice followed. It shows: institutions, 788; butter, 299,135 pounds; margarine, 13,666 pounds; other fats, 103,346 pounds.

This shows that in the two weeks preceding that report there were 11 new institutions came in. The increase in the report with respect to margarine is 75 pounds and the increase in the report with respect to other fats is 200 pounds. This record does not show what they continued to use after they came in. It is only a record of what they were using, and the record of each new institution is added to the records of all other institutions previously recorded to give the total figure.

Our record shows that in all institutions in Quebec there were 1,822 more pounds of butter used in the two weeks ending February 10, 1956 than in the week ending January 27, 1956. As a matter of fact, that was the question asked me by the hon. member for Quebec West. He wanted to know what was the difference with respect to butter. That is the question as it appears in *Hansard*. The records have been given the same way in all provinces. It will therefore be necessary to obtain further information from all institutions before being able to determine the

answer as to exactly what the effect of the application of the plan has been on the consumption of butter.

I only say that because in my speech the other day it will be found that I said, when discussing the matter here, that one of our objectives was to find that out, and these records which I am reviewing now do not make it possible to find that out. I do not know whether members are interested in hearing the law as it is in Quebec. I have the sections of the act here. It is probably not necessary to read them to the house. Maybe I should read them. I think it would be just as well to read them. It is not our law, it is the law of the province of Quebec, and it is not our responsibility to enforce the law.

Mr. Coldwell: Mr. Speaker, may I remind the Minister of Agriculture that neither the figures he gave last Friday nor the law of Quebec are in question in the house at the present time.

Mr. Gardiner: They may not be in question in the house—

Mr. Coldwell: Or in the country.

Mr. Gardiner: —But I gave an absolute undertaking both to the Speaker and to the press that I would give the figures today and give an explanation of what they mean.

An hon. Member: Why?

Mr. Gardiner: Of course, if no one wants to have the right information—

Mr. Speaker: Order. If I may comment at this time, the minister is quite right in raising a question of privilege in order to deal with the particular matter at issue, namely the alteration of *Hansard*. I was waiting to see if hon. members would raise a point with respect to the additional matter the minister has been dealing with in the last few minutes. If the point is raised at this moment the minister should not go any further than necessary in order to explain his question of privilege. Whatever else has to be done with respect to the matter of butter and margarine will have to be dealt with when we resume the discussion in committee of supply.

Mr. Gardiner: That is quite all right. That is why I asked the question whether the house wanted to hear it, and that is the answer. Finally, all I have to say is that the government has nothing to do with the distribution of margarine, spreads or other fats in the province of Quebec and only seeks information there as well as in other provinces for the purpose of being able to determine whether the policy is having any effect upon the consumption of butter, and, if so, how much. There is nothing in our records to indicate anything being done by any institutions in Quebec or elsewhere which is illegal, nothing whatsoever.

Mr. Speaker: As another person who is involved in the circumstances surrounding this case I should make my position clear. The right hon. Minister of Agriculture (Mr. Gardiner) came to me last Friday a few minutes prior to six o'clock with respect to an alteration which he wanted to have made in *Hansard*. As hon. members know, at that moment I had as guests in my chamber two members of parliament from New Zealand whom several hon. members had met between five and six o'clock.

When the minister came to me I understood, and I am sure the minister, who has not perhaps put the emphasis on that particular phase of our conversation but rather on the other, which is the inference that whatever he had said might have indicated that the institutions in Quebec were violating the law. I want to say that I was not so much concerned with that, because having said that, that was not the main reason I thought his request was reasonable.

He was dealing with figures and in front of the two guests who were there he indicated that there was very little time left and for the purpose of accuracy certain figures had to be changed and others taken out of the record. I took it as a minor essential alteration; that is the way it struck me. We were in committee of supply where more latitude is allowed than when the Speaker is in the chair for the revision of questions asked and answers given.

I want to say too that I was further impressed, although that was not the motive of my decision, by the fact that something had been said which might create considerable implications with respect to institutions in my province. As I say, that was not the main reason why I made the decision. I thought I was perfectly within what I considered to be the guiding rule with respect to alterations made in *Hansard*, and I shall deal with this later.

There is another thing which was in my mind. These were the very last minutes before six o'clock on Friday and I was fortified by the fact that if by any chance I was erring the possibility of redressing the situation could always be found. The daily edition of *Hansard* is the unrevised edition. We all know that within eight days from the moment speeches are made there is a revised edition prepared. Therefore we can always check whatever has been said and reinsert whatever has been taken out if it

is considered by the house that what has been taken out should not have been taken out.

I want hon. members to realize this position. In the first place, what is *Hansard*? Hon. members think it is the official report of debates, and so it is. But in what sense is it the official report of debates? I want to say this to hon. members for their consideration because now that I have an opportunity to deal with this matter I should like to deal with it as thoroughly as I can.

The editor of *Hansard* and myself, and I presume the Clerk, are in a difficult position because of a custom which has been established over the years of members going to the *Hansard* office to revise their typescript. Some make very few revisions but others make numerous revisions and it is sometimes difficult for the editor and myself to decide just where we should stop in accepting revisions that are being made.

According to the Speaker of the House of Commons of the United Kingdom, *Hansard* is a report as accurate as possible of the debates, but it is official only in the sense that it is published, not by an outside contractor but by persons who are employees of the House of Commons. I find the Speaker's remarks in *Parliamentary Affairs*, page 218, volume 2, 1948-49. In reply to a question in which a member was talking about an amendment which had not been referred to in *Hansard*, Mr. Speaker said:

> I can assure the right hon. and gallant gentleman that the mere fact that he has raised that point will automatically put the matter right. I think the right hon. and gallant gentleman said that it was a mistake in the official report. *Hansard* is not an official report. It is, I hope, as accurate an account of our proceedings as possible. The official report is one which it is my duty, the house remembers, by resolution passed at the beginning of every session, to peruse daily. I did peruse the official report, which is the accurate one, and it says "Another amendment made", which is the correct wording. Therefore, officially the amendment is correct and in order, and I hope that what I have said, and what the right hon. and gallant gentleman has said, will ensure that the matter is put right in *Hansard*.

In other words, there is a distinction between *Hansard* and *Votes and Proceedings*. *Votes and Proceedings* is the only volume that is official in the sense that evidence of it has to be accepted by the courts. Now, if hon. members will permit me, I want to ask, what is the authority of the Speaker with respect to *Hansard*? Some may think that, because there is a standing committee which is appointed at the beginning of every session, the standing committee is the one that should be the supreme authority with respect to anything that goes into *Hansard*. I wish to submit that it is not exactly so.

[Mr. Speaker.]

In the first place, the standing committee is not an administrative body and does not deal with anything unless something is referred to it by the house. As a matter of fact, once our standing committees are appointed there is always a motion that follows to indicate that they be empowered to do such and such, namely to deal with anything that may be referred to them from time to time. Hon. members will find that in their *Votes and Proceedings* at the beginning of every session.

Therefore, the standing committee on debates does not deal with current matters such as the one with which we are concerned at the moment. The position here is similar to that in the United Kingdom, and it is as follows. I quote from *Parliamentary Affairs*, volume 5, 1951-52, which states the position in the United Kingdom:

> The official report began in 1909 and the committee, whose terms of reference were extended to enable them "to assist Mr. Speaker" in the arrangements for it, became the "Pub. and Deb." which still exists to this day. "Assistance" is the most they can give, as responsibility for the production of the official report rests solely upon the Speaker.

In our own house, the situation is the same, because we had sessional committees until 1906, and on July 10, 1906, the committee on debates was made a standing committee. As I said a moment ago, it is not an administrative committee; it is one which is not called upon to sit unless some matters are referred to it by the house.

Having stated what my responsibility is in the matter, I should like to tell hon. members as briefly as I can what I consider to be the guiding principles which I think the editor of debates should follow in accepting revisions which are suggested, and the guiding principles which I follow myself.

I wish to interject here that during the last recess I had a long conversation with the associate editor of debates, and we talked about this problem of hon. members revising the transcripts of their notes. "I pointed out to him that he would receive my full co-operation in trying to maintain as closely as possible the original text as the speeches were pronounced in this house and to accept revisions only when they were minor alterations or when they were merely corrections for the purpose of improving the vocabulary or correcting grammatical errors."

I told him that I had looked at the authorities in the United Kingdom, that they were specific on the point, and that I thought it would be the wish of our house that the same rules that exist over there should exist here.

What are those rules? I have here a little volume entitled "Our Hansard" which is published by Mr. William Law. In it I find this:

A third revision—

He is talking about the revisions by members that have taken place in the House of Commons in the United Kingdom.

—is given to some of the speeches. A few members of parliament come up to the sub-editors' room and look through the transcripts. They have no right to do so, but the practice of allowing members to make corrections has its beneficial side, and has been allowed to grow up because it can contribute to the accuracy of the report. The member is not allowed to make alterations in meaning unless it can be shown that the reporter has misunderstood him and he is not permitted to read the speeches made by other members. Control of this practice, under the editor, of course, is in the hands of the assistant editor, who has the power, but seldom needs to use it, to erase what a member has written. He, with his sub-editors, is thus not only the corrector but the protector of the report. It is under his authority that the transcripts are finally passed for publication.

Speakers of the house have twice been asked to give a ruling on the practice of allowing members to alter their transcripts, and they have made it clear that the limits within which the member acts are very narrow. This is the official report of the questions put to Mr. Speaker Lowther on 6th April, 1914, and of his answers:

"Mr. Ronald McNeil: I desire to ask you, Mr. Speaker, a question relating to a matter of procedure—whether you would be good enough to inform the house, for the guidance of hon. members, whether there are any restrictions on the right of members to correct the official report of speeches delivered by them in the house and in particular whether there is any unwritten rule or honourable understanding that corrections should be limited to verbal errors, and that members may not, by the insertion of words or phrases, effect material changes in the meaning of that which they actually said in the house?

Mr. Speaker: I have consulted the editor of the official report on this matter, and he tells me that, although hon. members make corrections, he revises those corrections, and it does not follow that because an hon. member makes a correction in the proof that that correction is always accepted. I asked the editor on what principles he went, and he said that the chief principle which guided him was to obtain an absolutely correct report of what was said . . .

He is very careful not to allow any corrections which would in any way alter the general sense of the speech made, but that he does accept corrections, for instance, of faults of grammar, split infinitives, redundancies, or incorrect dates, and I have told the editor that in my opinion he is in that way acting quite correctly."

Then later on Sir William Byles asked a question:

Sir William Byles: May I ask you whether it has not long been the practice of hon. members to make slight verbal alterations in the proof which reaches them in order to make their meaning more precise and accurate?

Mr. Speaker: That might be their habit, but it rests with the editor of the official report to consider whether that amendment or alteration does materially affect the sense.

Mr. Whyte: Is it not the case that, owing to the difficulty of reporting hon. members, who usually speak in the direction away from you, the report taken of speeches in this house often omits very material sentences, and therefore, sir, it may often happen that in an important debate phrases or words are omitted or inserted which did not actually leave the lips of the speaker?

Mr. Speaker: That is so, and I have had complaints from the reporters that when hon. members, and I am sorry to add, right hon. members, turn their backs on the chair and address the benches below the gangway, it is very often very difficult to catch exactly what is said. I have given instructions in cases of that kind that it is the duty of the reporter to leave a blank if he is not able to take down the next words, and to ascertain from other sources what was said, and fill up the blank in that way.

Later on in 1944 Mr. Speaker Clifton Brown was called upon to rule upon the same subject and he reiterated the ruling made by Mr. Speaker Lowther in 1914.

That therefore is the situation in the United Kingdom and those are the rules which I think should apply in our own house. I am fortified in that view by another fact. In 1948 the standing committee on debates held meetings. I think it is the last time the standing committee on debates held meetings. Prior to that date there was a meeting I think in 1932 or 1933 and some in 1924 or 1925. But in 1948, as appears at page 490 of the *Journals* of 1947-48, I read in the report which was concurred in by the house the following, being paragraph 4:

That the pages of the daily edition be kept intact so that, after permissible corrections are made, the pages of the daily edition can be used for the bound edition as originally printed, and that—

And I draw your attention to this portion:

—changes suggested by members be confined strictly to correction of errors and essential minor alterations.

To me these are the guiding rules with respect to the execution of our duties; I refer to the duties of the editor of debates, myself, the Clerk or anyone else who may have anything to do with the matter in this house.

Some hon. members may say, "If those are your views, you are far away from having observed them in dealing with the point that is now before us". I will agree that is so. The only excuse I have, if any, is this. Whereas of late hon. members have been, so far as I can ascertain, perhaps more particular than ever with respect to any changes which might be made in *Hansard*, it looks as though even in the United Kingdom, when it comes to figures, quotation or statistics, about which one may have doubt, and especially when the house is sitting in committee and not with the Speaker in the chair, more latitude has been given. Indeed, in 1924 I find that the house even considered the possibility of

eliminating *Hansard* in committee and reporting only speeches made when the Speaker was in the chair. In the order of reference of the committee on debates which studied the matter—and this is found at page 504 in 1924—one question before it was this:

> 2. Whether it is desirable, in the interests of economy of time, labour and expense, that the report of the debates in *Hansard* should be limited to set speeches as may be delivered when Mr. Speaker is in the chair, with or without a brief report of proceedings in committee.

On the other hand, in the United Kingdom when the house sits late at night whereas they do not allow members to go upstairs to correct their speeches, they will allow this, and it is a suggestion reported in the *Journal of the Society of Clerks at the Table in Empire Parliaments* for 1947, page 38, volume 16:

> It is suggested that in the case of these later speeches members should not seek to do any revision later than 10.30 p.m., except on special points of difficulty or doubt, involving names, figures, or quotations.

As I said before, if we had been in different circumstances than those which prevailed just a few minutes before six o'clock on Friday night, the matter would have been dealt with in the house.

I believe that from now on it should be made certain, and I think the house will agree with me, that the editor of debates should, if these rulings I have quoted constitute a proper authority for the manner in which hon. members want to have their *Hansard* protected, be guided by those rulings without any reference whatever to anybody else. If an alteration is to be made in our debates, the matter should be dealt with on the floor of the house. This matter of the Speaker or the Clerk or anyone else having to do with this editing of debates, and being called upon to judge what may be taken out or put in, is putting those persons in the position of being censors. There is always the chance—as a matter of fact I would say it would be an illusion to think that if any material changes are made to *Hansard* they will not be picked up.

As hon. members know, the transcript of speeches made in this house is issued to the press gallery about 20 minutes after the take is reported. Members can always have access to the editor's room to check the speeches that are being made. There are all those hon. members who were in the house at the time the speech was made, most of whom have very good memories and can recall what was said. We cannot therefore eliminate something from *Hansard* without there being a chance that some repercussions will take place. I think the minister himself did know that, and I certainly knew it. At the time I conceded to what I thought was a reasonable request by the minister, based on the fact he was in committee of supply and was dealing with figures. Under the circumstances, they appeared to be minor alterations such as would be allowed according to the guiding rule recommended by the committee on debates in 1948 and concurred in by the house.

What are we going to do in the present circumstances? We are in the full house, and we are exercising our powers. I think, myself, that the words that have been omitted, now that they have been repeated in the statement made by the minister, should be reinserted in the revised edition where they should have been all along. It is a matter which is now of public concern, and I would suggest that the words eliminated be reinstated. They are not so considerable as some hon. members may think. I have the typescript here, and the omissions consist of two phrases in the reply made by the minister to the hon. member for Quebec West (Mr. Dufresne). There is one where it says, "They used only 6,000 pounds of margarine. Then they had other fats, neither margarine nor butter, amounting to 53,000 pounds." Then, later, the figures omitted were, "13,591 pounds of margarine and 103,146 pounds of other fats." Those are the words that have been omitted.

My ruling at this point would be—

Mr. Drew: I trust there will be no ruling until you have heard the views of hon. members.

Mr. Speaker: The Leader of the Opposition (Mr. Drew) has just said, "I hope there will be no ruling until you have heard from hon. members." I do not know exactly what the Leader of the Opposition has in mind, but the editing of the debates is in the hands of an employee of the house who is under the authority of the Speaker. If advice is required, he seeks it from the officials, that is the ones who are above him, and in this case that is what he has done. The Speaker takes full responsibility for what he has done and at the first opportunity submits what he has done to the house.

Now, I did indicate why I took the action that I did. It is because I have doubts that I propose to redress the situation by suggesting that the words omitted be reinserted.

I would tell the Leader of the Opposition that I could even go a step farther and at this moment I could submit my conduct to the house and ask for the yeas and nays.

Mr. Drew: May I, in deference, submit to you that before you do anything that purports

to be in the way of a binding decision, you permit hon. members to make comments in regard to the situation?

Mr. Speaker: Would the Leader of the Opposition proceed now?

Hon. George A. Drew (Leader of the Opposition): Yes. The reason I suggested that this matter be discussed before anything in the nature of a ruling be made is that, if a ruling were made, then there would be no further debate, and one of the most important subjects to come before the house would therefore be ruled out of debate.

I submit, Mr. Speaker, that this subject has not in any way been changed by what has been said. I am, in fact, rising on a point of privilege and I will proceed, if Your Honour believes that it is appropriate that I should proceed, on that basis. But I had hoped I might be permitted to do so before any ruling would be made which purported to dispose of the question of privilege raised by the Minister of Agriculture, and then not dealt with. All he did was to indicate what he thought he should have said on Friday. He neither apologized for the course he has followed, nor did he seek to have redress made for the very improper procedure that was adopted.

Now, Your Honour has mentioned two deletions and suggested that these are minor essential alterations. I submit that they go a great deal further than that. The first of these deletions appeared in the second last paragraph of the second column of page 1056, following the figure "155,000". Your Honour has already read them, but so that they may be in context I would repeat the words. "They used only 6,000 pounds of margarine. Then they had other fats, neither margarine nor butter, amounting to 53,000 pounds". The second deletion appeared in the fifth last line of the last paragraph in column two at page 1056, following the word, "butter". In that case, after the word "butter" and a comma, this appears, "13,591 pounds of margarine and 103,146 pounds of other fats."

And now, Mr. Speaker, this was part of a statement dealing with the broad question of the impact of the use of margarine on the use of butter under certain circumstances. If one reads the pages that follow, one will find that this fits into the context of general remarks, and one also finds what the result would be of a procedure of this kind because the hon. member for Vancouver South (Mr. Philpott) is left up in the air so far as *Hansard* is concerned. He is left in the position of having asked a question at page 1064, which does not relate to anything that was said. Nothing could better illustrate that this is not a question of minor alterations. It changes the whole context of the debate. If this can happen, then *Hansard* for practical purposes becomes a very ineffective record of the debates in this house.

Then, Mr. Speaker, I submit there are well-established rules in regard to the printing, in regard to the amendments, in regard to the nature of corrections which go much farther than those that have been suggested. There are long-established rules governing how corrections are to be made. Certain changes can be made by the member speaking. On the back page of each daily edition of what we describe as *Hansard* appear the words:

> Official report of debates.

No refinement of argument changes the fact that this is regarded as the official report of debates; whether sitting with the Speaker in the chair or in committee, these are the reports and the only reports of the debates that take place in the House of Commons. There need be no precedents read to establish what is permitted, because on the back page of *Hansard* there is printed each day, and it has been printed there for a long time, the following:

> Following publication of the daily edition, proofs of their speeches or remarks are sent to members. These must be returned to the debates office within eight calendar days of the date on which the speech was made. Suggested changes must be confined to correction of errors and essential minor alterations.

The errors are not errors of the speaker, Mr. Speaker. The errors referred to there are the errors in *Hansard*. There is a procedure by which errors on the part of the speaker can be corrected, and that is adopted day after day here. Hon. members rise and say: "I seek leave to have *Hansard* corrected by inserting the following, or substituting certain words in place of words already appearing." There is no doubt about what that means. The correction of errors is the correction of errors made by *Hansard* in the reporting.

Fortunately, and as a great tribute to *Hansard*, those are very few indeed. Essential minor alterations mean something that does not affect the context. As a matter of fact it does not in any way change the meaning of what was said. It simply clarifies in some way the statement that was made, and that of course applies to the corrections that are to be made within eight days.

I want to submit, Mr. Speaker—and this is particularly the reason for the suggestion that no ruling be made before hon. members had an opportunity to make certain observations in regard to this subject—when it comes to making changes in the official report there is a clearly defined way of doing it.

It cannot be done by any member of the house on his own initiative, as was done in this case. What is more, Mr. Speaker, I submit in deference that it cannot be done by the Speaker except under the authority of the house. It can only be done by the authority of this House of Commons, which is the supreme authority in matters of this kind.

There are plenty of precedents in regard to this. On April 7, 1933, the then member for Temiscouata, whom most of us remember very well, objected to a certain word used by a member about him in debate, and Mr. Speaker said at page 3804 of revised *Hansard*:

> If the hon. member for Temiscouata believes that the word referred to him, I will direct that it be expunged from *Hansard*.

I would like to point out what happened on that occasion.

Mr. Speaker: Order. Will the hon. member be good enough to give me the date of the incident?

Mr. Drew: April 7, 1933. The then leader of the opposition, Right Hon. Mackenzie King, made the following statement, which appears at page 3805 of *Hansard* I just referred to, and I quote his words:

> Mr. Speaker, I do not wish to take exception to what Your Honour may have done in the way of expunging possible objectionable phrases from *Hansard*, but I would ask if it is not part of the privilege of the house to control its own records, and whether the house should not, before any statements are expunged from the records, pass a resolution in the first instance. I raise this point now because Your Honour has made decisions which equally affect members on both sides of the house. I did not wish to take exception to anything done in the past but I respectfully submit so far as the privileges of the house are concerned that His Honour the Speaker is the servant of the house in this as in all matters, and the house should itself determine whether anything is to be expunged from any of its records.

That was the statement of Mr. Mackenzie King, the leader of the opposition at that time. The Speaker then made this reply, as reported immediately afterwards on the page of *Hansard* I have referred to:

> I will take the remarks of the right honourable gentleman under consideration.

Then, having given the matter the appropriate consideration, Mr. Speaker Black, on April 10, gave his ruling as follows, as reported at page 3855 of *Hansard*. I submit that this has stood unchallenged as the appropriate statement in regard to matters of this kind. I quote:

> On Friday, April 7, the right hon. the leader of the opposition raised the point that the house having control of its own records, the house should, before any statements are expunged from the official report of the debates, pass a resolution to that effect, and he submitted that the Speaker being the servant of the house in this, as in all matters, the house itself should determine whether anything is to be deleted from any of its records.
>
> In the case in point, the first opportunity I had of fully understanding the words complained of was when I saw the official report, and since I should have ruled them out when they were uttered I consider I was justified in ruling them out from the chair as soon as the house sat again. I agree that in dealing with *Hansard* the Speaker's authority is subject to the approval of the house.
>
> Instructions for any alteration in the official report of the debates should not be given without communicating them to the house in session, and for this reason, whenever I have deemed it advisable to direct that certain statements be expunged, I have done so from the chair, thus giving a ruling which, under standing order 12, is subject to an appeal to the house.

Now, Mr. Speaker, the situation here is one in which the minister could have apologized to the house, as he should have done.

Mr. Gardiner: I am quite prepared to do that when you sit down.

Mr. Drew: At least, Mr. Speaker, we have a grain of encouragement to say that the debate has brought this conviction to the mind of the Minister of Agriculture, and we welcome it. But it goes much farther than that. This subject is not one where figures or quotations were in doubt. This is not a case of a minor change. This is a case of tearing *Hansard* apart. This is a case of changing the whole context after that part of the debate, and in relation to statements which could have been corrected at a subsequent time by the proper procedure.

Now, if it were possible for *Hansard* to be changed in this way its effectiveness would be completely destroyed. No matter what we may argue as to the degree of official authority that is to be interpreted as applying to these records, the fact remains that they are described as the official report of debates and they are the only official reports we have. The whole context must remain in its proper form if we are in fact to have an understanding of what took place.

It must be remembered that in the proper course of their duties many hon. members may not be present in the house on a particular day. It is not only the members of the government who have legitimate reasons for being out of the house on many occasions. As every hon. member knows, many committees sit while the house is sitting and members are outside of the house. Unless the record conforms to the meaning and intent of the debate itself, hon. members who were doing their proper business as members of the house on committees or otherwise are denied the opportunity of knowing what took place here.

It is of vital importance that the integrity of the debates be fully protected, and I submit, Mr. Speaker, that this matter should not be left where it is. I submit with deference that circumstances have arisen which make it appropriate that this should go before the standing committee on debates for inquiry as to the procedure which has taken place and what actually did take place in this instance. Perhaps the Speaker could inform us whether *Hansard* had already refused to make the changes when requested by the Minister of Agriculture. If it did we should know that, because in that case it was no minor alteration but an alteration which *Hansard* had already refused to make when it was requested by the Minister of Agriculture.

Mr. Speaker: May I deal with the point raised by the Leader of the Opposition. In line with the conversation I had with the editor of debates during the last recess he did refuse to alter the words and that is why he submitted the matter to me. That is why the Minister of Agriculture came to my office to see me. I communicated with the editor of debates this morning again and I said: "In your opinion was it such a material change in view of the fact that figures were involved and the house was in committee of supply?" He did tell me that he did not think it was such a considerable change but in the light of the conversation we had during the recess it was the type of change which he felt he should refer to me.

As I told hon. members before, I would not have dealt with this matter in any shape or form had it not been for the fact that I thought it was merely a minor essential alteration and having regard to the fact that the house was in committee of supply, the accuracy of figures was under consideration and, as I say, I was impressed by the circumstances that there was an inference there about institutions being guilty of something which had been indicated in the house.

The Leader of the Opposition will permit me to tell him and the house that so far as the editors of debates are concerned they are not responsible for one second for anything that has happened. As a matter of fact, I pay them a tribute for their integrity, their independence, their conscientiousness and their impartiality. I will say further that if there is one man who is responsible for this it is not the Minister of Agriculture but the Speaker of the House of Commons.

Some hon. Members: No.

Mr. Speaker: Oh, yes, I am.

Mr. Knowles: Under pressure.

Mr. Speaker: Oh well, pressure—it all depends what you mean by pressure. The Minister of Agriculture did not insist that I do it—

An hon. Member: Oh, no?

Mr. Speaker: —but the circumstances were such as I explained a moment ago. Hon. members know that between five and six o'clock I had as my guests two parliamentarians from New Zealand and it happened that several members were in my office while they were there. They were just about to take their leave when the minister came in. As a matter of fact, I thought he was coming in to meet the two parliamentarians in question and I was very pleased to introduce him to them. But in the course of the conversation, and it was just a few minutes before six o'clock, I took it that the editor upstairs had perhaps been overzealous and was questioning the fact that the minister wanted to alter some figures for purposes of accuracy.

I take the responsibility and I am prepared to stand before the house. I will say, having reviewed the matter again during the week end, that I realized, as I said, that if I had had a few hours to look into the matter I would not have dealt with it in the manner in which I did. I confess I made a mistake and I do apologize to the house. In order to put the thing straight I suggest that the words be reinserted just as if nothing had happened, and I am prepared to submit myself to a vote of the house.

Mr. Drew: Mr. Speaker, we are dealing with a procedure, and I have already quoted what is the recognized authority for a similar procedure. In the first place may I, with deference, suggest to Your Honour that the Minister of Agriculture must accept full responsibility for having initiated the proceedings which led to this unfortunate result. One of the things that must be recognized is that when we discuss procedure here and seek appropriate changes it is not a reflection on the Speaker which should call for any suggestion that he submit himself to the house. It is a suggestion in regard to statements which have already been put forward and which, in the minds of many hon. members, do not suggest a satisfactory procedure.

In the quotations that Your Honour made I submit there was appropriate emphasis placed on rules that should be observed. One is that there cannot be a change unless it is shown that the reporter misunderstood the hon. member who was speaking. No such situation occurred here. Another rule is that an hon. member cannot make changes in the

meaning of what was said in the house. Neither of these rules permits any change in this case.

Simply with the idea of indicating what would be appropriate in regard to proceedings of this kind I am going to move a motion, but before doing so I must express concern as an hon. member of this house that Your Honour has sought to justify this procedure by drawing a distinction between sittings in committee and sittings while Your Honour is in the chair. I submit there is no precedent for any such distinction. The informality to which Your Honour refers is informality in discussion, not informality in reporting and not informality as to the manner in which these reports will be dealt with.

Discussions in committee may be just as important and may have just as far-reaching consequences as discussions when Your Honour is in the chair and we are discussing a matter with the House of Commons sitting formally. I submit, therefore, that the distinction cannot be drawn and it would be unfortunate if Your Honour proceeded to make anything in the nature of a ruling which incorporated the observation you have just made. For that reason, Mr. Speaker, I move—

Mr. Speaker: Order. Before the Leader of the Opposition moves any motion, he must realize under what circumstances he has taken the floor. I was dealing with the point and was about to submit my action to the judgment of the house as was done by Mr. Speaker Black in 1933. At that moment the Leader of the Opposition said, "Before you make a ruling I should like to say something." I have heard him and I think I should now hear other hon. members who wish to speak.

Mr. Drew: If you are not to permit me to make a motion at this time, then before I conclude my remarks—I could of course make a motion at another time—may I strongly urge that you make no ruling until this matter has been submitted to the standing committee on debates with instructions that that committee inquire into and report upon the omission of certain words and figures discussed this afternoon. May I urge that the committee also on the basis of its inquiry make recommendations which will be for the advantage of Your Honour and members of this house whose authority in the end will determine the matter as to the appropriate procedure which would best ensure the integrity of *Hansard* in the future.

Mr. Coldwell: Mr. Speaker, I should like—

Mr. Gardiner: Will you allow me just to make—

[Mr. Drew.]

Mr. M. J. Coldwell (Rosetown-Biggar): Mr. Speaker, I think the right hon. gentleman should wait until I conclude my remarks. First of all I want to say that this discussion this afternoon and the interest in the house, in the galleries and in the newspapers indicate the value which members of parliament have placed upon the official record of this house which we call *Hansard*. I want secondly to say that I noted that you suggested that you would submit yourself to the judgment of the house. May I say with all respect that I do not think you should do so. I do not see that you have any reason for doing that at this time.

I think the whole matter that you have tried to take upon your own shoulders is one that rests squarely upon the Minister of Agriculture (Mr. Gardiner). It was the Minister of Agriculture who came to you with the suggestion that certain words and figures be deleted from *Hansard*. You yourself have said that you understood that those figures were more or less inconsequential as far as the meaning of the statement made by the minister went. In that you were misguided or misinformed. Therefore I do not think that you should take the responsibility for what was done. I have no doubt that considerable pressure was brought to bear—

Mr. Harris: On a question of privilege and a point of order, Mr. Speaker, that remark was made just earlier by the hon. member for Winnipeg South Centre.

Mr. Coldwell: I did not hear it.

Mr. Knowles: Winnipeg North Centre.

Mr. Harris: I was about to rise at that point but I thought I would leave it until later. Now that it has been repeated may I point out to hon. members that in effect what they are saying that the Speaker of the House of Commons yielded to pressure of a cabinet minister with respect to something that was within his exclusive jurisdiction, and I want to suggest that no such remark should be made in this debate.

Mr. Coldwell: If that inference is going to be taken from it then I withdraw the word and I do it immediately because that was not the meaning of the word as I intended to use it. I should perhaps have said that very strong representations were made to you, Mr. Speaker, by the minister.

Mr. Gardiner: On a question of privilege, may I have the opportunity of saying that at no time did I put any pressure on anyone, either the Speaker or anyone at all. I would like that statement withdrawn. I did not put any pressure on anyone.

Mr. Coldwell: I would like to know why the Minister of Agriculture went both to the editor of *Hansard*, who as I understand it refused to make the changes that he urged upon him, and then went to the Speaker if it—

Mr. Gardiner: He did not refuse, he simply suggested that I go and discuss the matter with the Speaker, and I did.

Mr. Coldwell: All right; I will take that explanation from the Minister of Agriculture. But I do know that on one occasion when a colleague of mine simply inserted in *Hansard* the words "Mr. Speaker" indicating that I had risen to speak, the Minister of Agriculture not only objected to it but he pursued the former editor of *Hansard* with letters of criticism almost until he went to his grave.

Mr. Gardiner: Will you produce the letters?

Mr. Coldwell: I say to the right hon. gentleman that he obtained an alteration in *Hansard* which was not warranted. We have always believed that a member of parliament might go to the *Hansard* office and make editorial changes. What I mean is that he might change the phraseology without changing the meaning to improve the construction of a sentence. He might go to *Hansard* and change a figure that he had misquoted or, as I did the other day, when I quoted the name of a slave, in this House of Commons from memory, I quoted the wrong name and *Hansard* was good enough to accept my correction for the revised record of the debate.

Mr. Pickersgill: Did the hon. gentleman say slave?

Mr. Coldwell: S-l-a-v-e. I said the name of a slave in this House of Commons. The hon. gentleman knows perfectly well that you can put something in parentheses, and that is what I was doing. He is a master of the English language and he knows perfectly well what I was doing, but he thought it would be smart to pick me up.

Mr. Pickersgill: I object; I really misunderstood.

Some hon. Members: Sit down.

An hon. Member: You are still all wet.

Mr. Coldwell: What I was going to say is that those changes have been permitted, but this is a different sort of change. This was a change in meaning. I have looked at all the precedents that I could find this morning. The Leader of the Opposition (Mr. Drew) has quoted one of them, perhaps the most important. During the last 30 years members have risen in this house and drawn mistakes to the attention of the Speaker and the Speaker has ordered that words might be expunged from the record. From the chair he has ordered it, not outside this chamber. I looked through the records this morning and I could not find a single instance where anything of this sort had happened before. I hope that it will not happen again. From what His Honour the Speaker has said I do not think it will happen again.

I want it to be abundantly clear that in rising and discussing this problem I am not placing blame on Mr. Speaker, although I think perhaps Mr. Speaker did not exercise at that moment good judgment. I am placing the blame where it squarely belongs, on the Minister of Agriculture. This was an attempt on the minister's part to cover up something which he felt he should not have revealed to the house.

Mr. Gardiner: My friend knows better than that; he should know better than that.

An hon. Member: Sit down.

Mr. Gardiner: It was nothing that I should not reveal to the house. I revealed it to the house today.

Mr. Coldwell: If the minister felt it was something he should have revealed to the house, why did he reveal it to the house today after having taken it out of *Hansard* on Friday. I will tell you why he revealed it to the house today. It was because public opinion will support the members of this house in demanding that the Minister of Agriculture shall not be allowed to falsify the records of parliament. He realized that and so today he came back to try to make, shall I put it, restitution.

Mr. Gardiner: I realized on Friday that I would have all the abuse I am getting now and I was quite prepared to take it rather than leave some charge on the head of someone else.

Mr. Coldwell: I am very glad to know that that was the case. But, Mr. Speaker, this afternoon you tried to relieve the minister and I submit that the origin of the whole trouble should be laid on the shoulders of the Minister of Agriculture and that is where I intend to let it remain.

Mr. E. G. Hansell (Macleod): Mr. Speaker, it seems to me that perhaps in the end it will be discovered that this incident has been more or less highly inflated. However, that does not mean there is not some responsibility attached to someone somewhere, and that "someone somewhere" amounts to three people.

Hansard—Altering of Report

As far as I can see, Mr. Speaker, the first is Your Honour. You have given rather a lengthy explanation as to the rules governing this matter and the way you were approached on it, and I think the phrase you used was that you thought the minister's request reasonable. I can quite understand that. I do not suppose the minister came running to you with his hands scratching his hair out in a frenzy saying, "Mr. Speaker, you must do something". Politicians do not do it that way. They come and say—I am imagining I would do it this way—"There has been a slight error in some figures I gave today, and I just wondered if you would mind if they were scratched out and the correct figures put in."

Of course, Mr. Speaker, you would say that was a reasonable request. As far as any pressure being brought upon you is concerned, I would not regard it as pressure at all. I would regard it in the way I have said. I can visualize the minister coming to you in some such fashion and saying that it is an innocent little correction and your saying, "Yes, that seems to be reasonable to me." I say the minister should not have gone to you in the first place with such a request. That is where the responsibility, to my mind, rests. If your suggestion that you submit your decision to the judgment of this house is carried out, Mr. Speaker, this group is going to vote confidence in you, because they believe that you do act reasonably in all cases.

The second person that might be involved would be the editor of the debates, and you have already paid a high tribute to the editor of debates. The applause in this house confirms your tribute to the editor, and our experience—some of us over a good many years—would lead us to applaud every editor of debates that we have known in the last number of years. So we would vote confidence in them.

Of course there is only one person left, and that is the minister. It took the minister 20 minutes to rise on his point of privilege, and I think he would have gone on if you had not interrupted. I am at a loss to know why there were not the usual bawls on the government side of the house when a point of privilege lasted more than about 10 seconds. Today it lasted for 20 minutes, and no member on the government side of the house objected at all. That will be the day when anyone on this side of the house takes 20 minutes on a point of privilege. However, that is only incidental. There are one or two things I should like to amplify. The minister himself said that he had gone to the editor of debates and the editor of debates had said, "No, I am afraid we cannot delete a passage unless we get permission from the Speaker." The minister went to the Speaker, but there was another body of men to whom he went. He went to the press.

Mr. Speaker: May I suggest that in dealing with this point you might leave strangers out of the argument?

Mr. Hansell: The press may be strangers to some people but they are not strangers to the minister or to the government.

Mr. Coldwell: The minister went to the press.

Mr. Hansell: I hope I did not leave a wrong impression. The minister went to the press. It was the minister himself who first raised the matter by saying he went to the press. Now, I do not know whether we can conclude from that that there was any interference with the press, but the subject matter had gone over the wires and so nothing could be done about it. But this is not the first time that government members have gone to the press and tried to stop the press from publishing certain things. Members might talk about the freedom of the press and so forth, but let no person come to this corner of the house and accuse us of not believing in the freedom of the press.

The fact of the matter is that when the minister made his statement regarding the use of margarine by these institutions in our neighbouring province, somebody began to holler. It is not a matter of changing figures in *Hansard;* it is a matter of the minister's statement becoming a political issue in our neighbouring province. Somebody told the minister "You have to do something about this." The minister did do something about it, and it was the minister who yielded to some pressure. He did do something about it. He scratched it out of *Hansard.* He tinkered with the official record when it was not necessary to do so. The minister could have let the thing go just as it was, and he would have been better off if he had, because this criticism has gone into the press and has gone over the radio. Its importance, I think, has been highly inflated. All that could have been avoided by the minister letting the thing go, coming into the house today and rising on a point of privilege to say that he had made a mistake and that he should not have said this, correcting the figures and letting it go at that.

I shall not say any more except this. I think we have really said enough about the matter. We are not going to vote for the motion that has been proposed—

Mr. Coldwell: No motion has been moved. He could not move it.

Mr. Hansell: I am sorry. I thought it was a motion to refer this to the committee on debates. I am sorry if I misunderstood it. I do not think a motion is required at all. I think enough has been said to punish the minister. It is not the first time he has been punished in his long career.

Mr. Coldwell: It will not be the last.

Mr. Hansell: He says he is quite willing to rise and apologize. Let us not allow him or anyone else to think they can do these things and cover them all up with a little apology. That is not good enough. I do say, however, that there has been enough said. The minister recognizes the seriousness of the matter, and I trust that things of this kind will not happen again. The strange thing to me—though it is not strange after you have been in politics for a few years—is that, when anything becomes a political issue, my! my! how the sparks can fly!—and that is what that is. The minister knows it. Those gathered around him know it; and that is the reason for the whole fiasco today. As far as this group is concerned, we could just drop the matter now and let it stay where it is and let the minister realize that we are very critical of his action and that he himself will have to take the blame.

Mr. J. M. Macdonnell (Greenwood): Mr. Speaker, I was interested in the jeers which greeted the hon. member for Macleod (Mr. Hansell) when he suggested that there had been an attempt to interfere with the freedom of the press in this matter. If I understood the Minister of Agriculture correctly, he told us that on Friday evening he had tried in certain quarters to prevent certain material from being published. That was my understanding of what he said. When the Minister of Agriculture, with all his years of experience and with all his influence, seeks to have something kept out of the press, if that is not interfering with the freedom of the press, I do not know what is.

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, there is just one point in connection with this matter that I should like to ask Your Honour to consider. Before I do so, however, may I indicate my full support of Your Honour's suggestion that no member or minister should approach yourself or the Clerk in connection with matters of this kind. We have complete confidence in our reporters on the floor and in the editors of *Hansard* and we should not go beyond them with respect to a matter of this kind.

Mr. Harris: Will you withdraw your earlier remark?

Mr. Knowles: What is my hon. friend saying?

Mr. Harris: Will you withdraw the remark with respect to pressure, as your leader did?

Mr. Knowles: The Minister of Finance is asking that I withdraw the remark that I interjected at one point and in which I used the words "under pressure". Mr. Speaker, I do not feel that I should withdraw that remark. If any member of this house asked the editor of debates to make a change and the editor refused and if, as a result of that refusal, that member went to the Speaker in my view that is putting pressure on the Speaker.

The point I wish to raise, Mr. Speaker, relates to your suggestion that the words that were stricken from *Hansard* the other day be inserted at the proper point in the bound volume. First of all, of course, it will have to be made clear just where those words go. I believe Your Honour is the only one who has read the exact words so far and you said they would go after the figure "155,000". The figure "155,000" appears twice in the second last paragraph of column 2 on page 1056 of *Hansard*. I believe the words should be at line 12 of that paragraph.

The point I raise is this. Unless there is some notation put on page 1056 in the bound volume, a future student of *Hansard* will read page 1056 of *Hansard* of February 10, 1956, and this discussion of today with considerable confusion. Today's discussion will imply that these words are not there, but a future student of history will look back to page 1056 and will find that the words will be there. I am not proposing on the floor just how it should be done, but I am proposing that the editor of debates should be given permission to make a proper notation, if these words are put back in, to the effect that they were put back in as the result of today's discussion on the floor of the house.

Mr. Speaker: May I thank hon. members for the manner in which they have approached this difficult problem. May I say that apparently we are all in agreement as to how we want our *Hansard* to be protected. I think we are all in agreement that in authorizing the editor of debates to make the change which he made, I acted too summarily, too expeditiously and too lightly. I am extremely sorry to have acted in that light manner. I tried to explain the circumstances of the approach that was made to me. I want to state that if the minister had, as some hon. members contend, exerted any pressure, the alterations would certainly not have been made because it would have pointed out to

me what, in fact, the alterations were. But it was precisely because no pressure was put on me—

Mr. Hodgson: Oh, oh.

Mr. Speaker: The hon. member for Victoria, Ontario (Mr. Hodgson) makes an exclamation which indicates that he does not accept what I say, namely that there was no pressure brought to bear. I am not going to quarrel with hon. members. I state upon my honour as Speaker of the House of Commons that never at any time was any pressure put on me with respect to this matter. The circumstances were exactly as I have explained them to the house. I was standing up in my office. My two guests were right there when the Minister of Agriculture (Mr. Gardiner) walked in. I introduced him to my two guests, two parliamentarians from New Zealand.

It was at that moment that he indicated that there were some figures that he wanted to have deleted from *Hansard* in the interests of accuracy, and then he went on to indicate that if they were allowed to remain, there was some implication that some institutions in the province of Quebec would be guilty of a certain crime. At that moment it appeared to me to be a reasonable suggestion. That is all there was to it. The minister went upstairs and I phoned *Hansard*. That is the whole picture. There was nothing else. I swear to that. What I say now I would say under oath before any committee.

Some hon. members seem to feel it is peculiar that the editor of debates should refer an hon. member to me. The Minister of Agriculture is not the only one who has been referred to me. There are other members in this house at whom I am looking right now who have been referred to me by the editor of debates. During the last recess, when I was discussing matters of administration with the associate editor of debates—I am referring now to Mr. Buskard—he told me that sometimes he was having certain difficulties because he found that members, in revising their copy, were putting in too much or deleting too much. He said to me, "What is my order of reference? It is a difficult matter. Pressure is being put on me to make exceptions".

It was precisely in order to help him to resist that kind of pressure that I advised him as I did. I think hon. members know—in view of several requests that are being placed before me from time to time with regard to different matters—that I know how to resist or how to say no. I think hon. members know that. It was precisely in order to help that employee of ours that I told him this: "Hold the line; and if some difficulty comes along, refer it to me". It is for that reason that the Minister of Agriculture was obliged to come to see me. Where I failed in performing my duty as I should have performed it, in my opinion, was in not telling the Minister of Agriculture, "Will you please wait for me; I will let my two guests leave and then we can talk this matter over, call the editor of debates, bring him down here and look at the words that were to be deleted." If I had been able to consider them then, my reply to the Minister of Agriculture would have been no. That is my position.

The Leader of the Opposition (Mr. Drew) has made quite a case of the intervention of Mr. Mackenzie King in 1933 when Mr. Speaker Black had expunged from *Hansard* an expression which he considered to be objectionable and which had been attributed to Mr. Pouliot. The expression was that Mr. Pouliot had called another person a clown. That was a matter that had to do with disrespectful language or unparliamentary language. The expression was:

> . . . I did not object for the reason that clowns are never taken seriously, . . .

That is the expression that was used by Mr. Pouliot, at page 3749 of *Hansard* of April 5, 1933. It is that expression which Mr. Speaker Black ordered outside of the house to be expunged. It is that sort of action to which Mr. King took objection and to which he referred to his remarks at page 3805 of *Hansard*:

> Mr. Speaker, I do not wish to take exception to what Your Honour may have done in the way of expunging possible objectionable phrases from *Hansard* . . .

He referred there, as did Mr. Speaker Black at page 3855 of *Hansard*, to objectionable phrases which the Speaker may order to have expunged in the house because they offend the provisions of standing order 35. This is a different matter altogether. If hon. members assume for one moment that we are dealing in this case with alterations that deal only with minor revisions, and therefore purely a matter of editing, no hon. member will contend for one second that, in the very narrow limits of revision permitted under editing action, the Speaker, if his advice is sought by the editor of debates, must come to the house to make his ruling.

If, as in this case, it goes beyond the mere editing permitted, then of course it is a different matter. It is for that reason I am glad the matter is being aired in the manner that it is. I repeat that if I have done anything wrong which is not in accordance with

what hon. members would have wished me to do, then I am sorry; I confess; I apologize, and I feel that confession is good for the soul.

Mr. Coldwell: I am told by my colleagues, Mr. Speaker, that when I was speaking the Minister of Agriculture rose and offered to apologize to the house. I am sorry. I did not realize that or I would have sat down and allowed him to make that apology.

Mr. Gardiner: That was not my intention. I did rise when the Leader of the Opposition was speaking and said I was quite prepared to apologize but no one would let me do so.

Mr. Fulton: Has the minister changed his mind?

Mr. Leon Balcer (Three Rivers): I rise on a question of privilege, arising out of the same incident but on another subject than the one which has been raised. My question of privilege is this. A most serious accusation was made by the minister against the charitable institutions of Quebec—

An hon. Member: Politics.

Mr. Balcer: It is not a question of politics.

Mr. Lesage: It is a question of politics, not of privilege.

Mr. Speaker: May I tell the hon. member that what he is raising at the moment was part of the consideration that I did give in making my own decision. I am glad he has raised the point, but at this moment I do not think we should go beyond the point dealing with the alteration that was made in *Hansard*. The question the hon. member has in mind is one which I feel could be raised as soon as the committee is in supply on the estimates of the Department of Agriculture. You see, at the moment we do not know what has taken place in the committee of supply. It has not reported. All we know is that *Hansard* has been altered. This is the point that must be discussed at the moment.

If the hon. member wishes to discuss further the matter of altering *Hansard,* I will listen to him.

Mr. Balcer: It is just that the Minister of Agriculture, when he rose this afternoon on this question, did not give a definition of margarine. It makes a tremendous difference whether he meant the margarine used in the institutions in Quebec was margarine made from vegetable oils or if he meant—

Mr. Lesage: On a point of order—

Mr. Speaker: May I rise to clarify a point? The hon. member for Three Rivers is now complaining that in his statement the minister did not deal with the situation as fully as he should have. The hon. member for Three Rivers will recall that at one point in the minister's statement, a point of order was raised by the hon. member for Rosetown-Biggar (Mr. Coldwell) to the effect that no matter foreign to the alteration of *Hansard* be touched on by the minister. He could not deal with the matter any further than was necessary in a discussion of the alteration, the question before the house at the moment. Is the house ready to hear the minister deal with the other point, that there might have been some inference that institutions in the province of Quebec were breaking the law?

Mr. Balcer: Mr. Speaker, I really think that the minister ought to clarify the situation because it is very serious for him to accuse institutions of doing something illegal, and just give some statistics. I think he could clarify that. When he mentions margarine, does he refer to margarine made from vegetable oils or made from animal oils, because one is legal and the other is illegal. I think he should clarify that.

Mr. Gardiner: As the Speaker has already pointed out, that is what I was prevented from doing when I had the floor. I was going to read that into the record.

On December 17, 1953 an act, known as an act to protect the dairy industry in the province of Quebec, 2 Elizabeth II, was passed. In addition to defining dairy products, a substitute for a dairy product is also defined. Subsection G, section 1, reads as follows:

> "substitute": any food product prepared for use or used for any of the purposes which a dairy product may serve, and in the manufacture of which vegetable oils or fats are employed; such term means particularly, but not restrictively, margarine, oleomargarine and any similar product, whatever may be the name by which it is called.

Of course, the important fact there is the reference to vegetable oils. This means that any product in which vegetable oils or fats are employed is a substitute for a dairy product and is prohibited by section 2 of this act. You will note that margarine and oleomargarine are specifically mentioned and prohibited.

However, section 3 of the same act permits the lieutenant governor in council to:

> (a) withdraw from the application of this act any special alimentary product, in particular any product in the making of which enter largely animal fats and which, in the opinion of the lieutenant governor in council, is rather a substitute of the fat or of another foodstuff than a substitute of a dairy product in the sense of this act;

Unfortunately, in the short time at my disposal this morning I was not able to get a copy of all the amendments or regulations that have been passed under that act.

I understand, as the hon. member points out and as some hon. members know, prior to the time vegetable oils became popular margarine was made from animal fats and fish oils. There was not any margarine made from anything else. My understanding is that it is not that type of margarine which is declared to be illegal.

The same form goes to every province in Canada, including Quebec, and the three questions which I read into the record a little while ago are on it. In reporting what they were doing, the institutions did say they were buying margarine. We did not ask them to define what they meant by "margarine", and we have never accused them of breaking the law. I do not want it understood that anything I said on Friday contained implications that we were accusing anybody of breaking the law. It was because I heard so many suggestions afterwards that they were breaking the law that I thought any action whatever was necessary. If it had been a day earlier in the week, I would never have thought of doing anything other than what the rules state, namely bringing the matter before this house.

But as the Speaker has already pointed out, by the time I got around to him it was two minutes before six o'clock and the house adjourned at six o'clock. The only reason I went to the press at all was to point out to them what it would mean to have people publish the idea all over this country, during the long week end from Friday night until Monday morning, that some people had broken the law when as a matter of fact we knew they had not broken the law, in so far as we knew. For that reason, I did suggest that probably if the press could withhold—

Mr. Knowles: May I remind Your Honour that you asked the hon. member for Macleod not to discuss the strangers in the gallery with respect to this matter.

Mr. Gardiner: Most members who spoke said they were not strangers to me.

Mr. Speaker: I did ask him, but he did discuss strangers in the gallery.

Mr. Gardiner: In any case, the suggestion was simply made that if possible further publicity be withheld until Monday; that is, from Saturday morning until Monday. As hon. members know, there is no afternoon press Saturday anyway, therefore that did not mean very much. But they convinced me that it was absolutely impossible. The messages had gone out. As I understand it, they went out at about half past four, and I did not get around to checking it until it was close to six o'clock. Therefore there was not anything that could be done about it. They were kind enough to suggest to me that I submit a statement to them, and I gave them a two-line statement which I read out a few moments ago.

Mr. Coldwell: Instead of running to the Speaker and to *Hansard*, would it not have been well to wait and rise on a question of privilege in the house to clear up the matter?

Mr. Gardiner: It might have been. In order to accommodate the Leader of the Opposition, I am going to say to him that I understand the rules of the house very well.

Mr. Drew: That makes it far worse.

Mr. Gardiner: I have been here for 20 years and I have never asked anybody to take anything out of *Hansard* before, and that ought to be good enough reason for saying there ought to be a special reason this time. Suggestions have been made in some articles that have appeared in the press, and certain individuals have been named, and it has been said that they brought pressure to bear on me. They did not bring any pressure to bear on me at all, any more than I brought pressure to bear on the Speaker. He has indicated to you that there was no pressure.

As a matter of fact, I realized that if I had not made the suggestion which I did make, the insinuations which I heard today —and they are insinuations that the law had been broken—were going to go out over the whole week end from Saturday to Sunday, and it would be almost impossible to catch up with them. So I was quite prepared to let anybody abuse me from now until I go out of politics with regard to the matter in order to see to it that persons of that kind, and institutions of that kind, were not being condemned, as they have been condemned over the week end, not by the Canadian Press but by some newspapers. They were not to be condemned without knowing that there was no intention on my part or on the part of any of the officials in my department to say that they had been breaking the law. In my opinion, they have not been.

Mr. Drew: Mr. Speaker,—

Mr. Gardiner: Again may I say I sat down without apologizing. I do apologize.

Mr. Drew: Do not let me prevent you.

Mr. Gardiner: I do apologize for having made it necessary—and I say "necessary" advisedly—to have this discussion. I think that if it concerned only myself I would have seen to it that this discussion did not take place. But knowing this house as I know it, and particularly those who sit on the

other side of the house, I was not foolish enough to think there would not be anything said about it today. Of course, that will get a lot of publicity, but I hope the publicity it does get will indicate that institutions that some people think were breaking the law are not breaking it.

Mr. Drew: There is one point in Your Honour's remarks which I think I should refer to before we leave this matter, because it constitutes a record which will be referred to later on. Your Honour spoke about the fact that I had made some reference to a case in which Right Hon. Mackenzie King had put on the record a statement that has generally been accepted as a statement of the relationship of *Hansard* to the Speaker and to the house. Your Honour then went on to refer to the specific words that were used, which were expunged.

I would point out that my reference to that had not to do with the content of the statement which was expunged. It was to emphasize the fact that *Hansard* is under the authority of the house. That was the point that Mr. King was making, and that is the point I sought to make by quoting that reference today. In that regard, I simply do make this further observation so that the record will be complete.

Mr. Speaker: Well, no one objects to the theory that *Hansard* is subject to the authority of the house and that the Speaker is subject to the authority of the house. But that being so, I submit that there are two types of expurgations or erasures which may take place in *Hansard*. There is the one which forms part of what is called editing, which is very narrow, very limited. And I say that in the work the editor does as an editor he may seek the advice of the Clerk or of the Speaker. There is also a ruling which may be made by the Speaker when an unparliamentary expression is used. The Speaker may either ask that it be withdrawn, or he may ask that it be expunged from the record.

I agree with Mr. Speaker Black that when an unparliamentary expression is used in debate I should not order that it be erased from *Hansard* unless it is done on the floor of the house, unless I make my ruling right here. In that I fully agree with Mr. Speaker Black, and that is quite in line with what the Leader of the Opposition has said. But the Leader of the Opposition contended that the ruling of Mr. Speaker Black extended to the relationship between the editor and the Speaker with regard to the editing of *Hansard*, which is a different proposition altogether. As I say, that editing is supposed to be within very narrow limits, and the narrower it will be the better.

Mr. Drew: I do not want the record in this case to be in any way unclear to those who read it afterwards. This was not a case of editing; this was a case of expunging, and that is exactly the point I was making. I want to make it quite clear that my remarks were all directed to the fact that the minister was personally responsible, and he has apologized for what he has done. I think at this stage, therefore, hon. members quite agree that much of the discussion this afternoon could have been shortened if that had taken place earlier.

Mr. Speaker: May I say a word? I will follow the advice of the hon. member for Rosetown-Biggar (Mr. Coldwell), and of the hon. member for Macleod (Mr. Hansell) and I will not submit a question to the house with respect to the action taken, but will understand from the debate that it is the wish of the house that greater care be taken in future in the editing of our debates.

MOTION FOR PAPERS

GOVERNMENT GUARANTEE ON LOANS TO FARMERS

Motion No. 26—**Mr. Fulton:**

For a copy of the letter or letters sent to chartered banks of Canada by the Minister of Finance in November, 1955, as to the basis upon which they might commence making loans to farmers on the security of their grain, such loans to be guaranteed by the government.

He said: I believe that in response to a request made by one of the other hon. members on Friday the Minister of Finance has agreed to table the letter. If that has been done, it would seem to make my motion unnecessary. If the minister will tell me whether it has been tabled, I would ask that this be withdrawn.

Mr. Harris: I tabled the letters, Mr. Speaker, but on rereading them I find that I omitted to attach to them the forms which had been sent with the letters. With the consent of the house I will table these forms later today.

Mr. Fulton: May I ask that this motion be withdrawn?

Mr. Speaker: Is it agreed that the motion be withdrawn?

Some hon. Members: Agreed.

Mr. Speaker: Withdrawn.

Income Tax Act

RESEARCH

PROPOSED COMMITTEE TO PROMOTE AND ACCELERATE ACTIVITY

On the order:

Notices of motions: Mr. Murphy (Lambton West)—The following proposed resolution:

That, in the opinion of this house, the government should consider the advisability of setting up a special committee representative of all parties, with power to call witnesses and send for documents and papers for the purpose of examining and reporting upon the advisability of providing inducements to promote and accelerate activities in the field of research.

Mr. J. W. Murphy (Lambton West): Mr. Speaker, since the motion was called last I have read what Your Honour said and what the Prime Minister said, and have considered what the leader of the house said to me personally and what he also said on Friday last when he announced the business of the house for today. As a member of the opposition I must accept that assurance in good faith, and accordingly I suggest that my resolution be withdrawn.

Mr. Speaker: Dropped.

INCOME TAX ACT

SUGGESTED ALTERNATIVE PROVISIONS FOR DEDUCTION OF MEDICAL EXPENSES

Mr. O. C. Trainor (Winnipeg South) moved:

That, in the opinion of this house, the government should give consideration to the advisability of amending the Income Tax Act so as to provide that the taxpayer shall at his option be entitled to deduct from his taxable income either (a) his medical expenses as now determined; (b) the premiums paid by him for insurance against sickness or accident or both; (c) the specific provincial tax paid by him under any provincial scheme of health insurance.

He said: Mr. Speaker, my principal intention in introducing the resolution is to call to the attention of the house certain taxation practices followed in this country which I think work an injustice to citizens of the country. The resolution would simply introduce the principle of allowing an option to the taxpayer, and in addition to the present exemption privilege that he enjoys he would be granted the privilege of including in his exemption any premium he might have paid for the purpose of insurance against illness. In the alternative, if he happens to reside in a province which supplies this service and charges a specific tax therefor, the tax would also be allowed as an exemption.

The principle is really very simple. It is simply that the individual will be allowed to include in the exemption from his taxable income a prepayment on medical expenses. At the present time he is allowed to claim medical expenses as an exemption but he is not allowed to claim such expenses when they are paid in advance by way of premium. I submit it is only logical to allow an exemption for an advance payment when one allows an exemption for a payment after the fact.

It may be held that after all the question of an exemption is only of importance to the taxpayer with a large income but I submit it is of even more importance to the small taxpayer because from an examination of the statistics compiled by the dominion bureau of statistics one sees that the largest single group of taxpayers comprises those who get $5,000 to $6,000 a year. In 1950 they accounted for 7·6 per cent of the total income tax collected by Ottawa. I suggest that the exemption of insurance premiums or taxes, as the case may be, is an extremely important item to the income taxpayer who earns between $5,000 and $6,000 a year.

It may be maintained that the new hospital insurance proposals of the government will lessen to some degree the necessity for such changes in the Income Tax Act, but I suggest that the need will still exist and that anything other than a recognition of this need merely illustrates the extraordinary propensity of the government to strain at a gnat and swallow a camel. According to estimates I have heard, they are prepared to spend up to $182 million on a very inadequate and limited plan of hospital insurance and yet they refuse to recognize a relatively minor change in the Income Tax Act that would not be responsible for depriving the treasury of any very considerable amount of money but would certainly assist the average taxpayer in the country materially.

I submit that if the principle of medical exemption is valid in any circumstance it is certainly valid in the sense that it can be applied where prepayment is made rather than actual payment. As a matter of fact there is something a little bit improper, shall I say, if an exemption is allowed for medical expenses which the individual does not actually pay but which are paid on his behalf by an insurance carrier. It may be argued, of course, that he has already paid in the sense that he has paid a premium but nevertheless the premium may bear no particular relation to the amount of deduction he is claiming. Therefore I suggest that a far more logical way would be to allow him the option of claiming an exemption when he has actually made payment of the premium. This would regularize the situation so that the exemption would be claimed only when an expenditure had been made.

Many members, particularly those of the C.C.F. party, may notice that the resolution may appear to be parallel in some degree

to a resolution that was considered previously by the house and rejected. I do not wish to refer to that resolution other than to point out to hon. members of the C.C.F. group especially that the two resolutions are by no means mutually exclusive. I am glad to say I was able to vote for that resolution with a clear conscience and I intend to support this one as well. I would solicit the support of all members of the house for the subject matter of this resolution because I consider that it is logical and sensible and will certainly be very much appreciated by the taxpayers of the country.

Mr. Elmore Philpott (Vancouver South): Mr. Speaker, I am rising to oppose the motion of the hon. member for Winnipeg South (Mr. Trainor). It does not seem to me that it is out of order in any way despite the fact that we have already dealt with a resolution along somewhat the same lines at this session, as the hon. member has just pointed out. However, it seems to me there are many weaknesses in logic in the proposals contained in this particular motion.

The motion reads as follows:

> That, in the opinion of this house, the government should give consideration to the advisability of amending the Income Tax Act so as to provide that the taxpayer shall at his option be entitled to deduct from his taxable income either (a) his medical expenses as now determined; (b) the premiums paid by him for insurance against sickness or accident or both; (c) the specific provincial tax paid by him under any provincial scheme of health insurance.

It seems to me that there is a grave weakness in the equation which the hon. member for Winnipeg South (Mr. Trainor) sets up. He suggests that there is some equality or some balance as between the three things which he is suggesting as possible deductions. May I point out to the hon. member and to hon. members of the house that there are very strict limitations on any deductions that one may claim as of now. In other words, the limit is strictly to a certain percentage of your total income and you are not allowed to make any deduction unless it exceeds that point.

It is when he gets over into the field of suggesting that there should be deductible from income the premiums paid for insurance against sickness or accident or both that I for one cannot see much more sense in that than to suggest that we should be allowed to deduct the premium we pay for collision insurance on our automobiles from income. It does not seem to me to have much more relationship.

Surely the most unwise suggestion of the three is the third where the hon. member suggests that the specific provincial tax paid under any provincial scheme of health insurance should be deductible for the purpose of federal income tax. Surely if we stop to contemplate what is really suggested there we must realize that it is simply a disguised suggestion for transferring from the provincial to the federal authorities the responsibility for carrying on the hospital insurance schemes of this country. As we all know very well, there has recently been made, and we have already had a broad outline of it in the press, a suggestion for a nation-wide insurance scheme under certain conditions, but the suggestion of the hon. member for Winnipeg South would preclude and completely undercut the basis which has been suggested for the federal-provincial national health insurance scheme.

I do not think that anything has ever been suggested at any federal-provincial conference for the revision of the tax basis as between the two authorities which is so unwise or so unsound as the suggestions proposed in this motion by the hon. member for Winnipeg South. It does seem to me that this motion is completely unwarranted. The only good thing about it I think is that it merely suggests that medical expenses which are deductible now should be permitted as a deduction, but as against that it sets out other possible deductions which are not only out of balance in themselves but which would be very much against the national interest.

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, I feel that the intention of the hon. member for Winnipeg South (Mr. Trainor) in moving this resolution is one that should be supported. I think he stated that intention quite clearly in the remarks he made when presenting the resolution to the house. However, I must say in a kindly way, as used to be said by a former minister on the other side of the house, that I doubt whether the resolution as worded carries out the intention of the hon. member.

The hon. member says that he wants it to be possible for a taxpayer to be able to include in his deductible medical expenses any premiums he pays on sickness or accident insurance. With that desire I agree, but I ask him to follow me closely when I point out that his resolution as it is worded does not say that. His resolution does not ask that a taxpayer be allowed to include these premiums in his deductible medical expenses, but rather his resolution asks that the taxpayer be given any one of three alternatives.

The three alternatives suggested in the resolution are, first, that the taxpayer be allowed to deduct medical expenses as now determined. The second proposition is that the taxpayer be allowed to deduct as medical

expenses the premiums paid by him for insurance against sickness or accident or both. The third proposition is that the taxpayer be allowed to deduct as medical expenses the specific provincial tax paid by him under any provincial scheme of health insurance.

I think it is quite clear that the wording of the resolution would put the taxpayer in the position that he could have one of those choices, but not any two of them and certainly not the three of them. The result would be that if a taxpayer were to choose the first option, namely, the deduction of his medical expenses as now determined, he would not get the other privileges which the hon. member for Winnipeg South wants the taxpayer to have.

I say quite definitely that I do not think there is any argument between the hon. member and myself as to what he wants, but I do feel that I can render him a service by moving an amendment to his motion which will have the effect of making it more clear and which I think will have the effect of setting out actually what he wants.

Before I move the amendment which I have on my desk may I point out another difficulty that faces us when we look at the wording of the motion. I emphasize that the difficulty arises from the wording of the motion, not from the hon. member's speech or from what it is he really wants. The effect of the motion as it now stands would seem to put hon. members in the position of approving of the present provision, of approving of the plan for the deduction of medical expenses as now determined. Most of us on this side have indicated already our disapproval of the present plan, particularly with respect to the 3 per cent floor. We are not satisfied with the deduction of medical expenses as now determined; we want that changed. All of us on the opposition side of the house voted for such a change on January 30 and it would be difficult for us to vote today for a motion that seems to confirm the deduction of medical expenses as now determined as a satisfactory arrangement.

Mr. Trainor: I voted for your resolution.

Mr. Knowles: That is exactly my point. I appreciate the fact that my hon. friend and his colleagues voted for my resolution on January 30. For him or his colleagues to vote approval of this resolution seems to me to be inconsistent with our demands on this side of the house that the 3 per cent floor be removed.

Mr. Macdonnell: Would it not be clearer to call it acquiescence rather than approval?

[Mr. Knowles.]

Mr. Trainor: The words could be "that may be determined" if that would make any difference.

Mr. Knowles: I will come to the suggested amendment in a moment or two. Another difficulty I see with the motion in the way it is worded is that it seems to me that it does not offer a real option to the taxpayer. In most instances the medical expenses which a taxpayer would have would be more than the amount of premiums that he would pay into one of these plans. If you are in effect simply giving the taxpayer one or another of these three options, you are simply giving him what he now is entitled to or something less. It seems to me that that is hardly a worthwhile proposition.

I say to my hon. friend, and I must commend his patience in listening to my criticism of his resolution, that all my criticism is directed at his resolution and not at his speech or at what I believe to be his intention. I feel that what the hon. member wants, and in that we support him, is that the act be amended to make it clear that when a taxpayer is adding up his medical expenses he be permitted to include as medical expenses any amount he had paid during that year in premiums for sickness or accident insurance, either under a private plan or under a provincial plan.

We must not forget that at the present time, if a person is in one of these plans, whether it be a plan such as those in Saskatchewan, Alberta or British Columbia, or whether it be a Blue Cross plan in one of the other provinces, he is not entitled to deduct the premiums he pays. But in any year in which such a member of one of these plans is hospitalized, or has a bill paid for him in any other way, the amount of that bill which is paid for him out of that plan is allowed as a medical expense.

We do not want to lose that. But my hon. friend, though he stated it in his speech, does not make that clear in the wording of his resolution, and the fact that it is not clear would seem to me to raise a serious question. I think what he wants and what most of us feel we should have is that in any year when a person goes to hospital the present arrangement should stand, that the amount paid for him out of the plan be allowed as a deductible medical expense; but in those years when a person is not hospitalized he be allowed to enter as a medical expense the amount of the premium that he actually pays.

From what I heard my hon. friend say, that is what he wishes. I think this wording would make it clear. Therefore, seconded by

my colleague the hon. member for Mackenzie (Mr. Nicholson), I move:

That the motion be amended by deleting therefrom all the words after the words "be entitled" and by substituting therefor the following words: "to include in his deductible medical expenses either (a) any amounts billed and paid under a contributory insurance or hospitalization plan, as is now provided, or (b) any premium or tax paid by him for insurance against sickness or accident or under any plan of health insurance."

The result of this amendment is that the motion as amended would read as follows:

That, in the opinion of this house, the government should give consideration to the advisability of amending the Income Tax Act so as to provide that the taxpayer shall at his option be entitled to include in his deductible medical expenses either (a) any amounts billed and paid under a contributory insurance or hospitalization plan, as is now provided, or (b) any premium or tax paid by him for insurance against sickness or accident or under any plan of health insurance.

The merit of that motion as amended, if my hon. friend from Winnipeg South will accept the amendment, is, I think, that it is clearer and that it seeks exactly what my hon. friend wants. It does not touch the question of whether or not we approve of the existing plan of deductions, which includes the 3 per cent floor. That is not there. All of us on this side of the house are against that floor. It does not alter the present right of the taxpayer to deduct amounts paid for him under a plan, as is now provided in the regulations under the Income Tax Act, but it gives to the taxpayer the right in any year to include in his medical expenses, as an alternative to the amounts paid for him, the premiums he pays in. That would mean, of course, that if there happened to be a year in which the taxpayer found the hospital bill paid for him was less than the premium he had paid, he could charge the premium rather than the amount paid. It would also mean that in those years in which the taxpayer did not go to hospital at all, he would receive credit against his income tax for this prepayment, as my hon. friend calls it, that he makes from year to year.

Mr. Trainor: He could not claim both?

Mr. Knowles: That is the intent of my amendment, that the taxpayer not be entitled to claim both what he paid in and what is paid for him but that he be entitled to claim one or the other at his option. I hope my hon. friend will agree to my suggestion that I have tried to do him a service in moving an amendment which simply makes very clear what he wants. Certainly we are in support of the request contained in the motion as amended by the amendment I present to the house.

Mr. Trainor: Mr. Speaker, may I say I am quite willing to accept the amendment as proposed by my hon. friend from Winnipeg North Centre, not because I think it clarifies things particularly, in my rather incompetent way of thinking things out, but because he apparently thinks it is a clarification. Perhaps the resolution as drafted does lend itself to the interpretation the hon. member puts on it. So if it is of any assistance to the hon. member for Winnipeg North Centre or any other hon. members to accept his alternative phraseology, I am quite willing to go along.

Mr. F. T. Fairey (Victoria, B. C.): Mr. Speaker, I was prepared to say a word about the original motion, when I just had a copy of the amendment handed to me. In the main my remarks, as I had thought of them, will apply equally to the amendment. Certainly I would commend the mover of this resolution for his intention. Any intention to reduce taxes is most commendable. But this resolution would appear to give the taxpayer a choice, and the amendment still gives a choice and, to my mind, not a good choice. Let me refer to the resolution:

(c) the specific provincial tax paid by him under any provincial scheme of health insurance.

In the province of British Columbia the sales tax was increased from 3 per cent to 5 per cent, and the extra 2 per cent goes to hospitalization. No premium is paid by any taxpayer in British Columbia, nor is any premium paid on his behalf, as it used to be a few years ago. I think it is a good scheme now, and I have benefited by it. Formerly we were subject to a premium of about $19 or $20 for a single person and in the neighbourhood of $40 for a married person, and that entitled a person to receive free hospitalization and diagnostic services in the hospitals of British Columbia.

It would appear to me that to be allowed to include that small sum of, say, $40 for a married person as a medical expense would certainly not raise his allowable deductions to the point where he would get any benefit. But should an accident or sickness occur, as it did in my own specific case, and the person be faced with a hospital bill of several hundred dollars, a person in British Columbia can include that hospital bill as a payment made on his behalf and it becomes a part of his deductible medical expenses. It seems to me that is of greater benefit to an individual than to be allowed to deduct an annual premium which for many years would not permit him any deduction at all from his income tax.

Mr. Trainor: Would the hon. gentleman permit a question?

Mr. Fairey: Certainly.

Mr. Trainor: Do not the resolution and the amendment as worded still permit him to deduct that expense?

Mr. Fairey: Yes, I was coming to that. I should like to point out to the mover of the resolution, the hon. member for Winnipeg South, that there would be a tremendous difficulty in calculating how much I paid to the province of British Columbia by way of 2 per cent of the 5 per cent sales tax, as a premium for my hospital insurance. It would be an impossibility to calculate how much each individual in British Columbia pays by a levy of 2 per cent on all his purchases.

Mr. Trainor: If the hon. member has a suggestion as to how that might be done, I should be happy to include it.

Mr. Fairey: I am just saying it is impossible to do. I have no suggestions as to how it could be done. That is why I oppose this resolution. I think it is not possible to put clause 3 into effect.

Mr. Trainor: It is in Saskatchewan.

Mr. Fairey: It is not in British Columbia, at least I do not think it is.

Mr. Trainor: It could be.

Mr. Fairey: What does that leave us? It leaves us the choice, as far as British Columbians are concerned, between the A and the B. I know that an amendment has been moved and that the medical expense is to be, I take it from the amendment, the total amount of medical expense. We have that, of course, with regard to expenses over 3 per cent.

I have not made any study of the figures in order to calculate how many persons would benefit to any great extent by being allowed to deduct the total amount of their medical expenses, but I would just point out this feature. In my opinion, the principle underlying this matter is that we are all obliged to make some provision for what might be called the ordinary expenses of living, and included in that category is a certain reasonable amount which we should set aside for health purposes and medical expenses. That is why a limit has been placed upon the amount to be deducted for income tax purposes, and it has been gradually reduced from 5 per cent to 4 per cent and now to 3 per cent. It seems to me that to allow all of it would defeat what I think is a good theory, namely that everybody should be encouraged to provide for his own well-being up to a certain reasonable amount, and that it is only when disaster or a large bill from a serious illness strikes an individual that he should be allowed to make a deduction for income tax purposes.

The objection I have to the suggestion that deductions be allowed for premiums on insurance policies in connection with sickness or accident is that I can visualize the tremendous amount of bookkeeping that would have to be taken care of in the income tax department if every person who carries a sickness and accident insurance policy is permitted to show his vouchers with his income tax return.

Once again I suggest that this is, as I said a moment ago, one of the normal expenses of living. If the hon. member were to concentrate on the Minister of Finance (Mr. Harris) with regard to the first item and have that 3 per cent gradually reduced as he feels able to do so, I suggest it would be more in line with what the hon. member desires.

Mr. J. A. Smith (Battle River-Camrose): Mr. Speaker, we in this group had intended to support the spirit of the original resolution. We are happier now to support it as amended because the amendment has led, in our opinion, to a clarification. We in this group feel that illness is something over which no individual has any control, and that when illness strikes the home the net income of that home depreciates. For that reason we feel that individuals who see fit to provide against any future illness through insurance schemes or hospitalization schemes should have the privilege of reducing the amount of their premiums at least by their income tax deductions.

We should also like to point out that, as far as the people of Alberta are concerned, we soon hope to be under a complete system of hospitalization and medical service under which a definite amount will be charged on a voluntary basis to families and individuals who wish to come under the scheme. It is for that reason that we support first the amendment to the resolution and, second, the spirit of the resolution itself.

Mr. J. M. Macdonnell (Greenwood): Mr. Speaker, I wish to say a few words in support of this resolution as amended, and I base them really on the fact that what it is trying to do is help those who help themselves. I realize that there may be some difficulties connected with it. I realize the difficulties raised by the second last hon. member who spoke with regard to certain aspects of taxation. Nevertheless I, along

with the hon. member for Winnipeg North Centre, feel that I am in sympathy with the spirit which prompted the moving of this resolution.

I spoke about helping those who help themselves. In the last couple of generations —and I suppose in the last generation particularly—we have seen an absolute transformation in the extent to which the state looks after people. That situation has developed with the approval of everybody. It has now gone to extraordinarily comprehensive lengths. For example, I learned today that company retirement plans prevail in respect of 70 per cent of industrial employees.

Let me put it differently. Seventy per cent of industrial employees are in companies where there are pension plans. I am not sure whether that is exactly the same as saying that 70 per cent of employees are participants. No doubt that is roughly true. We look back not so far to the Victorian days when the principles of laissez faire still applied, and when the most high-minded and humane people could tolerate things which now seem to us to be almost incredible. They could tolerate little children working long hours; they could tolerate women doing heavy work in mines underground, and all the other things we know of. I need not take time to enumerate them. We all know also how that sort of thing was finally done away with under the influence of Charles Dickens and innumerable other people whose names are well known. As I said a moment ago, we know how the situation has changed.

On the other hand, I think it is desirable for us to remember that this change was possible, and is still possible, only because in a large department of life we have individual effort keyed up to its highest pitch. These pension plans of which we speak, and which are now so widely accepted in industry, are possible to their present extent only by reason of the most intense individual effort and by reason of the competitive system under which we live. I therefore come to the point I wish to make, namely that I welcome this amendment because it is an attempt to help those who help themselves.

I am going to do something which I very much dislike doing. I am going to read at some little length from a speech made two years ago by the head of a life insurance company, namely Mr. W. M. Anderson of the North American Life Assurance Company. This speech was made in February, 1954. From it I want to read a few sentences which argue the case for tax concessions to those who try to help themselves by means of insuring health. I apologize again for the reading:

> . . . The fact that health insurance premiums are not counted in determining the amount of exemption means that there is no tax inducement as in the United States to purchase health insurance coverage.

I should like to interject here that it seems no matter how much we are able to do through the state, no matter how much the Minister of Finance is going to announce to us later in the session, nevertheless there is always a great area in which people will be better off if they are able to do things to help themselves. It is for that reason I am in sympathy with this resolution. I continue to quote:

> This point is of particular importance in the case of persons in the lower tax brackets—

I think that is very important to remember.

> —where adequate health insurance coverage may cost more than 3 per cent of income of itself. It is interesting to note that the American concept if applied in the context of the Canadian 3 per cent floor would have the effect of providing a tax inducement to purchase voluntary health insurance coverage which would be of greatest value in the lowest tax brackets. Thus the American concept has the effect of encouraging the purchase of health insurance in the very income groups where protection is most needed.

I should like to interject for a moment that it seems to me it is these "catastrophic" costs we should be trying very hard to devise a means of meeting. I continue to quote.

> Life insurance companies form but one of a number of types of organization which provide voluntary health insurance. However, the life companies in their life insurance and annuity business are already in continuing contact with most of the families and employers in the community. They have a well developed corps of life underwriters and well organized collection and claims administration procedures all of which are conducive to the efficient operation and expansion of voluntary health insurance. Furthermore, they have substantial resources to guarantee the fulfilment of their contractual obligations in this field. In the United Sattes the companies provide health insurance as an integral part of their overall operations and in recent years there has been a very rapid expansion in this phase of their business and in the number of companies engaging in it.

Then Mr. Anderson says:

> It seems to me to be a great pity that Canadian law severely restricts the operations of the Canadian life insurance companies in this field.

Then he goes on to point out the way in which they are restricted. I want to interject here that I realize there are two sides to the argument on this point. At the present time the authorities do not feel that they want to allow the companies to venture too much of their purely life insurance funds in this

other field. I quote the next passage in the light of that fact.

If a Canadian company wishes to engage in the health insurance business it must establish a separate fund with separate assets and it has only a very limited privilege of transferring capital to this separate fund from its life fund. This restrictive legislation makes it awkward for a Canadian life insurance company to administer health insurance business in conjunction with its general life insurance affairs. As well as this, since the separate fund must stand on its own feet, the general resources of the company are not available either to finance the expansion of health insurance business or to guarantee the fulfilment of health insurance contracts except by the transfer of further capital to the separate fund.

This situation is particularly unsatisfactory in the case of a mutual life insurance company like our own. The transfer of $100,000 with which we established our separate group health fund, represented the statutory upper limit of capital which we can provide for our health insurance business. As a consequence we are forced to conduct this business in a strait-jacket—as if we were a newly organized and very small company. We must be extremely careful to make sure that we do not expand too rapidly and that the business which we transact does not involve significant loss. It seems to us that the legislation as it now stands is preventing our company and others in like circumstances from acting in a manner which we feel would be conducive to the best interests of you as policy owners and of the communities in which you live.

Then he says:

May I express the hope that the recently enunciated American attitude of encouragement of voluntary health insurance may find its counterpart within the councils of our own government, and that in consequence the Canadian life insurance companies may be allowed to take their proper share in the difficult task of making voluntary health insurance a satisfying answer to the problem of financing medical care costs.

I have read that at some length, Mr. Speaker, because it seems to me relevant. I am glad the minister has been here and has been listening, because the point which is raised by Mr. Anderson is very important. The fact that the department has a different view indicates that experts may differ, but it seems to me that the argument made by Mr. Anderson is worthy of consideration, and I hope it will have further consideration.

Recapitulating what he has said, therefore, which is that he feels we might go further along the same lines as the United States has gone and give a greater incentive to people to look after themselves in the way of individual health insurance, I repeat that I am prepared to vote for the resolution as amended.

Mr. C. W. Carter (Burin-Burgeo): When I read this resolution, Mr. Speaker, I came across the same difficulty of wording as that described by the hon. member for Winnipeg North Centre (Mr. Knowles). When one comes across the word "either" included in a resolution, it generally indicates that there are two alternatives, one or the other. This resolution had three alternatives.

I thought perhaps the hon. member for Winnipeg South wished to convey the idea in this resolution that the Income Tax Act be amended to provide that the taxpayer shall, at his option, be entitled to deduct from his taxable income, in addition to his medical expenses as now determined, that is in addition to the excess over 3 per cent, either the premiums paid by him for insurance against sickness or accident or both, or the specific provincial tax paid by him under any provincial scheme of health insurance.

I believe we all agree with what the hon. member for Greenwood (Mr. Macdonnell) has said, that even if we cannot accept this resolution we can all sympathize with the spirit which prompted it at this time. The hon. member for Winnipeg North Centre has introduced an amendment to this motion by way of clarification. I must confess that personally it does not clarify it very much. If I understand what the amendment means —and I must say that the hon. member read it rather quickly and I was unable to follow it closely while he was reading it, and I have not had an opportunity to study it since—a person, under this resolution, would be entitled to include in his deductions all his medical expenses; that is, doctors' bills, hospital bills, and so forth, and all the premiums he might pay under any hospitalization plan, and any provincial tax he might pay under any provincial scheme of health insurance.

We all know, Mr. Speaker, that there has been a good deal of talk about a national health insurance plan. I think we are all looking forward to the day when such a plan will be introduced. But we all know that such a plan will cost money. In fact it has been estimated that in its initial stages it will cost at least $180 million a year. Much as we would like to see an income tax reduction, in the face of such expenditure on health insurance it hardly seems possible that we can expect to have both; that is, to have a national health plan costing $180 million and at the same time have our medical expenses included in our deductions under the Income Tax Act.

In introducing his resolution the hon. member for Winnipeg South emphasized the point that premiums paid on insurance plans are premiums paid in advance, and that would justify having them included in income tax deductions. But if we include those premiums in our deductions when we pay them, and include them again when we incur them, then

that means a system of double deductions, and I do not think that is what the hon. member intended.

Mr. Trainor: Will the hon. member permit an interruption? Nothing in the resolution or in the amendment makes any such assertion. It gives the option of one or the other, not both.

Mr. Carter: Mr. Speaker, when there is an option included in the Income Tax Act it is specified in certain ways by using the words, "whichever is the greater", or "whichever is the lesser" as is desired. It is quite possible that a person may be worse off by including his deductions than he would be if he just took advantage of his present deductions under the Income Tax Act.

Mr. Trainor: Could you not leave it to the judgment of the individual taxpayer as to whether he is better or worse off?

Mr. Carter: If the hon. member intended that, there would have been no harm in his putting in his resolution the words "whichever is the greater". There is no law to prevent him from including those words in the resolution or in the amendment.

The idea of including in the deductions the premiums paid for a health insurance plan is not altogether sound. I will explain why. A few days ago I was talking to a friend of mine, and we were discussing medical expenses. My friend referred to an illness which one of our mutual friends had suffered. In relating the story to me he made a statement which really startled me. He said, "You know, our friend made about $1,000 out of that sickness?" That struck me as being rather strange. I said, "How on earth could a person make $1,000 out of being sick?" He said: "He had at least two, and perhaps three, insurance schemes. The amount he received from one of those schemes was just about enough to cover all his expenses, and the income from the other two plans amounted to $1,000." If we carry this resolution as introduced by the hon. member today we will actually be exempting the person from income tax on income he makes, and thereby increasing his actual income.

Mr. Nickle: How many Canadians are there who would be paying for more than one health insurance policy?

Mr. Carter: I really do not know, but there are a good many. I am paying for three.

Mr. Knowles: Many do not have even one.

Mr. Carter: I know a good many who are paying for two.

Mr. Nickle: You are a capitalist. It is like a life insurance policy. If there are more than one, your estate may collect on more than one, but you are not going to benefit.

Mr. Carter: No. There are many life insurance plans which you can take out today which will pay no matter what you receive in other benefits. There are many of those, and I happen to have one of them at the present time. In addition to that, Mr. Speaker, there are other plans of health insurance which pay actual income. They pay $25, $50 or even up to $100 a week while you are sick. I do not think it is the intention of this house to exempt any person from paying income tax on actual income.

In the course of his speech introducing the resolution the hon. member for Winnipeg South emphasized the point that this would benefit the small taxpayer. He said that the greatest number of taxpayers in Canada are in the $5,000 to $6,000 group. I am not going to quarrel with my hon. friend's statement, but I mention it only to point out that there is also another large group who do not pay income tax at all.

Mr. Knowles: How many health insurance policies have they?

Mr. Carter: I do not know. Some of them have health insurance schemes under provincial governments. That is so in my own province, where there is quite a good health insurance scheme at a fairly small premium. I do not know how perfect the plans are in other provinces, but I think that foremost in our minds should be those who pay no income tax at all. Even though the burden may be great on the $5,000 to $6,000 group, the burden on those under $5,000 and those under $3,000 is infinitely greater. If we are to carry out our policy toward them I think we cannot do much better than we are doing at the present time in providing an exemption for expenses in excess of 3 per cent of income.

The hon. member for Vancouver South and the hon. member for Victoria (B.C.) have also pointed out that the alternative of including in your exemptions taxes paid to a provincial government is the equivalent of placing the federal government in the position of financing provincial insurance schemes. I agree with the hon. member for Vancouver South that this is a very poor alternative and not a very wise one.

Mr. W. G. Blair (Lanark): Mr. Speaker, I rise to support the motion of the hon. member for Winnipeg South and in my opening remarks I should like to draw attention to what seems to have been missed by the house, namely the words "at his option". It is clear that a man might pay $50 on a health

insurance plan for his family, but if the bill only amounted to $10 for the previous year he would be apt to deduct the $50. However, there is such a thing as a catastrophe happening in a family and I note that the hon. member includes in his resolution the words "as now determined".

There was a case that received some attention in the press, of a man in the east who spent some $600 or $700 on oxygen for his wife. It was highly necessary and had to be done, but at the present time such an expense does not come within the rules of the Department of National Revenue. But let us reverse the situation. It is easy to say that these things should be deducted, but if we reverse the situation we see how difficult it is for a man to pay income tax on the costs of a catastrophe that has already happened.

In the case of the man who had the bill of $600 or $700 for oxygen, even if he were not in the group the hon. member has mentioned he had to pay income tax on $600 or $700 that it was necessary for him to spend in order to keep his wife alive. So far as the buying of insurance policies is concerned, one might put it this way. A man buys a health insurance policy, if I may be permitted to use that term, in preparation for a catastrophe that may happen. One might say that he anticipates something happening, or one could go further and say that he is safeguarding his family and himself as the wage earner from a catastrophe of that type.

I think the resolution moved by the hon. member for Winnipeg South is a good one, and that the amendment moved by the hon. member for Winnipeg North Centre merely clarifies it. If there was any doubt in the mind of any hon. member as to what is provided for in the resolution I think the amendment has clarified it; therefore I am very glad to support it.

I believe that the provision of an option is a good point. A man has the right to determine which amount he will deduct. It was said that the department would be involved in a lot of work and difficulty in determining the proper figures, but I believe it would be a very easy matter for the department. A man would only have to do as he does at the present time, submit his receipts with his income tax return. There would be very little difficulty in so far as that is concerned.

I think every hon. member should support the resolution because sickness expense is something entirely different from any other class of deduction. The hon. member who has just taken his seat brought up the question of somebody making money out of sickness. I have never known any person to do so, but if he does happen to be well covered it takes a lot of money to meet the payments.

I am glad to support the amendment because I think the point is well taken. I am glad to support the resolution, and I commend it to members of the house.

Mr. A. R. Lusby (Cumberland): Mr. Speaker, I should like to make a few comments on the subject matter of the resolution and the amendment. My thoughts on the matter were, of course, originally directed toward the resolution, but I think they will apply equally to the amendment that has been moved.

In commenting on the matter I must say I am fully conscious of the fact that the mover of the resolution is a member of the medical profession; consequently I think it is fair to assume that perhaps he has more personal knowledge of the difficulties encountered by people because of the expenses they are occasionally subjected to through sickness. He possibly has more personal knowledge in that regard than other hon. members who, though we may be members of equally noble and learned professions, do not come directly in contact with such matters.

Perhaps it is not entirely amiss for me to say that in the course of my own professional dealings I have occasionally been employed by medical friends to collect for them bills from various debtors, and I should like to pay this tribute to the medical profession. I think it has some relevancy to the subject matter. I find that uniformly they are always willing and eager to extend the utmost consideration to any poor or handicapped debtor who wishes to pay his bill but for some reason is not able to do so. I should like to pay that tribute to the members of the medical profession.

The subject matter of the resolution and the amendment is one that of course has a very definite appeal to the people of the country and their representatives in this house, because it has in mind providing a measure of relief for certain taxpayers, those who can bring themselves within its provisions from time to time. As I say, that is something which has a very definite measure of appeal, like any legislation extending benefits to the people of the country.

Of course, the two points have to be considered one against the other because, as we all know, the source of all moneys expended by the government for the benefit of the people is the taxpayers of the country. In this case if the relief to be afforded is to have any substance at all it of course involves the taking away of a certain amount of revenue from the federal treasury. I believe the hon. member who moved the

resolution stated that it would not deprive the treasury of any material amount. That may be so. I have no figures and I have not heard any as to what amount might be lost. None the less I think we should assume that if the resolution is to provide any substantial relief a substantial amount will be lost to the federal treasury. I think we must keep that in mind in weighing the benefits of this resolution.

Many of these policies for sickness and accident insurance provide not only for the payment of actual out of pocket expenses but for a guarantee of income. Of course it is not suggested that this income should not be subject to income tax, but the premium a man pays contains in part a provision for insurance against that loss of income. I think that factor should be carefully considered.

As I say, we must remember that this would constitute a drain upon the federal treasury. Possibly the chief objection I have to the resolution and the amendment at the present time is in the timing. As we all know, the federal government has proposed a sweeping nation-wide scheme of health insurance which is under consideration by the various provinces. Undoubtedly that is going to be of the greatest benefit to the people of this country. Unfortunately it is also going to cost the taxpayers of this country an extremely large amount of money. I think the estimated figure was $180 million, but the mover of the resolution mentioned a sum of $182 million. If past experience in these matters is any criterion it is most likely that the amount will be even higher than has been estimated. Consequently I do not think this is the time when this measure should be adopted by the house.

We do not know what effect the health insurance scheme when it is finally put into definite form and comes into force will have upon the various private schemes for sickness or accident insurance, or indeed upon any provincial health insurance scheme which is now in effect. It may very well be that when our dominion-wide health insurance scheme comes into effect we will find that things are not as visualized by the movers of the resolution and the amendment. It may be found that the need for this resolution has been largely done away with by the coming into force of the national health insurance scheme.

As I said before, this motion taken as a matter of theory naturally has a great deal to commend it, and I should like to congratulate the mover upon his presentation of the case. I know that he has at heart the welfare of the people it is proposed to benefit. Nevertheless, in view of the imminence of our national health insurance scheme and the probable cost of that scheme to the taxpayers of this country I repeat that I do not think this is the proper time for the house to approve this measure.

Mr. Colin Cameron (Nanaimo): Mr. Speaker, after listening to the hon. member who has just resumed his seat I have come to the conclusion that he is a victim of semantics. Because the government has persistently referred to its proposed or projected measure as health insurance the hon. member appears to think it is really a health insurance plan, when of course it is an extremely limited plan covering only hospitalization. If he would refer to the resolution before us he would see that it relates specifically, among other things, to medical expenses which would not be affected in any way by the hospitalization scheme which the federal government is said to be considering and which the Liberal party of course has been considering for over 37 years. The main thing is that it certainly will not cover the expenses that are referred to in this resolution.

An hon. Member: How do you know?

Mr. Cameron (Nanaimo): Because we have been told that it is going to be a hospitalization scheme when it comes through, in spite of the government's persistent reference to it as a health insurance scheme, a very bad misuse of words in my opinion.

There were two comments made this afternoon by my fellow British Columbian, the hon. member for Victoria (Mr. Fairey), to which I should like to refer. The first was the question of estimating the amount that is paid on behalf of a citizen of British Columbia by the government of British Columbia under the present hospitalization scheme in that province. As the hon. member pointed out, in British Columbia hospitalization is financed by an increase in the sales tax from 3 per cent to 5 per cent. While it is true that the funds for paying these hospital bills are derived from the sales tax, nevertheless I think—the hon. member can correct me if I am wrong, or any other British Columbia member can do the same—it will be found that the scheme is still operated technically as a hospitalization insurance scheme, and that the administration of the hospitalization insurance plan is provided with a sum of money by the government which is an actuarial estimate of what would have been paid into the fund by the citizens of British Columbia had the old premium scheme been maintained.

Mr. Fairey: I certainly do not agree with the hon. member. I think the amount placed in the estimates by the province of British Columbia is based upon the cost of the hospitalization, not the sum total of the premiums paid by the individual citizens.

Mr. Cameron (Nanaimo): It is the same basis upon which the premiums were estimated under the earlier scheme. The idea was to provide sufficient funds to pay for the hospitalization. I do not know whether it would be possible actuarially to estimate the amount paid on behalf of each citizen of British Columbia, but I do suggest that there are enough provincial schemes, one in particular, in Canada now in effect to enable the federal government to estimate with fair accuracy the amount that has to be paid on behalf of each citizen for hospitalization. Therefore the point the hon. member was bringing up in objecting to the scheme could well be covered by including in the legislation authority to make allowance in the case of residents of British Columbia of an amount equivalent to what would be paid under the hospitalization scheme operated under the premiums.

There is another point which was raised by the hon. member for Victoria (B.C.) which I think should be dealt with. He suggested that rather than proceeding with the scheme as outlined in this resolution and the amendment we would be better advised to urge on the Minister of Finance a lowering of the present floor for medical expenses to be deducted for the purposes of income tax. I am sure that is a most sensible suggestion. The hon. member almost indicated that if we just agitated a little more the soft heart of the Minister of Finance would be effected to such a degree that he would agree to this.

That is a very sound idea, but the curious thing is that no longer ago than January 30 of this year the hon. member for Victoria (B.C.) had an opportunity to urge in a very effective way precisely that course on the Minister of Finance, when this house voted on a resolution introduced by the hon. member for Winnipeg North Centre that would have had precisely that effect.

Mr. Fairey: Was not that resolution to eliminate the 3 per cent entirely?

Mr. Cameron (Nanaimo): Yes. On page 682 of *Hansard* of January 30 we find that a vote was taken and I find included among the names recorded under "nays" the name of the hon. member for Victoria (B.C.). I suggest that it is not good enough for government members to imply that they are in favour of a course of action which their vote in this house does not fulfil. If they believe this should be done, why do they not take advantage of the opportunities that are presented to them on the floor of this house. I would like to know how the hon. member for Victoria (B.C.) would be able to tell the citizens of Victoria that he is in favour of this elimination of the 3 per cent floor, when he has not—

Mr. Fairey: I did not say that. I deny that I said that at all.

Mr. Cameron (Nanaimo): My hon. friend has suggested that what the hon. member for Victoria (B.C.) said was that it should be whittled away. Of course it depends on how big a slice we are going to take with the whittle. We have decided to whittle the whole thing away. It might be possible yet for us to meet the requirements of the hon. member for Victoria (B.C.) and suggest a whittling resolution, and see whether his resolution would be strong enough to enable him to vote for it.

Mr. Deputy Speaker: Is the house ready for the question?

Hon. W. E. Harris (Minister of Finance): Mr. Speaker, I appreciate the comments that have been made during the course of this debate, and perhaps I could pay attention to the last one first. The Minister of Finance does receive throughout the year many representations about the manner in which he may collect and disburse the moneys in the public treasury. One of the most frequent that are placed before him is in the matter of deductions from income tax. Everyone seems to think we can make a special rule for a special group of people, instead of taking what I think the other side ought to be, namely that if you are able to reduce taxes you reduce them for everybody, and then the special reason is taken care of in doing that.

If I do not make myself clear, I would repeat that last year we did reduce taxes. We reduced taxes very considerably in the budget of 1955. Yet my hon. friends present motions intended to reduce further the income of the treasury because a particular group of people should have consideration of a particular kind. As a general principle I think the latter is wrong.

I admit that there are reasons why exceptions should be made, and we do in fact make the exception with respect to medical expenses over 3 per cent. But in principle I think most hon. members ought to agree with me that it would be better to have a general tax system in which there would be gradations of tax, of course, but that any changes in the tax system ought to be of a general rather than of a particular nature. In this specific instance—

Mr. Knowles: Is that what you are planning for this year?

Mr. Harris: I am hoping that anything I say cannot be construed as other than an abstract, philosophic approach to the problem. In this particular case we were being asked by the original motion to establish an option on the part of the taxpayer with respect to three particular forms of contribution that might be made by him in the medical field. By the amendment they have been limited, as I understand it, and that amendment has been accepted by the original mover of the motion.

As I understand it, one of the options has to do with any premium or tax paid by him for insurance against sickness or accident or under any plan of health insurance. This, I understand from the elaboration by some of the speakers, has to do with the payments made presently in some provinces and the payments that may be made in the future in other provinces, where similar payments are not now made.

I have no figures to give the house as to what this may mean by way of a charge on the public treasury, though it is quite obvious that the hon. member for Victoria (B.C.) has indicated at least one weakness in that particular option, that in the province of British Columbia there would not be, unless we established an arbitrary rule of some kind, the opportunity to take that particular option.

Mr. Pearkes: We would not want to be dogs in the manger about it.

Mr. Harris: I realize that my hon. friend, being the generous gentleman he is, would not be a dog in the manger. All he would expect, I think, would be that if this resolution carried the government would, in addition to granting these deductions in other provinces, establish an average for British Columbia and grant it whether or not the person might contribute that much in sales tax during the year.

Mr. Knowles: Fair enough.

Mr. Harris: My hon. friend from Winnipeg North Centre says, "Fair enough". That indicates to me that he does not give very much thought to the real responsibility that is behind a motion of this kind. As I say, I am not in a position to give figures as to the cost to the public treasury of this particular motion, but I have been impressed by what has been said by those speakers who have mentioned the proposal we have made to the provinces with respect to hospital insurance.

I shall not bandy words with my hon. friend from Nanaimo as to whether this is a health plan or a hospital plan, or as to what it may be or what it may become, because once again I do not propose to go beyond what has been said in public about that particular plan. But it must be clear to everyone in the house that the obligation which this government placed upon itself in making that offer is of the magnitude that has been mentioned by government members, and perhaps by other members as well. That obligation is one that is greater than the deficit we anticipated last year when I delivered my budget. It is not a small sum of money; it is a sum of money which takes a good deal of taxation to collect.

Therefore, while I realize that hon. members who make these speeches have no responsibility for imposing the taxation involved, nevertheless it does seem to me that they, in their responsibility as members, might take that into account when they consider the results that would flow from this type of motion.

May I call it six o'clock?

At six o'clock the house took recess.

AFTER RECESS

The house resumed at eight o'clock.

Mr. Harris: Mr. Speaker, we were discussing the position of the taxpayer in British Columbia who, if this motion were to carry and become part of our tax laws, would not be able to claim a deduction similar to that of a taxpayer in other provinces except by an arbitrary decision of the taxing authority as to how much he ought to be allowed with respect to the amounts he might pay in sales tax during the year. When the position is stated in that manner I think it will indicate the weakness in the motion and the weakness in the theory behind it, because you could not import into a taxing law a distinction of that kind.

The same situation applies in a somewhat different manner in the province of Saskatchewan, where the contributions toward a health plan, as I understand it, are made by way of a general tax for about 50 per cent of the cost and, with respect to the remainder, by way of a charge on the taxpayer, through the municipal corporation, attached to the property he may own. It would be easy to arrive at the amount that gentleman might be entitled to claim to the extent of the direct charges that may be imposed upon his real estate, but it is equally difficult to estimate the amount that might be contributed by him in the percentage of the cost which the general treasury collects by the taxing methods they have adopted.

If in another province the first option were adopted—and we shall take the province of Ontario, because at the moment in Ontario there is no contributory system of health or hospitalization insurance—say in Ontario under the first option the taxpayer could claim in full the amount of the Blue Cross plan or any similar plan. That might be $50 to $80, perhaps, depending on the type of plan he chooses; whereas the taxpayer in Saskatchewan might have a charge of $10 to $12 to $15 which could be proven—

Mr. Campbell: There is no land tax.

Mr. Harris: I beg your pardon. It is collected through the municipal corporation.

Mr. Campbell: It is education tax and hospital tax.

Mr. Harris: Quite so. The taxpayer in British Columbia would not be able to prove any sum at all. Not being a resident of British Columbia I could not say definitely about this, but it is not likely that claims under the Blue Cross in that province would be equal to those, for instance, in the province of Ontario. It must therefore be obvious to hon. members that even if the hon. members who moved the amendment to this motion have something in mind by way of relief for the taxpayer, they are adopting a method which, if I may say so with respect, would require a good deal of refinement before it could be effective in a manner that a taxing law ought to be effective.

The situation with respect to deduction for medical expenses is comparatively simple. As everyone knows, the taxpayer whose medical expenses exceed 3 per cent of his income may deduct the excess. Three per cent may or may not be the average expense of the average resident in Canada; it is probably somewhere about the average expense. It seems to me that the motion and the amendment would in effect say that the federal treasury should permit a deduction about equivalent to the cost of medical services to the average taxpayer in Canada. I take it that is probably the intention of the mover and seconder of the resolution. But let me point out that however difficult it may be for taxpayers generally to meet their medical bills and their taxes at the same time, it would be unusual to say that this particular type of personal expense should be exempt in addition to all others.

As everyone knows, the exemptions are more generous in Canada than anywhere else, I believe. At any rate, I made that statement last year—I think it was in the budget address, Mr. Speaker—and I do not recall anyone suggesting that I was wrong. The exemptions granted under the income tax law are intended to provide not by any means an estimate of the cost of living of a single person or of a married man with a family, but a general exemption to cover the normal expenditures that we think we can allow from the standpoint of the needs of the treasury and of the taxpayer. This type of expenditure is, of course, included in that exemption by way of computation.

The hon. member for Greenwood spoke of extremely heavy costs and, as I understood him, he said he felt that those ought to be given special consideration. They are, of course, given special consideration. If one has an extremely costly medical experience during the year it will in fact run over 3 per cent, and will then be deductible for tax purposes.

Of course it depends upon the income of the taxpayer as to how much of that expense is borne by the public treasury. We, of course, have people of modest income who have heavy expenses, just as we have persons of average or higher than average income who have medical expenses in that extraordinary range as well. But if we accept the 3 per cent figure as an average—though I am going to say that at the moment I do not quite understand how this motion would fit in with the 3 per cent—as I understand it the purpose here is that there would be an option to deduct the contribution to a medical scheme or the contribution to a provincial government medical scheme of some kind.

It may be noted that these contributions are made either to a co-operative association or to a private association in the business of providing insurance against these particular expenses. It is to be supposed that even in the case of the co-operatives they are trying to keep their income about equal to their outgo plus the cost of administration, with perhaps a margin for reserve, but not a great deal in that respect.

The profit organizations, on the other hand, would probably try to get their income high enough to include their outgo, their administrative costs and a profit to boot. But let us suppose that these organizations, on the whole, do not charge much more than the cost of doing business. It will be seen then that if we allow as a deduction the contributions to those organizations, we are in fact allowing the deduction of the medical costs of people throughout Canada in that particular year. While some hon. members would still feel that ought to be so, I suggest it is not possible to make it so at the present time, at least under our income tax laws.

Mr. Trainor: Do you think competition would look after that?

Mr. Harris: No, I think my hon. friend has missed my point. I am sorry; I will try it again. If all these organizations are running at a cost about equal to what they have to pay those whom they have insured, and their administrative costs, their income then by way of contributions from members of the association would about equal the medical costs which they pay. Therefore my hon. friend, by suggesting those costs should be tax exempt, is in fact suggesting a tax exemption for the medical expenses of all Canadians. If my hon. friend will consider it for a moment he will see that to the extent these sums of money represent the actual cost paid by these associations, they are the costs of the several thousand people who are in the associations during any given year.

Let us consider, then, Mr. Speaker, the situation with respect to the 3 per cent. As I say, I take it the amendment moved by the hon. member for Winnipeg North Centre has rather shifted the emphasis away from that. Perhaps I could ask him at the moment, but I take it that these deductions would be in addition to the deductions over the 3 per cent.

Mr. Knowles: May I answer the question? Yes, that was the intent of my amendment. I went no further than that for the obvious reason that if I tried to interfere with the 3 per cent floor in this amendment I would be told the house decided that question on January 30. My point of view on the 3 per cent floor is still the same as it was on January 30.

Mr. Harris: We have then, as I understand it, a situation in which we are asked to exempt the contributions paid into a fund, while we are exempting as well the payments out of the fund when those payments exceed 3 per cent.

Mr. Knowles: But not both in the same year.

Mr. Harris: That is just the point of my question a moment ago.

Mr. Knowles: I am sorry. If I might interrupt further, I thought the minister's question a moment ago sought to clear the air with respect to our position on the 3 per cent floor. As to whether or not the amendment asks for both deductions in the same year, the amendment is clear in that it presents an option between (a) and (b). One option is any amounts paid for the taxpayer out of a fund and the other is the premiums he pays in.

Mr. Harris: I am sorry I misunderstood the hon. member, then. He has cleared up what I thought was an unusual situation in the motion before us. It will be seen, however, Mr. Speaker, that if this motion were to carry it would be impossible, as I said a while ago, to estimate the cost to the public treasury. I know that hon. members opposite will say there will be no cost to the public treasury because the motion calls for consideration by the government of the suggestion put forward.

On that point we had a rather unhappy experience in recent years. There was a time in this house when private members' day was an occasion on which private members might bring forward any motion or bill they had in mind which would benefit the people of Canada. There was a certain practice, and I would use the word "courtesy" as well, that when the hon. member who presented the motion had made his argument, it was generally permitted to pass in the sense that it did not involve the government. It was merely an expression of opinion by this particular hon. member that this was something he felt should be said, and that all hon. members ought to be in the same position and the same consideration should be given because, in fact, they are hon. members and this is an idea they would like to put forward.

Mr. Knowles: How many times since the end of world war II have such motions been allowed to pass?

Mr. Harris: I could not say at the moment, but I will take your word for it.

Mr. Knowles: Not very many.

Mr. Harris: But times seem to have changed. Instead of having that type of motion, we now have motions which require the government or suggest the government should give consideration to the proposal, and on the one occasion we tried this out we were told after the event that the house had, in fact, decided this ought to be done. This was a departure from what had been the case in former times, if not immediately before that event occurred.

The government is put in the most awkward position of not being allowed, without some detriment, to extend to hon. members opposite the courtesy of permitting an argument to be made and allowing the matter to rest at that point. For that reason I approach this motion in the same light that we have approached other motions since this unhappy incident I mentioned, and feel that the government has to take—

Mr. Knowles: Unhappy on your side.

Mr. Harris: It was not unhappy on our side. I have a clear recollection that the parliamentary assistant to the then minister of finance stated that because the motion asked the government to give consideration, the government would in fact do so. I have a clear recollection in the following session, or even later in that session, of being told by the opposition that parliament had decided this particular matter ought to be done.

Mr. Trainor: Did you believe that?

Mr. Harris: I did not believe it, but I think it is unworthy of opposition members to suggest it under the conditions under which the motion was allowed to pass.

Mr. Trainor: Why worry about it if you do not believe it?

Mr. Harris: I have not many worries about the opposition generally, but I have some worries about my position as Minister of Finance, sir. So long as we are placed in that position we are bound to consider what we ought to do when a motion of this kind is presented. If we reject the motion it would not indicate that the Minister of Finance or anyone in this house, did not consider this was worthy of consideration. Every form of relief for the taxpayers of Canada is a matter for consideration, and should be on all occasions.

On the other hand it would be unwise to draw any conclusion from a motion which was adopted that the government felt it ought to follow that particular motion immediately, or even in the distant future. For that reason, sir, and particularly because at the moment we have under consideration a health or hospitalization scheme, which as I have said before is going to be most costly to the federal treasury, it seems to me that all matters having to do with medical expenses and income tax in connection therewith should not be decided affirmatively.

For that reason, sir, I am going to suggest that while I intend to vote against this motion, it is only because of what has already occurred and of which I have given an example, and it does not indicate that we are not giving careful consideration to all matters which affect the taxpayer, especially those who are obliged to spend considerable sums of money with respect to medical expenses.

Mr. F. A. Enfield (York-Scarborough): Mr. Speaker, hon. members will forgive me if I am a little repetitious in my remarks. At this stage of the debate one is bound to repeat arguments that have been so ably made already by hon. members who have spoken. However, I do want to say a few things about the resolution. I think the mover, the hon. member for Winnipeg South, is to be congratulated on his thought-provoking resolution. Certainly the discussion that has taken place has been to me at any rate most valuable, though I do not think I can agree with the premise, or the principle, on which the hon. member acts.

What is the principle behind his resolution? Well, he said the principle was that the individual be allowed to include in his tax deductions all prepayments for medical expenses. He said the taxpayer could now include medical expenses up to a certain point, but not any prepayment. He pointed out that he thought this would be important to the small taxpayer particularly.

I think he more or less presupposes that we are all in agreement with the real underlying principle of a resolution of this kind. The underlying principle is that there should be a reduction in taxes. This of course puts the discussion on a much broader basis.

With respect to the hon. member, I would have hoped that when he introduced his resolution he would have given us a better case on which we could base our judgment, first of all as to whether a reduction in taxes was necessary at all at this time, and second, whether this was the best type of reduction to make in the circumstances.

Naturally we would all like to introduce measures that would reduce taxes. It is very nice for the taxpayer, a very popular and very pleasant thing to do. I am sure the government was most happy, when the budget was brought down in March of 1955, to pass on a considerable reduction in taxes to the taxpayer, but it is not always easy to decide on the best method of reduction, and I suggest this resolution does not outline a particularly good method.

First of all, the resolution itself is rather confusing. A little more care could have been taken in its preparation. I again say, with great respect to the hon. member, that clause (a) sets out that he can deduct from his taxable income first of all his medical expenses as now determined. I was completely taken in by this clause when I first read it. I felt that what he wanted there was a deduction of all his medical expenses from taxes. He wanted to take off the 3 per cent limit, which was suggested in a bill brought in by the hon. member for Winnipeg North Centre some time ago.

Apparently that is not so. Clause (a) means that you can deduct medical expenses as they are now determined under present regulations. Of course if you take that option

then the principle is drained completely from the resolution. Fortunately for the hon. member for Winnipeg South, the hon. member for Winnipeg North Centre presented an amendment which does to some extent get around this defect, and it was accepted by the mover. He said you may include in your deductible medical expenses either any amounts billed and paid under a contributory insurance or hospitalization plan, as is now provided, or—and again this is an option—the taxpayer may take any premium or tax paid by him for insurance against sickness or accident under any plan of health insurance.

Clause (b) is most interesting. Presumably the resolution is an effort to assist the small wage earner. Under clause (b) you may take any premium paid for insurance against sickness or accident. This has been mentioned by previous speakers, but I should like to emphasize it. This would, of course, introduce a great inequity into the scheme because the number of policies for sickness and accident are legion. If you can afford it, you can insure yourself for any length of time against almost any type of sickness. Naturally if you were going to be allowed to deduct from your taxable income premiums paid for the most expensive type of sickness or accident insurance, then this would be an excellent way, under the proposed resolution, to gain the effect of health coverage completely at the expense of income tax, and of course not provide any particular benefit at all to the lower income groups.

I emphasize "the lower income groups" because the hon. member who moved it mentioned in the first instance that this resolution would be most important to the small taxpayer. Therefore I would suggest that in clause (b) of the amendment you have a great drawback in the wording of the resolution, and no doubt if this ever reached the point of the introduction of a bill some such limit could be introduced, or would be introduced, I imagine, to protect the taxpayer and the government against what is to me an obvious problem in the resolution as drawn.

I suggest that the resolution is too wide and too broad in its scope. If it were to be of any use at all, certainly it would have to be gone over with great care to take into account what limits one should put on the deduction concerned.

What about the resolution in the light of our pending health insurance scheme? This subject has also been dealt with in this debate. I think you can accomplish the same purpose the resolution tries to accomplish by providing a health insurance scheme on as cheap a basis as possible. In other words, instead of providing what must be a rather complicated method, a complicated set of regulations, for the deduction of certain allowances, why not say to yourself: Well, we are in a position to save the taxpayer some money. We would like to pass on the saving in as fair and equitable a way as possible. We are contemplating the institution of a national health insurance scheme. The best way to pass on the saving is to cut down the cost of the scheme. Then everybody, regardless of their position, gets a fair share of whatever saving or whatever possible tax reduction you can achieve.

To my mind the prospect of such a health insurance scheme takes away any real necessity for a resolution of this kind at this time. If you did it in that way, naturally you would be able to pass on the saving. You would achieve the same result with less work, less administration cost and less of the bureaucracy that my hon. friends in the official opposition are averse to increasing. In my opinion this would certainly achieve a better result on the whole for the lower income group.

Mr. Knowles: Will the hon. member permit a question?

Mr. Enfield: Yes.

Mr. Knowles: He is aware of the fact that the plan proposed by the federal government covers only hospitalization. This resolution discusses medical expenses generally. Would he implement the principle he is now advocating by having the government plan include medical expenses as well as hospital expenses?

Mr. Enfield: I really do not see that it would make that much difference, because whatever saving you pass along on any type of hospital insurance scheme would be money in the pocket of the taxpayer. Whether the actual scheme itself covers the whole gamut of health insurance and health facilities would not, it seems to me, make a great deal of difference.

For example, you could take the argument a step further and say that we might have a health insurance scheme to cover hospitalization, diagnostic services and medical services, the three things. You could argue whether the same principle would not apply if the health insurance scheme were carried further and covered other aspects of health problems such as loss of income during a period when one is ill.

Mr. Knowles: You are coming along.

Mr. Enfield: Well, we all hope that this scheme, if we get one, and we hope we will,

will cover a fairly wide field and that taking into account our responsibilities to the taxpayers, we will be able to broaden the scheme as time passes. The point raised by the hon. member was raised earlier by the hon. member for Nanaimo, and I noted at that time that I did not feel it really changed the principle of my suggestion.

Mr. Trainor: Will the hon. member permit a question?

Mr. Enfield: Yes.

Mr. Trainor: Is he suggesting that the cost of an over-all health insurance scheme would be at all comparable with the economic relief suggested in the resolution?

Mr. Enfield: That, Mr. Speaker, is a rather difficult question, as I think the hon. member who asked it will agree. In the light of the fact that the health insurance scheme which we are so glibly discussing is still in the process of negotiation we do not really know what it is going to cost.

Mr. Knowles: Would the hon. member permit another question? Does he realize that the health insurance scheme he is now talking about was first proposed by the Liberal party the year before he was born?

Mr. Enfield: Well, I think the hon. member is really paying me a compliment having taken the trouble to look up my birth date. However, it is difficult to know at this time what the scheme is going to cost us. I do wish I could answer the question of the hon. member, and I do wish that in introducing his resolution he had indicated to us what it would cost the taxpayers. I think we would all have been in a better position to exercise our judgment on the resolution.

Mr. Trainor: I have not been able to do that, but I suggest it would be very much less than the $182 million we have heard bandied about.

Mr. Enfield: That may be so, but again I cannot help indicating that I was rather surprised at the brief outline the hon. member gave us when he introduced what apparently was for him quite an important topic of discussion.

I was interested in an argument of the hon. member for Greenwood. He always has a very interesting little turn to add to our discussions. He said that in his opinion the resolution would help those who helped themselves. In other words he looked at it from the incentive viewpoint. He says that if you allow people to deduct this charge it will encourage more people to provide such insurance for themselves, and he mentioned that apparently somewhere in the United States of America that type of regulation is in effect. Like so many of these incentive propositions, as the proposition works out it helps everybody except the people who really need help.

He mentioned that insurance company executives were very much in favour of this idea. Naturally they would be, because it would be very nice from their point of view to get people as far into these schemes as possible in order that they would buy insurance from the companies represented by the insurance company executives. To reiterate an argument I made earlier in connection with this point, the type of people who would make the most money in dollars and cents out of a resolution of this kind are the well to do who can take out large policies covering every facet of health including protection of income, and then deduct the cost from their taxable income. Although we might help those who are willing to help themselves, I submit with great respect that on the whole I do not think we would help the main group that we want to help.

Mr. Trainor: Put a limit on it if you wish.

Mr. Enfield: The hon. member has suggested that we put a limit on it. It would appear that my remarks have perhaps added something to his thoughts on the subject. I do not believe I have any other points to raise. I think the underlying principle of whether or not we should have a tax reduction and whether this is the best way to bring about that reduction certainly needs more canvassing before we can go ahead with this type of thing. It might be better to give relief in a good many other ways, and this topic has not been touched upon at all in the debate except by the Minister of Finance.

Therefore I submit that as matters stand we are not justified in going ahead with the resolution because of the broadness of the wording, the difficulties involved in the regulation of the premium and the fact that we are in no way able to exercise proper judgment as to whether a tax reduction is possible in the light of all our other financial commitments.

The house divided on the amendment (Mr. Knowles) which was negatived on the following division:

Mr. Speaker: I declare the amendment to the main motion lost. Is the house ready for the question on the main motion? The hon. member for Cape Breton South. I am sure that all hon. members will wish me to welcome the hon. member back to this house. We missed him and we are glad to see him back with us.

Some hon. Members: Hear, hear.

Mr. Clarence Gillis (Cape Breton South): Thank you very much, Mr. Speaker. It is good to be back. One misses this elaborate club very much when one is away for any length of time. I know you will excuse me for occupying a little time at this point. I am interested in this particular resolution, but I did not want to speak on it while the frills were on.

An hon. Member: Who put the frills on?

Mr. Gillis: The hon. member for Winnipeg North Centre, being a little concerned, attempted to dress it up so it would make some sense, but he did not succeed in doing it very well. I know that while he did attempt to amend the resolution, he felt about the resolution and his own amendment very much as I do.

Any hon. member in the house who has done any travelling through the country in the past few months will agree with me when I say that one of the main issues in this country today is the question of national health insurance. As I see this resolution, with all due respect to its mover—it reflects his opinions—it is merely an attempt to justify the present very inadequate insurance schemes that exist in the country. Since the government has been making some serious pronouncements on the question of health insurance, practically every insurance company in the country has inaugurated a scheme of hospitalization insurance. This resolution merely attempts to amend the Income Tax Act to get a tax offset for contributions to the present insurance schemes which are not working very well.

I want to say very emphatically that every insurance company that is selling hospitalization insurance schemes in Canada is selling something it cannot deliver. You do not have to go outside this city to see it, for there are thousands of people paying into these insurance schemes who have to go on waiting lists to get into a hospital. These companies cannot sell hospital insurance when they have not the hospitals in which to put people, and they certainly do not contribute anything toward the upkeep of the hospitals.

I want to stress very emphatically that we cannot go on fooling the people of Canada

that these schemes give them hospital insurance, when the people selling the insurance have not hospitals to put them in. That situation exists right across this country.

I do not think the government can pass in this house legislation in respect to income tax for a small section of the population. In the second place, I do not believe income tax can be optional. I think income tax must be firm and must be applicable to everybody in the country in exactly the same way. This legislation, if it is passed, would be class legislation, as it applies only to those who can afford to enter into a hospital insurance scheme such as those sold today by the various insurance companies and other organizations across the country. For that reason I oppose it.

This resolution is proposed by a member of the house who is opposed to national health insurance. I heard him on a television newscast, and he emphatically made it clear that he is not favourable to national health insurance as discussed in this house on many occasions. In my opinion this resolution is merely an attempt to justify the present schemes and get the contributions to these schemes as tax offsets. If we were honest in the opinions we have expressed about national health insurance, I think we would see that something was done about it. I think the people of Canada today from coast to coast, expect the government within the foreseeable future to indicate a comprehensive scheme of national health insurance. If they do not get it within a reasonable time I think most people in this country are going to be badly disappointed.

The mover of the resolution is a medical doctor. I respect his opinions in these matters. I think he will agree with me that if there is a need in the country today, that need is to bring medical science within reach of the average person in this country.

Mr. Trainor: I suggest it is there already. I suggest it is within reach of the average person.

Mr. Gillis: I hazard a guess that one-third of the wage-earners and salary earners in this country are working below the income tax levels as far as salary and income are concerned. I am certain the hon. gentleman will agree with me that those people cannot pay present medical costs. There is only one way to get medical science to them, and that is by having those who can afford to pay taxes to support a national health scheme make medical science available to them. There is no other way in which they are going to get it.

We just cannot go on buying health insurance from private companies and then standing in queues at hospitals waiting to get in. I do not think anyone has a right to sell something they do not possess. Hospitalization is not the prerogative of private companies. They do not have hospitals. The citizens of the community, with contributions by governments, build hospitals. Many of them across the country are kept up on a subscription basis by the citizens who built them. The private companies will go into these communities and sell this type of insurance without any guarantee at all that you can get into a hospital. In every town across the country there is a waiting list of those who are buying this type of insurance.

If we are honest about this matter, I think the thing we should be discussing is, first, the abolition of the floor on medical expenses. I think people should have the right to write off the amount of those expenses. You can write off a great many things that could not be justified on as good grounds as those upon which you can justify the abolition of that 3 per cent floor. The 3 per cent floor is all right if you can write a cheque for $500 or $1,000. If you can do that it does not mean very much to you. But if you are in a bracket under which you are paying $50, $75 or $100 in taxes and you get a medical bill of $25, $30 or $45, it means much more to you; that 3 per cent relief would be of much more advantage than to the fellow who could write a cheque without any difficulty. This step would mean a great deal to the lower income groups.

I think that is the thing we should be definite about. I believe a resolution on this subject should be on that particular point, namely the abolition of the floor. Then I think we should be putting all our vocal chords to work in urging the government to try to bring medical science to the thousands of people across this country who cannot afford it.

If you are living in Winnipeg, Halifax, Vancouver, Montreal or Toronto, you have very good medical facilities. But if you are living down in the maritimes, particularly in the lower end of them 300 miles east of Halifax, or are living in some sections of New Brunswick, or on the prairies or in the far west where those facilities are not available, this is what happens. You have hundreds and hundreds of people in those communities where you have just ordinary practitioners. If you get any kind of disability that requires expert attention you are obliged to go from door to door, from neighbour to neighbour, attempting to borrow $400, $500 or $1,000 to send people over to some clinic

or big hospital in the United States, or to get them into the Victoria hospital in Halifax or the Hospital for Sick Children in Toronto. There is where you are hitting real expense and real hardship. There is not any insurance for most of those people. You borrow from your neighbour.

In the community in which I live, as in many other sections, there is not a day in the month when an appeal does not appear in the paper on behalf of someone who requires a serious operation such as a heart operation, a brain operation, treatment for cancer or a diagnosis in these expert centres. It costs hundreds of dollars for transportation plus the cost of the treatment. In many cases appeals are made in the newspapers to borrow the money in order to make that kind of thing possible.

It is true that the big centres are well provided for and that the expert attention is there. I do not think it is necessary to send any of our people to the United States. We now have the centres established in Canada, but they are not available to 75 per cent of the population in this country, and they never will be available to them until such time as the government has the courage to enact the necessary legislation. I refer to legislation which will place upon the citizen of this country who has the income the obligation to contribute by way of taxation to making medical science available to the hundreds of thousands of people in this country to whom it will otherwise never be available.

As far as I am concerned, I cannot support this resolution. I would make this suggestion to the Minister of Finance. Before his next budget comes down I would suggest that he give serious consideration to the abolition of that 3 per cent floor on medical expenses, and that he join with his colleagues in the cabinet in working out a comprehensive medical plan that will really give to the people the hospitalization and the medical science that is available in this country today.

Mr. Harris: Mr. Speaker, one appreciates the remarks made by the hon. member for Cape Breton South but, if I may say so with respect, we have launched into a different field from that in which we started. We have heard expressions of opinion from, I think, all the opposition groups and from the government side. I have made an engagement to give serious consideration to the amended resolution or motion. Of course I fully appreciate the fact that hon. members expect us on all occasions to consider the 3 per cent floor or ceiling, as you will.

Having that fact in mind, Mr. Speaker, I feel that we could usefully adjourn the debate and I therefore so move.

Mr. Knowles: The guillotine again.

On motion of Mr. Harris the debate was adjourned.

FAMILY ALLOWANCES

PROPOSAL TO AMEND LEGISLATION TO INCREASE AMOUNTS PAID

Mr. H. R. Argue (Assiniboia) moved:

That, in the opinion of this house, the government should give consideration to the advisability of introducing legislation to provide an increase in the family allowance.

Mr. Philpott: On a point of order, Mr. Speaker; are we taking motion No. 3 in conjunction with motion No. 10, according to the precedent of least year? No. 10 is practically a duplicate of No. 3.

Mr. Speaker: For the information of the hon. member I may say that now that we have considered this resolution the other one will have to wait and be dealt with when we get to it.

Mr. Argue: Mr. Speaker—

Mr. Speaker: If the hon. member speaks now, he will close the debate.

Mr. Argue: No; this motion was allowed to stand the other day.

Mr. Speaker: I am sorry. I thought this was a resumption of the debate. I understand we are taking it now for the first time, and the hon. member is moving the motion. Perhaps what got me into difficulty was the fact that the other day we thought we were on this motion when we were not.

Mr. Argue: I am pleased to have the opportunity of once again moving a motion requesting an increase in the family allowance. I believe the family allowance legislation, enacted back in 1944, is one of the most important acts ever placed on the statute books of this country. It is an important part of our social security legislation. Because I believe family allowances are a good thing, because I believe the legislation is worth while, I view with alarm the gradual deterioration in the purchasing power of the family allowance cheque. It is not sufficient at any time for a government to merely provide legislation which is good. In my opinion the government should be prepared to protect the value of that legislation. Year by year almost consistently since 1945, inflation has been allowed to eat away a good part of the value of the family allowance cheque.

There is only three-quarters of an hour left for this debate, and because time is limited and I should like to see other members take part in the debate I shall endeavour to make my remarks rather brief. The latest

report of the Department of National Health and Welfare shows that more than 2 million families are in receipt of family allowance cheques on behalf of almost 5 million children. A little later on I am going to give some income statistics which I believe will demonstrate that family allowance cheques are absolutely essential to the welfare of the family. Moreover, I believe I can demonstrate that the incomes of the vast majority of Canadian families are at a level which makes it necessary to consider an increase in the amount of the allowance at this time.

In some quarters it is being advocated that family allowances be doubled. Another suggestion is that the payment of the family allowance should be extended on behalf of children beyond the age of 16, probably up to 21, as long as those children remain in school. I think that suggestion is a valuable one. I feel it is one that the government and the house might consider. It seems to me that the importance of education and the high cost of it in this technological age should cause the government to consider encouraging young Canadians to stay in school as long as they can profitably do so. I believe, therefore, there is real merit in the suggestion that the age up to which family allowances may be paid should be extended.

The family allowance is just one aspect of the Canadian social security program. It is one instance where the government has provided a very important piece of legislation, and year by year has stood idly by while inflation has taken away a substantial part of the original program. This is not the only field in which the government, by standing idly by in an inflationary period, has allowed the value of social security legislation to deteriorate. I refer now to the old age pension cheque. The last increase in the amount paid old age pensioners was in April, 1949. It is true that since then the means test has been removed, and therefore the number of Canadians who are receiving old age pension cheques has been greatly increased. Nevertheless, since April, 1949, inflation has caused a very serious deterioration in the purchasing power of the old age pension cheque.

I have made some calculations, and on the basis of the consumer index for 1955 the old age pension cheque which was worth $40 in 1949 is today worth only $34.29 in terms of 1949 purchasing power, a deterioration of $5.71 since that time. I do not think anyone will say $40 a month for an old age pensioner in April, 1949, was too high. Certainly $34.29 in terms of 1949 purchasing power is today far too low. Not only in the field of family allowances, therefore, but in the field of old age pensions the value of the social security legislation has been allowed to deteriorate.

I have in my hand a table which shows the increase in the consumer price index each year since 1945, and the resultant decrease in the value of the family allowance. The consumer price index for 1945 stood at 75 and the initial family allowance cheque for the youngest child was $5. The next year the consumer price index was 77·5 and the value of the $5 cheque was reduced by 10 cents, to $4.90. The next year the consumer price index was again higher and the value of the $5 family allowance cheque had deteriorated an additional 50 cents to become worth only $4.40. The following year there was a further large increase in the cost of living and the value of the family allowance cheque went down another 50 cents to $3.90. Year by year, with the exception of 1953, inflation has caused a decrease in the value of the family allowance cheques until in terms of 1945 dollars, the year in which family allowances were first paid, the 1955 family allowance cheque of $5 became worth only $3.20. In 1955 the $6 family allowance cheque had deteriorated in value to $3.84; the $8 cheque had deteriorated in value to $5.93.

To show the position of our family allowance legislation, on the assumption that inflation continues in the next 10 or 20 years at the same rate as in the last 10 years, and the government does nothing in the next 10 or 20 years in regard to increasing the family allowance, we shall find 10 years from now that the $5 family allowance cheque will be worth just $2.05, and that 20 years from now a cheque worth $5 in 1945 will be worth $1.41.

I do not believe this government, or any other government that may be in office during the next 10 or 20 years, if inflation should continue at the same rate, will stand idly by and allow the value of family allowances to deteriorate from $5 to $1.41. I do not believe the people of Canada will stand for that being done. They will not stand for this drastic drop in the value of family allowances, which I have estimated to be 36 per cent. Now is the time for the government to consider restoring the value of the family allowance.

If nothing is done about it, 10 years from now the $6 cheque will be worth just $2.46, and 20 years from now, $1.69. The $8 cheque, the largest that is payable, 10 years from now will be worth $3.28, and 20 years from now, $2.26.

There is another way to demonstrate the deterioration in the value of family allowances. The family allowances legislation was

enacted and had its first full year of operation in 1946. At that time the gross national product in Canada was just over $12 billion. The amount paid out in family allowances was almost 2 per cent of the gross national product, or $245 million. Since 1946 the gross national product has increased from $12 billion to $26 billion. If the family allowances today were the same percentage of the gross national product as they were in 1946, we should be spending this year on family allowances the sum of $539 million. As a matter of fact in the coming fiscal year the estimate for family allowances is $399 million. Therefore, assuming that next year the gross national product does not increase—and we all know it should; it should go up about 5 per cent each and every year—the family allowances will be $140 million short of 2 per cent of the gross national product, that percentage of the gross national product which they constituted back in 1946.

I believe that 2 per cent is a very small part of the gross national product to have allocated for family allowances. I should like to see it even higher; but certainly I believe that the part of the gross national product used for family allowances in 1946 should be retained, and we should not be content to allow it to fall, as I have said, by $140 million.

The government brought in family allowances in 1944, and the legislation was passed. Family allowances became operative in 1945. The Liberal party, year after year, election after election, point out to the people of Canada the value of family allowances and take, if not 100 per cent of the credit, at least 99 per cent of the credit for having placed them on the statute books.

What has been happening since? The value of family allowances has deteriorated; the value of the old age pension has deteriorated. At this time, instead of restoring the purchasing power of the family allowance cheque, the government is talking of extending the field of social security legislation. I am all for the extension of social security legislation; I am in complete support of a program of health insurance, and better old age pensions. But unlike the Minister of National Health and Welfare (Mr. Martin), I do not believe that the amount of wealth represented by the deterioration in the value of family allowances should be used or an extension of social security measures in other fields.

I believe the family allowance legislation should be protected and any new legislation should be added to it. In speaking in the debate on February 23, a year ago, as recorded at page 1444 of *Hansard* the Minister of National Health and Welfare had this to say:

> If we had accepted my hon. friend's proposal a number of years ago does any hon. member think it would have been possible to have an old age security program that is costing Canada over $350 million a year? If we had accepted my hon. friend's proposal last year would we have been able to bring in the disability allowances program last year? If we had accepted my hon. friend's proposal would we have been able to bring in legislation to help the blind, or to bring in a national health program?

The most I have ever advocated in proposing an increase in family allowances was that the value of the family allowance cheque be restored; yet the Minister of National Health and Welfare says that had the value of the family allowance cheque been restored the government would not have been able to bring in the disability allowance, the blind pension or to provide $350 million for an old age security program. In other words the government is attacking its own legislation. It is taking a good part of the value of the family allowance legislation and, in the words of the Minister of National Health and Welfare, is using that sum of money to provide social security legislation in other ways.

Are the people of Canada really in need of family allowance legislation? Should there be an increase in family allowances? Is the average working person in need of an improvement in family allowance legislation? I hold in my hand some excerpts from taxation statistics, 1955, based on the 1953 taxation year. It shows that 39 per cent of income earners obtained less than $2,000 in 1953; that 51·4 per cent obtained less than $2,500; that 64·4 per cent, or almost two-thirds of the income earners in Canada, obtained less than $3,000; that 79·9 per cent obtained less than $3,500.

When you add to that table the statement that has often been made by the Minister of National Health and Welfare that 19 per cent of the working population of this country are responsible for the upbringing of 84 per cent of the children, you see that the average Canadian family obtains a very modest income, and must be able to balance the budget with the greatest difficulty. If almost half the working men obtained $200 a month, and if they obtained housing accommodation at a rental of $75, which would not be excessive, they would have $125 a month to buy food for the table, to buy clothing for the family, to provide for medical expenses, and all of the costs of raising a family, because the statistics of the Department of National Revenue point out that 51·4 per cent of income earners obtain less than $2,500 a year.

The united automobile workers put out a publication entitled *The Guardian*. In that publication they have figures showing the estimated cost of modest living for a year for a city family as at January 31, 1954. They have statistics for a working man who is a tenant, who has a car, who is a home owner, or who is a home purchaser. They estimate that the highest cost for a modest living is $4,600 for a home purchaser with a car, and the lowest modest living cost is for a home owner, someone who owns his home and has no car. In that case the estimate is $3,628.

In other words, according to this publication the average family needs at least $300 a month for a modest living and to balance the budget. Yet according to the taxation statistics three-quarters of the income earners in this country obtain less than $300 a month.

For that reason, Mr. Speaker, I feel that family allowances are essential, that an increase should be made at this time, and that the very least the government should do is to restore the purchasing power of the family allowance cheque so that it may be of greater assistance to the vast majority of families who now find it almost impossible to balance the family budget.

Mr. Elmore Philpott (Vancouver South): Mr. Speaker, before I speak on this particular item I think I should perhaps apologize for having started to speak on it a week ago last Friday. My only excuse is that I was listening to the page boys who were bringing us the Olympic hockey game scores, and I was not paying attention to the clerk when he read the item in the name of the hon. member for Assiniboia. So I started to speak on the wrong subject.

I am also a bit sorry that I did not speak last Friday as I should have, because I think I could have given a wide measure of moral support to the measure introduced by the hon. member at that time. I am afraid, however, that I can give him no moral support with respect to the resolution we are discussing tonight.

I think if hon. members had it within their power to say whether or not they would grant an increase in family allowances, old age assistance, old age security or any other welfare measure that we have in this country, not a single member of any of the four parties would hesitate if we were able to do that. But I submit, Mr. Speaker, that it is quite irresponsible to suggest that regardless of the taxation we levy, regardless of the necessity to balance the budget, we can increase our welfare allowances from year to year just out of good intentions.

I say to the hon. member, without any intention of being out of order, that it is not so many days ago that we heard a warning in this chamber about the terrible things that would happen if the price of beef should go down or if the floor price under butter were removed. I submit that all of these things have a connection with the increase in the cost of living and therefore with the justification for or argument in favour of higher family allowances.

In this country we are about to embark on the most comprehensive step that has ever been taken in the history of our nation in the form of the great national-provincial, coast to coast health care scheme.

An hon. Member: Hospital care.

Mr. Philpott: Hospital care scheme. The Prime Minister (Mr. St. Laurent) has clearly laid down the terms on which the government is willing to proceed with the plan, and we all know that it is going to cost the treasury of the federal government real money. By coincidence it is going to cost the treasury almost exactly the same amount in millions of dollars as the amount by which the hon. member for Assiniboia suggests that family allowances should be increased to bring them up to the level of the increase in the cost of living since 1947.

Maybe I am wrong, but I have the impression that if all the citizens of Canada could have their choice between an increase in the family allowance to bring it up to an amount that would compensate for the increase in the cost of living since 1947 or a plan whereby the national government in co-operation with the provinces will go ahead with a national health insurance scheme they would, in my opinion, vote by an overwhelming majority, probably by 99 per cent, to go ahead with the national health insurance scheme.

I had the great privilege this summer of travelling quite extensively in several of the countries which are most often held up in the house as being the ideal welfare state countries in all the world, namely the Scandinavian countries such as Denmark, Sweden, Norway and so on. I spent some time in each of those countries, and on some other occasion this session I hope to have the privilege of saying something about civil defence in that wonderful country, Sweden, where I had the privilege of examining their system.

However, tonight I want to talk for a minute or two about how the welfare state schemes in these countries compare with our own. These countries are often portrayed by the hon. gentlemen immediately opposite me as being the most advanced in all the world in this regard. Not one of these countries has a family allowance scheme that compares in any way with what we have right here in our own

Dominion of Canada. For instance, in Finland the family allowance payment is 1,200 markkas per year, very much less than Canada. In Norway the family allowance payment is 240 kroner per year, and the first child gets nothing. In Sweden the amount is 290 kronor per year. In that country it is all-inclusive. You do get a grant even for the first child. In Denmark the amount is roughly the same as in Sweden.

But in all these countries, Mr. Speaker, quite a rigid means test is applied in the case of all their welfare measures, not only with respect to unemployment insurance but also old age pensions. To date they have nothing comparable with what we have here under our old age security system payable to everybody right across the board.

Mr. Nicholson: I wonder whether the hon. member has those figures in terms of dollars and in terms of the food which the children may have.

Mr. Philpott: I can give them to you or you can figure them out yourself. The kroner is worth somewhere between 20 and 25 cents, so that in terms of dollars the Norwegian family allowance would amount to about $60 per year. In France the first child is excluded but the second child receives the allowance. On paper France has the most generous of all the European schemes. In the case of a city worker the allowance for the second child is based on 20 per cent of the worker's wages, which would really be a fabulous allowance if that system were applied in Canada.

However, if you examine the actual situation in France you will find that the scheme is full of jokers. It is not only true that a great many people do not pay taxes; it is also true that a great many people who are theoretically entitled to some of these welfare allowances do not draw them. It is also true that in the richest country in the world, the great United States of America, there is as yet no family allowance scheme of any kind whatsoever.

Therefore I say, Mr. Speaker, that before we talk too readily about extending these payments, desirable as all of us might consider that to be, we should sit down with pencil and paper and figure out exactly where the taxes are going to come from to pay these allowances, or where we are going to put the extra debt to pay for them if we are going into debt. It seems to me that the whole welfare scheme of Canada must be considered as an entity.

If I for one had to express my preference as to priority I would say that before there is any substantial increase in family allowances, consideration should be given to the old age pensioners. They certainly have a higher claim to prior consideration, because I can show you from my own files in my office in this building, literally hundreds of letters in which people have actually sent me their budgets, proving quite plainly that one simply cannot live on $40 a month.

I would say in all kindliness to the hon. member for Assiniboia, do not go M. Poujade one better. In France M. Poujade only comes out with the slogan, "Down with all taxes" but as far as I can see the hon. member for Assiniboia is in favour of "Down with all taxes but up with all welfare benefits."

Mr. Angus MacInnis (Vancouver-Kingsway): Mr. Speaker, the time remaining for the debate on this motion is not very long and I hope I will not take up all of it. I am really surprised, probably astonished would be a better word, after being among so many university graduates, that the hon. member for Vancouver South (Mr. Philpott) should be in such a hurry to oppose this measure that he had to speak on it before it came before the house at all. It is simply amazing, and I am quite sure it is not what the people of British Columbia expect of the hon. gentleman.

He told us of his experiences during a trip to the Scandinavian countries, Finland, Norway, Sweden and Denmark, this year. Surely the ability of those countries to provide for their people should not be compared with that of a rich country like Canada. Finland has not yet finished paying heavy reparations to the country which conquered her a few years ago. It is not so much the size of family allowances paid in those countries as it is the relationship of family allowances to the standards of living of the various classes in the country.

The hon. member says that if something has to be done in connection with social security there is a greater need in connection with old age pensioners. I am not going to dispute that the condition of old age pensioners in Canada, those who have to live practically or altogether on old age security or old age assistance, is deplorable; but I insist that if there is to be a choice between doing something for a child who has not yet developed into a man and doing something for an old person whose days are over, if we cannot do something for both, we should do it first for the child who is a future citizen of Canada.

There is another point I wish to mention in that regard. I am quite sure that the hon. gentleman who preceded me would say

and has said that this country should do more toward feeding the underprivileged people in other parts of the world. Many people say that if we are going to save the world from the dangers of communism that is something that should be done. But I suggest to you that if we want to feed hungry people we do not have to go outside of of Canada to find them. Our first duty as representatives of the people of Canada is to see that the national income is so distributed that all will have bread before some have bread and cake as well. That is what we are suggesting when we suggest that family allowances should be raised.

I have in my hand a bulletin prepared by the Vancouver housing association, which is a recognized organization in Vancouver coming under the red feather scheme. This bulletin contains a brief which was prepared for the Minister of Public Works in regard to housing. The association had a study made of housing conditions among social assistance families. Those were not old age pensioners; they were fathers and mothers, in most cases mothers, with growing children. The study was made by a man by the name of W. A. Wilson, and I should like to read some extracts from the study he made which appear in this brief. The first is as follows:

> A family dependent on assistance has only about a 50-50 chance of finding shelter which will not jeopardize its physical and emotional well-being.

What does that mean? It means that in Vancouver, the city which the hon. gentleman and myself represent, families with children on social assistance are forced to give up proper food and clothing and other things that the ordinary child should expect in order to be able to obtain adequate shelter. Family allowances are one way of adding to the income of those children. The next extract is as follows:

> It is a decidedly bleak outlook for the family attempting to find adequate shelter within the rental grant. A family without outside help is literally torn between two choices; paying an exorbitant proportion of their income in attempting to find satisfactory housing, or living in poor housing and having more of their income available for daily necessities.

We talk about juvenile delinquency, but what can be expected of children who are brought up hungry, who are brought up in homes that we would not want to live in? If we are going to combat juvenile delinquency successfully we must begin by improving the lives of young people in the community, not only with better food and clothing but with more of the social amenities and educational and recreational opportunities. Here again increased family allowances would help a great deal.

[Mr. MacInnis.]

I have before me an article which appeared in the Montreal *Gazette* of February 6 which was written for several papers by James S. Duncan, C.M.G., describing his experiences on a recent visit to Russia. Referring to the condition of the Russian people he says:

> The small luxuries, the important non-essentials, the minor niceties which lend grace and charm to life are conspicuous by their absence from the Russian scene; and yet the great masses of the people who have no points of comparison with the way other peoples live, apparently accept their drab lives without complaint or unhappiness.

I read all of it because there was no period. I could have read the first half and left it at that, pointing out that Russia is not the only country where the small luxuries, the important non-essentials and the minor niceties which lend grace and charm to life are conspicuous by their absence. I can take my hon. friend to hundreds of homes in the city of Vancouver where these minor niceties which lend grace and charm to life are lacking and where there is a continual daily struggle to provide the essentials of bare living.

Yet my hon. friend says in this house that we cannot afford this. How quickly people become satisfied. Let us first look after the many people in every city, in every town, in every hamlet in this land who are not getting enough food to eat, who are not getting proper clothes to wear, who are not getting the proper educational opportunities. Let us look after these people first, even before we extend our bounty to the more unfortunate people in other parts of the world.

My hon. friend, as I have said, is now one of the satisfied people. He is continually drawing attention to what this government is doing. I remember the day when he did not think this government was doing so much. I have here a quotation from a speech made by someone:

> Both parties are absolutely in the grip of financial interests. The real government of Canada is not at Ottawa but in St. James street, and the old parties are as closely linked as the Siamese twins.

An hon. Member: Who was that?

Mr. Studer: What have the socialists got to offer?

Mr. MacInnis: The speaker on that occasion was Captain Elmore Philpott at a meeting in Edmonton. I am just suggesting to this house that there is room for an increase in family allowances, and if some of the increase were to go to people who already have incomes you can take that away as it is taken away now. But we should make our family allowances such that every family in this country can be assured of a family income that will give it at least good physical health and good emotional health, and also allow the parents,

in their struggle for existence, to take advantage of the educational opportunities that this country provides.

(Translation):

Mr. Fernand Girard (Lapointe): Mr. Speaker, I should like to add a few words in support of the resolution under consideration at this time, consisting in a request to the government for an increase in family allowances.

There can be no denying the fact that the sum of $5, which the government had assumed to be an indispensable minimum for our families, in 1945, has gradually decreased in real value and that the family allowance cheque has lost 35 per cent of its worth, now being equal to a mere $3.20.

In other words, if the government was of the opinion, in 1945, that Canadian families deserved a minimum of $5, it should at this time, to be logical, be prepared to adjust the amount of this allowance to the present cost of living in this country.

Every time members in this house have asked for an increase in family allowances, there was always eagerness on the side of government benches to protest and to say: "Let's be serious, gentlemen. The government can only give money that it collects. Where are we to find the revenue to do this?"

It is unbelievable to see how often this argument is used by members of the government, and equally unbelievable to see how readily the government brushes it aside when it finds it convenient to do so.

When, for instance, we asked on behalf of the provinces for an increase in the field of income tax, the government said: "We can hardly grant more than 5 per cent, because that would make the situation unbearable for us". Some time later, the Prime Minister offered 10 per cent and, through some unbelievable and unaccountable miracle, the government had seen its way out of an unbearable situation.

Last year, when there was talk of increasing the rate of family allowances, the government was faced with the same problem: no money. It was not unwilling, but where could it find the money necessary for this purpose? Yet this same government, this year, is ready to spend $180 million on health insurance. I am not opposed to this plan, but if it is considered practicable, why can't the money be found to boost family allowances?

In the last analysis, the government must realize that if the $5 family allowance is now worth not much more than $3.20, the worker's income has also been affected so that he is proportionately less able to provide for the security of his children. Everyone will also recognize that, since children are our greatest asset, they deserve the largest share of our national income. If we can spend two billion dollars on defence, which may be an important thing, why could we not afford more than one-hundredth of that amount for the welfare of our children? Why could we not do more for an asset that is so important to our country?

(Text):

On motion of Mr. Girard the debate was adjourned.

HOUSE OF COMMONS

ANNOUNCEMENT OF PUBLICATION OF CUMULATIVE INDEX TO "HANSARD"

Mr. Speaker: Before the adjournment, may I point out to hon. members that, if they look in their files of *Hansard*, they will find that there is a green sheet of heavy paper immediately preceding an index which covers the period from January 10 to January 31. This is a current index which it is proposed to make cumulative and have published for every 15 days during the course of this session. It may be that when we reach the committee of supply sittings or the sittings of the committee of ways and means, the *Hansard* index branch may find it difficult, because of the multiplicity of subjects dealt with in the committee of supply and of ways and means, to issue an index on this current basis. However, in any event it is felt certain that, except for that time toward the end of the session when there is a great multiplicity of subjects being dealt with, a cumulative index can be issued. I hope this improvement will help hon. members to find what they look for in the daily *Hansard*.

At ten o'clock the house adjourned, without question put, pursuant to standing order.

Questions

ANSWERS TO QUESTIONS

The following answers, deposited with the Clerk of the house, are printed in the official report of debates pursuant to standing order 39:

FLOODS, B.C.—ASSISTANCE TO INDIANS

Question No. 74—**Mr. Regier:**

1. Have any requests been received for assistance to Indians of British Columbia as a result of flooding in 1955?
2. If so, what has been the reply of the government to such requests?
3. Have any Indian agents reported on the extent of damages suffered by Indians?

Answer by: **Mr. Pickersgill:**

1. Yes.
2. There has been only one application for assistance and the applicant has been provided with clothing, furniture and other essential requirements and it is intended to assist him with minor house repairs.
3. Yes.

INDIANS, ALBERTA—POPULATION AND MEDICAL STATISTICS

Question No. 86—**Mr. Smith (Battle River-Camrose):**

1. What is the number of Indians in the province of Alberta?
2. What was the cost of (a) hospitalization; (b) medical services; (c) dental services, for these Indians in each of the years 1954 and 1955?

Answer by: **Mr. Martin:**

Because the Indians of the Yukon and Fort St. John agency are cared for by the Indian health services organization in Alberta it is difficult to segregate expenditure figures for the care of Indians in Alberta alone. Therefore the figures quoted below include these two areas, the Indian population of which represents about 11 per cent of the total Indian population involved.

1. Indians in province of Alberta, 16,327; Indians in Fort St. John agency, N. E. sector of British Columbia, 488; Indians in Yukon Territory, 1,608.

2. (a) 1953-54, $1,823,754; 1954-55, $1,-973,900; (b) 1953-54, $65,423; 1954-55, $71,358.

Note: This item includes amounts paid to non-departmental doctors, dentists, opticians, and radiologists.

(c) Dental services are provided by dental clinics in hospitals and by non-departmental dentists. The amount paid for the latter is included in the amounts shown in answer 2(b). In addition two travelling dental surgeons were employed by the Indian health services in Alberta in 1955 and one in 1954.

In addition to the above expenditures there were those made in moving patients to and from hospital, which amounted to: 1953-54, $30,396; 1954-55, $34,178.

STAPHYLOCOCCAL EPIDEMIC, B.C. HOSPITAL PERSONNEL

Question No. 92—**Mr. Goode:**

1. Is there an epidemic of staphylococcol infections among the personnel of the hospitals in British Columbia?
2. If so, what discussions, if any, have taken place between federal and provincial government research staffs to eliminate the serious spread of such infection?

Answer by: **Mr. Martin:**

1. No.

2. The possibility of staphylococcal infections occurring in hospital personnel has always been a potential hazard. With the introduction of penicillin the solution seemed to be at hand. However particular strains of staphylococci, resistant to the effects of penicillin and other antibiotics, have developed. While the occurrence of these resistant strains of staphylococci has not assumed epidemic proportions, their presence has been reported from various areas in Canada and throughout the world.

A full discussion of this matter of staphylococci resistant to antibiotics took place at a conference of federal and provincial laboratory directors held in Ottawa in December, 1955.

Considerable research has been undertaken with the objectives of studying the characteristics of these penicillin resistant organisms, of developing improved methods for reducing the possibility of their transference from one person to another, and of discovering new antibiotics which will be effective against these resistant strains.

Typical of these research projects which have been supported under the national health program are: (a) the epidemiological study of penicillin resistant staphylococcal infections in the province of Quebec which has been underway since 1951; (b) investigation at the Hospital for Sick Children in Toronto of the sensitivity of bacteria to antibiotics; and (c) a study of the control of skin infections in the newborn and a proposed companion study now under consideration of the epidemiology and control of infections caused by staphylococci in the pediatrics department of a general hospital, both in Vancouver.

In addition to this financial support to independent investigators, both the Department of Veterans Affairs and the laboratory of hygiene of the Department of National Health and Welfare have been actively engaged in comprehensive studies of this problem.

BLIND PERSONS—FEDERAL MEDICAL AID

Question No. 103—**Mr. Proudfoot:**

1. Can recipients of blind persons allowances receive medical or surgical attention in cases where it is likely to improve their sight?

2. If so, does the government bear any portion of the cost?

3. Who selects the pensioners who are to be given treatment?

4. How many have been treated to date and of these in how many cases has the treatment been successful?

Answer by: **Mr. Martin:**

1. Yes. In 1947 the federal government introduced a scheme for treating blind persons in cases where such treatment would restore vision. The provinces of Newfoundland, Prince Edward Island, Nova Scotia, Quebec, Ontario, New Brunswick, Manitoba, Saskatchewan, and British Columbia are now participating or have agreed to participate in this scheme.

2. Yes. The federal government bears 75 per cent of the cost, the province bearing the balance.

3. The blindness control division of the Department of National Health and Welfare aids in the selection of cases for treatment in collaboration with the provincial authorities. Most cases are selected on the recommendation of the oculists who make the examinations for blindness allowances purposes. In some cases other oculists ask for authority to treat pensioners, frequently the Canadian National Institute for the Blind recommends treatment, and in a few cases the blind pensioners themselves ask for treatment. All cases are carefully reviewed in the blindness control division before treatment is authorized. If it is doubtful whether treatment would restore vision, a new eye examination is secured before authority for treatment is given.

Most of the cases treated are new recipients of blindness allowances whose blindness is due to cataract. The treatment is administered provincially and the patient can choose his own eye doctor.

4. 258 blind persons have been treated. 191 cases have been successful. 40 additional cases are under treatment now.

HOUSE OF COMMONS

Tuesday, February 14, 1956

The house met at 2.30 p.m.

HOUSE OF COMMONS

HON. MEMBER FOR FORT WILLIAM—BIRTHDAY ANNIVERSARY CONGRATULATIONS

Mr. Speaker: Hon. members will allow me, I am sure, to point out to them that today is the birthday anniversary of the dean of our house, the hon. member for Fort William. I want to tell him how pleased we are to see him looking so young and full of activity. We wish him very many happy returns of the day.

Whereupon the members of the house sang *Happy Birthday to You.*

Mr. Daniel McIvor (Fort William): I am quite tickled at hearing your words, Mr. Speaker, and especially at the fine music that has come from the house. I enjoy living very much, and I am going to carry on as long as a wise Providence permits and my better half helps.

NATIONAL DEFENCE

"PINETREE" LINE—PROVISION OF CANADIAN SECURITY GUARDS

On the orders of the day:

Mr. G. R. Pearkes (Esquimalt-Saanich): Mr. Speaker, may I direct a question to the Minister of National Defence, notice of which I have given him? Will the minister give consideration to the provision of Canadian security guards at United States army posts in Canada, such as the radar stations on the "Pinetree" line, so the men responsible for dealing with the public are Canadian rather than United States personnel?

Hon. R. O. Campney (Minister of National Defence): Mr. Speaker, I thank the hon. gentleman for giving me notice of his question. In view of his representations, I shall review the situation, and in so doing will be pleased to give consideration to his suggestion.

DISABLED PERSONS

INQUIRY AS TO POSSIBLE AMENDMENTS THIS SESSION

On the orders of the day:

Mr. J. Wilfrid Dufresne (Quebec West): Mr. Speaker, I should like to direct a question to the Minister of National Health and Welfare. Will the minister tell the house if he intends to amend at this session the Disabled Persons Act, following the discussions held last week among himself, officials of his department and representatives of the medical profession throughout Canada?

(*Translation*):

Hon. Paul Martin (Minister of National Health and Welfare): Well, Mr. Speaker, we are giving this matter serious consideration at this time.

(*Text*):

LIVESTOCK

SHEEP—REPORTED OUTBREAK OF SCRAPIE DISEASE IN ALBERTA

On the orders of the day:

Mr. C. E. Johnston (Bow River): Mr. Speaker, I should like to direct a question to the Minister of Agriculture. Can the minister tell the house in what part of Alberta the disease scrapie has broken out? Are there any other parts of Canada where this disease has broken out? How many sheep have been condemned for slaughter in Alberta and in other parts of Canada? What compensation, if any, does the government intend paying for each slaughtered head?

Right Hon. J. G. Gardiner (Minister of Agriculture): Mr. Speaker, the question asks in what part of Alberta the disease scrapie has broken out, and whether there are other parts of Canada in which it has broken out.

The use of the term "broken out" in connection with scrapie conveys a wrong implication. This is not a highly infectious disease which spreads rapidly from flock to flock, as do such diseases as hog cholera and foot-and-mouth disease. It is believed to be transmitted to some extent by breeding, but much research is still required to determine its exact mode of transmission.

Although it has been known to exist for some time in Europe and Great Britain, it is relatively rare on this continent; and in both United States and Canada the practice is followed of slaughtering infected flocks, with compensation, as a general safeguard and protection to the sheep industry.

Scrapie was recently diagnosed in one flock of sheep in Alberta, and at the present time that flock is in the process of being ordered

slaughtered and arrangements made for compensation. In the meantime, the flock is quarantined. Pending completion of arrangements it is not considered desirable to release details, but such details will be made available, if desired, when the disposal operations have been completed.

Scrapie has not yet been diagnosed in any other flock of sheep in Canada since 1954. It was first diagnosed in Canada in 1945 in an Ontario flock. Since that date, and not including the present instance in Alberta, it has been diagnosed in five flocks, all in Ontario. In each case the infected flock was destroyed. The total number of animals involved in all five flocks was 287.

The general plan that is followed in such cases will be followed in Alberta.

Mr. Johnston (Bow River): What was the compensation paid in Ontario when those sheep were slaughtered?

Mr. Gardiner: It is worked out on that basis. As far as the present herd is concerned the owner has suggested a certain compensation. We have had the herd inspected and we have proposed a certain compensation. The matter is still under discussion.

Mr. Johnston (Bow River): May I ask a supplementary question? In the latter part of my question I asked the minister what compensation had been paid in 1954 to the Ontario people? Do I understand that the herd has not been paid for yet?

Mr. Gardiner: No. That has been taken care of. The total number of animals involved in all five flocks was 287, but I have not the amount.

IMMIGRATION

REQUEST FOR CHANGE IN ADMINISTRATIVE POLICIES

On the orders of the day:

Mr. E. D. Fulton (Kamloops): Mr. Speaker, I should like to direct a question to the Minister of Citizenship and Immigration. Now that the Supreme Court of Canada has dismissed the appeal of the government in the Brent case, will the minister bring about an immediate change in the administrative policies of the department to bring them in line with normal standards of Canadian justice, as so often urged by the opposition in the house?

Hon. J. W. Pickersgill (Minister of Citizenship and Immigration): Mr. Speaker, it would require no change in the practices of my department to achieve the result that the hon. gentleman has suggested is desirable. As for the decision in the Brent case, the supreme court has not yet given the reasons for judgment. Until I have seen them I do not intend to anticipate them.

Mr. Fulton: May I ask then if the minister does not know that the government's appeal was dismissed?

Mr. Pickersgill: I am very well aware of that fact.

SUGGESTED INCREASE IN TIME FOR APPEAL

On the orders of the day:

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, may I direct a question to the Minister of Citizenship and Immigration. Will the minister consider extending to a longer period of time the 48 hours within which a person ordered deported may appeal to the new immigration appeal board, which the minister has established to be effective as at March 1?

Hon. J. W. Pickersgill (Minister of Citizenship and Immigration): Mr. Speaker, I shall be very glad to give consideration to the advantages there might be in extending the 48-hour period. I have some doubt in my own mind whether there would be any advantages but certainly I have no desire, and I am sure the government has no desire, to deny an appeal to any landed immigrant, and if a longer delay would make that end more certain there will be a longer delay.

GRAIN

BURSTALL SUBDIVISION—REPORTED SHORTAGE OF BOX CARS

On the orders of the day:

Mr. W. M. Johnson (Kindersley): Mr. Speaker, I should like to direct a question to the Minister of Trade and Commerce. Has the minister been made aware of the severe box car shortage on the C.P.R. lines in the Burstall subdivision? If so, what action has the minister taken to correct the situation?

Right Hon. C. D. Howe (Minister of Trade and Commerce): Mr. Speaker, I thank the hon. member for having given me notice of this question.

I keep in touch very closely with the general transportation situation, but this is the first time the particular problems of the Burstall subdivision have been drawn to my attention.

I am advised by the Canadian wheat board that the unit delivery quota has been taken care of at all points on the subdivision except Gascoigne, where four cars are still required. There are enough board orders out now to take care of the one-bushel quota for the

whole subdivision and the board is pursuing the matter with the railway to facilitate the car supply. From February 3 to February 10, 32 cars were supplied in the subdivision.

POST OFFICE DEPARTMENT

NANAIMO, B.C.—OCCUPATION OF NEW BUILDING

On the orders of the day:

Mr. W. M. Hamilton (Notre Dame de Grace): Mr. Speaker, will the Postmaster General inform the house when his department plan to commence operations in their new building in Nanaimo, British Columbia?

Hon. Hugues Lapointe (Postmaster General): Mr. Speaker, my understanding is that the department will probably move within the next two or three weeks into that part of the building which has been assigned to it.

PRIVILEGE

MR. GARDINER—REFERENCE TO REMARKS OF MEMBER FOR ROSETOWN-BIGGAR

Right Hon. J. G. Gardiner (Minister of Agriculture): Mr. Speaker, on a question of privilege I should like to point out that on page 1107 of *Hansard* of yesterday the hon. member for Rosetown-Biggar (Mr. Coldwell) is reported to have said:

> But I do know that on one occasion when a colleague of mine simply inserted in *Hansard* the words "Mr. Speaker" indicating that I had risen to speak, the Minister of Agriculture not only objected to it but he pursued the former editor of *Hansard* with letters of criticism almost until he went to his grave.

I can quite understand, after listening to the discussion yesterday, why my hon. friend did not undertake to have that taken out of *Hansard,* but I do want to refer to the fact that I asked him if he would produce the letters.

I wish to place the letters on the table of the house. I wrote one letter, and I wrote it within the time that is allowed to me under the rules of this house to have a matter corrected in revised *Hansard.* It was not corrected in revised *Hansard,* and I had one letter back. I did not take the matter up with the editor of *Hansard;* I took it up with the Clerk of the house. The letter was to the Clerk of the house and the answer was from the Clerk of the house. They have to do with the matter of the discussion which took place. The hon. member for Rosetown-Biggar and I were more or less playing for position in order to get the right to be the last speaker, and a discussion arose as to whether the rules were being followed. I am not going to go into that; I am simply going to ask hon. members to read these letters, which will be on the table.

Hansard—Altering of Report

The reference in the letters to the insertion of the words "Mr. Speaker" at page 3228 of *Hansard* for April 22, 1948, by the hon. member for Winnipeg North Centre (Mr. Knowles) will be fully understood by hon. members if they will read the discussions between Mr. Speaker and myself and between the hon. member for Rosetown-Biggar and Mr. Speaker. There was only one letter written by me and it was to the Clerk of the house, and was intended to refer to revised *Hansard.*

The words still remain in revised *Hansard* and if it is correct to have them there the ruling of the Speaker was wrong at the time I appealed to him to make a ruling. I wrote to the Clerk to call attention to the fact that if those words were properly there, then the order of the Speaker should have been different. I only say that because of what was said yesterday by the hon. member.

I want to say in addition that I have had five experiences of this kind with the hon. member, and the causes of them were exactly the same as with the hon. member for Moose Jaw-Lake Centre (Mr. Thatcher) as discussed in this house the other day when he was referring to what happened in Moose Jaw following a certain discussion here.

Mr. Fulton: Would the minister explain?

Mr. M. J. Coldwell (Rosetown-Biggar): Mr. Speaker, if I was in error yesterday I should like the record corrected. As a matter of fact I was speaking from memory. I remember very well the incident to which the hon. gentleman has referred, and the taking up on the floor of this house of the matter of the insertion of those words. I remember too that I understood that the correspondence to which I referred was not with the Clerk of the house but with Mr. Earl Young. Apparently on that point I was misinformed. If there are other respects in which I was in error yesterday I would certainly wish to set the record straight, because I try to be straightforward and fair. I think the minister could profit from some examples of that description.

Mr. Gardiner: Mr. Speaker, I have been meeting my hon. friend now for about 30 or 40 years, and on every occasion that he has attempted to misrepresent something I have said he knows who has lost the battle. He has lost it on every occasion, and this is the first time he has apologized for having lost it.

Mr. Coldwell: I made no apology other than to say I would be glad to set the record straight.

Mr. Gardiner: You are not big enough to set an example by making an apology.

An hon. Member: You are not so big yourself.

Mr. Speaker: Order.

[*Later:*]

Mr. Stanley Knowles (Winnipeg North Centre): I rise for just a moment on a question of privilege. Earlier today the Minister of Agriculture was permitted, on a question of privilege, to table certain documents and make a statement in which my name was involved. My question of privilege is that in making that statement the minister asked members to look at page 3228 of *Hansard* for April 22, 1948, if they wished to study the incident to which reference had been made, but that is the only page in *Hansard* to which he referred. What the Minister of Agriculture failed to do was to point out that on pages 3623 and 3624 of *Hansard* for May 5, 1948, the whole incident was discussed and, with the assistance of the late member for Danforth, Mr. Joseph Harris, was cleared up to the satisfaction of all who wished to study the incident. My point of privilege is that any reference to this incident should have included both of those references in *Hansard* and not just the one the minister placed on the record.

EXTERNAL AFFAIRS

RUSSIA—EXCHANGE OF PARLIAMENTARY DELEGATIONS

On the orders of the day:

Hon. L. B. Pearson (Secretary of State for External Affairs): Mr. Pearson—

Some hon. Members: Oh, oh.

Mr. Pearson: Mr. Speaker, I apologize for putting myself in your place.

An hon. Member: You are speaking to yourself.

Mr. Pearson: On February 10 last the hon. member for Mackenzie (Mr. Nicholson) asked the following question:

> In view of the Canadian Press stories in the morning papers to the effect that Russia may buy $5 million worth of wheat a year from Canada, would the minister consider recommending to the cabinet the accepting of the U.S.S.R. invitation for a Canadian parliamentary delegation to visit Russia, which was transmitted to the Canadian embassy in Moscow on January 6 of this year?

May I say first that the stories in question in so far as the shipment of wheat was concerned were inaccurate in a number of important respects. But apart from that, and with respect to the suggestion that there be an exchange of parliamentary delegations between Canada and the Soviet union, I do not think that this should in any way be related to the current trade discussions, as they are two quite separate matters. Recently, at the request of the Soviet foreign ministry, I conveyed to parliament through the Speakers of the two houses the translation of a resolution passed by the Supreme Soviet on December 28, 1955, which expressed support for parliamentary exchanges, of which you, Mr. Speaker, have already informed the house.

I understand that members are being given an opportunity of expressing their views regarding this invitation. Any attitude the government as such might take with regard to exchange visits of this kind will, of course, be taken in the light of the views of members as and when determined by them.

DOMINION-PROVINCIAL RELATIONS

SUGGESTED CONFERENCE TO INTEGRATE PRISON POLICY

On the orders of the day:

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, I should like to direct a question to the Minister of Justice. Will the federal government consider suggesting to the provinces the holding of a federal-provincial conference to integrate Canadian prison policy, as was suggested yesterday in Toronto by the John Howard society?

Hon. Stuart S. Garson (Minister of Justice): Mr. Speaker, I wish to thank my hon. friend for giving me notice of this question. Of course the answer to the question is yes, but I think we would be wise to postpone calling such a conference until after we have received the reports of the Fauteux inquiry and the McRuer commission, in order that we might be supplied thereby with sufficient data to indicate that this would be a fit subject for consideration by the two levels of governments at this time.

GRAIN

PROVISION FOR GUARANTEE OF BANK LOANS TO PRODUCERS IN PRAIRIE PROVINCES, ETC.

Right Hon. C. D. Howe (Minister of Trade and Commerce) moved the second reading of Bill No. 82, to provide for short-term credit to grain producers in the prairie provinces to meet temporary financial difficulties arising from inability to deliver all their grain.

Mr. D. S. Harkness (Calgary North): Mr. Speaker, this is the stage of this legislation when we are supposed to discuss the general principle of the bill. There are many, of course, who would say that as far as this

bill is concerned there is no principle. However, such as it is, the principle is contained in the title of the bill, which reads:

An act to provide for short-term credit to grain producers in the prairie provinces to meet temporary financial difficulties arising from inability to deliver all their grain.

In other words, this is an expedient to put a limited amount of cash into the hands of a limited number of farmers who have been unable to secure that cash in the normal way by the sale of their grain. The very wording of the title demonstrates the failure of the government to realize the seriousness of the cash situation of the prairie grain grower. To begin with, the bill says, "to meet temporary financial difficulties." The situation, I think, cannot properly be called temporary.

The minister is capable of taking a very liberal view, I know, of what the meaning of the word "temporary" may be, but I would submit that this shortage of cash on the part of western grain growers has been getting progressively worse over the past three years. This is not something that has come up only this year; it has been with us now for some considerable time. Moreover, the situation is steadily growing worse.

When you look at all the factors concerned, I think you will realize there is very little real prospect of this situation coming to an end in the next few months or in the limited period of one year that this bill is provided to cover. We have a very large surplus of grain, both stored in the elevators and still on the farms. The United States also has a very large carryover of grain. The general world wheat situation is one of surplus supply. Under those circumstances I do not think there is any real possibility of the present shortage of cash in the hands of the wheat farmers being really relieved for a period of at least two or three years in the future.

The Minister of Trade and Commerce and the government stubbornly refuse to admit that this is the situation. The minister at every opportunity talks of the improved sales position and comes out with optimistic statements, thereby attempting to spread the general idea that soon the farmer will be able to get rid of his grain and his cash difficulties will be at an end. I think that is merely raising false hopes. Instead of engaging in talk of that sort the minister should be addressing himself to some more realistic and definite means of solving the general difficulties brought about by the inability to sell our surplus grain and the resulting serious cash position of western farmers.

The full title of the bill continues with these words:

. . . to meet temporary financial difficulties arising from inability to deliver all their grain.

I emphasize the word "all". From reading this one would think that the farmers have been able to deliver a large proportion of their grain, but let us look at the actual situation. As far as last year's crop is concerned, a considerable number of farmers have only been able to deliver 300 bushels of wheat or 500 bushels of barley or 800 bushels of oats, enough in any event to give the farmer around $300 or at the most $350. This amount is quite insufficient to meet even his harvesting expenses, let alone any of his other expenses.

In addition, a one-bushel quota has been provided at a certain number of points in western Canada, and I believe a two-bushel quota was provided at a limited number of points. However, the fact that a quota is established, no matter what it is, does not mean that the farmer has been able to deliver that much grain. An eight-bushel quota was established with respect to last year's crop, but a considerable number of people were not able to deliver the eight bushel quota. They were still delivering on the eight bushel quota after they had harvested their last crop. In effect the situation is that as far as last year's crop is concerned the farmers in some cases have been able to deliver no grain and in other cases only a limited amount. Therefore when the bill refers to inability to deliver all their grain I think it gives a false impression.

When the legislation was discussed at the resolution stage the position of this party was made very clear. The Leader of the Opposition (Mr. Drew), the hon. member for Prince Albert (Mr. Diefenbaker), the hon. member for Dufferin-Simcoe (Mr. Rowe), I and others made very clear what we thought of the legislation. Our view can be summed up in four words. We did not like it. We did not like it at the resolution stage and we do not like it now that it has reached the second reading stage. We believe the measure is totally inadequate to meet the situation existing in western Canada brought about by a lack of cash, and that a much better method to deal with the situation is available in the form of cash advances on farm-stored grain.

The three general grounds on which this particular proposal has been attacked in the house were argued very extensively at the resolution stage by many members on this side, and I do not propose to repeat all the arguments put forward then in order to show that this was a completely inadequate and

poor piece of legislation. I will merely summarize them. The first general ground of complaint with the legislation is that the maximum amount that can be lent, $1,500, is insufficient so far as a large number of farmers are concerned. We have also been told that the average amount of the loans actually made so far is in the neighbourhood of $800.

I think it is quite clear that $800, or $1,500 in the case of a larger farm, is totally inadequate to meet the farmer's harvesting expenses, pay his taxes, provide him with food, fuel and clothing to carry him through the winter, and take care of the various other expenses he has to meet.

For that reason alone the legislation is unsatisfactory. It does not do the job which it says it is going to do. It does not provide enough funds for the majority of the people who may want to take advantage of it.

The second general ground of complaint on this bill is that the interest rate of 5 per cent is not justified. The loans are government guaranteed, and as everyone knows the rate of interest on government bonds, for example, is 3 per cent. The rate of interest on other loans guaranteed by the government is 3 per cent or 3½ per cent. Under these circumstances the farmers cannot understand why a rate of 5 per cent is justified. One might say that the risk to the bank is negligible.

Apart altogether from the interest rate, which is unsatisfactory, the farmer in western Canada does not believe he should pay interest on this money at all. He looks upon the payment of interest, as has been pointed out, as a payment of interest on his last years' wages. He looks upon it as very inequitable that he should be called upon to pay this toll on what he has already earned.

The third general complaint in regard to this bill is that many farmers cannot get loans under it. The very men who perhaps need the cash worst are the ones to whom the bank is unwilling to make advances. In addition to that, as has been pointed out also, a very large number of farmers do not deal with banks. In some cases they live 40 or 50 miles away from banks. The banker does not know them, and therefore is not prepared to make loans. One might sum up all of these objections to this legislation by saying it just does not meet the situation and is not what the farmers have requested.

On the other hand, we should consider a system of cash advances, which is what the farmers desire and what the organizations who have spoken for the farmers have requested. We find that all the arguments which can be put forward against the proposed legislation do not apply to a system of cash advances. The argument put forward by the minister and other members of his party against cash advances is that such a system would make the wheat board into a lending institution, and that the wheat board has not the staff to handle cash advances. It is said it would be impossible for the board to look after a system of that sort.

I feel that both these arguments were completely shattered by the discussion we had during the resolution stage of this bill. I believe it is quite apparent to anyone that a cash advance is not a loan. There is a distinct difference, for example, between going to a farmer and putting down $10 on a cow which he is to deliver a month later, and going out and lending him $10. The farmer understands that. The livestock business used to be conducted on that basis. You went out and bought stock, and put so much down on it. Essentially that is what is being asked for so far as the system of cash advances is concerned. It is really a payment on account, which is a different thing from a loan as the minister tried to represent it. The argument, therefore, that making these payments on account to farmers for grain stored in their granaries would put the wheat board in the same class as a lending institution, or convert it into a banking institution, just does not hold up.

The other argument, from the mechanical point of view, that the wheat board is not set up to handle a scheme of this sort, that it has not the staff, is equally without any strength. Ever since its inception the wheat board has been making advances to farmers. The advances were in the form of initial payments when the farmers delivered grain to the elevators.

There is no essential difference between making a payment of that sort and making a payment on grain while it is still stored in the farmer's bin. There may be a little more risk, but I am not arguing that particular point. Even so, I would maintain that the amount of risk is negligible. The risk in that case is that when this payment is entered in the farmer's permit book, he is then in a position where he cannot deliver any more grain unless this is taken account of, and his opportunities for selling grain except to the wheat board are extremely limited. In most cases they are nil. His only other customers are neighbours who may buy grain for feed. Most farmers already have more grain than they can feed, so he has practically no market. In some cases there is a little exchange of grain going on with implement dealers and other appliance dealers.

However, in effect the farmer has only the one customer and that is the wheat board. I think there is no question but that as the wheat board, an agency of the government, is the farmer's only customer, the government has the responsibility for making cash advances to the farmer so he can pay his normal expenses. We in this party believe that a system of cash advances would be a much better method of handling the situation than this legislation which has been presented to us and which we believe to be completely inadequate for the purpose.

Therefore I move, seconded by the hon. member for Brandon-Souris (Mr. Dinsdale):

That Bill No. 82 be not now read the second time, but that it be resolved that in the opinion of this house consideration should be given to the introduction of legislation which will provide for cash payments on farm-stored grain.

Before I sit down there is one other matter I should like to mention and that is the attitude which the minister took during the previous debate and which I think is open to serious question. He made what was nothing less than a threat to the members of this house. He said, in effect, that if we did not stop discussing this piece of legislation, which had been under discussion only a short time, he would withdraw it until the end of the session. The implication was that he would leave the farmers in a position where they could not get loans of any sort, and the responsibility would be ours.

I am fairly certain the minister will not try to carry out that threat because every farmer in this country would know that the responsibility was the minister's. This minister, and the government which supports him, would be responsible if the farmers could not get more loans. The members of the opposition would not be responsible merely because they had made proper criticism of the legislation the minister proposed, and were going on the theory that it might be possible to get the government to reconsider this legislation and bring in something better.

I would say to the minister through you, Mr. Speaker, that threats of that sort serve the exactly opposite purpose to that which the minister intended. That sort of disregard for parliament is the very sort of thing which makes all of us determined not to obey what amounts to a piece of dictation, a threat, or whatever you would like to call it.

Mr. W. M. Johnson (Kindersley): Mr. Speaker, it is rather unusual to see our friends in the official opposition make an about-face which is so obvious, because it was at the resolution stage of this legislation that they said there were enough good points in the bill to prevent them from voting against it. However, they have reversed their position because they perhaps recognize the arguments which we in this group have put forth in favour of cash advances on farm-stored grain.

Mr. Harkness: Mr. Speaker, on a question of privilege, I think the hon. member has totally misinterpreted my motion and what I said. There is no about-face involved in this amendment whatsoever. It is merely a substitution of something better for what has been submitted to us.

Mr. Deputy Speaker: Order. May I draw to the attention of hon. members the fact that they sometimes feel free to rise on questions of privilege which, in my opinion, are more in the nature of refutation of argument. I would hope that hon. members would recognize the difference between true questions of privilege and matters which are merely refutation of argument, which should be done in another way.

Mr. Johnson (Kindersley): Mr. Speaker, as I interpret the amendment moved by the hon. member it is to the effect that the bill be not now read a second time. To me it indicates a position that the members of the official opposition did not take at the resolution stage.

Mr. Fulton: We did not have the bill then. How could we?

Mr. Johnson (Kindersley): The hon. member could have voted against the resolution, as we did. We voted against it, as my leader pointed out, so we would not in any way indicate our support for this half measure which might prevent the introduction of legislation which would do some good, and which is really wanted. We wanted legislation in the line of a continuation of orderly marketing through cash advances on farm-stored grain, as was advocated by this group in the amendment to the address in reply to the speech from the throne.

The title of the bill before the house is an indication of the deceit in the bill. It is an act to provide short-term credit to grain producers in the prairie provinces to meet temporary financial difficulties arising from inability to deliver all their grain. It is an act to provide short-term credit to grain producers and, Mr. Speaker, it has failed miserably in this regard because, as the Minister of Trade and Commerce pointed out, only around 8,000 farmers in the three prairie provinces have seen fit to, or were able to, obtain a loan under the provisions of this legislation out of the 200,000 farmers or thereabouts who are in western Canada.

It has also failed, Mr. Speaker, because the average loan taken out is around $800, which is a little over half of $1,500, which the legislation was heralded as providing to western farmers. It is deceitful in this regard because it does not provide for nor live up to the expectations of western farmers. I have a question on the order paper requesting a breakdown on the number and size of the loans, but evidently the minister does not want the question to be answered until this stage of the debate has passed, because on page 980 of *Hansard* the Minister of Trade and Commerce said:

> I will give the hon. member the information now if he wants it.

It is now nearly one week later, and the question is still unanswered. That can only be interpreted as an effort on the part of the government to cover up some of the bad features of this legislation, to cover up the dismal failure which it has been.

The legislation was bound to fail, Mr. Speaker. There are 1,200 shipping points in Saskatchewan, but at the same time there are only 159 points served by 257 branch banks. As the Minister of Trade and Commerce well knows, the distances in the western prairies are great and the legislation is just not adaptable to those circumstances. It is very difficult for the farmer to go 50 or 60 miles to get a loan from a branch bank he has never visited before and where he is unknown. It has been pointed out in previous speeches that unless the banker is in a position to have complete confidence in the borrower, he is not going to make the loan.

The legislation was bound to fail because of the red tape which was attached to its application. The first form brought out dealing with applications for loans, the form that the farmer would fill out after he had travelled 50 miles to visit a branch bank, required him to put down everything except the money in the kiddy's piggy bank. It asked for a net worth statement on behalf of the bank; liens that were against the grain; the amount of grain that he would have a chance to market in his own right; the amount of grain the landlord would be entitled to. It made him list any chattel liens against the grain. That is an indication of the attitude of the government in bringing down legislation that has so much red tape attached to it that we could not expect the farmer to fill out the form to get the loan and return and get his $1,500.

We must give a great deal of credit to the members of the Saskatchewan wheat pool and the officials of that organization who, realizing that their battle for cash advances on farm-stored grain was perhaps useless in the face of government inactivity, met with the officials of the Department of Finance and had this form amended to take some of the sting out of it and make it a little easier for farmers to get loans. But still on the form there is a certificate by the responsible banker indicating his confidence in the reliability of the farmer. In other words if there is any risk involved the bank manager will not make the loan.

I say this legislation was bound to fail, as the hon. member for Calgary North pointed out, because of the 5 per cent interest rate involved. The Minister of Trade and Commerce added it all up and came up with a figure of around $20. I do not think that is the point. The principle of the legislation is what bothers the farmers in western Canada. They do not forget the depression they went through. They do not forget how often a little bit of debt can mushroom and pyramid and eventually break them. Therefore they are very reluctant indeed to take on further debt based on their own earning capacity.

We must also take into consideration the relationship of the farmers to the small businessmen and merchants in town to indicate again why this legislation was bound to fail. If I, as an individual farmer, owe $500 to the implement dealer in my town, I would be in no rush to pay it by means of this loan if I wanted to be a good businessman. If I did not have the money I would not go and borrow money at 5 per cent interest to pay a debt which was in effect costing me nothing. The businessman is going to sell me machines in the future. Therefore I am not going to incur a debt of 5 per cent to pay off a debt which through his good graces is not costing me anything. It is not that the businessman would not like to charge some interest but he realizes the people he is going to have to deal with in the future, through thick and thin, are these same farmers.

The grocer is in the same position, and the oil dealer. We can see the unfairness of this legislation and the hardship it works on these small merchants, the implement dealers and the independent grocers, in carrying the debts of the farmers. There is no alternative; the farmers are forced to borrow money on their own earnings at 5 per cent if they are to pay them off.

The alternative, of course, to this whole proposal, as was pointed out by my leader, is cash advances for farm-stored grain, a system whereby the farmer would be entitled as a right to some return for the product he has produced in the year and which he now cannot sell.

I think the various aspects of the operation of a cash advance on farm-stored grain have been fairly well spelled out, but they have fallen on many ignorant ears. The Minister of Trade and Commerce indicates his objection to cash advances on farm-stored grain, as reported at page 128 of *Hansard*:

> You must be careful about lending on grain where only limited security can be had. The grain on the farm would be the only security the board would have.

In effect the minister has said that you cannot trust the western farmer. He goes on to point out that as circumstances present themselves, farmers might feed their grain to their hogs or sell it to a neighbour. I wonder what has caused such a reverse in the minister's attitude toward the western farmer, because in 1951 when discussing a similar piece of legislation that was before us he outlined that the interest rate could be 5 per cent and he said, as reported at page 2034 of *Hansard*:

> The basis for my opinion that the government's liability under its guarantee is negligible rests fundamentally upon my belief in the integrity and good faith of western grain growers.

