The Deputy Chairman: Order. If the hon. member for Winnipeg North Centre is going to speak to the effect that this amendment is in order, he does not need to. I am bound here by the terms of the bill, and I am also bound by reasonable results which may flow from any action based on it, but I do not consider that I would be justified in saying that there are going to be a larger number of failures to repay loans because the interest rate is dropped. It is in case of failure to repay loans that the liability of the country comes into effect.

The point raised by the hon. member for Kootenay East is that if the banks charge 3 per cent, then some entirely new arrangement would have to be made whereby the government would have to raise another 2 per cent. With all respect to contrary opinion, I have to say that I cannot see that in this bill, and I cannot see any legal liability on the government of Canada under this bill unless a new section were brought in. In my opinion the amendment is in order in that it does not of itself place an additional burden upon the public treasury.

The hon. member for Prince Albert.

Mr. Diefenbaker: Mr. Chairman, I must say the Minister of Trade and Commerce has just enunciated a new principle of government; in other words, that parliament

must ratify anything that the ministers of the government do. In fact, he said that was a good principle of Liberalism.

Mr. Howe (Port Arthur): Mr. Chairman, my hon. friend is entirely misrepresenting my statement—I say the government must endorse the undertaking of a minister of the government.

Mr. Diefenbaker: Surely the government does not act by itself; it only acts through parliament.

An hon. Member: Not this government!

Mr. Diefenbaker: And this is just another example—

Mr. Gardiner: That is what we are doing.

Mr. Diefenbaker: My hon. friend has joined the chorus. As a matter of fact, this is another example of riding roughshod over the rights of parliament, making agreements. I know my hon. friends on the other side of the house laugh; but, Mr. Chairman, I have heard Mackenzie King, on occasions when he used to speak the tenets of liberalism, say that above everything else parliament should never be placed in a position wherein the government having entered into some arrangement parliament has to pass it. That is the attitude of this minister. It is just another step from 1948 when taxation was imposed by a radio speech.

Mr. Fleming: 1947.

Mr. Diefenbaker: Yes, 1947, when taxation was imposed by a radio speech.

Mr. Howe (Port Arthur): May I ask my hon. friend a question. Would he apply the principle he is just enunciating to treaties between governments?

Mr. Fleming: It is a different thing altogether.

Mr. Diefenbaker: This really is the epitome of nonsense. Since when did an agreement with a banker amount to a treaty between sovereign nations? As a matter of fact, sometimes having regard to the interest the government shows in great interests, I think it actually does believe that some of the great interests have the power to make treaties. Yes, that is a different proposition. I am surprised that the hon. gentleman secured such assistance from the Secretary of State. That is one of the exceptions—that is the only exception, the power that vests in the executive of the day to enter into treaties subject subsequently to be brought before parliament; but this is as yet an agreement with the banks, or a letter to the banks. A letter to the banks in his country does not, I hope, amount to a treaty or anything analogous to a treaty. As a matter of fact, this is just another example of this roughshod riding over parliament. I was amazed at the answer he gave to the hon. member for Macleod: "Huh, we did this; the Minister of Finance wrote a letter; it is going through and we are not going to have any amendments to it."

This is very much in keeping with the statement the Prime Minister made at the bar association meeting here in September—

An hon. Member: You are out of order.

Mr. Diefenbaker: Order? Mr. Chairman, have we arrived at a point where we cannot answer the constitutional misobservations of the government?

The Prime Minister said at the Canadian Bar Association in effect, when explaining the centralization of power in Ottawa: "The people require these things; they are requiring more and more from the central authority, and when they do we have to get the necessary power and the necessary revenue in order to satiate the demands of the people".

Unfortunately that seems to be the trend today, instead of leadership following demand. This example of the hon. gentleman saying, "Well, we wrote a letter and therefore we are not going to countenance any amendments", indicates exactly the degree to which this parliament, in the minister's view, has become simply an instrument to carry out the wishes of the cabinet made by agreement before parliament meets.

We had another example today, the latest one in connection with the Cyrus Eaton matter, which is just another example of what this government does.

Some hon. Members: Order.

Mr. Diefenbaker: It is another example, Mr. Chairman—

Some hon. Members: Sit down.

Mr. Diefenbaker: —of ministers of the crown interfering. In this latter case it is an interference in another country. It was a telegram in the Cyrus Eaton case, a telegram to the United States secretary of the treasury to hold up an action—

The Deputy Chairman: Order. I have no desire to interrupt any hon. gentleman who is entering this debate. Up to the present the hon. gentleman has been answering the point advanced by the Minister of Trade and Commerce as to why this amendment should not be adopted, but I ask the hon. member for Prince Albert to agree with me that if he is allowed to go into the merits of an entirely different case, which perhaps he quite properly referred to as parallel, but if he is going into the merits of something which I understand has to do with income tax on

minerals, then the statements he makes will be answered from other quarters of the house and we will be debating something which is not the question whether the interest rate should be reduced from 5 to 3 per cent.

Mr. Diefenbaker: I was just giving another example of the trend. I need not give any example because the answer of the minister indicates the supreme contempt he has for hon. members of this house. He says, "We wrote a letter"—

Some hon. Members: Order.

Mr. Diefenbaker: —and hon. members of the house must carry it out whether or not we believe it is an agreement which is necessary. It must be carried out whether the individual terms are agreeable or acceptable. I can see no reason, Mr. Chairman, why the suggested amendment should not at least be considered. As a matter of fact, as far as the one in question is concerned, I doubt whether it could be actually affixed to the bill as it is. But to give an answer which says in effect, we wrote a letter, take it or leave it, this dish of crow is yours, is not what we have the right to expect as members of the House of Commons.

Mr. Quelch: When the hon. member for Kootenay East spoke he suggested that we had implied that the cost of the creation of money by the banks was 3 per cent. He then went on to say that that would not cover the cost of servicing the money that had been created. When Mr. Towers in the banking and commerce committee referred to the cost of the creation of money as being 3 per cent he included in that the total cost, the cost of servicing the accounts, the cost of bank premises, the cost of wages to employees, the cost of investigation. That was the over-all cost. Surely hon. members are not so naïve as to think the mere physical action of writing up an account creating credit would cost the banks 3 per cent. That part would be practically costless. The expensive part is servicing the account arising from the creation of that money. There is one other point I want to refer to. When the hon. member for York West followed me he had this to say, as recorded at page 1507 of *Hansard:*

> . . . I dissociate myself entirely from any suggestion that the banks should be forced to deal in any manner whatsoever.

I never suggested in my statement that the banks should be forced. All I suggested was that they should be given the alternative, that either they would make the loans at 3 per cent or the government would. There is no suggestion that the government should force them to make loans at any given rate of interest. The point is that if they did not do it the government should.

Mr. Fleming: The Minister of Trade and Commerce in his latest outburst has introduced the ugly word "repudiation". It is a fantastic use of the word as applied to what is under discussion. This is not a case where any valid obligation binding on the government of Canada is being repudiated or is proposed to be repudiated. If it were I am sure those of us who are members of the official opposition would have nothing to do with it. We do not believe in repudiation; we always have opposed any proposal of repudiation. But the minister is completely mistaken in suggesting that there is now binding upon the people of Canada through the government of Canada any legal obligation. The only obligation that has been created in any sense whatever is the obligation which the government took upon itself by means of a letter written by the Minister of Finance to the banks of this country saying that legislation would be introduced. That is the only obligation there was. There was a moral obligation placed upon the government by that letter, but no legal obligation was created by it. The only kind of legal obligation that could be created would be one created by parliament. The government is asking us to create it, but the minister in this remarkable and silly statement he has made this morning about repudiation, assumes that a legal obligation is in existence now. We have reached the point where the minister is resorting to these utterly fantastic suggestions and charges in order to buttress a position which is so hopelessly weak. He does not attract any strength to the position by resorting to far-fetched suggestions of this kind.

There is no legal obligation in existence today as far as the people or the government of Canada are concerned. Only parliament can create any legal obligation, and that has not yet been done. So let there be none of this silly talk about repudiation as applied to what parliament is engaged in doing now, namely, deciding whether it shall permit the government to create a legal obligation and what shall be the terms of such legal obligation. We have a perfectly free hand in this parliament to decide on what terms we will permit the government to undertake such obligation.

Having been the person who raised the question last evening as to what discussions had been carried on by the government with the banks of Canada in relation to the interest rate, I wish to follow that up with one or two brief observations. I drew attention last

night to the fact that there are a good many people who would be happy to lend money with a guarantee of the government of Canada for an interest rate substantially less than 5 per cent.

There are two kinds of obligation that we have to consider here in a reasonable approach to a question of this kind. There are short-term obligations and there are term obligations. The government of Canada borrows money today on 10-year maturities through savings bonds at a rate of 3¾ per cent. Presumably an obligation with similar maturity terms guaranteed by the government would yield a similar return.

Here we are dealing with short-term obligations. The government guarantee is applied to an obligation which will mature in the ordinary sense in six months, as the minister indicated in his explanation last night. In that field the government today is borrowing at substantially less than the 3¾ per cent which is being paid by the government on 10-year maturities or on maturities of more than 10 years.

On the other hand, in a situation of this kind we have to make some allowance for handling charges. This is not simply a case of the government selling bonds. Some account has to be taken of the fact that these applications for loans must be processed, the bank must make certain investigations, certain prescribed forms must be completed and paper work will have to be done by the bank and in its contact with the government in order to put the guarantee into full effect. Anybody who believes in the scheme of this bill must take account of the fact that something must be allowed to the banks for handling charges.

But this does not yet provide an answer to the question that was asked last night. I think the Minister of Finance was here at the time or at least he had been here just before. He took his departure then and he has not appeared since in this committee of the whole during the discussion of this bill, as I think he should. He is the man who carried on the negotiations with the banks—and after I asked the question the Minister of Trade and Commerce said that he did not have anything to do with the banks, and it was the Minister of Finance who had carried on these negotiations. The Minister of Trade and Commerce said that he did not know what discussions the Minister of Finance had had with the banks about a proper interest rate. So the question remains unanswered because the Minister of Finance has not chosen to be in the committee or to acquaint the committee with the facts. I suggest that this committee ought to have an answer to the question before it deals with the clause and before it deals with this amendment. This committee is entitled to know what was the course of discussion between the government and the banks in regard to the interest rate.

I am sure that the Minister of Finance does not just write a letter out of the blue offering to introduce a bill to provide government guarantees for a scheme of bank loans. Surely the matter of interest rates must have entered into these discussions and before this house takes one step further it ought to be told in the plainest terms by the Minister of Finance what were the discussions and what was the position taken by the banks in regard to the maximum interest rate at which they were prepared to lend. We ought to know what was the government's position. Did the government make any serious effort to obtain for the farmers who will be borrowing under this measure an interest rate lower than the 5 per cent now contemplated?

I suggest to the government that the Minister of Finance should be sent for. He should come into the committee now and answer that question. This house has no right to go ahead passing a measure of this kind in relation to something that is going to be most important for the borrowers without having that information.

Mr. Howe (Port Arthur): My hon. friend is complaining that the Minister of Finance was not in the chamber when the question was asked, but I think I should say that my hon. friend was not in the chamber when the question was answered. If my hon. friend will look at page 1508 of *Hansard* of February 23 he will find that the Minister of Finance gave this answer:

> There were negotiations and conversations over several days with respect to all the terms of the loans that might be made. Opinions were expressed about the rate of interest and whether it should be lower or higher, and as a result of those discussions the conclusion reached is in this bill.

Mr. Fleming: That does not answer the question at all. We wish to know what was the position of the government. What position did the banks take? The minister simply said that there were discussions on various points and that this is the result. That is not an answer to the question. What did the government do? Did the government try to obtain some reduction in this proposed rate? We have not been given that information yet. If hon. members opposite are prepared to proceed without information of this kind, then I must say that I think they are being asked to act irresponsibly.

Mr. McCullough (Moose Mountain): Mr. Chairman, I do not see anything in this clause

that is good. We in this group at every stage of this legislation have endeavoured to have the bill given a hoist or taken from parliament and replaced with something more acceptable to the farmers. I do not agree with the hon. member who has just spoken. I think perhaps there was adequate discussion with the banks, but I think the point that should be made is that the discussion was not with the right people, the people who are going to have to pay the interest, namely the farmers. The farmers have not been given an adequate show in connection with this bill. No decision was made on their behalf. I think it can be truthfully said that the decision was made in accordance with the request of the banks.

I think I speak for this group when I say that we have been against this bill at every step. We would like to see the farmers given a square deal by being given cash advances. We are prepared to support any reduction, small as it may be, which would make it easier for the western farmer. I do not think there should be any interest. As has been said on former occasions, the farmer has done his part, he has produced his year's income in the form of grain now stored on his farm and which he cannot deliver through no fault of his own. The fault lies right on the doorstep of this government. Even a rate of 3 per cent would be easier for the western farmer and it would be better than the rate of 5 per cent presently provided.

Mr. Johnson (Kindersley): Mr. Chairman, there is one point I should like to have clarified by the minister before we go any further. As indicated on page 1498 of *Hansard*, the minister stated:

> These are small loans. The average is about $800, and the period of time would not be over six months.

The length of time the interest is in effect depends entirely, of course, upon the farmer's ability to deliver his grain and to retire the debt. The minister has stated on previous occasions that this legislation is aimed at assisting the small farmer in western Canada. The point I should like to have reconciled is this. How is a quarter-section farmer who is able to get a loan of $1,500 able to repay the loan within six months unless the minister by that statement has guaranteed that there will be at least a 16-bushel quota available at the end of the crop year? The maximum amount that a quarter-section farmer could deliver on even an eight-bushel quota is 1,280 bushels. It is apparent that it would require a 16-bushel quota for this quarter-section farmer to pay off the loan of $1,500 on the basis outlined in this legislation. Is the minister's statement that the interest will not carry on for more than six months a guarantee that there will be a quota of at least 16 bushels at the end of the crop year?

Mr. Howe (Port Arthur): A guarantee of a quota of 16 bushels per specified acre would mean deliveries of about twice that much, that is, 32 bushels per seeded acre. Does my hon. friend know many farmers who can deliver 32 bushels per seeded acre?

Mr. Johnson (Kindersley): He knows the quota is on the specified acreage. You cannot say a quota is 32 bushels when it is only 16 bushels. With an eight-bushel quota, the farmer with 160 acres would deliver eight times 160 bushels, that is, 1,280 bushels.

Mr. Gardiner: There are no such farmers.

Mr. Howe (Port Arthur): There are no quarter-section farmers who plant every acre they have to wheat.

Mr. Johnson (Kindersley): That is worse. He will not have the opportunity to deliver an eight-bushel quota. His opportunity to deliver would be limited even further.

Mr. Howe (Port Arthur): Now, Mr. Chairman—

Mr. Johnson (Kindersley): The minister is revoking the statement he made that the interest would not apply for over six months. He has indicated that it may carry on for a year or perhaps even longer.

Mr. Howe (Port Arthur): I was speaking of the average rate. Just as the average amount of the loan is $800, I said the average period of the loan would not exceed six months.

Mr. Drew: Mr. Chairman, this is an issue which is a little different from a mere question whether three per cent or any other particular percentage is an appropriate amount. What has practically been placed before us as the issue upon which we must vote is whether or not we have the right to vary any provision of this act.

The minister has propounded a doctrine that, because the government committed itself to certain arrangements without consulting parliament we are therefore bound to the detail of those arrangements. I submit that we have not before us the evidence that would make it clear whether or not three per cent is the figure that could appropriately be charged, but I am satisfied that the minister has made the issue here whether we have or have not the right to vary any provision of this bill.

I must say that I do not know—and I do not think any other hon. member knows, including the member who moves this amendment—whether in fact three per cent is the appropriate figure. From day to day the amounts that must be charged by government vary. However, the minister has put this on the ground that we have no right to challenge the rate of five per cent because this government has committed itself to the banks and therefore we must abide by that decision. If that principle were to be accepted, all that would be necessary for the government to do in any case would be to abandon the ordinary procedure, enter into improper arrangements in advance of the meeting of parliament, make commitments to various corporations or other bodies in this country and then come before parliament and say, "Because we have done this, you cannot discuss any variation. We are pledged, and it must ride or fall in detail as we have put it before you." That would deny to this parliament the right of discussion, which is the very foundation of parliamentary democracy. That, I think, is an issue which the Minister of Trade and Commerce does not understand, but he has made that the issue in the amendment that is now before us.

I am reluctant to support an amendment setting forth an exact figure which does not have supporting evidence to tell us whether or not it would be the right amount. But I am prepared to support this amendment as a challenge to the statement of the minister that they have made the commitment for five per cent and that stands no matter what the effects are. On that ground I shall certainly support this amendment as an acceptance of the challenge that parliament has no right to vary any figure in this bill.

I think also that the minister has made a statement here that should not go without notice. He said just a few minutes ago that the government must endorse the decision of a member of the government. We have had brought before us here, by a steady process of prodding and prying and questioning, decisions by various ministers that were unknown to the other ministers. If they were going to follow the course of being committed in every case to what is done by those ministers without the knowledge of the other ministers, then we would indeed have reached a point where parliament would be impotent to guide the affairs of this country. That would apply with more force to the members opposite than to the opposition. It would be the responsibility of the members opposite in particular to challenge a proposition of that kind. That proposition would mean that every hon. member opposite who supports this government is reduced to the role of a rubber stamp and that by his unquestioning vote he denies to this parliament the real freedom of discussion and the formation of opinion which should decide the course of legislation in this parliament of Canada. I hope hon. members opposite will recognize what the issue is here. I for one support this amendment for the reasons I have put forward.

Mr. Howe (Port Arthur): Mr. Chairman, I think I should say that the government has never questioned the power of parliament to change the opinion of the government, whatever might happen to the government. Of course, parliament has that power. My hon. friend says we deny him the right of discussion. It seems to me he has been discussing it at great length, and so have other members. We do not question his right to change the decision of the government. We question whether he has the votes to do it.

Mr. Knowles: There is one piece of evidence that I think should be on the record in connection with this matter. The evidence to which I refer is on the table of the house, in the form of a sessional paper, but I do not think it has yet been placed on the record of *Hansard* so that those who follow *Hansard* might read it.

Reference has been made to the undertaking which the government gave to the banks. The minister said earlier that the government and the Liberal party would stand behind that undertaking. He has confirmed that view now by saying to the Leader of the Opposition that he cannot command enough votes to change the views of the government. In other words, the minister is quite satisfied that those on his side of the house will stand by the government so far as this matter is concerned.

I think it should be pointed out that the Minister of Finance, the Minister of Trade and Commerce and other members of the government have lived up to the undertaking they gave to the banks. Three letters were written to Mr. F. W. Nicks, president of the Canadian Bankers' Association, the Bank of Nova Scotia, Toronto, Ontario.

This evidence is found in three letters which are contained in sessional paper No. 189 which was laid on the table of the house on Monday, February 13. The letters were written on October 28, 1955, November 25, 1955, and January 20, 1956. I want to read only short extracts from one or two of them. In the first letter which was signed by the Minister of Finance there appears this paragraph:

> I am authorized to inform you that legislation in some respects similar to the Prairie Grain Producers Interim Financing Act 1951, will be introduced in parliament at the earliest opportunity to provide for a guarantee by the Minister of

Grain

Finance to the chartered banks of loans made under section 88 of the Bank Act and subject to the following additional conditions . . .

I will not read the conditions. There are about two pages of them. The concluding paragraph in the first letter reads as follows:

Loans made by the banks in advance of the legislation under the terms and conditions above described will become guaranteed loans when the legislation comes into force, and I should appreciate your confirmation that, in the meantime, the banks will participate in making such loans.

Those are the only two references in that first letter to anything that might be called an undertaking. The government undertook to introduce legislation. That is all they undertook to do. I think the letter was poorly worded in the last paragraph when the Minister of Finance used the phrase "when the legislation comes into force." I think he should have had enough respect for the rights of parliament at least to say, "if and when the legislation comes into force."

Some hon. Members: Oh, oh.

Mr. Knowles: Oh, my hon. friends opposite laugh at our concern for the niceties of parliament but the niceties of parliamentary procedure are important. The other two letters, those dated November 25, 1955, and January 20, 1956, indicate changes that were made in the proposed legislation, and all they say that bears on the point now being discussed is that the Minister of Finance is authorized to inform the banks that the legislation to be introduced will be along certain lines. Surely it is clear, Mr. Chairman, that the only undertaking the minister gave to the banks was that legislation would be introduced. That has been done, but surely parliament has the say as to what should happen to that legislation.

Mr. Tucker: I should like to say a word with regard to the rate of interest. In promising to introduce this legislation the government was doing as the farm leaders asked them to do at that time, and naturally they wanted a workable system introduced. There is no use introducing a system whereby the banks would not get a guarantee unless they lent money at a rate of interest at which they would lose money. In other words, if you set the rate of interest too low it would mean that you would be putting a plan into effect that would not work at all. Therefore the only question so far as I am concerned is whether the rate of interest has been set as low as it possibly can be and expect the plan to work.

On that basis I remember what happened when we were putting through the Farm Improvement Loans Act. At that time some of us felt the rate of interest should be lower that 5 per cent. We heard a great deal of evidence and it all went to show that if the rate were set at 4 per cent the banks could not lend at that rate without losing money. They pointed out that if we put the rate of interest at 4 per cent we might just as well not pass the bill because nobody would be able to borrow money under it at that rate.

The majority of the members on that committee came to the conclusion that, although they would have liked to see a lower rate because there was a partial government guarantee, it was more important to the farmer to be able to get money to improve his farm and buy machinery and so on at 5 per cent than for them to make heroes of themselves by setting the rate at 4 per cent with the result that the farmer would not get any money at all. That is why the rate was set at 5 per cent, and obviously when it was set at 5 per cent at that time it was based upon the cost of doing business of the banks and of the money.

A little over one year ago this whole question of cost of making small loans was dealt with in the banking and commerce committee where we had evidence of the experience of the Canadian Bank of Commerce in making small loans. I should like to refer quickly to the evidence given there. During the year ended October 31, 1953, the average amount of loans was $515. During the whole period the plan had been in operation the average amount was smaller than that but that was the average during that year. The bank was charging an effective rate of interest of 10·46 per cent, almost 10½ per cent. Against the plan it charged 2·05 per cent as the cost of providing the money, so it was not charging a high rate for the cost of the money.

In spite of only charging roughly 2 per cent, the cost of doing business in making small loans was such that their operating profit before income tax was 1·46 per cent. In other words, while they charged only 2 per cent against their banking operations for the money they put into the small loan plan, after taking into account the cost of making these small loans their operating profit before income tax was 1·46 per cent. The cost of operation in making these loans in small amounts was such that even though they charged 10·46 per cent to the borrower and were only getting interest at 2 per cent representing the cost of providing the money they only had a profit of 1·46 per cent.

If you take what the bank got out of it by way of interest and profit, 2 per cent and 1·46 per cent, they got 3·46 per cent and

charged 10·46 per cent. So according to the actual figures it was costing the bank 7 per cent to conduct this business. That is 7 per cent over interest. I grant that if loans average more than $500, as they probably will be in this case, it will cut down the cost of doing business, but I ask hon. members this question. If, over and above the cost of the money, it costs the bank up to 7 per cent to administer a small loan plan of this type, even with a low rate of interest of roughly 2 per cent, then are the banks not going to say that they will lose money if we only give them 1 per cent over the 2 per cent representing the cost of the money to do business and will there be any money lent at all when, according to the evidence, it cost them 7 per cent to engage in the small loan business over and above the cost of the money?

Mr. Coldwell: Will the hon. member permit a question?

Mr. Tucker: Surely.

Mr. Coldwell: There was no guarantee of those loans by the government and, second, there was no advertising of the loans and therefore no advertising expense.

Mr. Fleming: And third, they are not secured.

Mr. Tucker: The amount spent on advertising by Canadian Bank of Commerce was only ·15 per cent, just a little over one-tenth of one per cent. So that does not affect the argument. With regard to the partial guarantee, obviously if you say to the banks that you will guarantee them against losses but will only let them collect a rate of interest on which they are going to lose money on every bit of business they do, then you might just as well kill the bill. Everybody must know that. In trying to get a deal with the banks whereby the farmers would get some money the government had to make a deal whereby the banks were likely to lend some money, and had the government done differently the farmers of western Canada would have had a right to complain.

I think I understand the situation of the farmers of western Canada. They need money to meet their living expenses and so on. A rate of 2 per cent on $1,500 for six months would be $15.

I do not think that any farmer would appreciate it or thank us for saying that we are so worried about wanting to save you some interest we are going to prevent you from paying that $15 of extra interest, even if it means you will not get any money at all. If my hon. friends opposite really believe that the farmers need money to carry them over, surely they would not vote for an amendment that would mean this bill was, in effect, killed and the farmers would not be able to get any money at all under the plan. I will have no hesitation in voting against this amendment because the effect of the amendment would be to say to the farmer, we are being so concerned about you that we are going to say you cannot borrow at all. Of course, we will cover it up by advancing the idea we are in favour of low interest rates.

I believe in facing the facts. We have the experience under the Farm Improvement Loans Act and the evidence given to the banking and commerce committee in regard to the Small Loans Act. In the light of the evidence that has been put before the banking and commerce committee over and over again, nobody could suggest that the banks could hope to engage in this business at 3 per cent without losing a lot of money. Then, do my hon. friends opposite say that if the banks are invited to go into the lending business at a point where they are going to lose a lot of money they are going to put out money to the extent required by the farmers? They know themselves that the effect of carrying this amendment would mean that the farmers would get no more money under this plan. Is that what they want? Well, it is not what I want. I should like to see the farmers receive the benefits the government intended them to receive under this legislation, and at a reasonable rate of interest for small loans, namely 5 per cent. I have no hesitation in saying that I intend to vote against this amendment.

Mr. Drew: Mr. Chairman, to use a term that was coined by the Minister of Trade and Commerce, this is rapidly degenerating into a debate. There are one or two things that have been said by the hon. member for Rosthern that require some comment. First of all, there is one correction, and that is that the act that was being considered by the banking and commerce committee was not the Small Loans Act, but the Bank Act. There is also the fact that the kind of loans that were being considered were very different from these. There was no guarantee. There was no security such as there is in this case. In addition to that there was the very large cost of advertising and solicitation to get the loans. The position is not at all comparable.

I have said, without any reservation, that we have not the facts before us that would make it possible to determine exactly what the percentage should be. I view this amendment more in the light of an assertion that we have a right to demand an examination

of the interest rate, rather than a declaration that we know whether it should be 3 per cent or any other amount. I quite recognize that what the Minister of Trade and Commerce has said is correct. We have the right of discussion, but it is more than the right of discussion that is involved. There at least must be the inference that the government is prepared to listen to arguments. After all, the right of discussion has no meaning in the light of the proposition put forward by the Minister of Trade and Commerce when he said, we do not question that you have the right of discussion but we question whether you have the votes. In other words, it does not make any difference what you say; you go ahead and talk, but if we have the votes we will just simply go ahead. Of course, implicit in everything that has been said is that we will crack the whip and our followers will toe the line.

In this proposition there is more than the substance of the amendment. It is a question of whether discussion in this house is still an attempt to try to reach some reasonable conclusion. We have put forward a proposition that has been dealt with, and I cannot suggest to you whether or not it was wise, that is that this should have been referred to a committee.

An hon. Member: You are out of order.

Mr. Drew: I am not out of order at all. We would have provided an opportunity in that way. I still suggest to this government that in the light of the discussion that has taken place this morning they consider the advisability of providing an opportunity not only to the farmer representatives but to the representatives of the banks as well, so that we could have the facts before us in regard to this case. In so far as the argument used by the hon. member for Rosthern is concerned, I can only express some measure of satisfaction that he did not make that argument over television in western Canada or some more television sets might have been endangered as a result.

Mr. Quelch: I find it very difficult to believe that the hon. member for Rosthern was really serious when he was trying to get us to believe that making loans under the small loans branch of banking is comparable to making loans under this legislation. The loans under the Small Loans Act are very small. They go down to $50. The average loan under this legislation to date is $800; that is a fairly large sized loan. Is he going to suggest that making loans of an average size of $800 is similar to making loans under the small loans branch, which is a very specialized form of making loans? The fact is that the small loan companies have been charging 2 per cent per month in the past and that shows a rate very much higher than general banking practice. The fact that the Bank of Commerce was charging around 10 per cent for small loans while they were charging an average of 5 per cent or 6 per cent on their general banking practice shows the big difference between the two.

As the Leader of the Opposition has pointed out, under the small loans branch the banks have the cost of investigation, the cost of a chattel mortgage and various things. Under this legislation they have wheat in the bins. In addition, the farmer goes to the banker and signs certain statements before the loans are made. Then the bank does not even have the cost of collection. The loans are collected by the elevator companies. The two are totally unrelated, therefore. Of course, on top of that the loans are guaranteed by the government. The hon. member should think twice, therefore, before he asks members in this house to believe in what I call the ridiculous suggestion he just made.

Mr. Argue: The hon. member for Rosthern has made a real plea in favour of what I consider to be a very high rate of interest. I do not believe his argument is well founded when he compares this legislation to the small loans legislation. His argument was not well founded according to his own words because he pointed out the cost of a small loan was somewhere around 7 per cent and therefore if loans under this legislation cost less the banks would be losing money. I do not believe even the hon. member for Rosthern thinks the banks are going to lose money under this legislation.

We are going to support the amendment because it goes at least part of the way towards the end we have been attempting to accomplish. No one has said money could be made available without any cost. Loans or cash advances cannot be made available free, without some charge to somebody. But we have continuously said that there should be no charge to the producer. I take it the hon. member for Macleod is now saying that if we have lost the fight to have advances made without any cost at all, the next best thing is to attempt to get the 5 per cent reduced. On the other hand, the hon. member for Rosthern is arguing in favour of a high interest rate, namely 5 per cent. Some years ago he was well known for ideas about monetary reform. A large part of those ideas was to get interest rates down. He argued this morning to maintain high rates of interest. The hon. member for Rosthern is arguing that the full cost of any advance or any loan that

is made to the farmer, plus the profit involved, must be borne by him. If the amendment should carry there will be nothing to prevent the government from moving a further amendment to this legislation to make up any loss that might be incurred, if there should be any loss, and I am not convinced there would be at the rate of 3 per cent.

What the hon. member for Rosthern is arguing is that the farmer shall pay the whole shot. The hon. member for Macleod is saying that we at least should be making some contribution as the parliament of this nation toward seeing that the farmer gets a loan at a reasonable rate.

Mr. Johnston (Bow River): I wish to say a few words on this. When the hon. member for Rosthern was speaking I attempted to ask him a question but he did not want to be interrupted at that point.

An hon. Member: That is his privilege.

Mr. Johnston (Bow River): That is his privilege and I am taking advantage of my privilege now in asking the question. At this point I am not much concerned whether he answers it or not. The hon. member was indicating that it costs the banks about 2 per cent on their money to carry these small loans. Then he said the cost of administration was about 7 per cent, making a total of 9 per cent. Of course, he did state quite emphatically that the type of loan he was describing then, and the type of loan which the Bank of Commerce was making, which was in effect a small loan, was the same as the loan contemplated in this legislation. He made no differentiation at all; in fact, he said they are the same. Now, that would mean—

Mr. Tucker: I did not say they were the same. I said the average amount during the past year has been $525. I said these loans would be bigger, and therefore the cost would be lower. But I said it would cost 7 per cent to administer an average loan of some $500 odd. They certainly could not administer loans of twice that for one per cent.

Mr. Johnston (Bow River): I do not think the hon. member should be making a speech now. I asked for the privilege of asking a question a while ago and the hon. member refused me that privilege. He definitely said—and I am sure the record will bear this out—that they were very similar loans. Let there be no misunderstanding about that. He went on to point out that an interest rate of 5 per cent was, in his opinion, a reasonable one. And yet he pointed out that every time the banks make a loan under the small claims act they have to charge around 10 per cent. That would lead us to believe—and he will have to correct me if I am wrong in this interpretation of his remarks, I do not think I am—that every time the bank would make a loan to a farmer under this legislation they would in effect be losing 5 per cent. That is just nonsense, Mr. Chairman.

Mr. Tucker: Mr. Chairman—

Mr. Johnston (Bow River): Wait a minute until I get through; you sit down. You would not give me permission to ask you a question, so just keep your seat.

Mr. Stick: Dictator.

Mr. Johnston (Bow River): It is quite evident, Mr. Chairman, that the hon. member for Rosthern is now trying to salve his own conscience in his support of the government introducing this legislation. Maybe I should be excused for using that word, but I have used it and I shall have to let it stand. I am sure the farmers of western Canada, and particularly of Saskatchewan, will not be too pleased when they find that the hon. member for Rosthern is upholding in every way he possibly can this high rate of interest when in fact he knows it should be lower than that.

The amendment moved by the hon. member for Macleod would not prevent farmers from getting money under this legislation. If it were carried—and I hope it is carried—it would say that the farmers would now be obliged to pay 3 per cent instead of 5 per cent. In fact, I am sure the farmers of western Canada deserve the benefits which would be derived by them from parliament carrying this amendment.

Mr. McCullough (Moose Mountain): Mr. Chairman, it took a certain amount of courage on the part of the hon. member for Rosthern to rise and defend the 5 per cent interest.

Mr. Tucker: It took no courage; it was just a matter of honesty on my part.

Mr. McCullough (Moose Mountain): Perhaps I should have said it would take more courage in other parts of the country to say it.

When the hon. member tries to make an argument in justification of the high rate of interest that is to be charged farmers under this legislation he points up the fight that we have been trying to make that we should have this thing done at a smaller cost to the western farmer. If it is true that, in the words of the hon. member for Rosthern, the banks are going to have difficulty in even making a profit on loans to farmers at the

high rate of 5 per cent interest, then I think there is every justification for the case that we have been trying to make that loans should be made through the Canadian wheat board, and that this government should give the responsibility and the power—

The Deputy Chairman: Order. I am afraid I must point out to the hon. member that the amendment we are now discussing is not whether the loans should be made through the wheat board or through the banks, but whether they should be made at 5 per cent or 3 per cent.

Mr. McCullough (Moose Mountain): Well, Mr. Chairman, I am going to try to confine myself within the orbit of the discussion. There is a discrepancy between the interest cost and how the loans should be made to the farmers. We are now discussing whether the interest rate should be 5 per cent or whether we should support the amendment of the hon. member for Macleod to reduce the rate to 3 per cent.

It is significant that under this legislation the elevator agents are to be the people responsible for collecting the money. They are to be responsible for making the returns to the bank. When we come to clause 9 of the bill we shall find that those elevator agents who are designated by this government are to be responsible for collecting those loans. I do not know what they are to be paid for it; I do not know how far their responsibility will go. If we had designated the wheat board as the lending agency, had advanced money to them and then had them collect it through an entry in a permit book we would have had a simple process, and I do not think the arguments made by the hon. member for Rosthern could have been maintained in any way.

If this complex process is going to cost the farmer 5 per cent interest, and if the banks are not going to make substantial profits, it seems a clumsy way in which to try to get a little money into the pockets of the farmers.

Mr. Hees: Mr. Chairman, I should like to ask the minister just one question. Did the government, in its negotiations with the banks, ask them to handle those loans at less than 5 per cent? If so, what was the banks' reaction?

Mr. Howe (Port Arthur): Now, Mr. Chairman, I have already said that I was not present at the negotiations. The negotiations with the banks were conducted by the Minister of Finance. I have the statement of the Minister of Finance on *Hansard* that negotiations extended over several days. If there had not been an attempt by the Department of Finance to get a lower rate of interest I do not know why the negotiations should have taken so long.

Mr. Hees: Mr. Chairman, I wonder whether the minister would ask his colleague, the Minister of Finance, to come into the committee and answer that question. It is one of the key points around which this whole clause revolves. If the minister has not the answer, will he ask his colleague to come into the house—he must be close by—and answer the question.

Mr. Howe (Port Arthur): Has my hon. friend suggested he might change his vote if he had more information?

Mr. Hees: Mr. Chairman, that is typical of this government's attitude towards discussion in this house. I have asked a straightforward question, and I would like a straightforward answer on a very important point, a point which is extremely important to the farmers who are asked to pay this interest rate on their loans. If the minister does not have the answer on this important point, would he ask his colleague to come into the house and give the answer.

Mr. Howe (Port Arthur): Mr. Chairman, my colleague is attending an extremely important meeting at the moment. I think the answer I have given on his behalf is sufficient. He has already said that he negotiated long and arduously. I do not know if he could give you any more information if he were here.

Mr. Hees: That is not an answer to any question. The answer the minister has given to my question is that we have discussed all aspects of this question and at the end have come to a decision which is reached in the bill before you. That is absolutely no answer, and we can therefore assume from this, Mr. Chairman, that the government did not ask the banks to handle these loans at less than 5 per cent, but it simply offered the banks 5 per cent and that is the sum total of this matter.

Mr. Carter: Mr. Speaker, I rise to point out to my hon. friends opposite that the effect of this amendment will be to give a much lower rate of interest to farmers than that which they voted to give to the fishermen last year. For that reason I am unable to support it and I ask them how can they honestly support it if they believe in the principle of equal treatment for all?

Mr. Argue: We will extend it to the fishermen.

Mr. Johnson (Kindersley): Mr. Chairman, I think there is one fundamental thing we

have to keep in mind in discussing the interest rate proposed by this legislation. It is that you cannot make a silk purse out of a sow's ear. By amending legislation that is unsavory you can perhaps make it smell a little better. We in this group are in favour of the recommendation advocated by the farmers of western Canada. It is proposed by this amendment the legislation might be slightly more palatable, but I think the principle we are concerned with is the desirability of introducing legislation that meets with the favour of western Canada. By amending the legislation certain groups are accepting the principle of the interest payment, which would indicate that they are perhaps showing some favour towards the bill. I would point out that in honesty to the people of the Kindersley constituency who are unalterably opposed to this type of legislation you cannot improve it in this manner to meet the desires of the farmers in my constituency.

Mr. Hahn: It would appear from the discussion that is taking place at this time that the minister would have been well advised to have brought this to the committee on banking and commerce or the committee on agriculture and colonization either of which could properly have dealt with it; however, we must ask our questions here.

I was rather intrigued by the hon. member for Rosthern when I discovered he was persuading himself that the interest rate was perfectly justified especially when I read the act. I understand that the act was negotiated between the Minister of Finance and the banks.

Clause 3, sub-clause 1, paragraph (d) of the act specifically says the interest rate charged by the banks on the loan did not exceed 5 per cent per annum. That would indicate to me that it is not mandatory to charge 5 per cent and that the banks themselves recognize that they could have given interest at a rate lower than 5 per cent. Therefore I would suggest to the hon. member for whom we all have a great deal of respect that certainly he should have taken that little phrase, "did not exceed 5 per cent" into consideration before having made those particular remarks.

The hon. member for Kindersley earlier in the debate asked certain questions of the minister in respect to a quarter-section farmer and the minister in reply indicated that it would take longer than six months in some cases to repay this loan. However, the bill itself does not indicate that and there is no provision for that. I find here that the amount of the loan is payable on the first day of October. If a quarter-section farmer makes a loan in May or June that does not provide a six months period and then the bank can come to the government and expect a repayment of the guaranteed loan. I was wondering if possibly the minister might elaborate somewhat on that point and indicate how we are protected against an instance such as that. Probably the farmer wishes to pay his bill but he does not have the money because he has not been able to deliver his wheat. The farmer is going to be put in the awkward position of having a loan come due and the banks, of course, can come to the government for the guarantee. Would the minister care to comment on that?

The Deputy Chairman: I would suggest that that question could be properly asked under the operative part of this bill, but it would widen unjustifiably the discussion on the amendment which we now have before us. I would suggest to the hon. member that when the amendment has been disposed of he should then ask his question.

Mr. Hahn: With all due deference to your remarks, Mr. Chairman, I would point out that the hon. member for Kindersley did raise this question in the course of the discussion on this amendment and that was the reason for my bringing it up at this time.

Mr. Hees: As the Minister of Finance is now in the house, will he answer my question? Were the banks requested to handle these loans at less than 5 per cent, and if so, what was the reaction of the banks to that request?

Mr. Harris: I understand that in my absence at a meeting of the treasury board the Minister of Trade and Commerce has already quoted what I said last night. I answered that question last night and I do not propose to add anything to the answer I gave at that time.

Mr. Hees: There has been no answer given to that question. The minister simply said that all matters pertaining to the loans were discussed and the bill is now before us as we see it. There has been no answer given to my question. I am asking you to give me a straight answer to a straight question. Were the banks requested by the government to handle these loans at less than 5 per cent, either yes or no. And if so, what was the reaction of the banks to that request? That is a simple straightforward question and I should like a direct straightforward answer.

Some hon. Members: Question.

The Deputy Chairman: Shall the amendment carry?

Mr. Hees: Mr. Chairman—

Some hon. Members: Sit down.

Mr. Hansell: All I am going to say on this particular point is that it is quite obvious to me that the government in its negotiations with the banks did not fight for low rates of interest. If there had been any controversy about it the Minister of Trade and Commerce would have known of it.

A further proof is this. In the return that was brought down, return No. 189, the first letter that was written on October 28 by the Minister of Finance to the president of the Canadian bankers' association states in the first paragraph:

> May I refer to the negotiations that have been carried on between representatives of the chartered banks and representatives of the departments of finance and trade and commerce with a view to facilitating loans to grain producers in western Canada.

It then goes on to set out certain conditions, the third one being:

> (iii) that interest on the loan does not exceed 5 per cent simple interest.

That was the first letter. I do not think there is much controversy there. In the second letter that was written certain changes were made, but there was no change in the interest rate. Some further changes were made in the third letter that was written but it contains no suggestion of any reduction in the rate of interest. I take it from that that the rate of interest was not a controversial matter, that the government did not fight for a lower rate of interest but simply suggested that 5 per cent was all right and they would let it go.

Mr. Habel: May I ask the hon. member what rate of interest is charged by the Alberta treasury branches for farm loans and is it not a fact that even at that the treasury makes good the losses?

Mr. Hansell: I cannot answer that definitely, but I can tell you what they charge me when I go to the Alberta treasury branch for a loan. They charge me 5 per cent.

Mr. Knowles: Does that mean that you had not received your yearly pay?

Mr. Hansell: I have had to borrow. I think the banks would charge me the same rate. I have no objection to paying it, but that is not the principle involved here. In this case the farmers are facing an emergency and this bill has been brought down as a result of that emergency.

I may say that the Alberta treasury branches would have liked to come under this bill. They wrote to this government and asked if they could receive the same guarantee as the banks, but they were refused the same protection. I do not know whether they would have loaned money under this bill at a lower rate of interest, but it is conceivable they might have. You cannot compare what the treasury branches are doing now with what they might do under protective legislation of this kind. That is my answer to my hon. friend and I think it is quite a reasonable answer. They are lending money to municipalities at a very low rate of interest.

Mr. Hees: In view of the refusal of the Minister of Finance to answer a straightforward question, we can only take it—I would like to hear him deny it if it is not so—that the government was perfectly satisfied to have the farmers charged 5 per cent and made no effort to have the interest rate reduced. I would assume also from the government's attitude in this matter that the government suggested the 5 per cent rate of interest.

Mr. Diefenbaker: Mr. Chairman, all the conclusions which the hon. gentleman has just mentioned seem to be conclusively established by the minister's failure to answer, but I think we can get this cleared up. The Prime Minister is here and he is the leader of the government. I ask him a simple question: Were the banks approached to accept less than 5 per cent?

Mr. St. Laurent (Quebec East): The banks were approached to make loans to farmers under the best possible conditions under which they would agree to make such loans.

Mr. Yuill: Mr. Chairman, for the peace of mind of hon. members opposite who have been inquiring about the interest rate charged to municipalities in Alberta I would like to tell them that I have been the mayor of Barrhead, Alberta, for 12 years. During that time we got loans from the provincial treasury, and I can also tell you something about grants. On more than one occasion we were able to borrow money for as low as 2 per cent when we were putting in our water and sewer facilities. We borrowed other money at 3 per cent, some at 3¼ per cent but never more than 3½ per cent.

With regard to municipal assistance, may I say that this town of less than 2,000 population received a direct gift of $13,642. We got enough from the Alberta government to pay them back 100 per cent.

The Deputy Chairman: I thought the hon. member had risen to discuss comparable interest rates, but I must point out that we are not discussing municipal grants.

Mr. Blackmore: Mr. Chairman, I think the noisy people across the way are beginning to see how completely ridiculous their position is. When a government really wants to help people it goes to work and does something for the people, not try to gouge them the way this bill does.

I should like to draw the attention of the hon. member for Rosthern to one or two facts which he knows very well. If the Bank of Canada has a $100 bond of the dominion government submitted to it, it can create $100 without its costing anybody anything. It could just as well be a $100,000 bond. If every dollar of the money to be loaned to farmers was obtained from the source from which the dominion government can get money, the Bank of Canada, that could be done by simply writing a Dominion of Canada bond and putting it in the hands of the Bank of Canada. I know the hon. member for Rosthern knows that. It is most important that every hon. member knows that and that the country knows that.

I should like to know whether the hon. member for Rosthern will take the untenable position that the dominion government should not have ample money created by the Bank of Canada in order to lend at 2 per cent.

The Deputy Chairman: I think I should point out that the hon. member for Rosthern should not be permitted to answer that question as we are not dealing with the question of government manufactured currency. We are dealing with the question of bank loans.

At one o'clock the committee took recess.

AFTER RECESS

The committee resumed at 2.30 p.m.

The Deputy Chairman: The committee has under consideration Bill 82, clause 3, and the amendment thereto by Mr. Hansell. Is the committee ready for the question on the amendment?

Mr. Blackmore: Mr. Chairman, when the committee rose, I had just asked the hon. member for Rosthern if he could deny the fact that the Dominion of Canada could get money completely free from the Bank of Canada and, if the Dominion of Canada could get that money, whether or not there was any reason why they should not subsidize the interest rate of 5 per cent so as to reduce it to 2 per cent. Money that would be created by the Bank of Canada would be completely free. It would not come from the taxpayers. It would not constitute a debt. Consequently, the very first thing the hon. member for Rosthern has to do before he can establish the necessity of having 5 per cent interest on these loans is to show that in this case the Bank of Canada should not be used to bring down the interest rate to two per cent. I believe that the considerations I have brought before the committee are such that the committee simply cannot afford to support the proposal for 5 per cent interest.

Mr. Howe (Port Arthur): Mr. Chairman—

Mr. Argue: Question.

Mr. Howe (Port Arthur): I think there are several questions that need to be discussed at this stage.

Mr. Drew: What is this, a filibuster?

Mr. Ellis: A one-man filibuster.

Mr. Howe (Port Arthur): In the first place I was interested in the speech by the hon. member for Eglinton. He said there was no agreement between the government and the banks. There were two letters written—

Mr. Fleming: On a point of order, the minister has said that I said in debate there was no agreement between the government and the banks. I did not say that. What I said was that there was no legal obligation created. I said there was simply a moral obligation, created by the letters from the government, to introduce the legislation.

Mr. Howe (Port Arthur): That is just the point I was going to make. There is no legal obligation created by the exchange of the letters, but certainly a moral obligation, which just shows that you have to be very careful with whom you do business, particularly financial business. I shall remember that remark by the hon. member for Eglinton.

Mr. Fleming: I hope you remember my remark and not your paraphrase of it. Is the government filibuster over?

Mr. Weir: No, Mr. Chairman, I am rising on a matter—

Mr. Hees: Government filibuster.

Mr. Weir: I do not know why government members should not participate once in a while in a debate.

Mr. Drew: Neither do we.

Mr. Weir: It should not be monopolized by the opposition. As a matter of fact, I am rather surprised they should continue this debate so long if this measure is so bad. Why not let it go through and let the public decide whether or not they want to pass their judgment in favour of it or otherwise?

Mr. Ellis: Why not have a vote now?

Mr. Weir: I was interested more particularly in this item of interest, having to do with

the amendment that has been proposed by one of the members of the Social Credit group.

Mr. Hees: There are enough in now.

Mr. Weir: For one thing, what it amounts to—

Mr. Ellis: Are there not enough Liberals in the house now?

Mr. Hees: Here they come.

Mr. Fleming: You can sit down now.

An hon. Member: Here they come.

Mr. Fleming: Here they are to toe the party line.

Mr. Weir: All I was going to observe during those interjections was that my wife thinks I am a pretty good looking fellow, and I am quite prepared to let you look at me.

An hon. Member: Order. Keep to the bill.

An hon. Member: What has that to do with wheat?

Mr. Weir: What I was leading up to was this. I was associated for some years with a farm organization that gave a great deal of credit—

An hon. Member: Not Social Credit.

Mr. Weir: —to matters affecting the costs of production for agricultural producers. Among the items to which they gave a great deal of consideration was the matter of credit, and one of the things that we learned in our experience in those times—

Mr. Fleming: Was to stall.

Mr. Weir: —was that the more prior the claims that were placed against fresh mortgage securities, then the higher the interest rate was bound to be, and I think that is sound. Now I come to the other point, and that is whether or not an interest item should be charged in making loans to individual farmers. In spite of what some of my hon. friends on the other side are arguing, I think it is logical and fair that an interest item should be charged. I am not going to argue as to what rate of interest that should be.

Mr. Fleming: Are you going to vote for that?

Mr. Weir: I am going to vote for the bill as it is,—

Mr. Fleming: Toe the party line.

Mr. Weir: —subject to any changes which may be made that will improve it.

Some hon. Members: Oh.

[Mr. Weir.]

Mr. Weir: What are my hon. friends arguing about? The government has provided in this measure for guaranteed loans to farmers through the banks at a rate of interest of five per cent. I presume that, had a lower rate of interest been secured from the banks, the guarantee required would have had to be higher. I think that is logical and reasonable, and that is the approach that has been made here. Interest on a loan of $1,000 at five per cent for a period of six months, if I have calculated correctly, amounts to $25. If the same loan is secured at four per cent, it amounts to $20. What is this argument about between a four per cent and a five per cent loan? For a six months period on $1,000, it means $5. My hon. friends also argue on the basis that this money should have been provided through the wheat board. If that is their argument and if they maintain that the expense thereof should be borne by the wheat board, I say that is unfair as an item to be charged under operating expenses.

Mr. Ellis: What clause are you speaking on?

Mr. Weir: I am talking on the interest item on which you have been talking all morning. Some people will be borrowing by means of these bank loans, and others will not. It is wholly unfair to say that the man who does not need to borrow should pay the interest costs of the man who does need to borrow. I shall go one step further in the same regard on this item. I look to the man who may have some securities but has a right to borrow, under the argument of my hon. friends opposite, an interest-free loan, but I go further and I take the case of a man—there are many such—who may have a mortgage on his farm, on which he is paying interest. He is able to sell a certain amount of grain in his deliveries this fall and from that should have paid off his mortgage. But, instead of paying off his mortgage, he did not do so, but retained that money that he had secured from the sale of his grain for pocket money to pay expenses and so forth. Is anybody going to say that somebody else is to get an interest-free loan while that man is continuing to pay 5 or 6 per cent on the mortgage money he has borrowed? That to me seems wholly logical, and there is no argument on it.

I doubt very much if my hon. friends opposite could stir up very much interest in the country over the item of interest itself. When farmers get accommodation of this kind, I think they would be expected to pay interest on it. I simply come back to what I pointed out earlier, that the argument here

seems to be over a matter of $5, between a $1,000 loan for six months at 5 per cent as compared with the same loan for the same period of time at 4 per cent. That is all I wish to say on that.

Mr. Ellis: What about 3 per cent?

Amendment (Mr. Hansell) negatived: Yeas, 52; nays, 88.

The Deputy Chairman: I declare the amendment lost. Shall clause 3 carry?

Mr. Argue: No, Mr. Chairman. Will you put the question on the clause?

Clause agreed to: Yeas, 92; nays, 54.

On clause 4—*When minister not liable.*

Mr. Fleming: Mr. Chairman, there is a question that arises on clause 4 of the bill. In effect this clause of the bill puts every one of the chartered banks in Canada on an individual basis in applying to the loans made by that particular bank certain limitations of the total extent of the government guarantee. May I ask the minister in the first place if all the banks have indicated that they intend to participate in the scheme of these loans? I have a second question that will then arise.

Mr. Harris: Yes, all the banks are participating.

Mr. Fleming: Then clause 4 means that with respect to each one of the chartered banks and looking at any one of them individually there are certain over-all limitations on the extent of recovery against the government under the guarantee. Would the Minister of Finance indicate to the house just how this is going to work out? I should think it will necessitate very close supervision from day to day unless the banks were prepared to proceed on the assumption that the loss on such loans would be a mere trifle and that they had no need to worry about the limitation that clause 4 puts on the government's responsibility under this guarantee. For illustration, what is the extent of the lending of individual banks now in relation to the limitations imposed by clause 4?

Mr. Harris: I regret that I cannot give that information. As a matter of fact, as a result of the inquiries in the committee last night I tried to ascertain this morning what the figures were for January but they are not compiled yet. Therefore the only information I can give is the total number of loans and the total amount involved up to the end of December, and I think that was given in a return.

Mr. Fleming: We have already had that, but I was wondering how with respect to any individual bank clause 4 involving this matter of the over-all limitation is going to apply at the present time. I should think that the banks are going to want to have some day-to-day over-all control on the loans that their individual branches are making in view of the over-all limitation applied.

Mr. Harris: I do not see that that would be necessary. The guarantee is unlimited to the extent of $50 million. The only distinction is that the percentage of guarantee diminishes after $100,000. But in view of the fact that up to the end of December the amount involved was about $8 million I would think there is really no reason why any bank would feel that it was making so many loans that it would exceed the $50 million.

Mr. Fleming: I realize it must apply to each individual bank, but can the minister give us any over-all idea at all how this particular clause will apply to any individual bank to the extent to which that bank has already participated in the scheme of loans?

Mr. Harris: I think the clause is quite clear. Any one bank is guaranteed in the manner indicated by subclause (a) (i) and subclause (a) (ii). We will of course be expected to report to parliament in any event, and if my hon. friend will let the matter rest I will be glad to give the January figures as soon as they are received and also, if I can, break them down by banks. He will then see the extent of participation by any one bank.

Mr. Argue: Could I ask that when those figures are given they also be broken down by provinces?

Mr. Harris: Oh yes, we can do that.

Clause agreed to.

On clause 5—*Regulations.*

Mr. Diefenbaker: I should like to ask the minister whether or not as of this date forms of application and directions, etc., have been drafted and if the minister has those forms available. Would the minister mind tabling the forms that have been prepared so far? As has already been stated, the original forms contained such a complete catechism that they naturally aroused a great deal of antagonism. The newer form does not have the same effect on the applicant as did the earlier one. Would the minister say what regulations, if any, have been passed as of this date? If regulations have not been passed, what forms are being used and to what degree are the banks directed to make loans on the basis of qualified applicants measured by the formula that the minister referred to, namely, that the borrower shall be able to establish that he has in fact a certain number of bushels of wheat on his premises? I should

also like to know whether any form or return is made by the banks under this or any other section setting out the names of applicants who have applied for loans and have been turned down.

I believe it was the minister who stated the other day he did not think there were very many. I have no idea of the numbers but I do know that in the course of the last three weeks I have received letters from 17 or 18 farmers who were turned down, who had on their premises the necessary wheat, but having advised the local bank manager as to the purposes for which they desired the money, namely the payment of some current liabilities other than for actual groceries and the like, the explanation given in these various cases was that these loans were not intended to cover instances such as were contemplated by the intended borrower. I should like the minister to give some kind of assurance because farmers are asking, what is this legislation? Why is it that unless an applicant is practically in a position where he could actually borrow on his own security, in certain branches of certain banks the application is being denied?

Mr. Howe (Port Arthur): We have been told several times in this debate, Mr. Chairman, that we cannot have regulations when the bill has not been approved.

Mr. Diefenbaker: But you have tentative ones.

Mr. Howe (Port Arthur): We have tentative ones. I am told that the forms that are used for applications for loans and certain other forms were tabled in the house this morning in the usual way. My hon. friend says that people who have the required amount of wheat have been turned down. I should like to know what the other circumstances were, how many liens were filed on the wheat. So far as the government is concerned, the two requirements are that borrowers give evidence that they have the wheat that is required by the amount of loan for which they apply, and that it is not pledged under section 88 to some other bank.

What was the other problem?

Mr. Diefenbaker: I asked generally about the use of the money and the refusal of the bank on the basis of a proper application.

Mr. Howe (Port Arthur): Yes. The bank has no right to ask what the money is going to be used for. Such information is not required by the government, and although my hon. friend says it is required by the bank, I cannot challenge that statement, but I doubt it. I have received many letters myself from people who expressed surprise at the ease with which they obtained loans. One said he had never met a bank manager before but was delighted with his reception and with the ease at which the loan was forthcoming. I cannot believe that, if there had been any great resistance in carrying out the spirit of this legislation, I would not have heard about it before directly from the persons concerned.

Then, the hon. member asked if the application for a loan was filed with Ottawa. The applications for loans that are granted are filed with Ottawa, and must be, because Ottawa guarantees each individual loan. I think that answers the question.

Mr. Diefenbaker: Would the minister also indicate the machinery? I am a farmer who goes into a bank and signs an application. Is it still a fact that that application has to be sent to Ottawa for consideraion here? If not, what is the explanation for the delay between the time of the application and the granting of the credit where credit is granted?

Mr. Howe (Port Arthur): Of course, the application is not sent to Ottawa as now suggested. The bank manager must determine whether that same grain has been pledged to another bank. He does that, as I understand it, by telephoning the clearing house at Regina. It should not require much time, and I doubt if it is a matter involving any great time. The bank manager has to make that one search of the title to the grain.

Mr. Diefenbaker: Is there any submission to the Bank of Canada or the officials here?

Mr. Howe (Port Arthur): No, not before the loan is granted. When the loan is reported, it is filed here at Ottawa.

Mr. Argue: I want to mention the point about the ease with which an applicant may be able to get a loan. I want to say the information I have received in many instances is contrary to the information or the letters to which the minister referred. I have information that it is very difficult for many applicants to get loans, and for many of them the amount of the loan they are able to obtain is a good deal less than that for which they have applied.

I want to ask the minister about some cases based on information given to me on the way particular applicants were treated. A farmer went into a bank and asked for a loan. He was provided with a loan of $700 on December 20. The minister has said it is not proper for the bank to take any part of the farmer's loan to discharge any other responsibility that the farmer may owe the

bank at that time. As I understood the information the minister gave to the house before, it is not proper for a bank manager to deduct from the amount of money the farmer may obtain under this legislation the amount of money that may be owing the bank at that time under the Farm Improvement Loans Act.

In this case at the time the application was made the bank did not attempt to deduct the amount owing under the Farm Improvement Loans Act. Here is the way the bank operated according to the information given to me. The farmer was given a loan of $700 on December 20. It was deposited to his account. The farmer came back 11 days later to take the $700 out of his account, but the bank had moved in in the meantime and taken $300 out of it to pay moneys owing under the Farm Improvement Loans Act. I am wondering if that practice is proper, and whether the bank had any right to use a back-door method to accomplish something I understand is improper, and perhaps even illegal. When a farmer is making an application, is it within the right of the bank to move in a few days later after the loan has been made and take from the amount the farmer received an amount owing to the bank?

Mr. Howe (Port Arthur): The action of the bank some days after the loan has been granted is a matter for a lawyer. It has nothing to do with this act. Your correspondent had better discuss it with his lawyer to see whether the bank had a right to go into his account and take $300.

Mr. Argue: What is the point of having this kind of legislation and having the minister say it is improper for a bank to deduct from the amount of money a farmer can obtain any amount he may owe under another act if the bank, a few days later, can come in and take that money from the farmer's account?

Mr. Howe (Port Arthur): Surely you would not expect the Minister of Finance or the Minister of Trade and Commerce to guard that money for 11 days after it was paid to the farmer. If he had put the money in his pants pocket and walked away, you might as well expect us to protect him from being robbed on his way home.

Mr. Fleming: There is a point I should like to raise with reference to one subclause of clause 5. The clause in general permits the governor in council to make regulations, and then paragraph (e) reads:

(e) respecting subrogation of Her Majesty to the rights of a bank with respect to a guaranteed loan.

As hon. members are aware, the purpose of subrogation is to permit the guarantor or surety, in the event of default, to step into the rights of the person who has put up the loan in the first place. In this case, presumably the intent of the section is to permit regulations to be passed under which Her Majesty will be able to step into the position of the bank in relation to the rights of the bank as against the original borrower.

Now, while the regulations are not technically in existence, nevertheless the whole borrowing scheme is and I would like the minister to indicate what the provisions in regard to subrogation contain in this regard. Would he outline with particularity the procedure that is provided for and contemplated in the event of default? If it is clear that default has been made and the farmer is not in a position to remedy his default, what are the steps then to be taken?

Mr. Howe (Port Arthur): I can read to my hon. friend the regulation under the 1951 legislation. I assume that the same regulation would apply in this legislation. The regulation reads:

Where payment is made by the Minister of Finance to a bank under the act in respect of any loss sustained by the bank as a result of a guaranteed loan, the bank shall execute a receipt in accordance with form "E" in the schedule to these regulations or a form to the like effect in favour of the Minister of Trade and Commerce, and the Minister of Trade and Commerce on behalf of His Majesty shall thereupon be subrogated in and to all the rights of the bank in respect of such loan and without limiting the generality of the foregoing, all rights and powers of the bank in respect of the loan, and in respect of any judgment in respect thereof obtained by the bank, and in respect of any security taken by the bank for the repayment thereof shall thereupon be vested in the Minister of Trade and Commerce, on behalf of His Majesty, and that minister shall be entitled on behalf of His Majesty to exercise all the rights, powers and privileges which the bank had or might exercise in respect of such loan, judgment or security, and to commence or continue any action or proceeding in respect thereof, and to execute any documents necessary by way of release, transfer, sale or assignment thereof, or in any way to realize thereon.

Mr. Fleming: Mr. Chairman, that dealt with the first part of my inquiry. The minister has indicated that similar regulations are in contemplation here. There can be no doubt that the regulation he read from the 1951 act provides for complete rights of subrogation so that if similar regulations are passed under the authority of clause 5 we may assume then that Her Majesty will step into all the rights that the banks enjoy under their original contractual relations with the borrower.

This raises the question as to the policy as well as the question as to procedure. I would ask the minister whether he would deal with the second part of my inquiry? Assume that

the fault has arisen; that the bank has satisfied itself that there cannot be any immediate recovery, and that the borrower is not in a position to remedy his default, put himself in good standing, and the government has been called upon to make good the guarantee. Is it the intention of the government in any such case to insist that the bank should first take judgment, or what process is the government going to insist that the bank take before it will be satisfied to pay under the terms of the guarantee? Assume that the circumstances have arisen under which the government has paid on the guarantee, what is the procedure contemplated and the policy in view on the part of the government with respect to enforcing the rights to which it is subrogated?

Mr. Howe (Port Arthur): Mr. Chairman, the action would depend upon the circumstances of each individual case. I might tell my hon. friend though that in connection with the 1951 legislation there was no case in which judgment was obtained against the borrower.

Mr. Quelch: Mr. Chairman,—

Mr. Fleming: May I just follow that up? May I take it, then, that it is not the intention of the government to insist that the bank shall obtain a judgment and presumably a return of "no goods" on the execution issued under the judgment before it will pay on its guarantee to the bank?

Mr. Howe (Port Arthur): Well, I am not going to say what the intention would be. I do not know what the circumstances will be. All I can say is, it is a matter of record that loans were defaulted under the 1951 legislation and no judgment against the debtor was obtained.

Mr. Fleming: And the government made good its guarantee without insisting on a judgment being taken? Is that the minister's answer?

Mr. Howe (Port Arthur): That is right.

Mr. Quelch: Mr. Chairman, I was somewhat puzzled by the reply the Minister of Trade and Commerce gave to the hon. member for Assiniboia. I was wondering whether the Minister of Finance would agree with the minister's statement. I gather from what the minister said that if a farmer owed the bank money and then borrowed from the bank under this legislation, the only safe thing for him to do would be to draw that money out of the bank in currency, put it in his pocket and walk away with it; otherwise, there would be nothing to stop the bank from raiding that farmer's account and taking out the money he has in it.

Mr. Howe (Port Arthur): I said nothing of the sort. The hon. member for Assiniboia was mentioning what had happened to cash deposited in the bank eleven days after the deposit had been made. My point was that the government's responsibility is no different then from what it would have been had the farmer, instead of depositing it in the bank, put it in his pocket and walked away with it. Eleven days earlier the government had passed out of the picture. The money passed out of the jurisdiction of the government when the loan was made and the money paid over.

Mr. Quelch: The only safe way is for the farmer to take out in currency the money that he borrows and take it away with him because—

Mr. Howe (Port Arthur): I suggest that is your statement, not mine. I made no statement that can be twisted or turned into that statement.

Mr. Quelch: You said that eleven days later the bank might consider raiding the account. The logical thing for the farmer borrowing from a bank to do would be to deposit it in the bank. Then he could issue cheques against that. It might take eleven days for those cheques to come back to the bank, and by the time the cheques came back his account might be marked N.S.F. because the bank had in the meantime raided the account. That is a very unsatisfactory situation. There should be some understanding with the farmer. If this legislation is being passed for a specific purpose, then the bank has no right to seize the money when it is deposited.

Mr. Howe (Port Arthur): I have only the word of the hon. member for Assiniboia on that point.

Mr. Argue: I have the evidence in my hand.

Mr. Howe (Port Arthur): Why not give it to a competent lawyer in your district and have him take action?

Mr. Quelch: That is not the point. It should not be necessary for a farmer to have to go to the expense of hiring a lawyer to safeguard himself under this legislation. I should like to have an interpretation of the situation from the Minister of Finance. Does he think it is ethical for a bank to raid the account of a farmer when money is deposited under this legislation?

Mr. Harris: Mr. Chairman, I do not think we ought to be too much concerned about an isolated case. One does not know precisely what the situation may have been. As everyone knows, when a customer in indebted to a bank he may very well sign an authority

to the bank under which the bank may at any time take some sums of money for the purpose of adjusting accounts. In this particular case I have no doubt whatever that the hon. member for Assiniboia is correctly reporting what he has been advised. But let us suppose that at the time the borrower said to the bank manager: Now, I am going to have to spend about $500 to pay this and this, and when I get through with that I may have no other debts. But I want $900 now to be sure I have more than enough. We cannot be sure that there was not a tacit understanding that at some time if there was a surplus in the account the bank manager might take it by agreement or understanding.

Mr. Johnston (Bow River): Mr. Chairman, may we have some understanding of this from the Minister of Justice? The hon. member for Acadia asked a very important question. It is a legal question. The minister pointed out a particular case. I can understand that in a particular case, such as the instance given, the borrower may have given the bank the right to take certain moneys from his account and apply them on a bill owing to the bank. But generally speaking, we should have a statement from the Minister of Justice telling us whether the banks have the right to take money from an account, money which has been obtained under this legislation, and then make deductions from the farmer's account in order to offset it against that which he owes to the bank without authority from that individual farmer in that particular case.

Mr. Harris: Mr. Chairman, excuse me if I answer before the Minister of Justice. The whole purpose of the legislation is to assure to the farmer the maximum amount of the loan. It has been understood that the banks will not take from the loan the amount of their indebtedness in other respects. Now, if it happens that a bank manager has done this, and if there has not been an understanding between them, I shall be glad to communicate with the bank concerned, because the purpose of the legislation is to give additional ready money to the farmer. I do not think we need a legal opinion; all we need is the persuasion of public opinion and the desire of parliament.

Mr. Argue: Mr. Chairman, I want to thank the minister for the remarks he has just made. I do not see anything wrong with the bank suggesting to the farmer that part of that money might be used to make a payment under the Farm Improvement Loans Act but it seems to me it should be done by agreement at the time the loan is made.

Mr. Harkness: I should like to ask the minister a question with regard to paragraph (f). What is the form and purpose in which it is envisaged the reports of the banks to the Canadian wheat board will be made?

Mr. Howe (Port Arthur): Before a new permit book can be issued it is necessary for the wheat board to know what loans are outstanding against the book which is being replaced. The reference has to do with the endorsement of the permit book.

Mr. Harkness: As I understand it, then, the sole purpose of this paragraph concerns the issuing of new permit books. Is that correct?

Mr. Howe (Port Arthur): Yes.

Mr. Harkness: And that is the only reason for a report to the wheat board at all?

Mr. Howe (Port Arthur): Yes.

Clause agreed to.

On clause 7—*Effect of endorsement.*

Mr. Howe (Port Arthur): Clause 7 (a) provides that no manager or operator of an elevator shall, after the coming into force of this act, receive for storage grain delivered by or on behalf of the borrower who made the endorsement.

It is found that while that provision was contained in the 1951 legislation it is not required in this legislation and I would ask my colleague the Minister of Finance to move:

That clause 7 of Bill No. 82 be amended by deleting paragraph (a) therefrom and relettering paragraphs (b) and (c) respectively as (a) and (b).

Mr. Diefenbaker: That of course removes an obvious anomaly in this section. However, I should like to draw the remainder of the clause to the attention of the committee. The part I refer to is this. If the manager of an elevator, or in other words the local buyer or any other person, receives delivery of grain, then that person becomes personally liable by action or proceedings for the recovery of the amount owing to the bank to the extent of the value of the crop that was delivered to the elevator buyer or manager.

There was a similar section in the old act. I should like to ask the minister what was the experience in the 1951 act in relation to the whole of clause 7. Were there any actions taken to the knowledge of the minister or his officials under this clause? I would think this imposes a very heavy onus on the buyer, the elevator operator or manager of the local elevator. It may be that it is just one of those clauses that has been borrowed holus-bolus out of the old act and stuck into this one, if I may use that expression.

But if it were actually enforced it imposes a heavy liability on the local buyer and one which few buyers would be willing to undertake.

Would the minister let the committee know the experience under the old act, because I personally know of no action taken under the old act and I wonder whether or not there were any such actions taken.

Mr. Howe (Port Arthur): Mr. Chairman, my responsible officer tells me that under the old act there were no cases where the money was not collected and turned over to the bank as provided in the legislation.

Mr. Nicholson: It would appear to me there should be an additional amendment in paragraph (c). Reference is made there to paragraph (b). I imagine the minister would want to move another amendment. Where the letter (b) appears in line 26 of paragraph (c) it should be changed to (a).

Mr. Howe (Port Arthur): That is correct. Thank you for the correction. I am just having the amendment written out. We discovered it at about the same time my hon. friend discovered it.

Mr. Argue: Two good lawyers.

Mr. Howe (Port Arthur): Yes.

The Deputy Chairman: In the meantime, would it be the wish of the committee to pass the first amendment? Is the amendment already moved by Mr. Garson agreed to?

Some hon. Members: Agreed.

Amendment agreed to.

Mr. Howe (Port Arthur): A further amendment, which is really part of the same amendment, is moved as follows:

That in new paragraph (b) the words "paragraph (b)" in line 26 be amended to be "paragraph (a)".

The Deputy Chairman: I think the committee has heard the motion made by Mr. Garson. Is this amendment agreed to?

Some hon. Members: Agreed.

Mr. Zaplitny: Mr. Chairman, just before we leave clause 7 I wish to refer again to what is now paragraph (b) with the amendment which refers to the responsibility of the manager of the elevator with respect to the bank taking proceedings to collect. I should like to know whether that means the person responsible as manager of the elevator, the person who at that time happens to be the manager, or what we call an elevator agent, or whether it could also refer to any person succeeding him in that job who assumes that responsibility.

For example, at the time a loan was granted there may be one particular person who is the agent of a particular elevator. He gets moved, let us say, 30 days later before the loan is paid back. Does the new agent who replaces him assume the same responsibility that is placed upon the current agent by this act?

Mr. Howe (Port Arthur): The man responsible would be the man who accepted the wheat and endorsed the permit book knowing that there was a claim registered in the permit book against that particular grain. It would be the operator at the time the grain was accepted for delivery.

Mr. Zaplitny: Regardless of whether that particular agent happens to be still an agent of the company by which he is employed, and regardless of the fact that he may have moved away entirely and taken on other employment, he still carries on that responsibility as an individual. Is that the case?

Mr. Howe (Port Arthur): He had no responsibility. He made no loan. The loan was made by the bank. The only responsibility on the agent is that when grain is presented for delivery on a permit book against which is endorsed an undischarged loan, it is the duty of the elevator agent to make out two tickets, one for the farmer and the other for the bank.

Mr. Zaplitny: Mr. Chairman, I can hardly agree with the minister when he puts it that way. I will read the words in the paragraph that are pertinent to the question:

the bank in whose favour the endorsement was made may recover any of the moneys to which it is entitled under paragraph (b)—

—which now reads paragraph (a); and these are the words—

by action or proceedings against the manager of the elevator or other person receiving delivery of the grain or receiving such moneys—

The responsibility of the agent or the manager of the elevator does not cease when he has issued the duplicate ticket. The bank may take action or proceedings against him. It must be remembered that clause 7 begins with these words:

Notwithstanding any other act or law—

That means that this legislation supersedes any other act or law and is a law unto itself. I can hardly agree with the minister that when a responsible agent issues a duplicate ticket on the delivery of grain he should be faced with the possibility of having action or proceedings taken against him. How long will he have to face the possibility of a bank taking proceedings against him even though

he may be no longer employed by the elevator company on whose behalf he purchased the grain? Does that go on indefinitely or is there any limitation?

Mr. Howe (Port Arthur): The only case where there could be continuing liability would be where he diverted money taken from the farmer and intended to be paid to the bank. If he proceeded normally when the grain was delivered, if the storage ticket was properly made out, he would have discharged his liability. But if he puts the bank's share in his own pocket and leaves the job I suppose he would be liable for whatever penalty is provided under the Criminal Code.

Clause agreed to.

Clause 8 agreed to.

On clause 9—*Offence and penalty.*

Mr. Diefenbaker: This is the clause to which I raised strong objection the other day, but not with regard to subsection 1, which reads:

> Every person who, after the coming into force of this act, in respect of a guaranteed loan
>
> (a) knowingly makes any misrepresentation in any application or other document or wilfully furnishes any false or misleading information; or
>
> (b) if he is a borrower and his loan has not been repaid in full, delivers, or causes any other person to deliver on his behalf, under a permit book that has not been endorsed by the borrower as required by this act, any grain of which he is the actual producer,
>
> is guilty of an offence and is liable on summary conviction to a fine not exceeding five hundred dollars.

To that section there can be no objection because it is similar to previous sections dealing with misrepresentation. However, subsection 2 does go somewhat further. In most summary conviction matters there is an ordinary limitation of six months, but this subsection provides for a limitation of two years. There may be good reasons for the extension of the limitation because of the circumstances connected with transactions under this legislation, but the subsection to which we in the official opposition take strong exception is the following:

> (3) When a person is convicted of an offence under this section, there shall be imposed on him, in addition to any fine, a penalty equal to the amount of the guaranteed loan that has not been repaid by him together with interest on the loan to the date of payment of the penalty—

Mr. Howe (Port Arthur): Perhaps I could shorten this discussion if I tell my hon. friend that I am going to ask my colleague to move the following amendment:

> That clause 9 of Bill No. 82 be amended by deleting subsection (3) therefrom.

Mr. Garson: I move accordingly.

Mr. Diefenbaker: That is the subsection to which I raised the strongest objection because it provides for imprisonment for debt under the summary convictions section of the Criminal Code. The failure to pay a fine imposed under the summary conviction clauses has the alternative of a sentence of six months in jail. I contended that it was iniquitous legislation to imprison for debt. I thank the minister for moving this amendment because that is the way that I think parliament should operate.

Amendment agreed to.

Mr. Nicholson: Paragraph (a) of clause 9 reads:

> knowingly makes any misrepresentation in any application or other document or wilfully furnishes any false or misleading information;

It is a practice in western Canada to do a large part of harvesting with combines and I am sure that there is no farmer who could estimate accurately the amount of grain he has in his granary. Therefore I am sure that 99 farmers out of 100 will be providing false information as to the quantity they have on hand. Subclause 2 reads:

> A prosecution under subsection (1) may be instituted at any time within two years from the time when the subject matter of the complaint arose.