That is rather an about-face in five years. In one case the minister says you can charge a low interest rate. I am assuming that the minister at that time thought 5 per cent was a low interest rate. He said you could do this because of the integrity of western farmers; but he now says you cannot make cash advances on farm-stored grain because the farmers will spirit it away in the night and the losses will be excessive.

The second phase of the bill, Mr. Speaker, as it states, is to meet temporary financial difficulties. This is just another case of more deceit. Certainly these conditions have not just popped up overnight. They did not just develop on November 15, 1955. The agricultural share of the national income has been declining continuously for the last five years. According to the *Canadian Journal of Agricultural Economics*, volume 3, No. 2, we find that in 1954 the farmers of Canada received the lowest share of the national income they have ever received in my lifetime. They received 6·8 per cent of the national income as opposed to the other low period of 6·9 per cent in 1931.

When we consider that agriculture involves approximately 20 per cent of the population of Canada we are indeed being deceitful when we say this is a temporary financial situation. This is the financial position of the farmer as related to other aspects of the agricultural picture. We cannot say it is just the price of wheat, because it is related to these other matters which have been brought up in debate. It is related to the fact that there is no floor price on hogs and there is no realistic floor price on eggs. When you have circumstances where farmers in western Canada are receiving 28 cents a dozen for eggs and 25 cents less than the floor price for hogs and a drop in the price of beef, you are able to make a more complete appraisal of this temporary financial difficulty, as it is termed in the bill.

Of course the farmers all over Canada are suffering from the price-cost squeeze, which is perhaps more pointed in the case of western Canadian farmers because as is generally realized, the occupation of the grain grower is more precarious and hazardous than for other mixed forms of agriculture. It is more sensitive to the rises and falls in our economy. In relation to the price-cost squeeze there is a general movement on behalf of the farm organizations to try and correct it.

I do not think the way to bring the level of farm income up is to bring the income of the other organizations down; but my colleague the hon. member for Mackenzie (Mr. Nicholson) certainly indicated one way this squeeze could be curbed. He indicated that there was a refusal on the part of the government to make a deal with the government of Poland whereby we could get cement in return for wheat. In fact it was even more favourable to the government than that; we would have to buy a certain amount of cement from the Polish government, and they in turn would buy a much larger amount of wheat from us. This of course will meet with the general approval of western farmers who have to buy United States cement at $2.65 a bag because they cannot get Canadian cement. They pay 80 cents a bag more for cement because of the failure of this government to carry out some policy which would provide them with cement on the one hand and sell our wheat on the other.

The bill goes on to state that it is designed to provide short-term credit to meet the temporary financial difficulty of the western farmers arising from their inability to deliver all their grain. What an insult to western farmers to indicate that they are in financial difficulties because they cannot deliver all their grain. Far from being able to deliver all their grain as of January 25, we have delivered in grain marketings from the farm slightly over half as much as the average in the preceding ten year period. This is an indication to me that we have not been able to deliver even a fraction of all our grain. We have delivered 75 million bushels less than last year at this time.

I think in fairness the government could do very well to expunge that whole title from

the bill and put one in that would be more suitable to the desire and wishes of western farmers. Not only is it because of our inability to market all our grain or even a small portion of it that we are in financial difficulties; it is because of the gross inequality in the opportunities to deliver. The whole situation of box car allocation and distribution has been a most vexing one in western Canada.

I received a letter from the secretary of the wheat pool committee at Mendham, in that same area the Minister of Trade and Commerce referred to in answer to my question on the orders of the day. I shall read it, because it certainly gives an appreciation of the circumstances that affect farmers in that area. The letter is addressed to me:

> Dear Sir:
>
> A very serious situation is facing the farmers and business people of this district.
>
> Mr. Gardiner made a statement that more money has been paid out to farmers since August 1 than over the same period last year. This is not so in our district and neighbouring points.
>
> Since August 1 the average income of farmers here has been approximately $350. Thanks to the business firms which have been able to carry the burden till now. But there is a climax to all.
>
> Since August 1 we are short 70 box cars compared to the same period last year, besides the fact that a number of the 90 cars received this year was used to fill the 8 bushel quota of the previous year. The situation was serious then. How serious is it now?
>
> In comparison to the grain that has been moved from the prairies since August 1 where does the proportion of the grain of the Mendham district come in?
>
> We farmers hereby request that immediate action be taken so we get more box cars.
>
> Yours very truly,
> Bernard Zubot,
> Secretary of
> Mendham pool committee.

Mr. Speaker: May I interrupt the hon. member, not to call him to order but to make sure that if he has in mind concluding his speech by moving a subamendment, he does not attach his subamendment to the amendment proposed a short time ago, because it is my view that that amendment is not in order. As I read it the amendment deals with cash advances. It is a reasoned amendment, and a reasoned amendment must oppose the principle of a bill; it must be relevant.

The bill now before the house deals with credit, with the lending of money, whereas the amendment deals with cash advances. In order to make my point clear I would say that the distinction would be about the same as though the bill dealt with housing and an amendment was proposed dealing with rentals. That is the distinction which I have in mind. This bill deals with short-term credit whereas the amendment deals with cash advances, and in my view those are two different matters.

Furthermore, I would refer hon. members to the subamendment which was moved to the amendment to the address in reply to the speech from the throne by the hon. member for Rosetown-Biggar (Mr. Coldwell), and which appears at page 53 of *Hansard* for January 12, 1956. The amendment to the amendment moved by the hon. member for Rosetown-Biggar reads as follows:

> —including their failure to provide cash advances on farm-stored grain—

It is immaterial whether those advances were to be 75 per cent, 50 per cent or 95 per cent. The house divided; and the subamendment for the provision of cash advances on farm-stored grain was negatived on January 19. On that date the house expressed its judgment on this very question.

If there are any comments which hon. members would care to make I will be pleased to hear them.

Mr. Fulton: Before making any comment may I ask upon what citation or ruling you based the first part of your remarks, with respect to the relevancy of the amendment to the bill now under consideration?

Mr. Speaker: Citation 662 reads:

> The principle of relevancy in an amendment governs every proposed resolution, which, on the second reading of a bill, must not include in its scope other bills then standing for consideration by the house. Nor may such an amendment deal with the provisions of the bill upon which it is moved, nor anticipate amendments thereto which may be moved in committee, not attach conditions to the second reading of the bill.

I gave as an example the distinction which could be made between housing and rental because I thought the house would remember that that case was before Mr. Speaker Macdonald a few years ago, and that was his decision.

Mr. Harkness: Mr. Speaker, I based my amendment on the authority of Beauchesne's second edition, paragraph 755, to be found at page 217, which reads:

> It is also competent to a member who desires to place on record any special reasons for not agreeing to the second reading of a bill, to move as an amendment to the question, a resolution declaratory of some principle adverse to, or differing from, the principles, policy, or provisions of the bill, or expressing opinions as to any circumstances connected with its introduction—

The rest of the paragraph is not applicable. I do not think there is any question but that this amendment is declaratory of some principle adverse to or differing from the principles, policies or provisions of the bill. As you have pointed out yourself, the bill provides for loans and the amendment provides

that the bill shall be withdrawn and that there shall be substituted legislation to provide for cash payments on farm-stored grain.

As I read this particular section of Beauchesne I would think it would be quite in order to introduce an amendment of that sort. I find that there are a number of precedents for amendments of this kind. At page 1136 of *Hansard* of March 27, 1950, will be found an amendment of a similar type. That amendment dealt with Bill No. 16, to amend the agricultural products act, and read as follows:

> That Bill No. 16 be not now read a second time but that it be resolved that in the opinion of this house consideration should be given to the introducing of a permanent agricultural products export act which would provide for the setting up of an export board, to fill present contracts, negotiate future contracts, and develop new markets abroad for surplus agricultural products.

Representations were made in connection with the amendment and it was allowed. On the same day another amendment of the same type was introduced, to be found at page 1157. This was in connection with Bill No. 17 to amend the Agricultural Prices Support Act. The amendment provided that floor prices should be established at such levels as to guarantee to producers a price-cost relationship.

Then on Wednesday, March 29, an amendment was moved which was really on all fours with this one. That will be found at page 1368 of *Hansard* for that date. The house was dealing with Bill No. 54 to amend the Fisheries Prices Support Act and the amendment moved read as follows:

> That Bill No. 54 be not now read a second time, but that it be resolved that in the opinion of this house consideration should be given to the introducing of legislation to amend the Fisheries Prices Support Act so as to provide that floor prices should be established at such levels as to guarantee to those engaged in the fishing industry a price-cost relationship not less favourable than that prevailing in the period 1944-48.

In view of section 755 of Beauchesne and these precedents I did not consider that there would be any question of this amendment not being in order.

Mr. Knowles: May I just ask one question?

Mr. Speaker: In quoting these precedents is the hon. member in a position to tell me whether in respect of any one of those cases there was a caveat issued by the Speaker, or some remarks made in relation thereto?

Mr. Harkness: In connection with the first one representations were made and the Speaker finally allowed the amendment.

Mr. Speaker: And stated that it should not be regarded as a precedent.

Mr. Fulton: Anything can be regarded as a precedent or not.

Mr. Speaker: That is just it. There are many times when a Speaker finds himself in the position of considering an amendment which is a borderline case. He lets it go at that, and what happens is precisely what is happening today.

Mr. Knowles: Might I ask just one question? When points of order are raised in the midst of an hon. member's speech it is often considered that the hon. member is at least partly responsible and the time taken up is charged against him. May I point out that this matter has been raised in the midst of the speech being made by the hon. member for Kindersley (Mr. Johnson). It was not his fault, and I hope the time taken up will not be charged against his 40 minutes.

Mr. Speaker: No. The only reason I interrupted the hon. member in order to deal with this amendment was that I wanted to protect his rights if toward the end of his speech he wanted to move a subamendment.

Mr. Fulton: On a point of order, as I understand it, it is suggested that the amendment might be out of order on one or both of two grounds; first, that it is not relevant to the bill now before us; and second, that it deals with a matter upon which the opinion of the house has already been taken. May I deal with those two points in that order?

I submit that my colleague the hon. member for Calgary North has effectively dealt with the question of the propriety of the amendment standing on its own, that is apart from the question of whether it repeats the amendment previously offered. But I would like to suggest, in addition to what he has said, that citation 662, which Your Honour was kind enough to refer me to in answer to my question, does not seem to be applicable under the circumstances. It reads:

> The principle of relevancy in an amendment governs every proposed resolution, which, on the second reading of a bill, must not include in its scope other bills then standing for consideration by the house.

I hardly see how this amendment could be said to include in its scope any other bill standing for consideration. The citation goes on:

> Nor may such an amendment deal with the provisions of the bill upon which it is moved—

Still it does not deal with the detailed provisions of the bill upon which it is moved. It suggests an alternative principle, an entirely different alternative, or rather an alternative not related to the detailed provisions of the bill. It asserts a contrary principle, and I make that statement without any

hesitation. It asserts a contrary principle without the adoption of which the hon. member moving the amendment could not agree to the bill. Then the citation continues:

—nor anticipate amendments thereto which may be moved in committee, nor attach conditions to the second reading of the bill.

I submit it is quite obvious that it does neither of those. Your Honour referred to the question of relevancy, and we may as well deal with all the points that have been raised. I wonder if the hon. member may have had in mind citation 657, which is the same as the citation already read by the hon. member for Calgary North from Beauchesne's second edition. This is exactly what is being done here. The hon. member is placing on record a special reason for not agreeing to the second reading of the bill, and is therefore moving a resolution declaratory of some principle adverse to, or differing from, the principles, policy, or provisions of the bill. He is thus advancing a different proposition, but it is still relevant because both the amendment and the bill itself deal with the same general subject. Your Honour, I think, distinguished them on the basis that the amendment deals with cash advances whereas you said the bill deals with short-term credit. I think you are placing an entirely too restrictive interpretation on the bill. May I read the short title?

This act may be cited as the Prairie Grain Producers Interim Financing Act, 1956.

It says "interim financing". The bill deals with the subject of placing cash in the hands of prairie farmers because of an emergency situation that has arisen.

Mr. Speaker: Through lending. How do you propose to make the cash advances?

Mr. Fulton: You are asking me to deal with the detailed provisions of the bill, which we are not allowed to do.

Mr. Speaker: No, I am not asking that of the hon. member.

Mr. Fulton: You certainly are.

Mr. Speaker: The hon. member said I placed too strict an interpretation—

Mr. Fulton: On the general principle.

Mr. Speaker:—on the general principle; and, since he was dealing with this, I just asked him for the purpose of clarifying my own stand how he defines it himself.

Mr. Fulton: I would suggest that the general principle or purpose of the bill is to place cash in the hands of prairie farmers which they require because of an emergency. The method by which that is to be done is dealt with under the detailed provisions of the bill, and the bill proposes in its detailed provisions to do it by guaranteeing loans through banks, but the purpose or principle is to place cash in the hands of prairie farmers.

My hon. friend from Calgary North says we propose to the house that the same purpose and principle be achieved, that is, that cash be placed in the hands of prairie farmers, but by another detailed method, namely by requiring the wheat board to make cash advances. So the principle of the two proposals is identical, and that, I submit to you, is proven conclusively by reference to the short title, "Prairie Grain Producers Interim Financing Act". The purpose is to enable the interim financing of prairie producers. One proposes in detail to do it through guaranteed bank loans; the other proposes to do it through cash advances by the wheat board. The amendment is most certainly relevant to the principle of the bill. It seeks to advance the same purpose as the bill seeks to achieve, only by a different and much more acceptable method.

I should have thought that Your Honour—and I make the suggestion with deference—probably attaches more weight to the proposition that this amendment has been anticipated by the amendment moved earlier by the C.C.F. party. I should like, then, to deal with that proposition. Here I think I should be able to convince you that the two amendments are different. The amendment moved by the C.C.F., which is to be found on page 53 of *Hansard*, proposed to add to the amendment moved by my leader on that occasion the following words:

—including their failure to provide cash advances on farm-stored grain, equal to not less than 75 per cent of the initial price, to alleviate the serious financial crisis now confronting western farmers and the entire economy of the prairie provinces.

The purpose and principle of that amendment was to condemn the government for not having done something. That was the sole object of that amendment. It was a motion of censure upon the government for their failure to do something, whereas the amendment now before us proposes, by way of a positive amendment, that the government, instead of proceeding by way of guaranteed loans, should proceed by way of cash advances. So I submit to you that to move censure of the government for its failure to do something is not the same as advancing in a substantive motion that another principle be substituted for the principle of the bill now before us.

I agree that it would be the same thing if we moved, say on a motion to go into supply, an amendment to censure the government for not having made cash advances. Then we

would be clearly repeating the previous motion, a motion censuring the government for failure to do something. But when the amendment before us moves that a bill be not now read a second time but that instead the house resolve that cash advances should be made, that is to my mind something quite different from a motion of non-confidence in the government condemning it for its failure, and a detailed failure; that is, a failure to provide cash advances equal to not less than 75 per cent of the initial price.

Mr. Speaker: May I interrupt the hon. member, just to ask him this. If the two motions—the one that was moved by way of a subamendment to the address in reply, and this one to the second reading of the bill—are in fact two motions on which the judgment of the house is required, would they then be regarded as the same if it were not for the fact that the hon. member contends that there is distinction between a motion of censure and a motion that is an amendment to the second reading of the bill?

Mr. Fulton: I think I have stated it as clearly as I can. To censure the government on one occasion, before any legislation has been introduced, for their failure to do a certain thing which is then positively stated, that is, make cash advances equivalent to 75 per cent, is a different thing from saying on this occasion that the bill should not be read a second time now but that in the opinion of this house consideration should be given to the introduction of legislation which will provide for cash payments on farm-stored grain. I do not think I could be making any argument at all if such an amendment had been moved as a vote of censure or non-confidence on a supply motion, but when a positive alternative is put forward by way of amendment to the motion for second reading of a bill I submit that the one motion has not been anticipated by the other and that there is sufficient difference, if you like, to make this another borderline case upon which you should perhaps reserve your final decision.

Mr. Speaker: Before the hon. member concludes his argument, may I say that I am very much interested in all he has said. Of course he realizes there is the general principle that no two questions substantially the same should be offered to the judgment of the house in the same session. That is the principle, and I would point out to him that by ancient usage the formalities attached to the presentation of an amendment to the motion respecting the address in reply to the speech from the throne involve an addition to the motion, and that an amendment to the second reading of a bill is made by way of deleting all the words after "that" and inserting other words. These are the formalities as to the method of presenting a motion, but I would submit to the hon. member that they do not alter the principle that two motions substantially the same shall not be offered to the judgment of the house in the same session. He has already agreed that these two are substantially the same.

Mr. Harris: Mr. Speaker, I rarely intervene in these discussions because I think you set things before us fairly clearly, but for the record I do want to dissent from the suggestion made by the hon. member for Kamloops that if the opposition on the address, on the six supply motions or on the budget cast their reflections on the government in a negative form, they are not then held accountable to the rule of anticipation. That in effect is what he has just said; and if what he has said should happen to become the practice of the house we would have these motions made from the beginning until the end of the session, and none of them precluding similar motions provided they are cast in the positive sense thereafter. I do not think even the hon. member for Kamloops seriously recommends that course.

On that point let me say this. In the wording of the subamendment moved by the C.C.F. party it is true that the word "legislation" was not used with respect to cash advances, and it is in the amendment before us; but any amendment or subamendment that may be moved on the address is, in a negative sense, based on the absence of legislation by the government, and the use of the word in itself is not necessary to indicate that what the opposition does mean is that we ought to do something by legislation.

Mr. Speaker: Have all representations been made? I am very grateful for the manner in which this point has been dealt with. I shall be pleased to look into the various cases the hon. member for Calgary North has suggested to me. They are all recent cases, and I had one of them right before me. I have just returned it to the Clerk. It was the one that had to do with the marketing board case, and I read the remarks of the Speaker of that day. As I say, I could be very lenient in respect of all these amendments and say, "Well, it is a borderline case; let this not be taken as a precedent and we will carry on from there." However, one of these days a member will stand up and say there were four or five amendments which were all borderline cases, and ask me why I did not consider his as a borderline case.

Grain

I am basing my remarks today on principles, and I am prepared to state them to the house. The hon. member for Kamloops has doubted the point I made with respect to relevancy. There is no question about relevancy—Perhaps some of these days the house may consider doing for the Speaker of the House of Commons what has been done for the Speaker of the commons of Australia, give him a table which could be removed on ceremonial occasions and replaced during debates during which the Speaker has to refer to many books—I have before me May, fifteenth edition, and at page 508 there is the following:

> The principle of relevancy in an amendment governs every such motion.

This is the chapter dealing with the second reading of bills and amendments thereto, and in saying that May refers to page 400 of the same volume where I find the following:

> The fundamental rule that debate must be relevant to a question necessarily involves the rule that every amendment must be relevant to the question on which the amendment is proposed.

This is why, in order to illustrate my point of view, I indicated to the house the distinction between housing and rental. I remember that when a bill regarding housing was presented in the house either the hon. member for Rosetown-Biggar or the hon. member for Winnipeg North Centre proposed an amendment regarding the control of rentals. It may be that the Speaker of the time did not quite make that point. Perhaps he did not rest his judgment exclusively on that point, but having looked at them I think that this is the best point.

The amendment would switch the discussion from credit to cash advances. Therefore what would we have? We would have a debate which would be a repetition of that which took place on the amendment to the address in reply moved by the hon. member for Rosetown-Biggar in January.

There is no question as to the second principle, that no two questions substantially the same shall be offered to the house for its judgment in the same session. I would point out to the hon. member for Kamloops that the only difference between an amendment to the second reading of a bill and an amendment to the address in reply which he calls a vote of censure is in the method of presentation, which has been fixed by ancient usage, and which provides that an amendment to the address in reply to the speech from the throne has to be made by way of addition whereas in this case an amendment has to be made differently. Is there something else the hon. member wishes to say before I put the final point?

[Mr. Speaker.]

Mr. Fulton: I was just going to say that there are frequent occasions when the difference between two subjects may be very little but still important, such as between men and women.

Mr. Speaker: I am sorry, I did not quite get the last part of what the hon. member said. Would he be good enough to repeat it, please? It seems to be very important.

Mr. Fulton: Because it is Valentine's day and I have a sense of gallantry I said "such as between men and women." It is very important.

Mr. Speaker: Much to my regret, for the reasons I have given and the authorities I have cited, I must rule the amendment out of order.

Mr. Johnson (Kindersley): Mr. Speaker, I should like to thank you for resolving this point before I had completed my remarks because while I did not have an amendment to move to the amendment moved by the hon. member for Calgary North, I have an amendment that I am going to move which is in a slightly different vein.

The last time I was on my feet I was discussing the amendment of the hon. member for Calgary North. Since it has now been ruled out of order I presume I could have another 40 minutes, but I can assure the house I am not going to take that long.

I was interested to note the tactics used by the official opposition in introducing this amendment. Their tactics were appreciated, because they indicated they are prepared to follow our leadership in fighting the battle for the western farmer to achieve cash advances on farm-stored grain, and that they will oppose this legislation which is inadequate.

One of the main reasons, Mr. Speaker, for the financial plight of the western farmer is the inefficiency of the transport controller. I have a copy of a resolution from the municipality of Miry Creek, which is south of the Saskatchewan river and in a similar area to the Burstall subdivision referred to in my question this morning. This is a copy of a letter which was sent to the Canadian wheat board and it says:

> At the regular meeting of the council of this municipality on the 3rd instant, a resolution was passed to acquaint your board with the unequal distribution of box cars for grain hauling. This discrimination or unequal distribution of box cars having a serious financial effect on those farmers who must utilize the services of the Canadian Pacific Railway.
>
> It has been pointed out that on the north side of the South Saskatchewan river, which is serviced by the Canadian National Railway, there appears to be no shortage of box cars. In fact, the farmers there have filled their 3-bushel quota and we are advised that there is sufficient space available for another 1 bushel quota.

Generally speaking, the farmers on the empress line of the Canadian Pacific Railway have been able to haul only the original unit of 300 bushels. At present, there is no further room available for additional delivery of wheat should a quota open.

That is signed by G. L. Brace, secretary treasurer of the rural municipality of Miry Creek. It gives us some indication of the failure of the individual charged with the responsibility of seeing that the marketing points in western Canada have an equal opportunity to market grain. On November 21 and November 22 when I visited that area I became aware of the inequalities. As I crossed the South Saskatchewan river it became obvious that there was a shortage of space on the Canadian Pacific Railway line. At that time I wired the transport controller from both Sceptre and Richmound, but received no reply. Representations were again made when I came to Ottawa; I tried to communicate with the transport controller but found he was not available. I am asking now, just who is responsible for fulfilling the duties of the transport controller when he is out of town? I presume it is his $50 per week secretary.

One other manifestation of this problem of car allocation is the discrimination against farmers who wish to deliver to the elevator of their choice. In Saskatchewan pool district No. 4 we find that to date, compared with the same period last year, there is an increase in the percentage of wheat shipped from 14 stations by an average of 3·7 per cent, but there is a decrease in the percentage at 19 stations of an average of 5·2 per cent. This is perhaps just another aspect of the problem introduced by the hon. member for Kootenay East (Mr. Byrne) at page 1009 of *Hansard,* when he stated:

I grant that one hon. member said yesterday that one of his constituents wrote and told him he had been unable to deliver any grain since the fall of 1954. At the same time he went on to say it was because he could not deliver to the elevator of his choice. Well if the constituent is so independent as to insist on the elevator of his choice, then he cannot be as badly in need of cash as the hon. member would seek to establish.

That is the attitude of government members on the agriculture committee, because they do not appreciate the democratic principle of allowing farmers to deliver to the elevator of their choice. They take the attitude that if it is all right with the United Grain Growers and the line elevator companies, it is all right for the farmers to make them deliver to any elevator in which there is room.

At the same time the hon. member for Kootenay indicated that he was asking this house to agree to a recommendation by Mr. Justice Sloan to take away the statutory Crowsnest rates. Well, Mr. Speaker, if that indicates the thinking of the government backbenchers, the farmers in western Canada certainly should be made aware of it so they can govern themselves accordingly.

We are opposing this legislation for fear it will prevent the introduction of the legislation that is needed. We object to the method of introduction by television programs. Evidently our friends in the Conservative party, who have objected to smaller things, take no objection to the fact that this program went on the air. We found that recently when a certain program did not go on the air, they joined us in protesting. We protest the failure of the government to accept the democratic representations of the farmers, and the failure of the government to follow the advice of farm organizations.

The threats and the intimidation levelled at the members of this party in particular by the Minister of Trade and Commerce are an indication of how right we are in opposing this measure. The minister has tried to deceive us in the same way one might try to deceive a small child into thinking that a bitter pill will be sweeter if followed by a bit of honey. The minister has told us we are not to be allowed to discuss the legislation relating to the payment of storage charges until we have swallowed this bitter pill. I think we are going to continue to discuss this until, as the hon. member for Winnipeg North (Mr. Stewart) pointed out, we can get some indication the government is prepared to take the action desired by the farmers.

There are various other arguments I could use to support my contention that this proposed legislation, as indicated by the title of the bill, is nothing but a farce. It is deceitful all the way through. I am hoping that by debating the issue we might be able to open some of the wilfully blind eyes of the members of the government. I therefore move, seconded by the hon. member for Winnipeg North:

That Bill No. 82 be not now read a second time but that the subject matter thereof be referred to the standing committee on agriculture and colonization.

Mr. W. A. Tucker (Rosthern): I do not intend to detain the house very long, but I would point out that if the amendment were carried it would defeat the principle of the bill. Unless the government saw fit to introduce a further bill, then of course this measure of relief to our farmers, whether it is deemed adequate or inadequate, would be denied. I would point out to members of the house that if they vote for the amendment moved by the hon. member for Kindersley

it will kill this bill just as effectively as if second reading were actually defeated.

There is just one further point I wish to bring forward in regard to a question about which there seems to have been some confusion. I notice an attempt has been made in the Manitoba legislature to clear up the matter. As has been pointed out, the marketing conference in Saskatoon asked for cash advances on farm-stored grain. I suggested to the house when I last spoke that when they asked for that they deliberately did not ask that it should be made through the wheat board; they did not specify in what way those advances should be made. They contemplated that those advances were in the nature of loans because they specified the way in which they should be repaid, and they dealt with the question of the interest they should bear. I suggested that an advance made to somebody which is repayable with interest is a loan.

The suggestion made in the amendment that was just ruled out of order, which apparently represents the position of the Progressive Conservatives at this time, does not refer to cash advances at all. It refers to cash payments. The Progressive Conservative party have changed their position in the matter altogether.

Some hon. Members: No.

Mr. Tucker: As proof of that I should like to read what their leader in Manitoba had to say on the matter. I am reading from the Winnipeg *Free Press* of February 11:

> Opposition leader Duff Roblin moved the original resolution. It asked the legislature to "affirm its belief in the just claim and need for cash payments without interest" at once for grain stored on farms.

I notice the proposed Conservative amendment today referred to cash payments, not cash advances. Mr. Roblin made it very plain that this was their position when he spoke in the legislature. Here is what he said. He emphasized that he was not asking for cash advances but cash payments. I ask you, Mr. Speaker, to note that the Progressive Conservative leader in Manitoba stated definitely that he was not asking for cash advances; he was asking for cash payments. These should be a partial payment for wheat stored on the farm.

It is quite obvious, Mr. Speaker, there has been a change in position on the part of the Conservative party in the matter. Let there be no doubt about it, because their own leader in Manitoba said he was not asking for cash advances; he was asking for cash payments.

[Mr. Tucker.]

When I endeavoured to state in the house what the marketing conference did in Saskatoon, my friends across the way, particularly the C.C.F., had a lot to say about it. They claimed that I was suggesting something that was not right and that I would not be able to sell it. Later on the hon. member for Saskatoon (Mr. Knight) rose in his place and said I had misrepresented what had been done at that conference.

Mr. Ellis: Hear, hear.

Mr. Tucker: I understand the C.C.F. say "hear, hear" to that. I am going to read something that I think will carry conviction to every hon. member in this house except those who absolutely refuse to accept facts no matter how plainly proved. I hold in my hand a document entitled "The submission to the government of Canada respecting the urgent need for cash advances on farm-stored grain in western Canada." It is dated October 11, 1955, and was presented by: The Alberta department of agriculture; Manitoba department of agriculture; Saskatchewan department of agriculture; Saskatchewan wheat pool; Manitoba farmers' union; United Grain Growers; Saskatchewan federation of agriculture; Manitoba federation of agriculture and co-operation; Alberta federation of agriculture; Saskatchewan farmers' union; interprovincial farm union council; Alberta farmers' union.

I shall read from this submission, Mr. Speaker. Here is what it had to say in dealing with the marketing conference in Saskatoon. Pursuant to the resolution passed at that marketing conference, a committee representing that conference met the government to make this submission and here is what they presented. I am reading from page 5 of the submission:

> While the long-term agricultural problems also received consideration the immediate problem of cash shortage held the spotlight at the conference and resulted in the following resolution being passed:
>
> "Be it resolved that the organizations participating in this conference urge the government of Canada to make immediate provision for advances to farmers on grain in store on the farm and further that these advances should be up to one-half the value of the normal delivery expected and should be repayable on the basis of one-half of the value of each delivery made by the farmer."

The submission goes on to say:

> While the principle of cash advances on farm-stored grain was unanimously endorsed by the organizations present at the conference various proposals were offered on the mechanics of making these advances. Proposals offered included a financing arrangement through the Canadian wheat board; financing through the banks; financing through a separate agency to be established for this purpose; and a proposal was made that the rural municipalities be used as a means of making the cash advances.

Opinions varied on the rate of interest to be charged the farmers, ranging from interest-free loans to a rate of 3 per cent. But all were agreed that existing commercial interest rates were excessive.

This delegation as assembled at Ottawa, on October 10, 1955, endorses the principle of advances on farm-stored grain and believes that it must be made a practical reality. We would strongly urge that these advances be made immediately and that the interest rate, if any, be kept at a minimum.

Mr. Ellis: If any.

Mr. Tucker: Yes, but unanimously endorses advances which may bear some interest. I suggest that hon. members consider this. They submitted exactly the same resolution that was passed at the marketing conference. They unanimously endorsed the idea that cash advances should be made, but they did not say what the mechanics should be to make those advances.

Mr. Ellis: They did not ask for bank loans.

Mr. Tucker: They did not exclude bank loans.

Mr. Ellis: They did not ask for them.

Mr. Tucker: I suggest to the hon. member it may be his idea of carrying on debate to interject, interrupt and try to break down the trend of thought. I can understand very well why hon. members opposite have, deliberately or otherwise, misrepresented what happened at that farm marketing conference, and why they should not want the record put straight, but I also suggest that this house is not going to be dominated and dictated to by a few C.C.F'ers who are determined to misrepresent this matter.

I told this house, and it was objected to over and over again by the C.C.F. opposite that this marketing conference had unanimously endorsed the idea of cash advances, but it left open the whole question of the mechanics by which those advances should be made. Hon. members will recall how that suggestion was jeered at by members of the C.C.F. opposition. I have now brought this submission, signed on behalf of the government of Saskatchewan, endorsing every word I said.

I ask hon. members opposite to bear in mind their attitude in this matter, how they were anxious to misrepresent the position of the government and of western Liberal members, and how they tried to prevent me from putting this before the house. Yet they, as a minority in this house, are treated by Mr. Speaker and the Liberal majority in this house in a way that I wish the legislature of Saskatchewan could just see and compare with the way in which the Liberal opposition is treated in the legislature where the C.C.F. have a majority.

I ask you to bear in mind, Mr. Speaker, when I was attempting to put this to the house the sort of opposition I got from the C.C.F. opposite. They interrupted deliberately and tried to prevent me from putting it before the house. The point I was putting before the house is this, Mr. Speaker.

Mr. Argue: Nobody is objecting to what you are doing; table it.

Mr. Ellis: Put it in *Hansard.*

Mr. Tucker: Yes, but it is no thanks to you. If the majority in this house acted the way you did it would be impossible for anyone to put in anything you disagreed with.

Mr. Knowles: Are you addressing the Speaker?

Mr. Tucker: I am not addressing the Speaker because I am being interrupted. The hon. member for Winnipeg North Centre is a great exponent of proper rules of procedure. I wonder if he agrees that the attitude that has been taken by his colleagues is proper. Every time anyone attemps to make a statement with which they disagree they interrupt, ask questitons, jeer and try in every way to stop it. If the whole Liberal party in this house were to take toward them the same attitude they take when somebody is dealing with something with which they disagree, I wonder if they would not object more strongly, and properly so. I wish to make this point again—

An hon. Member: Which Mr. Tucker is speaking?

An hon. Member: Is it the eastern or western Mr. Tucker?

Mr. Tucker: The point I was making, Mr. Speaker, is this, and I shall repeat it again and it cannot be denied; that the marketing conference in Saskatoon had asked that advances to farmers be made by the government. It did not say that they should be made through the wheat board but left it to the government to decide how they should be made.

Furthermore, when the question was raised about what was done by the Rosthern executive I said we took the same attitude. We took the attitude that advances should be made, and it was left to the government to decide how they should be made. I said that the government was providing for advances to be made to the farmers through this farm loan bill and that this was consistent with what this marketing conference had asked for. That was jeered at, particularly by the C.C.F. opposition. Now I have the proof, Mr. Speaker. This document here shows this was

concurred in by the Saskatchewan government. All they did was endorse the principle of cash advances and they did not go any further—

An hon. Member: That is your interpretation of it.

Mr. Tucker: —and ask that they be made through the wheat board or in any other way.

An hon. Member: Or the bank.

Mr. Tucker: Are my hon. friends going to tell this house that if this marketing conference or the representatives of these organizations had wanted advances to be made through the wheat board, they did not know enough to say so in so many words?

Mr. Ellis: Why didn't they mention the banks?

Mr. Tucker: They did mention the banks. Apparently my hon. friend did not hear me say that.

An hon. Member: Why don't you listen?

An hon. Member: He does not want to.

Mr. Tucker: The hon. member is so busy talking that he did not listen. I will read it again:

> While the principle of cash advances on farm-stored grain was unanimously endorsed by the organizations present at the Conference, various proposals were offered and the mechanics of making these advances. Proposals offered included a financing arrangement through the Canadian wheat board; financing through the banks; financing through a separate agency to be established for this purpose; and a proposal was made that the rural municipalities be used as a means of making the cash advances.

Does this delegation representing these organizations go on then and say we endorse the principle of this being done through the wheat board? They do not. They just say we endorse the principle of cash advances and ask that they be made at as low an interest rate as possible. Does not the fact that they refer to interest show it is not a payment on grain on the farm? Whoever heard of a person being paid for his wheat on the farm and then having to pay interest on the money he got paid for that wheat? And when these organizations say that the interest rate should be kept as low as possible they are obviously contemplating a loan—

An hon. Member: If any.

Mr. Tucker: —in one way or another. Anyone who understands the English language must know that. Here is the unanimous representation of all these organizations including the Saskatchewan government, and then the opposition say that the government is ignoring the wishes of western agriculture. In saying that, Mr. Speaker, they are deliberately misrepresenting the record.

Mr. Knowles: Mr. Speaker—

An hon. Member: Let him go on.

Mr. Tucker: They are deliberately misrepresenting the record.

Mr. Knowles: Mr. Speaker—

An hon. Member: Sit down.

Mr. Ellis: Consider where it comes from.

An hon. Member: Let him go on.

Mr. Knowles: Mr. Speaker, citation 256 of Beauchesne's third edition states that it is improper to accuse hon. members of misrepresentation. This hon. member has repeatedly said that certain hon. members have deliberately sought to misrepresent the record. I submit that in doing so the hon. member is out of order.

Mr. Tucker: If the hon. member for Winnipeg North Centre will say that the C.C.F. party are so stupid that they cannot understand these plain words, then I take it that it is being spelled out that I should not have said that they sought to misrepresent the record but that they are so stupid that they cannot understand plain English, because the record shows what the government has done is consistent with what was asked for by the farm organizations and concurred in by the Saskatchewan government.

Mr. Knowles: May I ask the hon. member a question?

An hon. Member: Sit down.

Mr. Knowles: Is he inferring from the reference he is making to these documents that the Saskatchewan government supported anything more than the recommendation that there be cash advances? Is that not the only part on which there was unanimity?

Mr. Tucker: Mr. Speaker, I tried to make it plain what I was saying but the hon. member was apparently so pleased by the uproar of his colleagues around him that he did not hear what I said.

Mr. Knowles: I heard it. The hon. member spoke loudly enough.

Mr. Tucker: I will read it again and I will ask the hon. member to listen this time if he will be so good as to do so. I said that the marketing conference had endorsed the principle that advances should be made to the farmers against grain on the farm—

Mr. Knowles: And on that there was unanimity.

Mr. Tucker: Yes, I said that. I do not interrupt you every word you say.

Mr. Knowles: Let us get it clear that this is the only point on which there was unanimity.

Mr. Tucker: Yes, but if you require an explanation of every sentence I utter then you are not as brilliant as I thought you were.

Mr. Knowles: The hon. member is trying to confuse the issue.

Mr. Tucker: I will say this again. I stated to the house that the principle of cash advances on farm-stored grain was unanimously endorsed by this conference—

Mr. Knowles: Hear, hear.

Mr. Tucker: —but I said various proposals were made at that conference as to the means of making those advances. I said the suggestion was made that they be made through the wheat board, through the banks, through their own municipalities; but the conference decided not to decide on any one of those means but to leave it to the government to work out the mechanics for making those advances.

I said that the government in deciding to make the advances through the banks was making a decision which was quite consistent with the position of the marketing conference; and that was questioned and jeered at by the C.C.F. opposition. Now I have the definite submission concurred in by the government of Saskatchewan which says that the only thing agreed to at that conference was that advances should be made; that various suggestions were made as to the mechanics of making these advances—and they mention them again—and they did not decide which they wanted done but just asked that the government provide advances and go on to say that they should be made at as low an interest rate as possible.

Mr. Ellis: The government is not making advances.

Mr. Tucker: I do not expect to convince the hon. members because they think they have stored up enough misunderstanding and have presented the idea that the government ignores the wishes of the representatives of western agriculture, and they are thinking how much good this is going to do them politically.

An hon. Member: Oh, dear.

Mr. Tucker: They hate to have the record set straight and now I tell them—

Mr. Ellis: You are the last person to do that.

An hon. Member: Hear, hear.

Mr. Tucker: I think I have done so to the satisfaction of the house and also to the satisfaction of you people.

Mr. Knowles: The hon. member tried to apply the unanimity to more than he was entitled to apply it.

An hon. Member: When is the government going to make advances?

Mr. Tucker: The hon. member asks when we are going to make advances. My answer would be this: The government has followed the wishes of the representatives of western agriculture and has brought in a bill to provide for those advances, but the opposition holds it up and makes the announcement that they are going to stop the bill going through if they can. Then they ask why do we not put the bill through. These advances are what was asked for by the representatives of western agriculture and that cannot be denied.

Mr. McCullough (Moose Mountain): Mr. Speaker—

Mr. Howe (Port Arthur): Mr. Speaker, are we having a debate on second reading or—

The Acting Speaker (Mr. Applewhaite): I did not hear the point of order raised by the minister.

Mr. Howe (Port Arthur): On second reading I do not think that this speech should be allowed to degenerate into a debate.

The Acting Speaker (Mr. Applewhaite): I have some sympathy with the point raised by the right hon. minister who is sponsoring the bill, but I think we should realize that the debate on this matter has gone quite far afield. Apparently it has been a question of the discussion, not only of the circumstances which placed the farmers in their present position but of the circumstances leading up to the introduction of this particular type of bill. While I do not think it would be fair for me to refuse to allow one member to reply to statements of a strongly provocative nature when made from the other side, I think perhaps the time has come when we might get back to the basic question now before the house which is whether or not Bill No. 82 shall pass its second reading or whether alternatively it shall not pass its second reading and that the subject matter thereof be referred to a standing committee.

I do not think that I can in fairness rule out of order much of the argument made by the hon. member for Rosthern (Mr. Tucker) because I think if I did so most of the preceding speeches and those at the resolution stage would be equally out of order. Perhaps

hon. members would give consideration to coming back to the matter we are discussing, which is whether or not this bill shall be approved in principle or shall not be approved at the moment but the subject matter referred to a standing committee of this house.

Mr. Tucker: All I wish to say in conclusion is that I want to make it plain that to begin with all the marketing conference asked for was cash advances. What the Conservative opposition and the C.C.F. are asking for today are cash payments. They are asking for something altogether different. The government is following out what was asked for by the representatives of the farm organizations while the opposition is asking for something different.

Mr. Knowles: They asked for bread and you are giving them a stone.

Mr. J. A. Smith (Battle River-Camrose): Mr. Speaker, I listened with great interest to the debate this afternoon, particularly that part of the debate prior to your ruling. Taking your ruling into consideration I shall attempt to stay within the terms of the bill. In doing so I should like to make it clear that this group supported the resolution, not because we thought that short-term loans which it provided were one bit better or as good as cash advances but because we saw there an opportunity to get some cash into the hands of the farmers of the west right away.

I do know that our organizations in the west want cash advances, they do not want bank loans. It happens that the farmers of the west are not in the privileged position of being able to get what they are entitled to and therefore we will likely have to be content with some type of bank loan. Why do the farmers need cash? I think that has been amply explained to this house already There is an extreme shortage of money in the west at the present time. I hope that that fact has been impressed upon the minds of hon. members of this house to the extent that they realize it is true. It is not only the farmers who are short of cash, it is the businessmen as well. They will continue to be short just as long as the present government system of financing the marketing of wheat continues to be what it is.

It is said that this bill provides short-term credit to grain producers in the prairie provinces, but I submit that it does not do that. It provides short-term credit to some grain producers, but it does not provide credit for that group of young farmers who are becoming established on farms. I know of several who have approached bank managers for loans but who were refused on the basis that they did not have sufficient security other than 5,000 bushels of wheat on their farms. I can produce evidence of this. It is for these reasons that we do not feel that the government's proposal is going as far as it should.

It has been suggested that an interest rate of 5 per cent will be charged on the loans issued by the banks and in our opinion this rate is far too high. It was pointed out this afternoon that it is possible for parties other than farmers to borrow from banks with some type of guaranteed security at less than 5 per cent. We cannot see why the farmers should be charged 5 per cent and when the bill reaches committee stage we will undoubtedly attack that portion of it.

It seems to us that this is a costly way of supplying cash advances. The last speaker tried to convince us that this was a type of cash advance to the farmer, but I could not follow his argument. However, he is entitled to his own opinion.

We propose to endorse the amendment and we would like to get into committee in order to be able to study the features of the bill, We would like to see that done soon so that some form of cash advance to the farmer can be made as soon as possible. I cannot see why so much time should be wasted in getting this bill to the committee stage where we will be able to sit down and discuss intimately its features.

Mr. W. G. Dinsdale (Brandon-Souris): Mr. Speaker, originally I had intended to speak in support of the amendment moved by the hon. member for Calgary North (Mr. Harkness), but as that amendment has been ruled out of order I must confine my remarks to the general principle of the bill and also make reference to the amendment introduced by the hon. member for Kindersley (Mr. Johnson). I am sorry that the hon. member for Kindersley does not see eye to eye with the official opposition in connection with this matter. I had hoped that there might be a certain degree of unanimity among western members on this matter of providing, as the bill describes it, temporary financial assistance to the grain producers of western Canada. Actually as I interpret the situation and as I review in my own mind the discussion that has taken place on this subject, I see that there is no widely divergent viewpoint at all so far as the opposition viewpoint is concerned. I am very sorry that the hon. member for Kindersley (Mr. Johnson) has tried to suggest that there is a divergency of viewpoint. This is one of the basic problems of the prairie grain farmer at the present time, and it requires united action on the part of all of us from western Canada.

I listened with a great deal of interest to the contribution a few moments ago by the hon. member for Rosthern (Mr. Tucker). He tried to intimate that the official opposition is divided, provincially and federally, on its attitude towards this important issue.

The Acting Speaker (Mr. Applewhaite): Order. I apologize to the hon. gentleman for interrupting him but I am going to take this opportunity to say something which perhaps should have been said in this house before. When a member has the floor, hon. members who sit in his close neighbourhood sometimes carry on their own conversations. While they do not realize it, with the aid of the loudspeaker system we have at the present time, at a distance from the member who is speaking we get all voices at practically equal level. It is almost hard, at this distance from the person who has the floor, to hear what he is saying.

Mr. Wylie: I rise on a point of privilege. I have sat here for a number of years and, when one of our members gets up to speak, I have always noticed that on my immediate right there is a good deal of noise, but when one of their hon. members gets up to speak, one of their members will tell me to keep quiet if I am talking. I think this is a very good point. The hon. member for Winnipeg North Centre (Mr. Knowles) is perhaps one of the members of this house who knows most about parliamentary procedure, but I quite truthfully say there is not a member in the house who breaks the rules more often than the hon. member for Winnipeg North Centre.

The Acting Speaker (Mr. Applewhaite): I rose in order to assist the smooth running of this debate, and I do not propose to allow at this time a debate on an entirely different subject. I have some sympathy with the general viewpoint expressed by the hon. member for Medicine Hat. I point out to him that he is entitled at any time to appeal to the chair to maintain quietness and order in the house when he is speaking. This I have endeavoured to do for the hon. member for Brandon-Souris, whose time for this afternoon is limited, and the time taken by interruptions will not be deducted from his time.

Mr. Wylie: That is what I was endeavouring to do.

Mr. Dinsdale: Thank you, Mr. Speaker, for those remarks. I would also like to thank the hon. member for Medicine Hat for his observation, because I do find that members immediately to my left are sometimes a little on the noisy side.

An hon. Member: We like you, Walter.

An hon. Member: That is unfair.

Mr. Dinsdale: That is true. I was going to say that politicians generally from Saskatchewan seem to be somewhat on the noisy side and not quite so subdued, shall I say, as their neighbours from Manitoba and obviously, judging from the remarks of my hon. friend from Medicine Hat, their neighbours from Alberta.

However, I was referring to another politician from Saskatchewan on the opposite side of the house, the hon. member for Rosthern, who indicated that there was some difference of opinion between the provincial Conservative group and the federal Conservative group on this matter of providing cash assistance to farmers at the present time. He quoted from a newspaper account to the effect that the leader of the opposition in the Manitoba legislature called for cash payments rather than cash advances. Well, that is a newspaper report, and obviously the attempt to drive a wedge between two political groups is the technique of splitting hairs. I do not know whether I am allowed to do so, but I have the verbatim report of the speech by the leader of the opposition in the Manitoba legislature, and the wording in that speech quite specifically refers to cash advances to farmers with grain in storage on the farms. I would suggest that this verbatim report is much more accurate than any newspaper report of what he said could actually be.

Furthermore, on that score, not only is the opposition in the Manitoba legislature in favour of the cash advances scheme, but also the throne speech delivered in the legislature came out very strongly on behalf of the principle of cash advances in preference to the method proposed in the bill now before us as it has been enunciated by several members, "an act to provide for short-term credit to grain producers in the prairie provinces to meet temporary financial difficulties arising from inability to deliver all their grain."

I would submit that in principle this measure falls short of meeting the situation on two fundamental points. First of all, as I understand the situation in the west, and as it seems the majority of other members understand the situation, this is not what the prairie grain farmers have been requesting. They have invariably requested the cash advances principle. Not only have they as individual farmers maintained this unswerving viewpoint, but also their organizations and the provincial legislatures—so far as I know, the provincial governments—have also asked for the same principle. So, in view of those

circumstances, it is past understanding why this bill is before us at the present time. It is going directly in the face of the requests of the prairie grain farmers.

The other point I wish to emphasize is that it does not take care of the problem existing in the west at the present time. It does not do what it says it is going to do, that is, provide for short-term credit to grain producers in the prairie provinces to meet temporary financial difficulties arising from inability to deliver all their grain. The phrase I should like to emphasize is "temporary financial difficulties". I feel that the use of that phrase is indicative of the fact that the government has failed completely to understand the nature of the economic problem that exists in our grain growing economy at the present time. I would suggest that not only does this measure not deal adequately with the immediate shortage of cash on the prairie farms but also it fails to take into consideration the fact that this is a long-term problem that arises from fundamental changes in the Canadian economy and also in the world economy itself.

On this point I should like to submit, Mr. Speaker, that in recent years Canada has been producing more and more grain. The suggestion is put forward that this is merely a temporary situation and that at any time the situation will reverse itself in the event of a drought or unfavourable conditions. That of course begs the question because at the moment the situation is—it has been so for the past decade or more—that the prairie region is producing more and more grain, more and more wheat on approximately the same acreage. At the same time, unfortunately, Canada's over-all proportionate share of the export market has been declining. For years we had 30 per cent of the total export market for wheat. We have hardly been holding that percentage notwithstanding the fact that the total world demand for wheat has been growing during recent years.

The bill before us refers to a temporary financial difficulty. I suggest that the financial difficulty is not a temporary one but is a problem that will continue for some years into the future until such time as the government moves to deal adequately with the changed circumstances in which Canada finds itself in relation to world markets. The wheat grower is dependent upon the export market to dispose of his crop, and the difficulty becomes more acute when he is in a position where he produces an abnormal amount of grain. Unfortunately the world market situation, instead of improving in the post-world war II climate, has been growing increasingly difficult.

[Mr. Dinsdale.]

Economic nationalism has been a factor of increasing prominence. We find that today our Canadian wheat trade operates within a jungle of import restrictions, milling prescriptions, tariffs, subsidies and the like which is the result of the growth of national policies in both import and export countries. If we are going to deal adequately with this so-called temporary financial difficulty, Canada must be placed in a position where she is competitive with other countries who are also participating in the export market for grain. Since the war we have attempted to deal with the problem by various international agreements, the international wheat agreement and also such United Nations organs as the food and agriculture organization. That approach to the problem is all to the good and should be encouraged.

It is becoming increasingly obvious, however, that, with the world situation now confronting us, we are not going to find any easy solutions to the problem of international trade. When the government suggests that the wheat board is not in a position to provide more adequately for the financial crisis of prairie wheat farmers, I think it is admitting that it is not willing to stand behind the wheat board. At the present time all other exporting countries, without exception, stand substantially behind the wheat producers in their particular countries. In Canada, however, the answer the government has given to the suggestion of the opposition that the present scheme of government-backed loans is inadequate and will not deal with the problem and that instead cash advances should be provided is to the effect that the wheat board is not in a position to provide such relief to the prairie farmers. That is suggesting that the government of Canada is not willing to stand behind the wheat board and give it the necessary support in order to deal adequately with the critical cash shortage of Canadian wheat growers at the moment.

I made the point before and I repeat that Canadian wheat growers are the only growers who are not assisted by their government in reaching a truly competitive situation in the world market. The wheat board, as it has been repeatedly pointed out, has no other moneys except those which it obtains from the sale of the farmers' wheat. Up until this year the farmer has been paying substantial amounts for storage charges, which has reduced his final payment. The government is moving to alleviate that to a certain extent through payment for excess grain in storage, but other than that the farmer has borne the total cost of handling his grain from his own money as realized from the

sale of grain by the Canadian wheat board ever since the board was established.

In carrying out this policy I say that the Canadian government is the only government that has placed the grain producer in this position. I do not have time to go into the details of the matter but it is obvious that there is a wheat war going on in the world. If we merely examine the attitude of our neighbour to the south we see that her position regarding wheat production has changed completely in the past few years. At one time she hardly produced enough for her own domestic consumption. I believe that pre-war domestic consumption in that country was approximately 600 million bushels while production amounted to 700 million bushels so that her contribution to the world market was merely nominal. But now she has completely reversed that position and instead of producing 700 million bushels of grain she is producing up to 1 billion bushels and has occupied the position that Canada formerly occupied in the export market. I believe the emphasis on a temporary cash shortage and temporary financial difficulties falls far short of a realization of the actual situation. I believe it is five o'clock, Mr. Speaker.

The Acting Speaker (Mr. Applewhaite): It being five o'clock, the house will proceed to the consideration of private and public bills.

PRIVATE BILLS

The Acting Speaker (Mr. Applewhaite): The business reserved for this hour having been disposed of, the house will revert to consideration of the business interrupted at five o'clock.

GRAIN

PROVISION FOR GUARANTEE OF BANK LOANS TO PRODUCERS IN PRAIRIE PROVINCES, ETC.

The house resumed consideration of the motion of Mr. Howe (Port Arthur) for the second reading of Bill No. 82, to provide for short-term credit to grain producers in the prairie provinces to meet temporary financial difficulties arising from inability to deliver all their grain.

Mr. Dinsdale: At five o'clock I was making the point that in the light of the steps taken to deal with the situation at the moment it is obvious the government does not fully appreciate the problem prevailing in our grain growing economy. I mentioned, as an example, the relative change in the position of Canada and the United States in the markets of the world. We must always remember that, in order to have a healthy grain growing economy, Canada must constantly keep in mind that we are dependent upon the export market and must occupy a substantial percentage of that market. Unfortunately in recent years we have not even held our proportionate position, even though general world markets have been expanding since world war II.

I could continue to point out how other countries are attempting to deal with this problem because it is a problem that is not peculiar to Canada. Other major wheat growing countries have faced the same difficulty. Australia, for example, is deliberately curtailing the production of wheat and encouraging the farmers to move towards a diversified agricultural activity; that is a deliberate government policy. In this country government policy has not shown the same awareness of the difficulty and up to the present time, except for a few of the provincial governments, the federal administration has been encouraging maximum production of wheat and concentration on this one-product prairie farm economy. I feel that this points to the need for more substantial measures on the part of the federal government than the bill we have before us or any other legislation that has been introduced so far to deal with the situation.

I know the government reply to any suggestion of that kind is that the Canadian government is not in a position to offer any more encouragement or any more assistance to the prairie wheat producer because the wheat trade occupies such a large segment of the total Canadian economy that it would be completely impossible for the Canadian treasury to deal with this problem as have other countries throughout the world. This is true. But again, it comes back to the fact that nothing has been done by the Ottawa authorities to try to arrive at a more balanced position in our prairie economy. In fact, I would suggest that government policies, instead of alleviating the problems of agriculture as a result of a one product, unstable economy, have only aggravated the difficulty down through the years.

There is one more point I should like to mention in connection with this matter and that is that the price of grain on the domestic market has occupied an unfavourable position in relation to the cost of other consumer goods. If we were to examine the statistics for the past 18 years we would find that the prairie wheat grower has been subsidizing the consumer in Canada so far as the sale of his wheat is concerned. The price to the Canadian consumer has never corresponded, up until the last two years, to the price of wheat on the world market. For years it was pegged

at $1.25 to the Canadian miller when the price in the world market was soaring upwards to $2.83. It seems to me that the time has come when something has to be done by this government to bring the domestic price of wheat more closely into relationship with the general price level of other consumer goods.

In the past two years this problem has been brought to our attention with increasing force because the world wheat price has declined. As a result of the decline in world wheat prices, the prairie farmer finds himself in this cost-price squeeze about which we have heard so much during this session. When there is a surplus of a product, it is obvious that the price of that product is going to decline, and that is the position in which the grain producer finds himself. It is a position that has placed the whole prairie economy in serious jeopardy, because while the price of his product has been decreasing, unfortunately continued inflationary pressures, particularly in the industrial field, have resulted in the increased cost of producing his product.

From time to time hon. members from other parts of Canada complain that too much time is consumed in this house discussing the problem of wheat. I should like to suggest that until the government moves to do something more adequate than we have in this bill, hon. members are going to be forced to hear a lot more than they have heard in the past. There is a real problem in our grain growing economy and nothing that has been forthcoming from the government by way of legislative measures has even begun to deal with the difficulty. It is because of that that I can support, without any reservation, the amendment that has been moved.

Mr. J. H. Harrison (Meadow Lake): I am going to make my remarks very brief. I do not think I will require more than about five minutes of the time of the house. There has been a question raised by some members, I think one was the hon. member for Battle River-Camrose (Mr. Smith), as to why our C.C.F. friends were taking such an interest in this particular bill, which is designed to help a portion of the farmers in the west who cannot get credit on their own. I think we have to recognize their interest for what it is. As most people know, we are having a provincial election in Saskatchewan and just in case wheat is moved in large quantities between now and then, they are taking on some insurance on the theory they will have a federal issue to talk about at that time. Certainly in the past the provincial government has not been in the habit of going to the country on their record.

I hold in my hand a copy of a reliable journal, Mr. Speaker, printed in North Battleford, called the *News-Optimist*. Under its date line of February 1, I find the interest of the provincial government and the C.C.F. party expressed by the provincial minister of education. He does not profess any particular interest in agricultural matters. I just wonder whether the interest across the way is as genuine as it would appear. The heading of the article reads:

> Saskatchewan no longer dependent on agriculture: Lloyd.

In a later issue of the same paper the provincial M.L.A. for The Battlefords announces the coming election, if one can judge by the heading in this paper which reads:—

> Eiling Kramer predicts gas in 1956

I would suggest to you, Mr. Speaker, that we have had the first impact of that gas in this house in this particular debate. When this particular bill is discussed in that election I shall certainly be able to uphold what has been done here. This legislation is to take care of those farmers who, as I said, cannot borrow on their own cognizance. There are other measures to take care of other people.

In my remarks at that time I shall deal with provincial issues and discuss such things as the tripling and quadrupling of taxation in the province, and that may be more effective.

Thank you very much.

Mr. O. L. Jones (Okanagan Boundary): Mr. Speaker, I should like to speak on behalf of a group, small in comparison with the farmers of the prairies, who are vitally affected by this bill. In the Okanagan valley we have several hundred retired prairie farmers who are still tied financially to the wheat crop that is produced on their farm. It is on their behalf that I should like to say a few words.

While this bill is seeking to overcome a temporary condition, or to provide temporary loans, I can assure the minister that the need for the loan is not a temporary one at all. It is more or less a permanent one for that type of person who is retired and dependent on income from the farm. This bill does not solve his problem. Actually, it increases it by adding interest to the debts he has already incurred. Therefore, as we discuss this bill, I want to ask hon. members to visualize not the active farmer of the prairies but those who were active at one time and have now retired, but whose interest is vitally affected by the sale or the non-sale of the wheat from the prairies.

I could name a hundred or more of them who have retired, some on a pension, some on

half shares, some on quarter shares, some on a rental basis, but all dependent on a steady income from the prairies. Some have been retired for so long that the little income that comes in now is totally inadequate to meet the increased cost of living, and they are finding this problem to be more intense in many instances than the actual farmer who is getting the loans. These people have so mapped out their lives for the remaining years as to fit into the picture of a steady income. That income has been diminishing and the cost of living has been going up. I feel I should make a plea to the minister on their behalf to assist them by a straight money advance on the crop they own, or part own especially in view of the fact that the security they offer is greater than many municipalities offer when they get money at 3 per cent and 3½ per cent interest. The sons of some of those people took over the farms, and they are dependent on the sale of their wheat to keep the old people in British Columbia going as well as their own families at home. Therefore, the position of those couples is made extremely difficult.

Then, we have several widows whose farmer husbands died. The widows were forced to sell their farms, or dispose of them on terms that at times were not very favourable. Some have a division of the crop. They were not in the happy position to demand a better deal. Many of these widows are also in dire circumstances owing to the low purchasing value of the money they get. Any money that they ask for under this plan should be lent to them at at least 2 per cent. If it cannot be given to them as a direct advance on the wheat, then 2 per cent should be the maximum asked of those widows and those retired farmers who must have the money to continue in the business of selling wheat. I contend that to ask them to pay 5 per cent is extortion of the worst kind. Personally, I think they should have a cash advance. If the government cannot see a businesslike way of giving the cash advances on wheat, then we must deal with what they propose to do. For that reason I suggest to the minister that he reconsider the interest rate on those loans and bring it down closer to 2 per cent. I am satisfied that 2 per cent is ample to take care of the bookkeeping and any other work that is necessary on loans advanced by the bank, or by the government, to any group, especially to citizens in this position who are putting up collateral worth far more than the money they are borrowing.

Mr. Ambrose Holowach (Edmonton East): Mr. Speaker, the principal feature involved in this discussion to ratify legislation guaranteeing bank loans made to grain producers in the prairie provinces who face financial difficulties as a consequence of the government's inability to market prairie wheat appears to be twofold. The first is the inadequacy of this measure to answer the farmer's problems. The second is the various submissions that have been made from the opposition side of the house. We believe that in making those submissions we have consistently represented the opinions of the farmers of western Canada. I think the answer is to be found in cash on the line rather than in loans at the bank as a means of alleviating the problem which faces farmers at this time.

I rise to take part briefly in this debate because one does not necessarily have to be a farmer to understand the predicament in which farmers find themselves, and also because I believe the problem has been handled rather lightly by the government. It so happens that I represent an urban riding, but we in that riding know that our well-being depends upon the prosperity of the farmer. Furthermore, in my riding there are many retired farmers who still possess their investments in the farms, and their children are managing those farms. As a consequence I believe that they would want me to rise in my place at this time and express their feelings on this matter. I fully agree that this legislation in no way answers the need of farmers for a stable and adequate income. Clearly the answer is to have a policy and a platform which will ensure a stable and adequate income for the farmers. The government has no such policy. Such being the case, this legislation, which makes lending facilities more readily available to the farmer, does help to improve his condition, but it must be considered as only a supplementary and additional measure. But let me make it perfectly clear that the farmers of western Canada are not satisfied merely with having the opportunity of borrowing money at banks. The farmers of western Canada are afraid of debt. They know from past experience, during the depression years, that there is only one thing worse than having a debt and that is having no markets, no money, and having a debt on top of that.

What is it that the farmer really wants? It seems to me that the farmer wants a solution to perhaps the most paradoxical problem of this age; namely the removal of his poverty in the midst of the plenty that he has made. I think the position of the farmer is very clear. He wants a policy and a platform that would first give encouragement and inducement for him to continue

producing without being penalized for it, and secondly he wants a fair return for such an effort.

There are over 250,000 farm units in western Canada who have no way of expressing their feelings with respect to this legislation unless we in the opposition set them forth and indicate to the house the feeling of injustice that must overtake them when they see that we are asked to consider these bank loans in place of the legislation they asked for.

There is another point to which I should like to draw the attention of the minister and that is the high interest charges that are being made. With the government guaranteeing to chartered banks the loans they make to farmers, it seems to me that the element of risk or loss is completely removed from such bank loans. My point is that the farmers should not have to suffer the consequences of a situation for which they are not responsible; loss of markets, increased cost of production resulting from a jungle of taxation and the inability of the government to provide policies making saleable the farm production of wheat. It surely is not unreasonable to expect that banks, which are protected against loss, should also make a small concession and accept slightly less profit thereby helping to shoulder the burden which faces an important segment of our population. I hope the government will consider the advisability of so advising the banks.

I think we should get one thing straight and that is that the farmers of western Canada are not asking for charity or handouts. What they are asking for are measures that will make it possible for them to exchange their production for purchasing power. I think that is the only answer they are willing to accept. I think it is a reasonable request both in theory and in practice. In the United States of America the commodity credit corporation which was set up there does make prepayments and cash advances on wheat that is properly stored on farms. Furthermore, I believe that the entire debate thus far raises a theme that has not been mentioned, namely what should be done about the tremendous stockpiles of our surplus wheat?

Clearly the answer is not in cutting down production but in making consumption here and abroad more available. What is this government for if not to devise policies that will make this possible? As long as there are hungry people in the world, and indeed as long as there are people in this country who do not have enough to eat, we in this group will certainly oppose any measure or suggestion that we plant trees or grass on those pieces of land which should quite rightly be producing crops.

The government is insisting that it receive gold or dollars for its surpluses in the matter of export. That is perfectly all right; let them proceed with an aggressive policy to acquire such payments for exports, but since they cannot receive gold or dollars for our surplus wheat, what is all this nonsense about our not accepting foreign currencies and not engaging in barter? Quite frankly I am glad that the farmers are demanding cash payments for their wheat.

They are asking in effect for income in return for having created real wealth, wheat. They are asking for purchasing power to equate their production power. I only hope that in asking for this they clearly understand that what they are asking for is the implementation of the monetary policies of social credit. I believe sincerely, that governments will have to implement these social credit policies sooner or later; there is no other way. My hope is that in making such demands the farmers understand that in reality they are asking for the implementation of fiscal policies and usage of the national credit of our country in order for them to obtain cash and not bank credit as is presently being advanced by this legislation.

Mr. H. P. Mang (Qu'Appelle): I just wish to make a brief statement at this time because as I have listened to the discussion both on the resolution and on this bill I cannot help but feel there is a great deal of confusion being created on the part of many members by forgetting that this is purely a temporary measure to deal with a certain specific situation. This does not entail, and there should not be, a general discussion of a long term policy for agriculture. This is a measure to deal specifically with an undertaking that has been made by this government whereby some cash can be put into the hands of farmers at a specific time and during a specific period. I do not see how anyone could hold up the passage of this temporary measure with any justification whatsoever. Indeed, all of this discussion has merely postponed the next measure to come before us which will probably be Bill No. 83 which does attempt to and will provide a part of a long term policy.

I do not see the point of a great deal of the discussion which has wandered all over the field of international marketing and international finance and has dealt with all the difficulties with which farmers have been beset ever since the profession of farming existed and which will beset farmers for some

time yet to come. This merely deals with a temporary and specific situation.

I entirely agree with what the hon. member for Rosthern (Mr. Tucker) brought forward this afternoon with respect to the responsibility of the government in dealing with the situation following representations from responsible farm organizations as representatives of the Saskatoon conference. I am aware of what took place at that conference because I was there as an observer and I listened to all the discussion. If we merely try to shove this particular bill before the agricultural committee its passing will be postponed for some months.

If the undertaking is made, surely to goodness we are businessmen enough in this house —if not we should be—to look at Bill No. 82 for what it actually is. It is not a bill to deal with long-term agricultural policies. All of the discussion that is going on is simply holding up our proceedings, and that in the long run will hold up the final payment which will be made subsequent to the passing of Bill No. 83. Do not let anyone say that Bill No. 82 is deliberately placed where it is before Bill No. 83 which deals with storage and interest charged. That was the businesslike way of doing it, that was the natural order of precedence. Let no one be unbusinesslike enough to get up and say that that is not so.

I am getting just a little bit tired of all this finagling around all over the field of general farm policies when this has nothing to do with the question of a general farm policy. I am going to vote for this bill because it deals with a specific problem and makes a specific undertaking.

An hon. Member: You have to.

Mr. Mang: I do not have to if I do not want to.

An hon. Member: I challenge you.

Mr. Mang: We will meet you boys on the election rostrum next spring and some of the statements that have been made in this house are going to look pretty silly when we have a proper discussion and when you start to separate facts from fantasy, facts from fiction. I have no hesitation whatever in supporting this bill and I have no hesitation whatever in discussing this bill and its passing with the people in my constituency. We have a lot of wheat out there. At Grenfell alone we have one million bushels. At Indian Head, the cradle of large wheat shipments in western Canada, we have one million bushels.

I know what the problems are because I have visited practically every elevator in the constituency. I have visited the municipalities and I have talked with businessmen. I know the situation and I know they will agree that this bill should be passed as of now without going into a great many generalities which simply postpone the date when the final payment will be made.

Mr. E. G. McCullough (Moose Mountain): Mr. Speaker, I am very happy to support the amendment moved by the hon. member for Kindersley (Mr. Johnson) that this bill be referred to the standing committee on agriculture and colonization. I think that there are two very important aspects to the arguments and debate as they have developed in the house. I want to deal first with the fact that I am very happy with the turn of events in the chamber and that some of the private Liberal members from Saskatchewan are being smoked out. I am glad that this afternoon we have heard from the hon. member for Rosthern (Mr. Tucker) who has great difficulty in explaining his position to the house and is using phraseology so that hon. members can understand what he is saying. I am sure that those of us who come from the prairie provinces are happy to see that these private members from Saskatchewan on the Liberal benches are being smoked out.

We have listened to a few remarks from them. I think it took the hon. member for Meadow Lake (Mr. Harrison) less than three minutes to say what he had to say on this very repugnant bill which incidentally the farmers in the west do not want. It took the hon. member for Qu'Appelle (Mr. Mang) an equally short period of time. We have not yet heard from the hon. member for Swift Current-Maple Creek (Mr. Studer) but I presume he will have his two-minute contribution to make.

Mr. Studer: It will be worth a lot more—

Mr. McCullough (Moose Mountain): I do not want it to come as an interjection. If the hon. member has anything constructive to say, let him get up on his two feet and say it.

Mr. Studer: You have not said anything yet.

Mr. McCullough (Moose Mountain): I believe that there is growing up in this country a doctrine which should be called the C. D. Howe doctrine. This doctrine entails subservience to ministerial undertakings. On the introduction of this bill we had the right hon. Minister of Trade and Commerce (Mr. Howe) stating to the public and to the banks that this government would undertake to spend public moneys through the undertaking of a minister, instead of waiting to call parliament together or to have the undertaking for the payment of public money made through the

proper channels. Instead of doing that the Minister of Trade and Commerce takes it upon himself to make this announcement at a public meeting.

After a very short period of debate in this house the right hon. minister had the audacity to get up and say that he was tired of the debate, that his patience was running out. He made the veiled threat—it was not so very veiled either—to the house that he was prepared to withdraw the legislation if hon. members continued to oppose it.

That was nothing short of a disregard for parliamentary procedure, for the integrity of this house. We should have in Canada supremacy of parliament, and veiled threats or intimidations should not be contained in any statement made by a minister in the house. In addition to that, the other day the right hon. minister stated that in illustrating the position of the western farmer I was more or less saying that the farmer was a man with a tin cup looking for a handout. That could not be further from the truth because the farmer in western Canada, and indeed in any part of the country, is not asking for a handout. The farmer is simply asking for justice, for some sort of equality of treatment.

The western farmers simply want to share in the prosperity that they see existing in this country. I feel that the time has come when we should not hear any more threats from the ministerial benches in this House of Commons. We should treat the subject before us in a parliamentary manner.

At the time the minister was taking such strong exception to the debate in this house he said quite incorrectly that the same speeches had been made more than twice by members from the prairies and then said that he saw a member getting up to speak for the third time. Nothing could be further from the truth because at that time the members of this group and indeed the members in all sections of the house had not spoken more than once on the subject. Whether the minister is happy about this legislation or not, the fact is that some of us are strongly opposed to it. We have given notice that we are going to oppose it in every way we can. It is now suggested that the bill be sent to the standing committee on agriculture and colonization where it can be examined and where perhaps some measure of progress can be made toward making it more acceptable to the western farmer. The hon. member for Assiniboia (Mr. Argue) suggests that it be thrown into the wastepaper basket.

In order to deal with this subject properly I think we must examine the reason for the government wishing to bring in a measure of assistance, if this can be called assistance. I think in order to do that we have to examine the condition of the farmers concerned. We have had on many occasions during the past few months explanations in the press for the condition of the western farmer.

I feel that the western farmer now is in one of the worst financial positions he has ever found himself in. The question is one of income. The farmer in western Canada, on the average, has a great deal of grain on hand and, indeed, he has been progressive in his methods of farming and has produced a great deal of livestock and other farm commodities. But the fact remains that the farmer's income in western Canada has fallen very drastically in the last three years, so seriously that he is now in a cost-price squeeze, so that he must have some assistance if he is going to be able to carry on.

I wish to point out at this moment that there has never been so much confusion, in respect to government policies pertinent to agriculture, as we see at this time. I was most amazed, just prior to coming back to parliament, that the press reported that, in addition to terminal storage at the coast ports and at the main terminal storage points, there were facilities for storing 58 million bushels of wheat and, in addition, in the other country elevators there was an additional storage space of over 44 million bushels. In other words, we were told there was storage available for over 100 million bushels of wheat. Yet up to that point the minister had been going to Washington and proclaiming to the press that it was the United States give-away policy in respect to wheat that was undermining the Canadian wheat sales.

On top of that, to show government mismanagement, while this storage space was available there were over 11,000 box cars absent from the prairies in the United States over and above the number of box cars from the United States in Canada. When it is considered that the western farmer must have the possibility of delivering his grain in many cases when the roads are open, it will be seen that the situation developing is one whereby the farmer in the middle of winter is unable to deliver his grain, regardless of whether or not there is an opening at the elevator. Here we have a lack of planning by the federal government. When we ask for some planning, they say, "You people think only of planning." This is one time when we could have had a little planning and where the transport commissioner must be sharply criticized for his inaction in not seeing to it that there were sufficient box cars to meet the situation prevailing at that time.

Now I should like to deal rather briefly with some of the aspects of farm income because I think it has a bearing on what we are trying to do at the present time. We in the C.C.F. group feel that this measure does not meet the needs of the western farmers. It is not only a short-term credit policy that we need, but I want to maintain that, if we had proper policies in this country to maintain the income of farmers, we would not now have to be dealing with a short-term credit proposal for western farmers such as proposed. While it is recognized that the general income of people throughout Canada has increased, it is still true that agriculture, even on a national basis, has deteriorated in the past three years.

Mr. Howe (Port Arthur): May I ask the hon. member a question?

Mr. McCullough (Moose Mountain): Yes.

Mr. Howe (Port Arthur): Have these figures changed since he put them on in the throne speech debate and since he put them on in the debate on the resolution? Is he putting on something different now?

Mr. McCullough (Moose Mountain): Yes, and I want to say that sometimes it is well to put them on more than once to convince this government. I want to say too that I think I shall not have to correct my figures as the Minister of Agriculture did the other day. It is getting to be the case in this house that we cannot be sure of the figures we are being given by some of the ministers.

I wish to say too, in answer to the minister, that the other day he indicated he would put before this chamber the type of policy carried out under the commercial credit corporation in the United States, and I recall his stating at that time that the commercial credit corporation in the United States does not pay for farm-stored grain in unapproved storage. The fact is that under some policies it does pay for unapproved storage of farm-stored grain. The agent examines the wheat, grades it and determines its approximate quality. The farmer is given three to six months in order to put it in approved storage, and, before it goes into approved storage, the farmer gets 70 per cent to 90 per cent of the parity structure. When it goes into proper storage, he can get the remainder of 90 per cent of parity.

Mr. Deputy Speaker: Order. I have listened to what the hon. member was saying and if I understood him correctly, he indicated he was going to put figures on the record for a second time. I think he used the word "again". An hon. member who makes an admission of this kind is probably admitting that he is guilty of repetition and, of course, I could not, in accordance with our rules, allow repetition in a debate.

While I am on my feet, I might also point out that we are dealing with second reading of this bill providing for short-term credit to grain producers. I realize that that opens a great many collateral matters to debate, but I do feel that we should confine our remarks so far as possible to the principle of this bill and that a very general debate on farm problems or on agriculture is not strictly in order. I am not saying that the hon. member has offended but I take this opportunity to point out that this bill is limited in scope and the debate should be similarly limited.

Mr. McCullough (Moose Mountain): Mr. Speaker, I did not wish to imply that I was repeating figures I had put on previously. Such is not the case. As a matter of fact, these figures I have just gleaned from certain dominion bureau of statistics figures and from other sources. While they may compare favourably with the figures I put on in previous debates, they are not taken from the same source, or at least they are not the same figures.

I should just like to point out that the reason I mentioned the commercial credit corporation in the United States was that their policy is to give cash advances to farmers for farm-stored grain, as against the present policy we are now discussing, which is, of course, to charge the farmer five per cent on his farm-stored grain.

Mr. Studer: We heard you the first time.

Mr. McCullough (Moose Mountain): It would have been very easy for this government to undertake an alternative plan. There seems to be general agreement among farmers and among many authorities that this could have been done without any fuss or confusion whatsoever, that 50 or 75 per cent advances could have been made on farm-stored grain, and it would not have been necessary to charge any interest. This government seems to be very much against giving equality to the farmers. Certainly there is no recognition in this bill that the farmer should be treated in any fair way. Actually, what this means is that the farmer is penalized simply because he must have a postponement of his income. If the farmer is not able to deliver his grain, as he is not able to do under the present marketing situation, it simply means that the government is forcing him to pay interest on his income. That would be bad enough in any case but it is also true that the short-term farm credit proposal is not meeting the situation as I see it in Canada today. When we in the

C.C.F. talk about parity we do so because we believe that is the only way the farmer can have equality and justice. I have here the issue of *The Country Guide* for February, 1956, which contains an article entitled, "One Hundred Per Cent of Parity". I should like to read some brief statements from that artcle. It says—

Mr. Howe (Port Arthur): Who is that?

Mr. McCullough (Moose Mountain): It is an editorial. I am not trying to argue against the person who wrote it or anything like that. What I am trying to point out is that here is an article with arguments comparable to most of the arguments put forward against parity prices for farmers and it reveals the inconsistency of those arguments. The editorial reads in part as follows:

> Surpluses would be inevitable even with firm controls, because of the rate of increase in production per man that is now possible.

In other words, it is assumed that if we have just and fair prices for the producer that in itself would cause unmanageable surpluses. In this country we do not have anything like parity. As a matter of fact, I could put evidence on the record to indicate that the farmer is producing below the cost of production. Then the editorial goes on to say—

Mr. Howe (Port Arthur): There is nothing in this bill that has to do with parity prices.

Mr. McCullough (Moose Mountain): Of course, that is the argument I am trying to make. I say that even though the bill provides for short-term credit to the producers of the country it does not in effect meet the situation that has developed. I am trying to argue that this situation is going to continue. I point out that in 1954 western farmers sold as much wheat and pretty well as much livestock as they did in 1953, but the fact remains that in spite of that fact the average long-term sale of wheat remains constant the farmer is in an impossible financial position. The government is now proposing bank loans on his farm-stored grain. I am trying to point out that there is no policy by which the farmer can get out of this squeeze or whereby we can have better conditions for the producer unless the government is prepared to at least listen to the argument I am trying to put forward in endeavouring to show the inconsistency of the argument against parity prices for agriculture. The editorial goes on to say:

> We also favour the principle of equality between agriculture and other sections of the economy.

I suggest—

Mr. Speaker: Order. It seems to me that in order to make the discussion relevant the hon. member should make his remarks directly on the principle of the bill. If we were to follow his contention that in order to deal with the bill he must review the entire economic situation as far as the farmer is concerned the result would be that one could carry that a little further and say one should discuss the entire economic situation of the country in relation to the farmer. We might even find ourselves looking into the international situation to find out what is the position of our country with reference to world affairs and the position of our farmers in the general world economy. Then we might finally come to the bill. I think the hon. member will agree that if we were to follow that sort of practice we would be far afield in almost every discussion we have.

[Mr. McCullough (Moose Mountain).]

Mr. McCullough (Moose Mountain): I am trying and shall try to confine myself to the principle of the bill and related subjects. In my opinion it is tremendously difficult to place the position of the farmers before the house without discussing their economic situation. This is a bill to give some assistance by way of bank loans at 5 per cent interest, and unless we discuss the financial position of the farmer it seems to me it would be very difficult to put his viewpoint and, indeed, the viewpoint of any member in relation to the problem confronting us, before the house.

It is well known that the farmers through their organizations are unanimously against bank loans. They are opposed to the interest aspect of the loans. They feel it is only going to add to their already difficult financial position and I believe it is important to have before us the situation that has existed since 1945 when the farmers' position began to deteriorate. At that time the economy was generally buoyant. It was also buoyant at the time of the Korean war and is now in the face of the continuous threat of war. Therefore I think it is very difficult to discuss this matter intelligently without referring to the financial picture of the farmers of western Canada.

I intend to close by saying I am very happy that it now appears there are at least some members formerly rather indifferent to this measure ready to join with us in expressing complete antagonism to it. When the amendment we have moved is voted upon I hope there will be a solid vote in favour of it from the opposition ranks even if we do not receive the support of some of the Liberal backbenchers.

Some hon. Members: Question.

Mr. Howe (Port Arthur): Mr. Speaker—

Mr. McCullough (Moose Mountain): Six o'clock.

At six o'clock the house took recess.

AFTER RECESS

The house resumed at eight o'clock.

Mr. Gordon Churchill (Winnipeg South Centre): I rise to take part in this debate, Mr. Speaker, because the subject matter is of interest to everybody in Canada, and of intense interest to all of us who live in western Canada. We have got into a debate which has extended for a longer period of time than was in the mind of the Minister of Trade and Commerce (Mr. Howe). This has come to be quite a usual circumstance. I notice that earlier in the course of this debate he suggested to us that there should not be a prolonged debate on this legislation. At page 605 of *Hansard* for January 27, 1956, he intimates that the provisions of the bill have been in effect since November 15.

Then, in some other place, I am not sure of the exact reference, he said the government had undertaken to pass a very simple resolution. That reminded me of a statement he made about a year ago when he used these famous words, "This is a simple bill, containing only two sections." Well, here we are again on a simple resolution; no prolonged debate desired because everything had been settled before we appeared here. The minister seems to think we are prepared to accept that method of doing the nation's business. I think not. I should like to point out to the minister that we might be in a better position on this bill had he made use of the resolution stage as it was intended to be used. The purpose of the resolution stage is to explain the nature of the legislation, to have debate and discussion as to the need for the legislation and hear suggestions from the minister concerning the contents of the bill with full disclosure of the details, giving an opportunity to revise the bill or withdraw it completely.

During the resolution stage of this bill a full debate was carried out. The minister was advised it was an unsatisfactory piece of legislation. He should have either made revisions in the bill before presenting it to us or withdraw it entirely. I should like to direct the attention of the house to what was done by Disraeli in 1867 when he was trying to introduce a contentious measure on reform in England. He did it by way of resolution. The resolution was debated vigorously and there was a great deal of opposition. As W. I. Jennings points out in his book on parliament, page 243, speaking of Disraeli he says:

> He withdrew the resolutions and gracefully covered his retreat by acknowledging a disposition on the part of the house to afford the ministerial proposals fair and candid consideration, to secure which was the main object of proceeding by resolution.

Well, that is exactly what we have done here.

Mr. Howe (Port Arthur): Did you vote for the resolution?

Mr. Churchill: I think perhaps I did, in the expectation—

Mr. Dickey: Perhaps you did?

Mr. Churchill: All right, I did, in the expectation—

Mr. Howe (Port Arthur): Go ahead, Disraeli.

Mr. Churchill: —in the expectation the minister would make some revisions in the bill in accordance with the advice tendered in the house. But the minister does not accept advice very readily.

Mr. Harris: How do you know whether or not he revised it?

Mr. Howe (Port Arthur): He does not know whether he is for it or against it or whether it is the same bill.

Mr. Churchill: There has been no change in the provisions of the bill.

Mr. Knowles: The minister should watch out that this does not degenerate into a debate.

Mr. Churchill: The minister told us the provisions of the bill have been in effect since November 15, and no change was made between the resolution stage and the introduction of the bill unless it was a minor change that has not been drawn to our attention. The minister shows the same disregard for parliament as in the past. He settled this matter on a television-radio program back in November.

Mr. Howe (Port Arthur): It has been said a good many times that I announced this financing by radio and television. The statement I made was made to the delegates of the Saskatchewan wheat pool. If they chose to have photographers there or radio there, that was their business, but I addressed a delegates meeting of the Saskatchewan wheat pool.

Mr. Churchill: It is too bad it was not televised and then perhaps the Manitoba farmers might have taken action with their shotguns.

Mr. Dickey: You are pretty proud of those Manitoba shotguns.

Mr. Churchill: I did not catch that last interruption, but at any rate the minister has

come here again asking parliament to be a rubber stamp for something he has done beforehand. There is a great deal of objection here, and I hope elsewhere, to treating parliament in that fashion.

Earlier today the hon. member for Rosthern (Mr. Tucker) dealt with the meaning of the term "cash advances", and he attempted to show—he did it very badly—some change had been made in our position and that we were now talking about cash payments instead of cash advances. We had a great play on words with regard to what you mean by an advance. I gather that one of the leading papers in western Canada got mixed up in this too, by inadvertence. I was sorry to hear the Minister of Justice (Mr. Garson) apparently had also become confused with regard to the word "advances". He is usually quite well informed on the meaning of words.

In order to show that there has been no change in our position from quite early, let me draw to your attention the fact that on October 26, before this house assembled and when the crisis in the wheat situation was evident, the Leader of the Opposition spoke on the matter and is reported in the Ottawa *Citizen* of that date as follows:

> He urged an immediate cash purchase plan by the wheat board of farm-stored western grain on a quota basis, making an initial payment thereon as if the wheat had been delivered to the elevators.

Later in this house the Leader of the Opposition used practically those very words and made it quite clear to everybody who was really interested in the matter that a payment was what was intended by the use of the word "advance", and it was clear to everyone except those who apparently did not wish to understand. He used such words as these, as reported at page 41 of *Hansard*:

> Provision should be made for immediate cash advances in the ordinary way on the quota book by the wheat board for farm-stored grain on a quota basis, making an initial payment thereon as if the wheat had been delivered to the elevator.

And then, to make it doubly clear, he drew the attention of the house to that once again on Friday, January 27. There has been no change in the position of this party with regard to cash advances being intended to be a payment on grain, and being intended to be paid for by the delivery of that grain when it could be called forward. At the same time the Leader of the Opposition very properly urged in October, or thereabouts, that a special session be called. He urged earlier that a special session should be called to deal with the problem.

The foreword to the bill that has been placed before us reads:

> An act to provide for short-term credit to grain producers in the prairie provinces to meet temporary financial difficulties arising from inability to deliver all their grain.

I looked at this with some amazement, particularly the last phrase: "inability to deliver all their grain". The grain producers are apparently unable to deliver all their grain. They are ready, willing and able to do it. The fault lies elsewhere. The latter phrase of the bill should read: "arising from the failure of the policy of the government in respect of promoting the sale of wheat and in its failure to provide elevator space and box cars for delivery." It is not the fault of the grain producers; it is not their inablity to deliver their produce to the elevator.

The factors that have made this bill unsatisfactory are perfectly clear. They deserve full consideration. In order to indicate the unsatisfactory nature of this particular legislation hon. members who have spoken have dealt with all aspects of agriculture in relation to the wheat-growing problem and the marketing of wheat, and there is some sense to that type of approach, because unless you see this particular problem in relation to the whole it might not be easy to understand the opposition to this measure. This is an emergency measure. It apparently is filling a need only for a small number of grain producers. It is clear from what is expected or asked for by those who are spending their lives in the production of grain on the western plains. The situation has been drawn to our attention, but there is no harm in having a look at it again.

The situation of western agriculture in relation to agriculture as a whole is much worse from the standpoint of over-all loss of farm income in that part of the country than anywhere else in Canada, and we recognize that agriculture throughout Canada is in a difficult situation. The figures in the returns to the farm people of Manitoba, Saskatchewan and Alberta amount to a decrease of $404 million for 1954, and the situation is certainly not improving. When you are dealing with figures of that magnitude, surely it is an emergency that deserves consideration from Canada as a whole. That is a serious loss of income to western Canada, and indirectly to other parts of Canada.

The population of western Canada is rapidly approaching the 3 million mark. We are closely linked with all the provinces through agriculture. It was agriculture that brought about the development of the west and although in recent years we are having

the good fortune to discover oil and to develop mining industries and to develop and use our forest products, nevertheless agriculture has been and still is basic to the welfare of western Canada, and affects a very large proportion of Canada's population. Then we all know that the income resulting from the sale of our wheat has certainly been very beneficial to those engaged in industry in other parts of Canada. Of course it has affected the whole transportation system of our country, which in western Canada was certainly developed on the basis of the export of wheat, and it has certainly affected the Atlantic and Pacific ports that handle our grain, and generally it has been of great importance to the whole economy of Canada.

Now, when you consider the decrease in the income of western Canada, because of the inability of the government to market our wheat and to pay farmers for what they have produced, you can see that the effect is widespread, and that Bill No. 82 does not deal with the problem except in a very minor way. It will not put into the hands of the farmers of western Canada the cash they need at the present time to pay their general expenses and to make preparations and provisions for the new crop year of 1956, which is fairly close at hand.

We have been informed that the loans are still limited in principal and in quantity, and that means of course that the shortage of cash still exists. It is incumbent upon all of us to speak out on this measure not simply because we may come from western Canada but because of our interest in the development of agriculture as a whole in this country. If western agriculture suffers very severely, as it is suffering at the present time, the effect is bound to be felt elsewhere. It may be a delayed effect, but it is a type of creeping paralysis which will gradually affect other parts of the country.

The proposal has been made that this bill, instead of being proceeded with forthwith, be referred to the agriculture committee for study. There is sense to that suggestion, because here in the house the minister has brushed aside some of the suggestions that have been made; whereas in committee they might be more carefully considered, and the whole implication of this bill and its effect on western agriculture given the closest attention.

The committee might well relate the wheat problem to our export markets and look ahead a bit in regard to our future policy in respect of wheat. It was just by chance that the short crop of 1954 staved off this problem for a year. That short crop aided the government in avoiding the issue with regard to the problem of disposing of our wheat. Well, it caught up to them in 1955 because the crop was good and now with the carry-over that faces us for 1956 the problem is going to be with us throughout the fall of 1956 and 1957. This bill may be extended, of course, to cover 1957 but as it is ineffective right now it will be ineffective in 1957 as well.

Throughout this debate and despite meetings of farm organizations and representations by letter and by telegram to the members of the government, absolutely no regard seems to have been paid to the opinion of the western farmer. Perhaps I should not put it that broadly but certainly not sufficient regard has been paid to that opinion. It has been brushed aside. That strikes me as peculiar because there are no sounder people than those engaged in agriculture in the western provinces. As all farmers are, they are sensible people who look at their problems pretty calmly and deliberately and they discuss and debate before they put forward their proposals. I have had an association with western farmers for over 50 years and I rank them as among the most sensible portion of our population.

Mr. MacDougall: You are older than you look!

Mr. Churchill: They are constantly engaged in a study of the problems that affect them and they do it in a most sensible fashion. They hold meetings in the rural school house or the local community hall. They have farm organizations, farm papers and they listen to the program "Farm Forum" which has been running very effectively for several years. They meet and discuss matters and pass resolutions and then get in touch with members of parliament or with the government.

Year after year we meet farm delegations in Ottawa who present their cases very sensibly. They are not radicals trying to change everything overnight; they reason calmly and coolly and present logical arguments. And yet, in the face of their suggestions over the last several months, the minister has refused to consider the problem as the farmer of western Canada sees it. He would lead us to believe that the farmers are wrong and that we on this side of the house are wrong and that he alone is right. I think that is not the case.

I think the proposal for cash advances on farm-stored grain, or if you prefer, cash payment on farm-stored grain, has been a very sensible approach to this problem. The farmer without cash is being carried along by his friend the village or town storekeeper. It is an intolerable situation, really, for a man who has produced a very valuable product,

Canada's wheat, which has for so many years been ranked as the most important wheat in the world. The man who produces wealth of that nature and adds to the gross national product is now told to wait for the government to dispose of his grain, to go and borrow money from a bank and pay 5 per cent interest on it and just hope for the best. I do not wonder at all that the farmers have been indignant about this method of dealing with their problem because it has struck close to home. They are the ones who know exactly what they need in order to manage from month to month and in order to pay their harvesting costs during the fall and to pay the normal costs of the winter and to get ready for spring. They naturally need cash and they have the security in this first-class wheat, which in this last crop year was of a higher quality than in some other years. On that basis surely the farmer has been right in asking for a method different from the one put forward by the minister.

Earlier in this debate I was disappointed to hear the minister suggest that perhaps the security was not good enough and that the farmers might dispose of their grain in some other way and would not be able to meet their obligations. That is not the western farmer as I have known him. The western farmer is prepared to meet his obligations on all occasions. The percentage of farmers who would not meet their responsibilities would not be any greater than in any other group; it would perhaps be one-half of one per cent. No, the farmer can be trusted and in this instance he should have been trusted and his advice should have been taken.

Why has there been this neglect of western Canada? What has happened to the government of this country that it can brush aside the expression of opinion from that great section of our country, the three prairie provinces with their large, active and thriving population, that section of Canada that has produced a great deal of wealth for this nation?

The representation of western Canada in the House of Commons, as we know, is divided. It shows the interest and activity and political alertness of western Canadians. It reveals that they do not simply follow along behind the government of the day. They are familiar with protesting when things are not going right. They have protested in the past, and very effectively, but at this time with all that experience behind us surely we can see that the voice of the western farmer, expressed through his normal farm organizations, should be heard and listened to attentively by this government and the proposals of the western farmer for cash advances, or for cash payments, which is the same thing, on farm-stored grain should have been accepted by this government long ere this. This bill should have been withdrawn between resolution stage and its presentation to this house, and it could now be withdrawn by the minister and altered to meet the circumstances of this particular period.

I think the government is neglecting western Canada and that this minister who caused us so much trouble last year is adopting the same attitude again this year. He wants to force this through parliament no matter how many sound organizations may be against putting it forward at this time. And that is the type of treatment of parliament against which we protest.

I urge the minister now—it is not too late—to withdraw the bill and bring in something really worth while.

Some hon. Members: Hear, hear.

Mr. Churchill: The minister could withdraw this bill and amend it in such a way that it would contain both methods if necessary. It is not beyond the capabilities of his staff to work out something which would accomplish both things. If there are some people who want a loan on farm-stored grain at 5 per cent and who can see no other way of managing that could be provided for if necessary, and if there are others who think it is far better to have a cash payment made on farm-stored grain with good security such as they have to offer, why not provide for that, too. Why give us this, which is not even half a loaf.

Mr. Harkness: It is an abortion.

Mr. Churchill: It is about one-sixth of a loaf made out of the lowest grade of wheat that could possibly be produced. I urge the minister for once in his life before he leaves us, —I shall regret to see him go—to accept advice from the House of Commons.

Right Hon. C. D. Howe (Minister of Trade and Commerce): Mr. Speaker, I intend to speak very briefly, as I am not going to join in the filibuster on this bill. However, I should like to say a few words on the amendment now before us. The hon. member for Winnipeg South Centre (Mr. Churchill) has given us some splendid advice on parliamentary procedure. He says to withdraw the bill and then introduce a new bill at the same session dealing with the same subject. Unfortunately the rules do not permit that. We cannot introduce a bill dealing with the same subject as one which has already been introduced at the same session. Surely my hon. friend knows that.

An hon. Member: What about unanimous consent?

Mr. Howe (Port Arthur): He also knows that there can be no unanimous consent. He knows also that this amendment which has been introduced would kill the bill. The amendment is that the bill be not read a second time. At that stage it would go off the order paper and you could do anything you liked with it. You could refer it to a committee or anything else, but you could not introduce it again at this session.

This has been discussed in the house many times and rulings have been given. I thought everyone was quite aware of the fact that the procedure I have indicated is the correct parliamentary practice. I am not surprised that hon. members of the Conservative opposition last week voted favourably on the resolution while this week they are prepared to vote to kill the bill. That is not the quickest turn-around I have ever seen. I remember when the hon. member for Greenwood (Mr. Macdonnell) voted "aye" on the second reading of a bill and "nay" on the third reading of the same bill in the same evening. I am sure he remembers that.

We all know that the Conservative party has no policy. They join in any hullabaloo that comes along. Last week they voted against the C.C.F. while this week they have joined them. Next week it may be the Social Credit group that will be the victims, but I hope not for their sakes.

There is another feature to this amendment. The amendment provides that this bill be not read a second time. This is a government measure and if the bill is not read a second time the government is defeated. I can assure hon. members that should that happen the house would be dissolved immediately and we would have an election.

Some hon. Members: Oh, oh.

Mr. Howe (Port Arthur): If you want an election now, you know how to vote on this measure.

Mr. Rowe: You would never come back under those circumstances.

Mr. Howe (Port Arthur): I like to hear these people opposite talk about the prairies. They know where the prairies are on the map but they do not know much about them otherwise.

Mr. Fleming: This is another "toe the line" speech you are making.

Mr. Howe (Port Arthur): Anyway that would be the result.

An hon. Member: Whom do you think you are threatening?

Mr. Howe (Port Arthur): This is not only a motion to kill the bill, it is a motion of want of confidence in the government; but we do not worry too much about that. That is the kind of debate we are carrying on this evening. If you want to vote against the bill, why, vote against the bill. I do not know why you have to again listen to the speeches we have just heard. We have already heard the same men making the same speeches. Perhaps they prepared their speeches before they came down and they were the only speeches they had. I do not mind listening to them but unfortunately I have other things to do. I really begrudge the time. Her Majesty pays me for doing something useful and I do not think I am earning my pay when I have to sit here in the house and listen to the kind of blather we have been having on this particular bill.

The history of the bill is simply this. There was a great meeting at Saskatoon and from that meeting came a document. That document was brought to Ottawa by a large delegation, including the leaders of all the farm organizations on the prairies. They presented the document to the cabinet, and impressed upon us the need of speed. They said that the small farmer needed cash immediately.

The document suggested three ways of getting cash to him. One was through the banks, another was to set up a special organization for the purpose of handling direct government grants, and the third was advances through the wheat board. The document even mentioned the rate of interest that should be charged. It urged that there be no interest, but said that if there was to be interest it be not more than 3½ per cent. That was the document given to us.

The main problem was speed; the money must be put into the hands of the farmers without delay. We examined the situation as a government and we found that the quickest way to get it out was to use the lending organizations already in existence. We made a special arrangement with the banks and on the undertaking by the Minister of Finance (Mr. Harris) that this legislation would be introduced at the opening of this session, the banks proceeded to make loans.

That is the history of this legislation. We did exactly what we were asked to do. The men who made the request were the leaders of the farm organizations. Whether it solves all the problems of the farmers I do not know, but it certainly solves the problem we were asked to solve on that particular date.

With those few remarks I will continue to sit here and watch the Tories reverse themselves as usual. Last week they voted for

the resolution and this week they will vote to kill the bill. That will be very amusing. This being an evening I cannot do much else, so go ahead.

Mr. Harkness: Could I ask the right hon. minister a question?

Some hon. Members: No.

Mr. Howe (Port Arthur): Do you know a question?

Mr. Harkness: In view of the fact that he threatened the house only last week or the week before that he would put this thing to the end of the order paper and it would never come up and therefore the western farmer would suffer if we attempted to talk about this bill—

Mr. Howe (Port Arthur): If the hon. member had not put a twist in it that might have been a reasonable question. When he says that it would go to the foot of the government paper and therefore it would never come up, that of course is along the lines of the bunkum he has been distributing in this house during this particular debate. I said that I was not going to allow a filibuster to disturb the orderly proceedings of the house. If there must be a filibuster, we would put it over to the end of the session when we would have plenty of time. That was the offer I made and it was not accepted.

Mr. Harkness: May I ask that the minister answer the question instead of just talking.

Mr. G. H. Castleden (Yorkton): Mr. Speaker, I am sure that the house is pleased to have a statement from the minister, particularly his statement that he felt that the legislation which they introduced last fall was a solution to the immediate problem. The minister refers to the discussion today as being a filibuster. That is not the first time that he has referred to a debate as being a filibuster. If he wants to have a filibuster, we will show him what a filibuster is, and that will completely block the legislation.

What we are doing here is expressing emphatically our opposition to the policy of this government to deal with what is a very critical situation, the cash shortage on the prairie provinces. The minister's statement that this is a solution to that problem shows how completely he misunderstands the problem and how uninformed he is as to the real situation.

It is the same kind of thing we have had in this house before during this session. We have heard talk about the great prosperity which Canada is enjoying from east to west, but then it was said that there are a few people who are not enjoying this great prosperity to the full. One portion of Canada which is not enjoying fully this prosperity is the three prairie provinces.

That area of Canada is suffering an economic recession, because the farmers are unable to deliver their grain because of the policies of this government and its failure to sell wheat. Then when wheat was sold it has failed to fill the space in the elevators which was made available. They tell us that the box cars are away, that the transport controller is not available. The result is that the farmers are unable to get any cash from the delivery of grain, which is the basis of the economy in the west.

I shall use the figures placed on the record, and left on the record by the Minister of Agriculture last Friday afternoon. According to those figures of net farm income in the prairie provinces, whereas the net farm income in the maritimes dropped by about 19 per cent from 1952 to 1954, in the province of Quebec about three per cent, and in Ontario about 15 per cent, in Manitoba the drop was 54 per cent in net cash income, in Alberta it was 50 per cent, and in the province of Saskatchewan, where most of this objection is coming from, it was 77 per cent.

If the minister realized what that situation means to those people, he would not bring in this kind of legislation which forces the people who are put in this position by the policies of the government, to go to the banks and borrow money if they are able. There are certain very stringent regulations, and the bank managers have apparently been instructed to be very careful about their loaning, and the deductions which must be taken off any loan for which they may qualify in the way of taxation arrears, lien notes and other indebtedness, including any cash that they may have obtained from a small delivery of grain which they may have had. It is all very well for the minister, in talking about this debate, to refer to what he hears from this side of the house as "blather".

An hon. Member: It is a good Irish word.

Mr. Castleden: Yes, it is a good Irish word. I suggest to him that what some hon. members say, such as the hon. member for Rosthern this afternoon, might be called blather by us. He was sent here by the people of Rosthern to represent them. He can make his charges that we are deliberately misrepresenting the case and make such statements as that, but surely the evidence is before the house, the evidence of those people who know the situation, when the wheat pools and farm organizations, the

people involved from the three western provinces, come down here and place the facts before the government.

The Minister of Trade and Commerce has the bureau of statistics under his department and he knows the cash situation is serious. We are looking for a solution and we are trying to persuade this government there is something wrong. If we are repeating ourselves, it is only in an attempt to persuade the members opposite and the people of Canada that there is a serious situation and that this legislation does not solve it. That is why we are emphatic in our opposition.

We are opposed to this measure because we think it is wrong in principle. These people are forced into the serious economic condition they are in on the western prairies today by government policy. Apparently their crime is that they have produced too much and have had a good crop. Surely, when they have produced the crop—and they have difficulty in some years in doing so—they should be entitled to deliver it. They are asking the government to allow them to deliver it. Surely the government is responsible for their condition and should undertake the responsibility for easing the situation, by allowing them to have the same cash advance—in fact, it is only half of the cash advance—which the same farmers would have if the government had provided the means whereby they could have delivered the grain. That grain, instead of being in store in the elevators, will still be on the farm. It will still be entered in the farm's permit book and it will be held against any future deliveries. That the farmer should be burdened with another loan, with another note against his personal property and all his production and a note to the bank or to the mortgage company, is wrong. That is why the opposition is very emphatic. I know we are a minority group in this house, but the only way we have of letting the government know that the people out there are opposed to this legislation is by constantly repeating it and letting the government know that this is an injustice. It is our duty to oppose it and we intend to continue doing so.

I have always admired the way the hon. member for Rosthern tackles an impossible problem. We have had another great demonstration of that from him again this afternoon. He tried to persuade this house that because the Minister of Agriculture, from the province of Saskatchewan, was at a conference in Saskatoon where efforts were made to get the government to meet the situation adequately, he supported the conference decision to ask for advances and, because he supported that, therefore he supported bank loans. That is an utterly ridiculous stand for any person to take. The people just do not accept it. I maintain that every one of the members who came down here to interview the cabinet and told them that they wanted cash advances for grain on the farm through the wheat board, was certainly very disgusted when they found that all they got was an arrangement through the banks, whereby a very small percentage of the people who would need it were going to be allowed to borrow money and have a lien on their backs and pay interest—another toll to the banks.

What is this government doing about it? They are being very beneficent in their attitude. They say, "We are just going to guarantee that the banks will not lose any money. The banks will have to collect the loan when the grain is delivered. The banks will get the interest. We will see that the banks do not lose anything." I do not suppose this will cost the government anything. The last time they had similar legislation on the books, in 1952, their losses were almost negligible.

Because it fails completely to do the job that is needed desperately, we oppose it.

We also feel that perhaps Canada can afford to do something for these people. The government has to accept the responsibility for their condition and cannot get out of it. If the rest of Canada is enjoying tremendous prosperity, then I say that to condemn the prairie producers to this kind of condition, at a time like this when the remedy is so easy, is to discriminate against the people in that part of the country. That is the reason for the opposition, not only from members on this side of the house but from the people of that part of the country, in the representations that come to this government from the daily press and from the boards of trade and certainly, emphatically, in the representations from the farmers. I believe that the cabinet is going to receive another delegation from the interprovincial farm union, probably this week. I would suggest to them that again they look to the representations that come from that interprovincial farm union with regard to this legislation and see whether or not the legislation which is being brought into this house at this time is any kind of solution to the problem. The unanimous decisions of the mass protest meetings held across the country show that there is a great deal of dissatisfaction, and it is emphatic.

This Bill No. 82, now before us for second reading, is being discussed in principle. I have outlined the principles under which it operates. It is merely a bank loan. It is a system under which the farmer has to go to

the banks, and many farmers find it very difficult to get to the banks in our part of the country. I believe there are approximately 1,200 delivery points where the farmers haul their grain to the elevators, but there are less than 200 places, or one-sixth the number of delivery points, where there are any banks or lending institutions of the type that are allowed to lend money under this legislation. There are credit unions which the farmers use but the credit unions are told that their organization apparently is not suitable to carry on this kind of lending. They are not going to be included among those who can make loans which the government will guarantee.

It is wrong in principle to ask people, who find themselves placed in an uneconomic position by the actions of the government, to burden themselves with a further load of debt, but it seems very difficult to put that basic principle across in the house. We have repeated it and we have still to find anyone on the government side of the house who will say that the principle is sound and right. I will vote for the amendment and I want to compliment the hon. member for Winnipeg South Centre (Mr. Churchill) on his attitude with respect to the bill. It is further evidence that people from the prairie provinces are disturbed about it. They recognize that it is wrong. They recognize that to support it is to support something which is wrong in principle and they refuse to do that.

Among the things that have disturbed western people as far as this measure is concerned is the fact that in the past they have had their hopes raised by statements made by ministers in the house. I can remember sitting here on several occasions last year, when the Minister of Trade and Commerce (Mr. Howe) told us that the farmers would be able to deliver all the grain they had in store prior to the 1955 crop and that before the 1955 crop moved their bins would be empty. He raised their hopes but their hopes proved to be groundless. Some farmers have been allowed to deliver their eight bushel quota but many have not been able to do even that.

The minister referred to this measure as being a solution for all the problems of the farmer. It is very far from a solution so far as they are concerned. As a matter of fact, we have stressed for years that there is something basically wrong with an economic system under which the farmer has to operate with rising costs and decreasing returns. Even with the payments that have been made on the farmers' grain their income has been kept at a low level and agriculture is facing a very serious economic situation not only in western Canada but throughout the whole country. The extra burden placed on the western farmer by this legislation is really a slap in his face. He sees that, not only is he facing bankruptcy with a continuation of the policies now in effect, but also that even with the delivery of his grain he is faced with the problem of decreased income from his farm and constantly increasing costs of operation.

The protests from the farmers are spontaneous. For the Minister of Trade and Commerce to try to mislead the house by saying that the demand for cash advances through the wheat board comes from the businessmen and from people wishing to destroy the wheat board is completely and utterly unfounded. The rank and file of the farmers have expressed their opposition through the only means they have, and that is where the opposition comes from. The dissatisfaction of the farmers with conditions is completely justified. The farmer rejects the offer of a further loan as being a rebuke to the western grain grower. He rejects the offer of the government to guarantee loans as an insult to his intelligence. He is trying to make the government appreciate that there is a real problem here that requires solution. We are opposed to the measure because it is impractical. We are opposed to it because it is completely ineffective in solving the problem, and the red tape involved in trying to get a loan is such that it will discourage the farmer in almost every instance.

Among the prairie people there is a sort of ingrown distrust of loans, notes, mortgages and the like. They have bitter memories of the results of going into debt when cash income is reduced and they are unable to cope with the situation. Thousands of farmers lost everything they had in the thirties when they were affected by the same situation, and it was a lesson they have never forgotten. They are opposed to mortgages and they dislike going into debt with the banks. They have had experience before with loans and they do not want any more. They also know that when in the past provincial governments attempted to save the farmer from foreclosure and the loss of everything he owned by passing legislation to protect the farmer and his wife and family on the home quarter, the Supreme Court of Canada declared such legislation was ultra vires of the provinces.

They find that in every case the money interests are protected and the protection of the farmer, his wife, his family and home is secondary. Apparently justice is always given first to the banker, to the sacred rights of money, capital and interest. The preference is always given to the money lender and the wife, the family and the home come second.

Court conflicts which have always ended in protecting the sacred rights of capital have made the people of the west very much opposed to any idea of loans and debt. I have known cases where the bread earner of the family lost his life through an accident and the wife and children were forcibly evicted on the road allowance in order to satisfy the rights of capital and the interest that had to be paid. Surely it is time that humanity came first and the rights of capital second.

The producer also knows that borrowing money does not solve any problem for him. It is no solution. It merely adds to his burden. Apparently the government is grimly determined not to consider the proposal for cash advances made by our party and the people from the prairies. There are almost 4,000 elevator agents in Saskatchewan as compared with less than 200 bank managers and if cash advances were made through the wheat board for grain properly stored on the farm the elevator agent, who has the producer's permit book, knows him personally and deals with him every year, could easily go to the farm, inspect the grain and see that is it properly stored and graded. If the government should require it, he could put a seal on it.

Let the farmer sign a document that he will not sell it except through his permit book, enter the advance in the permit book, and I can assure the government that they will be perfectly safe. Surely that is a fair and equitable method and a practical means of solving the problem. The bank loan legislation is absolutely useless in meeting the situation. We reject it and the people reject it. The determination of the government to force it through is going to be met by equal determination on the part of those of us who represent these people and are sent here to speak for them.

Mr. Studer: You only represent the socialists.

Mr. Castleden: I have listened to your blather for a long time.

Mr. Studer: You represent no one else, just the socialists.

Mr. Castleden: I am very pleased to hear you use the word "socialist".

Mr. Studer: You represent the socialists and no other person.

Mr. Castleden: It is very nice for you to talk that way. We are very pleased to hear you say so. You had better go out and take a look at what is going on in your own area.

Mr. Studer: Are you not a socialist?

Mr. Castleden: We will be pleased to talk after this is over.

Mr. Studer: Are you not a socialist?

Mr. Castleden: I am very proud of the record of the government of Saskatchewan. Comparing what it has done with what your government did, we will be standing a very long time after you have gone.

Mr. Studer: You represent only the socialists.

Mr. Castleden: I will be glad to hear you stand up and give your little talk after.

Mr. Deputy Speaker: Order.

Mr. Castleden: The only trouble with the hon. member is that sometimes his mind stops running and he lets his mouth go on talking.

Mr. Studer: You are a socialist ventriloquist.

Mr. Castleden: When the vote comes, stand up and be counted and we will be glad to hear you.

Mr. Studer: You are a socialist—

Mr. Castleden: Is this a point of order?

Mr. Deputy Speaker: Order. I would ask hon. members not to interrupt the hon. member who has the floor without his consent.

Mr. Castleden: I hope the hon. member for Swift Current-Maple Creek will bow to your decision.

To sum up the situation, may I say that our opposition to this is based on opposition to the principle, which is wrong and unjust. It is completely useless as a substitute for something fair, practical and equitable which we have proposed that will do the job. We are just as determined to oppose it all the way through the house as the Minister of Trade and Commerce apparently is determined to ram it through whether or not the people like it.

Mr. A. W. A. White (Waterloo South): I had not intended to speak on this bill, but after listening to opposition members, particularly the C.C.F. group, continually criticizing the government over this legislation which is intended to help the western wheat farmer, I felt compelled to say a few words.

Mr. Castleden: Without any notes.

Mr. Gauthier (Portneuf): Never mind; you had notes.

Mr. Bennett: You just read yours.

Mr. White (Waterloo South): I should like to make it clear at the start that I do not believe the speakers from the opposition benches truly represent the thinking of the majority of wheat farmers in western Canada. The government proposes by this legislation

to guarantee bank loans to wheat producers in western Canada on farm-stored grain at 5 per cent interest with a ceiling of $1,500 on the loan. A little later we will also be discussing another bill which proposes that the government pay interest and storage charges on wheat held by the wheat board over the normal carry-over level. It is estimated this will cost the government $30 million.

While at the moment we are discussing the bill in connection with bank loans, yet I feel that both bills must be taken into consideration in order to fully appreciate the assistance being provided by the government to meet the emergency situation faced by western wheat producers. The position taken by the C.C.F. group and other opposition members is that the guaranteeing of bank loans up to $1,500 is not sufficient. As an alternative they suggest the wheat board should make cash advances on farm-stored grain. Some even say that these cash advances should be made without any interest being charged. I am afraid I cannot agree with hon. members opposite.

In the first place, the wheat board was established as a marketing agency and not a lending institution. The wheat board has neither the money nor the administration facilities to carry on such an extensive lending program. Even though the wheat board could borrow the necessary money at a lower interest rate than the farmers could get on the same loan from the bank, the administrative costs would be far greater. The difference in the interest rates would not make up the cost of administration. Neither can I subscribe to any suggestion that the rest of Canada should pay the interest charges on these loans on farm-stored grain.

When a manufacturer over-produces in order to provide employment for his workers nobody underwrites the interest charges on his bank loans or provides him with interest-free capital. When an industrial worker is out of work and unable to meet his monthly payments on his home in which he has invested his life savings, he has to borrow money wherever he can at whatever interest rate is necessary in order to meet his obligations and save his equity and his home.

What is the present situation so far as the western wheat producer is concerned? During the past four years, with favourable climatic conditions, there have been bumper crops of wheat. The wheat board has exported more wheat in each of those years than they did in any of the post-war crop years from 1947 to 1951. This is also true for the crop year 1954-55. In spite of this there is still a considerable amount of wheat in storage on farms and in elevators. But according to the dominion bureau of statistics daily bulletin dated February 7 of this year, there is very little change in the visible supplies of wheat as compared with January 25 a year ago. The bureau's figures indicate that the visible supplies of Canadian wheat as of that date total 359,778,000 bushels as against 357,151,000 the year previous.

The position of the western wheat producer has not worsened, therefore, to any great extent in the past year. I appreciate the fact that he needs some help at the moment, and I intend to support this bill, which will enable wheat farmers who need financial assistance to get bank loans. I also intend to support the other bill when it comes before the house. This bill would allow the government to pay interest and storage charges on wheat held by the wheat board over and above the normal carry-over level. I intend to support these bills because I recognize it is impossible for Canada to maintain its present high level of prosperity unless all sections of the economy share in that prosperity or are assisted in some way.

The riding of Waterloo South, which I have the honour to represent in this house, has within its boundaries a number of communities which are highly industrialized, including the adjoining municipalities of Galt and Preston which very shortly it is expected will make the second twin cities of Waterloo county. Those industrial communities are surrounded by fertile and rich farmlands which support a substantial dairy industry. Indeed, some of the finest dairy herds in Canada are to be found in Waterloo county. The dairy farmers in my riding appreciate the fact that the government saw fit to retain—

Mr. McCullough (Moose Mountain): Mr. Speaker—

Some hon. Members: Sit down.

Mr. McCullough (Moose Mountain): On a point of order, Mr. Speaker—

The Acting Speaker (Mr. Applewhaite): The hon. member for Moose Mountain is rising on a point of order.

Mr. McCullough (Moose Mountain): My point of order is simply this. Before the dinner recess the Speaker raised a point of order because I was not confining my remarks strictly to the matter under discussion. I notice that the hon. member is transgressing the rule of the house that speeches must be strictly relevant to the matter under discussion.

The Acting Speaker (Mr. Applewhaite): So far as I am concerned—and I have heard every word of the speech of the hon. member who has the floor—he has not strayed

nearly as far from the subject matter under discussion as have a great many other speakers on all sides of the house. I assume—and I cannot tell whether this assumption is right for a minute or two—that his reference to the industrial communities in his own riding was going to be tied up with the subject matter of this bill as have been references to ports of export and overseas markets, and so forth. The hon. member will continue.

Mr. White (Waterloo South): As I was saying, Mr. Speaker, the dairy farmers in my riding appreciate the fact that the government saw fit to retain the 58 cent floor price on butter, but I can assure you, Mr. Speaker, that they do not appreciate the attitude of the socialist government in Saskatchewan which refused to buy any butter for the provincial institutions of that agricultural province when the federal government offered it to them at a reduction of 21 cents a pound because—and the reason they refused—

The Acting Speaker (Mr. Applewhaite): Order. I think I was right in the first place when I indicated that up to that point the hon. member had not got too far afield; but I am sure I can have no hesitation in indicating that in my opinion the attitude of any provincial government in the handling of butter can hardly be tied in with bank loans to farmers on farm-stored grain. I will admit that there may be a distant connection but I suggest to the hon. member it is a little too far distant for this debate.

Mr. White (Waterloo South): I was going on to say that is why I and others of this house are not greatly impressed by the arguments of the C.C.F. members in this house who belong to the same socialist party that refused to buy any butter at the reduced rate because it was going to cost that government a mere $20,000 a year.

Look at the irony of the situation, when the C.C.F. members in this house representing the province of Saskatchewan, which produces more wheat than the other two prairie provinces together, are not satisfied when this government is willing to spend $30 million to help the western wheat farmers and guarantee bank loans to them as well.

The leader of the C.C.F. group criticized the Minister of Trade and Commerce (Mr. Howe) for trying to get the resolution passed and the bill before the house after three days of debate which, in my opinion, offered ample opportunity for members to present their views to this house. I did not think that the leader of the C.C.F. group was being very consistent when he took this stand because I can well remember that when the former minister of finance advised the house that he was instructing the tariff board to hold a public hearing on the textile industry in Canada the leader of the C.C.F. group, on a nation-wide broadcast, without even waiting for the tariff board hearing to take place, without waiting for any legislation to be brought to this house, without waiting to hear any debate by hon. members, committed his party to oppose any attempt by the government to increase the preferential tariff on English textiles coming into this country.

I should like to point out to hon. members that in order to sell increased quantities of wheat which has been produced in western Canada we have been forced to accept ever-increasing quantities of manufactured goods from low-wage countries, which is seriously crippling our own domestic industries and putting many of our industrial workers out of work. Machine tools from Germany and the United Kingdom, woollens and worsteds from the United Kingdom, textiles from Japan and rubber footwear from Hong Kong, have been accepted in order to maintain our sales of wheat to those countries.

It is useless for hon. members opposite, as the hon. member for Assiniboia (Mr. Argue) did a while ago, to state, "Get rid of our wheat and put the money in the hands of our western farmers and we shall cure the unemployment situation in the east." The western farmer is no different from anyone else. If he can buy imported goods cheaper than he can buy Canadian-made goods he is going to buy them.

The more I listen to the C.C.F. representatives from western Canada the more I am convinced that they are not concerned with the welfare of the western wheat farmers as much as they are with political expediency.

If hon. members in this house from other parts of Canada were to adopt the same narrow and shortsighted policy adopted by the C.C.F. government in Saskatchewan in regard to butter none of us would support this legislation, but fortunately we are more broad-minded than that. In conclusion, I would urge the representatives from western Canada to remember that wheat is not the only economic problem in this great country, and to be a little more sympathetic to and have a little more understanding of the problems of other parts of Canada.

Mr. Macdonnell: On a question of privilege, Mr. Speaker; in the rather free-wheeling and rambling speech that the Minister of Trade and Commerce made a little while ago, rather to my surprise I heard him tell the house that on a certain occasion I had voted one way on the second reading and another way on the

third reading of a bill. I like to consider myself responsible for my actions. I believe it is an entire fiction of the minister's imagination. I believe that this is an entire figment of the minister's imagination and I would like him either to withdraw it or to give me the reference.

Mr. Howe (Port Arthur): The reference goes back a good many years. I will be pleased to bring it along and give it to my hon. friend. I remember the debate well but I do not remember what year it was in.

Mr. Macdonnell: Oh well, I will clear it up. Is the minister thinking about a certain occasion on which through inadvertence I voted in a way I did not intend to vote?

Some hon. Members: Hear, hear.

Mr. Macdonnell: I will tell him about that and I will tell him where to find it. If you will look at April 1, 1947, you will find it. I am not ashamed of that.

An hon. Member: April Fool's day.

Mr. Macdonnell: That is right. The former member for Fraser Valley said "new Conservative policy, vote both ways", but it has nothing to do with what the minister said tonight and I would ask him to withdraw it as I would prefer not to have anyone think that I voted on second reading in one way and in a different way on third reading. The minister must admit I have been very generous in telling him what was the true version of what he garbled.

Mr. Howe (Port Arthur): Well, Mr. Speaker, I had planned to look at *Hansard* and see if the hon. member's intentions were registered there when the vote was registered. However, if the hon. member feels sensitive about it, and since it traverses a period a long time ago when he and I were young, I will gladly withdraw it.

Hon. W. Earl Rowe (Dufferin-Simcoe): Mr. Speaker, I have listened with keen interest to the hon. member for Waterloo South (Mr. White), who has just concluded a speech very close to the issue before the house. I could not help but think as a farmer in Ontario not far from his district that there is a close relationship between the sale of agricultural products and the substantial and stable development of industrial enterprises. As I listened to him I also could not help but think of another occasion when I listened to the hon. member for Waterloo North (Mr. Schneider). I could hear those gentlemen echoing the high protection policy surrounded by so many free traders. They sounded like infants crying in the night, crying for the light, with nothing but a cry to express their weakness. How could these gentlemen parade as free traders at election time and as high protectionists in this house?

An hon. Member: They got applause, too.

Mr. Rowe: There is not much applause for them from these dusty old free traders who have been in power so long. It is close to the issue because if we had a sound fiscal policy in Canada we would sell more agricultural products. As the hon. member knows so well, it is true; but he did not say that when a conservative protection candidate was running against him. If they were to go back home and sing the songs they sing here they would never return.

I also listened to the Minister of Trade and Commerce tonight as I have listened to him on many occasions in parliament, but never before have I seen a greater spectacle of contempt for parliament and smug satisfaction than when I listened to the lectures of the hon. gentleman as he endeavoured to tell us what we should say and when we should say it. The government has been in power so long, Mr. Speaker, that everything that is opposed to this government seems to them to be a filibuster. Surely it is not the Mardi Gras party which has made them feel like that. They have been growing towards this during the last 20 years. That is why the farmers of Canada are disturbed today, not only our western farmers, about whom we heard so much, but all farmers.

I have listened to the hon. gentleman talk about western farmers at great length. I have listened to the Minister of Justice (Mr. Garson) so much that I have stopped listening to him since the Minnedosa meeting, and now he is listening to them. We are tired, sick and sore of listening. The government has left the farmer as a forgotten man in Canada not only in the west but in the east.

One of the big troubles in relation to western farmers, as I have observed the situation here for the last 30 years, is that the government fails to see the forest for the trees. No one has changed and turned more political somersaults than the Minister of Agriculture (Mr. Gardiner) in those years. Every time they have a farmers' meeting, a conference of the federation of agriculture, a meeting of the union of farmers of western Canada, the dairymen's association of Ontario or a meeting of the hog producers, he changes policy.

The question arises, who is leading whom? Why, Mr. Speaker, the hon. gentleman tries to tell us from time to time what the western farmers think. On the other hand, you would think, judging from the smug complacency of the Minister of Finance (Mr. Harris) and the Minister of Trade and Commerce, that they

were leading somebody. The Minister of Finance is just like the late leader, the Right Hon. Mackenzie King—

Mr. Harris: Thank you.

Mr. Rowe: He never led this country. He just followed so closely that you people thought you were leading. Mr. King just followed public sentiment with political expediency while you people who were the silent ciphers and patient admirers thought he was leading somebody. This situation has been somewhat the same—

Mr. Howe (Port Arthur): Whom are you leading now?

Mr. Rowe: I am certainly not trying to lead you and I am definitely convinced that you never led me. I would hope, Mr. Speaker, that I would never be so feeble in politics that I would be led by the man of the House of Commons who tries to dominate the show and ignore parliament.

Mr. Howe (Port Arthur): The gentleman you refer to at least knows how he is going to vote on this bill and I do not think you do.

An hon. Member: Gone forever.

Mr. Rowe: I know how I am going to vote on the bill but it would not make a great deal of difference to you because you ignore parliament anyway, let alone a private member.

An hon. Member: What about the party line?

Mr. Rowe: I am not going to be diverted from my line of thought—

Some hon. Members: Oh, oh.

Mr. Rowe: —no, not even by the loud and empty laughter of the members of the Liberal cabinet who, I am glad, are nevertheless not too tired to laugh.

Some hon. Members: Oh, oh.

Mr. Rowe: Nor am I going to be diverted by the loud laughter of the Minister of Justice (Mr. Garson), who knows that this issue is not popular out in his province.

Mr. Schneider: What has that got to do with wheat?

Mr. Rowe: It has just as much to do with wheat as the comments of your sidekick a moment ago and just as much as textiles have to do with it, which a moment ago you were applauding so loudly. The Minister of Trade and Commerce says that this is the kind of palaver we have to listen to.

An hon. Member: Talk wheat.

An hon. Member: What about fish?

Mr. Rowe: They listen to that kind of palaver so far as wheat is concerned and those who laugh the longest and loudest are those who have contributed the least to the wheat situation in this dominion. When we talk about wheat in Canada today we must bear in mind that we have more unsold wheat in Canada than any other country has had in the last 40 years and these great champions who are telling us how to sell wheat have endeavoured to tell us that we are trying to destroy the wheat board. Every hon. member within summons of my voice should ask himself the question: Where were those gentlemen when the wheat board was set up? Where was the right hon. Minister of Agriculture?

An hon. Member: Manitoba.

Mr. Rowe: As an hon. member pointed out the other day, we know your history. These younger members do not know it so well, but we know that you were the champions of free enterprise, of the Winnipeg grain exchange long ago, and now you are heralding in a loud voice that we are trying to destroy the wheat board. We created it; you have never supported it until the last few years and then you mongrelized it with all sorts of socialistic ideas that have nearly destroyed it. That is what has happened to the wheat board. Anything for political expediency.

This wheat situation today is not a greater problem than it was before. Today we produce only about 5·5 per cent of world production, but in the years when these tired old gentlemen you are talking about—a few years ago you said our party did not do anything to market wheat—we had twice as large a percentage of world production as you have now. We had 40 per cent of the world trade and in three years you cut it down to 18 per cent, and this year you have only 26 per cent. The United States of America exported only one-quarter as much wheat as we did before you came into power; since you came into power they are exporting almost twice as much as we are. We have a smaller proportion of the world production of wheat than we have had at any time since 1925.

These sales champions are trying to tell you now that they have done a great job, that nobody else could do as well. Nobody since confederation has made such a mess of things. Talk about changing policy. The right hon. Minister of Trade and Commerce tells us that the United States of America is spoiling this. If it does not rain too much in the United States of America everything will be all right. You carry out a policy when you think everything will be all right.

He says that they are selling wheat too cheap. They are giving the constituents of bread to our friends too cheaply. The right hon. Minister of Agriculture is giving butter to those who are not our friends. The one says it is wrong for them to give bread to our friends too cheaply, the other says it is right to give butter to our enemies for 21 cents a pound less than the housewife in Canada pays.

Mr. Cheaper, Mr. Speaker—

Some hon. Members: Oh, oh.

Mr. Rowe: Yes, nothing could be cheaper than the type of policy being carried on by these bread and butter twins that are trying to sell the products of Canada. One is smothered with wheat and the other is strangled with butter. One says that a billion bushels of wheat is not too much, that if it does not rain too much things will be all right and we can sell our wheat. The other twin says that they have only 100 million pounds of butter, that is not too much, the grass may be short next summer.

No wonder the farmers of Canada are dissatisfied. No wonder the young farmers of Canada are coming to members every weekend, as they come to me, wondering what they can do. Yet the right hon. Minister of Agriculture says that in Ontario they should not kick so much. You would think that they were expecting their adherents in the country to be as pliant as the Grit followers here. But they are befogged and bewildered and bitter. They do not know what way to turn. They ask me, "What shall I do? Shall I put another mortgage on the farm or shall I quit and try to get a job at Malton?" They are saying up and down the sidelines and bylines that neither the Right Hon. Jimmy Gardiner nor the Right Hon. C. D. Howe knows what is going on. The parade has gone by them. They have been at Ottawa so long, they are too tired to listen, they are too smug to look.

Mr. Gardiner: Let you and me go back to the dance.

Mr. Rowe: They have been so long in power that they are too tired to change.

An hon. Member: Bill 82.

Mr. Rowe: I do not need any instructions from my hon. friend. Any time you have been in order in the house you have been out of order with your party, so you cannot tell me anything. We see the smug complacency that creeps over any government which has been in power so long. You can speak about great problems that you have with wheat, but surely the world population has increased in the last few years. How well I recall, and I know he does too because he has a great memory when he likes to use it, my saying to the Minister of Agriculture, "You have been selling wheat over the last three years for from $400 million to $500 million less than the western farmer should get for his wheat". Everyone within sound of my voice who was here at that time will remember that. No one remembers it better than the minister. He said, "We are doing it to stabilize our markets with Great Britain". When I said to him—

The Acting Speaker (Mr. Applewhaite): Order. It is not too pleasant for us in the chair to feel that we must interrupt hon. members, particularly when the house as a whole is so obviously enjoying the speech of the hon. member. But unfortunately we must try to extend the same courtesy and latitude to one as to another. I think the time has come for me to point out to the hon. member who has the floor that we are dealing with the second reading of a bill to provide short-term credits to prairie grain producers by way of guaranteed bank loans. I think it is the usual thing for those of us in the chair to allow every hon. member to make general remarks at the commencement of his speech, as was perhaps done excessively not long ago, but I think the house and the hon. member for Dufferin-Simcoe (Mr. Rowe) will agree with me that the time has come when the hon. member should direct his remarks to the bill which is before us.

Mr. Rowe: Mr. Speaker, I certainly shall try to do that. I am glad that you suggested to me that you are going to allow me the same latitude as you allowed the hon. member for Waterloo South (Mr. White). We both will do our best to stick closely to the issue before the house. It is an important issue because it affects the economy of the whole dominion. The necessity for having either loans or cash advances has been brought about by the sales policy of the government. Probably you were not following me, but I was only trying to point out that one of the reasons was that a few years ago when I suggested to the right hon. Minister of Agriculture that we should not sell wheat for $400 million or $500 million less than the world wanted to pay for it, because the farmers might be able to use that money, he said to me, and the Speaker did not call him to order, "Don't you trust your English friends as I do?" I remember saying to him that I trusted them to be better traders than he was. To use the slang of the streets, how the chickens are coming home to roost! How those British traders must laugh at these bread and butter twins who thought they knew how to sell our products.

We have lost our market in Britain. Talk about stabilizing the market. In those years Britain was supplying only about 23 per cent of her wheat requirements. Today she is supplying about 35 per cent of her wheat requirements. France was just about producing what she required; she exported over 90 million bushels last year. These are the people who told the world that they would sell wheat at X price and the world would have to pay for it. They have changed their tactics. We have lost those markets today. Now we find one of those honourable traders searching behind the iron curtain for markets for agricultural products, while we find the right hon. Minister of Agriculture flirting with the same people to get rid of our wheat. That is a country that produces a great amount of wheat, and China alongside it produces many times as much wheat as we do. The farmers have been told that they never had it so good. The people who have never had it so good are the elevator people of western Canada storing the wheat that this government has failed to sell. They are the people who have had it the best.

The government now proposes to say to these gentlemen, "You cannot sell your wheat anywhere else. Some of your wheat we trade pound for pound for hay in Alberta. We are going to investigate you through the grain commissioners to see how much wheat is being sold in mixed grains to the United States. Now we are going to say that you cannot sell it to anybody else. If you have a farm in Alberta and live in Saskatchewan, you cannot feed it to your steers in Alberta". Look at this cabinet; they cannot eat it. They have the wheat situation in Canada in the most colossal muddle it has been in since confederation. They are condemning everybody else. They try to say that we destroyed the wheat board. We gave it its birth. They would not even accept the child on their doorsteps for the first four years. They owned it only after they had mongrelized it, as I have said. They have put political expediency on every term in the wheat pools and socialized agriculture to the extent that the farmers of Canada do not know where they are going. The dairymen of Canada are dissatisfied. The potato growers in the east are dissatisfied. The fruit and vegetable growers in my district are dissatisfied. The wheat growers of western Canada are dissatisfied. Tonight they say, "After we have made all these plans, you will pay 5 per cent for what any member of the cabinet can borrow at 4½ per cent. You will get the money at 5 per cent provided you have good credit".

In this whole issue, I am not concerned as to whether the Minister of Trade and Commerce withdraws the bill or threatens parliament or says, "We will not give these farmers anything until next July." There are 200,000 producers in western Canada, and in the first two weeks when this was brought in only 3,000 accepted the advances. The great bulk of those farmers out there borrowed in the same way as we farmers in Ontario borrowed. They paid their five per cent or whatever their credit would warrant in the banks. If all those who require it hound around through western Canada and find the branch banks and get acquainted with the bank managers, probably only about 5,000 or 6,000 out of the 200,000 will take advantage of it. So I might say to the Minister of Trade and Commerce that he may accept parliament or he may threaten parliament that he will do this or that if 3,000 or 4,000 more of the farmers of western Canada do not get a loan out of the 200,000. When the Minister of Trade and Commerce says he will close the door, he is all excited about nothing and out of breath for no purpose.

The trouble is that we have not performed as good salesmen. Surely the Minister of Agriculture and the Minister of Trade and Commerce will admit at long last that they have failed as salesmen of our agricultural products. I have great regard for both of them. Their political nimbleness has been astounding to all those who have not understood what was going on. They have gained the admiration, the applause and the desk-thumping of all their silent supporters in the back benches, many of whom are much brighter than they, in the last few years, but the farmers of Canada know very well that these men who have posed as champion salesmen, if it were not for the taxpayers' money, would have gone bankrupt long ago in selling Canada's products. In the last two or three years the Minister of Agriculture has allowed the dairy industry to be invaded by oleomargarine, and the other night he used oleomargarine himself.

It is a spectacle such as I have not seen since I have been in parliament, and I am not surprised that the farmers today are dissatisfied. I am not surprised that the young farmers have lost hope. I am not surprised that the old farmers are worried, because they find their government so complacent, smug and inconsiderate as to say that the farmers of Ontario are kicking too much and have nothing to kick about. The farmers in western Canada—the wheat growers—have something to kick about. I have every sympathy with the wheat growers of western

Canada, but all I shall say to them is, "Do not tell me your troubles; I am farming too."

An hon. Member: Raise horses.

Mr. Rowe: If my horses were no better than some of you fellows in the back row, I would go bankrupt at that too. Some of these smug and complacent fellows in the back rows remind me of some of my horses in the spring. Whenever they show any speed, they always make a mistake. I do not want to be too critical. I have been in this house a long time.

Mr. Knowles: I would like to hear you when you are critical.

Mr. Rowe: Someone said that they would like to hear me when I was critical. I find that the older I grow the more sympathetic I get, and the older this cabinet grows the more sympathy I realize it needs. I have felt long since disposed to extend the hand of sympathy to those who have been in power too long rather than to be critical. But I sometimes wonder whether the farmer is not the forgotten man and that is why we talk so much about him in parliament. The Minister of Trade and Commerce said that if the Conservatives were in power they would sell wheat for less and that the Leader of the Opposition had hurt the markets and that is why we had to bring in this bill and ask the farmers to pay five per cent—because our leader, the hon. George Drew, whose voice is becoming very effective in Canada—

Some hon. Members: Oh!

Mr. Rowe: The Minister of Trade and Commerce said that it was because he had caused panic throughout the world. He said he could have sold wheat much faster if it had not been for the opposition. When he says we would sell wheat for less, I think back over the years to the wheat we sold for $400 million to $500 million less than we could have had for it and then, after we joined the international wheat agreement—

An hon. Member: Which your party supported.

Mr. Rowe: They still sold wheat for 60 cents a bushel less than the world prices. After selling wheat for $400 million to $500 million less than they could have got for it, they joined the international wheat agreement and sold it for 60 cents a bushel less than the world prices. They say the farmers can borrow money, if they have credit and the bank manager likes the colour of their eyes, and they will be charged five per cent. That is the same interest my father used to pay about 30 years ago. Yes, Mr. Speaker—

[Mr. Rowe.]

Mr. Howe (Port Arthur): His credit was good.

Mr. Rowe: That is very generous. The Minister of Trade and Commerce says that we have changed our position.

An hon. Member: Did you ever have a position?

Mr. Rowe: Of course, in all fairness to him I know he is not getting old but he is getting weary. Today he fell asleep in the house and in his sleep he even interrupted the hon. member for Rosthern (Mr. Tucker). I cannot imagine anyone on that side of the house, even if they are awake, interrupting the hon. member for Rosthern because he has troubles enough of his own to straighten out his position on this critical problem. I have heard him struggling several times and I am glad that he has been spared to be with us here because he has had different viewpoints. I appreciate the conviction with which he expresses them and I hope he does not get hurt in the process.

But, Mr. Speaker, the Minister of Trade and Commerce tried to impress on us that we were the party that was going to sell for less. The record will show that the party he is trying to condemn on that basis has a pretty clean record with reference to the sale of wheat.

Mr. Howe (Port Arthur): You never got a price for it.

Mr. Rowe: Never got a price for it?

Mr. Howe (Port Arthur): Forty cent wheat.

Mr. Rowe: You say we never got a price for it. You are not even getting a sale for it, let alone a price. At least we sold wheat. At least the farmers' wives could buy bread.

Mr. Dickey: You would do it again on the same basis too.

Mr. Harris: At the least.

Mr. Rowe: But this government has taken $500 million from the farmers of western Canada that they might have had under world prices. Then they took 60 cents a bushel less under the international wheat agreement and still they have more unsold wheat than any government since confederation. After your party came into power you turned around and gave the western farmers—

Mr. Howe (Port Arthur): You cannot talk yourself out of that.

Mr. Rowe: Well, if you and your right hon. friend, the Minister of Agriculture (Mr. Gardiner), do not remember may I remind you that in 1938 after you had been in power for a while our portion of the world markets

dropped from the 36 per cent that our party left on your doorstep to 18·2 per cent and the price of wheat dropped from 90 cents to 80 cents and then to 60 cents. We put a floor in at 87 cents and never lost a dollar so far as the Canadian taxpayer was concerned. Then you reduced the price to 80 cents and you lost $125 million of the Canadian taxpayers' money. Then you took a $65 million booby prize and handed it back to the wheat growers of western Canada. These are the records, Mr. Speaker, that scream before the public today.

Mr. Dickey: You are the one who is screaming.

Mr. Rowe: These are the records that scream before the eyes of the wheat growers of western Canada and the farmers of eastern Canada. These are the reasons the farmers of western Canada have already lost confidence in the government. These are the reasons they do not believe these statements no matter how you change them on *Hansard*. The farmers know by the colour of your eyes. They can see it in the whites of your eyes that you are blustering. The farmers of this country are not satisfied. I leave it to the Minister of Agriculture. Go to the livestock breeders who are meeting in Toronto in February. Go to the fat stock people, go to the dairymen, go to the potato people, go to the fruit and vegetable people and you will find out what these people think about your handling of the whole agricultural situation.

What worries them more is how you ignore the problems. The Minister of Trade and Commerce says that there is no great problem, that all we need is a few more cars and we can sell wheat so fast that the cars cannot take it away. Why, the boats and the cars are filled with wheat we have sold and yet we find that 65 per cent less wheat was shipped in the first three weeks of January this year than in the same period last year. How do we reconcile these things?

Mr. Howe (Port Arthur): Where do you get these figures?

Mr. Rowe: No wonder you consider anything derogatory said against the government is blather! You do not like to hear it. No wonder you turn pale and go to sleep in parliament. You just cannot understand what has happened. The Minister of Agriculture tries to tell the farmers that there is no butter in Canada. You might as well sing the old song, "We have no bananas today". You have got more butter than you know what to do with.

Mr. Gardiner: Do you remember what Mr. Bennett said about the price of wheat the last year you were in parliament? He said wheat was the lowest price it had been for 400 years.

Mr. Rowe: Yes, Mr. Speaker, and I remember what your government did before Mr. Bennett came into power. You left more unsold wheat on his doorstep than had been left on any other doorstep since confederation, and if you go out of power, as I think you will if you leave the election for another year—

Mr. Dickey: Don't worry.

Mr. Rowe: I am not worrying except I know the kind of mess you left in the thirties. We were the honorary pallbearers then and we will likely be the honorary pallbearers again.

An hon. Member: Always a pallbearer.

Mr. Garson: You specialize in that.

Mr. Rowe: What did you do between 1921 and 1930? You lost everything and your little Grit friends in Manitoba did the same thing. You lost every market in Britain that we had. Never since confederation had we had as good a market in Britain as we had in 1921 when your party came into power. That is the record, Mr. Speaker, and it cannot be denied by any hon. member. In 1921 we were selling more beef, more pork, more wheat products to Britain than we had sold at any time since confederation and by 1930 we had totally lost that market and you were importing Danish bacon to feed to the people of western Canada.

Mr. Gardiner: Why did you lose out in 1935?

Mr. Rowe: Since that time what have you done? You have turned 67 per cent of your trade to the United States of America. You have bought products in the United States you could have bought in Britain, and have told the western farmers the fairy tale that you can sell even where you will not buy. You could not sell wheat in the United States and yet you bought 70 per cent of all you bought in the United States and you bought less from Britain proportionately than at any time in the last 40 years. You cannot have it both ways, Mr. Speaker. You cannot have your cake and eat it. You cannot play political expediency with the free traders of western Canada and the protectionists of South Waterloo or North Waterloo either. I call it ten o'clock, Mr. Speaker.

BUSINESS OF THE HOUSE

Mr. Harris: Mr. Speaker, we shall continue this entertaining debate tomorrow.

At ten o'clock the house adjourned, without question put, pursuant to standing order.

ANSWERS TO QUESTIONS

The following answers, deposited with the Clerk of the house, are printed in the official report of debates pursuant to standing order 39:

LOANS ON FARM-STORED GRAIN

Question No. 11—**Mr. Johnson (Kindersley):**

How many government guaranteed bank loans on farm-stored grain have been made to farmers in the amounts of (a) $1,000 to $1,500; (b) $750 to $1,000; (c) under $750, during each of the months of October, November and December, 1955?

Answer by: **Mr. Harris:**

		November	December
(a)	$1,001 to $1,500	980	1,212
(b)	$751 to $1,000	812	1,008
(c)	under $751	1,279	2,685

Loan operations did not commence until November 15, 1955.

COST OF LIVING INDEX—FINANCE CHARGES

Question No. 68—**Mr. Leboe:**

Does the computing of the cost of living index include the finance charges paid by consumers buying under conditional sales agreements?

Answer by: **Mr. Howe (Port Arthur):**

The only finance charge reflected directly in the consumer price index, formerly titled the cost of living index, is interest on homes being purchased. Although this item represents an important fraction of total consumer credit outstanding, it exercises very little effect on the movements of the index.

SMOKED HERRING FOR REDUCTION

Question No. 73—**Mr. Regier:**

Before the passing of order in council P.C. 1954-981, June 30, 1954, authorizing the sale of smoked herring at 9 cents per box for reduction purposes, was any inquiry made of the Department of External Affairs, the Colombo plan organization, or any subsidiary of the United Nations to determine whether this food could be disposed of for the relief of hungry people?

Answer by: **Mr. Sinclair:**

The smoked herring—bloaters—in question were hard cured, smoked, round herring, a product largely unknown in fish consuming areas outside of the Caribbean. These fish were entirely of 1952 production, could only be classed as of standard quality, and were very dry. The fisheries prices support board was of opinion that a product of this type and quality should not be used as a gift of Canada to consumers in a foreign country. The Department of Trade and Commerce did make inquiry in the Belgian Congo where the product is known, but no interest could be developed.

REPLACEMENT OF RAILWAY STATION DEPOTS

Question No. 91—**Mr. Pommer:**

1. How many applications have been made in the calendar year 1955, by the railways, to the Board of Transport Commissioners for Canada, to replace station agents with caretakers in (a) Manitoba; (b) Saskatchewan; (c) Alberta?
2. How many applications were made by the Canadian National Railways?
3. How many applications were made by the Canadian Pacific Railway?
4. What are the names of the stations in (a) Manitoba; (b) Saskatchewan; (c) Alberta, for which applications to replace station agents with caretakers were approved?

Answer by: **Mr. Marler:**

1. (a) 27, (b) 30, (c) 11.

2. 49.

3. 19.

4. (a) High Bluff, C.P.R.; Regent, C.P.R.; Roland, C.P.R.; Sinclair, C.P.R.; Griswold, C.P.R.; Crandall, C.P.R.; Bradwardine, C.P.R.; Petersfield, C.P.R.; Fraserwood, C.P.R.; Inwood, C.N.R.; McArthur, C.P.R.; Woodnorth, C.N.R.; Graysville, C.N.R.; St. Laurent, C.N.R.

(b) Waldron, C.N.R.; Trayner, C.N.R.; Wartime, C.N.R.; Carruthers, C.N.R.; Donovan, C.N.R.; Estlin, C.N.R.

(c) Tees, C.P.R.; Parkland, C.P.R.; Gibbons, C.N.R.; Haynes, C.N.R.; Chin, C.P.R.; Dalemead, C.P.R.

Note: In 14 cases the applications from the railways did not provide for the appointment of a caretaker but in each of these cases the board only granted the application on the understanding that a caretaker would be substituted for the agent.

FISHERIES STATISTICS

Question No. 104—**Mr. Bell:**

With respect to British Columbia, the maritimes, Quebec, Newfoundland, and the inland fisheries, each year for the last five years:

1. What has been the total marketed value of (a) all fish landed; (b) all salmon landed?
2. What has been the amount spent on research (a) on all types of fish; (b) on salmon only?

Answer by: **Mr. Sinclair:**

1 (a) & (b). MARKETED VALUE* OF FISHERY PRODUCTS PROCESSED FROM LANDINGS BY COMMERCIAL FISHERMEN

—	British Columbia	Maritimes	Quebec	Newfoundland (estimated)	Inland Fisheries
			—in thousands of dollars—		
1950					
All species	68,821	60,148	5,063	30,000	18,729
Salmon	48,702	880	336	800	
1951					
All species	85,396	64,602	5,006	29,000	20,889
Salmon	60,750	626	326	1,000	
1952					
All species	58,098	66,604	5,664	27,500	19,454
Salmon	40,495	689	384	1,000	
1953					
All species	66,260	61,437	5,270	24,000	17,260
Salmon	47,936	613	346	1,000	
1954					
All species	70,699	70,004	4,941	28,000	18,740
Salmon	50,284	777	261	800	

* Value F.O.B. processors' plants or fishermen's premises.
NOTE: 1955 figures not yet available.

2 (*a*). AMOUNT SPENT ON RESEARCH ON ALL TYPES OF FISH

—	1954-55	1953-54	1952-53	1951-52	1950-51
	$	$	$	$	$
British Columbia	622,833	538,845	464,767	461,392	435,200
Maritimes	541,290	520,015	508,360	502,314	476,420
Quebec	43,253	55,039	58,306	51,503	55,772
Newfoundland	244,669	241,717	212,787	151,227	130,468
Inland	203,790	85,498	40,559	44,831	42,092
TOTALS	1,655,835	1,441,114	1,284,779	1,211,267	1,139,952

2 (b). AMOUNT SPENT ON RESEARCH ON SALMON ONLY

—	1954-55	1953-54	1952-53	1951-52	1950-51
	$	$	$	$	$
Atlantic	65,702	66,880	65,263	63,258	60,243
Pacific	162,759	170,751	150,981	120,449	117,360
TOTALS	228,461	237,631	216,244	183,707	177,603

Questions

WHEAT MARKETINGS, ALBERTA, 1954-55

Question No. 105—**Mr. Smith (Battle River-Camrose):**

1. How many bushels of wheat, grades 1, 2, 3, 4, 5, 6, and feed, were marketed at local elevators in the province of Alberta during the crop year, 1954-55?

	Straight grade
No. 1 Nor.	1,265,128.6
No. 2 Nor.	22,111,228.7
No. 3 Nor.	23,584,225.8
No. 4 Nor.	11,670,663.5
No. 5 Wht.	16,764,013.9
No. 6 Wht.	5,017,313.8
Feed Wheat	1,322,595.2
Total	81,735,169.5

2. The 1954-55 pool account wheat is still under sale and therefore average selling prices are not available. In any case it is not possible from board records to compile average selling prices for wheat originating in a single area in the prairie provinces on account of intermingling in terminal elevators.

2. What was the wheat board's average selling price per bushel for each of the above grades of wheat?

Answer by: **Mr. Howe (Port Arthur):**

1. Purchased from producers in the province of Alberta:

	Tough	Damp (bushels)	Total
No. 1 Nor.	478.7	—	1,265,607.3
No. 2 Nor.	99,080.1	—	22,210,308.8
No. 3 Nor.	926,376.1	4,488.8	24,515,090.7
No. 4 Nor.	2,755,994.3	10,594.5	14,437,252.3
No. 5 Wht.	3,793,224.1	15,660.7	20,572,898.7
No. 6 Wht.	1,556,855.3	14,472.5	6,588,641.6
Feed Wheat	448,544.8	24,902.7	1,796,042.7
	9,580,553.4	70,119.2	91,385,842.1

CEMENT IMPORTS

Question No. 114—**Mr. Johnson (Kindersley):**

1. How much cement was imported into (a) the maritimes; (b) Ontario and Quebec; (c) the prairie provinces; (d) British Columbia, from (i) the United States; (ii) other sources, in 1955?

2. What was the average price at the port of entry in the above areas?

Answer by: **Mr. Howe (Port Arthur):**

1. Imports of cement, period January 1 to October 31, 1955 (latest period available):

	Cwt.	Value
The maritimes		
United States	291	$ 444
Other sources	409,747	336,274
Ontario and Quebec		
United States	488,278	625,873
Other sources	5,759,759	4,125,460
Prairie provinces		
United States	960,374	1,029,319
Other sources	40,595	27,116
British Columbia		
United States	679,689	732,800
Other sources	16,036	25,090

2. Average prices at ports of entry are not available from trade statistics. Import values are taken at the point from which goods were shipped to Canada.

OFF-SITE GRAIN STORAGE

Question No. 115—**Mr. Johnson (Kindersley):**

1. How many buildings for off-site storage of grain were approved by the board of grain commissioners during 1955, in the provinces of (a) Saskatchewan; (b) Manitoba; (c) Alberta?

2. What was the total capacity licensed in each province?

Answer by: **Mr. Howe (Port Arthur):**

1. New applications for off-site storage approved in 1955:

	(1) No. of buildings	(2) Capacity bushels
(a) Saskatchewan	69	1,681,200
(b) Manitoba	4	242,000
(c) Alberta	86	1,931,350

2. Total capacity licensed in each province as at December 31, 1955:

	(1) No. of buildings	(2) Capacity bushels
(a) Saskatchewan	165	4,483,950
(b) Manitoba	9	505,000
(c) Alberta	137	478,350

TRANS-CANADA HIGHWAY

Question No. 121—**Mr. Hodgson:**

1. How many miles of trans-Canada highway have been completed to date, by provinces?

2. How many miles are hard top, paved or mulched?

3. How many miles are completed with gravel top?

4. How many miles are under construction?

5. How many miles are yet to be constructed in each province?

6. Has any agreement regarding the trans-Canada highway been arranged with the province of Quebec?

Answer by: **Mr. Pinard (for Mr. Winters):**

1. Mileage (equivalent) of trans-Canada highway completed to December 31, 1955:

Newfoundland	141
Prince Edward Island	50
Nova Scotia	26
New Brunswick	65
Ontario	387
Manitoba	151
Saskatchewan	347
Alberta	208
British Columbia	193
Total	1,568

Note: Equivalent mileage is based on the actual work completed of the total work under contract.

2. 2,853 miles.

3. 1,477 miles.

4. 229 miles (equivalent) under construction.

5. Mileage (equivalent) yet to be constructed:

Newfoundland	409
Prince Edward Island	20
Nova Scotia	348
New Brunswick	243
Ontario	960
Manitoba	128
Saskatchewan	61
Alberta	78
British Columbia	453
Total	2,700

6. No.

KICKING HORSE RIVER BRIDGE

Question No. 126—**Mr. Johnston (Bow River):**

1. Has the original location for the bridge on the trans-Canada highway which crosses the Kicking Horse river near the junction of the Kicking Horse river and the Yoho river in the Yoho national park been changed?

2. If so, (a) for what reason; (b) what has been the additional cost of this change?

Answer by: **Mr. Pinard (for Mr. Winters):**

1. Yes.

Questions

2. (a) The original location on the old road was such that the bridge had to be approached by a switch-back climb involving extremely hazardous hairpin turns, entirely unsuitable to modern highway standards. (b) The new bridge is estimated to cost approximately $200,000. It is difficult to arrive at a cost comparison, since the original bridge was built 15 to 20 years ago, and to a much lower standard of construction.

TRANS-CANADA HIGHWAY—BANFF NATIONAL PARK

Question No. 129—**Mr. Johnston (Bow River):**

1. Will the construction of the federal government's share of the trans-Canada highway in Banff national park be completed by the end of the present contract date, December 9, 1956?

2. If not, when will it be completed?

3. How many miles of the trans-Canada highway run through the Banff national park?

4. How many miles in the park are completed, and when will the balance be completed?

5. How much of the trans-Canada highway has been completed between the east gate and the town of Banff?

6. Have there been any repairs on this section of the road?

7. If so, what was the nature of the repairs and what was the cost?

Answer by: **Mr. Pinard (for Mr. Winters):**

1. No.

2. At present rate of progress, December 1, 1959.

3. Fifty-one miles.

4. No mileage completed. All but twelve miles will be under contract for grading, culverts and gravel base by March 31. Completion to final pavement expected December 1, 1959.

5. Eight of the ten miles completed to gravel base stage.

6. Yes.

7. The gravel base course, part of which is asphalt bound, has been scarified and reshaped. The cost has been the normal cost of maintenance of this temporary type of surface under the exceptionally heavy tourist traffic, i.e., between $200 and $300 per mile.

HOUSE OF COMMONS

Wednesday, February 15, 1956

The house met at 2.30 p.m.

TELEVISION

PETITION REQUESTING PRIVATE STATION IN MUNICIPALITY OF BURNABY, B.C.

Mr. T. H. Goode (Burnaby-Richmond): Mr. Speaker, I have the honour to present on the behalf of the people of Burnaby, British Columbia, a petition of 13,333 names which prays this house to allow a private television station in the municipality of Burnaby, British Columbia.*

*See also page 1231.

TRANSPORT ACT

AMENDMENT TO BRING BRITISH COLUMBIA PUBLIC CARRIERS BY WATER UNDER JURISDICTION OF TRANSPORT COMMISSION

Mr. T. S. Barnett (Comox-Alberni) moved for leave to introduce Bill No. 107, to amend the Transport Act.

Mr. Green: May we have an explanation?

Mr. Barnett: Mr. Speaker, the purpose of this bill is to bring the public carriers by water in the province of British Columbia under the jurisdiction of the board of transport commissioners.

Motion agreed to and bill read the first time.

DIVORCE JURISDICTION

EXCHEQUER COURT TO HAVE JURISDICTION IN ACTIONS ORIGINATING IN QUEBEC AND NEWFOUNDLAND

Mr. Stanley Knowles (Winnipeg North Centre) moved for leave to introduce Bill No. 108, respecting the jurisdiction of the Exchequer Court of Canada.

Some hon. Members: Explain.

Mr. Knowles: Mr. Speaker, the purpose of this bill is to rid parliament of the divorce business. It does so without placing divorce courts in any province where the majority does not wish to have them.

Motion agreed to and bill read the first time.

STARRED QUESTIONS

HOGS—FLOOR PRICE STATISTICS

Question No. 11—**Mr. McCullough (Moose Mountain):**

1. At what marketing points are floor prices established for hogs?
2. Under what authority and on what date were these floor prices established?
3. What grades of hogs are included under the established floor prices?
4. What, if any, legal authority establishes the variation in prices as between grades?
5. Is a farmer automatically guaranteed these floors at Regina, Winnipeg, Toronto or Montreal?
6. If not, what procedure must be followed to obtain floor prices?

Mr. Gardiner: Mr. Speaker, I wish to answer the first two parts of this question in the one answer.

1 and 2. Under the authority of the Agricultural Prices Support Act, P.C. 4141, dated September 24, 1952, authorizes the agricultural prices support board to offer to purchase hogs and pork in whichever form is considered preferable on the basis of a price equivalent to $23 per 100 pounds, warm dressed weight from grade A carcasses, basis Toronto and Montreal, with appropriate differentials for other principal public stockyards throughout Canada.

The agricultural prices support board has established the following prices for grade A carcasses at the named public stockyards under this authority:

Montreal and Toronto	$23.00 per 100 pounds
Winnipeg	$20.00 per 100 pounds
Regina, Moose Jaw, Prince Albert and Saskatoon	$19.00 per 100 pounds
Calgary and Edmonton	$18.50 per 100 pounds
Lethbridge	$18.25 per 100 pounds

The Montreal and Toronto price was set by P.C. 4141 dated September 24, 1952. The remainder of the prices as indicated, with the exception of the Lethbridge price, were originally set by the board on October 8, 1954. Periodic reviews have been made by officials of the department and the agricultural prices support board since that time and the Lethbridge price as indicated was set on January 6, 1956, after a special review of the Alberta and Saskatchewan situations.

3. Support prices have been established on grade A carcasses.

4. The federal government has no legal authority to establish differentials in prices

between grades except if price support becomes operative the agricultural prices support board may offer to purchase hogs or pork on the basis of appropriate differentials between grades by prescribing prices therefor equivalent to $23 for grade A carcasses, basis Toronto and Montreal.

5. The farmer does not need to accept less than the established prices at the named public stockyards.

6. Advise the agricultural prices support board.

[*Later:*]

On the orders of the day:

Mr. Bryson: Mr. Speaker, I should like to direct a question to the Minister of Agriculture arising out of his rather lengthy oral statement a moment ago relating to floor prices. If, as the minister suggested, the support price for hogs is based on the warm dressed weight,—

Mr. Speaker: Order.

Mr. Bryson: Mr. Speaker, my question is: How can he expect the producer to be paid for hogs delivered to a stockyard?

Mr. Gardiner: Mr. Speaker, we have some very clever individuals in the Department of Agriculture who do this work for me.

U.S. AIR FORCE—ROUTINE FLIGHTS WITH ATOMIC WEAPONS

Question No. 12—**Mr. Knowles:**

1. Is the government aware of reports credited to the United States continental air defence command that United States air force planes will shortly be carrying atomic weapons on routine defence flights?

2. If so, will any of such flights be over Canadian territory and by what authority?

3. Is it intended that any Royal Canadian Air Force planes will carry atomic weapons? If so, under what circumstances?

Mr. Campney: Mr. Speaker, this question is in three parts.

The answer to the first part of the question is yes.

With respect to the second part of the question, any such flights over Canadian territory would require prior arrangements with the Canadian government and no request looking to such arrangements has been received.

As to the third question, the R.C.A.F. is watching very carefully the development of all types of air defence weapons, but as to the intentions of the air force in this matter, I am sure the house will appreciate that I cannot properly discuss them at this time.

UNEMPLOYMENT INSURANCE BENEFITS

Question No. 14—**Mr. Knowles:**

1. During the period from October 2, 1955, to January 25, 1956, how many persons, by provinces or by regions, were refused unemployment insurance benefits by reason of their inability to meet the requirements of section 45(2) of the Unemployment Insurance Act?

2. By provinces or by regions, how many of these cases have been reviewed?

3. By provinces or by regions, how many of these persons have been put on unemployment insurance benefits as a result of the re-interpretation of section 119(b) of the Unemployment Insurance Act, announced by the Minister of Labour on January 25, 1956?

Mr. Gregg: Mr. Speaker, the review of the claims to which I referred on January 25 is going steadily forward in spite of the fact that our unemployment insurance offices are very busy at this time of year.

There has not been enough information obtained to answer in any kind of a satisfactory manner the questions which are here asked by my hon. friend. In view of the fact that the hon. member for Hamilton West (Mrs. Fairclough) and a number of other hon. members have given evidence of keen interest in this matter, if the hon. member for Winnipeg North Centre (Mr. Knowles) will take this as acknowledgment of his question I will undertake at the first opportunity to make a statement on this matter in which I will include, as far as I can, the answers to these questions.

Mr. Speaker: Agreed?

Mr. Knowles: Agreed.

C.B.C. "RADIO TIMES"

Question No. 15—**Mr. Diefenbaker:**

1. Under whose auspices is the Canadian Broadcasting Corporation *Radio Times* published?

2. Did it in a recent listing of prospective programs on both radio and T.V. include as a program a discussion of Ferns and Ostry's, "The Age of Mackenzie King"?

3. If so, on what date or dates was the said discussion to take place and on whose authority was such listing given or advertised?

4. Did such program take place at the time or times advertised or at any time since? If not, for what reason?

5. Does the Canadian Broadcasting Corporation or any of its officials exercise any censorship (other than on grounds of decency) of programs on the Canadian Broadcasting Corporation?

6. What is the recognized policy followed by the Canadian Broadcasting Corporation respecting censorship?

Mr. McCann: The corporation advises:

1. The Canadian Broadcasting Corporation.

2. It did not carry a listing of presentation of a television program on the book "The Age of Mackenzie King", but did carry a listing of a radio program bringing a discussion of the book.

3. The answer is: According to the listing, the radio program was to be December 20. The listings in the C.B.C. *Times* are given on the authority of the C.B.C.

4. The answer is: Some consideration was given earlier to the book "The Age of Mackenzie King" as a possible subject for a national television network program with the idea that the sound part could be carried later on a radio program anthology, but on consideration the book was not judged to be a good basis for such a discussion or to merit this special broadcasting attention. The listing mentioned above was carried in error in the C.B.C. *Times* since there would be no sound recording available as a television program was not being proceeded with.

5 and 6. The answer to both questions is as follows: The corporation carries full responsibility for deciding on programs. It has to try to see that any material broadcast conforms with laws or regulations applying and also that commercial or other general material is acceptable under its policies. In any programs dealing with opinions it exercises no censorship on the expression of opinions.

"STATEMENTS AND SPEECHES"—DISTRIBUTION LIST

Question No. 16—**Mr. Fulton:**

1. What is the present total of names on the distribution list for "Statements and Speeches" distributed by the information division of the Department of External Affairs?
2. Of this total, how many are in Canada?
3. Of this total, how many are newspapers in Canada?

Mr. Pearson: The answer to the first part of this question is that 2,014 copies, 1762 in English and 252 in French, of issues of the external affairs statements and speeches series are distributed on regular mailing lists, which include only names which are there on request of the person receiving the material. In addition copies of specific issues are mailed out in response to requests for such issues.

The answer to the second question is that 872 copies, 746 in English and 126 in French, are distributed regularly in Canada and 1,142 copies, 1,016 in English and 126 in French, are distributed abroad.

The answer to the third question is that about 100 copies of each issue are distributed to newspapers and newspapermen in Canada.

[*Later:*]

On the orders of the day:

Mr. Fulton: I should like to ask the Secretary of State for External Affairs a question arising out of the oral answer he gave to question 16 a few moments ago, that is, whether he considers it appropriate that copies of the speeches made by the minister in controversial debates in this house—

Mr. Speaker: Order. May I suggest to the hon. member for Kamloops that this is not the type of question such as is contemplated by the standing order. It is one that he may pursue when the estimates of the department are before the house in committee of supply.

Mr. Fulton: My understanding is that on the orders of the day one is permitted to ask questions relating to government policy. I am seeking to ascertain the policy of the department in connection with the question I am asking.

Mr. Speaker: The hon. member and I do not understand the rules in the same fashion, I am sorry to say. It is quite true that, since I am in the position in which I am with respect to these questions of which I receive no notice, there are many that are put and answered without any intervention on my part, but it is permissible to ask information from the minister with respect to any matters coming under his jurisdiction as minister.

Mr. Fulton: This does.

Mr. Speaker: Yes, but at this moment he is asking if he thinks it appropriate that a certain thing be done. If the minister says that it is not, we can immediately have other supplementary questions on that very subject which make a debate out of the question. I think the hon. member will realize that. I do not want to make too fine a distinction on these questions. I have just glanced through various rulings that have been made in the past, and I have not time to go through the whole list, but I see one here that may not cover exactly the point, but I am sure it is applicable. This is in citation 295, page 120, of Beauchesne's third edition:

> . . . raise a matter of policy too large to be dealt with in the limits of an answer to a question.

We must also ask ourselves whether it is fair at this moment to ask a question which the minister might feel he might deal with at greater length than is usually expected of him at this time. We must also keep in mind that, whatever question is being asked, if the answer is to be lengthy it postpones further the asking of questions by other hon. members who are ready to ask questions at this time.

Mr. Fulton: I could ask my question in short form and perhaps use other words. Is it the policy of the department to distribute to the list of names outlined a moment ago, including the 100 newspapermen in Canada, statements made in controversial debates reflecting only the views of the minister?

Mr. Pearson: I think I should deal with this question now, though it could of course more effectively be discussed when the estimates were before the committee or in

the committee on external affairs, because the hon. member for Eglinton asked a similar question the other day.

Mr. Fleming: On February 9.

Mr. Pearson: I was ready to answer on Monday. At that time it was indicated on this side that an answer was being prepared. So under the circumstances I think I should give the answer now to the hon. member for Eglinton, though this matter could be discussed at greater length in the committee on external affairs.

The hon. member asked if I considered it a proper use of public funds for the Department of External Affairs to publish statements I made in the house on January 24 and January 31, but not those of other hon. members. I believe it is quite proper that in the fulfilment of its obligations to inform the public of the government's external policies that the government should make public statements of government policy. It is not, of course, a function of the department to defend the government's policies, nor to present alternative ones.

The department makes public these policy statements in different ways. There is, for instance, the "Canadian Weekly Bulletin", which is not circulated in Canada but goes to all Canadian posts abroad and on request to individuals residing in other countries. Perhaps the hon. member, however, had in mind the extracts from my two recent statements in the house which were reprinted by the department in a series of papers called "Statements and Speeches", and to which reference was made this afternoon. This series is distributed only to persons within and without Canada who have requested that they be placed on the mailing list. The list is reviewed periodically and only those who indicate a definite desire to continue receiving these papers are kept on the list.

The hon. member for Eglinton might note that in making public parts of my statement of January 24 on policy regarding the export of military equipment to the Middle East, the department as is its practice omitted certain sections which were of a debating character.

BRENT CASE—COST OF APPEAL

Question No. 17—**Mr. Cameron (Nanaimo):**

What was the total cost to the crown of the appeal taken to Supreme Court of Canada from the judgment of the Ontario court of appeal of April 5, 1955, in the case of Shirley Kathleen Brent?

Mr. Garson:

Mr. Speaker, this appeal was heard in the Supreme Court of Canada on February 8 and 9, 1956. Judgment was given from the bench on February 9 dismissing the appeal with costs. The costs have not as yet been taxed; therefore, until such time as they are taxed, it is not possible to answer this question.

QUESTIONS PASSED AS ORDERS FOR RETURNS

POST OFFICE BREAK-INS

Question No. 122—**Mr. Hodgson:**

1. How many post offices in Canada have telephones?
2. How many have burglar alarm systems installed?
3. How many were burglarized or broken into during 1955?
4. What was the estimated damage in each case?
5. What value in money, stamps and money orders disappeared or were destroyed in each case?

FEDERAL EXPENDITURES, BRITISH COLUMBIA

Question No. 131—**Mr. Goode:**

What is the itemized amount of moneys expended by the federal government in the province of British Columbia for the fiscal years 1953-54 and 1945-55, including veterans' pensions, war veterans' allowances, federal share of old age pensions, family allowances, hospital and scientific grants, trans-Canada highway, capital construction, etc.?

AMALGAMATION OF GOVERNMENT AGENCIES

Question No. 133—**Mr. Thatcher:**

1. How many people across Canada are employed in: (a) the Canadian farm loan board; (b) the administration of the Farm Improvement Loans Act; (c) the administration of the Veterans Land Act?
2. What liaison exists between these three federal agencies?
3. Has consideration been given to the amalgamation of these three agencies into one over-all farm credit organization?
4. Are there major reasons which would make such an amalgamation impractical?

CANADIAN BROADCASTING CORPORATION

REFERENCE TO ALLEGED CANCELLATION OF PROGRAM

On the orders of the day:

Mr. Donald M. Fleming (Eglinton): Mr. Speaker, may I ask the Minister of National Revenue who in the Canadian Broadcasting Corporation made the decision that the program on "The Age of Mackenzie King" by Ferns and Ostry should not proceed?

Hon. J. J. McCann (Minister of National Revenue): Mr. Speaker, I do not know the answer to that question inasmuch as I cannot give the exact name, but the Canadian Broadcasting Corporation takes full responsibility for such action as they took.

Mr. Fleming: I realize that, but I ask the minister, if he has not information as to who

made the decision, will he be prepared to obtain it and give it to the house?

Some hon. Members: No.

Mr. McCann: In answer to that question, I shall take the matter up with the Canadian Broadcasting Corporation.

EXTERNAL AFFAIRS

REPORT OF CANADIAN RIFLES BEING TAKEN FROM ALGERIAN REBELS

On the orders of the day:

Mr. Alistair Stewart (Winnipeg North): Mr. Speaker, I should like to direct a question to the Secretary of State for External Affairs. What basis of fact is there in the report that French authorities have taken some Canadian rifles from Algerian rebels?

Hon. L. B. Pearson (Secretary of State for External Affairs): The hon. gentleman was good enough to give me notice yesterday of his intention to ask this question and also to indicate the magazine from which his information was received. I wish to thank him for that notice because it has given us time to get in touch with the government concerned in order to ascertain whether or not this report is accurate.

We have not yet received that report, and therefore I cannot answer his question definitively. The article in question includes information which the writer received from a French official in Algeria to the effect—and this is the information he gave the writer—that out of every ten rifles taken perhaps eight are British and the others Canadian or Belgian. I do know that an examination of the trade statistics going back to 1946 reveals no shipments of rifles from Canada to Spanish Morocco, French Morocco, Algeria, Tunisia or Egypt during that period, but, as I have stated, I cannot give a final reply until I have heard from the government concerned with this matter.

[*Later:*]

On the orders of the day:

Mr. Pearson: Mr. Speaker, I am now in a position to give a final reply—or I hope it will be final—to the question asked by my friend the hon. member for Winnipeg North in regard to the report about Canadian rifles in Algeria. This is the reply which has just been received by telegram from Paris.

Authorities said that in the area with which the report was concerned—and this is from French official sources—the French had captured to date from rebels 66 rifles of British origin marked "B.S.A. .303", of which five had apparently once belonged to Canadian military forces. All these rifles were described as old weapons presumably abandoned during the last war in Egypt, Libya and Tunisia.

The French authorities have no evidence that the rebels are using Canadian rifles of recent origin.

PIPE LINES

TRANS-CANADA PIPE LINES LIMITED—APPLICATION TO U.S. FEDERAL POWER COMMISSION

On the orders of the day:

Mr. George H. Hees (Broadview): I should like to direct a question to the Minister of Trade and Commerce. In view of yesterday's Canadian Press dispatch from Washington outlining the mounting and serious opposition building up in the United States against the application of Trans-Canada Pipe Lines—

Mr. Speaker: Order. The moment the hon. member began saying, "in view of", he imported into his question more information than the house should care to receive at this moment. The hon. member should be seeking information from the cabinet, not giving it to the house. When it comes to dispatches from newspapers, I am not very much impressed by all these questions which seem to assume that cabinet ministers should have had time to read all the newspaper dispatches published throughout the country in the few hours that they have between the time of publication and entering this house.

It has been ruled on several occasions that it is not in order to inquire—I am referring now to citation 295, paragraph (e):

—inquire whether statements made in a newspaper are true.

If the hon. member is ready to put his question without any preamble, we will see what his question is. If it is to have certain facts which appear in the press verified, I will ask him not to pursue his point.

Mr. Hees: In view of the opposition building up against the application of Trans-Canada Pipe Lines Limited before the federal power commission in the United States, can the minister inform the house what chances he believes there are of the application being approved by the federal power commission before the target date of March 1?

Mr. Speaker: Now the hon. member is asking from the minister an opinion on a matter which is not within his own sphere of activities. How can he give an opinion to the house on what a board in the United States may do?

Mr. Hees: I am asking the minister if he believes that the application before the federal power commission will be passed. I am asking for his opinion.

Inquiries of the Ministry

Mr. Speaker: I do not want the minister to give it because it is seeking for an opinion. At this moment the purpose of question time is to seek information.

[*Later:*]

On the orders of the day:

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, may I direct a question to the Minister of Trade and Commerce. Has the minister any information to give the house concerning the status of the application of Trans-Canada Pipe Lines Limited before the federal power commission?

Right Hon. C. D. Howe (Minister of Trade and Commerce): Mr. Speaker, there is no application by Trans-Canada Pipe Lines Limited before the federal power commission and, as far as I know, there never will be such an application.

Mr. Hees: Mr. Speaker, may I ask a supplementary question of the Minister of Trade and Commerce. Has Trans-Canada Pipe Lines Limited made no application to the federal power commission of the United States for permission to sell power in the United States?

An hon. Member: Gas.

Mr. Hees: I mean to sell gas in the United States.

Mr. Howe (Port Arthur): Your statement is absolutely correct.

Mr. Knowles: May I ask a supplementary question? Will the minister give us any information he has regarding the status of the application of the Tennessee company to import gas into the United States from Canada?

Mr. Howe (Port Arthur): I am not greatly interested in that application. I have not been following the matter and I have no information to give.

[*Later:*]

On the orders of the day:

Mr. J. M. Macdonnell (Greenwood): Mr. Speaker, might I ask the Minister of Trade and Commerce whether any organization has made application to the federal power commission in connection with the export of gas with which we are all familiar. If so, what is the name of the organization?

Mr. Howe (Port Arthur): Frankly, I do not know the name of the organization, Mr. Speaker. It is a subsidiary of Tennessee Gas Transmission. I shall endeavour to write and get the name of the organization and give it to my hon. friend.

Mr. Macdonnell: We are coming up; we are getting hot.

FISHERIES

REFERENCE TO LAMPREY EEL MENACE IN LAKE HURON

On the orders of the day:

Mr. A. E. Robinson (Bruce): I wish to direct a question to the Minister of Fisheries or, in his absence, I will direct it to his parliamentary assistant. Does the minister agree with the view expressed by Representative Henry Reuss, Wisconsin, in connection with combating the lamprey eel menace in lake Huron at the same time—

Mr. Speaker: Order. This is not a question that should be asked at this time.

LAMPREY EELS—REQUEST FOR APPROPRIATION TO COVER EXTERMINATION

On the orders of the day:

Mr. A. E. Robinson (Bruce): Mr. Speaker, I should like to direct a question to the parliamentary assistant to the Minister of Fisheries. Will the minister consider placing appropriations in the supplementary estimates to cover lamprey eel extermination work in lake Huron and Georgian bay this year?

Mr. J. Watson MacNaught (Parliamentary Assistant to the Minister of Fisheries): Mr. Speaker, this is a question of policy which will have to be dealt with later. I would point out to the hon. member for Bruce that at the last session of this parliament legislation was passed setting up the great lakes fisheries commission. That legislation provided for six commissioners, three from Canada and three from the United States. The three Canadian commissioners have been appointed. As yet, the United States has not appointed its commissioners, so we have not yet received any scientific program from the commission; consequently, until that program is received, it would be almost impossible to make any answer to the hon. member.

NATIONAL DEFENCE

INQUIRY AS TO SHIPMENT OF 25-POUNDER AMMUNITION TO ISRAEL

On the orders of the day:

Mr. D. S. Harkness (Calgary North): I should like to direct a question to the Secretary of State for External Affairs. It refers back to an answer I received to a question asked on January 26. The question is this. Has the cabinet now considered the shipment

of some $30,000 worth of 25-pounder shells to Israel and has this shipment been authorized?

Hon. L. B. Pearson (Secretary of State for External Affairs): Mr. Speaker, the question deals with a small order for about 1,750 25-pounder shells. As has been stated in the house this matter has been before the cabinet for consideration, whether they should be shipped to their destination, which is Israel. The decision which has been taken by cabinet is to suspend any action with regard to delivery of these shells pending conversations which are now going on in Washington between representatives of the French, British and United States governments with which we are in close contact as to policy in the Middle East.

WEST GERMANY—MAINTENANCE OF CANADIAN TROOPS

On the orders of the day:

Hon. R. O. Campney (Minister of National Defence): Mr. Speaker, on Wednesday last the hon. member for Esquimalt-Saanich (Mr. Pearkes) asked whether I had been advised of any change in policy by the government of the federal republic of west Germany regarding that government's contribution toward the maintenance of Canadian troops in Europe.

The short answer to this question is that the government of the federal republic of west Germany has at no time contributed toward the maintenance of Canadian troops in that country. Canadian forces were not sent to Germany as occupying forces but as a part of Canada's contribution to the defence forces of the North Atlantic alliance. It has always been the government's policy to pay the cost of maintaining these forces. The only financial support that has been received from the government of the federal republic of west Germany has been in respect of capital expenditures such as the construction of barracks and airfields. The major construction program for the Canadian defence forces in Germany has now been mainly completed and no major additional projects are contemplated in the near future.

No official confirmation has been received of the reports appearing in the press to the effect that the German finance minister has stated that it is not the intention of the federal republic to continue to contribute to the financial support of such forces, and it is not clear from the present press reports whether the financial support extends to capital expenditures such as barracks and airfields which are, of course, of some interest to Canada.

Inquiries of the Ministry

EXERCISE "CRACKERJACK"—PARTICIPATION BY AUXILIARY PERSONNEL

On the orders of the day:

Hon. R. O. Campney (Minister of National Defence): Mr. Speaker, I should like to answer the question asked by the hon. member for York West on February 9, as to whether Royal Canadian Air Force auxiliary squadrons or auxiliary personnel forces took part in the test of our northern defences in exercise "Crackerjack". The answer is no.

Mr. John B. Hamilton (York West): Mr. Speaker, I should like to direct a supplementary question to the Minister of National Defence. Will he inform the house why the R.C.A.F. auxiliary squadrons or personnel did not take part in the exercise referred to?

Mr. Campney: Yes, Mr. Speaker. This exercise was for the purpose of testing the air defence system. It was to be a surprise exercise and the alert extended for a period of three months. At any time in that period this system might be tested, and it was not practicable to keep the auxiliary air force standing by for three months.

LIVESTOCK

HOGS—ACTION OF AGRICULTURAL PRICES SUPPORT BOARD RESPECTING FLOOR PRICE

On the orders of the day:

Mr. F. S. Zaplitny (Dauphin): May I direct to the Minister of Agriculture a question arising out of the answers he tabled just a few minutes ago with respect to the floor price under hogs. What action does the agricultural prices support board take when they are notified by a producer that he has not been offered the floor price established under hogs?

Right Hon. J. G. Gardiner (Minister of Agriculture): They immediately discuss the matter with all parties concerned and make a report.

SHIPPING

REQUEST FOR INSTALLATION OF FOG ALARM AT HORSE ISLANDS, NEWFOUNDLAND

On the orders of the day:

Mr. T. S. Barnett (Comox-Alberni): Mr. Speaker, I have a question for the Minister of Transport. In his absence, perhaps his parliamentary assistant can deal with it.

Has the minister received a request for the installation of a fog alarm at Horse Islands, Newfoundland? If so, what action has been taken on this request?

Grain

Mr. L. Langlois (Parliamentary Assistant to the Minister of Transport): Mr. Speaker, the hon. member was good enough to send me notice of his intention to ask this question, but unfortunately it reached me a few minutes before I left my office to come to the house at 2.30. I have therefore been unable to secure the information sought. I shall endeavour to answer the question tomorrow.

POSTAL SERVICE

REPORTED STATEMENT AS TO INCREASE IN DELIVERIES

On the orders of the day:

Mr. W. M. Hamilton (Notre Dame de Grace): Mr. Speaker, will the Postmaster General confirm the recent statement of an official of his department that extension of post office delivery services can be expected in the not too distant future because of the surplus arising from the increase in the postage rates?

Hon. Hugues Lapointe (Postmaster General): Mr. Speaker, I am sorry I have not seen the statement allegedly made by an officer of the department. If my hon. friend wishes to refer it to me I shall check it.

GRAIN

PROVISION FOR GUARANTEE OF BANK LOANS TO PRODUCERS IN PRAIRIE PROVINCES, ETC.

The house resumed, from Tuesday, February 14, consideration of the motion of Mr. Howe (Port Arthur) for the second reading of Bill No. 82, to provide for short-term credit to grain producers in the prairie provinces to meet temporary financial difficulties arising from inability to deliver all their grain, and the amendment thereto of Mr. Johnson (Kindersley).

Hon. W. Earl Rowe (Dufferin-Simcoe): Mr. Speaker, toward the conclusion of my remarks last night, the Minister of Trade and Commerce (Mr. Howe) asked me where I got my figures. I might advise him today that I have never been as reckless in using figures as he has been in presenting figures to parliament. I have no apologies to make for the figures that I have given, except to make a correction in *Hansard*, which I shall make later on a question of privilege. It was an error by the *Hansard* reporter that might be excused.

In the few moments that are left to me to conclude my remarks I do hope that the Minister of Agriculture and any other hon. member will not misjudge the position the Conservative party is taking on this matter of loans to farmers of western Canada.

[Mr. Barnett.]

The Minister of Trade and Commerce (Mr. Howe) seems to be concerned about what our position is. For several years our leader has made that position clear. He has defined it clearly and emphasized it repeatedly. Our position is that we believe the farmers of western Canada who cannot sell their wheat to anyone else should have cash advances. That has been made clear, and I hope the House of Commons and the press of Canada will understand from here on that there is no equivocation in that regard. We are prepared to vote now for the amendment to send this legislation to the agriculture and colonization committee to review the situation; for even the Minister of Trade and Commerce must realize that this is not letter-perfect; that the farmers of western Canada are not satisfied. If none of the rest of them believes that, surely the hon. member for Rosthern (Mr. Tucker) must know that they are not entirely satisfied.

We believe that cash advances now would allow the government to withdraw the bill entirely. They would not need this bill at all with the cash advances to pay the loans already made, and the matter should be settled—

Mr. Speaker: Order. The hon. member is overlooking the fact that we are not dealing with cash advances. What we are dealing with is another matter altogether.

Mr. Rowe: Mr. Speaker, I shall follow your ruling no matter where it takes me, but with all due deference to you, cash advances is our policy in lieu of what the government proposes in this bill. We are prepared to send this bill to the agriculture and colonization committee. However, Mr. Speaker, if you prefer it I shall not pursue it except to say in conclusion that we are in a difficult position. As I mentioned last night, even the bread-and-butter twins are not altogether in agreement on their policies. The Minister of Trade and Commerce is seeking to sell wheat behind the iron curtain. The Minister of Agriculture is selling butter behind the iron curtain at a premium. Now he proposes, as reported in the Winnipeg *Free Press*, to trade wheat for immigrants. An hon. member asked whether it would be on a pound for pound basis. I hope they are weighty immigrants if it is. The Prime Minister says he has not heard anything about it. The Minister of Agriculture (Mr. Gardiner) says he discussed it with other cabinet ministers. If I was in your cabinet I would discuss it with your Prime Minister as quickly as I would with your Minister of Trade and Commerce.

Mr. Gardiner: Mr. Speaker, I did not say any such thing at any time.

Mr. Rowe: The Winnipeg *Free Press* report said you discussed it with Sir Anthony Eden and Sir Winston Churchill—

Mr. Gardiner: Then I do not agree with the Winnipeg *Free Press*.

Mr. Rowe: And it does not agree with you. The Minister of Agriculture said he discussed it with Sir Anthony Eden and also with Sir Winston Churchill when they were here—

Mr. Gardiner: No, sir, I did not say any such thing at any time.

Mr. Rowe: You are the most misquoted quoter in Canada. The press gallery must have a real problem in quoting you properly because you have been misquoted more times in the last 30 years in Canadian politics than any other hon. member of this house.