Then paragraph (b) reads:

> If he is a borrower and his loan has not been repaid in full, delivers, or causes any other person to deliver on his behalf, under a permit book that has not been endorsed by the borrower as required by this act, any grain of which he is the actual producer,
>
> is guilty of an offence and is liable on summary conviction to a fine not exceeding five hundred dollars.

Section 694 of the Criminal Code reads:

> (1) Except where otherwise expressly provided by law, every one who is convicted of an offence punishable on summary conviction is liable to a fine of not more than five hundred dollars or to imprisonment for six months or to both.
>
> (2) Where the imposition of a fine or the making of an order for the payment of money is authorized by law, but the law does not provide that imprisonment may be imposed in default of payment of the fine or compliance with the order, the court may order that in default of payment of the fine or compliance with the order, as the case may be, the defendant shall be imprisoned for a period of not more than six months.
>
> (3) A summary conviction court may direct that any fine, pecuniary penalty or sum of money adjudged to be paid shall be paid forthwith or, if the accused is unable to pay forthwith, at such time and on such terms as the summary conviction court may fix.

The people who are going to be affected by this legislation are short of cash although they may have plenty of grain. Certainly it would not be difficult to establish that a farmer has given information not in accordance with the facts, and a penalty of $500 would seem to be

heavy under circumstances where the maximum amount he can borrow is $1,500. If a farmer cannot put his hands on the cash and must go to jail for six months it would seem a most objectionable provision. I feel sure that, when farmers are confronted with this possibility, even a smaller percentage will apply for loans than applied in 1951. I wish the minister would consider reviewing this section so that the penalty would not involve a farmer going to jail if he found himself in the position where he could not market any grain for cash and had nothing with which to pay his fine except grain.

Mr. Garson: Mr. Chairman, the fact that the section in question has received the approval of an hon. member who, I think we will all agree, is one of the most eminent criminal lawyers in Canada, the hon. member for Prince Albert, should indicate that there is not very much wrong with it from the standpoint of the accused. Otherwise the hon. member for Prince Albert would not have approved it.

I might say for the benefit of my hon. friend from Mackenzie that in drafting a bill of the sort that we now have under consideration the draftsman has to take into account the existing body of the law. Although it may seem to my hon. friend that this clause creates an offence which he may have thought did not exist before, actually the effect of this clause is to change this stated set of facts which would otherwise constitute the offence under the Criminal Code, of obtaining credit by false pretences, which would be triable upon indictment and carry a maximum penalty of ten years. Having regard to the fact that the offence contemplated here is of a less serious character than the usual offence of obtaining credit by false pretences, it has been set up in the form of what in effect is an amendment to the code. This bill provides that any misrepresentations under clause 9 (1) (a) shall be an offence triable upon summary conviction, for which the penalty shall be a fine not exceeding $500. I think my hon. friend from Mackenzie will agree that this is a very much lesser maximum penalty than ten years' imprisonment. That being the case, the effect of this present provision, as I have said, is to reduce very greatly the character of the offence and the nature of the punishment from what they would be under existing law.

After the accused has been found guilty—not, as my hon. friend has suggested, of merely conveying wrong information, but of knowingly making any misrepresentations in any application or other document or of wilfully furnishing any false or misleading information—he would be punished much more lightly and, we think, much more fairly, in relation to the kind of case that my hon. friend from Mackenzie has just suggested, than he would be if we were to have left the law as it would have been but for the passage of this clause.

Mr. Nicholson: Mr. Chairman, will the Minister of Justice agree with me that any farmer who has a granary full of grain will admit very frankly that when he says he has 1,200 bushels in the granary, that is misleading, and it might be 1,100 or 1,300 bushels?

An hon. Member: Knowingly.

Mr. Nicholson: I think at some point later he will be forced to admit that it is misleading information as to the exact amount of grain he has. I think the Minister of Justice could come out with some sort of wording that would be less offensive and some way of imposing penalties that would be less severe than we have in this legislation.

Mr. Garson: With all deference to my hon. friend, I would suggest to him that the language that has been proven by experience, not over years but over decades, in the Criminal Code is the language that is indicated here: knowingly and wilfully making false representations.

Let us consider the case of which my hon. friend speaks, where a farmer, not being too sure about the quantity of grain in his bin, was inaccurate, but unintentionally so, in making his application for a loan. If any prosecution were later to be based upon that set of facts, the Crown would have to prove beyond all reasonable doubt—and the accused would be entitled to the benefit of the doubt—that not only was the information incorrect but that the accused gave that incorrect information wilfully and knowingly with the intention of securing credit to which he was not lawfully entitled.

Mr. Quelch: There is one point I should like to have clarified. Unfortunately, I am not a lawyer. Clause 9 (1) reads as follows:

> Every person who, after the coming into force of this act, in respect of a guaranteed loan
>
> (a) knowingly makes any misrepresentation in any application or other document or wilfully furnishes any false or misleading information;
>
> . . . is guilty of an offence and is liable on summary conviction to a fine not exceeding five hundred dollars.

Clause 14 says:

> This act shall come into force on a day to be fixed by proclamation of the Governor in Council.

Does that mean that any farmer who commits an offence under this clause prior to the coming into force of the bill is not guilty and has not committed an offence under this clause?

Mr. Howe (Port Arthur): Not under this bill. He may come under the Criminal Code, but certainly this bill is not retroactive.

Clause agreed to.

Clauses 10 to 12 inclusive agreed to.

On clause 13—*Extension by the governor in council.*

Mr. Knowles: Mr. Chairman, as I indicated last night, it seems to me that the provision contained in this clause is an objectionable one. As everyone knows, we on this side of the house do not like this bill's inadequate way of dealing with this year's cash crisis in the west. It seems to us that by means of clause 13 the government is making it possible for it to come forward with the same inadequate solution next year if a similar crisis develops, without even having to raise the matter in parliament. If parliament is to give order in council rights, it should do so very sparingly, and it seems to me this is one occasion where that right should not be given.

If it was the intention of the government to make this legislation effective for two years, it should have been so provided in the main part of the bill. I do not like this uncertain way in which the future is left. In fact, I do not like the idea of the government having the power by order in council to extend legislation without coming back to parliament in any way whatsoever.

Mr. Howe (Port Arthur): I think I might clear that up. The government believes it is very doubtful if legislation of this kind will be required next autumn. We look for a very heavy movement of wheat during the summer and autumn, and it may be that there will be no call for the legislation. Therefore there will be no purpose in having it outstanding, unless there is a need for it—and we believe there was need last fall, in spite of what has been said here—if there is a need for it, my hon. friend, after these four or five weeks of filibuster, will hardly expect the government to take the same responsibility again that it has taken this season. Through this bill, it will not be necessary to do so. We think it is very much better to have the authority enacted now, rather than be with no authority.

Mr. Knowles: In spite of what the minister has said, I still think this house has the right to expect the government to bring matters such as this back to parliament.

Mr. Johnston (Bow River): May I ask the minister for a little clarification? Do I understand him to have said a moment ago that any man who has borrowed money under this bill prior to the time the bill comes into force is not liable to the penalty under this clause?

Mr. Howe (Port Arthur): The penalties set out in this bill apply only against a person who commits an offence after this bill has received the royal assent.

Clauses 13 and 14 agreed to.

Bill reported.

The Acting Speaker (Mr. Applewhaite): When shall this bill be read the third time? Now?

Mr. Knowles: Next sitting.

The Acting Speaker (Mr. Applewhaite): Next sitting of the house.

WHEAT

PROVISION FOR PAYMENT OF CARRYING COSTS OF TEMPORARY EXCESS RESERVES

Right Hon. C. D. Howe (Minister of Trade and Commerce) moved the second reading of Bill No. 83, respecting the payment of carrying costs of temporary wheat reserves owned by the Canadian wheat board.

Mr. J. G. Diefenbaker (Prince Albert): Mr. Speaker, I merely want to reiterate the stand taken on the resolution, that we in the official opposition support the bill. Any discussion on it will be in committee with reference to the several sections; and in view of certain sections to which reference cannot be made on second reading we believe that everything should be done to expedite the legislation, requested as it has been by all the major farm organizations and representing the conclusion of a concerted effort on the part of the farmer's unions throughout western Canada and other organizations of a similar nature for the achievement of this end. Further than that I will not say at this time.

Mr. F. S. Zaplitny (Dauphin): Mr. Speaker, I expressed my views on the principle of the subject matter of the bill at the resolution stage; therefore I am not going to repeat the views I expressed at that time. We are prepared to expedite passage of the bill almost immediately, particularly so because of the method provided for payment of the first instalment on account of this contribution from the treasury to the cost of storage. It is provided that the first instalment of half the amount that is payable shall be paid on the first day of the month following the month in which the act comes into force. We are very close to the end of this month and therefore we hope there will be no delay in passing the bill now in order that the first half of the moneys payable may be made

available on the 1st of March. For that reason we are quite prepared to forgo any detailed discussion at this time and to let the bill pass.

Mr. Victor Quelch (Acadia): Mr. Speaker, at the resolution stage we expressed our approval of the proposal, and now that the bill is before us we still believe it is a good piece of legislation. Therefore we are going to support second reading.

Mr. G. H. Castleden (Yorkton): Mr. Speaker, as well as supporting the motion on the basis of the principle of the bill, I should like to say that since this grain is in storage the government should undertake to pay the costs of the abnormal carryover. In this way the government will recognize its responsibility toward the producers who would normally have to carry this cost if the government had not undertaken to pay it.

The reason for the large stocks of wheat in store is the failure of the government to maintain a selling program of such a type as to get rid of sufficient wheat. Most of the increased production is being carried by the farmers on their farms, and it is only right and just that the government should undertake to pay storage costs. If they had recognized that responsibility with regard to Bill No. 82 there would have been much less trouble. I may say we are very pleased that this bill has come before the house and we intend to support it. We think it only right and just.

Motion agreed to, bill read the second time and the house went into committee thereon, Mr. Applewhaite in the chair.

On clause 1—*Short title.*

Mr. Diefenbaker: Mr. Chairman, the general discussion on this clause will enable certain questions to be asked. One arises out of a statement I made the other day which was somewhat challenged, and I wish to refer to it now. At page 392 of *Hansard* for January 23 there is the following:

> Mr. H. R. Argue (Assiniboia): Mr. Speaker, I should like to direct a question to the Minister of Trade and Commerce. Will the minister consider closing out the 1954-55 wheat pool account so that prairie producers may receive a larger payment at an early date rather than a smaller interim payment?
>
> Right Hon. C. D. Howe (Minister of Trade and Commerce): Mr. Speaker, I stated on a previous occasion in reply to a question by the same hon. member that no consideration could be given to the subject until Bill No. 2 on the order paper is approved by parliament or otherwise. That is still the situation. It will be the situation and I hope the question will not be asked again until that bill is disposed of.

[Mr. Zaplitny.]

> Mr. Argue: Is the minister not aware of the fact that Bill No. 2 is a bill standing in my name, and the bill he refers to is actually a resolution?
>
> Mr. Howe (Port Arthur): Quite right.

What I want to find out from the minister is something of the mechanics under which this legislation will immediately become operative. Would the minister be prepared to advise the committee and the country as to the total amount being paid today for the storage of wheat in the country and terminal elevators? There is also the fact that the legislation when passed will, as the minister said on an earlier occasion, enable a distribution to be made by an early cut-off of the 1954-55 crop in storage in the elevators of this country and as yet unsold.

As I see it, that is one of the major matters at issue at the moment in this legislation, and it is in that regard that the western farmer is particularly interested in knowing approximately what extra amount will be payable to him on account of the wheat in the 1954-55 pool and the saving that will be achieved by the farmer in respect of storage now being paid and ultimately charged to the fund from which distribution is made. How much will the farmer receive in general, and when may he expect that the cut-off for the 1954-55 crop will take place?

Mr. Howe (Port Arthur): Mr. Chairman, on July 31, 1955, there were in store, over the 178 million bushels which is considered normal, another 217 million bushels of wheat, and that 217 million bushels of wheat is the wheat referred as coming under this guarantee. All that wheat belonged to the 1954-55 pool. However, the amount belonging to the pool diminishes day by day as sales and deliveries for export are made. The wheat board receives the government's payments each month, applying on the grain in store.

To the extent that the grain in store is grain from the 1954-55 pool, it will apply to that pool. To the extent that the 1954-55 grain has been disposed of and replaced by grain in the 1955-56 pool the payment will apply to that grain. It is just a matter of bookkeeping for the wheat board to determine to which pool the payments are to be apportioned. This will be done month by month. It is customary to transfer the remainder of one pool into the next pool when a considerable proportion of the pool has been sold and priced. We have never, I think, transferred as much as 100 million bushels from one pool to the other.

Just when the transfer can take place, I do not know. We receive a recommendation from the wheat board when the proper time comes, and at that time the cabinet decides whether it can accept the recommendation

of the wheat board. In this case the situation is somewhat complicated by the fact that when we discovered there was a filibuster under way here we decided we could not ask the producer to wait. Therefore we authorized an interim payment instead of the final payment.

Obviously the amount of the final payment could not be determined until this bill had either been passed or rejected. Now that it has been passed we will continue with the interim payment, and in due course the government will decide to accept the recommendation of the wheat board and the final payment on the 1954-55 pool will be made. After that decision has been arrived at we will be able to announce it in the house.

Mr. Diefenbaker: That is all very interesting but also very general. Is the minister in a position to say that the amount that will actually be credited to the wheat producer under this legislation, in so far as the 1954-55 crop is concerned, would amount to any more than 6 cents a bushel? I have tried to work out a general computation in that regard, and I am asking the minister whether or not any estimate has been made and whether or not that estimate exceeds 6 or 6·4 cents a bushel?

Mr. Howe (Port Arthur): It seems to me that my hon. friend and I both had better cease guessing how much it will be and wait until a computation can be made by the wheat board, who are responsible for pricing the grain. I would not attempt to guess. I would think it would be more than 6 cents, but that would be only my guess.

Mr. Drew: Since reference has been made several times by the Minister of Trade and Commerce to a filibuster, with some appearance of objection to what has taken place, I would point out that there is a very good reason for not guessing. If there were no other ground for some of the discussion that has taken place than the time that was needed for the minister to learn what was the effect of subsection 3 of section 9, it would have been extremely useful in itself. The fact is that the answers that have been given by the minister are well illustrated by his ridicule of the hon. member for Prince Albert when he tried to point out that this subsection 3 of section 9 actually provided the penalty of jail for debt.

Now that the minister has seen what are the facts, we welcome the fact he is not prepared to guess on this occasion. But we would suggest there should not be so much reference to the time taken to convince him of some of the things that were wrong with this act.

Mr. Argue: The statement by the Minister of Trade and Commerce that the passage of this bill was held up by the debate on Bill No. 82 is not accurate at all. The fact that this bill has been delayed until this day is because the government has held back in calling this bill when announcing the business of the house. We in the C.C.F. group and all members of the opposition have been ready from the moment parliament assembled to pass this legislation with a minimum of delay. Nothing the Minister of Trade and Commerce can say can show that we have not been prepared at all times to pass this legislation since it was announced to the house.

As a matter of fact we did our best by way of a vote to get the government to alter its order of business. The fact that this measure has been delayed so long is not only because the leader of the house from time to time announced Bill No. 82 ahead of Bill No. 83, but because the Minister of Trade and Commerce himself on February 3 moved a motion to reverse the decision the house had taken earlier, namely to proceed with the resolution preceding the bill now under discussion. The minister's excuse cannot stand up at all. The government does what it wants so far as announcing the business of the house is concerned.

It is the governor in council who decides when an interim payment will be made or when a final payment will be made. I suggest to the minister that a combined interim and final payment on the 1954-55 wheat pool should be made immediately. The minister has said there is a good deal of wheat still in that account. This should not make any difference. The wheat board and the minister know the price at which grain is being sold today. We have the assurance of the minister, repeated time after time, that grain is being sold now in very large quantities. He says there is no doubt about it; it is all going to be sold in a very short time. I do not see any reason why western producers should have to wait for several weeks, perhaps many months, before they receive a final payment. We have had far too much jockeying in the past by the government with the dates of interim and final payments. I suggest the government should be prepared at a given date following each crop year to make a final payment, and at a given date during the crop year to announce an interim payment.

There is another disadvantage to making an interim payment at this time and a final payment at a later time rather than making a combined payment right now. It is the additional cost. It costs a substantial sum of money to make thousands of cheques payable to producers, and the producers themselves

have to pay the cost of making that extra payment. The final payment, if it were announced now, would be about one year late so far as our experience in the past is concerned. I suggest that the government has erred in not announcing, instead of a small interim payment, a larger final payment so that the account could be closed.

Mr. Nicholson: Before the clause carries I wish to say that I am sorry the hon. member for Vancouver-Burrard is unable to be with us. I think I should say that I am very glad no one but the hon. member for Vancouver-Burrard, so far as I am aware, has expressed any criticism of this particular legislation. I believe it is important that we should recognize that the carrying of food is a national matter. I think it is very fortunate the Minister of Trade and Commerce is able to say today we are likely to have good sales in the next few months. It is unfortunate, however, that a calamity in Europe is going to be responsible for a great many of those countries being short of grain. This points up the value of having in the world stocks of food for emergencies.

I think it is only right and proper that all the people of Canada should carry some part of the cost of maintaining those stocks. I am very glad that no one in the house, with the exception of the hon. member for Vancouver Burrard, has offered any objections to this legislation.

Mr. Campbell: Before this clause carries I would like to get some information. Some time ago I asked the government a question regarding elevator space. When I received the answer I was amazed at the amount of empty space in terminal elevators. I want to know why that situation exists. Is it because of a shortage of box cars or not? Before the minister answers I have another problem to put to him. There was an editorial in the Saskatoon *Star-Phoenix* around February 17 which said this:

> Transport controller Roy W. Milner, whose powers parliament will be asked to renew for two years, said Thursday there is no shortage of box cars holding up prairie grain shipments.

In the same article we find the following:

> Meanwhile, Jake Schulz of Winnipeg head of the interprovincial farm union council, said he is confused by Mr. Milner's remarks. The council is made up of farm groups in the prairie provinces, Ontario and British Columbia.
>
> In a brief before the cabinet, the council had attacked the transport controller because of a reported box car shortage, saying it shows Mr. Milner "is failing in his duties and thus betraying the trust of the farmers".
>
> Mr. Schulz said later he brought up the matter during the council's meeting with the cabinet and was informed by trade minister Howe that because of a box car shortage, prairie grain elevators will not be emptied before the spring navigation season opens.
>
> "What are we to believe?" he asked.
>
> Mr. Howe, under opposition fire because of federal grain policies, recently said in the commons that the big problem in selling wheat was not markets but transportation.

There is a confusion of opinion there. Later on in the same article we find the following:

> Mr. Marler, speaking at Saint John, New Brunswick, Wednesday said figures he has received this month "give me good reason to be confident that the railways are doing an excellent job."
>
> Some critics have suggested that the government's decision to pay storage charges on abnormal wheat carryovers in the hands of the wheat board is complicating the issue.
>
> The government has conceded there is room in elevators for more grain. But the more wheat that is packed into the elevators, the higher the charges the treasury will have to bear, unless the wheat is sold.

What I want to know is, why has this space been accumulating in terminal elevators? Is it going to be the policy of the government to back up the grain on the farms and keep the terminal elevators with a lot of empty space?

Mr. Howe (Port Arthur): I may say that I am confused after listening to my hon. friend. The purpose of the government is to move grain from the farms just as rapidly as possible. There is a very great demand for wheat at the ocean shipping ports, particularly at Vancouver, Halifax and Saint John. The weather conditions in western Canada have been very bad indeed. A combination of circumstances has not made it possible to deliver the required grain at export points and at the same time fill elevator space within Canada. An effort is being made to do both, and I think the situation is improving from day to day. If my hon. friend wants to talk to the transport controller or to any officer of the department in the committee on agriculture and colonization, all the reports are tabled now and he can go there and talk to them directly. He will not have to let me interpret them.

Mr. Campbell: Mr. Chairman, I am not satisfied yet. The minister himself spoke in Edmonton in November. At that time he is reported as having said—I am not going to try to give the figure—that there was a considerable amount of space both at the lakehead and in the western Pacific terminals. Why was that situation allowed to develop when the farmers needed money so badly? Is it the fault of the transport controller? Is it because we have not enough box cars? What is the answer to that problem?

Mr. Howe (Port Arthur): After my hon. friend listens to the evidence given in the

committee he can make his own assessment. I am not very much interested in assessing blame for what has or has not happened. I am interested in getting the job done. It is becoming a little better each day.

Mr. Fleming: The title of this bill is the temporary wheat reserves act. Presumably we are to enact it as a temporary measure. It is fair then to ask the minister what is his best estimate of the length of time over which this measure is likely to be in force?

Mr. Howe (Port Arthur): I could not give an estimate unless my hon. friend is prepared to tell me what is his estimate of the size of next year's crop, and what will be conditions generally. This is self-liquidating legislation. It stays in force until the carryover at the end of any crop year is less than 178 million bushels.

Mr. Campbell: I am going to ask the minister a straight question. Is there a shortage of box cars in Canada?

Mr. Howe (Port Arthur): That is a matter of opinion. I am not prepared to express my opinion. I expressed an opinion at Edmonton in the speech to which the hon. member referred. I said at that time that there was a shortage of box cars in western Canada. There is a much greater number of box cars in western Canada today than there was then. He can take one opinion; I will take another. As I say, he can get the opinions all collected in one room. He will have to make up his mind then.

Mr. Charlton: May I ask the minister whether this section means what I think it means? Is there not some strange use of words there that might give it some other meaning? The section reads:

> If at the commencement of a crop year the stocks of wheat of the board are not in excess of 178 million bushels, no payment shall be made by the Minister of Finance to the board under this act in respect of that or any subsequent crop year.

Mr. Howe (Port Arthur): Yes.

Mr. Charlton: Just exactly what does that section mean?

Mr. Howe (Port Arthur): That is the liquidating clause. It means that if at the 1st day of August in any year the carryover does not amount to 178 million bushels, this act becomes a dead letter.

Mr. Charlton: Mr. Chairman, I take it that might quite easily mean one bushel stored away some place. The act could be carried on for another year if one extra bushel had to be carried over. If that is the correct meaning of it, that is the situation.

Mr. Howe (Port Arthur): What of it?

Mr. Charlton: What of it? It is pretty important, I would think.

Mr. Howe (Port Arthur): If there is one bushel over, the act will remain in force. We will pay storage for the year on one bushel of grain.

Mr. Charlton: One bushel on the 1st day of August.

Mr. Howe (Port Arthur): I know; that is all.

Mr. Charlton: There might be 10 million on the 30th day of August.

Mr. Howe (Port Arthur): It does not matter what it is on the 30th day. We pay storage on the amount in store on the 1st day of August.

Mr. Charlton: Yes, for the year previous. But what about the next year? Do you pay it for 12 months or do you pay by the month? I take it that it would be each month's storage of wheat that it would be paid on?

Mr. Howe (Port Arthur): I think my hon. friend can take my word for it that we pay only on the amount in excess of 178 million bushels that is in store on the 1st day of August of any year. If there is one bushel extra in storage the act remains in force and we pay on that one bushel all through the year, which would amount to 15 cents, I suppose. But if there is one bushel less we do not pay on anything and the act comes to an end.

Mr. Charlton: By the same token, it would seem rather strange if on the 30th day of September, for instance, after the harvest, there was a carryover in excess of 178 million bushels, probably 200 million bushels, then you do not pay the storage on that for the whole of that crop year?

Mr. Howe (Port Arthur): That is not carryover. If my hon. friend would pay a little more attention in the committees that he attends every year he would know that carryover is the amount of grain in store at the end of the crop year, which occurs on the 31st day of July in every year.

Mr. Charlton: I do not think the minister had any justification for making that crack, because I have attended the committee meetings very religiously when they have been held, which has been very seldom. I do not think it has been anything but wheat for the last number of years. I take it, then, that the storage is only to be paid on the excess at the 1st of August for the year, no matter what the excess is during the year,

and that there will not be any storage paid on that until the 1st of August of the next year.

Mr. Zaplitny: The bill refers entirely to wheat reserves, and of course anything additional coming to the producers of wheat will have to be reflected in the dividend payments as they come due, whether they are interim or final payments.

I wonder if the minister would care to inform the committee whether or not consideration was given to making this a grain reserve act instead. There are many large and important areas in the prairie provinces where wheat is not the main crop but where, for example, barley or oats may be the more important crop. Since barley or oats are included in the operations of the wheat board, I wonder whether any consideration was given to including barley and oats under this act to make it a grain reserve act rather than an act confined entirely to wheat. If consideration were given and it was decided against doing this, perhaps the minister could inform the committee of the reason for this.

Mr. Howe (Port Arthur): The carryover of oats and barley has never been a problem. Over the years it has never been difficult to sell oats and barley as soon as those grains are put in a marketable position. The possibility of there being any considerable visible carryover of oats and barley is too remote to warrant consideration in this bill.

Mr. Argue: I wonder if the minister could give us some idea of the policy that will likely be followed, let us say during the latter half of a crop year before we arrive at August 1. This legislation provides for payment for the inventory of wheat in excess of 178 million bushels. It seems to me that the great advantages of this legislation could at least to some extent be reduced, for example in the last few months of the crop year, by buying more than usually large quantities of oats, barley and flax so the space in the terminal and country elevators on August 1 would have in them a greater proportion of oats and barley than might usually be the case. It is quite possible to have a policy of buying large quantities of coarse oats at the end of the crop year. That may not be a great danger or the most important way in which the benefit of this legislation might be reduced.

According to the answer the minister gave, on January 20 there was effective space for 58 million bushels in the country. In other words that would reduce the amount of obligation of the national treasury under this legislation, because the carryover would not be there. The carryover would still be back on the farms. The amount for which payment would be made would be reduced by 58 million bushels. I am wondering if the minister could say what general policy will be followed toward the end of the crop year so this legislation may be as effective as I believe it is intended to be.

Mr. Howe (Port Arthur): Mr. Chairman, as to what grain the wheat board buys, I might say it buys any grain the farmer wishes to deliver on his permit book. If he has delivered all his wheat and wants to deliver oats and he still has space in the permit book for oats, I suppose we would accept oats. But I hope my hon. friend is not suggesting that anyone connected with the government or the wheat board is wilfully going out to buy some oats or barley in order to cheat the farmer out of this payment.

Mr. Argue: Not at all.

Mr. Howe (Port Arthur): As far as shipments are concerned it is always the purpose of everyone connected with wheat to get the wheat as far forward as possible as transportation may make possible. We might have a shipping strike on the great lakes which would intervene, but generally speaking an attempt is made to fill the elevators at the seaports and fill the elevators supporting the ports so there will be reserves against all shipping delays. To do that we make space in the country, and of course farmers wish to deliver wheat to fill that space. I do not think the difficulty foreseen by my hon. friend is likely to arise as a problem if there is a surplus of wheat in the country.

Mr. Argue: I am extremely pleased to obtain that assurance from the minister. I do not want anything I have said to be taken as a reflection on either the minister, the wheat board or the policies they follow. I may just express the hope that box cars will be available so that the large amount of space now available will be filled by July 31.

Mr. Howe (Port Arthur): I share that hope.

Clause 1 agreed to.

Clause 2 agreed to.

Clause 3 agreed to.

On clause 4—*Payment in monthly instalments.*

Mr. Howe (Port Arthur): Mr. Chairman, I am going to ask my colleague to move to amend clause 4 as follows:

That paragraph (a) of clause 4 be amended by deleting the words, "on the first day of the month next following the month in which this act comes into force," in lines 15, 16 and 17 and by substituting therefor the words, "forthwith upon the coming into force of this act".

Mr. Harkness: I should like to ask the minister what is the purpose of the monthly instalments instead of paying this as a lump sum at the end of the year, when the amount of the carryover is determined?

Mr. Howe (Port Arthur): We have been asked to consider a winding up of the 1954-55 pool. Unless the money is in hand it will be difficult to wind up the pool. The purpose of paying monthly is that storage charges are usually paid monthly, and the government should properly pay monthly storage charges on grain the government itself is carrying.

Mr. Harkness: As I understand it, the carryover at the end of the crop year is determined and on anything in excess of 178 million bushels the government is going to pay storage charges. That amount is determined right there and then, as far as I can make out; is that not the intent and purpose of the act? I am therefore just wondering why these payments will be made monthly instead of being made there and then. Is not the matter determined at that point?

Mr. Howe (Port Arthur): Is it my hon. friend's suggestion that it be prepaid? The amount of the payment for the succeeding year is determined on August 31, but the charges do not accrue until the storage has been used. The payments are made each month as the storage charges accrue. The terminals make their settlement with the wheat board each month, following the usual pattern of trade.

Mr. Harkness: The amount that is going to be paid, however, is determined at the beginning of the crop year, and the amount on which storage is going to be paid for next year might be considerably in excess of or less than that?

Mr. Howe (Port Arthur): No.

Mr. Harkness: Why does the minister say no? Is the amount on which storage is going to be paid to vary from month to month throughout the year?

Mr. Howe (Port Arthur): No, the amount paid is on the carryover at the end of the crop year, so many bushels. This year the amount is 217 million bushels. Under this bill that 217 million bushels is to be carried throughout the crop year, no more, no less. That will be the case every year. We carry a definite amount as prescribed in this bill.

Mr. Harkness: Surely the minister is not saying that the board is going to carry 217 million bushels plus 178 million bushels throughout the year. If they can find customers for it they are going to sell it. That is the point I am raising, that the amount of the payment is going to be determined at the end of the crop year and paid in monthly instalments throughout the year, instead of in a lump sum when the determination is made.

Mr. Charlton: This is just further to what I was asking the minister before. The minister has used the words "succeeding payments" and has referred to prepayment. The minister told me before that the amount to be paid was on wheat in excess of 178 million bushels on August 1. Does that mean it will be irrespective of how much was in storage on December 1 of the previous year? In replying to the hon. member for Calgary North the minister suggested prepayment, but as I understand it all we will be paying on is the excess over 178 million bushels on August 1 in any year.

Mr. Howe (Port Arthur): That is right.

Mr. Charlton: Is the minister saying it will be on that excess for the entire year, for the twelve months?

Mr. Howe (Port Arthur): That is right.

Mr. Charlton: Regardless of how much was in storage on January 1 of that year?

Mr. Howe (Port Arthur): Yes.

Mr. Charlton: Supposing there were 200 million bushels in excess in storage as of August 1, would you pay the storage costs on those 200 million bushels for the entire year?

Mr. Howe (Port Arthur): Yes.

Mr. Charlton: No matter how much was in storage on September 1 of the year previous? If that is what the minister is saying, you are twelve months in arrears; each month you are a year behind in your payments, I take it.

Mr. Howe (Port Arthur): No, Mr. Chairman. Perhaps I could explain it this way. We have always been asked to set up a government reserve of wheat, and that is really what this bill does. How do we fix the amount of the reserve? We fix it by the carryover at the end of the crop year on July 31. If that carryover is 178 million bushels, which is normal, plus 217 million bushels, which was the case last July, that 217 million bushels is taken as the reserve which the government will carry for that year. My hon. friend will say that we will be shipping out of that reserve and replacing it, which would mean that it would not be the identical wheat, but we would be taking on 217 million bushels this year as a reserve which the government will carry in the national interest. My hon. friend can argue up and down but that is the situation.

Mr. Charlton: Supposing the situation is that on August 1, 1956, you have 500 million bushels over and above 178 million bushels; you will pay storage for one year on the 500 million bushels.

Mr. Howe (Port Arthur): Unfortunately the elevator space will allow us only to have about 250 million bushels over the 178 million bushels.

Mr. Charlton: I will change the figure.

Mr. Howe (Port Arthur): You can take 500 million bushels as a theoretical figure but it does not mean anything, because physical limitations intervene.

Mr. Charlton: I will take it as 200 million bushels. I was just using the 500 million bushels as an example. With 200 million bushels, when in fact you may not have any more than 178 million bushels in storage as of January 1, I do not see how the minister can argue himself out of that.

Mr. Howe (Port Arthur): I think the hon. member is the only one in the house who is disturbed.

Mr. Charlton: I think the farmers of eastern Canada will become much more disturbed knowing that that is the fact. Who is going to get that six months' storage? The government is going to pay out money when in fact the wheat was not in storage at the time it was paid for.

Mr. Howe (Port Arthur): July 31 is the period between the two crops. That is when the old crop would normally be shipped out and before the new crop starts to move. Any grain in storage on July 31 of any year is going to be supplemented by the new crop which begins to move into the elevators in September and October. During the following year that will be reduced again until the low point is reached at the end of July. That is the time when we fix the amount of the reserve we are going to carry for the next year.

Mr. Charlton: Is the minister saying now that all the wheat that is grown in the west is going to be taken into storage by September 1? In effect is the minister saying that all the excess will be in storage for at least a month when in fact the actual harvesting would not take place until September 1?

Mr. Howe (Port Arthur): I give up.

Mr. Argue: I imagine what the hon. member is worrying about is that this is going to cost more money this way than if it were drawn up in some other way. I suggest that the least amount of grain that the wheat board is going to have on hand at any time in the year will be about August 1, before the new crop is harvested. If you want it to cost the treasury more, let us start this storage arrangement as soon as the crop is marketed. We will then get storage for a year. But the way it is drawn now the prairie farmer will get something from the treasury only when there is a very large carryover, something excessive in relation to the experience we have had in the past. I am all for any suggestion that will increase the storage payment, but I think my hon. friend's worries are misplaced.

Mr. Harkness: As far as I can see the minister has not yet answered my question as to why this should not be paid in a lump sum. He said, "Do you want us to prepay it?" It is not a matter of prepaying it at all. As I see it, the situation is that if the excess held in storage on August 1 in any year is, we will say, 200 million bushels, that wheat will have come in during the previous year and the wheat board will have already paid the storage charges on that wheat or on a good part of it. Some of it may have been in the elevator for a year and a half, and certainly the wheat would be in for varying lengths of time. In any event the wheat board will have already paid the storage charges on the wheat and under this bill the money is going to be paid by the government at the rates laid down. Therefore it is going to go back into the farmers' hands and the farmers will be that much better off as a result.

The thing I cannot see is why that payment is not made at the end of the crop year when the amount that is going to be paid is determined, instead of being made as provided by this subsection in twelve monthly instalments. The advantage of paying it in a lump sum is that it would be an initial payment which could be determined immediately and the cash would go into the farmers' hands, rather than having it spread out over twelve months and delaying it getting back to the farmer.

Mr. Argue: A final payment.

Mr. Harkness: That is the point I am getting at.

Mr. Howe (Port Arthur): My hon. friend is taking too seriously the fact that this legislation is intended to cover the crop year 1955-56.

Mr. Harkness: 1954-55.

Mr. Howe (Port Arthur): No, 1955-56. It applies to the grain that is in store during the year 1955-56. It is true that all the grain that is in store at the beginning of this

period must have been in the other pool, because the grain delivered in 1954-55 belongs to the 1954-55 pool. That grain, on the 1st day of August, 1955, was in the elevators; it was the government's reserve of wheat. We are going to pay charges on it for the rest of the year. Those charges accumulate daily, but they are settled on a monthly basis. So on the 1st of September we owed certain money; on the 1st of October we owed certain money; and on the 1st of November we owed certain money. We have not been able to pay that money because we did not have the legislation, but we are going to settle our debt in a lump sum to the end of February. After that we are going to pay monthly as charges accrue. We are simply paying currently as the charges on our reserve accumulate.

Mr. Harkness: Then may I ask the minister this question. This is the situation, as I understand it. This money that is going to be paid, in this case about $32 million, I think the minister said, is going to be available to settle up the 1954-55 bills, is it not?

Mr. Howe (Port Arthur): No. Part of it is.

Mr. Harkness: Now the minister says "No", and he says, "Part of it is". How much is going to be applicable to and available for settling up the 1954-55 pool?

Mr. Howe (Port Arthur): We shall always assume that we shall be paying interest on 217 million bushels of wheat every month. In the month of August it will all belong to the old pool. But if during that month we shipped out 25 million bushels there would be 25 million bushels less in the old pool and 25 million bushels applied to the new pool. That would be occasioned by deliveries during the month of August. Each month we ship out certain grain which is credited against the old pool, and we replace it as grain applying to the new pool. The storage charges that we pay are allocated according to whether the grain to which they are applicable belongs to the old pool or to the new pool. This is a calculation which only the wheat board can make, but which the wheat board must make if they carry out this legislation.

Mr. Harkness: Has the minister not received from the wheat pool any calculation, or does he not know at this time, how much of this $32 million is going to be applicable to the 1954-55 pool?

Mr. Howe (Port Arthur): I really do not know. It depends how rapidly we can sell out the old pool. When all the old pool wheat is gone, naturally there will be no more payments on that pool. But I think my hon. friend should be able to see that the amount in the old pool is a diminishing amount until the old pool is wholly disposed of, and he will see that the amount payable on the 1955-56 pool is an accelerating amount until all the wheat for which we are responsible is wheat belonging to the 1955-56 pool.

Mr. Harkness: Perhaps one of the difficulties here is that this legislation is going to be retroactive to some extent. Therefore the only thing one can take is the calculation made on the 1st of August, whatever it is. Say it is 200 million bushels of wheat that was the surplus at that time, and it was accumulated over the previous year. The wheat board has already paid storage on it. This payment is being made to them for storage. Part of the money is to repay them for storage already made.

Some hon. Members: No.

Mr. Harkness: That is certainly what is being done as far as the present situation is concerned. At the same time the minister says it has been paid month by month because it is to cover the interest payments they will have to make during the next year. Surely it is either retroactive or it is not retroactive. The minister has already said that it is retroactive, in part at least, to the 1954-55 pool. Therefore I do not think he can have it both ways in connection with this matter.

Mr. Howe (Port Arthur): Perhaps I can explain it. As of the 31st of July, 1955, everyone is paid. The storage that has accumulated on wheat up to that time has been paid.

Mr. Harkness: Yes.

Mr. Howe (Port Arthur): Then, beginning there, the wheat in storage on the 1st day of August is divided into two lots; 178 million bushels, which is the normal carryover and will continue to be paid for by the pool, and 217 million bushels, which is going to be paid for by the government. That wheat is going to be held in storage for the full year. So each month we pay the storage charges on 217 million bushels of grain. Is that clear?