Mr. Gardiner: Mr. Speaker, if my hon. friend will permit me, I did make certain statements—

Mr. Rowe: I am sure you must have!

Mr. Gardiner: —to a reporter for the *Free Press* and the radio station phoned me up and asked me for a statement on it, and indicated just what my hon. friend is saying, and I told them definitely that I had not discussed trading wheat for immigrants with either of the ministers who were here from Britain.

Mr. Rowe: Mr. Speaker, this is a very strange thing, and I have to take the word of my hon. friend the Minister of Agriculture because I have followed his debating tactics in this house for so long that I would not even want to misquote him on any of his famous quotations. It is a strange thing, however, that the Winnipeg *Free Press* quotes how he discussed this with Selwyn Lloyd, Sir Anthony Eden and the Right Hon. Winston Churchill—

Some hon. Members: Order.

Mr. Speaker: Order. The hon. member has got even farther away from the principle of the bill. I did not want to give him the bad news I have in my hands while he was exchanging words with the Minister of Agriculture and I took into account the fact that there were interruptions and I do believe I reimbursed the hon. member for that time. Even with that I must come to the conclusion that the hon. gentleman has exhausted his time.

An hon. Member: He is all washed up.

Mr. Speaker: Now, if the hon. member wishes to conclude very briefly I think the house will allow him to do so.

Some hon. Members: No, no.

Mr. Gardiner: He has had a lot of time.

Mr. Rowe: I do not want to infringe on the courtesy and privileges of the house. Between your interruptions and the interruptions of the Minister of Agriculture I presume my time is exhausted.

Mr. Speaker: I am not going to let that inference remain on the record. Just before I called the orders of the day the hon. member sent me a note to ask me precisely how much time he had left and I sent him the note I received from the Clerk. The hon. member knew at the time he began speaking that he had only four minutes left at his disposal—

Mr. Rowe: And I just used five and you interrupted me for one.

Mr. Speaker: The hon. member knew from the note he received that he commenced speaking at 3.08 and his time would expire at 3.12. It is now 3.15 and I leave it to hon. members to decide for themselves whether I have made allowance for the time I have taken and the time consumed by the minister in interrupting him.

Some hon. Members: Hear, hear.

Mr. Rowe: Mr. Speaker, I rise on a point of privilege.

Mr. Speaker: Order. May I suggest if the hon. member wants to rise now to correct *Hansard* that it is not the proper time to do so—

An hon. Member: That is it.

Mr. Speaker: —the time to do so is just before the orders of the day are called. I recognize the hon. member for Humboldt-Melfort.

Mr. H. A. Bryson (Humboldt-Melfort): Mr. Speaker, I have already spoken once during the resolution stage of this question and regardless of what stage it is at I feel that after the events that have taken place—

Mr. Speaker: Order.

Mr. Bryson: —and the comments of the Minister of Trade and Commerce I possibly owe him an apology for rising at this stage. I apologize for my audacity. When I recall, of course, that the minister has risen and made approximately five speeches to date dealing with this question, that fact does temper my feeling of guilt to some extent.

I believe that yesterday the minister got up and said he felt the debate was starting to degenerate and I was a little puzzled as to what he had in mind, but when we had three Liberal speakers from Saskatchewan rise immediately after the minister concluded

his remarks I am sure that all of us agree the minister's fears were well founded.

When I recall the great many accusations and threats the minister has made because hon. members of the opposition have attempted in an extremely modest way to exercise and discharge their duties as opposition members in this house, when I recall that we had been accused of being obstructionists—

An hon. Member: You are.

Mr. Bryson: —who are purposely obstructing the passage of this legislation, I cannot help but wonder just what value the Minister of Trade and Commerce places on democratic procedures and on freedom. I confess the only conclusion I can arrive at is that possibly the only concern the minister has or the only interest in freedom he has is, as someone said, if I might paraphrase it "the pursuit of other people's freedom".

I am sure that the continuation of this debate has been more than worth while in spite of the criticisms levelled at us by the minister, because in criticizing this measure and by keeping this debate going I think it is pretty obvious that we have shown to the Conservative party and the Social Credit party the folly of their original decision in going along with this legislation. I am glad that because of our efforts to keep this debate going they are now to make an opposite decision. I am glad they see they made a mistake in the first instance; and, who knows, if this debate is carried on we may even have a reconsideration of the legislation from the government side. Therefore I think the fact that we have carried on the debate until today has had merit.

I am sure, too, that the Minister of Trade and Commerce failed completely in his attempt to intimidate anyone on this side of the house. I am also convinced that he failed equally in the effort he put forth by shedding buckets full of crocodile tears which he spilled all over the house in an effort to convince us that the banks were going to suffer because we were opposed to this piece of legislation. I do not think he fooled anyone on this side of the house and I do not think he fooled anyone in the country.

I should like now to quote from an editorial which appeared in the *Star-Phoenix* following the remarks made in this connection by the Minister of Trade and Commerce. The *Star-Phoenix* cannot by any stretch of the imagination be referred to as being notorious for its allegiance to the C.C.F. party:

The Right Hon. C. D. Howe—

Mr. Speaker: Order. If the article in question reflects upon anything said by an hon. member in this house it cannot be read in debate. I have had occasion to quote the citation that refers to that on many occasions and I referred to it at great length in a statement I had printed in the *Votes and Proceedings* with the approval of the house not very long ago on the question of reading of speeches. I am trying to put my finger on the citation at the moment that refers to the question. If hon members will just be patient with me, I am getting a great deal of assistance from my associates. There is further confirmation that the rule does exist since so many hon. members know about it. Citation 265 reads:

> It is not in order to read articles in newspapers, letters or communications emanating from persons outside the house and referring to, or commenting on, or denying anything said by a member or expressing any opinion reflecting on proceedings within the house.

Mr. Bryson: Mr. Speaker, I accept your ruling whatever it may be, but I should like to say that the article to which I referred goes on to say that they doubted if anyone in Canada was worried about the intimidating remarks which had been made to opposition members in the House of Commons, and that if the minister had tried to bluff anyone his bluff could very well be called. I think that points up the thinking of most people who are any way concerned.

I am sure that if there had been any danger that this milk and water legislation would be defeated during this session the government would have called a session of parliament last fall. I do not think anyone has been too much impressed by the minister's tactics. As a matter of fact I do not think even the bankers were unduly concerned as to whether this legislation passed or not, because at a meeting in Saskatoon several bankers were present as well as many officials of agricultural organizations, and business people. That meeting was held some weeks ago and one of the bankers was asked for his opinion and he told the meeting that if a farmer could not get a bank loan under ordinary circumstances with his credit rating he was not likely to get one under the government plan.

I think that is fairly significant of the attitude the banks have taken. Another matter in which we are going a little bit offside is that too many people think that $1,500 is involved in these loans. The bankers are not going to take any chances in connection with the security for the loans they make. This banker went on to say that the applicant would have to list all his debts, including chattel mortgages, and disclose his net worth. The items to be disclosed would be whether

or not his land taxes were unpaid. If so, the applicant would have to obtain a clearance. Some of the municipalities are allowing exemptions of from $1.50 to $2.50 per acre. The banker summed it all up by saying that all this information would have to be given to become eligible for a loan of something less than $100.

I do not think the bankers are unduly concerned about these loans at all in so far as getting this legislation through the house is concerned.

I should like to deal for one moment with another matter which I think has been overlooked. A great many speakers on the government side of the house as well as the right hon. Minister of Trade and Commerce (Mr. Howe) have tried to get the idea across that it is the small farmer who is going to be assisted by this legislation. I do not know what is the minister's interpretation of "small farmer", but I think it would be fair to say that anyone farming less than three-quarters of a section could be considered a comparatively small operator in the prairies provinces. As I say, it has been argued that it is that type of farmer who is going to benefit under this legislation.

This whole question came up at a meeting in Saskatoon where farm union officials gathered to discuss this whole question, and some very revealing figures came out which I should like to quote. It was stated that a quarter section farmer with 155 acres under cultivation would be able to deliver 1,085 bushels of wheat. Based on a 7-bushel quota the value of that wheat as No. 2 would be $1.18 per bushel at the local elevator, or a total of $1,280. Assuming a loan on the basis of 50 per cent would give you $640. But the value of 300 bushels already delivered would be $354, and 320 bushels under an additional 2-bushel quota would be $365. When those amounts are deducted you have a maximum loan of $21. This is one of the farmers the Minister of Trade and Commerce says he is really concerned about, says he is really going to help. That takes care of the quarter section farmer.

What about the half section farmer?

Mr. Speaker: I do not want to appear too restrictive but citation 265 which I read a moment ago applies to newspapers, letters and communications emanating from persons outside the house. The hon. member should not import opinions on this bill which have been expressed outside. An hon. member must speak in his own words, express his own views, and not carry on the debate by proxy. I will read the citation again, which is as follows:

> It is not in order to read articles in newspapers, letters or communications emanating from persons outside the house and referring to, or commenting on, or denying anything said by a member or expressing any opinion reflecting on proceedings within the house.

That restricts very seriously what an hon. member may say. An hon. member should express his own opinions in his own words. There is a temptation for an hon. member to read a letter he may have received or a resolution which has been adopted by an association of some kind and one in my position feels that he should not stand up too often to intervene. But it is the hon. member who does not break the rules who must suffer when this is done by other hon. members.

Mr. Bryson: The only reason I was quoting these figures was to discredit the argument of the minister who is trying to sell this legislation to the house on the basis that it is going to benefit the small farmer. I am simply trying to prove that it is not going to benefit the small farmer. I am using these figures to counter the argument put forward by the minister.

Mr. Speaker: I understand the hon. member's position. If he were before a court of law pleading a case he could submit evidence and it would be all right, but we are debating a matter and he must express his own views by virtue of rules which were adopted long before I ever came to this house. I do hope that he will observe those rules.

Mr. Bryson: I shall refrain from reading anything further. I could have made up figures of my own had I thought that you would object to what I am trying to do now.

Mr. Coldwell: May I rise to clarify the point of order. Perhaps I did not quite get the point, but am I to understand that the objection is to the hon. member quoting figures which had been given in a publication?

Mr. Speaker: I understand that the hon. member is quoting from an analysis which was made of this legislation in a publication put out by an association of farmers, first dealing with the one-quarter section farmer and then with another category. If a chamber of commerce, for instance, would analyse the bill which is before the house and would sort of refute some of the remarks made by the minister in introducing his legislation, and if the member would import that argumentation into this house and quote from it, he would certainly be violating citation 265, because he would be reading from a communication emanating from persons outside the house referring to, commenting on or denying something said by a member in this house. In other words, the chamber

of commerce or the association the hon. member referred to are not members of the house. In the words of a former prime minister, Right Hon. R. B. Bennett, when he was in this house, whenever a member quotes a newspaper or someone who has spoken outside the house on the subject that is under debate, he is introducing a two hundred and sixty-sixth member into this house.

Mr. Coldwell: Yes, I understand that, but the point I was getting at is this. Is the hon. member precluded from quoting these figures, provided that he puts them before the house as his figures and does not refer to the authority that produced the figures? It seems to me that he could do that without infringing upon the rule. I quite agree that lengthy quotations, and so on, are not compatible—

Mr. Speaker: The hon. member for Rosetown-Biggar is quite right, providing the hon. member does not give the credit to the association that has produced the figures. If he wants to incorporate them as being his own and take full responsibility for them, then I have nothing to say. He is using his own words.

Mr. Harris: He has already done that, unfortunately; he has already cited his authority.

Mr. Bryson: The figures I was quoting were not the compilation of figures made up after the legislation was introduced. This was a survey that was made in anticipation of what the legislation, if and when it appeared, was going to do. So I shall refrain from reading from that particular article. I have other figures I shall use, and I shall accept responsibility for them.

I pointed out what this legislation is going to do for the quarter-section farmer. He is not going to be able to borrow any money. As a matter of fact, he has $21 too much to start with. In the case of the half-section farmer, his maximum borrowing power would be $1,280, but if he had deliveries of 300 bushels under the initial quota he would then be eligible for a loan not exceeding $194.70. Again, this is the type of farmer the Minister of Trade and Commerce is so much concerned about. He is going to suffer if this legislation does not pass post-haste. Now let us turn to the three-quarter-section farmer, and I feel that is the ceiling when we are speaking about small holdings. We find that he is in an even worse position than the other two. Because of added expenses and his capital investment, he of necessity would need to get a considerably greater amount than either of the two I mentioned earlier, but under this legislation this farmer will receive only $84. When we consider that all of the grain we have been able to market on the prairies to date represents a complete and dismal crop failure, anything a farmer has been able to deliver above 15 bushels an acre he can consider a little better than a complete crop failure. So it is not hard to point out that this legislation, in so far as helping the small prairie producer is concerned, falls far short of anything that he had expected.

Now I should like to deal for a moment with another aspect of this legislation, and here, I feel, is the nub of the whole question. I believe that the best arguments as to why this legislation should not be passed are to be found in the very arguments put up by the government as to why it should be passed.

I should like to deal with that aspect for a few moments. I hope you will not rule me out of order, Mr. Speaker, when I quote the minister himself in this connection. The Minister of Trade and Commerce, speaking in this debate, had this to say, as recorded on page 602 of *Hansard*:

> The present legislation is designed to deal with a different problem, a problem which arises from the superabundant production of grain on the prairies during recent years.

Then he goes on to quote figures to prove that there has been superabundant production. He gives figures showing that in the years 1947 to 1950 the average yearly production on the prairies was 361 million bushels, in that five-year period. He then points out that in the last five years, from 1951 to the present time, production has averaged 515 million bushels. In other words, the average production increased during those five years by 154 million bushels. Further on he said that we have had increased marketing as well. He went on to quote figures showing that in the five-year period prior to 1951 the average marketings were 223 million bushels per year, and from 1951 to the present time he said our marketings have averaged 312 million bushels per year. In other words, the average yearly marketings during the past five years have been 89 million bushels greater per year than in the previous five years.

What exactly is the minister saying? I think it is quite an amazing revelation, because in effect this is what the minister is saying. Farmers will become bankrupts when (a) they produce better than average crops, (b) they are able to market better than average marketings. This is an amazing statement. If there was ever a greater indictment of the agricultural policies of this government, I have never heard it. I think it is a serious matter when we have the

Minister of Trade and Commerce saying that farmers are in a very difficult economic position because they have grown and marketed too much grain. He admits there is a serious situation; otherwise we would not be dealing with this piece of legislation at the moment.

I am not disputing his figures. I am not disputing the fact that we have had the equivalent of five very large crops in 3 years, but it is very serious that in the face of that the farmers' economic position is steadily but surely deteriorating. I do not know why the government does not face up to the realities of the situation, because after all it is an entirely different matter, to say we are producing more and we are marketing more than it is to say the farmers' net position is such and such.

What is the farmers' actual economic position? I should like to quote figures published by the research section of the Department of Agriculture. For the year 1953 the cash income—not the net income, because we are unable to get the net figures—of prairie farmers was $1,448,749,000, but in 1955 the cash income of prairie farmers had fallen to $961,518,000, a drop of $487,231,000 in two years.

Yesterday I received a publication from the dominion bureau of statistics which verified the figures I have quoted. It is a serious matter when in two years you have a drop in the farmer's cash income of 66·5 per cent. In addition to that, in the same period, costs have risen by 66 per cent. It is difficult to say what the farmer's net position would be if we had those figures. I am amazed at the statement made by the Minister of Agriculture (Mr. Gardiner), although in some respects I am not because we have known him to do things like this before in order to prove a point. I am sure that if the story were made known to Liberal members opposite they would take a different view of their position. In order to suppress any fears some Liberal members might have as to what the exact position of the western farmer is, he quoted precisely the same figures as the Minister of Trade and Commerce (Mr. Howe) quoted in this house to prove that the farmer has never been as well off in his life before. In order to spike it, he quotes the pool. I refer to *Hansard* of February 10. After he had quoted all of those figures on incomes of all kinds to show that the farmer has so much money he does not know what to do with it, then he has this to say for the benefit of the members of the government as reported at page 1060 of *Hansard* of that date:

> **And so, as the wheat pool says in Regina there has not been any going down of farm income on farms in general across Canada; the farm income has been higher year by year.**

I think that is a serious accusation in the face of the figures produced by the minister's own department. The three prairie pools have completely repudiated the minister in this respect. Recently they published a memorandum indicating that the income of Canadian farmers had dropped for the third successive year. They go on to say that all across Canada farm income has dropped by some 2·1 per cent, but in the prairie provinces this drop has been to the extent of nearly 28 per cent. It is obvious that in trying to make a case for this legislation the government is using every method at their disposal to discourage any fears that might arise in the minds of their own supporters.

I should like to deal for a moment with some of the other arguments, some of the other alibis that have been used by the Minister of Trade and Commerce as to why we should support this milk and water legislation. I am not going to delay the house with a long dissertation on parity prices or cash advances, but I should like to say this. There was a great deal of misinformation given to the house when we were discussing cash advances. It was said that could not be done; it was not feasible. In order to support his argument against cash advances, the minister went to some length to cite the United States support program as it applied to cash advances on farm-stored grain. He said that the government of the United States would not accept ownership of the grain until it was stored in government storage. Well, of course, that is completely fantastic. They do nothing of the kind. They pay the farmer up to a certain percentage on grain stored in government approved storage on the farm. All these arguments are nothing but red herrings drawn across the trail in an attempt to prove this cash advance proposition is completely unworkable.

It seems to me, Mr. Speaker, that we are still going to be faced with an acute economic problem on the prairies regardless of whether or not this legislation is passed. I would even go farther and say that even if this legislation were going to help or even if bank loans were rejected and cash advances were made, it would still not solve the agriculture crisis which we have been facing in western Canada for a good many years and which we will be facing for a good many years to come. This crisis will not be solved unless this government is prepared to completely overhaul its agriculture policy. Cash advances, bank loans, all of these things are only bits and pieces and by themselves mean absolutely nothing in so far as stabilizing agriculture is concerned. Only when all of these things

are welded together in a comprehensive agriculture policy will these bits and pieces really mean anything. I am convinced that in the very near future the government will be forced to undertake the implementation of a complete agriculture policy to stabilize the farm industry in this country. I might say also that one of the planks of that policy will be the acceptance of the principle of cash advances on farm-stored grain without interest and administered through the wheat board.

Before I move on, I should like to mention the argument that those who are opposing bank loans are in effect trying to undermine the wheat board. I am very much surprised that the government is making such a case for the wheat board. If they were as interested in the maintenance of the wheat board as they are trying to make out, why do they not put that board on a permanent basis? Why do they not put all grains grown in western Canada under the wheat board? If they would do that, then they would be proving that they are interested in the wheat board. We would not have today the spectacle out in southern Manitoba of United States farmers coming across the border, without any restrictions, and delivering flax into the elevators or loading it into box cars that are badly needed for grain grown in that area. Now, that is the situation we have today because the government has not seen fit to place flax and rye under the jurisdiction of the wheat board. I think it is a deplorable situation when box cars are so scarce and elevator space is so badly needed.

So, Mr. Speaker, I would just conclude by saying that this legislation is not going to benefit the people the Minister of Trade and Commerce is telling us it is intended to help. It is not going to help anyone. It did not do the job before and it will not do the job now. It is wrong in principle. It is wrong in practice, and for that reason we cannot accept it.

Mr. Victor Quelch (Acadia): I did speak a couple of times at the resolution stage, but on both occasions I spoke for less than half an hour and therefore I make no apology for speaking at this time. I rise mainly for the purpose of clarifying the stand of this group on this bill and on the amendment.

Whilst the question of advances against grain held on the farm is an important one, it is not the farmers' No. 1 headache today. The No. 1 headache from which the farmers are suffering today is the fact that they are in a price-cost squeeze. Lack of advances to farmers in many cases merely aggravates that situation. It does so in varying degrees. In so far as the farmer who is in a fairly strong position is concerned, it is merely an inconvenience. Unfortunately there are not many farmers in that happy position. The majority of the farmers have no large reserves upon which to fall back. It is not merely the small farmer who is handicapped. There are today many large farmers with large holdings of land who have heavy obligations, who are in the process of paying for machinery and for their land. Even though they are large farmers, these farmers today are suffering under a severe handicap.

I would say that the failure of the government to take action today to halt the fall in farm income and the failure to support farm prices at an adequate level constitutes a flagrant breach of faith with the farmers of this country. It is breaking a definite pledge that was made by the government in the latter years of the war; it was a pledge that was made by the prime minister of this country to the people of Canada. I think the farmers of this country have the right to expect something better than that from this government when the pledge was made by the prime minister at that time. The pledge was in words to this effect: In view of the fact that the farmers during the latter years of the war were having to take for their commodities prices that were less than the world market price, the government would after the war stabilize farm prices to compensate them for that loss. On wheat alone that loss amounted to half a billion dollars. If you take into consideration the losses as a result of selling all farm produce at less than world market prices in the latter years of the war and in the early post-war years, there would be several more hundreds of millions of dollars to add to that loss of $500 million. I therefore say that the failure of the government today to maintain farm prices at a level that bears a fair relationship to the price of other commodities constitutes a flagrant breach of faith having regard to the promise they made to the farmers in the latter years of the war.

It is no wonder that some time ago we heard that farmers in Saskatchewan had suggested that, if there was another war, they might not be quite so co-operative with the government as they had been in the last war. You cannot blame them for feeling that way. Time and again when I travelled in my constituency and when I was explaining to the farmers the British wheat agreement and other agreements and the fact that they were taking at that time less than they could have obtained if it had not been for government policy, I explained to them that the government had given a pledge that they would stabilize prices after the war, that they would support prices after the war. When I told them that,

many farmers said, "Do you think we can trust the government?" I said, "Yes; in this case I think you can; I think the government will stand by their promise". It is not a very happy situation in which I find myself when I am obliged to go back and face those farmers when they ask, "Do you still believe that the government are going to stand by their promise?" The government cannot expect me to defend them in that regard.

The government at the present time is showing little concern over the plight of the farmers. They apparently realize that the farmers are short of money. I think the government realizes that fact quite well and I think the Liberal members on the other side of the house realize it. But the strange thing is this. Instead of taking action to support the farmers, to help them, what do they do? They support the money lenders to help the farmers go further into debt. Practically all the legislation that is being brought down at the present time is designed not to support the farmers but to support the money lenders, to guarantee them against losses. The government bring down a farm loan bill to expand the amount of capital, to expand the amount of money that may be lent to farmers. It almost looks as though some people are rejoicing in the fact that at last the farmers are in a position where they will have to borrow more money.

It is true that during the war and in the early years after the war the farmers were able to pay off many of their mortgages. That fact was quoted time and again as proof of the fact that the farmers were doing well. But in the five years from 1948 to 1952, farm debt increased by 25 per cent. If farm debt increased by 25 per cent from 1948 to 1952, what has happened from 1952 to 1955? I am satisfied that farm debt has increased even more in that period of time. What has the government done to help that situation? It merely guarantees the banks. If the banks make loans to the farmers, the government will guarantee them against loss. Is it not about time the government started to guarantee the farmers instead of the financial institutions that are making these loans?

What is the situation with regard to the banks? After all, this is a bank bill. Would the Minister of Finance (Mr. Harris) suggest that the banks are in fairly bad shape today, that their reserves are disappearing and that their profits are falling? I think the Minister of Finance will agree that the banks are in an extremely healthy condition today and that they have substantial profits. Their reserves have been steadily expanding ever since the end of the war. Not only is that true of their general reserves but in addition to their general reserves they have a secret reserve and they do not pay any income tax on that inner reserve. I would suggest to the Minister of Finance that if the farmers were treated in that same way, were put in that preferred position, and were allowed to establish a secret reserve so that when their assets started to fall they could use that secret reserve to make up the losses of assets, and with no income tax charged them on that reserve, they probably would have been in a position today to meet their losses and to make up the loss of income resulting from the low prices today.

I do not know who drafted this bill. I should imagine that bankers drafted it because it is weighted so heavily in favour of the banks. The Minister of Finance shakes his head, but certainly I cannot imagine even bankers drafting a bill more advantageous to themselves than is this one. It is hedged with penalties from beginning to end. It is well to remember that the banks today are the only institutions in Canada that are in the preferred position of being able to monetize somebody else's wealth and then lend the proceeds to somebody at interest. That is a highly profitable business. But nobody else is in that happy position. I suggest that the farmers are in far greater need of assistance or support from the government than are the banks of this country. The government should attack vigorously the cause of the farmers' shortage of money which is, to a large extent, low prices.

At this point perhaps it is well to remind the house that this legislation is largely for the purpose of dealing with the question of wheat. What is the price of wheat today? The price of wheat today is just about half of parity price and by parity price I mean a price that bears a fair relationship to the price of other commodities. According to the dominion bureau of statistics, if the price of wheat today bore the same relationship to the price of other commodities as that which existed in the three base years used by the Agricultural Prices Support Act, namely 1943, 1944 and 1945, the price of wheat today would be $2.27 a bushel. What price are the farmers receiving? By the time you knock off freight charges, few farmers are getting more than about $1.25 a bushel under the initial payment.

I want to refer to the point that some hon. members have made. They have said, "You supported the bill at the resolution stage. We presume you are supporting the bill at this stage, in order to be consistent". May I say that we supported the resolution at the resolution stage after having bitterly criticized the measure. We voted in favour of the

resolution for the one purpose of allowing the government to bring in the bill. That is the purpose of the resolution. The bill is before us at the present time. Let me frankly admit there are many features of this bill, which we have now seen for the first time, which we heartily dislike. We dislike the section regarding penalties; we dislike the section regarding interest; and we dislike the section regarding storage, especially the section regarding storage. I cannot imagine why that section was ever put in the bill.

I am not permitted at this time to deal with any of those points, therefore I should like the minister—I see he is not in his seat; perhaps the Minister of Finance can give us assurance on this point—I should like the government to announce their intention to refer this bill to the standing committee on agriculture as soon as it receives second reading. Is the Minister of Finance prepared to say that when this bill receives second reading the government will be prepared to refer it to the standing committee on agriculture so that it may call representatives from the various farm organizations to find out at first hand what these farm organizations really think about this bill?

We have heard hon. members from all sides of the house give different interpretations of how the farmers really feel about this matter. I suggest that instead of having to get this secondhand, we should get it firsthand. Let us refer this bill—

Mr. Harris: If my hon. friend would permit me to answer his question, the answer is no.

Mr. Quelch: I thought that is what the government would say, and I am sorry to hear it, because it does not look as though the government really wants to get the advice of farm organizations on this matter. They do not really want to find out what the farm organizations think about this matter. It would be much easier for them to misquote the farm organizations at this time and try to give the impression that they are strongly in favour of loans at 5 per cent interest. I doubt very much whether there is any farmer in favour of that. They want advances.

If the government were prepared to send this bill to the agriculture committee upon second reading we would support the second reading; but if the government are not going to allow this bill to be sent to the agriculture committee, then they leave us no alternative but to support the C.C.F. amendment to refer the subject matter of the bill to the agriculture committee.

Mr. Argue: Another conversion.

Mr. Quelch: It is not a question of conversion; it is a question of analysing the bill before us and realizing that it does not meet the situation. At the resolution stage we had no bill; we had no details; we just had a resolution. We wanted to see the bill, and therefore we voted in favour of letting the bill be introduced in order to have the bill brought before the house. We do not like the bill; we do not like the way it deals with penalties, with interest and with the question of storage.

Mr. Argue: How are you going to vote on second reading?

Mr. Quelch: Very definitely against second reading and in support of the amendment, in view of the minister's answer. We would have been prepared to support second reading provided that the government had been willing to allow the bill to go before the agriculture committee, but apparently the government does not want the farm organizations of this country to have the opportunity to tell the members of this parliament what they really feel about the bill. In other words, I smell a rat.

Mr. Argue: One hundred and seventy of them.

Mr. Quelch: Mr. Speaker, I was not really making that allusion.

Mr. Argue: We will withdraw it.

Mr. Knowles: The bill is still odoriferous.

Mr. Quelch: In dealing with the matter at the resolution stage the Minister of Trade and Commerce stated that this measure was the same as the resolution submitted by the western conference to the government on October 11, 1955. I do not know how the minister could possibly come to that conclusion. He did not merely say it is the same, he said "exactly the same". Perhaps I had better quote his words. The hon. member for Bow River (Mr. Johnston) quoted the resolution and then the Minister of Trade and Commerce said: "That is exactly what we did". How he could possibly say that this bill is exactly what the western conference asked for I do not know. Just take the amount of the loan, $1,500. That is the limit of the loan. What was the limit asked for in the resolution of the western conference? They asked for an advance up to 50 per cent of the normal delivery. What would be the normal delivery? We might say 8 bushels to the acre. That was the amount of the quota last year, so we might say the normal delivery might be about 8 bushels to the acre. Just how would that work out, and what amount of loan would it provide? It all depends on the size of the farm, of course.

Mr. Howe (Port Arthur): May I ask my hon. friend a question?

Mr. Quelch: Yes.

Mr. Howe (Port Arthur): Has he any complaints from the big farmers about their inability to borrow money on their wheat?

Mr. Quelch: I did not get the question.

Mr. Howe (Port Arthur): I asked the hon. member whether he had heard any complaints from farmers farming a section or more of land about their inability to borrow from the banks without guarantees?

Mr. Quelch: It all depends on the circumstances of the farmer. If a farmer is farming one or two sections and is buying that land on crop-share payments he is having one heck of a time to borrow money. It all depends on the circumstances; it all depends on the size of the farm. As I mentioned a while ago, it all depends on the financial standing of the farmer and how great reserves he has. That would determine whether or not the banks would lend him money and, of course, the character of the man. As I pointed out, there are many large farmers today who are in the unfortunate position of trying to pay for machinery and land, and they are having a great deal of difficulty. Take the size of the farm. Let us take what might be called an efficient unit. Professor Hope said that the most efficient unit to farm was two sections. An average man with the aid of a full line of machinery can handle two sections of fairly good land, but if you are farming gumbo land a section of land could use practically the same machinery as two sections of average land. Let us say that the amount of cultivated land would be 600 acres. Well, if a man had 600 acres, then 50 per cent of that, at 8 bushels to the acre, would amount to 2,400 bushels. The initial price of $1.25—that is about what the farmer would get—would give him $3,000. Therefore, taking that as the efficient unit of land, under the recommendation of the western farm unions, the amount of the advance would be about $3,000 instead of $1,500 provided in this bill.

So far as interest is concerned, while interest was not mentioned, the resolution referred to advances. There is no doubt that many of those representatives were talking about interest-free advances. However, some talked about a loan, really, rather than an advance, at a certain rate of interest, and apparently different rates of interest were mentioned. But I do not think anybody mentioned a rate of interest as high as 5 per cent. Three per cent was mentioned. In view of the fact that the wheat board borrows money at 3 per cent, I cannot see why farmers—guaranteed by the government—have to pay 5 per cent.

The minister sometimes seems to think that 5 per cent is the normal rate of interest. There are many institutions borrowing money today at less than 5 per cent. Some of them are borrowing it at 3 per cent. When the loan is guaranteed by the government the banks certainly should be able to make loans at 3 per cent, even if for no other reason than to perform a public service. Therefore, the bill falls far short of the request made by the western conference, both in regard to the amount of the loan and the rate of interest.

The minister said that he cannot withdraw this bill; that if he withdrew it he would not be able to introduce another one this session. Of course, that all depends upon the bill. If he withdrew this bill, which is a loan bill, and introduced a bill to make payments to the farmers on wheat on the farm, he could no doubt introduce it because it would be another type of bill entirely. That is the type of bill the farmers want. They do not want loans, they want payments on the wheat in storage on the farms and if the government introduced a bill of that kind it would receive the wholehearted support of all the members on this side and I believe of all the farm organizations. If the government is not prepared to do that and is not prepared to refer this bill to the agricultural committee so the farm organizations may be called together to send representatives down here and tell us just what they think about the bill, the only alternative we have left is to support the C.C.F. amendment to send the subject matter of this bill to the agricultural committee and then we would have to vote against the bill as it is upon second reading.

Mr. Donald M. Fleming (Eglinton): This is the first time that I have participated in this debate at its various stages. I do so because I regard the problem which confronts the wheat growers of western Canada as a problem that is national in its effects and as one in which the principle of government responsibility is directly involved.

The western wheat farmer has one marketing agency and one only. It is a government monopoly and the responsibility of the government in the face of the kind of situation that exists today in western Canada is therefore inescapable.

At this point, sir, may I say a word by way of review of the situation and concerning what it seems to me is the issue involved at this time. The government brought forward two resolutions both of which were

favourably reported by the committee of the whole. The first provided for the introduction of the bill that is now under debate, Bill No. 82, which was debated in committee for several days. The other resolution which was passed after only a cursory debate paved the way for the introduction of Bill No. 83.

The question has been raised about the position of parties in this house on these measures and in relation to the problem of the marketing of the wheat surplus in general. I wish to state briefly, and I trust succinctly, the position that we of the official opposition have taken in our approach to this problem.

First of all, we supported the resolution at that stage because, of course, as was stated then by our leader, we wished to see the measure advanced and no matter how far short it fell from our conception of what is needed in the way of policy and legislation to meet the problem we were not prepared to deny to the wheat farmer of the west anything that might offer even some slight advantage to him, so great is his need of cash at the present time.

When this bill was called for second reading yesterday we sought to express our views and our policy in regard to it in an amendment which, although it was ruled out of order, I just wish to mention in this connection. It reads:

> That Bill No. 82 be not now read the second time, but that it be resolved that in the opinion of this house consideration should be given to the introduction of legislation which will provide for cash payments on farm-stored grain.

Mr. Speaker ruled that amendment out of order, but the amendment stands as the expression of the view of this party as to the proper policy to be followed. In other words, it is a policy of cash advances on farm-stored grain. That is the position which this party has consistently taken in relation to this problem, and the gyrations and distortions which fell from the hon. member for Rosthern (Mr. Tucker) yesterday in regard to what is meant by cash advances will not change the fact or the policy.

The use of the expression "cash advances" has never signified the payment of interest. The hon. member yesterday brought in a weird suggestion that the use of the word "advance" connotes a loan on which interest will be paid. I do not think so weird a suggestion deserves even to have time spent upon it.

The position of this party has been made abundantly clear, for all who wish to understand it clearly, by the leader of this party when he said there was no thought whatever

of the imposition of interest on any payment that should be made to a farmer on account of farm-stored grain. That is the position this party has taken consistently. It is the position this party has taken for years in relation to this whole subject. It was enunciated by my leader in this house in debate in December 1952, and that was not the first time it had been put forward. Consistently we have advocated the policy of cash advances against farm-stored grain and that is still our policy.

Mr. Deputy Speaker: Order. The hon. member introduced his remarks on this subject by referring to the amendment which had been ruled out of order yesterday. He has continued at some length along this line and I am just asking myself whether he is in order in doing so. May I draw his attention to citation 245, which reads in part as follows:

> It is a wholesome restraint upon members that they cannot revive a debate already concluded . . .

There was some discussion of this matter yesterday and the amendment was ruled out of order. Therefore I should think that the hon. member should refrain from reviving that part of the debate.

Mr. Fleming: Sir, I was not discussing the amendment but I was discussing the policy, and the policy is necessarily relevant to the debate on second reading of this bill because it is the proper alternative to the kind of policy that is embodied in the bill. The fact that the amendment was ruled out of order does not preclude a proper discussion of policy in relation to the problem that this bill seeks—

Mr. Harris: Which policy has already been rejected by the house.

Mr. Fleming: No.

Mr. Harris: Oh, quite.

Mr. Fleming: No sir, the policy has not been rejected by the house. The amendment was ruled out of order and the minister went on yesterday after that at page 1177—

Mr. Deputy Speaker: Order. One of the reasons, as I understand it, that Mr. Speaker ruled the amendment out of order was that the house expressed its opinion on that very point on a previous amendment and therefore I do not see that the hon. gentleman is on sound ground.

Mr. Fleming: Mr. Speaker, I had not intended to prolong that part of my remarks, but I do wish to state that at page 1177 of yesterday's *Hansard*, after this matter had

been dealt with by Mr. Speaker, the Minister of Trade and Commerce took it upon himself to say:

> We all know that the Conservative party has no policy.

An hon. Member: That is right.

Mr. Fleming: I am stating that the policy of the Conservative party has been and is the policy of cash advances on farm-stored grain. We sought to give expression to that policy in the amendment yesterday. The amendment was ruled out of order, and I regret that the house did not have an opportunity to deal specifically with that policy.

On the other hand, what does the bill provide for? It proposes to empower the government to guarantee loans up to $1,500 in each case made by banks to farmers as against grain, such loans to bear interest at the rate of 5 per cent. The minister says that since the banks embarked upon these loans several months ago on the strength of a promise by the government to ask parliament to pass legislation such as we understand to be embodied in Bill 82, about 8,000 loans have been made. We are told that this bill to provide for government guarantees on individual loans and the associated measure to provide for payment by the government of storage charges on wheat are all the government proposes to do. This is the sum total of the government's legislative program in answer to this problem.

What then is the principle of this bill? On the resolution stage we said, and we say it now with emphasis, that we deplore the utter inadequacy of the government's program to meet the need. An inadequacy so patent has been accompanied on the part of the government by taunts and expressions of contempt for parliament; the use by the Minister of Trade and Commerce of such expressions as "bunkum" applied to serious arguments put forward by opposition members who spoke with responsibility and a knowledge of the feelings of western Canada.

It is quite obvious that the western wheat farmer sought justice. He did not come on bended knee. What he sought was a proper loaf; but, as has been said on behalf of this party from the outset, it is quite clear that this measure is not even half a loaf. In relation to the need of the kind of policy I have described, it is at best not more than a crust.

There are times when a vote in the house on an issue when taken alone and apart from statements which precede it is not an adequate expression of the feelings of a party on that issue. We of the official opposition desire to express our indignation at the utter inadequacy of this measure to meet the need. At the same time we have no wish, in the face of the patent inadequacy of the government's program, to deny to the necessitous wheat farmers of western Canada even the paltry crust which this measure offers to 8,000 of them. We have considered ourselves as being under an obligation as a party to make every determined effort to obtain for the western wheat farmers something adequate, something much better than this inadequate measure. If a proper policy of cash advances, such as has been advocated, were adopted it would be a simple matter to take care of the 8,000 loans which have been made by the banks in western Canada in anticipation of the enactment of such a bill as this. The farmers would then be in position to repay those loans to the banks out of the cash advances.

Not having had an opportunity to vote upon our amendment I come now to the amendment introduced yesterday by the C.C.F. It has already been made clear that it is our purpose to support that amendment and I wish to give one or two reasons for our views in that regard. The amendment is in these terms:

> That Bill No. 82 be not now read a second time but that the subject matter thereof be referred to the standing committee on agriculture and colonization.

From the Social Credit party the house heard today a proposal that in the event of the bill receiving second reading the government should at that stage permit the bill to be sent to the committee on agriculture and colonization so that representations could be heard from the farm organizations of western Canada. One would have thought that that was a reasonable, indeed a modest proposal; but this arrogant government has rejected that proposal out of hand. It had hardly left the lips of the hon. member for Acadia (Mr. Quelch) before the Minister of Finance (Mr. Harris), as government leader, rose and rejected it out of hand. So we are then faced with the situation where the government will have nothing to do with any suggestion that this measure go to a committee, whether before second reading or after.

Mr. Harris: Oh, no, it is going to the committee of the whole.

Mr. Fleming: Why does the minister quibble? Who does he think is going to yield to nonsense of that kind?

Mr. Harris: That is not nonsense.

Mr. Fleming: Of course it will go to the committee of the whole. Every measure goes to the committee of the whole, but the whole purpose of referring a measure of this kind to a select standing committee is to provide opportunity for intimate discussion and the

hearing of representations by those whose representations in connection with the matter this government ought to welcome. But they do not wish even the farm organizations of western Canada to be heard here on Parliament Hill. It is much better for their purposes that they go forward garbling what has been said elsewhere on behalf of the farm organizations in western Canada.

There have been statements made in the course of this debate as to the position of the farm organizations. There have been contradictory statements by the minister as to what the farm organizations had conveyed to the government. Surely in the face of this situation the fair way of handling it would be to invite those organizations to speak with authority before a select standing committee of the house.

It was not always so. The government when faced with such a situation has not always taken upon itself to reject such a proposal out of hand. Not always when a proposal was made by the opposition that the subject matter of a bill be referred to one of the select standing committees for consideration has the government risen in its wrath and said that it would kill the bill.

If there were on the part of the government a sincere desire to understand the problems of the west and to offer effective measures within the scope of parliamentary responsibility to meet the need of western Canada, then the government would surely welcome a proposal that would place this matter before a committee.

Mr. Howe (Port Arthur): I might say that representatives of the most powerful agricultural organization in western Canada were here not later than yesterday to meet the government and in the course of an hour and a half did not once mention the subject matter of this bill.

Mr. Fleming: I wonder if they were given a chance.

Mr. Rowe: That is pretty complete proof that they did not like it very well or they would not have mentioned it.

Mr. Fleming: It would indeed be interesting if the government would permit such an opportunity to be shared with a select standing committee of the house where we could elicit the facts.

As I have said, the government did not always take this attitude. There was a time when the government did not say that the adoption of an amendment like the one now under discussion would kill the bill and therefore it must not be entertained. On May 14, 1946, there was before the house—I refer to this as a precedent in relation to proper procedure in connection with this matter—Bill No. 54, to amend the Reinstatement in Civil Employment Act, 1942. That was a government measure and the then minister of labour, the late Humphrey Mitchell, moved the second reading. An extended discussion followed and strong criticism was levelled at the bill by the opposition. But, if you please, not only did the government accept an amendment that the bill should not be read a second time but that its subject matter be referred to a committee of the house, but a minister offered that amendment. At page 1533 of *Hansard* of May 14, 1946, it will be found that at the conclusion of the debate on the second reading of that bill Hon. Ian A. Mackenzie proposed the following amendment to what was a government bill:

> That the bill be not now read a second time but that the subject matter thereof be referred to the select committee on veterans affairs with instructions that they shall consider the same and report thereon to the house.

Mr. Harris: What happened then?

Mr. Fleming: It went to the committee, and the committee made its report and recommendations to the house. The house dealt with the bill in the light of the recommendations of the committee.

Mr. Harris: A new bill.

Mr. Fleming: Yes. What was wrong with that?

Mr. Harris: I am not arguing; I am merely telling you.

Mr. Fleming: The result was a very much improved bill, but apparently the government does not want an improved bill in this case. There was no difference in principle between the situation that then confronted the house on May 14, 1946, and the one that confronts the house today, February 15, 1956. There was no difference in principle, but there was this difference in fact. The government then had a narrow majority and it was not dominated by the present Minister of Trade and Commerce. Today the government has a swollen, silent, supine majority, and the government is dominated by the Minister of Trade and Commerce. That is the difference.

As I understand it, the purpose of the amendment that is now under debate is to give an effective opportunity for reviewing the problem and trying to bring forward some more effective measure to deal with it, and at least trying to clear up all the contradictions as to the attitudes of those principally concerned as expressed through the farm organizations.

Is there a problem confronting the wheat farmer of western Canada, and if so, is it

a problem that is national in its effects and dangers? I say, "yes". To listen to the government talk, and particularly the familiar optimistic tones of the Minister of Trade and Commerce, one would just think there is no problem at all. On January 16 of this year the Minister of Trade and Commerce, after making some sarcastic references to the opposition, said:

> Shortages are wonderful, to be solved by simply denying their existence.

What is the government's attitude here? If I might paraphrase the remarks of the minister, it would be this: problems arising out of surpluses are wonderful, to be solved by the government by simply denying their existence. So far as the government is concerned, everything is perfect. Wheat is moving; sales are running up; prices are good; there is no question of unused farm storage. Everything is perfect, nothing is wrong, and a surplus is a good thing. That seems to be the government's position. The government, having no solution to this problem, is content to deny the existence of the problem. Baron Munchausen at his best could not have done better.

Mr. Rowe: He never met the minister.

Mr. Fleming: As to the worth of the minister's statements, it would be well for us to recall this glowing statement made by the minister in this house on February 18, 1955—this is almost the anniversary of these remarks he made in the house at that time—as recorded on page 1312 of *Hansard*:

> However, as I say, our sales are very good. I can assure hon. members, I think with certainty, that before the crop year ends on July 31 any producer who has grain of any kind that he wishes to market will have had an opportunity of marketing it. The suggestion of storage on the farm, I feel, is one that will not help very much, considering the short period that should ensue between now and the day the wheat grower will be able to market all the grain he has to market.

Again, as recorded on page 1313, he said:

> We will have a substantial carryover of wheat, but that wheat will all be in public storage. Storage on the farm will no longer be a problem to western Canada.

What a travesty of the facts! What a prophecy! When we hear the minister indulging in his prophecies again, the easy optimism, the denial of the existence of the problem, I ask the house to weigh the worth of the minister's statements of that kind against the equally worthless statements that he was asking this house to accept one year ago.

Mr. Rowe: It is getting worse all the time.

Mr. Fleming: The problem is one of lack of cash income to the western farmer, arising from the failure of this monopolistic government agency to market his grain. The government refuses to deal with the situation in a way that would meet the needs.

Mr. Howe (Port Arthur): I thought you invented the monopoly.

Mr. Fleming: We have demonstrated that not only does the government not wish a better measure, but they do not wish to treat parliament as parliament ought to be treated in these matters. What is the hallmark of a free parliament? It seems to me there are two tests. The first is that parliament, by its very name, is a place to talk. That is the democratic method. No matter how the talk may try the patience of some, it has still been proven in the long run, over the long years and centuries of testing, to be the best method. We have tried to persuade by the method of talking.

That is not the method that was practised in Hitlerite Germany. That is not the method of Russia; there, when the masters of the Kremlin choose to address the presidium, they simply call the presidium together and make their statements. It is a sort of counterpart, I suppose, of the speech from the throne, a review of the things the government has done, and the assembled legislators hear these declarations. There are perhaps two or three speeches by members selected for the purpose. The members simply hold up their hands to pass whatever is required by way of legislation, and then they go home.

The other hallmark of a free parliament is the right to criticize, and criticize freely. Another hon. member of this house, the hon. member for Charlotte (Mr. Stuart) and I were two of a group of half a dozen Canadians who in the fall of 1948 visited Greece and were received in the Greek assembly during the course of a debate. The debate was interrupted for the purpose of having tributes paid to Canada, particularly in the light of what Canada had done through the Red Cross and Canadian aid to Greece through the allied war relief fund. I recall how heated was the debate before we came in, and with what heat an opposition member was criticizing the government.

When I came back home and was addressing a meeting at a Canadian university and relating this incident, which happened at a time when the communists were seeking to overrun Greece and there was great distress, warfare and bloodshed in that country, a communist stood up at the back of the hall and asked, "How can you pretend that the Greek parliament is a free parliament?" My answer to him was this: "The test of a free parliament is the right to criticize, and I heard pungent criticism of the government

being offered in that house by an opposition member." That to me was proof enough of the existence of freedom in the Greek parliament.

So I say there are two hallmarks of a free parliament. One is talk; it is a place to talk. The other is the right to criticize freely. Here in this debate we have had further, and indeed unnecessary, proofs of the fact that this government does not want a free parliament.

Mr. Harris: Oh, now, just a moment.

Mr. Fleming: The government regulates the business that comes before the house—

Mr. Harris: Mr. Speaker, I rise on a point of privilege. Nothing whatever that has ever been said in my time in this house would justify a remark like that.

Some hon. Members: Hear, hear.

Mr. Harris: A free parliament is something that all of us seek to uphold and maintain, and I suggest that hon. members are not in order to say otherwise.

Mr. Fleming: Sir, with—

Mr. Deputy Speaker: Order. I must agree with the minister on this point of order. I am sure that on reflection, the hon. member for Eglinton will also agree and will revise his remarks accordingly. While I am on my feet, may I also remind the hon. member for Eglinton that for some time he has been directing his remarks to what I might call a philosophic discussion of parliament. We are actually dealing with the second reading of a bill dealing with a very particular subject. I must ask the hon. member to confine his remarks to the principle of the bill.

Mr. Fleming: That is just what I am proposing to do. You will see the relevance of these remarks. This government has sought to stifle debate on this measure.

Mr. Deputy Speaker: Order. I indicated that the minister's point of order was well taken, and I thought the hon. member for Eglinton would commence his remarks by revising his previous remark in that connection.

Mr. Fleming: I am saying, Mr. Speaker, that this government has sought to stifle debate on this measure.

An hon. Member: At no time.

Mr. Fleming: Let me get on with my evidence.

Mr. Harris: I have no objection to my hon. friend making a statement of opinion of that kind, but the question of whether or not one is attempting to stifle parliament is a different matter. This matter of opinion can be argued in debate between us, but saying we are seeking to change a free parliament is a different matter.

Mr. Macdonnell: On a question of privilege, Mr. Speaker, may I ask you whether or not you, at the request of the minister, are not seeking to stifle opinion. This is a question of opinion, and you are seeking to stifle it.

Mr. Deputy Speaker: I hope the hon. member for Greenwood is not attempting to suggest that the Minister of Finance is putting words in my mouth. That implication will not be allowed to remain. I did agree that the point of order raised by the minister was well taken when the hon. member for Eglinton had said that the government was attempting to stifle a free parliament, or words to that effect; I will get the exact words in *Hansard* tomorrow. That was a statement of fact, and I think that implication should be withdrawn by the hon. member.

Mr. Fleming: If it will meet the situation, sir, I will say that in my opinion this government is trying to stifle a free parliament. They have tried to stifle debate on this measure. It started on January 27, the very first day of the debate, when the minister, in the course of his remarks, tried to frighten members of this house into refraining from making remarks critical of government policy. He proceeded to say there was no occasion for a prolonged debate on this measure. We had a short day on Friday, January 27 and a short day on Friday, February 3. Wednesday, February 8 was a half day, and at that time the minister rose and made some very inaccurate remarks. His patience was exhausted, because he has no patience for debate and no patience for criticism. He said then, when this measure had been debated for only part of two days, that we had been a long time on this debate.

Then he went on to say that it seemed to him no more repetitive speeches were needed, and that some members of the opposition had spoken twice while one was about to speak for the third time. It was proven that was not a fact, and no member of the group to which he referred had spoken more than once. Then he said there was no need for debate on the principle of this bill. Is that not an attempt to stifle parliament? He said he was willing to drop the measure until June and charged that those who were critical of the government's policy were simply seeking to block and obstruct. Yesterday we had the minister making the extraordinary statement in this house that, after all, he is too busy to sit in the house and listen to a debate of

this kind. At page 1177 of *Hansard* for February 14, 1956, the minister said:

> I do not know why you have to again listen to the speeches we have just heard. We have already heard the same men making the same speeches.

Then he goes on:

> I really begrudge the time. Her Majesty pays me for doing something useful and I do not think I am earning my pay when I have to sit here in the house and listen to the kind of blather we have been having on this particular bill.

Some hon. Members: Oh, oh.

Mr. Fleming: Is that the speech of a sincere believer in democracy? I say that kind of speech would better belong to the other kind of assembly to which I referred in other countries rather than in a free parliament. Neither that attitude nor that kind of speech has any place in a free parliament. The attitude exposed is not the attitude of anyone who has any knowledge of or sympathy with the proper functions of a free parliament. When the hon. member for Rosthern was speaking the minister interrupted him to say that he would soon be turning this discussion into a debate, and naturally he does not want a debate.

So we are left with this situation. First, there has been in fact no obstruction. The charge the minister has made in that respect is entirely lacking in truth. Second, the minister has been very angry. He objects to listening to criticism. He does not want debate. He does not want reply to the wild accusations he has made.

Mr. Howe (Port Arthur): What are you reading from?

Mr. Fleming: He just does not belong in a free parliament with an approach like that. He just does not feel at home and therefore it is natural he should not wish to sit here; he would prefer to spend his time outside. If it is such a bother to him to spend his time in parliament, there is nothing to prevent him from leaving this parliament. Third, he has indulged in threats to the members to frighten them into silence. He threatened dissolution yesterday; that was intended to frighten Liberal members of this house. I am sure it had no effect on anybody else. These threats make a mockery of parliamentary process.

Fourth, I say the Liberals in this house are on trial. If you believe in a free parliament, then for pity's sake express yourself and do not sit in this house like mummies. Do not allow the minister to tell you, as the Minister of Trade and Commerce told you on January 18, that from now on you must toe the party line. When members of a free parliament are told by one of the ministers that from now on they must toe the party line I say to you, Mr. Speaker, that it puts every Liberal member in this house on trial. If he toes the line, then of course he will be a good boy. If he wishes to preserve a free parliament, then let him assert his independence and refuse to be told how to think about this great national problem.

Mr. Howe (Port Arthur): On a point of order, what is all this harangue about? It does not have anything to do with this bill or this amendment.

Mr. Fleming: It has a great deal to do with the supine and submissive Liberals in this house in relation to this measure and in the face of the needs of western Canada that are not being met by this inadequate measure.

Mr. Elmore Philpott (Vancouver South): I may say that I have no wish to hold up this debate, but I want to take two or three minutes to deal with some of the remarkable points raised by members of Her Majesty's official opposition. In the amusing talk we heard last night from the hon. member for Dufferin-Simcoe (Mr. Rowe), which I think certainly put the house in good humour, there was one serious point which even in my humble capacity I would not like to allow to go unchallenged. The hon. member suggested that there was something wrong in this government holding out a helping hand to Britain in a time of great need when she stood entirely alone against the whole forces of fascism in Europe, and when this country held out a helping hand by giving Britain a long-guaranteed supply of wheat at a fair price.

There was another remarkable point, Mr. Speaker, raised by—

Mr. Rowe: On a point of privilege, Mr. Speaker, I cannot allow the hon. member's statement to pass because at no time in this house, during wartime or peacetime, have I ever suggested we should not give a helping hand to Britain. On different occasions I have urged that we give them more. It was in relation to the British agreement deal that the Minister of Agriculture (Mr. Gardiner) made that I was speaking, and to twist it the way the hon. member has is to misinterpret it in unfairness to me.

Mr. Philpott: If I have misinterpreted the hon. member, I am sorry, but when I read his remarks in *Hansard* he was objecting to the fact that we sold Britain a supply of wheat at much less than world prices, and especially to selling Britain wheat for about a dollar a bushel less than otherwise she would have had to pay.

I now want to deal with the other rather remarkable point made by my good and genial

friend the hon. member for Winnipeg South Centre (Mr. Churchill) who, I note, has just stepped behind the curtain, when he suggests the Minister of Trade and Commerce should follow the example of the great Conservative leader Disraeli in the year 1867 and when he found there was opposition to a certain resolution which he proposed, he should withdraw the resolution gracefully. I have been looking up the book to which the hon. gentleman referred. Jennings' "Parliamentary Reform", page 243, gives the incident to which my hon. friend refers. The incident would certainly interest the old professor of history, the present Secretary of State for External Affairs (Mr. Pearson). It was when the great Conservative leader was trying to put through his reform bill to give the franchise to more of the voters of Britain and to abolish the rotten borough principle. It seems to me, Mr. Speaker, that the members of Her Majesty's opposition are certainly on extremely weak ground—

An hon. Member: This has nothing to do with the bill.

Mr. Philpott: —when they have to thresh over old straw not only once but twice and three times, and when they go all the way back to Disraeli and then, by implication at least, criticize that great Conservative leader for having tried to put through the second reform bill.

In my opinion, Mr. Speaker, by trying to hold up the passage of this bill and by making the same speeches not once but twice, three times, four times, five times and six times, not only reviving the debate on the speech from the throne but debate at the various stages of this bill, members of Her Majesty's loyal opposition are doing exactly the same thing today to which they violently objected when the Minister of Trade and Commerce suggested last week that we might be obliged to postpone this bill. By suggesting that this bill should be sent to the committee on agriculture and colonization they are in fact saying that the western farmers are in no hurry for cash advances of any kind and can afford to wait for months and months.

Mr. Argue: That is twisting the record.

Mr. Rowe: You had better get back to family allowances.

Mr. A. M. Nicholson (Mackenzie): Mr. Speaker, in reply to the hon. member who has just taken his seat, I might remind him that three months have passed since the Minister of Trade and Commerce made his announcement. If parliament has been able to wait for three months, I see no reason why we should not wait long enough to act on the suggestion made by my colleague the hon. member for Kindersley (Mr. Johnson). The amendment before us is that Bill 82 be not now read the second time but that the subject matter thereof be referred to the standing committee on agriculture and colonization.

The Minister of Trade and Commerce is old enough and has been here long enough to know that if he will only say the word, this reasonable request can be granted. When the minister was leading the house some years ago I had the honour of presenting an amendment asking that the question of milk subsidies be reconsidered, and the minister turned around and suggested there should be a free vote on that subject. There was such a vote and the amendment carried, and the government was not defeated. I suggest that all that needs to be done now is for the Minister of Trade and Commerce to say that this is a question that deserves the impartial consideration of all members of the house and that there will be a free vote.

The fate of the government will not depend on the outcome of that vote. If a majority is of the opinion that this bill should not now be read the second time but that the subject matter should be referred to the standing committee so that witnesses can be called, in the light of the discussion and the decision, the government can then decide whether or not it wishes to bring in additional legislation.

The hon. member for Eglinton (Mr. Fleming) has used a good deal of material that I planned on using. I want to thank him for that.

An hon. Member: Do it again.

Mr. Nicholson: Mr. Speaker, I resent the suggestion of filibuster and delay.

An hon. Member: That is what you are doing.

Mr. Nicholson: If there is anyone on the government side of the house who feels that this matter is being delayed, all you have to do is bring in a motion of closure and with your government majority the motion will carry.

Mr. Howe (Port Arthur): That is what you want.

Mr. Nicholson: When you were in the chair yesterday afternoon, Mr. Speaker, when the hon. member for Rosthern (Mr. Tucker) was speaking, you were surprised—as was I—to have the Minister of Trade and Commerce say this, as reported at page 1161 of *Hansard*:

Mr. Speaker, are we having a debate on second reading or—

The Acting Speaker (Mr. Applewhaite): I did not hear the point of order raised by the minister.

Mr. Howe (Port Arthur): On second reading I do not think that this speech should be allowed to degenerate into a debate.

I suggest, Mr. Speaker, that one who is getting so old and tired as to make that sort of interjection in this sort of debate must be causing a good deal of embarrassment to his younger colleagues—

An hon. Member: Don't worry about that.

Mr. Nicholson: —when he suggests later on, as reported at page 1177 of *Hansard*:

I do not know why we have to again listen to the speeches we have just heard.

Mr. Speaker, you are following closely what is being said, as are other members and I am sure that if anyone on the opposition side was attempting to make a speech that had already been made since that controversial subject arose, you would have been quick to draw attention to the fact that at page so and so of *Hansard* the speech was to be found. But these speeches are not speeches which have been given. The minister said:

I have other things to do. I really begrudge the time. Her Majesty pays me for doing something useful and I do not think I am earning my pay when I have to sit here in the house and listen to the kind of blather we have been having on this particular bill.

An hon. Member: Who said that?

Mr. Nicholson: Those are the words of the Minister of Trade and Commerce.

Mr. Argue: It could not be anybody else.

An hon. Member: Read it again.

Mr. Nicholson: In my opinion, Mr. Speaker, those words are a reflection on parliament. As the hon. member for Eglinton has suggested, if the minister is too busy or too tired to hear what is being said on this particular subject, let him do what he suggested he would like to do. Let him go away or do whatever he likes.

An hon. Member: Go fishing.

Mr. Nicholson: Yes; go fishing.

Mr. Knowles: If he does not think he is earning his pay, he does not need to take it.

Mr. Nicholson: When the minister spoke on this subject some little time ago he cited the case of the meeting he attended when there was someone who was critical, I presume, of government policy on agriculture. After the meeting was over the gentleman who was so vocal gave the Minister of Trade and Commerce a lift and the conversation is alleged to have run something like this: "After all, conditions are not as tough as I indicated". The minister said, "This is a nice car you are driving." "Of course; it is a new car and I like it." The farmer said, "It has been the goal of my lifetime to be in a position where I was free of debt, with a crop in the bins and was sitting pretty; and I am happy to be in that position now". Then the minister concluded by saying, "That is the position of the western farmer".

Mr. Blackmore: A scandalous remark.

Mr. Nicholson: After hearing him, Mr. Speaker, I could not let the resolution pass without challenging the fairness of that sort of statement. I was reminded of the report of a speech which his colleague the Minister of Finance (Mr. Harris) delivered in New York.

Mr. Studer: We heard it.

Mr. Nicholson: No, you did not hear this speech; I did not have it. This is what the Minister of Finance said on November 2 last when he was speaking as the guest of the Canadian Club in New York. I suggest that the Minister of Trade and Commerce should read this speech; it is excellent. After giving a review of the Canadian scene, the Minister of Finance had this to say:

The wheat problem as it exists today is not just a product of the temporary generosity of nature. The roots of the problem go much deeper than this. They lie in the national policies of a number of countries. Basically, the large stocks of wheat have arisen because of world acreage expansion. This acreage expansion has been the result of national policies of subsidies and tariff protection. The consequence of acreage expansion has been higher production. The estimated production for 1955 is not far short of 7½ billion bushels compared with about 6 billion bushels for the average of 1935 to 1939.

United States wheat production has increased proportionately over pre-war figures considerably more than world production; and the building up of very substantial unsold surplus has resulted. The ways and means by which the United States reduces these surpluses is of serious, indeed, vital interest to us.

In Canada we have a central selling agency for wheat, the Canadian wheat board, but we do not subsidize the wheat producer. The wheat grower in Canada receives an initial price on delivery and eventually a final payment which represents the net price received by the wheat board after meeting all costs of storing, handling, transporting and selling the crop.

The Canadian wheat producer is fully prepared to compete on equal terms in the world wheat market. He has confidence in the quality of his product and his technical efficiency in producing it. However, it is quite another thing to compete with wheat grown in other countries where it is heavily protected by either high tariffs or high subsidies, or both. The problem of the Canadian wheat producer will only be solved with the removal of these high artificial barriers which now restrict, directly and indirectly, our access to the world wheat market. But I can only repeat—wheat production is the principal source of cash income of the great majority of our western

farmers and we, as a government, are bound to be greatly influenced by anything so vital to them and to our national economy.

Mr. Harris: Am I expected to applaud?

Mr. Nicholson: No, but I would expect the minister's colleague, the Minister of Trade and Commerce, to do him the courtesy of at least reading this speech and learning of the views the Minister of Finance made known at the meeting in New York city when he was invited to address the Canadian Club. If this matter was of such importance, and it was, for the Minister of Finance, in the middle of a very interesting and accurate review of the whole Canadian economy, to take time to point it up, then I suggest, that the two eldest and senior members of the cabinet, the Minister of Trade and Commerce and the Minister of Agriculture, are doing a great disservice to their colleagues, to parliament, and to the people of Canada in suggesting that there is no problem; that it is a situation that is not to be worried about.

When speaking at another place the Minister of Trade and Commerce said:

> The Prime Minister lays down the party line. Once that line is laid down, I don't care whether you are a member of the House of Commons or the Senate, that line should be adhered to. We stand or fall together.

Mr. Habel: What has that to do with this debate?

Mr. Nicholson: I suggest there is an amendment before the house, and the Minister of Trade and Commerce said that if the backbenchers cannot support it the government will fall.

Mr. Habel: Who said so?

Mr. Nicholson: The minister has said it is a want of confidence motion. The Minister of Agriculture said:

> When the majority of the Liberal party agrees that a thing should be done I am going to work to see that it is done.

Whether it is right or wrong, so long as it is the party line. Not so Senator Power—

Mr. Dickey: Watch your desk.

Mr. Nicholson: Senator Power said:

> It has not been many generations since men struggled to destroy forever the doctrine of the divine right of kings.
>
> Cherishing these traditions and honouring those proponents of a free parliament I cannot bring myself to believe—

The Acting Speaker (Mr. Applewhaite): I have, perhaps incorrectly, allowed references to pronouncements by the minister who sponsors the bill and by the minister responsible for the Department of Agriculture because they might conceivably have some bearing upon the questions before us. But I must express the definite opinion that expressions of political philosophy by someone in another place, not dealing with the question of guaranteed bank loans to farmers, is not in order in the present debate.

Mr. Nicholson: Thank you, Mr. Speaker. But, as the Minister of Finance pointed out so correctly in New York city, the Canadian farmer cannot compete in the world with producers in other countries who are subsidized or where there are tariffs. In Chile the farmers receive the equivalent of $4.50 a bushel; Switzerland, $4.19; Norway, $3.43; Sweden, $2.35; Argentina, $2.72; and the United States, $2.24. So long as wheat is coming from countries that have these large subsidies, while we are trying to compete with wheat without any assistance, we shall be in a hopeless position.

Last night the hon. member for Waterloo South (Mr. White) spoke, and I was glad to have him take part in the debate. I am aware of the fact that those of us from the wheat-producing area have taken considerable time of parliament this session.

Mr. Blackmore: Not nearly enough.

Mr. Nicholson: I am sure in our remarks we have not suggested that there are no problems in other parts of Canada. I am sure that the hon. member for Waterloo South is a reasonable person and that on reflection he will not support what he said last night, which is as follows, as reported at page 1183 of *Hansard*:

> The more I listen to the C.C.F. representatives from western Canada the more I am convinced that they are not concerned with the welfare of the western wheat farmers as much as they are with political expediency.

Well, I think that was not a useful contribution to make to this debate. The Toronto *Star*, which supports the present government very faithfully, considered this question important enough to send one of their ablest reporters, Robert Nielson, to Saskatchewan to find out from the grass roots, if there is a problem, and Mr. Nielson has an article in the last issue of the Kelvington *Radio* that just reached me. He has had interviews with farmers on their farms. On the train coming out from Saskatoon he met a farmer by the name of Mr. Rediger who told him about the conditions on his farm. He called on several farmers who gave figures with regard to their expenses and incomes for the year.

Part of the report reads:

> Rediger broached a theme that was to be stated, politely but firmly, by nearly every westerner I talked with. He contrasted the position of the prairie farmer at the mercy of the world market for his income, with the happy state of workers and managers in eastern industry, sheltered by tariffs (which jack up the farmers' living and operating expense).

The report mentioned a hardware store in the town of Wadena, with a stock of $40,000 to $50,000, I would say. The hardware merchant said that one day the previous week he had sold 10 cents worth of goods.

Here is a significant pargraph near the end of the report:

> Nowhere on the farms or at the elevators did I hear a kind word said of the federal government's plan for 5 per cent loans through banks on farm-stored grain, up to a maximum of $1,500. A farce—said Harmsworth. Why should we pay interest on our own money? The farmers hereabouts take the view that they have done their work, harvested the crop, and should be paid for it—not asked to go deeper in debt.

I have here returns from some of the municipalities in my constituency. These municipalities are run by reeves and councillors who were elected on their merits. If he were here I believe the Minister of Agriculture would support me in saying that the provincial rural municipal organization is still under the influence of the Gardiner machine out there but be that as it may.

I shall read the tax returns as at the end of December, 1954, and 1955 for the following rural municipalities:

	Dec. 31, 1955	Dec. 31, 1954
Arborfield	$ 136,000	$ 110,000
Bjorkdale	150,000	109,000
Buchanan	87,000	61,000
Clayton	119,000	89,000
Invermay	54 000	23,000
Kelvington	132,000	99,000
Keys	79,000	62,000
Livingstone	73,000	49,000
Moose Range	334,000	210,000
Porcupine	158,000	124,000
St. Phillips	50,000	39,000
Sasman	154,000	111,000
	$1,526,000	$1,086,000

In all parts of Canada citizens want to make payments on taxes the main responsibility, and the citizens in these areas realize that unless their taxes are paid they cannot have the customary services in their roads and schools.

What is the direct result of these municipalities being unable to collect their taxes? I have another return which gives the amount of money that these school units which cover all of my area borrowed from the banks and on which they were paying high rates of interest:

School Unit Bank Loans as at December 31, 1955

Canora	$180,000
Hudson Bay	210,000
Kamsack	107,000
Nipawin	233,000
Sturgis	209,000
Tisdale	130,000
Wadena	267,000
	$1,336,000

The above school units owed the banks a total of $1,336,000 because they had been unable to collect their taxes.

The secretary for the municipality of Hazel Dell wrote saying how much their tax arrears have increased. The reeve of this municipality is Tommy Miller, who happens to be a very good supporter of the Minister of Agriculture. Although Mr. Miller has always voted Liberal I should pay him the honour of saying he is a very good reeve and I think he does a very good job. He is doing everything within his power to see that the taxes are collected.

Here is a situation the Toronto *Star* considers a matter of national concern and on which it sends one of its top reporters to Saskatchewan by aeroplane. He sees the people in their farm homes and in town. The secretaries of the municipalities point out that without exception every municipality in my constituency has reported tax arrears are away up from a year ago.

As Mr. Rediger pointed out, the thing which annoys the farm people is that the Minister of Trade and Commerce can correctly say that business is booming. International Nickel in 1954 had a net profit after taxes of $65 million; Imperial Oil, $49 million; Distillers Corporation, $35 million; Aluminium Limited, $33 million; Bell Telephone, $28 million. Every other sector of our economy is prosperous; yet the Minister of Trade and Commerce refuses to consider his own statistical information.

The hon. member for Kootenay East (Mr. Byrne) took part in the debate. I am sorry that an hon. member from an industrial riding should have tried to create the impression that the farmers in Saskatchewan are in high income tax brackets, and that when the war was on they purchased victory bonds as soon as they were issued while industrial workers were unable to do so.

I am happy to note that in a publication of the bureau of statistics which came to me it was pointed out that labour income from January to October of last year indicated an increase of 7 per cent. Wages were up 7 per cent; they reached an all-time high, and that is as it should be. I think if the labourer receives a good pay cheque he is going to be able to buy more food, and food of better quality.

I might say that the attitude of the hon. member for Kootenay East, who said in effect that we are misrepresenting the plight of the farmer and that after all the farmer is getting more than he deserves, is different from the attitude presented by most industrial organizations. It is typical of the trade union

movement on the whole to recognize that this is one of the problems in Canada, that farm people are not getting their fair share of the national income. Some hon. members have gone into the farming areas and suggested that the farmer's trouble is caused by the fact that the industrial worker is getting such high wages.

In the United States the U.A.W. recently made a study when steel prices went up in that country. In a circular issued by the U.A.W. in Washington I note on page 9 it is pointed out that the corporation profits before taxes went up 65 per cent and corporation profits after taxes went up 41 per cent; dividends paid by corporations were up 73 per cent but the farmers' net income was down 28 per cent.

The U.A.W. realize that when this happens they cannot sell automobiles and farmers cannot buy farm machinery. They point out that when the price of steel went up $7.50 a ton that year—

Mr. Blackmore: The price of what?

Mr. Nicholson: When the price of steel went up. This sort of increase creates some resentment for labour. The automobile workers had an increase of 21 cents an hour, and this increase would have warranted an increase in G.M. labour costs to the extent of $49 million. Instead of increasing by $49 million, they increased by $570 million. In the farm implement industry it should be pointed out that when Deere and Company gave an extra dollar to their workers, they collected $1.96 from their customers, and when the Oliver Corporation gave an extra dollar they charged $2.05. Allis-Chalmers—

The Acting Speaker (Mr. Applewhaite): It is with no pleasure that I interrupt the hon. gentleman. I am sure that the hon. member for Mackenzie will agree with me that the relationship between wage increases and the cost to the consumer of manufactured goods is so far from the question as to whether or not the particular bill should be referred to the committee on agriculture that it cannot be regarded as being in order in this debate.

I have no desire to interfere with the hon. gentleman and I do not like these interruptions because they always break into the train of thought of the hon. member who has the floor and make it difficult for him. But I think I am fully entitled to ask the hon. member to bring his argument much closer to the subject matter before us than he has been doing during the last four or five minutes.

Mr. Nicholson: Mr. Speaker, I appreciate your point and it is very well taken, but unfortunately government members who have taken part in this debate, particularly the hon. member for Waterloo South, who was permitted to discuss butter last night during this debate, have been allowed to wander. If hon. members on the other side are to be permitted to discuss everything under the sun, then I think hon. members on this side should be able to do likewise.

The Acting Speaker (Mr. Applewhaite): I am going to take it upon myself this time to interrupt the hon. gentleman and indicate that I interrupted the hon. member for Waterloo South yesterday of my own volition.

Mr. Nicholson: I shall not pursue that matter any further, as I want to leave some time in which to say something about the Minister of Agriculture. The minister should know better than to come to parliament and present the proposition that the farmers have never been as prosperous. The minister would be quite right in saying that the farmers of Canada are much better off than the farmers of India, the farmers of Pakistan or the farmers of a great many other countries, but that is not the point. The farmers of Canada are receiving a diminishing share of the national income as their costs are going up.

No one knows this better than the Minister of Agriculture. The other day he started to give us some figures on farm net income, and pointed out that the net income picture was pretty serious in the prairie provinces, but that taking a five-year period the situation was quite different.

On checking the Parliamentary Guide I find that the Minister of Agriculture was first elected to represent the people in 1914, 42 years ago. No wonder he is getting old and tired. I find that 34 years ago he was given cabinet responsibility, and that for the last 34 years he has been either a cabinet minister or the leader of an opposition. With that sort of record he should be in a position to speak with some authority over a long period. But when he suggests that the farmers in the west are in a very favourable position, or if they are not it is their own fault, he is doing a great disservice. The Minister of Agriculture gets the equivalent of $500 every Saturday night.

Mr. Blackmore: He does not have to borrow.

Mr. Nicholson: He does not have to worry about a bank loan. If farming is as prosperous as he has indicated he should be able to make enough on his farm to pay his income tax. Any farmer who could count on $500 a week would not be worrying about a bank loan. I think the figures I have given with reference to arrears of taxes in north-eastern Saskatchewan suggest that there are

very few people who have the good fortune the Minister of Agriculture has had in having such good health and a guaranteed income over such a long period. He is performing no service for agriculture by making that sort of suggestion.

The hon. member for Winnipeg North Centre (Mr. Knowles) has just handed me a little circular which I presume all hon. members have received, which indicates that the C.C.F. members here are backed by a considerable claque of wheat pool interests. Claque is defined as being a body of applauders, or hired applause. It points out that fortunately the government is not going to yield to our pressure and that the Canadian government has rightly refused to lick the boots of pressure groups whose main objective is to soak the Canadian taxpayer.

Before I conclude may I say that I wish the backbenchers would reconsider this matter and decide whether the Minister of Trade and Commerce was speaking for them when he suggested that they follow the party line. I should like to extend an invitation to the committee to meet in northeastern Saskatchewan. The accommodation there may not be quite as good as at the Chateau or in this building, but the best accommodation available in my constituency would be forthcoming for a meeting of a special committee to hear witnesses.

I think it is significant that the Minister of Justice has not made the same sort of mistake as was made by his colleagues, the Minister of Trade and Commerce and the Minister of Agriculture. I would be surprised if the Minister of Justice suggested at his Minnedosa meeting that the farmers of Canada are as prosperous as the Minister of Trade and Commerce said they were or as his colleague the Minister of Agriculture indicated. I hope serious consideration will be given to having this matter referred to the committee on agriculture and colonization in order to give the delegation which met the cabinet yesterday a chance to put their cards on the table and tell all Canada that we are wrong, that the farmers they represent are enjoying an era of prosperity seldom experienced in Canada.

Mr. E. G. Hansell (Macleod): Mr. Speaker, I did not speak during the resolution stage nor on the second reading, and I perhaps should not be speaking now as the position of the Social Credit group has been placed on the record more than once, but I rise to speak because of one word emphatically expressed by the Minister of Finance, when he said "no". I listened to the hon. member for Acadia (Mr. Quelch) with great interest as I always do. We regard him as one of our exceptionally expert men when it comes to matters of finance and trade and agriculture.

Mr. Harris: I agree wholly with that; do not dissociate me from that.

Mr. Hansell: I was not connecting the "no" with what I am saying now. I listened to the hon. member's speech, and as usual it was sensible, it was most reasonable, it was logical and, as all his speeches are, it was filled with sound judgment. His speeches are very seldom destructive, and in this instance he did not tear down anything. The speech he made this afternoon, I thought, was exceptionally constructive. His request was most reasonable. He stood here as a sort of peacemaker between the government, which is asking the confidence of this house, and a number of members on the opposition side who do not wish to vote confidence on this bill.

The suggestion he made was that we in this group should vote confidence on second reading, provided the government were a little more reasonable. He did not even ask the government to change its position. All he wanted was that the government would be more reasonable and on its own initiative send the bill to the committee without a vote on the amendment. It is going to be voted upon, but as far as our group are concerned we would vote against the amendment if the minister would send the bill on second reading to the committee on agriculture and colonization. But the minister interrupted my hon. friend and said, "The answer is no." It was a very emphatic no, and we all know that no meant no. Sometimes I wonder whether the government knows exactly its constitutional position.

An hon. Member: No.

Mr. Hansell: I have my ideas about it. The government assumes it was elected to bring some bills down. The government of this country is never elected. It is members of parliament who are elected, and they as individuals were elected by their constituents. Of course if they represent the party with the biggest majority, their leader is asked to form a government, and able men of the party are called in to form that government. But they assume that they speak for parliament. I might ask boldly, "Who do they think they are? Do they think they represent the people?"

The fact of the matter is that their actions would indicate that they have no regard for the people's wishes. The proposal that was made by the hon. member for Acadia on behalf of his group was a very reasonable one: "The bill is not all we want, but we

will vote for it, if he will send it to the committee on second reading, so that representatives can come and express their views." There are people representing various organizations who could appear before the committee and make their views known.

Now, let me ask what are standing committees for if they are not to look into the details of bills and hear representations from groups of interested people in this country?

Mr. McIlraith: Members of parliament are elected to represent the people.

Mr. Hansell: I recognize that, but what my hon. friend over here is saying is that therefore we do not need any standing committee.

Mr. McIlraith: No, he was careful not to say that. He was trying to put you right on law.

Mr. Hansell: He said it by inference. We have our standing committees for a purpose. Those standing committees are to hear representations on various bills and other matters.

Mr. McIlraith: No, they are not. They are to consider matters which are referred to them. That is their function.

Mr. Hansell: I did not say anything different from that. That is what we are asking. We are asking that the matter be referred to the standing committee. That is what they are for. Another thing is this. Should the government decide to refer this matter to the committee, these organizations would have the opportunity of coming before the committee and there presenting their submissions.

It must not be considered that only the farm organizations would come. They would come, naturally, but there are other interests which might oppose the bill and would be welcome to present their submissions. Other organizations, such as industrial organizations, may oppose the bill. I do not know of any that do, but there may be some. Even the banks could make representations. Even other lending institutions could make representations.

So the standing committee, which according to the ratio of members in this house would have a majority of supporters of the government party of this house anyway, could hear all those submissions. Indeed, there could have been an expression of the opinions of the people of Canada who are interested in this measure. But the government says no.

When the hon. member for Acadia made the suggestion, which was most reasonable, the Minister of Finance leaned over and spoke to the parliamentary assistant, and the Minister of Trade and Commerce walked in and sat with them. The three of them got into a little huddle. I have that in my notes here, because I drew three little heads with some hair on. After the huddle the minister rose and interrupted my hon. friend without even hearing the rest of his arguments, and said simply that the answer was no.

When I was a boy I went to Sunday school. As a teenager I was in a young lads' glee club. The director of that glee club taught us many songs, one of which—rather a unique one, but a good one, and we sang it with great gusto—was entitled "Have courage, my boy, to say no."

Mr. Argue: Walter was in the same club.

Mr. Hansell: The verses were all about the wiles of the devil and the sins that beset young men. Each verse ended—and my, how we sang it—with the words, "Have courage, my boy, to say no."

Mr. Harris: On a question of privilege, I insist that the hon. member should not refer to one of his party as a devil.

Mr. Hansell: I do not want to imply that one of my party is a devil but, frankly, I must admit that sometimes I think I have a little trace of him myself. However, I think the minister must have gone to Sunday school and learned that song, "Have courage, my boy, to say no." I should have imagined, with the minister sponsoring the bill, the government would be the first body that would want to hear representations from various organizations. I should have imagined they would be in a stronger position if they could say, "Yes, we shall send this bill to the committee and we shall hear what the various interested people have to say about it." I do not know why they do not say that.

The hon. member for Rosthern (Mr. Tucker) spoke yesterday. I have a high regard for the hon. member. I do not laugh as much as some do when the hon. member speaks. He has a case to present, and his position over the years has been most difficult.

I say with all sincerity that I have a high regard for the hon. member for Rosthern. Yesterday he rose and spoke to this motion. He read from documents signed by various organizations and attempted to prove that the measure that is before the house is the very thing these organizations wanted. I am not saying whether or not it is, but if that is so then why not send the bill to the committee? Then we would find out whether or not that is exactly what these organizations want.

I am afraid, and I rather suspect, one reason the minister will not allow this bill to

go to the committee is that he knows these organizations will come down and say, "No, the interpretation the hon. member for Rosthern is putting forward is not the right interpretation." I have a suspicion that is exactly what the organizations would do, and of course the government would not want that to happen.

We would have voted for the bill. We voted for the resolution. When the bill was introduced it was a lot harsher than we ever expected it would be. We felt determined to vote against it. Yet we have said no; it might be well for the farmers to be able to get their loans and to have the banks guaranteed against loss, so perhaps we had better vote for the measure. Then came the amendment presented by our C.C.F. friends. Well, that posed a question for us. We had to make a decision. Were we going to vote for this amendment? We said it was a technical want of confidence motion, but there is a middle of the road proposition we can make so that we do not have to vote for that technical want of confidence motion. We said we would act as mediators. We would propose that the government itself send the bill to the committee, so we can vote confidence in the government and in the bill.

That was most reasonable, was it not? The minister rose and had the courage to say no. Now what faces us? We are faced with a decision now, as the hon. member for Acadia has said. Are we going to vote confidence in a measure and in a government that refuses to hear the representations of the people who would have been permitted to come before a proper standing committee, set up for that purpose, and present their wishes? The government can make their decision. They will still have a majority of members on the committee. They could make their decision on the basis of the evidence submitted. We feel that is a most reasonable request.

Now the picture has changed. Can we have confidence in a measure and in a government that does not want to hear the representations of these people on this measure? Any government that does not want to let the light shine in on its administration does not deserve a confidence vote of this house. I am afraid, therefore, as the hon. member for Acadia has said, that we will have to vote for this technical non-confidence motion and vote against the bill on second reading.

Mr. William Bryce (Selkirk): I do not like this Bill No. 82, Mr. Speaker, any more than other hon. members, but I do not like it for different reasons. This bill is entitled:

> An act to provide for short-term credit to grain producers in the prairie provinces to meet temporary financial difficulties arising from inability to deliver all their grain.

That is not the problem in my constituency. We have not any grain to deliver. Here we have the government going out to help people who have grain and forgetting about the people who have had no crop for two years. I think that is disgraceful. I appealed to the government last year, and I appeal this year, to do something for these people.

Mr. Howe (Port Arthur): What you want is advances on grain.

Mr. Bryce: We could not get advances on grain because we have no grain, but you could do something for us. Help is needed in the interlake country. It is really bad there. I have tried to tell the government and the ministers what the situation is, but they think my language is too strong. They think I am exaggerating. These people in the interlake country are suffering. They are leaving their farms, and where are they going? They are going into the cities to compete with the men who are working there. That is a bad situation. If you lose a crop one year that is a calamity, but when you lose crops for two years that is a disaster. Certainly some of the people in the interlake country have a crop, but there are people there who will not be able to pay their taxes this year who have paid their taxes consistently for over 40 years.

I suggested that something should be done to bring in feed and seed to these people. I do not want to be told I am out of order, Mr. Speaker, but this is a serious matter and something ought to be done about it. I know I cannot move an amendment because it would call for the expenditure of money. It is going to cost money. There is more grain in the west than you know what to do with, and surely you could send some of that to the interlake country so some of these people will remain on their farms. An amendment of some kind could be introduced.

I could talk about this until tomorrow morning. I rose at this time to draw your attention to the serious situation there. Do not fail the people in the interlake country. They need help and need it badly. The unfortunate thing is that when I meet some of the cabinet ministers in the Manitoba government they say, "Well, what is the federal government doing?" Then when I speak to some of you gentlemen here you say, "Well what is the premier of Manitoba doing about it?" You are passing the buck. Don't do that. Don't do that to good citizens of Manitoba.

I am not going to say any more. I appeal to you as I have never appealed before. These people are in desperate circumstances. Do something for them.

Mr. F. S. Zaplitny (Dauphin): The motion before the house is very simple, Mr. Speaker. The amendment moved by the hon. member for Kindersley requests that instead of giving this bill second reading the subject matter thereof be submitted to the committee on agriculture and colonization. One would have expected that the government would have been very anxious to accept that motion, because it provides them with an excellent opportunity to get off the hook.

As the debate has proceeded on this bill it has become evident that the members of the government and the private members supporting the government who come from the prairie provinces have been becoming more restless and resentful as time went on. It is not altogether because of what has been said on this side of the house but because I suspect they are beginning to hear from back home. They are beginning to find that the assumption with which they started out, namely that they could present this half-baked measure as a substitute for cash advances and get away with it, was wrong. They are beginning to find that the farmers in the prairie provinces are simply not going to take this matter lying down. Hence the desire seems to be there to hurry it through, rush it through the house without too much comment, in the hope that it will be a forgotten matter before very long.

Recent events here have shown that they are not getting away with that idea. I want to say that we certainly welcome the change of attitude on the part of our Progressive Conservative friends to the right and of our Social Credit friends to the left.

Mr. Blackmore: There is no change in attitude; merely clarification.

Mr. Zaplitny: I will explain that remark in a moment. I refer to the fact that, on the part of both of those parties, those who spoke for them had announced that they were going to vote for second reading of this bill. They have now both announced that they are going to oppose the second reading of this bill and vote for the amendment to refer this matter to a committee. That is a change of attitude.

Mr. Blackmore: No; merely clarification.

Mr. Zaplitny: The change is perfectly justified, and I say that not in any criticism. I say it rather as a compliment to their good judgment in having at last swung in behind the C.C.F. on this question.

[Mr. Bryce.]

What are some of the reasons why we have asked that the subject matter of this bill should be referred to the committee on agriculture and colonization? Perhaps the main reason is the fact that the hon. member for Rosthern, on two occasions at least and perhaps three in this debate, has risen in this house and attempted to put his own interpretation on what happened at the Saskatoon grain conference. As one of those who were present at that conference, I am quite satisfied that the interpretation he seeks to place upon the desire of the delegates who attended that conference is not the correct one.

Naturally I do not expect him to agree with me but certainly he can go along this far. If he contends that what the delegates at the Saskatoon conference—and consequently the smaller delegation which was sent by this conference to interview the government—asked for is what is now contained in the bill, whereas of course we argue that it is not, then would it not be the wisest course for the sake of his own argument to submit this matter to the committee on agriculture and colonization and invite these various farm organizations which composed this conference to send their delegates again to Ottawa and have them place their wishes before that committee? Surely that would settle the argument as to what they asked for.

We contend that they did not ask for bank loans at 5 per cent, and voluminous evidence has been placed on the record to prove our contention. All that the hon. member for Rosthern has had to go on so far has been a set of resolutions passed at the Saskatoon grain conference which, because of the fact that they were not too specific in every respect, gave him just enough elbow room to place his own interpretation on them. We are willing to place our argument before that committee, and we are willing to hear the representations of these various farm organizations before that committee. Nothing could be more reasonable than that.

When one looks at this bill and hears the speeches of the members supporting it, one begins to wonder whether they are talking about the bill because, according to some of the speeches that have been made in support of this legislation, one would get the impression that the government is acceding to the request of the farm organizations for cash advances and that proposition, of course, is what the hon. member for Rosthern continues to argue. But what does this bill do? It does not provide for cash advances to the farmers. All it does is provide a guarantee to the banks in the event that they should make some loans. Not only does it do that; it also

provides for penalties to farmers in case they should misunderstand the legislation.

I think that is one of the features of the bill that would come as rather a surprise to a good many farmers. I think they will be surprised when they read the bill and find that if they happen to fill out the form which is supplied to them through the banks in the wrong way, or if they happen to make a mistake—and that would not be too hard, considering the fact that the government has set up regulations even before the legislation is passed—they are liable to a fine of $500. That is a far different thing from cash advances. It is an attempt to shift from the government to the banks the responsibility for the financing of agriculture in this crisis. It is also an attempt to shift the cost of that operation from the government to the shoulders of the farmers themselves.

In view of all that, it is rather strange to hear the word "misrepresentation" used by the hon. member for Rosthern and others. The bill itself is a complete misrepresentation of what the Saskatoon grain conference asked for and of what was asked for by every farm organization and every chamber of commerce plus the retail merchants plus anybody else who has had anything to say about it living in western Canada. It misses the point completely. It does not fulfil the functions for which cash advances were intended.

It does more than that. This attempt by the government to get out from under, to shift the responsibility for a crisis which is of their own making on to the banking system of this country, is doing more damage to the whole philosophy of the principles of orderly marketing than anything I can remember that has been done in this house previously.

Let us consider the situation. In 1946 the farmers were told that in order to enter into an agreement for the sale of grain under which Canada could guarantee a supply of grain to our customers, two things were needed. One was that the farmers would have to agree to a ceiling price, and it was set at $1.55. The second was that all the grain must be handled through the wheat board in order that there might be stability of price and stability of supply. The grain producers in this country were quite conscious of the fact that the market price at that time was higher than the amount provided in the agreement with Britain. However, they went along with the government on the understanding that the government was assuming the responsibility for the marketing of that grain. Today the government is denying that responsibility.

Mr. Blackmore: Six o'clock.

Mr. Zaplitny: May I move the adjournment of this debate?

On motion of Mr. Zaplitny the debate was adjourned.

BUSINESS OF THE HOUSE

Mr. Harris: Mr. Speaker, we shall continue with this debate tomorrow.

At six o'clock the house adjourned, without question put, pursuant to standing order.

Questions

ANSWERS TO QUESTIONS

The following answers, deposited with the Clerk of the house, are printed in the official report of debates pursuant to standing order 39:

KINISTINO INDIAN RESERVE STATISTICS

Question No. 97—**Mr. Bryson:**

1. How many Indians reside on the Kinistino Indian reserve?
2. How many acres of cultivated land are there on this reserve?
3. How many acres of pasture land on this reserve?
4. What was the cash income each year since 1951 from the sale of (a) grain products; (b) livestock products; (c) other products?

Answer by: **Mr. Pickersgill:**

1. According to the band membership list, there were 183 members of the Kinistino band as of January 31, 1956. The actual number of Indians residing on the reserve, however, varies from time to time.

2. 348 acres.

3. 1,500 acres, fair to good.

4. There are no official records kept of the total income of Indians. Statistics are, however, maintained for reserves on which the "permission to sell" section of the act is invoked with respect to farm produce. These figures would not necessarily be an accurate reflection of the total income of the Indians concerned.

FEDERAL BUILDING, CHATHAM, N.B.—PROPERTY PURCHASED

Question No. 101—**Mr. Bell:**

1. Has the government purchased any properties to be used as the site of the new federal building at Chatham, New Brunswick?

2. If so, from whom, and what were the purchase prices?

Answer (amended) by: **Mr. Pinard (for Mr. Winters):**

1. Yes.

2. Clarence F. Lynch, $15,500; Mrs. Annie Cripps, $8,500; Wm. J. Kerr, $4,000.

SOLDIER SETTLEMENT BOARD CONTRACTS

Question No. 108—**Mr. Smith (Battle River-Camrose):**

As at December 31, 1955, how many veterans of great war I, holding contracts under the soldier settlement board, were in the age groups: under 50 years; 50 to 55; 56 to 60; 61 to 65; 66 to 70; 71 to 75; 76 to 80; 81 to 100?

Answer by: **Mr. Lapointe:**

Under 50 years	Nil
50— 55 years	Nil
56— 60 "	27
61— 65 "	29
66— 70 "	9
71— 75 "	4
76— 80 "	3
81—100 "	Nil

Note—The above figures do not include veterans who hold contracts on a civilian basis.

MARGARINE—EDIBLE OILS

Question No. 130—**Mr. Bryce:**

What quantities of edible oils are being used in the manufacture of margarine in Canada, by provinces?

Answer by: **Mr. Howe (Port Arthur):**

CONSUMPTION OF OILS IN MARGARINE AND SPREADS, BY PROVINCES, 1955

—	Ontario	British Columbia	Other Provinces**	Total
	lb.	lb.	lb.	lb.
Vegetable oils—				
Coconut	6,169,998	*	1,960,788	8,130,786
Cottonseed	8,404,530	1,738,900	1,364,893	11,508,323
Palm and palm kernel	12,492,366	*	2,830,973	15,323,339
Soybean	27,394,323	3,190,681	4,031,474	34,616,478
Other	4,272,664	*	1,498,481	5,771,145
Total	58,733,881	4,929,581	11,686,609	75,350,071
Marine and fish oils	13,798,886	*	9,698,170	23,497,056
Animal oils—				
Lard	1,916,558	*	787,423	2,703,981
Other	190,403	*	6,628	197,031
Total	2,106,961	*	794,051	2,901,012
Grand total	74,639,728	4,929,581	22,178,830	101,748,139

* Included in other provinces to prevent disclosure of figures of individual firms.
** Combined to prevent disclosure of operations of individual firms which is forbidden by the Statistics Act.

LABOUR UNION CERTIFICATIONS, 1955

Question No. 139—**Mr. MacInnis:**

1. How many labour union locals, by provinces, were certified by the Canada labour relations board for the calendar year 1955?

2. What was the aggregate number of workers so certified?

Answer by: **Mr. Gregg:**

1. In the calendar year 1955 the Canada labour relations board issued 67 certificates to 35 international, national and local unions.

The bargaining units for which certificates have been issued are located in the following provinces or territories:

Newfoundland	2
Nova Scotia	2
Quebec	13
Ontario	6
Manitoba	2
Alberta	1
British Columbia	3
Yukon and Northwest Territories	12
More than one province	26
Total	67

2. The aggregate number of employees covered by the certificates issued was approximately 3,229.

DISABLED ALLOWANCE APPLICATIONS, B.C., 1955

Question No. 146—**Mr. Goode:**

1. What percentage of the applications received in British Columbia for disabled persons allowances, upon which decision had been reached at the end of 1955, were refused on medical grounds?

2. How many applications had been received to the end of 1955?

3. Of the total applications received (a) how many were granted; (b) how many are pending; (c) how many were refused on medical grounds; (d) how many were refused on other than medical grounds?

Answer by: **Mr. Martin:**

1. Less than 17 per cent.

2. 1,136.

3. (a) 720; (b) 208; (c) 159; (d) 49.

HOUSE OF COMMONS

Thursday, February 16, 1956

The house met at 2.30 p.m.

TELEVISION

PETITION REQUESTING PRIVATE STATION IN MUNICIPALITY OF BURNABY, B.C.

Mr. Speaker: I have the honour to inform the house that the Clerk has laid on the table the tenth report of the clerk of petitions. In connection with the petition referred to in this report, however, I received a memorandum from the Clerk which is to the following effect:

It is my duty to inform you that, although the petition presented by Mr. Goode on Wednesday last meets the requirements of Standing Order 70 as to form, it is irregular, in my opinion, on the grounds that it does not set forth a case in which the house has jurisdiction to interfere. See page 814 of May's Parliamentary Practice, 15th Edition.

This petition prays that this House may be pleased to take such measures as may be deemed expedient for the purpose of having the government of Canada and the Canadian Broadcasting Corporation consider the advisability of permitting the establishment of a private television station in Burnaby, B.C.

By virtue of the Canadian Broadcasting Act, chapter 32, R.S.C., 1952 and of the Radio Act, chapter 233, R.S.C., 1952, Parliament has decided that licences to operate private television stations shall be issued by the Minister of Transport, with the approval of the Governor in Council. The relevant sections of the respective acts read as follows:

Section 22(1) of the Canadian Broadcasting Act:

"The Minister of Transport shall before dealing with any application for licence to establish a new private station or for increase in power, change of channel, or change of location of any existing private station, or making any regulations or changes in regulations governing the activities of private stations, refer such application or regulation to the Corporation and the Corporation shall give public notice thereof in the *Canada Gazette* and shall make such recommendation to the Minister of Transport as it may deem fit; the approval of the Governor in Council shall be obtained before any licence for a new private station is issued."

Section 5(1) of the Radio Act:

"No person shall establish a radio station or private receiving station, or install, operate or have in his possession a radio apparatus at any place in Canada or on any aircraft registered in Canada, except under and in accordance with a licence granted by the Minister in that behalf."

It is my opinion that since Parliament has vested in the Governor in Council and in the Minister of Transport the exclusive authority to approve and issue licences for the operation of television stations, the House has no jurisdiction in such matters. See Citation 600 of Beauchesne's Parliamentary Rules and Forms, 3rd Edition.

Therefore, I maintain that according to the practice of this House, the petition should not be received.

I concur in the opinion given to me by the Clerk and therefore beg to inform the hon. member and the house that this petition cannot be received.

NATIONAL DEFENCE

ANNOUNCEMENT OF FURTHER REDUCTION IN FORCES IN KOREA

Hon. R. O. Campney (Minister of National Defence): Mr. Speaker, the house may be interested to know that a further reduction in the commonwealth forces serving under the United Nations command in Korea has been decided upon.

In so far as this country is concerned the present Canadian component of some 300 officers and men will be reduced to a small detachment of about 40 personnel of the Royal Canadian Army Medical Corps and the Royal Canadian Dental Corps. They will continue to provide medical and dental facilities to all commonwealth troops in Korea.

Our reduction will be phased in with that of other commonwealth countries concerned. These withdrawals are to begin next month and are to be completed as soon as practicable thereafter.

The commonwealth force then remaining in Korea will include a British infantry battalion and supporting detachments from Canada, Australia and New Zealand. This force will be known as the commonwealth contingent, Korea, and will retain its identity under the United Nations command.

Mr. G. R. Pearkes (Esquimalt-Saanich): May I ask the minister if there are any Canadian casualties in Korea at the present time?

Mr. Campney: I think not but I shall inquire.

INQUIRY AS TO INSTALLATION OF JET ENGINE IN FIGHTER AIRCRAFT

On the orders of the day:

Mr. J. A. MacLean (Queens): Mr. Speaker, last Friday I directed a question to the parliamentary assistant to the Minister of National Defence which he took as notice. I wonder when I might expect an answer.

Inquiries of the Ministry

Mr. P. T. Hellyer (Parliamentary Assistant to the Minister of National Defence): On Friday last the hon. member asked the following question:

Is the Pratt and Whitney turbo jet engine a more advanced design than the K-57 to be installed in Canada's first supersonic fighter aircraft?

For obvious reasons I cannot go into details but the short answer to the hon. member's question is that the engine which is being considered for the first test CF-105 aircraft is of a more advanced design than the J-57, presumably the engine to which he referred.

Mr. MacLean: Mr. Speaker, I should like to ask a supplementary question. Can the minister or his parliamentary assistant state whether it is intended that this particular engine should be standard equipment in the CF-105?

Hon. R. O. Campney (Minister of National Defence): Mr. Speaker, I think if the hon. member had followed the answer just given he would have his answer. The parliamentary assistant said that the engine to which he was referring was to be used in the first of the new planes when they have been developed to that point. They are not the engines intended to be used when these planes are actually in production.

Mr. MacLean: I wonder if the minister is aware—

Some hon. Members: Oh, oh.

Mr. MacLean: —that advertisements are appearing in the press to the effect that this will be done. It leaves the implication that this is standard equipment.

Mr. Campney: I am not aware of advertisements having been placed in the press to that effect and I do not think that the question is relevant. I have had nothing to do with putting advertisements in newspapers in this connection.

PIPE LINES

TRANS-CANADA PIPE LINES LIMITED—REQUEST FOR TABLING OF PUBLIC FINANCING AGREEMENT

On the orders of the day:

Hon. George A. Drew (Leader of the Opposition): I should like to ask the Minister of Trade and Commerce if he will arrange to table a copy of the undertaking given by Trans-Canada Pipe Lines Limited in regard to its method of public financing.

Right Hon. C. D. Howe (Minister of Trade and Commerce): Mr. Speaker, I do not recall such a document but I shall be glad to look into the matter. I think probably we have the information and, if so, I will table it.

[Mr. MacLean.]

STORMS

SUGGESTED ASSISTANCE TO BE GIVEN EUROPEAN NATIONS

On the orders of the day:

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, may I direct a question to the Prime Minister. Is the government giving any thought to the possibility of Canada sending supplies or trying in some way to render help to the people of Europe in view of the suffering and loss of life being caused by the unprecedented weather in that part of the world?

Right Hon. L. S. St. Laurent (Prime Minister): I received notice of this question from the hon. member just before I came into the chamber. Of course everyone sympathizes with those who have suffered from the unprecedented weather conditions in Europe, but the information we have is very slight, scanty and insufficient at this time and it would be premature to try to come to any conclusion as to whether the situation does or does not require assistance from outside Europe.

EGGS

PRICES PAID TO PRODUCERS IN RELATION TO FLOOR PRICE

On the orders of the day:

Mr. E. G. McCullough (Moose Mountain): I should like to direct a question to the right hon. Minister of Agriculture. Has the minister received any complaints that poultrymen are receiving below the floor price for eggs in Saskatchewan?

Right Hon. J. G. Gardiner (Minister of Agriculture): I have not.

Mr. McCullough (Moose Mountain): I should like to ask a supplementary question. I do not like to egg the minister into giving an answer, but I should like to ask him if he has received a copy of the article which appeared in the *Star-Phoenix* of February 9?

[*Later:*]

On the orders of the day:

Mr. McCullough (Moose Mountain): Now that the Minister of Agriculture has read the article I referred to, I wonder whether he would answer my supplementary question.

Mr. Gardiner: There is no answer I can give other than the answer I have given the hon. member on two or three occasions. The answer is that we offer 38 cents a dozen for grade A large eggs in storage at cold storage plants. If eggs are delivered there the prices board will of course make provision for storing the eggs subject to the fact that they

will take them over at 38 cents a dozen, if necessary, on December 1 next. But if the eggs are not delivered to a storage plant where they can be taken care of, of course the plan does not come into operation.

Again, in the province of Saskatchewan there has not been sufficient storage at times to store eggs, and I presume that with the high production at present that may be the condition. If there is no storage space in which they can be stored they must be shipped to Winnipeg or Calgary, and in either case it will of course cost something to get them there.

The last time that situation existed eggs were worth 27 cents a dozen at points out from Swift Current when they were being stored in Winnipeg at 38 cents. I am not at all certain whether or not the prices in the *Star-Phoenix* constitute breaking the floor, but there is a very simple way in which the floor price can be enforced. This government has no right to set the price for eggs in any province but we have the right to say that we will buy eggs at a particular price. We have said we will buy them at 38 cents in storage as of the 1st of December, and any provincial government can pass a law compelling the delivery of eggs on this basis without taking any chance of losing anything. The government of Saskatchewan can do that at any time.

HEALTH INSURANCE

REFERENCE TO ALLEGED STATEMENT RE DOCTOR-PATIENT RELATIONSHIP

On the orders of the day:

Mr. O. C. Trainor (Winnipeg South): Mr. Speaker, I should like to ask the Minister of National Health and Welfare to state whether or not he was correctly quoted in the Calgary *Herald* of February 10 to the following effect:

> There will be "absolutely no interference" between doctor and patient under the national health insurance plan, health and welfare minister Paul Martin told this writer today.
>
> "This is one provision upon which I will absolutely insist," declared the minister.

Hon. Paul Martin (Minister of National Health and Welfare): Mr. Speaker, as my hon. friend knows, perhaps better than anyone else in this house because of discussions he and I have had, my own personal view, and I think the view of most people in this country, is that that should be the eventuating situation. Of course that matter is something that could not in any way be decided by the federal government as it would be up to each province to decide.

Mr. Trainor: May I ask a supplementary question. Would not strict adherence to such a principle completely disrupt medical education as it is carried on in this country?

Mr. Martin: My hon. friend is now quoting what two of his colleagues in Winnipeg said the other day. I can only say to him that he, and the two doctors in question, should address themselves to the proper jurisdiction, the provincial government.

[*Later:*]

Mr. Trainor: I should like to ask a question of the Minister of National Health and Welfare, supplementary to my previous question. In the light of his assertion of provincial jurisdiction in this matter, may I ask what particular provincial government he was representing in his press release?

Mr. Martin: I do not believe there was any press release in question. I assume the question my hon. friend is putting now is intended to be serious. On that assumption, he knows as well as I do that the provincial government in question in his case would be the government of Manitoba. Having said that, the hon. gentleman will have to determine whether or not the same principle applies to the two doctors he has in mind.

INQUIRY AS TO INCLUSION OF T.B. AND MENTAL CASES

On the orders of the day:

Mr. J. G. Diefenbaker (Prince Albert): I should like to direct a question to the Prime Minister. In the submission of the health plan to the various provinces, were tuberculosis and mental cases included? If not, why were they not included, and is consideration being given thereto?

Right Hon. L. S. St. Laurent (Prime Minister): They were not included. For many years they have been recognized as a provincial responsibility and the submission that was being made was for the provision of additional services to those already in existence.

Mr. Fleming: May I ask a supplementary question? Does that exclusion apply to mental health patients in general hospitals or only to patients in mental hospitals?

Mr. St. Laurent (Quebec East): This is still a matter that has not been finally determined, but the intention was to exclude the mental hospitals that have been in existence for all time as provincial institutions.

Mr. Fleming: But not necessarily the mental health patients who are in general hospitals?

Mr. St. Laurent (Quebec East): Well, I am not a physician and I am not in a position to draw precise distinctions. It was intended

to make no change with respect to the provincial responsibility in regard to the unfortunate people who suffer from mental troubles nor with regard to the tuberculosis sanatoria.

THE VICTORIA CROSS

INVITATION TO CANADIAN HOLDERS TO PARTICIPATE IN ONE HUNDREDTH ANNIVERSARY

On the orders of the day:

Hon. Hugues Lapointe (Minister of Veterans Affairs): Mr. Speaker, on January 31 the hon. member for Wellington South (Mr. Hosking) inquired from me whether the government was considering sending Canadian war heroes who had been awarded the Victoria Cross to attend the ceremonies that will mark the creation of that military award next June. At that time I stated that an interdepartmental committee had been set up to get the necessary information and that I would be in a position to make a further announcement later.

I wish now to say that the United Kingdom government has advised the government of Canada of the celebrations planned in June of this year to mark the centenary of the Victoria Cross decoration and has expressed the hope that Canadian holders of the Victoria Cross will be able to attend.

The ceremonies include a service in Westminster Abbey on the afternoon of June 25, a review by Her Majesty the Queen of all V.C. holders in Hyde Park on the morning of the 26th, and a garden party in the grounds of Marlborough House that afternoon which will be attended by Her Majesty the Queen Mother.

Invitations to these functions will be sent upon request to three groups: (a) to each surviving holder of the Victoria Cross and one near relative; (b) to two near relatives of each posthumous recipient, one of whom must be the person to whom the medal was actually presented; and (c) to one near relative—parent, brother, sister, widow or child —of each deceased holder of the Victoria Cross.

The government of the United Kingdom has asked us to undertake the task of ascertaining the names and addresses of those eligible persons who would like to receive invitations. The interdepartmental committee to which I referred earlier has been charged with the responsibility of looking after this and other matters connected with the trip. This committee is endeavouring to contact by letter those eligible persons for whom we have addresses, to advise them of the celebrations and to ascertain if they plan to attend.

I would point out, however, that we do not have the addresses of all those who may be eligible to receive invitations and that some of the addresses we have may not be up to date. To ensure that no one is unaware of this centenary and the invitations which are available, the committee suggests that those who consider themselves eligible write as soon as possible to the deputy minister of the Department of Veterans Affairs. We hope, too, that the veterans organizations in Canada will help us to find those who are eligible and who, otherwise, might be missed.

Finally, in order to assist those who receive Her Majesty's invitations to attend the ceremonies, the government is making arrangements to provide free return transportation from their homes to London. It is expected that they will have approximately one week in England before commencing the return trip.

TRADE

CANADIAN REPRESENTATIVES AT INTERNATIONAL WHEAT AGREEMENT CONFERENCE

On the orders of the day:

Mr. J. G. Diefenbaker (Prince Albert): I should like to direct a question to the Minister of Trade and Commerce. In view of the fact that the international wheat agreement conference is to take place in Geneva on the 20th of this month, would the minister say who the representatives from Canada will be; are they being given specific instructions as to the limitations within which the prices shall be supported by them; and, finally, what are the prospects of Britain rejoining the international wheat agreement?

Right Hon. C. D. Howe (Minister of Trade and Commerce): Mr. Speaker, the meeting at Geneva begins in the course of a day or two. Our delegation is headed by the associate deputy minister of the department, Mr. Sharp. However, Mr. Sharp cannot leave for there immediately and will join the delegation later. At the moment it is headed by Mr. McNamara, one of the members of the wheat board. Associated with him is Mr. Charles Wilson, who is one of the officers of the department responsible for wheat matters in Europe. There are also six farm advisers attending, including the heads of the three wheat pools, the head of the United Grain Growers, the head of the Canadian council of agriculture and the head of the Saskatchewan farmers' union. These six delegates are there now.

The instructions are generally that we would like to see the wheat agreement be continued much in the form that it is in today. We are not prepared to take any material reduction in the floor price. There is some flexibility in our views about the maximum

price. We will only be interested if a substantial quantity of wheat is included in the agreement. We think that about two-thirds of the wheat entering into the channels of commerce is the minimum that could be considered. Aside from that, the instructions of the delegation are to negotiate in the hope that a satisfactory agreement can be arranged.

INQUIRY AS TO PROGRESS OF NEGOTIATIONS WITH RUSSIAN DELEGATION

On the orders of the day:

Mr. Donald M. Fleming (Eglinton): May I ask the Minister of Trade and Commerce whether he will acquaint the house with the progress being made in the trade negotiations with the Russian delegation? Second, will he tell us whether any question of strategic materials is involved in these negotiations?

Right Hon. C. D. Howe (Minister of Trade and Commerce): Mr. Speaker, I am quite unable to report on the progress being made except to say that the negotiations are continuing in a spirit of harmony. Materials of strategic importance are eliminated from coverage by the treaty. In other words, the security provisions of the treaty are adequate to deal with strategic materials.

EXTERNAL AFFAIRS

UNNECESSARY DELAY OF UNION OFFICIALS BY UNITED STATES AUTHORITIES

On the orders of the day:

Mr. F. G. J. Hahn (New Westminster): I should like to address a question to the Secretary of State for External Affairs. Is he in a position now to answer my question of February 10 when I referred to certain charges having been made that Canadian citizens were subjected to unnecessary questioning by United States immigration authorities while on the way to a conference in Seattle?

Hon. L. B. Pearson (Secretary of State for External Affairs): Yes, Mr. Speaker, I am in a position to answer the hon. member's question which dealt with complaints made by representatives of the united fishermen and allied workers' union against the United States immigration authorities. These complaints alleged, as my hon. friend has stated, that union delegates to meetings in Seattle had been unnecessarily delayed and questioned by United States authorities at the border.

I may say, Mr. Speaker, that the secretary of the union earlier had forwarded a similar complaint to me. In my reply to him I pointed out that the immigration authorities of any country have a right to question persons who are seeking entry to that country, but I asked the secretary of the union for more specific information on the particular incident of which he had complained without giving details, in order that we could decide whether the incident in question warranted a protest or intervention in Washington. Thus far, Mr. Speaker, I have had no reply to that communication.

I might also say, Mr. Speaker, that the agreements between Canada and the United States which established the international halibut commission and the international Pacific fisheries commission do not obligate either member country to grant special entry privileges for persons, such as members of fishermen's unions, who are eligible to be present at meetings of these commissions but who are not, of course, members of the commissions.

SHIPPING

REQUEST FOR INSTALLATION OF FOG ALARM AT HORSE ISLANDS, NEWFOUNDLAND

On the orders of the day:

Mr. L. Langlois (Parliamentary Assistant to the Minister of Transport): Mr. Speaker, yesterday I undertook to answer a question asked by the hon. member for Comox-Alberni (Mr. Barnett) as reported at page 1201 of *Hansard*, and having to do with a request for the installation of a fog alarm at Horse Islands, Newfoundland.

I wish to point out to the hon. member that, according to my information, there is more than one island known under that name in Newfoundland. However, a search of our files would indicate that no such request for any of these islands has as yet reached the department.

REPORTED SINKING OF DEPARTMENTAL VESSEL "HILUNGA"

On the orders of the day:

Mr. T. S. Barnett (Comox-Alberni): I should like to direct a question to the Acting Minister of Public Works. Will he give to the house details of the reported sinking this morning of the Department of Public Works vessel *Hilunga* off the Queen Charlotte islands?

Hon. Roch Pinard (Acting Minister of Public Works): The hon. gentleman informed me before I came into the house he intended to ask this question, but I have not yet received a final report. The preliminary report would indicate that it is correct that an inspection boat was lost off the coast of British Columbia. Fortunately, the report would indicate also that it would be fair to assume

there was no loss of life. Officials of the department expect to receive a final report tomorrow and it will then be made available to the hon. gentleman and the house.

Mr. Colin Cameron (Nanaimo): I should like to direct a question to the Minister of National Defence in connection with the same mishap referred to by the hon. member for Comox-Alberni. Can the minister tell us if any R.C.A.F. planes were available for rescue service in this instance, and if any of them proceeded to the scene of the wreck?

Hon. R. O. Campney (Minister of National Defence): I will take the question as notice.

DISABLED PERSONS

INQUIRY AS TO REPORT OF NATIONAL ADVISORY COMMITTEE

On the orders of the day:

Mrs. Ellen L. Fairclough (Hamilton West): I should like to direct a question to the Minister of Labour. Is the minister in a position to make any revision in the reply he made to my question of February 8 with reference to the report of the national advisory committee on the rehabilitation of disabled persons?

Hon. Milton F. Gregg (Minister of Labour): No, Mr. Speaker. However, I should like to take advantage of the occasion to enlarge on the answer that I gave at that time and to say this. The day before my hon. friend asked her question, a delegation from the national advisory committee on the rehabilitation of disabled persons met with my colleague the Minister of National Health and Welfare (Mr. Martin) and myself and presented a report which had been prepared by the national committee. After they had presented that report to us and asked us to take it under consideration, it was suggested that when we had a chance to make a comment on it, that comment might be referred to the main committee; then a decision could be reached as to whether or not the whole report should be made public generally.

Mrs. Fairclough: May I direct a supplementary question to the minister? From the minister's remarks do I understand that it is not the intention of the government to make this report in its present form available to members of this house?

Mr. Gregg: If Dr. McNally's committee—and Dr. McNally is the chairman of the national advisory committee—desire to do so, there will be no objection whatsoever. However, I do not think that those reports that come from advisory committees—and there are many of them—should each necessarily be made the subject of tabling in this house.

[Mr. Pinard.]

I should be glad to consult with my colleagues and, at whatever time appears to the committee to be appropriate, to make it available to those who wish to study it.

HEALTH AND WELFARE

REPORTED MALNUTRITION AMONGST OLD AGE PENSIONERS IN MONTREAL

On the orders of the day:

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, may I direct a question to the Minister of National Health and Welfare? Will the minister take note of the malnutrition and starving taking place in Montreal, particularly amongst old age pensioners, as reported in this morning's—

Mr. Speaker: Order.

Mr. Knowles: —Montreal *Gazette* on page 10.

Hon. Paul Martin (Minister of National Health and Welfare): The hon. gentleman knows quite well I am always ahead of him on these things.

Mr. Knowles: May I direct a supplementary question to the minister? If he says he is always a step ahead, will he tell the house what he has done about this tragic situation?

Mr. Speaker: Order. I have not heard the question but I rose merely to tell the hon. member that his first question should not have been asked.

UNEMPLOYMENT INSURANCE

REPORTED TIE-UP IN CAMPBELLTON AND EDMUNDSTON OFFICES

On the orders of the day:

Mr. J. C. Van Horne (Restigouche-Madawaska): I regret that I was unable to give the Minister of Labour notice of this question because I just received a telegram concerning the matter. What action, if any, is being taken to overcome the terrific tie-up and delays in the unemployment insurance offices in Campbellton and Edmundston?

Hon. Milton F. Gregg (Minister of Labour): I shall be glad to take notice of my hon. friend's question and look into the matter.

GRAIN

PROVISION FOR GUARANTEE OF BANK LOANS TO PRODUCERS IN PRAIRIE PROVINCES, ETC.

The house resumed, from Wednesday, February 15, consideration of the motion of Mr. Howe (Port Arthur) for the second reading of Bill No. 82, to provide for short-term credit to grain producers in the prairie

provinces to meet temporary financial difficulties arising from inability to deliver all their grain, and the amendment thereto of Mr. Johnson (Kindersley).

Mr. F. S. Zaplitny (Dauphin): Mr. Speaker, when the house closed at six o'clock yesterday I was at the point of drawing attention to the fact that the policy, or lack of policy as the case may be, followed by the present government with respect to the grain delivery crisis was in fact undermining the whole system of orderly marketing of grain in Canada.

I had drawn attention to the fact that in 1946 and subsequent years the government of Canada sold the idea to the grain producers of a stabilized system of marketing and that on the basis of their undertaking to market the grain through the Canadian wheat board and under the terms of the British wheat agreement and later through the international wheat agreement the grain producers of Canada were prepared to accept a ceiling price on their grain and in fact did accept a lower price than was offered on the open market at that time on the understanding that this was being done in the interests of stabilized marketing both from the point of view of price and from the point of view of supply.

What has transpired since then has indicated that the government has failed to carry out its share of the bargain, and the present grain delivery crisis with which this house is concerned and which is the reason for this bill which is now before us is only an indication that at the present time the government is attempting to get rid of the responsibility which it had taken on in good faith and which the farmer had accepted in good faith back in 1946.

I believe that this is one of the most important issues in relation to the legislation we are now discussing; that is, unless effective steps are taken by this parliament to assure to the grain producer that he shall receive cash for his grain and that he shall have an opportunity to deliver that grain within a reasonable length of time to the wheat board, then the whole principle underlying the question of orderly marketing will be seriously undermined.

That is one of the reasons why members of the C.C.F. group who have always stood foursquare for the principle of orderly marketing and the principle of the Canadian wheat board have so anxiously been following up this question to place squarely before this house and the country the dangers which may arise out of the lack of action on the part of the government to meet the responsibilities which are inherent in this whole question.

I think that if the government were prepared to give three assurances to the grain producers of Canada it would go a long way towards allaying the fears and anxiety which are very real and which I must assure the government are more real than is sometimes evident from the remarks made in this house across the floor from here. A genuine anxiety exists as to what the future holds for the Canadian grain producers.

If the government could give an assurance to Canadian agriculture that it is willing to accept the principle of parity prices, that in itself would go a long way towards allaying the anxiety under which grain producers of the west and farmers in general are now suffering.

If the government could assure the grain producer at this time that it is prepared to set a floor for export wheat of $1.55 a bushel and that it is willing to provide a floor price for domestic consumption which would be as close to parity as possible—at the present time it is calculated that it would be about $2.20 per bushel—that second assurance would go a long way towards allaying the fears which the grain producers have.

And, as a third assurance, if the government could assure the farmers that it is taking concrete and effective steps to assure that the grain which is now on the farms will be delivered or facilities will be provided for it to be delivered within a reasonable time to the grain elevators, that again would go a long way to allay those anxieties.

But as this debate has progressed to this point none of these assurances have been forthcoming. That is one of the reasons why I believe it would be advisable to place this whole question, the subject matter of this bill which is now before us, the whole question of how to get cash into the hands of the farmers who have produced the grain and are holding it available for delivery, which means that they have fulfilled their part of the contract; what is the best way in which to convert that grain into cash now, next year, the year after and so on. This bill as it now stands does not even begin to deal with that question.

It is a very narrow bill providing for guarantees to the banks. It has many weaknesses and therefore is completely unsatisfactory. I am sure that if this whole question were referred to the standing committee on agriculture and colonization, as is called for by the amendment now before the house, we would have an opportunity to call in representatives of the various farm organizations in Canada, of the three prairie wheat pools and of any other interested organizations, as well as other persons who had

some advice to offer and who, together with hon. members who are members of that committee, could hammer out an agricultural policy that would mean something, that would have some stability and some future, and not something made up of bits and pieces, of expediency. It would be something based on sound economic principles and sound agricultural principles. It is something which is overdue, it is something which is needed.

I find it most difficult to understand why hon. members who support the government, or members of the government, should take a stand against the acceptance of this amendment. All that the amendment asks for is that the whole question be referred to the standing committee which is constituted for that very purpose. Why do we have a standing committee on agriculture and colonization if it is not to deal with this kind of problem? Why should the government or the members supporting the government take the stand that that committee, which after all has a majority representation from the supporters of the government, which is made up of members from all sides of the house—why should that committee not be trusted to carry out the functions which it was intended to carry out?

I want to make a particular appeal to my colleagues from the province of Manitoba. We have not heard very much in this debate so far from members supporting the government from the province of Manitoba. Apart from the hon. member from Provencher (Mr. Jutras), we have not heard from any other hon. member. Most significant of all, we have not heard from the only minister in the cabinet from the province of Manitoba, the Minister of Justice (Mr. Garson). I would hope that before this debate is over he would take advantage of this opportunity to tell the house what in his opinion are the wishes and desires of the farmers of the province of Manitoba.

I want to make this appeal to them on this occasion. Let them vote for this amendment on its merits. It has been amply pointed out that there is no need whatever for the government or any supporter of the government to regard this amendment as a motion of want of confidence. The amendment calls for what I would consider to be an efficient and effective method of dealing with a problem which has many implications. We are asking that it be submitted to the proper committee of this house, a committee which incidentally has a member from Manitoba as chairman. Certainly he should be the last one to object to having this question placed before the committee where it belongs.

[Mr. Zaplitny.]

I appeal to them to approach the members of the government. I do not think it is too late to ask the government to change its mind on this question. It has changed its mind before. I remember not so many months ago when the government said, "Never, never, never" and then at the end said, "Well, hardly ever". The members of the government did change their minds and I think they should change their minds again.

I appeal to my colleagues from Manitoba. For example, does the hon. member for Churchill (Mr. Weaver) think that the farmers in the Swan river valley are in agreement with the subject matter of this bill as it now stands, or does he think that perhaps they have something better to offer? I would ask the Minister of Justice if he thinks that the farmers in the area of Minnedosa, for example, are in favour of this bill. If he is in any doubt at all, all he has to do is to refer to the press clippings to refresh his memory.

I would ask the hon. member for Portage-Neepawa (Mr. Weir) if he thinks the farmers of the Portage plain are content with the legislation the government is now proposing and if they have not already expressed themselves rather strongly in favour of a different method, namely the method of cash advances suggested by the C.C.F. I would ask the hon. member for Lisgar (Mr. Pommer) whether the farmers in his constituency are satisfied with this bill.

I need hardly ask the hon. member for Springfield (Mr. Weselak) what the farmers in his constituency think, because along with the hon. member for Brandon-Souris (Mr. Dinsdale) I had the privilege of attending a meeting at which the hon. member for Springfield was also present which was held in the town of Beausejour in that constituency. It was a most interesting and I think most effective meeting. The farmers who gathered there left no doubt in anyone's mind, including the mind of the hon. member for Springfield, as to where they stood on this question of cash advances as opposed to this bank loan bill.

I ask those hon. members who represent the farmers of Manitoba along with the rest of us whether they feel deep down in their hearts that they are doing the right thing by the people whom they represent, either by keeping silent or by acquiescing or giving approval to this bill, which is simply a cheap substitute for what the farmers are really asking for. If they are not satisfied, and I am sure they are not and they know the people whom they represent are not, then I think it is their duty as members of this

house, as representatives of western agriculture, not only to say so on the floor of this house but to say so in caucus and directly to the ministers who lead this government.

They should tell them that on this occasion it is the desire of this house, the desire of the membership of this house, that we have a free vote. I ask the government to call off the whips, to remove the shackles of unquestioning approval which they always seek from their supporters, or acquiescence, and on this occasion allow them to express themselves on this amendment both verbally and by their votes, on the basis of what they actually feel is the opinion and desire of the people whom they represent. Let this parliament carry out its function as a democratic parliament, let it not be regarded merely as the tool of a tyrannical ministry.

I think one of the measures of the greatness of any statesman in any government is the ability to change his mind when he feels he has made a mistake. We often hear eulogies of praise for Sir Winston Churchill, one of the outstanding statesmen of the day. Those who have read even his own words about his own life have been struck by the number of times he changed his mind about most serious matters in his own country and in the international sphere. It is perhaps a measure of the greatness of a man who is big enough to admit that under changing circumstances and conditions he is willing to revise his opinion.

I think that that would be a wise move on the part of the government today. Certainly this debate, if it has indicated anything, has indicated that the government has made a comedy of errors right down the line. They started out wrong to begin with. Last fall when this issue became a live one on the prairies—it did not come up overnight—as soon as the new crop year began on August 1, 1955, the farm organizations and members of parliament from the west were already warning the government that there was going to be a serious grain delivery crisis affecting the prairie farmers. The government knew, certainly as early as mid-September, that something would have to be done by this parliament to provide some system under which the farmers could obtain cash in order to convert their surplus grain or grain in storage into cash in order to carry on with their farm operations.

The wise thing to have done, the democratic thing to have done, was to call a special session of parliament in the middle of October or early in November. The members of this house could have devoted their time and their energies to the solution of that problem in a democratic fashion. The committee on agriculture could have been called together immediately. Representations could have been heard from the various farm organizations across Canada, instead of having to hold a grain conference in Saskatoon. They sent a small delegation to Ottawa to interview the cabinet, and to this day nobody seems to have the full version of what transpired at that meeting. We hear claims and counter claims. We hear that a certain minister of agriculture—for example, our own minister from Manitoba, who left Winnipeg fully instructed by his caucus to ask for cash advances for grain—somehow along the way, by the time he got down to Ottawa, found he was satisfied with bank loans.

All these things have become a mass of confusion through the inactivity of the government and its failure to call a special session of parliament in order to meet the problem at the time it was developing. Now the time has passed, and we are trying to deal with something that should have been dealt with four or five months ago and which could have been much more effectively and intelligently dealt with at that time with the advice of the farm organizations and the wheat pools, which was available to us at that time.

Even now, while the members supporting the government try to convince us that this bill before us is what the farm organizations asked for, we find that the Liberal leaders of the various provincial sections seem to contradict that very statement. Some of you may have been watching television yesterday evening. There was a program called "Press Conference" in which the leader of the Liberal party of Alberta, Mr. Prowse, appeared. Among the questions before the panel was the question of cash advances versus this present bill. Under close questioning the Liberal leader of that province stated quite categorically that he personally was in favour of cash advances and he was not satisfied with the present bill, although he did try to make a sort of lefthanded justification for it by saying that after all the only farmers who will really bother to apply at all under this legislation are the ones who desperately need it and so it would not involve many people anyway. In other words, he tried to justify it by saying it would not be used much anyway and so it did not matter, but he was careful to place himself on record as being in favour of cash advances. One can understand his caution. Considering what has happened in the past to Liberals who have appeared on television, I think he is to be commended for his caution.

Mr. Knight: The hon. member for Rosthern says the same thing.

Mr. Zaplitny: The humorous incident that occurred in Manitoba some weeks ago was a shot that is still echoing from the lakehead to the foothills. It is still bringing letters and comment. The hon. member for Humboldt-Melfort (Mr. Bryson) has just received a letter with a good Canadian dollar bill attached, and I assure all members of the house it is an authentic bill. The letter says:

Dear Sir,

Here is one good Canadian dollar towards replacing that busted T.V. set. The laugh was worth it.

It is signed:

Yours truly,
Disgusted Liberal.

Mr. Knowles: The woods are full of them.

Mr. Zaplitny: That is an indication of what even the former adherents of the party that is in power are feeling about this question, to say nothing of those who never voted Liberal.

Mr. McIvor: That means he is not hard up.

Mr. Zaplitny: I said a moment ago that there was a general feeling by all the farm organizations now, particularly in our province, with which I am more familiar, that this bill is not acceptable. I should like to give some of the opinions included in a submission to the government by the interprovincial farm unions council, which I believe was submitted to the government today—

Mr. Speaker: Order.

Mr. Zaplitny: —in which they set out some of the reasons why they think this bill would not be acceptable.

Mr. Speaker: I am sorry to have to interrupt the hon. member to remind him of a rule that I quoted yesterday in connection with reading opinions of people outside this house, contradicting what has been said in this house or reflecting on our proceedings. I refer hon. members to citation 265, which says:

It is not in order to read articles in newspapers, letters or communications emanating from persons outside the house and referring to, or commenting on, or denying anything said by a member or expressing any opinion reflecting on proceedings within the house.

The hon. member should express his own views and not introduce, as I said yesterday, a two hundred and sixty-sixth member into the House of Commons.

Mr. Zaplitny: Thank you, Mr. Speaker. It just so happens that the views expressed by the interprovincial farm union were so identical with the ones I hold that I merely referred to that fact. The reasons why, in my opinion, this bill does not do what is required, are several. For example take the banking facilities. It is pointed out that in the province of Saskatchewan there are 1,200 shipping points for grain but only 196 points that are served by banks. In the province of Alberta there are only 159 points with banking facilities, and in Manitoba only 91 points with banking facilities. The whole question of cash advances could have been, and may still be, handled through the wheat board and the elevator agents, which would make it possible for any farmer at any shipping point to go to his elevator agent with his permit book and get his advance. Instead of that they are being asked to seek the services of the banks where facilities are not so widespread and also where there is no guarantee or assurance that any particular farmer will obtain the loan he seeks.

One of the great disabilities is the fact that not only is there a form to be filled out in order to establish the farmer's credit but also there are deductions to be made from the grain he has already delivered. As I believe the hon. member for Mackenzie (Mr. Nicholson) pointed out the other day, in many cases farmers with sufficient grain on their farms to warrant a good credit standing, but who may have been fortunate enough to deliver some of their quota before this date, find they are not able under this legislation to borrow one cent because of the deductions that have to be made first from the grain they have already delivered before they can apply for a further loan.

Then there is the whole question—and perhaps it is a very important consideration—of the experiences that farmers have had with banks and with loan and mortgage companies in the past. I hope they have not all been unhappy experiences, but unfortunately we know that in the prairies many of the experiences in the past have been very unhappy. Farmers have borrowed in good faith, in times when the grain was worth something, a relatively small amount of money, $600 or $800. Then the grain prices fell seriously, and they had to pay back the dollars they had borrowed with production that had to be doubled in volume to provide for the same dollars. The farmer who borrowed at one time $800 found he had paid back $1,200 and, owing to the compound interest, arrears and so on, he still owed $800.

All these experiences have not been forgotten and the farmers are wondering why it is that the government insists that those who can obtain loans be forced to go again

to the banks and have to pay 5 per cent interest when as a matter of fact the government has a moral responsibility, if not a legal one, to accept grain deliveries, provide facilities for those grain deliveries and provide the farmers with the cash they have already earned. I therefore hope that the private members who sit opposite us and support the government will on this occasion assert their responsibility and authority in the house by speaking to the ministers of the cabinet and asking them to declare a free vote. Let us have a free expression of opinion. If that is done I think there is no doubt that hon. members will find it wise to accept the amendment referring this matter to the committee that has been established to consider such questions so that it may find a lasting solution to this important problem.

Mr. J. G. Diefenbaker (Prince Albert): Mr. Speaker, I rise for the purpose of dealing with certain questions that have arisen during the last few days, to reiterate my opposition to the bill now before the house, and to give reasons why the amendment should be supported. I go back to the legislation of 1951. I have heard about this act on many occasions. The minister has mentioned more than once in the house that the act of 1951 entitled "The Prairie Grain Producers' Interim Financing Act" was unsuccessful and achieved very little in providing credit for western farmers. One of the major reasons for that failure was the fact that it was studded with iniquitous provisions for enforcement. One of those iniquitous provisions in the act of 1951 was this:

> 9. (1) A person who
>
> (a) states in his application an estimated quantity of crops or grain or an estimated amount that he knows to be false; or
>
> (b) makes any other statement in his application that is false in any material respect;
>
> is guilty of an offence and liable on summary conviction to a fine of not less than twenty-five dollars and not more than five hundred dollars.

In addition, under subsection 2 upon conviction he shall be ordered to pay a penalty equal to the amount of any guaranteed loan made by him in respect of which the offence was committed as has not been repaid by him, with interest thereon to the date of the conviction. That was the first occasion in my experience that imprisonment for debt was made part of the laws of this country since imprisonment for debt was abolished many, many years ago. That section in its original form is intensified in the new bill. It is unjust and unfair. Indeed, Shylock himself could learn how to extract a pound of flesh by simply reading the sections dealing with penalties in the present bill which make every farmer who makes a mistake in the forms he has to complete liable not only to a fine and, in default, imprisonment, but in addition a penalty to the extent of the amount of his loan. Why that was continued in the present legislation is beyond me.

That is one of the reasons why the 1951 act did not operate. When this party took the stand the other day on the resolution stage that it would support the introduction of the measure with a view to ascertaining what the bill was, nobody here or anywhere else had any belief that the government would include such provisions in the bill as have been included.

I am going back a way to deal with the circuitous course taken by the government and in particular by the minister himself in connection with the matter. First of all, the Prime Minister (Mr. St. Laurent) said that the farmers did not really need money, and I think the Prime Minister is still the head of the government although there are others who doubt it. According to him, no money was needed. The farmers are not asking for much. Ridicule was heaped upon those who attended meetings in western Canada. Only today a representation was made by the interprovincial farm union council of the western provinces which indicates the almost universal demand for cash advances on farm-stored wheat everywhere throughout the west. I read from that representation, for it represents the facts:

> Scores of mass protest meetings, resolutions and petitions that have developed spontaneously throughout the west accurately indicate the degree of dissatisfaction felt in rural areas regarding the guaranteed bank loans on farm-stored grain. It is felt almost unanimously that farmers should not be asked to burden themselves with added debt and interest charges because wheat is not being sold at a sufficient volume to enable the farmer to maintain his cash position.

Then they go on to point out the weaknesses of this procedure. As was indicated in his concluding remarks by the hon. member who has just taken his seat, it all results from the failure to call parliament together. It is the old, old game. When in doubt pass an order in council. Sometimes do not even bother to pass an order in council, just believe you did and proceed to act accordingly. You find out afterwards that you did not even go to that trouble because, after all, if you can legislate by order in council behind closed doors it is so much easier to save the trouble of passing an order in council. I continue with the representations of the farm union council:

> Banking facilities are not readily available in many parts of the prairie provinces.

I am not going to follow that any further because that point has been dealt with.

> The amount of red tape involved in securing acceptance of a bank loan application is so great

as to discourage all but the most persistent, and eliminates a good percentage of those who might otherwise qualify.

It were easier, Mr. Speaker, for a camel to go through the eye of a needle than for anyone to pass the catechism and examination that is required in order to secure a loan. I repeat what I said the other day. The banks are turning down applications as soon as they find out the uses that are to be made of the money in the event they decide that the use is one that does not come within the ambit of the legislation.

The first excuse given by the government was that the farmers did not need money, that all was well. When that subterfuge and distortion of the facts was unsuccessful the right hon. gentleman produced the next story. He said that what these people who support cash advances are trying to do, indirectly or possibly directly, is to destroy the wheat board. There was a bogey! They really had one there. I am going to read the minister's words as found at page 127 of *Hansard* of January 16. He said:

> The chairman of the board has been in the service of the government for 25 years, his duties associated solely with the marketing of western grain. Associated with him are three very able men who share in the work of the board. I can tell the house that, if the government instructed the wheat board to lend money on farm-stored grain and assume the responsibility for the lending of that money and its subsequent collection, the four members of the wheat board would be out of office within a matter of days.

Mr. Deputy Speaker: Order. Did I understand that the hon. member was reading from page 127? He will realize that is a different debate of the same session.

Mr. Diefenbaker: I am sorry, Mr. Speaker. I should have summarized it. To summarize the minister's words, he said: "I can tell you that if this happened the wheat board would be out." Of all the unmitigated nonsense that the minister has brought forth, that indeed wins prize No. 1. I tried to find out what had been done in this connection and the only way I could find out was simply by asking a question to ascertain what the situation was. As appears at page 992 of *Hansard* I asked these questions:

> 1. Did the chairman or any members of the wheat board notify the government at any time since July 1, 1955, that they would resign within a matter of days if cash advances on farm-stored wheat were brought into effect? If so, which of them did so?
> 2. What was the date or dates of said notification and were same given verbally or in writing?
> Answer by Mr. Howe (Port Arthur):
> 1. No.
> 2. Answered by No. 1 above.

I saw immediately that there was a loophole there because I referred to loans. So I redrafted the question in order to get the truth. Then to my surprise the Department of Trade and Commerce gave the same answer as reported at page 1096 of *Hansard*. The question was:

> 1. Did the chairman or any members of the wheat board notify the government at any time since July 1, 1955, that they would resign within a matter of days if cash advances on farm-stored wheat were brought into effect?

The answer given was no.

Mr. Speaker, that was just another of those self-created subterfuges by the right hon. gentleman to evade the demands of western farmers to have action in this regard. As a matter of fact, the minister and those associated with him, including the hon. member for Rosthern (Mr. Tucker), have been indicating that the western farmer really does not want this assistance, that the various organizations have not asked for it, that they are willing to accept loans and that they are not in favour of cash advances. May I just say this. It is a funny thing that we cannot get answers to the questions that we ask which will establish whether or not the western farm organizations are asking for this assistance. On January 26, the hon. member for Assiniboia (Mr. Argue) asked the following question and it was passed as an order for return:

> Motion No. 4—Mr. Argue:
> For a copy of all correspondence, letters and telegrams, from August 1 to December 31, 1955, exchanged between any department of the government and any person or persons with respect to advance payments on farm-stored grain.
> Mr. Howe (Port Arthur): There are thousands of pieces of paper reflecting on this question. It would save a great deal of work if my hon. friend would examine them in the office, or if he would select the ones he wants tabled. I do not think he wants all of them tabled: it would be very expensive for the government.
> Mr. Speaker: The motion will stand in the meantime?
> Mr. Howe (Port Arthur): Perhaps it could be passed with that understanding.
> Mr. Argue: That is agreeable, Mr. Speaker.
> Mr. Speaker: Motion agreed to.

That was a rather big order. So I decided it would be easier to ascertain whether the western farm organizations were asking for this assistance. I then asked:

> For a copy of all resolutions supporting the demand for cash advances on farm-stored wheat which have been received from western farm organizations and other public bodies, by the prime minister and any of the ministers of the government, or officials of the government, since the 15th day of August, 1955.

It would have been so easy to answer that question. They say that there are not many organizations asking for cash advances. I say to the government: Produce that material. I challenge the government today to

table that return. It will answer the arguments that are made across the floor of this house that the western farm organizations and public bodies are not asking for it.

The other day the right hon. gentleman indicated that it was the city folk who wanted cash advances. Let us have the return.

Mr. Dickey: Mr. Speaker, my understanding was that that return had been tabled. It is not being held up.

Mr. Diefenbaker: I asked about it today and my understanding was that it had not been tabled.

Mr. Dickey: If it has not been tabled, there is some error.

Mr. Diefenbaker: Will the hon. gentleman table it this afternoon?

Mr. Dickey: I will check on it.

Mr. Diefenbaker: That is fine. I shall have accomplished my purpose in having it tabled because it will show that the farm organizations in western Canada are, I was going to say, unanimously in favour of cash advances. If there are any exceptions, I do not know of them. When that return is tabled I think it will show that every responsible farm organization on the prairies is asking for this help, that various municipalities are asking for it and that the general demand comes from the people as a whole and not from these so-called disparaged city people of whom the minister spoke so condescendingly the other day. I say to the government, "Produce that return". Then when that return is produced we will know who actually represent the viewpoint of the western people. We shall know whether it is the few members of the Liberal party from the western provinces who today find themselves in a position of trying to alibi themselves out of a position imposed on them by the authority of the minister and who because of the fact that they are required to support it, are obliged to endeavour to raise arguments which they must realize are, to say the least, ineffective and, to say the worst, most specious.

Mr. Charlton: There is not one of them in the house now.

Mr. Dickey: Many of your members are missing.

Mr. Diefenbaker: The next point that was raised was that it would be impossible to have the wheat board officials pay out money, that a problem was encountered there, that they could not do it. It was said that they have not the necessary facilities in the wheat board. All one has to do is read the Canadian Wheat Board Act, section 25, subsection 2, which reads as follows:

> The board shall, if directed by regulation, pay to each producer at the time of delivery of wheat to the board, in addition to any other payment authorized by this section, a sum per bushel on account of storage of the said wheat on the producer's farm, for such period of storage as the board in its sole discretion shall fix for the purposes of such storage payment, which sum, however, shall equal the amount payable for storage in a country elevator for the same period . . .

And so on. In other words, there is in the law already a provision for these men that operate the elevators to make payments. Indeed, the whole argument falls flat when it is realized that these elevator agents who, the minister states, cannot be trusted or who are unable to pay out money, are going to be required to see that the money is collected whenever deliveries are made in order to assure that the banks shall not thereby suffer as a result of non-payment of the amounts of the loans.

Having regard to the type of answer that I received in connection with the wheat board, more and more we find in this house that the answers being given by the government, if not untruthful, are too often evasive. Indeed, many of the answers give the appearance of not providing that frankness that is necessary to be preserved in a democratic assembly. Many of the answers indicate that, before they come to the House of Commons, they have passed through the filter of political expediency. That is a serious matter in a parliamentary institution. First, there were these various excuses that were made. One was that moneys were not needed. The second was that the wheat board would resign. The third was that the wheat board did not have the necessary facilities. All of these excuses having been more or less removed, the right hon. gentleman the other day followed a new course, in threatening the independence of parliament. May I say this, Mr. Speaker. This has been an unusual session.

Mr. Howe (Port Arthur): You are back to the bill of rights, are you?

Mr. Diefenbaker: This has been an unusual session. We thought we fought the last battle in this regard last July. I think it was Junius who said, back in 1760, that freedom hangs by a thread. In Canada, it was a fishing line. Yes, we ultimately achieved the supremacy of parliament, but only through the abdication of the minister who left for other purposes.

Now, what does he do? Well, he threatens the independence of parliament. Have we an oligarchy here? Are the Prime Minister (Mr. St. Laurent), the Minister of Agriculture

(Mr. Gardiner) and the Minister of Trade and Commerce (Mr. Howe), the oligarchy who dominate? Well, I simply point out that recently they had a meeting. Whenever the right hon. gentleman retires from politics I am hoping he will write a book on parliament, as I would like to see it. At that meeting in Ottawa on January 18, he gave his instructions as to what was to be done. I am not going to repeat what has been referred to before, but this is one particular thought that indicates the degree to which, with an overwhelming majority, this House of Commons is approaching a one-party state House of Commons. Here is what he said:

When the Prime Minister "lays down the party line, that has got to be it".

Mr. Howe (Port Arthur): He said nothing of the kind; you do not know what he said.

Mr. Diefenbaker: I am reading what he said.

Mr. Howe (Port Arthur): You are reading from what?

Mr. Diefenbaker: I am reading from the Ottawa *Journal*.

Mr. Howe (Port Arthur): A good Tory paper. That is its interpretation.

Mr. Diefenbaker: I am reading from the *Journal*:

When the Prime Minister—

And it quotes.

—"lays down the party line that has got to be it".

Then it went on to say—

Mr. Howe (Port Arthur): That is not a correct quotation, and I think I am in a position to know. I do not think the hon. gentleman has the right to question that fact.

Some hon. Members: Order.

Mr. Deputy Speaker: The hon. member who has the floor, of course, will take the minister's word for what was said on that occasion. I know he will do that. But while I am on my feet may I draw to the hon. member's attention that hon. gentlemen were saying "order" previously to my rising and I think they did so rightly because the remarks which the hon. gentleman was making were far removed from the principle of this bill. I must ask the hon. member to direct his remarks to this bill which is now before us.

Mr. Diefenbaker: Mr. Speaker, if the right of parliament to speak—

Mr. Howe (Port Arthur): To speak nonsense.

Mr. Diefenbaker: —is to be denied because the hon. gentleman does not want parliament to be free, we are indeed getting back to the position—

Mr. Deputy Speaker: Order. May I clear up this situation immediately. There is no question here of the right to speak. The hon. member has the floor and may speak as he wishes, but he will speak in accordance with the rules of this house. The rules of this house say that his remarks must be relevant to the subject under consideration.

Now, we are considering a bill which is entitled:

An act to provide for short-term credit to grain producers in the prairie provinces to meet temporary financial difficulties arising from inability to deliver all their grain.

On second reading of this bill, the supremacy of parliament and other abstract questions which the hon. gentleman has been attempting to raise have nothing to do with the principle of the bill and I must ask him to deal with the principle in a relevant manner.

Mr. Nicholson: On a point of order, Mr. Speaker, I think that to have the record straight you should read the amendment as well. We have an amendment before the house which should be on the record at this time.

Mr. Deputy Speaker: The hon. member is quite right. The amendment has been moved by the hon. member for Kindersley (Mr. Johnson) and seconded by the hon. member for Winnipeg North (Mr. Stewart) and is as follows:

That Bill No. 82 be not now read a second time but that the subject matter thereof be referred to the standing committee on agriculture and colonization.

I am sure the hon. member has been in this house for a long period, and I am sure he will agree with me on reflection that the remarks which he was making before I rose have little, if any, relationship to the bill or to the amendment.

Mr. Diefenbaker: I have always tried to follow the rules of the house, and when you speak of relevancy then I ask, sir, with the greatest deference, was it relevant the other day for the right hon. gentleman to try to browbeat parliament?

Some hon. Members: What?

Mr. Diefenbaker: Was that relevant?

Some hon. Members: Order.

Mr. Diefenbaker: I come now to answer that irrelevancy, if you will. However, these remarks are relevant to whether or not the amendment to which my hon. friend has made reference, that this matter be submitted to the agriculture committee to the end that the house may determine in that committee after representations are heard whether or

not this legislation does meet the needs of the western farmer today. With greatest respect, sir, I bow to your ruling, but I do say this. If in the discussion of a bill a minister, in order to steamroller it through the house, threatens parliament by saying what he will do, he will not let the western farmer get any money until June or July, then I think it is time for someone to continue to speak in parliament. After all, if we are to be silenced after that threat, we will become, in effect, robots.

Mr. Howe (Port Arthur): If the hon. member cannot make a speech without misquoting me, then it is a great pity.

Mr. Diefenbaker: The minister would speak about the independence of parliament. The other day he said, what is there to debate? There is nothing to debate there. I have lost my patience. There was a Louis who once said, "L'État c'est moi".

Mr. Howe (Port Arthur): If the hon. member is going to quote me let him turn up *Hansard* and indicate where I said all those things.

Mr. Diefenbaker: I was going to tell him about Louis. He said "L'État c'est moi". The right hon. gentleman would amend it to read "La Chambre des communes, c'est moi". That is what I am protesting, the right hon. gentleman trying to force it down the throat of parliament. I have had my say.

Mr. J. H. Dickey (Halifax): In entering this debate immediately after the remarks of the hon. gentleman who has just sat down, Mr. Speaker, I do so for the purpose of answering an inquiry that he placed before the house. He suggested that every substantial farm organization in western Canada had clearly and unequivocally demanded the introduction of a system of cash advances on farm-stored grain. I understood from his argument that he meant these farm organizations had all asked for these advances to be administered and made by the Canadian wheat board.

Well, I do not know what the hon. member's opinion of a substantial farm organization in western Canada is, or whether the organizations to which I am going to refer in a moment come within his definition of major substantial farm organizations. In my opinion, they do. For example, the United Grain Growers, at their meeting, had a resolution placed before them which was defeated and that resolution was in the following terms:

> Be it resolved that the board of directors urge the initiation of studies of possible machinery for the purpose of making advances to farmers on farm-stored grain.

The fact that that resolution was defeated and that no other resolution was adopted by that meeting of the United Grain Growers asking for any such system is, I think, a clear indication that that substantial farm organization is not clamouring for the kind of policy that the hon. member has been advocating.

An hon. Member: One of its directors got a promotion.

Mr. Dickey: I do not know what his opinion of the Alberta wheat pool is but at the annual meeting of the Alberta wheat pool no resolution was passed concerning advances on farm-stored grain. However, in the December 16 issue of the *Wheat Pool Budget* which is a weekly bulletin issued by the Alberta wheat pool the following appears. It is a report of the annual meeting of the delegates of the Alberta wheat pool and it sets out 12 specific policies which the delegates advanced as the policy of the wheat pool in connection with the marketing of grain. Not one of those twelve policy statements contains any reference to the kind of system that the hon. member has been telling the house has been demanded by every major farm organization, but after listing the 12 points of policy the following appears:

> Delegates felt that advances on grain, whether interest free or otherwise, were only an emergency measure and would offer no solution to marketing problems. They believe that farmers who finding it necessary to borrow should get as favourable interest rates as possible but they did not ask that the wheat board become involved in the loaning business for fear of jeopardizing its usefulness as a merchandising agency.

Mr. Diefenbaker: It says, "in the loaning business".

Mr. Dickey: Yes, "involved in the loaning business". That is the point of view which the hon. member was characterizing this afternoon when it had been stated by the Minister of Trade and Commerce as a suggestion that did not deserve any consideration. However, it comes from what I believe to be a very responsible and substantial organization of western farmers.

I do not know either what the hon. members' opinion is of the Canadian federation of agriculture, but I think that is not only a substantial organization of western farmers but that it represents farmers across Canada. On Tuesday, February 14, the Canadian Federation of Agriculture made its annual presentation to the Prime Minister of Canada and to the members of the cabinet.

As all hon. members know, that is the occasion on which the Canadian Federation of Agriculture has the opportunity of bringing to the attention of the Prime Minister and

of the government the policies that they believe should be adopted for the advantage of farmers and the progress of agriculture in this country. The federation dealt in a general way with the problem of grain marketing. They said, for example, and I quote from page 9 of their submission:

> The difficulties and problems faced by the wheat industry in Canada today, real though they are, give us only a small inkling of the trouble we would be in in the absence of these orderly marketing policies.

In their general representations they dealt with the present heavy stocks of grain at page 3, as follows:

> The heavy stocks of grain have been largely due to a favourable series of crop years, and these stocks are being handled in an orderly way in so far as conditions in the rest of the world permit.

That submission shows that the federation of agriculture is aware of the problem which exists in connection with the marketing of grain and it has a full appreciation of all the mechanisms which exist for the marketing of grain, but in their submission they did not advocate or suggest the kind of policy that the hon. member for Prince Albert (Mr. Diefenbaker) and the hon. members of the C.C.F. group and other speakers from the opposition have been advocating, namely the intervention of the wheat board in any system of cash advances or loans.

Mr. Diefenbaker: Not loans.

Mr. Dickey: I submit, Mr. Speaker, this indicates that substantial organizations of farmers, organizations which have in mind the interests of the wheat growers of western Canada and the farmers of Canada generally, are not unanimous by any means, as has been suggested, and that they regard the policy as outlined by the hon. member for Prince Albert and other opposition spokesmen as anything but the ideal solution.

Mr. Knowles: Tell us what the farm unions said today.

An hon. Member: What about the other organizations?

Mr. Dickey: I am not denying there are farm organizations which have made statements which are in accord with the arguments that have been presented. I was simply trying to indicate by quotations that the statement which has been made to the effect that the farm organizations are unanimous and are clamouring for this other policy is not in accordance with the facts.

Mr. R. R. Knight (Saskatoon): Mr. Speaker, I want to take a few brief moments simply to underline and endorse the themes which my farmer colleagues have been presenting, and when I say "farmer colleagues" I mean just that, because we are fortunate that in discussing this particular question we have in our group some young and active farmers. The house may judge for itself whether or not they have proved that activity in this particular debate.

There is one respect in which we are fortunate in this debate and in which we are not always so fortunate, and that is that we have been able to get directives from our constituents. I do not suggest that we always take directives from our constituents but we certainly consider what they have to say and this is one debate in which we have had ample opportunity to assess the opinion of various sections of the community in regard to the particular piece of legislation which has been amended by the motion that we have moved.

The things I do want to say today, and I say it with all sincerity and earnestness, is that the bill does not reflect in either its letter or spirit the decision of the Saskatoon conference, discussion of which has occupied some time in this present debate.

You know, farmers in western Canada are blamed for many things. One example of this was advanced to me in a letter from a farmer in eastern Canada. He said the farmers in the west have already received too much consideration; they talk about $65 million. Well, we dealt with that the other day. Our eastern friends are liable to forget that that $65 million was given in lieu of moneys which the farmers would have received under other circumstances during the period of the war.

Another reason I was asked to support this bill, and this is a peculiar reason, is that some eastern farmers say that the western farmers send down to them rubbish feed with which to feed their livestock. I shall take just one moment to answer that particular item because it is important to the people in the maritimes and the mid-Canada provinces.

As far as this question of feed is concerned, when the farmer delivers his wheat to the elevator the screenings pass out of his ownership into the hands of the elevator company. If my hon. friends in eastern Canada want pure feed grain, and I do not see why they should not have it, then I suggest that they buy directly from the wheat board or from the grain companies. They can buy No. 3 barley or No. 1 feed oats or whatever it is they want on the Winnipeg market, under government certificate, have it brought down to eastern Canada, build their own storage on a co-operative basis or some other method, grind the grain and distribute it among their

members. Then they would not be depending upon the grain dealers who are presently selling them a mixture of wild oats, pigweed and buckwheat, as I have seen being fed to pigs in Prince Edward Island. However, I imagine I will be out of order if I pursue that any further.

Coming back to this main question, I say to the Minister of Trade and Commerce in all sincerity that I think he made a tremendous mistake when he attributed to us, and I am sure equally to other members in this house, a political motive in opposing this legislation. After all, everything we do in this house is political. I understand politics to be the science of government. If any political praise is due because of what we have done, that is fine.

I say in all sincerity that I think the minister is vastly mistaken. As I said when I opened my remarks, we have had time to make contacts in a way the minister has not. We have been able to get the real opinion of the people of the country in regard to this measure. I know I can only interpret what the minister was thinking, but my interpretation is that he felt that in our hearts we realized that this bill was better than nothing, that we were simply opposing it for political purposes and at the last moment would throw up the sponge and say, "Yes, we will vote for it because it is better than nothing."

We do not think it is better than nothing. We do not say that it is vicious legislation, but we say it is silly and useless legislation. It is taking the place of legislation which would better meet the wishes of those who are so greatly concerned. Somebody said the other day that we should not indulge in humour when dealing with a matter as serious as this, but I say in all sincerity to the minister and the government that in western Canada this legislation is considered as a joke.

There are many retired farmers in my constituency but there are also active farmers there because my constituency runs south of the city. Saskatoon is the headquarters of the Saskatchewan farmers' union and we are in contact with farming people. Our very life depends on the success of the farmers who are contiguous to the city. We are the distributing point for goods and services to meet the needs of farmers all over northern Saskatchewan. I have not met one farmer who actually said to me that he thought this legislation was good, and I have not met anyone who said that he thought this legislation was better than nothing.

We have a good deal of labour in our city and I am glad to say that the labour unions are expressing a good deal of sympathy for their fellow men in the farm union. Several of the labour organizations got together and passed a resolution attacking this particular legislation as it was forecast on the radio and in the press before it was brought in. They realized that their prosperity depends upon the prosperity of the farmers.

What about the political parties? The Liberal party in Saskatchewan has done a pretty good job of covering up. We have had an example of that in the house here in the various speeches by the hon. member for Rosthern (Mr. Tucker) who has tried to make out that in fact this is what the farmers have asked for. But the Liberal association in Saskatoon does not think that this is what they want. I have the record in my hand but the previous Speaker said that we are not allowed to read these things and therefore I shall not attempt to do that. That Liberal association in meeting was severely critical of the right hon. Minister of Trade and Commerce and furthermore they said that if they were supporting a bank loan, and being a Liberal association they said they would support a bank loan, they criticized the rate of interest as being much too high.

Speaking of politics, a Liberal convention at Souris-Estevan met together to nominate a Liberal candidate. What did they do? They nominated the sitting Conservative member who said to them, and I am quoting his words, "I am a Conservative." However, they let it go at that. So much for what people think about this particular legislation.

I want to come back to this question of what really did go on at the Saskatoon conference as I think that is the crux of the argument put forward by the hon. member for Rosthern. I should like to quote what the hon. member said, as reported on page 1159 of *Hansard* of February 14. The hon. member was speaking in this particular debate and he said:

> I told this house, and it was objected to over and over again by the C.C.F. opposite, that this marketing conference had unanimously endorsed the idea of cash advances, but it left open the whole question of the mechanics by which those advances should be made.

That was the Saskatoon conference the hon. member was talking about.

> Hon. members will recall how that suggestion was jeered at by members of the C.C.F. opposition.

No wonder. I sat at that conference for three days and I know what went on. The hon. member then made this statement:

> I have now brought this submission, signed on behalf of the government of Saskatchewan, endorsing every word I said.

Anyone reading that would take it as a reference to a submission by the Saskatoon

conference, but it was no such thing. That was a request submitted by a delegation from that Saskatoon conference which came down here to present their recommendations to the government. That delegation was composed of representatives of the U.G.G.—I believe the president was a member—as well as other grain companies. There were lots of people there representing people other than farmers, as well as farmers. There were people of all political opinions. When they got together they presented to the government the only thing on which they were unanimous, and that was that there should be cash advances paid on wheat stored on the farm. Now, it is very interesting. There is a difference whether you are talking about the Saskatoon conference or whether you are talking about the request made to the government by a number of delegates of various political colours and various occupations who happened—

Mr. Dickey: Would the hon. member permit a question?

Mr. Knight: Yes, of course.

Mr. Dickey: Is it not correct that that delegation was sent down here from the conference—

Mr. Knight: Yes.

Mr. Dickey: —to represent it?

Mr. Knight: I shall answer by saying this. Never have I seen farmers so angry—and I count among those farmers Mr. Nollet, the minister of agriculture of the province of Saskatchewan, whose language in that regard I dare not quote in this house—at their disappointment and disgust with this wishy-washy thing, as they call it, that had been presented to the Canadian government. The only reason it was wishy-washy was that it was the only thing on which they could get those people with various types of interests unanimous. As far as the farmers were concerned, they considered they had been bypassed. Most of them used the word "sabotaged".

I want to deal for one moment with the assertion of the hon. member for Rosthern (Mr. Tucker) that what this government is doing in this legislation is in fact what was requested by the Saskatoon conference. I am not going to read this but I am just going to say that after the reports of what happened at the Saskatoon conference this was stated in a reliable newspaper:

> It was also stressed that this was an advance and not a loan.

That is from a report of the Saskatoon conference. It is rather an amazing thing that, when the hon. member for Rosthern himself wrote a letter to the Winnipeg *Free Press* shortly after this incident, the hon. member said:

> At the Saskatoon conference, farm union leaders and others advocated that advances should be made to farmers against wheat in store on their farms by the wheat board through the elevator agents.

Those are not my words, but the words of my hon. friend from Rosthern. Let him eat them now. I think that should settle the question of the Saskatoon conference, and of the representations that were made here. But I can assure the government and the minister that, so far as all these people are concerned —the people with whom I had daily contact for two or three weeks in my own city and outside it—whether they be professional men, labour men or farmers or whatever they may be, they consider the government legislation in this case as nothing short of a joke. That is absolutely true. I have already dealt with my hon. friend from Rosthern. If he talks, as I said the other day, till he is blue in the face —and he gets that way occasionally,—of course we have to make allowances for my hon. friend because he does not like the C.C.F. party and he has good reason for that. After all, he is smarting under the rather unfortunate and unsuccessful experiences he has had with the C.C.F. in the province of Saskatchewan over the past five or six years.

I do not think there is anything more I can say in that regard, because I believe I have made my point; but there is also one other point. That is the assertion that the Saskatchewan government somehow subscribes to this silly business of a loan because the minister of agriculture from the province of Saskatchewan signed his name to this wishy-washy document that was produced and presented to the cabinet here in Ottawa. Mr. Speaker, your predecessor has precluded our reading these documents in the house, although I notice you have been a little more lenient, and I shall not attempt to do so. But I could read here speech after speech made by the premier of the province of Saskatchewan, who, whatever he may be, to my thinking is a great man and certainly represents the C.C.F. opinion in that province of Saskatchewan. In everything he has said he has been against this principle of bank loans and has been in favour—and in fact he has laid it down on the line that this should be done—of cash advances, a payment in advance without interest on grain stored on the farm.

Needless to say, I shall support this amendment. We could have had something better, but under the circumstances I think we can support that. Early in this debate

we were challenged. We had the most amazing spectacle of the Minister of Trade and Commerce getting up one night in a fury—and that is the only way I can describe it—, looking at our friend from Regina City (Mr. Ellis) and saying, "All right, if you oppose this, we shall withdraw it." I ask, is this the way for a responsible minister of the crown to act in a democratic House of Commons? A member of a small group in this House of Commons is allowed to twist and change and pervert and cancel of his own volition legislation brought in by a government that is supposed to be acting for the good of the people concerned and for the good of the Canadian nation. Somebody has said we have witnessed a comedy of errors. I am not going into that, but one would need the fingers of both hands to count the errors the government has made in the last two weeks about this and other matters.

Mr. H. R. Argue (Assiniboia): This afternoon I listened to the parliamentary assistant endeavouring as best he could to read into certain resolutions from farm organizations the idea that farm organizations were not in favour of cash advances. He stated that, when the C.C.F. said that farm organizations and the farmers were almost unanimously in favour of cash advances and opposed to bank loans, we were not stating a fact.

I did not have the privilege of attending the Saskatoon conference, but it seems to me clear from the record that the delegates at that convention were in favour of cash advances. It seems also true that when the representatives from that conference met the cabinet they did not make precisely the same presentation to the cabinet that was agreed upon at that conference. Certainly there was a difference of opinion.

The important point is the fact that when the farm leaders, whoever they might have been, who met the cabinet and seemed to support the idea of bank loans, went back to their member bodies and faced their delegates in convention, the delegates speaking on behalf of the producers rejected any suggestion that bank loans were acceptable and those delegates came out spontaneously in favour of cash advances. Almost the same thing that happened in the prairies last fall can be seen in this debate. When the resolution preceding this bill first came before the House of Commons, the C.C.F. members said they were opposed to the resolution. We said we were going to vote against it and against the bill that would follow the resolution. It is not too easy sometimes to stand alone. It is much easier to be with the crowd. When you are in the opposition—and there are three opposition parties—it is much easier to go along with the majority. But we said we were against bank loans on principle. We said that, whilst they might do some negligible amount of good in a very few instances, the point was that we were discussing an important principle.

We had already made our stand clear that we were in favour of cash advances when we moved an amendment in the throne speech debate. We made it clear that we were not going to advocate cash advances one day and then be caught standing up in the house and voting for bank loans at a later date; that it was a question of principle; that we were not going to try to ride both horses; that even though we might be misquoted, even though our stand might be twisted, we were going to stand by the principle of cash advances, and the only way we could stand by that principle was to vote against the bank loan legislation all the way down the line.

I think the stand we have taken has already been justified and is now proven to be right. When we see the other opposition parties, both of them, I believe, now prepared to vote against this repugnant bill—

Mr. Diefenbaker: We have seen the bill now.

Mr. Argue: You have seen the bill now. The bill is precisely the same measure that the Minister of Trade and Commerce outlined to the Canadian people on his radio and television show, a $1,500 maximum, 5 per cent interest, on surrender of the wheat board permit book and after which 50 per cent of the moneys received from all deliveries will be paid to the bank. I want to congratulate the Social Credit and Conservative groups in the house for being prepared now to change their position when they see that bank loans should be opposed.

As I said, the same thing happened in the west last fall. A conference was held and there were some differences of opinion as to how cash advances might best be made. The leaders came to Ottawa, and apparently there was a greater difference of opinion when they faced the cabinet. Members of this group, other members from other parties and farm leaders went across western Canada speaking to farm organizations and meetings of farmers, and because of that campaign opinion became crystallized in favour of cash advances and opposed to bank loans. As a matter of fact almost all the organizations, as well as the majority of political parties, are now opposed to bank loans and in favour of cash advances. As the days go by, fewer and fewer people are in favour of bank loans.

The Minister of Trade and Commerce said at one time during this session that he had received about 3,000 pieces of paper with regard to the question of bank loans or cash advances, and I am positive in my own mind that 98 per cent of all the representations that have been made to the Minister of Trade and Commerce have been in favour of cash advances and opposed to bank loans. I would very much like to see that record produced immediately so we can see whether that statement is in fact correct.

Mr. Dickey: On a question of privilege, I understood the hon. member had received the return to his notice of motion for papers and that it was satisfactory. If he has any complaint about it, I wish he would speak to me.

Mr. Argue: I am not objecting to what has been placed in the return but I am saying that in my opinion 98 per cent of all the pieces of paper to which the Minister of Trade and Commerce has referred are in favour of cash advances and opposed to bank loans. Nothing that the Minister of Trade and Commerce can say can change the fact that western Canada believes the legislation now before the house is repugnant and should be withdrawn because it is not in the best interests of the agricultural producers.

I do not imagine the Liberal party is unanimously in favour of this legislation. Oh, they may vote unanimously in the house. The Minister of Trade and Commerce has said: "Toe the party line; we are not going to have anyone exercising a free vote, a free opinion." He has even told the hon. gentlemen in the other place who belong to his political party that they too must toe the line.

In Saskatchewan the Minister of Agriculture has already carried out these orders from the Minister of Trade and Commerce and, while there was a lot of deviation in the party line in Saskatchewan last fall, it is now being strictly followed. Nevertheless it is still not true that the Liberal party is unanimously in favour of bank loans. I too saw Mr. Harper Prowse, the Alberta Liberal leader, on television last night in the program "Press Conference". I have never seen the gentleman in person but I want to say that I was rather impressed generally with the ability he showed. It seemed to me that whenever he was being questioned about provincial matters he was very much at home and had the answers. He sat right on top of the conference until somebody mentioned federal policy and asked him about the government's wheat policy. Then he faltered and hesitated. He looked down and picked up a little note.

I can almost see the hon. member for Rosthern (Mr. Tucker) doing about the same thing on a television show. Then Mr. Prowse read the record, the old record about quantities of grain delivered and produced in the last five years. Then he was asked point blank, "Are you in favour of cash advances?" His answer was "yes"; he was in favour of cash advances.

Mr. Diefenbaker: He will be liquidated.

Mr. Argue: I suggest that Harper Prowse represents the opinion of prairie farmers in Alberta when he says that he is in favour of cash advances far more than the Minister of Trade and Commerce represents the opinion of the farmers of Alberta and western Canada generally when he says that the farm organizations are willing to go along with this legislation.

The parliamentary assistant quoted the submission of the federation of agriculture to the cabinet. That submission did not oppose cash advances. I did not hear him read anything about cash advances. But had the parliamentary assistant wished to quote the most important farm organization as far as the production of wheat is concerned, an organization that is a member of the Canadian Federation of Agriculture, he would know where the agricultural producers in fact stand on this question.

I am glad that democracy works in parliament to some extent, in spite of statements from members of the cabinet. I am glad to see democracy working in Canada and working in the farm organizations. I believe that the fundamental power must rest with the rank and file. It must be with the membership, with the ordinary citizens. It is a fact that some leaders of some farm organizations were prepared to go along with the bank loan legislation—

Mr. Dickey: They asked for it, too.

Mr. Argue: —until they met in convention—

Mr. Dickey: Some of them requested it.

Mr. Argue: —and the delegates said, "We are opposed to the bank loan legislation; we want cash advances." Democracy exerted itself in these farm organizations and the opinions of some leaders were reversed, but democracy apparently cannot exert itself within the Liberal party or their position would be reversed in the face of the opinion in western Canada. We have seen the Minister of Trade and Commerce in action before. He gets an idea in his head and he says, "This is it." No matter what opinion may be against it, no matter if he stands alone, he is going to see the legislation rammed through the house against all opposition and against the country itself.

What did the three pool conventions do? I do not have their resolutions in my hand, but I do have the submission of the interprovincial farm union council presented to the government this day, and it contains a reference to the stand of the three western wheat pools. With regard to cash advances it has this to say:

> Therefore the interprovincial farm union council is continuing to press for adoption of its original proposal, which has been endorsed—

I want to emphasize this.

> —at the three wheat pool delegate meetings, that the government arrange for interest free cash advances by the Canadian wheat board on farm-stored grain to the value of 50 per cent of the initial payment on an estimated delivery of 8 bushels per cultivated acre.

Nothing could be clearer than the fact that the western farmers want cash advances and are opposed to the legislation that is now before the house. Some reasons have been advanced by the minister as to why cash advances could not be made. None of them have appealed to me. I think all of them are incorrect. I think all of them are unfounded. Whenever the minister stated something by way of reasons why it could not be done those statements cannot be borne out by the facts. I think the minister gave one extremely important reason why he is not prepared to provide cash advances. He had this to say as reported at page 603 of *Hansard:*

> Finally, the government was reluctant to put elevator agents into competition in making wheat board advances.

The government was reluctant to let elevator agents compete for the business of cash advances. That statement is extremely important, because it has a great bearing on the business that would be received by each elevator company at any given marketing point. It has an important bearing on the whole question of box car distribution.

If the government had provided cash advances through the elevator system, a producer at a given marketing point would go to the elevator company where he wished to deliver his grain and obtain from that elevator company the cash advance. Then the farmer would be required to pledge his grain on delivery to that elevator company. Therefore if 50 per cent of the farmers at one marketing point had pledged their grain to a certain elevator company, that elevator company would have to be given 50 per cent of the box cars in order to move the grain so that the farmers who had accepted cash advances could repay them.

If that had been done, the farmers then would have had restored to them the right to deliver grain to the elevator of their choice. It would be the farmer who would decide, and not the transport controller or the Minister of Trade and Commerce who is deciding to which elevator farmers must deliver the grain because of the lack of box cars and because of the bad distribution of box cars.

If you brought in a system of cash advances, you would be stepping on the toes of some of the private grain interests which we have seen the Minister of Trade and Commerce so anxious to protect over the years. We have seen many times the attitude of the Minister of Trade and Commerce toward the farm organizations. The western farm organizations have asked for a better distribution of box cars. He gave them a transport controller who is doing nothing about the matter, who is opposed to the farm organizations, and who is opposed to allowing the farmers to deliver grain to the elevator of their choice. The statement by the Minister of Trade and Commerce that the government was reluctant to put elevator agents into competition in making wheat board advances is, in my opinion, highly significant. I should like to see a little bit of competition in the grain business, but the minister is opposed to competition. He wants the situation to continue where farmers are forced to deliver grain to whatever elevator may happen to get the box cars.

In this debate the Minister of Trade and Commerce has made a great many statements. The vast majority of the statements and the assertions he has made, I submit, are wrong, incorrect, ill-founded and cannot in any way be supported. The C.C.F. are asking for cash advances. He said, "Oh, yes, you are asking for cash advances. Why? Because you want to embarrass the wheat board. Anybody that is for cash advances is an enemy of the wheat board." He said the farmers' union is something like the C.C.F.; that they have said they support the wheat board "but", and he says there is always an extremely important "but".

The record of the C.C.F. group in regard to the wheat board is clear. We are not obliged to protect our record. We believe in the wheat board system of marketing all grains. That record is clear. I suggest that the farmers' union record is just as clear. They are not here to defend themselves, but their record is just as clear that they are 100 per cent in support of the wheat board system of marketing grain. Therefore the minister's statement to the effect that anybody supporting cash advances is the enemy of the wheat board is in fact wrong and is, in fact, perfectly ridiculous.

The organization that has campaigned most for the Canadian wheat board and in support of orderly marketing is no doubt the Saskatchewan wheat pool. Their delegates in

convention assembled the first day passed an emergency resolution that reads as follows:

That we urge the government of Canada to make immediate provision for advances to farmers on farm-stored grain.

That advances to farmers on farm-stored grain should be up to one-half the normal delivery expected and repayable on the basis of one-half of the value of each delivery made by the farmer.

That advances on farm-stored grain should be made by way of government-guaranteed loans to the Canadian wheat board; the Canadian wheat board to arrange with elevator companies to make the advances to individual farmers, and that any interest involved in such loans should be absorbed by the federal treasury.

The policy of the Saskatchewan wheat pool, as approved by its delegates in annual meeting, is clear-cut. It does not favour the government's proposal for bank loans. It firmly believes that the conditions are such that extraordinary measures are called for, and that these should include advances against farm-stored grain, and that such advances should be made to individual farmers through elevator companies in accordance with an agreement between the companies and the wheat board.

The Minister of Trade and Commerce says about 100,000 farmer members of the Saskatchewan wheat pool are the enemies of the Canadian wheat board. That is an extremely irresponsible statement from the minister in charge of grain marketing. The minister is always willing to slam anybody. He makes wild statements. Last year when we were discussing another bill in connection with the Canada Grain Act he referred to the wheat pools as the C.C.F. pools. I suppose in the mind of the minister that was calling them just about as bad a name as he could lay his tongue to. So he brushed aside the Saskatchewan wheat pool and the other wheat pools as being C.C.F. pools.

Mr. Harris: It probably was not a compliment.

Mr. Argue: Then another statement the Minister of Trade and Commerce has made, which is just as ridiculous and cannot be substantiated, is the one to the effect that the government could not make cash advances because they could not get ample security if it were done through the wheat board, and there was nothing to stop a farmer from feeding his grain to his livestock after he had received a cash advance, or selling his grain to his neighbour.

What was the minister saying? He was saying that the small farmer he had been talking about—the farmer who is poor; the farmer who has some grain but needs some money—could not be trusted if it were done through the wheat board because he might feed the grain some dark night, or he might haul it across to his neighbour.

An hon. Member: Big brother is watching him.

[Mr. Argue.]

Mr. Argue: There would be no danger of any farmer getting away with anything under the bank loan legislation. The only way in which he can get out of paying that, I guess, is to drop dead, because he is going to be tied very tightly. But surely the Minister of Trade and Commerce does not believe that any percentage of the farmers at all are not honest or that they would in fact feed or sell grain that was pledged to the elevator system. It is such a ridiculous statement. The farmer would be receiving only half the value of the grain. The wheat board has control of his permit book. In order to obtain the other 50 per cent of the value he must deliver the grain to an elevator. That is another statement by the minister that is completely inaccurate and cannot be substantiated in any way.

After saying that the farmers were not to be trusted, he said, after all, there was not too much need for any legislation. He said he was at a meeting of farm representatives. After the meeting was over one of the farm representatives asked him if he would like a lift in his car. He said the farmer had a new car and remarked to the minister that his land was now clear. The farmer told the minister he had one year's crop in his bins, something for which he had been hoping for many years.

Mr. Cannon: On a point of order, Mr. Speaker; we were told that same story yesterday in identical words. If this is not repetition, then what is?

Mr. Argue: I can understand the difficulty of the hon. member and the fact that he would like this statement forgotten.

Mr. Dickey: On a question of privilege, Mr. Speaker, I do not believe it is proper for an hon. member to impute motives to someone who rises with a proper question of order.

The Acting Speaker (Mr. Applewhaite): I did not understand the hon. member for Assiniboia to be imputing motives to anyone. I would be glad to hear his views on that.

Mr. Argue: I was not imputing motives of any kind to anyone, Mr. Speaker. If my hon. friend is so sensitive to what I said and believes some of it is objectionable, I am quite willing to amend anything I said so he will not sit in his chair with anxiety.

The minister went on to say that the farmer had a new car, had his farm clear and he had one year's crop in his bins—

Mr. Cannon: Could we have a decision on the point of order, Mr. Speaker?

The Acting Speaker (Mr. Applewhaite): If the hon. member for Iles-de-la-Madeleine

is asking me to rule that the telling of the same story twice in this house is repetition to the extent that repetition is barred by the rules of this house, I am very much afraid I would have to admit that at this time it would be most unfair for me to so rule against the hon. member for Assiniboia, considering other speeches we have heard in this and other debates.

At the same time, I feel that the hon. member for Iles-de-la-Madeleine is giving voice to views which are held by a great many in this house, and with which I believe the hon. member who now has the floor will agree, that little can be added to a debate by repetition of what has been said before. When repetition reaches a certain stage it becomes an abuse of the privilege of this house. All hon. members on all sides I think will agree that that situation can arise. Perhaps I might express a personal opinion that we are close to it, but I am not going to rule at the moment that the hon. member has gone that far.

Mr. Argue: In one breath, Mr. Speaker, the Minister of Trade and Commerce says this legislation is necessary to help the small farmer, the farmer who is short of money. He says we cannot establish a system of cash advances because the farmers cannot be trusted. Then he changes his story and says that after all, the farmers of western Canada are still well off. They are driving new cars. They have their land clear. I think the fact is that only a tiny percentage of western farmers are driving new cars. The vast majority are driving cars that are now a few years old. They are almost all heavily in debt. They are short of money. They are honest and they want cash advances. I believe they will resent the statement of the minister that they are all well off and there is nothing for them to worry about.

The minister made another statement to which I believe reference was made this afternoon, although I was not in the chamber at the time, by the hon. member for Prince Albert. The Minister of Trade and Commerce said that if a system of cash advances were put through parliament he would be faced with the resignation of the members of the Canadian wheat board. I may tell you that jolted me. I could scarcely believe my ears. I know the members of the Canadian wheat board and I have every respect for them as individuals. Personally, I believe that if parliament asked the wheat board to provide a system of cash advances, the present members of the Canadian wheat board would be only too pleased to carry out the will of parliament.

I can recall an earlier statement made by the Minister of Trade and Commerce, when he said we could not have a new system of box car distribution based on farmers shipping to the elevator of their choice because if we did the transport controller would resign. He would fold up. There would be no transport controller. Last year before the agriculture committee the transport controller was beginning to say very much the same thing; he could not administer it. I asked him point blank, "If parliament passed legislation directing you to control box cars in a certain way, would you implement the law as passed by parliament?" The transport controller said, yes; he would not resign but would be right on the job attempting to enforce the law of the country.

The minister said the wheat board would resign. Then the hon. member for Prince Albert asked a number of questions as to the date the minister received that information as to their impending resignation if cash advances were provided. The answer was no. Here we have more bluff, more inaccurate statements, more excuses and more threats. The minister has got himself in a jam. He is up to his ears in trouble, and it is all his own fault because he refuses to stick to the facts. He keeps on making statements that are ridiculous. He looks foolish in the house and in the country. He is not undermining the Canadian wheat board or the orderly marketing system by making these statements, but he is undermining the Liberal party in western Canada. He is undermining his own prestige in western Canada. A few years ago he had a lot of prestige. A few years ago in the books of Canadian farm organizations his name was respected, but today his name is not respected.

The Minister of Agriculture can shade meanings. He can pop down a hole any time you believe you are catching him. He will even go to *Hansard* and do something with the record, put something in or take something out. The Minister of Agriculture is well known in western Canada. But the Minister of Trade and Commerce does not follow the example set by the Minister of Agriculture. He makes statements right on the record that cannot be substantiated in any way and which time after time are proven inaccurate. He does not care about the record. So in western Canada, although the reputation of the Minister of Agriculture was not particularly high, now in comparison with that of the Minister of Trade and Commerce he probably stands in a higher position, even though the reputation of the Minister of Agriculture leaves a great deal to be desired.

The Minister of Trade and Commerce did not end the statements he could not substantiate with the one to which I have just referred. He keeps on making them, and is not at all discouraged if he is proven wrong every time he makes a speech. Speaking on the system in the United States for cash advances or loans, he had this to say:

> It has been said frequently here that in the United States grain in the farmer's bin is paid for by the government, but that is not true.

That can be found at page 1032 of *Hansard*. The minister says it is not true that grain in farmers' bins in the United States can be paid for. I hold in my hand a copy of *Price Programs*, a publication of the United States department of agriculture and I quote from page 17:

> Q. What kind of farm storage must a producer have to be eligible for CCC loans—

An hon. Member: C.C.F.?

Mr. Dickey: Not payments, loans.

Mr. Argue:

> —on farm-stored grain?
> A. The cribs or bins used must meet the approval of the county ASC committee. In general, farm cribs or bins that provide safe storage in the locality will meet requirements.

The minister says that United States farmers cannot be paid for grain in their bins, but the United States government says that they can and I am prepared to take the word of this United States publication.

An hon. Member: Why don't you move to the United States?

Mr. Dickey: For loans, not payments.

Mr. Argue: The minister then goes on to say at page 1032 of *Hansard*:

> We, in Canada, cannot have anything to do with the grain until it is delivered into the government's licensed storage. The two are practically the same.

In answering that statement I will deal with the comments of the parliamentary assistant that the United States proposal is loans. That is what they call them; they are loans. I will tell you what kind of loan it is and if the farmers of western Canada could have this type of loan I am sure they would be 100 per cent in favour of it.

The farmer in the United States today can get from the CCC a loan of $2.08 a bushel for the wheat in his bin; that is the national farm average. What is the interest? Three and one-half per cent. When does the farmer pay the interest? He pays it only when he wishes to discharge the loan by paying it in cash. But when he delivers his grain to the CCC the interest is cancelled. The interest is cancelled when the grain is delivered to the Commodity Credit Corporation. Therefore the United States farmer can get something worth while. The Minister of Trade and Commerce says the systems are just the same, but the Canadian farmer can get nothing except a bank loan and only then if the banker is in a good humour and likes the look of the farmer when he comes in to make his application.

The United States farmer can get $2.08 a bushel on his grain without interest immediately after it is harvested, because the interest is cancelled whenever the CCC takes the grain from the farmer the following spring.

An hon. Member: Who pays it?

Mr. Argue: And then if the United States government does not take the grain off the farm, or rather if the farmer in the United States asks that his bin be resealed, he is then paid storage—note this—for the following year, from 11 to 16 cents per bushel varying with the different kinds of grain.

I would like to see a system in Canada just half as good as the United States system, which is a form of 100 per cent cash advances, interest free. The only time interest is collected is in the event the farmer wishes to pay up the loan because the market price has gone higher or because he has decided to seed a portion of his grain or use it as feed.

An hon. Member: Who is going to pay for it?

Mr. Argue: Through the wheat board system the Canadian farmer owns most of the grain on his own farm. In the United States the American farmer has in his possession about 4 per cent of the grain and the rest of it is acquired by the United States government under their various policies. Now we have the bill before us—

Mr. Harris: At last.

Mr. Argue: —and the great clinching argument the Minister of Trade and Commerce used over and over again as to why the wheat board could not be allowed to make cash advances is this, and I quote from page 127 of *Hansard*:

> A government lien on grain on the farms would have to take second place to tax liens and would be on a par with liens put on by implement dealers or suppliers of any other kind.

He repeated that time and again. He said that a lien of the Canadian wheat board would be an inferior lien and there would be other liens that would supersede it. Therefore he said they had to have the strength of section 88 of the Bank Act.

We come to the bill and we notice that the strength in the Bank Act has nothing at all to do with the bill. As a matter of fact this legislation supersedes the Bank Act. This legislation gives to the banking institutions far more power and far more authority than they have under the Bank Act. It says:

Notwithstanding any other act or law—

Some hon. Members: Order.

Mr. Argue:

Notwithstanding any other act or law—

Certain things under this legislation will be laid down—

Some hon. Members: Order.

Mr. Argue: And what will be done under this legislation? The farmer is barred from storing his grain in the country elevator and when he does bring it to the country elevator 50 per cent of the amount must be paid to the bank because the banks are entitled "in priority to all other persons."

The strength of this lien is 100 per cent, and nothing can supersede it. The strength does not flow from the Bank Act but flows from this legislation which is now before parliament. The banks are given preference to the rural municipalities, the implement dealers and the threshers. The banks are given preference to all other persons. Is there any risk? There is no risk.