Mr. Harkness: I have already said that myself.

Mr. Howe (Port Arthur): No. I just want to go step by step. If we take two steps at once, we shall get my hon. friend confused again.

Mr. Harkness: I said that myself a few minutes ago.

Mr. Howe (Port Arthur): You were going back to the 1954-55 pool.

Mr. Harkness: Yes.

Mr. Howe (Port Arthur): That is why you got everybody confused. We are going to pay

on 217 million bushels from the 1st of August, 1955, until the 31st of July, 1956. Now this is where my hon. friend, I hope, will not interrupt me, because I have explained it twice, and this will be the last time. If he does not understand it this time, he can talk the rest of the day but I will not say anything more.

The question becomes what proportion of the 217 million bushels belongs to the old pool and what proportion belongs to the new pool. That proportion will vary each month. Finally, say about April, the old pool will have disappeared and the full payment applies on the new pool, for in the meantime the old pool is being shipped out. A smaller proportion each month applies to the old pool and a larger proportion applies to the new pool. Does that mean anything at all?

Mr. Harkness: I do not think the minister and I are in any misunderstanding in connection with the actual operation that is taking place, and so forth, but the point is this. I have not the wheat pool report for 1954-55 with me—it came out not very long ago—but I think it shows a deficit in the wheat account, leaving out oats and barley, of some $14 million. That is at the end of the old crop year. There have been some differences in that, as wheat has been sold so far. The point I am getting at is that at least part of this $32 million is going to be used to make up that deficit; and the remainder, as far as I can see, is going to be used to make this interim payment which is going to be made to farmers on account of wheat they delivered into the 1954-55 pool. Will the minister say whether that is not the situation?

Mr. Howe (Port Arthur): No.

Mr. Harkness: I should like an answer from the minister to that question.

Mr. Howe (Port Arthur): The answer is no.

Mr. Harkness: When the minister says the answer is no, does he mean that this $14 million deficit is not going to be made up out of this $32 million?

Mr. Howe (Port Arthur): The deficit in the pool accounts is purely a bookkeeping deficit. The grain in store is credited with the initial payment. It will be sold later at the market price and the deficit will gradually be turned into a surplus. It has nothing to do with this bill or anything we are discussing now. Every time we bring down a statement from the wheat board there is a deficit shown, and that deficit is a bookkeeping deficit. I do not ever remember seeing a statement come down showing a surplus. At that time of the year it is not normal to have a surplus.

[Mr. Howe (Port Arthur).]

Mr. Harkness: I think perhaps the place to prosecute this matter further is in the committee on agriculture and colonization when the wheat board accounts are dealt with there. However, I think there is no question but that in effect that is what is going to happen to this money. Perhaps there is not much use in our continuing to argue further about the matter here.

Amendment agreed to.

Clause 4 as amended agreed to.

On clause 5—*Use of moneys by the board.*

Mr. Diefenbaker: Mr. Chairman, I should like to find out from the minister the reason for the inclusion of certain words in this clause. First I will read the clause, and then I will refer to the words to which I wish to direct attention. The clause reads:

> The board shall, as the governor in council on the recommendation of the board directs, use moneys payable to it under this act in payment of expenses incurred in connection with the operations of the board attributable to wheat, and the board shall adjust its accounts accordingly.

What is the purpose of the addition of the words, "as the governor in council on the recommendation of the board directs"? My understanding of the wheat board is that it is an autonomous body not subject to the direction of the governor in council, which receives certain moneys for certain purposes as explained by the minister in that rather incongruous collection of explanations the committee has had in the last few moments. Why does the governor in council step in here? Why is the governor in council empowered to act as a kind of director for the wheat board? The wheat board receives certain moneys under clauses 3 and 4, which moneys are payable to the board by the Minister of Finance. Why should the governor in council direct what the board shall do on its own recommendation?

Mr. Lesage: Because this is the taxpayers' money.

Mr. Diefenbaker: Well, I am very much interested in that statement. I am not so sure that is the explanation, but if that is the reason it is at least a step in the right direction. The board receives moneys for certain purposes and must use those moneys payable in payment of expenses incurred in connection with the operations of the board and pursuant to the statute itself. Why then does the governor in council retain, over and above the statutory provisions, a further power as set out in this clause? I am asking that because this is an unusual clause.

I am not one of those who believe that these boards should be placed above parliament but I do ask why, when the board

is circumscribed under a statute in respect of the moneys it receives, it has to go to the governor in council and obtain an order in council to do that which the statute itself empowers the board to do. That cannot be brushed off by the mere suggestion on the part of the minister who interrupted a minute ago that it is because it is the taxpayers' money. It was the taxpayers' money. It is turned over to the board in pursuance of the statute to do certain things. Why is the board not permitted to do those things, empowered as it is by the statute, without having to go to the governor in council again to have an order in council passed to empower the board to do that which parliament authorizes the board to do, and to do it on the recommendation of the board?

Mr. Howe (Port Arthur): What part of the legislation is my hon. friend referring to with respect to directing the board how to apply these funds? Which clause directs the board how to use these funds?

Mr. Diefenbaker: I am referring to the words beginning with the fourth word in the first line of the clause and ending with the word "directs" in the second line. Why are those words included?

Mr. Howe (Port Arthur): This calls for a decision on the part of the board as to the amount applicable to the earlier pool and the amount applicable to the later pool. There is no way we can set that out exactly in an act. It is an arbitrary division. The board recommend it, and as a matter of fact the board ask that their recommendation be considered and confirmed by the government. No board likes to make such an arbitrary division and have it questioned later on by the Auditor General or by anyone else.

Mr. Diefenbaker: Mr. Chairman, if the government is learning from the criticisms of the opposition I must say this is a laudable step. I was merely asking for information to ascertain the situation, because only in the last few days we have had an example of how far parliamentary control is actually removed on occasion. On the 16th of this month we had an example, as found at page 1231 of *Hansard*, when the hon. member for Burnaby-Richmond endeavoured to place a petition before parliament embodying the request of himself and those associated with him for the establishment of a television station in British Columbia. The Clerk of the house took it on himself to say this:

> It is my opinion that since parliament has vested in the governor in council and in the Minister of Transport the exclusive authority to approve and issue licences for the operation of television stations, the house has no jurisdiction in such matters. . . . Therefore, I maintain that according to the practice of this house the petition should not be received.

The petition was regular; yet parliament was placed in the position that it dare not consider the matter covered by the petition because a board had been set up independent of parliament and not subject to the control of parliament, in so far as the exercise of the powers are concerned, to determine where television stations shall be established.

That is the reason I am asking for information now. If this clause is designed to bring back to parliamentary control, to a greater extent than under any other statute up to the present time, boards set up with absolute powers as under this legislation, then I most certainly commend the stand. I think it is a proper thing, and that is the reason I am asking for information. On the 16th of February I heard Mr. Speaker approve the Clerk's decision that this parliament cannot even have a petition brought before it because a board has been set up, and I must say that if that is the case then indeed a trend is taking place that is very serious and derogatory to the powers of parliament.

I am glad to have the minister's answer; and if this clause means that from now on whenever these matters come up, because the governor in council will have the power to pass an order in council the information will then be furnished to parliament by the responsible minister, then I certainly commend what has been done in this connection because that is what we have been contending for. We have contended that these boards should be subject to interrogation through the minister in the House of Commons, to the end that their actions must be ratified by parliament and be subject to the scrutiny of parliament.

Clause agreed to.

On clause 6—*Limitation.*

Mr. Fleming: There is one question on clause 6. We have been dealing with a figure of 178 million bushels, and certain answers have been given as to how it was arrived at. However, I would ask the minister if, with greater particularity than he has exercised thus far, he would indicate just how the figure of 178 million bushels was chosen as the breaking point for this purpose.

Mr. Howe (Port Arthur): The first year of big crops was 1951. We went back from then 15 years and took the average carryover of the 15 years.

Clause agreed to.

Title agreed to.

Bill reported.

Committee on Atomic Energy

ATOMIC ENERGY

SPECIAL COMMITTEE TO EXAMINE INTO ROLE OF GOVERNMENT IN NON-MILITARY RESEARCH

Right Hon. C. D. Howe (Minister of Trade and Commerce) moved:

That a special committee be appointed to examine into the role of government in the field of non-military research in Canada, including:

(a) operations in the field of atomic energy,

(b) operations of the national research council.

That the committee be empowered to sit during the sittings of the house and to print such papers and evidence from day to day as may be ordered by the committee and to report from time to time; and that notwithstanding standing order No. 67 the committee shall consist of twenty members.

Mr. Green: Is the minister going to make a statement?

Hon. W. E. Harris (Minister of Finance): I take it that although this will not be a lengthy debate there will be some speeches that hon. members would like to make on it. Perhaps we could break the rules to the extent of adjourning this and calling it five o'clock so that we could proceed with the other business.

The Acting Speaker (Mr. Applewhaite): I always hesitate to accept the responsibility of calling it five o'clock before it is five o'clock, because the sponsor of some private measure may not be present, and I do not think it should be held against him if that is the case.

Mr. Harris: Quite so.

On motion of Mr. Harris the debate was adjourned.

PRIVATE BILLS

MORRIS GILBERT

On the order:

Second reading of Bill No. 109 (Letter W-3 of the Senate), intituled: An act for the relief of Morris Gilbert.—Mr. Hunter.

The Acting Speaker (Mr. Applewhaite): As often occurs, there are a number of divorce bills. Is it agreed that these second readings be taken at the same time?

Mr. Stanley Knowles (Winnipeg North Centre): No. I would prefer you to call this order; then I move, seconded by the hon. member for Mackenzie (Mr. Nicholson):

That the house do now proceed to order No. 46.

The Acting Speaker (Mr. Applewhaite): Is it the pleasure of the house to adopt the motion?

Hon. W. E. Harris (Minister of Finance): Just on a point of order, Mr. Speaker, I have no objection to my friend taking this proceeding without notifying me, but is there any particular reason for this so we can judge the situation?

[Mr. Howe (Port Arthur).]

Mr. Knowles: With regard to the initial statement of the Minister of Finance the hon. member for Parkdale (Mr. Hunter), whom I advised of my plan, was going to inform the minister. I do not hold it against him if he neglected to do so. In answer to the minister's question, we feel that there are other items of legislation of more importance than divorce bills.

Mr. Harris: I do not oppose the motion at the moment, Mr. Speaker, but for the record I should like to enter an objection that those persons who have followed the procedure and filed their petitions and have bills before the house are entitled to have those bills considered in whatever sequence we normally reach them, though there may be special reasons for putting off this or that bill. I have no objection to the motion, sir.

Motion agreed to.

CHURCH OF ENGLAND IN CANADA

Mr. C. W. Carter (Burin-Burgeo) moved the second reading of Bill No. 122, an act respecting the general synod of the Church of England in Canada, the missionary society of the Church of England in Canada, the women's auxiliary of the Church of England in Canada and the Church of England consolidated trust fund.

He said: In order to understand the purpose of this bill, Mr. Speaker, it is necessary to know something about the organization and administration of the Anglican Church of Canada. For purposes of church government the fundamental unit of the Anglican Church of Canada is the diocese, which is under the authority and guidance of a bishop in matters both spiritual and temporal. The diocese of Newfoundland to which I belong was founded in 1839 with the Right Rev. Aubrey George Spencer as its first bishop. Previous to this Newfoundland had been administered as part of the diocese of Nova Scotia, which had been founded in 1787. In 1844 Bishop Spencer was succeeded by Bishop Field.

The letters patent which nominated the Rev. Edward Field as bishop also declared that on appointment Bishop Field would become a body corporate with the ordinary powers and functions of any corporate body. As soon as a diocese is sufficiently well organized a governing body known as the diocesan synod is set up to administer the temporal affairs of the diocese.

The diocesan synod of Newfoundland was organized in 1870 and incorporated in 1875. Every diocesan synod is composed of two houses, the house of the clergy which includes all the clergy active in the diocese,

and the house of the laity which is composed of the lay delegates appointed by each parish at its annual meeting. Matters which affect the whole church of Canada are in the hands of a corporate body now known as the general synod of the Anglican Church of Canada. This general synod is composed of two houses, the upper house or the house of bishops and the lower house made up of a body of lay and clerical delegates who are elected in equal numbers by each synod. It will be seen, therefore, that the system of government employed by the Anglican Church of Canada closely parallels our own federal system. The diocesan synod would be the counterpart of the provincial government and the general synod would be the counterpart of our own parliament of Canada.

The last meeting of the general synod took place at Edmonton, Alberta, from August 30 to September 8 of last year. The upper house consisted of 40 bishops, of whom 28 were diocesan bishops and the remainder were retired bishops. The lower house was composed of 284 elected delegates, half of whom were lay delegates and half clerical. One of the first matters considered by the general synod at this last meeting at Edmonton to which I have just referred was the following resolution:

> Resolved that the church hitherto known as the Church of England in Canada shall in future be styled the Anglican Church of Canada.

After due consideration and debate this resolution was passed by both houses with a substantial majority. The vote in the upper house or the house of bishops was 23 to 4 and in the lower house 174 to 40. I should like to make it quite clear that the decision of the general synod to change the name of the church requires no parliamentary sanction whatever. However, at various times in the past this parliament of Canada has passed a number of acts dealing with various bodies and organizations affiliated with the church and with the property owned by those bodies. As the name of the church has been written into some of these acts, the purpose of this bill is to effect a corresponding change in the name of the church wherever it appears in any of these measures.

Hon. members may wish to know why it was decided that a change of name was necessary. I can assure hon. members that it was not a snap decision. It has been under consideration on and off for over 40 years. It first came before the general synod in 1911. It was considered by the general synods of 1915, 1918 and 1921. It came up again in 1931 and was dropped until 1949. While support for the change tended to increase during the years, on none of those occasions was there sufficient support to have the change approved by any of the general synods. In 1954 the Primate set up a commission to study the whole matter, and it was the recommendation of this commission, embodied in the form of a resolution, that was passed at the last general synod.

The primary reason for the change was that the name "Church of England in Canada" no longer properly describes the present autonomous and independent status of the church in Canada as it did in the early days of its history.

Hon. members may recall I pointed out at the beginning of my remarks that the diocese of Newfoundland was founded in 1839. Prior to that date the work of the church in Newfoundland, and in all the colonies, was financed from the mother church in England and carried out under the direction and authority of the Bishop of London. The first chaplain arrived in Newfoundland from England in 1583, and it is possible that this date may mark the beginning of the history of the Anglican Church of Canada.

The cathedral parish of St. John's, Newfoundland, of which I am a member, claims the distinction of being the oldest parish of the Anglican church in Canada. It was organized by Rev. John Jackson in 1699, and financed largely by funds supplied by church organizations in the old country. One of these organizations was the society for the promotion of Christian knowledge, commonly known as S.P.C.K.; another was the S.P.G., or the society for the propagation of the gospel.

Today the situation is quite different. The Anglican Church of Canada is financially independent and conducts its own missionary activities in various parts of the world. Indeed, one of the highlights of the general synod at Edmonton was the presentation of a gift of $50,000 to the newly-appointed Bishop of Korea for his work in that diocese. No longer do our clergy come to us from England. Our clergy today are recruited from our own congregations and trained in our own Canadian theological colleges. Our bishops are no longer nominated by letters patent. They are now elected by the diocese which they are called upon to govern. It is quite probable that the late Bishop of Newfoundland, the Right Rev. Philip Abraham, who passed away on December 22, 1955, is the last member of the house of bishops to be consecrated following letters patent.

Another reason was that the missionaries and clergy working among newly arrived immigrants found that the name "Church of

England in Canada" conveyed to these people the erroneous idea that membership in the church was confined and restricted to people of English birth and ancestry. Be that as it may, after many years of consideration this decision to change the name of the church has been approved by a substantial majority in both houses of the general synod. This bill results from that action, and since it is a matter of importance to some 2 million Anglicans in all parts of Canada, I strongly recommend it to the house for approval.

Mr. L. T. Stick (Trinity-Conception): Mr. Speaker, I should like to support what my colleague from Burin-Burgeo has said. My words will be few. I think it has been found by the Anglican church in Canada that as Canada has grown and become sovereign in her own right—and particularly is that so since the union with Newfoundland—the church has found herself somewhat in the same position. It is now by this legislation and by law becoming sovereign in its own right in Canada. It is felt that since this nation has grown up and become independent, so the Anglican church in Canada is now fully grown, and this is another step to show that it is now sovereign in its own right. I have much pleasure in supporting the petition of my colleague from Burin-Burgeo.

Motion agreed to, bill read the second time and referred to the standing committee on miscellaneous private bills.

Mr. Speaker: It was agreed earlier to by-pass divorce bills and let them stand until later this day, and take second reading of Bill No. 146. Is that agreed?

Some hon. Members: Agreed.

CANADIAN EQUITY INSURANCE COMPANY

Mr. John Hunter (Parkdale) moved the second reading of Bill No. 146, to incorporate the Canadian Equity Insurance Company.

Mr. Macdonnell: Will the sponsor of this bill say something about it?

Mr. Hunter: Mr. Speaker, the object of this bill, of course, is to incorporate a company which shall carry on the business of fire insurance and classes of insurance other than life insurance. Its capitalization will be $1 million divided into 10,000 shares of $100 each.

In the event of incorporation of the company, arrangements have been made for the subscription for and the issue of 5,000 shares of the company at par and the payment of a premium of $500,000 to the company for shares by certain proposed shareholders. In the result, before the company commences business it will have capital and surplus accounts totalling $1 million, which is $250,000 higher than the present minimum amount desired by the Department of Insurance. No incorporation fees or expenses are to be charged to the company.

It is expected that after incorporation, shares will be issued so that the capital of the company will be held as follows: 50 per cent by a Dutch insurance company whose name I would not even attempt to pronounce; 20 per cent by the Hibernian Fire and General Insurance Company Limited of Ireland; 19 per cent by another Dutch company which I would not attempt to pronounce; 5 per cent by another one that I cannot pronounce; and 6 per cent by the directors.

The head office of the company will be in Toronto. The initial classes of business for which a certificate of registry will be sought are: fire insurance; accident insurance; automobile insurance; boiler insurance, excluding machinery; inland transportation insurance; personal property insurance; plate glass insurance; real property insurance; theft insurance; and in addition thereto civil commotion insurance, earthquake insurance, limited or inherent explosion insurance, falling aircraft insurance, impact by vehicles insurance, limited hail insurance, sprinkler leakage insurance, water damage insurance, weather insurance and windstorm insurance, limited to property insured under a policy of fire insurance of the company.

The amount of the company's paidup capital and premium is sufficient to qualify the company to apply for a certificate to transact all classes of insurance other than life insurance.

I think that is about all that is relevant.

Motion agreed to, bill read the second time and referred to the standing committee on banking and commerce.

INTERPROVINCIAL TRUST COMPANY

Mr. John Hunter (Parkdale) moved the second reading of Bill No. 147, to incorporate Interprovincial Trust Company.

Mr. Macdonnell: Would the hon. member make a statement; this is very interesting.

Mr. Hunter: My hon. friend is immensely curious. This bill has been fully discussed with Mr. MacGregor of the department and it is believed that he is satisfied in all respects as to the people behind the company and the proposed method of operation. The applicants, of course, are just provisional directors at the present time, although they may become permanent directors.

It is intended that the initial capital of the company required by Mr. MacGregor before

a licence will be issued will be raised by private financing, and that after it has been incorporated and licensed to do business, additional capital will be raised by selling shares to an underwriter who will in turn sell them to the public.

The present intentions of the people behind the company are that they will as soon as possible open offices in Toronto, Edmonton, and Vancouver, and that as the company develops offices will be opened in other major cities of the country. The company intends ultimately to carry on a general business of the same nature as that carried on by most of the existing leading trust companies.

Motion agreed to, bill read the second time and referred to the standing committee on banking and commerce.

QUEBEC NORTH SHORE AND LABRADOR RAILWAY COMPANY

On the order:

Second reading of Bill No. 148, an act respecting Quebec North Shore and Labrador Railway Company—Mr. Brisson.

Mr. Speaker: In the absence of the sponsor of this bill it will be allowed to stand. Shall we now revert to divorce bills?

Mr. Stanley Knowles (Winnipeg North Centre): That was not what was in my mind when I moved that we proceed to order No. 46. It was my intention after that for us to move to order No. 70. I thought when it was done by agreement it was understood we would now go on and move to public bills.

Mr. Speaker: The only point that has to be made clear for the purpose of the scroll is that when the hon. member for Winnipeg North Centre moved his superseding motions the motion for second reading had not been proposed from the chair and therefore he was not superseding anything but it was understood that it was the wish of hon. members that the first group of divorce bills be not proceeded with by agreement, and not by virtue of his superseding motion.

Mr. Knowles: It is quite satisfactory to me, Mr. Speaker, that the divorce bills were passed over by agreement rather than by passing the motion, but it was my thought that in passing over them we were passing over them for today.

Mr. Speaker: That would be agreeable. Is it agreed?

Some hon. Members: Agreed.

Mr. Harris: Yes. I think it is probably well known that the hon. member wants to make a speech in the remaining 45 minutes and I suppose we really ought to humour him.

Mr. Speaker: What does that mean?

Mr. Stick: Our genial minister.

Mr. Speaker: Is it agreed that all the divorce bills on the order paper will stand?

Some hon. Members: Agreed.

INDUSTRIAL RELATIONS

AMENDMENT OF CHAPTER 152, REVISED STATUTES OF 1952—VOLUNTARY REVOCABLE CHECK-OFF OF UNION DUES

Mr. Stanley Knowles (Winnipeg North Centre) moved the second reading of Bill No. 5, to amend the Industrial Relations and Disputes Investigation Act (voluntary revocable check-off).

He said: I confess that it is a temptation to respond to the challenge that was thrown to me a few moments ago by the Minister of Finance, but I also confess that it is not my intention to speak for 45 minutes if for no other reason than that the rules would limit me to 40 minutes. However, I shall limit myself to an even shorter period of time.

The bill now before the house is one which should be well known to all hon. members. It calls for the addition of a subsection to the appropriate section of the labour code, otherwise known as the Industrial Relations and Disputes Investigation Act, which would write into the labour code the voluntary revocable check-off.

The voluntary revocable check-off, Mr. Speaker, is a device whereby the collection of union dues is facilitated particularly in cases where a union has been properly certified and is the recognized bargaining agent in relationships between a group of employees and their employer.

This bill has been before the house a great many times. The history of the way in which the house has dealt with it is, I believe, pretty well known to hon. members. Despite the fact that it has been defeated a number of times some of us still hope that one of these days the government will realize that the rights of labour, one of which is set out in this legislation, deserve the passing of this bill.

As hon. members know, as long ago as 1948 a provision in exactly the words that are spelled out in Bill No. 5 was written into the Industrial Relations and Disputes Investigation Act when that legislation was before the committee on industrial relations. The sponsor of the motion on the basis of which the check-off was written into the labour code at that time was the then Liberal member for Spadina who is now an hon. member of the other place.

Despite the fact that the committee on industrial relations approved of the check-off

being written into the labour code at the time we dealt with it in 1948, when that bill came back to the committee of the whole house it was opposed by the then minister of labour and on the motion of another private Liberal member it was deleted from the labour code. Ever since then we on this side of the house have been trying to persuade the Liberals to accept this Liberal idea which, as I say, originated so far as legislating efforts in parliament are concerned with the hon. member who is now known as Senator David Croll.

I remind hon. members also that later in that same year the last national convention of the Liberal party was held. National conventions of the Liberal party are historic events; they do not occur very often. There was one in 1919, another was held in 1948 and there is a certain amount of interest as to when the next one will come. At any rate, at the national Liberal convention in 1948 a resolution was passed in support of union security.

Union security is a broad term. It is something which can be implemented in a number of different ways and to varying degrees. It is recognized that the voluntary revocable check-off is one form of union security. Therefore I suggest that the fact that in the spring of 1948 a Liberal member tried to write the voluntary revocable check-off into the labour code, taken with the fact that the national Liberal federation a few months later passed a resolution supporting union security, is a pretty clear recognition that the rank and file of the Liberal party were in support of the proposal made by the then Liberal member for Spadina.

Despite the fact that the Liberal party is committed to supporting the principle of union security, despite the fact that quite a number of Liberal members have voted for this bill across the years—in one session I think the number of Liberals who supported it got as high as 17, which is quite remarkable—the government as a whole has not seen fit to agree to this legislation. I hope the day will come when the government will see the wisdom of this legislation and will realize that it does involve a recognition of the rights of labour which labour in Canada deserves.

In addition to the support of this principle which has been shown by the Liberal party in the way I have indicated, my bill has had the support of the three groups on this side of the house every time it has come to a vote.

I might point out also that in at least six provinces of Canada the provincial labour legislation includes some version of the voluntary revocable check-off. Those provinces are the three in the far west, British Columbia, Alberta and Saskatchewan, together with three of the maritime provinces, namely Newfoundland, Prince Edward Island and Nova Scotia.

Mr. Stick: May I interject to say that Newfoundland is not included in the maritime provinces. If the hon. member would use the words "Atlantic provinces" he would be more correct.

Mr. Knowles: I was afraid I was going to have an argument over my statement about the check-off, but I am happy to make the correction that Newfoundland regards itself as one of the Atlantic provinces, not as one of the maritime provinces. At any rate, Newfoundland, Prince Edward Island and Nova Scotia of the Atlantic provinces do have the check-off in their labour legislation.

This business of six provinces supporting something has become a bit of a watchword in relation to another piece of legislation. I hope the fact that we have six provinces supporting the principle of the voluntary revocable check-off will make this bill more acceptable to the Minister of Labour (Mr. Gregg) and to the government in general.

In addition to the six provinces I have mentioned as having the voluntary revocable check-off, I believe that in the minister's own province of New Brunswick there is a provision for the voluntary revocable check-off with respect to workers in the mines. I do not think the provision in New Brunswick is as broad as it is in the other provinces, but at least there is a partial provision there. In other words we have got beyond this magical number of six, we have got to the point where about six and a half out of the ten provinces have the voluntary revocable check-off.

Mr. Brooks: New Brunswick is more than half a province.

Mr. Knowles: I seem to be having trouble with my friends from the Atlantic and maritime provinces. I hope they will understand that any error is quite unintentional. I did not mean that New Brunswick was half a province, not at all. Perhaps I can put myself in the clear by pointing out that my father was born in Nova Scotia and my mother was born in New Brunswick, so I would not indulge in anything derogatory to the maritime or Atlantic provinces. What I meant was that New Brunswick is half way along with this particular type of legislation.

In addition to the support of this principle which I suggest is indicated by the facts I have stated to date, I am sure the Minister of Labour knows that when the question of the

check-off has come before conciliation boards, more often than not such boards have recommended in favour of some form of union security, and more often than not in favour of the voluntary revocable check-off except in those cases where something better has been recommended such as the Rand formula. It is a few years now since there was a treatise on this matter in one of the issues of the *Labour Gazette*. However, in that treatise, figures were given showing that out of 125 cases that had come before conciliation boards where the question of union security was involved, 90 of the boards had recommended in favour of some form of union security.

While across the years the trade union movement has had to fight pretty hard to be recognized—it is a long story and I shall not attempt to go into it at this time—the point has been reached in Canada where it is becoming fairly generally recognized that labour unions are here to stay. They have a tremendously important part to play, not only on their own behalf and on behalf of their members but in the economy of the country, and all possible steps should be taken to accord them full recognition.

Because this point of progress has been reached, to me, to many of us on this side of the house, and I think to quite a few on the Liberal side of the house as well, it is disappointing that the federal government is still dragging its feet so far as this matter is concerned. It may be pointed out, and quite successfully, that a good many of the employees who come under federal labour jurisdiction already have the check-off in one form or another. For example, the railway employees have even more than the voluntary revocable check-off; they have the Rand formula.

Surely with this principle being established by law in so many other jurisdictions the time has come when the federal government—it can no longer give the lead because that has been taken by others—should follow along and put this principle into our federal labour legislation.

As to the meaning of the phrase, voluntary revocable check-off, I believe this is pretty well covered by the language of the bill. I do not think the wording is ambiguous as the drafting of bills sometimes is. May I spell it out by saying that what is involved in the voluntary revocable check-off is that when a union has been certified by the Canada labour relations board as the bargaining agent for a group of employees, then and only then that union has the right to request, which request must be granted, a check-off of the dues of its members. Even after that, under the terms of the voluntary revocable formula, the dues of individual members are checked off, that is deducted from the pay of the workers and paid over to the union, only for those individual members who sign cards or statements asking that their membership dues be deducted from their wages. Even after the deduction has been provided for in that way, it is still revocable in that any member of a union who has requested that his dues be deducted may revoke that request and, if he does so, the company discontinues deducting that particular employee's union dues. So it is clear that it is the very minimum of what is known as union security. It is the least provision one can ask to further the cause of helping to retain union membership and making it possible for unions to get along with other important business rather than spending time on the details of collecting dues.

The idea of a check-off is not confined to unions. Most employers, whether government or private, make deductions of one kind or another from their employees. The best known form of check-off, and the one most widely practised, is that which comes under the Minister of Labour's colleague, the Minister of National Revenue, in the income tax deductions that take place at the source. Almost everyone in Canada whose income is in a bracket that makes him taxable at the end of the year finds that there is a deduction made from his cheque every week, every two weeks or every month. In addition to that, people request deductions for various charities to which they wish to make contributions, or for purchases of Canada savings bonds and so forth. Pension fund payments are also deducted at the source. In fact, I have seen statistics of firms where there are scores of items that are deducted, not from the same individual, but deducted by an employer in the course of his business.

Why there should be this resistance by management to this particular type of deduction is hard to understand, unless it is that somehow or other management likes to hold back on the full recognition of the rights of labour and the place of the trade union movement in our economy.

Many fine things are said in this house and on public platforms of all kinds throughout the country about the place of Canadian labour in our economy, about the right of our working people to their hard-won privileges, about their right to a decent standard of living and their right to security. That is all wrapped up, so far as workers are concerned, in their organized effort through their trade union movement, and they feel very

strongly that they should have the recognition implied in the voluntary revocable check-off.

I have no doubt that when a very important event takes place in the city of Toronto, beginning April 23, the Minister of Labour will be there and will extend his greetings, and the greetings of the government and people of Canada, to the Trades and Labour Congress of Canada and the Canadian Labour Congress on the occasion of their merging into the Canadian Labour Congress. It will be a very important and significant event, and all of us who are related in any way to the labour movement are very proud of the step that is being taken. We feel that it will be for the good of workers generally and for the good of Canada that unity has been achieved between these two major labour bodies, and it augurs well for the future, not only because of the union that is taking place but because of the spirit in which it is being effected.

It seems to me that the Minister of Labour would feel much happier going to that convention—if he gets an invitation, as I am sure he will—if he could indicate to the new congress a few steps that have been taken this very year to show that the recognition of the labour movement consists not just of words, not just of the fine speech he will make from the rostrum if he goes there, but in legislation such as this that would mark a further step in national recognition of the place of the trade union movement in this country.

As I say, I have been pleased that in the past we have had the support, not only of all those on this side of the house but of a dozen to 15 or more Liberals, when this measure has come to a vote. I hope that this year the Minister of Labour will support it and that this piece of legislation, which recognizes the right of labour in a particular way, will be included in our national labour code.

(*Translation*):

Mr. Arthur Masse (Kamouraska): Mr. Speaker, in the six years I have been sitting in this house this question of the compulsory check-off has come up quite often, practically every year. After a thorough study of the matter I have come to the conclusion that it is my duty to oppose this legislation.

I want to say first of all that I am in favour of trade unionism. Secondly, each worker should support his own union. Thirdly, that achievement should come about through an agreement between employee and employer, and not through an act of parliament.

Here is what this legislation seeks to accomplish, and I quote section 1, paragraph 3:

> Upon request of a trade union entitled to bargain collectively under this act on behalf of a unit of employees and upon receipt of a request in writing signed by any employee in such unit, the employer of such employee shall, until the employee in writing withdraws such request, periodically deduct, and pay out of the wages due to such employee to the person designated by the trade union to receive the same, the union dues of such employee.

I will come back later on to that last part, for I believe it is up to the worker to designate that person.

> And the employer shall furnish to such trade union the names of the employees who have given and withdrawn such authority.

I do not agree at all with the sponsor of this bill when it comes to the means of effecting such social security. Since I have been sitting in this house I have often noticed that all groups represented here approve the principle of a bill but disagree on the way it should be carried out. If this legislation could bring about a greater measure of social security I would gladly vote for it, but I fear its adoption would have rather dire results.

The economic history of Canada shows that trade unionism plays a very important part, even an essential part in our industrial expansion. In my opinion, labour legislation derives its strength from the fact that it enables the members of a group or nation to obtain information on the matters under dispute. I agree with those who believe that unions have come to stay and if we want to protect them, we must give them the opportunity of extending their activity, and not hamper their work.

It is not by fostering disagreement between employers and workers that we will promote unity in trade unions. In that connection, I would like to quote an excerpt from "The Labour Problem in the Light of the Social Doctrine of the Church in Quebec":

> Professional organizations.
>
> In order to make their full contribution in the national economy, promote their professional interests and further their legitimate claims in the economic and social fields, workers must unite in strong professional organizations.
>
> Every man is bound to ensure the protection and security of all his professional interests. He should strive to secure for himself and his family what he needs to lead a truly human life, sheltered from the uncertainties of the future. He must contribute to the welfare of his fellow citizens, particularly those who share with him common interests. It is his duty to co-operate toward the

restoration of a better balanced social order, while furthering the respect for justice in all labour, industrial and business activities. Alone, he cannot succeed. By uniting with his fellow workers, he will be able to discharge that imperious social duty. Under present circumstances, he has therefore a moral obligation to take an active part in professional organization.

And I now quote paragraph 106:

By striving to ensure unity and harmony between capital and labour, one is not hampering the work of trade unions; on the contrary, such an effort is essential to ensure a careful and courageous evolution towards the adequate development of the labouring class; such an evolution will bring permanent and stable results.

In brief, the proposed legislation does not favour in the least the labouring class but does favour the union leader who wishes to ensure the perenniality of his salary.

Mr. Speaker, I have learned and I have taught that a good engineer, when undertaking to change the topography of a piece of land, must accept the ensuing consequences.

The same goes for any attempt to change the basis of the legislation and regulations pertaining to employers and employees.

I am also convinced that the standard of living of our working class can easily be compared to that of the labouring class of other countries.

This is due to the fact that our legislation has done more than any other to further the development of the labour movement in this country. Why should we complicate by legislation the friendly relations between employers and workers?

If improvements have been so consistent, we owe it to the understanding and the intelligence of our labouring class, supplemented by a wise legislation contributing to the application of principles capable of promoting the development of the labouring class.

If I have not taken part in this debate up to now, it is because, being the representative of a predominantly agricultural district, I had decided to abstain from speaking; however, having received from a mining organization of my province a request to oppose this bill, I felt it my duty to express my opinion after a careful study of the matter.

I do not believe it is fair to ask employers to do the work which the unions themselves should do. This procedure could very well bring about indifference on the part of the worker as regards his union since he would no longer be in contact with his association. Moreover this would seem to infer that the worker would not pay his dues willingly.

I am too well acquainted with the workers of the province of Quebec to allow such doubts to be cast upon the way in which they discharge their obligations. I would like to quote further, in this connection, from "The Labour Problem in Quebec", page 12.

A number of facts observed by us among the working people of Quebec are such as to give rise to real admiration because they reveal the riches of the worker. Our city families, our workers have fine qualities. Could we remain silent in the face of the sacrifices which the working class father constantly undergoes on behalf of his wife and children? How could we do justice to the devotion of those many wonderful mothers through whose strength and resourcefulness families find comfort in adversity and a livelihood from a limited budget? Through an appropriate education and in co-operation with their husbands they find the means of bringing up their children in a Christian way and of preparing them for urban living.

We have noted that our province has become largely urban in character. The adaptation of the countryman to city living is difficult. The worker and his family are beset with dangers, but resistance is taking shape. Class consciousness is developing among our workers; they demand that their rights be respected. Faced with this rising force some are worried, others remain confident and these are the more numerous.

Let us assume that there are in this country one million workers paying two dollars monthly. That means two million dollars per month that the employers alone would be called upon to pay over to the union treasury.

It seems to me that that is contrary to the right of the individual to do what he pleases with what is rightfully his.

In carrying out my professional duties I have always tried to let responsibilities remain where they belong. In this instance these responsibilities are those of the employer, the worker and the province concerned.

And when I say that this is the business of the employer and the worker, I quote again from the publication entitled "The Labour Problem in Quebec", page 50:

Relations with employees

The true employer, whatever the number of his employees, realizes his obligations as head of a working community. He appreciates his employees, not only for their physical strength or their productive ability, but also for their co-operation in a common endeavour and, particularly, for their dignity as men and Christians. A Christian employer is known by his determination to create a happy atmosphere in the enterprise, by his genuine solicitude for his associates in the labouring effort, by the genuine charity he shows towards them.

As regards the worker, I quote from page 34 of the same book:

Action required of the ones primarily interested.

The rehabilitation of the worker's status can be achieved properly only if workers have a noble and truly Christian appreciation of themselves and only if they are fundamentally prepared to co-operate and to help. Before counting on the

help of others, they must rely on their own efforts, on their own defence, on their mutual assistance, in the application of which the basic element is the feeling of close solidarity between those who give and those who take. They shall therefore be the primary makers of their improved situation, failing which the best reform projects cannot achieve the desired results.

Moreover, the province should make sure that it can exercise its rights. To this effect, I wish to quote, from page 61 of the same publication, an excerpt dealing with the role of the state as between employers and workers.

The workers, who are primarily interested, the employers, the members of the liberal professions and the educators who, in varying degrees, have a considerable influence over the life of the workers, should aim to contribute, each in his own way, to the rehabilitation of the labour conditions, and to "improve gradually and by peaceful means the physical and spiritual status of the working man". In their service, the state wields authority in order to place all, and therefore the workers, within easy reach of living conditions corresponding to their dignity. While it is not part of the state's duty to substitute its own action to that of the individuals and the lower level groups, it is within its province to take particular care of the weaker members.

I believe that very few Quebec companies fall under the federal labour code and that it would be more advisable to let the provincial governments legislate in this matter. I also believe that the only ones who could solve the problem to the advantage of those involved are the workers and employers themselves.

In my opinion, union security, whatever it may be, should continue to be discussed by the company and the union, with a view to eliminating all coercion.

Moreover, it would become increasingly difficult for the provincial governments who, until now, have resisted all union pressure to write the check-off into their labour code,—it would become increasingly difficult, I repeat, to maintain their opposition to this request, which scarcely tends to improve industrial relations.

For all those reasons, I shall oppose the adoption of this act as long as the workers of my province have not convinced me that it is needed.

(Text):

BUSINESS OF THE HOUSE

Mr. Harris: Monday will be private members' day, Mr. Speaker. Tuesday we shall take the motions on the order paper setting up the several committees, beginning with that of estimates and then atomic energy. After that we shall take second reading of the Canadian Farm Loan Act.

Mr. Knowles: May I ask if it is the intention to have the third readings previous to those items or later on?

Mr. Harris: Monday, normally.

Mr. Knowles: We are speaking about Tuesday and the third readings of the bills that were moved up today.

Mr. Harris: Certainly.

At six o'clock the house adjourned, without question put, pursuant to standing order.

ANSWERS TO QUESTIONS

The following answers, deposited with the Clerk of the house, are printed in the official report of debates pursuant to standing order 39:

C.N.R.—CURTAILMENT OF SERVICE, P.E.I.

Question No. 81—**Mr. Matheson:**

1. Is the Canadian National Railways planning to further curtail its train service in Prince Edward Island?
2. If so, will the curtailment be on the lines east or west of Emerald junction?
3. What curtailment of service is planned?
4. Would such curtailment of service be in keeping with the ruling of the board of transport commissioners in July of 1955?

Answer by: **Mr. Marler:**

1. The management of the Canadian National Railways advises that changes in timetables are made in the spring and fall of the year. These matters are now under study by the management but no changes have as yet been decided upon.

2, 3 and 4. Answered by No. 1.

C.N.R.—PERSONNEL STATISTICS, MONCTON, N.B.

Question No. 99—**Mr. Murphy (Westmorland):**

1. How many persons are employed by the Canadian National Railways Atlantic division at the present time at or operating out of Moncton, New Brunswick?
2. How many persons were employed with the Canadian National Railways Atlantic division in the years 1945 to 1955, inclusive, at or operating out of Moncton, New Brunswick?

Answer by: **Mr. Marler:**

The Canadian National Railways advise as follows:

1. Average number of employees in January, 1956: 4,621.

2. Average number of employees: 1945—4,318; 1946—4,476; 1947—4,358; 1948—4,464; 1949—4,458; 1950—4,395; 1951—4,567; 1952—4,698; 1953—4,763; 1954—4,576; 1955—4,519.

TRANSPORT CONTROLLER DIRECTIVES TO RAILWAYS

Question No. 113—**Mr. Johnson (Kindersley):**

1. How many directives to the railways were issued by the transport controller, during the months of October 1955, November 1955, December 1955, January 1956?
2. How many box cars were involved during each month?
3. What movement of rail cars resulted from the directives?
4. Who assumes the responsibilities of the transport controller during his absence?

Answer by: **Mr. Marler:**

1. None.

2 and 3. Answered by No. 1.

4. Deputy transport controller.

Questions

NEWFOUNDLAND—DUTY ON MACHINERY IMPORTS

Question No. 136—**Mr. Macdonnell:**

1. What was the total amount of customs duty paid by the Newfoundland government on all machinery imported into Canada in connection with the building of the cement plant at Corner Brook, Newfoundland?
2. What was the total amount of customs duty paid by the Newfoundland government in connection with all machinery imported into Canada in connection with the gypsum plant at Corner Brook, Newfoundland?
3. What was the rate of duty collected in each instance?
4. Was there any rebate paid back on these amounts paid by way of duty on machinery for either the cement or gypsum plant?
5. If there was any such rebate above mentioned, to whom was it paid, what was the amount of rebate and the percentage of rebate to total amount of duty paid: (a) in the case of the cement plant; (b) in the case of the gypsum plant?

Answer by: **Mr. McCann:**

1. As importations are not always described according to their ultimate use or destination and since an importer may enter goods through any number of different ports, it is not possible to ascertain with any degree of certainty the total amount of customs duties which any importer might have paid out in connection with importations for any particular purpose. Moreover, an importer might make importations through a number of agents or might obtain his imported goods from other importers all for the same purpose. It is not the practice of the department to furnish information which would disclose the private transactions of importers or exporters at customs.

2. See answer to No. 1 above.

3. The rates of duty collected on importations by the Newfoundland government for either of the above purposes were at the rates established in the Customs Tariff in accordance with the classification of the goods.

4. Answered by No. 1 above.

5. Answered by No. 1 above.

UNEMPLOYMENT ASSISTANCE AGREEMENTS

Question No. 179—**Mr. Garland:**

Which provinces, if any, have signed agreements under the federal government's offer to share the costs of unemployment assistance?

Answer by: **Mr. Martin:**

British Columbia, Newfoundland, Prince Edward Island and New Brunswick have signed agreements. It is understood that the offer is being given serious consideration by several other provinces.

HOUSE OF COMMONS

Monday, February 27, 1956

The house met at 2.30 p.m.

SHRI GANESH VASUDEO MAVALANKAR

DEATH OF SPEAKER OF INDIA'S PARLIAMENT—MESSAGE OF CONDOLENCE

Mr. Speaker: Sad news has come this afternoon from India that the hon. the Speaker of the House of the People in India has died. Many hon. members will recall Mr. Speaker Mavalankar when he was here in Canada as a visiting member on the occasion of the conference of the Commonwealth Parliamentary Association. As hon. members know, he was also the president of the general council of the Commonwealth Parliamentary Association. His death is a loss indeed to India and also to the commonwealth as a whole because he had a great knowledge of constitutional law and parliamentary procedure and had made a great contribution to the affairs of all commonwealth parliaments.

In your name I sent a telegram to the secretary general of the India parliament which reads as follows:

Please convey to Mrs. Mavalankar and members of your parliament condolence of members of Canadian House of Commons and myself in sad loss of Speaker Mavalankar.

Louis René Beaudoin,
Speaker of the Canadian
House of Commons.

NATIONAL PARKS ACT

AMENDMENTS RESPECTING PENALTIES, PROCEDURES, ETC.

Mr. C. E. Johnston (Bow River) moved for leave to introduce Bill No. 150, to amend the National Parks Act.

Mr. Knowles: Explain.

Mr. Blackmore: Explain.

Mr. Johnston (Bow River): Mr. Speaker, the purpose of the bill is to make a change in subsections 1 and 2 of section 8 of the National Parks Act so that the rights of citizens may be better protected and also that the penalties and procedure may be brought more into line with present-day practice.

Motion agreed to and bill read the first time.

NORTHWEST TERRITORIES POWER COMMISSION ACT

AMENDMENTS CHANGING NAME, AUTHORIZING SUPPLYING OF OTHER UTILITIES, ETC.

Hon. Jean Lesage (Minister of Northern Affairs and National Resources) moved that the house go into committee at the next sitting to consider the following resolution, which has been recommended to the house by His Excellency:

That it is expedient to introduce a measure to amend the Northwest Territories Power Commission Act to change the name of the commission to "Northern Canada Power Commission"; to authorize the commission to supply public utilities other than electrical power and to operate outside the territories; also to provide a fund to enable the commission to carry on investigations; and to provide further for certain changes in connection with the administration of the act.

Motion agreed to.

ST. LAWRENCE SEAWAY

AMENDMENTS TO AUTHORIZE OPERATION OF BRIDGES, ESTABLISHMENT OF TOLLS, ETC.

Hon. George C. Marler (Minister of Transport) moved that the house go into committee at the next sitting to consider the following resolution, which has been recommended to the house by His Excellency:

That it is expedient to introduce a measure to empower the St. Lawrence seaway authority to construct, maintain and operate international bridges as specifically authorized by the St. Lawrence Seaway Authority Act, and to construct, maintain and operate incidental works; to provide the specific authority for the construction of an international bridge; to enable the authority to establish tariffs of tolls with respect to pedestrians or vehicles using highways or bridges under its authority; and to provide further for certain changes in connection with the administration of the act.

Motion agreed to.

MOTION FOR PAPERS

MILK TENDERS, D.V.A., LONDON

Motion No. 27—**Mr. White (Middlesex East):**

For a copy of all telegrams, correspondence, memoranda and other documents exchanged between the chief purchasing officer, Department of Veterans Affairs, Daly building, Ottawa and dairy firms and all other interested parties, having to do with tenders for milk to be delivered to the Department of Veterans Affairs, London, Ontario, since August 1, 1955 to date, and also a copy of all tenders submitted on forms 2 R-LO-64, since August 1, 1955 to date.

Motion agreed to.

Conservation

CONSERVATION

PROPOSED CONFERENCE TO CONSIDER NATIONAL POLICY

Mr. H. W. Herridge (Kootenay West) moved:

That, in the opinion of this house, the government should consider the advisability of calling a dominion-provincial conference on conservation, with the view to the establishment of a nation-wide policy on soil, forest and water conservation and land use for Canada.

He said: Mr. Speaker, this is the fifth occasion on which I have moved a similar motion in this house. I take advantage of the opportunity provided by the rules of this house to bring this important question to the attention of the chamber. I do so with undiminished zeal and in the hope that the minister will finally be convinced of the soundness of our arguments, of our pleas and of the urgent need for our proposal and the public support behind it throughout the country. I trust that this afternoon the atmosphere of the house will be such that we will be able to imagine falling water, the sough of wind in the firs, and the smell of the good earth.

I never rise to speak on a resolution such as this without remembering the many occasions upon which the former member for Davenport, the late Mr. MacNicol, spoke on similar questions. I remember his interest in this matter and the travelling he did throughout this country to promote public interest in the principles of conservation.

I rise also because the policies of this group are based fundamentally upon reverence for life and reverence for creation, and in that spirit we in this group are constantly advancing suggestions for the conservation of human and natural resources.

I do not wish to exaggerate the importance of the problem. The solving of the conservation problem alone is not going to save this country or save the world. Political, social, educational and other measures are indispensable, but unless the conservation of natural resources is practised generally throughout this country in the near future our efforts in other directions will fail. In my opinion a government concerned with economic and political problems cannot ignore the necessity for the conservation of natural resources. If it does it is attempting to erect a national structure without sound foundation and it will simply not stand the test of time. In my opinion the most imminent danger is that we shall not realize how very short we are of that one unrenewable natural resource, time. If we delay until the next year or the next decade or the years to come, we shall be wasting just so much valuable time.

[Mr. White (Middlesex East).]

Other peoples and other civilizations suffered the consequences of ignorance, ineptitude, inaction and delay, and there is no reason why that experience cannot be repeated in Canada if we continue to procrastinate.

Our national health requires first of all that our renewable natural resources—those are the resources with which we are dealing this afternoon—be used to produce as much wealth as possible on a sustained yield basis throughout the years. We dare not exhaust those national resources to a dangerous point, because there are no substitutes.

As I said previously, this is not a partisan question. There is support in all political parties for the principles of conservation, and there is an opportunity in practising the principles of conservation for public ownership, for co-operative ownership and for private initiative. In my opinion, we shall require all three working together if we are going to solve this question satisfactorily.

There is an increasing recognition of the importance of conservation of our resources. More and more people are expressing their concern and their support for those principles. I wish to deal momentarily with just a few. I read recently that Lord Alexander of Tunis in a speech said this:

The forests of Canada are one of our greatest national assets and their conservation and use for the benefit of Canadians, present and future, is of great importance to all citizens everywhere.

On May 4, 1953, as reported on page 4764 of *Hansard*, the Prime Minister (Mr. St. Laurent) had this to say in speaking in a similar debate:

We recognize, as do all other hon. members, that the natural resources of Canada are a heritage to be developed and conserved for the purpose of providing the greatest possible measure of opportunity and security for all Canadians.

On February 16, 1955, as recorded on page 1205 of *Hansard*, the Minister of Northern Affairs and National Resources (Mr. Lesage), speaking on a similar resolution, said this:

I agree with him, however, that conservation of our natural resources is undoubtedly one of the most important subjects that can be discussed in this house.

Then we have in the Minister of Mines and Technical Surveys (Mr. Prudham), a minister who I know is interested in conservation of natural resources and who practises what he preaches. I was told recently that last summer when he was on his summer vacation he was out fishing with a party that caught a considerable quantity of fish. After using all they could in the camp that evening, they had a number left over, and then the instinct of the minister in support of the principles of conservation began to work. Do you know what the minister did?

He had heard many times about artificial respiration of human beings and the minister said: "Why not practise it on fish?" The minister practised artificial respiration on a number of fish, brought them back to life, put them in the water, and they went away to be caught another day. That is a true story.

An hon. Member: That is a fish story.

Mr. Herridge: Ask anyone to check on that. Then the agricultural institute of Canada—

Mr. Knowles: It was probably caught by another minister.

Mr. Herridge: —has for a long time urged a national policy of conservation of soil, water and other natural resources in Canada. They have had a very good committee working on this question throughout the year. The Canadian forestry association has urged the government to give increased attention to the question of the conservation of forests. During last year they were the sponsors of a dominion-wide conference on renewable natural resources. The recent convention of the Canadian lumbermen's association is another indication of the interest of the lumber industry in increased federal expenditures for the protection of our forests and national leadership in the question of a nation-wide conservation policy.

The Canadian Federation of Agriculture has taken an active part in studying this whole question, particularly the question of river bank erosion in British Columbia in recent years. The trades union congresses have indicated their interest in the matter. So have county and municipal organizations, particularly in the province of Ontario, as well as universities, the press, many periodicals and increasingly wide sectors of private industry in Canada, particularly the pulp and paper industry. There is also a very rapidly growing number of private Canadian citizens who are becoming interested in the subject because of the activities of these other groups.

I recognize the good work done by the federal government in certain directions, under the Prairie Farm Rehabilitation Act, the water resources act and the good work under the Rocky mountains conservation board act. In that connection I must pay tribute to Major General Kennedy. There is a man who is thoroughly imbued with the spirit of conservation as applied to forest resources. There is a man with a technical understanding of the problem, with the earthy approach that is required to get the co-operation of his officials and the people directly concerned. I think his work has proven very successful.

As I said before, various other bodies and organizations, particularly the pulp and paper industry, have carried on somewhat extensive research in recent years which has been of great value to all those interested in the problem. However, in my opinion there is a necessity for federal government leadership and financial assistance at this time to assure the satisfactory conservation of these resources on a nation-wide basis. I repeat that while there is a great deal being done in various directions we have, not only in my opinion but in the opinion of most responsible and informed people throughout the country, reached a point where there is an increased and urgent need for federal government leadership on these most important questions.

When speaking on my resolution last year the minister gave three reasons for not agreeing to accept it. While he supported the principles of conservation in general, he gave these three reasons for not being able to accept the resolution. First, he said that the prime responsibility for conservation of resources rests with the provincial governments. Second, he said that the suggestion for federal action should come from the provincial governments. Third, he had grave doubts as to the success of a conference called to deal with all renewable natural resources.

In reply to his first argument with respect to the matter being the prime responsibility of provincial governments, I would ask the minister if this argument applied when the old age pension legislation was adopted, when the Trans-Canada Highway Act was passed, when health grants were undertaken, and other measures. Second, the minister says that the federal government should first be asked by the provinces to co-ordinate a conservation program. I would ask the minister who took the initiative with respect to the income tax agreements, national unemployment insurance, federal-provincial agricultural conferences and so on. I would ask who took the initiative in the formation of a commission to study conservation in Canada in 1909. I think the federal government acted wisely in all these cases and saw that if there was going to be a satisfactory state of affairs in these cases it was necessary that it should take the initiative and leadership and not wait for the provinces to ask the federal government to act in a certain direction. The third reason has to do with the doubts expressed by the minister as to the success of a conference

called to discuss the conservation of all renewable natural resources. In that respect I will admit his argument has some validity. I think he has some grounds for argument there. It is a vast subject and possibly that would not be the best way to approach it in the first instance.

It might be better—and I agree with the minister to that extent—to call separate conferences on forest resources, on water resources and on soil and land resources, then at the appropriate time, call a final national conference which would be called together to correlate the work of these other conferences that have been going on throughout the years and to work out a draft for a final decision for a nation-wide conservation policy.

This year I have changed my resolution to this extent. I have changed the word "national" to "nation-wide". I am beginning to acquire the habits of the Minister of National Health and Welfare (Mr. Martin). I do not want any implication of centralization or federal domination of the provinces and things of that sort. I thought if I copied the Minister of National Health and Welfare in this respect and changed the word "national" to "nation-wide", it would remove every possible opportunity to suggest that the federal government was going to dictate to the provinces. I am sure I am on sound ground in that respect because there is no one more fitted to present a problem so as to avoid offending the sensibilities of any province than is the Minister of National Health and Welfare.

Today I have time to deal with only one aspect of conservation policy, namely, forest conservation. Other members of this group—and, I hope, members from other parties—will deal with water conservation, soil conservation and land use. I also hope we shall hear something from members who are interested in wildlife conservation because all of these subjects are correlated. Wildlife depends on forest conservation, water conservation and land conservation. I trust we shall hear something from those who are particularly interested in wildlife in this country.

I want to give a few figures to support my arguments with respect to certain comments I am going to make in connection with forest conservation. I particularly want to bring to the attention of the house the national revenue derived from the forest industry and the federal government's investment in conservation programs for this resource in relation to others. I have obtained these figures from the bureau of statistics. They are for 1953. They were the latest figures I could get worked out in this form.

[Mr. Herridge.]

In 1953 agriculture gave a net added value to the economy of Canada of $2,113 million. The government's investments in agriculture, in the estimates, are $75,565,308 this year. I see the Minister of Agriculture (Mr. Gardiner) looking at me and I suspect he might rise and say that the figure is not quite exact. May I explain, Mr. Speaker, that I have deducted the $2,167,783 that is in the minister's estimates for forest biology and scientific investigation into forest diseases. I can never understand why that matter was in the minister's department anyway. I find that mining in 1953 was responsible for a net added value to the Canadian economy of $1,101 million. That figure included primary mining, $791 million, and smelting and refining, $310 million. According to the estimates the government investment in mining this year is $22,832,265.

What is the situation with regard to forests? In 1953 the forest industry gave a net added value to the economy of Canada of $1,540 million made up as follows: Logging, $634 million; pulp and paper, $600 million; saw milling, $270 million. In this year's estimates the government invests in the forest industry in Canada $6,845,612 which also includes the money that is being expended by the science service of the Department of Agriculture for forest biology investigation. Now I think, Mr. Speaker, this demonstrates the improvident approach of this government with respect to investment in the protection of the forest industry in Canada, particularly in view of the revenue derived by the federal government from the forest industry. I think it is only common sense to increase the investment to ensure the permanency of that revenue.

I am quite confident, Mr. Speaker, that Canada's forest crop can only be maintained in the future, and in the very near future, by federal-provincial co-operation and the implementation of a nation-wide policy combined with a much larger federal investment in that industry. In total, if my information is correct, Canada has adequate timber reserves at this time but they are unevenly distributed. In some areas there is over-cutting, in some areas there is under-cutting, and in some areas the cutting is in balance. However, we are rapidly approaching the point, particularly with the rapid development of the pulp and paper and lumbering industries, where we could quickly commence to dissipate our forest capital. Professor Zavitz of the Ontario forest service said two or three years ago that Ontario's total annual growth that year was destroyed by fire, insects and disease, plus 7 per cent depreciation of the forest capital by cutting.

Now, that is a very serious situation in one province. Ontario is doing some very excellent work in connection with forest conservation. All our forests are constantly threatened by fire. Unless large sums are spent to protect them, with the increase in population and the increasing number of people moving about in the woods, in bad years the protection of these forests will be beyond the capacity of some of our provincial governments. I speak from nearly 50 years' experience in living in the woods, operating a forest and lumbering industry, and working in a heavily timbered region. I have fought fire on many occasions. I recall shortly after the first world war witnessing the destruction of 100 million feet of timber in four hours and 30 minutes. The hon. member for Vancouver-Quadra (Mr. Green) will know the district of which I am speaking. This fire consumed the timber between Summit lake and Slocan lake in one afternoon. The destruction occurred because the small fire which started the large blaze was not tackled early enough. The whole thing in forest protection is to get to the fire while it is small.

I shall never forget that experience because there was a magnificent mixed growth of fir, hemlock, cedar and white pine. The sight of 100 million feet of potentially commercial timber destroyed in four and a half hours is something that leaves an imprint on the mind of a person who is interested in natural resources. I might say, Mr. Speaker, the very first fire in which I had occasion to take part occurred when I was hiring horses to pack supplies. They were very unusual supplies in those early days. As a diversion I might say that was where I was first introduced to what was known in those days as Kootenay chowder. All the men in the camp away in the mountains build a big bonfire. In my supplies there were several cases of clams and several bottles of whiskey—that always went with fighting fires in those days. In case anyone is interested in the recipe, it is this. You get a four gallon kerosine tin, dump into that a case of clams and three bottles of rye whiskey, add one tablespoonful of dynamite, boil the whole for one hour and serve hot with bannocks. I have given that experience because it was my first experience in fighting fire, and it was quite a dramatic business. Anyway, my experience in the early days, not recently, with a great many fires, convinced me that that is the primary and first problem with respect to the protection of our forests of this country.

Naturally, I think the federal government should assist the provinces in five or six ways as far as the protection of their investment in the forestry industry is concerned. As I said before, the first should be increased assistance against fire. The most complete protection against fire is the most urgent duty of any administration, whether federal or provincial, but at the same time it is the most difficult and the most costly. The danger increases with increasing population. Out of an average of 5,000 fires reported each year in Canada, almost 4,000 are now caused by human activities. Funds are required to provide access roads, trails, radio communication, lookout towers, planes, helicopters, ranger cabins, warning signs and other equipment.

Years ago, because of the cost of fighting fires and the new people in the country at the time, many of the fires above levels of about 5,000 feet were not attended to. It was usually said, "It is not economic to protect that timber." In many cases it was not commercial timber but it was a great mistake. Many of the flash floods that are occurring in British Columbia now, in the interior particularly, are occurring because the small brush, the smaller timber, was burnt out in the basins at the headwaters of those creeks. It is just as important to put a fire out whether it is up 6,000 or 7,000 feet as it is to put one out at the thousand-foot elevation. But it takes money to do it. Because of this menace the federal government should gradually increase its assistance to the provinces for fire-fighting service.

As said before, Mr. Speaker, from my experience I give that as the No. 1 problem with respect to the protection of our forests. I admit the federal government is making some grants at the present time under the Canada Forestry Act and by agreement with the province; but there should be increased appropriations for continuing our forest inventory. Some people are of the opinion that if you take stock of the timber you have in the country, once you have gone over the whole of Canada, you have your stock there and you simply deduct that which is destroyed by fire, that which is cut and that which is destroyed in other ways, and then you have the remainder. But if a timber inventory is to be worth anything we must have a continuous inventory of our timber resources in this country. That takes some planning and some extra cash.

The second thing that the federal government should do is to increase the grants to the provinces for carrying on a continued inventory of our timber resources across this country.

The third thing we should think about is forest management, research, both fundamental and applied research. While forest management is essential, the results of good management are not fully realized without

respect to scientific utilization. In some cases I find men who are very interested in conserving the forest and growing a crop of timber but who lose interest at that point. Unless we have scientific utilization a lot of the value of our forest management will be lost.

At this time I must pay a tribute to the work of the forest branch of the minister's department. I think his officials are doing an excellent job with their limited resources, and I repeat that "limited resources". I also must say that the forest products laboratories are doing a work in this country that is recognized by very few people. Their studies in utilization, which is most important, if applied by the industry generally, will save this country the waste of hundreds of millions of feet of timber. Do we realize that if we protect our forests against fire by the practice of the best management principles—suppose we are doing that without adequate scientific utilization—even today in Canada on the average only 50 per cent of the trees standing in the woods across the country as a whole are manufactured into products for sale to consumers? We have to do a great deal more than that, and I must say again the work that is being undertaken by the forest products laboratories is a work that, if used by those who are producing great quantities of wood in the lumbering industry and in the pulp and paper industry of this country, could produce in the future hundreds of millions and possibly thousands of millions of dollars of increased revenue from resources that are now being wasted.

Then, there is the question of reforestation, which is very important. I place that as fourth. In our section of the country, in southeastern British Columbia, we have natural regeneration. Our people generally practise a system of selective cutting. In other places it is necessary to have clean cutting because of the huge stands of virgin timber. There is no second growth underneath. Then there are other places where replanting is required. Anyway, I think there is increasing need for federal assistance, assistance to the nursery stations, assistance for replanting, and there is also a need for studies in erosion. With respect to logging roads, and things of that sort, difficulties are increasing very rapidly because they use very heavy equipment in the woods in these days and there is need for assistance. When they used horses for logging purposes they did not dig large trenches in the woods; they did not make those gullies which quickly become creeks in the springtime. There should be a considerable increase in the assistance given by this government to the provinces for reforestation.

Then, last of all, in my opinion, education is of paramount importance. I know good work is being done by the forestry branch in this respect in the distribution of literature, press releases, radio addresses, pamphlets and booklets, and good work is being done by organizations such as the Canadian forestry association, by some of the universities, by some of the provincial governments and by some other private groups; but further funds are required—again limited funds—to carry on a more extensive program of public education and co-operation between governments, public bodies and individuals interested.

Without any question, Mr. Speaker, the facts prove the value of our forests of Canada, and prove that they warrant a much larger investment by the federal government in their protection and development. I do not suggest for a moment a sudden great increase in the estimates of the forest branch. I think we have an example of what can happen when you get a sudden increase in estimates. We all know of the wasteful expenditure of the Department of National Defence. In some respects it was occasioned by a sudden great increase in money available without any staff and without the planning necessary to use that money effectively. I am not suggesting a sudden great expansion in the estimates. I am suggesting, as a result of nation-wide conservation policy being developed, a gradual policy being devised and a gradual increase in the estimates of the forest branch of the minister's department, as a staff can be trained and as the program can be developed so that the funds will be spent efficiently and planned as a result of federal-provincial co-operation.

I have tried to illustrate, Mr. Speaker, as far as the forest industry is concerned, the need for a nation-wide conservation policy, protection and development of our forest resources as one facet of our renewable natural resources. Similar arguments will apply to water resources, soil and land resources and to wildlife. One of the greatest weaknesses today in facing conservation of natural resources is the number of governments and other agencies in this country who are concerned, and definitely concerned, in different phases of these problems.

Therefore in conclusion may I say that I think two things are essential for success, and I think it is essential that there be success in the near future. The first is the co-ordination of all these worth-while activities into one comprehensive and effective program, and

the second is that adequate funds be made available by the federal government to implement such a program.

Once again I urge the minister to accept the principle of my resolution and by so doing mobilize all the resources of the federal and provincial governments, of interested organizations, of individuals and of the people of Canada in support of a nation-wide policy of conservation of all our renewable natural resources.

Mr. A. H. Hollingworth (York Centre): Mr. Speaker, first of all I should like to congratulate the mover of this motion on his interest in the matter and on his knowledge of the subject of conservation. Not only is he a credit to his party, he is a credit also to his province and to his country.

This is a subject of great importance but I think we should realize at the outset that primarily it is a topic which comes under provincial jurisdiction and I think all our remarks should be governed by that salient fact.

I am entering this debate this afternoon to discuss two things in particular, the Humber valley conservation authority and the national parks program. Hon. members undoubtedly are aware of the fact that the Humber valley conservation authority made application to the province of Ontario and through it to the government of Canada under the Canada Water Conservation Act for the creation of flood control measures the necessity for which was brought about largely by the after-effects of the disastrous "Hurricane Hazel". Hon. members will remember that representatives of the authority saw the minister on January 31, 1955, and it was requested of them that a further report be made. Before the economic conditions and engineering aspects of this project could be determined it was withdrawn by the province of Ontario and at the present time the matter is in a state of flux.

I understand that a bill is before the Ontario legislature to amend the conservation authorities act and which would dissolve the Humber valley conservation authority and form the metropolitan Toronto and region conservation authority. I understand further that all the assets of and the appointments made by the Humber valley conservation authority would be taken over by the new authority. I should like to say that once the authority is designated and if further application is made to the federal government I as one of the members for the Yorks—I think all other members for the Yorks will feel the same way—will certainly use all my efforts to see that this worthy project is consummated.

The advantages of having a Humber valley conservation program are many. First of all, dams would be erected to provide reservoirs which would hold 52 per cent of any major runoff which might result from a repetition of "Hurricane Hazel". This could come any time, and usually does come once in every 75 years on a major scale. Furthermore these dams would control the summer flow of the water of the Humber at that time of the year and would ease a very serious problem of pollution which is prevalent in the summer months when the level of the water is quite low.

Then again the dams would create lakes to form a recreational area. One will realize that with a population of almost two million the Toronto metropolitan area requires some form of recreational park system which would take care of the recreational needs of greater Toronto. Finally, such lakes as would be established by this project would supply the municipalities with necessary water, and some control would also help in the management of soil conservation.

I should like now to deal with the question of national parks. Section 4 of the National Parks Act sets out the general purposes of the act. This is called the dedication clause, and it reads:

> The parks are hereby dedicated to the people of Canada for their benefit, education and enjoyment, subject to the provisions of this act and the regulations, and such parks shall be maintained and made use of so as to leave them unimpaired for the enjoyment of future generations.

Last summer I had the privilege of visiting some of these national parks, and at this time I should like to speak particularly of the Banff national park, the Yoho national park and Jasper national park. I want to comment upon the splendid reception accorded me by the different park superintendents and their staffs. It was a real privilege to see with what enthusiasm these gentlemen treated their work. I think a tribute is owing to the minister and his officials for the way in which these parks are being run by such capable people.

There are certain fundamental prerequisites for a national park development. A national park must preserve unusual scenery or some natural wonder or historic feature of national importance. It must be of sufficient size to support adequately all forms of wild life native to the region. It should embrace only lands in their natural state for the most part and should not take in lands suitable for agricultural use. It should exclude mineralized or forested areas capable of commercial exploitation.

I appreciate the problems created by the number of visitors who are visiting the parks.

This creates a great danger of spoliation and a greater danger of fire. An editorial in yesterday's New York *Times* comments upon the increasing use of United States national parks, and they put this problem quite nicely when they say:

> The brutal fact is that the national parks of the United States are in dire danger of being loved to death, destroyed by the American people in their desire to see them, to travel through them, to camp out in them, to walk and ride over them. Present facilities are geared to handle about half the number of present visitors. If we are going to continue to have national parks that are worthwhile, and, equally important, that are to be adequately used by the people while being preserved and maintained for future generations, we have to embark on a large-scale protective and constructive program.

I have two observations to make. They are not meant as criticism, but I should like to call them to the attention of the minister. First, in my opinion there are not enough tourist facilities available. It seems to me that there are too few auto camps and hotels to look after the people who want to visit these parks.

My other complaint is that many people seem to be disappointed in the fishing. Perhaps I noted this particularly because I am extremely fond of fishing and I know that I was disappointed. One can realize the difficulties in this respect. After all, lakes that are accessible to highways are always fished out. I am told that the glacial silt which comes down from the mountains, particularly in the summer months, is not good for fishing and that the best time to fish is in the spring or the late summer. But I understand the department is taking steps to correct this situation. For example, I was interested to note that in some lakes, such as the third Vermilion lake, the waters are being treated with "rotenone" powder to kill the suckers and to provide the water for trout. I was interested also to learn that the warden of Yoho park had said that Emerald lake was afflicted with suckers and a great deal of expenditure would be necessary to clean it out, but such action is being contemplated also, I am told.

Another matter is that the fish hatcheries at Banff and Jasper are being increased. At Banff two substations are being provided, and, for the first time in many years, one quarter of a million young trout will be available to stock the lakes in Banff park. Similarly, at Jasper, one half a million young trout are available and being developed at the Jasper substation. Again, research is being continued by biologists of the Canadian wild-life service of the national parks branch. I think the minister and his officials are to be congratulated. I am informed that trout can still be caught in the more inaccessible lakes and, of course, any real fisherman will tramp miles or go by packhorse to reach those lakes. It also means, of course one must have the time.

Now I should like to speak about national parks in Ontario. Hon. members particularly from that province, will be aware of the three small national parks, namely, the Thousand Islands national park, the one at Georgian bay islands and the small national park at Point Pelee. I think these parks are admirable, but I think also they are inadequate. In travelling through the vast panorama of lakes, streams and forests of incomparable and rugged beauty that constitute northern Ontario, I have thought that would be an excellent place for a national park. I understand that the procedure for establishing a national park is as follows. National parks can be established by an act of parliament amending the existing parks act. In establishing new parks the policy has been for the federal government to request the province concerned to take the initiative by offering a clear title. If the lands are suitable and measure up to national park requirements, the offer of the provincial government is accepted and necessary legislation will be passed by both federal and provincial parliaments.

The federal government and the province of Ontario have a splendid record of co-operation in many fields. I would like to ask the Minister of Northern Affairs and National Resources if he will consider approaching the province of Ontario for a great new national park in northern Ontario.

Finally, I wish to say something on this question of overriding provincial jurisdiction in this field.

I must say regretfully and reluctantly that I cannot support this resolution. I cannot support it because I feel, as the minister said last year, this is something that primarily comes within the jurisdiction of the provinces. If a majority of the provinces requests such a conference, then I think we should certainly co-operate with them, but it is not something like a dominion-provincial conference where both governments have equal jurisdiction or co-ordinate jurisdiction, for example, in taxation both the federal government and the provincial governments have access to taxation because of the constitution, but surely this is something which comes within the province primarily. As I understand it, it is also on the agenda of the present conference which was and is being held between the provinces and the federal government.

But in the meantime, to be true to our responsibilities and to assist the hon. member for Kootenay West, who is doing such a magnificent job of bringing this up year after year, we should not only reconstitute or resuscitate—whichever word you want to use—the house standing committee on resources but also perhaps, as the hon. member for Kootenay West suggested last year, the government should again set up a commission on conservation for the necessary fact finding and research.

Mr. W. M. Howe (Wellington-Huron): I should like to commend the hon. member for Kootenay West for once again bringing this question to the attention of this house and of the people of Canada, by means of his resolution that the government should consider the advisability of calling a dominion-provincial conference on conservation, with the view to the establishment of a nation-wide policy on soil, forest and water conservation and land use for Canada.

As the hon. member for York Centre was speaking, I was thinking of his own resolution not so long ago on education. In the discussion on that, the bugbear of dominion-provincial relations was brought up, and indications were that this was trampling on the field of the provinces. In the case of education and scholarships, the fact that none were given at certain levels meant that Canada was the loser, because it lost thus many of the brains that it needed. But in the case of conservation we have a problem in which we have a second chance. In the main we are dealing with renewable resources, built up by mother nature in this country over many years—trees, soil, rivers and so forth. Man has been destroying many of the things that mother nature took so long to build. But, as I say, we have a second chance, by carrying out a scheme such as is proposed in this resolution.

One of the particular reasons why I am interested in this question of conservation is that in my own riding of Wellington-Huron, as an editorial in the *Fergus News Record* indicates, in the spring of 1957 will be completed one of the greatest conservation schemes that has been developed in this whole dominion. That is the Grand river conservation scheme. That scheme is part of history. As far back as 1905 an engineer named William Breithaupt in the city then named Berlin took time to walk up and down the banks of the Grand river. Even in those days when there were not so many people living there, he found a picture of erosion. Trees, trunks and soil were taken away and the banks scoured to the rock on that river, because of the fact that there was a rushing current during the spring and summer months. Later on, he found the stream shrunk to a very small rivulet which was polluted with sewage and so forth from all the cities that were established along that river. He decided to see if he could interest people in building some type of conservation scheme on this river. The original plan was for five dams. In 1939 the first dam was built above the town of Fergus—this was called the Shand dam, not too far from the village of Belwood. A few years later another dam was built at the headwaters of the river and was called the Luther dam. When the final dam is built on the Conestogo a conservation scheme will have been developed that will prevent terrific flooding in the spring with the crushing weight of water and ice that does so much damage and it will also establish and maintain a flow of water throughout the entire season.

At this time I should like to pay tribute to those spirited citizens in that district who, with very little monetary return to themselves, have carried through this project to a successful conclusion, who have not stopped working and who are turning their time and energies to building up once again the banks of that river as they were many years ago before all the trees and shrubs were taken away. They are making it once again a thing of beauty. They are developing parks, building beaches around the lakes and, what is probably more important than ever, they are establishing tree farms up and down the Grand river valley.

I bring this matter to the attention of the house because, as I say, it is a pattern that might be followed in other parts of Canada. I maintain that if it had been followed along the Humber river valley the terrible catastrophe that followed "Hurricane Hazel" would not have been possible. Along many other rivers that night there were thousands of dollars' worth of damage. The flooding along the Nottawasaga river in southwestern Ontario that night resulted in over $500,000 damage done to bridges and culverts. With this pattern of damage and destruction, would it not be better to spend money on preventive measures so that the raising of disaster funds would not be necessary and municipalities and governments at all levels would not be called upon to assist in reinstating people, reconstructing buildings and moving them to other localities?

As I say, great tribute is due these people who have done so much to carry out this wonderful work. I might say also that their work has been of an economic nature, particularly in southern Ontario, something we did not expect. I have here an article from

the January issue of *Bush News* entitled, "Security for Future Seen in Tree Farms." The article reads in part as follows:

> Ontario now has 17 tree farms as a result of the certification of 11 woodlots in the Grand valley district of southern Ontario December 28. The woodlots, totalling 423 acres, were officially certified as tree farms at a ceremony in Galt, sponsored by the Huron district tree farm committee and the Grand valley conservation authority.
>
> During the ceremony, James A. Vance, P.Eng., of Woodstock, chairman of the Canadian forestry association of Ontario and guest speaker, announced there now was a direct market in southern Ontario for pulpwood from the tree farms. He said the Ontario Paper Company which operates its giant mill at Thorold is planning to purchase 10,000 cords of pulpwood in the southern Ontario area next year. . . . He added that Canada's history was largely determined by trees. There were more than 4,000 uses for wood in daily life today. It goes into lumber, pulp, rayon, cellulose and plastic. The tonnage of wood used in world war II was greater than the tonnage of steel.