Then the government guarantees the loan and says to the country elevators, "You have to collect". They do not really say that either; they hold the elevator agent personally responsible for the collection. It is no wonder that this legislation is repulsive not only to the farmers but to the elevator agents. It is small wonder indeed that this legislation is almost unanimously opposed by all people on the prairies. I am surprised that even this government would have the effrontery to present legislation to the country which in fact does nothing for the producer but which in fact will bind the producer hand and foot in an economic way when he is forced to accept a loan.

Mr. Charles Yuill (Jasper-Edson): Mr. Speaker, in rising to take part in this debate I do so with certain qualms of conscience because it is going to be very difficult to say anything that has not already been said by someone else. However, I do think we could say a lot yet on the merits or the demerits of the bill which is before the house at the present time.

I think if we were to be a little more realistic in our thinking we should go back a little further than this and deal with the root cause and the necessity of presenting a bill such as this. I think if we were to be realistic in our thinking we would have to agree that there is a challenge here to the people who are responsible for the fiscal policies of this government.

I think it even goes beyond that. I think it is really a condemnation of our fiscal policy. In this bill I believe we are just trying to determine whether or not it is better to give an aspirin or a dose of alka seltzer to relieve our economic headache. I do not think we are getting to the root of this problem. If mother nature is kind next year and we have another bumper crop, we will have to come back and repeat that order.

I do not think anyone should assume that he is ruling by divine right. Members of parliament are elected as individuals, they are not collectively grouped and elected as a government at all. Naturally those who are in the majority are charged with the responsibility of administering the business of this country, but that does not give them any right, in my opinion, to assume that they are there by divine right. They should not take us back to the law of the jungle and assume that might is right. They should be prepared to listen to constructive criticism by the people who are so vitally concerned with agriculture.

We have had the results of the collective thinking and good judgment of the important people in Alberta, Manitoba and Saskatchewan; of the farm organizations which have been charged with the responsibility at the local level. They have tried to come up with the right answers and suggestions in order to help those who in the final analysis are charged with the responsibility of doing something about this problem.

This government would be well advised to listen to the suggestions that have been made, the suggestions that the best way to serve the interests of the farmer is not by allowing him to borrow another $1,500 of his own money at 5 per cent but rather to give him advances of up to 50 per cent for grain stored on the farm. If we took a more realistic attitude and concentrated upon trying to determine ways and means of selling our wheat I think we would be getting closer to our responsibility.

I do not think we grow wheat or anything else just for the sake of putting it in a granary, storing it and getting money on it, either through the medium of bank loans or advances. Until we get down to basic facts and apply to our fiscal policy some modern techniques of salesmanship we will have this to contend with year after year. You can scarcely listen to a radio program or watch

a television show without having demonstrated to you new techniques in salesmanship. That is done as a matter of necessity.

We have allowed conditions to develop whereby on the one hand the farmer has an abundance and then must go and beg for the right to sell his commodity. So far as the attitude of the government is concerned, in refusing to consider in any way, shape or form any deal which would be on a mutually advantageous level, I think that is a very nearsighted attitude. It is desirable and absolutely essential that in our modern world we think in terms of creating sales up to a sensible and reasonable amount. If it were not that we are living in a world which is definitely conscious of the credit system our economy would not have reached a level of $26,400 million. Those who manufacture television sets, refrigerators and that kind of thing do so in the expectation that people will mortgage their future incomes to buy those articles on credit. If we are going to sell our wheat or anything else we must think more or less in those terms. We must be ready to sell some of our commodities on a credit basis.

I think this is really a backwash of faulty techniques in our fiscal policy. We have allowed our fiscal policy to take on a lot of dry rot. If we are to consider this bill on its merits I think we should follow the suggestion made by my colleague and send it to the committee after second reading. We could then take advantage of the collective thinking and good judgment of the people of Canada who are so vitally interested. The government would be able to listen to those people and if this legislation is not what the people want it could be modified without the government in my opinion losing face at all. In fact I think they would become more or less heroes as a result. If a man makes a mistake and is ready to admit it and tries to remedy it, he is doing the right thing. I urge the government in its mature wisdom to allow this bill to go to a committee where it can be given the acid test. Then whatever seems to be the sensible thing to be done can be done. We would be doing what the people of Canada want. If that were done the government could take credit for having the courage to take one more look at the matter in an effort to come up with the right answer.

I think it is a pity that the government has adopted the attitude that they will not permit this bill to go before the committee. It is certainly not in the interests of the agricultural industry when they refuse to do that. I would urge that they give one more look and agree to the proposal made by the hon. member for Acadia (Mr. Quelch).

[Mr. Yuill.]

Mr. T. S. Barnett (Comox-Alberni): Mr. Speaker, if the eyebrows of the parliamentary assistant to the Minister of Trade and Commerce (Mr. Dickey) rise slightly when he sees me taking part in this debate, let me assure him at once that I do not intend to go into any detailed statistical analysis of the wheat marketing problem or the detailed pros and cons of the legislation before the house. I feel that the situation as it affects the farmers has been adequately set forth by those of my colleagues who are much closer to it.

I say at once that my reason for rising to take part briefly in this debate is to say that in my opinion the subject matter of this bill is of concern to a much broader section of the people of Canada than the producers of wheat in the three prairie provinces. I think the government should realize that this particular piece of legislation and the effect it is going to have upon the welfare, not only of the farmers but of many of the rest of the people of Canada, are under much closer review than they may perhaps realize. As most hon. members know, in the constituency I represent there are a good many industrial workers. I want to suggest that among the industrial workers of this country there is a growing realization that the situation of the Canadian farmers and their own situation are much more closely parallel than they may perhaps have realized a few years ago.

Perhaps I might give one or two illustrations of that fact. Not so long ago, since the beginning of the present session of this house, as a matter of fact, I was invited to speak at a public meeting in one of the large industrial centres of Canada. The audience was composed largely of people who were industrial workers, and the topic which it had been suggested I might discuss was the new Unemployment Insurance Act. Of course, if the Minister of Labour had been there it would perhaps have been a more interesting discussion than we had. But the point I wish to make is that when we came to a question period at the end of the meeting, rather to my surprise the questions that were asked of me were not in the main directed to the Unemployment Insurance Act but to the situation in respect to the wheat surplus in Canada and the policies the government was formulating to deal with it.

I mention that because I think it serves to illustrate the point I am trying to make, that this is a measure of concern not only to my colleagues who come from agricultural constituencies in the prairie provinces but also to a great many people in a great many parts of Canada. In my district I meet from time to time quite a large number of people

who at one time or another have been prairie farmers. Where do I meet those people? Do I meet them driving around in the Cadillacs about which the Minister of Trade and Commerce was talking? Do I meet them frequenting posh resorts? No; I meet those people working in the sawmills and logging camps of Vancouver island.

That fact illustrates another point I should like to emphasize, that basically the situation of the agricultural producers of this country and that of the industrial producers of this country are the same. If the industrial workers were faced with the kind of situation which has been adequately described, where their pay cheques had been drastically reduced, and then they found at the end of the week or month they were not in a position to collect the other half of their pay cheques but were having suggested to them that they should go to the bank and get a government guaranteed loan at 5 per cent, their position would be rather similar to that in which the government is proposing to place the farmers of the western prairies by this legislation.

I felt I should like to take part briefly in this debate to emphasize the growing realization among the industrial workers of this country that legislation that is inadequate for the farmers is also going to have bad results as far as they are concerned. In considering whether or not the amendment now before the house on this legislation should be accepted, members in all parts of the house—not only those who come from agricultural constituencies in the prairie provinces but also those who may represent industrial constituencies in eastern Canada or other parts of the country—should realize that the eyes of many of the people of Canada are upon the actions of the government and the inadequacies of the measure it is now proposing to bring in.

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, I can imagine that some hon. members may have in their minds the question as to how many grain farms there are in Winnipeg North Centre. I think it is generally known that the answer is none. Nevertheless, I doubt that any member of this house has any greater claim to speak on this matter than has the member for Winnipeg North Centre, in view of the list of head offices that are located within the bounds of my constituency.

Within the boundaries of Winnipeg North Centre may be found the head office of the Canadian wheat board. Also in my constituency is the Winnipeg grain exchange. We also have the head office of the board of grain commissioners. There is also the head office of the wheat pool. The Manitoba federation of agriculture and co-operation has its head office in Winnipeg North Centre, as does the Manitoba farmers' union. I might also point out that every carload of grain that comes from anywhere west of Winnipeg headed toward the lakehead, whether on the Canadian National or the Canadian Pacific railway, comes through the constituency of Winnipeg North Centre.

So in our riding we have a real interest in agricultural matters. In addition to that, as my friend and neighbour the hon. member for Winnipeg South Centre (Mr. Churchill) pointed out a few days ago, all of us in the west recognize the important place that agriculture holds in our economy. We recognize that what is good for the farmers of western Canada is good for western Canada as a whole, and we feel that anything that is unfair and unjust to the farmers of western Canada is an injustice to western Canada as a whole.

Therefore I rise for just a few minutes to indicate my support of the amendment moved by my colleague, the hon. member for Kindersley (Mr. Johnson), and my opposition to the bill, the second reading of which is now before the house.

Reference has already been made to the "Press Conference" program, which many of us saw and heard on television last evening, when the gentleman being interviewed by the press, under the chairmanship of Professor Kenneth MacNaught of Winnipeg, was Mr. Harper Prowse, the Liberal leader in Alberta. We were interested in the way in which he was questioned about this legislation. He said at first it was his personal view that cash advances would be better, but then he tried to get off into a discussion of the bank loan legislation and tried to find something good about it. We were interested in the way in which one of the newspapermen put Mr. Prowse squarely on the spot and asked him what his own personal view was. He said that in his personal view cash advances would be preferable.

However, in the attempt that he did make to justify the bank loan way of dealing with this matter I thought he made one of the most telling arguments against the legislation now before the house. He put it something like this, if my memory from seeing and hearing the program serves me well; that one of the desirable features of the bank loan way of dealing with the problem was that only those farmers who desperately needed money would go to the banks and get it. As I say, that was about the only argument he advanced for it.

I suggest, Mr. Speaker, that that is as much as to say to a worker in an industry

that at the end of the week or two weeks, whatever his pay period is, he should not take his wages unless he really desperately needs them at that particular time. That is as much as to say to a member of parliament or a cabinet minister that at the end of the month he should not go to the pay office and collect his monthly cheque unless at that time he really needs it.

In our economy, in our society, Mr. Speaker, it is a basic principle that when people have done the work they were expected to do in connection with their job, occupation or profession they are entitled at the end of that period to their wages or pay for what they have done. It is our contention that the farmers of western Canada, having produced a bumper crop in 1955, are entitled without further delay to a return for what they have done and they are entitled to it as a matter of right, without having to go to the banks and borrow a portion of what they need at 5 per cent interest.

Mr. Speaker, it seems to me that last night Mr. Harper Prowse, in his feeble attempt to defend this legislation, pointed very clearly to what is wrong with it. We take the position, as I have indicated, that the farmers of western Canada, having done their year's work, should not now be told that the only way they can get any money is by going to the banks and paying interest, it being understood that they will not do so unless they desperately need it. That they need cash we know very well, but whether or not their need is desperate they are entitled to it. We feel that the only way that entitlement can be expressed under present conditions is by means of cash advances in respect of grain stored on the farms which the farmers of western Canada are prepared to deliver.

So, Mr. Speaker, we feel that this matter should not be pushed through in the form in which the bill is now before the house, but rather that the subject matter of the bill should be referred to the standing committee on agriculture and colonization so that interested bodies can appear before that committee and so that further consideration can be given to the matter.

The other day the Minister of Trade and Commerce objected to the amendment of my colleague, the hon. member for Kindersley, by saying that if this amendment were carried it would mean the defeat of the bill and would prevent a bill like this being introduced again this session. I feel that argument should be dealt with at least for a minute or two. First may I say that so far as we are concerned we are not frightened by the charge that the carrying of this amendment would mean the defeat of the bill. After all, we are trying to defeat it and that is fine. But, Mr. Speaker, we have left the door open for even such a bill as this to be presented again to the house if, after consideration by a committee, that committee having had a chance to hear responsible organizations, a recommendation to that effect is made by the committee to the house.

We are not on a point of order so I am not going to pick up Beauchesne and read it, but I would remind the minister that citation 663 of Beauchesne, third edition, makes it clear that these motions that deny the "now" reading for the second time of a bill do not prevent a motion being made for second reading at a later time. All this amendment does is to deny the reading at this particular time. It is still possible, if the committee were so to recommend, to reintroduce legislation even along these lines at this same session.

Nevertheless, Mr. Speaker, we feel that if the committee were given a chance to go into this matter thoroughly, if the committee were given a chance to hear the various organizations and get it straightened out for all who can hear as to what the farmers of western Canada want, that committee given a free hand would not recommend the reintroduction of a bill of this kind. We are satisfied that if the committee went into the matter thoroughly and heard representations from organizations representing the western farmers it would propose something much more akin to what we in this group have been advocating, namely cash advances to the farmers in respect of grain stored on the farm.

Naturally we have all been interested in the remarks made by the Minister of Trade and Commerce with regard to the legislation, and also with regard to the course the debate has taken. The minister does not like quotations of what he has said unless they are picked straight out of *Hansard,* so I will try to avoid offending him by putting words in his mouth that he did not use. However, I think it is pretty clear that he is annoyed that the debate is taking so long.

I am going to say to the Minister of Trade and Commerce that I think one of the reasons he is annoyed at the length of time this debate is taking is that he has not any effective club to hold over those of us who are opposing the legislation. At times there are measures before the house which are grossly inadequate and which we on the opposition side of the house oppose in the hope they will be improved. In circumstances such as those the

government can sometimes hold over us the club that unless we let even such inadequate legislation go through its benefits will not reach those for whom the benefits are intended.

But the Minister of Trade and Commerce knows as well as we do that any benefits that might accrue to individual farmers from this legislation have already been obtained by those farmers. If the debate goes on another day, another week, or is put off to the end of June it does not make a particle of difference to a single farmer in western Canada. Any farmer who would be able to borrow money from the banks, up to $1,500 at 5 per cent, after the passing of this bill can borrow that money now. In fact, the likelihood is that all who would take advantage of it have already done so. So the minister has no club over us in our opposition to this bill.

I mention that not just to remind the minister of the annoyance he is feeling, but also because the fact that it would make no difference whether or not this bill was passed emphasizes how utterly lacking in value it is. Just suppose this bill did not get passed. Would any farmer in western Canada suffer? Not one. Would any bank suffer? No. No bank has lent any money to any farmer on the strength of the letters from the Minister of Finance unless it was sure it was going to get its money back anyway. Hence if the bill does not pass, nobody suffers.

The Minister of Trade and Commerce said one time, "What are we debating about? There is nothing to debate about". Maybe he is right and there is nothing to debate about. There is no value to the bill at all. If it does not pass there is no change in the situation. But, Mr. Speaker, what happens if this bill passes is that the government is in a position to say to the farmers of western Canada that, between this and one other piece of legislation, "Here is the program; we are doing nothing more."

In that respect I may say this, and I say it frankly but kindly. I was disappointed in the vote at the resolution stage of our friends to the right and to the left of us, and I am highly pleased to know that on the vote that may take place shortly they are going to vote with us on our amendment and also against the second reading of the bill. I plead with them to stay with us in opposing this measure down the line.

I say that for this reason. If this bill passes this house not merely with the support of the overpowering government majority but with the acquiescence of even one group on the opposition side of the house, that will support the government in saying to the farmers, "This is all you get." I could recite the old saying that the good is the enemy of the best, but it would not be appropriate because there is nothing good about this legislation. The trouble with legislation of this kind being passed is that, in the government's mind at any rate, it blocks consideration of anything else. I therefore hope that, even if we have to have it by means of a government majority, there will be a strong opposition to this bill from this side of the house that will let the government know that so far as we are concerned this is not the end of dealing with the problem of achieving justice and fairness for the farmers of western Canada.

Mr. Speaker, there is before the house an amendment moved by my colleague the hon. member for Kindersley which, as I have indicated, has our full support. As my colleague the hon. member for Dauphin suggested earlier today, we still feel that the government might do well to let a free vote be taken on this amendment and give such members on the government side as wish to do so the opportunity to support that amendment as well.

This is one of those occasions, however, when I wish it were possible for us to move a different kind of amendment. I should like to have just a moment, Your Honour, to read a few sentences from May's thirteenth edition in order to indicate the kind of amendment that I think would have been even more appropriate than the amendment moved by my colleague the hon. member for Kindersley. I refer to page 394 of May's Parliamentary Practice, thirteenth edition, where I read:

> In more ancient times bills were treated with even greater ignominy. On the 23rd January, 1562/3, a bill was rejected and ordered to be torn; so, also, on the 17th March, 1620/21, Sir Edward Coke moved "to have the bill torn in the house;" and it is entered that the bill was accordingly "rejected and torn, without one negative." Even so late as the 3rd June, 1772, the Lords having amended a money clause in the Corn Bill, Governor Pownall moved that the bill be rejected, which motion being seconded, the Speaker said "that he would do his part of the business, and toss the bill over the table." The bill was rejected, and the Speaker, according to his promise, threw it over the table, "several members on both sides of the question kicking it as they went out."

Mr. Speaker, I wish it were possible to move that kind of an amendment to this bill. We would do our part in kicking it and we should be greatly pleased to see Your Honour do your part as well.

Mr. J. H. Blackmore (Lethbridge): Mr. Speaker, as the hon. member for Acadia (Mr. Quelch) pointed out yesterday, the revelations which were made to our group by reading the bill and by hearing the Minister

of Finance (Mr. Harris) declare on the floor of the house that the government would not refer this bill to the committee on agriculture and colonization changed our attitude. Those two revelations completely changed the attitude of the Social Credit group to this bill. Let me point out to my C.C.F. friends that it was not because of any "seeing the light" concerning the resolution. In that resolution there was no indication of either of those facts. Once we had these two facts we did not need the lead of the C.C.F. or anybody else to tell us the right thing to do in respect of this bill.

There are two or three other matters on which I think it is well to comment at this stage. We find that there are a great many members from Ontario, Quebec and the maritime provinces and even some from British Columbia who believe that this bill ought to be rejected because it is a good thing for the western farmers, they think. In other words, their general idea is that too much has been done by the rest of Canada for those farmers in the three prairie provinces. That is a regrettable attitude but I have heard various members express it. One man from British Columbia said in my presence, "I would just do anything to vote against this measure. If I could possibly do it and still support the government, I would".

Mr. Goode: I rise on a point of order, Mr. Speaker. I know the hon. member is sincere but he is placing an implication on all members from British Columbia when he makes a statement like that. I hope he will assure the house that I made no such statement.

Mr. Blackmore: I am glad to assure the house that the hon. member who has just spoken did not make the statement. I used that quotation merely as an illustration.

Mr. Fairey: Mr. Speaker, I rise on a question of privilege. I think a statement like that is a reflection on all members from British Columbia, as stated by the hon. member for Burnaby-Richmond (Mr. Goode). As the matter is now left, the hon. member for Burnaby-Richmond has repudiated the statement on his behalf. That narrows the field. We are now all under that implication. I do not propose to say that I did not say it—although I did not—because that would then leave it to my friend the hon. member for Vancouver South—

Mr. Nicholson: The hon. member for Vancouver-Burrard said it.

Mr. Fairey: I think the hon. member for Lethbridge should withdraw that statement.

Mr. Speaker: Order. In order to prevent hon. members from British Columbia from rising one after the other—and they are all implicated—perhaps the hon. member for Lethbridge could help us out and relieve the situation by modifying his remarks.

Mr. Blackmore: What I said, Mr. Speaker, is the exact truth. I think if they keep on, by elimination they will finally get to the man who said it. I am sure he was quite anxious to have his statement on record. However, I think it is well to let the matter go, being satisfied that these two men have been so disgusted with the attitude expressed by one British Columbia member that they have immediately repudiated it.

Mr. Philpott: On a point of privilege, Mr. Speaker; what I said to the hon. member for Lethbridge was that I hoped he would finish his speech before six o'clock so we would have time to vote and get out of here.

Mr. Blackmore: The hon. member has not said he was or was not the man.

Mr. Philpott: On a point of privilege, I can assure you that I was not the man.

Mr. Speaker: I am at a great disadvantage in that I did not hear the original statement now being complained about. At the moment I was discussing a point of procedure with my assistant, the deputy chairman of committees, who is also from British Columbia but who I am sure has not heard the original statement. Would the hon. gentleman be kind enough to repeat the statement he made a moment ago which produced some inconvenience to certain hon. members?

Mr. Blackmore: I was merely indicating the reaction which a person like myself, who likes to move around amongst the members and keep his ears open, gets from the attitude of members who are not from the three prairie provinces in respect of a measure which is designed to help the three prairie provinces. What I said was that one British Columbia member said in my hearing—I do not think he said it to me—that he would like to vote against this measure if he could only find some way whereby he could do so without voting against the government.

Mr. Speaker: I think in fairness to hon. members, if he is going to say that, he should name the hon. member to whom he is alluding.

Mr. Blackmore: My reaction to that, Mr. Speaker, would be very much like my reaction to a tattletale. I do not feel I should name the hon. member. Perhaps I could go on.

Mr. Fairey: May I rise on a point of privilege again? That is why I asked the hon.

member to withdraw the remark so he would not name the hon. member and thereby label himself as a tattletale.

Mr. Quelch: I understand the hon. member to whom reference is made gave a press statement to that effect. It is quite public, so I do not think there is any need not to mention his name.

Mr. Howe (Port Arthur): What was his name?

Mr. Quelch: The hon. member for Vancouver-Burrard (Mr. MacDougall).

Mr. Blackmore: I used that merely as an illustration of the idea that prevails amongst some hon. members. Yesterday I said "scandalous" when reference was made to what the Minister of Trade and Commerce said concerning those who were so well off, giving the impression that most farmers in the west were in the happy position of that particular man. I say that was pernicious because it would give so many people in the house who come from other provinces an altogether false idea concerning conditions on the prairie provinces.

I hope I have made my point. May I say to the members who come from provinces other than the three prairie provinces that if you could get together a complete account of all the grain which has been produced in those three prairie provinces since 1890 and sold for good, solid foreign exchange, you would be astounded at the service those provinces had rendered to the Dominion of Canada. They provide foreign exchange because that grain can always be sold for foreign exchange, whether or not it does the farmer who produced the wheat any good.

Now, I have not the figures compiled to indicate how great is the debt that Canada owes to her wheat growers in the three prairie provinces, merely on the matter of foreign exchange alone. I am sure everybody in this house is deeply perturbed by reason of the fact we are so dangerously indebted to the United States. We have an adverse trade balance every single year. This is simply putting our necks in a noose which will ultimately strangle us to death. This is enough to show you how serious it is to have production which results in foreign exchange for the advantage of this nation.

Well, that is just the first point. I would urge hon. members to forget entirely all this nonsense which has been given to them concerning the rank and file of farmers in those three prairie provinces living in luxury, riding off to California, Florida and that sort of thing. I have grown up and lived all my life amongst those farmers. They have never been able to go off to California or Florida or anywhere else. They have to have their noses right to the grindstone, just as my poor father had his. He farmed all the time I knew him, and he was injured by the rise and fall of prices as a result of trading on the open market just as tens of thousands of others were. We were very glad, therefore, when the wheat board was established.

There is another matter with which I hope hon. members can impress themselves. In the year 1946—no doubt the Minister of Trade and Commerce exercised a very powerful influence—this government permitted the steel companies to advance the price of steel by $5 per ton. That act looked rather simple at the time. I do not know whether the minister foresaw what a potentially catastrophic thing that was, but he must have agreed to it. What happened? Everyone whose memory goes back to that time will recall that the steel workers of Canada in the various mills struck for their share of that $5 per ton. They continued that strike for 82 days, and the industrial relations committee of this house heard discussions on that strike for many of those days. The result of the whole thing was that by the time we were finished with that experience the prices of practically everything in the Dominion of Canada had been forced upward.

Was this inflation? No, it was not inflation. Inflation is a rise in price which results from a scarcity of goods. Anyone who thinks he can challenge that statement can get up on the floor and do it right now. Was there any shortage of steel which caused the increase in price? Not a bit of it. Was there any shortage of labour which caused the rise in the wages? Not a bit of it. The result of that increase by $5 per ton in the price of steel and the strike of the men following it was an over-all increase in prices. But it had nothing at all to do with inflation, one way or another.

It being six o'clock, Mr. Speaker, I would ask you to let me discontinue my remarks until after the recess.

Mr. Speaker: The hon. member for Lethbridge, having laid down the general foundation for his speech, perhaps might continue his remarks at eight o'clock on the principle of this bill. Do I understand the hon. member for Lethbridge has concluded his remarks?

Mr. Blackmore: No, not by any means, Mr. Speaker.

At six o'clock the house took recess.

AFTER RECESS

The house resumed at eight o'clock.

PRIVILEGE

MR. MACDOUGALL—CLARIFICATION OF REFERENCE TO MEMBER FROM BRITISH COLUMBIA

Mr. J. L. MacDougall (Vancouver-Burrard): Mr. Speaker, I rise on a question of personal privilege. This afternoon a verbal hassle occurred with respect to an unnamed hon. member from British Columbia who was opposed to the wheat legislation. I know that the hon. members for Lethbridge (Mr. Blackmore), Mackenzie (Mr. Nicholson) and Acadia (Mr. Quelch) certainly wanted to be perfectly fair in connection with this matter, and I want at this time to be perfectly fair, too.

I might say, Mr. Speaker, there is no secrecy attached to this matter at all. Although some confusion exists, the whole thing is in *Hansard*. I made the statement referred to on the 16th day of January, at page 143. I then quoted *Votes and Proceedings* for January 12, as follows:

> That it is expedient to introduce a measure for the payment of carrying costs of temporary wheat reserves owned by the Canadian wheat board in respect of board stocks of wheat in excess of one hundred and seventy-eight million bushels at the commencement of a crop year, such payment to be made to the board by the Minister of Finance out of the consolidated revenue fund.

As you know, Mr. Speaker, there are two bills dealing with wheat. From what I have just quoted it is most obvious that I was referring specifically to Bill No. 83 and not to Bill No. 82 which is now before the house. As far as Bill No. 82 is concerned I wish to assure you, sir, that I am 100 per cent in favour of the bill.

Mr. Howe (Port Arthur): Apologize.

GRAIN

PROVISION FOR GUARANTEE OF BANK LOANS TO PRODUCERS IN PRAIRIE PROVINCES, ETC.

The house resumed consideration of the motion of Mr. Howe (Port Arthur) for the second reading of Bill No. 82, to provide for short-term credit to grain producers in the prairie provinces to meet temporary financial difficulties arising from inability to deliver all their grain, and the amendment thereto of Mr. Johnson (Kindersley).

Mr. Blackmore: Mr. Speaker, I am glad that the hon. member for Vancouver-Burrard (Mr. MacDougall) was here in order to put his case before the house with adequate clarity. His case merely strengthens the position I was taking. This bill which we are now discussing can hardly be of any value whatsoever to the farmers in western Canada as has been abundantly shown in the debate up to the present time.

The other bill which is yet coming along, which provides for the payment by the government of a certain amount of storage on grain which has accumulated in the country by reason of the fact that the government is unable to dispose of that grain abroad, will be of real value to everyone who has grain in storage. That is the bill which the hon. member for Vancouver-Burrard should support, because it is one which will help the farmer, but it is the one which he opposes. The bill which will burden the farmer with a great deal of debt and which will destroy the farmer is the bill he is willing to see go through.

Before the recess I was indicating that I thought there are a great many people in the country, altogether too many in the provinces of Ontario, British Columbia and the maritimes, who fail to understand the true situation in respect of the wheat growers of the three prairie provinces, and who are therefore quite wrongly led with respect to the prosperity which is supposed to exist on the prairies.

I was pointing out that the wheat growers of the three prairie provinces have done a great service to the nation through the years, from 1890 on, for example, by raising grain which has invariably been sold for exceedingly valuable foreign exchange, which has helped Canada to keep herself above water in the payment of her international commitments.

I was also pointing out just before six o'clock that a very serious blunder was made by the government in Ottawa in granting the steel producers an increase of $5 a ton in the price of steel in April, 1946. This was done by the government including the present Minister of Trade and Commerce and the present Minister of Agriculture. They cannot possibly escape the responsibility for having done this. In doing this they were backed by their party. I heard not a member dissenting. The responsibility is shared by a large percentage of the people in the Progressive Conservative party, these people representing all the provinces of Canada. There is no way in the world whereby the provinces I referred to, Ontario, British Columbia and the maritimes, can escape the indirect responsibility for that $5 advance in the price of steel.

That advance in the price of steel has put the farmers in the three prairie provinces at a disadvantage the seriousness of which

no one in the country begins to realize. In large measure it has meant disaster to the prairie farmers. The only way they could have avoided disaster would have been to dispose of their grain at good prices, which they have not been able to do. I propose to go into that matter just a little more fully in the time that remains at my disposal.

Let us not forget, first of all, that when the advance in the price of steel of $5 a ton was made the steel workers demanded and got their share of the $5. They went on strike for 82 days. At the end of the strike they won their point, which gave them an increase in wages, and this resulted in an increase in wages for virtually every section of the labouring class in the Dominion of Canada, thereby forcing up the cost of Canada's production.

This had nothing whatsoever to do with inflation. It was a forcing up of prices, a price manipulation. At the same time the increase in the price of steel forced up the price of every commodity into the processing of which the matter of steel entered, which includes, of course, almost every industry in Canada.

If we can only get that clearly in our minds we will begin to see one of the great causes of the trouble which today exists among farmers in the three prairie provinces. So many people nowadays are saying that this rise in price which we have sustained is inflation. Every hon. member in this house should know, and if he does not know it is a reflection on him, that the rise in price had nothing to do with inflation. It had nothing to do with the amount of money in circulation, and it had nothing to do with the shortage of goods. There were plenty of goods whenever any one of the increases in price occurred, and it is impossible for anyone to show there was not. Consequently there was no justification whatsoever for the increase in price except that the increase in the cost of production had come about through manipulation and not through a shortage of goods.

As I said a moment ago, this increase in the price of steel is at the bottom of the major cause of the difficulty confronting the farmers at the present time, which is a difficulty I feel everyone in Canada would be glad to help the western farmers out of if the truth were known.

Let us see what has been the result of these increases in the price of steel. The *Financial Post* in a survey shows that 25 corporations which do business with farmers increased their average profit after taxes by 402 per cent between 1946 and 1954. This means in effect that the government by permitting the $5 increase opened a back gate and turned into the Queen's garden a whole herd of hogs that had no respect at all for the welfare of the people; they just grabbed and gouged every single cent they possibly could and that herd of hogs is practically entirely made up of these 25 corporations. Those corporations were getting plenty of money with which to carry on during the war and they made good profits; but after the war, through this manipulation of the $5 a ton increase, they were simply allowed to go freely at will into the pockets of the Canadian consumers to rob them of every cent of which it was within their power to rob them.

The figures I have given indicate in some measure the result of that situation. These figures which I have given hon. members will be able to verify by consulting page 7 of the submission to the government of Canada by the interprovincial farm union council, which was presented on February 16, 1956. Remember that this document is quoting a survey conducted by the *Financial Post*.

Let me repeat once more that that is the cause of the difficulty which is ruining the farmers in the three prairie provinces. In the main those farmers rely upon grain, especially wheat, as the means whereby they can pay the excessive costs which have been brought about by the profits these companies have taken. Anything which affects the price or the ultimate value which the farmer derives from wheat will put him under an unbearable pressure financially.

We can consider this matter of purchasing power in another way, and I am going to cite some other figures for hon. members to contemplate to indicate the amount of money taken by these corporations from the people of Alberta.

Mr. Howe (Port Arthur): On a point of order, we are listening to by far the most intelligent speech we have had from the opposition during this debate, but I suggest that we are wandering away from the subject matter of the amendment.

Mr. Blackmore: I was not able to hear all that the minister said, but I draw his attention to the fact that this amendment is calling for the reference of this bill to the committee on agriculture and colonization, where all sorts of abominations like those which I am revealing will be brought to the fore and the people will be educated. Apparently the minister does not want that to happen.

Mr. Howe (Port Arthur): I like your speech.

Mr. Blackmore: It will not do the minister any good after all the facts are out, not by

any means. How could a person be following lines more relevant to the amendment before the house? This is the kind of thing which shows why the western farmers ought to have advances instead of loans, ought to be paid storage, not only for grain in the elevators but for grain on the farms. Those are the two great things the western farmers are needing and are asking for today. I think the minister is out of order on the matter.

Mr. Speaker: I know how strongly the hon. member feels as to the correctness of the points he is bringing forward. I have been following him closely ever since he commenced to speak before six o'clock and continuing from eight o'clock. As I said at six o'clock, having laid the general foundation for his speech I was hoping he would bring his remarks more closely to the principle of the bill.

It is quite true that if one wanted to be relevant to the principle of a bill regarding short-term credit to grain producers, and yet attempt to show the effect of the economic situation on farmers over a certain period of years, he could make a speech which would be far afield as far as the subject matter of this bill is concerned. Earlier I stopped hon. members on the grounds of irrelevancy who certainly had not wandered away quite as far as the hon. member has.

Cash advances to farmers were the subject of an amendment moved to the address in reply to the speech from the throne, which amendment was fully debated and voted upon by the house. It is difficult in criticizing this bill not to indicate a preference for cash advances, but if in trying to make that point the hon. member refers to the ill effects of an increase in the price of steel; if he refers to that particular factor and others in the same category during the greater part of his speech and refers only indirectly to the measure now before us, then I do not think it makes for orderly debate.

Mr. Blackmore: Mr. Speaker, I am not sure in what position I am now standing. Do I conclude my speech or may I continue?

Mr. Speaker: It is very simple. I am asking the hon. member to speak to the bill. I am trying to indicate to him that the way in which he has been speaking is not as relevant as I believe the rules would want him to be.

Mr. Blackmore: I bow to your ruling. Maybe I am not able to detect relevancy, but if it were proposed that advances should be given to farmers the first thing I would want to know would be how badly off are they. That is just exactly what the minister has been trying to argue all the way through. He and the Minister of Agriculture have been arguing along those lines. It is as simple as A, B, C.

Then the next thing I would want to know would be what caused them to be that way, how it was that they were so badly off. Was it because they have not been good managers? Was it because of any fault of their own? The figures I intend to advance show that it was not any cause of their own making.

Mr. Howe (Port Arthur): The price of steel.

Mr. Blackmore: The price of steel enters into their very existence.

Some hon. Members: Oh, oh.

Mr. Blackmore: This is no laughing matter. Every farmer who buys a combine or any machine whatsoever has his cost of production increased by the increase in the price of steel. Everything which causes his cost of production to rise creates an additional cost-price squeeze. There is no doubt about that. Under the circumstances I would say that it would be absolutely impossible to discuss this amendment with greater relevancy than I am doing at the present time. That is perhaps contrary to the opinion of Mr. Speaker and I bow to your ruling, but I am quite sure that is the way the majority of farmers see it.

I was going to give two sets of figures which are very brief but which are most enlightening. If after I have given these figures Mr. Speaker feels that I should discontinue this discussion, I shall gladly do so. I was going to give figures to indicate what had been taken away from the farmers and people of Alberta, Saskatchewan and Manitoba during the period 1940-45, when we were under price controls and when apparently the companies were getting along all right, in contrast to what was taken away during the period 1946-54, when the hogs were loose and the herd was running in every direction.

During the period 1940-45 those companies took out of the hands of the consumers in Alberta $320,041,005, but during the period 1946-54 they took from the pockets of the people of Alberta $2,877,463,723. If you want to find out why the farmers in Alberta, who had to absorb the greatest proportion of the impact of that situation, are in difficulty, it is so plain that even the minister should see it.

In Saskatchewan during the period 1940-45 they took away from the people $392,639,284, whereas in the period 1946-54 they took away $2,723,168,516. It is said by the Minister of Agriculture and the Minister of Trade and Commerce that the farmers of Saskatchewan

are not in bad condition. One would have to be blind not to see the impact of that situation.

In Manitoba during the period 1940-45 these companies took out of the pockets of the people $293,639,220, whereas in the period 1946-54 they took out $2,220,455,357. Do you wonder that the farming people in those provinces are in difficult circumstances? What would you do about it?

Before I go any further, let me point out once again that the responsibility for the incursion of the hogs into the Queen's garden lies on the Minister of Trade and Commerce and the people with him in the cabinet who made the decision to permit that $5 advance in steel. It lies on the people who supported that motion, who came very largely from Ontario, Quebec, the maritime provinces and British Columbia. There is no way of escaping that responsibility. The responsibility for this difficulty in which we find our prairie farmers lies on the government that is now in power.

The question now is, what are we going to do about it? I am not going to prescribe now what has to be done about it but, whenever it is suggested that the western farmers need advances or that they need payment for storage on farms or in elevators, I do urge upon every hon. member of this house from every province outside the prairies to bear these facts strictly in mind.

Mr. Daniel McIvor (Fort William): Mr. Speaker, there are just three things I should like to say. I was interested today when the hon. member for Saskatoon spoke. He said something about this bill being a joke. Coming from the same part of the old land, I have a warm spot in my heart for one who was an old neighbour of mine. But I would say it would be no joke if any hon. member in the opposition could stand up now and say something new—

Mr. Cardiff: I could do so but I am not going to.

Mr. McIvor: —and, second, if he could stand up and make a speech without repeating something sensible that somebody said before. The right hon. minister said something about "blather". I looked up the dictionary to see what "blather" was. It is talking nonsense. If any hon. member can stand up in this chamber and take the time of this house and the taxpayers' money without repeating something, he is talking sense. But if he has to repeat, I say he is just plain blathering.

Mr. Claude Ellis (Regina City): If it had not been my intention to say a few words at this stage, Mr. Speaker, I should have decided to do so after the last few remarks that were made. Some reference was made to the fact that we are here at the taxpayers' expense to conduct the affairs of parliament. I suggest that one need only look at the contributions —and I use that word quite loosely—of government supporters who have spoken on this measure. Tonight's Ottawa *Journal* has some reference to the hon. member for Swift Current-Maple Creek (Mr. Studer) as having the last word, which outlines the only contribution he has had to make on this matter which affects so many of his constituents and which has a great effect on the economy of Canada as a whole. We expect—

Mr. Studer: Mr. Speaker—

Mr. Speaker: If the hon. member wishes to correct some of the remarks made by the hon. member for Regina City affecting him, he may do so if the member who now has the floor is willing to yield. Apparently he is not; therefore the hon. member for Swift Current-Maple Creek may speak at the end of the hon. member's speech.

Mr. Studer: Could I ask the hon. member a question?

Mr. Ellis: I suggest that after I have concluded my remarks, the hon. member for Swift Current-Maple Creek can take all the time he requires to answer what I have to say. I wish he had the courage to stand up and make a speech instead of making interjections all the time.

Mr. Speaker: Order. I think perhaps one should not generate more heat than one can control. When the hon. member said, referring to the hon. member for Swift Current-Maple Creek, that he wished he had the courage to stand up in this house and make a speech, I think he went beyond what he really wanted to say. I think he should have modified that remark or replaced it by another.

Mr. Ellis: Mr. Speaker, I will put it this way, that I think we all enjoy interjections made during the course of a debate, but while the interjections are enjoyable at the time, there would be more point to them if the individual concerned were prepared to get up and give his views on this matter. The hon. member has been strangely silent. The amazing thing is that I found on reading the last edition of the Swift Current *Sun* that there is an article submitted by the hon. member—

Mr. Speaker: Order. The hon. member is now explaining why he made the statement. I would ask him to withdraw the statement that the hon. member for Swift Current-Maple Creek has not the courage to stand up and make a speech.

Mr. Ellis: I will withdraw that, certainly.

An hon. Member: Magnanimous.

Mr. Ellis: The hon. member, while not having made a speech in the house on this matter, has gone into print in his own constituency, and he has referred to this bill as being unpalatable. We have heard some reference to an editorial in the Winnipeg *Free Press* to the effect that we have a western Tucker and an eastern Tucker, a member with one voice in the west and another voice in the east. We have an indication of the same sort of thing in this instance. Here is a member who in writing a news letter to his constituents will refer to this legislation as unpalatable, yet he has not had a word to say about it in this house. All he has had to contribute to this debate is a lot of asinine interjections. It is quite apparent that if the word "socialist" were removed from his vocabulary, it would be cut in half.

Mr. Studer: Regina windbag.

Mr. Speaker: All these interjections are very entertaining, but the one that has just been made by the hon. member for Swift Current-Maple Creek is one that should not have been made. In referring to an hon. member, he should do so by calling him "the hon. member", and no other expression should be used. Therefore I shall ask him to withdraw the one he has just applied to the hon. member.

Mr. Studer: I would be glad to withdraw that, and just suggest that if he were on a farm you would just call him a windmill.

Mr. Speaker: If I may ask the hon. member to be just as serious as I am trying to be for one moment, I would ask him to withdraw the first and second expressions without any condition whatsoever.

Mr. Studer: Could I offer a substitute again, Mr. Speaker?

Mr. Speaker: No.

Mr. Studer: I will withdraw.

Mr. Ellis: I was merely suggesting that the hon. member who has been making the interjections has been the only member now who has, technically speaking, not taken part in this debate. I say "technically speaking" because there were two efforts by private members from Saskatchewan the other day, and perhaps while I am on this point I should make some reference to both of them.

The hon. member for Meadow Lake (Mr. Harrison) rose in his seat the other day and spoke for about a minute and a half. On reading his speech in *Hansard* I find it very difficult to understand why he rose, except that I recall that on the previous day there had been some reference to the fact that some of the members from the province of Saskatchewan had not spoken. I presume he thought that, having risen in his place and made a few remarks, none of which in any way had anything to do with the matter before the house, he would be absolved of any further charges that he had not participated in the debate. I presume he is hoping at the same time that the people back home will not have any knowledge of the extent of his contribution.

Then the hon. member for Qu'Appelle (Mr. Mang) took part in the debate the other day, and I wish to refer briefly to what he said because apparently some of the behaviour and mannerisms of the Minister of Trade and Commerce are spilling over into some of his followers. I noted that the hon. member for Qu'Appelle had this to say, as found at page 1169 of *Hansard* of February 14:

> I am getting just a little bit tired of all this finagling around all over the field of general farm policies when this has nothing to do with the question of a general farm policy.

Inasmuch as the hon. member represents a rural constituency, one would imagine that under these circumstances he would welcome a discussion of farm policies and would be only too eager to participate, give us the benefit of his years of experience and give some direction to the government. However, that was the extent of that contribution. I suggest, Mr. Speaker, that in this debate the supporters of the legislation have a duty to perform. It is their job to put forth cogent reasons why the legislation should be passed. It is the duty of those who are opposed to the legislation to give sound reasons why it should not be approved by the house.

I suggest that if you go through the records of this debate you will look in vain for any reasonable argument put forward by supporters of the bill as to why we should accept the bank loan legislation now before the house.

Mr. Mang: Mr. Speaker, may I ask a question? Did you read the speech in its entirety?

Mr. Ellis: I will do that. I will be glad to.

Mr. Speaker: May I tell the hon. member for Qu'Appelle that I did not. He asked me if I had read the debate in its entirety. I did not.

Mr. Mang: I was asking the hon. member.

Mr. Ellis: The hon. member for Qu'Appelle has asked me to read the speech in its entirety. It would not take me very long to do that. As a matter of fact this is what he had to say, and I think it is particularly

interesting in the light of an event which occurred in this house a week ago. As found at page 1168 of *Hansard* of February 14 he said:

> I do not see how anyone could hold up the passage of this temporary measure with any justification whatsoever. Indeed, all of this discussion has merely postponed the next measure to come before us which will probably be Bill No. 83 which does attempt to and will provide a part of a long term policy.

Then he continued in that vein. On the next page he said:

> All of the discussion that is going on is simply holding up our proceedings, and that in the long run will hold up the final payment which will be made subsequent to the passing of Bill No. 83. Do not let anyone say that Bill No. 82 is deliberately placed where it is before Bill No. 83 which deals with storage and interest charged. That was the businesslike way of doing it, that was the natural order of precedence. Let no one be unbusinesslike enough to get up and say that that is not so.

Well, there are a good many of us over here who are quite willing to say that is not so. There was no particular reason why the government should not have placed the resolution preceding Bill No. 83 before that preceding Bill No. 82. That was a government decision. There is no reason whatsoever why the government could not have placed the one before the other. They chose to place this most controversial piece of legislation ahead of the other item on the order paper.

Apparently the hon. member was not in his seat or was not aware of what went on at the time, but I made reference on a previous occasion to the fact that in committee we witnessed a very interesting spectacle when the hon. member for Rosetown-Biggar (Mr. Coldwell) moved that we rise and report progress. One of my colleagues reminds me that the hon. member for Qu'Appelle was the only private Liberal member from Saskatchewan who was in the house at the time. Therefore he will recall the incident.

Mr. Speaker: Order. I really do not see what this has to do with the principle of the bill. The hon. member recognizes that the proceeding to which he is now referring took place several days ago. If he wishes to take stock of what that division meant, then I would point out that there have been other divisions since and we would begin to have a discussion of the situations as they arose with respect to each of these divisions. We would get away from the principle of the bill altogether.

Mr. Ellis: Mr. Speaker, I appreciate your comments, but I was making the remarks I did in direct reply to the remarks made by the hon. member for Qu'Appelle. He has placed statements on record purporting to indicate that we are holding up the passage of Bill No. 83.

Some hon. Members: Hear, hear.

Mr. Ellis: That is the statement the hon. member has made, as appears from what I have quoted.

An hon. Member: Call it now.

Mr. Ellis: In reply to that I am simply reminding the hon. member that the government had the decision as to which item would be called first.

Mr. Speaker: As I heard the hon. member, he has already made that point. He has already said that the government chose to place Bill No. 82 before Bill No. 83, and we are now on Bill No. 82.

Mr. Ellis: I think perhaps you have made my point quite clear, Mr. Speaker, in your last remarks, and I am prepared to pass on to the next matter. I suggest that in reading the speech of the hon. member for Qu'Appelle hon. members will fail to see any reason advanced why the hon. member is supporting this legislation at the present time and why he is opposing the amendment. When hon. members take part in the debate I think they have a responsibility to put forward reasons why they are taking the stand which they are taking, and I suggest that the hon. member for Qu'Appelle added nothing to the debate.

I make this statement reluctantly but in reply to certain comments made by the hon. member for Fort William (Mr. McIvor), who made some derogatory remarks about members who have taken part in the debate. I think one must examine the records and determine just who have made the most constructive speeches in the debate and which side has put forward the most cogent arguments, the supporters of the legislation or the opponents of the legislation.

An hon. Member: A temporary measure.

Mr. Ellis: The matter that brought me to my feet in the first instance was the speech made the other day by the hon. member for Rosthern (Mr. Tucker). He addressed the house the other day and in this particular case he was the hon. member for Rosthern from the east. I checked his speech very thoroughly, and I find that the only thing which might pass as a reason why we should support the legislation is the oft repeated and oft refuted argument that the government, somehow or other, is complying with the wishes of organized agriculture in the west.

He went further than that. He went so far as to suggest that all the farm delegates

who met the government last fall were unanimous in their support for bank loans. He even went so far as to suggest that the government of Saskatchewan had approved the principle of bank loans.

Mr. Tucker: Mr. Speaker, I rise on a question of privilege. I suppose nobody should pay any attention to the ravings of the hon. gentleman opposite, but after all, when he deliberately misrepresents what I said, I suggest that I should draw that fact to the attention of the house. I did not say that they passed the bank loans. I said what the government did was consistent with what they asked for.

Some hon. Members: Oh, oh.

Mr. Speaker: In correcting what the hon. member has said and in referring to the hon. member's speech, the hon. member for Rosthern (Mr. Tucker) should not indicate that the hon. member for Regina City (Mr. Ellis) is deliberately misrepresenting what he said.

Some hon. Members: Withdraw.

Mr. Speaker: The expression "deliberately" should be withdrawn.

Mr. Tucker: The reason I said it was that I made it so plain and repeated it so often—

Mr. Nicholson: Withdraw.

Mr. Tucker: —that I think a school teacher could not misunderstand what I said.

Mr. Speaker: Order. Even though the hon. member has suggested he made the matter plain, he has also made it plain that he used the word "deliberately" which should be removed. That word should be withdrawn. I am sure the hon. member will accede to my request.

Mr. Nicholson: Withdraw.

Mr. Tucker: I withdraw, Mr. Speaker. I would say that he blindly and stupidly said it.

Mr. Ellis: Mr. Speaker, I must assure you that I am not particularly concerned about the type of remarks which we have just heard from the hon. member for Rosthern. I think of some of the comments he made during his speech the other afternoon when he complained about the heckling by the opposition. As reported at page 1159 of *Hansard* he said this:

> I ask you to bear in mind, Mr. Speaker, when I was attempting to put this to the house the sort of opposition I got from the C.C.F. opposite. They interrupted deliberately and tried to prevent me from putting it before the house.

[Mr. Ellis.]

I suggest, Mr. Speaker that every hon. member has every opportunity for putting his case before this house. I think it ill becomes a member to complain because certain hon. members opposite are putting him right, keeping his train of thought on the right track and perhaps assisting him to stick to the pertinent points. As reported at page 1159 of *Hansard* he said this:

> I have now brought this submission, signed on behalf of the government of Saskatchewan, endorsing every word I said.

Those are the exact words of the hon. member for Rosthern. He came into this house and said, "What I have said has been endorsed by the government of Saskatchewan". That is the statement he made. I am quoting his own words.

Mr. Knowles: That will be the day.

Mr. Ellis: In the light of all that, I think we ought to set the record straight. The other day the hon. member was quite concerned about setting the record straight. In fairness I suggest that we ought to make it quite clear where the government of Saskatchewan stands on this question of bank loans. Hon. I. C. Nollet, minister of agriculture in the province of Saskatchewan, made this statement:

> I supported the wheat board payment proposal on behalf of the government of Saskatchewan as the fairest and most practical way to deal with the situation.
>
> Since the farmer has so far carried the entire load of storage and marketing costs and is now faced with lower prices, he should not be compelled to borrow money from a bank on grain in the bin which through no fault of his own he is unable to market. We feel that advance cash payments on farm-stored grain must become an established part of wheat board marketing, . . .
>
> This view has been endorsed by the Saskatchewan legislature and has been brought to the attention of the Right Hon. C. D. Howe on several occasions . . . I again brought this matter to the attention of the federal government at the conference.
>
> It was disappointing to find the federal government had already decided that regular lending institutions would be called upon to meet the immediate situation, rather than employing an advance payment plan.

Those are the exact words of the minister of agriculture in the province of Saskatchewan. Yet the other day the hon. member for Rosthern made a direct statement to the effect that the interpretation which he placed on the Saskatoon conference had been endorsed by the Saskatchewan government.

While we are on this point, Mr. Speaker, may I say this. I just wonder what organizations at the Saskatoon conference had wanted to take bank loans. I wonder whether the hon. member for Rosthern could inform hon. members of the house what organizations at that conference asked for bank loans. Was it the wheat pool? Was it the Saskatchewan

farmers' union? The hon. member for Rosthern is not able to name one Saskatchewan farm organization which at that conference came out for bank loans.

What happened was this. When the delegation came to Ottawa, in an effort to present a unanimous report they were a little bit vague as to the manner in which this policy was to be put into effect. But here is the interesting point. The other day the hon. member for Rosthern was reading into *Hansard* the resolution passed at the Saskatoon conference and, as appears at page 1158 of *Hansard*, he read into the record the following:

> While the principle of cash advances on farm-stored grain was unanimously endorsed by the organizations present at the conference various proposals were offered on the mechanics of making these advances.

Then the hon. member went on to quote four alternative methods of putting the scheme into effect, one of which was that of bank loans. The hon. member selected the proposal which suited his convenience, the one of which he approves and of which the government approves, namely that of bank loans; and he says because the conference were not specific they obviously meant bank loans. But bank loans were only one of four proposals put forward. Then by the same token he argues that because they did not say cash advances on farm-stored grain paid by the wheat board, they are therefore opposed to cash advances paid by the wheat board.

It seems to me, Mr. Speaker, that that is entirely a matter of the interpretation of each individual person who reads these resolutions. However, I draw to the attention of the house the fact that the hon. member chose the one alternative which suited his purpose, the one alternative on which this government had decided. Because the delegation made a mistake, in an effort to present a unanimous front—because they made the mistake of not being too specific—they fell into the error of having a wrong interpretation placed on their recommendations by the government and by the hon. member for Rosthern.

If it is logical to say that the delegation asked for bank loans, I suggest that it is just as logical to say that they asked for cash advances paid by the wheat board. The very fact that they were not too specific can in no way be used as an argument in favour of the legislation now before this house. I think that is a matter that is quite serious. The other day the hon. member for Rosthern, several times—and I believe the hon. member for Winnipeg North Centre (Mr. Knowles) got to his feet on the occasion on a point of order—as reported at page 1160 of *Hansard* said:

> . . . they are deliberately misrepresenting the record.

At that time, Mr. Speaker, I was not too greatly worried because I think the people back home will be able to judge the hon. member and his interpretation of this particular matter. However, I want to suggest this. The other day the hon. member was complaining because of a little bit of heckling from this side of the house. I suggest to him that the heckling he got in this house was not nearly as severe as that which he will get back home if he goes out and tries to sell the same sort of line to the people there.

When the hon. member first brought this excuse before this house for supporting this bank loan provision, I interjected a remark to the effect that "You will not sell that back home". I stand by that remark. I am quite satisfied that the hon. member for Rosthern is not going to be able to go back to a public meeting in the prairie provinces and try to read into the record the interpretation which he placed on those resolutions in this house.

Mr. Argue: He cannot even do that on television.

Mr. Ellis: Some reference has been made to television, and I suggest that the hon. member take exceptional care, because in making statements from the public platform one is not accorded the protection of a soundproof broadcasting booth in a television studio.

I have referred to the speeches made in this house by Liberal members from my own province. I have gone through them very carefully in an attempt to find out what reasons they are advancing for supporting the legislation before us. I have not found a single reason put forward. I am wondering why they are supporting it if it is not because they are toeing the party line.

Some reference has been made to the leader of the Liberal party in Alberta who appeared on "Press Conference" last night. He stated in no uncertain terms that Liberal fortunes were not too good at the moment in the west in view of the agriculture policy being put forward by this government. He went on to say some glowing things about his own province, but when the reporters asked of him how he thought the Liberal party in western Canada was faring in the light of the agriculture policy being put forth by the government, he hesitated somewhat and then began to damn it with faint praise.

I referred earlier to the attitude of the leader of the Liberal party in Saskatchewan.

Initially he had the same reaction as hon. members of the C.C.F. group, that the legislation was completely inadequate and was not going to do the job which we felt had to be done.

We have an amendment before the house which, if it passes, will send this bill to the standing committee on agriculture and colonization. I am at a loss to understand why the government will not accept this amendment. We recall that the other night the Minister of Trade and Commerce issued a threat —perhaps on reconsideration I could properly describe it as a bluff—that if we were not good boys he was going to put off this legislation until June. If that is his attitude, I am curious as to why the Liberals do not vote for this amendment and send it to the committee. Then this bill would not come before the house for some time. If the minister is interested in putting off this matter we have opened the door for him. All he and his Liberal followers have to do is vote for the C.C.F. amendment to refer this matter to the committee. After the committee has discussed it and after the various farm organizations have had an opportunity to make their representations, the matter can be brought back before the house.

I do not believe anyone need feel too much concern over the fact that this matter is being discussed. It is being discussed thoroughly because the government has not accepted this amendment. When we find hon. members reading resolutions which are quite clear to all who wish to read them properly, and interpreting them in such a fashion as to completely defeat not only the intent but the spirit of those resolutions, then I think those people have a right to clarify their position. Some other members have mentioned that if we were to refer this bill to a committee it would enable the farmers in western Canada to make their representations. They would then be in a position to let the government supporters know how they feel on these matters.

By the way, Mr. Speaker, I hope that perhaps the Liberal members from Saskatchewan have a little clearer understanding of the problems out west since their meeting with the farm union delegation. I trust that they paid strict attention to the representations made, and I hope they will have had some effect on the way those members are going to vote on this particular measure.

We have had arguments advanced as to why we should support the legislation. We have had arguments against the legislation. But I suggest, looking at it from an objective point of view, that if hon. members were to go back to the record of this debate and draw up a balance sheet of the arguments in favour of and against this legislation there would be no question as to where the bulk of the evidence would lie.

We have had speeches by the Minister of Trade and Commerce, the Minister of Agriculture and private members supporting the government, but we have not had any discussion about the impact this legislation will have on the prairies. The hon. member for Humboldt-Melfort (Mr. Bryson) yesterday put before this house certain figures to indicate the effect this legislation would have on the small farmers on the prairies. He referred specifically to farmers with a quarter section, a half section and three quarters of a section, and indicated the extent to which those people could obtain loans.

We have had no discussion from government supporters. They have not considered the implication of the legislation. They have made up their minds it is good for the people out west and they are going to force it on us whether or not we like it. In my judgment that is the best reason why this house should vote for the amendment to refer this bill to the committee on agriculture and colonization, where it belongs.

Mr. B. R. Leboe (Cariboo): Mr. Speaker, a long silence in connection with this measure does not indicate by any means that I am not interested in what is before the house. I think it would be fair to say that this condition we are trying to remedy did not come upon us in the last few months. It has been with us now for three or four years. Farm income has been steadily dropping. We are now asked to put the rubber stamp of approval on a hurry-up measure that is already in operation. As I recall it, the minister said that practically all the loans that are going to be made under this legislation have been made. Since we have had this decline in farm income for some time, surely we should not have had to rush in with something in the middle of November and now come here as a group to put on the rubber stamp of approval.

I had one other thing in mind when I rose. Since there is a group of people from the farm union here, I should like to see someone on the government side stand up and explain why this bill should not go to the agriculture committee. It is all right for someone to get up in the house and flatly say, "No", but I think we should know why the government take that stand. I should like to have someone on the government side explain that to the house.

That is about all I have to say on this measure at this time. I may have something else to say when the bill goes to committee. I would urge the government to explain to us, Mr. Speaker, exactly why this bill could not go to the committee after second reading, and why they would not give an undertaking to have that done.

The house divided on the amendment (Mr. Johnson (Kindersley)) which was negatived on the following division:

Hon. George A. Drew (Leader of the Opposition): Mr. Speaker, in spite of the warning by the Minister of Trade and Commerce this has become a debate on second reading, which is the place where a debate should take place. The only thing that has degenerated during the course of this debate is the government side of the house, which apparently is suffering from a severe attack of silence which obviously has been imposed upon it by the Minister of Trade and Commerce.

An hon. Member: Untrue.

An hon. Member: Withdraw.

An hon. Member: Silly.

Mr. Drew: It is at least good to know that the hon. members supporting the government have voices, because we have not heard them in the debate. It would have been extremely helpful if some of those who have been making interjections, who have been speaking

so freely from their seats, had stood up and said some of the things they are saying in these buildings but outside of this chamber in regard to this bill.

An hon. Member: Fairy tales.

Mr. Drew: There is not an hon. member opposite who will suggest for one moment that there are not many hon. members on the other side who have expressed their disapproval of this bill but who will not express it here.

We have indicated quite clearly that we sought to have provision made that would in fact bring relief to the farmers of western Canada at a time when they need cash and need it desperately in the midst of all this immense accumulation of grain. The explanation we have had that this is only because of a succession of good crops is simply an evasion of the reality which must be faced and which this government has not faced.

When we were at the resolution stage I indicated that we hoped the government would still bring down legislation which, if they still insisted on bringing this in, would combine with it the provision for cash payments for farm-stored grain. We did not have the legislation before us. We had been told that the government was going to introduce legislation to provide for loans by the banks.

Of course the government acted in the way it ordinarily acts in relation to parliament. We had urged that we have a special session last fall to deal with this. That would have been the proper way to deal with this subject. Before this government told the banks to go ahead and make loans, no matter what their majority is, there should at least have been a sufficient measure of apparent respect for the independence of its members not to assume in advance that they would necessarily rubber-stamp what the government did. We should have been called together here to pass upon legislation of this kind. Had we been brought together, we could then have urged from the very beginning the kind of legislation we think would deal with this situation.

It will be recalled that when we indicated at the stage when the motion was before us that it was expedient to introduce legislation, we were pressing then for a broadening of the legislation, a widening of its application to embrace payments on farm-stored grain. We supported that resolution simply for the purpose of proceeding and permitting the government to consider what legislation it would bring in. It now brings in legislation that is similar in all respects to an act which over and over again they have told us was no good. This bill before us is almost identical with the bill introduced in 1951 under the title of the Prairie Grain Producers' Interim Financing Act, 1951. Over and over again we have been told by the government that this act was ineffective.

Surely we had reason to expect that we were not simply going to have a repetition of an ineffective act. Surely we had reason to expect that, with the experience they explained had resulted from that act, whatever legislation was brought in would overcome its objectionable features and be amended to make it more effective, even within the limited field with which they were prepared to deal. They have not done that. They have re-enacted the same act. There are certain provisions that differ, but those provisions that differ are even more onerous than the provisions in the original act.

Now we have before us the Prairie Grain Producers Interim Financing Act, 1956, with all the offensive provisions of that earlier act which made it so ineffective in bringing relief to the farmers at that time, and make it even more ineffective today because of a particular provision which I shall mention.

I thought we were dealing with the problem of providing loans. To read this you would think we were dealing with potential criminals. To read this you would think it was expected that everyone we were dealing with was likely to look for some way of getting out of his obligation. There are all sorts of provisions in this act that go far beyond any ordinary loaning provisions. As has already been pointed out, this act provides for imprisonment for debt, something that we thought had been removed from our laws generations ago. It is true that a similar provision was in the 1951 act, but we thought, from the government's own statements, they had learned how unsatisfactory that act was. Then look at the provision in section 9.

Mr. Speaker: Order. I was not aware that previous speakers had referred to sections but, if they have, they were not in order, any more than the Leader of the Opposition is now. I would quote citation 656 from Beauchesne's third edition:

> On the motion for the second reading, it is out of order to discuss the clauses of the bill.

Mr. Drew: I should not have quoted the number of the section. The bill provides for penalties of an extraordinarily severe nature. In the act—

Mr. Speaker: Perhaps I should have said that one should not discuss the sections either directly or indirectly.

Mr. Drew: But, Mr. Speaker, I submit that it is open to an hon. member to indicate

what the bill does. Otherwise we would have achieved the result the Minister of Trade and Commerce wants, that there be no debate.

Mr. Speaker: No; the Leader of the Opposition should not take that inference from the representations I have made to him. I do think I have made the point clear that, according to Beauchesne, citation 656:

> On the motion for the second reading, it is out of order to discuss the clauses of the bill.

It does not say whether they are referred to by number or whether they are referred to in the fashion in which the Leader of the Opposition has done.

Some hon. Members: Oh.

Mr. Speaker: Hon. members should know—and I think they do know—that the rules I have to administer are their own rules. I did not make them. If they do not want me to administer them in the way I think they should be, they have a recourse, and that is to appeal the rulings I make. That is the only way. Now, if they want to make further representations I would be very pleased to hear them, but I think they should let me perform my duties and not indicate in the way they have that I should not have interrupted an hon. member and reminded him of the rules.

Mr. Drew: Since there is a record made of the debate, and there seems to be some promise that the record may be more permanent—

Mr. Speaker: This reference now is a slight on me.

Some hon. Members: Oh.

Some hon. Members: No.

Mr. Speaker: It is; because I have just had the floor and made some references to the hon. member. In the hon. member's remarks he has just made, I think he is referring to an action that I took myself the other day and that was referred to in this house on Monday. I know the hon. member does not want to make any reflection on the Chair.

Mr. Drew: There was no reflection on the Chair. The reflection was on the Minister of Agriculture, as I made perfectly clear on the occasion when I first raised this subject.

Mr. Gardiner: I am at least able to keep within the rules of the house when I speak.

Mr. Drew: When I was making my remarks I was speaking about the onerous provisions of this act. Do I understand there is a ruling against dealing with the onerous provisions of this act?

Mr. Speaker: No, the Leader of the Opposition was dealing, as he said, with the provisions of this bill and he referred to the one dealing with imprisonment for debt. After having dealt with that one he proceeded to another which at that moment he identified by naming the number. He said "section 9". When I told him he was not to refer to sections he said, "I agree with the Speaker's ruling and will not do so." But he proceeded then not to refer to section 9 but to refer to what is contained in section 9. Without mentioning the number he went on to talk about the section.

Mr. Drew: Mr. Speaker, the record will indicate quite clearly what was said. I had spoken about the onerous provisions contained in the bill and the difficult features that are presented to those who are called upon to make loans in this way. One of the things the bill deals with is the quota book. In relation to our proposal, which has been made over and over again, a very simple method was available, and that was simply to make an ordinary payment on the quota book in relation to farm-stored grain. We have been told about the difficulty of using the quota book, but this bill provides for the use of the quota book. The bill provides that where there is a loan made under the extremely onerous provisions contained in the legislation, there then must be an entry to that effect in the quota book.

Mr. Howe (Port Arthur): I never heard of the quota book. What is that? What is this quota book my hon. friend speaks of?

Mr. Fleming: Read the bill.

Mr. Drew: If the Minister of Trade and Commerce has a question I will be very glad to hear it but I cannot hear him when he is mumbling.

Mr. Howe (Port Arthur): I have never heard of a quota book. Perhaps my hon. friend will tell me what that is.

Mr. Drew: Permit book.

Mr. Howe (Port Arthur): I just want to be accurate.

Some hon. Members: Oh, oh.

Mr. Fulton: We are making progress.

Mr. Drew: Mr. Speaker, we have made greater progress in the last minute than at any time during this debate. Any evidence of a desire on the part of the Minister of Trade and Commerce to be accurate is in itself worth all the discussion that has taken place. The Minister of Trade and Commerce

knows perfectly well what is meant by a quota book. It is described in the bill as a permit book. It is known to the farmers as a quota book and is known to the Minister of Trade and Commerce as such.

It is typical of the way in which this debate has been conducted that an attempt should be made to create any suggestion that the minister was not fully aware of what a quota book is. A quota book is well understood by the farmers of western Canada as meaning the permit book described in the bill. One of the results of that endorsement of the loan in the permit book is that the farmer cannot then deliver his grain to the elevator and therefore he not only has the problem of not being able to deliver his grain but he has an entry on his quota book or permit book, if the minister prefers that term, which prevents him carrying out the very transaction that is going to make it easier for him to repay the loan.

It is a typical achievement of the draftsmanship of this government that they should have a provision of that kind. This legislation is a little worse than the 1951 act, but not much. That of course was the act that they thought was such an unsatisfactory act. We have urged the government to reconsider this legislation. We have urged the government to provide in any event for cash payments, and it is perfectly clear that this bill, which deals with the permit book, to use the name the minister prefers, could easily have provided also for cash payments in relation to that same permit book.

It could have been done. It has not been done. The motion that was made by way of amendment on behalf of the Progressive Conservative party was ruled out of order. An amendment was then moved by a representative of the C.C.F. party and we supported that amendment.

Now we come to the bill itself. The cash advances that we have sought certainly are in no way contemplated or provided under the legislation now before us. On top of that is the attitude of the government in dealing with this whole matter. We have had no real explanation why the government was not prepared to consider this, except some suggestions of dealing with the permit book as we have argued. There was a typical example in the debate yesterday of the way in which this matter has been dealt with. The hon. member for Acadia (Mr. Quelch) was asking that the bill be referred to a committee and, as reported at page 1210 of *Hansard* for February 15, the hon. member for Acadia, following an extended discussion of the amendment calling for reference to a committee, said:

> I suggest that instead of having to get this secondhand, we should get it firsthand. Let us refer this bill—

He was in the middle of a sentence when the Minister of Finance (Mr. Harris) said:

> If my hon. friend would permit me to answer his question, the answer is no.

That, Mr. Speaker, is typical of the whole attitude of the government—no attempt to explain to the members of the house, no attempt to explain why our very reasonable proposals should not be carried out.

As has already been pointed out tonight, if the subject matter of the bill had been referred to a committee then the whole thing could have been examined with representatives of the various farm groups present and there would have been an opportunity to find out firsthand from the farmers themselves exactly what it was they wanted. In any event, we now find ourselves simply with the bill, a bill that the government described as unsatisfactory in its 1951 form and a bill which, now that we have it before us, is definitely more unsatisfactory today.

The arrogance of the government in relation to this has simply been a further expression of their contempt of parliament. They have been unwilling to listen to arguments. They have brought down a bill they themselves said was bad, and they have made it worse by the revisions that are in it. We shall certainly vote against the bill on second reading.

Mr. Speaker: The question is on the main motion.

Mr. A. M. Nicholson (Mackenzie): Mr. Speaker, I am on my feet. I have had some criticism, Mr. Speaker, for having folded up very quickly last week when the Minister of Trade and Commerce issued his ultimatum. The people who sent me to parliament did not expect that I would be cowardly enough to stop speaking just because the Minister of Trade and Commerce made such an irresponsible suggestion. I should like to explain, Mr. Speaker, that we had all spoken once and we were about ready to have the vote on the resolution before the minister made his suggestion, and I should like to assure the house that our decision to let the bill be brought before us was in no way determined by the threat that the Minister of Trade and Commerce made.

I feel, Mr. Speaker, that private members on the government side have been placed in an unfortunate position in having had two senior members of the cabinet present this important national problem in such a light

and trivial manner. The other night the hon. member for Waterloo South (Mr. White) mentioned that the position of the western wheat producer has not worsened to any great extent in the past year. Unfortunately that opinion is shared by a great many on the government side of the house.

The chief offenders in creating that impression are the Minister of Trade and Commerce, who is responsible for the statistical information for Canada, and the Minister of Agriculture, who also has a statistical branch or an economics branch so that he has information available. The resentment that is felt in the country as a result of the attitude of these two responsible ministers has been keener than anything I have experienced in many years.

For example, in the *Western Producer*, the February 2 issue, there is a heading " 'Making Monkeys out of us' Delegate criticizes Gardiner". That is strong language to appear in a paper like the *Western Producer*, coming from a meeting of the Canadian Federation of Agriculture which has been extremely friendly to this government. The article begins with these words:

"How long are we going to let Jimmy Gardiner make monkeys out of us," a delegate to the meeting of the Canadian Federation of Agriculture here shouted.

I think that is a question that should be answered.

Just before six o'clock there was some discussion with regard to what the hon. member for Vancouver-Burrard (Mr. MacDougall) had to say with regard to this question. In the Ottawa *Citizen* of January 10, before Bill 82 and Bill 83 were before the house, the hon. member for Vancouver-Burrard went into print. Here is an article written by Warren Baldwin, an extremely responsible correspondent. In it we find these words:

Howe wheat plan is seen dynamite. Meanwhile the government can look forward to a lively session.

Mr. Speaker: Order. Perhaps the hon. member is not aware of the fact that earlier this evening the hon. member for Vancouver-Burrard made a statement in this house explaining his position on this very question.

Mr. Nicholson: Mr. Speaker, he did not refer to the article in the Ottawa *Citizen*. He referred to a speech he delivered in parliament earlier. As reported in the *Citizen* he said he was going to speak against subsidies and vote against them.

Mr. Speaker: The hon. member will recall that the hon. member for Acadia (Mr. Quelch) had said that what the hon. member for Lethbridge (Mr. Blackmore) was alluding to was a public matter, that it had appeared in the newspapers. I took it that the hon. member for Vancouver-Burrard was refuting what had been said by both hon. members.

Mr. Nicholson: Mr. Speaker, I was here and was listening. The hon. member will correct me if I am wrong, but I understood he was referring to what he put on *Hansard*.

Mr. Speaker: That is why I am trying to protect him. He is not here at the moment.

Mr. Nicholson: Very well, Mr. Speaker. I shall leave that matter.

Mr. MacDougall: Mr. Speaker—

Mr. Speaker: Order. I am sorry. I was in error. The hon. member for Vancouver-Burrard is present.

Mr. MacDougall: I do not know whether the hon. member for Mackenzie was in his seat when I made my statement with respect to the matter.

Mr. Nicholson: I did not hear it all.

Mr. MacDougall: I know he discussed this matter with me when the hon. member for Lethbridge was kind enough to ask me to go and read in *Hansard* the statement he made this afternoon. Unfortunately I cannot utilize a statement that was made by anyone because it is not official and it will not be official until tomorrow. There is no question at all about where I stood, and I explained that matter tonight. I think it is rather picayune for the hon. member for Mackenzie to go on dealing with newspaper reports when I have already made my statement to the house.

Mr. Nicholson: Very well. I want to emphasize the point that several private members on the government side of the house have accepted the claims made by the Minister of Trade and Commerce and the Minister of Agriculture that the farmers in Canada are enjoying an era of prosperity such as has never been known previously. Those are not the facts, Mr. Speaker. The Minister of Trade and Commerce has supplied me with the statistics on new motor vehicle sales and motor vehicle financing for December of last year. This publication gives the information—

Mr. Howe (Port Arthur): Mr. Speaker, may I say this to the hon. member. The Minister of Trade and Commerce has supplied you with nothing. You got it from the bureau of statistics, which serves all the people of Canada.

Mr. Nicholson: Thank you very much. The releases are very kind in giving the Minister of Trade and Commerce credit as being the minister responsible.

Mr. Howe (Port Arthur): I would not furnish you with a postage stamp.

Mr. Nicholson: I make apology and give the taxpayers of Canada the credit for supplying this information. If the minister is so sensitive, it might be a good idea to have his name removed so that his extremely efficient staff in the bureau would not be held responsible for many of the statements the minister makes.

Mr. Speaker, the Minister of Trade and Commerce or rather, I should say, the bureau of statistics under the authority of the Minister of Trade and Commerce informs us of the statistics with regard to new motor vehicle sales in the various provinces of Canada for 1954 and up to December 1955. It is interesting to note that in Newfoundland there has been an increase of 24 per cent, in Prince Edward Island an increase of 35 per cent and so on across the country.

But when we come to the prairie region the story is different. I am sorry to be compelled to say that in my province there has been a decrease in passenger motor vehicle sales of 3·2 per cent in the number and 6·9 per cent in the value. In commercial vehicle sales we are down 23·3 per cent in number and 21·2 per cent in value. In Alberta and Manitoba the situation is not quite so bad. However, in Alberta in commercial vehicle sales they are down 0·8 per cent in numbers but up 11·7 per cent in value. This merely points up the fact that while motor car sales have been increasing in the rest of Canada, in the area where the agricultural crisis has developed on account of the factors which are well known, the motor car sales are down. That information is available to everyone. The Minister of Trade and Commerce, through his department, will supply these statistics to everyone.

The interprovincial farm union council met with the cabinet today and presented some interesting information with regard to the over-all position of agriculture, particularly the position of agriculture in the west. They have here a table giving the purchasing power of a bushel of wheat at Fort William in the period 1891-1900, 1901-1910, and so on, for periods ever since records were kept. They have these prices given in the purchasing power of a bushel of wheat in terms of the 1935-39 dollar. It is interesting to note that back when I was a lad a bushel of wheat would buy a pair of overalls. But in 1956 a bushel of wheat will buy the buttons and the braces, and the farmer is obliged to sell a pig or a calf or something in order to get the rest of the overalls.

In terms of 1935-39 purchasing power, a bushel of wheat was worth $1.28 back at the beginning of the century, while last year it was worth only 61 cents. Some years ago the Minister of Agriculture said that it had been proven over and over again that wheat could be produced at 40 cents a bushel.

Mr. Gardiner: The Minister of Agriculture did not say any such thing. That false statement has been repeated ever since about the year 1936.

Mr. Coldwell: 1939.

Mr. Nicholson: I am sorry I have not the reference here with me, but I am sure that the next time the matter is before us I will have it.

Mr. Gardiner: I can give it to you correctly, if you want it.

Mr. Nicholson: Mr. Speaker, when the matter comes up again I will have the reference in *Hansard* and I will be very glad to place it on the record.

Mr. Coldwell: Here you are.

Mr. Gardiner: The hon. gentleman who has misrepresented it for all these years is now handing it to you.

Mr. Nicholson: I am reading from *Hansard* for April, 1939, page 2623, and this is the Minister of Agriculture speaking:

> It has been proven over and over again that 20 bushels to the acre of wheat—

Mr. Gardiner: That is what you left out.

Mr. Nicholson:

> —can be produced at a cost of from 30 to 40 cents a bushel. We have had a great deal of discussion about the cost of producing wheat. It costs a certain amount to work an acre of land whether you get any wheat off it or not; it costs a certain amount to harvest it if you do get any wheat off it. It has been proven over and over again, I say, that twenty bushels to the acre of wheat can be produced at a cost of from 30 to 40 cents a bushel. For every bushel a man gets over twenty his costs per bushel decrease. When he has a crop of twenty bushels or more per acre, his other crops are usually good in proportion.

I note that my good friend the hon. member for Bow River (Mr. Johnston) was in the house at the time and was not prepared to let that go. The hon. member for Rosetown-Biggar (Mr. Coldwell) suggested that that was a very unfair picture.

Mr. Gardiner: Now, just to get the matter straight, my hon. friend left out the 20 bushels to the acre when he made his statement here. It is incorrect for anyone to get up and say it costs 30 to 40 cents a bushel to produce wheat without giving the other explanation; that is misrepresenting the whole case.

Mr. Nicholson: I explained I did not have *Hansard* with me.

Mr. Gardiner: You never do have *Hansard* with you when you are out in the schoolhouses. You just say what you said here.

Mr. Nicholson: Now that I have *Hansard* it goes one better.

Mr. Gardiner: If you read on, you will find that Mr. Hope, who is now the statistician for the federation of agriculture, said that from $6 to $8 an acre was the cost of production, and those figures indicate a cost of 30 to 40 cents provided the crop is 20 bushels per acre.

Mr. Quelch: That depended on the size of the farm, though.

Mr. Nicholson: I suggest that if the minister thinks the growing of wheat is such a profitable industry, and that there is nothing to it, he should take a holiday from here and demonstrate in the good farming area where he lives how he can manage to buy in such a high priced market and sell in the markets of the world when—

Mr. Gardiner: If my hon. friend will examine the *Hansard* he has been reading from he will find that the argument he was putting up a few moments ago to the effect that the purchasing power of the dollar has changed since 1939 will answer some of his questions.

Mr. Nicholson: The minister will have a chance to carry on the next time we resume. I resent very much, Mr. Speaker, the suggestion that those of us who are participating in this debate are coming to our colleagues from other parts of Canada with a tin cup, as beggars, and asking for a handout. I suggest that the Minister of Trade and Commerce and the Minister of Agriculture are doing a real disservice to Canada in encouraging members from other parts of the country to promote that idea.

When the war was on the Prime Minister of Canada, the Right Hon. Mackenzie King, recognized that the farmers of Canada had their prices frozen at uneconomic levels. In a radio broadcast on December 4, 1943, he said:

> If to help win the war, the farmers are asked to accept a ceiling on prices, we believe they are entitled to a floor under prices to insure them against an agricultural depression after the war. As an essential part of its post-war policy the government intends to ask parliament at the next session to place a floor under the prices of the main farm commodities.

Then in the speech from the throne closing the session on January 31, 1945, there was this:

> As a further safeguard of a basic standard of living, provision was made at the present session for floors under the prices of farm and fish products. These measures insure two great primary industries against the hazard of a collapse of markets or prices after the war.

Now, Mr. Speaker, the farmers in all parts of Canada accepted the fact that price controls were in the public interest. While the farmers had 10 years of rough going in all parts of Canada, the manufacturers had been able to convince the Minister of Trade and Commerce that they should operate on a cost plus basis. The minister yielded to pressure and removed the 5 per cent limit, so that the sky was the limit during the war for those who were taking contracts for munitions. But those who were producing food for our own nation and for our overseas customers were forced to produce on a cost minus basis. I submit that the commitment made by the Prime Minister of Canada when he went on the air on December 4, 1943, should not be forgotten.

I hoped the members from the prosperous areas of central Ontario and Montreal would have more consideration for the farmers on the back concessions of Quebec, Ontario and the maritimes, whose position is similar to the position of all other farmers. It so happens that this particular piece of legislation permits us to bring our problems to the only place where we can discuss them, to this parliament.

I want to assure you, Mr. Speaker, that while we are speaking about our problems we do not suggest for a moment that the potato growers in Prince Edward Island and New Brunswick, the fruit farmers and vegetable farmers in western Canada do not have problems which are just as real for them. But those problems are not going to be solved by the members of the cabinet who are so tired and so out of touch with the problems in the different parts of the country that they fail to consider the statistics made available by the bureau of statistics.

As it is ten o'clock, I would move the adjournment of the debate.

Mr. Speaker: Just before I put the motion, I should like to tell the hon. member that in trying to appreciate what may be relevant in this debate, I find it very difficult to understand why one should be allowed to review the position of agriculture in the 10 provinces of Canada when we are dealing now with the grain producers. I will ask the hon. member to take into consideration the fact

that several speakers in this debate already have made several points to prove that the condition of the western farmer at the moment is not as good as it has been represented by some members of the government.

Perhaps now he should deal with the principle of this bill and not spend all his time discussing a problem which is, of course, one of great importance and interest, but which there will be other opportunities to discuss. There is the first item of the Department of Agriculture and some items in the Department of Trade and Commerce on which the whole subject of agriculture will probably be opened up for discussion. The hon. member has reviewed the position of agriculture on February 16, and he will want to review it again on February 29, etc. I hope the hon. member appreciates what I am saying and recognizes the validity of some of the points I am stressing at the moment.

On motion of Mr. Nicholson the debate was adjourned.

BUSINESS OF THE HOUSE

Mr. Harris: We shall continue this debate tomorrow and when it is concluded take the other wheat bill and then the motion to set up the estimates committee and the atomic energy committee. It is the intention of the government to set aside Monday and Tuesday for another supply motion.

At ten o'clock the house adjourned, without question put, pursuant to standing order.

Question

ANSWER TO QUESTION

The following answer, deposited with the Clerk of the house, is printed in the official report of debates pursuant to standing order 39:

R.C.M.P. HEADQUARTERS, OTTAWA—REPAIRS

Question No. 137—**Mr. Lennard:**

1. What was the nature of repairs, renovations or improvements made to the Royal Canadian Mounted Police headquarters in Ottawa by H. Pion and Sons?
2. When was this work completed?
3. What was the amount of the contract?

Answer by: **Mr. Pinard (for Mr. Winters):**

1. Ventilation of the photographic section.
2. June 3, 1955.
3. $14,000.

HOUSE OF COMMONS

Friday, February 17, 1956

The house met at eleven o'clock.

CANADA ELECTIONS ACT

EXTENSION OF RIGHT TO VOTE AT ADVANCE POLLS

Mr. Stanley Knowles (Winnipeg North Centre) moved for leave to introduce Bill No. 121, to amend the Canada Elections Act.

Some hon. Members: Explain.

Mr. Knowles: Mr. Speaker, the purpose of this bill is to extend the privilege of voting at an advance poll to any qualified elector who finds that he will be absent from his constituency on election day. All the other clauses of the bill are consequential to that one change.

Motion agreed to and bill read the first time.

TRANSPORT

CONTINUATION OF AUTHORITY TO MAKE REGULATIONS AND APPOINT CONTROLLERS

Hon. George C. Marler (Minister of Transport) moved that the house go into committee at the next sitting to consider the following resolution, which has been recommended to the house by His Excellency:

That it is expedient to introduce a measure to provide for the continuation for a further period of two years of authority to make regulations for the control of transport of goods in bulk including, amongst other things, the appointment of one or more controllers and one or more deputy controllers to carry out the provisions of such regulations and the payment of their remuneration.

Motion agreed to.

CRIMINAL LAW

MAINTENANCE OF CAPITAL PUNISHMENT—APPOINTMENT OF SPECIAL COMMITTEE

On the orders of the day:

Mr. J. G. Diefenbaker (Prince Albert): Mr. Speaker, I should like to direct a question to the Prime Minister (Mr. St. Laurent) arising out of the feelings consequent upon the Coffin case and on what happened yesterday in Great Britain. Will the government give consideration to giving the house an opportunity by a free vote to reconsider the question of the maintenance of capital punishment?

Mr. M. J. Coldwell (Rosetown-Biggar): May I ask a supplementary question. I was going to rise to ask a somewhat similar question, but this one is different. Will the government set up the committee on capital and corporal punishment and lotteries at an early date so that the house may have an opportunity of considering the report when it is made, and giving an opportunity also for a free vote?

Hon. Stuart S. Garson (Minister of Justice): Replying first to the question asked by the hon. leader of the C.C.F. party, may I say that on *Votes and Proceedings* for today there will be a notice of the setting up of that committee. When a committee is set up it will consider this question and report to the house. I think at that time it would be appropriate for the hon. member for Prince Albert (Mr. Diefenbaker) to ask the question which he has asked this morning.

Mr. Diefenbaker: May I ask a question supplementary to the supplementary question. Is it the government's intention to permit a free vote if the committee so suggests?

Mr. Garson: I do not think I have anything to add to what I have just said, that after the committee has made its report to the house will be the appropriate time for the government to consider whether there should be a free vote.

Hon. George A. Drew (Leader of the Opposition): Mr. Speaker, may I ask a supplementary question of the Prime Minister? In view of the fact that no committee can recommend how the members vote, will the Prime Minister indicate whether or not he is prepared to indicate to his own party that it will be a free vote when the committee makes its recommendations?

Right Hon. L. S. St. Laurent (Prime Minister): Mr. Speaker, I do not think that is a question I should answer at this time. When we have the recommendation of the committee, we shall give it serious consideration and we shall take such responsibility as we may feel it is our duty to take in respect of the recommendation.

INQUIRY AS TO PENDING DEATH SENTENCES

On the orders of the day:

Mr. E. G. Hansell (Macleod): I should like to ask the Minister of Justice a question to clarify the urgency of a previous question. Are there any death penalties pending in Canada at the present time?

Inquiries of the Ministry

Hon. Stuart S. Garson (Minister of Justice): If my hon. friend means by "pending" whether there are any convictions for capital cases which have either come or have not yet come to the Department of Justice for consideration, I would not state it as a fact but I feel sure that there are. I would have to make inquiries, however, to find out how many.

Mr. Hansell: There is urgency associated with the matter. Perhaps the minister might make a statement later.

GRAIN

WHEAT—REPORTED STATEMENT RESPECTING AVAILABILITY OF BOX CARS

On the orders of the day:

Mr. W. M. Johnson (Kindersley): Mr. Speaker, I should like to direct a question to the Minister of Transport. Would the minister comment on the statement made by his transport controller, as reported in the Montreal *Gazette*, that there is no shortage of box cars holding up prairie grain shipments?

Hon. George C. Marler (Minister of Transport): Mr. Speaker, I have read the statement very hastily, but from what I saw in the statement there was nothing, in my opinion, that seemed to require comment.

Mr. H. R. Argue (Assiniboia): Mr. Speaker, I should like to direct a supplementary question to the Minister of Trade and Commerce. Does the comment by the transport controller now mean that the railway transportation bottleneck, to which the Minister of Trade and Commerce referred a week or ten days ago, has now been removed?

Right Hon. C. D. Howe (Minister of Trade and Commerce): Mr. Speaker, it is the duty of the Minister of Trade and Commerce to sell the wheat. It is the duty of the Minister of Transport to move it. I understand the Minister of Transport has given his answer.

REPORTED IMPROVEMENT IN RAIL TRANSPORTATION—EFFECT ON STORAGE CAPACITY

On the orders of the day:

Mr. H. R. Argue (Assiniboia): I should like to direct a question to the Minister of Trade and Commerce. Has the reported improvement in rail transportation resulted in any decrease in the 58 million bushels unused capacity for grain reported by the minister to the house on January 20?

Right Hon. C. D. Howe (Minister of Trade and Commerce): Mr. Speaker, I do not even know what the unused capacity is. I will look into the situation. If there is any useful information that can be given the house I will be glad to give it.

[*Later:*]

Hon. George A. Drew (Leader of the Opposition): Mr. Speaker, I should like to ask a supplementary question of the Minister of Transport. Will the Minister of Transport take appropriate steps to see that the cars are made available to deal with the situation since there are over 100 million bushels of available space for wheat in our elevators at this time?

Hon. George C. Marler (Minister of Transport): Mr. Speaker, the figures I have seen recently with regard to the movement of wheat are, I think, most encouraging and show that the railroads are meeting their responsibilities with regard to the movement of wheat.

Mr. Drew: I should like to ask a supplementary question. Does the Minister of Transport question the fact that there are 100 million bushels of space available in our elevators at this time?

Mr. Marler: The amount of space in our elevators at the present time is not a matter that comes under the jurisdiction of the Minister of Transport.

POST OFFICE DEPARTMENT

MONTREAL—REPORTED INSTALLATION OF BURGLAR ALARMS IN POSTAL STATIONS

On the orders of the day:

Mr. Hamilton (Notre Dame de Grace): Mr. Speaker, can the Postmaster General inform the house whether his department is about to instal burglar alarms at a number of postal stations in Montreal?

Mr. Speaker: Could that question be postponed until the estimates of the department are before the house?

Mr. Hamilton (Notre Dame de Grace): Can the Postmaster General inform the house if his department has recently changed its policy regarding the installation of burglar alarms in major post offices in Canada?

Mr. Speaker: Unless I am very much mistaken, that is the same question that the hon. member asked a moment ago. At that time I suggested that the question be postponed until the estimates of the department are in committee of supply.

Mr. Green: On that point, may I submit that the hon. member has asked whether there has recently been a change of policy. The estimates of the Postmaster General may not be under consideration for several months.

Surely we are entitled to ask a question of this type on the orders of the day.

Mr. Speaker: When one considers the urgency and the national character of questions that are to be asked at this question time period, may I ask the hon. member if he feels that the time of the house should be spent at this time in investigating the question whether or not burglar alarms should be installed in post offices?

An hon. Member: In view of the epidemic of robberies?

Mr. Green: I do not know why not, Mr. Speaker. Far less important subjects are being raised every day.

Mr. Speaker: The hon. member has never spoken truer words. If it is the wish of hon. members to have a question of that sort asked, I shall not object. But it would seem to me that the first question was somewhat different. The second one was somewhat rephrased because the word "policy" was introduced. I do not think it was in the first question put by the hon. member, but it means the same thing: Questions such as "Are there any doors to the post offices across the country?"—"Are there any fences around the grounds?"—"Are there any burglar alarms?"—are matters that may be important to the hon. member and to many others but do not appear to me to be the type of question that should be asked at this time. I may be wrong.

Mr. Green: As I heard it, the first question had to do with a burglar alarm system in Montreal. You said that the hon. member could not ask that question. Now he has asked a question having to do with policy right across the country. Surely that question should not be ruled out.

Mr. Speaker: As I just said, I may be wrong. However, hon. members should realize that at this moment when questions are being asked, I must be careful to give to hon. members an opportunity to ask questions of the widest nature and the most urgent character and therefore to eliminate those questions which appear to me to be not of the type that should be asked at this time. I think hon. members will realize that every time I ask hon. members not to press a question, I may be completely wrong. I am not omniscient. When I ask hon. members not to press a question I would hope that my request might not provoke a discussion on a point of order, thus causing the house to lose the benefit of my intervention, which is for the purpose of saving time. As I say, I may be completely wrong on this score, but am I so wrong that we must spend several minutes in discussing a point of order?

Mr. Green: I submit, Your Honour, that where an hon. member asks whether there has just been a change in policy by one of the departments on some matter having to do with the whole of the country, it should not be ruled out. I would point out to Your Honour that hundreds of thousands of dollars have been lost in thefts from post offices. It seems to me that a question of that kind is quite properly asked by the hon. member.

Mr. Speaker: The hon. member is not convincing me that whenever a question is asked on a matter of policy having to do with burglar alarms, just because of the fact that it is a matter of policy it is always a permissible question at this time. I am not of opinion that that question should be asked at this time.

BURNABY—REMOVAL OF MAIL SORTERS TO VANCOUVER

On the orders of the day:

Mr. T. H. Goode (Burnaby-Richmond): Mr. Speaker, may I direct a question to the parliamentary assistant to the Postmaster General. Is he aware that the post office sorting staff has been removed from Burnaby to Vancouver? If so, what are the reasons for the move?

Mr. Speaker: I think this question also could be postponed until the estimates of the Post Office Department are before the committee of supply.

Mr. Goode: Mr. Speaker—

Mr. Speaker: I must ask hon. members not to argue with the Speaker. The rules say that the rulings of the Speaker are not debatable. I have previously asked hon. members to observe that rule as much as possible.

TRANS-CANADA HIGHWAY

BRITISH COLUMBIA—REQUEST FOR SURVEY OF JUMBO PASS ROUTE

On the orders of the day:

Mr. H. W. Herridge (Kootenay West): Mr. Speaker, I should like to direct an inquiry to the Minister of Public Works, whom I am sure we are all glad to welcome back to the house—

Some hon. Members: Hear, hear.

Mr. Knowles: The Minister of Fisheries, too.

Mr. Herridge: —in such a healthy and suntanned condition. I should like to ask the

minister this. How long does the minister intend to pigeonhole requests from chambers of commerce and other organizations in south-eastern British Columbia for a thorough survey of the proposed Jumbo pass route as a section of the trans-Canada highway prior to a final decision being made concerning the route between Revelstoke and the Alberta border?

Hon. Robert H. Winters (Minister of Public Works): Mr. Speaker, whether or not a survey of any part of the route is to be made is a matter for the provincial government concerned.

AIRPORTS

PATRICIA BAY, B.C.—BUILDINGS DECLARED SURPLUS

On the orders of the day:

Mr. G. R. Pearkes (Esquimalt-Saanich): Mr. Speaker, may I ask the Minister of Transport if any number of huts has recently been declared surplus at the Patricia Bay airport?

Hon. George C. Marler (Minister of Transport): Mr. Speaker, I shall answer the question of the hon. gentleman by saying that a number of buildings have been declared surplus. The list is much too long to be given on the orders of the day, but I shall be glad to give my hon. friend the particulars of them.

HOUSE OF COMMONS

WELCOME TO MINISTER OF FISHERIES FOLLOWING ILLNESS

On the orders of the day:

Hon. George A. Drew (Leader of the Opposition): Mr. Speaker, I hope I may be permitted at this point to make a comment.

Mr. Harris: No.

Mr. Drew: If hon. members would wait, they would perhaps see how wise it is to wait for the finish of a sentence. I was going to say that I am sure all hon. members are very pleased to see the Minister of Fisheries back in his place. We had the opportunity to welcome him before but we know it was necessary for him to have a further holiday, and with the utmost sincerity I know that all the members of the opposition hope he is fully restored to health.

SHIPPING

SINKING OF DEPARTMENTAL VESSEL "HILUNGA"

On the orders of the day:

Mr. T. S. Barnett (Comox-Alberni): I should like to direct a question to the Minister of Public Works. Can he give the house a statement supplementary to that which was given yesterday with respect to the loss of the departmental vessel *Hilunga* on the west coast?

Hon. Robert H. Winters (Minister of Public Works): No, Mr. Speaker, I am unable to add to the information given the house yesterday. Although search and rescue have been active in trying to locate the vessel or signs of wreckage, they have been unable to do so. They have been joined in the search by the ships of the Department of Transport and the Department of Fisheries. I think I should say, however, that the report that the crew were seen leaving the ship and proceeding towards shore has not been confirmed.

Mr. Howard C. Green (Vancouver-Quadra): In connection with this question may I ask the Minister of Transport whether or not this vessel, which apparently was known as the *Hilunga*, was designed only for service in minor waters, class 1, whereas she foundered in minor waters, class 2?

Hon. George C. Marler (Minister of Transport): I am afraid I will have to take the hon. gentleman's question as notice and make some inquiry in order to be able to reply to him.

Mr. Green: Is this not one more case in which the United States coastguard was called in for help?

Mr. Marler: I am afraid I cannot answer that question either, Mr. Speaker.

EXTERNAL AFFAIRS

POLICY RESPECTING SHIPMENT OF ARMS TO MIDDLE EAST

On the orders of the day:

Mr. Donald M. Fleming (Eglinton): May I ask the Prime Minister if, in view of action taken at Washington during the last 24 hours to impose an embargo on the shipment of arms to the Middle East, the government will reconsider its position in that respect and consider taking parallel action?

Right Hon. L. S. St. Laurent (Prime Minister): Mr. Speaker, that is a matter which the government always has under consideration. The information that has already been given to the house is that we keep in close contact with our allies and try to keep our policy such as will occasion no greater anxiety about the Middle East than that which exists at the present time.

ST. LAWRENCE SEAWAY

PROTECTION OF CANADIAN PROPERTY AGAINST CHANGE IN WATER LEVELS

On the orders of the day:

Mr. Donald M. Fleming (Eglinton): I should like to ask a question that may perhaps concern both the Secretary of State for External Affairs and the Minister of Transport. Are there any negotiations under way at the present time, either with the United States government or with the provinces concerned, arising out of the construction of the St. Lawrence seaway, in which questions are being raised as to protection of property bordering on the lakes? If so, what steps are being taken on behalf of the Canadian government to see that Canadian land on the lakes is being properly protected against change of water levels?

Hon. L. B. Pearson (Secretary of State for External Affairs): Offhand, I cannot give a reply to that question, but I shall look into the matter and see if such negotiations are being conducted.

INQUIRY FOR RETURN

CASH ADVANCES ON FARM-STORED GRAIN

On the orders of the day:

Mr. J. G. Diefenbaker (Prince Albert): I should like to ask the Minister of Trade and Commerce if he is now in a position to table the return that was passed on February 6 dealing with the representations made by western farm bodies in reference to advances on farm-stored wheat.

Right Hon. C. D. Howe (Minister of Trade and Commerce): Mr. Speaker, it is my understanding that the return went to the Secretary of State a day or so ago and I presume it will be brought down shortly.

Hon. Roch Pinard (Secretary of State): I may say the return will probably be brought down today. There is only one department which has not supplied its answer.

Mr. Diefenbaker: We should have it for this debate.

GRAIN

PROVISION FOR GUARANTEE OF BANK LOANS TO PRODUCERS IN PRAIRIE PROVINCES, ETC.

The house resumed, from Thursday, February 16, consideration of the motion of Mr. Howe (Port Arthur) for the second reading of Bill No. 82, to provide for short-term credit to grain producers in the prairie provinces to meet temporary financial difficulties arising from inability to deliver all their grain.

Mr. A. M. Nicholson (Mackenzie): I have read carefully, Mr. Speaker, your remarks at the conclusion of my address last night and I want to say that, as usual, you are absolutely fair and correct. Your assistants found it necessary to call me to order when you were absent from the chamber and they, too, were quite correct and fair. But in my defence I should like to say that members supporting the government had been so far from this subject that I felt without some reference to some of the remarks made it would have been interpreted that we accepted those views. I have discussed the remarks I propose to make this morning with my colleague, the hon. member for Winnipeg North Centre (Mr. Knowles), and I will try to be absolutely on the beam all the way.

We are discussing Bill 82, which is an act to provide for short-term credit to grain producers in the prairie provinces to meet financial difficulties arising from inability to deliver all their grain. I am against that all the way. We do not want credit. We have had too much credit. We want to get fair consideration, nothing more and nothing less. This is not a temporary situation. While the Minister of Finance (Mr. Harris) has not taken any part in this debate I want to call him as my witness in saying that this is not a temporary situation. The Minister of Finance, speaking in New York, quite correctly said that this situation has been caused by policies in other countries. He also said that his government, the government of Canada, is concerned about the fact that wheat production is the principal source of cash income to the great majority of western farmers and his government was bound to be greatly influenced by anything so vital to them and to the whole national economy.

I want to make an appeal to the Prime Minister (Mr. St. Laurent). The Prime Minister has established, and has earned, the respect of a great many Canadians. I feel it is not fair for him to be in a position where the two senior members of his cabinet are so irresponsible in discussing this national problem. The Prime Minister is still the chief, and with all due respect to the contribution the Minister of Trade and Commerce has made in the past—and I am among the first to give him credit for the outstanding job he did during the war—if he were to approach this problem as he did his problems during the war, he would be saying the same sort of thing that the Minister of Finance is saying, that this is not a problem which has resulted from beneficent nature. It is a problem which results from policies which are not formed outside of Canada.

If we had had as minister of agriculture during the war a man who approached this problem as did the minister of munitions and supply at that time, our present Minister of Trade and Commerce, our farmers would not be in the position where they are so bitter as they are now. Therefore, I suggest to the Prime Minister that he deal with this problem in two stages; that he persuade his two senior members to take a holiday right now and go to Florida and have the Minister of Finance pilot this bill through the house, because I am sure the Minister of Finance would say that this is not a temporary problem. He would admit that it is a problem, and I am sure the Minister of Public Works (Mr. Winters), whom we are glad to see back in the house this morning, would do as he did last summer, namely, take over agriculture during the absence of the Minister of Agriculture, and he would certainly do a much better job than the Minister of Agriculture in getting this piece of legislation discussed. I am sure that with the two senior members out of the country the cabinet would be prepared to accept the analysis made by the Minister of Finance in New York.

The farmers do not want too much. They merely want recognition of the facts as they exist and an indication that the government is prepared to do something about them. After having taken that step, the logical step that would follow would be for both ministers to see that parliament got on well without them and they would tender their resignations, and we would be able to proceed from there on.

I suggest to the Prime Minister that over the weekend he should take a look at what his colleague, the Minister of Trade and Commerce, said during this debate. I wish to assure you, Mr. Speaker, that there is no bitterness on my part as a result of the interjections of the Minister of Trade and Commerce last night. While I was speaking and giving him credit for supplying me with certain information, the Minister of Trade and Commerce interrupted by saying, as reported at page 1275 of *Hansard:*

> The Minister of Trade and Commerce has supplied you with nothing.

I accepted that and made my apologies, and later on at page 1276 of *Hansard* the minister said:

> I would not furnish you with a postage stamp.

That is all right. I suggest the Prime Minister have a look at the editorial in this morning's *Globe and Mail* having reference to the remarks made by the Minister of Trade and Commerce. I am not going to read the editorial, Mr. Speaker. I merely ask the Prime Minister to read it and decide whether or not it is in the interests of good government in Canada to have his minister suggesting while one of his colleagues, the hon. member for Rosthern (Mr. Tucker), was speaking that this should not be degenerating to a debate. I think the Prime Minister would agree that the statements made by the Minister of Trade and Commerce are subjects for debate and that members of the opposition in all parties should not be muzzled. Either this bill is worth debating and contains certain principles, or it is not. The Prime Minister should look at it.

It is also suggested that he review the performance of the second senior minister, the Minister of Agriculture (Mr. Gardiner). I am indebted to Judith Robinson for her analysis of the barter proposals of the Minister of Agriculture. While the Minister of Trade and Commerce (Mr. Howe) says that there is no marketing problem, that there is no problem facing the farmers of Canada, at that very moment his colleague is negotiating a barter deal with Great Britain to exchange wheat for British immigrants. I am sure that everyone who has come to Canada in the last 50 years from any country will resent very much the proposal that we should now consider bartering human beings in order to get rid of a surplus of wheat which the Minister of Trade and Commerce says does not exist.

Mr. Speaker: Is the hon. member still speaking along the lines suggested to him by the hon. member for Winnipeg North Centre (Mr. Knowles)? The hon. member for Winnipeg North Centre and I are almost 100 per cent in agreement on most points, but if the hon. member is considering continuing along the line upon which he has now embarked I do not think he would be relevant to this bill.

Mr. Knowles: Does not the proposal made by the Minister of Agriculture suggest that there is a real problem, and is not the fact that there is a problem so far as the marketing of wheat is concerned relevant to the bill now before us?

Mr. Speaker: The hon. member for Mackenzie (Mr. Nicholson) has indicated the views of the hon. member for Winnipeg North Centre in his opening remarks this morning, which are to the effect that in his opening statement on the second reading of the bill apparently the minister referred to the fact that the condition of farmers was not as bad as perhaps might have been pictured by other people, or that it is good. Ever since this debate was initiated hon. members have tried to refute that part of the minister's statement. They spend most of their time on that and then at the end of their remarks

they come back to the bill and say, "We are going to be for or against this measure which has to do with loans."

In a 40-minute speech an hon. member, in order to maintain the relevancy of his remarks may refer incidentally to what may appear to be irrelevant and then apportion most of his remarks directly to the principle of the bill before the house. I am just picking a percentage out of the air, but as a rule we do not hear anything about short-term credit to grain producers until about 35 minutes of an hon. member's time has been spent in trying to prove that the position of the farmers out west is much worse than is imagined by some hon. members.

My point is that all kinds of arguments may be presented to prove just what is the position of the farmers out west. Indeed last night the hon. member was travelling all across Canada to show that the position of the farmers was not as good as some people had pictured. Then the hon. member should have returned to a discussion which was relevant to the bill.

I will be at a loss in directing the discussion on a bill of this kind if the position of farmers over the years or at the present time in the economy of Canada is to be relevant to the discussion. As I said the other night, we may as well look at the international picture to see how Canada stands and how it affects various classes in Canada and then come to the farmers. By that time an hon. member's speech would be over and we would not have heard about the bill before the house. That is my point.

Mr. Nicholson: Thank you very much, Mr. Speaker. I merely wanted to point up the fact that one cabinet minister says one thing, that there is no problem, while another minister says that there is. That is all I want to say. I submit it is relevant because the Minister of Agriculture has endeavoured to indicate that. I suggest to the Prime Minister that he take time over the weekend to read Judith Robinson's article in last night's Toronto *Telegram* entitled "Gardiner's Barter Bargain".

Representatives of farm unions from five provinces are in Ottawa and I understand are trying to see as many members as they can to discuss a variety of problems. Yesterday they presented a brief to the government. One of the delegates, the vice-president of the farmers' union of Saskatchewan, saw me last night. I am sure that hon. members who do not want to accept our views on this problem would be well advised to see some of these delegates while they are in the city and get their opinions.

The failure of the government to do something other than arrange for credit is actually going to cost the taxpayers a great deal of money directly. May I illustrate what I have in mind. Mr. Turnbull, vice-president of the farmers' union of Saskatchewan, has outlined what he is being forced to do with 10,000 bushels of wheat which he has on the ground. He is going to be obliged to go into hog production because there is a floor price under hogs, or so we are told.

One of his neighbours is putting up buildings in which to feed 500 hogs. That man has 15,000 bushels of barley on hand. As a result of our failure to recognize this problem there is going to be a tremendous increase in hog production and the taxpayers of Canada are going to have to subsidize pork production.

Mr. Turnbull mentioned that another farmer is acting on the advice of the Minister of Agriculture and is going to market his wheat through livestock. He is putting up pole shelters at a very low cost to house 200 head of cattle. No farmer in Ontario or Quebec can hope to compete with the sort of competition which is sure to develop.

The vice-president of the farmers' union is going to seed 200 acres with rapeseed this year because there is a guaranteed price. He knows that that will have an effect on butter producers. My colleague, the hon. member for Humboldt-Melfort (Mr. Bryson), acting last year on the suggestion of the Minister of Agriculture seeded 400 acres to rapeseed and had a production of 400,000 pounds. A process developed in Germany indicates that rapeseed will make a very palatable butter substitute.

I submit that it is most important that this bill to provide short-term credit to grain producers should not be read a second time. I think the Prime Minister should have an opportunity over the week end to consider the suggestions that I have made that these two members be given a chance to have a holiday. Therefore I move, seconded by the hon. member for Winnipeg North Centre (Mr. Knowles):

> That the word "now" be left out, and the words "this day six months hence" be added at the end of the question.

Mr. C. E. Johnston (Bow River): Mr. Speaker, let me say at the outset that I wish to refer to some remarks made by the hon. member for Westmorland (Mr. Murphy). He is not in his seat at the moment; so if the whip can bring him in he will be able to hear what I say.

There are a few things I wish to discuss on this second reading of Bill 82, an act to provide for assistance to farmers. The title of the bill is:

An act to provide for short-term credit to grain producers in the prairie provinces to meet temporary financial difficulties arising from inability to deliver all their grain.

First of all I find that some of the subjects mentioned in the bill are a little difficult for me to follow. In the first place, I am of the opinion that the difficulty has not arisen particularly because of the farmer's inability to sell all of his grain. Certainly the difficulty has arisen because of the government's inability to sell the wheat of western Canada. It is not the farmer's job at all to sell this wheat. The government's policy should be so designed as to take care of the wheat of western Canada. The government has been solely responsible for the sale of wheat in this country. Therefore it is the government's responsibility now to see to it that the farmers are given assistance towards obtaining some cash in this time of emergency.

It is not my intention to establish need at this time, because I have already done that on another occasion during this debate and many members in the House of Commons have brought forth that very point. It has been well established by all sound-thinking members that the western farmer is in need of assistance. I said that I thought the fact had been established by all sound-thinking members in this house, but there are some members apparently who disagree with that point of view.

The thing that amazes me is that, despite the fact that almost every member, particularly from western Canada, has brought this to your attention, no Liberal members from Alberta have got up and spoken on Bill 82 which deals with this question. Why are they so profoundly silent? Certainly on other occasions they have made themselves heard. In view of the fact that the Liberal leader in the province of Alberta has come out and condemned this bill, I think it is about time some of the Liberal members from Alberta got up and made themselves known in this respect. Are they afraid of the whip that will be cracked over their heads if they get up and assert themselves on the side of the farmer? The people in Alberta who sent them down here expect them to get up and make a statement on this bill. It is vital to the welfare of the western agriculturists. The only one who has styled himself as an expert is the lawyer from Westmorland. Let me tell you what he said. I am sure the western farmers of Alberta are not going to appreciate the attitude taken by the Liberal members in this House of Commons as expressed by the hon. member for Westmorland. This is what he says, as reported on page 970 of *Hansard*:

I of course am not a wheat expert.

I think we would all agree with that. Then he says:

As an eastern barrister I therefore feel I have a right to speak on this question.

What impudence that he, as an eastern lawyer, has the right to get up and speak on behalf of the western agriculturists of this country.

An hon. Member: What about the hon. member for Eglinton yesterday?

Mr. Johnston (Bow River): Who does he think he is? Not one of the Liberal members from Alberta has got up and contradicted these statements. He said:

It is a debatable point as to what is for the benefit of the wheat growers of Canada, but I believe this resolution is and that is why I am supporting it.

The Liberal members from Alberta, having him as their spokesman, are saying that the position in which agriculture finds itself is a very debatable one.

Mr. Philpott: You voted for the resolution.

Mr. Johnston (Bow River): I shall tell you in a moment why I voted for the resolution, but you let the Liberal members from Alberta do the speaking—

Mr. Speaker: I am quite prepared to let the hon. members from Alberta do whatever speaking they wish to do within the rules. The hon. member has just told me to let the members from Alberta do their speaking. I say I am quite prepared to do that.

Mr. Johnston (Bow River): Thank you, Mr. Speaker. I am sorry that I had to remind members in the opposition that they should not be asking questions—I mean members on the government side.

An hon. Member: They are in opposition to good legislation.

Mr. Johnston (Bow River): Yes, I agree with the remark that they are in opposition to what is of benefit to western agriculture. Then he goes on, and this is the way he believes the western farmers should be treated. This lawyer expert on agricultural problems says:

. . . we know that the judgment of the majority of the western wheat growers does not seem to be too good.

I am sure the people of western Canada who supported the Liberal members and sent them down here to carry on their affairs are not going to appreciate that type of inference. It is not an inference; he states it as a fact.

In other words, the western farmers of Alberta have not enough sense to know what they want. Not a Liberal in this house from Alberta has got up and contradicted that statement.

Who are these members from Alberta who say that the people from western Canada should send down no one except Liberals who will get up and support their cause? It was stated by the Liberal leader Mr. Prowse from Alberta over television the other day that there were five Liberal members in this house. Of course, that is not so, but we do not mind his exaggerating the truth. He always does that. There are, in fact, four members. There is the hon. member for Vegreville (Mr. Decore), who has not said a word on this resolution. There is the hon. member for Edmonton-Strathcona (Mr. Hanna), who has not said a word on this resolution. There is the hon. member for Athabaska (Mr. Dechene), who was here a while ago but is not now, and who has not said a word about this resolution. There is the hon. member for Edmonton West (Mr. Prudham), who has not said a word on this resolution. So they must be taking the side of the hon. member for Westmorland. Then this great sage who no doubt has taken his advice from the two cabinet ministers, from the Minister of Trade and Commerce (Mr. Howe) who has said during this debate that farmers in general in western Canada are not too hard up—

Mr. Howe (Port Arthur): I said no such thing. If my hon. friend is going to quote me will he please read from *Hansard*. He will distort anything that comes his way but I object to his distorting my remarks.

Mr. Johnston (Bow River): Mr. Speaker, the minister is always being misquoted. He is one of those who are always misquoted, but I recall quite vividly that the Minister of Trade and Commerce said that Bill No. 82 was being introduced to accommodate the very few who were in need of assistance. He based it on the 1951 legislation.

Mr. Howe (Port Arthur): I said nothing of the kind. I have asked my hon. friend to quote from *Hansard* if he wishes to quote me. I hope Mr. Speaker will support me in that. I do not know that a man can get up in this House of Commons and put words in my mouth.

Mr. Johnston (Bow River): Mr. Speaker, I will endeavour to quote the words of the minister in a few minutes because I have never tried to misrepresent anyone on any occasion. I am paraphrasing, and I think correctly, what the minister said.

Mr. Howe (Port Arthur): You will do it with reluctance.

Mr. Johnston (Bow River): If the minister did not say that these loans were being made available to accommodate only the few who would need them, I will take back everything I have said about him, but I know that he said it.

Mr. Howe (Port Arthur): The last time you said "very few".

Mr. Johnston (Bow River): Very few, yes.

Mr. Howe (Port Arthur): If I said that I will—

Mr. Knowles: You will what?

Mr. Johnston (Bow River): Oh well, we are not going to quibble over a word or two. The general meaning is clear.

Some hon. Members: Oh, oh.

Mr. Johnston (Bow River): The general meaning is clear and the Minister of Agriculture (Mr. Gardiner) backed him up in that.

Mr. Deputy Speaker: Order.

Mr. Johnston (Bow River): Then this all-wise barrister from New Brunswick concluded with these words:

> We in this party are doing what is best for the western wheat producer.

My, oh my! The people of western Canada have not got enough intelligence to know what they want, but a few of these so-called barrister experts down here tell them what is good for them and what is not good for them. Of course we have the minister of the department doing that very thing too. When the hon. member says that the people of western Canada do not know what is good for them, let me remind him once again, as I did the other day, about the Saskatoon conference which sent a submission to the government of Canada on October 11, 1955, respecting the urgent need for cash advances on farm-stored grain in western Canada. For the benefit of some of those people who do not know who sent the submission, let me read the names again. I put them on *Hansard* a couple of weeks ago in discussing this question, but some of you people over there who are so all-wise and who are going to endeavour to speak for western agriculture had better listen to the names of the organizations that sent the submission to the minister and see what they ask for. Then they will be able to speak intelligently on the subject.

Mr. Deputy Speaker: Order. The hon. member has placed me in the same position in which I was a few days ago. He actually admits he is going to put the same material

on *Hansard* for the second time, which is pure repetition and should not be allowed under our rules.

Mr. Johnston (Bow River): No, Mr. Speaker, this is not repetition because I am going to read the names so they will know who they are. The submission was presented by the Alberta department of agriculture, the Manitoba department of agriculture—

Mr. Howe (Port Arthur): Mr. Speaker, they have been read into the record at least three times.

Mr. Johnston (Bow River): —by the—

Mr. Deputy Speaker: Order. The minister is rising on a point of order.

Mr. Howe (Port Arthur): My point of order is that the list of names has been read at least three times, I think twice by the hon. member who is now speaking.

Mr. Johnston (Bow River): Mr. Speaker, of course the minister's memory is not—

Mr. Deputy Speaker: Order. That is the point I raised a few minutes ago. The hon. member said quite distinctly that he intended to put this record on *Hansard* again. That is a straight admission of repetition, and I feel I am on quite sound ground when the hon. member himself admits that it is repetition. Many times remarks are phrased a little differently and it is very difficult for the chair to decide that a statement is repetitious, but in this case I feel I can rely on the words of the hon. member himself and say that this is repetition and it cannot be allowed to proceed.

Mr. Johnston (Bow River): Let me put it this way, Mr. Speaker. The departments of agriculture of the three western provinces were among those who made this submission to the government together with all the farm organizations and chambers of commerce. Despite the fact that the submission was made by all these people who are directly and intimately concerned with western agriculture, the hon. member for Westmorland (Mr. Murphy) says that the people of western Canada do not know what they want and therefore some of the eastern Liberal members are going to tell them what is good for them. I say some of the eastern Liberal members because the Liberal members from Alberta have not had gumption enough so far to get up and express themselves. We do of course have the views of Mr. Prowse, expressed on a television program, who said that he was strongly opposed to such legislation. Why is that so? Because he is right out in western Canada where he has to answer to the people. When these members go back to western Canada they too will have to answer to the agriculturists of western Canada.

Therefore when these people say that the farmers do not know what they want they certainly do not know what they are talking about. This organization asked very clearly for advances to farmers on grain in store on the farms. Can anybody say that they do not know what they are talking about? In their submission they differentiate between advances and loans from the bank. In the one case they stated that there should be no interest and then they go on to say there are other methods that could be used, including bank loans. In that regard they say that if bank loans are to be used in any event there should be a very low rate of interest, and they state emphatically that the current rate of interest on bank loans is too high. Certainly no one can say that the western farmers do not know what they are talking about. If anybody does not know what they are talking about it is members on the opposition—

Some hon. Members: Yes, yes.

Mr. Johnston (Bow River): I mean on the other side of the house. When I speak of opposition—

An hon. Member: A good admission.

Mr. Johnston (Bow River): —I mean those who are opposed to the interests of western agriculture. Make no mistake about that.

An hon. Member: Now you are changing.

Mr. Johnston (Bow River): Let me tell you what was said here the other day when the hon. member for Rosthern (Mr. Tucker) was speaking.

An hon. Member: We heard it the other day.

Mr. Johnston (Bow River): I interjected in his speech and asked him if he was differentiating—

An hon. Member: That gives us the right to interject too.

Mr. Johnston (Bow River): —between loans and advances. I want to say right here that whether or not I agree with the hon. member for Rosthern is not the point at issue. The point at issue is that he did have courage enough to stand on his feet and express his own thoughts. He expressed his thoughts in strong terms when he said that he did not even have to agree with the Minister of Trade and Commerce. There are not many on the other side of the house who would dare to get up and make such an assertion.

An hon. Member: Oh, rubbish.

Mr. Johnston (Bow River): Let me read what the hon. member said as found at page 629 of *Hansard* of January 27. He was speaking and I interrupted and said:

> Are you differentiating between advances and loans?

The hon. member for Rosthern replied:

> Advances are exactly the same as loans.

Let me interject there to say that the Minister of Trade and Commerce does not agree with that. At that time I said:

> The minister does not agree with that. He says everybody who asks for advances is a sabateur of the wheat board.

I suppose the minister will deny that too but that is a fact. The hon. member for Rosthern went on to say this:

> I am dealing with the question as I see it. The minister makes his own speeches. If my hon. friend thinks I have always got to agree with the minister, he is mistaken.

At least the hon. member for Rosthern had the courage to stand up and say there were times that he did not agree with the Minister of Trade and Commerce (Mr. Howe).

Mr. Hosking: Mr. Speaker, I wonder if the hon. member would permit me to ask a question?

Mr. Johnston (Bow River): Surely; go ahead.

Mr. Hosking: Does he suggest that the farmers from the eastern part of Canada should pay the interest on advances so that these farmers in the west can take the money on those advances and invest it in government bonds and draw interest on those bonds and that our farmers should pay the interest on them? Is that what he is suggesting?

Mr. Knowles: The hon. member forgot to include the old crack about trips to California.

Mr. Johnston (Bow River): That is really amusing, Mr. Speaker. I did not suggest anything at all of that nature but through you, I would like to ask the hon. member this question. Does he think that western Canada is going to derive any material benefit in reduction of freight rates by the deepening of the St. Lawrence river that is costing us over $300 million of which western Canada is paying its share? Surely we were in favour of it. We were in favour of helping eastern Canada. We have helped eastern Canada so much down through the ages that they do not know how to get along without us.

Mr. Hosking: Mr. Speaker—

Mr. Deputy Speaker: Order. May I remind hon. members on both sides of the house in the vicinity of the hon. member who has the floor that the microphones are open and it is extremely difficult at this end of the house to hear the hon. member who has the floor when the various members are trying to speak at the same time.

Mr. Johnston (Bow River): Thank you, Mr. Speaker, once again for that interjection.

Let me refer again to the remarks made by the hon. member for Westmorland, and may I say that I am sorry he still is not in his seat, although I gave notice that I was going to refer to him. It was during that same speech—and this is one of the reasons that prompted me to say these few words—that the hon. member had this to say as reported at page 970 of *Hansard*:

> For a while in this debate the hon. member for Bow River criticized the action taken by the government in guaranteeing these loans, and then he said that he would support it.

I want to stop there for just a moment. The reason why the members of this party supported the resolution was that there was a faint hope that some assistance would be given to agriculture in western Canada. Quite contrary to some of the opinions expressed on the other side of the house, we knew that agriculture was in need of assistance. We were in hopes that when the bill was brought down there would be provision for some material assistance in this respect.

The hon. member for Acadia (Mr. Quelch), who was speaking the other day, went still further and suggested to the government that we would support this second reading of the bill if they would assure us that this bill would be referred to the agriculture committee of this house so that western agricultural organizations would be able to come down here and present their case. The minister decided that matter in one word, when the Minister of Finance (Mr. Harris) spoke for him or on his behalf and said no, it would not be referred to the committee on agriculture and colonization. Why should the government be so greatly frightened to have this bill referred to a committee of the house? Why should they be so greatly disturbed lest these agricultural organizations in western Canada—

Mr. Deputy Speaker: Order. May I point out to the hon. member that this particular phase of the question was decided by a vote of the house last evening. I think he is now precluded from reviving that debate.

Mr. Knowles: Mr. Speaker, may I rise on a point of order and suggest that what was decided by a vote of the house was whether or not the subject matter of the bill be referred to a committee. The question which was asked, and which the Minister of Finance

answered, was that an assurance be given that the bill, after second reading, would be referred to a committee. Those are two different things. Your Honour is correct in saying that what we voted on last night should not be revived. But surely it is still permissible for members on this side of the house to ask that the bill itself be referred to a committee after it gets second reading.

Mr. Deputy Speaker: There may be some accuracy in what the hon. member has just said. I now have the resolution before me and I see that it states:

. . . but that the subject matter thereof be referred to the standing committee on agriculture and colonization.

That would appear to resolve the matter. However, I would ask the hon. member to refrain from reviving any debate on the resolution which has already been decided as of last evening.

Mr. Johnston (Bow River): Yes, Mr. Speaker. I will abide by your ruling there, as I always do. But I found it was necessary to make that reference because of the untrue statements which appear in *Hansard* in the speech of the hon. member for Westmorland. I thought it was necessary to make that correction.

Let me say also that we agreed to support the second reading of the bill provided it was sent to the agriculture committee. We have never been obstructionists. We have always tried to do that which was best for the interests of Canada as a whole, whether those subjects referred to eastern Canada or to western Canada. We could see no logical reason why the government should not refer this matter to the committee on agriculture and colonization. Certainly any other important question which arises in this house is almost always referred to a committee of this house. Yet on this occasion the government has definitely refused to send this matter to a committee. Without any explanation their answer has been no.

The hon. member for Westmorland went on to say this:

I know that in Alberta the farmers would prefer to have loans guaranteed at the chartered banks because they would sooner have real money than funny money.

That is the learned lawyer from Westmorland who styles himself an expert and who also has the courage to get to his feet and express his opinions about western Canada on behalf of the Liberal members from western Canada while they sit mutely in their chairs.

Mr. Hansell: He is a funny lawyer.

Mr. Johnston (Bow River): Let me tell you, Mr. Speaker,—and I am sure you personally know it—that there is no funny money involved as far as this party is concerned. This hon. member refers to the fact that the farmers of western Canada would rather have credit issued through the banks. This stuff that I have here in my hand is Bank of Canada bills. These so-called wisecrackers the other day said this is sound money. This is a $10 bill and it is signed by Coyne and Towers. This one I am holding is only a $1 bill and it is signed by Beattie and Coyne. These so-called lawyer experts say this is sound money. As a matter of fact, this is the funny stuff because it can be stretched ten to one.

Mr. Quelch: It is starting to shrink again.

Mr. Johnston (Bow River): As my friend the hon. member for Acadia (Mr. Quelch) just said, it is starting to shrink again. It expands and contracts. If there is anything funnier than that, I should like to know what it is. The banks who issue this stuff—of course the banks did not issue this; that is done by the Bank of Canada.

An hon. Member: Throw it away. I will pick it up.

Mr. Johnston (Bow River): This is issued by the Bank of Canada. But the chartered banks, when they get this stuff, can expand their credit ten to one. What have they as a guarantee? Nothing but the whole of the Dominion of Canada. They did not pay anything for that expansion. On the other hand, let me tell the house that the provincial government of Alberta wrote to this government and asked them for permission to issue these loans having the same guarantee as the chartered banks are getting under this legislation. The other day the Minister of Trade and Commerce stated that the government could not permit that under this legislation. When this money is issued by the chartered banks, the farmers are required to pay 5 per cent, and with a 100 per cent guarantee. This is a greater guarantee by far than the government gave the lending institutions under the National Housing Act. Then the government only guaranteed 25 per cent of the loss, but here the government guarantees 100 per cent and the farmer is charged 5 per cent on that money.

Mr. Hamilton (Notre Dame de Grace): On a point of order, Mr. Speaker, I believe it is customary when an hon. member refers to a document and quotes from it, as the hon. member has just done, that the document is tabled. Would the hon. member be good enough to table this document?

Mr. Johnston (Bow River): The hon. member for Notre Dame de Grace (Mr. Hamilton)

is speaking of ordinary letters or documents which are referred to in this house. This is a sacred document, so I think the hon. member is out of order when he suggests that I be obliged to table it. I shall put it in my pocket so hon. members will not bother me any more about it.

Mrs. Fairclough: Give a reasonable facsimile.

Mr. Johnston (Bow River): The government of Alberta asked permission of this government to have the same guarantee, not more but the same guarantee, as was given to the banks. They were going to loan this stuff that I just showed you with Coyne's name on it and Beattie's name on it. Every time the treasury branch makes a loan they have it backed 100 per cent by this stuff, and that is more than the banks do. Let us hear the self-styled Liberal lawyer expert expound that theory a little bit.

Now, Mr. Speaker, I am sure the farmers of Alberta would have greatly appreciated the opportunity of borrowing money from the treasury branch if the federal government had given the treasury branch the same guarantee as they are giving the chartered banks. Never within my knowledge has the treasury branch lent money to a farm organization or a municipality at a rate as high as 5 per cent. I am quite confident that if the same guarantee of 100 per cent had been given the farmers of Alberta would have obtained their loan at greatly reduced rate.

Mr. Howe (Port Arthur): May I ask my hon. friend a question? I am sure that the treasury branch of the Alberta government is making loans on grain. Can he assure me that they are made at less than 5 per cent?

Mr. Johnston (Bow River): These are guaranteed loans we are talking about, guaranteed by the federal treasury.

Mr. Howe (Port Arthur): The treasury loans are guaranteed by the province of Alberta. Is one guarantee any better than the other? Is that security not as good as a guarantee by the federal government? In other words, is one government able to guarantee and the other not?

Mr. Johnston (Bow River): Of course the minister knows that is just ridiculous because the provincial government has not got the same means of raising money as this federal government has. Hon. members in this house always like to point to Alberta and say, now since you have had a Social Credit government you are considered per capita the most wealthy province in all Canada. Of course we are, but that only happened in the last 20 years. We have got our wealth through the development of our resources and proper management, as has been indicated. Neither the federal government nor the chartered banks have to obtain their money in the same way. The chartered banks can expand their credit as high as twenty to one, but of course they only do it about ten to one.

Mr. Howe (Port Arthur): I think I am entitled to an answer as to what rate the government of Alberta does charge on grain loans?

Mr. Johnston (Bow River): What obligation has the province of Alberta to lend money to the farmers of Alberta when they, the farmers, are in dire circumstances as a direct result of the inefficient policies of this government. This government is responsible for the condition in which the agriculturists find themselves in Alberta. Wherever the province of Alberta has had to deal with these matters internally, we find prosperity. Wherever the federal government sticks in its hands, we find distress and need.

Mr. Howe (Port Arthur): I want to apologize for asking the hon. member such an embarrassing question. I know he would answer it if it were not so.

Mr. Johnston (Bow River): The minister is not asking me any embarrassing question.

An hon. Member: Why not answer it?

Mr. Johnston (Bow River): I want to say to him right here,—

An hon. Member: What is the interest rate?

Mr. Johnston (Bow River): —will he deny the fact that no one can export wheat except through the wheat board, which is under the jurisdiction of this federal government? If he can say that, let him answer it. He knows that what he is asking now is just nonsense. He is the one who controls the export of wheat, and that is why the farmers in western Canada find themselves in the dire circumstances in which they are now. The minister tries to get up and drag one of those red herrings across the road, but it just does not work. He had better consult this lawyer expert on western affairs who lives in New Brunswick, and get some advice from him, because it appears he is the one who is expressing the views of Liberal members from Alberta.

Mr. Studer: What is the interest rate?

Mr. Johnston (Bow River): We should support this bill were it not for the fact that it

is not a farm bill at all. It is a banker's bill. I do not know of any other legislation that has ever been introduced in this house that gave an industry that has a monopoly of a product a 100 per cent guarantee on its loans, as has been done in this case.

Mr. Knowles: Is the minister off to Florida?

Mr. Johnston (Bow River): The bank just could not lose under this measure. Show me another place where the banks can lend their money as safely as this one? It just does not exist.

When we find a bill like this, which is loaded against the farmer, we just cannot support it. Perhaps Liberal members from western Canada will support a bill which is so loaded against the farmer. We will see when the time comes. But certainly, we would not be in that position. Here is a bill that proposes to lend the farmer $1,500. Of course, that is misleading; it does not propose any such thing. Of course, hon. members on the other side have not read the bill, nor, I suppose, has the hon. member for Westmorland.

If I understand the bill correctly, and the minister who is not now in the house will correct me if I am wrong, if a farmer has sold wheat to the extent of $1,400, the amount he can get would only be $100. The farmer cannot receive more than $1,500 in total from the disposal of his crops. If he gets that $100 loan and makes one little slip, oversteps the regulation, he is subject to a fine of $500 plus a penalty which is the remaining balance to be paid. Could you say, Mr. Speaker, that that is not loaded against agriculture? Can you understand why the leader of the Liberal party in Alberta condemns it? Can you understand why some Liberal members in this house can be silenced by, and have as their spokesman, the all-wise hon. member for Westmorland (Mr. Murphy), who styles himself as a lawyer expert?

Mr. Deputy Speaker: Order. I am sorry to interrupt the hon. member but I am obliged to advise that his time has expired. Is the house ready for the question?

Mr. W. M. Johnson (Kindersley): Mr. Speaker, it is most understandable that I should be wholeheartedly in support of the amendment moved by my colleague, the hon. member for Mackenzie (Mr. Nicholson), since I on a previous occasion introduced an amendment which did not appear to meet with the approval of the government. It is obvious that the government members are becoming quite fed up with the debate on wheat. We are fed up with the legislation which the government is trying to introduce.

[Mr. Johnston (Bow River).]

The members of the government had an opportunity to rid the house of the discussion on a previous occasion when I moved my amendment and if adopted the pros and cons could have been argued and debated before the agriculture committee. Had they followed that procedure they would have had an opportunity to consider the opinions of the farm organizations in western Canada, and the private members of the government from other areas of Canada would have been in a position to appreciate the problems which are confronting western farmers.

On previous occasions I have referred to the protest meetings which took place in Saskatchewan with respect to the introduction of this legislation and the manner in which it was introduced by the government. It was apparent at the time this legislation was mooted that the government gave no thought to getting the advice of western farm organizations, since their decision was already reached before the conference was held in Saskatoon and before the organizations had an opportunity to present a brief to the government. I might say that the brief that the organizations at that meeting presented to the government was watered down at the insistence of certain organizations which are entirely sympathetic to the government.

Some of those protest meetings took place in my constituency. On the last occasion I spoke on this measure I did not have the time to point out the fact that many of those organizations held their meetings spontaneously, at the insistence of various leaders within the community, who felt that a rank injustice was being perpetrated, and they did not want the whole procedure to go unnoticed and not be granted an opportunity to express an opinion. The Saskatchewan farmers' union played a very significant part in giving as much advice and assistance to these meetings as they could so that the farmers could be advised of the circumstances surrounding trade, circumstances that are resulting in the point directly related to the bill, namely, the financial difficulties of farmers. One of these meetings was held in my own community of Kindersley, where they had the good fortune of having the services of professor K. A. H. Buckley, of the University of Saskatchewan. After following such a procedure, after having information on a non-political basis, the farmers at that meeting, which was attended by over 100, passed a resolution to the effect that the emergency bank loans policy is inadequate for many producers. They requested interest-free cash advances on the basis of 6 bushels per specified acre. Similar

meetings were held at Swift Current, Mr. Speaker, and I understand the hon. member for Swift Current-Maple Creek (Mr. Studer) was in attendance at one of those meetings. I would suggest that in this debate he take the opportunity to outline the resolution which was passed at that grain marketing conference, since it is the people whom he represents who made the decision at that meeting. An obligation rests squarely on his shoulders to present their views before this house.

Meetings were also held at Kerrobert, Unity and Wilkie in my constituency. I may say that the resolutions from each meeting were very similar indeed. This can only mean one thing. It means that the farmers of western Canada have a unanimity of thought on this matter which perhaps they have not had on any other matter except on the insistence on the orderly principle of marketing through the Canadian wheat board.

We will find, Mr. Speaker, that the situation which originated at the time that the problem developed immediately after the harvest of 1955, is growing continuously worse. These protest meetings are still taking place in an effort to bring to the attention of the government the true situation which exists in western Canada, and which is confronting the people of that area. I am informed that even today farmers are making an effort to plow out their roads to town so they can meet together and discuss their problems relative to their financial position and their inability to market any grain at all.

As hon. members may know, we have had one of the worst winters in the west that we have had for many years. The snow and cold conditions are creating serious hardships among the farmers because of the added expense they must go to in an effort to keep their lines of communication open to get to town to buy their normal groceries, to have fuel delivered to their houses and to maintain the other aspects of daily living. The storm of December 12 was very significant. Along with a fairly heavy snowfall, the snow drifted around the farmsteads and buildings, and hon. members from other parts of Canada must appreciate what a great problem it must be to have to spend $100, $200, and much more than that in many instances, to keep the roads open so that one can carry on his normal day-to-day living, if not in comfort, at least in the position where he can get to market and get supplies periodically.

With that background information it is significant to note that farmers are today plowing their roads so that they will be in a position to discuss the very problem that we are discussing here today. They are very disturbed, as they plow their roads to town, to pass by the piles of wheat which are left on the ground. It is particularly disturbing to them, Mr. Speaker, because they realized at the time they piled this wheat on the ground it was unsafe, it was unsatisfactory, but they had no finances to build any storage. Their credit was limited. Anyone from any part of Canada who has done any building realizes that the amount of money which is required to build any kind of a structure to house grain is quite large. Because of the backlog of debts which the farmers had already incurred it was impossible for them to incur additional expenses in building farm storage. It is therefore most heartbreaking for them to drive by these piles of wheat which are being consistently cast asunder by the winds, because a pile of wheat is a conglomeration of small kernels which can be readily lifted and blown away to be lost forever, and the farmer sees the return from his year's labour gradually shrinking before his eyes. In addition to that he will find that in the spring as the snow melts it settles around the pile of wheat which he has not had an opportunity of moving and his loss becomes greater.

Then as he goes by those piles of wheat on his way to town he realizes that there are 58 million bushels of storage space available in the terminal elevators. He recalls on December 7 the Minister of Trade and Commerce (Mr. Howe) stated at Edmonton that there were 100 million bushels of space available in the terminals. His exasperation then reaches the breaking point. He sees his wheat being drifted about and destroyed by the wind and he knows that there are 58 million bushels of storage space available. He knows that if the administration of this government had been efficient in all its aspects much of that wheat would be safe in the terminals rather than wasting away on the ground.

In view of the position of leadership which this government likes to take in terms of international affairs, it is a tragic contribution which they are making toward the support of underdeveloped and starving countries of the world when they let this wheat, which we know we will need in the future, be spoiled and rotted on the farms of western Canada when there is space available in the terminals.

The hon. member for Bow River (Mr. Johnston) referred to the speech made by the hon. member for Westmorland (Mr. Murphy). I agree that the hon. member for Westmorland was ill advised to start off with the line of debate he did when dealing with a subject with which he was so unfamiliar.

I must say that I do give credit to some of the government backbenchers who have come to me personally and asked for my views on the situation of the farmers in western Canada. Those hon. members have an appreciation of the problems which exist in western Canada.

We cannot for one minute assume that farm conditions in other areas are similar to Saskatchewan. There are many factors which must be considered and a comparison of similar circumstances is most difficult. I suggest to members of the government that they would indeed be well advised to invite the western farm organizations—I am thinking of the Saskatchewan wheat pool, the interprovincial farm union council and other prairie pools—to send representations down here to discuss the problems with them so that they may become acquainted with those problems.

The attitude of Saskatchewan Liberals is most unreliable and it is because of that unreliability that many Ontario and maritime members have spoken to me. I appreciate that fact and I appreciate the attitude they have adopted after I have discussed the problem with them. Many times they have said to me that they did not realize that things were that bad, that a farmer might have been able to sell only 300 bushels of grain when he had 5000 bushels in store on his farm.

I would point out that one of the inequalities which exists is in the distribution of box cars among the marketing points in western Canada. It is pointed out in the wheat review that there are many marketing points in Saskatchewan which are still on the initial unit basis. That means that the farmers at those points are allowed to deliver only 300 bushels of wheat. At the same time it is significant to note that a number of points are on the 3-bushel quota.

This indicates to me that the transport controller has not been paying close attention to the problem. There is a dispatch in today's Montreal *Gazette* which indicates that the transport controller has stated that the grain will be moved before the Canadian wheat board has made an estimate as to how much grain it will want moved. According to this article the controller stated that there is no shortage of box cars holding up prairie grain shipments.

If there is no shortage of box cars holding up prairie grain shipments then the Minister of Trade and Commerce should be severely criticized for allowing a situation to arise whereby there are 58 million bushels of storage space available in the terminals. The Minister of Transport (Mr. Marler) has denied any responsibility for filling up the terminals, and the Minister of Trade and Commerce has stated that the moving of the wheat was not his responsibility. Those two ministers would be well advised to get a little closer together and give some thought to the position of the farmers of western Canada who are supposedly being served by the transport controller.

It is fairly obvious that members on the government side who are not conversant with this problem are creating a serious break in relations between western and eastern Canada. Their determination to prevent the introduction of any legislation which would prove to be of material assistance to western farmers is doing much to undermine the co-operation which must exist between all farmers of Canada if we are to achieve our fair share of the national income.

I do not think you will find many farmers on the western plains who will begrudge the freight rate assistance being provided for Ontario farmers, who will begrudge the assistance given to the maple sugar producers to purchase aluminum equipment, or who will begrudge other forms of direct and indirect assistance which have been given to the farmers in this area. I think also that eastern farmers generally have a great deal of sympathy for the western farmer.

I am making the statement now that if the government members continue to try to make a breach between the farmers of Canada, if they continue to be ignorant of the conditions which exist in western Canada, there can be only one answer or only one solution. I have heard this discussed many times during the last few months in Saskatchewan.

The people of western Canada are becoming fed up with the attitude of the government in denying them the South Saskatchewan dam and other things which would improve conditions in western Canada, so much so that they are considering marching on Ottawa. I must say that some of them are thinking in terms of secession.

I submit it is a pretty tragic indictment of the government of Canada when one section of the country realizes that it has been ignored, that it can no longer expect to get consideration from the government. It may be that if this Liberal government continues in power for too many years the only alternative will be for the western provinces to devise their own form of legislation so that they can be treated as they wish to be.

The challenge is out. I do not think any hon. member of this house will agree that the work done many years ago to bring about a national Canada should be so easily wrecked

by the failure of Liberal members from the prairies to present to their colleagues the conditions which exist in western Canada, present them with insistence in their party caucus and before this parliament of Canada. The challenge rests with them and I hope we will not be disappointed.

Mr. H. A. Bryson (Humboldt-Melfort): Mr. Speaker, I am sure it has been a rather disappointing experience to the government, and particularly to the Minister of Finance, to find that, in spite of revisions in the rules of procedure, legislation such as we have before us today is only inviting lengthy discussion.

We are discussing this at length for the very simple reason that the government has failed to appreciate and understand the problem that is involved. Certainly it will be as lengthy a discussion as it is possible for us to make it.

I rose primarily to deal with one or two of the questions posed by the parliamentary assistant to the Minister of Trade and Commerce, but before I deal with them I should like for a moment to say something about the very ill-considered remarks made a few moments ago by the hon. member for Wellington South (Mr. Hosking). The hon. member for Wellington South proved beyond question something that has been cropping up in this debate ever since it began—that the eastern Liberal members have been led to believe that this problem is not as acute as we would like to make out it is. They have been misinformed to the point which prompted the hon. member for Wellington South to make a most irresponsible statement in this house this morning. He asked the question, "Do the farmers of western Canada expect the taxpayers of eastern Canada to subsidize the western farmer in connection with cash advances?" I should like to point out to him and to all other members from eastern Canada—

Mr. Richardson: May I ask the hon. gentleman a question?

Mr. Bryson: Yes.

Mr. Richardson: Thank you very much. How many members of the C.C.F. party are presently in the house?

Mr. Martin: Only two. That shows their real interest in this matter.

Mr. Bryson: There are as many farmers in the C.C.F. party present as there are Liberal farmer members present.

Mr. Dickey: His speech has driven his own supporters out of the house.

An hon. Member: Where is the minister?

Mr. Martin: Where is the leader of the C.C.F. group?

Mr. Bryson: I want to deal for a moment with the question posed by the hon. member for Wellington South. This is not a local problem. It is a national problem. I think it is high time the Liberal members from eastern Canada faced up to the fact that it is a national problem. This morning the hon. member for Mackenzie (Mr. Nicholson) proved in his remarks that this is a national problem. It is time hon. members appreciated that fact. Here is what is going to happen, as pointed out by the hon. member for Mackenzie. We in western Canada have tremendous supplies not only of feed wheat but of feed grain of every other description. What are we going to do with it? The farmers are going to produce livestock in such a way that no farmer in eastern Canada will be able to compete with them.

Mr. Hosking: Why have they not done so before?

Mr. Bryson: We were getting rid of some grain before.

Mr. Hosking: Because they were making so much money from their wheat they did not have to raise livestock, like the eastern farmers, to make a living.

Mr. Deputy Speaker: May I remind hon. members that the hon. member who has the floor may not be interrupted without his consent? May I also remind the hon. member who has the floor that possibly he would not invite so many interruptions if he adhered more closely to the principle of the bill?

Mr. Bryson: I do not mind interruptions of the type I am getting, because they only prove my point that this government has completely misrepresented the problem with which we are dealing.

Mr. Hosking: May I ask another question?

Mr. Bryson: Yes.

Mr. Hosking: Would you suggest to me what our eastern farmers think of the government of Saskatchewan for not being willing to spend $15,000 for butter instead of margarine?

Mr. Johnston (Bow River): The same thing as they—

Mr. Deputy Speaker: That question will, of course, not be answered. We are dealing with Bill 82, and I would like hon. members to adhere to the principle of this bill.

Mr. Bryson: I am very serious about this. I am not saying this just for something to say. I am telling the members of eastern

Canada that the situation is serious. I realize it is physically impossible for the farmers in eastern Canada to compete in the livestock business with the people in western Canada, and there is a very simple reason why they cannot. We have tremendous stocks of grain. That is the chief reason. We are going to go into livestock production. I am not acquainted with what has been going on in the last two or three months as far as the people in my neighbourhood are concerned on this question.

Mr. Hosking: I am concerned about the farmers in my area.

Mr. Bryson: I very reluctantly bring this case up as an example. I can tell you that according to the last letter I had from my farm at Tisdale, they are going to breed 100 sows this winter. That gives you one indication. It is useless for a farmer to go into the livestock business and merely raise a few dozen head if he has 15,000 or 20,000 bushels of feed grain he wishes to get rid of. He has to go into the livestock business on a much bigger scale. This should be a sinister warning to the farmers of eastern Canada that, if this government is not going to accept this responsibility to the western farmer, the whole Canadian agricultural economy is going to collapse because of that fact.

Mr. Hosking: Your farmer will certainly do some work for a change.

Mr. Bryson: That is another irresponsible statement.

Mr. Hosking: You will find out, and so will he.

Mr. Bryson: Mr. Speaker, I would like to mention now the reason why I rose primarily to answer the question. I should like to say, before I leave this matter of the eastern farmer, if the representatives of the Liberal party who are representing farmers from farm constituencies in the provinces of Ontario and Quebec would get up in this house and make the same kind of fight for them as the members from the west have made.

Mr. Hosking: We would get as little done as you over there.

An hon. Member: What are you doing?

Mr. Bryson: You have done nothing. You just think you have. I rose to answer the question that was posed yesterday by the parliamentary assistant. He said that this bill was being accepted by reputable farm organizations right across western Canada. He quoted two or three very dubious organizations. He mentioned the Alberta federation of agriculture, I believe, and he mentioned Mr. Brownlee's organization, which I again say is very dubious, but he did not mention the six or ten organizations which came out with forthright statements in favour of cash advances through the wheat board. I wonder how many members across the way have received letters of condemnation and have received signed petitions from farmers—I am speaking, of course, of the Liberal members from the west—condemning this piece of legislation. I have several in my file, and I would like to put on the record a typical one from a farmer in Saskatchewan in connection with this piece of legislation, because I think it typifies the fundamental thinking of western farmers.

Mr. Deputy Speaker: Order. The hon. member has indicated he intends to place on the record an opinion with regard to this legislation. I think the hon. member will agree that Mr. Speaker has consistently indicated that such a procedure is not in order.

Mr. Bryson: Well, I accept your decision.

Mr. Argue: Just refer to it.

Mr. Bryson: He says that the legislation is worse than useless. I do not know what else he could say about it. We have heard a lot of statements during the course of the debate that cash advances are absolutely not feasible in any shape or form. I should like to point out that the wheat board has already established a principle very close to cash advances in that they are now accepting delivery of grain without any hope of an immediate market for it. They say that they will accept grain when there is room in the elevator. It is placed in the elevator and there it stays. Why can they not go to the farmer and say: We will pay you and you keep it in your elevator. What would be the result? We would save millions and millions of dollars in storage charges. I am not critical of the action but the people of Canada are going to be asked to pay a minimum of $30 million in storage charges. That would have been unnecessary if the government had put forward the proposition of cash advances, paid the farmer for the grain and left it in the farmer's granary. Such action would have saved the taxpayers of the country some $32 million a year.

Mr. Studer: Interest free.

Mr. Blackmore: Why not?

Mr. Bryson: In the face of what I have just said I think that to argue that cash advances are not feasible is rather ridiculous.

Mr. Studer: Interest free.

Mr. Bryson: The hon. member for Swift Current-Maple Creek (Mr. Studer) is trying to prove he is just as stupid today as he was yesterday.

Mr. Studer: I am not stupid. You cannot teach me anything.

An hon. Member: Just a vacuum.

Mr. Bryson: The government is relying on scarcity to relieve them of the burden with which they are confronted today. They are saying the only way the situation is going to be remedied is by a series of crop failures. Once again that is a very false premise upon which to establish any kind of realistic agricultural policy. A policy of scarcity is a criminal policy. It is an immoral policy. Of course, as has been said before, and it is worth repeating, the most potent arguments against acceptance of the legislation have been the arguments made by the Minister of Trade and Commerce (Mr. Howe). I should like to quote one or two things he has said to show exactly what I mean. As found at page 127 of *Hansard* the minister had this to say.

Mr. Deputy Speaker: Order. I have occasion to remember that page from yesterday. That is a page in *Hansard* in another debate, the debate on the address, and I do not think the hon. member should refer to another debate of the same session.

Mr. Bryson: I can refer to it without reading it. In this part I have in my hand—

Mr. Deputy Speaker: Order. Perhaps the hon. member misunderstood me. I do not have the rule before me but my recollection of the wording is that a member must not refer to another debate of the same session on the same subject.

Mr. Hosking: You have been out of order so often you do not know when you are in order.

Mr. Bryson: I will refer generally to the remarks that were made. First of all he said that there was no need to have the wheat board handle the matter because we have so much wheat that the farmers do not know what to do with it. Then the Minister of Finance (Mr. Harris) made the statement that there are many other reasons involved in the question besides the one mentioned by the Minister of Trade and Commerce. In any case we are dealing with a bill which is of no consequence whatsoever. If the government had wanted to do something worthwhile they would have done some hard thinking about the matter, but the cabinet has given out misinformation to the private members of the Liberal party and they are now prepared to support the decision of the cabinet. The members of the cabinet are tired. They are so bankrupt of ideas that the best they can do is to go out to the old Liberal boneyard behind the buildings where they bury things they do not like and which are of no use to them, things they would like to forget like the Liberal promises at election time. The unsuspecting new members of the Liberal party go with them and they dig up this old carcass of a bill which they buried in 1951 after it died from pernicious anaemia in the same year. After it is exhumed and they take a look at it it does not look very good so they sprinkle it with a little bit of tinsel by reducing the interest rate by one-half of one per cent and making the bank guarantee larger. Then they present it but they have not fooled anybody because regardless of all the efforts they made to dress it up it is the same old decrepit carcass it was in 1951. Therefore, Mr. Speaker, we are going to continue to reject this legislation. May I call it one o'clock?

Mr. Johnston (Bow River): On a question of privilege, Mr. Speaker, when I was speaking a while ago the Minister of Trade and Commerce interrupted me to say that my paraphrase of remarks made by him some time ago was incorrect. I stated at that time that it was always my intention to be able to back up everything I say and that if I had inadvertently misquoted the Minister of Trade and Commerce I would withdraw my remarks immediately.

I have looked up the references now and I should like to put them on the record. First of all I said that the Minister of Trade and Commerce had said on other occasions that there were very few farmers who would take advantage of this legislation. He objected to that statement. I think the words he objected to most strenuously were the words "very few". I claimed then that I was right and I want to put the references on the record for the minister's guidance. I am sorry he is not here.

An hon. Member: Page, please.

Mr. Johnston (Bow River): At page 129 of *Hansard* of January 16 he said:

> A certain number of producers have found themselves in difficulty this past season, and the purpose of the guaranteed loan was to relieve those smaller producers.

I contend, Mr. Speaker, that when the minister said that a certain number of producers have found themselves in difficulty it meant that there were very few who had found themselves in difficulty.

Mr. Deputy Speaker: Order.

Some hon. Members: Oh, oh.

Mr. Johnston (Bow River): Just one minute.

Mr. Deputy Speaker: Order. The hon. member is quite in order if he wishes to refer to the page and read the remarks, but in my opinion he is now introducing a matter which

is purely debatable. I think he has sufficiently made any question of privilege which is proper under the circumstances. Do I understand that the hon. member for Humboldt-Melfort has concluded his remarks?

Mr. Johnston (Bow River): Mr. Speaker, on a question of privilege, that is only one instance and that is the weakest. I want to put more on the record which are irrefutable so far as I am concerned. He also had something else to say at page 129. There are three references I want to give.

Mr. Deputy Speaker: Order. It is not a true question of privilege and I must rule accordingly. May I also point out to the hon. member that it is one o'clock and that I am leaving the chair.

Mr. Johnston (Bow River): Mr. Speaker, am I to understand that I will be able to carry on this question of privilege after one o'clock?

Mr. Deputy Speaker: I am unable to see that there is any proper question of privilege raised in the hon. gentleman's remarks to date. During the lunch hour I shall be glad to read the blues of *Hansard* and, if I come to a different conclusion, I shall be glad to inform him accordingly.

Mr. Johnston (Bow River): Otherwise, I shall be obliged to speak again after the house resumes.

Mr. Deputy Speaker: Do I understand that the hon. member for Humboldt-Melfort (Mr. Bryson) has resumed his seat or did he wish to call it one o'clock?

Mr. Bryson: I wish to call it one o'clock, Mr. Speaker.

At one o'clock the house took recess.

AFTER RECESS

The house resumed at 2.30 p.m.

Mr. Johnston (Bow River): On the point of privilege that I asked to raise just before the lunch hour, Mr. Speaker, have you given it further consideration? May I go on?

Mr. Deputy Speaker: During the lunch hour I obtained the blues from *Hansard*. The hon. member for Bow River rose on a question of privilege which resulted from an interchange between himself and the Minister of Trade and Commerce. During the course of the remarks of the hon. member for Bow River, he was citing what he considered the minister had said on previous occasions. I recall that the minister rose and requested the hon. member for Bow River not to paraphrase but to quote from the *Hansard* record.

On the question of privilege which the hon. member raised before one o'clock, he made the following remarks: "First of all I said that the Minister of Trade and Commerce has said on other occasions that there were very few farmers who would take advantage of this legislation. He objected to that statement." The hon. member's question of privilege was then to read the remarks of the minister from page 129 of *Hansard* of January 16, 1956, as follows:

> A certain number of producers have found themselves in difficulty this past season and the purpose of the guaranteed loan was to relieve those smaller producers.

The hon. member for Bow River then went on to say: "I contend, Mr. Speaker, that when the minister said that a number of producers had found themselves in difficulty it meant that there were very few who found themselves in difficulty."

At this time I interjected and indicated that the hon. member was then embarking on what I considered a debatable matter and not a true question of privilege. The hon. member rose and said that this was only one instance and was the weakest. He wanted to put more on the record which were irrefutable so far as he was concerned. I presume this is the same type of reference and I must rule that this is not a true question of privilege but rather a matter for debate.

Mr. Bryson: Just before we rose at one o'clock, I said something about the storage bill which is on the order paper following the one with which we are dealing. I mentioned this as a piece of progressive legislation for which the government is very glad to take credit.

Mr. Howe (Port Arthur): Is my hon. friend talking about another bill on the order paper? Surely he should confine his remarks to the bill under discussion.

Mr. Deputy Speaker: As a matter of fact, I have not been able to hear what the hon. member was saying. Perhaps it is the fault of the amplifying equipment or perhaps the hon. member might speak a little louder.

Mr. Bryson: I mentioned that the storage bill is a piece of progressive legislation. The government is very happy to take credit for it. But they are very careful not to take credit or accept responsibility for the lowest farm income this country has ever experienced. They are very careful also to take no credit whatever for policies which have resulted in the highest cost of living we have ever had in this country.

The farm union delegation is now in the city and what they have to say concerning the value of this piece of legislation with which we are dealing only confirms the convictions that have been held by a great many of us. It is a very sad commentary on conditions when a man has a piece of land which only two years ago was sold for $38,000. The man who bought it placed improvements on it to the value of $5,000, and is now offering it for $20,000 yet no one will take his offer. When he tried to get a mortgage on it for any amount, he was refused everywhere. I think that is a fairly common thing. I know areas in the west where 80 per cent of the farmers are now engaged in some other occupation in order to maintain a miserable standard of living.

When we have conditions such as these and at the same time find the granaries full of wheat, I think it is a very serious situation. Certainly when the Minister of Agriculture (Mr. Gardiner), as he has done on every occasion, maintains that inventories of grain represent a farmer's net worth, that too is a faulty premise on which to establish any sound foundation for this legislation. I venture to say that possibly 50 per cent of this grain will never be placed in an elevator because of spoilage. In conclusion, may I say once again on behalf of the farmers of my constituency who have sent me down here with express instructions to resist this legislation at every opportunity, I once again take this opportunity of doing just that.

Mr. J. G. Diefenbaker (Prince Albert): Having received the return which was tabled today by the Department of Trade and Commerce—

Mr. Howe (Port Arthur): By the Secretary of State.

Mr. Diefenbaker: —by the Secretary of State on behalf of the Department of Trade and Commerce—

Mr. Howe (Port Arthur): No, on his own behalf.

Mr. Diefenbaker: I wish to refer now to a matter to which general reference has been made heretofore, and that is the general demand in the prairie provinces for cash advances on farm-stored wheat. The question that was passed as an order for return was as follows:

> For a copy of all resolutions supporting the demand for cash advances on farm-stored wheat which have been received from western farm organizations and other public bodies, by the Prime Minister and any of the ministers of the government, or officials of the government, since the 15th day of August, 1955.

I have this return before me which tells the story. It indicates that more than 500 western farm organizations, municipalities and the like, have petitioned this government on behalf of what they demand, namely cash advances on farm-stored wheat.

One of the resolutions here is from Prince Albert and it is dated October 6, 1955, and signed by W. C. Bliss, Junior, subdistrict director of the Saskatchewan farmers' union, and represents the viewpoint of farmers generally in western Canada. After giving a general summary of the situation and the financial position in which the farmer finds himself, the resolution reads:

> The most pressing problem is the shortage of cash, and we strongly urge the government to make cash advances on farm-stored grain in an amount not less than 85 per cent of the present initial payment.

It deals also with other matters and other demands of western farmers and ends up this way:

> We urge that parliament be reconvened to take action . . . prompt and courageous action.

Now, this file has not shown all the returns because many of the resolutions were identical one with the other, but passed by more than 500 organizations throughout western Canada. It is for that reason I find it so difficult to understand why western Liberal members are adopting the attitude they are in this house on this matter. I have a tremendous regard for the hon. member for Swift Current-Maple Creek (Mr. Studer). He has a scintillating wit and the power to make parliament really understand problems. I think he spoke with such power this morning when, in an interjection with an hon. member, he said in effect, in reply to the remark that he was stupid: "I am stupid because you cannot teach me anything". Well, in that statement I think the hon. gentleman seemed to be speaking generally, in reference to this particular matter, for those members of the Liberal party who represent constituencies in western Canada.

Some hon. Members: Order.

Mr. Martin: Order.

Mr. Diefenbaker: I do not know why those hon. gentlemen take the stand that they do.

Mr. McIlraith: The hon. gentleman—

Mr. Diefenbaker: I am speaking to those from western Canada, not the wheat farmers from Ottawa.

Mr. McIlraith: No, you are addressing the house.

Mr. Diefenbaker: I am dealing with the situation in the west and with income of agriculture generally.

Mr. McIlraith: You accused the Liberal members of certain characteristics. Maybe

you are the one who suffers from that characteristic, and not the ones you accused.

Mr. Diefenbaker: I simply say to my hon. friend I do not know what he is saying. I know it has nothing to do with the problem with which I am dealing, and as the cuckoo is in June, he is heard but not regarded.

I say to my hon. friend, in the last couple of days the farmers' union has made a submission and has set out in very careful detail the position of the gross and net farm income for all of Canada between 1951 and 1955, and also the gross and net income in the last several years. These statistics indicate the serious cash situation in which the farmer finds himself.

As far as Canada in general is concerned, starting with 1951, the gross and net income among farmers is set out as follows: In 1951 it went down by 10·72 per cent; in 1953, by 21·1 per cent; in 1954, by 48·2 per cent. The figures for 1955 will indicate a further reduction in net income. Net income, of course, is based on a relative comparison between gross income and the cost that the farmer has to incur in order to operate his farm. These costs are rising.

I now come to the gross and net farm income for the prairie provinces for the same period. In 1952 the net income was down by 3·13 per cent; in 1953, by 21·6 per cent; in 1954, by 66·64 per cent. The final 1955 figures are not yet available, but they will indicate a further decrease. A 66 per cent decrease in net farm income in a matter of three or four years is one which explains as clearly as possible the need of cash. If these figures were based upon the purchasing power of the dollar the condition of affairs would be even more serious than is apparent from the simple percentage statistics that I have placed before you, Mr. Speaker.

Farmers generally—and I say this cannot be contradicted; the return tells its story—want cash advances, and everything has been done to prevent their getting them. The minister has threatened; he has endeavoured to intimidate, all with a view to securing the passage of this bill, regardless of the demands of the western farmers. In one instance he has used a stick. I referred yesterday to a speech he made recently in which he enunciated that new principle of parliamentary freedom. On the occasion of the 20th anniversary celebration in honour of himself and of the Minister of Agriculture the stick was used, the toe-the-line philosophy. On the other hand, the carrot is held out as well, the promise to the farmers of western Canada that if this legislation is passed, then and then only will the government give consideration to making further advances or a distribution of moneys on account of 1954-55 pool.

[Mr. McIlraith.]

Mr. Howe (Port Arthur): Mr. Speaker, may I point out to my hon. friend that either today or yesterday a distribution was made to the farmers of western Canada. Perhaps he will withdraw that statement.

Mr. Diefenbaker: I am just mentioning what the minister said the other day; that is all.

Mr. Howe (Port Arthur): Again I am misquoted. If I said something the other day perhaps my hon. friend will read it from *Hansard*. Hon. members think they can rise in their places and say: "The Minister of Trade and Commerce said so and so" whether he did or not. My hon. friend knows that he is not quoting accurately.

Mr. Diefenbaker: I am quoting accurately —I am not quoting; I am paraphrasing what the minister said.

Mr. Dickey: Misrepresenting.

Mr. Howe (Port Arthur): Misrepresenting.

Mr. Diefenbaker: If the minister says what I say is not correct all he has to do is to follow me and indicate that it is not. What I am saying is the fact. He held out a threat, a whip, a stick, accompanied by a carrot.

Mr. Howe (Port Arthur): May I ask, am I not permitted to say whether I did say it or not? I know what I said. My hon. friend is quite capable of quoting accurately. If he will take the trouble to do so, let him turn up *Hansard*.

Mr. Diefenbaker: All right, I will turn to *Hansard* just as soon as I sit down, and indicate the page, because the minister so often forgets what he said.

Some hon. Members: Oh, oh.

Mr. Diefenbaker: Yes.

Mr. Hosking: Distorted.

Mr. Howe (Port Arthur): Weasel words.

Mr. Diefenbaker: Oh, my hon. friends interrupt. If we had the kind of domination the minister would like in this house, hon. members would be merely puppets in a puppet show. That is his attitude toward it.

Mr. Howe (Port Arthur): We have the best puppet show right now.

Mr. Drew: You certainly have.

Mr. Diefenbaker: I agree so heartily with that interruption.

Mr. Dickey: In other words, the shoe fits.

Mr. Diefenbaker: Turning members of parliament into pantomime puppets, whereby they are threatened with what will happen,

an election will take place, threatening parliament, trying to steamroller this thing through when farmers on the prairies say: "We do not want this type of legislation; we do not want to be placed in the position of having to pay interest on what we have already earned". What about the legislation? Well, as the Leader of the Opposition said yesterday, it is the counterpart of the legislation of 1951.

Mr. Howe (Port Arthur): Read where a man has to go to jail.

Mr. Diefenbaker: Well, now—

Mr. Howe (Port Arthur): Read from the legislation where a man has to go to jail.

Mr. Diefenbaker: Mr. Speaker, the right hon. gentleman must have had somebody else draft it because he does not know the bill. I will read the section.

Mr. Deputy Speaker: Order.

Mr. Dickey: Wait until we get into committee.

Mr. Deputy Speaker: May I remind the hon. gentleman that he may not read the section.

Mr. Dickey: He did yesterday.

Mr. Diefenbaker: Mr. Speaker, you saved him that time. I will whisper to him "section 9". I come back to 1951 when the legislation was known as the Prairie Grain Producers' Interim Financing Act. That act was very similar, almost a counterpart except that the present legislation goes further and actually in effect places a yoke about the necks of western farmers. I quote from the 1951 legislation:

> Where a person is convicted of an offence under this section there shall be imposed on him, in addition to any fine, a penalty equal to such amount of any guaranteed loan made to him in respect of which the offence was committed as has not been repaid by him, with interest thereon to the date of the conviction, and the penalty shall be paid to the bank—

If the farmer is proceeded against and fails to pay his fine, the alternative is jail. In addition to the fine there is also a penalty of the amount of the loan. I say that that type of thing is disgraceful legislation. It is actually providing for imprisonment for debt and it is adding to all the security of the Bank Act and the further security that is provided in that a farmer may not sell except when he makes payment and to the degree provided for the making of payment. If he commits an offence he immediately finds himself in the position of being subject, first to a penalty up to $500 and then in addition to be ordered to pay as a penalty the amount that he owes.

If he has made a misleading statement, if he does not get cash and is unable to pay the amount of the penalty, the amount of the loan, there is only one alternative open to him, prison. That is provided by the section in question.

Mr. Studer: They have that in Saskatchewan if you do not pay.

Mr. Diefenbaker: I am not going to disagree with my hon. friend. It just shows the degree to which this government is imitating the socialists in Saskatchewan with legislation such as this.

Mr. Coldwell: That was on the statute books before the C.C.F. were elected.

Mr. Diefenbaker: This is a private argument between the C.C.F. and my hon. friend and I am simply an onlooker. I pass on to this legislation of 1951. In 1951 conditions were such that legislation similar to the present act was placed upon the statute books. We said that insufficient had been voted—$20 million was the amount—and ever since the right hon. gentleman has pointed out to us that the legislation was not used. He asked me to quote, and I shall quote what he had to say on November 18, 1953, as reported on page 128 of *Hansard*. At that time he was giving the reasons why advances on the farm, as he called them, were not necessary. I quote:

> It will be understood, then, why the government considers that the need for farm advances has not been proven.
>
> The government also had before it the results of the legislation approved by parliament in 1951 for advances to producers of grain on farms. Hon. members will recall the circumstances of that year. A very large crop had been grown but a great deal of it was tough and damp and a very large area was under snow and could not then be harvested. Faced with this situation, which was certainly very much grimmer than now prevails, the government introduced a bill to provide short-term advances to farmers. The banks were to be guaranteed against losses on loan advances up to $20 million on both grain in storage and grain in the fields.

After a few pleasantries directed at myself—

Mr. Howe (Port Arthur): Better read it all, do not skip anything.

Mr. Diefenbaker: The right hon. gentleman had this to say:

> I regret to say, however, that even though advances under this 1951 legislation were very limited and one might have thought that the risk was negligible, over $40,000 is still outstanding and the Department of Finance has paid losses to the banks in excess of $11,000. These results must cause anyone to pause who advocates that the wheat board or the treasury should become involved in a widespread system of advances on farm-held grain.

He said the legislation did not work, that it was worthless, and then in order to show how worthless it was he duplicates it in 1956 and asks the farmers to accept that which he said was not successful in 1951. Is it any wonder that in 1951 the farmers did not accept that kind of legislation? They were not looking for passports to jail, they were looking for advances which would make available to them the necessary money to pay their current expenses.

What happened—I say this with great respect—to the hon. member for Rosthern (Mr. Tucker) a few days ago simply summarized the attitude of western farmers everywhere. As a matter of fact, if I might be allowed to paraphrase—

Mr. Howe (Port Arthur): Something more.

Mr. Diefenbaker: My right hon. friend will understand this because he was an American until recent years. Paraphrasing Emerson I would say: Here once the embattled farmers stood and fired their shots heard around the west. That represents the attitude of western farmers everywhere. They are demanding that cash advances be provided. The record before us indicates the extent of that demand.

If the legislation did not work in 1951 why embalm it in another piece of legislation which is almost a photographic copy except for the amount which the banks may lend and also the extension of the penalties provided in 1951. The reason given by the minister in 1953 was that this kind of thing could not be done because the farmers were dishonest, because they were evading it, and because we have suffered loss. Ever since 1951 whenever any member of the opposition has suggested that something should be done to assist the farmers by cash advances on farm-stored grain the minister has bravely stood his ground and pointed out that the 1951 experiment was unsuccessful, that it did not work, that only a very small percentage of the total amount guaranteed was taken over by the farmers.

That is the reason for the small amount. What is the percentage? I understand it is about 4 per cent of the farmers. Four per cent have taken advantage of this, and that is all. They have been forced into that position against their own wishes and desires, against the resolutions which they themselves joined in having passed.

That is the reason why we take the stand that we do, and it has been a consistent stand. Last September when the matter was first mentioned, with the approval and consent of the Leader of the Opposition (Mr. Drew) I said that we believed in cash advances and that parliament should be called together. When the Leader of the Opposition was in western Canada in October and November and saw the situation he reiterated over and over again the need for action along this line being taken. But parliament was not called. If parliament had been called, the whole matter could have been discussed. Instead of that, the back-door method of cabinet decree was used and we are asked in parliament to rubber-stamp what the government did when it acted in derogation to everything the western farmer has demanded.

I was surprised this morning to hear the hon. member for Wellington South (Mr. Hosking) make a statement which in some ways seems to epitomize the viewpoint of some of my hon. friends opposite. Referring to the western farmers, he said this: "Your farmer will certainly do some work for a change."

That was a statement that ought not to have been made. I would like to see some of the Liberal members from Saskatchewan, Manitoba and Alberta stand up and repudiate that—unless my hon. friend has indeed become the voice of the members of the province of Ontario supporting the government. That was a very serious statement. We are not asking for any handouts. The government is the only market, through the wheat board. The farmer is entitled to what he has earned. Being in that position, he resents having to pay interest on the work he has done. We took that stand first in September, then when our leader visited western Canada, then again in the initial speech made in this House of Commons this session by the hon. gentleman, and also during the month of December when we said, as far as the resolution stage was concerned, "We shall accept this, because apparently something is going to be done."

I say, with all respect to the Department of National Revenue, which seems to have a monopoly of this sort of thing, that what is produced is almost a photostatic copy of a bill that did not work then. We were defeated when we asked that it be submitted to the agriculture committee. What we are trying to do is to secure through parliament by parliamentary means what the western farmer is asking for and what he has demanded over and over again. It may be that in the stand we take, because of the overwhelming government majority, this legislation will be pushed through. If it is, my answer to those who push it through is that if the 1951 legislation does not work, this legislation cannot work either. The experience of the past few months and the degree to which it has not been made use of indicates that it does not meet the situation.

Indeed, this problem is one that recurs from year to year. Not every year, but from time to time, it has recurred since 1952. In November 1953 the Leader of the Opposition, then speaking as I say he was speaking, for those in western Canada who had been asking for this kind of thing, demanded that legislation providing for cash advances should indeed be brought into effect. When finally the bill came up for second reading, the hon. member for Calgary North (Mr. Harkness) showed the attitude of this party in the amendment he tried to move, but it was ruled out of order. That amendment—and I am now paraphrasing—provided that the bill be not now read the second time but that there be substituted therefor legislation to provide for cash payments on farm-stored grain. In other words, cash advances are what we in this party have demanded over and over again. The support we have given to them is indicated by what I mentioned a moment ago—our support of similar legislation in 1953 and since.

Apparently even among members of the government there was not very much certainty as to what they were going to do. You will remember when Mr. McDonald, the leader of the Liberal party in Saskatchewan, came here—I think it was in October—and said something had to be done. He said, "I can't tell you what it is." It is like the old Indian medicine, Kickapoo juice; it would cure anything, but they never told you the contents. He returned and said, "I have found it; I have got it." Then it was rumoured that the plan was indeed guaranteed bank loans. On October 24, 1955, the Minister of Agriculture, speaking in Winnipeg, said that while there were complaints, including a complaint from the Manitoba government, these complaints were based on a belief that the federal government had chosen bank loans rather than advances. He said, in effect, "Don't believe it." There was the criticism of the Manitoba government and its representative. There has been the criticism of the leader of the Liberal party in Alberta, who knows what the people think.

Mr. Prudham: Mr. Speaker, I rise on a question of privilege. It is bad enough to misquote a member of this house, but I think to misquote someone outside the house, who is not here to defend himself, is not right.

Mr. Diefenbaker: That is his privilege, is it?

Mr. Deputy Speaker: I am afraid what the minister has raised is not a true question of privilege in the House of Commons.

Mr. Diefenbaker: If my hon. friend does no better at interpreting the feelings of the western farmers than he does at interpreting what Mr. Prowse said the other day on television, then I am very sorry for the people of Alberta. Everywhere throughout the western provinces the farmers are asking that we take action in this parliament to meet the situation.

I make this last appeal, that the government reconsider the matter now. I know that in recent weeks of this session, this government has scintillated in confusion, but I hope that out of the confusion of jarring statements made by various ministers since October last will come at last a realization that what the western farmer wants is cash advances. If even now they will withdraw this legislation and bring in what the farmer wants, it would be assured of immediate passage in this house.

Mr. M. J. Coldwell (Rosetown-Biggar): Mr. Speaker, I have not had a great deal to say on this matter in the past week or so, because I have felt that there were many others who wished to speak and that they should be accorded every opportunity of doing so. In this group we are fortunate in having with us most of the practising farmers on this side of the house, and I have been very happy indeed that, while I represent a constituency that is primarily interested in this problem, we have men who are actually engaged in production—

Some hon. Members: Oh.

Mr. Coldwell: I should correct that and say "western farmers". I have risen this afternoon to make one or two observations I have wanted to make for some time. I want to say to the Minister of Trade and Commerce (Mr. Howe) that the position in which western farmers have been placed by this situation is deeply resented by them. I informed the minister of a constituent of mine who for two reasons, one because he needed the storage space and the other because he needed cash, was actually selling 1954 feed wheat to the stockyards in Saskatoon for a cent a pound and paying 20 cents a bushel for hauling it. In other words, he was getting a net of 40 cents a bushel at Rosetown, Saskatchewan, for that wheat. When you examine the value of the dollar today compared with what it was in the 1930's, about which we have so often talked in this house, that means that in pre-war currency he was getting about 19 cents a bushel or about the lowest price that farmers in that area got for their wheat at the elevator in the very depths of the depression.

I am not going very fully into the legislation before us this afternoon because it has been gone into by so many. It is unsatisfactory legislation. It is legislation which we

saw introduced in 1951 and which we opposed at that time by an amendment to the resolution urging the government at that time to adopt a policy of cash advances. That has been our plea in the house ever since 1951. I am going to say to the minister that I am not in agreement with those who say that because we have a surplus of wheat at the moment on the western prairies our farmers should be told to cut down their production of wheat next year. I am not sure when that wheat will be needed in view of the reports coming to us from Europe at the present time that hundreds of thousands, yes, millions of acres of winter wheat have been destroyed by the great frost in Europe. Next year, or the year after this, wheat may be a very valuable asset to Canada and to the world.

I am never one of those who believe in restricting production to meet a situation of this sort, but I am saying that this valuable reserve, this valuable asset to Canada and to the world should not be carried by the farmers who produced it but that the people who should carry the burden are the people of this dominion. Of course it can be done in two ways, by making cash advances repayable when the wheat is marketed on a quota basis and then the surplus stored and storage paid to the farmers who have their wheat properly stored to meet the future needs of people here and across the world.

As was said this morning, because of the inability of the farmer to market his grain and his inability to get cash advances which would enable him to build more adequate and safe storage space, there has been a serious deterioration of wheat on the western prairies which we as a nation and the world may regret in the days to come. I have never had very much faith in the government's protestations about the wheat board. I am very glad that recently in the debate we have not heard it said that those of us on this side of the house are weakening or undermining the wheat board. That can be demonstrated to be quite untrue. As a matter of fact the records clearly prove on which side of the house the people sit who through the years have been supporters of the orderly system of marketing.

I regret that the Minister of Agriculture (Mr. Gardiner) is not in his seat this afternoon. Last night he accused me again of having misrepresented him on many occasions over recent years. I have no recollection of having done so except in so far as I said a few days ago that I had been misinformed and that I had misquoted the Minister of Agriculture. I admitted that and put the record straight. But the Minister of Agriculture is constantly saying that he has been misrepresented either in the press or in this house. He said it last night when it so happened that I had the *Hansard* on my desk from which I am going to quote in a moment.

The hon. member for Mackenzie (Mr. Nicholson) was referring to a statement made in the house by the Minister of Agriculture on April 5, 1939, and the minister disputed the accuracy of the statement of the hon. member for Mackenzie. I happened to have the *Hansard* with the verbatim report of what the Minister of Agriculture said. It is true that speaking from memory the hon. member for Mackenzie left out the reference to 20 bushels to the acre, but otherwise the statement was correct in every particular.

Mr. Howe (Port Arthur): Was not the 20 bushels to the acre the essential part of the statement?

Mr. Coldwell: I would not say that was the essential part of the statement. If the minister thinks so I will not argue that point, but in any event the matter was cleared up immediately. The accurate statement was placed on the record last night from *Hansard* of that date. Last night the hon. member for Mackenzie said, as found at page 1276 of *Hansard*:

> Mr. Speaker, when the matter comes up again I will have the reference in *Hansard* and I will be very glad to place it on the record.

Then I said, "Here you are." Then the Minister of Agriculture said:

> The hon. gentleman who has misrepresented it for all these years is now handing it to you.

I have not misrepresented it. I have not referred to it for some years now but whenever I did I used to carry with me a copy of the *Hansard* for April 5, 1939, and read what the minister had said from the record. I went further and read more than what was read last night although I do not think it made a material difference to the argument in question that, if we raised 20 bushels or more to the acre, wheat could be produced at 30 to 40 cents a bushel in western Canada. But the other day I was speaking in the house and I said this in this same debate—I am not quoting from a previous debate but the same debate—as found at page 843 of *Hansard* of February 3:

> . . . I remember perfectly well the Minister of Agriculture rising on occasion after occasion in the house and defending the grain exchange method of marketing.

The minister said, "Oh, no." Then I said:

> Hon. members who were in the house at the time, and I am sorry to say there are only a very few of us left, can remember it as vividly as I can.

Then the minister said:

... My hon. friend should not quote unless he has *Hansard* here to prove it.

One reason I am speaking this afternoon is that I have *Hansard* here to prove it. In the same debate the minister said that he had not supported the competitive system of marketing, which is the grain exchange method of marketing, since he had been in the house. Well, here is the record. Speaking in the debate on April 5, 1939, he referred to a speech of the late Hon. J. L. Ralston, to which I had referred, and said, as found at page 2612 of *Hansard* of that date:

Hon. J. L. Ralston, speaking in 1935 for the Liberal party, then the official opposition, on the grain bill of that year, which later became the wheat bill, and replying to Mr. Bennett, said, as reported at page 3581 of *Hansard*:

"I do not believe that the people of the Dominion of Canada are favourable to a compulsory wheat board, to a board the constitution of which will mean that every wheat grower, every elevator man and everybody engaged in the wheat business must deal with the government agency and no one else. This matter of policy has been discussed before not only in this house but throughout the country. The government has carried on with a voluntary system for five years as Mr. McFarland and the Canadian Co-Operative Wheat Producers Limited have been nothing more or less than a board conducting voluntary market operations. A man was entitled to sell or not sell to Mr. McFarland as he saw fit. I submit that so far as the western wheat grower is concerned that the voluntary system should be continued until there has been more opportunity to consider the matter. I do not believe the compulsory feature of this bill will meet with approval, either in the west, in the east or in this house."

That is the end of the quotation. Then the minister added these words:

There you have the issue clearly drawn between the two parties at that time—

I will refer to those words in a moment.

—in the house: One was for compulsion; the other—

The Liberal party.

—was for a continuance of the voluntary system.

Those were the words of the minister in this house on April 5, 1939. Then he went on to discuss the undertakings that Mr. Bennett had given at the time the wheat board was under discussion and he said this:

When these undertakings were given, indicating that the legislation was to deal with a temporary condition, that it was not a permanent policy, and that even while it was in force it was subject to the control of the government of the day, it passed the house unanimously.

I place this record on *Hansard* in order that the position may be quite clear in any discussion which may take place in regard to the actions of the government from that day to this, whether under the previous prime minister or the present Prime Minister.

Then my hon. friend the minister went on to describe some of the operations of the wheat board under Mr. McFarland and subsequently, at page 2615 of *Hansard* of 1939, having clearly outlined all this, he summarises what we took to be his own opinion in the matter. He says:

I have come to the conclusion that to ignore the so-called law of supply and demand, as Mr. Bennett said his government intended to do when they brought in the first bill in 1935, will eventually wreck any system that can be devised, by loading the system with an enormous surplus or by giving it an enormous deficit.

There we have the record indicating quite clearly that the statement which I made—and which the minister denied—was perfectly correct in every particular. I had, of course, quoted a former minister of agriculture, the late Hon. W. R. Motherwell, to the effect that he had been deceived, that when he wished to market his grain through his own local elevator through the wheat board, he was unable to do so in 1938.

Mr. Howe (Port Arthur): You win the argument by default.

Mr. Coldwell: How?

Mr. Howe (Port Arthur): The minister is absent.

Mr. Coldwell: I am sorry the minister is absent, but what I have done is to quote the record. I cannot understand how the Minister of Trade and Commerce (Mr. Howe) could say that I win by default when I have quoted the record; and I have tried to quote it accurately.

Mr. Howe (Port Arthur): You quoted it in the absence of the minister.

Mr. Coldwell: I am sorry the minister is absent.

Mr. Ellis: Whose fault is that?

Mr. Coldwell: As a matter of fact, I thought he would be here.

Mr. Howe (Port Arthur): Perhaps the hon. member picks his days.

Mr. Coldwell: No; I do not pick days. If the minister really wants to know the truth, I may tell him that I did not speak yesterday because I was not well. That was the only reason. Perhaps I should not be speaking this afternoon. But I want to say that what I have tried to do is correct a statement which the minister made in reply to a statement that I had made that afternoon.

I hear from a good many of the wheat producers in western Canada. My constituency is wholly a wheat-producing constituency. I was over the whole of it last autumn from one end to the other. My constituents at various points—and all of them are wheat farmers—expressed deep resentment at the

proposal once again to introduce this bank loan plan which—as the hon. member for Prince Albert (Mr. Diefenbaker) said in the speech he has just made—was proved to be a failure in 1953. We knew that it would be not only unpopular but mainly useless in 1951 when we moved the amendment to which I have referred calling for advances. We are therefore opposing this legislation because we disbelieve in it, because we think it is inadequate and because we think it is resented by the people who sent us here, and we are saying so. Not only are we saying so but at every opportunity we are going to vote against it.

I know we were the only party in the house which voted against it at the resolution stage. We voted against it then because we hoped that if the house showed its disapproval of this legislation at the resolution stage, a bill such as the one we have before us might not be introduced but rather that the government might reconsider its proposals and introduce another bill designed to meet the needs of the western wheat growers. I think that is what they hoped for as well. The government have not seen fit to do so. They have adopted this policy and they are going to put it through, I have no doubt. But they will put it through over our opposition.

Let it not be said that the opposition that has been indicated in this house to this measure is in any way fomented by those who are opposed to the wheat board. That was said on occasion but I am glad to say it has not been said just lately. Let that not be said. The Winnipeg *Free Press*, the newspaper which has been said to be opposed to the board, was opposed to the board, I know, when the board was originally set up and for some years afterwards. But as I read the *Free Press* today, even it accepts the situation as an accomplished fact, realizing that the producers want such a method of marketing and realizing perhaps that with an international wheat agreement—which I may say I hope will be consummated—this is the only way in which wheat can be marketed successfully under agreements and on the markets of the world. Hence today I believe there is unanimity in Canada—except for a minority who would like to restore the entire grain business to the grain exchange—in support of the wheat board method of marketing. We therefore do not need to argue that point.

I am going to say this to my hon. friends of the Liberal party. While I have said—and it is my belief—that they were opposed to this method of marketing for a long time, and that they wanted to do all they could to keep the voluntary system or, as they call it, the competitive system, because of the experience of the government during the war years and subsequently I believe they, like the rest of us, now believe that the wheat board is here to stay and that it is the best method of marketing.