As the hon. member for Kootenay West (Mr. Herridge) indicated, there are very many organizations which are taking an interest in this question, and in that regard I should like to refer to the policy declarations and resolutions of the Canadian Chamber of Commerce for 1953-54 and 1955-56. Under the heading "Water and Energy Resources" they have this to say in their 1955-56 policy declarations and resolutions:

> The chamber urges the development of a program for the establishment of a national policy for the control, conservation and development of water resources for multiple purposes on which all interests can unite and on which a maximum of local and provincial autonomy is assured.

It is also rather interesting to note that some of our younger people are interested in this question. In the *Globe and Mail* of March 8, 1955, there is an article containing the following:

> Katharine Merry, 17, of Milton, a member of the Halton 4-H beef calf club and 1954 winner of the Queen's guineas at the Royal Agricultural Winter Fair, said one-fifth of the original crop land of Canada has already been destroyed by improper agricultural methods and that more is being destroyed every day.

As this would indicate, Mr. Speaker, the question of conservation is bigger than just the holding back of the waters in our river valleys. We must consider the reasons that are contributing to the excessive flooding. We are all familiar enough with the history of this country to realize that when our forefathers came here it was pretty well all covered with forests but that in order to provide for food and crops for their way of life it was necessary for them to cut down the forests indiscriminately. This practice went on to a great extent. It was followed in our country in the same way as it has been all over the world with no thought being taken for tomorrow. As an ancient Chinese philosopher once said: "If a man take no thought for what is distant he will find sorrow near at hand."

The history of the world indicates that soil erosion is part and parcel of the history of mankind. Great empires have risen only to fall because of the loss of their topsoil. The great Sahara desert, over which Rommel made his advances and retreats during the last great war, was at one time the granary of the Roman empire. Irrigation works were damaged by war. Vegetation disappeared, blowing sand and subsoil covered whole cities and the work of seven centuries was lost in less than 100 years.

We find the same pattern in Mesopotamia, Italy and China. However, we do not have to go back that far in history. In many cases our own handling of this particular matter has proved that we too are guilty of forgetting the fundamentals necessary for the protection of that very valuable asset, our topsoil. There are many districts in southern Ontario which at one time supported whole communities and which are now pictures of dilapidated and broken down buildings and eroded soil. The people have been forced to move because through improper methods of land use the land would no longer provide a livelihood for them and their families.

In the United States we have the tragedy of the dust bowl that occurred in the states of Kansas, Texas and southern Oklahoma where, in a period of excessive drought and in a region with the striking paradox of productivity and erosion, the topsoil that was left exposed began to drift and blow. In fact, on one occasion the sky over New York city was darkened by the dust from that dust bowl in those southwestern states of the United States. We sometimes say that that happened back in 1934. I do not know how many members read the *Globe and Mail* this morning, but in it there is a picture with the heading at the top, "Red Dust from Texas Blows into Windsor Area." It can happen again. Periodically we read that there is still danger of the same thing happening in our own western provinces as happened back in the thirties with the blowing of the soil.

In China we find an example of the two extremes. In northern China there is the Gobi desert, a vast barren land where nothing can grow. In central China there is the Chengtu plain where for 1,500 years intensive agriculture has been practised by following proper conservation, irrigation and soil protection methods. We too must realize the importance of a national policy of conservation of our renewable resources, a national policy which gives us a comprehensive picture right across the whole country.

We might take a leaf from the book of some of the countries that have joined the Colombo plan organization. Last summer there was completed by Pakistan—one of the countries that we consider to be a have not country—an aerial survey of their whole country. From this survey, together with the work of a ground crew, there has been worked out a comprehensive plan, just as we have mentioned here in our resolution, so that in the reclamation and the setting up of their country, in using these funds for technical assistance, they will not go at it in a haphazard way but will have a co-ordinated plan that will be followed right through in their entire country. I understand that Ceylon is doing the same thing.

I can see no reason why we in Canada could not have an aerial survey of that type. The other day I noticed a description of a new type of machine for reading the three-dimensional camera which would give us a better picture and a better perspective of the means necessary to prevent the type of thing about which I am speaking. As was stated by the hon. member for Kootenay West (Mr. Herridge), many people are trying to bring this matter to the attention of this country of ours. In the London *Free Press* of recent date there appeared an item which was headed "Too much population; Professor broods on war from hunger" and which reads in part as follows:

> A gloomy forecast of a hungry, overpopulated world, with nations possibly waging war to safeguard their food supplies, was placed before a section of the Royal Society of Canada . . .
>
> The forecast was made by Professor D. A. MacGibbon of the department of political economy, McMaster University, in a paper on the threat of overpopulation.

The professor concludes his remarks with these words:

> He felt that the greatest possibility of delaying an actual global crisis in food supplies for some decades at least, lay in scientific progress and in the resolute employment of methods of conservation.

Speaking about things that are being done to decrease the number of acres of land we have, may I say that the practice that is being followed in some parts of southern Ontario is, in my opinion, wrong. I refer to the taking over by great industries of that wonderfully productive fruit and vegetable land in southern Ontario, something which man can never replace, something which it has taken years and years to build up and develop. Industry can grow and develop on land that would not be as suitable for the growing of fruit and vegetables. I think that practice is wrong and one that should be changed. General Smuts once said that erosion is the biggest question before the country, bigger than any politics. As I said, time is of the essence. Old mother nature does not stand still but she gives us a second chance to renew these resources which we have depleted. I feel that there should be a definite policy of conservation on a national level to promote systems of farm practice, tree culture, water supply and land settlement that will promote greater economic security for our dominion.

Mr. S. R. Balcom (Halifax): Mr. Speaker, I think we should be happy today that the hon. member for Kootenay West (Mr. Herridge) has again brought this important resolution before the house. I can appreciate his doing so for I understand that he lives in an area surrounded by thousands of lakes and streams and hundreds of acres of beautiful forest, all of which he owns.

Mr. Herridge: Excuse me, Mr. Speaker. I rise on a question of privilege. May I say that I do not own all that. I live in a very small area within all that.

Mr. Balcom: It does not look like it by the pictures, Mr. Speaker.

In Nova Scotia where forest, lake and stream blend to make a great paradise, the people are extremely conscious of this important matter of conservation. Nova Scotia is a small province, composed of merely 21,000 square miles jutting out into the Atlantic ocean, practically surrounded by water, and it loses by erosion many acres of fertile soil to the Atlantic ocean, the Northumberland strait and the bay of Fundy.

I am sorry that the hon. member for Kootenay West could not have broadened this resolution to include the youth of this country from Newfoundland to Yukon. That is one resource in which we are experiencing a great drain. Particularly is that so in Nova Scotia. We train our young to graduate—to mention only two professions—in engineering and medicine. Then we lose most of them.

Mr. Murphy (Lambton West): To the United States.

Mr. Balcom: To the United States, but mostly to central Canada. This drain has been going on for many years.

Mr. Murphy (Lambton West): He is wrong.

Mr. Balcom: I hear the hon. member say that I am wrong. I should like to point out to him and to other members of the house that all one needs to do is to look at our universities where we have our presidents, the important doctors across this country, the engineers, the president of the national research council, and at many places like that where you will see our university graduates.

Mr. Murphy (Lambton West): Look at the emigration figures. Look at the emigration that is going to the United States.

Mr. Balcom: We have a small number going to the United States. Unfortunately we are not filling up this loss in Nova Scotia through immigration. When talking about conservation I think we should give the authorities, both federal and provincial, credit for the work they have already done. Over the years many millions of dollars have been spent all across this country. In some provinces the amount has naturally been greater than in others. But Nova Scotia has done reasonably well with respect to money spent on conservation. In 1952 some $715,000 were spent in six counties of Nova Scotia. Of that $715,000, $90,000 was spent in Annapolis and Kings counties. Again in 1953-54 $166,000 were spent, and $90,000 again were spent in 1954-55.

Mr. Nowlan: They have a good member.

Mr. Balcom: That pleases the hon. member for Digby-Annapolis-Kings (Mr. Nowlan). This land in Annapolis, Kings and Digby counties is the most important part of the province. It has been cultivated from away back in 1604 by the Acadians, and it was intensely cultivated by them from 1604 to 1755 at the time of the expulsion. There were periods when this land in the valley—this land that was reclaimed by the building of dikes and dams—was worth perhaps $200 an acre and at times it produced 50 bushels to 75 bushels of grain per acre and 2½ tons to 3 tons of hay per acre.

Mr. Murphy (Lambton West): What kind of grain?

Mr. Balcom: Probably not as good as that out west but it was so good that those Acadians sold it to the French in order to feed their army, and they had quite a business with Newfoundland over the years not only in grain but in beef.

Mr. Murphy (Lambton West): I was wondering if it was oats or wheat because one has a much higher yield than the other.

Mr. Balcom: At the time the yield there was 50 to 75 bushels per acre. This may not compare so favourably with the highly cultivated land out west.

Now, in 1948 when the land saving program was undertaken as a co-operative measure between the federal and provincial governments the federal minister of agriculture said that since coming to Ottawa he was convinced one of the most important works to be done in Canada was the rehabilitation of the marshlands of the maritimes. He not only said that but he put his words into action. Since that time some $6 million has been spent out of the $9 million allocated. More than half of the 90,000 acres of land included in the project have been either reclaimed or given some protection. Many of the dikes have been either built or rebuilt. There is one piece of land in the Annapolis valley that has been partially reclaimed. I would strongly urge that at this spot, the Granvilles, a dam be built which would save thousands upon thousands of acres of rich, fertile land. Part of this land is already diked, and has been diked since 1604, but these dikes have broken and the land has been ruined. If a dam were constructed at this spot it would obviate the necessity of keeping up the dikes or building more dikes. This project would compare favourably with the reclamation work in connection with the Shepody river dam, where some $2 million were spent to reclaim 5,000 acres. In this case many more thousands would be involved. In addition it would save thousands of acres which have been cultivated since the early Acadians. As a matter of fact, it is the oldest European settlement north of Mexico.

I should like to draw attention to the Musquodoboit valley. Much land was ruined, as well as forests, in the floods this year. We think the time has arrived when perhaps something should be done to save this beautiful part of the country. The Musquodoboit river runs for probably 20 miles into the country and empties into Musquodoboit harbour. We would suggest that there should be some plan for fresh water control here; that community pastures be organized; that bogs and swamps along the river be dredged; that there be the construction of farm ponds for irrigation and fire protection. We require better supervision of wood lots to give the small man an opportunity of supplementing his income, especially if he is a fisherman or a small farmer.

In Nova Scotia destruction from insects and aphids has been high, but probably not as bad as in our neighbouring province of New Brunswick. However, there should be a campaign to kill these things because one aphid will multiply and produce many millions. Over the years New Brunswick has done considerable spraying and I believe the results have been very good.

This is a big job. Probably our resources are not as great as some other provinces but they are needed all the more. I would suggest, therefore, that to stop the ghastly waste of our assets we have an intensive campaign to study our forest policy, silviculture, forest

management, forest protection and forest utilization. Perhaps those aspects cover the field and we would ask that consideration be given to this.

Mr. A. B. Patterson (Fraser Valley): The resolution we have before us at the moment has two important aspects. I believe one stresses the importance and necessity of the establishment of a nation-wide policy and the other suggestion is that, in order to implement that, there be a dominion-provincial conference called to discuss these matters. I am sure we are all aware of the importance of the principle that underlies this resolution. Our natural resources are those resources related to the soil, forest and water. They are of such importance that every effort should be made, and must be made, to conserve them. The task is of such tremendous importance and of such magnitude that co-operation between federal and provincial authorities is absolutely essential.

So far as British Columbia is concerned, I believe this principle is clearly understood and supported. I should like to refer to a brief submitted to the dominion government by British Columbia on December 14, 1953. The introductory paragraph to this brief is as follows:

> The government of British Columbia in this brief proposes federal-provincial co-operation in the further economic development of the province and in the conservation of its natural resources. It submits that financial participation by the government of Canada in projects which will serve these purposes is warranted both by the national interest and by special considerations affecting British Columbia. It further submits that it is warranted by federal financial participation in projects in other parts of Canada.

In that introductory paragraph the idea of federal-provincial participation in these matters is set forth very clearly. As I have said, I believe it is of such importance that both the governments should co-operate in these particular matters.

In the province of British Columbia we have various resources. Of course, we have a varied economy and our resources cover pretty well everything that you can think of. Some of these have been mentioned in previous debates in this house. Just a few days ago we had a considerable debate on the hydroelectric potential of Canada, and in that debate the potential of British Columbia was mentioned.

The resolution before us emphasizes especially the establishment of a nation-wide policy of soil, forest and water conservation and land use for Canada. When we think of British Columbia we think first of all of the tremendous natural resources as evidenced in our various programs and in our forest resources. I am not going to take time this afternoon to refer in any detail to that particular aspect of the resolution; but certainly this matter is of vital importance to British Columbia, because it forms a considerable part of the income and also of the industrial capacity of our province. This afternoon I want to speak especially on soil conservation.

Because of the topography of British Columbia a very small percentage of our land is under cultivation, and a very small portion of our land is arable. Because of that fact the conservation of the areas that we have is of fundamental importance. In the brief which I have already referred to we find the following on page 2:

> The province has an estimated area of 366,255 square miles, of which more than 240,000 square miles have been classified as alpine and barren.

Therefore we see that the arable land we have must be put to the best possible use and must be conserved in every possible way.

In other sessions I have referred to the main problem that confronts us in the Fraser valley, namely, the continual loss of some of our best land through river erosion. This continues to take a terrific toll in my particular area. I could mention various points this afternoon where it is posing very serious problems; but I might say that from Hope right down to the lower end of my riding the residents are faced with this particular situation. In view of the seriousness of the problem I feel that this particular resolution has a direct bearing upon the matter.

I mentioned Hope. I could also mention Agassiz. I have referred to this particular area on a number of occasions in the past and I have spoken of the hundreds of acres of the very finest agricultural land that are being lost through river bank erosion. A considerable amount of work is being done to try and protect the property of residents in that section. We do appreciate the contributions that have been made by the federal government in this regard. Throughout the years the government has seen fit to make contributions which have enabled the people of that area and the municipal authorities to carry out work that has been of real importance and has contributed much to the solution of the problem there.

I was also very pleased to read in the Agassiz-Harrison *Advance* that this year again the federal government has seen fit to make a substantial contribution to this end; but from Hope right down through Agassiz, Matsqui, Mission, Silverdale, Albion and right down to Pitt Meadows, the same problem obtains and is creating serious difficulties for the agricultural section along the river.

I might say that at Mission there is one mill near the river in that village, and the owner of the mill spoke to me just last fall and told me of plans for expansion that he had been entertaining. In fact I believe the project had already been commenced but, because of the process of erosion, and the continual loss of land through erosion, he said he had decided to call off his plans for expansion, and his mill was in danger of being closed, with the consequent unemployment and loss of revenue to the community, through this unsatisfactory situation. I stood with some of the farmers of the Silverdale area and watched as great proportions of the land caved in and just disappeared while we were standing there watching. At Albion, houses will have to be moved. Developments of various kinds are in a serious position; valuable agricultural land is being lost. Then we come down to the community of Pitt Meadows. I was told just last fall that in the past years an area of land of about 2,000 feet long and 100 feet wide had been swallowed up by the waters of the Fraser river. Therefore, it appears that in areas such as that, which is facing this serious problem, it would be well if the federal and provincial authorities could get together, could call a conference and deal with this matter and try to arrive at some satisfactory over-all policy so that this loss of agricultural land could be halted and the people could live with a sense of security, knowing that their property is being protected.

I was talking to some of the authorities of the diking commission. They are of the opinion that there is only one satisfactory long-term solution to this problem, namely, channelling of the river so that these conditions will be rectified. The task is so great that it is beyond the power of the municipal authorities in these various municipalities. It is so great that it is beyond the capacity of the province to handle. In the interest of the people the co-operation of every level of government is called for to take care of this situation.

As we know, the Fraser river is a navigable stream. I believe that as time goes on it will play a great part in the industrialization of that entire section. We have already heard of its tremendous fishery resources. We have heard something of the hydroelectric potential on the river if the problem of the fisheries could be overcome. It is also going to contribute in a large way to the various industries that will be established along that section of our country. Therefore I would suggest, Mr. Speaker, that in the interest of such sections as I have mentioned this resolution calls attention to a very important and widespread need, namely, a nation-wide policy with regard to these matters.

There is in my riding another problem which has been called to the attention of the house on other occasions. However, I think it fits into the picture created by this resolution. I refer to the Vedder river problem. We had high hopes in the Fraser valley that the water conservation and control act which was passed several years ago was going to solve this particular problem. In fact my predecessor had every hope and expectation that this particular project would come under that act. However, we have been advised by the Minister of Northern Affairs and National Resources (Mr. Lesage) that it does not come under this particular measure. Although it does not come under the operations of that measure a problem is still created and we feel that it could fit in and should be bound up with this whole problem of conservation of our soil and land use in Canada.

The problem which confronts the residents of that particular area is that the Vedder river is gradually filling up and its waters are spreading. Instead of following a defined channel they are just meandering along and it is felt that the time will come, possibly in the near future, when instead of being confined in any way this river will overflow its banks and flood a great section of the agricultural area of the Fraser valley.

I might say that we already have our problems there with practically a 100 per cent freeze of our strawberry crop. This is creating a tremendous problem for our people and certainly we would hate to think that in the near future they will be faced with another one by the overflowing of the Vedder river and the inundation of vast areas of our land.

I have called this matter to the attention of the federal authorities but it seems that they cannot find any way to fit this into federal policies and bring it under any legislation covering resources and so on. Nevertheless it constitutes a real threat to that section of the country. One objection was that no federal property was involved and therefore it did not seem to come under the jurisdiction and responsibility of the federal authorities. I might mention that camp Chilliwack is in the area, and also the Tzeachten Indian reservation and the Coqualeetza Indian hospital.

These are all federal government installations, and the picture in connection therewith is changing. I was speaking to some people in that area on New Year's day and they said that although in the past it was felt

that there would be no danger to federal installations in that area, the picture has changed and today there is a possibility in the event of flooding that some of these properties would suffer. Therefore I call the attention of the ministers under whose departments this matter might come to this state of affairs and suggest that they take another look at this particular situation.

At the close of last session I was sorry to receive a letter from the Minister of Northern Affairs and National Resources stating that they could not see their way clear to being able to enter this picture and give assistance in connection with this particular problem. It may not be considered economically desirable or feasible, but yet I submit that it is not desirable to have hundreds of acres of our farming land flooded with the consequent destruction of private installations and development in that section.

Apparently at one time this watershed to which I have referred was under federal control and as such royalties and stumpage fees were paid to the federal authorities. Apparently this situation existed up until 1930 and the records would seem to indicate that at least $400,000 was collected by the federal government in stumpage fees and royalties on timber removed from this area. That did not take into account the amounts that would be paid in the form of personal and corporation income taxes and so on. Therefore I submit that the federal authorities have some responsibility in the matter because one of the contributing causes is the logging operations which were carried on in that section and from which the federal government received its share.

Without doubt the conservation of our soil, water and forest resources is a matter of urgent importance. It has been pointed out by the mover of the resolution and by other speakers in this and other debates that there is not too much time to lose, that the matter is urgent and therefore that we should support the resolution before the house. I should like to read the last paragraph in a letter which I received from the Hon. W. K. Kiernan, minister of agriculture of the province of British Columbia, dated January 20, 1955, as follows:

> While I was at the dominion-provincial agricultural conference in Ottawa in early December I again raised the point of no unified conservation policy by which the federal and provincial governments could co-operate in the conservation of our soil and other resources. It is time that we had in this country a conservation policy that was applicable to all areas of the country on an equitable basis with participation of the three levels of government. Anything that you may do to further this line of thought would be greatly appreciated.

That would indicate that the provincial authorities of British Columbia are behind such a resolution and that they would favour this resolution now before the house. I have pleasure this afternoon in commending the hon. member for introducing this resolution and indicating our support therefor.

Mr. A. J. Brooks (Royal): Mr. Speaker, I wish to say a few words in connection with this resolution. I listened with deep interest while the junior hon. member for Halifax (Mr. Balcom) was speaking. I was particularly interested in what he said regarding the marshlands. We in New Brunswick perhaps are not as vitally interested as are the people of Nova Scotia but we have had some benefit from the marshlands act. As the hon. member was speaking I was reminded of the debates we have had in this house at different times on the marshlands and I recalled of course the many times that my good friend, the former member for Cumberland, Mr. Black, spoke on this matter. As a matter of fact he has been called by some the father of the marshlands act of the maritimes.

This act was passed as a sort of balance to the Prairie Farm Rehabilitation Act. The maritime provinces like the other provinces of Canada were contributing extensively to P.F.R.A., and the marshlands act was a sort of return, and a most acceptable one in our section of the country.

I wish to say that I support this resolution wholeheartedly. This is the fifth time the hon. member for Kootenay West has moved this resolution in the house, and I have spoken on it several times. I have always been greatly in sympathy with the motion and with its context. I do not think there is any subject in Canada that should receive more support or more interest from the people than this particular subject of conservation. Of course, volumes have been written on this subject; it has been dealt with in books and pamphlets time and time again.

In 1948 and in 1949 the Canada Forestry Act was passed and this act went a long way towards assistance in conservation in this country. It was hailed by the people and the press across this country as a great stepping stone in the matter of conservation. I remember the debate at that time and I remember the interest that was taken in the press. But after six or seven years I realized that, whilst this act was designed to meet the conservation needs to a certain extent, still it has not gone nearly as far as we should hope. The whole question of the use of our forests, the land use and water supply is one upon which the whole economy of Canada rests and, as has been so well pointed out by some of the speakers this afternoon,

if by carelessness we destroy these great assets of ours, we destroy ourselves as a country and we place our country in a very poor condition.

As the hon. member who moved the resolution has very well said, time is of the essence as far as conservation is concerned. We have time on our hands in Canada, and by that I mean that, whilst older countries have dissipated their great assets, we in Canada have not dissipated them all or to the extent they have in older countries and we still have time to save these great assets of the forests, of the land, of our wildlife and streams, if we at the present time recognize the great responsibility we have not only to ourselves but to future generations. After all, the country does not belong to the generation that is living at the time, but it belongs to the future. It is the duty of every succeeding generation to conserve for the future that of which they themselves have an abundance.

No country in the world is blessed with natural resources such as we have in this country. Speaking for my own province, we have been greatly blessed with natural resources. I was very much interested in the discussion of our forests. Our forest assets of New Brunswick are our greatest assets. As a matter of fact, we might say that the three f's—the forests, the farms and the fisheries—are the greatest assets in the maritime provinces. We have hoped to have other industries, as the hon. member for Halifax has stated, that would keep the young men living from leaving our provinces. Such industries have not come to us as yet, but we still have hopes for the development of our mining industry and for the possibility of development of other industries through the use of our abundant water supply for the development of electric power, and we may be able to keep in our own part of Canada that great asset mentioned by the hon. member for Halifax.

The importance of the pulp and paper industry to New Brunswick and to Canada at large has already been mentioned. It is the largest industry that we have in Canada. I was reading the other day a report of the pulp and paper industry which said it was first in employment of labour in this country, it was first as far as total wages are concerned, it was first as far as the export value of its products is concerned, and first as far as the total values of production and of capital investment are concerned. So the forest products industry is the first industry in Canada and is an industry which should receive at least the same attention as any other industry.

I think the argument can be very well made that because forest products are our greatest industry and because the dominion government does receive very large revenue from the forest industry, then the dominion government is vitally interested in the preservation of our forests, whether they belong to the province or the dominion. It is greatly interested and must bear its full share in the preservation of this asset. In 1946, when the forestry act was passed, the dominion was contributing in the neighbourhood of $2½ million. I remember a speech at that time in which it was stated that this was only a drop in the bucket and it was estimated that before 1955 and 1956 the total amount of money spent for the conservation of the forests in this country should be in the vicinity of at least $100 million. Of course, this would not include the amount which would be spent by the provincial governments and also by the industry itself, which up to that time, 1946, had contributed practically three quarters of the money spent on forest conservation.

I shall not take up the time of the house this afternoon in discussing the different enemies of our forests. They have been mentioned before. Fire, of course, is one of the worst. I recall that in the debate in 1949 our leader, speaking about fire protection, suggested that the federal government should take a far greater interest in the protection of our forests and he suggested that airplanes should be used to a greater extent and that they should be used with far greater effect in carrying not only material for putting out fires but also men who could be moved from one place to another to put out our forest fires. I do not think enough of this has been done in the last six or seven years. I know that in my province we have not been using the airplane much for firefighting, nor do I think it has been done in other parts of Canada.

He also spoke about waste. There has been a great deal done in recent years to eliminate the waste of much of our forest materials. Sawdust is now being used for fuel in British Columbia, I believe. It is also being used for other purposes in other provinces. But I still see great mountains of sawdust in my own province which I think could be utilized, thus doing away with a great waste. Different parts of trees are also not used, and they become a great fire hazard in the woods.

I also remember that in the former debate Mr. Gibson, then the member for Comox-Alberni and a man with great experience in lumbering, spoke about reforestation. He mentioned the fact that there are many areas from which practically every tree has been

stripped. No trees were left to bring about the natural reforestation of the areas. At that time he said there should be a section in the Criminal Code making it a crime for any man to strip a forest area and leave no trees for seeding purposes.

This is a very important matter, and it comes back to the recommendation of the hon. member for Kootenay West, namely that more is required by way of education. It is a matter of education. I know of farmers in my own province who had good areas of trees but who have stripped every tree off these areas, not realizing that they were leaving nothing for seeding. Spruce and other trees will not grow again in those areas. If boys were taught more in school about our forest assets and the necessity for reforestation I think it would be a great help in assisting to bring about conservation.

There was also mention of pests. The hon. member for Halifax (Mr. Balcom) mentioned the terrible destruction that occurred in the province of New Brunswick, and how a real catastrophe was averted. In 1949 it was discovered that there was an infestation of the budworn pest in the northern part of our province. Immediately the large lumber companies and the government of New Brunswick became alert to the necessity of doing something. I am sure all members here know of the splendid fight that was waged to save the great forest area in the northern part of our province. Hundreds of square miles of forest would have been destroyed if it had not been for the effort that was made.

In travelling through the area myself I saw where six airfields had been constructed right in the virgin forest. Airmen were brought in not only from all parts of Canada but from the United States and Europe, and many thousands of barrels of D.D.T. were sprayed on the forests. Through these efforts the forests of northern New Brunswick were saved and probably the economy of our province as well. I suppose this was one of the greatest conservation efforts ever undertaken in our country. The federal government deserve credit for the assistance they gave. The provincial government deserves credit, and the large lumbering and pulp and paper interests in that part of the country also deserve credit. They worked together and were successful in their efforts.

With respect to education, Mr. Speaker, I am of the opinion that there are not enough specialists in this country to look after forest conservation. I think we should have more trained foresters, more men trained to do the work of conservation. In the Canada Forestry Act "forest experiment" is defined as meaning the study of silviculture, forest pathology, forest entomology, forest fire protection and many other technical branches. I am sure there is no question in anyone's mind that where these technical subjects are concerned we must have trained men who are able to look after these matters.

In this morning's *Gazette* I was quite interested to read a Canadian press dispatch from British Columbia headed "More Forestry Students Said Pressing Need". The article points out that while there are 6,300 students at the University of British Columbia only 125 are registered in the faculty of forestry. The article then refers to Dr. Allen, dean of the faculty of forestry of the University of British Columbia, and has this to say:

> Dr. Allen said it is conservatively estimated that in 20 years British Columbia will need 2,750 graduate foresters, 2,200 more than there are today.

If that number will be needed in British Columbia alone we get some idea of the great need throughout the whole of Canada for men technically trained in forestry. In our own province of New Brunswick we have had a school of forestry at the University of New Brunswick for over 50 years. Our graduates have gone not only to all the provinces of Canada but to the United States and, in fact, all over the world. Today we are receiving students from every province in Canada, the United States, Australia, Europe, and especially from Great Britain. They are coming to the university to take the forestry course there.

We often hear it said in the house that scholarships should be given at different universities. I do not think there is a greater need for scholarships in any branch of study today, and I would recommend to the consideration of the federal government the provision of forestry scholarships in our different universities. There are three universities which teach forestry, British Columbia, Toronto and New Brunswick. I cannot think of anything that would be better for the conservation of our forests than to have more of these men to assist in that work.

It is not my intention to take any more time this afternoon. I should like to speak about the effect that the lack of conservation of our forests has had on some of our fisheries, but I will have an opportunity to do so later on. I would simply say that the fact that the forests have been cut down along the banks of many of our streams in New Brunswick, the maritime provinces generally, Gaspe and even in Newfoundland has meant that streams, up which the Atlantic salmon go to spawn, are more or less drying up with a resulting decrease in the catch of salmon.

Only last year the catch decreased by over 50 per cent. Men who have studied the problem contend that one of the reasons is the fact that these streams are drying up and that the spawning grounds of the salmon have been taken away from them. These are all matters which deserve careful consideration. I agree entirely with those who have this afternoon contended that this is a matter in which the dominion government is vitally interested. I am strongly in favour of the resolution.

(*Translation*):

Mr. Auguste Maltais (Charlevoix): Mr. Speaker, I have been listening with a great deal of interest to the comments made by the hon. member for Kootenay West (Mr. Herridge) upon introducing his resolution. We are certainly grateful to him for providing us with an opportunity to discuss a problem of such significance.

As the hon. member pointed out, this motion is twofold. It involves, first of all, the establishment of a nation-wide conservation policy, and ensures its implementation through a federal-provincial conference. We all realize how important it is for us to make wise use of those natural resources which are the very foundation of our national economy.

Agriculture is based on use of the land, and our industries utilize electric power which could hardly exist without this use of the land. The Canadian government has long understood the importance of this problem and, in this connection, has implemented various steps in those territories over which it has direct jurisdiction.

Besides, the federal government has had legislation passed to favour all conservation projects that provinces could put into effect, such as, for instance, the Canada Forestry Act, the International River Improvements Act, the Prairie Farm Rehabilitation Act, all of which, to mention only those few, were adopted at the request of government departments to promote conservation of our natural resources.

Moreover, throughout the country, various agencies not connected with our governments, either federal or provincial, also carry out surveys and publicity projects to promote and help soil conservation.

I could not let this opportunity pass without mentioning the enormous and very important part played in this field in the province of Quebec by the Quebec Forestry Association and our numerous 4-H clubs.

We all realize, as members who spoke before me indicated, the importance of the conservation of our soil, of our water resources, in brief, of all our natural resources.

The motion that has been submitted to us, Mr. Speaker, would entrust this responsibility to the central authority, calling as it does for a national conservation policy. Any legislation that might come out of this motion, if it is passed, would make the central authority the primary warden of our natural resources, with ten foremen in charge of the administration of those resources under the jurisdiction of the federal government. After all, in order to be efficient, the principle of a nation-wide policy implies a central power or administration, and at the same time implies some measure of control.

The motion submitted by the hon. member is perhaps not comprehensive to that extent and has no other purpose than to interest the provinces in the establishment of a national program of conservation under which they might benefit from subsidies while remaining free to act as they would wish. In either case, I can see reasons of a constitutional, social and economic nature, which would prompt me to vote against the resolution.

Everybody here knows that, under the constitution, or rather under the British North America Act, sections 109 and 92—or more precisely under subsection 5 of section 92, not only do provinces have exclusive jurisdiction over the administration of our natural resources, but they are exclusive owners of these resources.

Federal government participation, as recommended in the motion of the hon. member, is a direct encroachment upon provincial autonomy, in a field which we have always regarded as a strictly provincial prerogative. Jurisdiction over these matters is restricted to provincial authorities, and I submit that under present conditions it is of paramount importance for the federal parliament to reject any attempt at infiltration into this sector of Canadian economy.

Canada's present expansion, and the technical advances of modern science, coupled with an influx of capital investment warranted and encouraged by the prospects of the country, have largely contributed, over the past decades, to the development of our resources from the Atlantic to the Pacific.

The increasing pace of the development of those resources has meant huge revenues to some provinces, revenues so huge, we might say, that they rank among the main items in provincial finances. We all know that the last federal-provincial conference again emphasized the pressing need for provincial governments to find alternative sources of

revenue to meet the requirements arising from their various responsibilities.

It is therefore imperative that the provincial government retain its authority in the field of conservation and development of its resources, so that it may enjoy the necessary discretion to supervise the utilization of its soil, forests, water resources and lands.

Only thus will the provinces fully benefit from the revenues arising out of the proper development of natural resources in a country as prosperous as Canada. We have already seen that some provinces, which were hindered a few years ago in the discharge of their responsibilities by the lack of sufficient revenues, have greatly improved their financial position as a result of the development of their natural resources.

Nobody will deny the financial advantages which Alberta has derived from the development of her natural resources. I also believe that the improvement in the financial situation of British Columbia—whose per capita revenue is now greater than that of the province of Quebec, with a larger population and a larger territory—is the result of the development of her natural resources.

In short, a national conservation policy could seriously hinder the collection of revenues which provinces can derive from the development of their own natural resources.

In addition, a national policy in the field of conservation implies a measure of uniformity that would hardly be consistent with the differences in climate and topography existing from the Pacific to the Atlantic.

True, a national conservation policy could perhaps be profitable from the economic standpoint, but I maintain that we must take into account other factors besides the economy because quite often in various parts of the country the conservation of our soil, the development of our forests and water resources are definitely linked with certain political or social principles, which differ in the various provinces that make up this country.

The conservation of our resources must take into account certain regional characteristics. For instance, intensive colonization compels local authorities to promote forest development for reasons particular to the district where colonization is taking place. On the other hand, we know that specialized farming in certain districts requires proper irrigation. Besides, our forest industry must be protected by means which may differ according to the area concerned. Surely methods of pest control in the woodlots of the province of Quebec are unlike those which might be used to control tree pests in the forest lands of the west coast, because the trees themselves and atmospheric conditions are different.

In addition, the various provincial governments are in a better position to look after the development of our water resources.

It may be that a provincial government wishing to develop its resources more than another province will allow the production of water power to take place at the same time as some industrial developments in order to decentralize industry. Conservation and development of our natural resources may be either nationalized or left to private enterprise. Some provinces might also look for immediate revenues through the development of natural resources while others might be more interested in the stability and security resulting from a slow development of natural resources. Moreover, in the province of Quebec, a great part of our education is connected with the development of those same natural resources. In fact, the agricultural college of Ste. Anne de la Pocatiere and some faculties of the University of Montreal and the university of Quebec are closely connected with the utilization of our different natural resources in that province. I believe also that a national conservation policy could jeopardize the outcome of these various programs which, in my province, are closely linked with university education.

Of course this does not mean that the central government should not get more interested in the conservation of our soil, in the cultivation of our lands and in the maintenance and development of our power resources. Already the Department of Transport, by recommending the St. Lawrence seaway project to this parliament, has largely contributed to promote and further the development of resources in northern Quebec.

I wish to thank the Minister of Transport (Mr. Marler) for asking this parliament to vote the necessary subsidies for the construction of a railway in the lake St. John district, an improvement which no doubt will create an atmosphere definitely con-

ducive to the conservation and the development of the tremendous forest reserves of that district.

A moment ago, the hon. member for Royal (Mr. Brooks), indicated that sometimes airports can help in the control of forest fire, disease or anything detrimental to them. There again, we must congratulate the federal Department of Transport for understanding that need.

As far as we are concerned, in the Charlevoix district which I have the honour to represent here, we are glad to express gratitude to the minister for having facilitated the building of that airport.

No doubt, the construction of a railway linking Charlevoix to the north shore will be another step which will greatly contribute to the development of the natural resources of that part of the province of Quebec.

Thus, since the federal government, through its different departments, has, within its jurisdiction, the means to further the conservation and the development of our resources, I intend to propose an amendment to the motion laid before the house by the hon. member. I therefore move, seconded by the hon. member for Lake St. John (Mr. Gauthier):

That all the words after the word "advisability" be deleted and the following substituted therefor: "of taking, in co-operation with the provinces, the necessary steps to establish a national inventory of the natural resources of the country with a view to permitting the federal government to grant the maximum assistance within its jurisdiction to the various provinces on soil, forest, land and water conservation."

(Text):

Mr. H. A. Bryson (Humboldt-Melfort): I am very happy this afternoon to have the opportunity of saying a few words in support of the important resolution which once again has been moved by the hon. member for Kootenay West. It is obvious to all of us that this is a very important question, and one which has had the unanimous endorsement of all those hon. members who have spoken up to the present time. It is hard to deal with all of the phases which would normally go into a comprehensive conservation program. It is my intention to deal with only one or two aspects of what such a program should take into account. I should like to deal with the soil and water factors which are of such importance in our economy.

I believe that the conservation problem has not had all the attention that ordinarily it would have had, had we not been placed in such a favourable geographic position. But as our park areas become denuded of trees, were it not for weather conditions, the effects of freezing, which tend to make erosion less of a factor than it is in many other countries of the world, we would find ourselves in a much more difficult position. I believe we have deluded ourselves to some extent into believing that our agricultural and arable lands will go on indefinitely as a sort of fixed asset, and also that their productivity will continue unabated. Unless we introduce some comprehensive conservation program in this country we know from past experience in other places that that of course will not be so. We are told that the nation that neglects its soil will soon see that soil completely depleted, and of course with that ultimately the destruction of the nation itself. History records that the depletion of the soil has been a greater contributing factor to the downfall of a country than have been high taxation and other things of political consequence. Therefore it is important that we take into account the great need for an over-all comprehensive conservation program in Canada.

In western Canada we of course have had this question brought into focus because of our experience during the early and mid 1930's. During that time we had in that part of Canada what has commonly come to be known as the dust bowl area. It is one of the amazing phenomena of modern times, I believe, that this land has returned to its productivity. It is hard to understand after almost years of continuous soil erosion because of high winds. The land was abandoned, and the people never expected to go back again.

However, those of us who were there and saw what actually happened can appreciate the value of a conservation program similar to what was set up under the Prairie Farm Rehabilitation Act back in 1938. At that time we saw soil erosion at its worst. The wind blew holes in level ground the size of this chamber. School children were let out of school at noon week in and week out because of the intensity of the dust. They could not see. It was almost like night. This was disastrous to our economy. Think of the years and the lives that were wasted. People had to leave the land, go into other industries, move to different parts of the country to make a new start. These are some of the things we should try to avoid if at all possible.

In spite of those disastrous times I have mentioned we in this country still have a tendency to think of our natural resources as oil wells, mineral deposits, timber lands, and so forth. Yet oil wells have a very embarrassing habit of going dry. Mines end up as empty holes in the ground. The only renewable resource, the only really important resource, is our land. After all, if it is properly cared for it will go on producing indefinitely. As a matter of fact, under proper management I think it can safely be said that its productivity increases.

This is no local problem it is a national problem. Because it has been tackled more or less on a local basis throughout different parts of the country we have a tendency to think that it is a local problem rather than a national problem. Under the British North America Act certain jurisdiction in this regard is given to the provinces. Experimental and scientific research comes under the jurisdiction of the federal government. In times of national disaster, in times such as I pointed out happened in western Canada during the dust bowl days of the 1930's, the problem was such that no province by itself could cope with it. Therefore the federal government recognized that it was beyond the capacity of a province and they came into the picture.

In 1938 there was set up in the prairie provinces the Prairie Farm Rehabilitation Act, commonly known as P.F.R.A. To give some indication of what was accomplished under the most adverse conditions imaginable, in 1938 and 1939 it took 58 acres of land to pasture one head of livestock in this area, which comprises some several million acres in southern Saskatchewan, and I imagine the same thing applied to southern Alberta and to other places that experienced similar conditions. After the act came into force it was a matter of only a short period of time until three head of cattle could be grazed successfully on the same 58 acres of land. That again is a clear indication of the great value of the practical application of scientific know-how to land and soil management.

We have now some 53 of these community pastures, as they are called, comprising several thousand acres, but the amazing thing is that in Saskatchewan there are some 23 million acres of land considered to be unfit for agricultural purposes. This is located in what is known as the brown soil zone. The P.F.A.A. people have carried out wide investigations and surveys of this area and have come up with statistics to prove that farmers cannot survive on this type of soil. Yet of those 23 million acres in Saskatchewan, 15 million acres are under cultivation. There is great need for conservation measures to get out of that land the production of which it is capable. In other words we are wasting some 23 million acres of land in Saskatchewan, land which could make a great contribution to the economic stability of this country.

During the depression years in Saskatchewan, brought about by the factors I mentioned a moment ago, it cost the people of Canada in the way of direct relief $184 million, to say nothing of the tremendous losses in capital investment. The P.F.R.A. made a great contribution to checking that tremendous loss. Approximately $76 million was spent under that act, money well spent.

We must remember that hunger is still the greatest problem in the world today. Considerable research has been done by FAO in this regard. We talk about overproduction, surpluses of agricultural products and so on, but I do not think anyone who has investigated the problem will say there is overproduction. Rather it is underconsumption. We need a distribution system to see that our production gets into the hands of the people who need it.

It is estimated by the food and agriculture organization that there are some 2·7 billion acres of arable land in the world. It might be interesting to note that in Canada, where we consider we have an unlimited number of acres, only 3 per cent of our land is arable. That is quite a small percentage when we consider the situation prevailing in other countries. For instance, in the United States some 24 per cent of the land body is arable; in the United Kingdom the arable land constitutes 30 per cent of the total land body, and in some of the Scandinavian countries the percentage is as high as 65.

It is important that we try to utilize to the best advantage all the land we have. On the basis of 2·7 billion acres of arable land in the world there is only 1·1 acre for each individual which is far below the minimum required for the decent nutritional standard we would expect. I should like to quote from a report by Dr. K. W. Neatby, director, science service, Department of Agriculture, which appeared in the *Agricultural Institute Review* of June, 1954. I am reading this because I believe it points up the importance of utilizing to the best of our ability all the arable land in this country. Dr. Neatby had this to say:

> Our population is increasing at a rate of about 2 per cent per year, our consumption of food is at least 80 per cent of our total production, and our production is not increasing anything like 2 per cent per year, if it is increasing at all. In other words, we are rapidly approaching a position of mere self-sufficiency. Can we expect a 2 per

cent per annum increase in production, that is 34 per cent by 1971? If we could develop virgin lands and irrigation schemes without regard to cost, if we could accelerate our plant and animal breeding work and count on a little luck, if we could produce abundant livestock feed by hydroponics, and, finally, if we could anticipate steadily increased efficiency in farm management, the goal might be reached easily. But can we? Shall we? I have grave doubts on both counts. I hope I am wrong; but if I am right, then maybe more people will be looking at the other side of the population—food equation by 1971 or sooner.

After pointing out that the world picture is even more serious, he goes on to say:

To maintain the physical standard of living that prevails in North America, it has been calculated that we require about 2½ acres of arable land for each individual.

He goes on to point out that in China and most of Asia the people are trying to exist on something like one-half acre of land each. It is important that we in Canada, especially in the west where we have great areas of arable land, utilize our land to the best of our ability. There are 123 million acres of arable land in the west, 15 million acres of which lie within the Palliser triangle, which area is subject to the drought conditions I spoke about a moment ago. The margin between desert conditions and those normally found in the Palliser triangle is so small as to be almost negligible.

It is most important that we waste no time in developing an over-all national—I do not mind using the word the hon. member for Kootenay West was a little sceptical about—conservation authority in this country in co-operation with the provinces. We need this to carry out this great and pressing work.

I would not want to sit down without mentioning the South Saskatchewan river dam. I am not going to elaborate any more on this than to say that it would be a most important project in an over-all conservation program. Water knows no boundary, and if we are going to continue to have these flash floods, if they are going to continue to be a great hazard to Manitoba, then it is most important that the federal government assume greater responsibility in connection with this whole matter of a national conservation authority. Soil and water are inseparable. I have no hesitation in asking the government to give the most immediate consideration to the establishment of such a conservation authority.

Mr. H. M. Batten (Humber-St. George's): Mr. Speaker, in taking part in this debate on the resolution proposed by the hon. member for Kootenay West I intend to confine my remarks to our forest resources in Canada. Here in my notes I have numerous figures which I may state at the beginning have been taken from the dominion bureau of statistics, from departmental reports and from the reports of the pulp and paper association of Canada.

I believe that in order to ascertain the degree of conservation that is required in Canada at this particular time as far as our forests are concerned, it is necessary first to get some idea of the extent of our forest resources, then to have some idea of the value which our forest resources have in our economy and, third, the rate at which our forest resources are being depleted and the problems of conservation they present. Then I should like to speak for a moment with regard to the procedures that are now being adopted in relation to those problems of conservation. Finally I should like to say a few words about conservation in my own province, following the same five points.

Our forests in Canada extend over a very wide area and are exceeded only by those of two other countries, namely the tropical forests of Brazil and the forests of Russia. Our forests in Canada extend from the Atlantic to the Pacific ocean, at times narrowing to a width of 600 miles and at other times widening to a width of 1,300 miles. The total forest area is approximately one and a half million square miles or 42 per cent of the total land area.

This total forest area is divided into two categories. One is called the unproductive area. This area lies along the northern fringe of vegetation and has an area of 670,000 square miles, or 45 per cent of the forested area of Canada. I sometimes disagree with this term "unproductive area." I think that is the terminology of the foresters. It may have some value in the sense that it means a portion of our forests which does not produce merchantable timber, but the unproductive area is unproductive only in that sense, because this unproductive area of our forests does give to us a large part of the habitat of our wildlife, and also gives us great controls to regulate our water flow.

Of the productive area, 830,000 square miles or 55 per cent of our forested area, it is here we find that the forest industries are getting most of their raw materials. This productive area again is subdivided into two classes, one called the accessible area, having an area of 580,000 square miles or 70 per cent of the productive area. The inaccessible area, or 30 per cent of the productive area, is an area of 250,000 square miles. This term "inaccessible" is of course nothing more than a relative term, because the areas that are today considered inaccessible may tomorrow be accessible by the building of roads or railways or the establishment of mills or the putting of new equipment on the market.

Of our trees in Canada today, there are roughly 177 different types. Of these, 55 have commercial value, and of these 55 we have 23 softwoods and about 32 hardwoods.

Having had a look at the extent of our forest resources in Canada, I should like for a moment to spend some time on the value of the forest resource in our economy. If we took productive area alone, 830,000 square miles, and worked this out, we would find that this would be equivalent to 180 acres of productive forest land for each family of five. Based on forestry estimates, 180 acres would produce in perpetuity about 60 cords of wood annually, which at present prices would be equivalent to $1,500 per year. If we were to take the importance of the pulp and paper industry in our economy, which uses about one quarter of the actual consumption of wood, we would realize that of the money which Canadians earn, one dollar out of every eight is earned by those engaged in the pulp and paper industry. In the approximately 80 companies now operating 130 mills in seven provinces in Canada, over 300,000 men are employed directly while many more thousands are employed indirectly.

Without this great product Canada would not be the international trader that she is. The value of the pulp and paper industry to Canada exceeds the value of wheat and all grains. It is equal to the total national output of all minerals. Every hour of the day here in Canada 1,000 tons of paper and pulp is being made by our mills, having a value of approximately $140,000, or a total of $1·1 billion a year. Twenty per cent of all exports are made up of paper and pulp products, and of our exports to the United States one-third are from the paper and pulp industry.

We might have a look for a moment at the value of our forests with regard to personal holdings. It has been said that 7 per cent of the forested area in Canada is privately owned. I agree that this, of course, is correct. The area of privately owned land is 97,000 square miles, but I would suggest that, although this statement is true, it does not give a true picture of the actual holdings, for the simple reason that the land that is now privately owned is situated in that part of Canada where the most prolific growth can be obtained. I would suggest therefore that the number of square miles of land privately owned should not be calculated with reference to the total forested area but should be calculated with reference to the productive area.

If we were to do that, we would find that the privately owned land represents 12 per cent of the total productive area. On the other hand, these privately owned lands are among the most accessible forest lands in Canada, and I would therefore go on and say that not only should the private lands of Canada be calculated with reference to the productive area but also with reference to the accessible productive area. We would then find that the privately owned lands would form 17 per cent of the accessible productive area.

In different provinces various percentages of forest land are privately owned. In Prince Edward Island, for example, nearly all the forest land is privately owned. In Nova Scotia 73 per cent of the forest land is privately owned, half of which consists of areas over 1,000 acres. In New Brunswick the percentage is 50 per cent; in Newfoundland 16 per cent; in Quebec 6 per cent; in Ontario 8 per cent; in Manitoba 7 per cent; in Saskatchewan 7 per cent; in Alberta 7 per cent; and in British Columbia 4 per cent. May I say that these percentages refer to total forested areas.

I should like now to have a look for a moment at the rate at which it is calculated that our forests are being depleted. For the ten years 1941 to 1950 the average utilization was 2·843 billion cubic feet. For the ten years 1942 to 1951 there was a slight increase, the average annual utilization for that period being 2·935 billion cubic feet. The utilization for the year 1952 alone was 3·545 billion cubic feet.

It will be noticed here that in the year 1952 there was a very definite increase. In talking about depletion we must not only, of course, refer to utilization. It is also necessary to refer to wastage. In the years I have mentioned wastage due to fire, insects and disease amounted to an annual average, for the ten years 1941 to 1950, of 732 million cubic feet, for the ten years 1942 to 1951 an average of 675 million cubic feet, and for the year 1952, 790 million cubic feet. If these figures are related to the total product which the forest is able to supply we find that over the ten years 1942 to 1951, the annual depletion was at the rate of 1·3 per cent of the accessible area or 0·9 per cent of the productive area or 2·9 per cent of the occupied area. For the year 1952 the depletion for the total productive area was 1·1 per cent, for the occupied area 3·5 per cent and for the accessible area 1·6 per cent.

If we take these figures and analyse them some very interesting facts can be found. First, we note that the rate of depletion is increasing. Second, we note that the annual rate of depletion in the occupied area was

3·5 per cent for the year 1952. No forest could ever hope to maintain a sustained annual yield with a 3·5 per cent depletion in any one year or over a period of years. But we must remember that this 3·5 per cent refers only to the occupied area, and the occupied area is of course considerably less than the total forested area of Canada. The total occupied area is actually 38 per cent of the productive area. If this is written in terms of the productive area, 1·1 per cent, we can easily see that with a rotation program of 70 years a depletion of 1·1 per cent can easily be maintained. While it may be true that in the accessible and occupied areas the percentage of depletion has been rather high, I suggest that when we talk about the rate of depletion it should be referred to the total productive area.

But another lesson comes from this, Mr. Speaker. It means that in the areas that are being logged today excessive cutting in all probability is taking place. But if the rate is referred to the whole area then the rate of cutting is not excessive, which points out the need for a very strong forest management program in Canada so that rather than cutting timber stands that are not old enough to be cut, there will be direction toward the cutting of timber in those stands that are mature and overstocked.

I believe these figures indicate the directions in which conservation measures are most likely to be successful, and I would suggest that there are five. First of all, there should be a program of sound forest management. Second, there should be direction toward the cutting of timber on mature stands that are overstocked. Third, there should be good cutting practice with controlled reforestation, seeding and planting programs not only to renew the forests that have been cut but also to augment them, for I believe that in any forest area that has been cut it is not only possible to produce a forest equally as good as the one that was cut, but that under proper management it is possible to produce a forest that is better. In other words, we not only have renewal but we also have augmentation. Fourth, we need an effective fire prevention program. Of course many of our provinces today do have fire prevention programs that are effective. Fifth, we need adequate scientific research to discover and control attacks by insect and disease.

If these five points are to be the points of a conservation program, let us look for a moment and see how these five points are being carried out by provincial governments, assisted by the federal government and assisted by private enterprise. In 1949 this parliament passed the Canada Forestry Act. Two years later, in May, 1951, there was a federal-provincial conference with reference to conservation. Following the passing of the Canada Forestry Act there was an agreement with some of the provinces whereby the federal government agreed to pay one-half the cost of forest inventories. They agreed to pay $10 per thousand for planted trees, $1 per acre for seeding and one-fifth of the cost of operation of tree nurseries.

Up to March 31, 1954, under this program ground surveys had been done on 200,000 square miles of Canada's forest lands, air surveys had been done on 500,000 square miles, and inventory reports had been received on over 400,000 square miles. Up to March 31, 1955, planting had exceeded 50 million trees over an estimated area of 60,000 acres, and seeding had been done over 6,000 acres. It is estimated that by the end of March, 1956, nearly $5 million will have been spent by the federal government on this program initiated under the Canada Forestry Act of 1949.

Added to this we have the research facilities of the federal government. We have the prevention measures by provincial governments and also by private enterprise. I believe that by provincial governments and by private enterprise a very excellent job is being done in this respect. We also have expenditures by the lumbering industry and expenditure on research and control by the Canadian pulp and paper association which exceeds the expenditure of all provincial governments combined.

I believe that a fairly good program of conservation is now in effect. It remains to be seen how effective it will be over the next few years and how well the program as outlined can be implemented. But I believe we can go forward with the hope that Canada's forests will continue to produce sufficient wood for our lumbering industry and for the pulp and paper industry. Mr. Gordon Godwin, woodlands manager for the Ontario division of the Ontario Paper Company Limited, last year said this, as found on page 2 of his printed speech, when speaking to the Rotary club of Woodstock, Ontario:

> Thus with all inventory withdrawals accounted for, and in consideration of growth rates, it is clear that we are in no danger of exhausting our forests.

Also, Mr. Speaker, in the annual report of the president of the Canadian pulp and paper association for the year 1955, at page 8 the president states:

> The pulpwood harvested last year for the industry increased by about 10 per cent and exceeded 13 million cords. About one-third of this wood was purchased and two-thirds came from company

limits. The limit cut represented a harvest of less than 8 cubic feet per acre averaged over all the woodlands of the industry. These woodlands can most certainly support such a cut in perpetuity and, under present management methods, can support an increasing cut in the years to come.

If I may, Mr. Speaker, I should like to refer to forestry resources conservation measures within my own province of Newfoundland. I do not believe there is any province across the whole country of Canada that is more conservation conscious than is Newfoundland. I believe we may have the earliest conservation measures in existence across this land, going back into the early history of Newfoundland, to the year 1610 when a Bristol merchant by the name of John Guy came to Newfoundland and established a settlement at Cupids. There in 1610 he made this ruling: "No person shall set fire in the woods". It may be that this regulation made early in 1610 was the first conservation measure on the North American continent.

I might add that it was at this time, under the administration of John Guy, that the first forest survey in Newfoundland was made. I agree, of course, that it applied only to that area of Newfoundland over which John Guy had the authority of administration. But 150 years later Sir Hugh Palliser, a governor of Newfoundland, speaking of Labrador, said that any person setting fire in the woods should be brought to St. John's, the capital of the province, and there tried before him. That was in the year 1767.

From that time onward not a great deal was done with the forestry resources in Newfoundland, but in 1919 a branch of the department of agriculture and mines was set up for the purpose of looking after our forest resources. In 1953 a new policy for forest management was brought into effect. At the present time the total forest lands of Newfoundland—and I am referring only to the island—are divided into 250 operational zones. In some of these zones studies have been carried out with relation to cutting rules and allowable cuts. In those management zones more concentrated studies have been carried out with the idea of getting facts and figures relating to the amount of wood which could be cut, the allowable cut and plans for a more effective management program. Of course the earlier settlers who came to Newfoundland came there to fish, but they were not there very long before they were able to see clearly the relation between the fishing and the forest industries.

There was a gradual development of the lumbering industry. For example, some of the old water wheels are still there. But it was not until 1890 that Newfoundland entered the export lumber business. It was not until 1897 that the first pulp mill was established in Newfoundland. This pulp mill operated, I believe, for a period of five years. Then in 1909 the Anglo-Newfoundland Development Company started that great mill at Grand Falls. In 1925 the Newfoundland Power and Paper Company began the great newsprint mill on the Humber river. This mill was later transferred to the International Power and Paper Company in 1926 and, in 1938, to the great Bowater organization.

The importance of forest industries to the economy of Newfoundland may well be shown by this statement, and I am reading from the estimated income of Newfoundland for the year 1955. The estimated income from all forest industries is rated at $64 million, or 31·6 per cent of the total income. The income next to that of forest industries was that of mining but it was much less, being only 12·3 per cent. The fishing industry was far less, bringing in only $20 million or 9·8 per cent of the total annual income.

In 1954 the provincial government of Newfoundland authorized a royal commission to be established to look into the problems of conservation in Newfoundland, along with, of course, many other forestry problems. I have here a copy of this report. As far as I can see, Mr. Speaker, the essence of this report is the same as what I have given for the forests of Canada as a whole, namely that in some areas there is considerable overcutting but that for the forests in general there is plenty of forest land to allow the present industries to carry on for some considerable time.

This does not, however, take into account the forest resources in Labrador. No complete forest inventory has been made of the forest resources of Newfoundland Labrador; but from what aerial surveys have been made, as well as from ground surveys, it is estimated that the major part of the forest resources of Newfoundland Labrador are concentrated at three points. These are in the lake Melville area, having a total production of 30 million cords; in the Sandwich bay area, having a total production of 11 million cords, and on the southeast coast of Labrador, having a total production of 8 million cords. These figures give a total of 49 million cords, an amount which would look after the industries of Newfoundland for some time, since they have an annual rate of depletion of a little less than 1 million cords per year.

Having due regard to these facts, the fact that there was a federal-provincial conference in 1951, the fact that in 1954 a convention was held by the Canadian forestry association, and the fact there is some indication that the forestry association will continue with its convention in 1956, I believe

that no federal-provincial conference is necessary at this time. To the hon. member for Kootenay West I should like to say that this is a problem which needs to be watched continually if we wish to be sure that our forestry resources are not going to be depleted beyond recognized limits.

I believe that the real conservation is the conservation which is put into effect when there is no danger of having our resources depleted. I should like to commend the hon. member for Kootenay West for having brought forward this resolution, and I hope it will be brought forward again. I believe that the conservation of our natural resources is a problem that needs to be tackled at various times in this house. After all, Mr. Speaker, our natural resources do not belong to us. We are not the owners; we are only the temporary tenants. I should hope that here, in this great land of Canada, some conservation program can be carried on so that we may hand over to posterity those natural resources, improved if possible but never impaired.

Mr. W. G. Dinsdale (Brandon-Souris): Mr. Speaker, I should like to congratulate the hon. member who just spoke for his excellent contribution to this discussion this afternoon. At the same time I should like to express a word of appreciation to the hon. member for Kootenay West who through his resolution has afforded us this opportunity. Obviously the subject of conservation is of tremendous interest in this house. Every year when it comes under discussion we have a wide, representative debate.

This all to the good because, as many hon. members have already indicated, the topic of conservation is of tremendous importance to Canada. We are passing into a phase of development where everyone is seriously concerned and preoccupied with the necessity of conserving our rich resources. From the standpoint of members from the prairie regions, it might appear that we are in possession of limitless land resources that could never be exhausted under any circumstances. However, already there are ominous statistics available which indicated that the time is long overdue when some positive action must be taken if we are to continue the degree of fertility we have in that section of the country.

Actually, the relationship of arable land to the total area of each of the prairie provinces is very small indeed. The Rand McNally standard world atlas, 1953 edition, indicates that in Manitoba only 6 per cent of the total land area is arable. In Saskatchewan we have 21 per cent and in Alberta 13 per cent. There are further statistics which indicate that during the period of the thirties, in particular, and up until 1941, we abandoned some 4 million farm acres in western Canada. Between 1921 and 1940 some 267,938 acres of land in Manitoba went out of cultivation, largely due to soil erosion. Those figures serve to indicate, I feel, that this is a matter that requires urgent attention.

The point I should like to stress is the need for a nation-wide policy to cope with the problem. I shall follow the example of the hon. member for Kootenay West in using the word "nation-wide" rather than national. Without exception from all sides of the house, every time this topic is discussed, we have the unanimous opinion that conservation is important. However, when we get down to the fine point we always run afoul of the problem of federal and provincial responsibility. Last year as I recall we had an excellent discussion, but in the final analysis I think it was the Minister of Agriculture who justified continued inactivity by indicating that it would be necessary for the provincial governments to take the initiative in this matter.

There are examples where the contrary has been true. Indeed, the only real occasion when a comprehensive attempt was made to deal with the problem was in 1935, when the Conservative government of that day inaugurated the Prairie Farm Rehabilitation Act. This was initiated by the federal government. The P.F.R.A. conservation work was placed under the jurisdiction of the federal department of agriculture. It incorporated the services of all agricultural research across the country. Soil surveys were expanded, and research was instigated at appropriate universities by plant breeders, soil scientists, agricultural engineers and agricultural economists. The extension services of the provincial departments of agriculture were helpful in taking the information arising from the various activities under P.F.R.A. to the individual farmers. The act provided for an advisory committee with representation from the provinces as well as from the federal government.

We have a precedent, therefore, for nation-wide activity, at least in one important aspect of this problem. The argument that usually winds up this debate, to the effect that in order to get action we must have provincial government initiative, does not necessarily apply in view of the precedent I have just mentioned.

I am mainly interested in this problem because of the continued difficulty that we have

with flooding in Manitoba. There is a concrete example of national co-operation on this particular problem as well. Last fall a very important flood control project was commenced in my constituency on Pipestone creek. It is perhaps a relatively small development, but it does involve the expenditure of some $200,000. This Pipestone project is being jointly financed by the federal, provincial and municipal governments. Through P.F.R.A. the federal government will pay about half the cost. The provincial government will pay about one-third, and the remainder of the cost will be split between the municipalities of Pipestone and Sifton. There is also another federal department participating in this particular project. There is an Indian reserve in the area, so the federal Indian affairs department is participating in the scheme. I mention this example merely to demonstrate that it is possible to get joint action on these important measures.

If I am given two minutes, Mr. Speaker, I think I can bring my remarks to a conclusion. I mention this subject of flooding particularly, and in doing so I do not exclude the general problem outlined in the resolution in connection with soil, forest and water conservation. I believe that flooding is directly connected to the problems that arise in regard to soil and forest preservation. I think it can be easily demonstrated that flooding, which we sometimes refer to as an act of God, can be more properly described as an act of man. I am thinking particularly of those murderous flash floods that have done such extensive damage in the various provinces during recent years. The flash flood on the Humber river, for example, could easily have arisen from the fact that forest reserves in Ontario have been allowed to diminish to a point where they are a small percentage of the total land area.

According to Mr. Bodsworth, who writes in *Maclean's* magazine, we have not only stripped the trees from the agricultural land but we have deforested 8,000 square miles of land so infertile that only trees will grow on it. He says:

> Germany, though fighting for living space in two wars, has 27 per cent of its land in forests. Canada, at the rate it is now reforesting its overcleared agricultural areas, will not have an adequate forest cover until 2750—if runaway water has not carried all of our topsoil into the oceans long before that time.

He goes on to refer to the tremendous loss of topsoil that occurred during the Humber river flood, when University of Toronto scientists measured the silt content of one of the three branches of that river and found it was carrying 2,700 tons of soil per hour into lake Ontario. Now, I do not believe I have to stress further at this point, mainly because of lack of time, that we have an urgent problem on our hands which can only be successfully coped with if the terms of the resolution are carried out, and nation-wide consideration given to this matter at the earliest possible moment.

At six o'clock the house took recess.

AFTER RECESS

The house resumed at eight o'clock.

(Translation):

Mr. Armand Dumas (Villeneuve): Mr. Speaker, the mover of the resolution now before the house is a champion of conservation, as are all other hon. members of the house.

The conservation of our natural resources is one of the most important matters that can be debated here and I believe I am not mistaken in stating that we all agree on that point. Moreover, being conscious of our responsibilities, we all know that it is our privilege and duty as Canadian citizens to promote at all times the cause of conservation of our natural resources, in all its forms.

That is the principle which leads me to speak in the debate and I hope that my humble contribution will justify the valuable time that I must necessarily take to express my views on this subject.

Each time conservation has been mentioned in the house, whether on the occasion of government legislation—and there have been several instances in the past few years—or whether the matter has come up as a result of a motion from a private member, such as this one, the problem has always given rise to interesting and most fruitful debates.

The conservation of our natural resources interests all those who have the welfare of society and the future of the nation at heart. We all speak feelingly in the matter. It has long been the subject of debate in provincial legislatures. It has also been the main topic of several conferences and meetings across the country, and all classes of citizens have made their views known on the matter. All of us want to discharge our responsibility towards future generations, and make sure that our natural resources will not be depleted but preserved for use by our successors. We also wish that their development may increase in proportion to the population.

Conservation

Unfortunately, the natural resources of our country have not always been dealt with according to the principles of true conservation, nor have they received all the attention they deserved. In the past, we have been far too wasteful of our resources. In the early days of the colony, for instance, the abundance of trees was, for the settler, an obstacle to colonization. For the first settlers in this country, the forest was almost an enemy which had to be defeated to make land available for cultivation. It has been pushed back with the axe and even with fire; vast spaces of land which should never have been cleared were thus turned into unproductive deserts. In the years which followed the period of settlement, unscrupulous operators, joining efforts with the settlers, did not show any better judgment in their treatment of the forest. Our forest resources have not been dealt with properly.

Again today we do not always show our forests all the respect they deserve. Today, one cannot understand that the forest should still fall prey to human greed.

There are still too many people bent upon drawing from the forest the greatest immediate profits possible without regard for consequences. We must put an end to these unforgivable abuses. It is the duty of provincial governments to show more severity and to bring to reason those unscrupulous operators.

Yet it is because of its forests that Canada is foremost among paper producers of the world. The forest is the great regulator of the streams which water our lands and supply our power plants. It protects against erosion and safeguards our wild life. Canadian forests, and the industries they supply, play a vital part in our national economy. Each year, they bring wealth to our country and contribute to the economic stability of the whole nation. At present, hundreds of thousands of people earn their living in those industries.

We are prone to consider that the forest is an inexhaustible source of wealth. It should not be forgotten however, that at this time our forest industries are running at full capacity and that there is very real danger that this system of high speed cutting may disrupt the balance of nature and that the forest may not have sufficient time to renew itself.

Our Canadian forest must not be allowed to die. Should this ever come about the whole national economy would suffer a grievous blow. Governments, industry and the public generally must therefore take the necessary steps so that the forest may remain productive and protected against its enemies: man, fire, tree diseases and insects.

It has often been demonstrated that in the past governments have been lacking in vision and that industry, and the public in general, have been guilty of unforgivable abuses in the exploitation of our forests, with the result that over vast stretches of land the forest has become unable to ensure its own regrowth without human intervention and recourse to expensive artificial means.

Fortunately, over the past thirty years, the necessity of conservation has been better understood. At the present time, for instance, lumber companies are more alert. They take a greater interest in the future of our forestry resources and are active in the fields of forest management and silviculture. Reforestation has ensured sustained yields to some of our largest operators. Each year the industry spends considerable sums of money in the opening of access roads, fire prevention, research of all kinds and surveys of improved methods of operation. These are essential contributions on the part of industry. They must be continued and governments should make it their responsibility to encourage them as much as possible.

I should add at this point that the provinces, which are primarily responsible for the administration and conservation of our forests, of which they are the owners, are increasingly conscious of their duty as regards forest management and conservation. Nevertheless since they are the real owners of the greater part of the forest area under their control, we have a right to expect that they continue to encourage conservation in all its various forms and in every possible field.

I should very much like to remind the house once more, Mr. Speaker, of the magnificent work accomplished in the field of conservation by the Canadian Forestry Association, l'Association Forestière Québecoise and all the various groups affiliated to the latter organization, such as the Quebec 4-H clubs and the regional forestry groups of which there are eight in all.

Over the past fifteen years these various associations have unceasingly alerted public opinion about the necessity of protecting and conserving our natural resources. If the interest of the Canadian public in forestry has been constantly increasing over the last few years, this is due to the activities of these various groups.

The Quebec Forestry Association was set up in 1939 by a group of public-spirited citizens who were determined to promote by all possible means the education of the public regarding the protection and the conservation of our natural resources, and more particularly our forests. For more than 15 years it has kept these vital problems before public opinion.

The Quebec Forestry Association does its educational work among French-speaking people in Canada, and its activities extend from one end of the country to the other. It is held in high repute not only in this country but in the United States and in other foreign countries. It is recognized as the best qualified organization to inform the public on the forest situation and it is regarded as the best medium for voicing public opinion on matters of conservation.

The aims of the association are to make French-speaking people in Canada conservation minded in order that the state may legislate more easily and more efficiently in that field. Its aims include also forest fire prevention, insect and disease control, and it conducts educational campaigns in favour of forest management, forestry and sound lumbering.

The association and its branches have a membership of more than 30,000, and their annual budget exceeds $175,000. The results recorded up to now are more than satisfactory, and we can be proud of the work done by these different organizations.

Public opinion has been aroused. The press, the radio, our public men and our clergy as well as associations, clubs and big business, all talk now of forest conservation as of something possible and necessary; it is even part of their activities. And, more important still, through the publicity thus carried out by the association, the public is beginning to realize the importance and necessity of such legislation passed by governments to regulate the utilization of natural resources such as the forests, fauna, rivers and land.

If I spoke at such length of the various activities of our forestry associations, it is because, to my mind, they deserve to be brought to the fore. With a very restricted budget, they do splendid work which must not pass unnoticed.

I should like at this point to appeal once again to the government and, to this effect, I urge upon the Minister of Northern Affairs and National Resources (Mr. Lesage) to recommend a more substantial assistance to the Canadian Forestry Association and to l'Association Forestière Québecoise. This year, the estimates include an amount of $10,000 for that purpose and I should ask him to consider seriously the advisability of increasing that amount to $40,000 or $50,000. That would be one of the best investments the federal government could make for the cause of conservation.

Now, Mr. Speaker, what should the federal government's attitude be as regards conservation of our national resources. If we consider the country as a whole and if we admit that forestry, agriculture, mining and manufacturing are the four mainstays of our economic, financial and industrial organization, we soon realize how important it is to strive for the conservation of our soil, our forests, our water resources and our mineral resources. We must consider this problem as being national, indeed international, in scope.

This government and its predecessors did not fail, in the course of the last twenty-five or thirty years, to take the necessary steps to co-operate with industry, with provincial governments and with our neighbours to the south, in order to intensify the conservation of the natural resources of our continent. And so we find on the statute books of Canada such laws as the Canada Forestry Act, the Canada Water Conservation Assistance Act, the Eastern Rocky Mountains Forest Conservation Act, the International River Improvements Act, the Prairie Farm Rehabilitation Act, the Maritime Marshland Rehabilitation Act, to mention but these few. Each of these acts was passed for the benefit of any province wishing to avail itself of its provisions.

It might be good at this point to ask ourselves whether all provincial governments take advantage of these acts as they should, whether there is reticence or negligence on the part of some provincial governments when it is merely a matter of availing themselves of the assistance offered to them by the federal government. I wonder what practical results we could expect from a federal-provincial conference on conservation.

And there are many other fields where the federal government is doing a good job in matters of soil conservation, forestry and water resources. May I mention first the forestry research branch, which has made

and is still making advanced studies in tree culture, cutting, protection, timber reserves, reforestation, utilization, preservation, technology and chemistry.

In a general way, the federal government administers an extensive policy of conservation in the fields under its jurisdiction. Part of this program is related to studies and research works of all kinds in matters of agriculture, forestry and water resources.

On reading the last report of the forestry division of the Department of Northern Affairs and National Resources, I found encouragement in the fact that seven provinces took advantage of the Canada Forestry Act and that, in a not too distant future, they will have completed the inventory of their forestry resources. It is also very encouraging to find that more than 48 million trees have been planted in six provinces according to the regulations passed under the same legislation.

It is most interesting to read in the same report that the federal government has made available to the province of New Brunswick an amount of $3 million for extermination of the spruce bud worm. This large scale experiment has already enabled the treatment of several thousand square miles, and apparently the work will continue next year as a substantial enough item appears in the 1955-56 estimates.

I could quote several other excerpts from the report I just mentioned, on hydraulics, for instance, hydrometry, forestry economy, the forestry research service, the forestry inventory section and the forestry product laboratory service. Each of these items, vying in interest with the others, shows how much federal legislation is promoting better use and greater conservation of our natural resources.

At this point I want to associate myself with the hon. member for Kootenay West (Mr. Herridge) in congratulating the officers and technicians in charge of the federal forestry service. They are doing a good job and we can consider ourselves lucky to have employees of that calibre to direct the activities of this important department.

Mr. Speaker, it must be admitted that the federal government is giving valuable assistance to the provincial governments in the field of conservation. If the provinces are really willing to take every possible advantage of this assistance, there is reason to hope that we will obtain the desired results.

[Mr. Dumas.]

In spite of the progress achieved in this field, much remains to be done. It is not an easy problem, as I have already said, to go to the limit of our resources in matters of conservation. As a rule, such problems are solved through compromise and co-operation.

Here let me emphasize that the ultimate purpose of the resolution of the hon. member for Kootenay West is to establish a nation-wide uniform policy on soil, forestry, water conservation and land use.

To achieve this, the hon. member suggests the calling of a federal-provincial conference.

It seems, at first, that there should be no objection to the establishment of a national conservation policy; on the contrary, it would seem to us an absolute necessity. On the other hand, in a case like this, might not certain people consider the expressions "national policy" or "national projects" as an infringement on provincial rights? Might not such words incite certain provinces to state that the central government wants to deprive them of some of their vested power? I am putting this question because past experience has shown that it was not always wise to initiate national policies in matters that were constitutionally under provincial jurisdiction.

As I said before in this house, I feel that one of the most important tasks faced by the various governments, by industry and the people in general would consist in defining responsibilities and lacks, so as to determine the logical means to solve any existing difficulty. The problem remains the same, and brings to the minds of some Canadians questions of great import that are still waiting for a clear answer.

How serious is our forest problem? What should we do in order to conserve this national asset? What ideal aim should industry and the various governments pursue? If there were any danger to lose this very important asset, what should be done to avoid such a disaster? How can we maintain each small lot of our woodlands in constant production?

I am repeating all those questions which I asked before in order to show that the problem with which we are concerned is not such that it could be solved during a federal-provincial conference. We have many reasons for not believing that such a conference would enable the country to establish a nation-wide conservation policy. The prob-

lem is too intricate and covers too large a field to leave any hope that it could be solved without preliminary study and without genuine co-operation on the part of all concerned.

This afternoon, the hon. member for Charlevoix (Mr. Maltais) moved an amendment which, I think, most members of the house should welcome. However, I, for one, insist again on suggesting that a special committee should be established. I feel that we, as a legislature, could do a better job by requesting that a special committee of the house be established in order to carry on further studies and inquiries on that subject which we all have at heart. It is quite possible that a thorough report on the matter might indicate the best way of considering the forestry problem, and the problem of the conservation of our resources as well.

It is obvious that the federal government wants to do everything in its power, at the present time, to encourage conservation. Furthermore, the legislation passed so far, the facilities provided to industry and to the provincial governments, and the moneys which are being voted every year for that purpose are so much evidence that this government is well prepared to really help those who want to help themselves.

(*Text*):

Mr. F. E. Lennard (Wentworth): Mr. Speaker, in rising to say a few words on this very important subject this evening, I wish to congratulate and thank the hon. member for Kootenay West for his motion which was at the head of the list, because it gives us an early opportunity to discuss this very important matter.

I might say that personally I have been an active conservationist for some years, not to the extent of the hon. member for Kootenay West with his vast acreage but in a very small way in Wentworth county with a few acres, both in water conservation and reforestation. I might say that my plan for reforestation is not the growing of Christmas trees but rather a long-term project.

I wish to deal for a few moments this evening—and this is the subject matter of my few words—with the lake shore erosion and water levels bordering on and surrounding lake Ontario. I have sometimes felt that my voice and those of one or two other members were crying in the wilderness in this house, because off and on for the past 20 years this has been one subject in which I have been very much interested. On April 20, 1951, I said in this house:

> In the immediate vicinity of Hamilton beach and Van Wagner's beach just a few months ago they experienced a great deal of trouble, and many houses have been practically washed away. The common answer to that is: Well, they should not have built so near the shore line. In many instances the older houses that were built years ago were built a considerable distance from the shore line at that time, but because of this constant erosion, in some instances up to six and often nearly seven feet a year over the past 15 or 20 years, the shore line has receded upwards of 200 feet. A serious condition is facing the people in the Niagara peninsula.