But that does not mean that, under circumstances such as those which now exist, our farmers are able to market enough grain to pay their expenses and their taxes; and those taxes are an extremely serious consideration in all the three western provinces where wheat is grown in large quantities. The municipalities in Manitoba, in Saskatchewan and in Alberta are all finding it difficult to maintain their essential services and their school systems. These bank loans will not suffice. If a man can get a bank loan under this legislation, he can get a bank loan anyway. If he is marketing some of his wheat, the bank loan he will get is so small that it will make little difference to him and it will not enable him to pay his taxes or to prepare his machinery for seeding in the springtime. So it is that we are opposing this legislation because we should like to have seen something different. Today, of course, I suppose it does not matter, from the point of view of the western farmers, whether or not this legislation is supported by the opposition members. Loans have been made and the guarantee was given by the Minister of Defence Production—

Mr. Howe (Port Arthur): The Minister of Finance (Mr. Harris).

Mr. Coldwell: Yes, the guarantee was given by the Minister of Finance to the banks, and I have no doubt that guarantee will be carried out. I want to say this to the Minister of Finance (Mr. Harris), who is also not in his seat: When this was contemplated the proper thing to have done was to have called parliament together to have this legislation, if this was to be the legislation, passed by the house.

I think the pledging of money on behalf of Canada is not a matter that can be done by order in council. If there is one traditional right we have in this House of Commons, it is the control over expenditure. It may be a very shadowy thing in a house where the government has the huge majority it has in this parliament, but the real function of this house it not to initiate legislation, which is the business of the government, but to control expenditures. This might have been a very heavy expenditure. I do not know what amounts are out at the moment but I imagine they are relatively small and yet, in many

people's eyes, probably quite substantial. This has been done without the consent of this parliament.

Parliament should have been called together when the situation was realized last September, and provision made, not for bank loans or loans upon which the farmers would have to pay 5 per cent interest on what has been described in this house as their own earnings. At the same time we were told that a powerful company, controlled in almost every particular in the United States, would have very great advances, not in the form of actual cash but in the form of a great national project which I think should not be alienated, at 3·5 per cent interest. The contrast is striking, Mr. Speaker. So I am rising this afternoon to support the amendment we have moved, just as I rose to support the other amendment we moved, to give this the six months' hoist.

Mr. Charles Cannon (Iles-de-la-Madeleine): We have listened to this debate for some time, Mr. Speaker, and I was going to say mostly but I will say nearly all the speeches from the opposition were irrelevant or repetitous. I think, therefore, we on this side of the house have good reason for not intervening in the debate to prolong it uselessly. But having just listened to the speech by the hon. member for Rosetown-Biggar (Mr. Coldwell) and the speech by the hon. member for Prince Albert (Mr. Diefenbaker) I think that one or two remarks would be in order at this time.

In my opinion the hon. member for Rosetown-Biggar put his finger on the crux of the problem when he said he is of the opinion that the surplus wheat we have in the west at this time is a great national asset. In saying that, he is repeating what the Minister of Trade and Commerce has already said, that it is no calamity to have a great wheat surplus because at this time they have bad weather conditions in Europe which may lead to a bad crop and we will undoubtedly sell our wheat crop eventually.

Mr. Coldwell: May I say—

Mr. Cannon: What impressed me most in what the hon. member for Rosetown-Biggar said, if the hon. member will allow me to continue, was that he thought the people of Canada should pay for the carrying of this surplus wheat; that is the crux of the problem. We on this side think that money should be advanced to the farmers but that they should pay interest on it. The people on the other side think that money should be advanced to the farmers without interest. Who is going to pay the interest? Evidently it is the people of Canada. Is it fair that the people of Canada should be called upon to pay interest for the farmers in the west? Why should I not say, as the member for the Madeleine islands, that the people of Canada should pay interest to the fishermen on their fish products that have been canned but not sold or that have been frozen and not sold. There are many other instances. You could go to the coal mines or anything that is produced in the country.

You could say, why should the people of Canada not make advances on all of these things that are produced? Why should they pay interest on such money? I think what the hon. member for Rosetown-Biggar has stated illustrates how weak is the position of the opposition and how strong is the position of the government. He has put his finger right on it. Why should the people of Canada pay that interest for the western farmers if they do not pay interest for all the other producers of this country?

Now, I want to mention what the hon. member for Prince Albert (Mr. Diefenbaker) said. I am sorry he has left the house. He has a reputation, which I am sure is well deserved, of being a distinguished lawyer. He has made a statement that I think is a legal heresy. His statement was more or less along the same line as that of the hon. member for Rosetown-Biggar. He says the farmers have produced this wheat, and therefore they should be paid for it and they should not have to pay interest on the money they get for it, whether or not the wheat is sold. There again, you cannot support a statement like that if you have a legal brain and if you know what the law is all about. Why should a person be paid for something he has produced before that thing has been sold? Why should he get that money without having to pay interest on it? I think perhaps all the western farmers can expect us to do for them is just what we are doing, to facilitate their getting bank loans on which they pay interest. It is only the normal thing. Why should they get money on their products, without paying interest, without having sold their products?

I think we are doing the right thing for the farmers. I am sure the farmers in the west are just as good citizens as any of us are. I am sure they are pleased with the legislation we are passing for them, which is privileged legislation, but I do not begrudge it. I am sure they realize they are getting a privilege through this legislation. I am sure the members of the opposition, and particularly the members of the C.C.F. group who have carried on a filibuster against this legislation, have not gained one vote but on the contrary have lost votes in the western part of the country.

Grain

Mr. Victor Quelch (Acadia): I wish to say a few words on Bill No. 82, Mr. Speaker. A number of us in this group at the resolution stage criticized the government's proposal at some length. On the other hand, it was a resolution to introduce a bill and we did not vote against the resolution because we wanted to see just what was going to be in the bill. We wanted to be in a position to accept or reject the bill on its merits. After we read the bill, there was no doubt in our minds that the bill should be rejected. Therefore, when the C.C.F. moved an amendment to report the subject matter of this bill to the committee on agriculture, we supported it.

The Minister of Trade and Commerce (Mr. Howe) suggested that such action would kill the bill. However, I believe the hon. member for Winnipeg North Centre (Mr. Knowles) showed quite clearly that that would not necessarily be the result, but that the subject matter could be sent to the committee on agriculture, and if the committee saw fit it could recommend to the house that the bill be again presented. Then, the bill could be put through the house if the house saw fit. Therefore the argument of the minister was not a very sound one.

However, I did present an alternative to the government. I suggested that after second reading the bill itself should be sent to the standing committee on agriculture and colonization. There was nothing unique about the proposal. We do it every year. At the time I was somewhat disappointed, but I will not say surprised, that the Minister of Finance (Mr. Harris) rejected the suggestion and said the government was not prepared to send the bill to the committee. I think it is a pity. It is quite an important measure. I should like to see a bill of this kind given far more consideration than it is going to get, and perhaps be extended into something of a permanent character, useful in the future instead of just for the moment. If this bill had been sent to the agriculture committee and we had called representatives from various farm organizations, then they could have given their views on the bill itself.

I do not know whether the government actually consulted any of the officials of the main farm organizations on the drafting of this bill. I doubt very much whether they did because I was speaking to one of the officials of one of the main farm organizations just two days ago, and I asked him what he thought of the bill. He said: "I have never seen it". He has not the slightest idea what is in the bill. He could not say whether he was in favour of it or not until he had seen it.

[Mr. Cannon.]

Mr. Howe (Port Arthur): May I ask my hon. friend a question? Is it customary to issue copies of bills before they are introduced in the house?

Mr. Quelch: No; but in a matter of this kind, in view of the fact that the minister had been out west and as a result of that visit came to the conclusion that loans should be made, it would have been a wise act on his part to call representatives of the unions down to Ottawa and discuss with them just what they thought should be in the legislation. In so far as agriculture is concerned—I may be wrong in this—I have a very strong feeling that the government acted differently in regard to the banks. I am not suggesting that the government issued the bill to the banks before it was introduced, although that may be possible, but I am pretty sure they consulted closely with the banks relative to various sections of the bill. If banks are to be consulted in that way regarding matters in the bill relating to them, surely it would have been a matter of courtesy, if nothing else, to give the same privilege to farm organizations. The minister could have very well discussed those sections that he intended to put into the bill relating to farmers because there are some features in the bill that I am satisfied the farmers will bitterly resent when they learn about them. At the present time they do not know about them.

Mr. Howe (Port Arthur): I can assure my hon. friend that responsible farm leaders well known to my hon. friend suggested that we use the form of legislation of 1951.

Mr. Quelch: Well, the situation in 1951 was very different from this one. What did you have then? You had your wheat unthreshed under the snow on the prairies. There was quite a question whether or not that wheat would ever be harvested at all. Undoubtedly, a great deal of risk was involved. What is the situation today? The grain is in the bins and the loans have been made on only a percentage of the grain, on only 50 per cent, I would imagine.

Mr. Howe (Port Arthur): Mr. Speaker, for a small farmer it could be 100 per cent.

Mr. Quelch: Well—

Mr. Howe (Port Arthur): This bill is meant to help the small farmer.

Mr. Quelch: Only half of each delivery is to be paid to the banks. Therefore, it must be 50 per cent. Otherwise, what has happened to the other 50 per cent? It is not 100 per cent; it is 50 per cent. Therefore, I say it is only a percentage of the wheat against which the loans are to be made; just

half the wheat. If a farmer should have 10,000 bushels and loans are made against only 5,000 bushels, the most he could get would be $5,000, but actually the maximum loan is only $1,500, therefore a man would need at least 3,000 bushels of wheat to get a $1,500 loan.

As I say, there are a number of features of this legislation which are of a very questionable character. When the hon. member for Vancouver South (Mr. Philpott) spoke the other night—I am going to use his own words, especially since he is not in his seat—he said this, as reported at page 1218 of *Hansard*:

> By suggesting that this bill should be sent to the committee on agriculture and colonization they are in fact saying that the western farmers are in no hurry for cash advances of any kind and can afford to wait for months and months.

By "they" he meant the members of the opposition.

Mr. Cannon: Is that not right?

Mr. Quelch: That is where you are absolutely wrong. They do not have to wait for months. Loans are already being made. Over 8,000 farmers have had loans up to the end of December, according to the figures given by the minister. I think $7 million has already been lent.

Mr. Hosking: You are learning something.

Mr. Quelch: The average loan is around $800. There is no question of the farmers having to wait. It makes very little difference whether this legislation goes through today or a month hence. Loans have been made in a large number of cases and I suppose they will continue to be made.

Mr. Studer: The hon. member said they were not getting them.

Mr. Quelch: If the hon. member would just listen he would not make an unwise statement like that. Let me finish what I have to say on this point. Loans have been made, 8,000 of them. I will guarantee that the majority of those loans would have been made whether this legislation had gone through or not. If this legislation were withdrawn tomorrow the banks would continue to lend in the same way as they have lent in the past. Why have the farmers hung back? For the simple reason that they do not like going into debt when they have wheat in the bin and they want to sell it. They want to sell wheat, not borrow money on it. Why should they borrow money on that wheat in order to pay bills? That is what most are doing.

Mr. Cannon: Will the hon. member permit a question? Why should farmers get cash advances on their wheat without paying interest on it any more than any other primary producer in Canada?

Mr. Argue: Do you pay interest on the butter floor price?

Mr. Quelch: Let me finish this other point. The point I was making is that the farmers are getting the loans, and will continue to get the loans even though this legislation is not passed.

Mr. Cannon: They are paying interest.

Mr. Quelch: Yes, of course. That is the reason. The reason they have not asked for loans is that they do not want to pay interest. They are hoping to be able to sell the wheat. That is the reply to the hon. member who just rose to his feet. The reason the farmers should not have to pay interest is this. The government is in control of the marketing of wheat and of transportation. Last year sales broke down. They could not get orders. This year they could get orders but they could not get box cars. It is transportation that has broken down. The government is in full charge of that policy. The farmers have a right to expect the government to at least pay them the price of the normal delivery for wheat on the farm. That is all they are asking for, the normal delivery of wheat. Why should they pay interest on that?

Mr. Hosking: They have already sold more than an average crop.

Mr. Argue: That is not true.

Mr. Quelch: That shows just how little the hon. member knows. The minister himself said that some points have a one-bushel quota. Is that a normal crop? Some points have a 2-bushel quota, and some have a 3-bushel quota. Does the hon. member call that an average crop? It might be in his part of the country, but if so, he must live on a stone pile. That is certainly not the situation in western Canada where the average yield even in an average year was around 17 bushels. In the past five years the average yield has been considerably in excess of that amount.

While I say there is a 1-bushel quota at some points, there are many farmers at those points who have not been able to deliver one bushel on the 1-bushel quota. Most points have been able to deliver the initial amount of 300 bushels, but there are many farmers who have not been able to deliver one bushel on the 1-bushel quota. It is not very pleasant for those farmers when they see a point 30 miles away where the farmers can sell three bushels to the acre and they are unable to sell one. As a result of that situation they

have bills in town at the different stores unpaid. They would like to pay them. They are not paying any interest on those bills. Can you blame them for not going to borrow money and pay interest on it in order to pay another bill upon which they are not paying any interest? It would not be very good business; it might be good ethics. That is why many farmers are taking loans today to pay bills on which they do not have to pay any interest. They are doing that because they like to pay their debts. They would rather pay interest on the debt to the banks than continue to allow the bill to run in the store, because they realize it is a hardship on the storekeeper. I would say that is true of 95 per cent of the cases. It just goes to prove that the farmers of the west, as a rule, are honest men and like to pay their debts. But they think there should be a limit to the extent to which they should be plunged steadily further and further into debt. They have the right to expect that they should be able to deliver a normal delivery. All that the farmers in the constituency that I represent ask for is for the government to make an advance up to 50 per cent of the normal delivery. By advance in that case they meant payment on the wheat and not a loan. They rejected the idea of a loan. They suggested that the normal delivery should be on the basis of 8 bushels to the acre because they were afraid that if it stated merely the normal delivery the government might take only 2 or 3 bushels to the acre. That is the stand they have taken to date. I have absolutely no hesitation in saying that if they read this bill they will reject it.

The farmers did not tell me that. As a matter of fact when matters of this kind come before a convention in my constituency and I try to get the farmers to give me a directive as to whether I should vote for or against something, they have always insisted that I use my best judgment. They say, "You are on the spot; you know the facts; therefore we are going to leave it to your discretion to decide whether you vote for or against the measure." I am using my discretion at the present time in rejecting this bill. The title of the bill reads:

> An act to provide for short-term credit to grain producers in the prairie provinces to meet temporary financial difficulties arising from inability to deliver all their grain.

I suppose that could be said to be the purpose of the bill. I would appreciate the minister correcting me if I am wrong, but I gathered from what he said that the purpose of the bill is to make loans available to the weaker farmer, the small farmer, the new farmer or the farmer who is financially embarrassed. I take it that is the main purpose of the bill, that is the class he has in view. I think he will agree that this is a fair interpretation of his attitude. I do not wish to misinterpret him and it would take too long to find his actual statement by going through all the pages of *Hansard*. I take it that this is the general purpose.

Therefore the minister will agree that if that is the purpose it is most important that this bill should carry out that purpose. I claim that the bill does not carry out that purpose. As a matter of fact, I claim that many farmers who might borrow under this bill will be worse off than farmers who borrow from other sources. I will give the reason why I say I think it will actually worsen their position. My contention is that the contents of this bill violate the purposes of the bill. We have heard it said that some members are dirt farmers, that some have had no farming experience. Speaking personally, I think I am in as good a position as anyone to speak on this bill.

Mr. Howe (Port Arthur): You do not need the bill then.

Mr. Quelch: No, I do not need the bill. I am not supporting or rejecting this bill on the basis of what I need, I am supporting or rejecting it on the basis of what I feel the people in the area I represent need. I have farmed for some 40 years. Let me state frankly that 75 per cent of that time I was short of capital. I have had lots of experience in borrowing from banks, so I know something about this situation. It is true that for the last 25 per cent of the time I probably did not need to, but for the first 75 per cent I did.

I homesteaded in the west in 1909. I did not have any capital, I did not have any money at all. I used to work in railway construction camps for a few months in the summer in order to get enough money to run my farm.

Mr. Hosking: You have done pretty well in this country under the Liberals.

Mr. Quelch: I have done fairly well in spite of the Liberals, you might say.

Mr. Hosking: There are a lot of people in the same boat from the sound of it.

Mr. Quelch: By 1914 I had just started to get on my feet, and then I was overseas for five years. When I came back I had to start all over again. Everything I had was worn out, my machinery was all worn out and the price of everything was sky high. I settled under the Soldier Settlement Act which was a pretty tough act, quite different from the present Veterans' Land Act. Within a few

years the value of my chattels had fallen to about half their original value. It was about 1929 before I again started to get on my feet.

In 1929 I was still farming with horses. I realized then, as did most farmers, that if I was going to make any real progress I would have to have a mechanized farm. I went to the bank and asked for a loan in order to buy a tractor. I was quite interested in the attitude taken by the bank manager. He had my financial statement and he told me I was in excellent shape, that in a short time I would be sitting on top of the world, but he then went on to give me some sound advice. He told me not to borrow any money with which to buy a tractor because within a short period of time we would be going into a depression.

That was in 1929. I have always wondered why a bank manager was able to tell me in 1929—it was not being publicized in the press—that we were going into a depression when credit would be restricted and therefore it would be unwise for me to buy a tractor. I continued along with my horses. Just two years later I went to the bank again, but I could not borrow a cent although my physical assets were exactly the same or a little bit better than in 1929. In 1929 I could have borrowed enough on my personal note to buy a tractor, but in 1931 I could not borrow a cent.

I might mention that they had changed the bank manager in the meantime. Any time they bring in a new policy of restricting loans they seem to change their managers, because it might embarrass a bank manager to refuse a loan to an old friend. I thought it very strange that with no change in physical assets I could not borrow any money.

We all remember the depression, and I am not going to deal with it. We got through it. I did not go under the Farmers' Creditors Arrangement Act because I did not like it, just as I do not like this bill. There were too many restrictions in it. However, we farmers got through the depression and then came some good times. I admit quite frankly that we have had some good times.

There are many farmers who realized that in order to produce efficiently they had to have an efficient unit. Professor Hope has defined an efficient unit as two sections of moderate land or one section of heavy land. The area which I represent is a good one, and many farmers thought it advisable to expand their land holdings and borrowed money with which to buy land. They borrowed money to buy farm machinery under the Farm Improvement Loans Act.

Those are the farmers who are in so much difficulty today. They are not new farmers, they are not young farmers, they are not small farmers; they are fairly large farmers. They have been farming quite a long time and have lots of experience. But they have incurred heavy liabilities which normally would be met from their sales of wheat. These are the farmers who are facing a great deal of difficulty.

Mr. Hosking: Do you think our eastern farmers should supply the money for the loans?

An hon. Member: Get up and make your own speech.

Mr. Hosking: I am. It is short and to the point, and I am not delaying the debate.

Mr. Quelch: You want to know whether I think the eastern farmer should be prepared to pay income tax for the purpose of helping to pay interest or to make loans available without interest? There need not be any interest involved, because the government could make advances to the farmers and get the money from its own institution, the Bank of Canada, without borrowing from the chartered banks. But it goes far beyond that. Even if it was costing some money I say that the western farmers are entitled to it because during the latter part of the war they subsidized the consumers of Canada to the tune of around $136 million. The same thing applies to other products of the farm.

Therefore a suggestion like that does not embarrass me at all. The hon. member talks about income tax. Let me remind him that the majority of the income taxes paid by farmers is paid by farmers in the west and not by farmers in the east. I suggest it would be a good idea if the Minister of National Revenue sent as many inspectors into that part of the country as to the west; then they would collect a little more money. The only reason they collect more income tax in the west is the fact that wheat is one of the main products and it is very easy for the Department of National Revenue to check on the farmers' incomes. In the east, where the farmers peddle their products in the local markets, there is no check at all, and I think many of them get away with murder.

Mr. Hosking: Is that the only reason your farmers are honest?

An hon. Member: Sell your gas.

Mr. Quelch: I am sorry the minister went away, though the parliamentary assistant is here, because I do not like to say anything specifically referring to the minister when he is out. I was just going to say that I have been puzzled at times during this debate over the fact that the minister seems to display

quite an ignorance of the true situation in regard to agriculture. However, that is perhaps only natural, because he is not a farmer and the problems are quite complex.

I believe he thinks he is stating the facts when he makes certain statements, but when I spoke the last time he made two or three interjections, and I was somewhat amazed at the questions he asked. I should have thought he must have known at that time that his questions did not really make sense, as for instance when he suggested that no large farmer had trouble getting money from the banks.

I have just explained why so many farmers are having trouble. It is because many of the big farmers have borrowed to expand their capital in the form of machinery, and have borrowed to expand their land holdings. They are large farmers, but they are heavily in debt. They may have 20,000 or 30,000 bushels of wheat on the farm but cannot sell it. If they could sell their wheat they would be able to meet their obligations. They cannot borrow money from the bank because they have gone as far as they can go in that direction. They are not interested in legislation like this. They are interested in being able to sell their wheat.

Right through this debate the minister has shown that he does not understand the situation as between the smaller farmer and the larger farmer. He jumped to the conclusion that the large farmer must be considerably better off than a small farmer. I agree that the size of the farm is a great factor, but there is another factor even greater, and that is the quality of the soil. You could have a three-section unit of marginal land which would not be nearly as good as a one-section unit in, for instance, gumbo land.

The constituency I represent is remarkable for the different types of soil it contains. On the western side of the constituency we have the gumbo plain, probably the best wheat country in Canada. I resided on the edge of that area. This legislation will be of little if any value to the farmers in that area. Whatever money they want to borrow, they can borrow from the banks. But they do not want to borrow today because, as I say, they do not like paying interest. They are already paying enough interest on their land holdings, machinery and so on. As they have the wheat, they feel they should be able to sell it and so pay off their obligations. If they want to borrow from the banks, they can borrow without this legislation.

Then we have the northern area of my constituency, around Stettler on the C.P.R. line. That is not such good land, but there is a greater rainfall there. I think the same thing applies to that area as to the western part of the constituency; it is a mixed farming area. Then you have an entirely different situation on the eastern side of the constituency. From Hanna east is what used to be known as the drought area of Alberta. This is where irrigation would be put in if the Red Deer diversion scheme were proceeded with. The government has been talking about that and making surveys for it since 1922, but the only time there is any real activity is just before an election, and I suppose next June there will be a great deal of activity there again. The farmers are still hopeful, however, that some day that program will be put into effect.

That is a dry area. Back in the years around 1919 or 1920 most of that land was sold for tax arrears. Most of the farmers got hopelessly into debt and the land was put up for sale. The mortgage companies did not consider the land worth sufficient to pay the reserve bid and so the land reverted to the provincial government. The provincial government realized that no farmer could make a living in that area on a half-section unit. Most of the land was taken back, and then any farmer who had a quarter or half section in that area was allowed to lease from the government about 2,000 acres. The units in that area are about 2,000 acres per farmer. They had to own one-quarter sections.

Just because a farm is large it does not mean that the farmer is in a position where he can borrow all the money he needs. As a matter of fact, the farmers in that area—all those big farmers—until recently, at least, were never able to go to the banks and borrow much money. Indeed, that area was blacklisted, and the farm loan board refused to make loans in that area. I have received many protests and have taken them up with the farm loan board, which has insisted it has not blacklisted the area but has judged each application on its merits and found the situation does not warrant making loans in that area.

However, in the past four or five years we have had heavy rains in that area and, generally speaking, there have been good crops for the past five years and these farmers are getting on their feet. Four or five years ago the average yield in that area was only six or seven bushels to the acre. During the last few years it has been about 16 or 17 bushels to the acre.

I want to relate that situation to this bill, because there you have large farms with fair yields of wheat, about 16 bushels to the acre. Take a farmer in that area getting a loan under this proposal. I do not say he would

not get a loan. He might get a loan of $1,500. What is the situation in which he finds himself if he takes a loan under this bill? We shall say, for example, that a two-bushel quota is put into effect and that the farmer has six or seven hundred acres of cultivated land, which would be a very moderate holding in that area. Many of the units are 2,000 acres, because it is considered necessary for a farmer to have that amount of land to make a living. At one time a farmer there was allowed to carry only three head of livestock on a quarter section, but that has been changed a little owing to the rains in recent years.

When a two-bushel quota is put into effect, that farmer takes a load of wheat to the elevator agent and asks what grade he can get. Probably there will be a dispute between him and the elevator agent, and the agent may say it is 4 while the farmer will say, "It is a good 3, and I am not going to take 4." What can the farmer do in a case like that, unless he is prepared to sell it for what the agent says he will pay? He will have to put that wheat into storage and a sample will be sent to the head office. Then the grade is sent back, and he is paid on that grade.

However, under this act he is not allowed to put that wheat into storage. Therefore, any farmer who has borrowed under this legislation, and who in order to get a fair grade tries to put his wheat into storage until such time as a grade has been arranged, puts the elevator agent in the position where he can be prosecuted if he allows the grain to be stored.

Mr. Howe (Port Arthur): Mr. Speaker, I should like to say, if I may, that the department has taken cognizance of that fact and an amendment will be offered if and when we get the bill into committee which will make it possible to put grain in storage. In the 1951 legislation there was a reason for that provision but in this legislation there is no similar reason and that restriction will be removed.

Mr. Quelch: I am certainly glad to hear that, because that was one of my very strong objections to the bill. Then there is another objection. The minister will probably say this one is not quite so well founded. He will probably say the provision is necessary, but I can tell the minister that it is going to be bitterly resented.

Take two farmers who are living side by side. I am speaking from experience in this case; it is something that has happened many times. Two farmers are living side by side and one is hailed out 100 per cent. What happens in a case like that? If his neighbour has a good crop the practice in the past has often been for the farmer with the good crop to lend his neighbour who has been hailed out maybe a thousand bushels of oats, barley or wheat. I have done it myself, and I have had grain lent me.

The farmer who gets the grain and has no money can deliver the wheat on his own quota and sell it. Sometimes he makes a dicker with the farmer from whom he got the wheat and pays some of the money to him. If any farmer does that under this legislation he can be fined $500 and, if the hon. member for Prince Albert is right, he can land in jail. If the farmers find that out they will be hopping mad, because it is very often the only way they can help themselves. I think the minister will agree that is a fine co-operative spirit, and nothing in this legislation should allow that fine co-operative spirit to be destroyed. The farmers help themselves. I do not believe that anywhere in Canada you will find a better co-operative spirit that you will find amongst the farmers of the west. If one gets in bad shape his neighbours help him out if they can.

Mr. Howe (Port Arthur): May I ask a question? What would happen if that co-operative spirit extended to the transferring of all the grain from one farmer to the other?

Mr. Quelch: Well, the minister sees one ship and he talks about a fleet. I am not suggesting that at all. Remember that the farmer can only get a loan of up to 50 per cent of the amount of wheat. The minister knows that in many cases the farmer will have far more than the amount of wheat needed to cover the loan. Therefore it should be possible in a case like that for the farmer to transfer some of that wheat to a neighbour if he so desires.

Under the legislation he pledges so much of that wheat. He tells the bank manager how much wheat he can deliver and the price he expects to get, but so long as he states a certain amount of wheat and a price and the bank manager agrees to that, then any wheat the farmer holds in excess of that amount should be his property to do what he likes with. If he wants to lend a thousand bushels to his neighbour who has been hailed out there should not be any danger of that man being prosecuted or thrown in jail. At least the legislation should be wide enough to allow a certain amount of discretion so that the farmer can discuss the matter with the bank or with the wheat board and get permission for that transaction.

The minister knows that the situation today is difficult. We will not talk about who is to blame for the situation, but we are faced with

a situation today and it is a difficult one. Therefore anything the farmers can do among themselves to try to relieve the situation, to try to relieve the pressure, is something the minister should be glad to help them to do. I hope the minister can say the same thing about that provision as he said about the other one, that an amendment will be moved to modify its operation.

Mr. Howe (Port Arthur): May I say that if my hon. friend will draw up the amendment the government will consider it.

Mr. Quelch: I hope I have said enough to the minister to make him realize there are certain features of the bill that the farm organizations should be allowed to discuss. Therefore I again ask the minister to reconsider his decision not to allow the bill to go before the standing committee on agriculture. Let the bill go before the committee and call representatives from the farm organization. If they are able to make worth-while suggestions to the government and the government is prepared to accept those recommendations we may then have a bill that we will be able to support in the house. If the minister will pledge himself to send the bill to the agriculture committee after second reading, even now we will support second reading and vote against the amendment; but if the minister is going to stand by the statement made by the Minister of Finance (Mr. Harris) that the bill will not be sent to that committee, then we will be obliged to support the motion of the C.C.F. for the six months' hoist.

Mr. W. A. Tucker (Rosthern): Mr. Speaker, I do not intend to detain the house very long. The only reason I am speaking is that something was said last night by the hon. member for Regina City (Mr. Ellis) to which I wish to refer. As found at page 1268 of *Hansard* he said:

> While we are on this point, Mr. Speaker, may I say this. I just wonder what organizations at the Saskatoon conference had wanted to take bank loans. I wonder whether the hon. member for Rosthern could inform hon. members of the house what organizations at that conference asked for bank loans. Was it the wheat pool? Was it the Saskatchewan farmers' union? The hon. member for Rosthern is not able to name one Saskatchewan farm organization which at that conference came out for bank loans.

I had said that organizations at that conference had suggested bank loans and that legislation like that of 1951 was the solution to this temporary difficulty. Apparently that was not believed by some hon. members opposite. Therefore I obtained the record of that meeting as kept by the secretary, and I looked over the record. I have thereby refreshed my memory on the matter, and I am going to give the stand taken by some of the people representing organizations at that conference. Anyone who wants to check this can see the record in the hands of Mrs. Norman because as the conference went on she kept notes of what everybody said.

When this matter came before the conference on the afternoon of September 27, 1955, one of the first speakers was Mr. Wesson, who first of all dealt with the statistical position and gave various statistics. This is Mrs. Norman's record of what he said:

> The shortage of cash was the problem. Wheat pool opposes advances of wheat board through elevators. Propose we ask federal government through parliament pass the same act as in 1951, advance through banks and guaranteed by federal government. Bank advance loans on the basis of the security of grain stored on the farm. Don't believe it should be interest free but some arrangement made by government through Bank of Canada making available to farmers at between 2½ per cent and 3 per cent. This he felt would help to solve the immediate situation of farmers to help pay for urgent pressing financial bills.

At that point the conference recessed. I wonder what those members have to say who sneered and jeered and said that nobody had suggested bank loans, that everybody there was in favour of advance payments by the wheat board. Then I come to Mr. Schulz, the chairman of the interprovincial farmers' union and his attitude to the suggestion of Mr. Wesson, the president of the Saskatchewan wheat pool. This again is Mrs. Norman's record:

> Mr. Schulz continued debate on Mr. Wesson's proposal. He stated he was in favour of Mr. Wesson's proposal but suggested that the government should absorb all interest.
>
> Mr. Forsythe of Alberta chamber of commerce observed that about 20 per cent of Alberta machinery was sold through finance companies. His organization was proposing farm loans of long term and interest no higher than bank loans to their provincial government.
>
> Mr. Barber of the Winnipeg labour council stated his council had passed a motion requesting that farm loans be advanced to farmers interest free.

Then my friends across the way stated that there was never any suggestion of farm loans.

> Mr. Forrest of retail merchants association expressed the opinion that this was a recurring problem in recent years. Suggested that advances of half the value of the grain be advanced so that banks are repaid on a bushel basis as deliveries are made rather than in a lump sum. Felt there should be a concession in the interest rate as well.
>
> Mr. Hansen submitted a table outlining the average purchasing power of wheat over a series of years. He felt also that other alternatives should be explored. Any plan considered should also be considered in light of practicability in future years.
>
> Mr. Appleby—

He used to be president of the farmers' union.

—felt there must be supervision on when bank loans are repayable which he felt should not be left to the discretion of the banker.

Mr. McFarlane of United Grain Growers outlined a plan of cash advances designed to be handled on the quota books through banks up to 50 per cent of grain he has on hand at a rate of 4 per cent interest.

The Manitoba government through their minister of agriculture indicated as follows:

Both plans suggested by Mr. Wesson and Mr. McFarlane would meet their approval . . . Interest rates he believed should be lower than in past.

Mr. Douglas of the Saskatchewan teachers association felt that bank loans might prove unpopular. He suggested advances to farmers through elevators. He thought there should be an interest rate of 3 or 4 per cent to discourage borrowing by farmers who weren't really in need.

There is there a reference to loans repayable with interest. Yet we were told that loans were never suggested.

Mr. Studer: Socialist political acrobats.

Mr. Tucker: Then here is something which was said by Mr. Nollet, the provincial minister of agriculture in Saskatchewan:

If the Bank of Canada was able to loan money to banks to loan to farmers, it should also be able to loan money to the Canadian wheat board for loan to farmers.

We were told by the C.C.F. there never was any thought at the conference of loaning money to farmers.

Mr. Zaplitny: May I ask the hon. member a question?

Mr. Ellis: Do it through the wheat board, not through the banks?

Mr. Tucker: I suggest that I be permitted to make my statement. Then the hon. member can ask questions afterwards if he wishes to do so. I continue:

Mr. Brownlee . . . expressed the opinion that other problems in grain marketing must be considered. Looking upon the problem as an emergency, supplemental to bank loans municipalities must be engaged on a basis whereby they can advance money to farmers on the backing of government loans. This would spare the small farmer from being left without recourse if bank loans were refused and would be convenient to those farmers who live great distances from banks.

In other words, he said that it is quite all right to pass the legislation but this further provision should be passed supplemental to it.

Later:

. . . Mr. Brownlee stressed the need that advances must be placed on a business basis and not as a charity.

Later:

Mr. Hogg suggested that the resolutions committee consider the following resolution:

"Move we request advances on grain up to 50 per cent stored on farms and loaned through banks guaranteed by the dominion government at low rates of interest."

This was a resolution put before that conference.

Mr. Ellis: It was not passed.

Mr. Tucker: A resolutions committee was set up to bring in a resolution. They brought in a resolution. There was an amendment moved to it. According to the notes the motion was as follows:

(In favour of principle of advances being made and made immediately)

Wesson—50 per cent of wheat.

Appleby—75 per cent of initial payment.

That is, Mr. Wesson thought it should be 50 per cent of the wheat and Mr. Appleby thought it should be 75 per cent of the initial payment. Mr. Brownlee thought it should be a flat maximum rather than "up to half".

Mr. Knight: Mr. Speaker, may I ask what was the motion, just for information.

Mr. Tucker: I will give it to you in a minute. Then on the question of the dominion-provincial conference:

That this be presented to three prairie governments at once and they take it to Ottawa.

The question was whether it would be through the banks, through the wheat board or have the government set up a fund and administering it through a body, perhaps the municipalities. That is from Mr. Brownlee's remarks. An amendment to the amendment was moved by Mr. Schulz, seconded by Mr. Waldbauer:

Advance payments without interest when this is an emergency.

The amendment was that they delete:

—at a normal rate of interest not to exceed 3 per cent—

This was to the resolution as brought in by the resolutions committee. That rather sounds as though they were talking about loans. As this resolution committee brought in the recommendation for the resolution it contained these words:

At a normal rate of interest not to exceed 3 per cent.

The amendment was moved that these words be struck out and the amendment to the amendment was that the words "interest free" be substituted. That amendment to the amendment was defeated, that it was to be interest free. Then the amendment was carried that they strike out the reference to interest. Then the resolution which was brought in and has been cited in the house was passed. I just wanted to lay that before

the house so the house can judge who was telling the truth about that Saskatoon conference.

Mr. Zaplitny: I wonder whether the hon. member for Rosthern, before he takes his seat, would answer the question I was going to ask and which he did not allow me to ask when he was speaking. The question I wanted to ask is this. Is what he has referred to a stenographic record of what went on at that conference or is it signed by the chairman of the conference?

Mr. Tucker: At the outset, Mr. Speaker, I said that I had a vivid recollection of what took place at that conference.

An hon. Member: So have I.

Mr. Tucker: That resolution was questioned; some hon. members here said they were there and that they knew what took place, that there was no question of loans, nobody had said anything about loans and so on. I therefore asked the secretary appointed by that conference, and who I saw was making notes of what was said, if she would make those notes available to me. What I have given to the house are excerpts from those notes which she made as people spoke.

Mr. F. S. Zaplitny (Dauphin): Mr. Speaker, it had not been my intention to speak on this occasion, but the two speeches that have been made from the opposite corner of the house—I refer to the one we have just heard and the previous one by the hon. member for Iles-de-la-Madeleine (Mr. Cannon)—make it necessary for me to say a few words. First of all, referring to the document from which the hon. member for Rosthern has just quoted, may I say that it is quite obvious that what he is quoting from is a set of notes made by one person at the conference. It is not a stenographic record. I asked him whether it was signed by the chairman of the conference. He did not answer that question, so I assume it was not signed by the chairman. We can therefore accept it only as being the opinion of the person who made those notes as to what transpired there.

Some hon. Members: No, no.

Mr. Zaplitny: I suggest that the hon. member certainly cannot rest his case on a set of notes drawn up by someone who is expressing from memory what transpired at this conference.

Mr. Tucker: Just to correct my hon. friend, may I say this. This person whose notes I cited was duly elected secretary of that conference and made the notes at the time of the conference.

[Mr. Tucker.]

Mr. Zaplitny: I am not disputing for a moment that the person referred to was elected as secretary for that conference. I am pointing out, however, that this is not a stenographic record of what took place. My friend the hon. member for Rosthern is in the legal profession, and he knows that if he attempted to present evidence which was contained in a set of notes which he could not identify and which he could not prove as being correct, he would not get very far.

Mr. Dickey: He has identified them.

Mr. Zaplitny: He has identified the person who made the notes. But everyone knows that if he is going to use a document and assert it to be a correct record of what took place, that document should be signed by the chairman of the conference. That has not been done. It is therefore not a document which represents what went on at the conference.

Mr. Dickey: He was present.

Mr. Zaplitny: I was present also.

Mr. Wylie: Many others were present also.

Mr. Knight: I would accept his notes if he would read the rest of them.

Mr. Studer: May I ask the hon. member a question? Where are the records signed by the secretary and chairman of this meeting, as stipulated by themselves for the last week?

Mr. Zaplitny: I am very glad to have that question—

Mr. Dickey: He cannot face the facts.

Mr. Zaplitny: —particularly from the hon. member who is so voluble. The only resolutions I placed on the record in this debate were taken directly from the records of the conventions at which those resolutions were passed. They were authentic records signed by the secretary of the organization, which is altogether different from what the hon. member for Rosthern put forward.

Mr. Tucker: On a question of privilege, Mr. Speaker, the resolutions which have been used in regard to that conference are signed by Mrs. Bernice Norman, secretary of the interprovincial farm union council, and were not signed by the president.

Mr. Zaplitny: It is quite characteristic—

Mr. Martin: This will stop the filibuster.

Mr. Zaplitny: It is quite characteristic of the hon. member for Rosthern to begin talking about something different. I was talking about the notes he used and he is trying to bring in the resolutions; that was not the

subject under discussion. The subject was these notes he used which are not signed by the chairman of the conference and are not a stenographic record of the conference; that is all I am saying. So far as the resolutions are concerned, no one is disputing the resolutions or the wording of them. I say he should rest his case, if he has one at all, on the resolutions themselves and not on what one person at the conference set down in her notes as her interpretation of what she heard.

Mr. Dickey: Pretty weak.

Mr. Zaplitny: If these hon. gentlemen want to chip in every few minutes with interruptions while I am speaking, I may tell them there is still plenty of time left for them to speak.

As I said at the outset, I rose to comment particularly on the contribution that the hon. member for Iles-de-la-Madeleine made to this debate. During his speech he made a couple of rather astounding statements. He asked the question, and he repeated it later when he interrupted the hon. member for Acadia, why should the farmers be paid for what they have produced and what has not yet been sold? That question in itself indicates a lack of understanding of this whole issue. I hope the hon. member is not speaking on behalf of the farmers of eastern Canada. Certainly if he is, he is doing a tremendous amount of harm to their cause.

In the first place no one in this house has asked that the grain producers generally be paid for all their production. The farmers themselves have not asked for that. They have asked for an advance of approximately half of what they expect normally to deliver, and that is a long way from what they have produced, as the figures are there to prove. The question indicates the hon. member does not understand the permit book. He does not understand the quota system. He does not understand that farmers are not asking, nor are the representatives of the farmers, that they be paid cash for all the grain they have produced, even though that is what is being done in the United States. We have heard time and again from the members on the other side that the farmers in Canada are being very well treated in comparison with the farmers in other countries. But if the government applied the same method that is being applied in the United States, then they would pay the farmer for all his production and in addition to that would pay him for storing the grain on his farm.

All the farmers are asking, and all we in this group are asking, is a long way from that. We are asking that they be given the opportunity to obtain an advance on a portion of the quota that they are able to deliver under the present set-up. That is an entirely different thing from the interpretation the hon. member gave to it. But let us follow that a step further. If this parliament were to accept, heaven forbid, the philosophy that farmers should not be paid for what they have produced until it is sold, where does that leave our whole Agricultural Prices Support Act? Where does it leave the support price under butter and the support price under eggs? Where does it leave all these support prices which have been accepted as part and parcel of the agriculture policy? If the government, in a moment of weakness, were to give in to the advice of the hon. member for Iles-de-la-Madeleine it would mean the complete destruction of the Agricultural Prices Support Act. He is doing a distinct disservice to every dairy producer, every producer of eggs, not only in western Canada but in his own constituency. I think on reflection the hon. member would want to withdraw that statement and apologize for having made it.

He goes on to say that this bill is a privilege. He wonders why the farmers are dissatisfied with the present bill because it is a privilege. This privilege is an opportunity for the farmer to go further into debt, an opportunity to pay interest on money that is properly coming to him. I am not at liberty to refer to the clauses in the bill, but it is well known that one of the privileges in it is that if a farmer should happen to misunderstand one of the multifarious forms that have been drawn up, forms that were drawn up before this bill has passed, he can be fined $500. In addition to that penalty he would have to pay the amount of money still owing on his loan. I suppose that in default of paying his fine he could be imprisoned; that is the kind of privilege that is being offered under this bill.

Mr. Hosking: We could discuss the clauses of the bill in committee.

Mr. Zaplitny: I hear some chirping from the hon. member again, and perhaps if he would stand up and ask his question I could answer it.

Mr. Hosking: I was just suggesting that we could discuss the clauses of the bill when we are in committee.

Mr. Zaplitny: I was discussing the motion that is before the house, and if the hon. member had done the same thing when he was on his feet he would not be getting into difficulty. He made a few remarks, too. He said, "My farmers are objecting to the payment of interest on advances to grain producers". Now, there is an indication of the

kind of ideology that exists in the minds of some Liberal members. He refers to "my farmers". Is that not a return to the feudal system? He speaks of his farmers. He has become the great white father of his constituency. Out west we take a rather different attitude, regardless of party. We feel we are the representatives of the people, not the owners of the people in our constituency. Here this hon. member stands up and says "my farmers object".

If we may follow that one step further, I wonder if he is doing a service to the farmers of eastern Canada by taking that attitude or—

Mr. Hosking: I am just stating what they think.

Mr. Zaplitny: —by proclaiming that his farmers are objecting to paying any interest that might be involved in this transaction if cash advances were being made. Let me remind him that we also represent farmers. I have no doubt I represent a good many more farmers than he does. The farmers in my constituency and in the prairie provinces have been helping to pay freight assistance on feed grain coming to his farmers and the farmers in other constituencies for a period of 12 years.

Mr. Hosking: Are you suggesting that that be dropped?

Mr. Zaplitny: This has amounted to over $100 million. We are not objecting to it. We have been glad to give a helping hand.

Mr. Hosking: Because you get the benefit, too.

Mr. Lesage: It helps the western farmer, too.

Mr. Zaplitny: I do not mind one at a time, but I think it gets confusing when we have more than that. We have never objected in this house to this freight assistance being paid because we felt it was part of the agriculture policy—

Mr. Hosking: Because it helps yourself.

Mr. Zaplitny: —and because it is for the good of the nation as a whole. But there are those from eastern Canada who—

Mr. Lesage: Will the hon. member permit a question?

Mr. Zaplitny: Yes.

Mr. Lesage: Does the hon. member think the freight subsidy on feed grain coming from the west to the east does not help the western farmer also?

Mr. Zaplitny: That is not the question.

Some hon. Members: Oh, oh.

[Mr. Zaplitny.]

Mr. Zaplitny: At no time have I or any member of this group claimed that it does not help the western farmer. If it is of any assistance in the selling of feed grain then, of course, to that extent it is of some assistance to agriculture generally. But the point is, it is a direct subsidy to those who feed that grain in eastern Canada. Yet there are hon. members from eastern Canada who rise in their places and—I have no doubt without consulting the farmers at all—they take the stand that they are their farmers and they speak for them without consulting their opinions at all. They say that their farmers are objecting to something that may be of advantage to the grain producers who are willing to pay their share of freight assistance to ship the feed grain to eastern Canada.

All we are asking is that the members from eastern Canada take a fair and reasonable stand on this question. I think if they would only stop to think they would realize that in many ways the people of western Canada have been instrumental ever since confederation in subsidizing to a very great extent the people of eastern Canada in the form of tariff duties, for example. Every day that goes by hundreds of thousands of dollars are paid out by the people of western Canada to help to protect industry in eastern Canada. If they would stop to think of that I am sure they would take a little more reasonable attitude than they are taking on this question.

However, the question that is before us is whether this bill should be read a second time. We have stated, I believe in clear and unmistakable terms, that we are not prepared to support the bill on second reading. The other opposition parties have also indicated now that they will not accept the bill on second reading. We are basing our stand not only on what is contained in the bill, bad as it is, but also on the opinions as they were expressed in convention by the major farm organizations in western Canada.

Regardless of what the hon. member for Rosthern may say, regardless of how he tries to twist around what happened at the Saskatoon conference, regardless of what other members of the Liberal party may try to say, if they were to go out to western Canada today and test public opinion on this question I am sure they would come back quite convinced that this bill is not the answer to the problem. What is more, they would come back convinced that they are making a major mistake by assuming that just because at one time or another one, two or three of the leaders of some of the farm organizations made certain statements which make it appear as though they are supporting the bank loans, they were in fact speaking for the farmers

of that organization, because subsequent events proved that that was not so.

If the government feel so stubborn about this question, if they feel so sure of their position, I for one am prepared to let them test public opinion on this issue. Let them call an election tomorrow and actually find out the feelings of western Canada on this question.

Mr. W. G. Dinsdale (Brandon-Souris): Mr. Speaker, it is obvious from the nature of the discussion taking place on this bill today that we are dealing with a very complex problem that has a very serious impact on the general economy of Canada, and more particularly on the whole economy of the prairies. I am taking advantage of the amendment moved by the hon. member for Mackenzie (Mr. Nicholson) to lend my support to the suggestion that this particular piece of legislation be given the six months' hoist. I do so because I have considered the matter quite seriously as it would affect my own area, and I can quite readily come to the conclusion that nothing would be lost, so far as assisting the critical cash shortage among the farm population of my particular constituency is concerned if this legislation is never passed.

The last time I contributed to the discussion I emphasized why the bill is not wanted by the farmers of my area, and why if passed it will do nothing to solve the basic problem. The hon. member for Rosthern has been recapitulating certain arguments that have been made in the house. I would like to suggest, in refutation, an up to date point of view representing a cross section of the prairie farm population, a point of view, as a matter of fact, which was expressed to the government no later than yesterday, February 16. The interprovincial farm union council delegation appeared before the government at that time, as they have appeared before other groups in this house, and repeated in no uncertain terms, verbally as well as in their written statement, that they favour the cash advance principle rather than the legislation that we have before us today.

We have had contributions from members from other parts of the country as well as from western Canada. As I have listened to the contributions from members from eastern Canada, I have been amazed. Some of those contributions have been formal speeches; others have been interjections. I have been amazed, Mr. Speaker, at the lack of understanding of the difficulty with which the farm population, the wheat grower especially, is faced at the moment. I refer particularly to the interjection of the hon. member for the Iles-de-la-Madeleine and others who interjected, who feel that the legislation before us is in the form of a subsidy to the grain growers on the prairies.

I endeavoured to point out the other day that at no time has the prairie farmer ever been subsidized by any part of the Canadian economy. There is the misunderstanding that the operations of the Canadian wheat board involve a form of subsidy. But, as I emphasized the other day—and I repeat it this afternoon because the point does not seem to have penetrated—the farmer has paid out of the returns received from the marketing operations of the wheat board for every penny that he received. He has never been subsidized by the federal treasury. And of course the bill we have before us places him in the same independent position.

The point we are making is that the principle enunciated in the bill does not begin to meet the situation in which the farmer finds himself at the moment. It would seem that not only is there failure on the part of members from other sections of Canada who have intervened in the debate to understand the nature of the problem, but it would appear that the administration itself, the ministers most concerned, also fail to appreciate fully the nature of the problem.

I am going to deal with only one phrase in the bill which tends to emphasize the point I have just made. The bill refers to the cash shortage problem as a temporary financial difficulty. One reason I have opposed the legislation is that I feel this is not a temporary situation. If it were a temporary and passing situation no doubt the piece of legislation we have before us today would suffice, but it becomes increasingly obvious with the passing of time that the farmer himself regards the bill as quite ineffective to meet the problem. Certainly the fact that the government have described the bill as meeting a temporary situation indicates that they are almost completely unaware of the real nature of the problem.

Actually there has always been a shortage of cash among the farmers of western Canada. Until 1930 the farmers there operated largely under a subsistence economy. They did not have much to do with the exchange of money in any shape or form. They were suspicious of banks and the whole monetary scheme of things. I think this fact is dramatically demonstrated in the new forms of political expression which have emerged in western Canada. All of them have had as a basic part of their ideology some emphasis on the suspicious attitude toward the existing financial system. Farmers had got themselves into a situation of debt during the thirties, and that only increased their anxiety.

Grain

More recently because of changing circumstances the farmer has been moving toward a cash economy. Whereas he had been able to get along reasonably successfully on a subsistence basis, living as far as possible from the production of his own farm, today he is dependent upon money whether he likes it or not. He must have ready cash in order to meet current operations of his farming business. This is not a new situation, it is merely something which has come to a head because of the rapidly changing circumstances since the war, particularly in the past three or four years. It seems obvious that the government has failed to appreciate the nature of this problem.

One reason the situation has become critical from the standpoint of the Canadian farmer is the changing agricultural situation in our neighbour to the south. If we fully appreciated the change in the production and marketing of wheat we would readily come to the conclusion that we are faced with more than a temporary financial situation. Statistics are available so that he who runs may read. For example, we see that today the United States is producing annually more than 1,000 million bushels of wheat, whereas before the war it produced on the average some 700 million bushels of wheat. We must appreciate the difficulty facing the Canadian wheat economy because of that changed situation.

The consumption of wheat remains pretty well static. It is a well known fact that the demand for wheat remains practically stationary regardless of the level of production. When there is an increased level of production the demand remains almost static. The total world demand for wheat has grown very slightly in relation to the total increase in world population. Domestic consumption in the United States has remained fairly static; therefore they have had to turn to the export market. Ever since the Canadian west was settled the export market traditionally has been largely taken care of by the wheat producers of the Canadian prairies. During the 10-year period 1930-39 the United States producers exported 59·9 million bushels, whereas for the comparative 10-year period 1946-55 they exported 309·3 million bushels. Such an increase would tend to suggest that somebody is going to suffer in the markets of the world and unfortunately that somebody has been the western Canada wheat producer.

It is equally obvious that the United States is going to remain a sharp competitor of the prairie grain producer, so that the cash shortage referred to as a temporary financial shortage is not going to decrease within the foreseeable future. Actually Canadian exports have decreased proportionately in the past three years. We maintained our position fairly well up until the end of the war in Korea, but since that time Canada has been occupying a declining position in the export markets of the world. That problem has been intensified by the fact that there has been no real positive action on the part of the government to improve our exports.

An hon. Member: Time.

An hon. Member: You made it.

Mr. Speaker: As hon. members know, according to standing order 28 a member should address himself to the Chair. On reading the record it might appear that that expression was addressed to me, that I should make this announcement at this time.

An hon. Member: I withdraw.

Mr. Speaker: I am glad the hon. member does say that. That is why I interrupt hon. members who interject in the second person, whereas they should do so in the third person.

PRIVATE BILLS

Mr. Speaker: There are several divorce bills. Shall I take them one by one?

Mr. Knowles: Yes; would you call them one by one?

GEORGE FRANCIS ALFRED YULL

Mr. E. T. Applewhaite (Skeena, for Mr. Hunter) moved the second reading of Bill No. 11, for the relief of George Francis Alfred Yull.

Mr. A. M. Nicholson (Mackenzie): Mr. Speaker, although this is the 29th day of the session, this is the first opportunity members have had to discuss the divorce bills which are before us, and I should like to say a few words on this particular case.

I would draw attention to the fact that we have only 60 minutes to discuss the 90 cases which are before us, and it would not be possible to give these bills the careful consideration Their Honours the senators did, but I have been interested in noting that several of the new senators have been working most carefully on these assignments, and on this one in particular. I notice that Senator Croll, in the first case that came before him, asked:

Q. Now at this stage you have said that three months after you were married your troubles started?

A. Yes, sir.

Q. How long did you know your wife before you were married?

There was a real attempt by His Honour the senator to try to find out what had gone wrong in this particular case. Another point I should like to mention is that we still find contradictions in the evidence given by these paid detectives. I would suggest to Their Honours in the other place, and to the committee that will be reviewing these cases, that careful consideration be given to the hired detectives who come here. One of these detectives reported that he and the other gentleman went to a particular place at a very unreasonable hour. One swore that the door was open without any question, and the other swore that before the door was opened the question was asked as to who was there and he replied that the clerk was there. I think it is significant that a detective giving evidence is prepared to admit—

Mr. Knowles: Not the Clerk of the house.

Mr. Nicholson: No, not the Clerk of the house. It was the clerk of the hotel in question. It seems strange that a detective who admits having given false evidence is able to give evidence in connection with a case of this sort and it is accepted. Senator Croll, naturally, considering it was his first case, was not quite familiar with the procedure. At page 14 of the evidence he is recorded as saying, after hearing the detective:

All we have at the moment is that two people were found in the room.

Her Honour Senator Hodges came to his assistance by pointing out:

We usually have a description of the room.

That was placed on the record. Senator Croll inquired:

Q. What day of the week was the 17th March?
A. A Thursday, sir.

I do not know what that had to do with it, but that was the evidence. I do not think we should call for a recorded vote on this particular bill, but I did want to make those few comments.

Mr. Speaker: Is it the pleasure of the house to adopt the motion?

Mr. Knowles: On division.

Mr. Speaker: Carried on division.

Motion agreed to on division and bill read the second time.

JOYCE ETHEL JAQUES HORGAN

Mr. W. G. Weir (Portage-Neepawa, for Mr. Hunter) moved the second reading of Bill No. 12, for the relief of Joyce Ethel Jaques Horgan.

Mr. Speaker: Is it the pleasure of the house to adopt this motion?

Mr. Knowles: On division.

Mr. Speaker: Carried on division.

Motion agreed to on division and bill read the second time.

JEAN THOMSON DUQUETTE

Mr. W. G. Weir (Portage-Neepawa, for Mr. Hunter) moved the second reading of Bill No. 13, for the relief of Jean Thomson Duquette.

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, I should like to say just a few words with respect to this bill. I draw attention in particular to the fact that the chairman of the committee, Senator Roebuck, found it necessary to express dissatisfaction on one or two points. In particular he expressed dissatisfaction with the investigator in this case, who is one whose name appears many times in these records of divorce proceedings. On page 10 of the record of this particular case the chairman, Senator Roebuck, said this:

It is not fair to a respondent. We have a lot of these cases like this today, and it is getting worse. There was a time when the pleadings did give some particulars, but now they are coming here with just practically none.

A little later in the handling of the same case, Senator Roebuck as chairman of the committee said this, as recorded on page 12:

As to whether the evidence is sufficient we will discuss that afterwards. I am not satisfied. This is a professional investigator—

His name is Ernest Gordon Etheridge.

—and he did not go as far as he could have gone in giving us the best evidence that was available on that occasion. I say this now because we have heard these cases, and this investigator comes before us frequently. He ought to have gone on and found out from that man—got admissions from him as to who this woman was, and in his presence should have asked the woman who she was.

If my memory serves me correctly, the senators have had occasion to reprimand this same investigator on previous occasions, and here he is again coming before Their Honours with pleadings and with evidence which Senator Roebuck says are not satisfactory. It seems to me that Their Honours deserve credit for trying to get these investigators to take more care with respect to these matters; but it also seems to me, after reading a case like like this, that we in this house simply are not competent to decide whether or not this particular divorce should be granted.

Mr. Speaker: Is it the pleasure of the house to adopt the motion?

Mr. Knowles: On division.

Mr. Speaker: Carried on division.

Motion agreed to on division and bill read the second time.

Private Bills—Divorce

ROSA STRAUB GEHLSEN

Mr. W. G. Weir (Portage-Neepawa, for Mr. Hunter) moved the second reading of Bill No. 14, for the relief of Rosa Straub Gehlsen.

Mr. Speaker: Is it the pleasure of the house to adopt the motion?

Mr. Knowles: On division.

Mr. Speaker: Carried on division.

Mr. Harris: Mr. Speaker, I quite appreciate the points being made by my hon. friends. We have on former occasions, however, asked them to grant us their indulgence by indicating those bills on which they do not intend to speak. If they are prepared to do that now, we can put them through in one motion and then call the ones on which they intend to speak. I ask that only in the interests of the normal dispatch of business in the house, and not by way of criticism of the action being taken.

Mr. Knowles: Mr. Speaker, I know some of the bills on which I intend to speak, but I do not know what bills my colleagues intend to speak on. I think we might go on and call them in the present way, one at a time.

Motion agreed to on division and bill read the second time.

CECILE BEZEAU BARNABE

Mr. W. G. Weir (Portage-Neepawa, for Mr. Hunter) moved the second reading of Bill No. 15, for the relief of Cecile Bezeau Barnabe.

Mr. Speaker: Is it the pleasure of the house to adopt the motion?

Mr. Knowles: On division.

Motion agreed to on division and bill read the second time.

DORA GINA COSTELLO DASH

Mr. W. G. Weir (Portage-Neepawa, for Mr. Hunter) moved the second reading of Bill No. 16, for the relief of Dora Gina Costello Dash.

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, I should like to say a brief word about this case. First of all, since we so often draw attention to the cases in which paid investigators or professional detectives are used as witnesses, I should be fair and point out that in this case no detectives or investigators were employed. The witnesses who appeared on behalf of the plaintiff seemed to be people who had never appeared before in a case such as this. But after reading this case I am also impressed with the tragedy of the situation. I note in particular that there are two children, one 8 years of age and one 3 years of age.

Having read this case, it does seem to me it is the type of case where some other recourse might have been had, where counselling of some kind might have been effective. Because of that I feel unhappy about parliament granting this divorce in the very easy manner in which it seems to go through, particularly through this House of Commons.

Mr. Speaker: Is it the pleasure of the house to adopt the motion?

Mr. Knowles: On division.

Motion agreed to on division and bill read the second time.

FERNAND DESMARAIS

Mr. W. G. Weir (Portage-Neepawa, for Mr. Hunter) moved the second reading of Bill No. 17, for the relief of Fernand Desmarais.

Mr. Speaker: Is it the pleasure of the house to adopt the motion?

Mr. Knowles: On division.

Motion agreed to on division and bill read the second time.

ELSIE ABBOTT MARSDEN

Mr. W. G. Weir (Portage-Neepawa, for Mr. Hunter) moved the second reading of Bill No. 18, for the relief of Elsie Abbott Marsden.

Mr. Speaker: Is it the pleasure of the house to adopt the motion?

Mr. Knowles: On division.

Motion agreed to on division and bill read the second time.

FREDA ETHELWINNE HENDERS JACOBSON

Mr. W. G. Weir (Portage-Neepawa, for Mr. Hunter) moved the second reading of Bill No. 19, for the relief of Freda Ethelwinne Henders Jacobson.

Mr. Speaker: Is it the pleasure of the house to adopt the motion?

Mr. Knowles: On division.

Motion agreed to on division and bill read the second time.

HAZEL LORETTA NOSEWORTHY JOHNSTON

Mr. W. G. Weir (Portage-Neepawa, for Mr. Hunter) moved the second reading of Bill No. 20, for the relief of Hazel Loretta Noseworthy Johnston.

Mr. A. M. Nicholson (Mackenzie): Mr. Speaker, this is a rather unusual bill. In the

petition it is stated that the petitioner resides in the town of North Sydney, but when the case came before the subcommittee on January 17 it appeared that the petitioner resided in Montreal. The evidence does not make it quite clear how it is that in the one place it is stated that she resides in North Sydney and in the other place in Montreal. My learned friend the hon. member for Winnipeg North Centre informs me that while this couple, when they were married and after they were married, resided in North Sydney, because the husband deserted and returned to Montreal his wife automatically became domiciled in the province of Quebec. This unfortunate woman has a tragic story as told in the Senate, and is put to the expense of coming to Ottawa to present her case.

There is another unusual feature in this case. The co-respondent appeared and gave evidence. It is obvious that this family has been broken and of course the customary questions were asked and answered with respect to whether or not there was any collusion. I think this is the first case of this particular type which I happen to have noticed this year, where the co-respondent has come before the committee, admitted the charges and a divorce has been granted.

When this case comes before the house committee I think there should be some discussion with respect to the information given in the petition as to the residence of this woman and the information given in the minutes of the subcommittee of January 14 setting forth that the woman is domiciled in the province of Quebec. The question should be cleared up whether a woman who has always lived in Nova Scotia and is deserted by her husband who goes to the province of Quebec should be put to the expense of coming to Ottawa to seek a divorce.

Mr. Speaker: Is it the pleasure of the house to adopt the motion.

Mr. Knowles: On division.

Motion agreed to on division and bill read the second time.

VERONICA IRIS COLLIER HORVATH

Mr. W. G. Weir (Portage-Neepawa, for Mr. Hunter) moved the second reading of Bill No. 21, for the relief of Veronica Iris Collier Horvath.

Mr. Speaker: Is the motion agreed to?

Mr. Knowles: On division.

Motion agreed to on division and bill read the second time.

MARIA ROMANO BOVE

Mr. W. G. Weir (Portage-Neepawa, for Mr. Hunter) moved the second reading of Bill No. 22, for the relief of Maria Romano Bove.

Mr. Speaker: Is the motion agreed to?

Mr. Knowles: On division.

Motion agreed to on division and bill read the second time.

NORA MARIAN TILLEY MCBAIN

Mr. W. G. Weir (Portage-Neepawa, for Mr. Hunter) moved the second reading of Bill No. 23, for the relief of Nora Marian Tilley McBain.

Mr. Speaker: Is the motion agreed to?

Mr. Knowles: On division.

Motion agreed to on division and bill read the second time.

MARGUERITE TREMBLAY NATHAN

Mr. W. G. Weir (Portage-Neepawa, for Mr. Hunter) moved the second reading of Bill No. 24, for the relief of Marguerite Tremblay Nathan.

Mr. Speaker: Is the motion agreed to?

Mr. Knowles: On division.

Motion agreed to on division and bill read the second time.

DOLORES MARION ZOLOV KARPMAN

Mr. W. G. Weir (Portage-Neepawa, for Mr. Hunter) moved the second reading of Bill No. 25, for the relief of Dolores Marion Zolov Karpman.

Mr. Speaker: Is the motion agreed to?

Mr. Knowles: On division.

Motion agreed to on division and bill read the second time.

ROSALIE ROSETTI ACASON

Mr. W. G. Weir (Portage-Neepawa, for Mr. Hunter) moved the second reading of Bill No. 26, for the relief of Rosalie Rosetti Acason.

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, this is another bill where the principal witness is the co-respondent. Once again, as with some of the others to which I have referred today, having read the bill it seems to me we simply do not know whether or not this is a divorce that should be granted. The more I read bills of this kind, and there are a lot more like them before us today, the more I feel we

simply are not competent as a group of members, with all the other business we have, to be dealing with cases of this kind.

Mr. Speaker: Order.

Mr. Knowles: I am glad to hear you say "order", Mr. Speaker. I think the whole business is out of order.

Mr. Speaker: I fully agree with the hon. member. As a matter of fact, I have been looking up some of the authorities and want to submit some observations to him. The hon. member concluded his remarks a moment ago by saying that he does not think members are competent to deal with these matters. No doubt he was referring to a bill he introduced the other day which will eventually come before the house, namely his proposal to refer this whole business, as he calls it, to the exchequer court. That measure will come up and he will have ample opportunity at that time to put forward the suggestion contained in that bill. Therefore the suggestion should not be anticipated in the discussion of this bill.

Mr. Knowles: With respect, I did not suggest it. You may be reading my mind, but I did not say it.

Mr. Speaker: The hon. member almost said it without referring to the bill. I have heard him make remarks before with respect to this whole business and he will perhaps permit me to keep in my mind some of the words he does say in the house from time to time.

I want to refer particularly to the procedure that has been followed since five o'clock. The hon. member for Mackenzie (Mr. Nicholson) and the hon. member for Winnipeg North Centre (Mr. Knowles) have spoken to the second reading of some of the divorce bills that have been before the house today. In each of the cases on which they have spoken they have referred to the evidence taken in the Senate. I think they have both referred to members of the Senate who are members of that committee and who acted on it. I have in mind, in looking over these proceedings, that if we are to refer to the actions taken or the opinions expressed by the members of the other house, perhaps we are alluding to proceedings in the other house. That is something which is not allowed in this house. I would refer hon. members to citation 243:

> Allusion to debates in the other house are out of order, and there are few orders more important than this for the conduct of debate and for observing courtesy between houses.

There was nothing derogatory in what was said about the members of the other place. As a matter of fact I think it was complimentary.

[Mr. Knowles.]

Nevertheless I do not believe that in this house we should summarize the work that is being done by one or two individual senators in whatever work they are called upon to perform in the other house. Today, in view of the fact that the comments have not been derogatory, one might say, "Let it go". But tomorrow they may be derogatory and then I would be obliged to stop hon. members from referring to our colleagues in the Senate.

Mr. Knowles: Will Your Honour permit a question?

Mr. Speaker: Yes.

Mr. Knowles: I do not rise to argue the point just now but would Your Honour regard what goes on in a committee or in a subcommittee of the other place as coming under the same ban that is stipulated in citation 243 which refers to the other house? The documents from which we have been reading are reports of proceedings in committees and subcommittees. They are not reports of what went on in the other house itself.

Mr. Speaker: The hon. member could also have asked whether it relates to debates. The citation to which I have referred, namely citation 243, refers to debates whereas the evidence that has been commented upon constitutes the proceedings in a working committee of the Senate.

Citation 243, although it refers only to "allusion to debates" is only one citation that points out the courtesy which must exist between the two houses. Generally speaking, I think there can be found other citations which are to the effect that in our own house in debate we should refrain from referring to individual members of the other place and what they have done, in whatever capacity, as far as their parliamentary work is concerned.

But there is this further point that I should like to submit to hon. members, namely the very nature of a private bill. When the second reading of a private bill has been given, its principle is to be accepted only conditionally. It is accepted conditionally upon the facts being proven before our own committee to which the bill must be referred. By our own standing orders we provide that, with respect to any private bill, the principle of it is accepted upon condition that it will be referred—we have no choice in the matter—to a standing committee where the facts relating to that bill will be proven. If the preamble is not proven, the bill does not go any further. But if it is proven, it comes back here.

I think the discussion of the evidence taken in the Senate is a premature discussion.

Furthermore, to expect that hon. members, in debating the second reading of these bills, will make up their minds only upon the evidence taken in the Senate I think is prejudging what their attitude may be after they have looked at that bill in their own committee.

We know what the practice is and what it has been, but I am now talking about the theory of the whole thing. I am not assuming that our committee, let us say, will not meet —to take an absurd case—to consider these things or, even if they did meet, that they would not pass on them quickly because, let us say, they have confidence in what has taken place on the Senate side. At this moment this bill is to be referred to one of our standing committees. If hon. members wish to do so, they can call all the witnesses —including detectives when there were any— take their own evidence and make up their own minds.

Then in committee of the whole they can review the proceedings that have been reported from our standing committee. But at this moment, in discussing the principle of this bill on second reading, to summarize for the benefit of hon. members who perhaps, like myself, have not read the evidence, while at times it is extremely interesting and entertaining, I think it is something that does not meet the conditions that our rules prescribe.

I am not making a ruling today. I just want to submit these points for the consideration of hon. members. There is no question that, according to citations 769, 770 and 771, on second reading the principle of a private bill is accepted only conditionally. I read now from citation 769:

> . . . but the expediency of a private bill, being mainly founded upon allegations of fact, which have not yet been proved, the house, in agreeing to its second reading, affirms the principle of the bill, conditionally, and subject to the proof of such allegations before the committee.

The allegations of fact contained in this bill, as far as our own house is concerned, have not been proven. The allegations of fact in the petition have been proved to the satisfaction of the Senate before their committee, and they passed the bill and sent it to this house. But as far as we are concerned, we look at the second reading of this bill only conditionally, notwithstanding what the evidence might have been in the Senate. As far as we are concerned, the facts in connection with this bill have not been proven as far as our own committee is concerned.

Otherwise what would be the reason for sending these bills to our standing committee? You might as well have them dealt with immediately—I am speaking of the bills to which hon. members have referred tonight— if they opposed them only on the basis of the Senate evidence but did not seek to do anything further in order to defeat them, such as provoking a division or anything like that. What is the purpose of sending them to our own standing committee? Why should they not go from here directly to the committee of the whole and be passed upon immediately? I consider that we are perhaps not adhering to procedure as strictly as we should in considering these private bills.

Mr. Knowles: May I say a word, Mr. Speaker, because I agree with Your Honour that perhaps the procedure we follow might be considered carefully. As a matter of fact, when I was thinking of what I would say if Your Honour gave me the floor for a moment, I was going to start off by agreeing with what you had said about second reading of a private bill being different from second reading of a public bill. In support of my agreement with Your Honour I intended to read the very sentence or two that you have just read from citation 769 of Beauchesne's third edition. Perhaps I might read the same sentence or two again:

> A public bill being founded on reasons of state policy, the house, in agreeing to its second reading, accepts and affirms those reasons; but the expediency of a private bill, being mainly founded upon allegations of fact, which have not yet been proved, the house, in agreeing to its second reading, affirms the principle of the bill, conditionally, and subject to the proof of such allegations before the committee.

However, Mr. Speaker, as I think you will readily realize, it was my intention not to stop there, as did Your Honour. I intended to go on and read the next sentence or two, which are as follows:

> Where, irrespective of such facts, the principle is objectionable, the house will not consent to the second reading; but otherwise, the expediency of the measure is usually left for the consideration of the committee.
>
> This is the first occasion on which the bill is before the house otherwise than *pro forma* or in connection with the standing orders; and if the bill be opposed, upon its principle, it is the proper time for attempting its defeat.

Now, Mr. Speaker, I contend that if I, as one of the few members who may happen to have read some of these cases, feel that the principle of a particular bill, the principle of granting a particular divorce as between Mr. and Mrs. A., is objectionable and should not be agreed to, I am within my rights and within the rules of the house in speaking to that bill at second reading. Certainly I would be within my rights in attempting its defeat if I felt that such a bill should not be allowed to pass.

I hope I was not mistaken if I detected in what Your Honour was saying—Your Honour was reading my mind so perhaps I can read Your Honour's—that Your Honour was almost challenging us to divide the house on some of these bills. Well, in the past we have tried and we have found, to our surprise, cases which we thought should be defeated, and knowing the views of many members in this house on divorce we thought would be defeated, which nevertheless were carried. Whether or not we seek to divide the house I suppose depends upon whether we think, having in mind the circumstances of a particular bill, we can win the majority of the members to our view that a particular bill should be defeated.

Nevertheless, because there are some divorces we think should not be granted, we believe we have the right to draw attention to the ones which in our view are slightly objectionable as we go along so that when we get to ones that are really objectionable we will be in a position to give the house an opportunity to divide on them.

As I say, I agree with Your Honour's contention that these bills are different from public bills. But there is a difference within the difference. As I have pointed out by referring to citation 769, where we think there are objections to a particular divorce, it seems to me that we have the right to discuss it on second reading. Nevertheless, I agree that the whole procedure might be reviewed. We would be glad to discuss it privately with Your Honour or in a committee. Indeed, as Your Honour knows, I would be glad to find some way whereby parliament might get rid of the whole business.

Mr. Speaker: I am sorry if the hon. member detected in anything I have said a view that he could not discuss this bill on second reading. Of course if he feels the principle is objectionable, he will discuss it, and he should discuss it. Under the rules he will be quite in order. But in discussing the principle of this bill I consider that he does not necessarily have to refer to the evidence which has been taken on the Senate side. That is my point.

Suppose the bill were introduced in this house. When second reading was being considered in the Senate they would have no evidence whatever. They accept the principle conditional upon their committee proving the allegations of fact. We are in the same position here. I think if you take for granted that our objection to the bill should be based on the evidence taken in the other place, you do not attach very much importance to the ability of our own committee to prove the facts themselves.

[Mr. Knowles.]

Mr. Knowles: May I point out that in the case of a private bill coming before this house initially, other than a divorce bill, the same general rules apply. We expect the sponsor of such a bill to make an initial statement as to what is involved in that bill. I would be satisfied with the same practice in respect of these bills. If instead of our being given the evidence as a means of finding out something about them, the hon. member for Parkdale (Mr. Hunter) or the hon. member for Portage-Neepawa (Mr. Weir) who is sponsoring some of these bills on his behalf, would speak on second reading and tell us why he thinks we should submit this bill to the committee, as is done in the case of private bills, then I would say that would obviate the necessity of our looking at the evidence furnished to us.

I would be interested in what Your Honour has in mind when you say that a reference to the evidence is not necessarily desirable on second reading. I take it there is no question as to our right to refer to it if we wish. My point is that we are accepting this evidence as something that is given to us in lieu of a statement in support of the bill being made by the mover of second reading.

Mr. Goode: I wonder if I might make a comment on this. I would support what you have said, Mr. Speaker. I just point out to you that if the evidence is going to be allowed on second reading, and if we consider every bill that has been offered to the house at this time, it would take every hon. member 26½ hours to read the evidence. He must be in the same position as my hon. friend to be able to debate a particular bill, and I do not think any hon. member, on this side of the house at least, has 26½ hours to spend reading evidence on divorce bills.

Mr. Herridge: I should like to draw to your attention the fact that during the last parliament when a divorce bill was brought before this house, a member on the government side objected to it being proceeded with because members had not received a copy of the evidence. Mr. Speaker upheld that objection at that time because members had not received a copy of the evidence and were therefore not in a position to proceed.

Mr. Speaker: Does the hon. member have the precise date of that incident?

Mr. Herridge: No, I have not, but I know I am speaking correctly.

Mr. Speaker: I recall one, and in discussing this point with my predecessor he had doubts as to whether or not hon. members would

have the right to hold up a bill which comes up for second reading only on the ground that the evidence had not been received from the Senate. I think in this case one wants to accommodate all hon. members. I do not think I would, myself, care to have to render a judgment on that point, although I think if I were pressed I would do so. The Clerk informs me that the evidence is always received with the bill, so there is one copy of the evidence available. Copies are not always printed and distributed when the bill comes up for second reading.

In these instances today, all the evidence has been printed and distributed. When a bill is called, it is printed. According to our standing order all bills must be printed before second reading. They have been printed and they meet with our requirements; therefore I can put the question whenever they are called. Theoretically I do not believe hon. members may object on the ground that the evidence has not been printed and distributed. The evidence is not part of the bill.

As I say, I raised the point only as a matter of interest and perhaps as a diversion from the rather monotonous task I was performing of proposing one bill after another. Having done so, hon. members may consider what I have said. It is not a ruling, but I thought I would make these remarks in order to give hon. members an opportunity to think them over. Perhaps on some other occasion I may have to rule, but I want to go further into this myself.

Mr. Nicholson: I am not clear as to whether or not you consider it is permissible to refer to the evidence in connection with these cases. May I say that last year there were four or five cases before us which this house refused to accept on the evidence as it came from the other place; we reversed the decision. If we had not been able to refer to this evidence I am sure we would not have managed to win a favourable vote in the house. We have no other information on which to reach a judgment as to whether second reading should be given or refused, except on the basis of the material which is supplied to all hon. members reviewing the work of the committee.

Mr. Speaker: I do not want to make a ruling on this point; I have doubts. If the hon. member wishes to continue quoting from the evidence I will not stop him on this occasion.

Mr. Richardson: May I ask the hon. member for Winnipeg North Centre a question? I was about to ask him whether he would permit me to do so before Your Honour began your observations. Has he, or any other member of his party, including the hon. member for Mackenzie, any other bills of this kind in which either of these hon. members has a particular interest?

Mr. Castleden: Why?

Mr. Knowles: Will that not be found out as we proceed?

Mr. Richardson: I am only asking the question.

Mr. Castleden: You have the answer.

Mr. Speaker: Is the motion agreed to?

Mr. Knowles: On division.

Motion agreed to on division and bill read the second time.

EDMUND JOSEPH COCHRANE

Mr. W. G. Weir (Portage-Neepawa, for Mr. Hunter) moved the second reading of Bill No. 27, for the relief of Edmund Joseph Cochrane.

Mr. Speaker: Is it the pleasure of the house to adopt the motion.

Mr. Knowles: On division.

Motion agreed to on division and bill read the second time.

EDNA HANNAH KEENE NEWBERG

Mr. W. G. Weir (Portage-Neepawa, for Mr. Hunter) moved the second reading of Bill No. 28, for the relief of Edna Hannah Keene Newberg.

Mr. Speaker: Is it the pleasure of the house to adopt the motion.

Mr. Knowles: On division.

Motion agreed to on division and bill read the second time.

CHARLOTTE JEAN MCANDREW BOYD THOMPSON

Mr. W. G. Weir (Portage-Neepawa, for Mr. Hunter) moved the second reading of Bill No. 29, for the relief of Charlotte Jean McAndrew Boyd Thompson.

Mr. Speaker: Is it the pleasure of the house to adopt the motion?

Mr. Knowles: On division.

Motion agreed to on division and bill read the second time.

WILMA JUNE KEAST NOEL

Mr. W. G. Weir (Portage-Neepawa, for Mr. Hunter) moved the second reading of Bill No. 30, for the relief of Wilma June Keast Noel.

Mr. Speaker: Is it the pleasure of the house to adopt the motion?

Mr. Knowles: On division.

Motion agreed to on division and bill read the second time.

PATRICIA O'NEILL PRIMIANI

Mr. W. G. Weir (Portage-Neepawa, for Mr. Hunter) moved the second reading of Bill No. 31, for the relief of Patricia O'Neill Primiani.

Mr. Speaker: Is it the pleasure of the house to adopt the motion?

Mr. Knowles: On division.

Motion agreed to on division and bill read the second time.

EVELYN NELLIE KEEMER MEIN

Mr. W. G. Weir (Portage-Neepawa, for Mr. Hunter) moved the second reading of Bill No. 32, for the relief of Evelyn Nellie Keemer Mein.

Mr. Speaker: Is it the pleasure of the house to adopt the motion?

Mr. A. M. Nicholson (Mackenzie): At this point I should like to give you a rest for a few moments, Mr. Speaker.

Mr. Knowles: An act for the relief of Mr. Speaker.

Mr. Nicholson: Again I would like to pay a compliment to Their Honours who handled this case. The chairman was Senator Gershaw and the other members were Senator Cameron and Senator Hawkins. In discussing this particular case the chairman, Senator Gershaw, intimated that he hoped he had the facilities available to try to find out what went wrong in this instance. Here they had a young couple with all the advantages that one could expect to find. There was no shortage of money; they had a good education. The chairman went to a great deal of trouble to find out what really was wrong and whether there would not be some possibility of reconciling the difficulty. Of course, in his capacity as the chairman of the committee he did not have any further responsibility than to recommend whether or not the divorce should be granted. I should like to commend particularly Senator Gershaw for the very sympathetic manner in which this particular case was handled.

Mr. Knowles: On division.

Motion agreed to on division and bill read the second time.

[Mr. Weir.]

PIERRE ROGER VUILLE

Mr. W. G. Weir (Portage-Neepawa, for Mr. Hunter) moved the second reading of Bill No. 33, for the relief of Pierre Roger Vuille.

Mr. Speaker: Is it the pleasure of the house to adopt the motion?

Mr. Knowles: On division.

Motion agreed to on division and bill read the second time.

MARIE GERTRUDE ANTOINETTE HOTTE OUELLETTE

Mr. W. G. Weir (Portage-Neepawa, for Mr. Hunter) moved the second reading of Bill No. 34, for the relief of Marie Gertrude Antoinette Hotte Ouellette.

Mr. Speaker: Is it the pleasure of the house to adopt the motion?

Mr. Knowles: On division.

Motion agreed to on division and bill read the second time.

EUPHROSINA KOWALYK WHALLEY

Mr. E. T. Applewhaite (Skeena, for Mr. Hunter) moved the second reading of Bill No. 35, for the relief of Euphrosina Kowalyk Whalley.

Mr. Speaker: Is it the pleasure of the house to adopt the motion?

Mr. Knowles: On division.

Motion agreed to on division and bill read the second time.

MATILDA STONER ADAMS

Mr. E. T. Applewhaite (Skeena, for Mr. Hunter) moved the second reading of the Bill No. 36, for the relief of Matilda Stoner Adams.

Mr. Speaker: Is it the pleasure of the house to adopt the motion?

Mr. Knowles: On division.

Motion agreed to on division and bill read the second time.

GERTRUDE BAILISS GOODLIN

Mr. E. T. Applewhaite (Skeena, for Mr. Hunter) moved the second reading of Bill No. 37, for the relief of Gertrude Bailiss Goodlin.

Mr. Stanley Knowles (Winnipeg North Centre): Can the hon. member for Skeena, who has been named as the mover of the motion for second reading of this bill, give any reasons why we should support it on second reading?

Mr. Applewhaite: I am particularly pleased that an opportunity has been given to me to express the reason. The hon. member for

Winnipeg North Centre will, I think, follow my line of reasoning. If he agrees with me that under certain circumstances, regrettable circumstances, in Canada, it is expedient that people be divorced, then he thinks as I. He and I will both have the greatest respect for those who believe that under no circumstances should couples be divorced.

In this case I, as sponsor of the bill, have reason to believe it can be proved that those circumstances justifying the passing of the bill will be proven or can be proven in our committee. They cannot be proven under the rules, I submit, until such time as the bill reaches the committee which has the power to look into those statements of fact. In other words, sir, the principle of the bill which we are now called upon to approve or disapprove is that if certain facts can be proved, then it is expedient that a divorce be granted. The application of that principle to a particular set of facts cannot be discussed by this house at this time because those facts cannot be made available in final form in this house for the house to take action on them until such time as this house has referred a private bill to a committee.

That is the point on which I was greatly tempted to rise to my feet a few moments ago, because I do feel that that is the basic principle in passing private bills on second reading. I do not know the history, but there has grown up in this parliament the practice of considering this class of private bills differently from others.

It was my privilege at one time to be quite vitally concerned with a contested private bill of another nature which started in the Senate and came to this house. It was most noticeable at that time that no evidence given in the committee of the Senate came to this house. Then there were a number of pipe-line bills a few sessions back which originated in the Senate, and no evidence came to this house upon which it could base approval of the motion for second reading. It was only the basic principle; and whether there was sufficient evidence to make that principle applicable could, I submit, be made known to this house only through the miscellaneous private bills committee or some other appropriate committee.

Mr. Knowles: Mr. Speaker, I appreciate the statement the hon. member for Skeena has made. The fact is that a number of us, including the hon. member, Your Honour and others, will no doubt have private discussions about this matter because it is quite important. It does seem to me, if I may add this word, that what the hon. member for Skeena has said suggests that second reading in the case of divorce bills means something quite different from the second reading of other private bills, let alone the second reading of public bills. That being the case, it seems to me that the whole question of our procedure on these bills, if we are going to continue to deal with them here, might be reviewed further.

As a member of Your Honour's committee which met for several sessions to deal with the rules and procedures of this house, if I may say so I am pleased with the job we did. Many of the changes we made have already proven to be very valuable and I think we cleared up many ambiguities with respect to the procedures of the house. I suppose this matter of divorce was a bit difficult for us to deal with effectively, but it seems to me that it is one piece of unfinished business, this question of how we should be handling these divorce bills.

Mr. Speaker: Shall the motion carry?

Mr. Knowles: On division.

Motion agreed to on division and bill read the second time.

GASTON MAILLE

Mr. E. T. Applewhaite (Skeena, for Mr. Hunter) moved the second reading of Bill No. 42, for the relief of Gaston Maille.

Mr. A. M. Nicholson (Mackenzie): Mr. Speaker, on page 13 of the evidence in connection with this case will be found some questions and answers which are a bit vague. Apparently the petitioner went to the lawyer and asked for money, and suggested he be paid $5 a week to avoid divorce proceedings. I am sorry Their Honours did not follow that through, but apparently it was dropped at that point. I suggest that when our committee reaches this bill further consideration be given to the information on page 13 of the evidence.

Mr. Speaker: Shall the motion carry?

Mr. Knowles: On division.

Motion agreed to on division and bill read the second time.

DIVORCE BILLS

Mr. Speaker: Some hon. members have expressed the opinion that we should get rid of all the remaining bills at once in order to save printing costs. Can they be taken up in one motion and disposed of?

Some hon. Members: Agreed.

Mr. Knowles: Agreed to on division out of respect for Your Honour's voice.

Mr. Speaker: I appreciate the hon. member's kindness very much.

Private Bills—Divorce

SECOND READINGS—SENATE BILLS

Bill No. 38, for the relief of Leokadja Laura Rozycka Haber.—Mr. Hunter.

Bill No. 39, for the relief of Teofila Kurjata Marciniak.—Mr. Hunter.

Bill No. 40, for the relief of Shirley Gelber Kaufman.—Mr. Hunter.

Bill No. 41, for the relief of Margaret Pounden Greenstien.—Mr. Hunter.

Bill No. 43, for the relief of Mary Dufresne Cosco.—Mr. Hunter.

Bill No. 44, for the relief of Julienne Marchesseault Jasmin.—Mr. Hunter.

Bill No. 45, for the relief of Helen Mary Farrell Hickey.—Mr. Hunter.

Bill No. 46, for the relief of Hazel Mair Grant Mander.—Mr. Hunter.

Bill No. 47, for the relief of Joseph Roland Gaston Charette.—Mr. Hunter.

Bill No. 48, for the relief of Beulah Sybil Chapman Maus.—Mr. Hunter.

Bill No. 49, for the relief of John Elwood Way.—Mr. Hunter.

Bill No. 50, for the relief of Thomas Charles Desmarais.—Mr. Hunter.

Bill No. 53, for the relief of John Caldwell Scriver.—Mr. Hunter.

Bill No. 54, for the relief of Marie Therese Provost Lapointe.—Mr. Hunter.

Bill No. 55, for the relief of Margeryann Williams Farrow Chesney.—Mr. Hunter.

Bill No. 56, for the relief of Kathleen Birdie MacPhail Morgan.—Mr. Hunter.

Bill No. 57, for the relief of Sylvia Colato Le Pottier.—Mr. Hunter.

Bill No. 58, for the relief of Antonina Dieni Choumanchuk.—Mr. Hunter.

Bill No. 59, for the relief of Rena Amelia Duncan Chenier.—Mr. Hunter.

Bill No. 60, for the relief of Stanley Edgar Barnes.—Mr. Hunter.

Bill No. 61, for the relief of Molly Joyce LaPlante Baggott.—Mr. Hunter.

Bill No. 62, for the relief of Jean Dorothy McLean Lewis.—Mr. Hunter.

Bill No. 63, for the relief of John Walter Thoburn.—Mr. Hunter.

Bill No. 64, for the relief of Panorea Delaporta Alivizatos.—Mr. Hunter.

Bill No. 65, for the relief of William James Stoddard Edington.—Mr. Hunter.

Bill No. 67, for the relief of Audrey Hilda Voysey Beaudoin.—Mr. Hunter.

Bill No. 68, for the relief of Frederick Howard Blaikie.—Mr. Hunter.

Bill No. 69, for the relief of Muriel Tetreau St. George.—Mr. Hunter.

[Mr. Speaker.]

Bill No. 70, for the relief of Patricia Colleen Hewitt Nelson.—Mr. Hunter.

Bill No. 71, for the relief of Ruth Mildred Thompson McBain.—Mr. Hunter.

Bill No. 72, for the relief of Joseph Theophile Lambert.—Mr. Hunter.

Bill No. 73, for the relief of Lillian Baron Goodman.—Mr. Hunter.

Bill No. 74, for the relief of Madeleine Erna McArthur Blais.—Mr. Hunter.

Bill No. 75, for the relief of Queenie Molly Wolfson Phillips.—Mr. Hunter.

Bill No. 76, for the relief of Annie May Elizabeth Godson Brooks.—Mr. Hunter.

Bill No. 77, for the relief of Ada June Mannard Wilmoth.—Mr. Hunter.

Bill No. 78, for the relief of Rose Florczyk Greenwood.—Mr. Hunter.

Bill No. 79, for the relief of Beryl Grace Leaper Shufelt.—Mr. Hunter.

Bill No. 80, for the relief of Ralph Patrick Dowling.—Mr. Hunter.

Bill No. 81, for the relief of Alice Guernon Peladeau.—Mr. Hunter.

Bill No. 85, for the relief of Elizabeth Baird McDowall Whitlock.—Mr. Hunter.

Bill No. 86, for the relief of Adrien Patrick Dicaire.—Mr. Hunter.

Bill No. 87, for the relief of Jessie Altha MacBride Burnside.—Mr. Hunter.

Bill No. 88, for the relief of Marianne Adorjan Balogh.—Mr. Hunter.

Bill No. 89, for the relief of Helene Marguerite Peck Cooper.—Mr. Hunter.

Bill No. 90, for the relief of Una Margaret Prower Douglas Heubach.—Mr. Hunter.

Bill No. 91, for the relief of Hilary Hope-Hawkins Hardie Henders.—Mr. Hunter.

Bill No. 92, for the relief of Marie Arthemise Marguerite Denise Laperriere Mercier.—Mr. Hunter.

Bill No. 93, for the relief of Harry Hood.—Mr. Hunter.

Bill No. 94, for the relief of Delima Chalifoux Prevost.—Mr. Hunter.

Bill No. 95, for the relief of Frances Raven Sherman.—Mr. Hunter.

Bill No. 96, for the relief of Constance Louisa Kelly McKenna.—Mr. Hunter.

Bill No. 97, for the relief of Jean Mailman Greenleaf.—Mr. Hunter.

Bill No. 98, for the relief of Grace Elizabeth Davidson Alexander.—Mr. Hunter.

Bill No. 99, for the relief of Frederick Arthur Waltho.—Mr. Hunter.

Bill No. 100, for the relief of Jean Decary.—Mr. Hunter.

Bill No. 101, for the relief of Sylvia Barbara Murphy Simon.—Mr. Hunter.

Bill No. 102, for the relief of Amy Elizabeth Torrance Fraser Walker.—Mr. Hunter.

Bill No. 103, for the relief of Margery Cooper Mason.—Mr. Hunter.

Bill No. 104, for the relief of Caroline Scortaru Ungariano, otherwise known as Caroline Scortaru Ungar.—Mr. Hunter.

Bill No. 105, for the relief of John Joseph Rahilly.—Mr. Hunter.

Bill No. 106, for the relief of William Ross Gould.—Mr. Hunter.

At six o'clock the house adjourned, without question put, pursuant to standing order.

ANSWERS TO QUESTIONS

The following answers, deposited with the Clerk of the house, are printed in the official report of debates pursuant to standing order 39:

C.B.C. DIRECTORATE

Question No. 116—**Mr. Diefenbaker:**

1. Who are the members of the directorate of the Canadian Broadcasting Corporation referred to by the minister in the House of Commons on February 7?
2. How often does the said directorate meet?
3. What are its duties?

Answer by: **Mr. McCann:**

On February 7, the hon. member for Eglinton asked if there is a directorate in the C.B.C. which concerns itself with whether a program will or will not go on the air. It was thought at the time that the reference was to one of the regular divisions or departments of the C.B.C. The reference and this inquiry is now understood to relate to some presumed special directorate or body that decides whether programs do or do not go on the air.

The C.B.C. advises that there is no such special body which considers and decides whether programs should or should not be broadcast. The C.B.C. as a corporate entity has full and independent responsibility for all program decisions which are taken through the usual administrative process of chains of responsibility.

BALL POINT WRITING INSTRUMENTS

Question No. 140—**Miss Aitken:**

With reference to tender No. 24-20577, ball point writing instruments, (a) how many tenders were received; (b) what firms submitted tenders; (c) what price was quoted in each tender; (d) which tender was accepted?

Answer by: **Mr. Pinard:**

(a) Four.

(b) Scripto of Canada Ltd., 184 Bay St., Toronto, Ont.; Venus Pencil Co. Ltd., 1325 The Queensway, Toronto 14, Ont.; Northern Products Ltd., 1090 Laurier St., Montreal 23, P.Q.; Truform Industries Ltd., 50 Main St. South, Weston, Ont.

(c) Scripto of Canada Ltd., $37,403.90; Venus Pencil Co. Ltd., $18,241.52 ($18,613.80 less 2 per cent—10 days); Northern Products Ltd., $18,200.16; Truform Industries Ltd., $17,869.25.

(d) That of Venus Pencil Co. Ltd. (found best suited for purpose by independent laboratory tests).

HOUSE OF COMMONS

Monday, February 20, 1956

The house met at 2.30 p.m.

BUSINESS OF THE HOUSE

EASTER ADJOURNMENT

Right Hon. L. S. St. Laurent (Prime Minister) moved:

That when this house adjourns at six o'clock p.m. on Wednesday, March 28 next, it stands adjourned until Monday, April 9, 1956, at 2.30 o'clock p.m.

Motion agreed to.

STORMS

SUGGESTED ASSISTANCE TO BE GIVEN EUROPEAN NATIONS

On the orders of the day:

Hon. George A. Drew (Leader of the Opposition): Mr. Speaker, I wish to direct a question to the Prime Minister. Has the Prime Minister anything to say about any decision of this government along the same lines as the announcement by President Eisenhower in the United States, who stated that supplies of grain and other food products would be available for those in distress in western Europe?

Right Hon. L. S. St. Laurent (Prime Minister): No, Mr. Speaker, not at this time.

STEPS TAKEN TO OBTAIN INFORMATION AS TO SITUATION IN EUROPE

On the orders of the day:

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, I should like to direct a question to the Prime Minister supplementary to the question asked today by the Leader of the Opposition and also supplementary to the question I asked on Thursday of last week. Is the government taking any steps to secure information regarding the situation in Europe so as to determine whether or not Canada should be providing assistance to the people there?

Right Hon. L. S. St. Laurent (Prime Minister): The government is obtaining information from its representatives in the countries that were affected by these unusual weather conditions.

TRADE

GREAT BRITAIN—REPORTED DECISION NOT TO JOIN INTERNATIONAL WHEAT AGREEMENT

On the orders of the day:

Mr. J. G. Diefenbaker (Prince Albert): Mr. Speaker, I should like to direct a question to the Minister of Trade and Commerce. Is it a fact, as announced a few moments ago on the radio, that the United Kingdom has given notice that it does not intend to join the international wheat agreement nations and, if that is the decision, what are the prospects of that organization being effective?

Right Hon. C. D. Howe (Minister of Trade and Commerce): Mr. Speaker, we were advised in advance that the United Kingdom did not intend to join the wheat agreement. Of course, that country is not a member of the wheat agreement at the moment. It certainly lessens the effectiveness of the agreement to have the United Kingdom a non-participant. I think I had better reserve further comments until I am more familiar with what was said at Geneva.

Mr. Diefenbaker: Would the minister allow a supplementary question? There was some reference as well to the fact that the result of this will be a reduction in the price of bread. Does the minister consider that the abstention of the United Kingdom from this agreement will bring about a pronounced reduction in the price of wheat?

Mr. Howe (Port Arthur): The answer, Mr. Speaker, is no.

Mr. H. R. Argue (Assiniboia): Mr. Speaker, I wonder if the minister would be prepared to say whether Canada would support a restricted international wheat agreement, believing that such an agreement would be beneficial to this country and would get the support of wheat producers.

Mr. Howe (Port Arthur): Mr. Speaker, I do not know what a restricted wheat agreement is.

Mr. Argue: Without Britain.

Mr. Howe (Port Arthur): That would depend on many things. I do not care to comment without more information as to what did happen in Geneva today. I have no information. We have six farm advisers there,

together with a strong group representing the government, and until I hear from them I would not care to say what we would or would not do.

GRAIN

WHEAT—REPORTED DECREASE IN EXPORTS DURING DECEMBER

On the orders of the day:

Mr. A. M. Nicholson (Mackenzie): I should like to direct a question to the Minister of Trade and Commerce. Would the minister care to comment on the Canadian Press dispatch from Winnipeg this morning to the effect that wheat exports for December were down about 50 per cent from November and December, 1954?

Right Hon. C. D. Howe (Minister of Trade and Commerce): Wheat exports in December are always down from November. The volume of wheat exports during December depends on the date of closing of navigation on the St. Lawrence.

Mr. Nicholson: They are down about 50 per cent from a year ago.

Mr. Howe (Port Arthur): They are not down 50 per cent from a year ago. I presume the reason that wheat exports from the St. Lawrence were down in December has a good deal to do with the fact that wheat exports from the maritime ports during January, February and March are going to set all-time records.

WHEAT—REPORTED COMPLETION OF CONTRACTS WITH RUSSIA

On the orders of the day:

Mr. H. R. Argue (Assiniboia): I should like to ask the Minister of Trade and Commerce a question. Has the Russian trade delegation now completed in Winnipeg a number of contracts for purchases of wheat, as reported in today's Winnipeg *Tribune*? If so, what are the sizes of such contracts?

Right Hon. C. D. Howe (Minister of Trade and Commerce): It has been made abundantly clear, and my hon. friend should know it, that sales of wheat are not discussed in this house.

Mr. Argue: They are in the Winnipeg *Tribune*.

ADMINISTRATION OF JUSTICE

REQUESTED STAY OF EXECUTIONS UNTIL REPORT OF COMMITTEE ON CAPITAL PUNISHMENT

On the orders of the day:

Mr. Hayden Stanton (Leeds): I should like to direct a question to the Minister of Justice. Would the government consider staying all executions of those convicted of murder and sentenced to be hanged until the report on capital punishment has been received and parliament has had a chance to discuss the same?

Hon. Stuart S. Garson (Minister of Justice): My hon. friend not having given me notice of his question, I should tell him that the matter he has raised is a matter of government policy which will be announced in due course.

PIPE LINES

TRANS-CANADA PIPE LINES LIMITED—TABLING OF PUBLIC FINANCING AGREEMENT

On the orders of the day:

Hon. George A. Drew (Leader of the Opposition): I wish to direct a question to the Minister of Trade and Commerce. Can the minister inform us when the undertaking given by Trans-Canada Pipe Lines Limited in regard to their method of public financing will be tabled in the house, as requested last Thursday?

Right Hon. C. D. Howe (Minister of Trade and Commerce): I am glad to give that information. It was tabled about ten o'clock this morning.

SHIPPING

SINKING OF "HILUNGA"—PARTICIPATION OF R.C.A.F. PLANES IN RESCUE OPERATIONS

On the orders of the day:

Hon. R. O. Campney (Minister of National Defence): Mr. Speaker, on Thursday last the hon. member for Nanaimo asked me whether any Royal Canadian Air Force planes were available in connection with the loss of the Department of Public Works vessel *Hilunga* and whether any of them proceeded to the scene of the wreck. The answer to the first question is yes. As to the second question, I may say that during the period of rescue operations six Royal Canadian Air Force aircraft carried out nine sorties for a total of 41 hours of flying. The crew of the *Hilunga* was first sighted by a Royal Canadian Air Force Lancaster at ten o'clock a.m. Pacific time on the 17th and a Royal Canadian Air Force Canso picked up the survivors and landed them at Sea Island shortly before four p.m. Pacific time on the same day.

NATIONAL DEFENCE

STATEMENT RESPECTING CANADIAN CASUALTIES IN KOREA

On the orders of the day:

Hon. R. O. Campney (Minister of National Defence): On Thursday last the hon. member

for Esquimalt-Saanich addressed the following question to me:

May I ask the minister if there are any Canadian casualties in Korea at the present time?

The answer is no.

SUPPLY

Hon. W. E. Harris (Minister of Finance) moved that the house go into committee of supply:

POWER DEVELOPMENT—PARTICIPATION BY FEDERAL AND PROVINCIAL GOVERNMENTS

Hon. George A. Drew (Leader of the Opposition): Mr. Speaker, I propose to avail myself of the opportunity afforded on the discussion of this motion to bring before the house today the discussion of power development and a policy of joint investment by the federal and provincial governments in power development throughout Canada. In raising this subject I am not limiting the purport of the motion to hydroelectric power or to electricity but include the development of industrial power generally, with particular reference to the development of hydroelectric power, underground gasification of coal for power generation purposes and atomic power.

It seems to me that there is no occasion to devote too much time to emphasizing the immense advantages of the development of our available hydroelectric resources. Every Canadian has seen the remarkable results that follow the harnessing of our great streams in this country. There is reason to believe that it may be possible to harness other power besides that of the flowing rivers. Research is now being carried out into the harnessing of tides and the flow of water between confined rocky shores. New possibilities are presented in that field. Particularly, however, all Canadians have had occasion to be tremendously impressed by the consequences that have followed in every case where great water powers have been harnessed.

I suggest, Mr. Speaker, that in some of the discussions which have taken place publicly in recent months too much emphasis has been placed upon the cost of transmission of electric energy from power sites to the point where the power will be used. I mention that matter for this reason. For example, in relation to the development of certain of our power resources, I have noted that some emphasis has been placed upon the fact that in harnessing those power resources it would cost us a great deal to carry that power to the industrial centres. For instance, I have seen that suggestion made in the case of the greatest power resource we have in Canada, namely Grand falls on the Hamilton river where more than 3 million horsepower are immediately available with the harnessing of those mighty waters. I would suggest that those who think only in terms of carrying power to existing centres of production should examine what has happened out in northern British Columbia. One of the most exciting and challenging developments has taken place at Kitimat, where great water powers have been harnessed in the sub-Arctic, and now one of the largest aluminum plants in the world is producing aluminum as a result of the fact that water power is available at that point. No attempt was made to carry that power long distances by transmission lines. They carried it that relatively short distance, over a mountain it is true but over a comparatively short distance, to the producing site on the seaboard where the processed aluminum could be shipped to the markets of the world. I feel confident that with the harnessing of Grand falls on the Hamilton river, not very far from the great air base of Goose Bay which so many of us know, we will see pulp and paper mills, metal processing and other developments of that kind take place within close proximity to that distant spot.

Nevertheless, even if transmission lines are necessary, the constant improvement of the alloyed metals which carry the power is facilitating more and more every day the transmission of heavy loads of electrical energy to distant points. I mention this because it is not only in the case of the production of electrical energy, but also energy of other kinds, that it would be well if we could keep in our minds the fact that industry goes to power. The largest producer of aluminium at this time is at Shipshaw. In that case bauxite from Jamaica and South America is carried by ship up the St. Lawrence and up the Saguenay to the mill near the tremendous power plant at Shipshaw. The process of production went to the source of power. The same thing happened at Kitimat, as I have mentioned.

In this regard I should like to mention the possible use of some of our vast coal resources in Cape Breton, where no doubt there could be, with the underground gasification of coal, power generation carried out at economic costs. In discussing that, I have seen it stated that there would be very long transmission lines between the place where the power would be produced and Halifax. I should like to emphasize the fact that if power were produced in Cape Breton by the underground gasification of coal in those seams which in some cases are not being worked, it would be possible to instal

secondary industries at that point because this power would be produced near the seaboard.

Not only new steel mills but other types of secondary production could be established there from which would be shipped the finished product to the markets of the world. This tremendous possibility of power development presents itself right across Canada. In British Columbia there are enormous power resources waiting to be harnessed. I think that in British Columbia there are perhaps some of the greatest sources of power still waiting to be brought under control and developed for the production of electricity. Our members from British Columbia will be discussing that subject. Our members from the maritime provinces will be discussing this subject from the point of view of development in Nova Scotia, New Brunswick and the other maritime provinces.

In addition also to the production of electricity by means of hydro, and the thermal production of electricity, there is the production of electricity by gasification and by atomic energy. Atomic energy is no longer a dream in the production of electricity. This year electricity will be flowing into the great electricity grid in Britain from an atomic plant, and that is only the beginning of a tremendous program, which, in a few years, will be contributing a large quantity of the needed electricity in Britain to their grid system.

In this country experiments are taking place in co-operation between the agencies of the federal government and the Ontario Hydro-Electric Power Commission for the purpose of designing and planning atomic energy electricity plants. This presents immense possibilities for the future and particularly for those provinces which nature has not endowed with great natural water resources. This will be of particular importance to the maritime provinces. In the maritime provinces there are water powers but not the mighty rivers that we have in Quebec, in Ontario, in British Columbia and also in some measure in the northern parts of the prairie provinces as well. In the southern part of the prairie provinces and in the maritime provinces there will undoubtedly be a particular interest in the development of atomic energy.

I feel sure that all hon. members have been interested in the report of the citizens' committee in the United States, which was presented to the government of the United States just a few weeks ago. In that report they pictured the possibility that within 25 years more than half of all the electricity used in the United States may come from atomic energy. That is how close we actually are to the possibility of the commercial use of atomic energy for the production of electricity. I recognize, and I am not minimizing the fact, that much still needs to be done to bring the production of electricity from atomic energy down to an economic level of production costs. However, it was pointed out by this extremely competent committee, representative of management, of engineering skill, of organized labour and of other activities associated with ventures of this kind, that there is every reason to believe that we are on the brink, if one might use that word without inviting criticism, of great new opportunities in the use of this energy; that we are in fact in all probability just at the beginning of the atomic age so far as the peaceful use of atomic energy is concerned for industrial and power purposes.

In making the recommendations that I propose to make I am not suggesting that the federal government should get into the active production of power in those areas. I am very conscious of the fact, and have reason to be particularly conscious of the fact, that the development of resources is within the exclusive jurisdiction of the provincial governments. Under no circumstances should it be implied or suggested that the federal government will in any way seek to invade that field of responsibility which is that of the provincial governments.

It is already apparent that many of the provincial governments find it necessary to seek financial support in carrying out some of the ventures which they would like to develop within their own boundaries. Some provinces have such a broad financial basis that they are fully capable of undertaking any activities of this kind except in the case of atomic energy. In the case of atomic energy, however, it would seem likely that it will require the co-operation of the federal government in almost every case because of the special relationship of the federal government to the many aspects of atomic energy research.

I do not want anything I say today to be taken as implying that I am suggesting that this government get any further into business. I think the time has come for this government to divest itself of many of the activities it has taken on, and which it took on for some particular reason. I think that, except for those cases that are manifestly special activities which should be brought under government development, this government would be well advised to follow the lead

that has already been given by the government of the United States where the picture was similar in very many ways.

I am talking about co-operation and the joint investment in some of these great developments. As I have indicated, I shall leave the discussion of some of the particular projects in British Columbia and in the maritime provinces to the hon. members of our party from those provinces. Because I have spoken of this on a number of earlier occasions, and because my memory of this particular project goes back to my early boyhood, I do want to speak today about the project on the South Saskatchewan river and the reason why every hon. member of this house should be prepared to say now that we want action from this government in regard to the development of the South Saskatchewan river for power and for irrigation.

This subject has been before the house many times but this above all others is the time when encouragement should be given to the people of Saskatchewan and to the people of the prairie provinces by a definite decision on the part of this government that it will without any reservation proceed as quickly as possible with the construction of the dam on the South Saskatchewan river which will provide both electricity and irrigation.

There need be no uncertainty in the mind of any hon. member as to the practical possibilities of this project. The skilled engineers under the P.F.R.A. have advocated that this be proceeded with. In order to have further and full support for the contention that this should be done the government appointed a royal commission. That royal commission made a finding which leaves no justification for any delay in a decision to proceed with the development. I would point out that, in spite of the immense scale of the development of the St. Lawrence river, the government did not feel impelled to appoint a royal commission to find out whether its engineers had been correct in their recommendations that it should proceed with the St. Lawrence river development. The government was prepared to rely on the advice of its own engineers and it did so with the full support of the hon. members of this house.

One cannot escape the thought that the appointing of a royal commission to deal with the various problems arising in connection with the South Saskatchewan river development was simply a delaying program and that it was not in fact done for the purpose of obtaining additional information. In any event, delay was pleaded as being justified on the ground that this commission had been appointed. That commission was appointed, it has reported, and its report has been available for a long time.

Granted that the figure, of course, is not small; granted that the figure, of course, may be difficult to determine down to the exact dollar some distance in advance. But, whether it be $135 million as originally estimated or $160 million as is now estimated, in any case there seems no uncertainty about the fact that the cost will be more than justified by the direct results and by the indirect results that would flow from this decision alone, even without waiting for the completion of that great project.

Near Outlook, in the province of Saskatchewan, there is visible proof of what can be done by irrigation in that very unfortunate area. Those who have been through that countryside know the desolate picture of abandoned homes, abandoned schools, abandoned churches and abandoned farms. Those who have been through that area know the difficulties under which those farmers have been carrying on for years, who have nevertheless carried on their farming activities. Throughout that whole great dry area of the Palliser triangle, the decision to go forward with the development of electricity and this great irrigation project would bring heart to people who have been discouraged and people who are doubly discouraged at this time with the problems of the failure of wheat marketing imposed on top of the difficulties they have already encountered. This great undertaking would change the whole aspect of that countryside. An area of 500,000 acres now under very limited production or no production at all would be irrigated. Those who have visited the experimental irrigation project near Outlook know that, with irrigation, that is rich, productive soil. In that experimental irrigation area, not only field crops but excellent root crops are being produced. Actually it is a garden area, and around it is grey, desolate, dry land.

It would be worth while to compare what is happening with what has happened not far away in North Dakota. Just across the boundary in North Dakota there was another power possibility. They have gone ahead in North Dakota with the construction of what is known as the Garrison dam. The comparative figures of those two projects are extremely interesting. It is true that the project in North Dakota is somewhat larger. Whereas in Saskatchewan 500,000 acres would be brought under cultivation by this irrigation, the Garrison dam project in North Dakota will irrigate 960,000 acres, just less than twice as much. Instead of 250,000 kilowatts of power produced by the dam on the South

Saskatchewan, the Garrison dam project will produce 400,000 kilowatts, substantially less than twice as much. But let us see the comparative costs. The Garrison dam project, which will produce substantially less than twice as much, both in irrigation and in power, as will the South Saskatchewan river development, will cost $400 million, whereas the highest estimate that has been placed on the cost of the South Saskatchewan project is $160 million. All the economics are in favour of the project across the border on our side, in Saskatchewan. The engineers tell us it is practicable. The people of that area need the power and they need the irrigation, and the whole of the prairie provinces need the encouragement which would come from that great development.

Now let me just give you some of the figures of what it is estimated will come to North Dakota as a result of the Garrison dam project, which is considerably less than twice the project in South Saskatchewan. These are the figures of what they expect will come to North Dakota, as a minimum estimate, within the next ten years: 3,600 new farms; 1,700 new businesses; 20,000 new jobs; 93,000 more people, supported by the activities which will result from that development; and $250 million a year in new farm and business income. If the figures were comparable for Saskatchewan, then we would have well in excess of $125 million a year in new return from business and agricultural development that would come directly from that project, as against the initial cost of a maximum of $160 million for the completion of this project.

What is perhaps even more important is that, a result of the irrigation in North Dakota of 960,000 acres, the engineers who have advised on this project, which has now been positively undertaken, believe that this will stabilize the whole agricultural production of 18 million acres of agricultural land throughout the state. It is in that light that I think all of us should examine the possibilities of this great development. It is not only the 500,000 acres that would be directly irrigated; it is not only the elevation of spirit that would come from the sight of these new green acres that would emerge from the development of this project; it is the fact that the new agricultural activity and the secondary industries that would flow from the creation of power would stabilize the whole agricultural picture throughout Saskatchewan in a very large measure, at a time when every hon. member in this house has reason to recall from recent discussions that stabilization in that area is very greatly needed. There can be no reason of any kind to question the fact that we would gain even more substantially in Saskatchewan, in central eastern Alberta and throughout the whole prairie provinces by undertaking this project. What are the reasons for delay? What reasons have been given? The Minister of Agriculture (Mr. Gardiner), who is prolific in statements that need correction afterwards, has given his explanation of why it is not being proceeded with. As reported in the Regina *Leader-Post*, and as stated already in the house, the Minister of Agriculture said:

> We have been doing all right at clearing obstructions out of the way. There were four when we started discussions, and there is now only one left—the question of power development costs—

Let us hope that in this case he was accurate. After his lesson to the Liberal meeting here in Ottawa in January that you should not care too much about whether you believed in what you said as long as you said it with sufficient emphasis in support of the party line, perhaps it would not be inappropriate to wonder whether he believed what he was saying in this case. At any rate, there is his statement, that there was—

Mr. Gardiner: I am sure my hon. friend will expect me to correct that one. I did not make any such statement at the Liberal meeting and no one has even reported that I did.

Mr. Drew: Oh yes, the minister did. He was giving them advice on how they should act and he recalled how, when he was in the cabinet of Mr. Mackenzie King, he had argued vigorously against a particular project in which he did not believe and when he went into the house he got up and made such a splendid advocacy of that particular project that as he was coming out someone said to him on the way out the door, "What could you have done, Jimmy, if you only believed in it?" This was a lesson in how to carry out party activities by the Minister of Agriculture.

Mr. Gardiner: It was a lesson which I am sure the leader of a great party in this country often gives, namely, that no one person can be responsible for the setting up of policies for a great party, and I do not presume to do that for the Liberal party. I put forth my arguments in favour of what I think they ought to do, but when I am weighed down by the arguments of 20 others that it is not the right thing to do I get right into the team and go to work.

Mr. Drew: I agree.

Mr. Gardiner: If you do that you should get along better than you have been doing.

Mr. Drew: I am quite prepared to let the record of what has been said here today

stand for itself in that regard. I would point out that, as the Minister of Agriculture has correctly pointed out, I have emphasized on many occasions that a minister of the crown has no right to speak on behalf of himself alone, and therefore I trust he was not speaking on behalf of himself alone when he said:

> We have been doing all right at clearing obstructions out of the way. There were four when we started discussions, and there is now only one left—the question of power development costs.

They know the cost of power development, Mr. Speaker.

Mr. Gardiner: Since the Leader of the Opposition is reading the record he might read the remainder of the record in *Hansard,* the letter itself which was drafted by the government and sent to the government of Saskatchewan. That covers all the points in question.

Mr. Drew: I will follow with what I said immediately after my quotation the last time. I said: "Mr. Chairman, some of us will remember that Scotch song, 'Last night there were four Marys, tonight there are but three.'" In this case he only had one Mary still left and that was power production costs. This government has had the power production costs for a long time. They have the report of their own engineers. If they do not believe in their own engineers then they should do something about it. I am satisfied they have every reason to believe in the accuracy, skill and reliability of their own engineers who reported on this project, who said it should be proceeded with and who have given the power production costs. If that statement is a statement which accurately interprets the position of the government, then this project should have been proceeded with long ago. It should have been announced as a definite project of the government in the speech from the throne this year.

The farmers of western Canada need all the encouragement they can get at this time, particularly the farmers of central Saskatchewan whose problems are the greatest of all in this particular area that would be most closely associated with the development to which I have referred. If any evidence were needed of the fact that the government has been in power far too long, it is the way in which they continue to disregard the assurances given that this project would be proceeded with when they had the appropriate facts. If there is one thing needed to demonstrate beyond all question that this government has been in power too long and is unresponsive to the demands of those who feel that something should be done, it is that they would go ahead so quickly with projects elsewhere in the country and leave untouched a project which they have been dealing with for so long and in regard to which there have been so many generous assurances by the Minister of Agriculture.

If this development were proceeded with there would be challenging and inspiring new developments at Outlook and at other parts of the province of Saskatchewan. Everyone who has had anything to do with the production of electrical energy knows that if there is a firm core of substantial electric production from a hydroelectric source this is fed out into the transmission lines and makes it possible to maintain peak loads at distant points by auxiliary supply from diesel and thermo production in a way that would give an economic level of electricity cost throughout the whole area.

If the project is proceeded with, first of all there will be a use of part of the electricity for the pumping equipment of the irrigation project. There will be power employed by secondary industries that will start up in the area, and there will be further power available to flow out into the transmission lines throughout the province and make it possible at economic levels to carry low cost electricity to many distant points in the province of Saskatchewan.

Very recently a most imaginative plan was put forward in Regina with respect to the planned development of Outlook itself in relation to this project. It is the kind of thing that indicates what imagination, spirit and confidence could do in that area. This plan, put forward after examination by competent engineers and businessmen, recommended that there should be a planned program of development at Outlook, that secondary production should be encouraged to locate there, and that in addition to the new agricultural development that would come in that area a community should be planned of 10,000 or 11,000 people which would be an example to the whole of Saskatchewan and to other parts of the prairie provinces of what can be done by the use of resources of that kind.

One of the reasons why this example would be so important is that if our dreams of the use of atomic energy for the production of electric power come to the fulfilment which now can be reasonably expected, it will not be long, in terms of history, before atomic energy plants in the drier areas of the western provinces and in other parts of Canada could be used as the centre of planned development of both primary and secondary activities. If emphasis needed to be placed upon the fact that this government has been in power far too long, it came last week in a statement by the hon. member for

Kindersley (Mr. Johnson) when he said as reported at page 1296 of *Hansard*:

> The people of western Canada are becoming fed up with the attitude of the government in denying them the South Saskatchewan dam and other things which would improve conditions in western Canada, so much so that they are considering marching on Ottawa. I must say that some of them are thinking in terms of secession.

Mr. Habel: Mr. Douglas censored that suggestion.

Mr. Drew: I did not hear the interjection of the hon. member.

Mr. Habel: Mr. Douglas censored that suggestion. He said it was a foolish thing to say.

Mr. Drew: I am referring to what was said in this house. No matter how foolish it may have been to say, the fact that the word "secession" even crept into this house indicates the exasperation which is resulting from the attitude of this government.

Mr. Coldwell: I have heard some people say the same thing. I do not think it is right and proper to suggest it.

Mr. Drew: Mr. Speaker, I am not suggesting that the ugly word "secession" in any way interprets the general attitude.

Mr. Diefenbaker: Was there not something said about it in Newfoundland?

Mr. Drew: I am pointing out that in addition to the premier of Newfoundland, voices in the west have even talked about secession.

Mr. Studer: Socialist voices.

Mr. Drew: I had not heard that the premier of Newfoundland was a socialist up until now.

Mr. Studer: Socialist voices out west.

Mr. Pickersgill: The premier of Newfoundland never suggested secession.

Mr. Drew: Oh, yes. The visiting hon. member for Twillingate (Mr. Pickersgill) cannot speak for the people of Newfoundland. Mr. Speaker, the fact that this thought—no matter how unjustified it may be as interpreting any substantial sentiment—would even be uttered in this house, indicates that the time has come to recognize the situation that exists. I think perhaps I might make some comment about the use of that word. I have no doubt that the hon. member who used it was being perfectly sincere in his statement that he even heard the use of the word "secession". The hon. member for Rosetown-Biggar (Mr. Coldwell) just a few minutes ago rose to say that he has heard this same statement being made. I believe that this raises another point. Whether or not secession is in fact being talked about by any number of people, there can be no doubt about the burning distrust of this government expressed by many people in recent weeks and months in western Canada. There can be no doubt about the exasperation and there can be no doubt about the belief in western Canada—and particularly in the area that would be served by this great project—that this government is doing little to carry out its implied obligation and its stated obligation to proceed with this development on the South Saskatchewan river.

To my friends of the C.C.F. party and of the Social Credit party I should like to put one thought forward when it is said that exasperation in any part of Canada is reaching the point which they describe. Let us examine what the situation actually is. The only reason that this government is in power with its large and docile majority is the division of the votes of those people who are opposed to this government.

Mr. Garson: They should all join the Tory party.

Mr. Drew: Yes. As the Minister of Justice (Mr. Garson) has just said,—and it was the wisest thing by far that he has said in this house—they should join the Tory party. In fact, that is one of the few statements he has made with which I can heartily agree. I suggest that those of the C.C.F. party and the Social Credit party—

Mr. Studer: Socialist Tories.

Mr. Drew: Mr. Speaker, listen to the interjections from the slow socialists. Listen to the interjections from the state socialists across from us. Listen to the interjections from those who have taken more and more control of the business of this country into their hands and have established more socialism than the socialist party in this house even advocates. If you want socialism, examine some of the projects that have been undertaken under the emergency of war and are still held by this government at this time detrimentally to the interests of the people of Canada.

Mr. Gardiner: I wonder if it ever occurred to the leader of the Conservative party that he may be the chief reason why people do not join it.

Mr. Drew: Mr. Speaker, the statement of the Minister of Agriculture and the silly giggle of the Minister of Justice both illustrate the measure of the contribution that is made in debate in this house by many of the ministers at a time that important subjects are under discussion here.

Mr. Gardiner: At a time when you are dealing very freely in personalities.

Mr. Drew: Mr. Speaker, this reminds me of what happened when I rose the other day to welcome home the Minister of Fisheries (Mr. Sinclair). Before I had finished my first sentence I had "no" from the Minister of Finance (Mr. Harris). I have been directing or trying to direct my remarks to the C.C.F. party and the Social Credit party.

Mr. Gardiner: You addressed many of them to me.

Mr. Speaker: Order.

Mr. Drew: One of the convenient things about the position of Leader of the Opposition is that I can be patient and wait until the ebullient enthusiasm of the Minister of Agriculture has settled itself and he can remain quiet for a while. It is one of the advantages of having time in which to make sure that what you say can be heard.

An hon. Member: How long?

Mr. Drew: When the Minister of Agriculture interjects "how long", may I say that it will be just as long as necessary to say exactly what I started out to say.

Mr. Gardiner: I did not say that. You are getting confused.

Mr. Drew: This is one time, Mr. Speaker, when they cannot drop the guillotine. This is one time when, under our rules, I have the opportunity to say what I started out to say; and I am going to take all the time that is needed in spite of all the barracking that is being done by hon. members opposite at a time when we are discussing a project which they have promised for a good many years but with which they have failed to go ahead. I was directing my remarks not to the Minister of Agriculture on this occasion but to the C.C.F. party and the Social Credit party.

Mr. Gauthier (Portneuf): Again?

Mr. McIvor: Address them to the Speaker.

Mr. Drew: Mr. Speaker, I am going to interrupt my remarks again in view of the noise that is being made on the opposite side of the house and the unintelligible interjections which make it almost impossible for anybody to hear what is being said. The interjections at least suggest that for once hon. members opposite are paying attention to what is being said instead of reading the comic strips in the paper as they usually do.

I do want to say, Mr. Speaker, that I think when hon. members are prepared to seriously talk about the word "secession", as if it should be considered as a serious subject of discussion, they might well consider why this government is in power. I would point out that the genius of the people of the United States, under a constitution which could be as unworkable as the French constitution, has been in the fact that throughout all these years they have adhered to the two-party system.

Mr. Blackmore: It almost ruined them.

Mr. Drew: In spite of my regard for the hon. member who made that interjection, there are a lot of people throughout the world today who are not of the opinion that any substantial measure of ruin has come to the people of the United States.

Mr. Blackmore: Those who are well informed know it.

An hon. Member: They have no Liberal party.

Mr. Drew: As has been pointed out, they have no Liberal party in the United States, and they are extremely fortunate in that respect.

An hon. Member: They have no Tory party either.

Mr. Drew: If some of the hon. members who are making it so difficult for me and other members to hear what is being said would just keep quiet for a moment they would hear the suggestion I would make. If they want to find out about the Liberal party they might examine the Encyclopaedia Britannica and they would find there that this responsible publication says there has never been any definition of the policies of the Liberal party. It is entirely a party of expediency which is prepared to grab whatever it can and hang on to it by whatever device comes to hand.

In so far as the continued period in office of this government is concerned, it has demonstrated very effectively that it has been in power too long for the benefit of Canada and above all for the benefit of the independence of mind of the members who sit behind the government. I have found in the course of debate here that the extraordinary thing has been the number of times the parties to the left and the Conservative party have found themselves, in good conscience, voting similarly on similar issues. The fact is that I have been able to detect very little of the historic doctrine of socialism in many of the arguments that have been made by some of my hon. friends to the left. The real state socialists are opposite; the people who really deny competition and are denying competition are sitting in the government benches.

Mr. Gauthier (Portneuf): The Tory member for Rosetown-Biggar.

Mr. Drew: We even had censorship of the C.B.C. demonstrated very clearly here only last week. We know that no inconvenient competition is allowed in that case. We know that no inconvenient competition is allowed any of the chosen instruments in the air or on the ground. We know that this government has adopted attributes of socialism which most of my friends to the left have not, in my hearing, advocated on any occasion in recent years. On one occasion the Prime Minister (Mr. St. Laurent) described the C.C.F. as Liberals in a hurry. Quite obviously, he knew they were going the same way but they have it in their power to go the whole way and the C.C.F. party has not—probably that has been fortunate for everybody. This government has in many respects outdone what the C.C.F. would have done because the C.C.F. has voted against some of the restraints that this government has imposed.

Then, when we come to the Social Credit party, if they have a discernible political philosophy, then they are more fortunate than anyone else.

Mr. Pickersgill: Than the official opposition.

Mr. Drew: Oh, no; I would not have denied anyone that silly remark because it gave the Minister of Justice (Mr. Garson) another chance to giggle. After all, he is better giggling than in saying some of the things he sometimes does. It really would be illuminating to many of the people of Canada if there could be a record taken of the discussions of this house.

Some hon. Members: Hear, hear.

Mr. Drew: We hear the giggle again. Unfortunately, the giggling cannot be reproduced in *Hansard* nor can some of the silly interjections that are being made. In addition, what cannot be reproduced is the constant flow of noise from the other side which takes the place of reasoned argument.

An hon. Member: You can hear a pin drop.

Mr. Drew: You certainly can hear a pin drop so far as any Liberal speakers on the other side are concerned, and in the discussion of wheat which has been taking place we are still waiting to hear some of those Liberal members from Saskatchewan, Alberta and Manitoba tell this house what they think of the problem of surplus wheat and the marketing of that wheat.

Some hon. Members: Order.

[Mr. Drew.]

Mr. Speaker: Order. If the Leader of the Opposition could continue, as I believe he was doing at the beginning of his remarks, to state his grievance and one which he will probably embody in the form of an amendment later on, perhaps it would be better. At this moment I should like to emphasize that although I believe the Leader of the Opposition did not intend any implication, he did say that during the debates in this house there is a constant flow of noise. I am directing orderly debate according to standing order No. 12. I do not want to take issue with him, but I really do not see any justification for that statement so far as the Speaker of the house is concerned.

Mr. Drew: I do not intend, Mr. Speaker, to let the record be corrected in any way. There has been a constant flow of noise this afternoon which has been going on practically all the time since I started to speak.

Mr. Speaker: Order. The Leader of the Opposition may interpret interruptions in any manner he wishes and and that is his privilege. Referring to paragraph 3 of standing order 12 it says:

> When a member is speaking, no member shall pass between him and the chair, nor interrupt him, except to raise a point of order.

He should not be interrupted. Then, there is the other standing order which has to do with the right of reply and which gives a member an opportunity to explain a material part of his speech which may have been misquoted or misunderstood. We all know that when hon. members are referred to in debate they often do not wait until the end of a speech, as the rules provide, but frequently make the corrections by standing up on some fraudulent question of privilege, or with the consent of the member who has the floor, to put the record straight, so to speak. But there are some interruptions which are generally permitted in this house because it is the spirit of debate. There are interruptions, provided that they are not disorderly, that are allowed. As I say, there are some interruptions that are allowed, and the limit to which they can go is that they are not disorderly. There are also some interruptions that are provoked; there are some that are even asked for, and I do not think that we can deduce from that that the house is disorderly.

Mr. Drew: Mr. Speaker, there have been disorderly interruptions, and I have been referring to those. I would not want the people who read *Hansard*, and who like to know what goes on in the house, not to have some idea of what is taking place here. I have been trying to assist by interpreting

what has been going on here in a way that would be much more effective if there were a record. If there had been a record this afternoon I think it would be very illuminating to many people throughout the country to know just how much some of the noises that have been made opposite had any bearing on the discussions that were taking place here.

Now, Mr. Speaker, I was directing my remarks, during those different occasions when it has been necessary to interrupt them, to my friends to the left. Without in any way suggesting any lack of devotion to their cause I suggest that if they believe—and the spokesmen of both parties to the left have often said the ugly word "secession" is being repeated—that even a small minority are making that statement,—and it is not mine—then I simply leave it to them to give careful consideration to how important it is that this government, which represents a substantial minority of the voters of Canada, should be left in power by the division of votes. That is something which in their minds they could consider, but there can be no doubt about the simple arithmetic of the situation with which we are confronted.

I have dealt with a problem which is of great concern to western Canada; but I suggest that before anyone even intimates that there is any thought in the minds of a handful of people of talking about secession they consider why this situation exists. If you talk about secession you suggest that there is a lack of sympathy for western Canada in eastern Canada, or in the extreme part of western Canada. Mr. Speaker, there has been no evidence of any lack of sympathy with the prairie provinces here in this house. The Conservative party—and I have no hesitation in saying the C.C.F. party and the Social Credit party—have joined for several years in demanding action in regard to this vitally important project in western Canada. If there are those who have reached the point of exasperation, such as that suggested by the terms that have been used, then let them realize that it is not a division of sentiment in Canada on a geographical basis; it is a division on a political basis. It is the government which has failed to show any balance of understanding; it is this government which has failed to meet its obligation to the wheat farmers of western Canada; it is this government which has failed to carry out its undertaking to those in the Outlook area and in the Palliser triangle; it is this government which has failed to co-operate with the governments of the prairie provinces at a time when it has been willing to co-operate with the governments of provinces which are in a much more fortunate financial position. It is no wonder that some people in western Canada look askance at the readiness of this government—the readiness that we have all supported—to proceed with the St. Lawrence project, and then express such concern about the expenditures that would be involved in the completion of the South Saskatchewan river development, a small proportion of the amount involved in the St. Lawrence development.

We have all supported the St. Lawrence development. I had occasion to support it before I came to this house. We all believe in that development, but those of us on this side believe that the people of Saskatchewan, and the people of western Canada, have just as much right to have co-operation from this government in the development of resources of that kind as has the province of Ontario or any other province in Canada. That is the proposition that is before us. The government has agreed in principle. The minister who, on this occasion, has been careful to point out that he does not presume to speak on behalf of himself, said that there were four problems, and that some time ago it was reduced to the question of power production costs. The government knows the facts. They have had the report by the engineers under P.F.R.A., skilled, experienced and competent engineers in whom we have confidence. They have had the report of the royal commission set up to conduct an independent inquiry. They have said that was the only thing that remained. Let them get ahead with this, and in doing so not only carry out a great project that will be an example to the whole of western Canada, but let them show that we are all behind the improvement of conditions in that particular part of Canada.

But once again may I point out that no one in western Canada, in their exasperation with the government, should suggest that this is on a geographical basis. Examine the record of the Conservative party, the C.C.F. party and the Social Credit party in this respect. They have been consistent. Support for this development has come just as vigorously from those in the east as from those in the west. May I say to their credit that the members of the Conservative party from the maritime provinces, where they also are seeking co-operation of this kind, have indicated their wholehearted approval of that great development in western Canada.

So that this may be brought before the house in a manner which permits hon. members to indicate their opinion, I move, seconded by the hon. member for Vancouver-Quadra (Mr. Green):

That all the words after "That" to the end of the question be deleted and the following substituted therefor:

"in the opinion of this house consideration should be given to a joint investment program for the development of power resources in any province where the government of such province requests the co-operation of the Canadian government in carrying out such development".

Mr. Speaker: I am going to consider this amendment, but I wish to point out at this moment it strikes me that if this should carry it would indicate that this house would agree with the suggestion contained therein that there should be a joint investment program for the development of power resources in any province where the government of such province requests the co-operation of the Canadian government in carrying out such development. Should no province request such co-operation from the Canadian government, where would we stand with respect to an amendment that we would have had carried?

Mr. Drew: The question is already answered, Mr. Speaker, because two provinces at least have already requested it, the province of Saskatchewan and the province of New Brunswick. So far as the fact that this would indicate a willingness to proceed with the program is concerned, I would point out that the word "consideration" is used, and that is the word which is used in every recommendation which involves the possible expenditure of money.

Mr. Speaker: I was not for one moment dealing with the question of the expenditure of money. I was just dealing with the principle that whatever we pass upon in this house should have practical results. The hon. member for Rosetown-Biggar.

Mr. M. J. Coldwell (Rosetown-Biggar): Mr. Speaker, I rise to support this amendment if you declare it to be in order. Because I am going to discuss the amendment now before us may I respectfully point out that in my opinion it should be in order.

You have made only one point. You have not raised the problem of the expenditure of money because, as the Leader of the Opposition (Mr. Drew) has said, it merely asks for the consideration of these projects. As to the limiting clause where the government of such province requests the co-operation of the Canadian government in carrying out such developments, we have passed permissive legislation in this house and subsequently provincial governments have been able to come under that legislation at their own request. That, I think, is particularly true of some of our social legislation and it may be true again and if that is true of our social legislation I can see no reason why we should not consider the same kind of arrangement in any other piece of legislation.

I want to say something about the amendment and to comment particularly on some of the remarks of the Leader of the Opposition. When my friend the hon. member for Kindersley said he had heard the word "secession" mentioned I did not think it was going to be played upon to the extent it was played upon this afternoon. I want to assure hon. members of this house that I have heard the word, too, but in very restricted circles. I may say that I have heard that word ever since I have been in western Canada. I heard it shortly after I got there in the days when there was considerable dissatisfaction with some features of the autonomy act, which established Alberta and Saskatchewan, and I heard it after the first world war when the old progressive movement was established and organized in western Canada. I also heard it in the dirty thirties as we sometimes call that period in the west when relief under both governments was so inadequate that many of the people in some parts of Canada were reduced to what I considered to be virtually a starvation existence. And now I suppose we hear it again when the circumstances in some parts of the prairie provinces are almost intolerable; you hear the same suggestion.

But I want to assure the Leader of the Opposition that when my hon. friend used it he meant only to imply that he had heard it and when I rise to support the truth of that submission I want you to understand, Mr. Speaker, that I have only heard it and there is no organized effort to that end.

Mr. Drew: I do not wish to interrupt, Mr. Speaker, but I made it clear—

Mr. Coldwell: Oh, you did.

Mr. Drew: —that it was not extensive and I was in no way putting it forward when I said that even the use of it implied a situation—

Mr. Coldwell: Yes, I understood that, but I wanted to emphasize the fact because I can assure my hon. friends that any secessionist movement in any part of Canada, including Newfoundland, would receive my very wholehearted opposition if it were proposed or attempted.

Well, my hon. friend the Leader of the Opposition suggested we might all join the Conservative party and I notice that the

Minister of Justice applauds the remark. Well, I rather think that the Minister of Justice could find a place in a very conservative, with a small "c", party more readily than almost any other hon. member of this house and I recommend that thought to him. But you know, the odd thing is this. We have the Leader of the Conservative party in this house suggesting to us as hon. members of the C.C.F. party that we join the Conservative party. Sometimes the atmosphere in this house and elsewhere is sort of like Alice in Wonderland because only last week the lone Conservative member of the legislature of Saskatchewan received the nomination of the Liberal convention in the constituency for which he stood.

Mr. Drew: He did the last time, too.

Mr. Coldwell: Well, that makes it all the more embarrassing, —

Mr. Harris: That is the only reason he ever gets elected.

Mr. Coldwell: —that they should nominate a Conservative twice running, and furthermore it shows the bankruptcy of the Liberal party in the province of Saskatchewan; but when I heard the hon. gentleman make that suggestion my mind immediately thought of my own province of Saskatchewan.

Then, of course, there was the discussion of socialism. Well, if the Liberals in this house are content to accept the title of state socialists I have no objection because I can assure you that we have never been state socialists. We have always been democratic socialists and we believe that we have carried out the great liberal with a small "l" tradition that gave rise to the great socialist movements in northwestern Europe and today in many parts of the democratic world. And so I am not unhappy about the Liberals assuming the role of state socialists, although I must confess that I should like to see them go a little further in the direction of the social control and development of many of our great resources.

As a matter of fact, this resolution before us this afternoon would not have been introduced in any parliament by a Conservative, I would imagine, some 20 or 30 years ago because a joint investment program in the development of power resources in any province clearly indicates, I think, that the hon. gentleman quite properly, and I am not saying this unkindly, contemplates the development of these resources and the building of these power plants under some form of public control. Of course the hon. gentleman spoke primarily of a province where one of the great experiments in social ownership of an economic project was undertaken so successfully—

Mr. Drew: By a Conservative.

Mr. Coldwell: —and was done by a Conservative. I refer to the Hydro-Electric Power Commission of Ontario of which the people of Ontario are quite properly very proud. This is an example which has since been followed in many parts of Canada, and I think it will be followed still more in the days to come in other great projects besides that of hydroelectric power.

I would hope that it might be followed, not because I have any ideological preference for it, in the transportation of gas from the western prairies to serve the people of eastern Canada. I am not going to discuss that this afternoon, Mr. Speaker, because we shall have ample time to express our views regarding the pipe line project when the matter properly comes before the house. However, I did want to rise and support the hon. gentleman in what he has said about the necessity for the conservation of water and the development of power from that water in all parts of Canada. May I say that I want to see that done under a public authority and I want to see it done for the benefit of Canada. I do not want to see some of the great resources, the great water resources of British Columbia for example, being developed by United States companies to promote United States industry in the United States. I want to see the great power resources of British Columbia utilized primarily for the benefit of British Columbians and for the benefit of the people of Canada.

Like the Leader of the Opposition, I have seen the wonderful project at Kitimat. I was there last November and I say to hon. members of parliament, all of whom have nation-wide railway passes, that we owe it to our constituents and to the people of Canada to see as much of this country as is possible in order that we may understand its resources and see its development.

I know that one of the assets I had when I came to this house was the fact that I had been an officer of a teachers' organization for some ten years. During those ten years our conventions were held in many parts of Canada and I had usually driven by car to attend those conventions which were held from one end of Canada to the other. In doing so I got to know something of the resources and something of the projects in this country. As I say, I was able to visit power plants like that at Ile Maligne in Quebec and to understand some of the problems of the

projects that were undertaken elsewhere. I can assure hon. members of this house that any member of parliament, with a pass, should during his first term make up his mind that he is going to see this wonderful country in which we live—that sounds like a platitude, as it is said so often, but I really mean it sincerely—and to understand the great possibilities that are here, the great possibilities that I am convinced our grandchildren, those of us who have grandchildren, will see brought to fruition for the building up of this great country and for the benefit of the people who live therein.

The same thing applies to the maritimes. Last year I saw something my hon. friend from Cape Breton South (Mr. Gillis) has advocated for the whole time he has been here. In fact, I think that causeway joining Cape Breton to the mainland of Nova Scotia might have been christened the Gillis causeway. What a wonderful project that was! It may be that other projects along the coast of Nova Scotia will be undertaken sooner or later to the benefit not only of Nova Scotia but of all parts of Canada.

I quite agree with the Leader of the Opposition that, whilst some of these resources seem a long way from our centres of population, like the Grand falls he mentioned on the Hamilton river, today, with new methods of transmission, that power can be economically transmitted. I remember when we were discussing the Shipshaw project in this house, a project which I always thought was a remarkable engineering project though I had some criticisms of the manner in which it was financed at the time—but let that pass. I said at that time it was one of the most remarkable pieces of engineering not only in North America but in the world, and Canadian engineers were to be congratulated on having had the imagination to build that great dam and power plant. At that time it was said that when the war was ended the vast power that was being generated could not be transmitted far enough to keep that plant going as an economical unit. Well, it was transmitted and is being transmitted because from time to time, when the necessity has arisen, the inventive genius of man has been able to overcome difficulties of that description.

I come back now to my own province. I happen, of course, to be the member of parliament for the district in which Outlook is situated and the area of Saskatchewan that would benefit most from the building of that South Saskatchewan river dam. Of course, I think the Leader of the Opposition went a little far this afternoon when he described the area around where the dam site would be, just below Outlook, as desolate and unproductive. As a matter of fact, I drove over it in the last week in July, and I had never seen anywhere a finer stand of wheat than I saw in that area. As the Leader of the Opposition said, the soil is productive if we can only get the water and, as there were copious rains last summer, there was a wonderful crop promising in that area. I use the word "promising" because over the centre of that whole area around Strongfield and right through to Davidson there was a devastating hail storm in the first week in August, and there was 100 per cent damage in that area to one of the finest stands of wheat I saw in Saskatchewan last summer. That soil is productive only when there is a rainfall. I was the member, not exactly for that area—because the boundaries of my constituency have been enlarged on the side of the river to which I have just referred—during the drought period, and I remember what the countryside looked like then. It looked like a desert, as a result of wind erosion. It was unproductive because it lacked water. I remember driving over a farm either in 1937 or the summer of 1938—it was probably 1937—with a gentleman who is now minister of highways in the province of Saskatchewan. We passed over an area of land that had been so wind-eroded that my friend said to me, "here is a piece of land that I believe will never produce another crop." I have seen some excellent crops on that very piece of land since, as I have driven by it, because we have had rain.

The government and some people in Canada may be lulled because we have had good crops in the Palliser triangle for several years past. We have had a period of unusually heavy rainfall over an unusual number of years. I do not think there is any doubt about that. But the day will come when we shall have, as we have had before, years of unusual drought when very little will grow. I use the words "very little" because I think our people in that area lacked much during the years of drought and depression and that there are newer and more efficient methods of production which may to some extent minimize a condition of that sort. But such conditions will occur again, and when they do, in spite of P.F.A.A. payments and all the rest of it—that is, the contributions made by the farmers into that fund—, if water is not available for irrigation, then it will cost this country again a tremendous amount of money to make up the deficiencies in the P.F.A.A. or—as I think is more likely—to give more relief than P.F.A.A. can give to the rural people in that area.

With regard to that dam, my understanding of the situation is that the Minister of Agriculture has gone to the province of Saskatchewan on several occasions, and each time the provincial government has either come close or has accepted the proposals he has made. At no time, however, did the Minister of Agriculture have cabinet approval for the plans he placed before that government. Bit by bit, the Saskatchewan government increased the amounts of money it was prepared to put into that plan, until, if my memory serves me correctly—and I am speaking from memory—the last time they agreed they would be prepared to accept a plan in the neighbourhood of $70 million and that they would undertake the electrical end of this project—a very important end, but not nearly as important as the other end, the irrigation side of it.

After the Leader of the Opposition had begun his address this afternoon, I sent up to my office for *Hansard* of February 21, 1938. I had been in the house two years at that time and I had spoken on the Saskatchewan river on the estimates of the department. Then on February 21, 1938, I moved the following resolution:

> That, in the opinion of this house, the government should place before parliament at an early date plans, or proposals, for a comprehensive and authoritative survey of water conservation, irrigation possibilities and other feasible projects for the permanent rehabilitation of the drought stricken area of western Canada and its people.

That is not so far removed from the sort of proposal that the Leader of the Opposition (Mr. Drew) has put before us this afternoon. When I moved that resolution, Mr. Speaker, I had preceded it with a good deal of investigation. I had made up my mind from what I had learned that the South Saskatchewan river project was a feasible project. I had been to two of our universities and had met outstanding university people who had made some study of such projects. They had convinced me that the proposal was feasible, sound and economic.

I had also gone to the library of parliament and there read the Palliser report and the Hind report, to which very few people ever refer, on the conditions that those two early explorers had found in western Canada in the mid-fifties. I quoted voluminously from them. I am not going to quote from these reports this afternoon. I merely refer to them and say to hon. members who are really interested in this subject: Go to the library, take a look at these reports and see what the condition was in that country in the 1850's or in the 1880's. I am referring particularly to the 1850's, and it is evident that 100 years ago there were many years of drought. Think of what may happen again within a measurable period of time, particularly in view of our demands upon the soil for chemicals and moisture for the production of grain. We may find ourselves faced with a condition of this sort sooner than we think.

I remember that I recounted how a friend of mine had been standing on the banks of the South Saskatchewan that very summer and had noted the vast quantities of water flowing through the parched lands. Although the same is not equally true, it is true to some extent of the North Saskatchewan river. I went on to say, as found at page 638 of *Hansard* of February 21, 1938:

> I have gone carefully over the contour maps of the dried-out area, and as a layman I would say that wide-scale irrigation seems to present no insuperable difficulties, either physical or financial, on the northern side of the Missouri-Coteau divide.

At that time, Mr. Speaker, not only did I believe that irrigation was desirable and feasible but that electrical projects were feasible too. I should like to quote from page 639 where I had this to say:

> The valleys of both the Saskatchewan rivers lie between great banks and there are several places where dams could be conveniently located and power generated if desired.

I went on to refer by inference to the old Pearce proposals of the early part of this century and said:

> If it were necessary to divert some water from the North to the South Saskatchewan river, and to supplement the latter, irrigating the intervening county as it flowed, I believe that could be done.

So, Mr. Speaker, this matter has been before us for years and had been before the house years before I came here. I placed it before the house on February 21, 1938, just 18 years ago tomorrow. I went on to say:

> I have been told by engineers that dams placed at intervals on the South Saskatchewan, south of Saskatoon, to the point at which the Red Deer joins the South Saskatchewan in Alberta, would impound sufficient water to give moisture to the whole of central and southeastern Saskatchewan. I do not know. But that is something we should, as a parliament, find out. The little sloughs and large lakes now dry could be filled, and the table level of subsoil moisture raised again to its old level, while in many years an inch or two of water on the parched land at the right time would ensure a bountiful return for the labour expended.

Whether or not southeastern Saskatchewan could be irrigated, I do not know, but when I examined these contour maps in the hands of a competent hydraulic engineer, to whom I was recommended by some of the people at McGill University, he indicated that it could be done. But undoubtedly between 400,000 and 500,000 acres in my constituency could be irrigated. Undoubtedly the demonstration carried on by the Minister of Agriculture and his department at Outlook demonstrated very

clearly the productivity of the soil. As I have indicated, however, you do not need such a demonstration because if there is plenty of rainfall in that area the soil has been shown to be productive, although what the Department of Agriculture has done is to show that crops could be diversified.

The town of Outlook, situated as it is in a strategic position to take advantage of these irrigation and power projects, could be expanded. I should like to say this further word. We were talking a few minutes ago of transmitting power from some of the great power plants at the coal mines or rivers to the centres of population. I think there is a more important thought, the thought of building up places like Outlook and the many other "Outlooks", if I may call them such, across Canada so that we may diversify our production, so that we may move it away from these great centres of population where there is overcrowding and where, in the event of war, I do not see how the civil defence organization could operate effectively. I do not see how the civil defence organization could, for example, evacuate the city of Montreal, the city of Toronto, even the city of Ottawa or the other major cities across Canada. I am not thinking that we are going to have a nuclear war but in the interests of health, in the interests of building communities with a community spirit where individuals in the community may know one another, the more of these relatively smaller cities we can establish the better it will be for our country in the final analysis.

I am very glad to rise this afternoon and support the amendment. If I were moving an amendment to it I think I might emphasize the South Saskatchewan river project. However, the Leader of the Opposition emphasized that sufficiently in his address. I do not know whether my colleagues will be content, because I have not had a chance to talk to them, but I am going to content myself with supporting the amendment moved and recommending to the government not only the project in which I am particularly interested because I represent the people who inhabit that area but also that a very thorough survey be undertaken with the provincial governments so that there may be a joint development of some of these great projects in the maritimes, in western Canada and in other parts of this great country.

One only has to travel in the northern part of Canada to realize what tremendous resources there are available. I have been told by people who know something about what is going on in our own northland and what has been going on in Siberia and the Arctic regions of Russia that we are 20 or 30 years behind the Soviet union in developing our northern resources and that we should be paying much more attention to the great resources we have in that north country.

Bear in mind the fact that it would not require any joint agreement with any province. These northern resources are in the northwest territories of Canada under the control of this parliament. If the government is unwilling to enter into arrangements with the provinces to develop some of these resources, then let the government do more to develop that great north land. Perchance, now that the iron curtain is being lifted a little bit—and I hope it will be lifted some more—we might be able to get some data on how to deal, for example, with permafrost and some of the other problems that exist in the north country, as the result of the experiments that have been carried out in Siberia and in the northern reaches of Russia.

I want to join the Leader of the Opposition in recommending to the government the consideration of this report. May I say, Mr. Speaker, that is the only way in which I wish to join him.

Mr. F. G. J. Hahn (New Westminster): Mr. Speaker, we are indeed pleased to have the privilege of going along with this motion. In speaking to it I may say that our group is wholeheartedly in support thereof. I was greatly interested in some of the remarks which the leader of the official opposition had to make, more particularly the statement to the effect that if the party of which I am a member have a political philosophy they had more fortune than anyone else.

I may assure him that we have a political philosophy. The fact is that it has proven to be so good that we have never had to look back. We are one of the few political parties that are not looking back. We are the only political group that has increased the number of governments we have in this country at this time.

He also brought in the word "secession". To my knowledge I do not believe any member of this group during the course of the past few days, when we were discussing the question of wheat, brought that word into the debate. Reference undoubtedly was made to what the hon. member for Kindersley (Mr. Johnson) had to say. I would agree with the hon. member for Rosetown-Biggar (Mr. Coldwell) who indicated that over a period of years the word has been quite frequently used in the west.

Hon. members are probably aware of the fact that I spent much of my early life in Saskatchewan and Alberta and only in recent years became a citizen of British Columbia.

During that time it was not an uncommon thing to hear the word "secession" in the dried out sections in the southwestern corner of the province of Saskatchewan in around Hatton, Maple Creek, Piapot and that area with which I am so familiar, and then carrying on into the city of Medicine Hat. However, I do not believe anyone was really and truly in earnest. It was just an emotional feeling that they were not being looked after with the proper attention. I would say that they used it more for the purpose of directing the attention of the government to that particular problem than with the intention of putting it into effect.

I am satisfied that the people of the far west—and certainly this is so in my own province—would be much opposed to the thought of secession at this time or at any other time. We joined to make the Dominion of Canada a stronger and better place in which to live as a group, not a place in which we might get what we alone desire. However, we expect our fair share, and that is where the rub comes in.

Frequently I have heard constituents of mine and others as well—and I have possibly made a similar observation—say that the governmental friends, the Liberals as a whole, are a fine bunch of fellows taken as individuals but that they hatch some of the worst legislation this country has seen. I did not use the word "worst"; I used a stronger term. In the far west and particularly in British Columbia it seems to us at this time that the legislation is not meant to call for unity in Canada but rather for more of what the leader of the official opposition had to say in respect thereto, namely that it is localized too much in the provinces of Ontario and Quebec and that fact causes a great deal of dissension.

In the course of his discussion the hon. member for Rosetown-Biggar drew attention to the fact that in Saskatchewan there was apparently a Conservative who received both the Liberal nomination and the Conservative nomination, and who is going to run under that banner in this coming election. I should like to remind hon. members and all Canadians as a whole that this is not an uncommon thing in the far west, more particularly in British Columbia. We had there an alliance between the C.C.F. and the Liberals in a good number of cases. In Alberta in the last provincial election they not only had a Liberal-C.C.F. member but they had a C.C.F.-Liberal-Conservative, whatever that is. They did not have just one; they had several of them. They were endorsed by each political party.

It reached this point. If the system of proportional representation proved nothing else, it definitely proved that there was a coalition between the C.C.F. and the Liberal party. In one of the provincial ridings within the Jasper-Edson area I am told that in the vote, of the 1,100 second choices that went from the C.C.F. member, 900 went to the Liberal candidate and 200 to the Social Credit candidate, even though the Social Credit candidate had a majority of over 200 on the first count. I am satisfied that would indicate to the hon. member from Vancouver South (Mr. Philpott), who likes to jeer at others, that he has run as a C.C.F'er, as an independent, as a Liberal.

I do not know whether the Conservatives would have him or not but we certainly did not and we do not intend to. But that should indicate to the people that there is apparently very little to choose between these people who would run under these numerous badges and call themselves particular groups; who can run as socialists or Conservatives and still be Liberals, as was indicated by the hon. member for Rosetown-Biggar.

An hon. Member: Why not speak to the resolution?

Mr. Hahn: I am coming to the resolution. I am just answering some of those things that were suggested earlier. It should not worry you because you realize full well that the things I am saying must be true. We did not coalesce with anyone when we had a minority government in British Columbia; it was not our intention to do so and it is not today nor will it be at any time.

The leader of the official opposition suggested that Canada was divided for political purposes. I do not think he has to repeat that for those in the west. The people in the prairie provinces, particularly west of Manitoba, frequently suggest that they have become the milk cow of Canada. We have heard that suggestion time and again in the past few days and in former debates. In the resolution proposed by the Leader of the Opposition there is much in common with what we have suggested from time to time. His motion reads:

> in the opinion of this house consideration should be given to a joint investment program for the development of power resources in any province where the government of such province requests the co-operation of the Canadian government in carrying out such development.

At pages 9 and 10 of the Social Credit manifesto, interestingly enough, we read this with respect to natural resources:

> A Social Credit Canadian government would co-operate with the provincial governments in stimulating the opening up of new areas and fields for discovery and development of natural resources, with a view to establishing national policies of self-sufficiency in the essentials of living. Their general policy would be to encourage

the development of all those resources which can contribute to the economical production of goods within the country.

You see, while the terms are not identical, certainly the fact remains that we believe in complete co-operation between federal and provincial authorities. I have tried to stress that from time to time, not only in connection with this matter but in connection with many others. It was my intention to bring to the attention of this house later the fact that there is not sufficient of this particular type of co-operation. Members on the government side seem to get the idea that because of the huge proportion of members on the government side, they can force anything upon those areas which are suffering in a particular fashion. Despite any representations that might be made, these areas are not being given the hearing they have every right to expect.

This just does not happen in one instance. It has happened in many instances. There is not sufficient co-ordination among the various departments, and I shall refer specifically to the Department of Transport and the Department of Public Works. I have mentioned this before. I see the Minister of Public Works (Mr. Winters) looking at me. I have referred to a particular problem which exists in my area, but I shall refer to it in more detail at a later time because it is not relevant to this particular resolution. However, I would once again say most definitely that we are in complete agreement with this particular resolution, and for several reasons.

In British Columbia we have water power which has not been developed and we have a great need for that particular development. A year ago there was an extensive debate on a project known as the Kaiser dam in connection with the Columbia river development. We received a hearing and consideration from the committee, and we have abided by that consideration. But today we find that British Columbia is in great need of the development of some of its potential water power resources. We have industries that are anxious to come into our province. It is not an uncommon thing to hear that the lower mainland is running short of water power. There is a reason for it. We have an agreement with the northwestern states of the United States for the exchange of electrical energy. Our population has grown so rapidly and we have so many more industries in the area that today we have not sufficient water power developed in British Columbia to look after our own needs.

For that reason we have had a thorough examination made of the water resources of the province. We find that through a diversion scheme on the Columbia river, such as that referred to by the Minister of Northern Affairs and National Resources (Mr. Lesage), we could add approximately 20 million horsepower to our water power development. This, of course, would cost a tremendous sum. I am rather amused when I hear the leader of the C.C.F. suggest that we should not allow United States capital to come in and help us develop that power. Certainly we need that money. The important thing, so far as the people of British Columbia are concerned, is to see that there is work available. We cannot have work available unless we have water power developed within our province.

It might be said, why cannot the people of Canada finance that development? I am satisfied that you realize as well as I do, as do most of our socialist-minded friends, that you cannot build a huge dam for nothing; that is just wishful thinking. Some of these dams cost anywhere from $300 million to $750 million. It takes a great deal more capital than the Canadian public can afford to invest within the country for its proper development. We lack the capital for proper development.

It seems to me that, for that reason, we are going to have to make certain agreements which, at this time, may not appear to be to the advantage of Canada as a whole if viewed on the strictly Conservative basis of Canada first. I would suggest, therefore, that we must have closer co-operation and a better understanding between the federal government and the provinces, as is suggested in this resolution, for the purpose of developing everything we have in this country to the optimum. We speak of war with Russia or the Union of Soviet Socialist Republics. We are not ready for it. No nation is ready for it unless it is working at full speed. Certain of our industries are in a depressed condition, and certain of them have been shut down because they have not sufficient power. We are trying to look after that problem in this section of Canada, I would agree to that.

I would agree to the development of any water power project in New Brunswick or any of the other provinces. Through our premier we have been battling with the Minister of Finance (Mr. Harris) with respect to the development of the have-not areas. They cannot be expected to do anything unless they have the power and the means. Undoubtedly as a result of the development of this project that has been suggested in New Brunswick we will find that New Brunswick will prosper as well as the whole of the maritimes.

But that is not the answer to the problem of British Columbia. We have found it necessary to go out of British Columbia to obtain

capital for these developments. As a result of having to get that assistance from outside the area, we are being told by other citizens, particularly the socialists and those who believe in the Canada first policy, that we must develop Canada as a whole.

It is understandable that if Canadian funds are being utilized in Quebec and Ontario, as apparently they are, then it is going to be necessary for us to get some of that capital from other sources. In order to get that capital we must be prepared to give certain concessions. In British Columbia we have the Kitimat project, which will sustain a population of about 50,000 people. The diversion scheme on the Stikine and Liard rivers would take care of another 250,000 or 300,000, and the Frobisher project would add another 150,000. In other words, as a result of the proper development of these two diversion schemes we would be able to look after approximately another half million people in the northern part of our province.

In recent weeks we have had a proposal made that there should be a dam on the Fraser river, a project which is commonly known as the Moran dam. The Minister of Fisheries (Mr. Sinclair), and quite rightly so, objects to the whole scheme. I would agree with him. Any damming of the Fraser river that will affect our fishing industry in an adverse way should be opposed. We were going to develop the southern end of the Columbia river to begin with, the part crossing the border. We were denied that privilege. As a result the people of British Columbia have been denied the receipt of $2 million annually, which would be their share from that particular project. Foreign capital and Canadian capital have not been prepared to come in since and develop the upper part of the Columbia, by the Mica creek dam, which we were assured should be the first part to be developed. The Canadian government is not doing anything about it either.

I put a question to the Minister of Northern Affairs and National Resources some time ago, and he said that up to that time there had been one request for a licence for a project which is already in operation. That is understandable. The people who have the capital to invest in industry and require power are not interested in investing it where we might suggest. They want to develop the project in a certain region and at a particular place, and they expect the right to do so if they are to invest their money. It is not being invested just for the purpose of doing Canadians a good turn.

Mr. Herridge: We know that.

Mr. Hahn: I would agree with the hon. member who just said "We know that". Certainly I would agree with him that there is not a man in business today who is operating for the good of the people of Canada alone. He is in business to make a profit on his capital investment. And what is more, he is entitled to it. I suggest there is not an hon. member to my immediate right who does not think along the same lines. If he has a farm or anything else he believes that he should have the privilege of making a profit on it.

I heard a lot of squawking in the house the other day over the fact that hogs were being sold at $18 a hundredweight. It was said that the farmers could not make a profit at that price. Let them rise in their places and defend themselves against those particular capitalists. I am satisfied that private industry will give us the answer and will give us dollars and cents, provided that they are ready to accept it on terms that might be more agreeable to both the province of Saskatchewan and themselves.

Mr. McCullough (Moose Mountain): Tie up natural resources; give them special privileges.

Mr. Hahn: Special privileges?

Mr. Deputy Speaker: Order.

Mr. Hahn: I am being carried away by my own enthusiasm. The hon. member suggests special privileges. They ask for no special privileges. The oil companies of Alberta did not ask for special privileges that the government of that province was not prepared to discuss with them. I suggest to the hon. member for Moose Mountain that he study how the oil industry of Alberta was developed, and then compare it with what the Saskatchewan oil industry is doing. At an earlier time I lived in southern Saskatchewan not too far from where the hon. member lives. I lived there when community oil wells were being drilled in the little town of Hatton, up around Many Island lakes. That oil well was never finished.

Mr. McCullough (Moose Mountain): We did not have a C.C.F. government then.

Mr. Hahn: A C.C.F. government was elected, but the property was not necessarily exploited. Those concerned did not go ahead and spend millions of dollars on drilling, with the possibility of drilling a dry hole and then having to turn it over to a government, in which most capitalists fear to invest. Today capital has a right to expect a fair return. I am satisfied that most hon. members will agree with me in that; and what is more, Canadians have indicated, in two provinces at least, that they agree with us. They are prepared to

accept United States investment, British investment, or investment from any other country that we can interest to the extent of coming into this country, provided they come in under our regulations. We are in a position, if we wish to do so, to make laws in respect of any of this capital that might be coming in. I would say that the elected representatives in the provinces and in the federal government should be capable of looking after the interests of Canadians as a whole.

May I return to British Columbia electric power development. We have one major electrical firm in British Columbia known as British Columbia Electric. That company has realized for some time that there is a need for power development in that province. In an effort to have our power developed properly and in their desire to protect industry as well, which is most important, they have set aside the significant sum of $50,000 to discover a means by which salmon spawn can be taken up to the headwaters safely.

Some of our friends have already suggested that capital is not willing to invest money without exploiting the country. Here we have an industry which has been with us in British Columbia for a great many years. Besides the profit motive that the hon. gentleman suggests, this company has the interests of the people of British Columbia at heart, just as any other firm might have, or just as an individual might have; because if the people in our province failed they would have to leave, and if they leave the British Columbia Electric will have to leave, and they are no more interested in doing that than is anybody else. They have indicated their interest by suggesting that this money be made available to the University of British Columbia. The university in turn has asked Dr. Shrum, who is one of the great scientists in that province, to look after this particular project and see whether means can be found to have development in both ways.

I could speak on this subject of the Fraser river project for a long time. I have ten more minutes to go, but at the same time I realize that as many hon. members as possible would like to have the privilege of speaking on this question. I shall therefore give way to the next hon. member.

Mr. Howard C. Green (Vancouver-Quadra): Mr. Speaker, I am craving the indulgence of the house while I deal with the amendment for a few moments, believing that it focuses attention on a new type of policy which is needed in this country. There have been policies that have been somewhat of the nature proposed by this amendment, but this goes quite a bit further, and I am hoping that the government will see fit to accept the amendment.

[Mr. Hahn.]

We all know that as Canada grows and new developments become possible the need arises to reassess governmental policies. The amendment here, I submit, Your Honour, deals with one field in which there is need for such reassessment. For the purpose of the record I read the pertinent part of the amendment which is that:

> ...consideration should be given to a joint investment program for the development of power resources in any province where the government of such province requests the co-operation of the Canadian government in carrying out such development.

You will notice that the method of participation is not set out. We have not attempted to go that far. I think the method is a matter to be worked out in each case, and it will perhaps differ in each case.

The dominion part in a joint program might be by way of a direct contribution, by way of a guarantee or by actually doing some of the work that is necessary in order that the project can be completed. I think the main thing is to make it possible for the credit of the dominion to be put behind the credit of the provinces where developments of the kind contemplated are to be undertaken. That is not necessary, of course, with the provinces of Ontario and Quebec because I understand they can finance on practically as favourable terms as the nation itself.

The main point we seek to drive home in this amendment is that there should be an acceptance of some responsibility by the federal government. Such a policy is needed particularly in the case of rivers flowing over the border into the United States. I say that because last year the government—and I agreed with the action—took a licensing control over the improvements on international rivers by means of a statute which was described as the International River Improvements Act.

The purpose of that act was really to provide for the licensing of international river improvements to ensure that the water resources of Canada are developed and utilized in the national interest. That control, while necessary, does restrict the provinces considerably, and it puts the federal government under some obligation to co-operate in at least a portion of any improvements of these river systems. Otherwise, were that not the case, the federal government would be in the position of a dog in the manger in so far as the development of these particular rivers is concerned. There has been no actual application made in respect of the Kaiser dam, but we all know that the attitude of the dominion government was that it would not permit the construction of that dam.

Now, it is not good enough for the dominion simply to say to a province, "No, you cannot go ahead with this scheme." I submit that the dominion must be prepared to take steps to help by offering some alternate scheme. The difficulty that arose on the Columbia river system last year was the situation which brought about the enactment of the International River Improvements Act. I should like to review for a moment or two the facts with regard to the Columbia river system.

It is a great power river, third in importance on the North American continent, surpassed only by the Mississippi and the St. Lawrence; and I believe that it is of about the same importance as the St. Lawrence river system. Three-fifths of the power that can be developed on that river system is in the United States. That is, it can be developed by use of the Columbia river where it is flowing within the United States boundaries. One-fifth can be developed wholly within Canada and the remaining one-fifth can only be developed by storage of water in Canada for use in United States power plants below the boundary.

The dominion and the province of British Columbia have been making joint surveys for many years having in mind the proper development of this river system in Canada. The Minister of Northern Affairs and National Resources can correct me if I am wrong, but I think the international joint commission has been investigating conditions on this particular river for ten or eleven years.

At the moment one of the great questions which remains unsettled as between Canada and the United States is whether there will be any payment for what is known as downstream benefits; whether, for example, the United States will pay anything to Canada for the storage of water in Canada which is to be used subsequently on the United States side of the line. That question is unsettled.

To this picture we add the Kaiser deal of a year or 18 months ago. Then the act follows which was passed last year, and since then there appears to have been a stalemate develop. I can only plead today as I did last session for co-operation between the two governments, the federal government and the government of the province of British Columbia. This question will never be settled satisfactorily unless there is such co-operation.

I was somewhat disturbed to hear the remarks made this afternoon by the hon. member for New Westminster, because he indicated that he was in favour of United States development of the Columbia river system in Canada. That is the stand taken just two weeks ago by the minister of lands and forests in the British Columbia legislature. I refer to Hon. Mr. Sommers. I have in my hand a press dispatch of his speech, and among other remarks he had these words to say; I am quoting from the Vancouver *Province* of February 7:

> He made it clear the government will still deal with the U.S. for development of a big power and storage dam at Mica creek, high in the Columbia river system.

The Mica creek development is the main development on the Columbia river system in Canada. Conditions are such that that development could be proceeded with in the very near future and here is a provincial minister, the minister in charge of this particular type of work in British Columbia, making this statement. The dispatch continues:

> Mr. Sommers accused members of the federal government of "an appalling act of irresponsibility", and several times described Liberal leader Arthur Laing as the Liberal party's "chief apologist in B.C."
>
> He said the B.C. government's policy for the Columbia is to have the Mica creek dam "built free of cost to the people of B.C.; that we have the control and generation of all at-site power for the use of B.C., and that we would expect delivery of 20 per cent of the gross power generated (additional) on the American side by this storage, delivered cost-free to the province of B.C."
>
> No better plan has been devised, he said.
>
> He declined to specify whether American public or private money would build the storage dam.
>
> What better deal could there be, he demanded. Besides getting the dam free, B.C. would get all the power generated at the dam and 20 per cent of the power the same water—once it had reached the American side—would generate in American hydro plants.

If that policy is put into effect it means that the Puget Sound utilities council will be doing that development. The Puget Sound utilities council is made up of the Puget Sound Power and Light Company, which is a private company operating in the state of Washington; Seattle City Light, a municipal system; Tacoma City Light, another municipal system; Snohomish county public utility district and Chelan public utility district, both of which are public utility districts. Those five power organizations make rather a queer combination, but they have combined into the Puget Sound utilities council, and it is hoped that they would be in partnership with the United States federal government in many of the projects. Possibly the Mica creek project would be one in which the Puget Sound utilities council would be doing the work, with the backing of United States federal government money or of the credit of the United States government.

That, of course, is directly opposed to the plan for the development of the Columbia river system envisaged by General

McNaughton. He, of course, is in favour of this Mica creek development at the earliest possible time. He has advocated a series of other dams, which I need not enumerate today. He has dealt with the question of downstream benefits, and also suggested that it might be possible to divert the headwaters of the Kootenay river into the Columbia river system and allow a portion of the Columbia river water into the Fraser river system. I am not taking a position today either for or against these diversions. There is a great deal of controversy in British Columbia as to whether or not General McNaughton is correct in advocating those two diversions, but his whole plan is to have this work done by Canadians for Canadians.

There we have a direct conflict between the two plans. Apparently the dominion government and the British Columbia government are again at loggerheads over the development of this system. Unfortunately, time is an element in this question. Canada cannot afford to sit back and wait for something to develop. The problem is very pressing. Yet there is no indication whatever that the federal government is moving to meet this situation. The Minister of Northern Affairs and National Resources should give this house a statement during this debate as to what the dominion proposes to do with regard to this question.

Clearly, here on the Columbia river system there is a case for a joint investment program by the two governments. If such a program were adopted the result would be to keep control of the system in Canada. There would be a great saving if the federal government put its credit behind any such development. The plans could be proceeded with much more quickly, and that means that the people in British Columbia would have cheaper power at an earlier date, with resulting benefits throughout the whole economy of that part of Canada. There would be new industries.

This development of the Columbia river system would be the greatest development that has ever taken place in British Columbia. There has never been anything there of this magnitude. It would mean an expansion of towns and an increase in population. Once the whole plan becomes actually effective, I believe the result will be an increase of a million people in the province of British Columbia, and there would be so many more people to consume the wheat that is grown on the prairies, which is giving us so much trouble at the present time. For that reason alone my suggestions to the government today should be acceptable, for then they would not hear so much about wheat in future sessions. It would mean increased strength for the nation as a whole.

I point out that there would be very little risk to the dominion in entering into a joint investment program of this kind. These works, I believe, would be self-liquidating. It is merely a matter of the dominion putting its credit behind the province. Just a few months ago we had a great talk about joint investment programs. When the dominion-provincial conference met in April of last year one of the four subjects set over for consideration in the fall was as follows:

> Public investment and natural resources development.

Under that heading this particular scheme certainly should come. The province of British Columbia sent representatives here in October, and the premier of that province had this to say in his brief. I am quoting from page 5, under the heading "Public Investment":

> British Columbia submits that the federal government should participate jointly with the provinces in investment in capital projects directed to the expansion of the productive wealth of Canada. Such public investment is a capital expenditure warranted by the return which will accrue both to the nation and to the province.

In giving the details of his plans he did not mention the development of power. But I suggest that he be taken at his word, and that the dominion say, "We are prepared to go into a joint program of this kind for the development of the Columbia river power." I submit that with regard to this particular river—and I point out that next to the St. Lawrence it is the most important one in Canada so far as power is concerned—we are at a fork in the road. One way will lead to great expansion by Canadians for Canadians, and I believe that way would be by a joint investment program. The other way we shall have expansion in Canada by Americans, primarily for Americans—make no mistake about that—with Canadians losing partial control and getting only partial benefits. I do not believe there are very many in this house who wish to see a policy adopted which leads to that second result.

It is obvious that the province of British Columbia cannot do this development itself, particularly under the curb of the dominion licensing control which exists under the International River Improvements Act. It is absolutely necessary that there be a partnership. If a joint program can be worked out, nothing would do more to help the Canadians who live on the Pacific slope. I would like to see more co-operative suggestion coming from the west coast, but I hope the dominion government will make an offer to the province of British Columbia to hold discussions. Why

should the two governments remain at arm's length and snarling at each other across 3,000 miles of Canada? Their representatives should be meeting to discuss this question.

With regard to downstream benefits, the Canadian government should be meeting with the United States government, and I see no reason why the government of British Columbia should not have representatives sitting in on those discussions. In some parts of the country, for the orderly development of power by Canadians we must have a joint investment policy.

As I said in my opening remarks, I place these thoughts before the house today, and particularly before the government, in the hope that the policy outlined in this amendment will be accepted. This amendment is not brought forward simply to make trouble for the government. It is brought forward in the belief that a policy of this kind should be adopted by Canada, and I hope it will be possible for the government to treat the amendment in that way.

Mr. Elmore Philpott (Vancouver South): Mr. Speaker, I want to make a few remarks on the all-important subject raised this afternoon. Before I begin talking about Columbia river power I should like to comment on what the Leader of the Opposition said, that he wished at times there could be some more accurate way of recording what takes place in the house. I too have thought at times it would be a very good idea to have television broadcasts of what takes place in the house, especially with the general exodus from some parts of the house from Thursday to Tuesday every week. But I am rather surprised to hear the Leader of the Opposition make this particular suggestion, because I can remember that when the chairman of one of our committees had the temerity to introduce a sound recording device to record the proceedings of a certain committee the Leader of the Opposition protested most vigorously.

Mr. Drew: Mr. Speaker, the incident I was referring to is one that should not be left in such form as it has been presented. That was the case where the chairman of the committee, without any word to the committee, without permission from the committee and without the knowledge of the committee, brought a sound recording device for his own use into the committee room.

Mr. Philpott: There is one other thing on which I should like to comment, what seems to me the unwisdom of any hon. member in any quarter of the house ever introducing the word "secession". We all have our political differences, and in my opinion it is not in the national interest for any hon. member in any quarter of the house so much as to suggest that this great nation of Canada is not one union, permanent and indissoluble.

I want to speak for a minute or two today on the question of power which has been discussed in various quarters of the house. Before I do so I should like to make one remark on the much discussed question of the South Saskatchewan dam. I sometimes think we hear too much about the South Saskatchewan dam, just as I sometimes think that we hear too much about wheat in the house compared with their general importance to the whole economy of the country. But I suggest that hon. members opposite, who so often criticize the speech of the Minister of Agriculture at the banquet, certainly cannot have read very carefully what the minister said at that banquet, because he dealt most specifically with the South Saskatchewan dam and particularly with the point that it is just a question of when.

I want to talk particularly today about the matter raised by the hon. member for New Westminster and the hon. member for Vancouver-Quadra. May I say at the outset that I am completely in support of the main point made by the hon. member for Vancouver-Quadra and completely opposed to the suggestion thrown out again by the hon. member for New Westminster of the Social Credit party, in which he suggested that the power resources of the upper Columbia river should be developed for the benefit of the people of the United States rather than for the benefit of Canadians.

Mr. Johnston (Bow River): Don't be so silly.

Mr. Philpott: I think if there is anything, Mr. Speaker—

Mr. Johnston (Bow River): You should not make a statement like that when you know it is not the truth.

Mr. Philpott: I do not wonder that my hon. friends are very much concerned, because I think the whole country will be very much concerned when they find what is suggested in some quarters of the house.

Mr. Johnston (Bow River): Just stick to the truth.

Mr. Philpott: Just as one year ago there was a suggestion to give away one small portion of the water resources of the upper Columbia river under what was known as the Kaiser dam deal, it now appears that the whole cat is out of the bag and the suggestion is to give away the whole vast resources of the upper Columbia under some larger Kaiser dam deal.

Mr. Blackmore: That is not so.

Power Development

Mr. Philpott: I think the fairest presentation of the whole power situation in the upper Columbia region was made by United States Senator Richard L. Neuberger of Oregon, who was sent to the upper Columbia to make a special report for the chairman of the United States senate committee on interior and insular affairs. When Senator Neuberger came to Canada to see exactly what was going on in this part of the country, exactly what was what and who was who, he came to certain conclusions. I may say that among others he visited the hon. member for Vancouver-Quadra. I know he spent a good deal of time with the hon. member for Kootenay West, and I know he attended public meetings. He came to certain conclusions, and I now read his own words as found on page 12 of the report made by Senator Neuberger to the committee:

1. Insistence on maximum development.—The value of the vast hydroelectric power potential lying dormant in the river canyons of British Columbia is well understood north of the border. The people of the province and their representatives have seen the progress which 20 years of Columbia river development in the United States have brought to the Pacific northwest. They visualize an industrial empire for western Canada, built on the full utilization of the water power latent in their portion of the Columbia river basin.

2. Canadian resources for Canada.—Canadians generally would prefer this full utilization to benefit the industrial development of their own Pacific northwest and are averse to the direct or indirect "export" of their water power potential to the more developed power market of the United States. Their convictions in this respect reflect both national pride and a confident long-range view of the future of western Canada.

3. Recognition of public responsibility.—Both in public meetings and in private conversations the view was repeatedly expressed that only the national governments of Canada and the United States can work out a settled program for mutually beneficial upstream development and downstream benefits in the Columbia river basin; and that the dominion and the provincial government in British Columbia, acting in continuing co-operation with the United States government, can best undertake developments of the magnitude of those possible on the upper Columbia river.

He goes on to say:

I spoke at length with members of parliament representing the people of British Columbia at Ottawa, who belong to the Conservative party and to the C.C.F. and with many private individuals belonging to these, to the Liberal, or to the Social Credit parties.

Then he goes on to say that there is a strong desire for Canadian-United States agreement and puts it in this way in his report:

4. Desire for Canadian-United States agreement.—There is sincere concern over the threat to the traditionally close relations between the United States and Canada posed by the disagreement over Columbia and Kootenay river storage and by the possibility of partial diversion of these rivers in Canada from their natural course through the United States.

Then he makes this important point.

Mr. Johnston (Bow River): Mr. Speaker—

Mr. Philpott: He says—

Mr. Johnston (Bow River): On a point of order—

The Acting Speaker (Mr. Applewhaite): Order. The hon. member for Bow River has a point of order.

Mr. Johnston (Bow River): Is there not some rule of the house that prohibits a member from getting up and reading from a document by the hour like this without making his own speech? Surely he should make his own speech and not read something out of some magazine or something else.

The Acting Speaker (Mr. Applewhaite): The hon. member is perfectly right in saying there is a rule of the house against reading from magazine articles, etc., by the hour. At the same time I know of no rule that forbids a member reading short extracts, particularly if they are from a report whether issued in this country or some other. I find myself unable to come to the conclusion that the hon. member for Vancouver South is reading to any greater extent than has been permitted many other members in various quarters of the house.

Mr. Philpott: I will only be reading for another 15 seconds. I have no doubt whatever why it is so distasteful to the Social Credit members of the house. Senator Neuberger went on to say:

Canadians generally have confidence that their position in these negotiations is being represented to the full limits of their national interests under the leadership of Gen. A. G. L. McNaughton, who is respected as Canada's most illustrious soldier.

I therefore submit that the work of the international joint commission is being well carried on for Canada under the distinguished leadership of General A. G. L. McNaughton, and that the interests of Canada are in very good hands. I submit that the first step in this whole power development on the upper Columbia river is to get the report of the international joint commission. When we get that report we will all know where we stand. As long as this government is in power there is no danger whatever that the natural resources of Canada will be sacrificed in the interests of the big business corporations in the United States.

Mr. H. W. Herridge (Kootenay West): Mr. Speaker, I rise with the greatest of pleasure to support this Progressive Conservative

amendment moved by the leader of the Progressive Conservative party. I am going to read it so that it heads what I have to say. It reads as follows:

> in the opinion of this house consideration should be given to a joint investment program for the development of power resources in any province where the government of such province requests the co-operation of the Canadian government in carrying out such development.

I am delighted that in that amendment the Progressive Conservative party indicated their support for an identical policy which has been proposed in this house by members of this group for many years.

Mr. Lennard: It is what we have in Ontario. We have had it for years.

Mr. Herridge: That is a provincial matter. We are talking about this house. We support this resolution wholeheartedly because it is in line with our basic philosophy and economic principles, because it provides for using our natural resources and the credit of the nation to provide developments for the advantage of Canadians.

Like the hon. member for Vancouver South, I was most surprised to hear the hon. member for New Westminster stress the vital need for bringing in United States capital to undertake these developments. I cannot understand that attitude. The way this thing is done, Mr. Speaker, once United States capital gets control of the natural resources, its capital is raised on the security provided by our Canadian natural resources. We in this group agree —as, I am glad to see, do a good many other members in the house, including hon. members opposite—that we can raise that capital in Canada based on the same natural resources. I was greatly surprised to hear that suggestion, particularly coming from a member of a group which stresses, I think generally, the use of the national credit for the development of the natural resources and to provide the good things of life.

Mr. Johnston (Bow River): You will hear more about it. He stressed it only when you could not get it from the federal government.

Mr. Herridge: As usual, Mr. Speaker, they are starting to wriggle.

Mr. Johnston (Bow River): Not a chance.

Mr. Herridge: A reading of the hon. member's remarks will clearly indicate that he considered it was necessary to get United States capital, that we in Canada were not capable of undertaking those developments by using our own national credit.

Mr. Johnston (Bow River): Let me ask the hon. member a question, Mr. Speaker. I wonder whether he would tell us whether the province of Saskatchewan is getting United States capital to develop their oil.

Mr. Herridge: I am not talking about other provinces.

Mr. Johnston (Bow River): Oh, that is different.

Mr. Herridge: I am talking about the situation that was raised with respect to the development of water resources in British Columbia. Like the hon. member for Vancouver-Quadra, as a British Columbia member and as one who resides in the district and represents a large area in the district, I am particularly interested in the development of the Columbia basin. I have been interested in that matter for a good many years, even prior to the reference of 1944. Since that time I suppose 95 per cent of the investigation of the Columbia river basin has been carried on at the expense of the federal government, and rightly so.

At this point I must pay a tribute to the good work of the officials of the Department of Northern Affairs and National Resources, the Department of Mines and Technical Surveys and the Department of Public Works who have been doing that work throughout the basin since 1945. I am sure it will not be many months until we shall have some idea of the result and some conclusions drawn from that long-term investigation.

Last session the discussion on the international rivers bill in the house, and also in the committee hearing the evidence given by witnesses, created a great deal of interest and a much wider understanding of this question so far as the Columbia river is concerned. Since that time, as mentioned by the hon. member for Vancouver South, we had a visit by Senator Richard L. Neuberger of Oregon. He is a member of the interior and insular affairs committee of the United States Senate. I know Senator Neuberger quite well and was pleased to make certain arrangements for him. I arranged for him to meet certain organizations and to address certain meetings. I made travel arrangements and provided him with the opportunity of examining the situation, and of meeting organizations and people in the district in order to secure material for writing what I think is an excellent report to his committee in the United States Senate.

I am not saying that I agree with all his conclusions, but at least from the Canadian point of view it was written very fairly indeed. He had an opportunity to address a number of public bodies such as city councils, boards of trade, chambers of commerce, committees and other small meetings, and he obtained a fairly good idea of the thinking of the people in the district. He was

greatly impressed by the concern of Canadians he met in the area and in British Columbia generally about the development of this basin, that it should be developed to the advantage of Canadians and that Canadian rights and interests should be protected.

In any event, he was greatly interested in the widespread interest in the question and to what an extent a large section of the public was quite generally informed on it. In addition, in his report he mentioned one significant thing. He said that, although generally speaking all parties he met were suggesting the necessity for the development as the result of the investment of public funds, nowhere did he hear the word "socialism" referred to. He was quite taken with the fact that all parties he met supported these proposals and no one suggested that this was a form of socialism. His visit, I think, was fruitful from the American and the Canadian point of view. His visit was largely the result of United States concern over proposals being made in Canada for the diversion of the Columbia river into the Fraser river.

I want to draw the particular attention of the house to a series of articles written by Mr. Grant Dexter in the Winnipeg *Free Press* of November 12, 14 and 15. I suggest that anybody who is interested in this question should read those articles, because Mr. Grant Dexter has clearly grasped the core of this whole situation. I think the articles are well worth reading by anyone who is interested in understanding the position of the Canadian section of the international joint commission and the position of this government with respect to this proposed development.

Mr. Dexter is one of an increasing number who recognize the splendid efforts that General McNaughton is making to see, so far as he and the commission are concerned, that these developments do take place to the full advantage of the Canadian people.

Now, I agree with the hon. member for Vancouver South. I do not think we can come to definite conclusions. We must have all the facts before us before we can start to draw conclusions. I am sure that those members of the house who are interested in this subject are awaiting with interest the report on the investigation that is being made into the possibility of the diversion of the Columbia into the Fraser. When we have that report on the investigation from the commission, we will be in a position to analyse the situation and know to a greater extent what we are talking about.

This development is of some importance to the Kootenay country generally. It is of particular importance because, as the member for Vancouver-Quadra said, there is a possibility for the development of this power in relation to the great natural resources that exist in the area. I think everyone in this house will recall that members on the government side speaking on this subject last year, and General McNaughton in the committee, laid particular stress upon the fact that every recognition was given to the rights of the province in regard to the development of natural resources and that these developments come directly within provincial jurisdiction. Therefore, after we get the report there is no question about it but that one would expect the provincial governments, like the rest, to study them and make certain proposals.

The hon. member for Vancouver-Quadra dealt with certain proposals made recently by the minister of lands and forests in the legislature of British Columbia. I have a transcript of that speech, and I shall just read from it briefly. The minister says:

> Our policy in respect to the Mica development is:
>
> 1. That we expect to have the storage dam built free of cost to the people of British Columbia.
>
> 2. That we would have the control and generation of all at-site power for the use of British Columbia.
>
> 3. That we would expect delivery of 20 per cent of the gross power generated on the American side by this storage, delivered cost free to the province of British Columbia.

I presume that is the policy of the government of British Columbia with respect to the development at Mica creek at this time. I believe that would clearly indicate they are looking forward to United States capital building this dam.

I am concerned directly because of my interest in this question, but the particular reason I have for supporting this resolution, in addition to its general importance, is the fact that it points to a joint public investment program for the development of our power resources. As the hon. member for Vancouver-Quadra I thought very well said, one method means United States capital and with it a measure of United States control and profits. The other way means using our national credit, based on Canadian natural resources, to develop Canadian natural resources to the advantage of Canadians generally. I believe, Mr. Speaker that if this could be done then a spirit of co-operation would exist among all governments.

Mr. A. J. Brooks (Royal): This is a very interesting resolution that we have before us, Mr. Speaker. We have heard of the great interest and benefit it would be to western Canada in the development of the South Saskatchewan and Columbia rivers, as

well as other rivers in the west. I do not suppose there is any part of Canada which would rejoice more if the government would adopt this motion than the maritime provinces. I myself am very pleased indeed that the matter has been brought before the house, and I sincerely hope it will receive the endorsation of this parliament.

The idea is not new at all. The hon. member who just took his seat stated he thought his party had introduced it first in this house. I do not know about that, nor do I think it makes very much difference. But I know that the idea has been prevalent in my own province for quite a number of years. The present premier of New Brunswick, at a recent meeting of the provincial premiers with the federal government, brought the matter to the attention of that conference.

I should like to read, Mr. Speaker, from a speech that was made by the premier of New Brunswick in the provincial house at Fredericton last year. He said:

The federal government proposed for consideration two subjects:—

This was at the dominion-provincial conference.

—taxation and unemployment. Right here is where the New Brunswick delegation differed. We went to Ottawa primarily to stress the opposite of unemployment, namely employment. The first item on our agenda was, and I quote—

Premier Flemming is quoting from his own agenda.

"Our first proposal is that an important place on the agenda should be accorded to the principle of the federal financial assistance to the provinces for the broad purpose of resource development.

He went on to say that he was thinking of Beechwood and other hydro developments in the province of New Brunswick.

As I say, the idea is not new so far as this house is concerned. I recall that quite a few years ago there was the development of the Tennessee Valley Authority in the United States. This great development was brought about by the federal government for the benefit of the southern states, which were not receiving the attention they should. There was not the industry in that part of the country, and it was felt that what was necessary was some great hydro development.

After the development of the Tennessee valley power, industry did flow to that section of the country. This was true not only of the Tennessee valley project but it was true also of the great northwestern section of the United States. The same idea has been advanced by the commonwealth countries in the Colombo plan. We speak about the necessity for the development of hydroelectric power in India, and we claim also that it is our privilege to assist in that development in Egypt and Ceylon.

Here I should like to state that in my opinion, if such a development is good for different sections of the United States, if it is proper that we as Canadian members of the commonwealth should assist in this development in countries like India, China—perhaps I should not mention China—India, Ceylon and Egypt, then surely it is right that we should do everything possible to develop every section of our own country.

I do not think that in the whole of Canada there is greater need for hydro development than there is in the maritime provinces today. This subject has been discussed in this house on numerous occasions. I myself have pointed out the great dearth of electric power in my own province of New Brunswick. I understand that the average amount of electric power in Ontario and Quebec is one horsepower per capita. In New Brunswick we have a population of about 500,000 people. Our hydro electric development amounts to 136,000 horsepower. Anyone can see the great difference between hydro development in New Brunswick—and the same applies to Nova Scotia and Prince Edward Island—and in the central provinces, and even in the province of British Columbia. We did not feel this lack of development so much until recent years.

In the last two or three years we have discovered great mineral wealth in our province. We hope to develop the minerals of our own province; we hope that smelters will be built in the northern part of New Brunswick so that minerals produced there will not be shipped away to be smelted in other parts of the world, as is being done at the present time. That is the hope of every citizen of New Brunswick, and it has been expressed at different times. Today there is the prospect of further development of our pulp and paper industry.

I might say in that connection, Mr. Speaker, for years the province of New Brunswick has been shipping out of the province anywhere from 500,000 to nearly 1 million cords of pulpwood. We want to process and develop that in New Brunswick. The only way it can be done and will be done is to produce cheap electric power in the province. Today there is talk of a mill being built on the south shore of the province, on the bay of Fundy. Those who are interested in this mill are making serious inquiries as to the amount of power that is available for the production of paper, and also as to the cost of this power.

I could mention many other reasons why we are anxious to have power developed. I have spoken of them before in the house. Defence production is an example. We have not received in New Brunswick at any time our fair share of defence production. We believe that we would have received it if we had the necessary hydro development in the province.

I might ask the question, have we the prospective water power in New Brunswick? Anyone who has listened to hon. members from the maritime provinces debate this question during the last 10 or 15 years will realize that we have. I myself and other maritime members, particularly the opposition members, the former member for Cumberland, Mr. Black; the hon. member for Cape Breton (Mr. Gillis) and other opposition members, have mentioned the Chignecto canal and the power that could be developed from the utilization of tidal waters. We have spoken of the Petitcodiac river and the Passamaquoddy.

I mentioned the Passamaquoddy a few weeks ago. The United States, particularly the state of Maine, is greatly interested in the development of Passamaquoddy. They have asked the Dominion of Canada to join with them in an investigation into the feasibility of developing power at Passamaquoddy. As yet the Dominion of Canada has not indicated whether or not it is willing to assist in this investigation.

I am satisfied, Mr. Speaker, that Passamaquoddy will be developed by the United States if it is feasible, and I am satisfied that it will be of great benefit to the state of Maine, which lies side by side with the province of New Brunswick.

The development of power from the tides is not something altogether new. I remember reading a few years ago that in France they develop power from the tides. On the Severn river in England there is a power plant which gets its power from the rise and fall of the tide. That is also true of China. There is no place in the world that has such high tides and tremendous power potential and such tremendous rush of water as has the bay of Fundy in New Brunswick. These are just some of the possible developments that could take place in our province, some of which have been mentioned many times, I fear to very unsympathetic ears as far as the federal government is concerned.

I come now, Mr. Speaker, to a development which is under way at the present time, namely the Saint John river development. The development which is under way at the present time, namely Beechwood, is only a part of the great possibilities for development of the Saint John river. This matter came up in the house a short time ago, and I was very disappointed to hear the Minister of Northern Affairs and National Resources—I should like to get his attention for a moment—say that it would not be the policy of the government to assist in the development of Beechwood. I should like to quote from his remarks at that time. This question was asked by the hon. member for Gloucester (Mr. Robichaud), as reported at page 558 of *Hansard*:

> Mr. Speaker, may I direct a question to the Minister of Northern Affairs and National Resources. Has the government given consideration to the possibility of co-operating in the over-all power development of the Saint John river system in New Brunswick?

I may say the over-all power system means the development of Beechwood, the same as it does in other parts of the Saint John.

Mr. Robichaud: It means storage.

Mr. Brooks: It means storage, yes.

Mr. Robichaud: First.

Mr. Brooks: No, not at all. Does the hon. member mean to say that in order to develop Beechwood they have to develop storage in Maine and in Quebec?

Mr. Robichaud: Absolutely.

Mr. Brooks: I would like to place the hon. member's opinion against the opinion of the very best engineers in the United States and Canada who have investigated this. I shall call attention to that in a few minutes, Mr. Speaker.

This has been the attitude of hon. members opposite. It is also the attitude of the opposition in the province of New Brunswick. We need the development of Beechwood in the very worst way, but because they think it will bring some credit to Mr. Flemming, the premier of New Brunswick, they are trying to discredit it in every way they possibly can. I would ask those hon. members to be very careful and read over the report of the international committee on the development of the Saint John river and the development of Beechwood. I was discussing the attitude the Minister of Northern Affairs and National Resources took concerning the development of Beechwood.

He said, as reported at page 558 of *Hansard* of January 26:

> All the way along there has been a constant exchange of views among provincial and federal technical and financial officials.

This is correct; there has been an exchange of views. He continued:

> These discussions appeared to indicate that the development to the end of the Beechwood phase could be carried out by the province of New Brunswick without jeopardizing its credit.

This is the point I wish to make, Mr. Speaker. It is not a matter of jeopardizing the credit of the province of New Brunswick; we did not expect the development of Beechwood to jeopardize our credit. What the province of New Brunswick was asking for was assistance so we could get cheaper power. That is what jeopardizes the introduction of industry in our province. We did not in any way feel nor do we feel today that the development of power is jeopardizing our credit. The minister went on to say:

> It appears, however, that future developments in the province are likely to require additional power on a substantial scale. This larger future development has been represented to the federal government as likely to be beyond the capacity of the province of New Brunswick to finance on its own.

Beechwood is a part of the whole development of the Saint John river. There is no reason in the world why the federal government, if it is going to give assistance in the development of the Saint John river, could not give assistance to the whole scheme and not pick out parts of it and say we are doing this because it might jeopardize the finances of the province.

This attitude is jeopardizing our prospects of getting industry in that province. It is jeopardizing our prospects of being able to build a smelter in the northern part of our province, for instance. It is jeopardizing our prospects of developing our great pulp and paper industry there. I would ask the Minister of Northern Affairs and National Resources to reconsider this matter, and I am sure he will have the very grateful thanks of the people of my province if he does so.

There would be some difficulties and it would take some time to develop the whole of the Saint John river; there is no question about that. Some hon. members will recall that our good friend the former member for Temiscouata had his people so stirred up around lake Temiscouata that it would take considerable time, I am sure, to get the rights that we require in Quebec, for instance, in the development of other phases of the Saint John river. We have to get agreements with Maine. This will all take a long time, but we in New Brunswick cannot wait for all these things to be settled. We can produce power at Beechwood now; we have the power plant almost constructed there, and that is where we need immediate assistance from the federal government. This is not something far off in the future.

I might say, Mr. Speaker, that the whole scheme of developing the Saint John river has already been investigated by the engineers of the international joint commission, and they have already made a report. I would like to quote from the report they made, and it brings us to the question of the selection of Beechwood. I am quoting from a book entitled "The Background of the Beechwood Hydro Electric Power Development" dated March 25, and in this they quote—

An hon. Member: By whom was it prepared?

Mr. Brooks: It was prepared by the hydro engineers of New Brunswick, but in it they quote from the report of the international joint commission. I quote from page 18 of this report:

> The Beechwood site was selected for inclusion in all initial plans of development by the engineering work group and the engineering board.

I might explain that the engineering work group and the engineering board were appointed by the international joint commission. They represented the opinions of the best hydro engineers in the United States and the best hydro engineers we could find in New Brunswick. It continues:

> Economic studies indicated that the project is more attractive than other power projects which were investigated. This site has the advantage of being below the mouth of the Aroostook and Tobique rivers, the largest tributaries of the Saint John river. Also the site will benefit from the storage which has been developed above it—

In this connection I might say that my hon. friends are saying we just get the natural flow of the Saint John river, but that is not true. As these engineers indicate, besides the natural flow of the Saint John river we also have benefit from the storage which has been developed above it; and as the report says:

> —this amounts to about 400,000 acre feet.

Mr. Robichaud: Was the hon. member there last summer?

Mr. Brooks: What do you mean by "there"?

An hon. Member: Beechwood.

Mr. Brooks: I know what the hon. member is coming to. There was a dry season not only in New Brunswick but all over Canada, and there was not a hydro development scheme anywhere in Canada that was not suffering from lack of water last year. That is not a valid argument, to my way of thinking. The report continues:

> Present storages above Beechwood are 105,000 acre feet on Temiscouata lake and owned by Gatineau Power Company; 82,000 acre feet on the

Aroostook river at Squa Pan, owned by Maine Public Service Company; 17,000 acre feet on Green river, owned by the city of Edmundston; and 187,000 acre feet on the Tobique river, developed by the New Brunswick Power Commission.

Mr. Speaker, that storage of 400,000 acre feet is not the natural flow of the Saint John river. That is what these engineers say the Beechwood power would receive the benefit of.

Some hon. Members: Six o'clock.

The Acting Speaker (Mr. Applewhaite): I think it is a convenient time for the hon. member to adjourn for the recess.

At six o'clock the house took recess.

AFTER RECESS

The house resumed at eight o'clock.

Mr. Brooks: Mr. Speaker, at six o'clock I was discussing the development of Beechwood on the Saint John river and the general development of the Saint John river for hydroelectric purposes. I was stating at that time that the Beechwood development had been approved by the international joint commission, as well as outstanding engineers employed by the international joint commission from the United States and Canada, and also the engineering works group, which consisted of outstanding citizens from both the United States and Canada. This is a quotation from the report of the international joint commission:

The New Brunswick Electric Power Commission will be faced with a shortage of power in 1956 unless early steps are taken to deal with the situation.

As we all know, early steps were taken in the form of the development of Beechwood by the present government of New Brunswick. It is also stated in this report:

If the economy of the province is to grow with the general growth of Canada as a whole, New Brunswick must be assured of future supplies of power at costs which are attractive to industry.

That really is the crux of the whole matter. The reason we have not been able to develop in New Brunswick is that we have lacked power. We shall develop in the future only if we have power at such a cost that it is attractive to industry. That is why appeals have gone out from the province of New Brunswick to the federal government for assistance in this matter. The engineering board of the international joint commission also stated that it—

—sees no objection to the construction of a plant at the Beechwood site, as it would be a major part of any ultimate plan of development.

These statements do away with the argument we have heard that Beechwood should not have been developed until there was general development of the whole Saint John river area. At the opening of my remarks I dealt with the statement of the Minister of Northern Affairs and National Resources. I am sorry he is not in the house.

An hon. Member: Yes, he has been here since eight o'clock.

Mr. Brooks: I beg your pardon. I should have said that he is not in his seat. The report of the Power Corporation of Canada Limited estimated:

. . . that power would be available at Beechwood and before transmission for 5·4 mills per k.w.h. if interest costs were 5 per cent and that energy cost would be reduced to 3·1 mills per k.w.h. if capital was available at 2½ per cent interest.

There is the very point that the people of New Brunswick, through the government of New Brunswick, are trying to make to the parliament of Canada. It is not that the finances of the province are going to be jeopardized, as the minister stated here some time ago, but the point is that we cannot encourage industry that is in the province and we cannot attract outside industry unless we can obtain our money at a cheaper rate of interest. We are not begging anything from the federal government. We are simply asking it to back our bonds so that with the credit of the dominion government behind us we may be able to borrow money at a cheaper rate of interest, which means all the difference between cheap and dear power in the province of New Brunswick. I want to impress that on the government, and particularly on the Minister of Northern Affairs and National Resources.

As I said before, the development at Beechwood was approved by those people I mentioned. It was also approved by the Power Corporation of Canada Limited, by H. G. Acres Company Limited, and by the Shawinigan Engineering Company Limited. Those are three outstanding firms of consulting engineers in Canada. I want to say to my hon. friends from New Brunswick who belong to the Liberal party that not one of these firms I have mentioned, nor any creditable hydroelectric engineer in the Dominion of Canada or in the United States, has said that before Beechwood is developed there must be development and storage in Maine and the province of Quebec. If any of those members speak later I would be pleased if they would give the names of any outstanding engineers who have ever made that statement.

At the outset of my remarks I spoke about the need. I know it is not necessary to develop that point here in this house. It has

been mentioned too often, and every hon. member is well aware of the situation in the maritime provinces as far as the requirements for hydroelectric development are concerned. Those provinces are starving for cheap hydroelectric power.

As for the advantages, I have also mentioned them. Power at a reasonable price would serve as a stimulus to all the province's industries at the present time. It would increase the industrialization of that province. It would help to develop our mineral deposits. It would help to develop further our pulpwood industry. Another thing of very great importance to us in New Brunswick and the maritimes is that it would give employment to our young people and keep them at home. As I say, this is a very important matter as far as we are concerned. The tax revenues would be increased, as far as New Brunswick and the other maritime provinces are concerned.

There are other benefits. With the discovery of over 100 million tons of valuable ore in New Brunswick, it would give the province the greatest opportunity for economic expansion in its history. These mineral deposits can be developed in such a way as to be of maximum benefit to the people of New Brunswick only if there is a large surplus of relatively cheap electric power available. At the present time there is no surplus available, and the price of our power is too high. It is several times the Canadian average.

The chief reason for the high cost is the high rate of interest paid by the provincial government in borrowing money. A large surplus of relatively cheap power can be made available, which would develop the hydroelectric power potential of the province, with financial assistance by the federal government. There is no question at all about that.

Perhaps I might mention some precedents for consideration by the federal government as far as our problem is concerned. I think I could make a case in regard to the St. Lawrence seaway. We get very little, if any, benefit from the development of the St. Lawrence seaway. We in the maritime provinces will have to pay our full proportionate share of that development.

An hon. Member: Nonsense.

Mr. Brooks: No nonsense about it. We hear so much about the trans-Canada pipe line. What benefit will the maritime provinces receive from that? Let no one say it is nonsense to say that we will receive no benefit. As a Canadian from the maritime provinces, may I say that we do not oppose these developments in other parts of Canada. We are glad to see the development of Canada, but we feel that we are entitled to some compensation when our money is paid out for the benefit of other parts of Canada and we receive absolutely no benefit.

Take the crown corporation that is being formed for the commercial development of atomic energy. It might very well have been established in the maritime provinces. We thought it was coming to the province of Nova Scotia. New Brunswick would not have objected to that, but instead it is being established here in the province of Ontario where there is a surplus of practically everything that goes to develop a country.

As I say, these are arguments that we could use, but we do not intend to do so. We hope that out of pure justice to our own province and the other maritime provinces the government will give these matters due consideration.

Finally I wish to say that we are most sincere about this matter. I hope that all members from New Brunswick and the maritime provinces generally will add their voices to those who have already spoken. We are all interested because power is the key which will bring prosperity to that section of the dominion.

In the United States attention is being paid to what may be called depressed areas. We are not calling the maritimes a depressed area, but we might say that they are a neglected area. In the southern states of the United States and even in the New England states their atomic energy commission is locating many of their atomic reactors for commercial purposes. They are doing so in the New England states to bolster the economy of that part of their country. Why should these things not be done in Canada? We do not want a concentration of industry and people in the central provinces while on the extremities people are without industries and employment. It is not a healthy situation, and it is one which I believe can be corrected if the government will give serious consideration to the matter.

The proposal contained in the amendment is a very advanced step which would do a lot to improve the situation as far as that part of Canada is concerned. I do not think I need say any more, but I do hope the government will give every consideration to the amendment now before us. If they do I am sure they will be doing something which will be of great benefit to the part of the country from which I come.

Mr. Clarence Gillis (Cape Breton South): Mr. Speaker, the amendment moved by the

Leader of the Opposition is broad and all-inclusive. He was not parochial in his presentation. If you look at the order paper I think you will find there is a great deal of interest in this particular subject, as indicated by resolutions there which could very well bring about a discussion similar to this. They do not call for a public investment program, but they do suggest that many members of the house are interested in this subject.

There are many things the Leader of the Opposition had to say with which I agree, and there are some with which I do not agree. I would point out, Mr. Speaker, that the amendment is not asking for something that is not already being done by the federal government. In his amendment the Leader of the Opposition asked the federal government to consider the advisability of establishing a development fund that might be used province by province across Canada for the development of power, provided the province concerned is willing to co-operate.

At the present time the federal government is developing power for the province of Ontario through the St. Lawrence seaway project and is paying a great deal of the cost. The Prime Minister (Mr. St. Laurent) shakes his head. It is alleged, and we hope it is so, that the state of New York and the province of Ontario will pay the full shot for developing the power project at Niagara Falls which will be linked with the St. Lawrence seaway project, but I would point out that the St. Lawrence seaway project is being carried on by a federal government agency, the St. Lawrence seaway authority. The administrative and other costs will certainly be borne in the final analysis by the federal government.

I do not think the province of Ontario will pay the full cost of the power development, in view of the fact that the development is connected with the St. Lawrence seaway authority, which is a federal government project. All the negotiations were carried on by the federal government. All the amendment asks is that similar consideration be given to the same kind of development in other provinces which are willing to co-operate with the federal government.

The different speakers who followed the Leader of the Opposition of course dealt with the problem as it applies to their own particular areas. That is what members are elected for, to represent the people who elected them to the House of Commons. The Gordon commission established by the federal government has made a trip across Canada and will be in Ottawa shortly. The commission is studying the resources of Canada and how best we can apply ourselves to their development. They are gathering a lot of information, and there is a lot of information available because this is not the first time this kind of job has been done. I think the amendment and the discussions are timely, because the Gordon commission will be in Ottawa within a few weeks, according to the press, and this debate will give the Gordon commission some indication of what is in the minds of members of the house with respect to the development of our resources.

In discussing the maritimes this afternoon the Leader of the Opposition stated with respect to the coal resources of the maritime provinces, and referring particularly to Nova Scotia, that there was a possibility of gasification of the coal mines and the utilization of the energy for power purposes. I do not agree. Gasification of coal mines has been tried for a good many years and has proved a failure. It was tried in Russia. It was tried in Britain and the United States.

I want to tell him and the house that in so far as the coal mines of Nova Scotia are concerned—and most of them are on the island of Cape Breton—it is not possible to carry on that type of development of energy. To begin with, these mines are deep; they are submarine mines, and they are very gassy. The gasification of coal means that you set the mine afire and extract the gases and the energy from the coal. If you set one of those mines afire on the island of Cape Breton and sealed it off, with the gases that are generated by that type of coal you would likely blow that island off the map. That would be the net result of gasification in the coal mines of Nova Scotia. That procedure therefore is not any solution.

But in addition to that, if you went into that type of thing it would mean the scrapping of the industry as it is today. It would mean the displacement of all the men there. It would mean you would have to utilize—if it was a success—the coal for power purposes. What are you going to apply it to?

I think all of the information needed is available with respect to power in the province of Nova Scotia. We had here only a year or so ago the Christie report made to the Department of Mines and Technical Surveys and to the coal board. Mr. Christie is a thermal power expert who was brought in from the United States. He made a survey of that whole area and drew up a rather comprehensive report. I have the report here but I am not going to read it. However, that report indicates that there is available in the province of Nova Scotia much more power than the average person thinks there is. His report is clear on that point.

I should just like to point out that on the island of Cape Breton, for example, there is no shortage of power. There is a shortage of industry. The Dominion Coal Company have a thermal power plant which operates at Glace Bay and which, I am informed, is putting power to the switchboard as cheaply as any hydroelectric outfit in Canada. That plant is expanding all the time. They have been adding unit after unit. They are making another expansion now. They are running their pole line all the way up to the strait of Canso, that is some 90 miles, and they can and will supply power in that whole area. I am reasonably sure that in time that plant will cross the strait of Canso and go over on to the mainland. There is no shortage of power in that particular area. It is thermal power, and it is being generated as cheaply as any hydroelectric power because in this plant you can burn splint, the stuff they throw away. It can be utilized for energy purposes in these thermal power plants.

Mr. Christie made a couple of fairly good reports. I might say they are rather radical reports in some respects. In this report he said many of the things that I have been saying in the house for some considerable time. For example, at page 7 of the report he has this to say. I do not intend to quote much from his report but I would just like to read this because the Leader of the Opposition this afternoon said that when the St. Lawrence seaway project was discussed in this house it was unanimously accepted by the house. It was not unanimously accepted. I was the lone person in this house who opposed it on the ground that I did not consider it progress to support a project that was going to scrap the main base of the economy of Nova Scotia. On that particular point Mr. Christie has this to say at page 7 of his report:

> The construction of the St. Lawrence seaway will permit ore boats to carry coal cargoes at low rates to Montreal and Quebec on their return trip from lake Erie ports to Seven Islands. This loss of market will reduce coal mining in Nova Scotia by a possible one-third. Such a reduction would prove disastrous to the coal industry. Widespread unemployment, loss of business, and decreased consumption of electricity would result from necessary mine shut-downs.

I said that when I was discussing the St. Lawrence seaway project; but here it is said by an impartial, independent person from the United States who makes a survey of the province, who looks at its economy and its resources and its possible development, and who is working for the federal government and the provincial government. He sees that picture with respect to the St. Lawrence seaway and the loss of coal markets exactly as I see it.

I merely mention that report to show that. As the hon. member for Royal said, I did not say I was unalterably opposed to the seaway, but I said we should like to get some of the advantages with respect to power development and auxiliary industry that might flow from that development. The hon. member for Royal suggested that we are not opposing the pipe line. However, when Alberta gas comes into Quebec I know it is the end of our main market in that particular area.

The discussion would suggest that the development of Nova Scotia was retarded because of the lack of power. It is not true that there is lack of power. There is now developed in Nova Scotia power that can be used by any industry that may come in there. That is the reason I am supporting the resolution. Suppose, as is suggested by the resolution, the federal government set up a fund not only for the development of power, because the development of power presupposes the development of industry. It is just not enough to develop power and let it stand there. To be beneficial it must be applied to something, and that something would have to be auxiliary industry in the province of Nova Scotia.

I would suggest this, and I hope the Gordon commission are considering it. The federal government spent a great deal of money in developing the Canso causeway, and I appreciate that fact. I said previously and I still contend that it is going to bring results to the province of Nova Scotia and the island of Cape Breton. In putting that causeway across the strait you developed one of the best natural harbours in the world open to the sea. It is the ideal spot for a pulp and paper development. There is all kinds of pulpwood in the area right at tidewater. If there is any place in Canada where our own pulpwood could be processed most cheaply and where it should be processed, it would be at that very spot. The establishment of the causeway created that site for a development of that kind. I hope it will be utilized in the future for that purpose.

However, we must remember this, as other hon. members have suggested. Many of our basic resources are getting out of our hands. Pulpwood is one of them. Most of our pulp has been going across to the United States at an extremely cheap price. It is coming back here as newsprint at $90 to $100 a ton. It is not being processed in Canada. In sections of Nova Scotia some United States companies have leases on huge forest reserves which

they are using for pulp purposes. The situation has reached the point where Nova Scotians are obliged to negotiate with a United States company in order to buy back some of their own pulpwood.

Of course, if a mill is to be established in this country, the location of that mill is not decided in Canada because the pulp and paper industry is largely in United States hands today to the extent, as I said before, that the uncut reserves are leased to them over a long period of time. That is true not only of pulp and paper but it is true also of automobiles, aluminium, nickel and the gold mines. We are losing our hold on our basic resources. It is true of iron ore and of steel to some considerable extent.

So when we are talking about developing our own resources we have to take a look at the leases we have granted to capital from the other side of the border. We do not have the say any more. In my opinion we have done a bad job of collective bargaining in farming out our natural resources. People talk about secession and going over to the United States. They do not have to go to the United States, because the United States has come over to them and in many ways they are calling the shots.

I know there were negotiations by the provincial government for some considerable time in connection with the pulp and paper development around Canso. It was hoped that a mill was going in there, but when the decision was made it was put somewhere else and that mill is going somewhere in Halifax county, although the best site was around the strait of Canso.

There is an organization functioning in the maritimes today that I consider one of the best developments since confederation, and that is the Atlantic economic council. Within the last few days I received one of their reports. They are studying this whole question. The governments of the maritime provinces have formed this economic council and staffed it with very able personnel. They are now studying the possibilities of developing the resources of Newfoundland, New Brunswick, Nova Scotia and Prince Edward Island, and how these provinces can best complement the economy of the other provinces. They have a committee on each of these resources, and on the question of power the committee make it quite clear in their report that they agree with what I am saying now so far as Nova Scotia is concerned. They are gathering a lot of data on this particular question of power. The committee say the power is there, and it is just a matter of getting some industries into the province to apply it.

[Mr. Gillis.]

There are things the government could do without this resolution, but they have not done them. For example, this government knows, and the provincial government knows, that the coal industry has lost about 3,000 people in the last couple of years. You would imagine that the government would be thinking there has to be something in that particular area to take up the slack. I appeal to the Minister of Public Works (Mr. Winters).

For example, there is a fish plant at Morien which keeps a whole community of 3,000 or 4,000 people. It is the only industry in the area. If the breakwater which is there were expanded, and it would not cost a lot of money to put it in good shape, much greater room would be provided for boats. The basin comes right in from the sea and the storms are quite heavy. Larger boats and more boats could be used for fishing in that area, and the fish plant could be expanded greatly. I looked in the estimates but there is nothing for that purpose. You would not have to have any extra authority, because that is the prerogative of the Department of Public Works. The industry could be expanded because there is a market for those products.

Second, the town of Glace Bay is a town which has been hit by the closing of these mines. It has a population of 28,000 and there is a huge investment in churches, schools, and that sort of thing. There is a harbour there that is not in too bad shape. It is one of the best swordfishing grounds and during the season boats come in there from Lunenburg and all over Nova Scotia and Newfoundland. The harbour is small but it could be widened and deepened. It could be built up to accommodate twice the number of vessels that fish out of there now. This is the biggest swordfishing industry in North America and the catch goes to the United States, where it is a very expensive dish. This town has lost thousands of its population because of the closing of the mines.

The Minister of Public Works could very easily have said, well, there are two fish plants there that employ 600 to 700 people. The harbour does not accommodate very big boats, but if it were widened and dredged you could expand these fish plants so they would take up some of the slack from the waning coal industry. What is needed in most industrial communities is a source of auxiliary income.

In these homes around the steel plants and coal mines you will find two or three young women who cannot find employment in the community. Most such young women are employed in these fish plants and thus bring extra income into the home to supplement what the father is getting, perhaps from

unemployment insurance. There may be one man working in a home and supporting a family of eight or nine, many of them grown young women. The expansion of the breakwater at Morien and the widening and deepening of the Glace Bay harbour would do exactly the things I am saying. You do not have to have any extra authority to put something in the estimates of the Department of Public Works to cover those two items. I have talked about this for two years, but there still is not anything in the estimates.

As I said before, the Atlantic economic council is doing a good job. In time I believe we are going to be told through these organizations that we cannot continue to look to our Ontario and Quebec markets for the products of the maritime provinces. We will be told we have a market within the maritimes and we can trade within the maritimes. If that development takes places, then this part of the country is going to lose the lucrative market down there, but the maritime provinces are going to benefit 100 per cent. That is the purpose behind the formation of the Atlantic economic council and the industrial development boards. There are three of them, one in Glace Bay, one in Sydney and one in Antigonish county.

I realize that in time the basic industry of coal is going to peter out, especially when the gas line goes into Quebec and the Canadian National Railways completes the dieselization program. Something will have to take its place. I believe that pulp and paper at Canso is a natural. I believe that the expansion of steel production at the Sydney plant is the next step. I believe that in addition to turning out raw steel at that plant there should be a considerable amount of the steel fabricated in that area.

You know, just recently the capacity for raw steel at Stelco was pretty well taken up. They were shipping the raw material down to Sydney, and I suppose you were paying a freight subsidy on it. Dosco was turning out ingots and shipping them back up to Stelco again to be fabricated, and I suppose you were paying another subsidy on dragging them back to Hamilton.

I believe that Dosco is now considering the expansion of the steel plant at Sydney. It is a bit late; it should have been done a long time ago. Over the past 16 years many of us in the house have been urging that, because they have their own iron ore deposits at Wabana, Newfoundland. They do not have to depend on anything else. They have huge deposits there and all kinds of modern equipment for taking it from under the ground. It is only 90 miles from Newfoundland to the Sydney plant. They have their own coal mines next door to them. All the raw material necessary to turn out steel is right there. If there is any place in Canada where the manufacture of steel and steel fabrication should be going on at the cheapest possible rate it should be right in the Sydney area.

The United States steel people come all the way down to Quebec and drag their iron ore up from there to the head of the lakes. Dosco have their own ships, their own coal mines, their own gypsum deposits, their own limestone deposits; everything that goes into the manufacture of steel is right there at their back door, and they own it all. Why more raw steel is not made and more fabrication turned out there is a mystery to me. Perhaps there is a little too much United States capital in the steel industry today. I know four of the board of directors of Dosco are pretty big United States money men. They may have some influence in preventing the development of steel in that area, because perhaps it would interfere with their markets.

I trust the federal government will give some consideration to the setting up of this kind of a fund. It does not seem to me that there is any other way we are going to be able to work the resources—what is left of them—in this country. I cannot see any Canadian investors rushing in to develop areas like the iron ore deposits at Ungava and Labrador. They do not seem very anxious to get into textiles. That field is pretty well controlled in the United States. We do not seem to have people in this country who have enough confidence in the country to invest their money. The people of the United States are gamblers. They are doing it over there, and they are getting quite a control over our natural resources.

I think the discussion is timely. I am in hopes that when the Gordon commission reports we shall not treat it as we have treated other reports of commissions. The Sirois report was brought down in 1940. There were volumes and volumes of it. I do not think any hon. member could ever read it all. I picked out the parts that pertained to the maritime provinces. The Sirois report was a new constitution for Canada. It had everything that was necessary to the rehabilitation of the country, the development of its resources, an educational system, and so forth. But it went to the archives, as have the reports of commission after commission.

I hope when the Gordon commission reports —I trust the report will not be too lengthy, and that we shall all be able to read it—every hon. member will take it and have a square look at it and say to himself: "I represent

Canada and Canadians. Every last recommendation in this report we are going to see implemented. I do not come from British Columbia or Ontario; I come from Canada". I hope that is the attitude we shall take; we are all Canadians and we want a balanced economy; we want the same educational advantages. If we have resources to be developed, Canada will pitch in and help develop them, and see that it is not made the responsibility of any particular province which may not be able to do it. We should all be glad to help one another. I hope that is the kind of approach we take to the Gordon report when we get it. I believe it is going to be a good one. The personnel of the commission are able men and will do and say the things that are right for this country when they report.

I was very pleased that the Leader of the Opposition brought on this discussion. Of course it is a socialist measure. I heard the leader of the C.C.F. party in 1942, 1943 and 1944 ask for the setting up of a development fund along the same lines and for the same purpose. But of course the Leader of the Opposition has been here a long while now. This is a bigger forum than the one he came from. He has heard all of those debates, and a lot of them have rubbed off on him. He himself is becoming a little socialistic, and I hope he will continue the attitude that he has taken this afternoon.

He put his discussion on a broad national base. You know, for some time I was afraid that he was supporting the kind of thing that is going on in this country, namely following the same pattern that has been carried on in the United States, developing the centre of the country and leaving the east and the west as the hewers of wood and the drawers of water. That is pretty well the development that we are getting in Canada. That is the kind of thing that Hitler was aiming at in Europe. He aimed to make Germany the super state with the supermen. He was going to use the rest of Europe as the hewers of wood and the drawers of water, the suppliers of raw material and brawn. The Germans were going to preside over them as the great super race, and they were going to keep the rest of the continent in slavery.

Well, if you look at the United States you will find that the centre is rich. They have everything they require. But if you go to the south you will find they still have the thatched roof and the tarpaper shacks. If you go into the New England states, if you drive through there, you will find that they are no better off than they are in the maritime provinces, and maybe not as well off, because there has not been very much industrial development taking place in that part of the country. Let us not follow the backward pattern that was set in other countries a long time ago when perhaps it was all right, when you had to concentrate population.

Today we are in a different position. Today it should be the aim in Canada to put every section of this country on exactly the same basis for every purpose. It is a bad development both socially and economically to build up the centre as we have in Ontario and not so much in Quebec, where problems are being created. There are sections of Ontario today that are screaming for relief from school and housing problems. People are being dumped in there both through immigration and migration from other provinces. That has happened to such an extent that they are not able to handle them and provide the necessary services, hospitalization, schools and so forth. The premier of Ontario said that himself on several occasions.

I do not think any country will ever be great until everybody in it shares equally in the wealth of the country. I hope we have made a start by this amendment of the Leader of the Opposition. I know that the government, the Minister of National Health and Welfare (Mr. Martin), the Minister of Finance (Mr. Harris) and others on that side of the house are social-minded. I know they have been thinking about this all the time. They have just been waiting to find out where the Conservative party stood. Now they know. They have the green light and I am reasonably sure they are going to take full advantage of it. I shall be watching the reaction of the Leader of the Opposition.

I hope that the suggestion made by the hon. member for Royal that the atomic energy development plant be sent down to the maritimes will be acted upon. It should have gone to New Brunswick or Nova Scotia. If there ever was a place where the experiments should have been carried out, it is down there. I hope the Leader of the Opposition will prevail upon the government of Ontario to make a donation of that power plant. I am sure the federal government would be willing to throw in their share if the province of Ontario said we are going to do for the maritime provinces exactly what Canada has done for India; we are going to lift the power plant out of Ontario and ship it down to one of the maritime provinces, because since the power plant was lifted from Ontario and shipped over to

India bit by bit—it was done under the Colombo plan—I understand it has done a pretty good job over there.

I hope the Leader of the Opposition will have a talk with Mr. Frost and see if he would consider making a gesture of that kind toward the rehabilitation of the maritimes.

Mr. W. D. Wylie (Medicine Hat): Mr. Speaker, it is not very often that I speak in this house, but I do feel I can support the amendment that is now introduced. I must say, however, that I have to disagree with the last speaker when he says this is a socialistic measure. I rather disagree with him. I think this is something we had long before we had socialists in this country, and I am sure it will be carried on long after the socialists have gone.

In this connection I might say that I listened to the radio this morning and learned that there is a very good socialist in the Conservative party. I was rather astounded when I heard it, Mr. Speaker, but apparently the hon. member for Broadview (Mr. Hees) was talking to some club in Toronto and he said he thought that all athletes who take part in any Olympic games should be supported by the government—

An hon. Member: He is a real socialist.

Mr. Hees: On a question of privilege, Mr. Speaker, may I correct that statement. I said that the hockey team which represents Canada at the Olympic games should be supported by this government to insure that we will have a star team and make sure we win the next time.

Mr. Wylie: Well, Mr. Speaker, perhaps he was misquoted again, but may I say that I still think private enterprise and our good hockey teams in this country can produce a good enough hockey to beat any Russian team that was ever iced without any assistance from any government.

An hon. Member: Get Beliveau.

Mr. Wylie: Yes, you are right; we should get Jean Beliveau and Maurice Richard. I could name them all, Mr. Speaker, because I am a keen hockey fan, but I know that you would call me out of order if I did.

Returning to this amendment, I think it is very timely and deals with something we all must consider; that is the development of our water resources in this country. Coming from a very dry area as I do, without power developments—

An hon. Member: Dry is the word.

Mr. Wylie: Someone interjected something, Mr. Speaker, and I did not hear what he said. I wish he would get up and say it now. He is still laughing about it. It could not have been very much, and I would not expect it to be very much coming from the hon. member from whom it came.

When we hear power development considered we always connect it with irrigation. Irrigation has done a great deal for the southern part of Alberta and will do more in the future. Lately we have had another project about 30 miles northeast of Medicine Hat that is drawing the attention of the federal authorities as well as the provincial authorities. In the Medicine Hat *News* of Wednesday, February 15 the mayor of the city of Medicine Hat had this to say—

An hon. Member: City?

Mr. Wylie: Yes, it is a city, perhaps bigger than your city. The mayor is reported as saying:

> Negotiations will be opened by the city with the federal government for a cost picture on development of the Rapids Narrows dam project. Mayor Veiner said this morning that the city would be interested in obtaining power from this site, in view of future gas prices which will boost costs at the local gas plant. The government would have the water available for irrigation purposes east of the city. The dam site is some 30 miles north of the city on the South Saskatchewan river, and such hydro power, he believes, would be considerably cheaper than that produced in a steam or gas-induction generator.

When we talk about power projects we always have irrigation projects in mind. This is a project I mentioned to the Minister of Agriculture last spring. I am sure the minister remembers the telegram I sent him concerning this same project. At that time I received a letter from the minister to this effect:

> April 27, 1955
>
> Dear Mr. Wylie:
>
> I have just read your wire of April 21 this morning. I only returned to the office on Monday.
>
> We have no information whatsoever with regard to a proposed dam north of Medicine Hat. P.F.R.A. officials have had no association with the proposal.

So now we are back at it again, and I hope this time the minister will give this project some consideration because we do need more electrical power in Medicine Hat and the surrounding area.

I might mention to the minister that this project received much attention all over southern Alberta. Even the Hanna *Herald* had a big article concerning it, as did the Lethbridge *Herald* and many other papers. I do hope that when the city of Medicine Hat gets in touch with the P.F.R.A. officials this year we will have some action, and if we have action at this time we will also have a huge area north and east of Medicine Hat and extending far into Saskatchewan that could develop into an excellent irrigation project.

We know what has happened with the South Saskatchewan dam project. Nothing has been done outside of what might be called survey work. I am sure there are many people living in that area who believe it is a project that should be developed, and I certainly do not blame them.

We in the southern part of both provinces, and I am speaking now for Saskatchewan as well as for Alberta, believe that if we can develop our natural resources in the way of irrigation or power it should be done. We know what irrigation has done for southern Alberta. I could talk for 40 minutes on that subject, Mr. Speaker, but I shall not do so at this time. I think there will be another time when I can speak on it and perhaps be more in order, and that is on the minister's estimates.

However, I do suggest to the government that the development of our water resources, no matter whether it is in southern Alberta, southern Saskatchewan or in any other province, is of great importance. It is important not only for the province in which the project is situated but it is important for the whole of Canada. I think that is something we must consider.

Of course irrigation is a "must" in both southern Alberta and southern Saskatchewan. I could go back to the years before irrigation out there and tell you some of the circumstances of those days, but we do not have to go back so far. All we have to do is go back to 1936, 1937 and 1938, when the only crops in that area were obtained where there was irrigation. In the southern part of the province we have had five exceptionally good crops.

At the present time many farmers ask, "What do we want irrigation for?" Many of those farmers have perhaps 150 or 160 acres coming under the ditch at the present time; but I must say that whilst we have had five exceptionally good years—and no one knows it better than the Minister of Trade and Commerce and the Minister of Agriculture—we are going to have some more years that will not be so favourable. In the southern part of the province we consider every year to be a dry year. If we have an exceptional amount of rain, as we had last July, we think we are just lucky. I hope that keeps up so that we do not have to use all the water that comes in the ditch, but we must be prepared for it in this respect, that chinook winds in the southern part of both provinces can ruin a very good crop in four or five days.

I am reminded of a poem which I think is very good. Many people moved out to the prairies. We have heard a good deal about the Palliser triangle. I often wish that everyone would forget about the Palliser triangle, but I heard it mentioned in the house today by the hon. member for Rosetown-Biggar, and so it brings us back to the Palliser triangle. This poem has been quoted many times, but I am going to quote it again. An old homesteader in the southern part of the province, before any irrigation was put in there, left this on his door:

> Seven miles to water,
> Fifteen miles to wood.
> You can have my desert homestead.
> I am leaving it for good.

That is very true. I am sure the Minister of Agriculture knows that area much better than I do. However, he has seen the changes in that area and the way the people moved in there, had a few good crops and then moved out. I have seen the same thing happen in Medicine Hat only a few years ago. Perhaps they are doing that today in southwestern Saskatchewan. When those people move out of southwestern Saskatchewan they come into Alberta, into the Vauxhall and Haynes area west of Medicine Hat, an area that is being developed under the Minister of Agriculture through the P.F.R.A., which is doing a very good job.

Before I conclude, may I say that I believe the P.F.R.A. should be continued by the government in those very worth-while projects. It means the difference between a good livelihood and a poor one, perhaps the difference between someone thinking that Canada is doing a good job for its citizens and someone dissatisfied and thinking the opposite. I hope the government takes this amendment into consideration. I certainly am very glad to see it brought up at this time, and I am very glad to support it.

Mr. A. J. MacEachen (Inverness-Richmond): I rise to speak in this debate because it focuses attention on one of the factors involved in our economic development. Several members who have already spoken have stressed the relationship between power development and economic development generally, and it is to that particular phase of the question that I should like to address some of my remarks.

A great industrialist, Cyrus Eaton, made the remark that industry springs where power is, especially where cheap electric power is. It is true that the availability of power at competitive rates is a factor of first rate importance in the location of particular industries; and it is true, of course, that power is of secondary importance in the location of other industries.

It is important, in discussing power in its relation to economic development, to realize

that it is simply one of several decisive factors in industrial location. Any consulting firm would certainly regard location near valuable raw materials, location near important markets and, certainly, location near suitable labour skills as equally important with power in the development of any industry, or in some cases much more important. So in presenting any argument on the importance of power one must conclude that it is a necessary condition, but not a sufficient condition, of industrial location.

In Nova Scotia, and to some extent in several of the other eastern provinces, we have exhausted our hydroelectric possibilities. We have as a result been accustomed to attribute our slower rate of economic development to the lack of hydroelectric possibilities in the maritime provinces. There has been in existence in Nova Scotia and elsewhere in the maritime provinces a very real feeling that the scarcity of power, and especially the lack of power at what are regarded as competitive rates, is one of the chief causes of the slower rate of economic development.

I do not intend to review the problem fully, but I think I should say enough to indicate that all the studies I have seen on the economic development of the maritime provinces indicate that the lack of power at competitive rates is not of crucial importance in the economic development of the eastern provinces. One of the studies I have at hand was conducted by Professor Keirstead of McGill University shortly after the war, when he was asked to investigate the probable economic effects of the war on the maritime provinces of Canada. One of the subjects to which he addressed himself was this particular subject of power and industrial development. He made this comment:

> Power costs have often been regarded, particularly in industries like pulp and paper, as of decisive importance in determining location advantage. Our evidence suggests the possibility of exaggerating the importance of power as a location factor.

Later on in his analysis of the pulp and paper industry Professor Keirstead gives some rather convincing evidence. He states that the power costs, for example, of a median establishment in Quebec are some 5 per cent lower than a similar establishment in Nova Scotia, and further that in pulp and paper, to carry out his illustration, power costs are one-fifteenth of the total cost of production, so that the general advantage that a Quebec competitor would enjoy over a Nova Scotian competitor would be something like ·33 per cent per ton output. Therefore the conclusion is inescapable that in this particular instance, which may be applicable to other industries, power is not and has not been a decisive determinant in industrial location.

To bring the discussion up to present day evidence, I was interested, like the hon. member for Cape Breton South, in reading some of the arguments presented by the Atlantic provinces economic council in a report issued just recently. I share the views the hon. member for Cape Breton South has expressed with respect to this new organization in the Atlantic provinces. One of the first duties undertaken by it was to set up a power committee to examine the power situation in the Atlantic provinces. Because it is of some interest I might mention that the chairman of the power committee is Mr. R. E. Tweeddale, assistant chief engineer of the New Brunswick Power Commission. The committee made what must be regarded as a preliminary study of the power situation in the Atlantic provinces, and this is the result of their preliminary study. They say:

> Basically, there is an adequate supply of electric power available in the maritime region to meet present demands. The committee believes that electric power can be made available for any section of the region to meet future demands.

Then the committee looked into the competitive relationship of power costs in the maritime provinces and other areas. It is true that power costs are higher in the Atlantic provinces than in the central provinces, but the committee states that power rates in the Atlantic provinces are not out of line with power rates on the eastern seaboard of the United States, and there it is not argued that power has been a decisive determinant of industrial location. To argue thus is to say that power has not been a decisive determinant of industrial location, but I think it is true that if you combine our lack of competitive advantage in power with some of our other disadvantages, namely our distance from national markets and the high costs of transportation, you may have more illuminating reasons for the relative lack of economic growth in the Atlantic provinces. It may be that if we could develop very cheap power for distribution in the Atlantic provinces it would be a compensating factor that would make up for our evident disadvantages in geography.

In Nova Scotia, of course, we must depend on coal for power generation. Our hydroelectric possibilities are exhausted, and it would be unrealistic to consider the generation of power from any other source. I must say that the Department of Mines and Technical Surveys has been alive to the importance of the coal industry in the generation of power in the maritime provinces. The hon. member for Cape Breton South has referred

to the investigation made by Professor Christie into thermal power generation in the Atlantic provinces. In his report Professor Christie did make a very important suggestion which is worthy of study by the provincial governments of Nova Scotia and New Brunswick.

He suggested a single power authority to administer the private and public power companies in New Brunswick and Nova Scotia. This single power authority would be completely responsible for the generation and distribution of power in these two provinces. He further suggested that this interconnecting system might be linked with the system in northern Maine and that in the part of Quebec on the New Brunswick border.

He claimed very outstanding advantages for this proposal. It would join the hydro and coal electrical generating systems and would permit the development of larger plants with very evident economies in operation. It would follow that there would be a cheaper electrical rate with a very reliable source of distribution. This is one of the interesting proposals that came out of Professor Christie's study, and one that is certainly in line with the need of developing the electrical possibilities in Nova Scotia and New Brunswick and in line with the requirements of the coal industry.

This afternoon the Leader of the Opposition referred to the problem of underground gasification of coal. This is a problem which has been the subject of considerable study by various organizations. I have, for example, the annual report for 1951 of the Nova Scotia research foundation, which contains a rather technical discussion of the experimental difficulties in developing this process for commercial utilization. While experiments have apparently been conducted in various countries, no country has yet succeeded in bringing this development to commercial utilization, and I think the reason is that they have been unable to solve the combustion process so that they get a gas of sufficient heat.

But while the underground gasification of coal cannot at present be a practical possibility, there is another form of gasification of coal that I think has advanced to a more satisfactory stage. I refer to the surface gasification of coal. There have been experiments undertaken at Morgantown, West Virginia, by the department of mines of Washington, and they now have in existence and in commercial use surface plants which do gasify coal. I understand there are several of these plants in operation in that part of the United States.

[Mr. MacEachen.]

Its implications for the power industry and also for the coal industry of Nova Scotia are very evident. If we had a unit that could gasify, for example, 7,000 tons of coal a day, and I think that is one of the economical units, we would have a market that would absorb maybe 3 million tons of Nova Scotia coal a year. If we did that, what effect would it have on the annual expenditures we make today in subventions for the movement of coal from Cape Breton? Here is something that we should look into.

You may then ask this question. If you gasify this coal, what do we do to dispose of the gas? This, of course, would require a type of development that would bring this gas to the more populous centres of Canada. If it were economical to send gas up to Quebec, for example, it would be certainly a practical possibility because of the stability it would provide to the Nova Scotia coal industry and because of the more useful way in which to expend this annual amount of money that is now spent on subventions.

This is one of the more promising experiments now going on in the United States. In the next few months or the next few years I am sure we are going to hear a good deal more about this experiment that is now going on at Morgantown, and that may have important implications for the coal industry of the province of Nova Scotia.

This amendment is an interesting one. It focuses attention on one of the elements of industrial development. It leaves unmentioned several of the others. At the present stage the proposal does not appear to be a certain way of assisting in the particular economic disabilities of the Atlantic provinces.

Mr. Gillis: Would the hon. member answer a question? Having regard to the experiment at Morgantown, is it not called low temperature carbonization? In Burlington, Ontario, there is a plant which has been operating along similar lines for many years. Mr. W. A. Caunt operates it. He approached the provincial government. I think the technical term for what is going on at Morgantown is low temperature carbonization, by means of which the gas is extracted from almost any kind of coal. The reason I wanted to correct the term is that "gasification" would be misleading.

Mr. George H. Hees (Broadview): Mr. Speaker, when the Prime Minister (Mr. St. Laurent) was speaking on the question of development in Edmonton last September he had this to say, and I quote his words:

> Canada stands at the threshold of expansion unequalled in our history. We believe that if we can maintain a vigorous and expanding economy,

and if we can create the conditions under which Canadians can avail themselves of the great opportunities this country presents, then none of us need fear for his future or for the future of the nation.

Who is going to quarrel with that statement of the Prime Minister? Certainly not the Conservative party, because we have been trying to convince the government of the common sense and factuality of these economic facts of life, and to persuade them to act on those facts. All we wish is that the Prime Minister and his colleagues would act as confidently as they speak, and that their actions were as bold as their words.

As the Prime Minister has said, this country presents tremendous opportunities. But opportunities do not just come to you. Opportunities must be seized. As he said, we in Canada are on the threshold of an unequalled expansion. But, Mr. Speaker, thresholds must be crossed. They do not just stand there waiting for you. The possibilities which the Prime Minister outlined will become realities only if we have imaginative planning and action by business, industry and, not least of all, the Prime Minister's own government. What, I ask you, is this government doing to promote this country's expansion? What strong and visible foundation is this government placing under Canada's future?

When he was speaking in Edmonton the Prime Minister mentioned the St. Lawrence seaway. In that regard, he suggested that the benefits that would be derived from this project would be felt in all parts of the country. On that subject he had this to say:

This project seems to illustrate a truth that is too often forgotten—that any contribution to the Canadian economy is a contribution to all of Canada and not just to the area immediately concerned.

Mr. Speaker, that is, of course, perfectly true. But why is this government at present engaged only on the St. Lawrence seaway? Why is it not pushing ahead with similar projects of similar magnitude, which would have similar benefits in other parts of the country?

Every Canadian and every part of this country will gain through the construction of power and irrigation works on the South Saskatchewan river. But this government has consistently refused to give any assistance whatsoever to the government of the province of Saskatchewan. Hence this great project, which has been demonstrated to be practical and desirable, remains an unrealized dream.

As the Leader of the Opposition so ably pointed out this afternoon, this project can do tremendous things for the province of Saskatchewan. First of all, it will provide more than half a million acres of irrigated land which today is wheat-growing land but which then will become market-gardening land. This will greatly diversify and improve the agricultural economy of Saskatchewan. In the second place, it will provide enough cheap hydroelectric power to make it possible for industries to locate in Saskatchewan in order to further diversify the economy of that province and make life better for the people who live there. After all of these protestations of its desire to develop the country, is this government interested in helping to make life better for the people in that province? The answer, of course, has been given on many occasions by this government, and it is a flat no.

As the hon. member for Royal so ably stated a few minutes ago in this house, all of Canada will gain by the construction of the Beechwood project to develop hydroelectric power on the Saint John river. This government again has consistently refused to give Premier Flemming the very reasonable assistance which he has asked of this government, namely that they simply give his power bonds federal backing so that he can obtain the money he needs for that project at a far lower rate of interest than can be obtained without it. This would make it possible for the people of New Brunswick to have a lighter tax load than would otherwise be possible.

Mr. Speaker, what Premier Flemming has asked for will not cost this government or the taxpayers of Canada one penny. Yet this government, which professes and gives lip service to a desire to develop this country, refuses to help that province to help itself to develop hydroelectric power which it desperately needs in order to bring industries to that province to help it diversify its economy so that it will be less dependent on its primary products; which it needs to smelt its new-found ores and which it needs to benefit greatly every resident of the province and make life better for them. Is this government interested in that development? The answer, of course, has been given on several occasions by this government, and it is a flat no.

Now, once again every Canadian will benefit if cheap power can be produced from Nova Scotia coal. This government has refused to proceed with research to find out if cheap electric power could be produced—

Mr. Prudham: That is not right.

Mr. Hees: —by burning Nova Scotia coal below ground, as has been done in Germany and in Russia. The government is not interested in helping Nova Scotia produce cheap electric power from these vast quantities of coal, thereby attracting industry and diversifying that province's economy.

Power Development

All of Canada will gain if it is found practicable to harness the tides in Passamaquoddy bay to produce cheap hydroelectric power in that manner. There is a potential source of a million horsepower of cheap hydroelectric power waiting to be developed if that project is found practical. This government has consistently refused to put up its share of the money needed for research to find out once and for all if that project is or is not practicable. Once again, by its refusal to do so this government is denying the maritime provinces the potential use of one million horsepower of cheap hydroelectric power.

All of Canada would gain, Mr. Speaker, by harnessing the great hydroelectric power potential of the Columbia river in British Columbia. But has this government given any indication of any desire to co-operate with the government of British Columbia to develop that great hydroelectric power potential? The answer is no.

Mr. Lesage: How many millions of dollars have we spent on surveys of the Columbia?

Mr. Hees: All of Canada would gain by harnessing the great hydroelectric power potential of White Mud falls and the Kettle rapids on the Nelson river in Manitoba. Is this government interested, after all the lip service it has given to the desire to develop this country, in co-operating with the Manitoba government in producing that power? The answer is once again a dismal and resounding no.

Yet, Mr. Speaker, it is public investment in the type of project I have mentioned that encourages the private investment, both domestic and foreign, which we need to make it possible to have the expansion this country must have. It is on the firm basis of things like seaways and highways, natural gas and electric power, irrigation and reclamation, that people build homes, offices and factories. The government say these things cost money. Of course they cost money, but that money is readily repaid over and over again with interest in the form of higher and more stable tax revenue. These kinds of projects Mr. Speaker, present to any government the only way out of the dilemma that governments today are facing, that is how to cut taxes and at the same time increase social security measures.

The credit, sir, of this country is good. It will not be strained one iota by borrowing the capital necessary for the basic development of this country. If Canadians will lend their government $12 billion, as they did during the last war, to be shot up in smoke, then Canadians will certainly lend their government a billion dollars or so to be invested in self-liquidating projects of the kind I have mentioned. The people of this country have just as much faith in the future of this country as the Prime Minister professes to have. If he will act with vigour and imagination, he will find that the people of this country will back him up.

What we need, as the Leader of the Opposition outlined this afternoon, is a national development policy, a policy which will assist the provinces that request assistance, in developing power and other projects which can be demonstrated to be both practical and capable of expanding that province's economy. All of the projects I have outlined so far tonight come well within that category.

It is only through such a policy as the Leader of the Opposition outlined this afternoon that this country can develop all the potential sources of cheap power from coast to coast and so attract industry, which goes to power, to the areas which need it most, such as the west and the maritimes. Industries establish themselves in certain localities for two main reasons. The first is because they believe that their cost of production will be lower than otherwise, and the second is because they believe their cost of distribution will be lower, and that they will be able to make more rapid deliveries of their finished products to their customers.

Power is a very important component of any cost, and the reason a very high proportion of industry in this country has so far concentrated in Ontario and Quebec is simply because there has been an abundance of cheap electric power in both those provinces. If equally cheap power could be developed in important quantities in the maritimes and in the west, then branch plants would be located in those areas because it would be to the advantage of industry to locate there.

The advantages industry will derive are three in number. First, they will have a power cost as cheap as anywhere else in the country. Second, they will make tremendous savings because their cost of distribution will be lower than if they have to pay for the long freight haul from central Canada to the west or the maritimes. Third, the time of delivery of the finished article will be cut down considerably, and under today's competitive economic conditions, that is a very important factor.

If the decentralization of industry could be made a reality as a result of the adoption of the policies outlined by the Leader of the Opposition this afternoon; if we could develop cheaper sources of electric power in all parts of this country, then our whole economy would be strengthened. It would be strengthened because the west and the maritimes would be less dependent on their

primary products, and their individual economies would become more stable.

Another thing I believe we must do to strengthen our economy, and increase employment and prosperity right across this country is, as the Leader of the Opposition has urged on many occasions, that this government should give the lead in promoting the processing of far more of our primary products right here in Canada. It is almost unbelievable, but it is a fact, that we seem quite content to ship most of our primary products out of the country in their raw state, to feed the mass producing machines of the United States and other countries. Then we turn around and buy back many of those raw materials in their finished form.

There is no reason at all why a far larger proportion of our raw materials should not be turned into the finished article by Canadian workmen working in Canadian plants. If people from the United States, from Britain, from Germany and others can take Canadian raw materials, turn them into finished products, and find a ready market throughout the world for those products, then there is no reason in the world why Canadians, working with Canadian raw materials in Canadian plants cannot find just as good a market in other parts of the world as do people of other nationalities who use our raw materials today.

What we need is some action, once again, by this lethargic government. We want the government to give a lead to industry in two ways; first of all by sponsoring a greatly expanded industrial research program, and second by revising its taxation policies so that new industries will be induced to start up, and present industries will be induced to expand.

Mr. Speaker, we know—everyone of us knows—that we have right here in Canada everything that is needed for a tremendous industrial expansion. We have enough food to feed several times our present population. We have almost unbelievable supplies of timber and iron ore, which are the basic requirements of any industrial program. We have almost unbelievable resources of every kind of power; we have tremendous resources of practically every metal that is needed in industry, nickel, lead, zinc, copper. Anything you can name we have in tremendous quantities. We have the brains; we have capital, and we can attract capital from the outside. We have proved that. All we need is some leadership from this government to make it possible for this country to have the economic development of which we are capable.

I urge the government to take three steps in that regard. First of all, the Leader of the Opposition urged this afternoon the introduction of a national development policy to assist provincial governments who wish to have assistance in developing power and other natural resources within their own borders; second, to sponsor a greatly expanded industrial research program, to help industry develop new products and develop cheaper methods of production; third, to revise our taxation policies so that new industries will be encouraged to start up and present industries will be encouraged to expand. Instead of sitting back and doing nothing, if this government will take common-sense economic action to help this country to help itself, if they will help develop power, if they will encourage industry to start up and expand, then this country can and will develop into one of the really great industrial nations of the world.

Mr. A. M. Campbell (The Battlefords): Mr. Speaker, my main purpose in rising tonight is to try to get more of the members on the government side of the house interested in the South Saskatchewan dam, power and irrigation project. I might say that we now have the support of the Conservative party for this project, and I believe the support of all the members on this side of the house. I believe too that we have the support of the Minister of Agriculture, and a good many members on the other side of the house, particularly all of the members from the province of Saskatchewan. It seems to me we need only a little bit more support on the government side of the house to bring this project into being.

With regard to power, in the province of Saskatchewan we have not a single hydro-electric plant. All our power is produced either from coal, from gas or from diesel power. We want cheaper power in Saskatchewan because we want to see more diversification in that province. Diversification has been going on fairly rapidly during the last few years, and it is predicted in Saskatchewan that in the next ten years, provided we can produce enough power, the so-called wheat economy of Saskatchewan will be completely changed.

We need not only power in our province; we need irrigation. Tonight the hon. member for Medicine Hat told us something about an irrigation project in his province. Last summer I had the good fortune to go through a large part of the irrigated sections of that province. I went into the Vauxhall district about which the hon. member spoke. I wish to take the house back some 50 years, or a little over 50 years, because I was in that district in the year 1905. At that time settlers

were few and far between. What settlers there were were scattered along the different rivers.

In those days the cattle population was small because of the fact that there was no water available except in the rivers. They could travel a distance of only about 10 miles for feed because that was about all the distance they could go. Most of the time the cattle were walking back and forth to the river to drink. They never did get very fat. At that time it was considered that it took at least a quarter section of land to feed one cow.

That was the siutation in 1905. I might say that hay was almost not to be found at all. The rancher I worked with at that time thought he was lucky if he could cut a load of hay by keeping his mowing machine going all day. He had to haul it 15 or 20 miles. There were no trees. There was one small bush which was called the lone tree that you could see for 20 miles in all directions. There was no growth; there were no farms; there was nothing but a huge expanse of country that was not worth anything to anybody.

I left that country with a wagon train in 1905. We moved up into what they called the long grass country. Last summer eleven of us decided that since it was 50 years since we left that Vauxhall country, we would like to go back and take a look at it. We did. We went on to Provost and straight south from Provost. After we got about 50 miles from Provost we ran out of farming communities. From there on, almost into Medicine Hat, down to Suffield we saw a few deserted homes.

We stopped and looked at one of the homes that had been deserted. It looked like it had been a pretty nice house. In that house was a piano. When the people who had been there left, no doubt they did not have room on their wagons to carry away the piano, and so the piano was left. The following day we got into the Brooks country.

I am telling the story because, as I said when I opened my remarks, I want to get more members on the government side of the house interested in irrigation. The transformation that has taken place in that area is almost unbelievable. For somebody who left there 50 years ago and went back, the change was almost unbelievable. There was no town of Brooks at that time. There was a section house there and a few section men working on the tracks. There was a small post office, and the postmaster had $200 or $300 worth of groceries. It was very seldom that he had a customer outside of the section-men.

[Mr. Campbell.]

Today there is a town of several thousand inhabitants. Surrounding that town for many miles is one of the finest agricultural districts to be found anywhere in Canada. Instead of cattle walking 10 miles to get their feed and 10 miles back to get their water, cattle and sheep by the thousands are standing knee deep in alfalfa. They have to move only a few feet to get a drink of water. All they have to do is grow and get fat, and believe me that is what they are doing. We have a half million acres in the province of Saskatchewan that could be developed in just the same way, provided we could get the assistance of the federal government.

I said a few moments ago that it was considered it took at least a quarter section to feed a cow. Cattlemen in particular are vitally interested in irrigation. I came across an article in the *Country Guide* which told a story illustrating this point. It is a long story concerning irrigation in Alberta. I have not time to go into it, but I do want to read one little part to show what can be done with irrigation in the production of cattle:

> The eyes of cattlemen have been recenly focused on irrigated pasture. Because of this, two areas of 500 acres each, five miles east of Hays, have been fenced, broken and seeded to grass mixtures for use as community pastures. Jim Wickenheiser, for one, is planning to buy a flock of sheep. Others are planning on cattle and sheep too, for pasture marketed through livestock can always be sold, and promises good returns per acre.
>
> There is plenty of evidence that this might offer the best hope for these new areas. For instance, W. W. Foss, P.F.R.A. chief engineer at Lethbridge, returned from a tour of U.S. projects in 1954 and said, "I was amazed to find, even in the fabulously rich irrigated valleys of California, grain and livestock as the major sources of income. In all projects an average of about two-thirds of the acreage is devoted to them."
>
> Right in Canada, at Kamloops, B.C., the range experimental station has produced up to 800 pounds of beef per acre from irrigated pasture. At the Lethbridge experimental station, up to 6,100 pounds of fluid milk have been produced in a year from an acre, while at Broxburn, Alberta, 80 Aberdeen-Angus cows and their calves thrived on only 20 acres last summer.

That illustrates what can be done in the raising of livestock when we have irrigation. Irrigation is not good for cattle production only; there are many different kinds of crops that can be grown on irrigated land. I have in my hand a press clipping which contains a little story about two young men who came to Canada from the United States:

> Dick Butler and Robert Faris were born and raised in the potato and corn areas of Idaho. They'd done well for themselves but early this spring decided they wanted to do better. They thought sheep raising in Canada or South America would be a good bet.

They came to Canada and Mr. Faris is reported to have said:

"When we saw the Bow Island district this spring while looking for sheep land and we heard that irrigation was in sight for this year, we decided that there was no place on earth with better possibilities."

They went right to work and before long had possibly the largest single acreage of dry beans in the British empire, 600 acres of them.

The entire crop is certified seed and they have already made arrangements with neighbours to supply them with seed for the coming year.

"The average Canadian eats 12 pounds of beans per year, while an American eats 15 pounds with the Mexican being at the top with 55 pounds per person per year," said Mr. Faris.

"According to Alberta government statistics, this province imports practically all beans consumed and is presently short about 35,000 acres," he says.

Looking over his first year's crop which he thought wasn't very good Mr. Faris after conversing with his partner said it would go nearly 1,800 pounds to the acre.

"Even if we get a very low price of seven to eight cents a pound," he claimed, "we stand to clear about $100 an acre and where can you beat that."

That is all I want to say this evening, Mr. Speaker, but I do want to urge the government and hon. members on the other side of the house to take another look at the South Saskatchewan river dam and irrigation project. I know that the Prime Minister has been blamed in the newspapers for being the one who opposed this project, but I understand he has been through that part of the country and has seen something of what can be done there. I am hoping he will use his influence to try and see if something can be done in the near future to give Saskatchewan this project.

Mr. B. R. Leboe (Cariboo): Mr. Speaker, the amendment we have before us has aroused an interesting discussion, and we hope that in years to come we will have some results from the time spent upon it in the house at this time. It is nearly ten o'clock, Mr. Speaker, and I am just wondering if we could perhaps adjourn the debate.

On motion of Mr. Leboe the debate was adjourned.

Mr. Speaker: Before we proceed to the adjournment of the house I should like to say a few words just for the purpose of informing hon. members of the way I look at the situation.

I should like to refer again to the amendment that has been moved. It refers to a joint investment program for the development of power resources in any province where the government of such province requests the co-operation of the government in carrying out such developments.

Some hon. members have already indicated that this amendment is very wide and at least one hon. member, the hon. member for Cape Breton South, referred to a resolution of his on the order paper, a notice of motion which is notice No. 3, which asks for direct government assistance for the establishment of additional or alternative industries in the areas concerned. No doubt he had also in mind, like I have, the notice of motion in the name of the hon. member for Saint John-Albert, No. 24, and the one in the name of the hon. member for Restigouche-Madawaska, No. 27, both of which deal with the consideration to be given by the government to the advisability of providing assistance to the province of New Brunswick in the development of electric power.

It seems to me that some of these notices of motion when they are called, and if they are called between now and the end of the present session, might have been included in the discussion which is now before this house. I do not want to apply the rule of anticipation, but I think hon. members who may feel that the present amendment could block their own notice of motion at a later stage might do well to take advantage of the present debate so that later when their own notice of motion comes along they may be satisfied that having dealt with the substance in this debate, they will not again press their own notice of motion.

The amendment is so wide that I do not feel I should use citation 350 of Beauchesne's third edition, which is to the effect that it is out of order to move, as an amendment to another question, a motion standing on the order paper as a notice of motion. Therefore, having said that, I hope hon. members will govern themselves accordingly because we do not want to have overlapping of debate or repetition.

At ten o'clock the house adjourned, without question put, pursuant to standing order.

ANSWERS TO QUESTIONS

The following answers, deposited with the Clerk of the house, are printed in the official report of debates pursuant to standing order 39:

COLLECTIVE AGREEMENT CONTRACTS—GUARANTEED ANNUAL WAGE

Question No. 79—**Mr. Knowles:**

1. How many collective agreements between employers and employees in Canada now include a provision for a guaranteed wage?
2. How many employees are covered by such contracts?
3. How many of such contracts were negotiated during 1954? How many since January 1, 1955?
4. What relationship exists between such provisions for a guaranteed annual wage and unemployment insurance? Has it been made clear in the unemployment insurance regulations that any payments received from an employer under a guaranteed annual wage plan by an employee not working at the time are not regarded as earnings within the meaning of the Unemployment Insurance Act?
5. Is the Department of Labour taking any steps to encourage more employers and employees to include provision for a guaranteed annual wage in their collective agreements? If so, what are such steps?
6. Are there available any departmental studies on the subject of the guaranteed annual wage?

Answer by: **Mr. Gregg:**

1. Since the signing last June in the United States of the first guaranteed wage plan in which payments are to be integrated with unemployment insurance payments, five agreements containing plans of a similar nature, frequently known as supplementary unemployment benefit plans, have been negotiated covering Canadian firms.

The department has, in addition, record of five agreements under which a minimum amount of work or wages is guaranteed during the year without reference to unemployment insurance. Three of these are plans of several years' standing. The other two are more recent plans which guarantee a minimum number of weeks of work during the year.

Thus, total plans including both types, of which the department has knowledge, number ten.

2. The five agreements containing plans of the supplementary unemployment benefit type integrated with unemployment insurance cover 8,261 employees.

The other five agreements containing a guaranteed annual wage plan by our definition cover 1,578 employees.

In total then, 9,839 employees are covered by the ten agreements.

3. None of the contracts of which the Department of Labour has knowledge were negotiated during 1954. All of the five plans providing for supplementary payments to unemployment insurance have been negotiated since January 1, 1955.

Of the other five plans, three were negotiated several years ago and two have been negotiated since January 1, 1955.

4. Since the provisions of guaranteed annual wage plans differ considerably, each plan must be studied before its relationship to the Unemployment Insurance Act can be determined. No specific regulation refers to guaranteed annual wage plans as such. Therefore the unemployment insurance commission would not be in a position to determine whether or not payments received under any particular plan will or will not be regarded as earnings within the meaning of the act until the provisions of that plan are fully considered in the light of all the provisions of the act and regulations.

5. The Department of Labour does not attempt to encourage or influence management or labour to seek any particular working condition in collective agreements. It is the policy of the department that working conditions should be negotiated freely and directly by the parties concerned.

6. The only published study on this subject appeared in the September 1953 issue of the *Labour Gazette*. In that study five agreements were shown as containing annual work or wage guarantees. Three of these are still in existence and are included in the ten agreements having a guarantee as noted above. The plans in the other two agreements in the 1953 study were subsequently deleted from the agreements. Other studies on this subject will be made in due course as warranted.

ARCHBISHOP BORIS OF RUSSIA

Question No. 138—**Mr. Hansell:**

1. Was Archbishop Boris and his party, during their recent trip in Canada, at any time guests of the federal government or any official thereof?
2. If so, did the government acquaint itself with the background and activities of Archbishop Boris and/or his party?
3. Was there anything which could cause any hesitation in granting visas and what was the position and official status in the U.S.S.R. of the members of the party?
4. Did the government inquire as to whether or not visas had been refused by the United States and France to Archbishop Boris or any member of his party?
5. If so, with what result?
6. How long was this party travelling in Canada, at what port did they enter, what was their point of departure, and did any government official or officials accompany the party on their tour?
7. Did the party or any member thereof travel under diplomatic immunity?
8. Was the entry of the archbishop and his party recommended to the Department of Citizenship and Immigration or any other department of the government? If so, by whom, and did the recommendation state the purpose of the visit?

Answer by: **Mr. Pearson:**

1. No.

2. Answered by No. 1.

3. No. All requests for visas are carefully scrutinized. The government was supplied with the usual particulars about the individual members of this group, and after the normal consideration by the appropriate Canadian authorities it was decided that visas could be authorized. The official positions of the members of the party were:

Vik, Boris Ivanovich—
Archbishop, Russian Orthodox church.
Ruzitsky, K. I.—
Archpriest, rector of Moscow ecclesiastical academy.
Gorbatchev, A. P.—
Inspector of Moscow ecclesiastical academy (a layman).

4 and 5. The United States permitted the archbishop to visit the United States early in 1955, and again issued him a visa in November, 1955, on the understanding that he would minister only to soviet nationals in the United States. Proceedings were taken to cancel this visa, however, when the Soviet union insisted that he be allowed to enter on a permanent basis to exercise the administrative functions of exarch of the Russian Orthodox church in the United States. Since the archbishop wished to come to Canada for a short visit only, the United States reasons for refusing him entry did not apply to Canada. Our embassy in Washington was in touch with the state department on this subject. The government did not inquire as to whether visas had been refused by France to Archbishop Boris or any member of his party.

6. The party travelled in Canada for two weeks, entering on December 4 at Montreal and leaving on December 18, also from Montreal. No government official accompanied the party on its tour.

7. No. Members of the party were given ordinary non-immigrant visas.

8. Yes. The general council of the United Church of Canada recommended the entry of the archbishop and his party. The secretary of the general council stated in a letter to the Secretary of State for External Affairs that the object of the visit would be "to establish friendly relations between various communions of the Christian church, to increase our knowledge of one another's problems and to consider some aspects of the general subject of the church and international affairs with which we are all deeply concerned." The request for visas was passed to the Department of Citizenship and Immigration with an explanation of the purpose of the visit, and that department approved the request subject to the normal requirements for non-immigrant entry.

HOUSE OF COMMONS

Tuesday, February 21, 1956

The house met at 2.30 p.m.

HOUSE OF COMMONS

REQUEST FOR EARLY ORGANIZATION OF COMMITTEES

On the orders of the day:

Hon. George A. Drew (Leader of the Opposition): Mr. Speaker, I would ask the Prime Minister if appropriate steps can be taken to see that the committees are constituted. I realize there is a procedure but I also believe that a suggestion from the Prime Minister will be helpful in expediting the process. I would also ask particularly that steps be taken to call the public accounts committee at the earliest possible date.

Right Hon. L. S. St. Laurent (Prime Minister): I thank the hon. gentleman. I assure him that appropriate steps will be taken to get the committees organized as expeditiously as possible.

LABOUR CONDITIONS

REFERENCE TO UNEMPLOYMENT FIGURES FOR JANUARY, 1956

On the orders of the day:

Mrs. Ellen L. Fairclough (Hamilton West): I should like to direct a question to the Minister of Labour. Has the minister any comment to make on the statistics which appeared in the papers this morning indicating that the unemployment figure for January is the second highest since the war?

Hon. Milton F. Gregg (Minister of Labour): Mr. Speaker, the figures that appeared in the papers this morning were based upon the report which comes out from month to month. It gives a very complete survey of the situation as reflected over the period from the middle of December to the middle of January. I should like hon. members to recall that of course that is a period when there are a great number of lay-offs for one reason or another over the Christmas holidays and at the beginning of the year.

Up to that period our non-farm labour force in Canada had increased by 300,000, in round figures, since last year; and the total number of applicants for work were, in round figures, 100,000 less than last year. As a mid-winter picture, while it is unfortunate there are so many unemployed, I think we are in a better position this winter than we have been for a number of winters in the past regardless of the figures.

That is true in the main, of course, because of the buoyancy of our whole economy in Canada. To a much lesser degree it is true because of the fact that governments at all levels, industry—particularly the Canadian construction industry—labour unions, communities and municipalities have worked together on a very widespread experiment to see how seasonal unemployment might be attacked this winter. I hope and believe that we are learning many things that will be useful in the future. Finally, the improvement of the unemployment insurance plan, particularly during the seasonal period, is helping where more work cannot be obtained.

UNEMPLOYMENT—REQUEST FOR CONFERENCE OF LABOUR, MANAGEMENT AND GOVERNMENT

On the orders of the day:

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, I have a supplementary question I should like to direct to the Prime Minister. In view of the seriousness of the unemployment situation, will the government consider calling a conference of labour, management and government to see what can be done to check rising unemployment?

Right Hon. L. S. St. Laurent (Prime Minister): Mr. Speaker, I am confident that employers at all levels mentioned by the Minister of Labour a moment ago are doing their best to provide additional jobs during this period of seasonal unemployment. I have no reason to believe that their efforts would be intensified as the result of any conference that might be called in that regard.

UNEMPLOYMENT INSURANCE

INQUIRY AS TO PROVISION FOR PERSONS DENIED BENEFITS

On the orders of the day:

Mrs. Ellen L. Fairclough (Hamilton West): Mr. Speaker, I should like to direct another question to the Minister of Labour. As some four weeks or so have now elapsed since the announcement the minister made in this house with respect to the reinterpretation

of the new unemployment insurance regulations, can he give any information to this house with respect to the effect that has had on those persons who were previously unable to establish themselves as beneficiaries under this scheme?

Hon. Milton F. Gregg (Minister of Labour): Mr. Speaker, I cannot give any information in detail this afternoon but I should like to assure my hon. friend that the matter is being watched very carefully. Just as soon as there is something that can be of value in that way, I shall be glad to present it to the house.

Mrs. Fairclough: You had better hurry up.

APPLICATION TO FISHERMEN—REFERENCE TO PRESS REPORT

On the orders of the day:

Mr. T. S. Barnett (Comox-Alberni): Mr. Speaker, I should like to direct a question to the Minister of Citizenship and Immigration. Is the minister correctly quoted in the *Fishermen's Advocate* of February 10 as saying that it is "really only a matter of time" before unemployment insurance is granted to fishermen?

Hon. J. W. Pickersgill (Minister of Citizenship and Immigration): Mr. Speaker, I have not had the benefit of reading the periodical, and I never like to say anything about things which I have not read.

PUBLIC BUILDINGS

ESTEVAN, SASK.—REQUEST FOR IMPROVED POST OFFICE AND CUSTOMS FACILITIES

On the orders of the day:

Mr. E. G. McCullough (Moose Mountain): Mr. Speaker, I should like to direct a question to the Minister of Public Works. Has the minister received any communications from the town council of Estevan, Saskatchewan, urging the need for improved post office and customs office facilities? If so, can the minister inform the house when construction of the federal building to meet this need will be commenced?

Some hon. Members: Oh, oh.

Mr. Speaker: Order. It seems to me that we could use our time at this moment more profitably if we were to avoid asking questions with regard to the reception by ministers of correspondence in connection with public projects.

[Mrs. Fairclough.]

HOUSING

CENTRAL MORTGAGE AND HOUSING CORPORATION —LOANING POLICY

On the orders of the day:

Mr. John Pallett (Peel): I should like to direct a question to the Minister of Public Works. Has the policy of Central Mortgage and Housing Corporation been changed in the making of loans in any areas so that no loans will be made on dwellings erected on lands which are not provided with sewers?

Hon. Robert H. Winters (Minister of Public Works): No, Mr. Speaker. There has been no change in policy in that respect. The policy that applies now is the policy that has been in effect for some time.

Mr. Pallett: I should like to direct a supplementary question to the minister. Will the minister have that policy reiterated down through Central Mortgage and Housing Corporation so that no statements are made by officials contrary to the minister's answer today?

Mr. Fleming: Answer.

Mr. Macdonnell: A smile does not get on the record.

PIPE LINES

TRANS-CANADA PIPE LINES LIMITED—METHODS OF PUBLIC FINANCING

On the orders of the day:

Hon. George A. Drew (Leader of the Opposition): I should like to direct a question to the Minister of Trade and Commerce. Has the government received any written undertaking from Trans-Canada Pipe Lines in regard to their methods of public financing, other than the material which was tabled at 2.30 yesterday afternoon?

Right Hon. C. D. Howe (Minister of Trade and Commerce): I recall no communication to that effect, Mr. Speaker. The government has not pressed them for a statement of their public financing, it being a matter with which the government is not primarily concerned.

SUPPLY

The house resumed, from Monday, February 20, consideration of the motion of Mr. Harris for committee of supply, and the amendment thereto of Mr. Drew.

POWER DEVELOPMENT—PARTICIPATION BY FEDERAL AND PROVINCIAL AUTHORITIES

Mr. B. R. Leboe (Cariboo): At the adjournment last night I had been speaking for about a minute and a half on this amendment. At

the outset, I should like to say that I have not too much I want to put on the record. However, I feel we should review some of the things we have in mind in British Columbia in the field of power.

Of course atomic energy is something that is in the experimental stage at this time, and therefore there need not be too much said about it. On the other hand we know some advances have been made in the use of coal and gas for the production of electricity. In Alberta, for instance, the Calgary Light and Power Company is installing a plant at Wabamun that is going to develop about 147,000 horsepower. The information I have is that this plant is adapted to the use of gas but will eventually be converted to the use of coal. It is my understanding that the coal will be used in the form of dust in high pressure water tube boilers generating steam for turbines.

We can see that in this way electrical power is going to reach many people in Canada who otherwise would not have power because they are a long distance from hydroelectric plants. In that connection I should like to bring to the attention of the house a report appearing in the Dawson Creek *Star* of February 9, 1956. The heading is, "4200 Alberta farms get power in 1955." The article reads:

> A total of 4,264 farms were organized into rural electrification associations during 1955, according to figures released today by the Hon. Raymond Reierson, minister of industries and labour. The number of farms electrified has now reached 34,768. In addition there are 5,410 non-farm customers who are receiving power as a result of the construction of farm lines.

There is no question but that the subject of power is important. The thing in which we are interested in Canada is how this power is going to reach the people of this country at the earliest possible moment and bring to them a higher standard of living. A good deal of our power in British Columbia is developed under a crown corporation known as the British Columbia Power Commission. In that province we find that under the power commission we have 150,000 kilowatts of hydroelectric power, 26,000 kilowatts of diesel, that is thermal electric, 700 miles of high voltage lines, and 3,300 miles of distribution lines.

I have been given to understand that there is a trend toward the use of direct current motors in industry, which give a great deal more power for the amount of electricity consumed. I also understand that experiments have been successful in the transmission of direct current over much longer distances than they are capable of transmitting alternating current at the present time. Because of these factors we can readily see that hydro plants in some of the far reaches of our country can be brought, as it were, closer to the places where we have many farms and villages looking for electrical power.

It is expected that in British Columbia, owing to the gas line that is to be built from Fort St. John in the Peace river country to Vancouver, a great deal more thermal electric power will be developed through the use of gas. It is very important to realize that this great national resource is now to come to the people of British Columbia for power and heat. We are grateful for that. Many industries may develop in the interior of British Columbia as a result of the use of gas for both power and heat.

Possibly the position of British Columbia can best be summed up by referring to the federal-provincial co-operation in economic development submission made to this government on December 14, 1953. In the introductory remarks this is what the submission had to say:

> The government of British Columbia in this brief proposes federal-provincial co-operation in the further economic development of the province and in the conservation of its natural resources. It submits that financial participation by the government of Canada in projects which will serve these purposes is warranted both by the national interest and by special consideration affecting British Columbia. It further submits that it is warranted by federal financial participation in projects in other parts of Canada. Accordingly, a joint program of public investment is here proposed.

I think that is in line with the amendment moved yesterday by the Leader of the Opposition.

The power potential of British Columbia is great. We have heard considerable mention of the Columbia river as a potential power site, but I should like to point out to the house that the Columbia river basin is by no means the largest and most important power site that we have in British Columbia. To mention a few, there is the Yukon Taku project. The potential there is almost 5 million horsepower as compared to the Columbia river development of 3,300,000 horsepower. The lower Fraser valley potential exceeds that of the Columbia river. The upper Fraser valley potential exceeds that of the Columbia river. These figures of the potential horsepower of British Columbia indicate that while a great deal of interest has been created in the Columbia river development project, a great deal of consideration has to be given to some of the other power sites in Canada.

We recognize, of course, that the fishing industry of British Columbia is an important factor and must receive its due consideration. In the known potential of British Columbia we have 22,913,000 horsepower and the

potential of 25 per cent of the province is still unknown. That these developments will be of benefit not only to British Columbia but to the people of Canada is a fact I do not think anyone would care to deny.

The St. Lawrence seaway has been mentioned as being located in more or less the central part of Canada, and I believe that is true. I agree that a certain small amount of benefit may be derived in the over-all Canadian economy, and that is also true of such power projects as exist in British Columbia and in other parts of the country.

I would support the plea that the province of New Brunswick be given consideration in its Beechwood project. I think it is important to the economy of Canada that money is being spent in various parts of the nation for the development of power.

While I am on the subject of money I should like to say that it is certainly easy for hon. members of the opposition to be continually pressing the government for the expenditures of great sums of money, and it is perhaps not always possible for the government to meet our demands or requests. I believe I should use the word requests rather than demands; however, when I think back to about November 15 I recall that the Bank of Canada met with the chartered banks of this country. If I read the evidence correctly that meeting was for the purpose of recalling certain funds from specific areas with a view to making it more difficult to obtain credit in the country. In other words it was an indication that the money supply of the country was adequate to meet the demand for the distribution of goods.

If that is so, I would then say that the government had failed to meet its obligations some years ago when the decline in farm prices began. In this case where we are asking for federal money to be spent in various parts of Canada, the over-all money supply in the country must be taken into consideration because if the money supply is increased to the point where we are faced with inflation, we are then going to do more damage than ever to all the recipients of social assistance across the country whose living standard has been cut by the financial policies that have been followed by this government.

Speaking of money, which we know is necessary for the development of this country, I should like right now when the hon. gentleman over there says "real money" to quote an article which appeared in *Labour* of December 17, 1955, which is published in Washington. This reads:

How "Bankers' Money" Works

Uncle Sam's $205 billion national debt can keep on going up, but it can't come down much or permanently without causing a depression. That's the surprising picture painted by economists at a Senate-House committee hearing on taxes.

The explanation, however, is this: The less money the government takes in taxes, the more it has to borrow from bankers. They "manufacture" the money they lend to Uncle Sam when they buy his bonds. The government spends this "new money" and thus stimulates the economic machine.

What would happen if Uncle Sam used tax money to pay off part of the debt owed to bankers? The economists said that surely would cause an economic slump, for these reasons:

First, the people couldn't spend the money because it was taken from them in taxes. Second, the government couldn't spend money it used to pay off debt. Third, the debt payments would wipe out "bankers' money" circulating in the economic system.

It's a fine system for the bankers, because it yields them billions of dollars of profits in interest on the money they "manufacture". But is it the best possible system for the American people and their government?

The hon. member for Kootenay West (Mr. Herridge) suggested to the Social Crediters that we should support the use of the national credit. We do support 100 per cent the use of the national credit for the development of Canada, but we are not unmindful of the fact that the national debt of the United States has risen by billions —from $268 billion to approximately $300 billion. Many of those United States dollars have been reinvested in Canada as permanent capital, and that permanent capital investment in this country has added to the dollars released in the form of salaries, wages and dividends.

Once we have a sufficient money supply in the Dominion of Canada, surely we cannot ask the government to go into debt under the present financial policy, or that they should change it and use the Bank of Canada for the creation of money against the national credit to a point where we would have inflation. That is not a sound policy. Therefore I think we have to go back a good many years to find out exactly what caused the situation that we have today to develop. Having done so I think we will find that had we had a different financial policy in this country a good many years ago, many Canadians who today have not savings to invest would have savings to invest in this country.

Some suggestion was made that outside capital should not be invested in Canada for the development of our country. If that policy were to be followed it should have been followed many years ago. Take the Canadian Pacific Railway. I understand from the latest figure that 88 per cent of the dollar investment in the Canadian Pacific Railway comes from outside Canada. I understand the Aluminum Company of Canada is 75 per cent owned outside of Canada. In British Columbia, as mentioned before, we have the Kitimat project where a town of about 50,000 people

will eventually be built around that industrial development. That project was made possible by the investment of foreign capital together with Canadian capital.

All this business of what is socialism and what is free, responsible enterprise can be answered very quickly. Free, responsible enterprise is just exactly what it says and we can find out what socialism is in the Oxford Press dictionary, where it is very well explained. We do not need to be worrying about that here.

I was amazed to find that the hon. member for Vancouver South (Mr. Philpott) did not rise on a question of privilege today and correct the speech he made yesterday with regard to the remarks he made concerning the hon. member for New Westminster (Mr. Hahn). I suggest to the hon. member that he read in *Hansard* what the hon. member for New Westminster said and compare it with what he said he said. The same thing applies to the hon. member for Kootenay West. If he would do the same thing I am sure he would like to rise on a question of privilege and put the record straight.

Mr. Byrne: What did he say?

Mr. Leboe: You can read it in *Hansard.*

Mr. Byrne: I am listening to your speech. I am not reading *Hansard.*

Mr. Leboe: Well, you have lots of time. Members over there have more time than money.

Mr. Byrne: Only the Social Crediters have money.

Mr. Yuill: You should know; you are living in a Social Credit province.

Mr. Leboe: In connection with power development in Canada, I believe that in the past we have lost sight of the responsibility of governments to take the lead in encouraging the processing of our raw materials within our borders. I think there is much that can be done in all the provinces of Canada in that regard. Some of them are much worse off than others in that respect, and we know which ones they are. But surely we must get to the point where we are utilizing our own men and women in this country, who are looking for work, in the processing of our raw materials.

I can see no reason why, for instance, a pulp mill should be exporting pulp to another country. I do not see why we should not be making the paper right in this country instead of shipping the pulp out of the country. We should be shipping out newsprint, not pulp. In that respect I would advocate that due consideration should be given by the government to rendering all the assistance necessary in the development of research, and that the government should encourage the full utilization and processing of our natural resources within our borders.

With respect to federal-provincial co-operation, I should like to refer to the proposal of the provincial government of British Columbia in their submission on December 14, 1953. I will not read the words, but on page 13 of their submission they pointed out that there were already certain precedents in Canada for dominion-provincial co-operation in those fields we have mentioned, and I would urge the government to take a new look at the situation.

If the money supply in Canada has reached the point where the release of further credit is going to cause inflation, then I think it is time the government made a full review of its financial policy and that of the Bank of Canada. I certainly can see no reason why we should not embark now on a policy that would bring about a situation whereby Canadians themselves would have the savings to invest in the development of their own country. Certainly we have not such a policy now, and that is what the hon. member for New Westminster pointed out yesterday. With reference to the provinces of western Canada he said, as found at page 1354 of *Hansard:*

> They are prepared to accept United States investment, British investment, or investment from any other country that we can interest to the extent of coming into this country, provided they come in under our regulations.

In order to call what he said to the attention particularly of the hon. member for Vancouver South and the hon. member for Kootenay West, may I point out that he used these words, "provided they come in under our regulations." Naturally these provinces are looking to the protection of the interests of their people, and to seeing that their rightful share comes back to them from the processing of their natural resources. Therefore I think there is room for federal participation in the development of power if and when the time arrives that the federal government is in a position to do so.

Mr. G. R. Pearkes (Esquimalt-Saanich): Mr. Speaker, I welcome the opportunity of rising this afternoon to support quite briefly the amendment moved by the Leader of the Opposition yesterday. The pertinent part of that amendment reads as follows:

> . . . consideration should be given to a joint investment program for the development of power resources in any province where the government of such province requests the co-operation of the Canadian government in carrying out such development.

Power Development

The Leader of the Opposition dealt with the problem on the broad national basis and left it to the rest of us to apply the broad principles to our particular provinces. I should like to emphasize two words in the amendment, the one "joint" and the other "co-operation". Joint investment certainly presupposes that there should be intimate and close co-operation.

I think the amendment is very timely, because only last year we had the sorry spectacle of two governments, the government of British Columbia and the federal government, failing lamentably to show the degree of co-operation that is necessary and will be necessary in the future if these joint programs are to work to the benefit of the people of any particular province or, in fact, to the benefit of the people of Canada as a whole. Of course I refer to that striking lack of co-operation which was shown in the early stages during the events that led up to the introduction of the international rivers bill.

I am not going to repeat today the details of that lack of co-operation. They are well known to all members of this house and to the majority of the people resident in British Columbia. It was indeed a sorry spectacle. However, after the bill had been amended we of this party were in support of the act as it was subsequently modified.

It will be recalled that under that act the federal government has the authority to issue a licence for the construction of any project on an international river. If the federal government assumed the authority to issue licences, it must also accept the responsibility which goes with that authority which it has taken. If the federal government merely adopts a negative attitude and says it will not issue licences for this or that project which may be suggested either by the provincial government or by some corporation anxious to develop the industrial resources of any particular international river, there will be a great deal of resentment. In fact, the people will never tolerate such an attitude.

Industry today is straining every nerve to find additional sources of power. The assumption of this authority by the federal government is a challenge to the government which it must accept, namely the challenge to assist Canadians to retain and develop the power resources of Canada in the best interests of the Canadian people. We are today faced with organizations, corporations, businessmen and industrialists in the United States who are only too anxious to come in, build projects on our rivers and utilize the power which is produced from those projects for the power-hungry industries of the United States, giving to Canada or, in the case of British Columbia, to the province of British Columbia only a portion of the wealth in power which they have taken from our own waters. I therefore feel that it is a definite challenge to this federal government to see that it adopts a positive attitude toward the development of these streams.

Until quite recently coal was the main source of power in British Columbia. However, that day has gone. In British Columbia our coal fields, I regret to say, are not as active as they were. Many of the seams have played out. Today water is providing 44 per cent of the power, petroleum provides 38 per cent and coal has dropped in position until it is providing only 18 per cent. The estimates which have been made indicate that there will be a considerable increase in the proportion of power provided by water. In fact some scientists have estimated that not less than 70 per cent of our power will be derived from water sources in the near future.

The hydroelectric potential in British Columbia, based upon careful surveys carried out by the water comptroller of that province, has been estimated as something over 25 million horsepower. But today in the installed hydro stations we are producing only 2,246,000 horsepower. Those figures show what a tremendous increase there may be, from 2 million horsepower to 25 million horsepower, for all of which sources have been located. There are still large portions of the province, particularly in the northeastern part of British Columbia, where no surveys have yet been made. The availability of the horsepower which has so far been developed has played a major part in the development of our mining and smelting industry. It is therefore quite obvious that if we can develop that enormous potential to 25 million horsepower or more, the growth of British Columbia in population and in industry will be beyond imagination.

Just to give some idea of the various localities where there has been development—and there are still projects which are undeveloped but which have been surveyed—I start out by giving the figures around Vancouver island, which are contrary to the general trend in the rest of the province. On Vancouver island there are 396,000 horsepower developed but undeveloped there remain only 235,000 horsepower. Obviously there is an acute shortage in sight on Vancouver

island. It is for that reason that this year a cable is being laid to bring power from the mainland of British Columbia to Vancouver island.

When we come onto the mainland, in the lower Fraser valley we find that only 986,000 horsepower have been developed. That is in the immediate vicinity of the metropolitan area of Vancouver. Yet the surveys have shown that 3,600,000 horsepower are available. Up the Columbia river only 703,000 horsepower have been developed, while again there are 3,300,000 horsepower which are undeveloped. In what is termed the upper Fraser district there are no developments; no projects have been developed. Yet according to the surveys which have already been made, 3,600,000 horsepower are available. In the Kitimat area only the small quantity of 560,000 horsepower have been developed while the undeveloped sources reach the figure of 2,240,000 horsepower.

Then as we go further north into that immense area of the Yukon Taku district, there are no water power developments there but the estimated undeveloped potential is 4,900,000 horsepower. As I said a moment ago, the northeastern portion of the province has not even been surveyed.

I think those figures give some idea of the future prospects of this great province. The hydroelectric developments which have taken place so far have been of the nature of single and steep developments on individual sites. It is probable that in future developments, particularly the type of development that is expected in the lower Fraser valley, the trend which has been taking place in the United States will be followed. This means the multiple use of the water, so that wherever it is economical to put in irrigation plants as well as power plants, the two will be developed concurrently.

With these great possibilities ahead I must sound a note of caution, or perhaps it may be even a further challenge to the government. No dam or hydro project must be developed on our streams on the west coast without due consideration being given to the effect upon our fisheries. Of course the principal fishery in British Columbia is salmon. The estimated market value of that fishery in a normal year, such as last year, is over 50 million. This industry employs, as fishermen and in allied occupations, well over 15,000 people.

The problem of passing fish over a dam in a river is as old as dam construction itself, but until comparatively recent years dams in most rivers were very low and the engineers and fishermen who gave any consideration to this problem were concerned with the upward movement of the fish. A few ladders enabled the fish to work their way up to the spawning grounds. But as dams were built higher and higher it became noticeable that in spite of the fish ladders which were provided the run of fish in those particular streams was decreasing.

Perhaps I might digress for a moment to give a very brief life history of our Pacific salmon. It is common knowledge that during the summer and fall months the salmon work up from the ocean to the spawning grounds in fresh water, literally hundreds of miles from the seashore. There the salmon spawn and immediately die. During the winter months the eggs lie dormant, but they are hatched early in the spring. By April the small fry are free swimming. Some species, such as the pinks, work their way down to the ocean immediately so you have the problem of little fry, two inches in length, going down and encountering a dam and wondering how to get past that obstruction.

Other types of fish, such as the sockeye and spring, remain in the fresh water for one, two or three years, and reach a length of six to eight inches before they start to work down the streams. If they meet a dam they have to find a way to get around it or over it. The problem presented to the engineers is entirely different according to the species with which they are dealing. Following their natural instincts the fry or fingerlings follow the main stream, and if there is water spilling over the dam they follow that spillway and are hurled hundreds of feet to the lower level. Obviously the casualties from abrasion and from the sudden change in height and pressure is very high. If there is no water running over the top of the dam, no surface spillway, then the fish are either shut in or they must go through some submerged spillway or through the turbines. In both cases the results of course is a very heavy death toll.

It was only when the higher dams were being built that the engineers realized that the greatest damage to the fishing industry was done when the fish were migrating downstream rather than upstream. A few years ago a series of investigations were carried out by Canadian and United States officials under the international pacific salmon fisheries commission at Baker dam in north Washington. The Baker dam is only a comparatively high dam, 250 feet. Dams now built or being built are two to three times that height. As a result of the investigations which were carried out it was found that 64 per cent of the sockeye which went over the spillway were killed, and 34 per cent of the sockeye

which went through the turbines were killed. This gives some idea of the problem and indicates that unless this problem of passing fish over, through or under these projects is tackled there will soon be no fishing industry on the west coast, or else the power developments will be limited to the non-fish streams. Neither of these results would be desirable.

If our hydro development is limited to the non-fish stream, then a great deal of that enormous potential to which I referred may not be realized. We cannot, of course, contemplate having hydro plants built on fish-producing streams that otherwise would ruin the fishing industry until some way has been found by which the fish may be passed safely around, through or under these dams. I am pleased to say that experiments are being carried out now which are meeting with a degree of success. I have myself seen fish led around in a tank by electrical methods. It is quite easy to do that in an experimental tank, but there are great difficulties when it comes to the question of guiding millions of small fish in an open stream. However, the project is being examined.

Experiments are being carried out, but I regret to say that the majority of those experiments are being carried out in the United States by the United States corps of engineers. They are spending annually something like $400,000 in just carrying out these experiments. A small grant has been made to the University of British Columbia, and I believe something in the neighbourhood of $60,000 is to be spent this year in my province.

I say that these are the two challenges to this government. If they sit down and do nothing about the development of our rivers, and if they will not examine into and produce some results regarding fish migration so that the streams and rivers of British Columbia can be used both for hydro development and for fish production, then they will have fallen short of the task which they should undertake.

These great projects cannot be undertaken by one government alone. As this amendment points out, these must be joint investments with the co-operation of the provincial governments. Therefore I do urge this government to tackle this job seriously and to enter into the fullest and closest co-operation with the provincial governments in order that Canadians may get the full benefit of their resources and we shall not see them being developed and taken away from us by the United States, or by any foreign concern.

Mr. H. J. Murphy (Westmorland): Mr. Speaker, I rise this afternoon, again at the risk of being styled an expert in the field of engineering by some of the western members. However, I should like to say a word on power as it affects the province of New Brunswick. We do not need hon. members from the west down in New Brunswick to teach us Social Credit doctrine, either.

An hon. Member: Why did you invite us?

Mr. Murphy (Westmorland): You invited yourselves. When I came to this house I had the honour and privilege of being associated with and having for my office mate Mr. J. G. Boucher, who was for a number of years the chairman of the electric power commission, or the hydro commission, whatever the proper title is, in the province of New Brunswick. Mr. Boucher, while in office in New Brunswick, laid out a policy of thermol units that I believe will be followed some time in the future by the present authorities.

I shall leave the Beechwood project to some of my colleagues from New Brunswick to go into fully. I will say in passing, however, that in the Moncton *Transcript* of February 18, 1956, Mr. Cleophas Leger, M.L.A., says this about Beechwood:

> Turning to Beechwood, Mr. Leger contended the province could build the project on its own resources, claiming tax rental funds would be sufficient "if this government did not waste it elsewhere."

That is the government of New Brunswick.

> He charged that the Flemming administration "had in its hands a good part of the money needed for Beechwood and it came from Ottawa. But the government frittered it away on less important things".
>
> He said first things were not given first consideration. He added that federal help to the province had been steady in the past and more would be available when "we are prepared to use it wisely, without wasting it".

I should now like to compare the potential industrial expansion of the province of New Brunswick with the New England states. During the course of my remarks I shall be using figures that come from a survey called "Power in New England", a report of the power survey committee of New England council, the chairman of which was E. H. Hunter, chairman, New Hampshire public service commission; from Maine, Edward E. Chase, president, Maine Securities Company, Portland; Bryant L. Hopkins, engineer, Kennebec Water Power Company, Waterville. Associated with these men were approximately 20 or 25 men from the states of New Hampshire, Vermont, Massachusetts, Rhode Island and Connecticut.

In their report they publish a bibliography which has the following authorities: Published reports of federal power commission; published reports of Edison electric institute; published reports of corps of engineers, U.S.

army; statistical abstracts, United States department of commerce; water supply papers, United States geological survey; congressional reports on St. Lawrence seaway projects; journal of Boston society of civil engineers; publications of national electric light association; reports to public service commission of Vermont on flood control power and storage projects by H. K. Barrows; report to associated industries of Massachusetts of its power investigating committee, 1924; reports of Maine state water power commission; reports of New Hampshire water resources board; reports of Maine public utilities water power and storage commission; report on development of inland waterways of Massachusetts by special commission; water resources of New England, New England regional planning commission; report of the special commission on regional planning commission; report of the special commission on the development of inland waterways, 1947, commonwealth of Massachusetts.

I wanted to have my authorities on the record so the report could not be considered as a trivial one. Because water power was a prime factor in the original development of industrial communities in New England it has become magnified in the minds of many with respect to the present situation. Hydroelectric power is cheap only in the most favourable locations, of which few remain undeveloped; and of all the industries of New England using water power, perhaps the only one in which the cost of power might be a determinant factor in its location is the pulp and paper industry.

During the depression years between 1929 and 1939 a number of industrial-owned power plants were discontinued, and the output fell from 1,800,000 kilowatts to 1,200,000 kilowatts. During the war years this reduction in the production of power ceased and it increased somewhat. Since V-J day 1,144,000 kilowatts of capacity either have been constructed, were under construction or are on order in New England. All this capacity will be in use by 1951; this is the report of 1948.

Ninety-one per cent of this new capacity is owned by utilities, and of the new capacity 91 per cent is steam power. This capacity will build up reserves that were depleted during the war years; and 81 per cent of the new capacity will be located in Massachusetts, Connecticut and Rhode Island. From 65 to 75 per cent of all electrical energy generated in New England in the 1948 period came from steam plants. In the United States as a whole from 60 to 65 per cent of the energy generated is from steam plants. The exact percentage from year to year depends upon the rainfall and the extent to which the hydro development plants can be operated.

This predominance of steam generated power will be accentuated in the future because the number of feasible undeveloped water power sources is limited. It is therefore logical that the cost of steam power is the best comparison for determining the economic feasibility of hydro developments. During the last century steam generating plants have increased in size, efficiency and complexity. They are now built in locations where coal and oil are available, and where water for condensation is readily accessible.

I should like to put on record a table with respect to New England. In Massachusetts electricity produced by utilities was 1,254,000 kilowatts; 592,000 kilowatts was produced by industrial corporations, the total being 1,846,000 kilowatts of which 87·8 per cent was generated by steam power.

In Rhode Island utilities produced 319,000 kilowatts; industry produced 78,000 kilowatts, a total of 397,000 kilowatts of which 96 per cent was produced by steam generated plants.

In Connecticut 828,000 kilowatts were produced by utilities; 246,000 kilowatts was produced by industrial producers, a total of 1,074,000 kilowatts. Of this power 90·3 per cent was produced by steam generating plants.

In New England as a whole 2,617,000 kilowatts was produced by utilities and 1,079,000 was produced by industrial corporations, a total of 3,696,000 kilowatts. The over-all percentage for New England power produced by steam generated plants was 74 per cent.

The annual cost of power available from steam plants is made up of two components, the first of which is capacity cost. This is composed of annual fixed charges on the capital investment plus the annual operating and maintenance expense. The second is energy cost, which is the fuel cost expressed in mills per kilowatt hour. The coal which is used in New England averages about 13,500 B.t.u. per pound as received. On this basis the 1947 cost of coal in Boston was about $7·80 per ton.

It appears to me that in the province of New Brunswick, with its limited water power sites that are feasible for harnessing, and perhaps more so in the province of Nova Scotia, we must turn to the thermo method of generating electricity. I believe the normal increase in the use of electricity will take up any hydroelectric power that is generated in the next several years in the province of New Brunswick. As has been pointed out in this

report, the use to which hydroelectric plants can be fully put depends upon the rainfall. For example, last year in New Brunswick we had a very dry summer. Last year would be a model year for the combining of thermo power and hydroelectric power. In the province of New Brunswick we have the coal fields at Minto, and in addition to that we have vast coal reserves in our neighbouring province of Nova Scotia.

This committee reached some conclusions in their report, and I should like to read a paragraph or two of those conclusions, as follows:

> New Hampshire, Vermont, Massachusetts, Rhode Island, and Connecticut use about 89 per cent of the utility power produced in New England and constitute an integrated system. This area is dependent on steam power for the major part of its power needs because at present about 80 per cent of the generating capacity is steam. Even if all the undeveloped hydro power in this area were built regardless of whether it is economically feasible or not, it would not take care of half the expected increase in load during the next ten years. Therefore it is obvious that a large addition to the steam capacity will be required.

The report has this to say concerning the cost of power in manufacturing:

> The importance of the cost of power in manufacturing has been greatly overemphasized. Except in a few industries the cost of power averages less than 2 per cent of the total value of manufactured products in New England industries. It is, therefore, obvious that the question of cheap power is not a determining factor in management decisions regarding location of manufacturing plants except for certain heavy industries. Other factors such as labour, markets, and materials are the principal ones which govern these decisions. A change in power rates which affects such a small part of the value of a product has an extremely minor effect on its total cost, but the importance of having a source available which provides reliable power when it is required cannot be overemphasized.

I believe that in the province of New Brunswick and in the Maritime provinces as a whole we are somewhat in the same situation as the New England states. No one can deny that the New England states, especially the area centred around the state of Massachusetts, are highly industrialized. They have no greater hydroelectric potential in those states than we have in the maritime provinces, but of course they do have a geographic advantage with respect to markets.

I believe that the policies laid down by the late J. G. Boucher of New Brunswick hydro power commission should be dusted off in many offices in New Brunswick, and then I feel that within a short time the province of New Brunswick will come back to a combined system of thermal and hydroelectric power.

[Mr. Murphy (Westmorland).]

Following this report the *Electrical World* of November 27, 1948, had this to say about it:

> New England Must Rely on Fuel, Not Hydro Power
>
> Fuel-generated electricity must be the backbone of New England's power supply for many years to come. Valuable as economically warranted hydro may be, there simply is not enough of it undeveloped and practicable in the northeast to meet New England's needed 1,100,000-kw generating-plant expansion in the next decade.

And later:

> The report points out that the importance of the cost of power in manufacturing has been greatly overemphasized. In textiles, power is but 2·3 per cent of the total cost. For industry as a whole in the area, it is but 1·4 per cent.

I realize that the conditions in New England are not on all fours with those in New Brunswick, but I believe the ideas and findings contained in the report of that committee would be of assistance to New Brunswick. As I said previously, I wished only to place the importance of the generation of electricity by coal before this house. My colleagues from New Brunswick will deal with the development of hydroelectric power, but hydroelectric power alone is not enough for the province of New Brunswick; we must have thermo-developed power as well.

Mr. Colin Cameron (Nanaimo): Mr. Speaker, there have been some very interesting comments made during the course of this debate. In fact the very first speech contained some extremely interesting comments including an invitation to political merger—I said merger, not murder.

I should like to deal with that for a moment. I was most interested in the invitation of the Leader of the Opposition that the two parties sitting in this corner of the house should combine with the Conservative party. It is with the utmost regret and respect that on behalf of this group I must decline the proposal. I do not think I can even give the traditional answer of the coy maiden and say that we shall be a sister to them.

On the other hand there is a field in which I think we could do a little cultivation with some benefit. I would suggest to the hon. gentleman that he follow the example of his former party colleague, the premier of British Columbia, who having discovered that the old gray mare of Conservatism was not what she used to be in British Columbia, very nimbly leaped from her on to the back of the piebald pony, Social Credit, and rode into power.

In case the Leader of the Opposition thinks there is any danger in this manoeuvre I would commend that he follow even more closely

the activities of the premier of British Columbia, for he will find that the Social Credit party is still quite firmly in the grip of two gentlemen, who not so very long ago were members of the Progressive Conservative party. I am not sure that the Leader of the Opposition is as politically agile as is the premier of British Columbia, but I believe the premier of British Columbia would be prepared to give him a course of lessons at a reasonable rate of remuneration.

I am convinced that this is the wisest policy for the Conservative party, even more so after having listened to the speech of the hon. member for New Westminster (Mr. Hahn) yesterday. Just in case I might be accused of misquoting him, I should like to place some of his words back on *Hansard*. They will be well worn words by the time *Hansard* gets through with them. I quote from page 1352 of *Hansard* of February 20, where the hon. member is reported as follows:

> It might be said, why cannot the people of Canada finance that development? I am satisfied that you realize as well as I do, as do most of our socialist-minded friends, that you cannot build a huge dam for nothing; that is just wishful thinking. Some of these dams cost anywhere from $300 million to $750 million. It takes a great deal more capital than the Canadian public can afford to invest within the country for its proper development. We lack the capital for proper development.

Dear, dear, Mr. Speaker; this is from the party which has been enunciating with monotonous regularity, rather like an incantation, throughout the country that what is physically possible is financially possible. It removes the last possible obstacle to fusion between the two parties to the right in Canada. I am quite sure that the rest of us will be only too delighted to come to dance at the wedding.

Nevertheless I welcome this curious, shall I say rather un-Conservative, proposal that has been brought before the house. But like Oliver Twist I ask for more. I do not think it goes quite far enough. It is a very good thing to suggest that the people of Canada through the federal and provincial governments should co-operate in the development and production of power, but I think we have to ask ourselves something else. We have to ask ourselves for what purpose are we producing this power?

Mention has been made in the house of the Kitimat development in British Columbia. As has been quite rightly said, it is a most stupendous engineering project. However, it was accompanied by some rather dismaying results that were not envisaged because there was no over-all planning of that particular scheme. I refer of course to the devastation that occurred in Tweedsmuir park, much of which could have been avoided had there been a long-term plan prepared well in advance for the logging of that area. That project has earned a rather unenviable reputation with regard to certain aspects of the conditions under which the workers in that area must work.

For a number of years we have had in British Columbia a publicly-owned power commission. I was in the provincial legislature when the power commission was set up. That commission has been engaged in very important development work, particularly on Vancouver island. However, it has been suffering from some severe handicaps imposed upon it by various governments in British Columbia. I think it is true enough to say that it was gone ahead with and developed for one purpose and one purpose only, to provide cheap power for certain large industries which were about to be established on Vancouver island.

Its devotion of power to those purposes makes me think that we should ask some further questions. For instance, we should ask this question. Is it enough to plan to produce power to supply a pulp and paper mill which as parts of its operations is going to produce raw material for the comics which the hon. member for Kamloops (Mr. Fulton) has been fighting so vigorously for a number of years, simply to add to the flow of trash which comes from the printing presses? Are we to be satisfied with merely providing power and letting those who receive it go on and use it as they will.

No, Mr. Speaker; we have had a lot of warnings lately, and these warnings have come from people to whom I think we should listen very carefully. Quite prominent among the voices have been those of Canada's Secretary of State for External Affairs (Mr. Pearson) and Minister of Fisheries (Mr. Sinclair). They have been bringing us some very serious news about which we should be thinking very carefully.

The main warnings they have been bringing us are these. They warn us that it is only at our peril that we underestimate the industrial and economic capacities of the communist world. They warn us also that we shall be running very severe risks if we harbour the comforting illusion that the peoples of the communist world are in a state of incipient revolt, for the evidence they have brought us indicates that the exact contrary is the case and that the people in that area are not only supporting their government but apparently supporting it with considerable enthusiasm in the pursuit of a certain goal.

I should say at this point, Mr. Speaker, that no Liberal, no Conservative, no supporter of

private enterprise can have experienced one-quarter of the dismay and the disillusion experienced by socialists regarding some of the developments within the Soviet union over the last 30 years. Only a socialist, I suppose, could have had that disillusionment at seeing what began and what might have continued as a noble experiment in human relations and social organization degenerate through the years and develop many aspects of squalid tragedy and repression of human dignity.

Nevertheless, as this rising chorus of warning voices tells us, merely because we have been disillusioned with what has gone on there, merely because we see with all too clear eyes the tremendous gap there is between the socialist ultimate aim and what has been accomplished in the communist world, we would do well not to delude ourselves into thinking that because we do not like some of its aspects it is not an economically viable and valid regime; a regime, moreover, that is at the present moment offering the greatest threat to people of our type of thinking in the world. It is offering a threat because it has developed that enormous industrial potential, and the reason it has developed that enormous industrial potential in the short space of one generation is perfectly plain and perfectly simple for anyone to read. There has been deliberate, conscious planning of the development of resources and power in that country for a specific purpose.

We may have our doubts about what the ultimate purposes of that planning are, and no one knows; but one of its by-products is that it has developed an industrial machine there that those in this country who should know warn us threatens our supremacy in North America in the industrial world. I think when we are considering the question of developing our power we should be considering that thought, as to what is the purpose of our production in this country. I have been amused sometimes at the comfort that certain people in Canada and the United States have taken from the plainly much lower living standards of the peoples in the communist world. They have deluded themselves into thinking that these lower standards are a sign of the incompetence of the Soviet economic machine, and of course all they are a sign of is the ruthless efficiency of a totalitarian regime that can make economic plans without too much consideration for the happiness or convenience or comfort of the members of its society.

Mr. Hahn: You would not advocate that, would you?

[Mr. Cameron (Nanaimo).]

Mr. Cameron (Nanaimo): I am not advocating it, but I am suggesting it would be even more foolish to pretend that it does not exist and that it is not an effective method of producing goods of certain qualities, certain varieties and estimated in determined quantities. I also suggest that here in North America we run very serious risks if we think we are going to be able to compete with that sort of danger by the haphazard, unplanned type of production in which we engage today. It is not good enough merely to plan where we are going to get a source of power to operate our industries. We have to plan also as we planned during the last war. We have to plan to do it without unnecessary waste of our resources.

I wonder, Mr. Speaker, just how long the people of North America are going to go on smugly deluding themselves that they can continue to destroy natural resources like a horde of hungry locusts for the most trivial and childish aims. How much longer are we going to make the goal of our industrial and social life bigger and better automobiles to cause more problems in our cities? How much longer are we going to continue to haggle over the appropriation of a few million dollars to improve our admittedly inadequate educational system, while at the same time we observe with complacency the investment of millions upon millions of dollars in the production of useless trash for the debilitation of our population?

Has anybody thought to compare the cost of establishing, shall we say, one of these junior colleges that the province of Ontario has announced it is about to establish with the cost of producing astronomical numbers of bottles of pop to rot our children's teeth? That is the sort of thing we are doing with our resources today, and I suggest to you, Mr. Speaker, that we cannot very much longer go on doing that sort of thing without heading straight for disaster.

We could do it when North America stood without a peer in the world for industrial capacity and efficiency, but it is doubtful now that we stand in that position. We persist of course in continuing a standard of living, that standard which Thorstein Veblen has called conspicuous waste, and we have developed an elaborate advertising racket to pander to the very lowest, cheapest and silliest desires of our people in order to create a market for the production of trash in great quantities.

I have wondered just how long we are going to blind ourselves to this very difficult position that we are in today, and when we are going to realize that we have a supremely difficult task to perform. It is true enough

that in North America and in Canada we have in our society values which are supremely well worth preserving, values and standards that are perhaps the fine flower of human thinking, alongside this invitation to low standards that goes on under the pressure of modern business. We have to solve the problem of meeting our communist opponents on the field of industrial production while at the same time preserving for ourselves those elements of our society without which we would find life intolerable, and it is not going to be an easy job to do.

But, Mr. Speaker, I have no hesitation in saying that sooner or later our production is going to be planned by someone. Either we are going to undertake it ourselves on a rational basis; either we are going to set ourselves goals as we set them during the war, or someone else is going to do that planning and is going to do it with ruthlessness, in the same way it is being done in other parts of the world. We cannot escape that problem today.

The whole world is moving now toward the field of rational economic planning, and the Conservative amendment that has been produced here is a sign of that trend today. I am not in any way jeering at my Conservative friends when I suggest that only a few years ago their predecessors would have hesitated for a long time before they would have come into the house and advocated public investment. It is a step toward that goal of rational economic planning which we must meet if we are to survive in the world today. While it is true enough that we do not like what we see going on on the other side of the world, and while it is true enough that individual liberties have been trampled on, I sometimes wonder whether we do not embrace too large a territory under the spreading umbrella of liberty and freedom in this part of the world.

Is it really essential, Mr. Speaker, for the preservation of human liberties that individuals and groups of individuals should be left free to decide what they are going to do with our natural resources, at what rate they will consume them and what commodities they will make from them, without any regard whatever to the public welfare and without any regard whatever to a concerted, integrated social aim? That is the question we must answer and, in my opinion, we must answer it quickly. I suspect that sitting in this house are members who will, before many years, sit here and hear proposals which today would be denounced as rank bolshevism, and they will probably come from the most respectable quarters of this house when, under the heat of economic reality, fear, prejudice and superstition have been dissolved.

As I say, Mr. Speaker, I welcome the amendment of our Conservative friends. I wish it went further. For my part I expect to see before long not only resolutions in this house but actual undertakings in Canada along the lines of those of which I have spoken. I believe that not even the most purblind of our people will want to run the risk of extinction merely in order to uphold the shibboleth of liberty of man to exploit his fellow man, which is what we lump in under the whole general concept of freedom and liberty today. I believe that our people eventually, and before long, will awake to the fact that their individual liberty and freedom can be found only in a rational society in which the resources—including electric power resources and the other natural and human resources—are devoted to a certain determined and approved social goal.

Mr. G. W. Montgomery (Victoria-Carleton): Mr. Speaker, I am glad to be able to take a short time this afternoon to speak in support of this resolution. It illustrates a line of thinking which is not particularly new to me. I think we should keep in mind what the resolution indicates. There is a tendency to get off on one branch of it and to concentrate too much on one phase of power. That is what rather surprised me about my colleague from New Brunswick, the hon. member for Westmorland (Mr. Murphy) when he was speaking this afternoon. I felt that he was against this suggestion. Maybe that is not so. I could not help wondering whether he is against hydroelectric development. I think this resolution covers the field of power from any source whatsoever. It is a co-operative affair.

We all realize that the development of power is within the jurisdiction of the provinces, and there is no indication, as a result of the suggestion in this resolution, that the situation should be otherwise. But it seems to me that in this federation of ours we are a family of provinces. We have our interprovincial boundaries. We have a long boundary between Canada and the United States of America. Hence we have our international problems.

These problems arise in many ways immediately you commence to consider the development of our resources. As soon as you start to consider industry, one of the first things about which they talk is the matter of power. Regardless of what may have been said here today, the cheaper the power the more inducement there is to industry. It is true that other things must be taken into

consideration. The fact that we have interprovincial and international problems in this country seems to me to constitute a reason why there should be evolved a national policy whereby, in all these situations, there should be co-operation between the dominion and the provincial authorities.

There may be many situations in which a province does not want the co-operation of the federal government. In such a situation I do not think the federal authority should impose its will upon the province. But I believe there are many situations in which co-operation is required. As was mentioned previously, it is more or less left to members from various provinces to deal with specific areas.

I have reference to the situation in which we find ourselves in my province. We have interprovincial problems and international problems there. We have possibilities of development which involve the crossing of not only provincial but international boundaries. I am not going to spend any time in going into all the details of this matter, because I know the government have those details. Surveys, investigations and recommendations have been made. The point, however, is this. If any province has a sound policy of resources development—and I contend that we in my province come within the bounds of what I am going to say—and if there is a demand for the product of those resources but unfortunately owing to size there is lack of financial backing, it should have a right and should expect to go to the central authority that sits over all the provinces and put forward its proposition. I think it has a right to expect that the central or federal authority will give serious and sympathetic consideration to the development of the type of policy which a province outlines if it comes within those suggestions I have made. There may be others. I refer to a development that is found to be possible and where there is a market for the product.

I contend that we in New Brunswick are practically in that position. For years after confederation our industrial activity declined. If I had the time in which to do so, there are many things I should like to say about that matter. The hon. member for Westmorland when speaking a few days ago—I do not know how many figures he put on the record—gave this house a picture of what happened and gave a picture of how our industrial activity declined.

At the time of confederation or shortly thereafter, of the four provinces that went into confederation, my province had the highest percentage of population employed in industry. It had quite a margin, as a matter of fact. The figure was 6·3 per cent, and the average in Quebec and Ontario was only 5·50 per cent. In the years that have elapsed since then we have gone down to less than 4 per cent. Today we stand second to the lowest, while those other provinces have gone up to more than double.

It does seem to me that the intent of the planners of confederation was that generally speaking, possibly with some minor exceptions here and there, all parts of this country should develop at an even pace. It seems to me the idea was that the federal authority was to act as a levelling force where necessary to help each and every area in order that one area might not become dependent upon another. Within the last few years that is the position in which we have found ourselves. We hear it said that maritimers are always coming with our hands out. Being a maritimer I do not like to hear that, but we cannot say too much about it. I have heard it since I have come to Ottawa. We would like to be in a position in my province where we do not have to do that.

Within the last few years there have been tremendous mineral discoveries in New Brunswick, and with the development of those mineral resources it would appear that we could become not only self-supporting but contributors to the rest of this country. We have a fairly bright future. The one block in our way at the moment is power. The reason I like this resolution is this. We in New Brunswick—I should like to tell this to the hon. member for Westmorland but I think he must know it—are developing thermal power right along with our hydro power. We are not concentrating on hydro at all. There are not sufficient potential hydro sites available that have been surveyed and approved at the moment to meet the demands we know we must meet within the next 10 years. We cannot, therefore, hold up this program in which the federal authority may join with the provincial authority. If the federal and provincial authorities in co-operation feel that they can develop thermal power to better advantage, that is all right. We have no objection to that. What we need is power.

Last evening the hon. member for Inverness-Richmond (Mr. MacEachen) referred to the report of the Atlantic provinces economic council. I agree with those who spoke on this subject. I think this is the beginning of an organization which is going to be of great advantage to the Atlantic region. The hon. member referred to certain statements in that report which apply to the region as a whole. I should like to refer, Mr. Speaker, to some of the specific findings in that report which refer to my province of New Brunswick. Last September the council held what

was called an economic seminar at the University of New Brunswick. Apparently it was attended by some of the outstanding men in Canada and the New England states. I will not quote too much, but I should like to quote a few lines showing who these people were. The report says:

> In September, 1955, at the University of New Brunswick in Fredericton, we held an economic seminar which, to say the least produced encouraging results. Information and background on a wide range of economic problems facing the Atlantic region were discussed. An exchange of ideas between leading men in economic, government, business and professional fields were possible. Excellent representation by well informed personnel from the federal government, provincial governments, the universities, the New England council, research associations and business entities participated whole heartedly to make this seminar an outstanding success.

I am not going to read too much of the report, but further down it says:

> The seminar discussed at some length the opportunity for secondary manufacturing industries to develop in the region. That is, to provide profitable employment for the people displaced in the development of the primary industries.

Anyone who is interested may read the whole of the report, but I do not want to take that time. However, it says:

> In New Brunswick, for example, if large quantities of relatively cheap power are made available, primary mineralogical extraction could be supplemented by processing at points of power generation and large chemical industries established. Few people realize the tremendous opportunities for development that are slowly but surely taking place in northern New Brunswick . . .

I am sure all members will agree, particularly those from the maritimes, that this is a document which is the result of very serious study. These people are looking into the economic situation with the idea of improving it. It is a non-political organization, and they really want to do something. You know what they say about my province; there are tremendous opportunities.

In addition to the development in northern New Brunswick, very near my home they are starting to develop a large body of iron and manganese ores. I know definitely that this development will call for large blocks of power, and I do not care whether it is hydro or thermal power. What we want is power, because we must have power before this development will take place to the fullest extent. The hon. member for Gloucester (Mr. Van Horne) may know more about the project in northern New Brunswick than I do, but it is something that if fully developed would put northern New Brunswick in a far better position than it is today. The one in my section of the province, when it gets into development, will certainly create a tremendous lot of activity and will attract secondary industry.

What we need more than anything else is far more people. We have the space for them and we can grow the food for them to eat. We need markets closer to home. As you know by this time, agriculture in New Brunswick has its drawbacks, and one of the drawbacks is the long haul to markets. As is pointed out in this economic report, what we need is a market closer to home. We need more people and we need more industry.

I know there is no necessity for me to try to sell the idea of developing the Saint John river. Beechwood is only one development on that river. The full development of the river includes storage as well as several other sites. I might tell the hon. member for Westmorland that there is no river in the New England states comparable to the Saint John river; in fact, there is no river comparable until one gets to the Mississippi. The people are obliged, therefore, to use thermal power.

I know also that figures are available, and I am sure the department has them, to show that the cost of developing thermal power over a period is far more than the cost of developing hydro power. In the beginning the cost may not be so high, but over a period of years hydroelectric power, if you can get it, is the cheapest form of power. If I had the time I could go into the last hydro development that went into operation at Tobique. Last year was a dry year. I wish that hon. members from other parts of New Brunswick could have seen the amount of power that came out of the storage at Tobique and the water that was held there and used. I am sure that we have far more storage than we get credit for. If the department has not this information already I can say that in the next two years it is to be surveyed.

What we need is a start. That is what the provincial government of New Brunswick have done. They did not start that project until they had had it well surveyed and well recommended. As the hon. member for Royal (Mr. Brooks) said yesterday, it has been recommended by some of the outstanding hydroelectric authorities in Canada. Last year I listened to the outstanding man in North America, our own General McNaughton, who is chairman of the Canadian section of the international joint commission. I know myself that he recommended Beechwood be the first start of that development. I think I can say without successful contradiction the steps that have been taken so far in New Brunswick are steps that have been recommended by the best authorities in Canada. But we cannot stop there. I do not believe we can stop when we get the Saint John river development.

There is a future for the maritimes. A policy developed in accordance with this amendment would and should take hold of such a proposition as the Chignecto canal. I hope the hon. member for Westmorland (Mr. Murphy) does not think I am quoting him too often today—

Mr. Murphy (Westmorland): So long as you are quoting me you are all right.

Mr. Montgomery: Sometimes I quote with approval and sometimes not. The St. Lawrence seaway development will never be complete as a Canadian project until the Chignecto canal is also completed, because it will open a brand new seaway. It will save a lot of mileage and cut down freight rates. We need that canal. In connection with the canal, the federal authority should look into the proposition of power from it. I am satisfied that power could be developed there. I base that opinion on the information we have received. The federal authority should come into the picture and commence to make scientific surveys, looking ahead to the next few years.

Once we have the Saint John river system developed, once we have used all of our other resources—and we shall continue to develop as fast as we can with the thermo—we shall need more power in the maritimes. I believe we can regain our economic position in this country. We have one of the greatest coastlines in Canada. There are harbours for ships; there are opportunities to ship freight from all points in the maritimes to halfway into Canada by water. There is no reason in the world, if we once get started, why we cannot have a good life in that part of Canada. As far as my province is concerned, we are receiving inquiries already. The one block is power. I have no idea what negotiations are going on. The New Brunswick representative in the cabinet knows more about it than I do. I do hope that he and his government will see their way clear to assist in some way that little province to develop power in order to develop industry, increase the population and give work and markets to our own people.

We are a small spot on the map. You look at a map of Canada and you see us down there in the maritimes. I think that is one reason why we have sort of become the forgotten people so far as the rest of Canada is concerned. I know that when I came up to Ottawa I had to get accustomed to the people up here talking about the people in the east. I soon discovered it was not the maritimes they were talking about. When they were talking about the people in the east, they were talking about the people in Quebec and in parts of Ontario. To my mind there is a big country beyond that; there are a lot of people beyond that, and there is a great chance for industry beyond that. We as a part of the federation of Canada on the fringes deserve to be helped in order that we may help ourselves.

I am not going to take up much more time, but I want to sum it up in this way. The people of New Brunswick believe that a new deal is in the offing. New mines have been discovered, and there is nothing small about them. Manganese is something that North America wants. We need power, but we are small; financially we are poor. There is no question about that.

An hon. Member: You have had a Liberal government too long.

Mr. Montgomery: Something has been the cause of it, but I will not say what. Since the hon. member has brought that up I will say it has been said that the darkest shadow of confederation was the decline of the industrial activities of the maritimes. A lot of it may have been our own fault. I am strong in my belief that confederation was a proper step. I believe it has been a great thing. It has helped develop this country; it has helped to build us into a great nation; but let not the central part of Canada, let not the central government, forget that we are down there. Whether it is right or not, you are not going to convince the people of the maritimes that this government is not helping, indirectly at least, Ontario in its power situation in so far as the St. Lawrence seaway is concerned. I am not saying it is right, but they have that feeling. When you have the public feeling that way it is something to which the government should pay some attention.

Today in the maritimes we have a brighter outlook, especially in my own province. I think that feeling is backed up by the report I have here, which is nonpolitical. The men concerned with it are the best brains in the maritimes and they are working. I am going to wind up by saying I know that this government have the facts. There is no use in our trying to tell the government what the situation is. We are starting to develop something that has been approved. It happens to be hydro at the moment. We need assistance. I trust and hope that this government can see its way clear to adopt a policy in quite a substantial way. I am all for adopting a policy that will apply to all parts of Canada. Although my remarks have been confined to my province, I am not particularly advocating that New Brunswick be given help that cannot be given to some other province that needs it. I feel that the province should

organize its own plan of development. The province should take a lead, and I believe we are doing that. I do not believe that any province should sit back and wait for the dominion government to come and tell it what to do. I believe that the provinces should take a lead, should organize their policies and be able to put them in black and white before the central authority and be able to show that they are sound policies. And when they do that I think we in the federal house should have a national policy with which we can meet them. If we need enabling legislation to do that, let us then get that enabling legislation. Let us have it so that the dominion government may have the tools at hand in order to carry out the proposition with any province on any sound development plan that may be put before it.

I do not want anyone to think that I am asking for something special for New Brunswick or the maritimes. I want that to come through a national policy which could be used or adapted to any other part of the dominion and I think that is the way we must look at it.

Mr. A. W. Stuart (Charlotte): Mr. Speaker, I wish to say immediately that I agree wholeheartedly with nearly everything that has been said by the hon. member who has just taken his seat.

I believe you will find that the members representing constituents in New Brunswick all realize that we have great power there and electrical energy is one thing which we need in abundance. I would also say that the Liberals federally and provincially in the province of New Brunswick have never taken any other stand.

I have expressed my views on two different occasions in this chamber with respect to the Beechwood project and I am going to deal with it again today although at no great length. I have always believed there was power that could be economically developed on the Saint John river and I have never said anything different. However, I have been bitterly opposed to the way the development was started.

Only a few days ago an item appeared in the Saint John *Telegraph-Journal* concerning a remark made in the provincial legislature of New Brunswick by F. A. McCain, a Progressive Conservative member of the provincial legislature. He quoted my remarks in connection with Beechwood which I had made in this chamber and at that time he stated that my remarks were most unpatriotic. Well, he may consider that they were unpatriotic but I maintain that the way in which the Beechwood development has started is wrong. I maintain that it should never have been started until we had storage rights in the state of Maine and in the province of Quebec and if we do not obtain those storage rights what we have done so far is a complete waste.

Mr. Brooks: Nonsense. That is complete nonsense and you know it.

Mr. Stuart (Charlotte): That is my opinion. The hon. member for Royal (Mr. Brooks) had a lot to say yesterday and I did not interrupt him. He is entitled to his opinion and I am entitled to mine and our opinions will never agree because he is a Tory and I, of course, am a Liberal. However, I believe that I should have the right to express my views.

At this point I might say that the hon. member for Royal accused the federal government of being asked to take part in the proposed Passamaquoddy power development which it refused to do. This morning I got in touch with the Secretary of State for External Affairs (Mr. Pearson) and this is the reply he gave me to the question which was raised by the hon. member for Royal:

> . . . my understanding is that the joint resolution requesting the Secretary of State to arrange for the international joint commission, (Canada and the United States) to conduct a survey of the proposed Passamaquoddy tidal water project was passed by congress and signed by the president. This resolution became public law on January 31. I further understand, however, that as yet no request for participation in this project has been received by the Canadian government.

I believe that will answer the criticism in so far as this government being unwilling to take part in the Passamaquoddy development is concerned.

The amendment we have before us today is of course a want of confidence vote in the government so every one should readily understand how I would feel when it comes time to vote. The amendment was introduced by the leader of the official opposition and in introducing that amendment he covered the whole area from Newfoundland to British Columbia and we again listened to the same thing we listened to in another debate which is still going on in this house.

It reminded me that this group might be placing the electric power of this country on the auction block to see if they could make some progress between now and the day that a federal election might be called. This same procedure has taken place in this chamber in every period previous to election since I came here. There is always a period when the electric power is put on the auction block to see who can make the best bid for their supporters but I am sure the Canadian people are not too much interested in this type of politics.

Power Development

It is also very noticeable to me that the leader of the official opposition has become much more generous since he came to Ottawa as leader of the official opposition than he was as premier of the province of Ontario.

Mr. Rowe: He did a pretty good job there.

Mr. Stuart (Charlotte): As premier of Ontario he stated on more than one occasion that revenues obtained from the citizens of the province of Ontario should be used exclusively for the citizens of that province. That is on record in many parts of this country and that statement has been used time and time again. But since he has no responsibility, and he has no great responsibility here, he can make these fantastic remarks without giving them too much consideration; but the people still look back and remember him as the man who was the premier of Ontario and they recall the attitude he took at that time.

I might also add that the hon. member for Royal who interrupted me a few minutes ago was not quite so generous when he was a member of our provincial legislature as he is since he came to Ottawa.

Mr. Brooks: How about Mackenzie King's policy; not a five cent piece to a Tory province?

Mr. Stuart (Charlotte): That is correct but I am telling you that you did not give a five cent piece to your own province.

Mr. Knowles: Is the hon. member addressing the Speaker?

Mr. Stuart (Charlotte): I am addressing my remarks to the Speaker; that is correct. The amendment which has been moved by the Leader of the Opposition embraces this great country of ours from Atlantic to Pacific; he now wants to help everyone in the country. It is somewhat like the suggestion of my hon. friend for Royal that if all the policies he had advocated were put into effect the income tax would be more than doubled today in order to take care of them. But you can always be most generous when you have no financial responsibility. You can always be most generous when someone else must bear the responsibility. If you look at the record of the province of New Brunswick when he was a member of that government it does not coincide with the attitude the hon. member for Royal takes at this time because I can assure you his generosity at that time was not nearly as great as it is now that he is a member of the opposition sitting in Ottawa.

Another matter which was most noticeable to me in this debate was the great plea that the leader of the official opposition made for the support of the other parties in this house. Only a few weeks ago a convention was held at the Chateau Laurier hotel in Ottawa and I very well remember the remarks of the hon. gentleman at that time that there would be no collaboration or coalition with any other political group in Canada, that they would stand on their own feet. Well, I think yesterday was an excellent demonstration that that slogan has already been discarded because if I have ever heard a plea for the support of other parties in the House of Commons I heard it yesterday when the Leader of the Opposition was addressing this chamber.

It is most confusing to the citizens of this country to hear one story one day and a direct contradiction within the next two weeks but that is what we have had to contend with here for quite some time.

My thoughts also go back to the dominion-provincial conference which was held in Ottawa the first year I came here as a member in 1945. The gentleman who is the leader of the opposition today and who was so generous as the premier of Ontario at that time attended the conference. I sat in on quite a number of the discussions that took place whenever I was able to get in. It is a well known fact, and I am sure that he will not contradict it, that as premier of the province of Ontario he took the same attitude at that conference. Hon. members no doubt have heard what occurred at that conference. It has been stated ever since that the premiers of the two provinces scuttled the conference. I can assure you that at that time he had no idea of any division of wealth belonging to Ontario with any other part of this country; the wealth that was within the province of Ontario was to stay within the province of Ontario. That is the attitude he took at that time and that attitude was maintained until he came here as leader of the Progressive Conservative party.

Mr. Michener: Not a word of truth in it.

Mr. Rowe: That is your statement.

Mr. Stuart (Charlotte): That statement was made over the air and in the press. Everybody has heard it. You have read it and everybody else has read it. We all know the attitude he took as premier of Ontario and we know the attitude he is taking now, the generosity he is prepared to show today.

Mr. Rowe: That is not—

Mr. Stuart (Charlotte): I do not interrupt the hon. member when he speaks. I am sorry I am saying things that he does not like to hear, but these are my opinions.

Mr. Michener: Would the hon. member permit a question? Referring to that conference, does the hon. member remember

that the then premier of Ontario, now the Leader of the Opposition, proposed what were called national adjustment grants which would do the same thing as the equalization fund now proposed by this government?

Mr. Stuart (Charlotte): I never heard the word "equalization" used. I do not know whoever used that word and I will not argue with you. But I will say this: If he had this spirit of generosity why was he afraid that the people of Quebec might get a little benefit from the province of Ontario? We all know his record. The hon. members of this house know his record as well as I do. The hon. member for Royal had this to say, and I quote from page 1362 of *Hansard* of February 20:

> This has been the attitude of hon. members opposite. It is also the attitude of the opposition in the province of New Brunswick. We need the development of Beechwood in the very worst way, but because they think it will bring some credit to Mr. Flemming, the premier of New Brunswick, they are trying to discredit it in every way they possibly can.

If that was not introducing a political subject into this debate, I do not know what it was. I have told the hon. member for Royal and others exactly where the Liberals in New Brunswick stand on this question. They realize the great need for power in New Brunswick. We all realize that.

Mr. Brooks: They all voted for Beechwood.

Mr. Stuart (Charlotte): They all voted for Beechwood with storage rights, but they did not vote for Beechwood without those rights. There is no guarantee that we can get those rights. On many occasions I have spoken to the former member for Temiscouata and I have concluded that we will have a problem on our hands in obtaining storage rights in the province of Quebec. I can assure hon. members of this house that without storage rights the Beechwood project will never be a success.

To substantiate that statement I should like to place a few figures on the record. The flow records at Pokiok, below Beechwood, show that from July 1 to December 31, a six-months period, there was not one day with a sufficient flow of water to run the two proposed 45,000 horsepower turbines. During that same period of 184 days, there were 119 days when the volume of water was not sufficient to operate even one unit at capacity. I know that somebody will say that last year was a dry season, and we will all admit that, but let me say that for the year of record ending September 30, 1954, there were four months when the average monthly flow was below that required to operate two units at capacity. That was a year of exceptionally heavy rainfall.

For the year of record ended January 30, 1953, there were nine months during which the average flow of water was insufficient for the capacity operation of the two units.

Surely that should convince any fair-minded person that we cannot produce power without water. We can never expect to have full capacity at Beechwood without storage rights. That is the attitude Liberals have taken on this matter both provincially and federally since it was first mentioned. I still think it was a terrible blunder to have attempted to build Beechwood before we had guaranteed storage rights above it. I hesitate to say, but to me it is doubtful if we will ever be able to get those storage rights.

There is another question in connection with Beechwood which I should like to mention this afternoon; that is, the way in which contracts for Beechwood were awarded. The contract for this project was awarded to Foundation (Maritime) Limited for $7,112,000. A tender was received from another Canadian construction company for $5,900,000. This would have meant a saving to the people of New Brunswick of about a million and a quarter dollars, and they need it. The people of that province want to know why Foundation (Maritime) Limited was given the contract when a tender had been received from a reliable contracting company at a million and a quarter dollars less.

Sub-bids on the complete processing of 360,000 tons of gravel for Beechwood were called. One bid was received from Terminal Construction for $1.27 per ton, another from Armstrong Brothers was for $1.20 per ton, but the contract was awarded by the Foundation company to Terminal and this meant a loss of about $26,000 to the taxpayers of New Brunswick.

From my experience and from the experience of many others down in that area this has been a purely patronage organization since it was established. It is that and nothing else. Even the lumber being used at Beechwood, and there are great quantities being used, is being purchased from one of the companies owned and controlled by the premier. I will not say it is completely owned, but it is partly owned. I say it is utterly wrong for the premier of the province to be benefited financially by the construction of the Beechwood project.

Mr. Speaker: I do not think the hon. member should leave the impression that the premier of a province is benefiting from patronage.

Mr. Stuart (Charlotte): It is a known fact.

Mr. Speaker: Even at that, I think the hon. member should keep in mind that the premier of the province is not sitting in this house and if there is any imputation as to his conduct I do not think it should be voiced in the house.

Mr. Stuart (Charlotte): I may say that I do not think there is anything wrong under our provincial constitution, but he should have been a little more careful. I do not think anything has been done that a man could be prosecuted for, but I can assure you that the people of the province are wondering why he was placed in such a position. There are six or seven companies with which the gentleman is associated which are doing business directly with the provincial government. It is a well known fact; it is something generally known in New Brunswick. I have heard it discussed many times.

Then in so far as the hiring of workers is concerned, at the Beechwood project, I should like to refer to the interjection a few minutes ago by the hon. member for Royal who said something about 5 cents to a province with a Conservative government. The gentleman who does the hiring and firing at Gagetown was a member of the local legislature of New Brunswick for many years. I know this gentleman very well. A few years ago we had a Tory government down there and he wrote the following letter to the premier of the province:

> I see by the paper that your government is giving the old country about 200 cars of potatoes. I want to say that we do not want to let a Liberal supply one barrel. Want a chance to supply my share when the time comes.
>
> G. W. Perry

Mr. Brooks: On a question of privilege, the hon. member said that this Mr. Perry was employing people for Gagetown. I know as an actual fact—

Mr. Stuart (Charlotte): I said Beechwood.

Mr. Brooks: —that he has nothing to do with Gagetown.

Mr. Stuart (Charlotte): I said Beechwood.

Mr. Brooks: You said Gagetown.

Mr. Stuart (Charlotte): I meant Beechwood. Excuse me. This gentleman is a member of the hydro commission and he has been looking after things at Beechwood, so judge for yourself what chance there would be of a Liberal securing employment at Beechwood under that set-up.

Mr. Montgomery: Would the hon. member permit a question? Does he know how many Liberals are employed there?

Mr. Stuart (Charlotte): At Beechwood? I can only say to my hon. friend that I know the manager of an employment office in New Brunswick approached the premier of the province and asked him if it would be possible to place a few unemployed in his town on the Beechwood project and up until last week he had not been able to have one of them placed there. I know from experience that the first thing anyone from my part of the country who has gone up there has been told is: "You have got to have a certificate from a Tory M.L.A. before you can be employed." That is no joke in New Brunswick.

In the building of the trans-Canada highway—and I am sure all Liberals here will support me because they know the story—for which the government is providing 50 per cent of the funds, you could not get employment driving a truck or at hand labour or using a pick and shovel or anything else unless you had a certificate from a Tory M.L.A. If the federal government undertook to assist in any way with respect to the Beechwood project we would have exactly the same set-up again. Yet they wonder why federal Liberal members from New Brunswick are just a little bit suspicious when mention is made of assisting the government there. It is a known fact that no Liberal could get a job on the trans-Canada highway.

Mr. Gauthier (Portneuf): No bread for the Liberals.

Mr. Stuart (Charlotte): Correct, and in my own county—

Mr. Brooks: On a question of privilege, I know what is going on in my constituency and I can truthfully say that there are as many Liberals being employed in the county of Queens, which is part of my constituency, as there are Conservatives. I do not intend to let the hon. member get away with any more of this nonsense.

Mr. Stuart (Charlotte): Let me say now that I cannot take that from the hon. member for Royal (Mr. Brooks). It seems to me that in this parliament Her Majesty's loyal opposition can say anything but the minute a Liberal gets up to say anything he is unpatriotic. There is something wrong.

Mr. Fulton: That is because of what you say.

Mr. Stuart (Charlotte): I can assure the hon. member for Royal that I am stating the facts and I can prove every statement.

Mr. Brooks: They are not facts and you cannot prove them.

Mr. Stuart (Charlotte): Yes, I can prove them.

Mr. Brooks: They are like the statements you have been making ever since you have been here. You cannot prove one of them.

Mr. Stuart (Charlotte): I can prove them by what has happened in my own county. I think it is worse than anywhere else. In Charlotte county if you are a Liberal then you are blacklisted as far as the provincial government is concerned. There is no job for you whatever. The only thing you can do is go hungry, and that has been going on since 1953.

I want to sum up the remarks I have made by stating again that all the Liberal members from New Brunswick, and we get together and talk over the situation, realize the seriousness of the power situation in our province. We all realize it and we are all in support of anything that will improve the situation, but we are all mighty suspicious of the manner in which these projects are being carried on at the present time.

There is plenty of evidence to bear out what I have said. It has been repeated in the provincial legislature within the last few weeks. The story has been told, and the people of New Brunswick know that the story is correct. When the time comes tonight for the vote to be taken I believe there is very little doubt that Liberal members from New Brunswick will support the government on this issue.

Some hon. Members: Oh, oh.

Mr. Stuart (Charlotte): Well, I shall support the government. I have never denied that I support the government and I am not ashamed of the fact because they are always right. Whenever a resolution or an amendment has been brought into the house to try to embarrass me the attempt has never been successful because it is always a pleasure to get up and vote against an amendment or resolution that you know is designed for that purpose. It will be a pleasure for me to do that very thing tonight.

I understand that the submission of the province of New Brunswick is now in the hands of the federal authorities and I hope to be able to see it in a few days. When we get the submission it will be carefully studied by members from New Brunswick, but I can assure other members that so far as I am concerned certain restrictions will have to be imposed before financial assistance is provided. I will want to know where the money is going to be used. I will want to know if it is going to be used for one class of people and not for another. We are all Canadians and one Canadian can get as hungry as another. A Liberal can get as hungry as a Tory. If we are going to go ahead jointly on this thing in an effort to try to improve the situation down there we have got to know exactly where we stand. We have got to develop power in New Brunswick in a way that will be helpful to each and every citizen in the province. When the time comes and the bell rings I will be supporting the government.

Mr. G. W. McLeod (Okanagan-Revelstoke): Mr. Speaker, in speaking on the amendment there are two problems I could quite readily discuss that are of great concern to the interior of British Columbia. The first is power development and the second is irrigation, but in the short time at my disposal today I think I shall by-pass irrigation and discuss it on the agricultural estimates. Before getting into my short talk on power, I should like to refer briefly to the humorous remarks of the hon. member for Nanaimo (Mr. Cameron) about horseback riders, weddings and so on that have been taking place in British Columbia. I should like to tell the hon. member and all hon. members that we in the Social Credit party do not enlarge our group by marriage but rather by adoption. I would invite all forward-thinking Canadians to renounce the Conservative, Liberal and socialistic theories they may have had and join our happy family.

Some hon. Members: Oh, oh.

Mr. Hansell: The only alternative.

Mr. McLeod: I come now to the amendment which we support wholeheartedly. However, there is one question that is in my mind, and I am quite sure that if the hon. member for Greenwood (Mr. Macdonnell) had been in the house he would have asked it long ago. Where is the money coming from? I am going to ask the Conservatives and the C.C.F. where they would get the money for public spending. Would they raise it by taxation, would they borrow from the banks or would they use the Social Credit system and monetize the wealth of the project itself?

In my estimation these are the only three ways in which such things can be financed, and I should have liked to have heard some of the previous speakers outline their policies for financing the projects which they are advocating. These are important questions and the people of Canada should know the answers, for they would have a terrific bearing on the cost of the project and, in the case of power, on the cost of the power that would necessarily be charged after the project was completed.

We in this group have the answer. We have a cost-free means of financing the development of our power and other resources for the use of our people under a plan of public

investment. We hear a lot about the kind of capital that is used in development projects. I am surprised to hear that our C.C.F. and Conservative friends have become so alarmed about United States dollars. I am not so alarmed as long as our governments, and I emphasize this point, are prepared to safeguard our people from exploitation and unfair practices. It can be done and when this is done I think it is not a matter of great importance from what source the money comes.

I do not believe the hon. member for New Westminster (Mr. Hahn) placed United States capital at the head of the list as the desired medium for developing Mica creek. However, there are always those looking for political capital who can twist words around to suit their own train of thought. Speaking for myself and this group and, I believe, for every member in the house may I say that I would certainly like to see our natural resources developed by Canadian capital. We have it stated, I understand, that at the end of the past year there was over $6 billion on deposit in savings accounts of the people of Canada. I often wonder why these people are satisfied to leave that money on deposit, drawing a low rate of interest, and I often ask this question: Why not invest in the future of Canada and the welfare of Canada?

I heard someone here last night in this debate say that Canadians were poor gamblers. That may be so. Perhaps we would rather clip our 3 per cent bonds and be sure than invest in these projects to which there may be attached some risk. But then, if that is our attitude, why do we sit back and blame the Americans if they are prepared to come in, take that gamble and provide the money for the development which we are afraid to tackle?

I am not making any plea for the United States investor. In the development of our Canadian resources I am firmly convinced that the first to enter this field should be the private Canadian citizens. Second, if there is not sufficient capital forthcoming from that source, the required balance should be made up by public investment. In the event that either is not sufficient to provide the development necessary for the welfare of our people, the third and last resort is foreign capital. But I say this. We must have development.

At this point I should like to read a short excerpt from the Revelstoke *Review* and I would ask the hon. member for Kootenay East (Mr. Byrne) and the hon. member for Kootenay West (Mr. Herridge)—who is not in the house—to pay particular attention to it. It is dated Invermere. The Windermere section of the Invermere board of trade at their February meeting heard an address by Dr. Coy, who is the head of their committee, on the Columbia river development.

> Dr. Coy pointed out that the Columbia river is the logical source of power for the interior of British Columbia and said that the increase of population and the continued well-being of the people is contingent upon obtaining an adequate and cheap source of energy.
>
> All investigations have shown, he said, that the building of a high dam at Mica Creek is the first step in the development of this river to obtain the necessary hydroelectric energy.
>
> The undertaking can be done, the speaker said, only by agreement between the government of British Columbia, the government of the Dominion of Canada and the government of the United States.
>
> The meeting unanimously passed a resolution presented by Dr. Coy that provincial and federal governments be urged to confer on the problems and place for construction of the dam without further delay and further that the B.C. government, in the opinion of the Windermere district board of trade, would best serve the interests of the people of B.C. by giving sole rights on this project to the B.C. Power Commission.

For the benefit of those in other parts of Canada I may say that the B.C. Power Commission is a public investment corporation in the province of British Columbia for the development of power projects. We are quite proud of that corporation. They have done a splendid job. They have opened up many resources and have provided power in many parts of British Columbia in which I am sure private capital companies would not have provided it.

This whole field of public investment was one of the first things discussed at the beginning of this session. I think we all recall the words of our own Prime Minister (Mr. St. Laurent) when he was speaking on federal-provincial relations in the light of the recent conference. It was during the throne speech debate. As reported at page 49 of *Hansard*, these are his words:

> I said we felt that parliament should not provide for sharing in the cost of provincial projects except in special circumstances and as a part of a policy which we could justify on national grounds.

I think those words are well spoken. I think this whole problem of public investment, as I said before, should be entered in order to fill the breach where private capital is unable to fill the bill. As I say, I agree with the words of the Prime Minister 100 per cent. In fact, I also believe that the less the federal government become involved in provincial affairs, the better for all concerned. But we have a peculiar situation in relation to the development of power on the Columbia river. This government has already declared that such a development is in the national interest. I think all who recall the debate in the house last year will

not dispute that statement. Hence the government—and I mean this national government—is committed to the Columbia development program.

Last year we heard much about the building of the proposed Mica creek dam. We in the interior had high hopes that such construction would be under way this year. But for some reason—and I am not going to lay the entire blame at the door of this government—all plans for the development of the Columbia are at a standstill. We hear nothing about Mica creek. Despite what the hon. member for Inverness-Richmond (Mr. MacEachen) had to say last night—and I hate to question the word of such a learned economist—when he was trying to play down the value of cheap hydroelectric power in industry, we in British Columbia want power. The interior of British Columbia wants it. The province needs it. The whole of Canada would benefit by it. All I can say is this, and I have said it on many other occasions. Let us get down to business and lay concrete plans for immediate action. A few hours around the conference table would clear the way for development and for the opening of a new era in the interior of British Columbia. Most of you will recall the words of Sir Anthony Eden when speaking of the great future in store for Canada. These words were uttered in this house a very short time ago:

> I have no doubt that you will fashion it—

He was speaking of the future of Canada.

> —in a manner worthy of a great people.

Let us accept that challenge and get on with the job of assuring that great future for our people in British Columbia and in Canada.

Mr. R. R. Knight (Saskatoon): Mr. Speaker, one could not read the words in the amendment moved by the Leader of the Opposition (Mr. Drew) without some challenge, coming as I do from the province of Saskatchewan. I refer to the words about a joint investment program. We have there, of course, a proposition of which the house has long been aware and one which has been debated often in this house. May I say, Mr. Speaker, that I have been in my seat religiously this afternoon expecting to speak following the last Conservative member, namely the hon. member for Victoria-Carleton (Mr. Montgomery). A Liberal member and a Social Credit member have come in between us, so I have to make my remarks very short at this time. I realize that the debating time in the evening will be short as it will finish at 8.15.

This project, as I say, is nothing new to this house. It has been the subject of discussion on platforms of all sorts in Saskatchewan, and certainly on political platforms. I do not think there is time here to go into the history of the project, into the origin of it nor the stage which it has now reached. This is the only political comment I shall make when I say it has been held out as political bait in all the federal elections in which I have taken part, and some in which I have not taken part, since away back in 1940. There have been promises, definite promises by Liberal speakers and by the Minister of Agriculture himself. At times we have been assured that those were not actual promises. There is one quotation here which I take from page 1747 of *Hansard* for February 9, 1953. The minister is quoted by the Regina *Leader-Post* as having said at a meeting:

> The dominion government thus did not need the endorsation of the South Saskatchewan river development association to begin work on the South Saskatchewan river. It has already decided to go through with it . . . a decision would be reached on where the dam on the South Saskatchewan should be placed. It would be on one of three sites between the Elbow and Saskatoon. As soon as the site had been finally decided upon contracts would be let, and work would proceed immediately.

Now, there was some dispute later about the accuracy of that report. It was one of those reports which the minister finds so often, in which he had not been correctly quoted. I have dozens. I am not going to talk about what the minister said any more. I am finished with that. I merely want to say that we in Saskatchewan are tired of having this thing trotted out before every election, and then when the election is over, we are blandly told that the time is not ripe; that it is not a national project; that the province is not prepared to assume its proper amount of responsibility, and so forth. So much for the speeches, and so much for the disappointments that we have suffered in the matter.

Now our desire, sir, for this project is, I suppose, born of the depression of the thirties. I think I am quoting the minister here again in a previous debate when he said that during that depression direct relief in Canada amounted to about $186 million. I am going to suggest that the $186 million would go a long way towards building this dam which, to a degree, would take the sting out of any subsequent depression in that part of the country. As the minister knows, and as the Saskatchewan members know, we had a world depression. During that depression eastern Canada suffered, western Canada suffered, as did many other countries.

Not only did the people in the prairie provinces suffer the results of a world depression, but they actually suffered hunger caused by drought. At that time we witnessed settlers

shooting their cattle because they could not feed them. I have seen a farmer go down to the station with a buggy and bring back one bale of hay in order to keep alive his last surviving cow from which he obtained milk for his family. When I talk to eastern people and eastern farmers about that particular event I find a lack of realization as to what the suffering actually was. I have seen, as other members have seen, those clouds of dust and those piles of soil accumulate day by day along the telephone poles. We have seen farmers in the southern part of the country loading their family and their small possessions on a hay rack, with perhaps a cow tied behind, heading north to find green grass and water. It just occurs to me here to mention in passing a thing which we have forgotten now, but fundamentally the power of mankind to survive on this earth depends upon the ability of the earth to produce that common and perhaps despised commodity grass.

However, that is enough of philosophy. It is said, and I do not know whether or not it has been proven but I think it has, that the weather is likely to go in cycles. At the moment, as everyone knows, we have an abundance of rain in Saskatchewan. Under the system in which we live, this has produced some of the economic problems from which we are suffering at the moment. But there is this to be said for the type of thing we have now as compared with what we had then: When there is an abundance of food, when there is an abundance of fodder for all the stock, then that type of depression, a depression without money, can be survived on the farm perhaps better than anywhere else.

But if one of these cycles of dry weather should come again, we want to be as well prepared for it as it is possible to be. Of course, that is one of the main reasons why we believe now is the time to build this dam, not at a time when dry weather is upon us. We want this irrigation. We want it for what it has done for Lethbridge. I was struck by what the irrigation project had done in that particular part of the country. I was struck by the diversification of farming there. I was struck by the fact that people now have smaller farms. I was struck by the fact that even if there were dryness in the surrounding area, there was a fodder belt in there that would supply feed for the surrounding starved-out districts. I was struck by the diversification of interests, like sugar beet farming and the substantial industry that has grown there in the fattening of cattle. We would like to have, in our section of Saskatchewan, some of the things that irrigation has done for Lethbridge and is in the process of doing for Medicine Hat.

Irrigation should bring about an increase in population as a result of the lessening of the size of the acreage held by individuals. Anyone who goes through these plains knows that the scarcity of population is one of the problems that increases our difficulty. We have a tremendous mileage of roads to keep up, even where there are few people. The few children here and there have to be provided with education. Either these little schools have to be kept open or transportation has to be provided for the pupils, as the case may be. The remedy, of course, is population. The population has been dwindling but it is beginning to pick up again. It did dwindle because of the mechanization of the farms, or automation, whatever you like to call it.

Then there is the question of diversification of farming, which I have just mentioned, the feeding of cattle, the growing of sugar beets. There is another thing that one might mention, namely, the attraction of a certain type of immigrant that we might be able to get into our country. I am not going to argue that the failure of immigration, or the comparative failure, this year is a failure on the part of this government, or what is its cause. But there is a fine class of people in northern Europe who would be attracted to an irrigated country, just as in the earlier days many United States citizens were attracted to southern Alberta because they had been accustomed to irrigation on their own farms at home, and were surprised to find they were able to purchase irrigated land at a much lower price than they had paid in the United States.

To my mind, irrigation which would come from a dam of the type desired would—and I have already suggested this—cause an economic stability of which we are not sure at the moment, because our whole economy has been geared to the production of wheat. Even that has failed us this year in that we have been unable to market wheat in the quantities that are satisfactory.

There is also the question of a feed bank. We talk about a bank for wheat, for cereals, for grain, but there is the other question of a feed bank for forage. I do not want to go into that. Some of my agricultural friends and experts in this particular party are much more familiar with it than I am, but I think it is a thing which should be mentioned. I had the unfortunate experience one winter, which I imagine the minister will remember very well, following the summer of 1919, when cattle were dying out there like flies because

they did not have enough to eat. A lot of people got them through the winter, but when they turned them out in the spring onto the dry grass lacking any nourishment, and with the heat of the sun, they simply wilted and that was that. People lost their herds and lost the money they had invested in them.

At the moment, sir, we have a fair start in industrial production in the province of Saskatchewan. It is a fact that is not generally well enough known in other parts of Canada. Certain factories are going to start operations this very year. For example, a pipe factory is to commence operations in the city of Regina. It is to manufacture pipe through which oil or gas may be conveyed. There is an undertaking to produce cement. These things are all tied in with the question of power and irrigation from the project that I have suggested. It is a common economic fact that power of any kind, and particularly cheap power, attracts industry. We have now, of course, a wider distribution of electric power and that process will go on. The distribution and transportation of natural gas, and oil discoveries which are now taking place, are making us at least a rival, if a small one, of our neighbouring province to the west. These things are going on and all of us are beginning to see a great new era for that province which up to a few years ago at least was regarded simply as a great plain where one grew some grain in the summer time and sat close to the stove in the winter time. That was about the only prospect we had. It was with those ideas and in that spirit that a good many settlers came to the province of Saskatchewan.

I am sure a good many of them came there away back at the time the minister came there—I am not suggesting that he or myself was one of those people—with the idea of making as much money as they could and getting away from there as fast as possible. Perhaps in one respect the fact that they were not too well off did us some good because it prevented them from moving out until they had an opportunity to establish worth-while homes, and now they have decided to stay and watch their sons under the new conditions of power, gas and electricity on the farms, and these things that I have mentioned, increasingly better roads, look upon that province as their home and reconcile them to living there with pleasure and with comfort, and with profit, too, may I say. If this government can get the wheat crisis cleaned up as soon as possible, conditions will be even better. Therefore, we need this dam; we need irrigation and we need the power.

I said, sir, that I was going to speak briefly, and I did mean that. Some millions of dollars have already been spent on the Saskatchewan river dam in surveying and in engineering, largely through the department under the minister. It is too bad that these moneys should be wasted. The results of their findings are upon the record. Previous to 1949, of course, we were told that the province would not have to spend a cent on this project. In the election promises and in others this was to be purely a federal matter and a federal expenditure, but subsequent to the election of 1949 we came back here to face a minister who smiled at us smugly and said: Well, of course, we could go ahead with this program. We have made arrangements. We are going to see what the province will do. I could go into a long story about that. *Hansard* reports are full of it. I shall refrain from doing that at the moment. In the course of the negotiations that have gone on since that time the province has become pretty heavily committed. I know that in a letter by the premier of the province to the Prime Minister an offer of $72 million was made as the provincial share. At that time the agreed-upon cost, in spite of the Hogg report which preceded it, was to be $135 million in all. Although I have not the figure I believe the province has increased its offer since that time.

In 1954 the minister said there were three main conditions necessary for the starting and the completing of this project. He said that the first one was an interprovincial agreement on the availability of water required for power and irrigation purposes. The first of those conditions was met. The prairie provinces water board agreed that there was plenty of water in the South Saskatchewan and its tributaries to supply water for the project near Outlook.

The second condition was a Saskatchewan commitment toward the cost of the dam. That was the statement at that time. It was to remove any suggestion that Ottawa was subsidizing provincial power production. I have already dealt with that. Letters from the premier of Saskatchewan to the Prime Minister of Canada have continually expressed nothing but co-operation and willingness to be counted in the project so that it could go ahead.

The third stipulation was a realistic estimate of the cost of the project. It is true that we had the Hogg report which was rather unfavourable and which added about $100 million to the cost that I have given, but that report was heavily discounted. It was discounted in this house by the minister himself who said, at least on one occasion, that

the cabinet had pretty well written off that particular report. We are then told that the negotiating committee set up by the federal government in conjunction with the provincial government had estimated the costs as follows: main reservoir and dam $80 million; irrigation system $35 million; the power plant $20 million, or a total of $135 million.

Someone might say, well, we have heard it said frequently in the house that the people of Saskatchewan are always complaining about something; they are always wanting something. Well, we are and I do not think that it is a bad thing or an unhealthy thing; but no one has ever suggested in this house or elsewhere that we have not done our share to build up this great country whether in public projects or by any other means. I do not care whether it is by means of war contributions, recruiting of men or payment through taxes to other projects in the country; I do not think anyone can say we have been niggardly in that regard.

When we mention projects like the Canso causeway or the St. Lawrence seaway we do it in commendation of these things. We are glad to see the nation prosper and we believe that through public investment the nation can prosper and that it cannot prosper without it.

I have now concluded what I wanted to say and I now move, seconded by the hon. member for The Battlefords (Mr. Campbell):

That the amendment be amended by changing the period at the end thereof to a comma—

Mr. Argue: The Minister of Agriculture smiles.

Mr. Knight:

—and by adding thereafter the following words: "and that consideration should be given to the advisability of proceeding with the immediate construction of projects in connection with which investigations have been carried out, such as the South Saskatchewan river dam and irrigation project."

Mr. J. G. Diefenbaker (Prince Albert): Mr. Speaker, the sub-amendment which has just been moved represents in reality one of the major questions dealt with by the Leader of the Opposition in introducing the motion yesterday on this question which is of such importance to Canada as a whole.

There is no need of saying what the South Saskatchewan dam and irrigation project will mean and what it will achieve in the days that lie ahead when drought returns once more to Saskatchewan. The arguments have been made over and over again and as far as I am concerned it is unnecessary to prove that goodness is good.

The whole proposition is one that has been pushed about by this government for a period of years. Postponement has followed postponement in relation to its consideration by subterfuge and excuses but until the last two days I doubt whether the people of Saskatchewan will have realized as finally as they now must realize that this necessary project has been written off by this government.

The Leader of the Opposition (Mr. Drew) dealt at some length with this project yesterday as he has dealt with it and supported it on many previous occasions. Indeed, I was rather surprised to hear the hon. member for The Battlefords speak as though he had suddenly made a great discovery that the Conservative party was now supporting this project, a project which this party has supported for many years. Over and over again it has been included in the party platform and over and over again it has received the approbation and firm support of the Leader of the Opposition and the vote of each and every hon. member in this party from the Atlantic to the Pacific.

An hon. Member: That does not take in very many.

Mr. Dinsdale: Quality, Jim; real quality.

Mr. Diefenbaker: Having said that, I want to make reference to the fact that the Prime Minister (Mr. St. Laurent) was here yesterday while the Leader of the Opposition was speaking. I realize that the Prime Minister cannot continue to be in the house with all the responsibility that faces him but I do believe that the Prime Minister owed it not only to the people of Saskatchewan but to the people of Canada as a whole to have spoken in this debate and allowed Canadians to learn something of the concept of this government relative to this most important subject contained within the resolution.

As a matter of fact, this has been a campaign of silence on the part of the government in the face of the advancement on the part of the opposition of a policy which is necessary to Canada today and which is not one that advocates the expenditure of money without dividends in the national development.

I think the people as a whole are becoming tax conscious and do not want unnecessary expenditures made. Expenditures for national development are self-liquidating in that they produce a return far above what the actual expenditure amounts to.

I was rather amazed at the speech of the hon. member for Charlotte (Mr. Stuart). I think Canadians as a whole, and I have found this to be true as long as I have been a member of this house, do not endeavour to look at problems from a parochial angle. Each citizen endeavours to join together in

a common effort to build all parts of Canada. I should like to have heard the hon. gentleman advance something in the nature of what the maritimes are asking for, with something of the vision of the maritime members who have spoken during this debate. Instead of that he resorted to a discussion of trivial matters that in no way are of interest to Canadians as a whole.

What of the maritimes? Well, I have visited the maritimes on a number of occasions and have tried to understand something of their problems and something of the need of power development in the maritimes in order to equalize those advantages which central Canada has which are natural to the geographic location of Ontario and Quebec.

I was very much taken by the move a year or so ago for the formation of an Atlantic province economic council and also by the report that was made by Dr. A. G. Christie in which he advocated the pooling of all existing electrical generating systems in Nova Scotia and New Brunswick under a joint power authority, something much in the nature of the plan advocated yesterday on a national basis by the Leader of the Opposition. Under this plan, under this merged system plan, the encouragement of new industries by the providing of reliable electrical and power services at favourable rates would be established. Steam plants would be established in the province of Nova Scotia by reason of the coal that is waiting there for a market, and in the province of New Brunswick there would be hydroelectric developments.

I believe that something in the nature of what is described by this resolution must come about because we are not equally endowed with power potentialities in all parts of Canada. I believe that under this resolution consideration could be given to bringing power to industry. As the Leader of the Opposition has said, today industry goes to power; but I believe that in the new atomic age which we are entering at the present time power will be taken to industry. I am one of those who believe that in certain parts of Canada, the maritimes in particular, atomic energy plants for civilian purposes should be a matter of primary consideration, in addition to the production of power through the medium of coal and hydro sources.

In other words, there should be a national vision to equalize opportunity everywhere in Canada and to enable the building of this nation in the face of the challenge referred to today by the hon. member for Nanaimo (Mr. Cameron). The hon. member spoke of the challenge of the U.S.S.R. in the economic world and how socialism provided the answer. I do not want to get into any argument in that connection, but let me tell my hon. friend that that is the same unrealistic attitude we heard in Saskatchewan. For many years we had theoretical socialism, but when it came to the development of our resources the government of that province, after having entered into various industrial activities quite unsuccessfully, having produced for years but without profit—we got neither—finally decided to invite capital into the province to develop northern Saskatchewan.

When my hon. friend speaks of the challenge of the U.S.S.R. let me say that this industrial challenge is going to be a tremendous one for every part of the free world. The reason is the serf-like wages that are paid, the fact that the agriculturist is required to turn his product over to the state at whatever the state determines, the fact that there is tyrannical control over the hearts of men with each man being a robot under the control of the state. Certainly the U.S.S.R. with its resources and the vast developments which are taking place in connection with power, particularly the establishment of nuclear plants, represent a challenge.

For that reason this resolution more than ever before is of first importance. It is one that affects the people of Canada as a whole. There should be a united people in a great national crusade for the development of Canada to the end that to a greater extent than ever before we in Canada will be developing our own resources here rather than shipping our raw materials to the United States and thereby exporting employment from this country.

I believe in this resolution. It is one that deserves more than the attitude of silence taken by the Prime Minister (Mr. St. Laurent) and his ministers. It is one that deserves the serious attention of parliament. It has been dealt with throughout in an objective manner, with one exception. I think the ministers owe something more to parliament than to adopt the aggressive silence which this resolution has met. I could say much more, but I know the hon. member for Yukon (Mr. Simmons) wants to give a message and for that reason I shall discontinue now.

Mr. J. A. Simmons (Yukon): Mr. Speaker, any discussion on the use and conservation of water across Canada would be incomplete without reference to the water resources of the Canadian northwest, particularly those of the Yukon Territory and northern British Columbia. The natural resources of this northwest area, surrounded on the north and

west by Alaska, are minerals, forest cover and water power; they are linked together in the development of the country. In their beneficial development, these resources are all closely associated because low cost power is an essential agency for the economic development of the mining and forest resources.

Not only will electric power from water power sites in our northwest permit the processing of local ores such as those containing silver, lead, zinc, copper, iron, asbestos, etc., but the potential amount of power is so great that it will attract to power sites in the northwest other ores from various parts of the world, including cobalt, bauxite, nickel and titanium.

As most hon. members of this house know, the Northwest Power Industries Limited, a subsidiary of Ventures-Frobisher-Quebec Metallurgical Industries Companies, has been engaged for three years on engineering investigations and surveys of the power potentials of the upper Yukon river waters in the Yukon and northern British Columbia. Information required for the first million horsepower will be pretty well obtained by the end of this year. It discloses that between 4,300,000 horsepower and 4,900,000 horsepower can be developed from the Yukon watershed in power plants that can be built south of Atlin lake.

Power from these plants can be transmitted without difficulty some 45 miles to industrial sites on the Taku river—and as required 360 miles, without difficulty, to the Canadian port of Alice Arm—and to other industrial sites throughout the northwest.

All the investigations and plans have strictly conformed with the Canadian government policy as announced by the Prime Minister (Mr. St. Laurent) and the Minister of Trade and Commerce (Mr. Howe) from time to time in this house, that water power from Canadian waters must be developed in Canada and is to be used in Canada to the fullest extent possible.

In addition to the Yukon river project there are other power resources in the northwest in the watersheds of such rivers as the Liard, Stikine, Dease and the Nass river. All these permit major development.

In fact preliminary investigations reveal that this particular area might afford 6 million horsepower and the Nass river area another half million. This is in addition to the upper Yukon river watershed.

At six o'clock the house took recess.

AFTER RECESS

The house resumed at eight o'clock.

Mr. Simmons: Mr. Speaker, in continuing my remarks, which were interrupted at six o'clock, I should like to say further that there are the power potentials of the Peace river near Finlay Forks and of the Stuart and Babine rivers, these latter being in the vast drainage system of the large lakes of central British Columbia comprising Stuart lake, Trembleur lake, Takla lake and Babine lake. I think it can be stated that the water power resources of our Canadian northwest are greater than the most optimistic estimates made so far. There is every reason to believe that the value of water power and its place in the development of Canada's natural resources will greatly increase over the next 20 years. I am sure that this is one of the things that will be mentioned in the Gordon royal commission report.

The value of waterpower to Canada in dollars and cents will not only be evident in connection with our own resources but the availability of large blocks of power will bring to Canada for processing raw products from all over the world. What an assured future Canada has if she realizes the potential treasures she has in her vast water resources. You can readily see that the northwest has the largest water potential on this continent, so far as I know.

If our resources in the north are to be developed then our resources must be looked upon with more vigour than has been the case heretofore. Canada should, therefore, adopt a policy with regard to the northwest and the rest of Canada's northland which will engender a gradual shift of transportation, population and industrial growth to the northward. Only when this has been recognized and achieved will an adequate development of our resources be realized. If serious consideration is not given to this proposed project it is quite conceivable the result will be that the development of our hydroelectric potential and consequent economic expansion of the whole area through the development of its resources will be retarded for years, if not for generations.

It does not take too active an imagination to appreciate the contribution to the permanent economy of the northwest that a project such as that envisioned by the Frobisher group would make. Neither does one have to indulge in extravagant dreams to visualize what great economic developments would redound to Canada's northwest from future development of this region's natural resources. We need new vision and understanding of what the northwest can mean to our future

as Canadians and to the future of free mankind. We want policies to roll back the frontiers of this country and give Canada depth as well as breadth.

I am informed by Northwest Power Industries Limited that their field work will continue in 1956 to complete the detail surveys necessary for the objective I have outlined in anticipation of commencing actual construction of the first stage of the project in the Taku river area in the not too distant future. Field work planned will include checking of triangulation work, soundings of the Yukon river through Miles canyon and further surveys on the Nakonake river. A large expenditure will be made on diamond drilling on the Miles canyon dam site, at the tunnel entrances, and on the Nakonake river power house site. Sample of borings made will be obtained and studied. It is expected that by the fall of this year the survey period of the Yukon river power project that is necessary to begin construction will be completed.

It is my understanding that a preliminary study by Northwest Power Industries has revealed the Nass river as the most promising interim power area, and surveys will also be undertaken there this coming season. Its power potential is limited but it will be possible to transmit power as required from the Yukon project to the Nass river area. The Nass river project will not in any way prejudice the Yukon project but is insurance that Canada will not lose prospective power customers if there is delay in Yukon power being made available.

There is an important essential in the ordinary development of our water power and that is the rapid obtaining of hydrometric data. The flow of northern streams must be recorded accurately and over as long periods as possible. This means that water readings sufficient for safely estimating power potentials should be under way in adequate scope over all our important streams in the northwest that give promise of water power development. There is no use waiting until interest develops in any particular watershed because it is then too late for any long-term records. This is where I think Canada has been backward and there has been a tendency to wait for a demand for vital information while this should have been available and have been collected over the years.

No one fully familiar with the requirements of power development will question this viewpoint. Personally, I doubt if there are more than two major streams in the northwest out of seven or eight where there is sufficient hydrometric data for a private company or a government owned company to actually determine the amount of firm power available in any watershed. The excellent work being done by the Department of Northern Affairs and National Resources in the hydrometric field is acknowledged but the data is greatly restricted by insufficient money being voted in this house. I would say that the small amount of funds available for hydrometric work across Canada in the coming year will probably be about one-third of what it should be.

We should have a balanced inventory of our national resources with respect to what we have in the way of minerals and forest products, base metals and chemical resources and construction material, and we should also have comparable information as to where necessary water power or power from thermal units can be obtained. In conclusion I should like to say that I believe the Department of Northern Affairs and National Resources, which is responsible for the administration of the territories, has vision in carrying out its responsibilities in the development of the northern territories, and I know that the present administration has this forward vision and realizes how important it is for Canada that these northern areas should be developed.

The Frobisher plan will develop the vast known resources of the Yukon territory and northern British Columbia for the benefit of the Dominion of Canada as a whole. Consider the development of timber resources, with ample power to operate pulp and paper mills and the development of mineral deposits in the northwest and from places around the world by the utilization of lost-cost power for smelting and processing ores. Yes, Mr. Speaker, we have a wonderful future in Canada and the northwest.

Right Hon. J. G. Gardiner (Minister of Agriculture): Mr. Speaker, I had not intended to speak on the question had it not been for the movement of the subamendment. The reason I had not intended to speak was that in the amendment itself there is no mention of the South Saskatchewan river project. Therefore I did not think it necessary to say anything on the main amendment, but in the subamendment moved by the hon. member for Saskatoon (Mr. Knight) and seconded by the hon. member for The Battlefords (Mr. Campbell) the question of the South Saskatchewan is brought before the house. The subamendment reads as follows:

> . . . that consideration should be given to the advisability of proceeding with the immediate construction of projects in connection with which investigations have been carried out, such as the South Saskatchewan river dam and irrigation project.

There are only one or two remarks I wish to make. The first one is that in the discussions that have taken place in relation to the South Saskatchewan river project sums have been mentioned running from $135 million to $160 million as being the cost of the project that has been under consideration. I only wish to state with regard to that that the use of these sums in discussing the question would be somewhat of an argument in the minds of many people to the effect that the project should not be proceeded with.

As a matter of fact, the amount of money involved is just about half of the higher figure. It is $82 million, and I do not think anyone discussing this matter should take it for granted that it is going to cost $160 million. The discussions are all on the basis of $82 million. The figure of $82 million has been established as the cost as nearly as any cost can be established, and it is known to the government that there are those who would undertake to construct the project at that cost. Therefore there is no reason to discuss any higher cost in connection with it.

Mr. Ellis: All the more reason for starting it now.

Mr. Gardiner: Well, there is no reason for discussing any higher cost. Discussing a higher cost can only result in there being some opposition where there otherwise would be none. My main reason for rising, however, is to call attention to the fact that the matter has already been considered and also to call attention to the fact that in the estimates which are before this house now there is a vote for the South Saskatchewan river project.

Mr. Diefenbaker: How much?

Mr. Rowe: After a quarter of a century.

Mr. Gardiner: I also want to indicate to the members of this house that in my opinion this amendment to the amendment is out of order.

Mr. Rowe: The dam is out of order. It has been out of order for 20 years.

Mr. Gardiner: I am not raising the point of order in order to avoid indicating to the house and to the country how I would vote or how I intend to vote if the amendment to the amendment is placed before the house. It is typical of amendments which are put before the house in the province of Saskatchewan. I have been there myself when they were put before the house and when, as premier of that province, I was obliged to handle them. During the period in which the present premier has been in office he has been obliged to handle them on a number of occasions because they were brought forward by the party to which I belong in Saskatchewan. On every occasion on which an amendment of this kind has been made on a motion to go into supply, it has always been taken as a vote of want of confidence in the government, whether it was in Saskatchewan or whether it was in this house.

Mr. Nicholson: Not always.

Mr. Gardiner: There was one occasion when it was not so, and what did my hon. friends say about it? At the time it was being discussed in this house they said that they were only asking the government to consider it. Then when the government, after considering it, decided not to do it, they went around the country telling people that the house had voted for it and that the government had refused to do it. I have no doubt that is what would be done in connection with this very motion if it were placed before the house now. But I only want to say that if it is placed before the house it is my intention to vote confidence in the government and to vote against the amendment to the amendment. It is not my purpose to avoid indicating to the house and to the country what I think of the amendment to the amendment but I simply wish to say that at page 132 of the estimates there will be found an item indicating what the vote of $7,050,000 has within it for the project. The item reads, "South Saskatchewan river development, $500,000".

Mr. Diefenbaker: Five hundred thousand dollars!

Mr. Gardiner: My hon. friend who is probably more concerned with the matter than is any other member of the official opposition looked across the aisle and said, "$500,000". If he will look—

Mr. Rowe: It is a 20-year start anyway.

Mr. Gardiner: It is a fairly good start.

Mr. Rowe: After 20 years, yes.

Mr. Gardiner: If the hon. member will look at page 7, he will find item 42, which reads, "Major irrigation and reclamation projects in the prairie provinces, $7,050,000". There is in the estimates an item which indicates that the government has already considered this matter.

Mr. Rowe: Mr. Speaker, it is 8.15 p.m.

Mr. Gardiner: There is an item in the estimates under which the whole question can be discussed in this house when the estimates are before the house.

Mr. Rowe: Mr. Speaker, it is now 8.15 p.m.

Mr. Speaker: As it is 8.15 p.m., it is my duty to interrupt the proceedings and to put the question to the house.

The house divided on the amendment to the amendment (Mr. Knight) which was negatived on the following division:

Mr. Gillis: May I announce that I was paired with the hon. member for Vancouver-Burrard (Mr. MacDougall). Had I voted, I would have voted for the amendment. I might add that the hon. member had to go into the hospital this evening.

Mr. Speaker: The question now is on the amendment to the main motion.

Those in favour of the amendment to the main motion will please say yea.

Some hon. Members: Yea.

Mr. Speaker: Those against will please say nay.

Some hon. Members: Nay.

Mr. Speaker: In my opinion the nays have it.

And more than five members having risen:

Mr. Speaker: Would hon. members consider that their members have been called in for the purpose of this division?

Some hon. Members: Agreed.

Mr. Gillis: Mr. Speaker, I was paired with the hon. member for Vancouver-Burrard (Mr. MacDougall). Had I voted I would have voted for the amendment.

Mr. Speaker: Just at 8.15 there arose a very peculiar situation. The Minister of Agriculture (Mr. Gardiner) in making his speech did indicate to the chair and to all hon. members that the amendment to the amendment which has been voted upon a moment ago might be out of order. Hon. members have noticed that notwithstanding his remarks to that effect, that it being 8.15, as soon as the Clerk announced the time to me I put the motion before the house.

There are hon. members who may feel that, if an amendment is out of order, some action be taken by the chair before the vote is put to the house. Well, I did not do anything this time because I thought that there was no time left for me to make a judgment.

Standing order 56, paragraph (d) says:

If any amendment be under consideration at 8.15—

And then further down it says:

Mr. Speaker shall interrupt the proceedings and forthwith put the question on any amendment or amendments then before the house.

Now, "if any amendment be under consideration"—is it under consideration from the point of view of its merits or under consideration from the point of view of order? Hon. members must not forget that if at 8.15 a point of order is under discussion no time is left for me to do what is prescribed by standing order 12. I am in a most peculiar position and this is a case which I think will have to be considered by all hon. members, and that is, if a point of order is raised with respect to an amendment and 8.15 arrives and the Clerk announces to me that it is 8.15, if I am to deal with the point of order I will have to comply with the provisions of standing order 12 paragraph (1):

In explaining a point of order or practice, he shall state the standing order or authority applicable to the case.

There is also the provision which is understood by hon. members as being compulsory on my part. As far as I am concerned I do not think I have to listen to hon. members who want to make representations, but I consider that it is better that I do listen to representations. If the representations that are being made to me do not convince me and I rule an amendment out of order, hon. members still have the right to appeal my ruling and therefore a vote might take place on that appeal and then later we come finally to whatever may still have to be done by virtue of standing order 56 (5) for the house to decide.

Now, I want to consider that situation further but it seems to me that any time there is a ruling for the Speaker to decide before 8.15, it would be much better that time be given to him for that purpose.

Mr. Knowles: Mr. Speaker—

Right Hon. J. G. Gardiner (Minister of Agriculture): Mr. Speaker, I was not going to raise any question of order because I know according to the rules that you were right in what you did. I understand the rule says that if the Clerk declares it to be 8.15 a vote is to be taken but I was looking at the clock in front of me and I would suggest that the clocks be put at the same time the Clerk has, in other words that the clocks be synchronized, because I stopped at 14 minutes past on the clock in front of me, not 15 past.

Some hon. Members: Sit down.

Mr. Speaker: Perhaps I might remind the Minister of Agriculture (Mr. Gardiner) that the first time we took a vote according to the limit provision of these standing orders I did indicate that my clock did not correspond with the clocks around this house but with the clock of the Clerk, because I foresaw that these clocks might go out of order.

Mr. Gardiner: That is quite all right and I am not complaining at all. You decided it correctly—

Some hon. Members: Oh, sit down.

Mr. Gardiner: —I am only saying that I would like to have the clocks right.

Mr. Fleming: See the Minister of Public Works about it.

Mr. Fulton: It is more important that you be right.

Mr. Knowles: Mr. Speaker—

Mr. Daniel McIvor (Fort William): Mr. Speaker, before the hon. member speaks I rise on a question of privilege.

I should like to congratulate the official who announced so clearly and without a mistake the names of the hon. members in the house notwithstanding the stares and the homely looks on our faces.

SUPERANNUATED CIVIL SERVANTS—REQUEST FOR INCREASE IN PENSIONS

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, I rise to take advantage of the privilege afforded by the rules to raise a grievance. Before I do so, Mr. Speaker, perhaps I might be permitted to say that if there had been any discussion on the point of order suggested by the Minister of Agriculture some of us would have taken part in that discussion; indeed I certainly would have raised the question as to how there could be any relationship between the small amount of money in the estimates under the heading of the South Saskatchewan river and the subject matter of the sub-amendment which called for the construction of the project itself.

Some hon. Members: Order.

Mr. Knowles: Mr. Speaker, the grievance I rise to state is the closed mind and the stubborn attitude of my otherwise genial friend, the Minister of Finance (Mr. Harris), in relation to the question of pensions of retired civil servants.

The reasons I raise this matter at this time are several. I need not remind hon. members that I have been concerned about the question for a long time. In addition, certain answers have been given to me recently by the Minister of Finance which would suggest that no consideration is being given to this

important matter. Also there have been placed on *Hansard* figures indicating the number of retired civil servants and the number of widows of retired civil servants who are having to live on very small pensions. Then I have in my hand a copy of the *Times Weekly Review* of London, England, for Thursday, February 9, 1956, which records that action has been taken yet again at Westminster to increase the pensions of civil servants and others previously retired.

On a good many occasions I have argued this matter with the present Minister of Finance, with his immediate predecessor and with his predecessor before him in an effort to make the point that it is not a unique suggestion to propose that pensions of persons previously retired, even though those pensions measure up to the contracts under which they were employed, should be increased if in the meantime the cost of living has gone up and the position of those pensioners has thereby been worsened.

During the course of my remarks I shall support the arguments I have made by a reference to some of the arguments that have been made in the United Kingdom parliament, but first may I remind the minister again that many other jurisdictions have taken action on this important issue. Not so long ago the government of the very province in which we are physically located at the moment, the government of Ontario, increased the pensions of retired school teachers. At least two other provinces of this country have increased the pensions of their retired civil servants, particularly those in the lower brackets.

In the United States the federal government has taken action along this line on several occasions, as have many of the individual state governments. For example, I have in my hand a page from the Boston *Herald* of Tuesday, July 26, 1955, recording action taken by the legislature of the commonwealth of Massachusetts increasing the pensions of retired civil servants where those pensions are under the $2,000 figure. One might also refer to a few instances where private employers have taken action to increase the pensions of persons previously retired.

I have had occasion to mention previously, and I mention it again tonight with a considerable sense of pride, the union to which I happen to belong, the international typographical union. That union has a contributory pension plan for its members. The pensions paid to retired members of that union across the past number of years have been increased considerably. In fact in the past 12 or 14 years pensions have been more than doubled. That increased rate of pension is paid not just to those who have retired recently and who on a percentage basis have made a higher contribution; that pension which is more than double what it was 12 or 14 years ago is also paid to those who were retired 12 or 14 or 20 years ago.

There are many jurisdictions which recognize the problem, which recognize the moral responsibility of the employer or whatever body is paying the pension, to face up to the fact that increases in the cost of living have taken place and something has to be done by the employer or by the person or organization providing the pension.

I said that the Minister of Finance has indicated, along with his genial nature which is well known to all of us in this house, something of a closed mind on this question. He will recall that on January 25 of this year, as recorded on page 546 of *Hansard*, I asked this question:

> Has consideration been given, at any time since the end of the 1955 session of this house, to increasing the pensions of retired federal civil servants, particularly those whose pensions are in the lower and middle brackets?

The minister's answer was a very simple one, just one word, no. I also asked the minister if the matter was now under consideration by the government and I got the same answer, no. A week later in another connection, referring to the fact that the government seemed to be recognizing that the increased cost of living and other factors made it desirable to increase the scale of wages and salaries of civil servants, I asked the minister whether the same considerations would lead the government to review the matter of increasing the pensions of retired civil servants. I got the same answer, as will be found on page 708 of *Hansard* for January 31, 1956, where the minister is recorded as follows:

> I answered it last week, but if the hon. member wants another answer the answer is the same this week.

In other words, not only is nothing being done, the matter is not even being considered. This is the attitude of the government despite the fact that according to figures which were placed on *Hansard* on February 1, 1956, in answer to certain questions of mine, to be found at page 785 of *Hansard*, there are 1,814 retired federal civil servants whose pensions are less than $40 per month. In addition there are 3,297 widows of federal civil servants whose pensions are less than $40 a month. If I may go to a higher bracket in making my computation, and still using the figures to be found at page 785 of *Hansard* for February 1, I would point out that there are 3,537 retired civil servants whose pensions are less than

$60 per month, and 4,911 widows of retired civil servants whose pensions are less than $60 per month. In other words there is a grand total of pensioners and widows of 8,448 whose pensions are less than $60 per month.

It seems to me that the minister and the government generally have taken the attitude that these speeches by the member for Winnipeg North Centre on the question of pensions for retired civil servants are just something they have to take like a gadfly that keeps biting a few times each every year but for which the government has a certain salve to put on the bites and somehow or other they can take it. I raise this matter very seriously and I raise it in the earnest and confident hope that one of these days the point of our appeal will be driven home to the government, that one of these days the government will recognize the justice of the claim of retired civil servants for increased pensions and that something will be done about it.

I could take more time of the house to tell the story of what has been done in some other jurisdictions but I shall confine myself tonight to a few references to what is being done and what has been done and said in the House of Commons at Westminster.

As I said, I have before me a copy of the airmail edition of the *Times Weekly Review* for Thursday, February 9, 1956. There is reported in this issue the fact that on Monday, February 6, there was published at Westminster another pensions increase bill which will have the effect of increasing the pensions of about 400,000 retired public servants and members of the armed forces. The article to which I refer can be found on page 10 of the edition I have in my hand, and it indicates that these increases will be of the order of from 6 to 10 per cent and that the only basic condition that has to be met before a person can qualify for the increase is that he be over 60 years of age.

The article is very interesting as a matter of fact, being what it is, namely, a report of a bill that has been introduced at Westminster which, in addition to the increases it provides, removes some of the restrictions that were imposed on pensions increases in earlier bills introduced at Westminster. In other words, at a time when my otherwise genial friend the Minister of Finance can only say one word, no, no, no, at Westminster they are becoming more generous in their treatment of their retired civil servants and those who are retired from the armed forces.

The only restriction on the increases proposed in the new bill is that there is a maximum that one can receive by way of an increase. Again hon. members will appreciate that whether it is 6, 7, 8, 9 or 10 per cent depends upon the category in which the pensioner finds himself. Corresponding to these categories there are absolute limits of £60 to £100 a year. In other words, some pensioners might be in a very high bracket and a 10 per cent increase would result in something more than £100 per year. In their case the increase would be only £100 per year or $280 to $300, according to the rate of exchange. But apart from that limitation as to an absolute amount the bill wipes out a number of other means test provisions and other restrictions that have been in the pensions increase legislation in the United Kingdom for some considerable time.

I submit, Mr. Speaker, that if this kind of thing can be done again and again at Westminster it is not just an academic matter I am raising here from time to time but rather that there is definitely a moral obligation on the government to face up to this issue. May I point out that, although there is quite a long history in the United Kingdom in the matter of pension increases, the most interesting part of it, the part that has the greatest relevance for us, relates to the last 12 or 13 years, and I ask the government and members of the house who are interested to note this. A pensions increase bill raising the pensions of those already retired was passed at Westminster in 1944 when, as hon. members will recall, the government was a wartime coalition government under the prime ministership of Mr. Churchill. The next time that there was a pensions increase bill was in 1947 when the government at Westminster was a labour government and Mr. Attlee was the prime minister. The next increase came in 1952 when the government was a Conservative government and Mr. Churchill was the prime minister. Now in 1956 we have another pensions increase bill under a Conservative government headed by Prime Minister Sir Anthony Eden.

There you have in effect four different governments but in each and every instance something is done to deal with the plight of retired civil servants who find the value of their pensions decreasing as the cost of living goes up. I was interested in going through some of the *Hansard* debates, to which I have been able to refer in my study of what has gone on in Britain, to discover the difference between the answers one gets here and the answers one gets in Britain. For example, recalling the fact that the Minister of Finance can stand up so easily and just say no when one asks for something, look at what occurred on November 28, 1946, as found in column 1782 of the *Hansard* of the United Kingdom

House of Commons. This is during the question period too, Mr. Speaker, and this is what I find under question No. 69:

> Major Mott-Radclyffe asked the Chancellor of the Exchequer when legislation to amend the Pensions (Increase) Act will be introduced.

The chancellor of the exchequer, like the Minister of Finance, answered with one word. But his one word was, "Today". What a difference in what happens over there.

Mr. Harris: That was not a planted question, was it?

Mr. Knowles: No, it was not. It was as much a surprise to that member as it would be if it took place here. I have been making some reference to what happened in the United Kingdom and I should like hon. members to note this, that the basic principle of providing increases for civil servants because of the increase in the cost of living was established by the wartime coalition government in 1944. I have been particularly interested in the length of time that was spent by the British House of Commons debating the government's bill on that occasion. In this house we all know, because we are reminded of it many times, that debates are handled much more expeditiously in the United Kingdom parliament than they are here. We have been told repeatedly how debates on the address can be handled in a day and a half and so on. I ask hon. members to note this, that in 1944—and members will recall the seriousness of the war situation at that time—the debate on the government's bill to increase pensions occupied 210 columns in the British *Hansard* over several different days. I give that figure because, as hon. members know, the British *Hansard* is numbered by columns rather than by pages as is ours. But there are two columns to a page and 210 columns works out to 105 pages.

That is a mark of the seriousness with which members of the parliament of the United Kingdom faced this problem right in the midst of the difficult days of the war in 1944. They occupied 105 pages dealing with the question of increasing the pensions of retired civil servants. Why did they take so long? Because, despite the improvements that the government of the day was proposing in the pensions of retired civil servants, the members were not satisfied. Members of all parties felt that something better should be done and a good deal of the argument turned on such things as means test provisions and other restrictions that were still being imposed on retired civil servants and other pensioners of the United Kingdom.

I feel that not only should I give the house the type of statistics I have listed indicating the time and attention given to this question in the United Kingdom but I should also like to quote one or two excerpts from speeches made when the 1944 pensions increase bill was introduced. It was, of course, introduced by Sir John Anderson who was then chancellor of the exchequer. In column 1761 of the British *Hansard* for March 3, 1944, he said this:

> The measure which I have to submit to the house carries out a promise made by me on 3rd December last, in the course of the debate on the address. The amendment which was then under discussion proposed that state and local government pensions should be increased to a level corresponding with the increased cost of living. I said, in the course of the statement which I made on that occasion, that, in the view of the government, the arguments for and against doing something were still fairly evenly and nicely balanced, but, on the whole, the government considered that there was a case for some action. I made it perfectly clear that the government would concentrate attention on cases of what I described as "real, grave hardship".

The chancellor at that point went on to quote from something which he had said earlier but he proceeded to make it clear that, although there were arguments pro and con, particularly in time of war, nevertheless the government accepted the fact that it had a moral obligation to be concerned about the position of those who were suffering real and grave hardship because of the smallness of their pensions. I submit, Mr. Speaker, that everything that was said about real and grave hardships on the part of pensioners in that country and everything that would apply to the situation over there now applies with equal force here, if not more so. I submit that the people to whom I have referred in my statistics as to the numbers who are drawing these small pensions are people who are suffering real and grave hardship and that the government owes to them serious consideration of their position.

I should like hon. members to listen to another few sentences which were spoken during the course of this debate. This time I am free to admit that I am quoting a labour member of the House of Commons but he was a member who was supporting the coalition government of the day and he was actually speaking against some of those independent souls around the house who were trying to persuade the government to do better than was proposed in the house. The labour member whom I am quoting is Mr. Pethick-Lawrence, and he had this to say. It is to be found at column 1777 of the United Kingdom *Hansard* of March 3, 1944:

> I would like now to say a word on the broad facts. I am in agreement with the Chancellor of the Exchequer that—

I ask both the Minister of Finance (Mr. Harris) and the Secretary of State (Mr. Pinard) to listen to this.

—legalistically interpreted,—

This is their language.

—the public pensioner has no precise right to any increase in his pension. The strict law of his contract has been kept,—

How many times has my hon. friend and Mr. Abbott before him and Mr. Ilsley before him said that?

Mr. Harris: Not I.

Mr. Ellis: You just say no.

Mr. Harris: I just said no.

Mr. Knowles: My hon. friend has not put all of those words in his own mouth. He has either said no or he has said, "My position is that of my predecessor". In answer to that position let me continue with my quotation:

—but the fact is that underlying all contracts for payment at some future date there is an assumption, unwritten and unspecified, but nevertheless implied. That is the stability of the purchasing power of money. Unless this is substantially maintained all time-contracts are meaningless.

I commend the entire column or two from which I am now quoting to the Minister of Finance, the Secretary of State and all others who have to deal with this matter, for Mr. Pethick-Lawrence goes very fully into this whole question of pensions being based on contracts and lays it out, in my view, very well that one cannot contend that a contract has been kept if the cost of living has been permitted to rise. Further down he says this. I am still quoting Mr. Pethick-Lawrence:

There is this further point when we are dealing with employees of the state. A private employer may argue that he had nothing to do with fixing the value of money, that it is an act of God so far as he is concerned, God being the state or possibly the Chancellor of the Exchequer.

It is too bad that he does not say "the Minister of Finance" so that it would come a little bit closer to home but I am sure the connection is not overlooked. I continue the quotation:

When the state makes a contract, however, it itself has the power of altering the value of money, and, therefore, the state cannot quite get away with that excuse. Therefore, I have come to the conclusion and I think it is the same conclusion to which the Chancellor has come, although he may not have put it quite so bluntly, that in equity the state must review its contracts to meet the situation.

Mr. Speaker, that is exactly what I asked Mr. Ilsley to do many years ago. That is exactly what I asked Mr. Abbott to do every year that he was minister of finance. That is what I am still asking the present Minister of Finance to do, namely to review these contracts, to recognize the principle of equity and to do something to meet the situation of our retired civil servants.

I know, Mr. Speaker, that there are those who think that this is just that same old speech being made over again but even Your Honour will admit it is a different speech although it is on the same subject. I know there are those who say, "We are going to have to listen to these speeches as long as the hon. member for Winnipeg North Centre is here." There is one way in which the government can put a stop to the making of these speeches on behalf of the retired civil servants and that is by doing justice to them and bringing in a measure or putting in the estimates at this session an item that will provide for an increase in the pensions of these people and put them on a basis whereby they can cope with today's cost of living.

Let us not hear any more the argument that the government must concern itself with what other employers are doing. I know that the government sometimes takes the view that it must not be the best employer in the country. It should not be the worst either. But I am not satisfied even with the idea that the government should be an intermediate kind of employer. In my view the government as an employer should lead the country, should be a model employer and in this matter should give a lead to other employers and other jurisdictions. Let it not be argued that the old age security pension without a means test takes the place of an increase in these pensions. Other people obtained the old age pension without a means test in addition to whatever other income they had or whatever income they may earn. That is no answer at all to this problem. As a matter of fact, so far as the old age pension is concerned, the Minister of Finance knows what I think should be done about it. I believe the amount of that pension should be increased as well. We shall deal with that matter on another occasion. For the moment we are dealing with this specific problem, namely the plight of our retired civil servants. As strongly as I can I put it to the minister that he should not let another session go by just sloughing the matter off by making the same old answer. This session apparently—and I hope it is true—there is going to be an increase in civil servants' salaries. That is fine. One of the reasons for it is the greater productivity of the country. Another reason is the increased cost of living. Those same reasons make possible and make necessary an increase in the pensions of retired civil servants. I call upon the minister and the government to give the lie to my opening words, when I said that the minister has a closed mind or is stubborn.

I hope the minister will show that such is not the case. I call upon him to take action upon this important issue at this session of the house.

Hon. W. E. Harris (Minister of Finance): Mr. Speaker, at the moment I do not propose to debate the question with my hon. friend but, as he considers it to be a matter of some moment and as this is the time for the mention of so-called grievances, it would be appropriate for me to say that I shall be glad to consider the arguments he has made and to consider the principles which he says were acted upon in the United Kingdom. At the same time, of course, I will not say more than that the situation may well be entirely different. However, that would be only a matter of detail.

I appreciate the opening remarks about myself. It really does not matter whether the hon. member calls me genial, stubborn or one having a closed mind. I shall discharge my duty by considering what he said and will give him an answer on another occasion.

Mr. E. G. Hansell (Macleod): Mr. Speaker, I do not intend to take much time, and I may say that I am speaking entirely extemporaneously.

I am wondering why the hon. member who introduced this subject confined his remarks particularly to the civil servants. I do not think he intended to necessarily. I think we can say that the financial policy of the government over the years has been of such a nature that people now retiring with pensions that were at the time of contributing equal in purchasing power to what they expected would give them a fair living, have depreciated considerably so that today the dollar value of the pension has seriously diminished. Now, that of course applies to all pensions, civil service or otherwise.

I know that the Minister of Finance (Mr. Harris) perhaps is directly responsible for the civil servants of Canada but because of financial policies that have been pursued the minister is responsible to the entire population of Canada and, in respect to the matter under discussion, all people who may be living on pensions resulting from contributory schemes. I have met retired bank managers, particularly in the cities of Victoria and Vancouver, who had been paying into pension schemes inaugurated by the chartered banks years ago which were looked upon as being fairly healthy pension schemes. What has happened? Those men, honoured in their profession, are now having to live on a pittance. Why is that so? It is not because they do not draw the amount of pension that is due to them, but because of the depreciation in the value of the dollar in terms of purchasing power.

Now, not only does that apply to bankers but it applies to any class of person who has been on a contributory pension scheme. In a previous session of parliament I once illustrated the point. I visualized a person going to the bank years ago and saving his dollars expecting in the years to come to be able to draw out money which would be worth so much in purchasing power. I visualized this person in his old age going to the bank and drawing from his savings account perhaps all that he had there. On his way out of the bank he is held up by a robber. In the process a little scuffle takes place and the thug gets away with half the man's savings. Supposing that happened today in reality? What would you discover? You would find that the police would be on the track of the thug, attempting to run him down. If he were caught he would be hailed into court and sent to prison.

Well now, what is the difference? Today the same person who put his savings into the bank many years ago goes to the bank and draws out his savings. He finds that in terms of purchasing power his savings are worth only half what they were worth many years ago. What is the difference? The difference is only this, that the robber who held up the man at the bank was a crook and was sentenced to jail. In the case of the depreciation of purchasing power, it is a matter of the government pursuing a wrong policy that actually robbed the man of half his savings. Now, of course, I am not going to accuse the Minister of Finance or the government of being dishonest men. I would say that they are pursuing financial policies which, in themselves, are not honest. Until they can arrive at a policy whereby the purchasing power of our money is retained over the years, then we will always have this very aggravated situation of the depreciation of the value of one's savings, whether it is in the bank or whether it is put into a pension fund. The financial policy being pursued by the government now, in reality, is a steal—not that they have stolen money personally, not that they have been, in themselves, dishonest, because I think they are honourable men trying to pursue what they regard as honourable policies. But in reality the policies are dishonest by reason of the fact they filch from the people their purchasing power.

Now, Mr. Speaker, I need say no more. I do not believe the problem can be remedied merely by the Minister of Finance saying, "Well, we will increase the pensions because the cost of living has increased and of course we will tax the rest of the country

to pay the pensions." Now, that might be all right as a temporary thing but it does not get to the heart of the trouble. It does not get to the disease that is eating away the body. We must correct the financial policy of the country in order to stabilize our dollar so that its value does not fluctuate as it has over the years in terms of purchasing power. I do not believe there will be a solution found until a right financial policy is pursued that will get to the heart of the trouble.

Mr. J. A. Byrne (Kootenay East): I am sure, Mr. Speaker, that the hon. member for Macleod (Mr. Hansell) has more or less confused the issue by bringing in the question of inflation and the depreciation of the dollar. If any monetary philosophy calculated to depreciate the value of the dollar was ever conceived before, it is certainly the philosophy of social credit. These people would have money printed in a way that would, in the words of Social Credit members, equate the money supply with production. It is that very thing that has caused the depreciation of the dollar in Canada. There is more money in circulation in relation to the amount of production than there was some 30 or 40 years ago or even 10 years ago. This, in itself, has caused the pensioner to be in an adverse position today.

I am not one who wishes on every occasion to support the hon. member for Winnipeg North Centre (Mr. Knowles). I would think there would be more sincerity in his undertaking if he did not rise on almost every occasion to find some way of reducing the power of the government to raise money. Only recently the hon. member introduced a motion calling for certain reductions in the tax revenue by removing the 3 per cent floor on medical expenses. I am sure that either he has, or some members of his party have, already indicated that the income tax exemptions should be raised. That again would mean a loss to the federal treasury. Someone near me in this section of the house has calculated the additional money that would be required if we had undertaken all of the measures proposed by the C.C.F. party during this session. It runs into something over $1,500 million. The hon. member himself will not feel that I am being unfair when I say that I doubt somewhat the sincerity of his proposals.

The question that the hon. member raises at this time affects almost everyone on a fixed pension. Pensions that are based on contributions made ten, fifteen, twenty, or even thirty years ago are totally inadequate today and no one denies that fact. There is something entirely wrong with our pension system that is based on contributions made in an economy such as ours where there is no absolute control such as the socialists would wish to have. It seems to me that if we were to follow the philosophy of the Social Credit party it would also mean almost absolute control of prices, wages and so forth. So long as we allow prices to fluctuate—and they do—pensions will not be satisfactory. When I say "fluctuate" it probably does not adequately describe what does take place in our economy because if we go back to 1900 we shall find that wages averaged around $2 a day. Even up to 1925 they were around $3 or $4 a day. When contributions are made on that basis the pensions cannot possibly be adequate. Wages are now running at $2 an hour, $15 and $16 a day, and in many instances up to $18 and $20 a day. Therefore, one can see the inadequacy of pensions provided both by the civil service and by industry on that basis. Pensions should be based on the cost of living at the retirement age. I know of many industries employing large groups that do favour that type of pension plan. The pensions paid are paid on a basis of length of service and on the highest last ten years' earnings or the last five years' earnings, whichever is the greater. That is a reality that should be faced. I am sure it is more important actually than paying $40 a month which hon. members across the way were so insistent was the requirement, $40 a month to people who might be earning $5,000, $10,000 or $15,000 a year. They said that $40 a month must be paid to every one of those independent people. It does appear in our budget and creates the impression that a very large sum of money is being paid out. In reality it is returned even before it is paid out, but it does appear as a budgetary expense. For that reason it is very difficult to make an increase based on some millions of pensions.

Let me get back to the people who are living on a very low income; that is, on a pension based on earnings made some thirty or forty years ago. Certainly, it is very difficult to imagine how they sustain themselves. I am fairly well acquainted with two large companies that within the last few months have increased pensions to those who were retired prior to the rapid increase in wages and prices that has taken place since 1950. They have increased their pensions from a low figure of $1 to $50 a month, depending on the length of service of the pensioners and their earnings at that time. Perhaps we should face this question. But when facing it, it would be more appropriate for the members of the opposition to face the realities of the situation, namely, how are we to raise the money for

that purpose, and not on every occasion be faced with want of confidence motions which supporters of the government have to vote against. I refer to those very popular motions asking for a reduction in taxes here and there. Let us have a little more sincerity over this problem. Let us all face the facts truthfully and I am sure we shall be able to do better for everyone.

Mr. O. C. Trainor (Winnipeg South): Mr. Speaker, I should like to ask the Minister of Finance whether the arguments put forward by the hon. member for Winnipeg North Centre (Mr. Knowles) on behalf of the pensioners do not apply with equal force to the holder of federal bonds, and if so whether or not those individuals are entitled to the same measure of relief as the pensioners? We have to be fair about this.

Mr. Colin Cameron (Nanaimo): Mr. Speaker, I could not endorse more strongly the last words of the hon. member for Kootenay East (Mr. Byrne) who said: Let us have a little honesty and sincerity in debate. I am not going to deal with his attempted slur on the sincerity of my colleague, the hon. member for Winnipeg North Centre (Mr. Knowles). I do not think it requires any comment at all. The comment when it does come—and I have no doubt it will come—will come quite strongly from that large body of civil service pensioners who for many years have been looking to the hon. member for Winnipeg North Centre to present their case to this house.

I speak with some considerable knowledge of the conditions in which many of these people are living today, because many of them live in the constituency that I represent. That is not surprising, since it is of course the most salubrious part of Canada. I hear mutterings from around me about that. Of course, it is an incontestable fact, otherwise retired civil servants would not come there in such large numbers. Seriously, though, many of them are living in very straitened and difficult circumstances. I must say I have been encouraged by the fact that the Minister of Finance (Mr. Harris) gave us a much more encouraging reply and intimated that he was contemplating a study of this problem. Now he shakes his head and dashes all my hopes.

An hon. Member: Make up your mind one way or another.

Mr. Cameron (Nanaimo): Well, that shows you on what crumbs of encouragement the opposition has to live and now the crumb has been snatched away from us by a shake of the ministerial head.

Mr. Knowles: But the shake of his head is not on *Hansard*.

[Mr. Byrne.]

Mr. Cameron (Nanaimo): Nevertheless I do think, sir, that as the responsible body in Canada for the conduct of our affairs we in this house should very seriously consider the position in which many faithful servants of the Canadian people are left in their latter years. In my constituency I am continually coming across men and women up in years who are now forced to scrape and scrimp and just get by after years of service in the public service at what I think we will all agree are not particularly generous or extravagant salaries.

In fact, I think it is not too much to say that the salary rates of civil servants are to some extent based on the assumption of security of tenure and an adequate pension at retirement age. Owing to the reasons that many hon. members have stressed here tonight those pensions are now totally inadequate.

I remember some years ago in the provincial legislature of British Columbia we faced the same problem with regard to civil servants and to teachers who are not, of course, civil servants strictly speaking. It was decided at that time that, in spite of the actuarial arguments against increasing the pensions, some action had to be taken because many of these people were in desperate straits. At that time the provincial legislature did place in the superannuation funds governing the pensions of these people a large sum of money to increase pensions for those who had been pensioned some years before. In spite of the discouraging shake of the head just now I would urge the minister to consider seriously the plight of these people who have served so well and faithfully for many years.

Mr. Deputy Speaker: Is the house ready for the question?

UNEMPLOYMENT INSURANCE—HOSPITAL EMPLOYEES

Mr. T. S. Barnett (Comox-Alberni): Mr. Speaker, I am assuming that all those who wish to speak on the particular matter that is under discussion have spoken.

I should like to mention briefly another matter before the house votes on the question as to whether you can leave the chair. My grievance arises out of a subject matter that was discussed actively in the industrial relations committee last session while the Unemployment Insurance Act was under review. I am quite sure that if the Minister of Labour (Mr. Gregg) were in his seat at the moment he would recall this particular discussion quite well.

The subject matter of my grievance arises out of the fact that, in spite of that discussion

and in spite of the assurance that was given to us in committee by the Minister of Labour at that time, employees of hospitals throughout this country are still not able to secure the benefits of unemployment insurance in like manner with others in similar positions employed by other employers.

My understanding is that at the present time the only regulation which brings hospital employees under the coverage of the act is one affecting only casual employees. I have a letter which I received recently from the secretary of the hospital employees union in British Columbia which indicates to me that the non-medical employees of hospitals in British Columbia are covered only in the case of two hospitals where they have succeeded in negotiating with their employers and by consent they have been brought in under coverage of the hospital insurance act.

Last year when the Unemployment Insurance Act was under review I argued quite vigorously but unsuccessfully against the inclusion in the new act of a principle which as far as I can recall affects only hospital employees, employees of charitable institutions with the exception also of employees of the crown in right of the province, and that principle is that they can be brought under coverage only with the consent of the employer.

I objected most strenuously, as I say, to the continuance of that principle within the act and suggested that if the phrase had been changed to read, "on application of the employees," it would have been a much more equitable arrangement and would have been one which would have allowed employees in perhaps certain types of hospitals who did not wish to come in to remain outside the coverage of the act. Nevertheless the act was passed in that form but in the committee the Minister of Labour did state, as recorded on page 255 of the minutes of the committee, that the matter was under active consideration by the cabinet after having received the recommendation of the unemployment insurance commission and the unemployment insurance advisory commission.

This was a recommendation which would have brought in the entire list of employees which the Minister of Labour set forth as recorded on page 253 of the proceedings. This list of employees included: clerks, stenographers, secretaries, bookkeepers, switchboard operators, laundry workers, stationary engineers, firemen and other power-house workers, carpenters, painters, electricians, plumbers and other building construction workers, porters, elevator operators, chauffeurs, drivers and other transport workers, gardeners and other ground maintenance workers, printers, machine operators and other craftsmen, and all categories of employees who normally come under the provisions of the Unemployment Insurance Act when employed by other employers.

In spite of what I felt to be the almost certain assurance when the committee rose last year, that long before this these employees would by regulation of the commission have been brought in under the coverage of the act, this has not been done. I rise at this time to express as a grievance the fact that as far as my knowledge goes such employees are still excluded from the benefits of the act.

Mr. Deputy Speaker: Is the house ready for the question?

Some hon. Members: Yes.

Mr. Deputy Speaker: Is it agreed that I do leave the chair?

Some hon. Members: Agreed.

Motion agreed to and the house went into committee, Mr. Applewhaite in the chair.

DEPARTMENT OF FISHERIES

135. Departmental administration, $301,000.

Item stands.

DEPARTMENT OF JUSTICE

166. Departmental administration including annual contribution of $200 to the conference of commissioners on uniformity of legislation in Canada, $513,658.

Item stands.

DEPARTMENT OF TRANSPORT

435. Departmental administration, $1,777,100.

Item stands.

Progress reported.

BUSINESS OF THE HOUSE

Mr. Knowles: Better call it ten o'clock.

Mr. Harris: Mr. Speaker, I presume there is just time to take the division on the second reading of the bill with respect to short-term credit but I fancy that that would not meet with the approval of all hon. members.

Mr. Fleming: That is an understatement if I have ever heard one.

Mr. Knowles: Someone might move the adjournment of the debate and we would take a vote on that.

Mr. Harris: I think therefore we ought to rise now and we can discuss the bill tomorrow. I move that the house do now adjourn.

Motion agreed to and the house adjourned at 9.52 p.m.

Question

ANSWER TO QUESTION

The following answer, deposited with the Clerk of the house, is printed in the official report of debates pursuant to standing order 39:

MEAT IMPORTS, 1955

Question No. 154—**Mr. Hodgson:**

1. What number of cattle and how much beef were imported into Canada in 1955?

2. From what countries, and how much from each country?

3. How much pork and pork products was imported into Canada in 1955?

4. From what countries, and how much from each country?

Answer by: **Mr. Howe (Port Arthur):**

1 and 2. Canadian imports by countries, of cattle and beef, period January 1 to November 30, 1955:*

	Cattle, pure bred		Livestock, n.o.p., cattle, goats, hogs, sheep and lambs (mostly cattle)	
Country	No.	Value	No.	Value
United Kingdom	204	$143,758	1	$ 202
United States	1,189	656,391	19,901	460,313
Totals	1,393	$800,149	19,902	$460,515

	Beef and veal, fresh		Beef, canned		Beef, pickled	
Country	Lb.	Value	Lb.	Value	Lb.	Value
United Kingdom	12,856	$ 4,722	74,189	$ 20,751	—	—
Australia	55,989	12,245	8,397,798	2,632,747	2,320	311
New Zealand	2,776,926	530,452	246,000	109,668	—	—
Argentina	—	—	3,383,256	1,120,123	—	—
Denmark	—	—	10,623	7,474	—	—
Netherlands	—	—	281	205	—	—
Alaska	100	59	—	—	—	—
Ireland	224,000	56,448	360	159	—	—
United States	2,354,887	818,441	12,626	8,437	11,009,074	1,872,284
Totals	5,424,758	$1,422,367	12,125,133	$3,899,564	11,011,394	$1,872,595

* Latest available.

3 and 4. Canadian imports by countries of pork and pork products, period January 1 to November 30, 1955:*

	Pork, fresh		Bacon, hams, shoulders and other pork, cured other than canned		Pork, barrelled, in brine		Pork dry salted	
Country	Lb.	Value	Lb.	Value	Lb.	Value	Lb.	Value
United Kingdom	3,244	$ 898	4,908	$ 1,975				
Australia	66,445	22,708	—	—				
Alaska	—	—	203	128				
United States	—	—	26,044	20,426	Nil		Nil	
Totals	69,689	$23,606	31,155	$22,529				

Statistics on imports of other pork products are not available.

*** Latest available.**

HOUSE OF COMMONS

Wednesday, February 22, 1956

The house met at 2.30 p.m.

FINANCIAL ADMINISTRATION ACT

AMENDMENT TO PROVIDE FOR PRINTING OF NEGOTIABLE INSTRUMENTS IN BOTH ENGLISH AND FRENCH

Mr. Raoul Poulin (Beauce) moved for leave to introduce Bill No. 149, to amend the Financial Administration Act.

Some hon. Members: Explain.

Mr. Poulin: Mr. Speaker, the purpose of this bill is to provide that every cheque, draft, bill of exchange, postal note, money order or other negotiable instruments of any department or of any crown corporation shall be printed in both official languages, namely English and French.

Motion agreed to and bill read the first time.

DOMINION-PROVINCIAL RELATIONS

FISCAL ARRANGEMENTS—TABLING OF LETTER AND MEMORANDUM

Right Hon. L. S. St. Laurent (Prime Minister): I should like to lay on the table a copy of a letter that I sent to the premiers of all the provinces on February 18 relating to federal-provincial fiscal matters. Enclosed with that letter was a memorandum from the Minister of Finance (Mr. Harris) giving answers to a number of questions that had been raised by provincial representatives. As was done in the case of previous correspondence relating to the same subject, perhaps hon. members would wish that these documents be printed as an appendix to *Hansard* of this day.

Mr. Drew: Agreed.

Mr. Speaker: Is that proposal agreed upon?

Some hon. Members: Agreed.

(For text of letter and memorandum see appendix, pages 1458-60.)

STARRED QUESTIONS

POST OFFICES—INSTALLATION OF BURGLAR ALARMS

Question No. 20—**Mr. Hamilton (Notre Dame de Grace):**

Has the post office recently changed its policy regarding the installation of burglar alarms in its principal post offices?

Mr. Lapointe: Following the statement made by my predecessor during last session, the whole question of security in postal establishments, including the use of burglar alarms, was reviewed by an interdepartmental committee composed of representatives from the Post Office Department, the Royal Canadian Mounted Police and the Department of Public Works.

In co-operation with the Department of Public Works, the Post Office Department is now studying ways and means of implementing the recommendations of this committee.

HOGS—FEDERAL ASSISTANCE TO RECOVER FLOOR PRICE

Question No. 21—**Mr. Diefenbaker:**

What assistance or measures to assist are furnished by the Department of Agriculture, to a farmer or other producer who, having shipped hogs to a packer, has received less than the floor price then prevailing, to recover the difference between the amount received and the existent floor price?

Mr. Gardiner: The fact is that up to date we have had nothing to indicate that that has happened. I have before me now the answer to the statement brought in by the hon. member for Humboldt-Melfort which I think is the explanation of the situation as it exists and what is done with regard to it. I shall, as indicated, return that statement to him, having read this to the house.

The hogs referred to in the attached statement were apparently delivered direct to the packing plant where they were purchased for $18.75 as compared with a floor price of $19 which applies to public stockyards in Saskatoon. It will be noted that the trucker passed the stockyards on his way to the packing plant and therefore chose the market where, in his opinion, he would receive the better price. The price received, however, does not appear to be out of line with the floor price of $19 on the stockyards as he was able to unload his hogs at the plant without any expense, whereas if they had been marketed through the stockyards he would have had to pay for such services as are required in connection with the sale of hogs on public stockyards, which could easily absorb the 25-cent differential. The price at plants is quite commonly somewhat below the stockyard price.

The application of the support price is only practical at public yards where there is competitive buying and those who wish to be assured of support prices can, in cases like

this, deliver their hogs to the public stockyards. They are, however, at liberty to sell direct if they believe they will get better returns. In doing so, they assume responsibility and may, in some cases, get a better price and in some cases they may lose. There does not, however, appear to have been a deviation from the support price through this private sale.

Those are the facts in connection with this one sale and variations of those facts would be the case in connection with others. However, the fact is that this gentleman could have taken his hogs to the stockyard at Saskatoon and have received $19, but he thought he would do better and took them directly to the packing plant where he received 25 cents less, which means that he himself was satisfied he would get a better floor price there than he would if he had delivered to the yards.

Mr. Diefenbaker: I wish the minister would now answer the question I asked as to what measures, if any, can be taken where less than the floor price is actually paid by the packer on shipments made directly to the packer. Is there any method or means whereby the producer can be protected?

Mr. Gardiner: I will say again what I said at the beginning. There has not been any case where it has been necessary to put into effect—

Mr. Diefenbaker: Oh yes.

Mr. Gardiner: There has not been.

Mr. Diefenbaker: Yes, there has.

Mr. Gardiner: Well, there has not, and since there has not been we have not found it necessary to devise ways and means of dealing with it. Immediately a case is brought to our attention where that has been true we will devise ways and means of dealing with it.

Mr. Diefenbaker: So there is no means now.

Mr. Gardiner: There are means now. The means are there. The farmer who goes to the stockyard will get the floor price.

FLUORIDE TOOTH PASTES

Question No. 22—**Mr. Goode:**

1. Has the Minister of National Health and Welfare received any communications from individuals or associations warning of danger in the promiscuous use of fluoride tooth pastes?
2. If so, from whom?

Mr. Martin: Mr. Speaker, I received no communications in this matter.

[Mr. Gardiner.]

QUESTIONS PASSED AS ORDERS FOR RETURNS

MILITARY BANDS

Question No. 90—**Mr. Dinsdale:**

How many military bands are there in each of the Canadian armed forces and where are these bands located?

FEDERAL PROGRAM OF REFORESTATION

Question No. 148—**Mr. Hodgson:**

1. Has the federal government any program of reforestation?
2. If so, how many trees were planted in 1954 and 1955?
3. What was the number of each species planted?
4. Where were they planted?

PUBLIC WHARVES, NOVA SCOTIA

Question No. 155—**Mr. Purdy:**

1. At what places in the province of Nova Scotia, other than Halifax, are public wharves located?
2. What was the expenditure on each of these wharves, including protective works and approaches for the five years ending March 31, 1955?
3. What was the expenditure for dredging, for the same period at each of these points?
4. What was the net return to the treasury from each of these wharves by way of harbour dues and wharfage, for the year ending March 31, 1955?

LEGAL SERVICES, EDMONTON

Question No. 163—**Mr. Holowach:**

1. What lawyers or law firms, if any, in the city of Edmonton, Alberta, were retained by the federal government or any branch thereof, during the period from January 3, 1955, to January 2, 1956?
2. What sums were paid by the federal government and all departments thereof, to each such lawyer and law firm?
3. What amounts, if any, are still owing, or claimed for services and to whom?

TRADE

GREAT BRITAIN—INQUIRY AS TO WITHDRAWAL FROM INTERNATIONAL WHEAT AGREEMENT

On the orders of the day:

Mr. J. G. Diefenbaker (Prince Albert): I should like to direct a question to the Minister of Trade and Commerce. Would he tell the house what action, if any, is being taken to secure the adherence of Great Britain in the face of its desire to withdraw from the international wheat agreement? Would the minister also say whether or not the instructions to our representatives in Geneva comprehend the acceptance of an international wheat agreement without Britain? Would he also say what is the maximum price on which Canada is standing in respect of the prices to be determined under this agreement?

Right Hon. C. D. Howe (Minister of Trade and Commerce): Mr. Speaker, representations have been made by Canada to the government of the United Kingdom. I think all the representations that can properly be made have been made. The decision, of course, is for the United Kingdom, and apparently that has been taken. Canada, as I said before, is represented at Geneva by the presidents of the six leading farm organizations in western Canada, and their instructions are sufficiently flexible to allow them to make such recommendations as they believe to be in the interests of the western producers. No recommendations have been made by them up to the present time. When they are made, consideration will be given to them.

Mr. Diefenbaker: May I ask a supplementary question, Mr. Speaker? Will Canada accept an international wheat agreement, or support one, in which Britain is not one of the members?

Mr. Howe (Port Arthur): Mr. Speaker, Canada has not been asked to support anything. We would like to get advice from people on the ground before we answer any questions of that kind. We are not taking any stand whatever, either publicly or privately, that would interfere with the six farm leaders who represent us at Geneva as advisers in giving such advice as they think will be in the best interests of the producer.

Mr. Argue: May I ask whether this means that the government's position has been modified since the minister's statement that in order for Canada to support an agreement it would have to cover about two-thirds of the wheat going into world markets?

Mr. Howe (Port Arthur): That discussion was held in the expectation that Britain would be a member of the agreement. I do not wish to state any position. My hon. friend has been one of the first to declaim here time after time that we must listen to the advice of the farm leaders. We are going to do that in this case.

Mr. Argue: Will the minister say whether he listened to the advice of the farm leaders when he made the statement in the house that Canada would support an agreement only if two-thirds of the world wheat in trade was covered, and if he has read the statement since of the vice-president of the Saskatchewan farmers' union?

INQUIRY AS TO CANADIAN DEFICIT WITH U.S.

On the orders of the day:

Mr. Donald M. Fleming (Eglinton): May I direct a question to the Minister of Trade and Commerce, Mr. Speaker? In view of the deficit of $840 million in Canada's 1955 commodity trade with the United States, as just announced, may I ask the minister what measures, if any, the government intends to take or propose to bring about a better balance in Canada's trade with the United States?

Right Hon. C. D. Howe (Minister of Trade and Commerce): Mr. Speaker, as far as the Department of Trade and Commerce is concerned, we plan to take no steps.

[*Later:*]

On the orders of the day:

Mr. J. M. Macdonnell (Greenwood): Mr. Speaker, in view of the fact that the Minister of Trade and Commerce has just told us that the Department of Trade and Commerce is doing nothing about the deficit in our trade with the United States, can he tell us whether any other department is doing anything?

Some hon. Members: He did not say that.

Mr. Howe (Port Arthur): Mr. Speaker, I suggest that my hon. friend ask the other departments.

Mr. Knowles: That will take time.

[*Later:*]

On the orders of the day:

Mr. Macdonnell: Following the advice of the Minister of Trade and Commerce, may I ask the Minister of Finance if his department is doing anything about this?

Hon. W. E. Harris (Minister of Finance): Mr. Speaker, it is true that I accept responsibility in the house for the customs tariff and any items of that nature which affect trade, but in so far as the promotion of trade is concerned I am happy to follow the leadership of the Minister of Trade and Commerce.

Mr. Knowles: And he says he is not doing anything.

INQUIRY AS TO CANADIAN-RUSSIAN AGREEMENT

On the orders of the day:

Hon. W. Earl Rowe (Dufferin-Simcoe): Mr. Speaker, in view of the fact that a few minutes ago it came over the radio that a Russian trade agreement had been accepted in principle, I should like to know if the Minister of Trade and Commerce (Mr. Howe) would tell the house now what the principles of the trade agreement are.

Right Hon. C. D. Howe (Minister of Trade and Commerce): Mr. Speaker, to the best of my knowledge and belief negotiations for a Russian-Canadian trade agreement are still in

progress. When they are completed I shall be glad to announce the results to the house.

IMMIGRATION

INQUIRY AS TO CONFERENCE WITH PROVINCES AND OTHERS

On the orders of the day:

Mr. E. D. Fulton (Kamloops): Mr. Speaker, I should like to ask the Minister of Citizenship and Immigration whether arrangements have been made for a conference with provincial officials as well as with representatives of labour organizations and of the Canadian Chamber of Commerce and others on the subject of immigration. If so, what is the nature and purpose of such conference and when will it be held?

Hon. J. W. Pickersgill (Minister of Citizenship and Immigration): Well, sir, arrangements have not actually been made for such a conference. Invitations have been issued in the last day or two. It is planned this year to have one conference instead of having more than one. In other years I think there have been two, one with representatives sent by provincial departments interested, and one with various organizations such as the chamber of commerce, the federation of agriculture, the Trades and Labour Congress, the Canadian Congress of Labour and various other organizations interested. It was thought it might be more useful to have all these people who are interested directly in immigration who are co-operating with the department come together to discuss the program for the coming season. There is nothing new about the principle of the thing; it has been done for the past four or five years but the meetings are all going to be held together.

Mr. Fulton: Then, are we to take it from what the minister said it is not a conference to make a more fundamental inquiry into immigration than the conferences of the past have been?

Mr. Pickersgill: It is a conference having to do with administration and related problems. It has nothing to do with any of the fundamentals of policy which I take it come before this house.

INQUIRY FOR RETURN

FLOOD DAMAGE, SASKATCHEWAN

On the orders of the day:

Mr. E. G. McCullough (Moose Mountain): Mr. Speaker, I should like to direct a question to the Prime Minister (Mr. St. Laurent). Could the Prime Minister state when I might expect the tabling of documents concerning the extent of flood damage in Saskatchewan, for which there is an order for return dated February 6?

Right Hon. L. S. St. Laurent (Prime Minister): Mr. Speaker, I think that will be forthcoming within the next day or two. I saw the intended report this morning and I felt it was not quite complete. I therefore asked to have further inquiries made so that the report might be complete when it is tabled.

CRIMINAL LAW

INQUIRY AS TO REPORT OF ROYAL COMMISSION RESPECTING CRIMINAL SEXUAL PSYCHOPATHS

On the orders of the day:

Mr. W. B. Nesbitt (Oxford): Mr. Speaker, I should like to direct a question to the Minister of Justice (Mr. Garson) with reference to a question I addressed to him on February 8, and which he took as notice. Is he now in a position to tell us how soon the report of the royal commission headed by the chief justice studying the problem of sex offences will be completed?

Hon. Stuart S. Garson (Minister of Justice): Mr. Speaker, following my hon. friend's question on February 8 my deputy had an opportunity of conferring with Chief Justice McRuer, who is the head of this commission, but as a result of their discussion I do not think I can add anything to the reply which I made to the question asked by the hon. member for Middlesex East (Mr. White) on a previous occasion. My reply then was to the effect that it will be some months before we can expect a report from the commission. I am sure my hon. friend will realize that in an inquiry of this sort the completion of the commission's work cannot be forecast to within a few days.

NATIONAL DEFENCE

AUSTRALIAN ATOMIC TESTS—INQUIRY AS TO CANADIAN REPRESENTATION

On the orders of the day:

Mr. H. R. Argue (Assiniboia): Mr. Speaker, I should like to direct a question to the Minister of National Defence. Is a joint military and civilian observer force to be sent to view the atomic tests this year off northern Australia?

Will the government consider sending a Canadian parliamentary delegation so that public representatives may view the destructive power of nuclear weapons?

Hon. R. O. Campney (Minister of National Defence): Mr. Speaker, the answer to the first question is that the matter is under

discussion at the present time. I cannot really say more than that at the moment.

With respect to the second question I would expect that any consideration would be predicated upon receipt of an invitation. I am not aware of any invitation for hon. members to attend but I shall look and see whether I have missed something.

IRRIGATION

SOUTH SASKATCHEWAN RIVER— INQUIRY AS TO PRESENT POSITION

On the orders of the day:

Mr. J. G. Diefenbaker (Prince Albert): Mr. Speaker, I wish to direct a question to the Prime Minister arising out of a discussion last evening in regard to certain items in the estimates respecting the South Saskatchewan river dam and irrigation project. Has the government decided as yet whether or not to go on with that proposition?

Right Hon. L. S. St. Laurent (Prime Minister): No, Mr. Speaker, the government has not decided whether or not to go on now with that proposal.

LIVESTOCK

REQUEST FOR FURTHER INFORMATION FROM PACKERS TO PRODUCERS

On the orders of the day:

Mr. H. A. Bryson (Humboldt-Melfort): Mr. Speaker, I should like to address a question to the Minister of Agriculture. Would the minister suggest to packers that they fill out in the space provided on return statements to producers the extra costs connected with settlement in order to clear up any doubts in the minds of the producers as to the basis of settlement?

Right Hon. J. G. Gardiner (Minister of Agriculture): I did not hear the question quite clearly but I shall take it as notice when I see it in *Hansard*.

ST. LAWRENCE SEAWAY

PROTECTION OF CANADIAN PROPERTY AGAINST CHANGE IN WATER LEVELS

On the orders of the day:

Hon. L. B. Pearson (Secretary of State for External Affairs): Mr. Speaker, on February 17 the hon. member for Eglinton (Mr. Fleming) asked the following questions:

> Are there any negotiations under way at the present time, either with the United States government or with the provinces concerned, arising out of the construction of the St. Lawrence seaway, in which questions are being raised as to protection of property bordering on the lakes? If so, what steps are being taken on behalf of the Canadian government to see that Canadian land on the lakes is being properly protected against change of water levels?

I should point out that in the international joint commission order of approval of October 29, 1952, concerning the power developments in the St. Lawrence river, the following provision was inserted about protection to property owners who might be injured by the resultant change of levels of lake Ontario:

> All interests on either side of the international boundary which are injured by reason of the construction, maintenance and operation of the works shall be given suitable and adequate protection and indemnity in accordance with the laws in Canada or the constitution and laws in the United States respectively, and in accordance with the requirements of article VIII of the treaty.

That is the boundary waters treaty.

Recently, as the house knows, the governments of Canada and the United States approved the recommendations of the international joint commission on the range of elevations of lake Ontario to be put into effect when the works in the St. Lawrence river are completed. In approving these recommendations the government was satisfied that this range of elevations, which is made possible by the St. Lawrence power project, far from being injurious to property owners on lake Ontario will in fact give them some protection against extreme high and low levels which they have not enjoyed heretofore. Nevertheless, the question of suitable legal redress for the property owners who might be injured as a result of the approval of the international joint commission recommendation has been raised by interested parties on both sides of the international boundary. Consequently both Canada and the United States are examining the adequacy of legal redress for injured interests as described in the international joint commission order and exchanges are now taking place between the two governments. In addition, since this legal redress falls partly within the jurisdiction of the provinces, consultations with provincial authorities will take place.

Mr. Donald M. Fleming (Eglinton): May I ask the minister if on the outcome of these negotiations and studies a suitable public announcement will be made so that those whose properties are affected will have ample notice of the redress which lies open to them?

Mr. Pearson: Yes, I think at the appropriate time such notice should be given.

Mr. J. W. Murphy (Lambton West): Mr. Speaker, I have another question I should like to direct to the Secretary of State for External Affairs which he can take as a notice because I am quite sure he would not

have the necessary information available. Would the minister be prepared to say what the level of lake Huron will be upon the completion of the St. Lawrence seaway, and if it will be at all possible to divert more water to the Chicago drainage system?

Mr. Pearson: It is my impression that the level of lake Huron will not be affected by the seaway, but as my hon. friend suggests I shall take his question as notice so that a reply can be given later.

GRAIN

PROVISION FOR GUARANTEE OF BANK LOANS TO PRODUCERS IN PRAIRIE PROVINCES, ETC.

The house resumed, from Friday, February 17, consideration of the motion of Mr. Howe (Port Arthur) for the second reading of Bill No. 82, to provide for short-term credit to grain producers in the prairie provinces to meet temporary financial difficulties arising from inability to deliver all their grain, and the amendment thereto of Mr. Nicholson.

Mr. W. G. Dinsdale (Brandon-Souris): Mr. Speaker, when the house adjourned last Friday afternoon I was making the point that, in contrast to the position of the United States in relation to the critical situation in the grain trade, Canada was doing comparatively little. In support of that viewpoint, I merely have to quote the title of the bill we have been discussing for some time now, Bill 82, which suggests that the problem facing the wheat producers is only a temporary problem which requires merely temporary financial assistance as provided in the bill before us. I would like to disagree with that viewpoint as strongly as possible.

Up to the present moment, other than the bill we have before us, there has been no action on the part of the government to deal with the problem. Admittedly, we shall have Bill 83 before us within the next few days but, with reference to the position of the United States and its aggressive sales policy, we have had only mild reprimands from this government. Another possible solution has been put forward, and that is the possibility of some national disaster such as a drought that would automatically solve the surplus problem with which we are faced at the moment.

It would seem that the government has decided to adopt what might be called a status quo approach to this difficulty, and that, of course, is indicated by statistics that are available concerning Canadian participation in world wheat marketing in the past ten years. While the pattern has been changing considerably and the United States has been moving into that area aggressively, we have continued to participate in the world wheat market only to the extent of some 30 per cent.

It must also be recalled that during the immediate post-war years we benefited considerably, by way of exports to the European market, from the extensive United States Marshall aid program that was proceeding after the end of world war II. Now that the Americans have moved toward a surplus crop disposal program of their own, that particular source of export has tended to decline.

Canada is going to be faced this year with very important decisions concerning international wheat trading, and uncertainty in this regard has already been indicated by our attitude towards the international wheat agreement. Perhaps, if we had been more flexible in our negotiations when this arrangement was last up for consideration, Canada would be in a much more favourable position in the world wheat market at the present time. During recent days the Minister of Trade and Commerce (Mr. Howe) has indicated that the export possibilities for wheat in the world market are quite hopeful, and a potential figure of some 320 million bushels has been quoted as the total export figure for Canadian grain.

Mr. Howe (Port Arthur): Mr. Speaker, I cannot allow that figure to go on the record unchallenged. That is the figure of total deliveries last year, and, if anybody has quoted it as export sales, it must have been a member of the opposition. Certainly no member of the government has quoted it as the figure for exports.

Mr. Dinsdale: Mr. Speaker, I understand that is a projected figure for the possible export of Canadian wheat by the end of the current crop year.

Mr. Howe (Port Arthur): I will defy my hon. friend to find the source of that statistic. I think it is his own figure, and that he is trying to put it in my mouth. Certainly I never used that figure.

Mr. Dinsdale: I obtained it from the Searle grain report and it is usually an accurate record of the Canadian grain situation. It is the circular for Wednesday, February 15. Under the heading "Substantial marketings anticipated" is the following:

> But even more heartening, perhaps, is the minister's statement that, in his opinion, prairie producers will be able to market as much wheat as last year (320 million bushels) provided that transportation is adequate to clear sufficient space in country elevators.

Mr. Howe (Port Arthur): That exactly proves the point. Does my hon. friend think there is no difference between producers' marketings and exports? He is giving the figure for producers' marketings and calling it exports. I know he is not a farmer and has not had much farm experience; but he has lived in the farming area and should be able to make some distinction between those two figures.

Mr. Dinsdale: If the minister wishes to split hairs in that way, that is fine. I was merely indicating the possible disappearance of grain from our total surplus.

Mr. Howe (Port Arthur): Why call producers' marketings exports?

Mr. Dinsdale: Then I will change the terminology. I will admit that I am not a practical farmer at the moment, although I am descended from a long line of farmers. However, I would say that I have had as much practical farm experience as has the minister. He tends to discredit my experience in that regard but I do not think it is necessary for us to be practical participating farmers in order to make a contribution to this important discussion. The matter affects more than the farm economy directly. It affects more than the farmers directly. In fact, it involves very intimately—and I think the minister will agree with this statement—not only our western economy but our total Canadian economy and it has world-wide implications as well.

I should now like to come back to the point I was making, namely that there is a possibility that we shall market 320 million bushels of wheat by the end of the current year. That is something that is to be hoped for, of course, because it would ease to a certain extent the mounting crisis in the wheat economy. However, I think it can be demonstrated that even if we market in those optimistic amounts, we shall still have a surplus of some 600 million bushels of wheat in Canada at the beginning of the next crop year.

I had better document that statement for the sake of the record. I can do so by projecting some figures into the future. We have at the present time, or at least as of January 11 of this year, 797·5 million bushels of grain available. The estimated domestic utilization between January 12 and July 31 of this year, which will be the end of the crop year, can be projected at 30 million bushels. That is estimated on a total average domestic consumption of some 60 million bushels. Estimated exports of wheat and wheat flour from winter ports from mid-January to mid-April can be estimated at 60 million bushels and, from the opening of navigation to July 31, at some 105 million bushels. Hence the total estimated disappearance from January 11 to July 31 of this year will be something like 195 million bushels. Subtracting that figure from the total available supply at the moment of 797·5 million bushels, we find it leaves us with a surplus of 602·5 million bushels. That is a sizeable carryover in any one crop year and that statement is all on the basis of the optimistic marketing figure of 320 million bushels. This problem is therefore not temporary, Mr. Speaker; it is a continuing problem and it must be met by more substantial and vigorous policies than those which have been enunciated by the minister up to the present time.

There is another point to be considered in connection with this matter of the sale of grain. During recent months we have had an increase in the export marketings of grain. That is largely owing to the fact that we have had to drop, by substantial margins, the price of our lower qualities or lower grades of grain. If that had been done before, perhaps we would have been able to clear the low quality grain that was clogging our distribution system and thus would have been in a happier position today. But since last August, for example, No. 5 grade, which was then $1.49 per bushel, has decreased in price to $1.22 per bushel. That was at December. No. 6 grade has decreased in price from $1.47 in August to $1.18 in December and feed grain has decreased from $1.44 to $1.14. The result is that the demand for that lower grade grain has considerably increased and is largely responsible for the increased marketings during recent months, including the special arrangements with countries behind the iron curtain.

I should like to bring to the attention of the house another point which is sometimes missed. We are concerned not only with the problem of wheat. It must also be noted that other coarse grains including barley, oats and rye, exports are down for the past few months. For example, the figure for barley is 13 million bushels behind that of the previous year and for oats it is 15 million bushels behind. On top of that we have our perpetual box car situation. All of these circumstances tend to suggest that the prairie grain farmer is going to find himself in distress for some considerable time ahead. This means that the government must take much more strenuous steps than it has already indicated in any legislation we have before us.

This point was summed up by the twentieth century research fund project on the grain problem in North America, which incidentally included a Canadian, namely Dr. Andrew Stewart, president of the University of

Alberta. Dr. Stewart at the present time is serving as a member of the Gordon commission which is dealing with Canada's general economic position and its prospects for the future. In summing up this long-term problem of agriculture and in summing up the problem of the crisis with respect to grain, we must remember that it is basically a North American problem. Canada and the United States are producing tremendous surpluses which have caused the glut on the world market. Among many other conclusions, the twentieth century fund researchers came to this conclusion, which I think emphasizes the point I am trying to make at the present time:

> . . . we recommend that effective aid be given to individual farmers in working out the kinds of changes in farming that will enable them, with as little hardship as possible, to make the adjustment that apparently will have to be made in the not distant future whatever kind of program is adopted. Where such adjustments put a severe strain on the resources and income of the farmers concerned, we favour liberal aid in the form of special credits and, if necessary, special payments during the transition period.

The twentieth century fund researchers, after looking exhaustively at the problem from all its aspects, came to the conclusion that there was a critical situation in our agricultural economy. They came to the conclusion that during the transition period—it is not a temporary thing—the maximum assistance would have to be given to the farmer by way of professional advice on diversifying his economy and solving his economic difficulties as well as by way of direct credit and cash extensions to him. That, of course, is contrary to a lot of the traditional economic thinking on the North American continent but in both the United States and Canada the role of government in the marketing of grain and in agricultural policy generally has become very firmly established during the past 20 years, and because of the situation as it exists at the moment the Canadian government has to take very vigorous action to deal with the difficulty.

I say that obviously we are being presented with the traditional Liberal policy that has often been referred to as hope and grope, hoping that everything will work out for the best, waiting for something to happen that will be in the best interests not of the people of Canada but of the party in power. That has been the policy followed by the present administration since the end of world war II, and long before. At the end of the war we were preparing for a depression. We were gearing ourselves for a depression. That was the advice of all economists. In our attempts to stave off the anticipated depression we ran into inflationary conditions, and I would point out that inflation is one of the basic causes for the grain producer's difficulties at the present time. He is caught in the cost-price squeeze as a result of continuing inflationary pressures in Canada.

Notwithstanding the anticipated depression, Canada, because of her changed position in the world economy, because of the devastated European markets and because of the unanticipated demands for consumer goods and so forth, moved into an era of prosperity and the administration immediately took credit for that period of prosperity. I remember that in 1953 the slogan was, "Keep Canada Prosperous, Vote Liberal". The prairie farmer is not enjoying that prosperity for some of the reasons I have pointed out and for reasons that other speakers have mentioned in this debate. It is a difficult, complex, economic problem. It is related to the situation with which the west has been confronted under all the long years of Liberal administration, namely, an underdeveloped economy, and an attempt to play off the east against the west on the basis of bogus issues such as free trade versus protection and so on.

I was interested in a newspaper dispatch concerning the speech by the Minister of Northern Affairs and National Resources (Mr. Lesage) last Saturday to the Liberal students federation in which he said that the Conservatives were responsbile for speaking with two voices in Canada. That particular point might go over on the hustings, but it certainly will not go over with a group of university students because we now have available in Canada very excellent political histories.

For one I could mention the excellent work on the life of John A. Macdonald that has recently been completed by Professor Creighton of the University of Toronto which puts a lot of the political history of Canada into its correct perspective. Our university students are reading these political histories. Fact is being sorted out from fiction, propaganda from history, and it is being discovered that more than one political party in Canada has made outstanding contributions to the national development of our country. I could mention other works such as "The Age of Mackenzie King" or even Bruce Hutchison's book, "The Incredible Canadian", which refers to a former Liberal prime minister as the Blondin of politics, indicating an ability to juggle precariously on both sides of the political tightrope.

To sum up my remarks, the point is that nothing is being done in a positive way to deal with the critical agricultural situation facing Canada and the United States. It is essentially a North American problem, and if we are going to solve it we must go much

further than the bill we have before us in order to deal with it adequately over the next decade or two. A balance must be restored between production and consumption. Healthy trading relations must also be established because wheat in North America depends upon a thriving export market for its continued prosperity.

Just a few moments ago we had an example of the hope and grope policy. The Minister of Trade and Commerce was asked if it was the intention to do anything about the unfavourable balance of trade that Canada has with the United States, and the answer was no. That, Mr. Speaker, is not good enough, and I am sure the people of Canada will readily come to that conclusion. In solving this problem changes will have to take place step by step. There are no easy overnight solutions and these changes as they come step by step will have to be made in the right direction. I submit that the measure now before us does not move in the right direction but is rather a retrograde step.

Mr. Romuald Bourque (Outremont-St. Jean): Mr. Speaker, we on this side of the house have been taunted many times about not getting up and speaking, but for the last week I have been trying to get the floor and every time I did somebody got ahead of me. Therefore, I have been left over until today. It has been said many times in the house that we in the centre of this country are not interested in the farmers' plight. I should like to say, Mr. Speaker, that we are not only interested in the farmers' plight but we are in great sympathy with the farmer. We believe it is in the interest of all Canada that the farmer be prosperous. If the farmer is not prosperous, then there is very little prosperity in the country. It is my belief that we should help him in times of depression and whenever a need arises. But, Mr. Speaker, there is a limit to the help that we should give to the farmer. Should we go beyond common sense, or should we help him whether he needs it or not?

The hon. member for Macleod (Mr. Hansell) told us the other day that in his province many of the farmers own farms greater in area than the whole state of Israel. Surely, Mr. Speaker, you could not consider him a poor farmer or a farmer in need of help. If he owns that amount of land and cultivates it, he has ample opportunity in the good years to put aside something for a rainy day.

It is the duty of the government to help the farmers, as I have said, and I am sure the government is very anxious to help them and to see that they receive their fair share of the revenue of Canada. But surely the intelligent farmer, as he is—we all recognize that the farmers on the prairies are very intelligent men because they have prospered to a great extent during the last few years—has put aside a reasonable amount of money. Not all of them need help; perhaps some do. We have been told that there are around 200,000 farmers in the west. Surely, 150,000 of those do not need help. If the government were to guarantee loans to farmers, irrespective of whether they have money or not, those 200,000 farmers would be able to obtain guaranteed government loans without any interest. What would be the result? We all know that the majority of farmers as well as the industrialists and everyone else have some collateral. They hold mortgages, bonds, stocks, that they can call on for a rainy day. If no interest was charged on those loans and 50,000 farmers needed help, and the loans were guaranteed to everyone, the 150,000 farmers who did not need help would surely be foolish if they did not take advantage of the government guaranteed loan. Those 150,000 farmers, whether they needed it or not, would go to the bank and secure a loan of $1,500 without any interest, and then they would invest that money in stocks or bonds or mortgages, and they would be drawing interest of $75 a year.

Mr. Ellis: What a fairy story that is!

Mr. Bourque: I ask you, Mr. Speaker, whether that would be a fair measure for the other people in Canada who pay income tax? Take 150,000 workers, white collared men or men in any category, who are in the income tax bracket which causes them to pay a tax of $75. They would be paying their $75 and the government would act as a collecting agency. They would take 150,000 times $75 and transfer it to the farmers who do not need loans. I think the government is very wise in adopting the attitude—

Mr. McCullough (Moose Mountain): May I ask a question?

Mr. Bourque: I will make my speech, if you do not mind. You may speak later. You have been speaking for the last two weeks. You have been taunting us for the last two weeks to speak. Surely you can let me speak for a few minutes so that I can make my point.

Mr. Knowles: Make it sensible.

Mr. Bourque: You have been asking everybody to speak. Let us speak. This is a question that affects the whole country, not only the westerners.

Surely, Mr. Speaker, if this is a measure that the opposition is trying to foist on the government, the government has the right

to resist and to say to those people: You are asking us to put through a measure that is not fair and equitable to all the people of the country whom we represent in this house. This government represents the working men, the farmers, the wealthy men and everybody. It has to present a measure that is fair and honest to everybody. That is why the Liberals have always come back with a very large majority. That has always been the policy of this party, and I am sure it will remain the policy for many years to come no matter how many people rise in their places and try to change the policy of this government.

We have listened to a lot of palaver for the last week or so; we have listened to all kinds of arguments. I think I am right in saying that the Minister of Trade and Commerce (Mr. Howe) and the Minister of Agriculture (Mr. Gardiner) have done a wonderful job in resisting this. Surely, as they have listened to all the palaver that has been said, they have been tempted to throw up their hands and say: "Oh, why bother?" But they are cognizant of the needs of the country, and I am sure that no matter what palaver comes from the opposition they will resist any measure that is unfair to all the people of Canada.

We have listened to speeches for about two weeks, and I have listened to possibly three or four speeches from the same hon. member made in the same way and in the same light. They have now run out of ideas. I can tell you, Mr. Speaker, that if we were to adopt the measure that the opposition wants us to adopt and give free loans to these intelligent farmers they would all take up the loans, but it would be a great disservice that we would be rendering to the farmers themselves because in time they would believe that it is easy to get money at any time that they ran up against a snag and other people would object. To my way of thinking, the opposition is splitting the country into many camps at the present time. They are pitting the farmers against the citizens of Canada.

Mr. Ellis: The Liberals are doing that.

Mr. Bourque: I am sure the Liberal government will resist and will see that all elements of the population are treated equitably and fairly, and that the taxes that are collected are distributed in as favourable a way as possible to all the citizens of Canada.

Mr. W. D. Wylie (Medicine Hat): Mr. Speaker, it was not my intention to speak on this bill. Perhaps I feel just a little bit like the hon. member who has just taken his seat, that everything has been said. However, after listening to his speech, there is only one thing for one to do and that is to rise and speak.

May I tell the hon. member who has just taken his seat that we are not trying to split Canada by not supporting this bill. We believe that the farmers of western Canada are entitled to a little bit more than they have received so far. No matter what the hon. member thinks, may I say to him through you, Mr. Speaker, that if it was not for the prairies—and that includes the three provinces and perhaps one farther west—Quebec and Ontario would not be enjoying the prosperity they are enjoying today. I say that for this reason. The other day I listened to the hon. member for Wellington South (Mr. Hosking), who suggested that Ontario was paying more income tax than any other province of Canada. May I say to the hon. member that we in the west feel much the same way, but we must not forget, Mr. Speaker, that all of the cars produced in this country are made in Ontario. All of the machinery we buy in Alberta, Saskatchewan and Manitoba is produced and manufactured in Ontario. When you consider how much it costs the people of the three prairie provinces to buy products that are manufactured in another province you can readily see that we derive no benefit except that we do get the cars, machinery and other products. I think we in the west are slipping a little bit. What we should do is put a tax, and a substantial tax, on the money that leaves the western provinces to purchase machinery and cars. If we did that perhaps the situation would look a little different.

Mr. Bourque: What about the wheat we buy?

Mr. Wylie: What wheat do you buy?

Mr. Argue: Perhaps he eats toast for breakfast.

Mr. Wylie: Do you eat toast for breakfast? Perhaps you do.

Mr. Argue: It is usually subsidized.

Mr. Wylie: It is all subsidized. I am not suggesting that that should be done but that is one way in which we could show the eastern provinces what the west means to them.

I was very surprised at the hon. member who has just spoken because I think his brother was mayor of Ottawa at one time—

An hon. Member: Oh, oh!

Mr. Wylie: I think I am right in saying that. I was surprised at a statement like that being made.

Bill No. 82 is an act to provide short-term credit to grain producers. May I say that in my part of the country the farmers are not asking for a handout. They do not want a handout and they certainly do not like the loans that are being made through the banks. As a matter of fact, last week in Medicine Hat there was a Liberal convention and according to the press reports there were approximately 60 or 70 people in attendance. The people attending that conference received a telegram from the Minister of Trade and Commerce (Mr. Howe) and this is what Mr. Howe had to say, and I hope he is listening to me.

An hon. Member: He will be.

Mr. Wylie: I am going to quote it the way it appeared in the Medicine Hat *News* of February 17.

An hon. Member: It will probably be misquoted.

Mr. Wylie:

Mr. Howe wired that widespread endorsement has been accorded the Liberal program of assistance to farmers—

An hon. Member: Ha, ha.

Mr. Wylie:

—and that export sales of wheat are well ahead of last year. The prospects now are better than for some years.

This is one point, Mr. Speaker, I want you to pay particular attention to.

It indicates that the party's position on wheat will not be a handicap to your candidate.

Mr. Argue: The most optimistic statement so far this year.

An hon. Member: It is probably misquoted.

An hon. Member: There is nothing wrong with it.

Mr. Wylie: Perhaps it was misquoted but I do not think so. I think there is nothing wrong with it.

An hon. Member: He is misinformed.

Mr. Wylie: When this is quoted in the Medicine Hat *News* it must be correct.

Mr. Howe (Port Arthur): We want to get a good man from Medicine Hat.

Mr. Argue: The minister says, "We want to get a good man from Medicine Hat".

Mr. Wylie: Thank you very much, Mr. Howe. I am going to read a few more articles; you have asked for it.

At this convention or rally which the Liberals held last week in Medicine Hat, perhaps they foresaw an early election; I do not know and I am really not too much worried about it because the candidate the Liberals will nominate is a man I have defeated twice already and I will defeat him again—

Some hon. Members: Hear, hear.

Mr. Wylie: Yes, I am going to defeat him again. Let me tell you what was said by the candidate who will be running for the Liberal party in Medicine Hat.

Mr. Deputy Speaker: Order. I wonder if I was not remiss in failing to have risen even before now to draw to the attention of the hon. member that we are, after all, discussing Bill 82 which has a rather limited principle. Surely the hon. member at this late stage in the debate can adhere quite strictly to the principle of the bill itself.

Mr. Wylie: Mr. Speaker, that is what I intend to do. Bill 82 was discussed at this Liberal convention and also at a U.F.A. convention in Medicine Hat.

Mr. Deputy Speaker: May I also indicate to the hon. member that Mr. Speaker has consistently ruled that emanations from outside the house reflecting on legislation which we are discussing within the house are not permissible. I would also draw the hon. member's attention to that principle.

Mr. Wylie: In other words, it would appear that we are not allowed to discuss what happened at any convention or any other function outside the house. I will therefore put this in my own words. The mayor of Medicine Hat, who has run against me in the last two federal elections, apparently is not to run again—

Mr. Deputy Speaker: That is exactly the type of discussion which I have tried to indicate to the hon. member is not relevant at this time. We have had an admittedly long debate and I think at this time hon. members should co-operate with the chair in adhering strictly to the principle of the bill itself.

Mr. Wylie: Mr. Speaker, I shall be very happy to do that. I shall co-operate with you in every way I can. Getting back to Bill 82, as you suggested I do, may I say that the farmers in my constituency do not like this bill in spite of what the Minister of Trade and Commerce says. The farmers of my constituency believe we should have cash advances and not loans provided by the bank. Yes, I can tell you why we do not like this bill. We in the south are in an area that perhaps suffers more poor crops than any other part of Canada. Today those farmers have their bins and granaries full but cannot dispose of their wheat.

An hon. Member: In Medicine Hat city?

Grain

Mr. Wylie: We do not farm in Medicine Hat as it is a city. It is too bad the hon. member does not wake up. We farm out in the country, not in the city of Medicine Hat. Our farmers today have their granaries full with wheat piled out on the ground as well. Mind you, we do not mind having that because we do not know what next year will bring, but we are short of cash. In the last few years the income of the farmer has dropped perhaps 50 per cent while everything he buys has gone up. This has created a price squeeze situation.

What the Minister of Trade and Commerce (Mr. Howe) should do, in spite of his statement to the Liberal convention in Medicine Hat, is to withdraw this bill and bring in one under which the farmers would receive cash advances on wheat stored on the farm. I have a record here of many of the things that were said by those who attended the Liberal convention but I realize I would not be allowed to put them on the record at this time. However, may I assure you that when the first item of the estimates of the Minister of Agriculture (Mr. Gardiner) comes up I am going to do it. I will then be able to show just what the Liberals in Medicine Hat think about Bill No. 82 and many other policies which this government is trying to carry out.

I could tell you in my own words but perhaps I would be called to order if I did, so I shall not do it at this time. But I do want to say that Bill No. 82 is not what the farmers of western Canada want. The right hon. Minister of Trade and Commerce must have had his tongue in his cheek when he sent that telegram to the convention. I just want to say that the farmers in my area are certainly not satisfied with what this government is doing in connection with the sale of wheat. I am sure that when I am allowed to read some of the statements I have here I will be able to show that they have just cause for the way they feel.

I oppose this bill because it does not bring to the farmer what the farmer wants. Short-term credit means that a farmer can go to the bank and borrow $1,500 provided he has not obtained any other loans, and even then he must pay 5 per cent. The farmers do not like that and I do not blame them a bit.

Mr. George H. Hees (Broadview): Mr. Speaker, I should like to deal briefly with the basic reason why this government finds itself in such an unholy mess today with regard to wheat sales. The simple reason is that the government's selling efforts have been inadequate and utterly pathetic. To show what this government has done in the way of making export shipments of wheat as compared with what has been done by other countries, I intend to quote some dominion bureau of statistics figures. The following are the export shipments of wheat and wheat flour in terms of wheat expressed in millions of bushels by the five leading exporting countries during the 1953-54 crop year:

Canada	255·1
Australia	63·4
France	34·0
Argentina	110·3
United States	211·4

The following are the export shipments in millions of bushels for the crop year immediately past:

Canada	251·8
Australia	94·2
France	83·8
Argentina	134·5
United States	276·5

Those figures show that Canada shipped 3·3 million bushels less for a decrease of 1·3 per cent. Australia increased her shipments by 30·8 million bushels for an increase of 48·6 per cent. France increased her shipments by 50 million bushels for an increase of 250 per cent. Argentina increased her shipments by 24·2 million bushels for an increase of 21·9 per cent, and the United States increased its shipments by 65·1 million bushels for an increase of 30·8 per cent.

What that adds up to is that the four other major exporters of wheat shipped 170 million bushels more during the last crop year than during the crop year immediately preceding, for an increase of 40 per cent, while in the case of Canada, the shipments decreased 3·3 million bushels or 1·3 per cent. That performance has been carried into the first quarter of the present crop year when Canada shipped 14·2 million bushels less than in the same quarter of the preceding crop year, for a decrease of 19 per cent. In other words, all the other wheat exporting countries were able to ship 40 per cent more wheat than in the preceding year, while we shipped 1·3 per cent less.

I think that that is a disgraceful performance. The minister will quite likely say that the United States increased their shipments to a certain extent by adopting a giveaway program, and we will grant that. He will say that Argentina entered into barter agreements, and we will grant that. However, according to his own department, France and Australia, trading on the same basis as Canada, were able to ship 80 million bushels more during the past crop year than in the preceding crop year, while we shipped 3·3 million bushels less. In other words, France and Australia, trading on the same

basis as we do, seem to have salesmen who can go out and make sales. Canada just does not have that kind of salesmen.

What has happened is that during the war years and the later 1940's, while we were in a seller's market, this government became so used to sitting back and arrogantly expecting buyers to come to us that it has lost whatever sales technique it ever might have had. It certainly has none today, because other countries are making increased sales while we are making less sales. That is nothing less than a disgraceful performance.

What is required in any business to get additional sales, particularly when your competitors are getting additional sales, is that you first go and see your potential customers. You do not treat them with the arrogance with which this government has treated potential customers in the past. You get to know them and obtain their confidence. You sit down and talk to them. You say, "We have something to sell, and you need to buy our commodity. What kind of a deal can we engage in that will be mutually satisfactory?" By working back and forth, getting their confidence, getting to know them and being willing to sit down and work out a mutually satisfactory arrangement, finally a deal is consummated.

However, in the spring of 1953, while the hon. member for Prince Albert (Mr. Diefenbaker) and other hon. members urged the Minister of Trade and Commerce to go to England, when it was evident that Great Britain was not going to enter the international wheat agreement, and try to work out a mutually satisfactory arrangement with Great Britain, the minister said he was not interested in going, and he did not go. That simply exemplifies the attitude this government has taken towards the need for going out and selling a commodity which we must sell—because we have not sold it. We have tremendous stocks building up every day, and the farmers are asked to take the rap. They are asked to do what the members of the cabinet, I am sure, would refuse to do. It is the equivalent of the Minister of Finance making a muddle of his financial arrangements to such an extent that it is not possible to honour the pay cheques that members of the cabinet and members of parliament receive at the end of each month, and to their being required to go to the bank to borrow their salaries and pay five per cent on them. That is what this government is demanding that the farmers of this country do—something they know perfectly well they themselves would not be willing to do with regard to their own salaries. Payment for wheat is the salary that the wheat grower of this country receives.

The performance of this government with regard to selling wheat has resulted in a situation in which every other major competitor is showing an average increase of 40 per cent more shipments last crop year than this crop year, while we are showing less shipments. If that kind of performance were shown to any sales manager, it would result in the salesman being fired on the spot. It is about time the people of Canada, who are being so adversely affected by this mess that this government has got us into, should do the same thing and fire the salesman on whom we are relying to dispose of our wheat. I feel sure that the farmers of this country will look after that very important piece of business at the next election.

Mr. G. H. Castleden (Yorkton): Mr. Speaker, it is rather fortunate that this afternoon we had a speaker on the government side of the house—the hon. member for Outremont-St. Jean (Mr. Bourque)—giving us some figures about agricultural income. I would point out to him in all fairness that he would appreciate the position of the agricultural producers in western Canada a little better if he were to study some of the figures with regard to costs of operation and the decline in net income in his province as compared with those of the prairie producers. In his province, from 1952 to 1954, the farmers—most of them, I believe, are engaged in dairy production—had a reduction in their net income of about three per cent and they can still carry on. I can imagine what the situation would be like if the producers in his province suffered by a decline in net income of 77 per cent.

He suggested that, if these prairie producers were able to get this $1,500 in the west, most of them would be investing it in bonds and stocks and that kind of thing to take advantage of the government's offer of interest-free money, that it would be a bad thing for the rest of Canada and we could not expect them to support it. There could not be better proof of the lack of understanding of the situation or of the conditions under which those people are trying to exist and in which they have found themselves as a result of government policy.

The member who immediately preceded me, the hon. member for Broadview, made a very telling point. He showed rather conclusively that, because of the failure of this government to sell its wheat in the world's markets, other large wheat exporting countries were increasing their sales while Canada's sales were decreasing. It is the failure of the government to sell the grain that has caused the terminal elevators to be blocked up, the inland elevators to be filled,

the elevators at the delivery points to be filled and the farmers' bins now to be filled. In many cases, hundreds of thousands of bushels are lying out on the prairies without any covering at all for them. If this government accepts the principle of orderly marketing, it is up to it to purchase this grain.

I wish my hon. friend from Outremont-St. Jean and a good many other members on that side of the house would just try to appreciate that situation. Then perhaps they would not so blindly follow the government votes in this house.

This Bill 82 is supposed to provide short-term credit for grain producers on the prairie provinces. The fact that it does not do so points up the bill—this is the best word I can use to describe it—as "phony". It does not do the job. To say the situation is a temporary financial difficulty the people are in, arising from an inability to deliver all their grain, carries with it the suggestion that most of the farmers are fairly well off and have delivered most of their grain. It is utterly impossible, I suppose, to get members here to understand the situation unless they will undertake to study it a little.

It is because this bill is wrong in principle, beause it does not do what the government has said it is going to do in the preamble or in the definition of the bill, that we are opposing it. If it provided cash to the farmer as a right, then perhaps there would be some reason for some of us to support it. The farmers' inability to deliver is directly the responsibility of this government. It is the failure of this administration to sell that grain, even to provide the box cars for the delivery of the grain at the points of delivery to fill the available space in the terminal elevators, that causes the people of the west to oppose it.

There are two great failures here, and they rest directly on the administration. If the government has failed in its responsibility and as a result has placed the producer in the position where he has not the money to pay his costs of operation for the past year and to pay his taxes and other operating expenses, then surely it is the government that should take the responsibility and should pay for that responsibility. It is misleading to say that this does take care of the situation. As a matter of fact, when the facts of the situation are known, it will be a disgrace to Canada if such a bill is placed on the statutes. I think we are doing the government a favour by suggesting to them that this is a disgraceful piece of legislation which purports to do something but which does not do it at all. Such a thing can only be described as being misleading. We have moved the six months' hoist to this bill. We in this group are supporting that six months' hoist because behind the bill is a definite and real injustice.

Orderly marketing in principle implies responsibility on the part of those who are to purchase the grain. Under act of parliament—and rightly so—the wheat board is the sole agency for the purchase of this grain or at any rate by far the greater bulk of it. Orderly marketing also implies that it is the responsibility of the government to sell that grain. It is the responsibility of the transport controller and the boards under the government's direction to see that transportation facilities are available so that the farmer can deliver that grain to his local elevator and so that the grain can be shipped to terminals. The government has failed in those responsibilities and now, under this legislation, wishes to place a penalty on the producers, namely the penalty of extra debt and the penalty of extra interest. When the action of any one person causes harm to some other person the person who is guilty of causing the harm would, in a court of law and in the name of justice, be obliged to pay for that action. The damages of the plaintiff who complains against those who have caused him harm or loss would, in a court of justice, be assessed against the person causing that harm. In this case we have the government being responsible for the loss or harm suffered by the producer and the producer being penalized for the failure of the government to act. That is the basis upon which we refuse to accept this bill and upon which we condemn it as being unworthy of the government of Canada.

If we were to endorse this bill in any way we would be endorsing a principle which, if allowed to continue in the present maladministration, would place a continually increasing burden of debt and interest on the back of agriculture which could have only one ultimate result, namely to break it. The farmer is facing bankruptcy rapidly enough with constantly increasing costs of production and a decline in income. To put a further burden on him is further to condemn agriculture to poverty for years to come.

On numerous occasions over the past years we have suggested to this government that, with the situation developing as it was, it was their responsibility to provide storage in Canada for this grain which they must buy from the farmer. They have undertaken to buy it and they have undertaken to sell it. They must accept their responsibility to sell it. If they had built these inland elevators and provided for a food bank within Canada, it would have been for the good of all. Without that elevator space available, we are caught in the mess in which we find our producers today. If the government had carried out the

recommendations presented to them by this group on numerous occasions, they would have done a good deal to help and would have prevented the present situation entirely. They have failed to carry out those recommendations and they must accept the responsibility. If the government policy with regard to exchange, barter deals and their attitude towards other governments is responsible for the failure to sell grain, then the responsibility rests squarely on their shoulders.

Instead of tackling the problem, what do we find? They say, "Oh, if the farmer is in temporary difficulties, we will make arrangements whereby he can go to the bank and the bank will lend him money. We will guarantee that the banks do not lose anything"—at least we are guaranteeing up to 85 per cent, I believe, under the bill—"and you pay the interest on it. That is just a little extra burden." How far is this going to go? Where is the end of such a policy? Can we accept that principle? Surely we cannot do so. The bill being unjust and being without a proper basis in principle, we would be derelict in our duty, if we were to support it. We could not possibly do so.

It has been suggested that recognition of the justice of the case of the producer in the west, is limited to only a few people here and there. It is encouraging to find throughout Canada growing support for the justice of the case of the western producer in the predicament in which he finds himself today. Just a few days ago the leaders of the two great labour unions of Canada, representing organized labour in this country to the extent of almost one million people, issued a statement supporting the demands of the western farmer for cash advances on his farm-stored grain as a matter of right; and, even more significant, they are supporting the demands of organized agriculture throughout the whole of Canada for the establishment of a parity price, the only way in which the farmer can be assured of any security. With the costs of operation continuing to rise, he should be guaranteed a floor price which will bear a proper relationship to his costs of production. Without that parity price, he faces bankruptcy. Organized labour in Canada recognize that fact and have issued a statement supporting the demands of the farmer for that right.

The action of this government is completely ineffectual. This bill will not do the job; it cannot do the job. Why should it be presented to this house? Not only is it misleading and ineffectual but it is a travesty on justice. It is a burlesque imitation of what should be done, and it is completely misleading. Because it is useless and ineffectual, wrong in principle, dangerous to the future of agriculture and misleading, we are going to support the motion that the six months' hoist be given to this bill. That is our way of saying that it should not be passed by this house, that it should be thrown out and that something should be introduced which would restore the confidence of the people who are doing the job of producing the economic weapons in the struggle for men's minds today, the people who are producing and doing the job of producing the food that the world so desperately needs. The movement of people away from agriculture in this country can only mean that the army of people who provide probably the very basis upon which the good part of this country is built—the rural homes, the farm homes, the place from which our nation draws its strength—lack confidence.

One hon. member this afternoon compared what is happening in Canada to what has happened to agriculture in that great giant of a country to the south of us. Within the past few years the government of that country has supported agriculture with a parity price program. It recognizes that agriculture as of right deserves to be supported in an economy where the costs of operation, without price support, will mean the ruination of agriculture. They have spent some $799 million in support programs for agriculture. In spite of this fact, agriculture in that country still continues to decline. Here in Canada we have no such support. This government refuses to recognize the right of agriculture to any support prices when it is responsible for the increasing costs of living. With the costs of production continuing to rise, there must be some support for agriculture. The bill purports to deal with a matter of immediate importance, what amounts to a desperate situation, the shortage of cash in the prairie economy. It does not do the job and that is why we have moved an amendment to give the bill the six months' hoist. Basically it is only a part of the greater problem facing agriculture which we can discuss at another time. In refusing to recognize cash advances on grain properly stored on the farm, the government condemns the farmers of the country to a critical economic condition, but it also does more than that. Underlying the attitude of the government is a denial of the principle of orderly marketing, and only by the application of that principle is there any hope for the people of the prairie region and those of the rest of Canada engaged in the agricultural industry. I am pleased to support the amendment for the six months' hoist. I hope

that every hon. member, having studied the situation and knowing what he is voting for and what he is voting against, will do likewise.

Mr. H. R. Argue (Assiniboia): Mr. Speaker, I rise at this time—

An hon. Member: Once again.

An hon. Member: Is this the last time?

Mr. Argue: —to oppose once again the bill before the house. As the days go by, I believe it is becoming more and more clear why the members of the C.C.F. group have been right all along in deciding to oppose this measure. As the days go by support for opposition to the measure is growing. The only people who are saying anything in favour of the proposal are members on the government side of the house. In their desperation various members of the Liberal party are making statements that are bound to lead to growing disunity in the country, because that is what they are talking about.

Mr. Dickey: You started talking about disunity.

Mr. Argue: Just a few minutes ago an hon. member said that the farmers of eastern Canada were opposed to this kind of thing. I do not believe the farmers of eastern Canada are opposed to cash advances in any way. As a matter of fact, just the other day one of the organizations representing the farmers of Ontario came into this building, met the various groups and advocated the very thing that we have been advocating, namely, cash advances. The Ontario farmers' union joined hands with the farmers' unions of the three prairie provinces in supporting cash advances and opposing bank loans.

This afternoon the hon. member for Outremont-St. Jean (Mr. Bourque) said that the opposition members were pitting the farmers against the rest of Canada. When I said that members on the government side of the house were prepared to make statements that could in no way serve the cause of national unity, that was one of the statements I had in mind. I say that the people of Canada are not supporting the government in the action it has taken at this time. We in this group are not attempting to pit the farmers against the rest of Canada because we believe the majority of Canadians are fair and believe that agriculture from one end of this nation to the other is entitled to fair economic treatment and that the farmers are in fact entitled to an economic standard of living comparable with the rest of the nation.

What has the government said when we in this group have advocated measures such as support prices in the interests of our farmers? They have said: You might be able to do something in this case but the consumer is against it and labour is against it. In other words, they say that the country is divided and that when the farmers want a certain policy the consumers are opposed to that policy. I do not believe that for a moment. I believe I can show that the nation as a whole is quite prepared to support the farmers in their demands for equity, justice, and for prices which will give them a reasonable standard of living.

We have seen the government attempt to divide farmers and labour. Because they have been able to do that with some success in the past, perhaps it has served their own ends. The Canadian Congress of Labour had a convention last fall and they came out in favour of 75 per cent cash advances on farm-stored grain. The labour unions are certainly far ahead of the government in advocating such a policy. Just a few days ago the farm-labour economic council issued a statement which was reported by the Canadian Press and is found in the Ottawa *Journal* of February 20. In it they had this to say:

> Prairie farm unions, driving hard for cash advances on farm-held grain, now have powerful allies—spokesmen for some one million organized workers. The heads of the two national labour bodies, the Trades and Labour Congress and the Canadian Congress of Labour, Saturday agreed with farm unions that the need of such payments should be recognized.
>
> T.L.C. chief Claude Jodoin and C.C.L. head A. R. Mosher, whose organizations are soon to amalgamate, agreed also that farmers should get "equitable" or parity prices on all farm products.

I say that statement is the best answer that could be given to the suggestion of the hon. member for Outremont-St. Jean that we are attempting to pit the farmers against the rest of Canada. As a matter of fact, more and more it is becoming clear that the government's stand is in fact against the rest of Canada and that is the only division there is in the country on this question.

I have heard it said very frequently that farmers in eastern Canada, farmers in the maritimes and farmers in British Columbia do not support the policies that are advocated from time to time by the Canadian Federation of Agriculture and other organizations speaking on behalf of the prairie farmers. I do not think that is true. Not only do I think that the farmers of the east and British Columbia are prepared to support reasonable demands advanced by prairie producers but I also believe that the prairie producers, as fair-minded Canadians, are prepared to support reasonable demands advanced by producers in all parts of Canada.

The hon. member for Westmorland (Mr. Murphy), who is in his seat at the present time, made some very amazing statements in his contribution to this debate. Referring to the opposition he said, as found at page 971 of *Hansard* of February 8:

> Why do they not come up with the same suggestion on wheat? Why do they not suggest that the government buy the wheat and give it to the Canadian public at such a low rate that bread will be a penny a loaf?

That is an open and public confession by the hon. member that he knows nothing about the grain business, that he knows nothing about the cost of the wheat that goes into a loaf of bread and knows very little about economics or he would not make the suggestion that bread, even if wheat were free, would come down to a penny a loaf. It might come down two, three, or three and a fraction cents a loaf but that is all because most of the cost of a loaf of bread is for something other than the flour content of the loaf.

Then the hon. member went on to criticize the western wheat producers in very strong language. He said:

> It seems to me that the western wheat producer in this case is the man who holds the big stick . . .

He says that the wheat producer in the west is the man who holds the big stick. He does not hold a stick at all. He holds a lot of grain that he cannot sell. He is out of money and the only place where he can sell his grain is the Canadian wheat board. He believes the government that has taken responsibility for the functioning of the Canadian wheat board should also take the responsibility for providing money to the producer when he is unable to deliver his grain. If there is a big stick at all it is being held and wielded by the right hon. Minister of Trade and Commerce (Mr. Howe). Because of the power he possesses in the government he has said to the western wheat producers, in spite of an almost unanimous request for cash advances, I will have nothing to do with it and I will oppose it. It is not the farmer in the west that is wielding the big stick; it is the Minister of Trade and Commerce.

I do not think the statements I have referred to do the hon. member for Westmorland any credit. Since he is a member of the legal profession and has had a good deal of training one would expect that he would not make such statements as these.

Mr. Murphy (Westmorland): I am a Canadian, also.

Mr. Argue: Well, I believe that is a correct statement. The hon. member needs to make quite a number of correct statements to live down the comments to which I have referred. Even though the hon. member for Westmorland may take exception to what I am now saying, his statements were, in my opinion, not quite so bad as those made by the hon. member for Wellington South (Mr. Hosking). In the statements he made he showed that he had no understanding not only of the grain business but of the livestock business of this country. As recorded on page 1298 of *Hansard,* he was quite prepared to interrupt the hon. member for Humboldt-Melfort (Mr. Bryson) when that hon. member was making the statement that unless the government took action the prairie farmer would be forced to produce more livestock. The hon. member for Wellington South said:

> Your farmer will certainly do some work for a change.

That shows the abysmal ignorance of the hon. member for Wellington South. He had already made other statements along the same line before he made that statement. At page 1297 of *Hansard* he had this to say. He had been questioning the hon. member for Humboldt-Melfort regarding the production of livestock and he asked this question.

> Why have they not done so before?

He was referring to the western producers. The hon. member for Humboldt-Melfort replied:

> We were getting rid of some grain before.

To that the hon. member for Wellington South made this statement:

> Because they were making so much money from their wheat they did not have to raise livestock, like the eastern farmers, to make a living.

I looked up the record in the dominion bureau of statistics agricultural statistics, and I found something that amazed me. I will admit that. I found on the farms in western Canada, as of the 1951 census, almost exactly the same number of cattle and calves as are on farms in eastern Canada, namely, in Ontario and Quebec. As a matter of fact, in that year on each farm in Ontario and Quebec there were 12·5 head of cattle. In the same year on the prairies there were 12·1 head on each farm. The statement of the hon. member for Wellington South is therefore inaccurate.

Mr. Deputy Speaker: Order. If the hon. member will read a little farther on page 1297 he will find I indicated that questions along that line should not be answered, and I am still of the same opinion that these discussions of livestock are not quite in order on this bill.

Mr. Argue: Mr. Speaker, I am quite prepared to abide by your ruling.

Mr. Robichaud: Find something new.

Grain

Mr. Argue: What other hon. members of this group have been endeavouring to say is that just so long as the government fails to take action to solve the problem of the farmer obtaining money for his grain there will stand an ever-present threat to the livestock industry across this nation of the western producer deciding that he has vastly to increase the number of livestock on his farm. Because we believe that such a thing can only further increase the misery of agriculture in this nation we have been pointing out the need for the government to take action to place money in the hands of the wheat producers. We can talk as we like on this subject; we can talk about cash advances that are so important, but the main thing finally will be to get the grain moved, to get the grain sold and to get money for the sale of the grain in the pockets of the producers.

We have been pointing out the fact that sales of grain in recent years have been going down. We have pointed out the fact that increased crops, because of new methods, are likely to add to the surplus rather than detract from it, unless the government should vastly increase the sales of grain; but we were surprised to learn, as I am sure the nation was, that according to the Minister of Trade and Commerce the trouble is not the matter of sales; the trouble is not the matter of giving cash advances or loans. The minister had this to say in the debate at page 603 of *Hansard:*

> Our big problem now is not selling, but transportation. If deliveries of wheat by producers this crop year do happen to fall behind last year, it will be because rail transportation is not adequate to move grain forward quickly enough and thus clear space in country elevators.

We have heard alibis of all kinds, but this is the main alibi, this is the last alibi, that there is a transportation bottleneck; that there is a shortage of box cars; that sales are marvellous; they have been going up; but if the transport controller did his job—that is in fact what the minister was saying—and provided more box cars, then the whole marketing problem would not be nearly so difficult. The transport controller, who is supposed to be an authority on the control and movement of box cars, replied to this statement about three weeks ago, according to a Canadian Press dispatch of February 17. He had this to say:

> Transport controller Roy W. Milner, whose powers parliament will be asked to renew for two years, said Thursday there is no shortage of box cars holding up prairie grain shipments.
>
> The Canadian wheat board has made an estimate of how much grain it will want moved by April 15 and "we will have that grain moved before that date."

I have heard the Minister of Trade and Commerce criticized in this house for the statements he has made from time to time. I have seen many hon. members rise in their places and attempt to argue against the Minister of Trade and Commerce and refute his statements, but this is the first time in my memory that a senior civil servant has gone to the press and said in fact, in so many words, the minister does not know what he is talking about. The Minister of Trade and Commerce says there is a big shortage of box cars; that is the bottleneck; that is the trouble in moving grain. The transport controller says there is no shortage of box cars holding up prairie grain shipments.

Mr. Trainor: Give him credit for that.

Mr. Argue: I am not too sure which one is right, therefore I do not know where to place the credit.

Mr. Howe (Port Arthur): In other words, you do not know.

Mr. Argue: I asked the Minister of Trade and Commerce what had happened to the 58 million bushels effective capacity which was not used, as reported in an answer in this house on January 20. He said he did not know. He did not know whether it was more or less. We need a lot more information. I would like to see the agriculture committee of this house called at an early date. I would like to see the minister present his case to that committee for saying that the great difficulty is the shortage of box cars, and then it would be very interesting to have the transport controller tell us why he makes the statement that there is no shortage of box cars. In the last session and the present one we have seen increasing evidence that the government has lost touch and that the cabinet is no longer able to effectively carry out its duties. This is more evidence of the fact that the government is not effectively carrying out its obligations to the people of this nation.

I would like to see the Minister of Trade and Commerce make a statement in the house and tell us what the facts really are and tell us who is right. Is the minister right or is the transport controller right? Whatever the answer may be this situation should be solved so that the greatest effective capacity possible will be used and grain will be kept in position without having to pay demurrage on ocean vessels waiting in port and so on so that we may take advantage of every possible sale.

Someone made a statement in this chamber the other day to the effect that farmers have already marketed their normal crop. This statement was made by someone who

had been listening to the Minister of Trade and Commerce but who had failed to get the gist of his remarks. Farmers' marketings on the prairies so far this crop year are very low. There has been a calamitous drop in farm marketings. Day after day hon. members from western Canada are receiving letters and resolutions following meetings that are called asking for increased quotas, for more box cars and for the opportunity to go out in thirty or forty below zero weather to open a road by removing the snow so that they can get a few bushels to market.

The statistics I hold in my hand show that this situation is in fact prevalent on the prairies. I have here a list of farmers' marketings from the period August 1 to February 1 for a number of years. The high year in recent years is the period 1952-53 when farmers from August 1 to February 1 marketed 286 million bushels of wheat. The next year marketings in the same period were 241 million bushels of wheat and in that period 1954-55 marketings of wheat had dropped to 135 million bushels. For the current period marketings are down to 111 million bushels. In other words, from this period in 1952-53 when farmers marketed at country elevators on the prairies 286 million bushels of wheat, there has been a drop to 111 million bushels.

It is because of the lack of marketing and because of the fact that marketings have been so drastically curtailed that meetings in western Canada are still being held asking the government to provide a system of cash advances.

The Minister of Trade and Commerce keeps telling us that sales are better but when we ask him in the house what the sales are he says, "I will not tell you, it is not public; but I know they are better, I know sales are up." We have to rely on export figures, but a sale is transferred into an export before too long and the latest figures on exports which have come to my office are for the period August 1, 1955, to February 8, 1956. These figures show exports were 97·4 million bushels, a drop of approximately 18 million bushels from the same period last year.

I hope the Minister of Trade and Commerce is right in saying our sales are up, but if he is, he is going to be right this year whereas he was wrong many, many times last year when he told us in this house that marketings and sales were up and that the 8-bushel quota would be off the farms. In fact, he said that farmers would be able to market all their grain before the new crop was harvested.

There is a great need to make certain that our exports are increased. One cannot help but feel that, unless we are successful in obtaining a new international wheat agreement, these figures I have used today and the optimistic statements the Minister of Trade and Commerce is now making will not prove to be correct and sales may in fact go down.

I was very disappointed to learn that Great Britain would not consider coming into a new international wheat agreement. The fact that Britain has said no to a new international wheat agreement is no excuse for the Canadian government to take the position the minister suggested it was taking on February 16 when he said it would not be prepared to enter a new international wheat agreement unless two-thirds of the wheat entering into the channels of commerce were provided for in that agreement. Even with Britain participating in an agreement, it is doubtful if we would have two-thirds of the wheat that is entering into the commercial channels of the world covered. We have an international wheat agreement at the present time. It is not what we would like it to be, but let no one think that it is not an important agreement or that it does not cover a vast quantity of wheat or that there are not many countries in the world who are signatories to the agreement. The guaranteed quantities under the present international wheat agreement which is still in operation are 395 million bushels, and while we have exported 97·4 bushels in the crop year to February 8 the report of the international wheat council shows that in the period August 1, 1955, to February 10, 1956, Canada sold 52,734,000 bushels under the current international wheat agreement.

In other words, with an agreement restricted as it is without Britain we have exported approximately half of our wheat so far this year under the terms of that international wheat agreement.

I regret the statement of the Minister of Trade and Commerce that Canada, at least on February 16, is apparently not thinking in terms of supporting a new international wheat agreement even though it would cover a much smaller quantity of grain.

The minister this afternoon in answer to a question asked by me stated that I had always said he should take the advice of farm organizations and he said that is what he was doing; he was taking the advice of farm organizations. As a matter of fact, he is doing some of the things which are absolutely opposed to the statements of leaders in the farm movement. When he made the statement that Canada would not consider an agreement unless two-thirds of the wheat that is entering into the commercial channels of the world was covered, Mr. Alf Gleave, the vice president of the Saskatchewan

farmers' union, Mr. Stewart Thiessen, secretary of the Saskatchewan farmers' union, and Mr. Alex Gilliland, the wheat pool manager, questioned the wisdom of the minister's statement.

According to the Winnipeg *Free Press* of February 18 in a news item entitled, "Howe Stand on I.W.A. Criticized", Mr. Gleave had this to say:

> Why send a negotiating team to Geneva, then three days before the meeting opens, lay down a policy which limits their powers of negotiation?

The minister says that he consults with the farm organizations and their leaders and listens to their representations but as a matter of fact, according to Mr. Gleave, the minister has not consulted with them at all and three days before the opening of the international wheat agreement negotiations the minister cuts the ground in large part from under the feet of the people who are to take part in the negotiations.

The Acting Speaker (Mr. Applewhaite): I am going to suggest to the hon. member for Assiniboia (Mr. Argue) that he is opening what could become quite a large debate within a debate; that is, the action which this government should take in the future in connection with the forthcoming wheat agreement. That undoubtedly will be a legitimate subject for debate if it comes before the house, and it can be discussed under the estimates of the department concerned if no agreement comes before the house. I would ask the hon. member to agree with me that we are a little far away from legislation dealing with the present financial condition of the farmer.

Mr. Argue: Mr. Speaker, you are absolutely right; we are some considerable distance away from a discussion of the second reading of this bill and of the amendment for the six months' hoist which is before the house.

When the matter was being considered previous to the debate I expected that the debate would be restricted largely to the question of bank loans or the alternative cash advances. However, when the Minister of Trade and Commerce opened this discussion on January 27 he made a most detailed statement, not only of the government's position as far as bank loans are concerned or even cash advances but as to exports of grain in the last few years. He gave all kinds of statistics and dealt at length with the government's marketing policy.

Any reference I have made to the wheat situation today and to marketing policies, any statistics I have quoted, have been right around the subject with which the Minister of Trade and Commerce dealt most adequately when he opened this discussion on January 27. I was not endeavouring to extend the scope of the debate; I was merely making comments on the general statement which the minister made when we first began this discussion.

The Minister of Agriculture is not at all reluctant to make statements on wheat. I am glad he is not, and I congratulate him upon being ready to do that even though he is wrong and at times he must feel that he is wrong. That does not bother him. He goes out to meetings of all kinds, in eastern Canada and western Canada, and makes statements as to his version of the farmer's position, as to why bank loans are good enough, as to why the government is opposed to cash advances, as to why the minister himself is opposed to cash advances. I believe the minister might have a different idea and the government might have accepted a different policy if they had started from a correct instead of a wrong premise.

I should like to refer to the report of a speech made by the Minister of Agriculture which appeared in the Windsor *Daily Star* of Thursday, February 2. It is headed "Wheat in Bin likened to Farm Bank Account". If I had not known who was making this speech I would not have needed to read any more than that headline to have guessed that it was the Minister of Agriculture, because that is an old theme of his that wheat in the bin is like money in the bank.

I am sure that the Minister of Justice is prepared to say that the farmers of Minnedosa and district do not believe that statement by the Minister of Agriculture? As a matter of fact the Minister of Trade and Commerce does not entirely believe it either, because he is bringing in something which he expects will provide farmers with some money in their bank accounts; but according to the Minister of Agriculture if you have wheat at home it is just as good as money in the bank. He cannot convince anybody of that. The minister was making this speech before a medical society, so he did not have many hecklers I suppose. The report reads:

> Mr. Gardiner told the doctors he has been criticized for earlier statements in that vein, "But I still say agriculture is making a pretty fair showing in Canada."

The fact is that the farmer today is in a worse cost-price position than he was when the Minister of Agriculture took over his present portfolio; the farmer is in a worse price-cost position today than he was 20 years ago. The minister stated that as far as he was concerned the farmer's position today was pretty fair. Then he went on to say:

> After all, the best bank account a farmer can have is a bin of wheat. That's because he can't spend it.

The Minister of Agriculture apparently says, "Don't give the farmer any money; don't give him a bank account, but let him have some wheat and then stop him from selling it. Don't give him any money because after all it is good for him that he cannot spend it". Is it any wonder that the minister is running into trouble? Is it any wonder that we have a return such as the one tabled the other day for the hon. member for Prince Albert, containing many resolutions and petitions with signatures running into the thousands all saying that the Minister of Agriculture is wrong when he says that wheat in the bin is as good as money in the bank? They indicate that the farmers in fact want the government to do something that will transfer wheat in the bin into cash. The minister went on to say:

> On my own farm I once held wheat twelve years in a row and it came out in first-class condition.

I do not think he meant that the wheat had been there for twelve years. He held it for just one year at a time. That is fine.

Mr. Gardiner: No. My hon. friend says that is funny.

Mr. Argue: I said, "That is fine". I am being misquoted now.

Mr. Gardiner: The wheat had remained in the bin for twelve years.

Mr. Argue: The Minister of Agriculture has another source of revenue; therefore he was in the happy position where he could make the statement that wheat in his bin was as good as money in the bank. I suppose if all farmers of western Canada had some side line where they could make—

Mr. Gardiner: Perhaps I had better indicate to my hon. friend that I was feeding the wheat out of the bin for the twelve years and when the wheat came out of the bottom of the bin it was just as good as when it went in. I was selling cattle and hogs in order to get my return.

Mr. Argue: The minister still kept this wheat for twelve years. In fact he was able to pay most of his accounts, I imagine, without having to charge them for an extended period because he had other sources of revenue.

Mr. Gardiner: Every farmer will understand it.

Mr. Argue: It is no wonder that the farmers cannot get cash advances when the Minister of Agriculture is against them. He thinks the farmer does not know how to run his own business, that the best thing for the farmer is to prevent him from selling his grain because it will leave him in a good position. He will have a bin of wheat as good as money in the bank and he cannot spend either the wheat or the money. The minister says that the wonderful policy of the government means that the farmer is in a pretty fair position after all.

As I said before, I admire the Minister of Agriculture in many ways. He has courage. He is quite prepared to face an audience at any time, even one completely hostile to him where there may be many hecklers and where many questions may be asked. The Minister of Agriculture does not mind entering into a debate in this house at any time. Usually you do not have to challenge the Minister of Agriculture, but if you do you are almost certain to get a reply and he will make his reply interesting; he will make it in strong language.

But there is a silent member of the cabinet from the prairies. What I have just now said about the Minister of Agriculture I cannot say to the same degree about the Minister of Justice who represents Manitoba in the cabinet. The Manitoba farmer is short of money, and he would like to know the position of the Minister of Justice. I am sure the members of this house would like to have the Minister of Justice enter this debate and tell us why in his opinion the farmer takes that view.

An hon. Member: Don't go away.

Mr. Garson: I have a telephone call.

Mr. Argue: We can excuse you. However, I think if it were the Minister of Agriculture he would say, "I will make my speech first and answer the phone a little later." The Minister of Justice makes big speeches about wheat and he gets great publicity on the front page of the Winnipeg *Free Press* about the government's position on cash advances. This speech was made by the Minister of Justice on Saturday, February 18, in the "Report from Parliament Hill" series. He made it over radio station CKDM in Dauphin.

Mr. Knowles: Not even on television.

Mr. Argue: The minister knew he would not have any hecklers when he broadcast over that station. I imagine he did the same as the rest of us do on the "Report from Parliament Hill" program, and went to Sparks street and recorded it. He was in the room all by himself and did not have a wheat farmer there. He had no hecklers.

An hon. Member: No shotgun.

Mr. Argue: The Minister of Justice maintains the safety of silence here and makes his comments over a radio station by means of a recorded transcription of a speech that he

makes in Ottawa. Then, of course, he very generously distributes it to the reporter for the Winnipeg *Free Press*, which gives the "Report from Parliament Hill" broadcast by the Minister of Justice a very prominent display on its front page. I say to the Minister of Justice that he owes it to this house to stand up here and give us his views and the views of the people of Manitoba, and not to continue his silence as far as parliament is concerned, using merely the safety of radio station CKDM in Dauphin.

The government gives the farmer bank loans requiring interest. The farmer wants money so he can pay off his mortgage, but the government gives him another one. Instead of getting rid of his debts when he gets a crop, he gets more debt. The government has no policy that will solve the wheat problem at home. It has no policy for solving the problem of getting rid of the wheat in the export markets. Europe, according to all reports, is now experiencing the worst winter in 100 years. President Eisenhower says that with the devastation in Europe, with the great damage to the crops there and with the suffering among the people, the government of the United States is prepared to make some of its surplus food available to help the people in need in Europe. We ask this government what it intends to do. Silence again. No comment. No policy. I suggest that the government—

The Acting Speaker (Mr. Applewhaite): Order. I am sorry to interrupt, but I have to advise the hon. gentleman that his time has expired.

Right Hon. C. D. Howe (Minister of Trade and Commerce): Mr. Speaker, I have listened a great deal and spoken but seldom in this debate. I have listened to my hon. friend from Assiniboia challenge me to refute his figures. I am not going to do that. He gives so many figures, and so many of his colleagues give so many different figures, that time would not permit. I am simply going to challenge his right to speak for the province of Saskatchewan.

This program in the bill before us was undertaken by the government at the request of the farm leaders of Saskatchewan. They were present when the request was made. They were very explicit as to what they expected from the government. The only item that has not been exactly as requested is the rate of interest. The government does not determine the rate of interest; that is determined by the banks which make the loans.

That is why the government entered into this program. It is a program that the government believed could be administered to the satisfaction of taxpayers in every part of Canada. It is a program that we believed would relieve the shortage of cash resulting from the fact that the country elevators being filled with grain had delayed marketing operations in the early months. It is a program that has certainly helped 8,000 farmers, and I think the figure is considerably higher than that at the moment. I have had letters from many of them, and they all express satisfaction with the help that has been given.

However, I am not relying on that evidence. I have further evidence. I have before me a report headed "Province of Saskatchewan, Royal Commission on Agriculture and Rural Life." This is report No. 8, "Agricultural Markets and Prices." I might say that this commission was established by the government of Saskatchewan. The members of the commission were Professor W. B. Baker, chairman; Mrs. Nancy Adams of Ethelton; Mr. H. L. Fowler of Saskatoon; Mr. T. H. Bourassa of LaFleche; Mr. Charles W. Gibbings of Rosetown; and Mr. J. L. Phelps of Wilkie. It seems to me that is the same Mr. J. L. Phelps whom the hon. member for Assiniboia has been quoting to me for a number of years. This report pays special attention to the subject matter of this bill, and I shall read from page 103:

> The payment of advances on farm-stored grain would, in effect, be a prepayment of all or a portion of the initial price by the wheat board. Such a program would resemble, in a number of aspects, the commodity loan program of the United States. One undesirable feature would be the questionable wisdom of making advances freely available to all producers whether or not they are in need of financial assistance. The principal objection, however, lies in the field of administration. Provision would have to be made for inspection to determine adequacy of storage facilities, to verify quantity, and to determine grade. The additional costs involved would appear to make the proposal of doubtful value as a long-term program.
>
> Perhaps a more workable proposal is to re-establish the Prairie Producers Interim Financing Act of 1951 on a permanent basis. This act provided government guarantees of bank loans made to producers between January and September, 1952. Banks were guaranteed against loss up to 25 per cent of the aggregate principal amount of loans made under the act. The total which could be guaranteed was set as $20 million. Individual loans to producers were not to exceed $1,000, could not bear an interest rate of more than 5½ per cent, and were to be secured by the crops and grain on the farm, with the added requirement that the borrower be the actual producers. Only $625,000 was loaned under the act, but it should be noted that the use of such loans would probably be much greater if the act were in force now.
>
> A continuous program of marketing under the board system will mean that any crop not delivered in one year will be delivered in the next year. While payment for one crop will be delayed, it is also probable that part of the resulting lower income for that year will be compensated for by delayed deliveries and payments from the previous year; therefore, the existing need could probably

be met through re-enacting the Prairie Producers Interim Financing Act as permanent legislation.

That seems to be a little endorsement for the bill we have before us.

Mr. Ellis: That is one side of the coin.

Mr. Howe (Port Arthur): I suggest to you that was a commission established by the Saskatchewan government to advise the Saskatchewan government on how to handle this situation, and the statement I have just read is the statement of the commissioners established for that purpose as to what they believed to be the solution to the problem at this time.

That report is dated 1956—in other words it is hot off the griddle—and it is published in the light of all the information and misinformation that the hon. member for Assiniboia has been able to put on the record during this session of parliament. I ask hon. members whether those who have been speaking from the C.C.F. group are the proper interpreters of the feeling of Saskatchewan. Perhaps they interpret their own opinions, but can they speak for the farm population of Saskatchewan with the same conviction as a commission appointed to determine the viewpoint of the province, to analyse what is best for the people and to present a report to the provincial government?

I think that extract is a fair measure of the filibuster we have had here, and a fair measure of the validity of this motion to give this bill the six months' hoist. The bill was recommended by the farm leaders of the province. It is endorsed by a commission of the provincial government, but it is opposed by this little group who represent perhaps some opinion but, if my own opinion is correct, it is a small portion of the public opinion in the province of Saskatchewan.

Mr. F. G. J. Hahn (New Westminster): Mr. Speaker, I am not participating in this debate for any particular purpose other than that of clarification. We who have listened for so many days, both on the government side and in the opposition, are placed in much the same position. We wonder who is right and who is telling the complete truth. From what the minister has just said I am satisfied that he has a particular statement from a commission which was set up by the Saskatchewan government, as he indicated, and that the report is hot off the press. That report would be applicable to the province of Saskatchewan.

The group with which I am associated in British Columbia do not have this particular problem. However, I have a problem in my own mind. To me it does not make sense that we would have so many members in this house willing to commit political hara-kiri by trying to get rid of a bill that the farmers are wanting or not wanting, as the case might be. It raises an element of doubt in my mind as to whether or not the farmers themselves know what they want. I have listened to a great number of charges from the opposition side as to what is wanted. I have heard some answers from the government side.

An hon. Member: Very few.

Mr. Hahn: And I have also heard some ridiculous questions from that source. One of the reasons I rise this afternoon is something the hon. member for Medicine Hat (Mr. Wylie) had to say a short time ago. I used to be a citizen of the city of Medicine Hat. I was there for a good number of years. I know people in and around that area very well. I did not leave there too many years ago, in fact. Most of the men who attended a particular farmers' union of Alberta meeting there are known to me. I taught in that area for a good number of years.

The meeting of the farmers' union of Alberta was apparently called to discuss the grain situation. More particularly, some of the members who were there included Mayor Harry Veiner, the present mayor of the city of Medicine Hat. You will notice that I said "the city of Medicine Hat." I did so in order to endorse what was said earlier by my friend the hon. member for Medicine Hat. Others at the meeting included Harry Strom, who happens to be at this time Social Credit member of the legislature for Cypress; Bryce Stringam, member of the legislature for Bow Valley. He is a C.C.F.-Liberal-Conservative, the one who beat out the Social Crediter and to whom I referred the other day. Also present was Anders Anderson, farmers' union of Alberta director for district No. 13.

Some of the things these individuals had to say proved to be most interesting, particularly when the mayor of the city in effect said that the people should demand a 60 cents per bushel advance on at least 10,000 bushels of wheat. This was a demand. It is not a suggestion that the Minister of Trade and Commerce is wrong in his statement, but here we have this statement being made by this particular showman, Harry Veiner, who is well known across Canada for that matter, particularly for his showmanship and his ability to sell a commodity. He is particularly well known to the Minister of Agriculture. He happens to have been in his area for a good number of years.

It seems to me, Mr. Speaker, that a statement of this type made by a responsible individual such as this man should be given

some consideration, not only because of the fact that he was making it for himself but because he was apparently speaking for a good number of citizens in that community. What is more, he said they should not be expected to pay it back at a rate of interest greater than 4 per cent. That also seems a strange thing when one realizes that in this particular bill the rate of interest that is suggested—not by the government of Canada but by the bankers, and the government follows suit—is 5 per cent. I would hold that to those of us who do not know the full story this gives reason to wonder what the truth of the matter is, as I indicated earlier.

Certainly it is not my intention to vote for a motion to give the six months' hoist to a bill if the farmers want that particular bill. I just want to know what they really want. I am not discounting what the Minister of Agriculture and the Minister of Trade and Commerce have had to say. But I also like to think that the hon. member for Acadia (Mr. Quelch), the hon. member for Lethbridge (Mr. Blackmore), the hon. member for Macleod (Mr. Hansell) are not just raising something for political purposes. I think the lives of people in Canada have been played with politically just a little bit too much, and that it is high time we got the full truth of the matter.

It is a simple matter to get that truth. I would suggest to the Minister of Trade and Commerce that he indicate to this house that if we allow this bill to be given second reading, he is prepared to let us call in individual farmers and farmers' organizations and get their exact viewpoint. Then I think we can vote on this question in a sensible and sane fashion.

Mr. J. H. Blackmore (Lethbridge): Mr. Speaker, the Minister of Trade and Commerce was shooting a broadside at the C.C.F. for having courageously and most effectively battled, for many days now, on behalf of the people who sent them to parliament. I know it is not good politics on my part, but I think it is good Canadianism to congratulate the members of the C.C.F. who have planned and carried on this battle for having done a good job and for being ready to continue to do that job.

May I say this so the C.C.F. will not have to take all the opprobrium; that if they had not got in and started to move amendments to the motion for second reading, the Social Credit group would have done it. The members of the Social Credit group have been ready to move amendments ever since the motion was made for second reading of the bill, if they could have only got the floor. The reason they were not able to get the floor is that the C.C.F. happens to have a few more members in the house than the Social Crediters, and consequently they have priority in the matter of being recognized. The Conservatives, as the official opposition, are recognized first by Mr. Speaker, as they should be; the spokesman for the C.C.F. is recognized second by Mr. Speaker, which is as it should be, and the Social Crediters have to wait until the others finish their show before they can commence theirs.

But let not the minister think for one minute that the Social Crediters are not solidly behind everything the C.C.F. people have advocated in this debate, with the exception, as I have said, of the resolution preceding the bill concerning which we disagreed with them because at that time we did not know what sort of measure was going to be introduced and we did not know that the government would refuse to let the bill go before the committee on agriculture and colonization, which is the logical place for it to be examined. Apart from that we have been with the C.C.F. in respect of all the arguments that have been put forward.

As far as I am concerned, and I speak for Lethbridge, I will wager that 98 per cent of all the farmers in the constituency of Lethbridge are solidly against the bill and solidly behind advances on grain in storage on the farms. I have not been able to talk to all of them, but I have talked to enough of them to feel quite safe in making that statement.

There are several matters which I think need to be considered at the present time and to which I should like to give some attention. In the first place I should like to congratulate those on the Liberal side who have spoken on the bill. The hon. member for Outremont-St. Jean (Mr. Bourque) gave a little talk today. There were many things in his speech which did the hon. member credit. He said he believed that the farming population should be kept prosperous, and he said a good many other things with which I am entirely in agreement. They do credit to the hon. member and the constituents who sent him here.

The only difficulty in his talk apparently arose from the fact that the hon. member had been slightly misled by men who should have informed him correctly. How could he, coming from Montreal, have anything like an accurate knowledge of conditions obtaining in the three prairie provinces unless he were told by the men in charge, like the Minister of Trade and Commerce? If the Minister of Trade and Commerce was no more clear and straightforward when talking in the Liberal

caucus than he has been on the floor of the house, I do not blame any Liberal for being completely confused with respect to the whole situation in the three prairie provinces.

Two other hon. Liberal members spoke the other day and asked questions. The hon. member for Iles-de-la-Madeleine (Mr. Cannon) made a speech and another hon. member asked several questions. These men made statements which were honest, fact-facing and sincere. They showed that there was a question in their minds which should be clarified. I appreciate all of these statements and questions greatly and I say once more what has already been said many times, that it is my settled conviction after hearing all that has been said that if the people of Canada from coast to coast and the members of this house all knew the facts they would practically unanimously condemn this bill and unanimously demand cash advances on farm-stored grain.

Mr. Dupuis: We will give you the whole of Canada, everything. You will get it.

Mr. Blackmore: I know the hon. member is very enthusiastic—

Mr. Dupuis: Even your funny money.

Mr. Blackmore: —but the knowledge the hon. member has about western wheat is probably not very great. I realize the hon. member's enthusiasm, but I cannot see anything in his background which would necessarily give him the right to talk for prairie farmers.

Some doubt has been raised as to just exactly what the United States is doing for its farmers. Before I go into that matter may I ask every hon. member in the house through you, Mr. Speaker, is there any conceivable reason why the Dominion of Canada cannot do as well for its farmers raising wheat as the United States can do for its farmers raising wheat?

An hon. Member: Yes.

Mr. Blackmore: Is there any conceivable reason why Canada should not be able so to do? If there is any reason that can be brought forward we will be glad to hear about it. I contend there is no reason to treat our Canadian wheat growers like slaves while the United States is treating her wheat growers like kings. It must be admitted that the United States farmers are having difficulties because of a fall in their income. That is largely because of the rise in the cost of production—and we in Canada are suffering in the same way. But as far as what the United States is attempting to do and is actually doing, for her wheat growers is concerned, she makes Canada look like a nation of pikers. There is no question about that.

Mr. Murphy (Westmorland): The member for Acadia (Mr. Quelch) says that eastern farmers are getting away with murder. What about that?

Mr. Blackmore: I think that was probably a slip of the tongue. The hon. member for Acadia will answer for himself. He is quite capable of doing so, as I think the hon. member knows full well. I am giving my speech now and I will welcome honourable, straightforward questions on anything I have to say. I am going to read a quotation here which will give the house the exact picture of what the United States is doing. I wish to read from an editorial in the Lethbridge *Herald* of December 5. It does not comment on what is going on in the house, so there is no danger of my being out of order. The editorial reads in part as follows:

> Writing of the difference between the wheat marketing situation in Canada and in the United States, the agricultural editor of the Minneapolis *Tribune* visited Regina recently and in his paper drew this rather startling contrast:
>
> "Let's compare the difference in prices received by two farmers who raise 5,000 bushels of wheat on 250 acres, one near Bismarck, North Dakota, and the other near Regina, Saskatchewan. The North Dakota farmer could put his entire crop under government loan. If it graded No. 1 northern, he could obtain $2.10 a bushel and receive $10,500 for his 5,000 bushels, farm-stored. He could repay the loan or let the wheat go to the government when the loan matures."

Quite obviously that amounts to a purchase on the part of the government. I continue:

> "The Regina farmer would get $1.22½ a bushel for No. 3 wheat, comparable to U.S. No. 1 northern. And that doesn't figure in the margin for his country elevator. He is allowed to market 300 bushels, for which he receives $367.50. But he still has 4,700 bushels on his farm. If storage opens up, he may be able to sell up to 8 bushels an acre or another 2,000 bushels for $2,230. That would bring his total sales to $2,597.50."

Compare that with the $10,500 which the man just a few miles away across the line receives! I continue:

> "And the Canadian farmer would have 2,700 bushels of wheat on his farm . . . wheat that he doesn't quite know what to do with."

That pretty well settles the matter regardless of all the attempts to laugh it off or draw red herrings across the path, so that—

Mr. Byrne: May I ask a question?

Mr. Blackmore: May I just finish my statement first? That simply shows up the government of Canada just exactly as it is. It has been guilty of an absolute betrayal of the Canadian farmers of the three prairie provinces. Now let the hon. member ask his question.

Mr. Byrne: It would be interesting to know whether the United States government pays the $2.10. Do they make any reduction from that amount for handling charges, freight charges, and so forth, or is that the full amount the farmer receives?

Mr. Blackmore: I would say that if the picture given here by the editorial writer is not accurate in fact, then it would be a most dishonest thing. If there were any serious differences between the cost which the United States farmer would have to incur through freight handling, and what the Canadian farmer would have to pay, I would think that writer would pay attention to it. I would think that matters like freight, storage, handling and all that kind of thing would probably be just about the same on both sides. I am not in a position to speak with great authority respecting all that the United States is doing, but thus far the quotation I have given is absolutely clear and utterly unanswerable. I think everyone will agree with that.

Some hon. Members: No.

Mr. Blackmore: I would now like to refer—

Mr. Howe (Port Arthur): Mr. Speaker, may I ask my hon. friend two questions? Apparently the man from the United States confuses acreage seeded to wheat with cultivated acreage. That is one mistake. The second is that he entirely neglected to mention the participating payment which comes after the wheat is sold.

Mr. Blackmore: Well—

Mr. Byrne: There is the question of freight rates.

Mr. Blackmore: If it is a matter of becoming a master of the whole technique of United States administration, I think I can probably acquire that just about as soon as the minister can, if that is the thing we are going to be debating; but there is not a question in this world but that the wheat farmer in the United States receives money on grain as soon as it is stored on the farm, and a lot of money, but the Canadian farmer receives no money on the grain stored on his farm, and what he does receive is very little, probably not nearly enough to cover the cost of production.

I trust I have dealt with the minister's questions. If he wants to bring on a debate at any time with respect to the way in which the United States handles grain, if he will just give me three or four days' notice then I shall be glad to debate it on his estimates or at any other time.

Since I have referred to the comments of the two hon. members to whom I referred a few moments ago I think I should quote the actual words they used. I refer to the hon. member for Iles-de-la-Madeleine (Mr. Cannon) and the hon. member for Wellington South (Mr. Hosking). At page 1309 of *Hansard* the hon. member for Iles-de-la-Madeleine used these words, which I think did him credit. I do not blame any hon. member for making these comments. He said:

> We on this side think that money should be advanced to the farmers but that they should pay interest on it.

May I interrupt and say that the United States administration apparently does not think so. I continue:

> The people on the other side think that money should be advanced to the farmers without interest.

Well, the people of the United States apparently think so, too. The hon. member went on:

> Who is going to pay the interest? Evidently it is the people of Canada. Is it fair that the people of Canada should be called upon to pay interest for the farmers in the west?

That is a straightforward question. Farther down the page the hon. member used these words:

> Why should the people of Canada pay that interest for the western farmers if they do not pay interest for all the other producers of this country?

And still farther down he used these words:

> Why should a person be paid for something he has produced before that thing has been sold?

The United States gives the answer. I continue:

> Why should he get that money without having to pay interest on it?

Again, apparently, the United States gives the answer. Farther on he used these words:

> Why should they get money on their products, without paying interest, without having sold their products?

As I said, I do not criticize hon. members for saying these things. It is straightforward, honourable, manly and clear thinking, but without the very essential facts which we are now discussing.

When we come to the contribution of the hon. member for Wellington South, we find these words on page 1313 of *Hansard*, which I wish to quote:

> Mr. Hosking: Do you think our eastern farmers should supply the money for the loans?

The hon. member was perfectly justified in asking that question. He simply is not informed on a good many things or he would not have asked the question, and I hope to deal with those questions before we get

through. These two gentlemen by their statements and questions raised the whole matter of how the grain is financed now. With respect to grain marketing in Canada, when the grain is taken from the farmers into the elevators and from the elevators delivered to the wheat board and then sold abroad, how is it financed? So that hon. members will all be able to consider this, I am reading a quotation from the Alberta *Wheat Pool Budget* of February 10, 1956. It is taken from the report of the Canadian wheat board; consequently it can be relied on:

> Financing—The board required to borrow money from the banks throughout the year to finance its heavy stocks of grain. Borrowings ran from a low of $85 million to a high of $100 million. It was also obligated at July 31, 1955 to grain-handling organizations for the stocks which they carried for the board account in country elevators, in the amount of $361 million.

The next sentences are very important:

> Bank interest on loans to the board was 3 per cent compared to 3¼ per cent the previous year. Loan interest to agents of the board (elevator companies and pools) on board grain was 3¾ per cent compared to 4 per cent the year before. Agents make initial payments upon receiving the wheat in the country and receive reimbursements when they turn it over to the board at the terminal.

I am sure that every hon. member in this house will ask himself how can it be, if the wheat board, to its credit, was able to borrow money at 3 per cent, that the farmers of Canada should be required to pay 5 per cent interest on money borrowed on their grain? That is a question that will have to be answered. What I have given indicates that there is no thought in the minds of those who are asking for advances on their grain, or in the minds of hon. members of this house who are advocating advances on grain, that anybody in the Dominion of Canada will pay any taxes to pay interest on anything or pay any taxes to pay the advances. That matter will be taken care of in just the same way in which it has been taken care of in the past.

Let me ask any hon. member who has given thought to the matter of finance, is there any conceivable reason why the wheat board should have to borrow money from the chartered banks when there is a Bank of Canada which is capable of lending money by simply creating it?

Some hon. Members: Oh, oh.

Mr. Blackmore: Remember that all those who are laughing are just disclosing vacant minds. They simply do not know.

Mr. Byrne: Major Douglas is not the governor of the Bank of Canada.

Mr. Blackmore: Major Douglas did not set up the Bank of Canada or draft the Bank of Canada Act. I am talking of pure, orthodox finance. Can the hon. member forget Social Credit long enough to realize that I am talking in terms of the instruments with which this country now finances its affairs?

Mr. Dupuis: Not Social Credit dollars?

Mr. Quelch: How do chartered banks make loans?

Mr. Johnston (Bow River): Answer that question.

Mr. Blackmore: I ask the question once more. Is there any conceivable reason why the wheat board handling the farmers' grain should have to borrow money from the chartered banks and pay 3 per cent when it could just as well borrow that money from the Bank of Canada and pay 1½ per cent?

Mr. Byrne: I cannot borrow from the Bank of Canada—

Mr. Blackmore: Never mind all that nonsensical talk. Face the facts, face reality, and answer in a sound and responsible way. It is just as simple as that. You cannot laugh the thing off any more than wolves can laugh off reality. The fewer silly comments you make the fewer silly remarks there will be in *Hansard* to stand against you.

That is the question all hon. members ought to ask themselves and for which they should demand an answer. In the light of all these facts tell me what justification there is for demanding that the farmers of this country, if they should have to borrow money on their wheat, should have to pay 5 per cent interest when the government could just as easily borrow the money from the Bank of Canada at not more than 1½ per cent interest if it wanted to, and turn it over to the wheat board to finance its operations, just as the wheat board has been financing its operations on money borrowed from the chartered banks. Then when the dominion government had thus borrowed the money the interest would go into the hands of the Bank of Canada and therefore into the hands of the government, and the cost of the interest need not amount to anything at all for either the taxpayers or the farmers.

Just let me put the question now to the two hon. members who have been interrupting me. Let me ask if they now have any grounds for complaint on the score that the eastern farmers or any one else in Canada would be taxed to pay the advances. I will just leave that for hon. members to think through. I have given you exactly what the facts are and what they can only be seen to be from an intelligent reading of the Bank of Canada Act.

Grain

I think probably that deals sufficiently with the matter of finance and with the objections any hon. members have raised on this count of having Canadian taxpayers pay the money with which to pay the interest or with which to make the advances.

There are other matters which I think require a considerable amount of attention. One of the difficulties which a great many people have is that they do not seem to be able to realize how big the prairie farmers' problem is. It is said that there are two types of people, one type which sees the world through a snake's eye and one which sees the world through a bird's eye. Altogether too many hon. members and other people are endeavouring to get a comprehension of the wheat problem as viewed through a snake's eye. Let them rise into the air and soar high into the atmosphere and look at the problem as its exists in reality, as a bird would see it. They will then be literally appalled at the magnitude of the wheat problem in the west.

I should like to devote a little attention to that aspect of this question. In the first place I wonder how many hon. members have taken the trouble to consult statistics and realize how colossally big are the wheat fields of the three prairie provinces. Do they realize, for example, that in the prairies there are 39·7 million acres, and note that I said million acres. That must be bewildering to a person who grew up in Quebec on the little farms on which they do so well there. Let them try to visualize a million acres! It is 39·7 million acres with which we are concerned in dealing with the wheat problem on the prairie provinces; 39·7 million acres, if you please.

Mr. Dupuis: The Quebec farmers do not want to have capital without paying interest on it; that is the difference.

An hon. Member: Don't talk about it too much or you might get an argument.

Mr. Blackmore: Some of these days when I have time to bother with the hon. member I shall do so, but today I do not have time to deal with his comments.

I am going to read a quotation from the Alberta *Wheat Pool Budget,* February 10, 1956, issue, which gives the amount of the prairie wheat acreage. It will be of great value to every hon. member in this house and to every person in the country to read this over and ponder it well. The "prairie wheat acreage dropped during the year by 2 million acres". The report indicates that the "total prairie acreage of all crops dropped from 39·7 to 37·7 million." In giving these figures we are leaving unnoticed the great amount of land which would have been under summerfallow or in grass. This deals only with the portion that was in grain. The following table gives yield comparisons. If the house is willing to have me do so I shall put the figures on *Hansard* without reading them. Have I permission to put them on *Hansard*?

The Acting Speaker (Mr. Applewhaite): Will the hon. member identify the source of these figures?

Mr. Blackmore: They appear in the Alberta *Wheat Pool Budget,* which is absolutely authentic; February 10, 1956 issue.

The Acting Speaker (Mr. Applewhaite): Has the hon. member permission to place these figures on *Hansard* without their being read?

Some hon. Members: Agreed.

Mr. Blackmore: The tables are as follows:

	Average Production 1946 to 1950	Average Production 1951 to 1953	Production 1954
		Bushels	
Wheat	367,000,000	597,000,000	282,000,000
Oats	222,000,000	321,000,000	196,000,000
Barley	135,000,000	255,000,000	167,000,000
Rye	12,000,000	22,000,000	12,000,000
Flaxseed ..	8,000,000	10,000,000	11,000,000
Total	744,000,000	1,205,000,000	668,000,000

Placing the table in *Hansard* will save time in discussing this matter. Let me now just quote the first line of these figures concerning wheat so hon. members can get some idea of the stupendous—

An hon. Member: Colossal.

Mr. Blackmore: —amount of material which is involved in wheat. The average production from 1946 to 1950 was 367 million bushels; from 1951 to 1953 it was 597 million bushels and the 1954 production was 282 million. I wonder if any hon. member would like to conjure up in his mind an image of a pile of wheat that contains a million bushels? In 1954 there would be 282 piles like that! What an enormous amount of material to take care of! It is not a small problem by any means.

This is one reason why we should give the prairie farmers' reserves of wheat most special consideration. Certainly no hon. member of this house can responsibly make any hasty remarks until he has given careful thought to all the elements in the situation, one of which is certainly the tremendous acreage and another the tremendous amount of wheat.

There is another most important matter and that is this. What are the western farmers going to do with that land? Do hon.

members actually wish the prairie farmer to raise weeds on that land instead of wheat?

An hon. Member: They have cattle; they have cows.

Mr. Blackmore: They already feed the cattle, but please grasp the significance of this matter. Everything I am saying, Mr. Speaker, is of tremendous importance in this discussion. The people who come here representing those areas have seen those tremendous piles of wheat and have seen this vast ocean of soil. They know that if the land is not put into wheat it will either be blowing or raising weeds. Is there anyone who wants to see that land blowing or raising weeds?

Mr. Byrne: No.

Mr. Blackmore: Then something must be done with that land every year. What do hon. members desire to suggest that these farmers should do with that land?

Mr. Byrne: Grow wheat.

Some hon. Members: Grow wheat.

Mr. Blackmore: Grow wheat; is that not so?

Some hon. Members: Yes.

Mr. Blackmore: I am sure no hon. member would want to say, "Let the land go back to weeds and turn over a weed patch to the next generation". I am sure of that. Now, what would you prescribe as the course of procedure to be followed by the farmers in the three prairie provinces next year?

Some hon. Members: Oh, oh.

Mr. Blackmore: If hon. members would just rise one at a time and ask me a question I may be able to answer it.

An hon. Member: What are you suggesting?

Mr. Blackmore: I am suggesting that provision be made on the farms of western Canada for the safe and secure storage of that wheat, every bushel of it. I am glad the Minister of Agriculture told us that he had kept wheat on his farm for twelve years. I ask any hon. member, even those who are quite talkative; would you rather see that wheat stored safely on the farm in bins, such as those in which the Minister of Agriculture kept his wheat for twelve years, or would you rather see it lie out on the prairie, or would you rather see it unproduced, in the face of the tremendous shortage of food in the world today? Which would you say was the humanitarian thing to do? Which is the common sense thing to do?

Going on to answer the hon. member's intelligent question, I would say that we should make provision so farmers could provide adequate storage on their own farms in which they could put their wheat. Then let us pay them enough on the wheat in store on their farms to enable them to carry on and raise a crop next year. Then next year if we are unable to sell the wheat, let us store that wheat also. There is going to come a day when we will need it. They have had the most terrible storms in Europe that they have had in 100 years, and who knows that the same thing may not be repeated for four or five years? If we Canadians have plenty of grain of all kinds stored on our farms, think of the favoured position we would be in with respect to extending help to those needy people! Common sense dictates that no other course be followed but to preserve that wheat and pay the farmers enough money to enable them to pay their running expenses, buy their machinery and be able to carry on and raise more and more crops until the time comes when we should know whether we want to go on raising wheat or whether we want to turn that land back to grass, back to the Indians so to speak.

The trouble today is that we are facing an emergency. That is what confronts us right now. These farmers must have money with which to pay their bills, to pay for gasoline and oil and all the other things needed to carry on. This question of what to do with the grain is most important. This is one factor to which we must give attention before determining what we are to do in respect of measures like this, the silly bill we have before us now.

There is another matter to which thought ought to be given, and that is the large percentage of what is now the three prairie provinces was examined around 1860 by Captain John Palliser, who solemnly declared that it was unfit for human habitation. That area starts at a point in my constituency not far from Lethbridge, goes up somewhere near Saskatoon, and then down back to part of southwest Manitoba. If you place a map before you and draw that general triangle called the Palliser triangle you will see the amount of the land which Captain John Palliser said was unfit for human habitation. Why? He realized that that area might receive ample rain one year or perhaps two years, and then there would be three, four or five dry years during which even the grasshoppers could hardly live.

Let us bear in mind what the government of those days did. We are not blaming them, but we must remember that around 1890 men who sat here—not in this particular house—said, "Let us put people out there; let us let them take a chance." They advertised that

land as being far better than it was, and great numbers of people went out. Why did the government want them out there? They wanted them out there so the C.P.R. would have business hauling them out there and hauling their goods.

Some hon. Members: Oh, oh.

Mr. Blackmore: Oh, yes. I can go to *Hansard* and find where hon. members got up and solemnly offered those reasons. I am not so sure that hon. members of this house would not advance the same reasons. The men of those days said that if those people survived we would have more population. Tens of thousands of people settled those areas and they have made good. The amount of wheat which they have grown on the Regina plains and in other areas within the Palliser triangle is absolutely astounding. That grain has all been sold abroad by Canada for good solid cash, foreign exchange.

I am not saying that the farmers who produced that grain made anything out of it. By the time the railroads got through hauling it, by the time the handling charges were paid, by the time their various expenses had been taken care of, many of them did not make very much, and many of them made even less.

The fact that those people are out there in an area which can become almost as dry as a desert for two, three, four or five years, when they might be deprived of everything; the fact that they are out there living under those conditions justifies us in doing everything in our power to help them to make good when they have wheat on hand.

I fear that my time is practically exhausted. There were other things which I wished to say, but I shall say only one more thing.

The latest report from Sir John Boyd Orr, the man who originated FAO, states that the world requires $12 billion worth of goods in order to relieve hungry people. As I said in a former speech, we have not had in previous parliaments men with intelligence and understanding enough to find out how to get those goods to those people who need them. Please the Lord, the time may come when we shall know how to get $12 billion into the hands of the needy people so they can buy up the surplus production which is now being brought into being.

The fact that there is such a colossal need for food certainly ought to impress any hon. member of this house or any person in the country that we should go full speed ahead with production and take whatever measures are necessary to enable our producers to produce and store and go on producing from year to year, until we are able to decide upon a policy if need be, along some other line.

I do not hesitate one minute to say that I am going to vote for the amendment and against the bill. Then, if I have the opportunity, and my friends stand by me, I shall move some amendments myself.

Mr. Claude Ellis (Regina City): Mr. Speaker, about an hour ago the right hon. Minister of Trade and Commerce made a statement, and at one point I interjected that that was just one side of the coin. Upon reflection I think perhaps I was a little charitable in suggesting that it was one side, because since the right hon. minister made his remarks I have had an opportunity of perusing the report to which he referred.

This was report No. 8 dealing with agricultural markets and prices, submitted by the royal commission on agriculture and rural life in Saskatchewan. I might say at the outset that I feel certain the minister is not trying to convince the house that this report had anything to do with persuading the government to undertake the type of legislation we are now confronted with because this report was not brought down until February 3 of this year.

I made reference to the minister giving only one part of the story, and a very minor part to say the least. I direct the attention of the house to the fact that the minister quoted a few sentences from the main body of the discussion, and I think it is most significant that the section which he quoted starts out with the word "perhaps". It goes on to discuss certain alternative proposals that have been suggested to the commission. I notice that the minister was very careful to omit the conclusions, which I suggest are the most important parts of any royal commission reports. The minister neglected to mention them.

I am sorry the minister is not in his seat. I notice he left the house a few moments ago. I hope we shall not have a repetition of something that happened in this house the other day, when the hon. member for Rosetown-Biggar was accused of having deliberately chosen a time when another minister was not in his seat to discuss something that had been said by the minister previously.

An hon. Member: Don't worry about that.

Mr. Ellis: I draw to the attention of the house that on page 207 of the report to which the Minister of Trade and Commerce made reference is conclusion No. 17, arising out of the very exhaustive study made by this royal

commission. In conclusion No. 17—and I am going to read the most pertinent part—

An hon. Member: Read the whole of it.

Mr. Ellis: It says:

A survey of present storage facilities—

An hon. Member: Put the whole thing on the record.

Mr. Ellis: I shall read the entire conclusion.

An hon. Member: Read the book.

Mr. Ellis: I certainly wish I had the chance to read the entire report into the record. As a matter of fact I hope the Minister of Trade and Commerce, who apparently seemed willing to pick out one recommendation from the report, would be willing to take the report as the basis of a sound agricultural policy.

Mr. Argue: The Minister of Agriculture could do that.

Mr. Ellis: But I am going to put on the record the concluding remarks of this commission on the matter presently under discussion. Once again, on page 207 of the report it says:

A survey of present storage facilities is urgently required to determine whether new storage is needed and, if needed, where it should be built. In the meantime, advance payments could be made by the wheat board on properly stored grain on the farm to ease the farmer's immediate cash shortage.

That is the conclusion arrived at by the royal commission. The Minister of Trade and Commerce selected certain sentences out of the preliminary remarks of the commission, but he neglected to read the conclusion.

Mr. Dickey: I challenge the hon. member to put on the record the whole of conclusion No. 17.

Mr. Argue: I challenge you to put all the conclusions on the record.

Mr. Ellis: I suggest that any hon. member who wants to read the report may do so. I have put on record the last sentence of the recommendation, which sums up the entire recommendation in this respect. If there is any doubt at all—

Mr. Rowe: Read it again.

Mr. Ellis: As some hon. member has suggested, I shall read it again.

A survey of present storage facilities is urgently required to determine whether new storage is needed and, if needed, where it should be built. In the meantime, advance payments could be made by the wheat board on properly stored grain on the farm to ease the farmer's immediate cash shortage.

What could be more explicit than that?

Mr. Gardiner: Read the rest of it. Do you want me to read it?

Mr. Deputy Speaker: Order. I take it that the hon. member has not given his consent to this interruption.

Mr. Ellis: When I took my seat I was under the impression that the Minister of Agriculture was rising on a point of order. It was quite obvious that he rose to make another speech.

Mr. Gardiner: I did not rise on a point of order. I asked you to read one more sentence.

Some hon. Members: Order.

Mr. Ellis: I realize that this is most unpalatable to the minister and his supporters.

Some hon. Members: Read it.

Mr. Deputy Speaker: Order. It is impossible to hear the hon. member, and I hope he will be given the opportunity to make his remarks.

Mr. Ellis: If I had more time this afternoon I should have been happy to read all the recommendations contained in this report, because I feel they would bring a great deal of worth-while opinion that would be to the advantage of this government, if it would accept the recommendations outlined in the report in so far as they affect federal matters.

Mr. Dickey: A complete fake.

Mr. Ellis: The Minister of Trade and Commerce also put on the record the names of the members of the commission. This is interesting, because the members of the commission whose names were quoted by the minister are in some cases members of other organizations that have gone on record in this connection. I noted that some reference was made to Mr. J. L. Phelps. Hon. members will recall that it was Mr. Phelps who, according to a report in the Ottawa *Journal* of February 20, was quite active in negotiations that resulted in a statement of policy in support of cash advances on farm-held grain on behalf of some one million organized workers throughout Canada. Mr. Fowler's name was also mentioned, the same Mr. Fowler who is an officer of the federated co-ops, an organization representing 150,000 patrons which has also gone on record as being in favour of cash advances on farm-stored grain.

The Minister of Agriculture tried to create the impression that the members of the government were speaking for organized agriculture on the prairies. This should be viewed in the light of the fact that there are only five Liberals in the house from Saskatchewan and there are only 11 Liberals in the Saskatchewan legislature—and there will be a great

many less after the election next June. We have the recommendations of the Saskatchewan farmers' union and the emergency resolution passed last November 1 by the delegates of the Saskatchewan wheat pool, who went on record as advocating cash advances on farm-held grain. In the recommendations of the Saskatchewan farmers' union it was pointed out to the government that there had been scores of mass protests held throughout western Canada, and there had been resolutions and petitions developing spontaneously.

I might add that many hon. members on the government side have had ample reason to appreciate the truth of the statement I have just made. The Minister of Justice could speak from his own personal experiences in his own constituency. There were meetings held in other areas in Manitoba. A meeting was held in my own constituency, at which there was no question as to where the farmers in that constituency stood.

On motion of Mr. Ellis the debate was adjourned.

BUSINESS OF THE HOUSE

Mr. Harris: We shall go on with this tomorrow, sir.

At six o'clock the house adjourned, without question put, pursuant to standing order.

ANSWERS TO QUESTIONS

The following answers, deposited with the Clerk of the house, are printed in the official report of debates pursuant to standing order 39:

TRANS-CANADA HIGHWAY

Question No. 134—**Mr. Follwell:**

1. What has been the total cost to the federal government of the trans-Canada highway?
2. How much has been spent by the federal government in each province?
3. How much has been spent by each province?
4. How many miles have been completed on the trans-Canada highway?
5. How many miles have been completed in each province?
6. How many miles are now under construction in each province?
7. When will the trans-Canada highway be completed?

Answer by: **Mr. Winters:**

1. $82,750,095.97 including Banff and Yoho national parks, as of February 1, 1956.

2. To February 1, 1956:

Newfoundland	$ 6,453,804.33
Prince Edward Island	1,530,178.31
Nova Scotia	309,903.60
New Brunswick	3,577,757.77
Ontario	22,785,104.94
Manitoba	6,320,949.51
Saskatchewan	8,589,474.71
Alberta	9,807,943.19
British Columbia	17,232,481.53

3. No information.

4. 1,588 equivalent miles to December 31, 1955. (Including parks.)

5. Equivalent mileage of trans-Canada highway completed to December 31, 1955:

Newfoundland	141
Prince Edward Island	50
Nova Scotia	26
New Brunswick	65
Ontario	387
Manitoba	151
Saskatchewan	347
Alberta	208
British Columbia	193
Total	1,568

6. Equivalent miles under construction:

Newfoundland	60
Prince Edward Island	0
Nova Scotia	16
New Brunswick	4
Ontario	65
Manitoba	25
Saskatchewan	7
Alberta	6
British Columbia	46

7. Under the terms of a proposed new agreement the completion date being established will be December 31, 1960.

VANCOUVER POLICE FORCE—INVESTIGATION BY R.C.M.P.

Question No. 144—**Mr. Fulton:**

1. Did Inspector Dube of the Royal Canadian Mounted Police proceed to Vancouver for the purpose of special investigations in connection with the royal commission of inquiry into the Vancouver police force?
2. If so, where did he live during the period of his investigations, and for how long?
3. Did any other Royal Canadian Mounted Police personnel accompany him or were any such personnel assigned for the purpose of such investigation? If so, how many and of what rank?
4. By whom were the costs of such investigations, including living expenses, borne? If by the federal authorities, what was the cost?
5. Are the investigations concluded? If so, did they reveal any criminal activities, and what has been the result of such revelation?

Answer by: **Mr. Garson:**

1. Yes. Proceeded from Regina, Saskatchewan to Vancouver, British Columbia,after a request in writing was received from the deputy attorney general of British Columbia for the Royal Canadian Mounted Police to investigate suspected criminal offences arising out of matters coming to light before the Vancouver police inquiry.

2. Resided at a hotel and autocourt, respectively, in Vancouver, British Columbia. Duties commenced on July 16, 1955, and ceased on February 15, 1956.

3. Yes. Four resident members of the British Columbia division Royal Canadian Mounted Police were assigned to the investigation. These were one sergeant, two corporals and one constable.

4. Costs of investigation were borne by the Royal Canadian Mounted Police under the terms of the agreement between the government of the province of British Columbia and the federal government for the policing of the said province. Total costs were $2,628.69 plus police car mileage of 10,129 miles.

5. Yes. The results of the investigation have been passed to the attorney general of British Columbia. To date, the Royal Canadian Mounted Police have received no instructions to enter prosecution against any person.

APPENDIX

LETTER AND MEMORANDUM RESPECTING FISCAL ARRANGEMENTS WITH PROVINCES

OFFICE OF THE PRIME MINISTER
CANADA

Similar letters sent to the premiers of all provinces. The letter to the premier of Quebec was in the French language.

OTTAWA, February 18, 1956.

The Honourable Leslie M. Frost,
Premier of Ontario,
Toronto, Ontario.

My dear Premier:

Since the federal-provincial conference adjourned in October, the federal government has made the fiscal proposals outlined in my letters of January 6 and explained them in some detail early this month to provincial treasury officials. It has also made contingent commitments to recommend to parliament financial participation on a large scale in provincially-administered hospital insurance plans. It has received written comments on the proposals from the premiers of three provinces, which have been studied along with comments and questions received in conversation.

I am enclosing a memorandum from the Minister of Finance giving answers to a number of questions that have been raised by provincial representatives. Some of these answers involve some modest development in the details of the proposals advanced by the federal government in January. In particular the government has decided that it would be in accord with the spirit of the present arrangements and with the special nature of the federal tax on insurance premiums to treat provincial taxes on insurance premiums as not being special corporation taxes within the scope of paragraphs three and five of my letter of January. This will improve the arrangements from the point of view of all provinces.

In view of the suggestion that we should meet again in committee to discuss these fiscal arrangements, I feel it would not be fair to the provincial governments if I failed to indicate at this time that the federal government believes its own fiscal situation in the next few years would not justify adding any substantial further financial commitments beyond those already proposed.

In the replies I have received to my letters of January 6, the premiers of Nova Scotia and New Brunswick have expressed regret that the federal government was not able to accept suggestions such as they made for a wider application of the fiscal need principle, and the premier of Saskatchewan has also indicated that in his view fiscal need has not been given sufficient weight. My colleagues and I feel there is a very substantial recognition of fiscal need involved in the equalization payments we have proposed and also in the high level of returns in these tax fields which we are prepared to guarantee to provincial governments. These are, of course, in addition to the existing statutory subsidies which already make special provision for the fiscal need of the Atlantic provinces. We believe we should all have some experience in the practical operation of these proposals before going on to consider other concepts of fiscal need.

I note that only two of the premiers have suggested a resumption of the conference for the purpose of considering the fiscal proposals. Since our federal responsibilities and commitments are now so heavy that we would not be warranted in making any increases in the basic offer we made in January, it may be that the provincial governments generally would not feel that there would be any advantage to be derived from another meeting to discuss fiscal relations.

If a further meeting in committee is generally desired, we would suggest it be held either on March 2 or March 9 in order that final decisions can be reached before the Minister of Finance completes the preparation of his budget. If, on the other hand, most of the provincial governments see no substantial advantage in a general meeting, Mr. Harris and I would be happy to confer at any time between now and the early part of March with the premier or treasurer of any province wishing individual discussions of particular aspects of the proposals.

I should be grateful to have your views at your earliest convenience.

Yours sincerely,
LOUIS S. ST-LAURENT.

Memorandum from the Minister of Finance of Canada in the matter of certain questions raised by provincial governments relative to the federal fiscal proposals of January 6, 1956.

In the course of discussions on the fiscal arrangements between Canada and the provinces advanced by letter of the Prime Minister dated January 6, 1956, certain questions were asked and clarifications requested. The federal government's position relative to these matters is set out in this memorandum.

1. *Royalties and the taxation of income from certain natural resource industries.*

Under present fiscal arrangements, the provinces have not been restricted in the imposition of royalties on natural resources. No specific suggestions have been made for changes in the methods employed and none would seem warranted.

Present procedure gives the provinces a substantial concession in the taxation of the income from mining operations and the income from logging operations. It is proposed that this general position be maintained. The federal government would be willing to undertake, should any province wish, further studies in an endeavour to determine if better formulae for the allocation of profits between the primary and secondary phases of the industries can be devised.

The extension of this special treatment to the petroleum and natural gas industry is not warranted, in our opinion.

2. *Tax on insurance premiums.*

Under present arrangements, a full offset against the federal tax is given in a non-renting province for the insurance premium tax charged by that province. In a renting province, the province has been paid for relinquishment of the corporation tax field and the insurance premium tax is included in that category.

In order to put all provinces on an equal basis in this field and at the same time provide to them a substantial additional source of revenue, the federal government is prepared to allow any province an offset for a tax on insurance premiums. Accordingly provincial taxes of this nature would not be considered corporation taxes for purposes of paragraphs 3 and 5 of the Prime Minister's letter of January 6.

3. *Definition of corporation tax.*

The definition of corporation tax included in the present tax rental agreement would not seem to require any changes in substance. There are however two exceptions to it where provinces have requested some liberalization of the terms. These are in relation to the limits on license fees now set at $250 per annum for each corporation, and the gross receipts or gross revenue tax on certain public utility companies now set at 4 per cent in the case of telephone companies and 3 per cent in the case of all others.

The federal government will be prepared to increase the allowable limit on license fees to $400 from $250 as now authorized.

As to the rate of tax on gross receipts or gross revenue of certain public utility companies, we will be prepared to study this in an effort to determine if some increase in the present rates is justified.

4. *Base year for purposes of equalization.*

In the proposals the base year on which calculations are made for purposes of equalization is that taxation year preceding the fiscal year for which payments are to be made. The calculation of payments under the current rental agreements has always been on this principle. In view however of the desirability of placing these payments on as current a basis as possible, the federal government is prepared to calculate these equalization payments on the basis of the current taxation year as is provided for in calculation of proposed tax rental payments. This decision accepts the fact that all payments in a fiscal year will be on the basis of estimates and that some substantial if indeterminate financial cost to Canada is involved in this change.

5. *Fire marshal tax.*

The federal government is willing to consider a more flexible policy in this matter providing that the principle of the tax being used for costs of operation is maintained.

6. *Tax on income of non-residents.*

The federal government will regard tax revenue from income of non-residents of Canada as being subject to allocation under the proposals.

7. *Withholding tax.*

The federal position is that taxes shared with the provinces should be confined to those of a nature normally employed by them. Withholding tax does not come in this category and therefore cannot be included for purposes of provincial sharing.

8. *Sharing of income tax from companies whose main business is the generating or distributing of electrical energy, gas or steam to the public.*

The federal government is prepared to continue these payments for the time being but will not incorporate the provision in any formal agreement entered into.

9. *Deduction of certain corporation income tax revenue losses from the payment due a province.*

The federal government will not require the inclusion of this provision in any future arrangements.

10. *Collection agreements.*

The federal government will undertake to enter into a suitable agreement to make its facilities available to any province for collection of provincial taxes on personal or corporation income providing that the terms of

the provincial statutes do not differ from those of the federal statute and that the rates imposed are at the standard rates of tax as contained in the proposals.

Any agreement would be on an agency fee basis subject to cancellation on adequate notice by either party.

11. *Formula for allocation of corporate profits between provinces.*

The current federal procedures in this will be followed.

12. *Special provision for raising revenue for a provincial health program.*

The exceptions contained in the definitions of individual income tax in the present agreements will be carried forward into any new agreement.

13. *Old age security tax.*

The federal government's position is as stated in the Prime Minister's letter of January 6, 1956.

The old age security tax is not part of the federal income tax structure proper, and will be excluded from calculations of the provincial share of tax fields and from abatement of federal tax.

14. *Adjustment for changes in definition of income, etc.*

Under the proposals it is provided that adjustments will be made for changes in rates and personal exemptions in personal income tax and succession duties. Miscellaneous changes in income definitions, allowances, etc., are most difficult to assess and it is therefore necessary that the adjustments be limited to those as originally set out in the proposals.

15. *Tax credits after expiry of agreement.*

It is not considered necessary or desirable that the federal government should limit itself to any specific tax policy beyond the period of any agreement entered into. For the purposes of any province entering into a new tax rental agreement, Canada will be prepared to undertake that at the conclusion of the agreement a renting province will not be placed in a less favourable position than a non-renting province relative to federal tax abatements or credits.

16. *Termination.*

It is proposed that the same conditions apply as under the present tax rental agreements.

W. E. Harris
Minister of Finance.

Ottawa,
February 18, 1956.

HOUSE OF COMMONS

Thursday, February 23, 1956

The house met at 2.30 p.m.

HOUSE OF COMMONS

ADDRESS TO BOTH HOUSES BY THE PRESIDENT OF ITALY

Right Hon. L. S. St. Laurent (Prime Minister): Mr. Speaker, I feel sure that hon. members have been pleased to learn that the President of Italy, His Excellency Giovanni Gronchi, has accepted an invitation extended by the government to visit Canada during his North American tour. Mr. Gronchi will be arriving in Ottawa on Saturday, March 3, and will remain until Monday, March 5. Mr. Gronchi will be accompanied by his Minister of Foreign Affairs, Mr. Gaetano Martino.

His Excellency the Governor General has invited the President and Madame Gronchi, and the Minister of Foreign Affairs and Madame Martino to be his guests at Government House during their visit.

Hon. members will also be pleased to learn that Mr. Gronchi has consented to address both houses of parliament in this chamber on Monday, March 5, at 2.30 p.m.

REQUEST FOR CALLING OF STANDING COMMITTEE ON AGRICULTURE

On the orders of the day:

Mr. H. O. White (Middlesex East): Mr. Speaker, I wish to direct a question to the government. Does the government intend to call a meeting or meetings of the standing committee on agriculture during the present session of parliament to study the economic problems of agriculture other than those arising out of wheat, with particular reference to the ever-increasing costs and declining prices and markets?

Right Hon. C. D. Howe (Minister of Trade and Commerce): Mr. Speaker, the committee on agriculture and colonization is a standing committee of this house. It is my understanding that the committee decides what it will discuss, and I presume that will be so in this case.

ST. LAWRENCE SEAWAY

REQUEST FOR INTERVENTION ON BEHALF OF CAUGHNAWAGA INDIANS

On the orders of the day:

Mr. E. D. Fulton (Kamloops): I should like to ask a question of the Minister of Citizenship and Immigration. Will the minister intervene on behalf of the Indians of the Caughnawaga reservation near Montreal and arrange to halt the entry into and destruction of homes and property of those Indians by contractors of the St. Lawrence Seaway Corporation at least until the question of compensation and alternative housing accommodation is settled?

Hon. J. W. Pickersgill (Minister of Citizenship and Immigration): No, Mr. Speaker; the Minister of Citizenship and Immigration will not intervene. This matter has proceeded according to law, as provided by this parliament at the last session, and everything that has been done about this matter has been done in accordance with the law. Every Indian whose property is affected has been seen individually by the legal adviser of my department, and the whole situation has been thoroughly explained. Proper and appropriate arrangements are being made between the seaway authority, my department, the band council and a committee appointed by the band itself to deal with this matter. I think it would be quite improper, sir, to give any impression that anything else was the case.

Mr. Fulton: Does the minister recall that on June 27 of last year—

Some hon. Members: Order.

Mr. Fulton: Does the minister recall that on June 27 of last year he gave an undertaking to this house, the spirit of which seems to be completely denied by his present attitude? In the light of that previous undertaking, will the minister not reconsider and at least arrange that houses be not destroyed until alternative housing accommodation is provided in the middle of winter?

Mr. Pickersgill: No houses are being destroyed until alternative housing accommodation is provided.

[*Later:*]

Mr. G. H. Castleden (Yorkton): Mr. Speaker, this question is supplementary to the question asked by the hon. member for Kamloops (Mr. Fulton). Will the minister inform the house what compensation has been given to the people who live on the Caughnawaga reserve whose homes and property have been confiscated for the construction of the St. Lawrence seaway through that reserve?

Mr. Pickersgill: Mr. Speaker, I am sure the hon. gentleman was quite inadvertent in using the word "confiscated". There is no

question of confiscation; it is an expropriation for which full and adequate compensation will be paid.

It was suggested that an interim payment should be made but I am informed that the Indians would prefer to have the final value determined before being paid. A valuation has been made on behalf of the seaway authority and a separate valuation has been made by my department. At the present time my department, in consultation with the council of the band, is engaged in discussions with the seaway authority with a view to seeing whether an agreement can be reached which will be satisfactory to each individual Indian who is in possession of land being expropriated. If such agreement cannot be reached, of course, the issue will, as is always the case with expropriations, be decided by the courts.

Mr. Speaker: The hon. member for York West (Mr. Hamilton).

Mr. Fulton: Mr. Speaker, may I ask a supplementary question?

Some hon. Members: The hon. member for York West.

Mr. Fulton: May I ask the minister—

Mr. Speaker: Is the hon. member asking a supplementary question?

Mr. Fulton: May I ask the minister if he saw a delegation yesterday made up of members of this band and, if so, what did they come to see him about?

Some hon. Members: Order.

Mr. Speaker: I do not think we should start having questions and answers as to who comes to this building and what for.

EXTERNAL AFFAIRS

VISIT OF PRIME MINISTER TO WASHINGTON —SUBJECTS TO BE DISCUSSED

On the orders of the day:

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, may I direct a question to the Prime Minister? Will the Prime Minister enlarge upon the Canadian Press report that he plans to go to Washington at Easter? Will he tell us what subjects he intends to discuss with President Eisenhower, and whether any other cabinet minister will be going with him?

Right Hon. L. S. St. Laurent (Prime Minister): Mr. Speaker, it is true that I have received an invitation from President Eisenhower to visit him and I have been very pleased to accept the invitation, but I think it would not be courteous for me to give any details of the proposed visit until there has been an announcement from the White House.

POSSIBLE RETALIATION FOR ACTION OF STUDENTS OF QUEEN'S UNIVERSITY

On the orders of the day:

Mr. Roland Michener (St. Paul's): Mr. Speaker, is the absence of the Secretary of State for External Affairs an indication that the government is expecting massive retaliation from Watertown, New York, because of the recent flag-raising episode indulged in by students of Queen's University on Washington's birthday?

ATOMIC ENERGY

AVAILABILITY OF URANIUM FOR PEACEFUL USES AT HOME AND ABROAD

On the orders of the day:

Mr. A. M. Nicholson (Mackenzie): Mr. Speaker, I should like to direct a question to the Prime Minister. Has the Prime Minister noted in this morning's *Globe and Mail* the report to the effect that the United States will make available $1 billion worth of uranium 235 at home and abroad for promotion of peaceful uses of atomic energy? Will the Prime Minister indicate whether or not similar consideration has been given by Canada?

Right Hon. L. S. St. Laurent (Prime Minister): Mr. Speaker, I have noted the report but I would prefer not to comment until we have received the text of the announcement in the ordinary course of events.

CANADIAN BROADCASTING CORPORATION

REFERENCE TO ALLEGED CANCELLATION OF PROGRAM

On the orders of the day:

Mr. Donald M. Fleming (Eglinton): Is the Minister of National Revenue now in a position to answer the question I asked him on February 15 as to who it was within the Canadian Broadcasting Corporation who made the decision that the program on "The Age of Mackenzie King" by Ferns and Ostry should not proceed? The question is to be found at page 1198 of *Hansard*.

Hon. J. J. McCann (Minister of National Revenue): Mr. Speaker, the answer is that the Canadian Broadcasting Corporation takes full responsibility for their attitude.

Mr. Fleming: Mr. Speaker, that is not an answer to my question. I point out to you, sir, that that is what the minister said, as

reported on page 1198 of *Hansard*, on February 15. It was because of that answer that I asked my question. May I read his answer, sir?

Mr. Speaker: Order. I remember the answer. The reason I interrupt the hon. member at this time is to remind him that the minister takes responsibility for the reply he has just given to the question by the hon. member. I am looking at citation 307 which says:

> A minister may decline to answer a question without stating the reason for his refusal, and insistence on an answer is out of order, no debate being allowed.

Mr. Fleming: Mr. Speaker, quite within the terms of that citation I would just point out to you, sir—

Some hon. Members: Order.

Mr. Fleming: On page 1199 the minister said this when I asked him the same question:

> In answer to that question, I shall take the matter up with the Canadian Broadcasting Corporation.

I took it that he meant he was going to bring back an answer to this house and that is the reason for my asking that same question again today, and I ask the minister the same question now.

Mr. McCann: I have done as I said I would; I have taken it up with the Canadian Broadcasting Corporation and the answer I was given is the one which I have just made.

POTATOES

NEW BRUNSWICK—INQUIRY AS TO CHANGE IN STARCH PROGRAM

On the orders of the day:

Mr. G. W. Montgomery (Victoria-Carleton): Mr. Speaker, I should like to direct a question to the Minister of Agriculture. Has the government received any recommendation from the agricultural prices support board in reference to any change in the potato starch program in New Brunswick within the last week?

If so, will the minister state what the government's decision is in the matter and what the government is prepared to do.

Right Hon. J. G. Gardiner (Minister of Agriculture): Mr. Speaker, the hon. member was kind enough to send me notice of his question.

The first question is: Has the government received any recommendation from the A.P.S. board in reference to any change in the potato starch program in New Brunswick within the last week? The answer to that question is yes.

The question continues: If so, will the minister state what the government decision is in the matter? They asked for an increase in the spot grade price from $1 to $1.20 and it was indicated to them that that could not be done. They asked for a tolerance in connection with the spot grading, a guaranteed tolerance of 20 per cent. There is a tolerance now in the fact that it is an estimate as to what the proportion of grades of potatoes certain truck loads would be and they are asking to have that guaranteed. The answer they received to that was that it would be given consideration.

The other request was to set the date at June 30 instead of April 30. It was intimated to them that the decision on that could not be made until we approach the date of April 30. Consideration is always given as the time in the agreement is reached and will be given again.

DEFENCE PRODUCTION

CF-105—INQUIRY AS TO PRODUCTION PROGRESS

On the orders of the day:

Mr. John B. Hamilton (York West): Mr. Speaker, I should like to direct a question to the right hon. Minister of Defence Production. Is the minister in a position to confirm the report that production of the CF-105 at A. V. Roe Canada Limited is two years ahead of schedule and that the prototype will be coming off the assembly line by the summer of 1957?

Right Hon. C. D. Howe (Minister of Defence Production): Mr. Speaker, apparently my hon. friend has better information from inside Avro than I have. I cannot answer the question.

PIPE LINES

TRANS-CANADA PIPE LINES LIMITED—REQUEST FOR LIST OF SHAREHOLDERS

On the orders of the day:

Mr. J. W. Noseworthy (York South): Mr. Speaker, may I direct a question to the Minister of Trade and Commerce in view of the financial arrangement that the government is proposing to enter into with Trans-Canada Pipe Lines Limited. Has the government secured a list of the shareholders of the company showing how many are Canadians, and will the government table that list?

Right Hon. C. D. Howe (Minister of Trade and Commerce): Mr. Speaker, all the information that I have about the shareholders of Trans-Canada Pipe Lines Limited has been placed on the table, some of it recently

at the request of the Leader of the Opposition (Mr. Drew). Correspondence with the company has been tabled on the request of other hon. members. I have no information in addition to that.

IMMIGRATION

ISRAEL—FACILITIES PROVIDED AND APPLICANTS TO BE CONSIDERED

On the orders of the day:

Mr. Roland Michener (St. Paul's): Mr. Speaker, I should like to ask the Minister of Citizenship and Immigration what progress has been made in providing facilities in Israel to deal with prospective immigrants to Canada, and also what relatives of Canadian residents will now be considered for such immigration?

Hon. J. W. Pickersgill (Minister of Citizenship and Immigration): Mr. Speaker, I think that perhaps this question should have been put on the order paper, but I do know there is a great deal of interest in the subject and I might just as well reply now. The government has made no progress in providing facilities for immigrants from Israel and has no intention of making any progress in that direction because the government of Israel, which is a country seeking immigrants, does not wish us to do so. We have provided consular service in Israel which is available to my department to assist in dealing with applications of certain categories of close relatives of Canadians who are admissible and desire to come to Canada.

Those categories are, in the case of residents of Canada, the wives or widows and minor children of residents, men over 65 years of age, women over 60 years of age, duly ordained ministers of religion and other persons whose normal and full-time vocation is devoted to the service of a recognized religion, husbands and parents, and humanitarian and compassionate cases. In the case of Canadian citizens resident in Canada, the list also includes children of any age, married or single, and fiancés.

Mr. Michener: May I ask a supplementary question. Would sisters come within the categories being considered?

Mr. Pickersgill: I understand that normally applications would not be considered unless there were special compassionate or humanitarian grounds.

Mr. G. R. Pearkes (Esquimalt-Saanich): May I ask a supplementary question. For purposes of immigration and citizenship are the people of Israel classified as Asiatics?

Mr. Pickersgill: No, they are not.

[Mr. Howe (Port Arthur).]

LIVESTOCK

REQUEST FOR FURTHER INFORMATION FROM PACKERS TO PRODUCERS

On the orders of the day:

Mr. H. A. Bryson (Humboldt-Melfort): Mr. Speaker, I wonder if the right hon. Minister of Agriculture is prepared to comment upon the question I directed to him yesterday?

Right Hon. J. G. Gardiner (Minister of Agriculture): Mr. Speaker, the question which I took as notice yesterday was:

> Would the minister suggest to packers that they fill out in the space provided on return statements to producers the extra costs connected with settlement in order to clear up any doubts in the minds of the producers as to the basis of settlement?

I have inquired into the matter and I find that, as I have stated in the house on a number of occasions, the place at which the floor price can be obtained is at the stockyards. When hogs are delivered to the stockyards, that space is filled in there. If they are not delivered to the stockyards, of course, there are no charges in getting them from the stockyard to the plant, and they would not be filled in by the packers.

GRAIN

PROVISION FOR GUARANTEE OF BANK LOANS TO PRODUCERS IN PRAIRIE PROVINCES, ETC.

The house resumed, from Wednesday, February 22, consideration of the motion of Mr. Howe (Port Arthur) for the second reading of Bill No. 82, to provide for short-term credit to grain producers in the prairie provinces to meet temporary financial difficulties arising from inability to deliver all their grain, and the amendment thereto of Mr. Nicholson.

Mr. Claude Ellis (Regina City): Mr. Speaker, yesterday, during the discussion of this amendment, the Minister of Trade and Commerce (Mr. Howe) placed on the record an excerpt from a report published on February 3 of this year on "Agricultural Markets and Prices" by the provincial royal commission on agricultural and rural life in Saskatchewan. I drew the attention of members of the house to the fact that the minister had seen fit to place this one excerpt on record, yet had neglected to read further in the report and deal with the conclusions and recommendations made by that commission.

It was the minister himself who introduced this document into the debate, and it was simply for the purpose of setting the record straight that last evening I read into the record a portion of a conclusion arrived at by that commission with respect to the subject now under discussion. Hon. members will recall that last evening there was such

a babble across the way that I and other members in this group found it almost impossible to determine what hon. members on the other side were objecting to, although we could well judge from their behaviour that they found the remarks most unpalatable. Now I have had a chance of reading *Hansard,* and I note the requests of hon. members opposite to read all the sentences in the particular conclusions I placed on the record yesterday. In conclusion No. 17, found on page 207 of the report, the commission states as follows:

> Delayed deliveries of wheat, necessitated by lack of storage space, result in high farm storage expenses and delayed returns to producers. For farmers with limited resources the resulting financial hardship is serious. The proposal that farmers be paid storage for farm-stored grain has considerable merit.

At this point I should like to draw the attention of hon. members to the fact that, when the Minister of Agriculture went to the press after the house adjourned, he himself did not place all the sentences on record. He just took one sentence out of that conclusion to buttress his particular point of view, but I draw to your attention this reference in the part I had not read yesterday:

> The proposal that farmers be paid storage for farm-stored grain has considerable merit.

Then it goes on to say:

> In addition, the provision of emergency credit by banks and credit unions—

Once again I want to draw to the attention of hon. members of the house that this legislation has completely ignored the credit union movement in the country.

> —guaranteed by the federal government, would be a useful part of any long-term agricultural program.

This is the part I put on the record yesterday, and note that the legislation before the house is presumably to take care of an emergency. It is temporary legislation. Yet the commission states:

> In the meantime, advance payments could be made by the wheat board on properly stored grain on the farm to ease the farmer's immediate cash shortage.

If the Minister of Trade and Commerce (Mr. Howe) had been interested in giving a comprehensive picture of the report to the house he could have gone on further from the conclusions to the recommendations, and on page 216 he would have found recommendation No. 14, which reads as follows:

> That, in view of the grain producers' immediate need for cash and their present difficulty in selling farm stocks of grain, the federal government promptly establish, on an emergency basis, a system of cash advances on farm-stored grain.

May I draw attention to the words "on an emergency basis", because, if you will recall, the earlier part I placed on the record uses the words "in the meantime". In other words, what the commission is actually doing is suggesting that there is a place in a long-term program for reenactment of the 1951 type of legislation, but nowhere in the report does it suggest that type of procedure as a solution to the present emergency situation.

Mr. Howe (Port Arthur): Would my hon. friend mind reading recommendation 15, since he is in the mood for confession?

Mr. Ellis: I think we could go on reading from the report for hours, but in my opinion the *Star-Phoenix* summed it up very neatly in its editorial of February 14 when it suggested that so far it looks like a draw between loans and cash advances. We will admit to the minister that there are excerpts he may take from the report which may give him some solace and comfort—

Mr. Knowles: He needs it.

Mr. Ellis: —but by the same token we can produce far more valid quotations from the report to prove our point. I suggest to the minister that this last-minute effort to clutch at the report as a means of alibiing for the impasse in which the government finds itself is not too convincing, and in that regard I should like to refer to what the minister said in his speech yesterday. As found at page 1447 of *Hansard* he said:

> The bill was recommended by the farm leaders of the province. It is endorsed by a commission of the provincial government—

That was a deliberate effort to create the impression that because the commission, in an omnibus study of farm problems, happened to mention this particular issue, which was not such a serious problem at the time the commission was holding its hearings, somehow or other what they said represents the viewpoint of the provincial government. The minister went on to say:

> —but it is opposed by this little group who represent perhaps some opinion but, if my opinion is correct, it is a small portion of the public opinion in the province of Saskatchewan.

I suggest, Mr. Speaker, that some time next June hon. members will have a chance to see, through the surest method possible, just how public opinion stands in that province. However, in view of the fact that the minister stated in the house yesterday that we do not represent public opinion in the west, I think the time has come to reiterate and place in proper perspective the recommendations of farm organizations throughout the west. I ask hon. members to weigh them in the balance and to decide just who is speaking for the farmers of western Canada. There are in the province three organizations which represent

the vast majority of the farmers there. I refer to the Saskatchewan wheat pool, a member of the Canadian Federation of Agriculture, the federated co-operatives, with membership throughout Saskatchewan and the province of Manitoba, and the Saskatchewan farmers' union. What do we find? I mention this in connection with the remarks of the minister yesterday. The Saskatchewan wheat pool held its annual convention last November and in their publication headed "Wheat Policy—1956" they have this to say: This stems from or is contained in the report of their 1955 convention held last September:

> The current problem of a shortage of farm cash was considered as soon as the annual meeting opened. The delegates went on record in favour of a system of cash advances against farm-stored grain to be paid out by the Canadian wheat board through elevator companies with the federal government assuming the interest on the loans involved.

That is the announced policy of the Saskatchewan wheat pool. Yet the minister suggests that we are not speaking for organized agriculture in western Canada. Surely neither the minister nor any hon. member on the government side of the house can argue that the Saskatchewan wheat pool does not represent the vast number of farmers on the prairies. Then we have the 150,000 members of the federated co-operatives in the provinces of Saskatchewan and Manitoba. They have gone on record in this connection. In a resolution which was sent to the Prime Minister they state as follows:

> Whereas we consider the recently announced plan to place cash into the hands of grain producers through government guaranteed bank loans is entirely inadequate and most unsatisfactory for the following reasons:
>
> 1. The amount available through the proposed plan is not nearly sufficient to meet such immediate items as taxes, harvest operating costs and living expenses for the average grain farmer.
>
> 2. It is unfair to ask farmers to pay interest on loans against their production when they are not responsible for the inadequacies of national policies that make it impossible for their grain to be sold on world markets.
>
> Therefore, federated co-operatives, representing 650 consumer co-operatives with a membership of 150,000 in the province of Manitoba and Saskatchewan, request the federal government to arrange interest-free advances on farm-stored grain.

That is another argument. Does the Minister of Trade and Commerce suggest that the federated co-operatives are wrong? He has intimated that the wheat pool is wrong, that the federated co-operatives are wrong and that the Saskatchewan farmers' union is wrong.

An hon. Member: You are wrong.

Mr. Ellis: I am interested in the interjections that are being made. I am suggesting that contrary to the statements made by the minister yesterday, these organizations represent agriculture on the prairies. The Saskatchewan farmers' union made their presentation to the government just a week or two ago and I am sure that members from Saskatchewan, in their meeting with that organization, were left in no doubt as to how the Saskatchewan farmers' union felt. They state:

> Therefore, the Interprovincial Farm Union Council is continuing to press for adoption of its original proposal—

I think the hon. member for Rosthern ought to pay attention to that statement.

> —(which has been endorsed at the three wheat pool delegate meetings) that the government arrange for interest-free cash advances by the Canadian wheat board on farm-stored grain to the value of 50 per cent of the initial payment on an estimated delivery of eight bushels per cultivated acre.

Three organizations representing the vast mass of the farmers of the west, particularly in Saskatchewan, have gone on record.

Mr. Howe (Port Arthur): My hon. friend will surely give us the conclusion of the fourth organization that he mentioned, namely the Canadian Federation of Agriculture.

Mr. Ellis: Mr. Speaker, the Saskatchewan wheat pool is a member of the Canadian Federation of Agriculture. As some other hon. member pointed out, no mention was made of this particular problem by the Canadian Federation of Agriculture.

Mr. Howe (Port Arthur): Oh, yes.

Mr. Ellis: As far as the prairie farmers are concerned, we can only conclude that the wheat pools as members of the federation are expressing the considered opinion of their membership on the prairies.

Then we can go beyond that to the legislature of Saskatchewan. I note that this year the C.C.F. member for Gravelbourg in the provincial house put forward a resolution calling on the government to implement cash advances. Mr. Walker, the member for Gravelbourg moved:

> That this assembly, recognizing that the federal government guaranteed bank loan scheme is inadequate to meet the serious financial crisis now confronting the western grain farmers and the entire prairie economy, deplores the failure of the federal government to provide a pre payment on the initial price of grain in the form of a cash advance on farm-stored grain.

Some hon. Members: Oh, oh.

Mr. Ellis: Some hon. members are saying "oh, oh". I am going to make a guess. I am willing to make a wager with any hon. member opposite that when this resolution goes before the legislature, every Liberal in the legislature will vote for it. I shall be

glad if anyone wants to take that wager. I am convinced that when that resolution comes up for a vote, every Liberal M.L.A. will be voting for it. I am not alone in making that prediction. Why? Because there was a similar resolution in 1953 when the hon. member for Rosthern was the leader of the opposition in the Saskatchewan legislature. In the votes and proceedings of the legislature of Tuesday, April 7, 1953, Mr. Walker, the member for Gravelbourg, moved this resolution:

That, in view of the fact present public grain storage and transportation facilities seriously fail to meet present day conditions arising in part from farm mechanization and inequalities in the quota system, this assembly urges that, in the interests of orderly marketing and the stabilising of farm income, the federal government make immediate provision for:

(a) storage payments comparable to elevator storage charges on grain suitably stored by farmers;

(b) substantial advance payments on grain stored in approved bins.

An hon. Member: Who voted for it?

Mr. Ellis: Who voted for it, someone asks. The hon. member for Rosthern voted for it. That was the western Tucker. But when he comes down to Ottawa it is a different matter. He is the chief apologist for the government. In 1953 when this matter was before the provincial house—and I am glad to see that the hon. member for Rosthern has returned to his seat—this resolution was passed unanimously by the Saskatchewan legislature. I repeat that when the present resolution comes before the house I am satisfied that every Liberal M.L.A. in the house will vote for it just as they did in 1953. But out west the Liberals have one story. They have one voice out there. When they get down here it is an entirely different matter. I know that the hon. member for Rosthern in a recent broadcast which is printed in the *Saskatchewan Valley News,* a Rosthern paper, goes to bat for the Minister of Trade and Commerce. He does not try to beat about the bush. He comes out and parrots exactly the words of the Minister of Trade and Commerce. In this broadcast he quotes the minister as follows:

We looked at the possibility of advances to producers by elevator agents on behalf of the Canadian Wheat Board. At first glance this seemed to be a logical procedure, but the more we looked at it the less we liked it.

Then a little further on he quotes the famous passage from the speech of the Minister of Trade and Commerce:

You must be careful about lending on grain where only limited security can be had. The grain on the farm would be the only security the board would have. It may be said that the farmer would have to market the grain and bring it to the country elevator eventually, when the board would be able to recover its loan; but I suggest that the farmer does not necessarily have to bring it to the country elevator.

In other words the hon. member for Rosthern is parroting the accusation made by the Minister of Trade and Commerce that the reason they cannot bring in cash advances on farm-stored grain through the wheat board is that you cannot trust the farmer. When the hon. member for Rosthern will go on the air and say to his own constituents that the reason you people are not getting what the farmers want in the west, namely cash advances, is that the Minister of Trade and Commerce (Mr. Howe) does not trust the people of western Canada, he suggests that once the advance is made, they are going to cheat the wheat board and that they are going to try to peddle their grain elsewhere. Even if that were possible I think it is shocking that a statement like that should be made by the minister and even more shocking that those words should be parroted in the province of Saskatchewan by the hon. member who is in effect insulting his own constituents.

Mr. Crestohl: Mr. Speaker, I rise on a point of order. On three separate occasions the hon. member has said that the hon. member for Rosthern has parroted the language of the minister. Under the rules of the house, Mr. Speaker, I find that the hon. member should not be permitted to make the statement—and this is covered under paragraph 299 of Beauchesne—that he does not believe a statement he himself has made. The assertion that the hon. member for Rosthern has parroted the minister is a clear implication that he does not believe the statement which he himself has made and it is my respectful submission that the hon. member should be made to withdraw those remarks.

Mr. Knowles: Mr. Speaker, on the point of order, does it follow that if an hon. member quotes a minister he does not believe what the minister says?

Mr. Harris: There is quite a difference.

Mr. Speaker: I note that the hon. member has cited citation 299 of Beauchesne's Parliamentary Rules and Forms, second edition, in which are given samples of unparliamentary phrases which were ruled out of order. I do not know in what year, but on a certain occasion in the past. If the word "repeated" had been used in the expression perhaps it would have been better and the hon. member would have preferred that. The word "parroted" has been used on three different occasions. It has been used before. It is perhaps in line with a lot of other expressions that have been used since the beginning of the present session.

Mr. Tucker: Mr. Speaker, I am not rising to make any objection to what the hon. member for Regina City said because it has been pointed out to him over and over again that he is putting a wrong interpretation on what the Minister of Trade and Commerce said and on the words which I quoted from his speech. He persists in repeating those misinterpretations and misrepresentations. I do not want to waste the time of the house, because I am sure the house will realize from whom it comes and how little attention it should pay to it.

Mr. Ellis: Mr. Speaker, I think it is a sad commentary on the condition in which the Liberal party finds itself when Liberal spokesmen find their own words so difficult to take just a few days after they are spoken. I think I have put a proper interpretation on what the Minister of Trade and Commerce said. If the hon. member takes exception to that interpretation, that is his privilege. I am quite prepared to let the record stand and let the people judge for themselves on that score. I do suggest that the hon. member who has just taken his seat has shown quite clearly why the Winnipeg *Free Press* was quite correct in characterizing him as having a western face and an eastern face, because when he was leader of the opposition in the Saskatchewan legislature he stood up and voted for the very thing he is now attacking and opposing. It all depends where he is located when he is forced to take a stand on a matter of this kind.

Mr. Knowles: He suffers from schizophrenia.

Mr. Ellis: I have referred to the Saskatchewan wheat pool, the Saskatchewan farmers' union, the federated co-operative and the legislature of Saskatchewan. I could mention the Liberal politicians of the west. Mr. McDonald made the statement that this legislation was as effective as a stirrup pump in a forest fire. Mr. Prowse damned it with faint praise recently on a television program. Private members go out to their constituencies and label this legislation as being unpalatable. And yet, the Minister of Trade and Commerce tells this house that we are not accurate and are not voicing the feelings of our people back home. But beyond that, Mr. Speaker, I am quite willing to look into the grass roots to the thousands of people throughout the province who are sending in their representations.

A return was brought down in this house just recently, sessional paper No. 193, containing certain correspondence that was received in this connection. You will find that those communications are from rural municipalities in the province of Saskatchewan, many of whom have reeves and councillors who are not supporters of the C.C.F. Many of them are quite active supporters of the Liberal party. I have been going through this return and I find communications from the Easton board of trade, from the rural municipality of Moosomin, from the constituency represented by the hon. member for Qu'Appelle federally, and also from the constituency represented by the leader of the Liberal party in Saskatchewan, from the rural municipality of McLeod, from the rural municipality of Buchanan, from the international woodworkers of America, the Prince Albert branch. We have representations from the Saskatchewan farmers' union, the wheat pool committees, and so on.

The following resolution was passed by the wheat pool committee held in Lanigan:

> The Lanigan wheat pool committee unanimously agree that the proposed bank loans available to farmers, up to $1,000 at 5½ per cent interest is definitely unsatisfactory and unjust.

This came in before the details of the new legislation were known. I continue with the letter:

> The Lanigan wheat pool committee strongly recommend:
> That the dominion government make an advanced payment of $1 per bushel on a 4-bushel quota on the 1955 crop.

The rural municipality of Manitou Lake wrote a letter along the same lines. There is a telegram from the farmers' union, subdistrict 5. There is also a letter from Whitewood, Saskatchewan, containing a resolution of the east central motor dealers association. Quite naturally, the central motor dealers association are concerned about payments on their cars. They want to sell cars, and they know that so long as the farmer is not able to get cash for his wheat he is not going to be able to pay his bills.

There is a letter from Stoughton, Saskatchewan; there are resolutions from municipal councils and from the rural municipality of Happyland.

One could go through these letters by the hour and read over the resolutions that came from rural municipalities. There were so many representations, Mr. Speaker, that when this return was asked for permission was granted to summarize some of them. If that were not done we would have received a mountain of a return.

There were approximately 35 telegrams. This is a sample telegram from North Battleford, and reads as follows:

> Resolved that the council of the rural municipality of North Battleford No. 437 go on record as

favouring cash advances on specified acreage of farm-stored grain in preference to guaranteed bank loans . . .

Thirty-five telegrams along that line were received. I find here a sample letter which more or less summarizes 165 letters received by the government along the same lines. I note here a letter from the rural municipality of Sutton, Saskatchewan. There were approximately 165 letters of this type received, Mr. Speaker. This letter is dated November 7 and reads, in part, as follows:

At the meeting of our council on November 1 the following resolution was passed unanimously: "That we protest the proposed plan of guaranteed bank loans to farmers as being totally inadequate . . .

Then, there were petitions to the government of Canada. One hundred and nine of these were received containing 3,256 names in connection with the matter now before the house.

The other day the Minister of Trade and Commerce suggested that we are representing only a small group from the prairies. In the light of the representations that have been made from every responsible farm organization in my province—and they have asked in each instance for cash advances to the wheat board—and in spite of this mountain of evidence, the minister still persists in his attitude and belief that the government has some support for this measure on the prairies. I suggest, Mr. Speaker, that the silence of their own supporters is mute testimony of the unpopularity of this legislation. Do you mean to tell me, Mr. Speaker, that if we were wrong, that if we were sticking our necks out, we would not be jumped on by private members from the prairies? We have not heard from some of them. One or two have taken part in the debate. I say this with all respect to the hon. member for Rosthern. He has been carrying the load for the government in this respect. He has been the work horse for the party in trying to put this unpopular measure across in the house. All credit should be given to the hon. member. But I find it very difficult to believe the Minister of Trade and Commerce thinks that we are in the wrong and they are in the right in view of the silence, whether it is enforced silence or voluntary silence on the part of his supporters, because if there was any great doubt in their minds about the feeling back home they would not lose any opportunity of jumping into this fight with both feet and belabouring the members of this group.

This debate has brought out only too clearly the fact that we have conscientiously, and I think faithfully, interpreted the wishes of agriculturists, the people who are represented by many members of this group. Although we were the only group to vote against the resolution I am very pleased to see that as a result of our leadership we have been able to persuade other opposition members to join with us in opposing this measure at this time.

Mr. Howe (Port Arthur): They follow anybody.

Mr. Knowles: In due course maybe the Minister of Trade and Commerce will follow our leadership, too.

Mr. Ellis: Mr. Speaker, I think the minister and his supporters would find it extremely difficult to argue now that the wheat pool is not for cash advances through the wheat board, that the farmers' union is not opposed to this legislation in principle and in favour of cash advances through the wheat board or the federated co-ops; and I suggest when this matter is brought before the Saskatchewan legislature within the near future every member in that legislative assembly will be standing up, and that includes the 11 Liberals in the house, and voting for the amendment to be moved by Mr. Ed. Walker, the C.C.F. member. When that time comes it will be the best testimony there is—

Mr. Speaker: May I point out to the hon. member that he has already made the point which he is repeating now—

An hon. Member: Four times.

Mr. Speaker: —and besides repeating a point that has already been made I think he has been dealing and he is now again dealing too much with matters that refer to provincial legislatures.

Mr. Ellis: Just to set the record straight, may I say that that was my concluding sentence. I simply summed up in one sentence and had taken my seat. That was my concluding sentence.

Mr. A. B. Weselak (Springfield): Mr. Speaker, this debate is now in its tenth day and I can sympathize with the hon. member for New Westminster (Mr. Hahn) when he wonders who is right and who is telling the complete truth. I can also sympathize with the hon. member for Selkirk (Mr. Bryce), who spoke in this debate and placed the problems of his constituents before the house. Our two constituencies in the last two or three years have suffered comparable crop losses. Our problems are, I think, far more serious and far more difficult of solution than others which have been placed before the house.

The opposition has repeatedly stated before this house that there was unanimous agreement among the farm organizations and farm leaders as to how this money should be made

available to the farmers. I think that, in order to bring this debate into its proper perspective, the events leading up to the meeting with the federal cabinet in October should be reviewed, because the decision of the government concerning cash advances was made as a result of a delegation which came to Ottawa to present the problems of the western farmer to the federal cabinet.

When I think of this problem I recall a meeting that was held in Beausejour in December and was attended by the hon. member for Dauphin (Mr. Zaplitny) and the hon. member for Brandon-Souris (Mr. Dinsdale). At this particular meeting Mr. James Patterson, president of the Manitoba farmers' union, spoke at length on the matter of cash advances. I made rather comprehensive notes at that meeting and have since reviewed them. Mr. Patterson stated that the farm leaders were far from unanimous when they came to Ottawa to meet the federal cabinet. He stated they were far from unanimous when they discussed the matter at the Saskatoon conference.

Concerning the Saskatoon conference a special dispatch appears in the Winnipeg *Free Press* of September 28 which reported what transpired at the meeting. The following is reported:

> Bank loans up to $1,000 based on grain to be delivered to elevators and guaranteed against loss by the federal government was suggested by President J. H. Wesson of the Saskatchewan Wheat Pool as the means to alleviate the emergency financial problem of western farmers. He said the federal government should be asked to pass an act similar to that of 1951 which provided emergency financial assistance to farmers in difficulties. That year the crop was snowed under and farmers could not harvest.
>
> Mr. Wesson said the Wheat Pool did not agree with the suggestion of interest-free loans to farmers, but the interest should not be exorbitant. The banks would grant some loans now, but were "choosey" of their debtors and the five per cent interest was too high. He thought the government should pass the legislation and there should be an arrangement between the Bank of Canada and the chartered banks whereby the loans to farmers be on a two or 2½ per cent interest basis. The loans could be made on the basis of the grain the farmer would probably deliver and entered in his quota book. The federal government should take the loss, if any.

The following day a further dispatch appeared which reads as follows, and I quote from the Winnipeg *Free Press* of September 29:

> The farm conference here Wednesday urged the federal government to make immediate provision for advances to farmers on grain they had in store, up to the value of half the normal delivery expected, or four bushels per cultivated acre. These should be repaid on the basis of one-half the value of each delivery made by the farmer.
>
> The two-day conference was attended by governmental officials and representatives of farm, municipal and business groups from the three prairie provinces. It was called by the Interprovincial Farm Union council to discuss grain marketing and possible financial assistance to farmers.
>
> The resolution as originally presented contained a reference to not more than three per cent interest be charged on the advances to farmers. Jake Schulz, president of the Manitoba farmers' union, tried to amend the resolution by striking out the reference to interest and inserting a clause that the advances to farmers be interest-free.

Incidentally, I would state that was the farm union's original proposal and they have since stuck to it.

> Others disagreed with the substituted clause and all reference to interest was deleted in the final draft. It was generally agreed the resolution should be broad so the federal government would understand the conference favoured the principle of advance and the method was under the government's jurisdiction.

Warren Burgess, who I understand is also an ex-C.C.F. member of the Saskatchewan legislature, had this to say:

> . . . interest-free loans would give some big farmers a chance to make money. Under the system as proposed by Mr. Schulz, a farmer not in difficulties, could apply for interest-free loans and then put the money advanced into government bonds.
>
> For this reason J. E. Brownlee, president of the United Grain Growers, suggested there be a flat maximum for these loans or advances. Only those in need of the emergency assistance should get it. J. H. Wesson, president of the Saskatchewan Wheat Pool, had made the same suggestion Tuesday when he proposed re-enactment of the 1951 act which allowed loans up to $1,000.
>
> Mr. Brownlee said time was the essence. The proposal should be presented at the federal-provincial conference next week.

A report appeared in the Winnipeg *Tribune* on the same date and the following observation was made:

> It was generally agreed the resolution should be broad so the federal government would understand the conference was in favour of the principle of advances but wanted to leave the method up to the government.

At the meeting in Beausejour to which I previously referred, Mr. Patterson stated that when the delegation came to Ottawa they expected only to meet the Minister of Agriculture (Mr. Gardiner) and the Minister of Trade and Commerce (Mr. Howe) but they were pleased when along with the two ministers they met the Prime Minister (Mr. St. Laurent) and the other senior ministers of the cabinet and received a very sympathetic hearing.

He stated the only thing the delegation could agree on was that cash was needed. When asked by the Prime Minister how much, they simply were unable to tell him. When it was asked how the money was to be made available to them they could not tell the Prime Minister, either.

The truth of this statement is borne out in the Canadian Federation of Agriculture *News*

and Information Bulletin of September-October 1955 which in referring to the brief presented to the cabinet states:

The brief urged the government of Canada to "make immediate provision for advances to farmers on grain in store on the farm, and further that these advances should be up to one half the value of each delivery (of grain) made by the farmer".

The brief did not recommend any one way in which they thought these advances could best be made. Bank loans, wheat board advances, a special credit agency, and a system of advances through rural municipalities have been some of the alternative methods suggested.

It was recommended also that regular bank interest rates were higher than should be charged on such advances, and that the interest rate "if any", should be kept to a minimum.

This is also borne out in the press report of a speech made by the Minister of Agriculture for Manitoba in addressing the Union of Manitoba municipalities as reported in the Winnipeg *Free Press* of November 24, 1955:

Some idea of the confusion which existed at Ottawa when representatives of the three prairie governments and prairie farm groups met Prime Minister St. Laurent and some members of his government to discuss the western wheat crisis was given to the Union of Manitoba Municipalities by Hon. R. D. Robertson, minister of agriculture, Wednesday.

Mr. Robertson said when the prime minister asked him for suggestions, he had to admit they did not have one definite suggestion to make. As a result the representatives of 15 groups presented their personal views on the matter and most of them were different.

Mr. Robertson said he had attended a meeting in Saskatoon before the Ottawa meeting, but many of the resolutions could not be accepted by the representatives of the governments or other groups because they had received no instructions on them.

An hon. Member: What was your idea?

Mr. Weselak: I am just putting the record straight. The report continues:

"It is too bad", he said, "that so many must speak in public—

Mr. Wylie: Mr. Speaker—

Mr. Deputy Speaker: Do I understand that the hon. member is rising on a question of privilege?

Mr. Wylie: Mr. Speaker, when you were in the chair yesterday I tried to quote much the same material as we are hearing today and I was called to order. I do not see why another member should be allowed to quote the same thing.

Mr. Deputy Speaker: There seems to be some confusion on this point and perhaps I should do what I can to clear it up at the present time. The citation upon which such interruptions are based is citation 265 which reads:

It is not in order to read articles in newspapers, letters or communications emanating from persons outside the house and referring to, or commenting on, or denying anything said by a member or expressing any opinion reflecting on proceedings within the house.

At the present time we are discussing the second reading of Bill No. 82 and any outside reflection upon proceedings in this house with respect to Bill No. 82 would be out of order under that citation. It is not out of order to read short extracts—I emphasize the word "short"—in support of an argument or a motion as long as they do not offend citation 265 or any other rule of the house. There comes a point however when if one were to read at great length—I am sure hon. members will agree—the assumption would be that the hon. member who has the floor was not making his own speech but, as I believe another citation in Beauchesne's third edition points out, was introducing another member into the chamber which of course our rules do not allow.

These rules are difficult to administer and the Speaker or Chairman gives a great deal of latitude to the hon. member who has the floor before interrupting him in order to be sure in his own mind that no injustice is being done to the hon. member. On the other hand, whoever is occupying the chair must consider that there are 265 members of this house and must try to preserve the rights and privileges of all members and keep everyone within the rules.

It was I who interrupted the hon. member for Medicine Hat (Mr. Wylie) yesterday, but I did so because in my opinion I thought the article which he was attempting to read was reflecting upon the proceedings of this house and, under citation 265, was contrary to a line of rulings which have been delivered by Speakers.

Of course, the interpretation of any rule is open to argument at any time, but fortunately or unfortunately, as the case may be, I am the person charged with making the decision. Since I did not interrupt the hon. member for Springfield (Mr. Weselak) it was because I had decided in my own mind that he had not transgressed that particular rule. I trust that this somewhat extended explanation, for which I apologize, will go to some length to clear up this particular point in hon. members' minds.

Mr. Weselak: Mr. W. J. Parker is president of the Manitoba pool elevators and also vice-president of the Canadian Federation of Agriculture. His opinions are highly respected in western Canada.

An hon. Member: He is a rat.

Mr. Weselak: He had this to say in regard to the position of the government:

Credit unions and banks provide the only practical machinery for making the loans. The wheat

board has no machinery to make the necessary advances except through country elevator agents. And, he added, "Elevator agents cannot be turned into bankers overnight".

During the debate yesterday the hon. member for Assiniboia (Mr. Argue) stated that the Trades and Labour Congress and the Canadian Congress of Labour had expressed unqualified support for the proposition that interest-free cash advances should be made on farm-stored wheat. I should like to put the whole statement on the record as it appeared in the press because it has a bearing on the problem.

An hon. Member: What is your own idea?

Mr. Weselak: You have been talking for ten days and I think I can take half an hour. This article which appeared in the Winnipeg *Free Press* of February 20 had this to say:

Prairie farm unions, driving hard for cash advances on farm-held grain, now have powerful allies—spokesman for some 1,000,000 organized workers.

An hon. Member: Who said that?

Mr. Weselak: The article continues:

The heads of the two national labour bodies—the Trades and Labour Congress and the Canadian Congress of Labour—Saturday agreed with farm unions that the need of such payments should be recognized.

TLC chief Claude Jodoin and CCL head A. R. Mosher—whose organizations are soon to amalgamate—agreed also that farmers should get "equitable" or parity prices on all farm products.

In turn, the farm unions, which claim to represent some 200,000 farmers, agreed with the labour chiefs that:

1. All governments should consider legislation to reduce work weeks if automation gains ground in factories, workshops and offices.

2. Minimum wage levels should be raised through federal-provincial co-operation to boost incomes in depressed areas.

3. There should be federal-provincial government studies to make sure that workers and farmers get a "fair share" of the national income.

I thought that both sides of the report should be placed on the record. In placing these facts on the record I am not suggesting that there is unanimous support or unanimous opposition to this legislation. On the other hand, it is quite obvious that when this matter was brought to Ottawa there was very little agreement among those who spoke on behalf of the farmers. The government has been urged repeatedly by opposition members to accept the advice of farm leaders and it has accepted their advice on the matter on which they agreed, namely: that cash advances be made available, repayable on the basis of 50 per cent of deliveries.

In addressing the meeting at Beausejour, to which I have previously referred, Mr. Patterson expressed the opinion that because of the disorganized approach to the problem by farm leaders the government had no justification for doing otherwise than to bring in the legislation it has proposed. In closing I should like simply to say that in the time I have taken I have merely attempted to give a factual record on the matter before the house. I would suggest that hon. members draw their own conclusions in the light of these statements as to whether the government has acted in complete disregard of the unanimous wishes of the farmers of western Canada.

Mr. Tucker: Mr. Speaker, on a point of order, when Mr. W. J. Parker, president of the Manitoba wheat pool, was referred to by the hon. member who has just spoken, I distinctly heard a statement from the C.C.F., "He is a rat." I think it is shameful that a man of the high standing of Mr. W. J. Parker should be characterized in this house by any hon. member as a rat. I think that should be struck from the record.

An hon. Member: Hear, hear.

Mr. Deputy Speaker: Order. May I draw the hon. member's attention to citation 247 of Beauchesne's third edition, which reads as follows:

If a member should say nothing disrespectfully to the house or the Chair, or personally opprobrious to other members, or in violation of other rules of the house, he may state whatever he thinks fit in debate, however offensive it may be to the feelings, or injurious to the character, of individuals; and he is protected by his privilege from any action for libel, as well as from any other question or molestation.

In view of that citation, I have no authority in the matter.

Mr. Weir: Mr. Speaker, on a question of privilege, I want to join my hon. friend from Rosthern (Mr. Tucker) in protesting vigorously against that type of language. Mr. Parker is an old classmate and neighbour of mine—

Mr. Deputy Speaker: I am sorry to interrupt the hon. member, but in view of the citation I have just read there is nothing I can do in this connection. It is not a question of the privileges of this house.

Mr. Weir: The hon. member should be big enough to withdraw.

Mr. J. M. Macdonnell (Greenwood): Mr. Speaker, in one way I try to imitate the Minister of Trade and Commerce, and that is in being an optimist. I am going to allow my optimism to run to the length that I am not going to abandon hope that even yet this government may see fit to reconsider its decision and that even yet it may adopt the

course of what I consider to be common sense and what I think an increasing number of people in Canada are considering to be common sense.

We have had the word "filibuster" bandied about. I am not much worried about that. We heard that last summer. We were told last summer it was impertinent for an opposition to take itself seriously. Well, we took ourselves seriously then and we got results.

Mr. Howe (Port Arthur): No one else does, though.

Mr. Macdonnell: It is interesting to observe that some of the things that happened last summer are happening now. That is to say, as time goes on, evidence is accumulating that more and more people are sharing the view we have put forward. I refer not only to the press, though there is evidence from there; I refer particularly to what has been already mentioned, the attitude of a large bloc of labour. I read from the Ottawa *Journal* of February 20:

> Prairie farm unions, driving hard for cash advances on farm-held grain, now have powerful allies—spokesmen for some one million organized workers.

That is the kind of language that I am quite sure the government understands. It may be that even yet we may see, as I say, some more accommodating spirit introduced. We do not raise much grain in Greenwood but we have many common-sense people there. After all, I only represent them here and I am only here because in a large democracy we cannot all gather together as they used to in the old days. What a time the government must have had in the old days when all the citizens of a democracy were present and when government were not able to confine the whole authority to themselves.

I have been just imagining to myself a conversation with one of my constituents in Greenwood. I think that, when he found out the story, he would say to me that we in this parliament are being asked to act as no sensible men in consideration of their own businesses would ever be asked to act—in other words, without the evidence and without talking to the people concerned.

Let us consider the situation at the moment. The question of this bill being referred to a committee if it receives second reading was raised the other day by the hon. member for Acadia (Mr. Quelch), who said, briefly, this:

> We have heard hon. members from all sides of the house give different interpretations of how the farmers really feel about this matter.

How true that is. We have spent almost the whole afternoon arguing about the evidence given by people who are not here and to whom we cannot talk, when it would be infinitely more sensible if we could get them to express themselves. I shall read the rest of this. The hon. member suggested the following:

> I suggest that instead of having to get this second-hand, we should get it first-hand. Let us refer this bill—

At that point the Minister of Finance, who certainly was Johnny on the spot, said:

> If my hon. friend would permit me to answer his question, the answer is no.

There is a bare, bald, stark, unco-operative answer. No reason is given. That is of a piece with the situation at the moment, as I shall try to indicate. As I said, I have imagined myself talking to a constituent and I have imagined him trying to find out what has happened. I can imagine him asking, "What is this bill really about?"

My answer to him: "The wheat farmers of western Canada find themselves in difficulties and they regard the situation as being due to a failure on the part of the government. Representative after representative of farm constituencies has complained."

My constituent asks, "How are you personally going to decide what action to take on this?" My answer: "Well, the matter is being debated between members of the government and members of the opposition, mostly members of farm constituencies, and if the bill is passed it will go to a committee of the whole house."

The constituent: "I suppose the committee will be able to have those interested before it, so that you can form first-hand an impression of the farmers' needs." Myself: "No, there will be no witnesses before the committee. We shall have to take the statements of the Minister of Trade and Commerce and of the representatives in parliament of the farmers."

The constituent: "Do you mean to say there will be no direct contact between the members of parliament, other than the government, and those who are interested in this? Do you mean to tell me there is a curtain between you and the interested parties when legislation is being passed, so that you have no direct evidence, so that the evidence is rationed and filtered? Does that always happen? Do you have no committees that get evidence?" My answer: "We have a large number of committees, and a very usual practice is to refer subject matters to committees. For example, take the revision of the Bank Act. Nobody would ever suggest that that should be done without a committee. As a matter of fact, there will be two or three, perhaps more, bills, even in this very session, that will be referred to committees by the Minister of Finance himself."

The constituent: "How do you explain the Minister of Finance's attitude here?" Myself—

Mr. Byrne: Mr. Speaker, I rise on a point of order. I believe the hon. member is referring rather too often to his copious notes. I would be willing to take the part of the constituent if he will give me his notes, and it would make this dialogue more interesting.

Mr. Fleming: How funny you are. Maybe then you will advocate that it go to the committee, where you will have the chance to ask your questions.

Mr. Macdonnell: I use some notes, but I do not believe anyone in this house will accuse me of reading. I am not able to see any reason whatever for the present course that is being followed. To me it is just silly that we are not to have a committee, apart from the committee of the whole house, which will—

An hon. Member: It has been decided.

Mr. Knowles: It has not been decided.

Mr. Macdonnell: I think the hon. member is at fault.

Mr. Deputy Speaker: Perhaps I should also clear up any misunderstanding there may be on that point. The question that has been decided is as to whether or not the subject matter should go to a committee. The actual reference to a committee has not, I think, been decided by the house.

Mr. Macdonnell: Thank you, Mr. Speaker. That is what I hoped was the case.

Mr. Dickey: How is this relevant to the bill?

Mr. Fleming: You would not know.

Mr. Macdonnell: Let me suggest one or two things that happened here that made this seem so silly. It is only an old-fashioned word that will describe it. Last night we had a long controversy as to the effect of the report of the Saskatchewan royal commission on agricultural and rural life. As I say, we had a long dispute between the hon. member for Regina City (Mr. Ellis), the Minister of Trade and Commerce (Mr. Howe), and particularly his parliamentary assistant. It was a battle of quotations. I thought that the hon. member for Regina City won but that is not of any significance. The point I am making is that the sensible thing would be to have these people here if they are going to be quoted so that we will not have one member saying they meant one thing and another member saying they meant something else.

[Mr. Macdonnell.]

I thought it was a most unedifying and stupid performance, and I will bet my shirt, if that is not unparliamentary, Mr. Speaker, that when the Minister of Trade and Commerce was in business he would never have entered into a business arrangement on somebody else's say-so of what somebody else believed. He would want to talk to the parties concerned. As a matter of fact, Mr. Speaker, it almost seems to me, if I am correct in my analogy, and it may appeal to a professional man like you, like having a case in law where the plaintiff is not allowed to appear and give evidence and where counsel go on arguing and arguing and talking to the jury without the real people being allowed to be there.

Mr. Howe (Port Arthur): May I ask my hon. friend if there is any better representation of the farming community than the elected representatives from the area?

Mr. Macdonnell: That, I suggest, is not the point.

Mr. Howe (Port Arthur): You want to pick them.

Mr. Macdonnell: My point is that we want to have a committee of the house investigate the matter. The committee then won't have to hear a dispute between the Minister of Trade and Commerce and the hon. member for Regina City as to what somebody else meant when he said something nor all these references to page this and that. They want the man himself so they can cross-examine him. Incidentally, the calling of the committee will result in more evidence being made available to the public, and the public are interested.

Mr. Knowles: Will the hon. member permit a question? In view of the interjection of the Minister of Trade and Commerce, I wonder whether he would ask him if he would have the matter referred to a committee consisting of the members from the three prairie provinces and let them make the decision.

Mr. Macdonnell: I am a co-operative man and I am always glad to get assistance. I associate myself with that question. There is another thing which seems to me equally silly, and I apologize for using that old-fashioned word. The other day we were actually asked to give weight to and act on a pure negation. We were told, and of course I take the word of the hon. gentleman, that some farm organization—I forget the name of it and it does not matter—had been here, had been in touch with the ministers and had not said a word about this matter. I do not know what that was expected to prove. I do not know what we were ex-

pected to do as a result of that statement. We would need to know a whole lot more about the discussion. We would need to know a whole lot more about who were there. We would need to know a whole lot more about the attitude of the two ministers because the Minister of Trade and Commerce and the Minister of Agriculture (Mr. Gardiner) are pretty cocky roosters when they are on their own dunghill. I would say they might be very difficult to stand up against and I would have been very interested in being present at the conference although I would not expect to have my evidence taken as a fair report of everything that had happened there.

But that is the kind of evidence we are given and that is what makes me say again that this is silly. Why this bill should be picked out, why witnesses cannot be heard when they will be heard in perhaps half a dozen other cases this session, I do not know, and I have not heard any explanation being given for that action. As a matter of fact, though I know that hon. gentlemen opposite are triple-proof against really taking an interest in what we take an interest in, namely, the position of parliament, I think anyone as intelligent as my constituent in Greenwood, although my friend from Kootenay East did not think I was really representing them properly, would take this matter seriously.

As I have said, here we are asked to take an action that no reasonable man would take, to decide something without the evidence and merely have the evidence presented to us by somebody else. No sensible man would do that. In any other context of life no one would be asked to do that. So I say this is further evidence that parliament has sunk pretty low, and I am going to venture to read two or three sentences from the great parliamentarian of our age. I would ask hon. members to listen to this and particularly to one or two phrases of what I shall read. I would ask them to ask themselves honestly whether we are in that position or in anything like that position.

Mr. Studer: Is he talking about bank loans?

Mr. Macdonnell: No, he is talking about parliament and I am venturing to talk about parliament too.

Mr. Deputy Speaker: Order. May I remind the hon. member that after all we are talking about bank loans and Bill No. 82. I was forced to interrupt another hon. member on the same point the other day, and I hope the hon. member for Greenwood will co-operate with me.

Mr. Macdonnell: Well, Mr. Speaker, I do want to co-operate, and I am hoping that even yet the refusal of the Minister of Finance (Mr. Harris) the other day, which did not seem to me really down his alley and was not worthy of him, may be changed. Quite frankly, I have very little more to say, but I am trying to make the point that what is being done now is another act of disrespect and disregard for parliament. The fact that my friend wishes to stop me makes me realize how far we have gone. I propose to quote two or three sentences from Churchill.

Mr. Deputy Speaker: Order. The hon. member has indicated in advance that the quotation he proposes to read deals with abstract ideas of parliament, and after all we are dealing with a bill, the principle of which is very confined. I must ask the hon. member to co-operate with me and confine his remarks to the principle of the bill.

Mr. Macdonnell: Well, Mr. Speaker, of course I must do what you say, but may I suggest to you that everything we do is governed by abstract ideas and that all I am hoping to do is to suggest an abstract idea which, if put into effect, might cause a change of action on the part of the government. As I said, Mr. Speaker, I wanted to refer to a few words of Churchill, and unless you prohibit me I should like to read them. They are very brief.

Mr. Deputy Speaker: If the hon. member will give me an assurance different from the assurance he has already given the house and will say that this extract has some bearing on Bill No. 82 then of course I cannot interrupt him in advance. However, it seemed to me he indicated quite clearly that his extract would deal with another matter, and that is the reason I rose.

Mr. Macdonnell: Here it is, and it is very short.

Some hon. Members: Order.

An hon. Member: Oh, let us hear it. Get it on the record.

Mr. Macdonnell: He said:

> I see the houses of parliament—and particularly the House of Commons—alone among the senates and chambers of the world a living and ruling entity; the swift vehicle of public opinion . . . I regard these parliamentary institutions as precious to us almost beyond compare. They seem to give by far the closest association yet achieved between the life of the people and the action of the state.

It is that last phrase on which I want to comment.

Mr. Deputy Speaker: In order that these questions may be cleared up as far as possible, and I seem to be doing a lot of clearing up this afternoon, may I say that now that I have heard the quotation I think the hon. member for Greenwood was right when he first said that it dealt with an entirely different matter and I cannot see that it had any relevancy to the bill before us.

Mr. Macdonnell: Mr. Speaker, I do not think I said that it dealt with an entirely different matter but I am not going to persist further. I should simply like to say that I believe the points I have been trying to make, even though they sound like idle tales in the ears of some gentlemen here, are practical. I believe they have a great practical bearing here. I believe they have a great bearing on what we are going to do with this particular bill.

It may take time. I would say that the fact that these suggestions are regarded as of no value, that people do not want to hear them, shows how right we are when we say that the conception of parliament is fading and becoming very dim. I believe the time will come when these things will be practical. I still hope that the government, in what I hope will be a venture into wisdom, may decide in this case that they will not treat us like a lot of children but rather that they will have a committee which can see the parties interested in this matter and not have a curtain drawn down between those who are trying to act and those who should be given the information on which they are acting.

Right Hon. J. G. Gardiner (Minister of Agriculture): Mr. Speaker, it is now so long since I spoke on the resolution that I can hardly convince myself—in spite of what I hear—that we are still discussing the question and if I may be permitted to say so, are straying about as far away from it as we can. At that time I took half an hour to try to convince the house that there is only one matter under consideration when we are dealing with Bill No. 82. It was not before the house then and I could understand the position taken at that time—the bill had not been seen—namely that there was a special condition which arose last fall and which required to be dealt with.

The government decided that the better way in which to deal with the question was to have loans made by the banks. The government decided that was the quickest, the cheapest and the most effective way of dealing with the question. There never was any decision made, when that point was reached, as to whether the final way to deal with the wheat question was to have advances made on the grain that is on the farms. That question was not under consideration by the government at that time at all. The question under consideration was the quickest way of getting into the hands of the farmers cash which they could use in order to pay their accounts.

It was also well known that there were many who said that the quickest, the cheapest way and the best way from all points of view to have that done, was to have these loans put out by the banks. There were, of course, others who said otherwise. There were those who said that perhaps it could be done in some other way better than that. But the question that had to be decided by the government was this: Are we going to do it in some other way or are we going to have that particular thing done in the manner provided in this bill. It had no relation whatsoever at that time to the long-term policy of the government in relation to the handling of wheat or in relation to the handling of the surplus of wheat and so on.

As I stated, the decision was made to do it through loans obtained from the banks.

Back in 1951, there had been on the statute books an act which made certain provisions to do the same thing,—not for the same reasons but to do the same thing—namely to provide with cash the farmers who desired it and had to have it. Because there were very few of them who took advantage of it and because not a very considerable amount of money was involved—I think some $600,000 went out under that system—some suggestion was made that it did not do any good and had not any particular purpose. After all, some $600,000 is quite a lot of money. If put out in sums of less than $1,000, it takes care of a considerable number of farmers. From that point of view this legislation naturally suggested itself to a great many people. They said, "We have already had experience under it in 1951, and now it can be brought into effect again."

It is true that that legislation, as it was drafted at that time, was not functioning fully when the matter was discussed last fall. It was still in existence, and still on the statute books, but there was a termination date with respect to the time that it would operate. Hence it was suggested that we operate on a similar principle. That was at once taken to mean many things. Some people said, "It means that you can borrow only $1,000". Some people said, "The interest rate is going to be 5½ per cent". As was indicated a few minutes ago by the hon. member for Regina City (Mr. Ellis), when he started to read his letters he found that some of those letters were written under those

circumstances when the question which was being discussed was not the question which is now before the house.

The present bill makes provision for loans up to $1,500. The present bill states that the interest rate is 5 per cent. The present bill also indicates a method by which the money is to be paid back, namely that half of the money obtained for the wheat from month to month over the period that the loans are out can be retained by the farmer with which to carry himself along. In other words, it is not the same legislation as that which was being discussed in those earlier days. This legislation is now known to the farmers and is understood by them. I therefore do not think we are gaining very much by going back and discussing what people thought at that time.

As a matter of fact, hon. members also know that—and probably I used the wrong term, as I am accused of doing sometimes—in the earlier part of the discussion when I made reference to regulations, somebody asked a question afterwards whether there had been any change in regulations and the answer was no. The fact is this, and everyone who knows anything about the situation out west knows it and if they presume to discuss the question from the western point of view they should know something about it, the fact is that the first statement which came out, and which was submitted by the banks to the farmers who applied for loans, was not satisfactory.

The Department of Finance called together a meeting in the city of Winnipeg. That meeting was attended by finance officials, by the solicitor for the wheat pool in Saskatchewan and by many others. They redrafted the statement which was put out to the farmers and reconsidered some of the conditions that had been put on under the first statement. One of them was as to whether the applicant agreed to pay taxes out of this loan before it would be made. Another one was as to whether loans that had been made by banks for other purposes should be taken under consideration. One was as to whether they had to examine the records at land title offices throughout the prairie provinces before they could make the loan. Those inconveniences were all removed within a few days and a new form was gotten out. Most of these resolutions that are paraded here in connection with this discussion were resolutions passed prior to the bringing out of these new forms, and the attitude today in the western part of Canada is not the same as it was at that particular time.

Then again it has been said that farm organizations believe this and that farm organizations believe that, and that you ought to call the farmers in here before a committee. There are 250,000 farmers growing wheat. To conceive of the idea of getting in a hearing before a committee of the house a sufficient representation or a more complete representation than is sitting in this house is just a proposal that could not be carried out in spite of the good intentions of my friend the hon. member for Greenwood (Mr. Macdonnell). It might be good in theory but I venture to say that when you consider an organization that has 11,000 members—and that is true of one of the organizations that has been quoted—from among 250,000 farmers and when you figure that sometimes there are two or three out of the one farm house who belong to the farm organization, even an organization like that does not necessarily speak for the farmers of western Canada. Then, when you take another organization, as was done a few moments ago, which is not farming at all, as a matter of fact an organization which a very few months ago passed a resolution to the effect that they ought to be making oleomargarine, and quote it as an organization that speaks for farmers on every point, I would like to hear something that is a little more in line with what we would expect to decide our vote upon when we are considering a bill of this kind.

Mr. Diefenbaker: What was that organization?

Mr. Gardiner: Oh, if my hon. friends will think back far enough they will all know. I do not need to tell them who it is.

Mr. Diefenbaker: Why is it being made anonymous?

Mr. Gardiner: There is only one of them in Saskatchewan, so the hon. member will be able to find out all right.

The other matter which is of concern is this, Mr. Speaker. A few moments ago the hon. member for Greenwood (Mr. Macdonnell) asked who were those people who were here to see the government. Well, it was the Canadian federation of agriculture, the largest farm organization in Canada and the most representative. After all, the farm organization that was mentioned a few moments ago has organizations in only four provinces of Canada. The federation of agriculture has organizations in every province in Canada. Not only have they organizations in every province in Canada but every single phase of agriculture from one end of Canada to the other is represented in that organization. When someone on the other side of the house said a few moments ago that that

organization is financed by the wheat pool, well, that answers a lot of the arguments that have been put forth in the house in the last few days. If that organization is financed by the wheat pool—and I am not saying it is—or by all the wheat pools of western Canada—

Mr. Ellis: Who made the statement that it was?

Mr. Gardiner: A speaker only within the last few minutes. The statement to the effect that it is financed by the wheat pools proves only one thing, namely, that if they were expressing the views of the wheat pools when they were down here, hon. members on the other side of the house have not been expressing them. I have not any doubt as to what the opinion of the wheat pool was as an organization.

Mr. Ellis: What about their convention?

Mr. Gardiner: I attend their conventions every year on invitation. I am a member of the wheat pool and I discuss all their questions with them for at least one afternoon every year. I know what their views are. I would call the attention of some hon. members to the fact that one of the members of this royal commission is a member as a representative of the wheat pool. Another is a member because he is president of the farmers' union, or was president when he was put on the commission. These men are members of the commission which brought out this report.

Some suggestion was made by the hon. member for Regina City (Mr. Ellis) that the Minister of Trade and Commerce (Mr. Howe) had tried to leave the impression that the government of Saskatchewan was in favour of these bank loans, because of what he said last evening. The Minister of Trade and Commerce did not say anything last evening which would give anyone justification for even making such a statement. He said that this report was being made to the government of Saskatchewan.

Mr. Ellis: He used the word "endorsed".

Mr. Gardiner: He said that this report was being made to the government of Saskatchewan by a royal commission which had been appointed by the government of Saskatchewan. I might say, in addition to that, if hon. members opposite think there were meetings held last fall they should have followed this commission around the province. This commission visited practically every hamlet in the province of Saskatchewan. It met farmers everywhere who would come and talk to them. After having done so they made the report which is on hon. members' desks, and it was submitted to the legislature in Saskatchewan since it met in its present session only about two weeks ago. That is about as up to date as anything one can get on the question.

Let us come back to where we were last evening. With respect to the result of the discussions which took place while they were out on the road interviewing everybody they could, doing just exactly what the hon. member for Greenwood says ought to be done, they say this, in arguing out the question:

> The payment of advances on farm-stored grain would, in effect, be a prepayment of all or a portion of the initial price by the wheat board. Such a program would resemble, in a number of aspects, the commodity loan program of the United States.

They go on to say this:

> One undesirable feature would be the questionable wisdom of making advances freely available to all producers whether or not they are in need of financial assistance.

There could be nothing clearer than that. They say that is the objection to following the system, but then they go on to say:

> The principal objection, however, lies in the field of administration. Provision would have to be made for inspection to determine adequacy of storage facilities, to verify quantity, and to determine grade. The additional costs involved would appear to make the proposal of doubtful value as a long-term program.

What hon. members are discussing more than half the time on this particular bill is the question of long-time policy. They are discussing that. This organization says that that particular thing might be most difficult to apply. I repeat, after having done that, after going out and hearing evidence all over the province, hearing all the farmers, that is the summing up of the matter. Then they say this:

> Perhaps a more workable proposal is to re-establish the prairie producers interim financing act of 1951 on a permanent basis.

Well, if my hon. friends think that that is not good for the immediate time, are they prepared to accept it as a permanent policy of this government as something to be applied out west for all time ahead of us? Well, if they are, they ought to be very much more in favour of having it applied for the next six months to try it out. They pretend to be speaking here for the farmers of western Canada in saying that the farmers of that part of the country are opposed to this bill. Then they take this particular report of the commission and quote from it to try to prove that is the fact. I was somewhat astounded last evening when my hon. friend opposite the member for Regina City refused to read the opinion of this organization on the

question that was under discussion. He would read anything else but this. At the end of the quotation I have read, the commission goes on to say:

Therefore, the existing need could probably be met through re-enacting the prairie producers interim financing act as permanent legislation.

They refer to the existing need, not the permanent need. They say the existing need could be met by bringing that legislation into effect.

Let me turn to the conclusions at page 207 of the report. I am going to read all of conclusion 17.

Mr. Ellis: I put it on record last night.

Mr Gardiner: No, you did not. You left out two sentences last night and you left out one today. I am going to read it all just as it is on page 207.

Mr. McCullough (Moose Mountain): May I ask a question?

Mr. Gardiner: I will put it all on and you can follow it as closely as you wish.

Mr. Ellis: It is already on the record.

Mr. Gardiner: No, it is not, not in the form in which I am going to put it on. I am going to put it on the record just as it is written in the report. Conclusion No. 17 reads:

Delayed deliveries of wheat, necessitated by lack of storage space, result in high farm storage expenses and delayed returns to producers. For farmers with limited resources the resulting financial hardship is serious. The proposal that farmers be paid storage for farm-stored grain has considerable merit. In addition, the provision of emergency credit by banks and credit unions, guaranteed by the federal government, would be a useful part of any long-term agricultural program.

A survey—

Here is where my hon. friend came in last night and left out all that precedes this. He comes in with this:

A survey of present storage facilities is urgently required to determine whether new storage is needed and, if needed, where it should be built. In the meantime—

Some hon. Members: Hear, hear.

Mr. Gardiner: Yes, hear, hear. My hon. friend referred that "in the meantime" to the statement he did not read last night but that "in the meantime" does not refer to that at all.

Mr. Fleming: Go ahead and read it.

Mr. Gardiner: It says while they are making this survey of present storage facilities—

—advance payments could be made by the wheat board on properly stored grain on the farm to ease the farmer's immediate cash shortage.

Mr. Argue: You are splitting hairs.

Mr. Gardiner: I have not split any hairs, and if my hon. friend will sit down until I get through he can make any speech he likes providing he has not worn out his welcome already.

Now, the other statement which the hon. member for Regina was asked to read today and which he did not read—

Mr. Ellis: What sentence did I not read?

Mr. Gardiner: I am reading from page 216. Recommendation No. 15 (b) with regard to emergency credit is set in the commission's report:

(b) the recommendations with regard to emergency credit as set forth in the commission's report on agricultural credit be implemented or, alternatively, the federal government re-establish, on a permanent basis, the Prairie Producers' Interim Financing Act of 1951.

Mr. Ellis: Alternatively.

Mr. Gardiner: That is the final recommendation that is made.

Mr. Ellis: Read No. 14 now.

Mr. Gardiner: Yes, "or"; and my hon. friend goes on saying that the farmers are all against us. Well, I have had some very prominent farmers in my office within the last two days. Perhaps I should not say farmers, but very prominent individuals from Saskatchewan have visited me in my office within the last few days. These are men who are having farmers from the communities in which they live drop into their offices hour by hour and by the score, people who are doing daily business with them; and they tell me that the argument that is being put up here on the floor of the house is not correct at all.

Mr. Ellis: Bank managers?

Mr. Gardiner: None of them are bank managers at all. The main objection I heard was the objection I heard when I was in the west. I was in the west myself at the end of the week.

An hon. Member: You certainly were.

Mr. Gardiner: I was in Winnipeg, Regina, Lethbridge, Cardston, and in the Blood Indian reserve. I covered practically all of western Canada in my trip. The chief objection I heard to anything that is going on down here in the house was voiced by a gentleman in Winnipeg, who said the people in Melfort were hostile because the hon. member for Melfort refused to come home to discuss the on to the bay movement and was wasting his time down here making the kind of speeches he has been making. That is at least the opinion of a few farmers.

Mr. Ellis: Well, he was elected to come down here.

Mr. Gardiner: My hon. friend says he was elected. That reminds me of the fact that he threw out a challenge a while ago. He says they are going to be elected in Saskatchewan in June. I have always found it a very good bit of advice to say you had better wait until the election is over and you can probably prophesy more accurately at that time. I am going to say this to him, however, that if they will run the election on this issue and on no other we will lick the pants off them. But I know they are not going to do that. They are going to run the election if they can on everything but the record of the government out in Saskatchewan, and if they are successful in getting away with that they may accomplish something, I am not too sure about that. However, they will find that there are still some Liberals in the province.

Everyone knows that the situation out in Saskatchewan last fall was such that some people needed money and needed it as soon as they could get it. There was no question about that on the part of the people of any political party and there is no necessity of trying to prove it here; but at the same time a great many people knew there would be a small percentage of the farmers of western Canada who would be going into the banks and getting loans.

There are two reasons for this, the first one being that those who could get along without the money would not go to the banks. That is quite natural and it is to their credit that that is the case. Some of those people who were really having a tough time getting along might not go to the banks, but a great many did go to the banks; some 7,000 of them did so before Christmas.

Mr. Howe (Port Arthur): Eight thousand.

Mr. Gardiner: Yes, 8,000 went before Christmas and received loans amounting to some $7 million. Well, $7 million is not something to be laughed at. What is the effect of this bill in relation to that?

I might have agreed last fall with some of the things that were said, including the suggestion that perhaps we ought to call the house together, although there were not a sufficient number of people saying that to have placed a great deal of emphasis upon the contention that we ought to call the hon. members from all across the country to consider the terms of the new bill that was going to be brought in. However, I am quite convinced that the people back home and the hon. members who come here from all across Canada would have considered that a great waste of money not only by the government of Canada but by the individual members who had to come here to decide on one particular matter.

Therefore the government said to those concerned, "Well, in all probability when the house does meet it will pass this legislation", and in spite of what has been said and all the fighting that has been done I know it is going to be passed and there is no question about it.

An hon. Member: Crack the whip.

Mr. Gardiner: My hon. friends wonder how we can say that. We can say that as a result of the last election in Canada, and we will still be able to say it after the next election. So I want to say to my hon. friends that it was not considered to be the best policy or in the best interests of this country to call in over some 270 members of this house and the members of the Senate in addition in order to determine a matter which everyone knew at that time would be passed by this house.

We are here now asking hon. members to pass this bill and our hon. friends by talking for ten days on it—

Mr. Fleming: It has not been ten days.

Mr. Gardiner: —and by saying they are going to go right on talking as long as they have breath left with which to talk about it and remain within the rules of the house, are serving no particular purpose. I do not like to sit here listening to them; nevertheless I do it.

Mr. McIvor: Wasting time.

Mr. Gardiner: We have to hear what they say in any case in order to be absolutely certain they do not say something different when they go home; therefore we sit here and listen to them. Hon. members opposite are here endeavouring to tell this house that the farmers out west are raising a terrible row about this. There is no one in this country I know of who opposes the government who hesitates to say to me all the nasty things he can whenever he has occasion to do so.

An hon. Member: Give them a chance.

An hon. Member: But you keep moving around.

Mr. Gardiner: Give them a chance? I went right across the prairies last week end and I am going back again right across the prairies out as far as Calgary. I expect I will hear some more comments concerning the fact that my hon. friends are wasting their time and ours in Ottawa when they might have been getting this bill through

and into operation. The only thing they are accomplishing at present is to make bank managers hesitate here and there across western Canada before making loans. That is all they have accomplished in the last ten days. A farmer goes into a bank and says, "I want a loan," and the manager says, "Those members of yours in Ottawa are not going to put the bill through".

Mr. Ellis: I thought you said it was going to go through anyway.

Mr. Gardiner: I am sure it is, but hon. gentlemen on the other side of the house have been doing everything they possibly can to make sure that it does not go through. They are trying to convince the farmers back home that it is not going to go through. I would like to suggest to you that one of the reasons some of the farm organizations are losing membership so rapidly is because the farmers do not agree with what some hon. members are saying.

Mr. Ellis: We are not worried.

Mr. Gardiner: The farm organizations in western Canada are not raising a row about this legislation. The only place I have ever heard any row raised about it was when some of my hon. friends of the C.C.F. group on the other side were getting meetings organized. They say that they did not organize them, that they just sprang up, but the fact is that they were getting them organized out there all across the country and were talking against loans. There have not been any other meetings of farmers in western Canada where resolutions have been passed.

The farmers of western Canada want to make use of this bill; not all of them of course, because all of them do not need the assistance provided by this bill. But the farmers in western Canada who are in greatest need of assistance want this bill and they want it as soon as it can be put through. I see the hon. member for Humboldt-Melfort (Mr. Bryson) shaking his head. Well, I saw people in Melfort shaking their heads back in 1931 when they got $5 per acre when they had grown a lot of wheat. I know that farmers up in that section of the country are not supporting the position which is being taken by members in this house.

When the election is held in western Canada, as it will be sooner or later, I imagine that there will be fewer words said about this legislation than about anything else that has been under consideration in this country. Why will that be? That is if it is left to my hon. friends opposite to say the words. They are saying that members from Saskatchewan, from Manitoba and from Alberta ought to get up and talk about this legislation. They are simply telling you, Mr. Speaker, that they have not convinced the rest of the members of the house that they are giving us a proper report on western Canada. They are appealing for support of hon. members on this side of the house in order to put over a plan which they have in their minds. When they go back and try to explain the fact that for ten days they have asked the people of Canada not to provide loans to the farmers out west, that for ten days they have been threatening somebody that they should change their minds down here those members will change their minds.

A few minutes ago the hon. member for Greenwood (Mr. Macdonnell) spoke and said that they do not grow much wheat in his constituency. I think he could have said that they could not grow any wheat in his constituency. The wheat growers of the west are dependent upon men in his constituency. Most of the men interested in the financial institutions of western Canada live in Toronto and Montreal. Those men have looked over the whole situation and they are prepared to lend money to farmers under this bill.

Now we are told that we should not do it, that the farmers should not get it, that we should bring all the farmers down here before a committee to say what they think. If that were done there would be a lot of Tories who would be going back home and keeping quiet for the rest of the session. These farmers in the west have members here to express their point of view. If my hon. friends on the other side of the house are not able to express that themselves and are appealing to Liberals on this side of the house to express their views on the question, well may I say that I have expressed mine in a previous address on the resolution and I am expressing them again. The hon. member for Assiniboia (Mr. Argue) was kind enough to say yesterday that I always have sufficient nerve—he called it courage but I will call it nerve—to speak to any meeting. I would not hesitate to go to any meeting in western Canada and meet any group of farmers and lay my point of view before them.

I repeat that the gentlemen who formed this royal commission were looked upon by the government of Saskatchewan as being the outstanding agriculturists in that province. They wrote this report and I have not any doubt that this report will be referred to in the debate that is going to take place as a result of the resolution introduced into the legislature which the hon. member for Regina City (Mr. Ellis) read a few minutes ago. But

I am just as sure that when the resolution is discussed this report will be discussed too. I have no doubt that there will be more support for this report in the legislature of Saskatchewan on both sides of the house than for what members are saying here.

This is a reasonable report got out by people who represented different organizations of farmers. One was a professor of agriculture at the university. Another member was a leader of one of the co-operative organizations that were referred to. Another was a member of the board of the wheat pool. Another was the president at one time of the farmers' union in Saskatchewan.

An hon. Member: And a farmer's wife.

Mr. Gardiner: Yes, and a farmer's wife. That is a pretty good committee and they have made some very sound recommendations. One of the soundest recommendations was that there should be provision for farmers getting guaranteed farm loans from the banks in western Canada. That is what this bill proposes, and it proposes nothing else. My hon. friends go on discussing all kinds of things. The hon. member for Dauphin (Mr. Zaplitny) laughs at that, but I have said on one occasion before that this is not a laughing matter. This is a very serious matter with the farmers out west.

By this method they will be able to get money, and yet there are those who are trying to prevent them getting that. I repeat, no one on this side of the house, no one in the government, no one connected in any way with this measure has ever said that it will solve anything else but the matter of getting money quickly into the hands of farmers.

Then it will be found by the bill which comes up next that the government has gone on to say that it will pay storage on anything over the average amount of wheat which has been in the elevators for a term of years. Has anyone on the other side of the house made any objection to that? Of course they have not. They have all said they are going to vote for it. As a matter of fact I would rather expect that if some day some time there was some provision made for some kind of support for grain that has to be left on the farm, they will all support it. They will go even farther than that and say that when this bill was before the house they gave the government all the ideas that there are in existence in connection with this particular trouble.

I have watched them in operation. That is the way they always operate. They try to bring up everything they think the government may do some day so that they will be able to say that they thought of it first. I am accustomed to that kind of argument, but the quickest way to satisfy the farmers of western Canada is to put this bill through and get it into operation so that when a farmer walks into a bank and asks for a loan the banker can say that with this legislation in effect he can give the farmer the assistance he requires.

The sooner that is done the better it will be for C.C.F. members. I should not say that because it might be worse for Liberal candidates if the C.C.F. members showed a little sense from now on, but nevertheless I give them that advice for what it is worth. Put the bill through, get it out of the realm of discussion among some 20 members of the house. Let us get on with our business.

Mr. J. A. Smith (Battle River-Camrose): Mr. Speaker, in taking part in the debate on this amendment, following as I do one of the greatest orators, or I would like to say politicians Canada will ever know, I feel rather humble. But I am not prepared now, nor have I ever been and I hope I never will be, to accept his advice. I am ready to agree that if we must have a Liberal federal Minister of Agriculture perhaps the hon. gentleman holding that portfolio at the present time is one of the best we can ever expect to have.

I would like to point out to the right hon. Minister of Agriculture that you do not find many farmers interested in bank loans around the Bessborough hotel or the Fort Garry hotel or the Palliser hotel or the other larger hotels in western Canada. For that reason I was not too greatly impressed with the observations he made regarding the contentment that exists among the farmers of the west at the present time.

An hon. Member: Not flying by T.C.A., either.

Mr. Smith (Battle River-Camrose): I would also like to point out to my hon. friends to my immediate right that we in the Social Credit group have not yet reached the position where we are prepared to take too much guidance from them. We did support this particular bank loan legislation in the resolution stage because in our opinion that was the proper thing to do. We did so because at that time we did not know the terms of the bill. When the terms of the bill were exposed to us, we ourselves changed our course and no one gave us any guidance. Let us keep that point clear. It was suggested that perhaps our position had changed. I would point out that on January

16, speaking in this house, I quoted from a report of the Social Credit caucus held in Edmonton, as follows:

> The present federal policy with respect to loans on farm-stored grain is entirely inadequate and the proposal to put the farmers further into debt at 5 per cent interest is unfair and unjust when all the circumstances are taken into consideration. Not many farmers will be able to qualify for the full amount of the loan. Even if more of them did, the amount would not be sufficient in many cases to take care of the debts incurred in putting in and taking off the crop.
>
> We believe the federal government should make it possible for the Canadian wheat board to make cash advances to farmers against grain stored on the farm.

I maintain that that was our position at the opening of this discussion and has continued to be our position all the way through. We are in favour of this amendment which proposes to give it the six months' hoist, simply because we do not feel that the bill meets the wishes of the farmers of the west. Regardless of what the right hon. Minister of Agriculture has to say about farmer opinion in the west, we are not prepared to agree with him on that score.

We do not like the bill for several reasons. We feel the interest charge on these loans is far too high. Taking into consideration that the wheat board, for example can borrow at 3 per cent, we cannot see why farmers of the west should have to pay 5 per cent.

Again, the penalties for non-payment of the loan are in our opinion far too severe. Again, the bill itself does not give money to the younger farmers of the west who are just getting started. The other day I was able to convince even the Minister of Trade and Commerce that this was true.

During the course of the discussion, however, one very interesting thing has occurred. I am referring now particularly to the admission the right hon. Minister of Trade and Commerce made the other day in reply to the hon. member for Acadia (Mr. Quelch). The hon. member for Acadia was speaking about the storage problem under this bill, and he had this to say, as recorded on page 1315 of *Hansard*:

> However, under this act he is not allowed to put that wheat into storage. Therefore, any farmer who has borrowed under this legislation, and who in order to get a fair grade tries to put his wheat into storage until such time as a grade has been arranged, puts the elevator agent in the position where he can be prosecuted if he allows the grain to be stored.

In reply to this comment by the hon. member for Acadia the Minister of Trade and Commerce had this to say:

> I should like to say, if I may, that the department has taken cognizance of that fact and an amendment will be offered if and when we get the bill into committee which will make it possible to put grain in storage.

That did help some. On the other hand we still feel there are many features to this bill that are not worthy of our support. We are still hoping, by the way, that the government will see fit to agree to the suggestion made by the hon. member for Acadia to refer this bill to a committee so that representations regarding it can be made by farmer organizations from the west.

This afternoon we have heard quite a debate as to what constitutes a farmer organization. The Canadian Federation of Agriculture, the wheat pools, the United Grain Growers, the farmers' unions, and so on, have been mentioned. I maintain that if such a committee were established it would be only right and proper to ask all organized groups of farmers to come before that committee and submit evidence, and in that way this cross-fire we have to listen to here in the house would be eliminated.

In that connection, I have in my hand a copy of *The Organized Farmer*, which by the way is the official organ of the farmers' union of Alberta. We have been told that the farmers of the west are in favour of bank loans. With that statement I do not agree. I know the farmers of the west were opposed to bank loans from the day they were mentioned. Just to bring this point before you at the present time, I wish to quote briefly from the president's report in November issue of *The Organized Farmer*. I might point out that the farmers' union of Alberta is not a small organization of farmers; it is an organization that is composed of over 63,000 members, which is a good percentage of the farmers of Alberta. The president had this to say:

> The new plan for advances to farmers against grain stored on farms has recently been announced. While this will be some help to farmers, the interest rate of 5 per cent is unreasonably high. There is a growing resentment among farmers against the idea of paying any such rate of interest for an advance on our own goods. Many farmers are strictly opposed to taking on a new debt and by so doing making more money for the banks. Why should not our government supply the money through our own Bank of Canada at cost? To go further, why should the wheat board not have access to the money at cost from the same source. It may be objected that this idea is "Social Credit" but so what.

The president went on further:

> Of course the federal government will have to take the responsibility for the plan which they put out. If farmers refuse to use it the government will, of course, say that farmers don't need money. At the Saskatoon conference in September—

Grain

By the way, we have heard a tremendous amount about what happened at that particular conference. Here is the impression of this president:

At the Saskatoon conference in September, farm union representatives and the Saskatchewan minister of agriculture wanted to write a limit of 3 per cent into the plan to be presented to Ottawa. In fact most of them would have preferred to present a demand for a plan without interest at all. However, other opinions prevailed, and the brief presented asked for immediate advances without specifying any particular interest rate. I am now convinced that we should have stuck to our original idea and if the federation of agriculture and wheat pools, etc. would not have agreed, we should have presented our own plan to the government. In this case we conceded the point in order to present a united front for immediate action. In the long run, the other course might well have done our farmers more good.

Some fear has been expressed in parts of the house, Mr. Speaker, that in opposing second reading of the bill we are doing a great disservice to the unity of Canada. With that I cannot agree. All through the years this group has stood for all-out support to the primary industries of Canada. I am certain that throughout the years we have fought hard to improve the plight of eastern farmers. I am certain that we have supported the fishermen and others, and will continue to do so. It just so happens that the particular bill before the house is one that strikes primarily at the pocketbook of the wheat producer of the west. In that regard I ask the house to consider the fact that when the pocketbook of the wheat farmer of the west is affected it does not take very long for this influence to seep right down through the whole of the Canadian economy.

Why must we discuss bank loans? The reason is simply that the farmers of the west cannot market their wheat. We have been told time and time again that one of the reasons for the failure of the farmers to market their grain is the fact that there is a shortage of box cars in western Canada. I have in my hand a letter which I received in the mail this morning, and I wish to quote from it. It reads in part as follows:

The issue is rather confusing. Some places the quota is 2 bushels per seeded acre, others claim 3 bushels. It doesn't matter very much what the quota is. Before a car can be shipped a permit has to be issued by the board, before the railways can supply cars. In talking with one of the C.N.R. operators—

This is a railway employee to whom he is referring.

—I was told that there wasn't any shortage of grain cars, permits to move grain was the hold-up. This fellow also said that not very long ago there were some 800 cars of grain sitting on sidings west of Edmonton waiting for orders to be moved.

[Mr. Smith (Battle River-Camrose).]

We are told, Mr. Speaker, that there is plenty of vacant space in the terminals on the west coast, so in my opinion this adds up to nothing short of inefficiency on the part of somebody, and perhaps even bungling. This afternoon the right hon. Minister of Agriculture was very impressive in pointing out to us that we did not know the opinion of the western farmers. Perhaps we do not know. Maybe he does not know, but I do know that last week a delegation came to Ottawa representing the interprovincial farm union council. In my opinion the interprovincial farm union council represents the best organized opinion of the farmers in five provinces of the dominion, and I only hope the day is rapidly approaching when this organization will represent the opinion of the farmers in the ten provinces. Here is what they had to say about this particular piece of legislation we are now discussing, first of all by way of review of what has happened:

Scores of mass protest meetings, resolutions and petitions that have developed spontaneously throughout the west accurately indicate the degree of dissatisfaction felt in rural areas regarding the guaranteed bank loans on farm-stored grain. It is felt almost unanimously that farmers should not be asked to burden themselves with added debt and interest charges because wheat is not being sold at a sufficient volume to enable the farmer to maintain his cash position.

They go further and discuss the bank loan program in detail. The bank loan program is not being used for a variety of reasons, and they mention such things as banking facilities. They say:

(a) Banking facilities are not readily available in many parts of the prairie provinces.

I know that is definitely true in the province of Alberta. I also know that when the facilities of the Alberta government treasury branches were offered to the federal government, that offer was refused. They go on to say:

(b) The amount of red tape involved in securing acceptance of a bank loan application is so great as to discourage all but the most persistent, and eliminates a good percentage of those who might otherwise qualify.

I should like to add one thing. Those who are most hungry have to go through this red tape as well.

(c) Many prairie farmers today conduct their banking business with credit unions, and the government apparently has made no provision for loans through this source, but has limited its guarantee to the chartered banks.

(d) The practice of banks deducting the value of any grain sold under the initial unit quota or additional small acreage quotas from the maximum face value of a loan means that most farmers can only qualify for amounts so small that they are not worth applying for.

(e) Many farmers dread credit dealings with banks and mortgage companies due to past foreclosures . . .

They certainly do dread such dealings because they only have to recall what happened 15 or 20 years ago to realize just what it meant to them and their families to have hanging over their heads a bank loan which could not be paid.

It has been mentioned that the farmers of Canada are a wealthy group, that there is no need for the people of Canada as a whole to have to subsidize them, and so on. If that statement were true I would not suppose any hon. member would be arguing here for cash advances on farm-stored grain. Of course the truth of the matter is that as a group the farmers of Canada are far from being wealthy.

In the same brief presented to the federal government by the interprovincial farm union council I should like to refer to a table found on page 9 which deals with agriculture and total national income in Canada, 1945 to 1954 inclusive. I have every reason to believe that the table is backed up by authentic statistics, and in it we find that in 1945 the farmers received 11..8 per cent of the national income. In 1946 they received 13 per cent, in 1947 12·8 per cent, in 1948 13·6 per cent, and in 1949 12·8 per cent. Let us go down to the last three years for which statistics are available. In 1952 the farmers of Canada received 11·4 per cent of the national income. In 1953 they received 9·9 per cent and in 1954, 6·8 per cent.

Yet we have some hon. members still trying to convince us that the farmers of all Canada are receiving that which they justly deserve. I trust that other hon. members will get up and speak with feeling on this bill. May I say finally that I would not wish the right hon. Minister of Agriculture to feel for one moment that his harangue had one bit of influence upon my thinking, because I know the feelings of the farmers of my area. I have lived with them all my life. I know their thoughts, and I know that in the west at the present time there is a drastic shortage of money and that bank loans at 5 per cent are far from the answer to the problem.

Mr. E. G. McCullough (Moose Mountain): Mr. Speaker, we are discussing an amendment by the C.C.F. group to give the six months' hoist to Bill No. 82, which provides for bank loans. In listening to the Minister of Agriculture a few minutes ago, I was most interested in his statement that this measure had been introduced to deal with special conditions. I agree with that statement, and I want to say that the fiasco facing agriculture in the country at the present time lies right at the doorstep of the Liberal party. The reason for this legislation coming before this house is simply and solely the lack of adequate policies on behalf of this government in relation to agriculture in this country.

I do not think the minister convinced anybody in this house by his attempt to place on the record the statement that western farmers were not against this legislation. He took the opportunity of saying that he had just come back from a trip to western Canada. In the Regina *Leader-Post* I notice some comments in respect to the minister's trip out there. Incidentally I might say that he made a statement, or there is attributed to him a statement, with respect to the flood damage. He is reported to have said:

They waited—

That is the Saskatchewan government.

—for us while the other provinces went ahead with what they had to do and billed us later.

This discussion is not within the orbit of this debate, Mr. Speaker, but I want to say that the minister made this statement either deliberately or not knowing the facts. It is a fabrication; and if he knew the facts it is a deliberate lie.

Mr. Gardiner: Mr. Speaker, I do not like the hon. gentleman's language and I do not think you will like it either. It is not a lie and it is not deliberate.

The Acting Speaker (Mr. Applewhaite): I think the hon. member for Moose Mountain (Mr. McCullough) will agree that on all sides of this house it has always been accepted that the expression "deliberate lie" is not used in connection with speeches or statements by other hon. members. I feel quite sure that the hon. member will be willing to withdraw the expression.

Mr. McCullough (Moose Mountain): Mr. Speaker, I am quite willing to withdraw it if the hon. member wishes me to do so.

Mr. Gardiner: Make it outside the house.

Mr. McCullough (Moose Mountain): As I stated, Mr. Speaker, perhaps he was not familiar with the situation prevailing and with the work which the Saskatchewan government has done in respect of it.

Now we have the picture of the farmer being asked to accept bank loans as a measure to relieve his present cash situation. I believe that is an indignity to the farmer. It places him in an extremely difficult position, because it is only going to add to his present financial problem. The Minister of Agriculture stated that to date some $7 million had been loaned under the proposal of the Minister of Trade and Commerce. In my opinion, Mr. Speaker, this is only another load and another debt on the western farmer. If the farmer has to

take a year to pay back that $7 million it is going to impose a load of another $350,000 on the already harassed and debt-ridden farmer of western Canada.

Mr. Speaker, there has been a great deal of talk in the house as to what the farmers in western Canada want. The Minister of Agriculture stated that, when they were undertaking to make some proposal, bank loans seemed to be—and he gave three reasons for the provision—the quickest, the most effective and the cheapest method. I want to say that he never said it was the fairest method, and that is an important issue in this debate.

The present situation facing the farmer is the result of the lack of adequate agriculture policies by this government. I am sure that anyone who is fair-minded, after a perusal of what has taken place, will agree that the western farm organizations and the western farmers generally do not accept this legislation. Last evening the Minister of Trade and Commerce quoted what he called "hot off the griddle" submissions made by the royal commission investigating the position of agriculture in the province of Saskatchewan. As reported at page 1447 of *Hansard* he said:

> The bill was recommended by the farm leaders of the province.

I want to say that statement is not true. It is not endorsed by the farm leaders of the province. If there was any confusion in the early stages leading up to the present situation, then it could have been said that there was not complete unanimity. However, I believe that as discussion in this house and in the country has taken place, the submissions made now by all the main agricultural organizations and farm spokesmen are to the effect that they are asking for cash advances as opposed to bank loans. When the Minister of Agriculture was speaking I asked him to read recommendation No. 14 appearing in the report of the royal commission on agriculture and rural life from which he had been quoting. I now want to quote that recommendation for the record:

> That, in view of the grain producers' immediate need for cash and their present difficulty in selling farm stocks of grain, the federal government promptly establish, on an emergency basis, a system of cash advances on farm-stored grain.

In addition to that, among the people who were on the commission making this submission we have Mr. H. L. Fowler, secretary manager of federated co-operatives. Mr. Fowler now is backing cash advances for farm-stored grain. In addition there is Mr. Charles W. Gibbings, who is another member of the commission and is second vice president of the wheat pool. He is another person who is supporting cash advances. Then there is Mr. J. L. Phelps, president of the farmers of Alberta economic committee. He is supporting cash advances. In addition to that, I want to say that the resolutions which the Minister of Trade and Commerce read last evening were not necessarily final recommendations. It should be noted that in the beginning they said:

> Perhaps a more workable proposal is to re-establish the Prairie Producers Interim Financing Act of 1951 on a permanent basis.

Then later on they say:

> . . . the existing need could probably be met through re-enacting the Prairie Producers Interim Financing Act as permanent legislation.

They were no final conclusions whatsoever. I think I have read into the record the final recommendations which these people made, which is more to the point.

Just recently the interprovincial farm union council came to Ottawa and made their submissions to the government. In an unmistakable way they pointed out that they were asking for cash advances and not for farm loans. I read from page 15 of their brief submitted to the government:

> Therefore, the interprovincial farm union council is continuing to press for adoption of its original proposal (which has been endorsed at the three wheat pool delegate meetings) that the government arranged for interest-free cash advances by the Canadian wheat board on farm-stored grain to the value of 50 per cent of the initial payment on an estimated delivery of 8 bushels per cultivated acre.

I have here also, Mr. Speaker, the Saskatchewan wheat pool's brief and I want to quote from it as follows:

> The current problem of a shortage of farm cash was considered as soon as the annual meeting opened. The delegates went on record in favour of a system of cash advances against farm-stored grain to be paid out by the Canadian wheat board through elevator companies with the federal government assuming the interest on the loans involved.

I think we can all surely agree that we have a preponderance of farm leadership and farm organizations asking for cash advances at this time. I think the debate should rest on the merits or demerits of that proposal, namely whether or not the farmer is entitled to cash advances or whether he should pay interest on any alleviation of his present financial crisis.

I said at the beginning that the present farm economic problem should be laid right at the doorstep of the Liberal party. There has been confusion in respect of deliveries; there has been confusion in respect of box cars. We find that the Minister of Trade and Commerce has made a number of statements in this respect. On January 11 he said:

> The weather is improving and I may say that car loadings are improving.

On January 16 he said:

> The movement of box cars in the west has improved very considerably in the last two weeks, largely as a result of improved weather conditions.

On January 27 he said:

> Our big problem now is not selling, but transportation. If deliveries of wheat by producers this crop year do happen to fall behind last year, it will be because rail transportation is not adequate.

Then of course the Minister of Justice (Mr. Garson) had some comment to make over a Winnipeg radio station. He said:

> Our great problem is box cars. Of these there is a great shortage both in the United States and in Canada.

When the Minister of Agriculture was in the west the other day he made the comment to the press that there was still a shortage of box cars. He went on to say that one company making wheels for the box cars was going full blast. That certainly shows a lot of confusion, a lack of planning and a lack of knowledge on the part of this government. They are not interested in trying to get the grain off the farms into box cars and into elevators.

Then we have the comment of the transport controller, as it appeared in the *Gazette* of February 16. He said:

> There is no shortage of box cars holding up prairie grain shipments.

It would seem that there is a lot of confusion somewhere. The net result is that this year the federal government has failed to move the grain off the farms and to pay the farmers anything for their labour. That is the crux of the whole situation. That is why the farmer has the right to demand that some cash be put in his pocket so he can pay his debts and carry on.

In my constituency I have a number of organizations. The Saskatchewan farm union district convention was held in Estevan. We had around 200 delegates. At that meeting they passed a resolution asking that cash advances be paid to farmers. In addition, at all the public meetings I held resolutions were passed, and there was unanimity in asking for cash advances as opposed to bank loans. The farmers are justified in asking for cash rather than paying interest on loans. I know that in my constituency the average young farmer who started to farm in the last seven or eight years is so short of cash that he cannot pay his fuel bills, his debts, and carry on.

I was at a large livestock feeder sale and talked to a number of young farmers. These farmers wanted to buy some cattle, put them on feed and perhaps make some money during the winter. They had grain on their farms, but simply because there was no movement of grain those young farmers were forced to watch the big feeders come in and buy up the cattle, take them out and put them on feed lots, while they sat back and watched the auction take place without any money to buy livestock.

I remember that a year ago the Minister of Agriculture told the western farmers that if they wanted some ready cash to start raising some more hogs.

Mr. Gardiner: Mr. Speaker, that statement has been made quite often. I did not say any such thing. In reply to a newspaperman's inquiry I said that I raised hogs. I did not ask anybody to raise them.

Mr. McCullough (Moose Mountain): Mr. Speaker, on another occasion I am going to quote exactly what the minister said. He said he was misquoted at the time. He said to some farmers who wanted ready cash, produce livestock. I am suggesting now that the Minister of Agriculture is afraid—

Mr. Gardiner: I did not even say that.

Mr. McCullough (Moose Mountain): —to suggest that western farmers feed some of his grain to hogs and cattle, particularly hogs, because he knows right now the Canadian picture in hogs is pretty blue. He knows also that if the western farmer started to raise hogs it would undermine eastern agriculture to that extent.

We in this group favour justice for all our people in the field of agriculture. We want to see the eastern farmer receive the same justice as the western farmer. We feel that indirectly the subsidy on feed grain going to eastern Canada so the eastern feeder can feed hogs and cattle is of some benefit to the western farmer, but it is mainly beneficial to the eastern farmer.

In respect of the production of hogs, naturally the eastern farmer has an advantage of perhaps around $6 per grade A hog produced over and above the western farmer. We do not mind that. I say to the Minister of Agriculture, if there is a shift in the production of hogs in Canada and the western farmer goes heavily into hog production, he will undermine the eastern farmer who ordinarily is a raiser of hogs. If he does that it will be simply because of the lack of an adequate policy on the part of this government.

In addition, we have the local problem facing many sections of the prairie provinces. We are not going to sit here, Mr. Speaker, and allow this government's policy to go unchallenged. The Minister of Agriculture says he knows this legislation is going to be passed. Of course he does. They have a preponderance of over 70 members in this house

over all opposition members combined. They could send 50 of them home and still carry the legislation.

As a matter of fact, two and a half days after this debate started the Minister of Trade and Commerce said he was sick and tired of it. He said he was prepared to withdraw the legislation until the latter part of the session and then bring it on. He would have to go to the banks and tell them that this bill was off for the present. I know full well that there is a group on the Liberal benches, the private members, who are afraid to rise in their places and speak. As a matter of fact, we have not heard from the Minister of Justice. He has not told us what he thinks would be a good thing for his constituency. Perhaps the Minnedosa meeting, which he attended last fall, has frightened him a bit. I challenge him to tell us what he thinks is the opinion of organized agriculture or of the individual farmer.

The hon. member who spoke before me said that when the Minister of Agriculture goes out west he goes by plane and stays at the big hotels, at the Bessborough in Saskatoon and so on. When he is at these big hotels he is not talking to the farmer who is frozen out in the back concessions and cannot deliver his grain.

Mr. Gardiner: You should follow me.

Mr. McCullough (Moose Mountain): He may be talking to the bankers, but he is not getting the opinion of the farmers. We have had a profound silence from the Liberal members on the other side of the house. I notice that we smoked out a few of them. The hon. member for Qu'Appelle (Mr. Mang) has spoken. It is all to his credit. He did not deal with bank loans. He did not try to give us the farmer's financial position. We have not been able to get the hon. member for Swift Current-Maple Creek to rise.

Mr. Studer: On a point of order, if the hon. member will sit down I will make his speech for him; I know it by heart.

Mr. McCullough (Moose Mountain): That would be the first sensible speech the hon. member ever made. We are always quite prepared to listen to what the hon. member has to say.

Mr. Studer: Sit down long enough.

Mr. McCullough (Moose Mountain): Mr. Speaker, the agricultural position today is a complete fiasco. I think we have a definite right to try to put the facts before this government. They are stubborn; they do not want to listen. Nevertheless they cannot deny the facts. They cannot deny from 1951 to 1955 agricultural income in all sections of the country has deteriorated. It has gone down in the west more than 3 per cent over the general farm economy. It has gone down over 46 per cent in the prairie provinces. Today the western farmer's dollar stands at a parity level of about 46 per cent as compared with the purchasing power of the 1945 dollar.

In other words, Mr. Speaker, since 1945, the time of decontrol, the policies of this government have put the western farmer in an impossible financial position. His costs have gone up and up and the price of his commodities has gone down. That is why today the western farmer is in a cost-price squeeze. There is nothing the individual farmer can do, and there is nothing organized agriculture can do except to come down here and put before this government their plea that we have some kind of planning in this country by which agriculture will get a fair deal.

I noticed a press comment which stated that presumably the Minister of Trade and Commerce is indifferent or will not see the light and take into consideration that because western agriculture today is in such a financial crisis, it will eventually affect the whole Canadian economy. We have heard a lot of optimistic statements from various hon. members of the cabinet but when we ask for adequate policies we get such policies as the one we are presently discussing, namely that the farmer must be expected to go to the bank and be subjected to that indignity, and he must give a lot of information as to his financial position.

This is reminiscent of the hungry thirties. I remember the period in the thirties after we had had a Conservative government and the Liberal government was again in power. Neither of them was able to help the farmers, and I suppose the people of Saskatchewan and the prairie provinces in general were the worst hit. It got so that farmers had to sign this paper and that paper, and I remember a story concerning one farmer who when taking a load of wheat to town jumped off the wagon when he saw a piece of paper floating by and put his signature on it.

That seems to be the behaviour this government expects of the farmer in order to obtain a little bit of cash, in spite of the fact that he has farmed well and has produced wealth for this country and for hungry people abroad where we can perhaps meet the challenge of communism. The farmer is trying to provide adequately and he has done a good job. Despite the fact that he has done this he is faced with nothing short of a ridiculous and unfair policy which says in effect that after he has produced his wealth and put it in the granary he must now go and borrow on it.

I wonder how many hon. members of this house, perhaps in the year 1945, were earning $4,800 a year. I wonder too how they would react if their income today was to drop to $1,800 in terms of purchasing power, and if at the end of the year their employer said, "You are not going to get $1,800; you will have to go to the bank. We will set up a plan whereby you can go to the bank and borrow on your $1,800". That is exactly what the western farmer has to do under this policy.

The western farmer favours an orderly marketing system, he is in favour of the Canadian wheat board and he does not want speculation on food stocks. However, he does believe that this government should get busy and endeavour to sell some of the grain in storage, and that for the welfare of the whole Canadian economy we should have a policy of storing our grain somewhat akin to that which exists in the United States, where the farmer is paid as soon as he produces his grain and places it in approved storage. At that time he can obtain 90 per cent of parity for his grain. In this country we have nothing like that.

Mr. Studer: He reduces his acreage first.

Mr. McCullough (Moose Mountain): We have nothing like that. The farmer is left without any assistance whatsoever. The Minister of Agriculture indicated that the government was prepared to bring in legislation which would provide for some payment on farm-stored grain. The Liberal government will never have any difficulty when we shove them along toward better legislation for the people of this country. That is one thing which we in this group have been advocating since 1945 when I came into this house and I presume hon. members of this party were advocating it before then. Instead of taking an average delivery of 10 or 15 years the government should set up the principle of the normal granary, where we store in the years of plenty for years of scarcity; but no such program is forthcoming.

In closing I just want to say that this government, in spite of its numerical strength in this house; in spite of the threats of the Minister of Agriculture; in spite of what I think is the twisting of the facts of the support of this bill on the part of the Minister of Agriculture, we in this group feel the farmers of western Canada do not support bank loans. They do not want to be forced to go to the banks and pay interest on their money; in fact, they feel it is an injustice.

I am happy to have had the pleasure of being one of those people who have stood up in this house and put forth what I believe to be the contention and the stand taken by the western farmer.

The Acting Speaker (Mr. Applewhaite): Is the house ready for the question?

Some hon. Members: Yes.

The house divided on the amendment (Mr. Nicholson) which was negatived on the following division:

Mr. Speaker: May I inform the house that in future paragraph 2 of standing order 12 will be strictly enforced. It reads as follows:

When Mr. Speaker is putting a question, no member shall enter, walk out of or across the house, or make any noise or disturbance.

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, I rise to speak for just a few minutes before the vote is taken on the second reading of this bill. I imagine most hon. members would prefer to have the vote after eight o'clock, anyway.

An hon. Member: No.

Mr. Knowles: However, my purpose in rising is to urge the government to reconsider its announced refusal to send this bill after second reading to the committee on agriculture and colonization or any appropriate committee which the government might choose. Bearing in mind the dislike of the Chair and the dislike of the house for repetition at this stage of the debate, I shall not repeat the arguments for such a course. I merely make the appeal. In fact, I think one might well rest such an appeal on the arguments already made by members of this group, as well as other members, particularly that of the hon. member for Acadia and the argument made this afternoon by the hon. member for Greenwood.

However, if the government feels it cannot send the bill—I am not referring to the subject matter, but to the bill itself—to committee, then serious consideration might be given to the proposition that was enunciated this afternoon by the Minister of Trade and Commerce. He made an interjection during the speech made by the hon. member for Greenwood, which I took down—and I hope I took it down correctly—when he said something like this: "May I ask my hon. friend if there is any better representation of the farming community than the elected representatives from the area?"

The point the minister was making was that we do not need to send this bill to a committee to have representatives from various organizations there because, as he put it, the best representatives of the farming community—the community affected—are the elected representatives on the floor of this house. I made the suggestion, by way of a question which I put to the hon. member for Greenwood, that the minister might then consider seeking the advice of the elected representatives who he has said in his own words are the best representatives of the farming community.

An hon. Member: Please make it snappy.

Mr. Knowles: I remind the minister that the area to which he referred consists of the three prairie provinces. There are 48 constituencies in those three prairie provinces, represented in this house by 48 members. There are 14 of them from Manitoba, 17 from Saskatchewan and 17 from Alberta. Judging by the way those members have been voting on the last two amendments that have been before the house, those 48 members would vote 32 to 16 against this bill.

I submit, therefore, that on the basis of the minister's own pronouncement this afternoon he should not be calling upon the government's majority in the whole house to support a bill which he says might be subjected to the best representation from the farming community, namely the elected representatives from the area concerned. Some hon. members might say that suggestion is not put forward too seriously. I do not recall any occasion on which a committee of the house was set up on the basis of representation from a particular province or particular provinces. Therefore it might not be an appropriate precedent to establish, namely the actual appointment of a com-

mittee representing members from the three provinces named. Nevertheless, in spirit—

Mr. Trainor: An ad hoc committee.

Mr. Knowles: The hon. member for Winnipeg South (Mr. Trainor) says it should be an ad hoc committee. Well, the members of such an ad hoc committee have already spoken in the house. They are two to one against the bill. In view of that fact it seems to me that the bill should not be allowed to pass. But if the government insists on putting it through with its majority, then it does seem to me that the case is unanswerable that it should be referred to the standing committee on agriculture and colonization.

I offer just one other objection to the bill. Although I have not sat here every minute of the debate on this legislation I have tried to follow it closely, and I believe this objection has not yet been voiced. In making this objection may I point out that one of the main reasons we from the prairie provinces oppose this legislation is that we know if it is enacted it, together with the proposal contained in Bill No. 83, will be all that the wheat farmers of western Canada will get in relation to their present crisis. We know that no matter how strong the appeals may be for further legislation, for further consideration of their plight, the fact that these two measures have been passed will put an end to any consideration by the government of the crisis in western Canada.

That is bad enough, Mr. Speaker, when it applies to the present situation. That is bad enough when that is the answer for this year, but I ask hon. members to recognize that in addition the government, through this legislation, is asking for the right by order in council to extend this bill for a second year. That means that if a year from now a situation in western Canada develops which is similar to the situation that now obtains, we will not even have the matter discussed in parliament. There will not be a summoning of a session of parliament as there should have been last fall. Of course not. But there will not even be a discussion in parliament. The matter will be decided behind the closed doors of a cabinet meeting by the passing of an order in council, and once again the farmers of western Canada will be faced with the fact that this is it so far as the government of Canada is concerned.

As one hon. member said a few days ago, 32 of us from the prairie provinces would not be committing political suicide if we felt that this legislation was popular on the prairies. We know that it is not. The fact that, despite what happened in the first vote at the resolution stage, there has been a solid opposition in the votes on the amendments that have taken place, and that there will be a solid opposition on the vote that may now take place on second reading, is in my opinion pretty conclusive evidence as to the views of the people who are affected by this legislation.

The Minister of Trade and Commerce enjoyed making his comments the other day with respect to whether my colleagues in this party were expressing the views of western agriculture, but he cannot deny the fact that the one way the people of the prairies have to express their views on national matters is through the representation they send to this house. He confirmed that this afternoon in the statement that the best representation from the farming community consists of the elected representatives here. Those elected representatives are two to one against this legislation.

Therefore I feel that it should be turned down by the house. But if the government insists on putting it through, surely the least the government can do is to have it referred to a standing committee of the house so that interested bodies may appear and further consideration may be given as to whether this is the way to deal with the matter or whether an effort should be made to find some better way.

Mr. C. E. Johnston (Bow River): Mr. Speaker, I do not intend to take very long at this time. I have spoken on the bill on other occasions and have expressed my views leaving no doubt as to what I meant. When I was speaking the other day I made a statement with regard to something the Minister of Trade and Commerce had said. The effect of it was that the minister had said there were not very many people who were going to take advantage of these loans. He objected to that statement and said that I should give some proof of that fact. I informed him at that time that I would do so.

The other day I started to quote some passages from *Hansard* which indicate, in my judgment at least, that the minister made that implication on more than one occasion. I had put one reference on the record and then Mr. Speaker at that time, not Mr. Speaker now in the chair, stopped me and said he did not think it was a question of privilege.

I indicated, therefore, that as time went on I would put the remarks of the Minister of Trade and Commerce on *Hansard* to prove my point, and that I would also prove the point I had made regarding the Minister of Agriculture supporting the remarks of the Minister of Trade and Commerce. I want to do this now, and it will not take more than

a couple of minutes. As found at page 129 of *Hansard* of January 16, the Minister of Trade and Commerce had this to say:

> A certain number of producers have found themselves in difficulty this past season, and the purpose of the guaranteed loan was to relieve those smaller producers.

I contended at that time that in referring to a certain number of producers the minister had indicated that no great number of people were intending to take advantage of the legislation. Then I want to quote another passage from the remarks of the Minister of Trade and Commerce. As found near the top of page 129 he said:

> Apart from that—

He was referring to the storage question.

> —it did not seem to me that there was any particular burden on the farmer through this condition of plenty.

Again I say, Mr. Speaker, that the Minister of Trade and Commerce pointed out that because of the surplus situation there was no unnecessary burden on the farmers, and that very few would take advantage of this legislation. To make it more definite, I want to put on *Hansard* what the Minister of Trade and Commerce is reported as having said in Calgary. These are his words, and without doubt I think they will convince the house that the minister did not have in mind that very many people would take advantage of the legislation. As found in the Calgary *Herald* of November 28, 1955, the minister is reported as saying:

> It is my hope and belief that comparatively limited use will be made of the lending facilities, that most farmers are either in a position to carry on without borrowing or are in a position to finance in the ordinary way.

Then the Minister of Agriculture said just today in his speech, and I wrote down his words at the time he uttered them, that a very small percentage of the farmers will go to the banks for these loans. In my opinion, Mr. Speaker, I did not misquote the Minister of Trade and Commerce. What I said was perfectly true and I still stand by what I said the other day with respect to what the minister had said.

The house divided on the motion (Mr. Howe, Port Arthur), which was agreed to on the following division.

Bill read the second time.

Mr. Speaker: Will hon. members agree to send the bill to committee now and perhaps make up for the time lost by meeting at 8.15 this evening? Is that agreed?

Some hon. Members: Agreed.

The house in committee, Mr. Robinson (Simcoe East) in the chair.

The Chairman: The house in committee on Bill No. 82, to provide for short-term credit to grain producers, and so on.

It being six o'clock I do leave the chair. May I remind hon. members that in accordance with the understanding just arrived at I will resume the chair at 8.15.

At 6.20 the committee took recess.

AFTER RECESS

The committee resumed at 8.15 p.m.

On clause 1—*Short title.*

Mr. Nicholson: Mr. Chairman, I wonder if the minister would elaborate on the word "interim". It would seem to me that since the act provides that by order in council it can be extended to a year from now there should be some indication as to what the minister has in mind by the reference "interim".

Mr. Howe (Port Arthur): Mr. Chairman, the purpose of the word interim is to indicate that it is not the intention of the act to take care of all the requirements of the producer for a year. It is to take care of a producer in the interim from the beginning of the crop year until he is able to deliver wheat or other grain in an amount that is current in a normal year.

Mr. Nicholson: But, Mr. Chairman, since provision is made for the legislation to be extended by order in council, I think that would suggest in the minds of those who were drafting it that it probably will be applicable next year. With such large sections of the west where farmers have been able to deliver only one bushel per acre up until this time, and with the picture as serious as it is, I would think there should be some indication as to whether or not the farmers are going to be able to find some other ways and means of realizing on the sizeable stocks of grain which are in hand but which cannot be sold.

Mr. Howe (Port Arthur): Well, Mr. Chairman, no matter what the title suggests to my hon. friend it is in fact an interim loan. The farmer starts repaying it as soon as he delivers any grain and over a period of time the loan is bound to diminish, providing the farmer is able to market his grain.

Mr. Fleming: At quite an early stage of the debate the minister indicated that the number of applications for loans received by the banks totalled about 8,000.

Mr. Howe (Port Arthur): At the end of last year.

Mr. Fleming: At the end of the calendar year. Has the minister now any more recent figures on the total number of applications for loans and the aggregate amount?

Mr. Howe (Port Arthur): No; I am sorry, but I have not seen the figure. I particularly asked for it at the year end and obtained it. I have not asked for it since; therefore I have not seen it. Of course the banks have the figures, but it would take a request on our part to obtain the figures from them.

Mr. Fleming: Does the minister recall the total amount of the loans that was given to him as at the end of the calendar year 1955?

Mr. Howe (Port Arthur): Yes. It was roughly 8,000 loans totalling approximately $7 million.

Mr. Castleden: I should like to ask what it is expected that such loans to the 8,000 borrowers will cost the government. What was the cost as a result of the experience of the government under a similar act in 1951?

Mr. Howe (Port Arthur): Mr. Chairman, I hope the only expense will be the expense of the administration which is the responsibility of my colleague the Minister of Finance. The Department of Trade and Commerce hopes to ride free.

Mr. Quelch: Could the minister say how many loans have been made up to the end of January?

Mr. Howe (Port Arthur): No, I have not seen the figures.

Clause agreed to.

On clause 2—*Definitions.*

Mr. Nicholson: I was going to ask if there have been any requests from the credit unions

to have them accorded the same guarantees the banks have. Could the minister indicate whether or not there have been any requests?

Mr. Howe (Port Arthur): I rather think there have been. We were not in a position to grant the requests. Until now we have had no legislation to cover our guarantee. We had some protection under the Bank Act, but unfortunately credit unions do not come under the federal statute which is known as the Bank Act and therefore we could not guarantee loans from credit unions.

Mr. Nicholson: My understanding is that fishermen qualify for loans. I do not have the legislation before me, but probably the Minister of Finance could help us with this. It would seem to me that if the fishermen are able to qualify for loans through their credit unions, and if the credit unions on the prairies did want to have some consideration given them and the credit unions in British Columbia and the maritimes, probably some changes should be made.

Mr. Harris: It is correct that fishermen do get their loans under the legislation of last session through credit unions. We have considered it in connection with this legislation and in connection with another bill which will be coming forward in due course. The difficulty is more than just a matter of intention or desire, there is a real administrative difficulty. We have been in touch with the major credit union organizations throughout Canada, have corresponded with them and obtained their suggestions and have asked them a number of questions as to how some of these problems could be solved if they did in fact come within this type of legislation from now on.

It was not possible to conclude that, and it is not possible to conclude the matter in time for this legislation. I hope I shall be able to do so before another bill of similar import may come forward. I can assure my hon. friend that so far as we are concerned there is no objection to credit unions. We would be glad to have their assistance, but there are a great many problems that arise in the Department of Finance if we are to get the same results we get from the banks. I hope my hon. friend will take it that while we were not able to do it in connection with this bill, we hope to be able to do it in connection with this type of legislation in the future.

Mr. Nicholson: I am glad to have that statement from the minister. I am sure that hon. members from all parts of the country will agree with me when I say that the credit unions have a good record in the handling of small loans in a great many areas in the prairie provinces where there are no banks for some considerable distance. If the minister is able to bring forward legislation shortly so that credit unions can have the same advantages the banks are given under this legislation, I am sure it will be appreciated greatly.

Mr. Smith (Battle River-Camrose): Did the same request come from Alberta treasury branches as well?

Mr. Harris: The Alberta government treasury branches were considered in the same manner as were the credit unions, but we were unable to accede to their wishes at the moment. I repeat the assurance I gave to the hon. member with respect to credit unions and say that we will look at the matter, having in mind the actual desire to provide loans under convenient terms to farmers at any given time.

Mr. Hahn: Can the Minister of Trade and Commerce state why grain is being defined as wheat, other than Durum wheat, oats, barley and rye?

Mr. Howe (Port Arthur): Wheat, other than Durum wheat, is allowed to be shipped ex quota; there is no quota for Durum wheat, and the same for flax.

Mr. McCullough (Moose Mountain): As I understand it, rye is excluded from the "grain" mentioned in that paragraph.

An hon. Member: Included.

Mr. McCullough (Moose Mountain): Rye is not handled by the Canadian wheat board, and because of that fact many farmers are placed in an awkward position. We have been asking that rye and flax be handled by the Canadian wheat board. There are no restrictions on rye and flax as far as delivery is concerned, but the farmers producing these grains are not in position to get an average price as they would if they were being handled by the Canadian wheat board.

I take exception to the present policy of excluding rye and flax from Canadian wheat board handling. A situation existed this fall which worked to the disadvantage of the farmer who was able to get his flax to market quite early, because he did not get the higher price which flax was able to command later on. Generally speaking a farmer is at a disadvantage when he cannot sell his crop as he chooses; yet under Canadian wheat board regulations he is forbidden from selling when he wishes to sell. I think in all fairness to the position of our farmers the minister

should consider the advisability of including rye and flax in the products handled by the Canadian wheat board.

Mr. Howe (Port Arthur): In speeches which my hon. friend has delivered at least four times he has complained about the farmer not having freedom to deliver. Fortunately he has freedom to deliver his flax or rye and his Durum wheat whenever he likes. Therefore he has at least the best of one world if not of two.

Mr. Michener: As I understand it, we are dealing with paragraph (e) of subclause 1 of clause 2 of the bill. I should like to ask the minister if it is the intention of this paragraph to include oats, barley and rye within the definition of grain, or to exclude them. I have read the section several times and I am not yet clear as to its intention. It reads:

"grain" means wheat, other than Durum wheat, oats, barley and rye.

If that "other than" carries through to oats, barley and rye, then it means only wheat and would not include oats, barley and rye. If it does not include oats, barley and rye I suggest that the wording be reversed so that it would read:

"grain" means oats, barley and rye and wheat other than Durum.

Mr. Howe (Port Arthur): Perhaps if my hon. friend would pay strict attention to the commas he would get the meaning.

Mr. Michener: I have, but I think there should be brackets enclosing "other than Durum wheat" if it is to mean that Durum wheat is the only exclusion. Is that the intention?

Mr. Howe (Port Arthur): That is right.

Mr. Michener: I suggest that the paragraph could be made clearer. I read the paragraph when the bill first came down and I was not clear whether it was intended to include or exclude oats, barley and rye. I suggest that for the sake of clarity a simple change be made.

Mr. Howe (Port Arthur): Some of the highest priced lawyers in the country worked on this draft. If it would make my hon. friend feel any better he could move an amendment that there be parentheses around the words "other than Durum wheat".

Mr. Michener: I would move accordingly. Sometimes these high priced lawyers get so refined it is impossible to understand what they say.

Mr. Knowles: Nothing like a good sea lawyer.

The Chairman: It is moved by the hon. member for St. Paul's that the commas after the first and second "wheat" in paragraph (e) of subclause 1 of clause 2 be replaced by parentheses.

Mr. Knowles: I think we would still need a comma after the closing parenthesis.

Mr. Michener: I agree. We have discovered another high priced lawyer.

Amendment agreed to.

Mr. Johnson (Kindersley): I should like to ask the Minister of Finance whether the prescribed form referred to in paragraph (h) has been altered in any way since the bill was introduced, or since November of last year?

Mr. Harris: I did not catch the final part of the question.

Mr. Johnson (Kindersley): I imagine that the prescribed form referred to means the form which the farmer fills out at the bank when obtaining a loan. Has that been altered in any way since the legislation was initially introduced?

Mr. Harris: I am sure it has not been changed since the legislation was introduced, but we did change the form a week or ten days after it was sent out in the middle of November in order to eliminate certain searches with respect to titles and things of that kind. That would be perhaps around November 15 or 20, but I do not recall any major changes since.

Mr. Zaplitny: Perhaps the minister could table a copy of the prescribed form which is now being used in order that members may have an opportunity to see what is the case at the present time.

Mr. Howe (Port Arthur): Yes, we shall be glad to do that. We have it here.

Mr. McCullough (Moose Mountain): Could the minister state whether or not there have been restrictions on the delivery of rye? It seems to me that farmers have been restricted under the Canadian wheat board regulations.

Mr. Howe (Port Arthur): During this crop year, rye has been under quota. Rye is included with grain this year. The quota was lifted for a short time, but it is now under quota.

The Chairman: Shall clause 2 carry?

Mr. Castleden: With regard to clause 2 the Minister of Finance, in giving his explanation to the house, stated that he had contacted the credit unions throughout Canada and had acted upon their recommendations. Would he tell the house whether the banks expressed

any opinion as to their willingness or desire to lend money under this act?

Mr. Harris: Certainly they agreed to loan money under this act.

Mr. Castleden: Managers of banks to whom I have spoken in regard to this said they were hoping they would not be called upon to lend money under these regulations, and my impression was that the banks did not like it.

Mr. McCullough (Moose Mountain): Subclause 2 refers to words and expressions. I should like to ask why the words and expressions used in this act will have the same meaning as in the Canadian Wheat Board Act. Why are not the words fully spelled out in their exact meaning? It seems to me a situation could well arise where there would be an amendment to the Canadian Wheat Board Act, and perhaps the occasion would arise when the expression used in that act would not coincide exactly in meaning with what is meant in this act. I wonder if there is any reason why the words and expressions were not fully spelled out in the explanations in this act.

Mr. Howe (Port Arthur): In any revision of the wheat board act we would be very careful that the meaning of the expressions would not change. This simply means that instead of a long list of interpretations, we put in the major interpretations and say that the others are exactly as in the wheat board act.

Mr. McCullough (Moose Mountain): In connection with the prescribed form, I understand that forms prescribed by regulation may be changed at the will of the minister by order in council. It seems to me there is a danger here. I wonder why the minister is asking that by order in council these regulations may be changed. Most of us are not satisfied at the present time that the forms the farmer has to fill out are fair. They seem to be restrictive, and they seem to put the farmer in a difficult position, as we shall find out when we go into the other clauses of the bill. It seems to me we should have spelled out here very definitely what the government intends to do with regard to the prescribed forms, and we should know exactly what kind of forms the farmer has to fill out and what kind of commitments he has to make in order to obtain a little money on the grain he has stored on the farm.

Mr. Howe (Port Arthur): It is always the custom, where regulations are required, to provide that they will be made by order in council under the authority of the bill itself. That is the case here.

[Mr. Castleden.]

Mr. Zaplitny: The clause states:

"actual producer" means a producer actually engaged in the production of grain;

What would be the situation with respect to grain that is rented out? Would it be assumed that the tenant rather than the owner of the land is the actual producer of the grain, or would both be considered as actual producers of grain? What is the interpretation of that?

Mr. Howe (Port Arthur): The interpretation is exactly the same as in the wheat board act. The producer is the man who actually grows the grain.

Mr. Zaplitny: I am not too clear about that answer. When the minister says that the producer is the one who actually grows the grain, does he mean the tenant in the case of rented land?

Mr. Howe (Port Arthur): Yes, the tenant does the work.

Mr. McCullough (Moose Mountain): Following up the question by the hon. member for Dauphin, I wonder if the term "producer" will have the same application in this case as under the Prairie Farm Assistance Act. In other words, will anyone who is possibly receiving a small income from some other source be refused any assistance under this act?

I have in mind that when we were discussing it in a former debate with the Minister of Agriculture it was pointed out that there were cases where a young farmer who was perhaps doing a bit of trucking as a side line was not allowed to qualify for payments under the Prairie Farm Assistance Act. Would it be just as restrictive in this case, or will it mean that a farmer who is normally producing the grain and just takes a temporary occupation outside of his farming practices will be able to get this loan?

Many farmers, much as they would like to refrain from having to take this loan, are going to find themselves in a very difficult position this spring as regards putting in their crops. Some of the farmers have gone into the city and taken construction and other jobs. Perhaps they have taken their cattle to another farmer, and one farmer may be looking after two or more farmers' stocks while those farmers are away trying to earn a little ready cash. Will these people be refused a loan under this bill?

Mr. Howe (Port Arthur): No, P.F.A.A. has no more to do with this legislation than the Railway Act. This legislation is parallel to the wheat board act. The expressions are the same as those used in the wheat board act. If the man is the actual producer of the

grain, whether he be a tenant or an owner, he is entitled to obtain a loan on the grain he produced.

Mr. Regier: The Minister of Finance referred previously to having consulted credit union organizations, I believe. I wonder whether he could be a little more specific as to who was consulted. I understand there is no such thing as a national credit union organization. Were the provincial credit union federations or the co-operative union of Canada consulted, or were they individual organizations that were consulted?

Mr. Harris: I do not think we need to go into great detail, but we have consulted all the major credit unions, especially those that have a provincial or extra-provincial authority. I think before we are through we shall have consulted such a representative group that there will be no question about the opinion that we ultimately form having the support of practically all the credit unions.

Mr. Argue: I heard the Minister of Finance's comments earlier on the likelihood or the hope that credit unions might be included in a number of acts at this time. Is it the minister's hope that in the next session of parliament, if this act should then be in effect, an amendment might be moved so that credit unions may be included?

Mr. Harris: I am very much concerned to get this session of parliament along with its job and not to worry about that.

Mr. Argue: I hoped when the minister made his earlier remarks that we were likely to get action, not only as far as this legislation is concerned, with regard to giving credit unions the same guarantee as banks, but under other legislation and other acts of this parliament, giving them the same guarantee.

In spite of the minister's comment that he would like to get this session over before he says anything about this other possibility, I am hopeful that at the next session credit unions may be included, and under the same guarantee as the banks.

When the Minister of Trade and Commerce was defining "producer" I noticed he made the comment that any actual producer, tenant or owner, was entitled to a loan. I am wondering in what way a producer can qualify so that he is entitled to a loan. In other words, does the minister feel that if a producer has grain on his farm that has not yet been marketed and the permit book is open for a certain sum of money, the producer in reality is entitled to a loan in that amount?

Mr. Howe (Port Arthur): Mr. Chairman, we are coming to the guaranteed loan presently, and I suggest that we take these things up under the proper heading.

Mr. Castleden: The Minister of Finance indicated that the provincial credit union organizations are still being contacted. Is that what I understood him to say?

Mr. Harris: No, Mr. Chairman. I said that we had decided we could not complete our work with respect to this bill and have anything to do with credit unions in it. However, I did say that in general we were pursuing the subject of the position in which credit unions could be put with respect to similar legislation. I mentioned that there is one on the order paper that we are considering at the present time, but so far as this bill is concerned there will not be time and we do not intend to pursue it.

Mr. Diefenbaker: As the bill now stands, credit unions could not be included, could they?

Mr. Howe (Port Arthur): No.

Mr. Diefenbaker: In view of the fact that under section 88 of the Bank Act security must be taken, and therefore as the legislation now stands credit unions could not be included.

The Chairman: Shall clause 2 as amended carry?

Mr. Diefenbaker: No. I am asking the Minister of Finance whether that is not so.

Mr. Harris: The chief difficulty that we have had is the question of representation of credit unions. It is not a question to be solved easily. We are dealing here with seven or eight banks and we have to have a similar situation before we can deal with credit unions.

Mr. Regier: I do not think the credit union movement is going to be very happy with the minister's answers thus far. I understand this legislation goes back to October 1. Quite a few months have passed since that time. Could the minister not be a little more explicit and explain exactly the implications involved in why the credit union movement cannot be brought into this legislation?

Mr. Harris: There is no need to do that. There is nothing in the bill with respect to credit unions. My hon. friend will just have to take the explanation I gave, that I did not consider it possible then and have not considered it possible since to have the work we are doing with the credit unions advanced sufficiently to find an acceptable basis on which we can include them in legislation of

this kind. I think that is a complete answer, and I do not think my hon. friend should press it beyond that.

Clause 2 as amended agreed to.

On clause 3—*Minister's liability to a bank.*

Mr. Diefenbaker: With respect to the first subsection of clause 3, I am one of those who believe there is very little danger of any losses being suffered by the federal authority under the guarantee. In order to support that I should like the minister to give particulars as to the experience under the 1951 act. How much was borrowed? I believe the figure was approximately $600,000 but I am not sure of that. How much, as finally guaranteed by the Minister of Finance, had to be put up by the government of Canada, and of that amount how much is still in default, if anything?

Mr. Howe (Port Arthur): Originally there were 1,504 loans under the 1951 legislation. Of that number 1,430 were repaid in full and 71 were defaulted. There is a balance of three loans still outstanding that have not been put in default. The amount of the claims paid by the Department of Finance is $23,587.51. The amount of money recovered through wheat board deductions and direct repayments by borrowers is $9,707.22. The balance outstanding at this date is $13,880.25.

Mr. Argue: What was the aggregate amount of the loans made under that act?

Mr. Howe (Port Arthur): $625,633.91.

Mr. Hamilton (York West): I notice that paragraph (d) of subclause 1 of clause 3 refers to the rate of interest charged by the bank on the loan not exceeding 5 per cent. In other words the guarantee would apply if the rate of interest charged by the bank on the loan did not exceed 5 per cent per annum simple interest. This would indicate a maximum figure. Can the minister inform the committee if the banks have handled any of these loans at less than 5 per cent interest?

The reason I ask the question is that it seems to me the guarantee supplied in this case is very much the same as when a borrower goes to the bank, asks for $1,500, is questioned as to his security and presents $1,500 in Dominion of Canada bonds. Under circumstances of that kind I am quite sure that any bank manager would be prepared to lend at a rate less than 5 per cent. I have been told that there may be problems of collection involved in this instance which are a little different from just having to cash bonds, but I am quite sure that if the banks had certain problems of collection they would in the ordinary course of events add their collection charges to the amount which they would be attempting to collect. Perhaps the minister might answer first if there have been any loans at less than 5 per cent and, second, just what type of negotiations took place with the chartered banks leading up to the rate fixed under this legislation.

Mr. Howe (Port Arthur): If a borrower were prepared to put up $1,500 in government bonds he would not make use of this legislation. He would conduct his own negotiations with the bank. Of course the bank does not need $1,500 in government bonds plus the government guarantee. I dare say if they had both they might give him quite a good rate. This legislation is concerned with the borrower whose only security is the wheat on his farm, and as far as I know the rate is 5 per cent.

These are small loans. The average is about $800, and the period of time would not be over six months. Probably it would not be as much as that. Therefore the total amount collected by the bank would be $20 per loan, and for that sum the bank has to go to the expense of making and collecting the loan. There is no such thing as adding collection charges, so my hon. friend need not worry about that.

Mr. Hamilton (York West): I am satisfied with the explanation respecting no collection charges, but I do not think the minister should try to confuse me by telling me that if a man had $1,500 in bonds he would not be going to the bank to borrow under this legislation. I realize that. What I am saying is that the guarantee by the government to the bank is just as good security as the $1,500 in bonds that he might have taken to the bank if he had them. Under those circumstances people ordinarily can borrow money at less than 5 per cent. That is the particular point at issue here. Approximately 16 million people have become joint and several guarantors for these loans, and I cannot see much prospect of anybody losing any money.

Mr. Howe (Port Arthur): If you put it to a bank manager as to which he would rather have as security, $1,500 in government bonds or alternatively $1,500 in respect of which the government has given a 20 per cent guarantee, I think he would certainly choose the former. I do not know why my hon. friend insists on comparing two unequal classes of security.

Mr. Argue: Mr. Chairman, we in this group have continued to say that under the legislation before us the banks in fact are taking no risk at all and that the 10 per cent of the

aggregate that is guaranteed could not possibly under any circumstances be reached. I can therefore agree with those who say that, with such a complete guarantee by the federal government, the banks should certainly be able to do better than to put out their money at the rather high rate of 5 per cent.

In answer to a question by the hon. member for Prince Albert, the minister has just placed on record the experience of the government in connection with a guarantee on somewhat similar lines in 1951. It shows that on aggregate loans of $625,000, to date the loss to the treasury has been $13,880. I am sure the minister hopes that some of the money still owing may yet be collected, and that what has been a loss to date of approximately 2 per cent may be still further reduced. I would think the 2 per cent loss is probably higher than that which is likely to be experienced under this act.

The 1951 legislation was enacted to deal with a situation that was different in many respects. Today we are dealing with a situation where the farmers have grain of high grade, in excellent condition and in good storage. It is the grain itself that is the guarantee that the bank loan will be paid. But in 1951, when marketing conditions were better, it was not a question of a farmer with grain finding it difficult to get his grain to market. The situation was that owing to adverse weather conditions in the fall of 1951, thousands of farmers had not been able to harvest their crop and the crop itself in an unthreshed condition was out under the snow. Because the farmers had no grain to market, the government decided to guarantee a loan. In this legislation the loan is against grain in storage. But in the legislation of 1951 the security was the crop and the crop was defined as follows:

(e) "crop" means a crop of grain of any kind, as well before as after severance from the soil, harvesting or threshing thereof, and includes grain of any kind.

The grain could not only be under the snow in a swath condition where there was perhaps a reasonably good chance of harvesting it in the spring, but the grain could be under the snow in a standing condition so it was difficult to say what the possibility might be of harvesting the grain the next spring.

Still, with respect to this legislation, there is a high interest rate of 5 per cent. The farmer is obliged to surrender his permit book. He is giving the banks, I suggest, full security. I wonder what the right of the farmer is under this act. Is the farmer with grain undelivered, with his permit book uncommitted as defined in this legislation, in fact entitled to a loan? I do not think so. I still believe it is at the discretion of the banker whether the loan is in fact made. Because of the fact that we object to this extremely high rate of interest, Mr. Chairman, we oppose this particular clause.

Mr. Howe (Port Arthur): I am quite willing to assume that there will be no loss to the banks and I am quite willing to assume that the loss—if there is a loss—to the government will be extremely small. Nevertheless, it costs money to carry on a banking business. It costs money to make small loans. My hon. friend has before the house at the present time an amendment to the Small Loans Act, and it covers loans of about the same amount as these loans. What interest rate did he provide for there?

Mr. Argue: Mr. Chairman, they are not at all comparable. The purpose of the legislation which I proposed to the house was to reduce the interest rate that borrowers would be obliged to pay when they obtained loans under the Small Loans Act. The borrower who is asking for a loan from a small loan company has already been paid his wages—at least we assume that—or if he has a product to sell, he has been able to sell it. But the fact is that the prairie producer, while he has perhaps one of the best crops in history, has not been able to deliver it.

Because the wheat board and the government, who have the sole responsibility of marketing that grain, have been unable to take delivery of a substantial part of the grain to date, we feel the government has some responsibility. It is probably more just that a person, in obtaining a loan after he has received his wages, should pay an interest rate even though it is in excess of 5 per cent, than it is that a person be forced to pay 5 per cent interest because of the failure, through government policy, to take delivery of that grain.

Mr. Quelch: We in this group have already stated that we think the interest rate is too high. Inasmuch as apparently the losses are guaranteed by the government, there is therefore no real danger of the banks suffering any loss. But what I am interested in is this. How far must the banks go in collecting the money that is owed to them before the government will pay up any losses they may have suffered? For instance, if when the grain has been delivered there is still a certain amount of money owing to the banks, can the banks then claim that they have suffered loss or must they take other measures in order to try to collect the money that is owing to them, such as foreclosing on chattels or any other assets?

Mr. Howe (Port Arthur): I believe that matter is covered by the regulations. The bank is obliged to make a reasonable effort to collect the money. I think there is a recovery section in it:

> The bank shall notwithstanding full settlement of its claim of loss as a result of the guarantee loan act on behalf of the Minister of Trade and Commerce to collect amounts outstanding in respect of the loan and for such purpose shall take such reasonable steps as the said minister may deem necessary and shall realize upon any security held by it such amounts as may be collected or realized by it to be remitted to the said minister at the end of each month, commencing with the first day of November, 1952.

That is a regulation from the 1951 legislation, but that will be covered by the regulations in this case.

Mr. Quelch: The reason I asked that question is this. When we were considering the housing legislation the representatives of the banks stated that they did not like to go into the mortgage business because they did not want to be obliged to foreclose. At that time it was mentioned that they were obliged to do that under the farm improvement loans, and the witness for the bankers stated that, within his knowledge, they had not been obliged to foreclose on any farmer. I was wondering whether, under this legislation, the banks would actually be obliged to go through the procedure of foreclosing on any chattel that might be owned by the farmer other than the wheat alone.

Mr. Howe (Port Arthur): The only security for this loan is the wheat.

Mr. Quelch: If the wheat does not pay up the loss, as far as the bankers are concerned they are through?

Mr. Howe (Port Arthur): If he does not pay it off with the wheat he has this year, we hope perhaps he will pay it off with the wheat he gets next year.

Mr. Fleming: Mr. Chairman, I think the clause in regard to the maximum rate of interest needs some further clarification. I think it will shock a great many people to learn that a loan guaranteed by the government of Canada should call for a rate as high as 5 per cent. It is quite true that there are limitations on the amount of the loan. There are limitations imposed by this section and there are limitations imposed by the next following section. Therefore it cannot be said that it is a complete, unconditional guarantee of the loans by the government of Canada. But even taking account of that fact, the rate of interest seems high in relation to the kind of security this bill authorizes.

Seeing that this must have been the subject of conferences with the banks before the lending began as of October 1, I ask the minister whether this subject of the rate of interest was seriously discussed, and whether the government did press for a lower rate of interest on these bank loans, in view of the extent of the government guarantee?

Mr. Howe (Port Arthur): Mr. Chairman, the Minister of Finance, of course, deals with the banks, and discussions about the rate of interest were carried on by the Minister of Finance. The government has many guaranteed loans and I do not know that 5 per cent has ever been considered a high interest rate. The Farm Improvement Loans Act is the same and the National Housing Act is a bit higher. If my hon. friend says that 5 per cent for a loan averaging $800 is an excessive rate, he is expressing his own opinion; he certainly is not expressing mine.

Mr. Fleming: I think the minister is only adding confusion to the situation. He is talking about certain loans made by government boards under certain acts to individual borrowers. That is not the situation under this bill at all. This is a question of banks lending to individual borrowers, and receiving at the same time a government guarantee. I did not use the expression "excessive interest rate" as the minister has. But I do wish to express the opinion that I think it will shock a great many people to learn that a loan that is guaranteed by the Bank of Canada still must bear a 5 per cent rate. It will shock many people to learn that that should be so. A great many people in this country would like to lend money, receiving on it a government guarantee, for a lesser rate than 5 per cent. If there were any sense to this, I think the minister should say so rather than introduce a lot of confusing references to situations which are not at all parallel to this in any sense.

Mr. Howe (Port Arthur): Mr. Chairman, the Farm Improvement Loans Act is exactly the same as this. It provides that a borrower borrows from a bank under a government guarantee. It has been in effect for several years, and the rate is 5 per cent.

Mr. Rowe: It is too much.

Mr. Howe (Port Arthur): A more parallel act is the Fisheries Improvement Loans Act under which the fisherman borrows from a bank under a government guarantee at an interest rate of 5 per cent. It is the same class of loan.

Mr. Johnston (Bow River): Can the minister tell us what was the amount of loss under the Farm Improvement Loans Act?

Mr. Howe (Port Arthur): It is not in the Department of Trade and Commerce.

Mr. Nicholson: The Canadian Farm Loan Act is certainly not comparable.

Mr. Howe (Port Arthur): I said "Farm Improvement Loans Act".

Mr. Nicholson: Certainly not the Canadian Farm Loan Act.

Mr. Howe (Port Arthur): No.

Mr. Michener: I should like to say a word about the time period for which these loans are guaranteed. The bill says loans made between November 15, 1955 and June 1, 1956. Here we are in February, and parliament is now going to guarantee loans which have been made as far back as November 15, I suppose under the assurance of the government that it would cause parliament to pass the necessary regulation. It is that kind of attitude of the government toward parliament which leads me to ask the minister whether the date was not intended to be November 5, which was the date on which the announcement was made and which, as students of history will recall, is Guy Fawkes day, and the anniversary of the gunpowder plot to blow up parliament. I thought the minister had some sense of poetic justice in what he was doing in making his announcement on Guy Fawkes day. Perhaps he would like to amend this section and have the date run from November 5 to June 1.

Mr. Howe (Port Arthur): Mr. Chairman, if I had the same finicky view of the situation as my hon. friend has I would probably have decided to wait until parliament had met and this lengthy debate was over, and the farmers would only now be able to get loans instead of getting them last November. I daresay it helped.

Mr. Diefenbaker: Possibly the minister can explain whether or not an order in council was passed to cover the guarantees that had been made from the date when the banks were promised this guarantee back on November 5 until the date that parliament did meet. Is that the basis upon which the guarantee was carried into effect?

Mr. Howe (Port Arthur): Mr. Chairman, there was no order in council. There were letters from the Minister of Finance to the banks which were tabled in the house. I am quite sure my hon. friend has read them. I do not know why he asked the question.

Mr. Diefenbaker: Mr. Chairman, that is not quite the answer; that is no answer at all. The Minister of Finance has no power outside of parliament or under an order of council under the prerogative right of the crown.

Mr. Howe (Port Arthur): No power to write a letter?

Mr. Diefenbaker: Oh, now, we have arrived at the point where a minister can write a letter and make a guarantee on behalf of the government of Canada without an order in council. That is a most interesting thing. That is a new principle of government.

Mr. Howe (Port Arthur): The Minister of Finance made no guarantee. He wrote a letter to say that when the house convened he would introduce legislation to guarantee the loans from a certain period, which I think was November 15. That was the letter to the banks. The banks did not even wait. They decided they would lend on the basis of that letter, believing that the Minister of Finance would introduce the bill as he had promised, which has been done.

Mr. Diefenbaker: Has that letter been tabled?

Mr. Howe (Port Arthur): Yes.

Mr. Diefenbaker: That is the one that was tabled?

Mr. Howe (Port Arthur): Yes.

Mr. Diefenbaker: The one in question; I see.

Some hon. Members: Oh, oh.

Mr. Diefenbaker: My hon. friends laugh. Because of the delay in tabling them it makes one suspicious, any time any matter arises, that they have not been tabled. I want to ask some questions in regard to directions to the banks. One of the complaints that I have had from quite a number of farmers is that qualified farmers are denied loans under the terms of the legislation. It all seems to depend on the location of the bank or the attitude of the individual banker.

What instructions have been given to the banks in regard to this question? In certain places farmers have been denied loans with all types of excuses. One excuse has been, well, you really do not need the money at the present time because you are going to make payments on account of certain debts that you owe. That excuse has been used on a number of occasions. Farmers believe that they are entitled to this assistance because after all one of the major reasons for it was to relieve the monetary situation among the farmers, and also, I would think, to be of assistance to the creditors in the area in which those farmers live in order to meet the current expenses of farming.

What instructions have been given to the banks? I asked the other day whether the government had any record of how many applications were turned down by the various chartered banks. The reply I received was that the government had no such information. I feel that if instructions have not

been given to the banks, instructions should certainly go out now from the Minister of Finance to the various banks requesting them to grant the necessary loans, since the banks are guaranteed against any possibility of loss. Will the minister say—

Mr. Howe (Port Arthur): Mr. Chairman, there are only two criteria that must be insisted on. One is, has the farmer the grain? In other words if he has 2,000 bushels of wheat he is entitled to borrow on a thousand bushels. The other is, is it pledged under section 88 to some other bank? If it is not, or if it is pledged under section 88 to the same bank and there is room for the loan, he is entitled to the loan. Those are the only two criteria.

Mr. Quelch: Is there not another under section 3(e)? If the farmer had sold his 2-bushel quota would not the amount of that be deducted from the $1,500?

Mr. Howe (Port Arthur): Yes. This is supposed to put the farmer who has delivered no grain in cash until he has delivered his grain, and if he has delivered part of his grain that is counted against the loan and he is only entitled to borrow the $1,500 less the value of the grain that he has delivered.

Mr. Quelch: What if the farmer has only delivered 2 bushels per acre—the normal delivery is 8—surely the farmer should be able to borrow something; but if he had 800 acres at 2 bushels that would be 1,600 and that would mean he would not be able to borrow a cent. Yet he would have 6 bushels to the acre left on which he should be able to borrow.

Mr. Howe (Port Arthur): If he had 3,000 bushels he could borrow $1,500, I suppose, and if he has delivered 500 bushels that is taken off; but this legislation was never intended for a man who has 800,000 bushels of grain or anything like that.

Some hon. Members: Oh, oh.

Mr. Howe (Port Arthur): How much did you say?

Mr. Quelch: Eight hundred.

Mr. Argue: What is a million bushels?

Mr. Howe (Port Arthur): This is for the small farmer, the three-quarter section farmer who would be expected to produce about 3,000 bushels of grain. That is the man this legislation was designed for. My hon. friend likes to refer to his own position, but I venture to suggest a bank manager does not ask him for any guarantee when he goes in to borrow.

[Mr. Diefenbaker.]

Mr. Bryson: It has been argued constantly that the risk involved does not warrant the high interest rate of 5 per cent, and the minister referred to the experience in 1951 and the small loss taken, which seems to fairly well justify that belief. I wonder if the minister could tell us of the $13,000 that did go into default in the 1951 experience; how many of those loans went into default because of misrepresentations made by producers as to the amount of grain they gave as security to the bank?

Mr. Howe (Port Arthur): We would not know that. These loans are put out by chartered banks. I suppose they do their best to collect, but whether there is misrepresentation or misfortune or whatever cause we would not know.

Mr. Johnson (Kindersley): Mr. Chairman, the minister has stated that this legislation is aimed at assisting the small farmer providing he can meet the qualifications of section 3. The qualification of section 3(c) is that the bank manager has scrutinized and checked the application for the loan with the care required of him by the bank in the conduct of its ordinary business.

I suppose all bank managers are charged with the responsibility of making money and not losing any; therefore the bank manager would not give the loan to anyone who is in any way a poor risk. He would not give it to the small farmer who is in need of it by virtue of this qualification which is stated in the act. Is that not correct?

Mr. Howe (Port Arthur): All I can say is that up to the end of last year he had already given it to 8,000 farmers, and I am sure he has given it to a great many more since that time.

Mr. Johnson (Kindersley): Has the minister any information as to the number of farmers who have applied?

Mr. Howe (Port Arthur): Not the slightest.

Mr. Johnson (Kindersley): It is listed on the application for the loan which the Minister of Finance has. Could the minister get that information? Surely it must be part of the information which the Minister of Finance has.

Mr. Howe (Port Arthur): It is not available in Ottawa.

Mr. Trainor: Would the minister care to state at just what price per bushel this grain which is to be hypothecated for loans is to be held?

Mr. Howe (Port Arthur): It is the initial price of the grade.

Mr. Trainor: What is that, $1.40?

Mr. Howe (Port Arthur): It depends on the grade.

Mr. Castleden: I should like to ask another question with regard to the security. Since all the loans are going to be entered in the farmer's permit book, the security upon which the loan is made is not merely the grain which the farmer has on hand at this time but all the grain which he may have in years to come. Is that true or is it not?

Mr. Howe (Port Arthur): Yes, that is true.

Mr. McCullough (Moose Mountain): I think the point has been well made that there has been very little risk involved in these bank loans. The hon. members who have spoken have indicated that there has been very little loss under the 1951 legislation, and I expect there will be very little loss under this legislation. This afternoon the minister indicated that to date some $7 million had been loaned under the present proposed legislation. Calculating that at 5 per cent interest, if it runs for a year there will be an additional debt of $350,000 on the farmers' backs.

Mr. Howe (Port Arthur): It does not run for a year.

Mr. McCullough (Moose Mountain): But certainly it may very well run for a year.

Mr. Howe (Port Arthur): No, sir.

Mr. McCullough (Moose Mountain): Consequently I say it smacks of discrimination, simply because when we consider other legislation proposed by this government to help various companies in this country at around 3 or 3¼ per cent interest, one can readily understand our disgust. The farmer is already bankrupt because of this government's policy.

I take exception to this because as the minister has said, it is an ironclad guarantee by the government of up to 15 per cent of the aggregate loss the banks can have. I think all hon. members will agree that at the outside the loss will be only about 2 per cent, and when it is considered that this legislation is supposed to help the small farmer in general one can agree with what has been said by the hon. member for Humboldt-Melfort and the hon. member for Kindersley and others who have said that the farmer in many cases is not going to receive any assistance under this legislation.

If for example the farmer has his grain hypothecated to taxes, to the storekeeper, the oil merchant and to others, and if he has made a delivery under the quota, then of course his chances of getting a loan are very remote.

When one considers that the farmer is hard pressed at the present time I think the government should have given fair consideration to this. At least when it is prepared to back it with the Canadian taxpayer's money so the banks cannot possibly experience the loss contemplated of 15 per cent of the aggregate, then I think we should have at least found this government ready to compromise on this and ready to reduce the interest to approximately 3 per cent, which it was ready to give big companies in this country in relation to credit and advances.

I think there are certain friends of this government, but the farmers of western Canada are not among them. The friends of the government appear to be the vested interests, corporations, and big people who can do something for themselves. Very little if any consideration is given to the little fellow and, I refer particularly to the farmers of western Canada.

Mr. Trainor: May I ask the minister an additional question? Supposing he accepted the suggestion which has just been made, how much does he estimate it would cost the treasury of Canada, if anything?

Mr. Howe (Port Arthur): What was the suggestion just made?

Mr. Trainor: The suggestion was made that the interest rate be reduced to 3 per cent.

Mr. Howe (Port Arthur): Well, I suppose if the banks charged 5 per cent and we charged the farmer 3 per cent someone would have to pay the other 2 per cent. My hon. friend has a pencil there; he can figure it out.

Mr. Trainor: Not necessarily; the banks could be persuaded to charge 3 per cent.

Mr. Knowles: Mr. Chairman, a few minutes ago when the interest rate was under discussion the Minister of Trade and Commerce tried to make the point that 5 per cent was the rate charged in certain other acts providing for government-guaranteed loans. He referred in particular to the Farm Improvement Loans Act and the Fisheries Improvement Loans Act. It seems to me that there is a very fundamental difference between loans sought under those acts and the loans provided for under this legislation, a fundamental difference which we do not as yet seem to have been able to get across to the minister.

When a farmer seeks a loan under the Farm Improvement Loans Act he is seeking money to improve his property or to purchase machinery, knowing that he will have to repay that loan—and intending to do so—out of future earnings. But in this case the farmer is put in the position where he has to seek

a loan in respect of wages he has already earned but has not been able to draw. It is because of that fundamental difference that we think there should be cash advances rather than loans. In other words, we think that there should be no interest at all. We contend that the minister's attempt to make a comparison is invalid.

Mr. Howe (Port Arthur): Mr. Chairman, I am certain that my hon. friend is so indoctrinated with the idea of collective farms, government-owned farms, that he talks about the farmer's production as labour. The farmer is an entrepreneur, he is an owner. His rewards come from the product he sells. The farmer does not work for a wage unless he is a hired man. On the collective farms in the old country wages are paid to the farmer and the state owns the land. The state takes the profits from the farm and stands the risks. But here we have ownership of the land by a private individual. The owner of the land cultivates his farm, markets his product and takes whatever comes.

Mr. Knowles: Just because the minister and I both happened to mention some fisheries legislation is no reason why he should produce a red herring. As a matter of fact, he knows that the inference which he has just attempted to draw is quite unfair and quite unrealistic.

Mr. Howe (Port Arthur): No, you are a socialist.

Mr. Knowles: The fact of the matter is that in this country under a system which we in this group thoroughly approve, namely, orderly marketing through the wheat board, the only way in which a farmer—call him an owner if you will—can get a return for his year's work is to be able to market his product. You are indulging in semantics if you call him a labourer or wage earner because he collects his wages at the end of the year. The fact of the matter is that it is the inadequacy of the government's policy which makes it impossible for him to get that return.

I come back to the point which I made when I rose before. What the farmer will be seeking under this legislation, what he is forced by the government to apply for, is a portion of what he has already earned. That is totally different from trying to borrow something against future earnings. That being the case, there should not be any interest in this bill at all.

Mr. Hamilton (York West): Mr. Chairman, I can see that we all have different opinions about interest rates and also about the effectiveness of the security. Listening to the hon. member for Winnipeg South deal with the question of interest it seemed to me that the Minister of Trade and Commerce or the Minister of Finance owes this house an outline of the negotiations which took place with the banks, not just a tabling of correspondence. I think we are entitled to know if the officials of the department sat down with the representatives of the banks to determine what would be an equitable interest rate, and whether there were any representations on the part of the treasury that 5 per cent was too high, that the banks could make a reasonable profit at 3½ per cent. Did they simply accept the proposition by the banks as being the only one under which they would carry out their obligations? I think we are entitled to an explanation and to know exactly what took place.

Mr. Stuart (Charlotte): The hon. member for Winnipeg North Centre has suggested that there should be some variation in the interest rates on loans provided for fishermen and those provided for farmers.

Mr. Knowles: I did not say any such thing. I made a comparison between the farmer borrowing under one act and the farmer borrowing under another act. It was the minister who brought in the fish.

Mr. Stuart (Charlotte): That is what I want to speak about. I believe the hon. member for Winnipeg North Centre mentioned fish as well. The fishermen in the riding which I represent are asking for loans this year for the first time, and I can assure you that they have not a year's supply of fish in storage. The reason they are asking for these loans is that last year was a bad year. If they had had two, three or four productive years they would be the last people in the world to ask anyone for assistance of any kind. The fact is that they have had two and three and in some cases four years of scarcity, and I mean scarcity.

During the past year legislation was passed in this house to provide them with the same facilities we are giving the western farmers. I can assure the hon. member for Winnipeg North Centre that the fishermen who are taking advantage of this legislation are men who have been without income for two or three years. I think it is a most unfair comparison when you take one who has had four or five bountiful years and whose next year's bread and butter is in storage.

The Deputy Chairman: Perhaps I might state to the committee, and I think hon. members will agree, it having been understood that there was a comparison made between fishing legislation and farming legislation,

and that comparison having been answered, while I am not ruling comparisons out of order I think I should rule out of order debate as to the merits or needs of fishermen.

Mr. Knowles: On a question of privilege, I wish to make it perfectly clear that I referred to the fisheries act only to pick up what the minister had said, but when I made the comparison which I sought to make I made it between the farmer applying under the Farm Improvement Loans Act and the farmer applying under this bill. I deliberately and distinctly avoided making any other comparison, because if it were in order I would support the kind of appeal the hon. member for Charlotte is making on behalf of the fishermen.

Mr. Stuart (Charlotte): I was under the impression that in his statement the hon. member said there should be a difference in the interest rate on loans to western farmers and on loans to fishermen, that the western farmer should have a lower rate. I may have misunderstood the hon. member.

Mr. Knowles: I invite my hon. friend to go with me to the *Hansard* office and I am sure it will be found that I said no such thing.

Mr. MacInnis: Mr. Chairman, I have listened to this debate for a long time and have not taken any part in it, but apparently some hon. members do not understand the farmer's position as a producer. He is a little different from the industrial worker. The mere fact that he owns his farm does not make so much difference, I should think. The difference is this. The industrial worker sells his labour to somebody who wants to buy it—or, more correctly, his labour power. He gets paid for that. What he produces belongs to the person who bought his labour. The farmer does not sell his labour power or his labour directly to anybody. He turns that labour into some kind of agricultural commodity, into oats, wheat, beef or pork or whatever he may be producing. The moment he has produced that, he has to find a buyer and he is actually in the same position as the industrial worker.

An hon. Member: No, he is not.

Mr. MacInnis: You settle that for yourself. He is in the same position as the industrial worker who cannot find a buyer for his labour. The farmer on the prairies today who has wheat on his farm and cannot find a buyer is like the unemployed worker. He is in exactly the same position.

Mr. Howe (Port Arthur): There is a remarkable difference. The farmer who cannot market his wheat still has his wheat. The unemployed worker has no income; he has only outgo.

Mr. Argue: One works for nothing, and the other sits around for nothing.

Mr. MacInnis: The farmer who has his wheat markets it in a reasonable time, it is true, and the industrial worker who cannot find a sale for his labour has his labour power, but that too has to be sold or used every day in order to be of any value to him. There is very little difference.

Mr. Howe (Port Arthur): There is a lot of difference.

Mr. MacInnis: If the farmer cannot find a market for his product, as I said before, he is in the same position as the worker who is unemployed. As a matter of fact, what you are doing now is providing some sort of unemployment insurance for the farmer.

Mr. Howe (Port Arthur): The farmer who cannot sell his wheat at least has his wheat. Suppose we take a year when the farmer cannot sell his wheat. At the end of the year he has the year's production of wheat. If a worker is unemployed for a year, he has nothing at the end of the year.

Mr. Trainor: In view of the demonstration by the hon. member for Winnipeg North Centre and the hon. member for Vancouver-Kingsway of the complete socialism of the wheat grower in this country, how can the minister maintain that the wheat farmer is in the position of an independent entrepreneur?

Mr. Howe (Port Arthur): I suppose the most independent man is the grower of Durum wheat or the grower of flax. They can sell those whenever they like. Yet we have more complaints from those people than from anyone else. They are free agents, but they are not happy about it.

Mr. Trainor: In other words, there is no wheat board in their case.

Mr. Argue: Some of us have been saying that the position of the farmer is identical with the position of the wage earner who would have to borrow his wages at the end of the month. The minister says that is just some evidence that the C.C.F. believe in socializing the farmer.

Mr. Howe (Port Arthur): Does the C.C.F. not believe in socialism?

Mr. Argue: Not socializing farmers; absolutely not.

An hon. Member: Just everybody else.

Mr. Argue: The minister has stated that the farmer is an entrepreneur, that the

farmer is a capitalist and that he is not a wage earner. We cannot demonstrate that he is a wage earner, because he is not getting any wages. The minister cannot demonstrate that the farmer is an entrepreneur when he is not getting any return on his capital investment. He has a capital investment and he does a good deal of work, but he gets nothing for it. I think the definition of a capitalist is somebody who gets a return on his capital.

Some hon. Members: Oh.

Mr. Argue: But we have the minister—

Mr. Howe (Port Arthur): You will be driving a wedge between the Conservatives and the C.C.F. if you are not careful.

Mr. Argue: I have in my hands some figures on the amount of return a farmer gets on his capital invested under the kind of system the minister is talking about.

Mr. Howe (Port Arthur): I suggest that there is nothing in this that has anything to do with the clause under discussion.

The Deputy Chairman: I was about to raise that point myself. The position in which the farmer finds himself today, and whether or not he should be called upon to pay a certain rate of interest, undoubtedly come under this particular clause; but if we get too far afield into the very broad principles of whether a farmer is a capitalist or a wage earner or whether or not the C.C.F. believe in socialism, we are getting too far from the subject. The hon. member for Assiniboia might point his remarks to the clause under discussion.

Mr. Knowles: It is obvious that the Liberals do not believe in liberalism.

Mr. Argue: It would be very difficult for a farmer or anyone else to pay interest when he is getting no interest on his investment. The figures I have show how impossible it is for farmers to pay a higher interest charge than they have been paying in recent times.

Mr. Howe (Port Arthur): I can assure my hon. friend that, if he has figures, he has put them on *Hansard* at least four times in the last six weeks.

Mr. Argue: That is another inaccurate statement of the minister. I have not yet mentioned these figures. He says I have put them on *Hansard* four times, and he does not know what the figures are. He has no idea what I am going to say, but he is so impatient with parliament and so impatient with discussion that he cannot wait until a member has finished his sentence before he gets up and interrupts with a lot of inaccurate statements. As far as I know, these particular figures have not yet been placed on the record of this house by any other member.

Mr. Howe (Port Arthur): What are you reading from?

Mr. Argue: The interprovincial farm union council presentation to the cabinet. The figures are all taken from the dominion bureau of statistics and no doubt have been issued under the authority of the minister or, if they were not, there is another source, the Manitoba government's submission to the royal commission on Canada's economic prospects, another body set up by this government. In any case the Liberal party and this government are very closely associated with these statistics, even though I cannot tell at a quick glance whether they were issued by the dominion bureau of statistics.

They are to be found on page 8 of that submission. It is called "Table VII" and the heading is "Gross and Net Income, Operating Expenses, Total Debt and Per Cent Returns to Capital for Farms in Manitoba". You could not blame any low rate of return in Manitoba for anything a socialist provincial government might be doing, because the people out there have a provincial Liberal government as well as a federal Liberal government. In 1954 for each dollar of capital invested in Manitoba the farmers received a return of ·001 per cent, which I suggest shows that the farmer, under the legislation and under the policy of the Minister of Trade and Commerce, is not a capitalist at all, because he gets zero return on his investment.

An hon. Member: What is the comparable figure for Saskatchewan under the socialist government?

Mr. Nicholson: While the hon. member for Winnipeg North Centre was speaking, some exception was taken to his suggestion that the farmer is in a position where he can sell his wheat to the wheat board, and to the wheat board only. We should not lose sight of the fact that twice during the last century farmers were prevented from selling their wheat in the open market in order to keep the price down, and they were forced to sell through the wheat board.

I am not complaining about that. I am all for it, but we must not ignore that fact. We cannot sell our wheat any place else. I wish the minister would admit the correctness of the information he gives us regarding what has happened in the case of farmers in other countries, as found in the *Wheat Review* for December, published by the authority of the Minister of Trade and Commerce, in which he refers to what is being done for

the wheat farmers in the Argentine, in Australia, France and elsewhere in Europe.

Mr. Mang: We have heard that a hundred times.

Mr. Nicholson: You have not heard this at all. What the hon. member for Qu'Appelle says is typical, that they have heard all this many times when they have never heard it at all.

Mr. Howe (Port Arthur): You gave us all that.

Mr. Nicholson: I wish the Minister of Trade and Commerce would merely go as far as his colleague, the Minister of Finance, and admit that the jam we are in now has been brought about partly because of policies that have been formulated and carried out in other countries. I realize that when we are exporting such a large percentage of our production we are not in the same position as the United States, but I think that at some point the minister should admit that Canadian farmers have no place to sell their wheat except to his wheat board. He should admit that farmers' marketings for the period from August 1 last until February 8 have dropped from 138 million bushels to 115 million bushels, and that money is scarce.

Mr. Harris: On a point of order, Mr. Chairman, up to this moment I had thought that this was a rather model committee of the whole. The questions that have been addressed to the government have been pointed and on the clauses concerned. The opinions expressed have been opinions with respect to the clauses concerned. But my hon. friend is now saying in a different form arguments he has used at least twice, if not three times, on the motion for second reading and the amendments thereto. Remarks of that kind are out of order in committee of the whole, and while I appreciate the fact that he may have quoted me in his last remarks I suggest that he should direct his remarks to the particular clause under discussion.

Mr. Quelch: Mr. Chairman, the Minister of Trade and Commerce stated that the rate of interest under the bill was no higher than the rate of interest under the Farm Improvement Loans Act. That is true. It is also no higher than the rate of interest under the Veterans Business and Professional Loans Act. But the minister must be aware of the fact that when both these measures were before the house a number of members on this side of the house and I think some of the members on the other side of the house objected when we were in committee to a rate of 5 per cent being charged when the loans were being guaranteed by the government. I think members on all sides of the house felt that when loans were guaranteed by the government the chartered banks should be able to make them at less than 5 per cent.

That is why some of us wonder whether or not the government endeavoured to get the chartered banks to make loans at a lower rate than 5 per cent where the loans are guaranteed by the government. It may be argued that the banks perhaps said they were not going to make loans at less than that rate. On the other hand, the government is of course in a position where it can bring pressure upon the chartered banks to make loans at less than 5 per cent. If the government wish to do so they have the power to tell the chartered banks, "You will have to make loans at less than 5 per cent or we will have to take action to make loans available at that rate ourselves."

All that would be necessary would be for the government to say to the chartered banks, "Now, if you do not make loans at less than 5 per cent we will get the money from the Bank of Canada; then we will increase the cash reserve requirements of the chartered banks so you cannot use that money issued by the Bank of Canada for the purpose of expanding credit." If that were drawn to the attention of the chartered banks I believe they would probably think twice before they would refuse a request by the government to make loans at less than 5 per cent.

Remember that some years ago we had Mr. Towers before the banking committee, and he told us that he estimated it cost the banks approximately 3 per cent to create money. If it costs the banks 3 per cent to create money, then surely on loans guaranteed by the government they should be prepared to make loans at cost. As has already been pointed out, they are making loans at cost, if 3 per cent is the cost, to the wheat board, and they are making loans to the wheat pools at approximately $3\frac{3}{4}$ per cent, just three-quarters of one per cent above their cost as estimated by the former governor of the Bank of Canada. In view of that fact I think it would be interesting to know whether or not the government did attempt to get the banks to make loans at a lower rate than 5 per cent.

Mr. Hamilton (York West): Mr. Chairman, since I asked the same question as the last speaker some time ago I want to say that I dissociate myself entirely from any suggestion that the banks should be forced to deal in any manner whatsoever. In my view whatever should have been done in this case should have been done by open negotiation and mutual agreement. Am I to take it

from the silence of both the Minister of Trade and Commerce and the Minister of Finance that no round table discussions were held and no case was put forward for the farmers to see if a lower rate of interest could not be obtained in connection with these loans?

Mr. Harris: Of course not, Mr. Chairman.

Mr. Hamilton (York West): We are glad to have you answer.

Mr. Harris: There were negotiations and conversations over several days with respect to all the terms of the loans that might be made. Opinions were expressed about the rate of interest and whether it should be lower or higher, and as a result of those discussions the conclusion reached is in this bill.

Mr. Cameron (Nanaimo): I have been wondering about the interest rate. It occurs to me that if the government is assuming the ultimate responsibility for these loans now at 5 per cent, the government would be in no worse financial position if they were to borrow the money from the banks at the reduced rates at which governments can borrow from the banks and provide the wheat board with those funds for loans at a recoverable rate of interest, which would restore to the treasury all the funds they would be advancing and at the same time provide loans at a rate of interest much more favourable to the farmers. I understand that the legislation is intended to benefit the farmers, and it seems to me that consideration might have been taken into account by the government.

Mr. Cardiff: I should like to ask why, if it is possible to lend the wheat board money at 3½ per cent or whatever the percentage is, it is not possible to lend it to the farmers at the same rate?

Mr. Howe (Port Arthur): I think I can answer that. At the moment the wheat board loan amounts to approximately $450 million. One piece of paper covers the loan of $450 million. I think my hon. friend will realize there is a good deal of work involved in putting any loan through and that, with the average loan under this legislation being about $800 and the average period being six months, it might be a little more costly to make small loans than a big loan.

Mr. Cameron (Nanaimo): Can the Minister of Finance tell me whether he considers that the treasury would have been in an adverse position if they had followed the course I suggested?

Mr. Trainor: What the Minister of Trade and Commerce is really saying is that it is a question of the service charge being different with regard to the two types of loans. I wonder whether any figure has been worked out as to just what is the cost of servicing these individual loans, and I should like to ask whether the service charge could not be assessed against the borrower rather than the interest charge.

Mr. Howe (Port Arthur): The service charge is assessed against the borrower through the interest rate. I do not think the borrower would want to owe some indefinite service charge in addition to the interest rate.

Mr. Trainor: Would it not be possible to separate the two? Presumably the interest rate is the profit for the banker in addition to the service charge for his services. Would it not be possible to separate the two so the farmer would merely pay the service charge on the loan?

Mr. Howe (Port Arthur): I suppose anything is possible.

Mr. Cameron (Nanaimo): I should like to ask the Minister of Finance again whether he would agree that the government would be assuming no greater risk of loss of public funds if they had proceeded on the course of borrowing the money themselves from the banks at the rates which are available for government borrowing and had advanced the money at the same rate, with a slight addition for carrying charges, to the farmers through the wheat board. Would their risks have been any greater, and would there have been any loss to the treasury by following that course?

Mr. Harris: Mr. Chairman, we do not normally go into that business, although my hon. friend may very well say if his party were in office they would do so. However, I do not recall an occasion in the past when a transaction of the nature he has mentioned has been undertaken. Perhaps I am wrong in that regard. But our guarantee is a guarantee of a certain percentage of losses. It is not a guarantee of all losses. As I take it, my hon. friend's description of what he was going to do would mean that we would suffer all the losses that might occur.

Mr. Cameron (Nanaimo): Yes, Mr. Chairman. But I imagine that the government have statistical data upon which they base their guarantee of a percentage of the losses. From past experience they knew that the losses were not likely to exceed that amount. In fact I think they are fairly sure that they are not going to approach that percentage. I cannot see that there would be any more likelihood of the farmers being

unable to repay the loans if they came from the government than there would be if they came from the banks.

The Deputy Chairman: Shall the clause carry?

Some hon. Members: Carried.

Mr. Argue: No, Mr. Chairman. I wonder whether either the Minister of Finance or the Minister of Trade and Commerce discussed with the various elevator companies whether or not the elevator companies might be prepared to make such loans through their own facilities?

Mr. Howe (Port Arthur): The matter has been discussed. It was certainly discussed with them when the 1951 legislation was being considered. I discussed it with several of them when the question of assistance last autumn was being considered. Certainly no responsible elevator owner wants to be an intermediary in a matter of this kind.

Mr. Argue: The information I was given—it is now two or three years ago—along with some of my colleagues is that the Saskatchewan wheat pool at the time of the 1951 legislation made an offer to the government of the use of its facilities in making such advances to farmers. If my memory serves me correctly they made an offer to provide advances to farmers for an aggregate guarantee of 2½ per cent. I am wondering whether this time the minister received any offer from any of the elevator companies suggesting that they would be prepared to make the advances.

Mr. Howe (Port Arthur): I think that is correct, Mr. Chairman. I think the Saskatchewan wheat pool undertook to handle the loans under a government guarantee. I am certain that the interest rate was not going to be 2½ per cent. That might have been the service charge by the elevator company, with the interest rate in addition. That was on the understanding that the government was to provide the funds. But it was the only elevator company that indicated any wish whatever to handle those accounts. I think there has been a change of heart there, because we received no such offer this time.

Mr. Argue: I do not know whether or not there was a change of heart—

The Deputy Chairman: Order. I think perhaps it is my duty to point out to the committee, before this interesting discussion goes further along these lines, that we are dealing with a financial or money bill, and that in the bill we are bound by the terms of the resolution which preceded it. That resolution read in part as follows:

> That it is expedient to introduce a measure to provide, by way of a guarantee for bank loans . . .

I say with some regret—because this is an interesting discussion—that I do not think, under that resolution, we now have the authority to discuss alternative methods of making the funds available to farmers. Those alternatives were discussed at great length on the resolution. I feel obliged to say that we are now bound not by the words of this bill but by the general principle of the bill, and that our job is to go over the wording of it clause by clause and to decide whether those clauses shall pass or not pass or be amended.

Mr. Argue: Mr. Chairman, I was not endeavouring to open up a discussion that had already taken place, and I was not endeavouring to discuss the advantages or disadvantages—whatever hon. members might think—of a system of providing advances or loans or whatever you might wish to call them through the elevator companies. But when there is a provision that the government shall guarantee 10 per cent of the aggregate loans to the banks, I think it is relevant to ask questions and to point out—depending upon the type of answers that may be given—that some other alternative might have been available that would have made it possible for the government to make a much smaller guarantee.

When we are discussing the guarantee, which is 10 per cent, if it is true that an elevator company at any time in the past has offered to take a much lower guarantee, it seems to me that pointing out that fact, if it is a fact, is certainly relevant to this bill and to this section. The treasury is committed to a certain guarantee. Surely it is the duty of members of parliament to explore the situation and find out whether there was an alternative that would have provided for a much smaller guarantee.

The suggestion has been made by a number of hon. members that since this is an iron-clad guarantee by the government, the banks should be prepared to reduce their interest rate from 5 per cent to 3 per cent or something in that neighbourhood. If some other facilities had been used, even if a service charge had to be added to the 3 per cent, it is my opinion that we could have made advances to farmers at an interest below 5 per cent, or else at an interest rate below 5 per cent through the facilities that they are ordinarily accustomed to use. They would be just as much opposed to paying one body an interest rate as they would be to paying any other body. But had other facilities been used, certainly there would have been much more convenience in dealing with this type of thing than there is by using the banks and the guarantee.

Reference to Unparliamentary Remark

The Deputy Chairman: Shall the clause carry?

Mr. Argue: No.

The Deputy Chairman: Shall I report progress and ask leave to sit again?

Some hon. Members: Agreed.

Clause stands.
Progress reported.

PRIVILEGE

MR. REGIER—REFERENCE TO REMARKS IN DEBATE THIS DAY

Mr. Erhart Regier (Burnaby-Coquitlam): Mr. Speaker, I rise on a question of privilege. In the debate on Bill No. 82 this afternoon the hon. member for Rosthern said that members of the C.C.F. had called Mr. Parker of Manitoba a rat. I was one of those who echoed the Tory interjection "He is a rat". I thought the reference was to the hon. member who had the floor, namely the hon. member for Springfield (Mr. Weselak). I did not have any intention of calling the elected head of the Manitoba wheat pool and the friend of the Minister of Trade and Commerce any names whatsoever.

Since that time, Mr. Speaker, it has been pointed out to me that it is unparliamentary to call even a member of this house a rat, and I therefore withdraw that remark.

Mr. Dinsdale: Mr. Speaker, on the question of privilege, I believe I understood the hon. member to suggest that he was merely re-echoing a Tory sentiment. I am sitting on the extreme left of the so-called Tory group in this house, and I would like to state quite emphatically that the interjection referred to by the hon. member came from the quarter farther left than where I sit.

The Acting Speaker (Mr. Applewhaite): I suggest to the house that perhaps this afternoon nobody intentionally called anybody else a rat, and if they did it is to be considered withdrawn.

Mr. Tucker: As a matter of fact, I raised the point so that whoever did say it could rise in his place and say that he did not intend to cast any aspersion. When I pointed out that this was an unwarranted aspersion on a great Manitoba citizen and that it should be stricken from the record there was not a word from the C.C.F. opposition.

BUSINESS OF THE HOUSE

Mr. Harris: Mr. Speaker, we shall continue with this tomorrow; then take the other wheat bill, and then the motions with respect to setting up committees.

It being five minutes after ten o'clock the house adjourned, without question put, pursuant to standing order.

ANSWERS TO QUESTIONS

The following answers, deposited with the Clerk of the house, are printed in the official report of debates pursuant to standing order 39:

PUBLIC BUILDING, NANAIMO, B.C.

Question No. 147—**Mr. Hamilton (Notre Dame de Grace):**

On what date was the new public building in Nanaimo, British Columbia, completed and ready for occupancy?

Answer by: **Mr. Winters:**

The building will be ready and officially opened on February 29, 1956.

GREAT LAKES FISHERIES COMMISSION

Question No. 150—**Mr. Robinson (Bruce):**

1. What are the names of the plenipotentiaries representing Canada in connection with the Great Lakes Fisheries Convention Act?
2. What are the names of the personnel of the Canadian section of the great lakes fisheries commission mentioned in article II of the act?
3. What progress to date has been reported from the Canadian commission to the Department of Fisheries?
4. What are the different methods used by the commission to combat the lamprey eel menace?
5. Have there been any chemical control tests made towards combating the lamprey eel? If so, what results have been obtained?
6. Since the act was passed, what work has been carried on in lake Huron and Georgian bay towards combating the lamprey eel menace?

Answer by: **Mr. Sinclair:**

1. A. D. P. Heeney; Stewart Bates.

2. Dr. A. L. Pritchard; Dr. W. J. K. Harkness; Dr. A. O. Blackhurst.

3. The commission has not yet held its first meeting as the United States commissioners have only recently been appointed.

4. The action to be taken by the commission cannot be forecast, but up to the present the following control methods are or have been in use on both the Canadian and United States sides of the lakes:

(a) Electrical barriers in spawning streams;

(b) Mechanical barriers in spawning streams (nets and dams);

(c) Habitat change; gravel beds required for spawning are removed or covered with other material such as cement;

(d) Application of materials toxic to lamprey.

5. Yes. Results have been favourable in areas where young lamprey are congregated in streams. No material yet available for economical treatment of whole river systems. United States investigators have recently discovered specific poisons which will kill immature lampreys in the streams and not affect other fish. Results of experiments and assessment of costs in this respect have not yet been released.

6. The act came into force concurrent with ratification of the treaty only in October last, and there are no significant lamprey runs in the winter. One electrical barrier on Thessalon river and trap-nets on several small streams flowing into the north channel and Georgian bay will be operated again next summer.

FISHING PRIVILEGES, LOCKPORT LOCKS, MAN.

Question No. 157—**Mr. Knowles:**

1. Has any action been taken rescinding the privilege of fishing off the concrete wall at the locks at Lockport, Manitoba?
2. If so, what is the reason for such action?
3. Has fishing from this wall been prohibited at any time in the past?
4. If the privilege of such fishing has been rescinded, will consideration be given to reinstating the same?

Answer by: **Mr. Winters:**

1. Yes.

2. During the summer of 1955, the privilege was withdrawn as the result of a minor accident.

3. See answers to Nos. 1 and 2.

4. Yes, if adequate assurance can be obtained from the anglers concerned that the privilege will not be abused.

UNEMPLOYMENT OFFICE, WINDSOR, ONT.

Question No. 159—**Mr. Fraser (Peterborough):**

1. Is the unemployment office in Windsor, Ontario, to be equipped with air conditioning?
2. If so, at what cost?
3. Does the government own the building in which this office is located?
4. Have plans been made to instal air conditioning in government offices in other centres?

Answer by: **Mr. Winters:**

1. Plans are being studied.

2. Cost not known at present.

3. Yes.

4. No over-all plans have been made. Each case is studied on its merits.

POST OFFICE BUILDING, TEESWATER, ONT.

Question No. 162—**Mr. Robinson (Bruce):**

1. Did the Department of Public Works receive a petition, dated January 11, 1955, requesting that a new post office be built at Teeswater, Ontario?
2. If so, on what date?
3. Has any work been done on the site purchased for the new post office building at Teeswater, Ontario?
4. If so, what type of work?
5. Have plans been made to erect the post office on the above mentioned site?
6. If so, for what size and type of building?
7. When is it expected this building will be completed?
8. Will there be living quarters in the building for the postmaster?

Answer by: **Mr. Winters:**

1. Yes.

Questions

2. January 14, 1955.
3. No.
4. Answered by No. 3.
5. Plans are in the process of preparation.
6. A one storey building of brick veneer construction approximately 46' by 40', without basement.
7. Approximately the end of the year.
8. No.

FISH AND DRAGGER STATISTICS, GLOUCESTER COUNTY, N.B.

Question No. 164—**Mr. Robichaud:**

1. What was the total catch of (a) cod; (b) flounders or plaice; (c) haddock, landed in Gloucester county, New Brunswick, in each of the years, 1953, 1954, 1955?

2. What was the total number of draggers licensed in Gloucester county, in each of the fiscal years, 1953-54, 1954-55, 1955-56?

Answer by: **Mr. Sinclair:**

1.

	1953	1954	1955
	Quantity '000 lbs.		
(a) Cod	17,663	23,189	27,459
(b) Flounders or plaice	6,968	7,829	12,694
(c) Haddock	547	2,468	892

2. 1953-54, 42; 1954-55, 49; 1955-56, 55.

HOUSE OF COMMONS

Friday, February 24, 1956

The house met at eleven o'clock.

GREAT SEAL

ANNOUNCEMENT OF CHANGE IN DESIGN

Hon. Roch Pinard (Secretary of State): Mr. Speaker, I desire to inform the house that Her Majesty the Queen has approved the adoption and use by the government of Canada of a new Great Seal of Canada.

Since confederation the design of every Great Seal of Canada has comprised the effigy of the reigning sovereign seated on the throne, crowned and robed, and holding in each hand the orb and sceptre, or sword; also the Canadian armorial bearings, and around the rim an inscription of the title and name of the sovereign. The design of the new Great Seal which Her Majesty has now approved is of this design, with the bilingual inscription "Elizabeth II Queen of Canada—Reine du Canada".

The design shows Her Majesty wearing the St. Edward's crown with which the Queen was crowned at Westminster, and this crown also surmounts the whole armorial bearings of Canada, in addition to being part of the crest.

INCOME TAX

PREMIUM IRON ORES—ALLEGED INTERFERENCE IN UNITED STATES TAX APPEAL

On the orders of the day:

Mr. J. G. Diefenbaker (Prince Albert): Mr. Speaker, I should like to direct a question to the Minister of National Revenue. What is the justification for, and what was the purpose of, his intervention by telegram to the United States secretary of the treasury asking for delay in a civil suit against Cyrus Eaton in connection with certain copper interests, or the formation of a certain copper company? What is the basis of his intervention?

Hon. J. J. McCann (Minister of National Revenue): Mr. Speaker, in the first place there was no intervention on behalf of Cyrus Eaton at all. The intervention was to ask for the postponement of a tax appeal against Premium Iron Ores, which is a Canadian company. Representations were made to me by Canadians who are interested in that company. They contended that there was double taxation. A tax agreement we have with the United States provides that there shall not be double taxation. The intervention was in order to give Canadians who are interested in Premium Iron Ores more time to process their objections.

Mr. Fleming: May I ask a supplementary question? Who were the Canadians at whose request the minister intervened?

Mr. McCann: Well, one very important Canadian was the president and manager of the Steep Rock iron mines.

Mr. Fleming: Others?

Mr. McCann: Others, yes.

Mr. Knowles: May I ask a supplementary question? In view of the minister's statement that the attempt is to avoid double taxation, can he say whether any Canadian income tax has been imposed with respect to these transactions?

Mr. McCann: Mr. Speaker, I am sorry, I did not get the whole of that question. It will either have to be repeated or I shall take it as a notice.

Mr. Knowles: I said, in view of the minister's statement that the attempt is to avoid double taxation, will he say whether any Canadian income tax has been imposed with respect to these transactions?

Mr. McCann: Yes, the Canadian government has collected from Premium Iron Ores all the taxes that are required of them and all that they owed.

Mr. Fleming: I should like to follow up the minister's answer given to a previous question. Is it not a fact that the Steep Rock iron mines are controlled by Mr. Cyrus Eaton? And second, as the minister referred to Canadians at whose request he intervened, could he tell us who the others were?

Mr. McCann: Mr. Speaker, I do not know where the control of Steep Rock iron ore mines lies. All others who made representations were legal people connected either with Steep Rock iron mines or with Premium Iron Ores.

Reference to Unparliamentary Remark

PIPE LINES

TRANS-CANADA PIPE LINES—EXCLUSION FROM CAPITAL EXPENDITURE FORECAST

On the orders of the day:

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, may I direct a question to the Minister of Trade and Commerce. Does the exclusion of Trans-Canada Pipe Lines Limited from the minister's forecast of capital expenditure in the coming year indicate that the minister does not expect construction of the line this year?

Right Hon. C. D. Howe (Minister of Trade and Commerce): Mr. Speaker, in preparing the forecast of capital expenditure the department is instructed not to include a project that is not definitely financed. The pipe line eastward from Alberta was not included.

My hon. friend is asking if I expect it to be built this year. I do; however, it is not advanced to a point where we thought we should include it in the forecast of capital expenditures.

SHIPPING

SINKING OF DEPARTMENTAL VESSEL "HILUNGA"

On the orders of the day:

Mr. Howard C. Green (Vancouver-Quadra): Mr. Speaker, I should like to direct a question to the Minister of Public Works. Some days ago I asked the Minister of Transport (Mr. Marler) whether or not the public works vessel *Hilunga* which foundered on the west coast last week was designed only for service in minor waters, class 1, whereas she foundered in minor waters, class 2. My understanding was that the Minister of Public Works would answer that question. Perhaps he would take this as notice and give an answer at the first of the week.

Hon. Robert H. Winters (Minister of Public Works): I shall be glad to do so, Mr. Speaker.

PRIVILEGE

MR. REINKE—REFERENCE TO REMARKS IN DEBATE OF FEBRUARY 23

Mr. R. E. Reinke (Hamilton South): Mr. Speaker, on a question of privilege, I was in the house yesterday afternoon when the hon. member for Springfield (Mr. Weselak) was speaking and he made reference to Mr. W. J. Parker, president of the Manitoba pool elevators, and a remark was interjected from the opposition side reported on page 1471 of *Hansard* and attributed to an hon. member—"He is a rat."

Further along in the debate the hon. member for Rosthern (Mr. Tucker) brought this to the attention of the Speaker and Mr. Tucker had this to say at page 1472:

> Mr. Speaker, on a point of order, when Mr. W. J. Parker, president of the Manitoba wheat pool, was referred to by the hon. member who has just spoken, I distinctly heard a statement from the C.C.F., "He is a rat." I think it is shameful that a man of the high standing of Mr. W. J. Parker should be characterized in this house by any hon. member as a rat. I think that should be struck from the record.

Further along the hon. member for Portage-Neepawa (Mr. Weir) said:

> Mr. Speaker, on a question of privilege, I want to join my hon. friend from Rosthern (Mr. Tucker) in protesting vigorously against that type of language.

The Deputy Speaker ruled on this question of privilege and I would suggest he ruled correctly. I would like, Mr. Speaker, to be dissociated, as a member who was sitting in the house at the time, from this remark and I suggest that where it says on page 1471 "An hon. Member: He is a rat", it should say, "An hon. C.C.F. Member: He is a rat".

Mr. Knowles: Mr. Speaker, should the record not be made complete? Should not reference also be made to the fact that at the conclusion of last night's sitting my colleague the hon. member for Burnaby-Coquitlam (Mr. Regier) indicated that however it came about it was he who used the words, whereupon he withdrew them without reservation?

Some hon. Members: No, he did not.

Mr. Harris: I agree with my hon. friend up to a point, but if you recall the apology which was tendered—I have not seen the record to see if it carries it—my recollection is that the hon. member said that apparently it was not within his competence to refer even to an hon. member of parliament as a rat.

Mr. Speaker: I will have to look at the whole record. I see what happened as reported on page 1471 of *Hansard*, and as referred to by the hon. member for Hamilton South (Mr. Reinke), but the withdrawal which the hon. member for Winnipeg North Centre (Mr. Knowles) refers to might have taken place while the house was in committee. I cannot find it at the moment.

Mr. Knowles: It will be found on page 1510 of *Hansard* for yesterday at the conclusion of the sitting when Mr. Speaker was in the chair.

Mr. Speaker: I have not had an opportunity to peruse what is recorded on page 1510, but I think it would be much better if expressions of this type did not reach our record. There is no question about that. I do not think

that hon. members will insist that an expression like that remain in the record. I do not think we should have expressions like that as applied to anyone remain in our record. As I say, I was not in the chair at the time. The matter is being brought up now and as far as I am concerned I think hon. members will agree that if it is possible the expression therein contained should be eliminated from the record. I think all hon. members would be of that view. It is just as simple as that If hon. members want to make a case of it, I shall study the point and give a ruling later. However, I take it that that would be the general view. Is it the general view that this expression be eliminated from the record?

Some hon. Members: Agreed.

Hon. George A. Drew (Leader of the Opposition): Mr. Speaker, I am not quite clear as to the extent to which elimination can take place. There is a question of privilege I wish to raise. The hon. member for Burnaby-Coquitlam (Mr. Regier), in admitting that he had used this term, then in a manner which was not in keeping with the ordinary decencies of this house tried to place the blame upon the Conservative party. He used these words:

> I was one of those who echoed the Tory interjection "He is a rat."

I wish to put it clearly on the record that there was no such interjection. I was in the house during the discussion and it was most unfair, most improper and not in keeping with the decencies of this house. In accepting responsibility for the statement, to whomever it was directed, the hon. member should accept full responsibility and not try to divest himself of any measure of responsibility for this improper statement.

Mr. Speaker: While the Leader of the Opposition was speaking I had a chance to read the remarks of the hon. member for Burnaby-Coquitlam as recorded on page 1510. I think that so much has been said there that our elimination from the record of the expression on page 1471 would necessitate the elimination of whatever is recorded on page 1510. That would be too much of an alteration in *Hansard*. I think there is only one way to deal with it now, that is for the hon. member for Burnaby-Coquitlam to stand up and withdraw unreservedly the expression which has been used.

Mr. Erhart Regier (Burnaby-Coquitlam): Mr. Speaker, on a question of privilege, as I said yesterday, I withdraw that remark and I do so in its entirety. However, I cannot tell a lie; my ears heard the interjection.

Some hon. Members: Oh, oh.

Mr. Regier: I withdraw even that.

Mr. Speaker: The hon. member is to be lauded for saying that he cannot tell a lie, but I would suggest to him that he would do well if he would withdraw without adding anything else.

Mr. Regier: I should like to do so, with your permission.

Mr. Drew: Mr. Speaker, I should like to point out that the hon. member has successfully placed on the record a statement which is untrue. I was in the house and so were other hon. members of this party and no member of the Conservative party made any such remark. That remark came from the hon. member for Burnaby-Coquitlam and he should accept full responsibility for that contemptible remark.

Mr. Speaker: I understand that at my request the hon. member for Burnaby-Coquitlam has withdrawn without any reservations whatever. I think we might well be satisfied with that withdrawal.

GRAIN

PROVISION FOR GUARANTEE OF BANK LOANS TO PRODUCERS IN PRAIRIE PROVINCES, ETC.

The house resumed, from Thursday, February 23, consideration in committee of Bill No. 82, to provide for short-term credit to grain producers in the prairie provinces to meet temporary financial difficulties arising from inability to deliver all their grain—Mr. Howe (Port Arthur)—Mr. Applewhaite in the chair.

On clause 3—*Minister's liability to a bank.*

The Deputy Chairman: Order. May I take the liberty of pointing out to hon. members that it is unfair to expect any member of the house to open this discussion with the noise that has been going on. I know that there is always this little disturbance while we get settled down, but let us please keep it as quiet as possible, because one of these times it may be ourselves who wish to speak, and I think we should extend the same courtesy to others as we would expect them to extend to us.

Mr. Nicholson: Mr. Chairman, I wonder if the minister could make a comment or two in regard to subclause (1) (e) (ii) at the bottom of page 2. This reads:

> fifteen hundred dollars, minus the aggregate, at the time of the application for the loan, of the moneys that have been paid or are payable for the sale of grain delivered by or on behalf of the borrower under his current permit book before the making of the loan and on or after the 1st day of August, 1955, other than for grain delivered and entered in the permit book as the balance of the 1954-55 eight bushel quota.

I wonder if the minister would indicate how the owner of the land might be eligible if he has been renting it. Common practice has been for a farmer, when he retires, to rent his land to his son or to a neighbour so that the owner pays the taxes and the renter pays one-third of the crop to the landlord if and when it is sold. Let us take a typical case where the crop is 6,000 bushels. The landlord is entitled to 2,000 bushels, and the renter has 4,000 bushels, out of which he must pay all operating costs, but the landlord must pay his taxes. At the present time the landlord will have difficulty in getting any cash until the renter has been able to market at least eight or ten bushels per acre. I wonder if the minister could indicate what provision, if any, has been made for the owner of the land to receive assistance under the subclause I have just mentioned.

Mr. Howe (Port Arthur): I thought I had made it clear that only the actual producer of the grain is entitled to borrow under this bill. The relations between the owner and his tenant are whatever they are under the law; but, so far as this bill is concerned, only the producer can borrow.

Mr. Nicholson: As I pointed out, the landlord is committed to pay the taxes. That is an essential part of the operation of any farm. Normally the tenant would deliver to the landlord his third of the crop by Christmas time, but under the present set-up the tenant must have at least 5 bushels per acre to meet actual cash disbursements. It seems to me that quite a large number of the owners of the 200,000 farm units in the prairie provinces are retired. They are too old to work the land and do not have a permit book. It seems to me there should be some provision for them. If a retired farmer has 2,000 bushels of grain which cannot be delivered it should be possible for him to get some assistance so that he can meet his taxes and pay his grocery bill.

Mr. Howe (Port Arthur): It seems to me that my hon. friend is putting up a straw man. If the tenant could deliver his grain freely he would give the farmer one-third of the money. If he borrows from the bank I suppose he can still give the farmer one-third of the money. The position is unchanged. The regulation is exactly the same as in the 1951 bill, and I am told that no single instance of the kind mentioned by my hon. friend was ever raised.

Mr. Johnston (Bow River): I should like to say a word on this clause. If I interpret paragraph (e) (ii) of subclause 1 correctly, $1,500 is the maximum amount that a producer can get. I also understand that if a producer has sold grain to the value of $1,000 he would only be entitled to an additional $500. If that is so I think it should be changed so that once the legislation comes into effect the producer may be entitled to get the full $1,500 regardless of whether or not he has in the past sold a few bushels of grain. As far as I can see, it should not make any difference whether he has already sold some grain before the coming into effect of the legislation. He should still be entitled to the full $1,500.

The bank is not bestowing a favour on the producer. The bank is carrying on a legitimate business for which they are being paid a fairly handsome rate of interest with an absolute guarantee. Therefore it seems to me that this is an imposition on the producer and he should be allowed to get the full $1,500 when the legislation is passed regardless of whether or not he has previously sold any grain.

Mr. Hansell: I should like to call attention to paragraph (d) of subclause 1 in which the rate of interest of 5 per cent is mentioned. Yesterday the hon. member for Acadia rose and put in rather concise form the fact that the government was in an excellent position to persuade the banks to grant these loans at cost. I agree with that and I do so on this basis. After all, I take it that the purpose of this piece of legislation is to meet an emergency. If an emergency had not arisen there would be no need for the bill. I am not going into a detailed discussion on that point. We all know the background and the reasons for the bill. The farmers have claimed that they need money by reason that they cannot sell their grain. Part of the responsibility for disposal of the farmers' grain falls on the government.

Now then, the government recognizes that this emergency exists and they have introduced this bill. But the fact remains that the farmers are going to be burdened with 5 per cent interest on a tragedy for which they are not responsible. Because of these circumstances we believe that it would not be unreasonable that in emergency legislation of this kind the banks be asked to lend money at cost. The other feature is that the banks are going to be guaranteed against loss. There will be very few losses sustained when the government, through this legislation, is going to guarantee the banks against loss.

Now, let me read what the hon. member for Acadia said yesterday at page 1507 of *Hansard,* the second column:

> That is why some of us wonder whether or not the government endeavoured to get the chartered banks to make loans at a lower rate than 5 per cent where the loans are guaranteed by the government.

Now, I will skip a piece here for the sake of brevity and read from the middle of the page. The hon. member for Acadia said:

> Remember that some years ago we had Mr. Towers before the banking committee, and he told us that he estimated it cost the banks approximately 3 per cent to create money. If it costs the banks 3 per cent to create money, then surely on loans guaranteed by the government they should be prepared to make loans at cost. As has already been pointed out, they are making loans at cost, if 3 per cent is the cost, to the wheat board, and they are making loans to the wheat pools at approximately 3¾ per cent, just three-quarters of one per cent above their cost as estimated by the former governor of the Bank of Canada.

Now, the following sentence is the pertinent one:

> In view of that fact, I think it would be interesting to know whether or not the government did attempt to get the banks to make loans at a lower rate than 5 per cent.

Then the hon. member for York West spoke. The government did not answer that question, and I think it would be interesting to know, in their talks with the representatives of the chartered banks, as to whether or not the banks were willing to grant loans at cost or grant loans at 3 per cent or 4 per cent, and what persuasive arguments the government used by reason of the emergency to ask the banks to grant loans at cost. I think that question should be answered and therefore, Mr. Chairman, I am going to move an amendment. It is a simple one. I move:

> That section 3 subsection (1), clause (d) be amended by deleting the words "five per cent", and substituting therefor the words "three per cent".

Mr. Howe (Port Arthur): It is quite impossible to do that because that would be imposing a unilateral change in an agreement. In other words, there is an agreement between the banks and the government and it has been outstanding for some time. The banks have lent large sums of money on the strength of the exchange of letters with the Minister of Finance. Personally, neither myself nor this party will agree to repudiate the signature of the Minister of Finance which is the signature of the government of Canada. If my hon. friend thinks that is good Social Credit practice we of the Liberal party do not believe it is sound government practice.

Mr. Coldwell: I do not think that is the question at issue, if I may say so with all due respect to the minister. That is not the question.

The Deputy Chairman: Order. I see the hon. member for Macleod.

Mr. Hansell: Mr. Chairman, I know the minister is aggravated. The debate has been going on for a long time, and we are now on a very important section of the bill. But I think that the minister's interjection "if that is good Social Credit practice" is entirely uncalled for. I will tell the minister what good Social Credit practice would be, and that is to bring down a bill and get the authority of parliament before striking an agreement with anyone else. That is what good Social Credit practice would be, and the people of this country should know now that Social Credit members would not override the authority of parliament.

Here is the point, Mr. Chairman. Many hon. members on this side of the house have risen and called attention to the government's flouting of the powers of parliament. Is there an agreement existing between the government and the banks? If there is an agreement existing between the government and the banks, then parliament becomes a rubber stamp.

I can understand how there could be an exchange of letters. That might be all right. I hope there is an exchange of letters between some other interested parties and the government as well as with the banks. The situation is this. The bill is now before us. We are discussing the bill. The committee has a right to amend any bill. It is my proposal that we amend this bill now. I cannot help how impractical it may appear to change the bill. If the government has made any mistake, that is its responsibility, not parliament's. We are saying what kind of bill we want now. This is not even the kind of bill we have been continually advocating. By reason of the defeats of previous amendments we are now forced into the position where we must fight for the best bill possible. We want to pass legislation which we believe in the circumstances is the best piece of legislation obtainable, and we claim now that the interest rate should be 3 per cent instead of 5 per cent. Therefore, we have moved this amendment, and the committee will have to deal with it regardless of whether or not the government stuck its neck out and reached some agreement with the banks. But I must confess I do not like this idea of governments making agreements and then bringing the bills here to be passed and then saying: "You have got to pass it because we have made the agreement".

Mr. Howe (Port Arthur): Mr. Chairman, I should have added that this bill, of course, is out of order. It calls for a change in the interest rate—

Some hon. Members: Hear, hear.

Mr. Howe (Port Arthur): I should have said "this amendment is out of order". It changes the arrangement that has been made. There is no indication whatsoever that the banks

would lend at 3 per cent. It imposes a charge on the treasury, and that of course is not the privilege of a committee of this house.

Mr. Hansell: On a point of order—

Mr. Coldwell: I was going to rise to say very much what the hon. member for Macleod has said. I do not think that the minister's objection is correct. My understanding is that in dealing with a charge on the people of Canada we may not increase the charge but we may reduce the charge on the people of Canada.

Mr. Howe (Port Arthur): On the treasury.

Mr. Coldwell: Well, perhaps that is dealing with something somewhat different. I think the minister is not correct when he says we cannot deal with this matter in committee. When I rose before I was going to make the point that I do not know what the Social Credit principle is, the C.C.F. principle, the Liberal principle, or the Conservative principle, but it is a parliamentary principle that no commitment regarding the expenditure of money shall be approved by this House of Commons before that commitment is made.

Mr. Howe (Port Arthur): That is what we are asking.

Mr. Coldwell: The government should have called parliament together before making this arrangement. And when we vote, as I presume we shall, my colleagues and I will vote for the reduction in the interest rate, but when we do that we shall not be repudiating any agreement that is made. What we shall be doing is failing to confirm the agreement that was undertaken, that was improperly given by the Minister of Finance on this occasion.

The Deputy Chairman: Before the hon. member for Prince Albert speaks may I say I believe the point has been made that the amendment as submitted is out of order in that it increases the charge on the public treasury. I may say now that I am unable to agree with that. Clause 3 (d) says that the act would come into operation if:

> The rate of interest charged by the bank on the loan did not exceed 5 per cent per annum simple interest.

The amendment is that the clause would come into operation if:

> (d) the rate of interest charged by the bank on the loan did not exceed 3 per cent per annum simple interest.

I am not ruling the amendment out of order. The hon. member for Prince Albert.

Mr. Diefenbaker: Mr. Chairman,—

Mr. Byrne: On a point of order, the member for Macleod has just pointed out that the money can be created by the banks in large sums or otherwise at the rate of—

Mr. Hansell: What is the point of order?

Mr. Byrne: Permit me to make this point of order.

The Deputy Chairman: Order.

Mr. Byrne: It will cost 3 per cent to create money, but that does not say that money can be created and administered in small loans as presumed by this legislation, therefore—

Some hon. Members: Order.

The Deputy Chairman: Order.

Mr. Byrne: —therefore it will require more than 3 per cent to lend money to the farmers under this legislation. The banks have said they cannot lend at less than 5 per cent. There would be a 2 per cent administration charge that would be charged to the treasury, and therefore it would be a charge on the treasury. For that reason, the amendment is out of order as there can be no legislation proposed or amended other than by the government. For that reason I feel that the amendment is definitely out of order.

Mr. Knowles: Mr. Chairman—