I might say that those people living on the shore line of lake Ontario have been especially concerned for years and, because of the St. Lawrence seaway development, have been rather perturbed as to what might happen to the property when certain levels were established. I have before me a brief that was presented to the federal government early in January of this year by the lake Ontario property protection association. With the consent of the house I should like to put this on *Hansard*.

Mr. Speaker: Is it agreed?

Some hon. Members: Agreed.

Mr. Lennard: The brief is as follows:

> The Canadian
> Lake Ontario Property Protection Association
>
> Whereas Her Majesty's government has approved the recommendation of the international joint commission to control the water level of lake Ontario contrary to nature, we, the property owners ask for your consideration of the following statements:
>
> Whereas the natural water levels of lake Ontario with the addition of diverted waters, and the removal of the Gut dam, has maintained fluctuating level below 245 feet minimum, and 247 feet maximum, and
>
> Whereas Her Majesty's government approved the diversion of waters to assist the hydro commission, and has now sanctioned a fluctuating level of 244-248 feet:
>
> We therefore request Her Majesty's government to give serious consideration to the property owners' problems.
>
> At various times members of parliament, realizing the need, and the responsibility of the government for assistance, have brought this problem up for discussion and have been offered partial assistance; but owing to the inability of the municipalities to meet their quota due to insufficient funds, the offer was withdrawn.
>
> We realize, too, that mistakes can be made in such a mammoth undertaking, and one that caused millions of dollars worth of damage to property owners, and much loss of land, was the diverting of waters into lake Ontario—which is the lowest of the great lakes—without making provisions for increased outflow. This association pressed for the removal of the Gut dam, and arranged for a tour of inspection of the international joint commission,

thus convincing the commission of the seriousness of the situation; and the removal brought immediate relief.

In view of the fact that the findings of the select committee, formed by the provincial government to study erosion was never tabled, and also that no cabinet minister has ever attended an international joint commission public meeting, we feel it to be very essential that a committee be formed comprising members of parliament—not engineers—to meet with members of this association and discuss the problems of the property owners, and consider the most economical ways of protecting their homes and income. Considering the enormous losses already sustained, they wish to be assured of a reasonably safe future.

We feel that had the international joint commission recommended the hydro commission to lower the channels two feet, the power potentials, and the natural levels of the lake would have been maintained, and erosion controlled without further protection.

We feel that this matter should be considered immediately, a committee formed, and action taken so that protective work may be completed in conjunction with the completion of the St. Lawrence power project.

I might say also in that connection that I have a letter from the Wentworth county council endorsing that brief. I wish to draw your attention especially to the second last paragraph of that brief, which states:

We feel that had the international joint commission recommended the hydro commission to lower the channels two feet, the power potentials, and the natural levels of the lake would have been maintained, and erosion controlled without further protection.

I must say that this brief was presented by an association that represents other smaller associations from the bay of Quinte around the lake to Niagara-on-the-Lake. In connection with the recent damage I wish to say that I have before me a list of 139 different properties along the shores of lake Ontario. I might say it refers to just that part of lake Ontario extending from Burlington to Niagara-on-the-Lake. The totals of that list are as follows: Estimated damage, $361,034.20; real estate depreciation, $415,095, and cost of protection by shoring, etc., $365,709.25. Just last year in one storm alone damage was done to the total amount of $12,180 to 24 dwellings at Crescent beach, Saltfleet township, near Hamilton.

It is often said, Mr. Speaker, that the federal authorities have no responsibility in the matter. I say they most certainly have because, so far as lake shore erosion is concerned, in the past many years federal governments have taken tons of sand from along the lake several miles from shore, making huge holes in the lake bottom. These holes were very quickly refilled by sand washed from the shores by the undertow, and that sand never returned to the lake shore.

These people on the shores on lake Ontario who have their property damaged are not asking for any consideration for the damage that has been done, but they are concerned for the future and they want to be assured that they will have adequate protection with respect to damage that might occur through the operations of the deep sea waterway. On January 23, 1956, I wrote to General McNaughton, chairman of the Canadian section of the international joint commission, as follows:

Dear General McNaughton:

I would urge that in the forthcoming deliberations that there be suitable indemnification clauses inserted into the plan for the regulations of the water levels of lake Ontario. I urge this on behalf of the lake Ontario property protection association and more especially for those members and residents who live on that portion of the shores of lake Ontario lying between Hamilton and Niagara-on-the-Lake.

On the same date I received this letter from General McNaughton:

Dear Mr. Lennard:

I have your letter of today's date in which you urge on behalf of the lake Ontario property protection association and others that the plan for the regulation of the levels of lake Ontario should include suitable indemnification clauses. I am bringing your letter to the attention of my colleagues and careful consideration will be given to the matter.

Yours sincerely,
A. G. L. McNaughton.

As I said before, Mr. Speaker, these people are very fair. They are not asking for compensation for past losses, but they are asking for protection against future damage. I feel that in this whole affair the property owners along the shores of lake Ontario have had to play second fiddle to the Ontario Hydro-Electric Power Commission, and that under the circumstances they should be assured of protection in the future. Protection clauses most certainly should be put into the agreement.

Mr. F. S. Zaplitny (Dauphin): Mr. Speaker, in rising to support the resolution moved by my colleague the hon. member for Kootenay West, I wish to co-operate, as have other members, by being as brief as possible because we know there are so many who would like to make their contribution to the debate. The resolution calls for a dominion-provincial conference to study the question of conservation with respect to soil, forest and water resources. In introducing the resolution the hon. member has set out most adequately and in excellent fashion what the objectives are and some of the means that might be pursued. Therefore I will not need to repeat what has been said in the general discussion of the question.

However, the province of Manitoba is particularly interested from the point of view of

water. So far this winter more than seven feet of snow have fallen in most parts of the province, and unless the spring break-up is exceptionally favourable there is no doubt at all that there will be widespread property losses as well as inestimable damage to soil and fields generally. Because we in Manitoba feel that in the past there has not been sufficient planning with respect to the conservation of water, which is the other aspect of the problem of flooding, we are particularly glad that this question has come before the house at this time.

So far the only type of work that has been done which could be classed as conservation, together with reclamation, has been that done under the authority of the Prairie Farm Rehabilitation Act, and most people in Manitoba feel that while the act has been very useful in many respects it has been too restricted in its scope, not only from the point of view that it applies only to the three prairie provinces but also because it does not even apply to all of the three prairie provinces.

For example, in the province of Manitoba the work done under the act has been confined to a small area in the southwestern part of the province. There are large settled areas of good agricultural land where the problem of flood waters has been just as serious as in the area covered by the act, if not more so, and these areas have been entirely left out of the operation of the act. The figures show what the situation has been. Since the act came into force on April 1, 1935 until March 31 last year over $100 million has been spent. Of that amount only $6,824,000 was spent in the province of Manitoba. About $45 million was spent in Saskatchewan, the same amount in Alberta and $3,242,000 in British Columbia. Percentage-wise it works out to 6·8 per cent in Manitoba, 45 per cent in Alberta, the same in Saskatchewan and 3·2 per cent in British Columbia.

I point that out not because we have any objection to a large amount of money being spent for conservation and reclamation in the provinces of Alberta and Saskatchewan. We are glad they have been able to receive benefits under the act, but certainly even a glance at the figures will indicate that we in the province of Manitoba have a real grievance in that only 6·8 per cent of the total has been spent in our province where the need, particularly for flood control, is as great as if not greater than in the other provinces. For that reason I welcome the proposal for a dominion-provincial conference on the question of conservation, particularly from the point of view of the question of water in the province of Manitoba.

We are interested in the matter from two different angles, which stem from the same condition. We are interested in flood control for the very obvious reason that in the last three or four years many parts of the province, such as the interlake district represented by the hon. member for Selkirk (Mr. Bryce), the constituency which I represent and many other areas have suffered very serious set-backs due to excess water, and also due to the fact that the run-off of water was not controlled.

We are also interested because while our province so far has been extremely fortunate in being able to utilize its water power, we are now reaching the stage where the easily accessible sources of water power are becoming exhausted. Unless we move much farther north into areas which are much more inaccessible and remote, a procedure which would bring with it much greater expenditure on transmission facilities and construction, it will not be long before the province of Manitoba will become extremely short of water power. If we can harness in the most useful fashion the water resources we have and can control the water run-off, it will serve a double purpose. It will provide a supply of water for our water power requirements and at the same time it will prevent some of the serious flood damage that has occurred in our province from time to time.

In order to bring about a general over-all plan for the control of these waters, it will be necessary to have federal and provincial co-operation. In the province of Manitoba I think there is a good case in point. As it happens, in the northwest part of Manitoba, the area with which I am most familiar, the difficulties we have had with flood water arise from two sources particularly. One of them happens to be Riding Mountain national park, which is the responsibility of the federal government. The other one, which is north of Riding Mountain national park, is the Duck Mountain reserve which is, of course, the responsibility of the province of Manitoba. The waters from the eastern and northern slopes of these two watersheds have caused a serious amount of damage over the years, and many efforts have been made by the municipalities, through the province, to obtain the co-operation of the federal government in working out an over-all plan to try to control the water from these watersheds in such a way that the problem will be solved.

The problem in the past has been this. While the federal government has been willing to assist and has contributed to a great number of projects, the assistance has been based or hypothecated upon the ability of the local municipality to contribute its

share. They have offered to the province a series of agreements under which the rural municipality and the province share half the cost of construction of the project, and the federal government assumes the other half. But unless the local municipality can put up its share, then of course all the rest of the moneys which are contingent upon that share being forthcoming do not come through.

We have therefore been slowly coming to the realization that if we are going to solve our flooding problem in that part of the province—and I think this statement holds true for many other parts of my province—that job must be done. It will be a big scale job. It will require excellent engineering and large expenditures, but it will pay big dividends, when we stop to consider what is lost in the way of crops and soil erosion each spring when the waters go out of control, as has happened so many times in the last few years.

It has happened in the constituency which I represent. It has happened on the Portage plains, in the interlake country and in many other parts of Manitoba. The loss in topsoil, in crops and in property damage has been tremendous in my province.

While this is of course a long-term project and it may take a considerable length of time to work out a national policy of conservation, in the meantime I hope this government will be willing, in co-operation with the province of Manitoba, to take some immediate steps to help reduce the losses which we may be facing even this spring on account of the unusually heavy snowfall.

(Translation):

Mr. J. O. Gour (Russell): Mr. Speaker, I am happy to take part in this debate which I consider very important to the future welfare of the electors of the county I have the honour to represent in this house, and of all Canadians as well.

It is not the first time I call the attention of this house on this question, but I think it is such an important matter that I never miss an opportunity to speak on the subject.

Since Providence has been good enough to endow our country with all kinds of resources, our duty is to develop, protect and improve these resources. Our deserving Prime Minister (Mr. St. Laurent) having been good enough to give us such a brilliant and active Minister of Northern Affairs and National Resources (Mr. Lesage), it is our duty to support him and to acquaint him with our wishes.

For my part, I wish that the Nation river project, which was prepared several years ago, would be undertaken. I have a plan which is already drawn up, and I would be glad to submit a copy of that plan to the house, to the minister. I will read the different parts I would like to put on the official record.

(Text):

Chapter 1

Location and Boundaries

The watershed of the South Nation river is an area of 1,511 square miles lying between the cities of Ottawa and Hawkesbury on the river Ottawa and Brockville on the river St. Lawrence. In shape it may be likened to a flattened triangle with its apex near Gloucester station, six miles south of Ottawa and the long side, or base, running northeast from near Brockville to a point near Vankleek Hill, Southwest of Hawkesbury. On the southeast and for a short distance on the southwest the South Nation watershed is bounded by that of the St. Lawrence. On the north, it adjoins the watershed of the Ottawa and on the west the watershed of the Rideau, whose tributary, Kemptville creek rises within ten miles of the St. Lawrence, north of Brockville.

A watershed has been defined as the high ground separating two river systems. Taken in this literal sense it becomes only a boundary line but the term "watershed" is commonly used also to describe the area which is drained by a river and its tributaries. It is in this broader sense that the term is used in this report and, throughout the report, the terms watershed, drainage area, drainage basin and drainage unit are used interchangeably.

As there are no doubt many others who will want to speak on this important subject, I shall leave off further discussion of this important chapter 1. I will ask that this important subject be given consideration and that everything possible be done for the conservation of the soil and the power resources. I should like to have the minister, when he has the opportunity to do so, to look into the matter.

(Translation):

As I said just now in English, the watershed of the southern branch of the Nation river covers an area of 1,511 square miles.

There are neither cities nor towns of any importance in this watershed, but a number of fine, prosperous villages that have been incorporated as municipalities, among them Winchester, Chesterville, Casselman, Finch and Maxville. There are also several villages that have not been incorporated as municipalities, of which Spencerville, South Mountain, Chrysler, Metcalfe, Moose Creek, Limoges, Russell and Bourget, are the most important.

We can therefore see that this watershed really comprises a rural area in Ontario.

I am speaking of digging, diking, etc., all urgent and necessary works, because they would improve the position of the twelve municipalities: Matilda, Mounta, Winchester, Edwardsburg, Augusta, Finch, Cambridge, Plantagenet South, Alfred, Plantagenet North, Chesterville and Casselman.

Floods in the southern watershed of the Nation river constitute a serious threat to the very existence of the people of all the rural municipalities in that district, and are detrimental to the economy of all the neighbouring commercial centres. It goes without saying that the periodical destruction of crops, roads, bridges and the washing away of thousands of tons of the best arable soil in one section of the province constitute a loss for the whole province. Those large losses are unfortunately not rare occurrences; on the contrary, they have been felt 30 times in the past 37 years, from 1918 to 1955 inclusive and in six cases they happened twice during the same year.

The floods of 1938 and 1955, which were the worst of all, indicate that this menace is getting worse and worse all the time.

The worst floods happen more particularly in two districts, the Brinston area, up the river from Chesterville which comprises the fertile lands of Winchester, Matilda and Mountain townships and the lake Cobb area, including the lowlands along the river from Lemieux to Plantagenet. In the Brinston district, the 1938 flood covered an area of 24 square miles; the water rose as high as nine feet and many houses had from two to three feet of water on the ground floor. The 1947 flood was quite as serious.

Floods caused by swelling rivers in the Spring cause much trouble, havoc and distress. Farmers are doing all they can to face the threat; they put livestock and equipment in attics or other safe shelters, and put off seeding until the water has withdrawn. At times, as many as nine days and a half have elapsed between the time the river overflowed its banks and finally receded.

Those floods happen not only during the spring thaws but often in summer after heavy rains. As a matter of fact those rains cause the heaviest damage, for at such times full crops are washed away or rot under the water. Cases have been reported where the same farmer had his crops destroyed four years in a row.

I am glad that the minister concerned has agreed to accept a copy of the report, and I assure him that I am prepared at all times to supply him with any information regarding that project.

The cost of the project is not particularly high, being somewhat over two million dollars, to be shared by the province and the federal government. Since this work would be carried out in an agricultural district the municipalities concerned are in no position to meet any part of the cost. However, irrigation works are being carried out everywhere in Canada, the cost being met partly by the federal government, partly by the provincial governments. In the case of the project I just mentioned, the flooding of thousands of acres of fertile land could be prevented. Moreover we would be able to restock the Nation river with fish such as those our forebears caught and which they so enjoyed talking about. I will return to this later, and I shall refer to the three dams which existed in former days and which belonged to private individuals who had built sawmills and flour mills on them. Those mills later disappeared because of a lack of forest cover, of neglect and lack of funds.

Indeed, Mr. Speaker, if this project of mine were carried out, the river would stretch over 90 miles that could easily be stocked with various kinds of fish, to the delight of tourists and residents of the twelve municipalities I have mentioned. Moreover, this would also provide a supply of drinking water for all the herds on the numerous riverside farms, as about thirty small streams, such as the smaller and greater Castor rivers, the Horse creek and several others, flow into the Nation river. These rivers, which run through several villages, would provide a reservoir of a fairly high level that would insure adequate year round protection against fire.

You might be surprised to learn that, last summer my home town of Casselman voted $25,000 for the construction of a dam across the Nation river, to raise the level of the water in order to pump it back more readily into mains, to insure protection against fire.

That would enable us to have irrigation ditches in different parts and in many cases to double the crops of our farmers. It is not only in the west that irrigation would be a good thing. We too in the east, in the province of Ontario, would like to have irrigation just as much as the western provinces. However I do not want to impose upon the kindness of the house and have it listen to speeches on that subject for days and weeks. I realize that the government, which manages our country so well, will always be prepared to undertake projects

which are to the benefit of all Canadians and will try to solve that problem when it has enough revenue to do so.

But I want to call the attention of the house on that point and say that in the east we maintain that the government should undertake an irrigation scheme in order to help our farmers who have to buy from the west most of the grain they need to feed their cattle. Yes, Mr. Speaker, our farmers and the people of our villages have to spend thousands and thousands of dollars in order to get water.

I know farmers in my county who spent more than $2,000 to provide their cattle with an adequate supply of water. The same farmers buy grain from the west at market price, and very often pay $20 a ton for transportation only, in addition to storage fees. They sell their products at market price, as the western farmers do, but they do not come here and ask parliament to guarantee bank loans on their farm stored crops, nor to vote a $65 million bonus as the one we gave a few years ago to the western farmers. But they work just the same 365 days a year and they know that the province of Ontario contributes 45 per cent of the federal budget. I trust that the Minister of Northern Affairs and National Resources will take my request into serious consideration.

There is also the Ottawa river which, on a distance of 40 miles approximately, borders on the northern part of the county of Russell, that is from Rockcliffe to Wendover. I shall limit my remarks to the part of that river which flows through the county of Russell. Cottage and motel owners are getting discouraged because they are losing customers owing to the pollution of the Ottawa river water by sewage and waste material from Ottawa and other cities, and from industries. I believe the provinces of Ontario and Quebec should join the federal government in an attempt to solve the problem of purification and restocking of the Ottawa river. The fish have been destroyed by polluted water. This keeps away the tourists and means a loss to all cottage owners, as their properties decrease in value.

I would chide myself if I failed to mention the urgent need of accelerating reforestation work. May I be permitted to relate what Russell county has done in this field. We began retimbering 28 years ago in what we call the Larose stand. Now I know that the federal government is anxious to provide all the help needed without however encroaching upon provincial rights. Therefore the minister should try and get the Ontario government more interested. The Larose forest entails rather heavy expenses for the united counties of Prescott and Russell who buy land and pay wages to an officer, while the province is taking care of it as far as planting and maintenance are concerned.

I am pleased to congratulate all the personnel working on that project. They are wonderful workers and our agronomist is an efficient and intelligent man. They are doing a very good job. I give credit to the provincial government in this respect. This forest is a provincial property, so that the counties have to pay for the lands, and municipalities are losing tax revenue.

However, we are satisfied to carry on, because it will profit the future generation. At present, the Larose forest has an area of 23,500 acres, planted with 12 million trees. We mean to increase it to 25 million trees, that is why I am urging federal government assistance.

I have been interested in reforestation for the past 40 years. I started to plant trees on my farms in 1931, and I have had over 250,000 trees planted. What discourages people who want to do the same thing is the fact that at present the Ontario government is selling trees for $10 to $14 per thousand. In addition, one must pay municipal taxes and fire insurance. If the provincial government refuses to supply trees free of charge, could not the federal government pay for them? I would also ask that taxes be payable only when the trees are cut, and that the services of provincial government experts be provided to tell us which trees should be planted. I would also ask that fire insurance premiums be reasonably priced so that farmers may be encouraged to retimber all those stretches of land unsuited to agriculture. And we have a great many left. There are a great many of these stretches in Russell. It would be far better if they were covered with trees. In this way we would be providing wealth for future generations.

While travelling through Europe, a few years ago, I made it a point to inquire about methods of reforestation in the various countries I visited. The method I have just described was explained to me. I should add that when a tree is to be cut an expert from the central government designates the particular tree to be felled, and at the same time orders its immediate replacement by a small tree or trees suited to the ground. Then, and then only does the owner pay taxes and fire insurance premiums.

In conclusion, Mr. Speaker, may I suggest that afforestation is essential to the economy

of Canada and that the sooner we set ourselves to this task the better it will be for all Canadians. I am pleased to tell the house —in fact, both the opposition side and the government side of the house share this opinion—that the prime minister's choice was perfect when he picked so active and so qualified a man as the Minister of Northern Affairs and National Resources to direct the work of that department. All Canada will benefit from his great capacity.

Mr. Speaker, it is important to hasten the carrying out of this project. I therefore hope that the provinces will better understand their duty in that respect and that, in the near future, afforestation will be practised on a larger scale. This will also bring about an increase of animal life and attract greater numbers of American tourists who live close to our border.

(*Text*):

Mr. James A. McBain (Elgin): Mr. Speaker, the resolution in the name of the hon. member for Kootenay West calls for the establishment of a nation-wide policy on soil, forest and water conservation and land use for Canada. I feel that most of us thoroughly agree in principle at least with the hon. member's resolution.

Therefore let us first make an observation on soil. I think many of us have oftentimes picked up a lump of soil in our hands, and we who are farmers have sifted that soil through our fingers and felt its body, its texture and its availability to absorb water. Yes, a farmer will sniff at it and almost taste it.

No treasure on earth is as valuable as a simple lump of soil. It is the very core of life from which all organisms emerge and it is the basis of the prosperity of all nations. A lump of soil absorbs water and solar energy and harbours a swarm of living things. A tiny seed finds in it the heat and moisture necessary to germinate. Here too is a storehouse of food from which tiny rootlets derive nourishment that is passed along to stems, leaves and fruit; all this from a single lump of soil. However, the soil can only give forth what it possesses. If rich in nutritive elements it can produce an abundance of food for man or beast. Lacking such reserves it can only grow weak plants and poor crops.

Originally nature had provided in the arable lands the nutriment required to grow a good crop, but man through lack of foresight to conserve depleted nature's storehouse, slowly in some parts of the world, in others very rapidly. Where soils have been depleted in organic material through mismanagement or other contributing conditions, science has intervened. It has provided improved methods of tillage. With chemical fertilizers it adds to the soil required quantities of the food it lacks. It has even developed custom-made seeds, brimfull of strength and vitality which enclose all the desirable characteristics of species, variety, productivity, early maturing, rapidity of growth and resistance to disease.

How important is a tree? The answer to this question is wide and varied. I would just like to quote an article that was written at the beginning of the 18th century, as follows:

> The state is like a tree, the roots are agriculture, the trunk is the population, the branches are industry, the leaves are commerce and the arts; it is from the roots that the tree draws the nourishing sap . . . and it is to the roots that a remedy must be applied if the tree is not to perish.

In conservation in Canada the federal government should be giving direction and leadership to the production and growing of that tree so it will be worthy of being conserved. The roots of the tree are our provincial governments, which over the years have spent many thousands of dollars promoting conservation at the provincial level. The trunk and branches could be the population and industry, who stand to benefit from a sound tree with firm roots.

Governments in the past and present show great interest in our natural resources, but are they too late? They become concerned not in the relatively simple matter of protecting, developing and using the resources, but with the costly and almost hopeless task of restoring, rebuilding or trying to recreate or re-establish something that was in perfect condition before they became interested.

Conservation of our resources, including our soil, forests and water, should be a challenge for our governments at all levels. It should be a challenge to every individual in this great country of ours. I believe it is time for all of us to accept this challenge to prevent the waste of those things that represent our very lifeblood.

At the time of the birth of Christ it has been estimated that there were presumably about 300 million people on earth. Since then the population has doubled on three successive occasions. It took 1,650 years for the first doubling; 200 years for the second doubling, and only 100 years for the most recent. By the end of this century, barring unforeseen casualties, the world population will have again doubled. Should the population reach the 5 billion mark by the end of the century there will then be only an average of half an acre of ground per person. If

these facts were really understood there would be no need for us to talk about and urge the necessity for conservation; we would be hard at it.

The virgin forest lands of this continent have been sadly depleted. In many areas we lose to fire, insects, disease and harvesting an amount in excess of the total annual growth. Forest management to maintain a sustained yield is still an objective to be achieved. In Canada an average of 5,000 fires a year rage across our forest lands burning in their path enough timber to build 85,000 five-room houses.

Forest fire protection in the Scandinavian country of Sweden is so complete that it is cheaper to insure a woodland property than it is to insure an industrial concern. To us living in Canada, where no insurance company would give consideration to covering growing timber, this fact is little short of incredible.

The demand for our forest products is terrific. For example, a single Sunday edition of the New York *Times* uses the product of from 80 to 100 acres of forest. I think we should also remember that it takes 60 to 80 years to grow a black spruce to a size ready for economical pulpwood harvesting.

I should like to conclude by quoting an poem entitled "Dust Bowl" which appeared in *Nature Magazine* of December, 1954. I hope that we in Canada will never reach the condition described here. This reads:

> Men now exhume dead roads from tragic dust,
> That devastation's dry wind-blowings spanned,
> Where nature's grim revenge rides every gust,
> For man's abuse of its long-tortured land.
> Too late, bulldozers seek to rectify
> The checks and balances where man has erred,
> Too late, steam shovels fret dust-heavy sky,
> For nature—it seems—has the final word.
> Now man must face destruction, he designed,
> While lord-of-all-creation's worthy foe,
> Will blow soil-desiccation through his mind,
> Exacting punishment with every blow.
> A noble servant—nature—but beware,
> Contempt will draw a monster from its lair.

Mr. M. A. Hardie (Mackenzie River): Mr. Speaker, I have been wondering all this evening whether I was going to get on. Possibly that may have been the result of something affecting Mr. Speaker. Possibly I should call in an eye specialist. Since the last speaker was not an hon. member on this side of the house I thought possibly I might follow. Perhaps I should blame my mother for this, because apparently she did not make me quite big enough or tall enough.

First I should like to congratulate the hon. members who have preceded me in this debate upon their sincere presentations in the cause of conservation. It is evident that more and more people are today conscious of the need for conserving our natural resources. The majority of hon. members who have taken part in this debate have dealt with conservation as it affects their ridings, with the exception of one, the hon. member for Charlevoix (Mr. Maltais). He, in my opinion, is a national conservationist. He included everything in his amendment with one exception, the wildlife resources, which to me and the people in my country are very important. If I wished to amend the amendment I would include wildlife, but I do not think I shall move any subamendment at this time.

The question of conservation is tied up with the privilege of living in Canada. Durward Allen said in his book "Our Wild Life Legacy":

> The rich resources of this land have given us our national standing and character, but we have reached a point where an end to much of this common property is in sight. The question is whether we will use it wisely and in perpetuity or use it up and be done with it. It is clear that natural advantage lies in one course although as individuals we might profit by the other.

Other speakers in this debate have covered the many and varied subjects of conservation, such as forestry, mining, soil erosion, agriculture, water, etc. I should like to deal with some aspects of the subject in regard to forests and wildlife, two of our renewable resources.

We are aware that during the early years in both the United States and Canada our forests were greatly depleted and our wildlife was killed off with no regard for future generations. In recent years it has become evident that if we are to continue to supply the demand for our forest products, a more efficient utilization of our forests is necessary. The federal government has been aware of the need for co-operation with the provinces in this field, and as a result the forestry act of 1949 was passed. This act provides for assistance to the provinces in the fields of forest inventories, reforestation, infestation of forests, etc. In this year's estimates you will find that $900,000 is being contributed for forest inventories. An additional $225,000 is being contributed for reforestation. There is also an amount of $650,000, which represents the federal contribution to combat spruce budworm in the province of New Brunswick.

Under the forestry branch of the Department of Northern Affairs and National Resources a great deal has been done in the field of forest research. It has also carried on research in forest products in the Vancouver and Ottawa laboratories. The maintenance of the operations of this important branch of government will cost $2½ million this year. These figures, along with the contributions I have mentioned, total in

the neighbourhood of $4½ million. It is quite obvious, therefore, that this government is aware of the need for forest conservation and is playing its part. I might add that responsibilities in the field of conservation should not be borne only by governments alone but also by the lumber industry and those individuals who derive pleasure and recreation from the great forests of Canada.

I should like to deal briefly with the subject of forest conservation as it affects the Northwest Territories. For a number of years the Slave river has produced spruce lumber for our building requirements and the logging and timber requirements of our mining industry, but it has reached the point where in two years the supply along this river will have been exhausted. The natural resources of the Northwest Territories are a federal responsibility, and I would respectfully suggest to the Minister of Northern Affairs and National Resources that an immediate survey be carried out by the forestry branch of his department to ascertain whether natural reforestation in that area is possible and if not, what methods of reforestation would be necessary to assure the ever-increasing mining industry and the communities of the north of a continued supply of these forest products.

I should also like to point out to the minister the need for a sound forest management policy in view of the new lumber industry which has been set up in the Wood Buffalo park.

Now I should like to make a few brief remarks in regard to the conservation of wildlife. We have only to look back not too many years when hundreds of thousands of buffalo roamed the western plains. In the matter of a few short years after the building of the railroads to the west, the buffalo were on the verge of extinction. A lessening in the numbers of these animals was bound to come because the people of that era gave no heed to conservation, and their disappearance was sudden. Many hardships were encountered by the people living in the west at that time. Through government action since that time we have been sustaining herds of buffalo in some of our national parks, one of which is the Wood Buffalo park, which lies partly in my riding. The herd in this area has increased from approximately 650 animals in 1890 to between 15,000 and 16,000 at the present time.

Another example of what could happen when conservation is thrown to the winds is the case of the whooping crane. Today in North America it is believed there are only 27 of these birds left. I am happy to say that the majority of these birds nest in my constituency in the Northwest Territories. Because of regulations in both the United States and Canada forbidding the shooting of these whooping cranes it is hoped that in the future their numbers will increase.

From the sentimental and recreational point of view we in Canada through our national parks and provincial game preserves, along with projects carried on by private organizations and individuals such as Ducks Unlimited and the Jack Miner bird sanctuary, are attempting to preserve some our our truly Canadian species of wildlife. I would like at this time to commend these private organizations for the active part they are playing in the conservation program, both in the United States and Canada.

Nineteen federal-provincial conferences have been held since 1922 on the subject of wildlife conservation. I understand that the twentieth meeting will take place some time in June of this year. I do not intend to go fully into the matter of the part played by the government in the conservation of wildlife, but I should like to say that the wildlife conservation branch of the Department of Northern Affairs and National Resources is co-operating fully with provincial and private agencies in the broad aspects of wildlife research and management.

An example of this co-operation is the case of migratory game birds. The Canadian wildlife service, along with the United States fish and wildlife service, some provincial governments, Ducks Unlimited and other private organizations, conducts surveys each year to determine the current status of our migratory birds, particularly ducks and geese. Joint reports are prepared annually which provide information upon which to base regulations governing their shooting. Many other surveys of other species of wildlife are made throughout Canada by this branch and the results of these surveys are made available to provincial governments and other interested parties.

At this point, Mr. Speaker, I intend to speak more specifically of conservation as it affects the Northwest Territories. To me conservation is the intelligent use of our natural resources in the Northwest Territories, and in that part of the country conservation is also an economic problem. A large section of our population, and I speak of the Indians and Eskimos particularly, derive their living from the trapping of fur-bearing animals, and they also derive a large portion of their food from our wildlife resources.

In order to give an idea of what has happened to the trapping industry during recent years I should like to quote a few figures. In 1943-44 the total number of beaver pelts

exported from the Northwest Territories was 13,535. In 1954-55 the figure was 11,342. The total value in 1943-44 was $463,574. The total value in 1954-55 was $168,996. Then let us take the case of ermine. I doubt very much if there are very many here who know what ermine is. There are a few from the northern part of the country who know, but some of our city slickers would not know the difference between an ermine and a rabbit. As far as ermine or weasel—now you all know—is concerned, in 1943-44 9,790 ermine were taken and exported. In 1954-55 4,852 were exported. The value in 1943-44 was $13,706. Last year the value was $4,124.

Then we come to mink. In 1943-44 the total export was 9,903 skins. In 1954-55 the figure was 3,463 skins, one-third of the number taken in 1943-44. Some people will say, and I have heard this argument before, that the number of furs taken is dependent on the price paid. Well, as I have just said, in 1943-44 some 9,903 mink were taken and the value at that time was $21.25 each. Last year when 3,463 were taken the value was $23.10 each, practically the same.

What has happened? The numbers of fur-bearing animals in my part of the country are being depleted. We will go on to muskrat, the main source of livelihood for my people down the Mackenzie river. In 1943-44 there were 281,255 muskrats taken. In 1948-49 there were 724,432 taken. Last year there were 344,507. Let me deal with the difference in revenue between 1943 and last year with respect to rats, and I am not referring to the rats that a member of the C.C.F. party spoke about the other day. I am talking about muskrats. The value in 1943-44 was $528,759 compared with $248,090 last year.

Then let us take white fox. For as long as I can remember white fox has been the commodity from which the Eskimo has derived his cash. In 1943-44 there were 30,420 white fox skins exported. Last year 6,877 white fox were exported. To me these figures indicate an alarming decrease not only in the number of furs taken but in the revenue to the people of my part of the country.

I will leave fur for one minute. Economically speaking, fur is that industry which supplies the native with cash in order to buy the white man's food to which he has become accustomed over the years. But now I will speak of caribou. Caribou is and has been the main source of food for the native people. I should like to refer to a survey made by Dr. Banfield of the Canadian wildlife service in 1948. In that survey Dr. Banfield estimated that the total population of caribou at that time was 658,000. He also estimated the total decrease per year taking into consideration on the one hand the calf crop and on the other hand the decrease brought about by hunting, what the wolves take, natural disease and so on. At that time he said our caribou population was decreasing by 50,000 animals a year.

I and a lot of other people in my constituency said, "That guy is nuts." As a matter of fact, this is a controversial subject in my constituency. There are a great number of people in my constituency who say these experts are completely off their rockers. There are other people in my constituency who agree with the experts. Now, I am a layman.

Mr. Harris: No, no.

Mr. Hardie: I do not know whom I should listen to, whether I should listen to the people in my constituency who say that the experts are crazy or whether I should listen to the experts. But I will say one thing. Last year the same department, namely the Department of Northern Affairs and National Resources, through its Canadian wildlife service undertook a survey of caribou. What did they find?

An hon. Member: Caribou.

Mr. Hardie: My dear friend, I am sorry to say they did not find caribou in the numbers in which they expected to find them. What did they find?

An hon. Member: Muskrat.

Mr. Hardie: The hon. member for Lethbridge (Mr. Blackmore) does not know anything else but wheat. If he will just shut his trap I will continue.

Mr. Blackmore: Mr. Speaker, the hon. member for Lethbridge did not say a word.

Mr. Hardie: If the hon. member for Lethbridge did not say anything I am very sorry for the remark I made, and I will withdraw it. It must have been another wheat farmer from Alberta.

An hon. Member: Was it the hon. member for Cariboo?

Mr. Hardie: What happened? They came out, and as a result of their surveys last year they said the caribou population had been depleted to from 300,000 to 350,000 animals, thus leaving us in the north and your Eskimo and Indian friends 300,000 caribou as of last spring. Dr. Banfield's report, which we said was crazy—I said it; I agreed with many people—stated that the caribou were diminishing or were being depleted by 50,000 animals a year. After last year's survey—50,000 a year for six years,

300,000—we find that is practically what they are missing now. We now have 300,000 caribou left in the Northwest Territories.

To my friends on all sides of this house this may seem to be nothing. They started feeding the natives beefsteak. I want to tell my hon. friends something. This case is not the same as that of the buffalo. When the buffalo disappeared from the western plains the prairie farmer brought in livestock that could live off the same grazing grounds as those on which the buffalo had been feeding. I will defy the Minister of Agriculture or anybody else to feed cattle on the same grazing grounds the caribou have been feeding on this last century.

This is an important matter. I am appealing to the Minister of Northern Affairs and National Resources to do something about it. I know what people will say. As a matter of fact, I have heard officials of the department say it. They will say that we have at Tuktoyaktuk a reindeer herd that the government brought in 30 years ago. We spent over $1 million on those reindeer. By the time they arrived at Tuktoyaktuk there were 3,600 of them. Twenty or more years later, how many reindeer have we at Tuktoyaktuk? We have 6,500.

Mr. Knowles: Plus Rudolph.

Mr. Hardie: I will tell you this. Of all hon. members to speak of Rudolph, I think the hon. member has the reddest nose. As I was saying, we have spent over $1 million on reindeer. We have not quite doubled the numbers of those reindeer in over 20 years. I must admit that we have supplied meat to some of the people up there at anything from 65 to 75 cents a pound. We might as well have been flying in beef.

Then down in Wood Buffalo park we have the buffalo which I mentioned some time ago. We have increased the population from 650 in 1890 to from 15,000 to 16,000 today. We have also slaughtered each year a certain number of those buffalo and we have sold them to the Hudson's Bay Company, who sold them back to us. That is fine and dandy; it is O.K. with me. But last year what did they do? I am not a farmer, so I thought I would bring up this matter in the estimates committee last year. They sold buffalo meat to Canada Packers and to Burns and Company for 5 cents a pound, f.o.b. Fort Smith. But the same department sold the same buffalo meat to the Department of Indian Affairs for 35 cents a pound for distribution as relief rations to the Indians. When I brought this matter before the estimates committee last year I thought the hon. member for Moose Jaw-Lake Centre (Mr. Thatcher), a real cattleman, would be sure to nab this point, but he just let it go by.

To be serious about this matter, Mr. Speaker, may I say that something must be done. At the rate caribou have been depleting in numbers, six years from now there will not be one living caribou in the Northwest Territories. This is the food of the large majority of the people who live in that country. To the Minister of Northern Affairs and National Resources I suggest that he really get down on his knees before the Minister of Finance—

Some hon. Members: Oh, oh.

Mr. Hees: That I must see.

Mr. Knowles: Now who has the red nose?

Mr. Hardie: —and do something during this period about restricting the number of caribou that are taken each year. If the natives do not take those caribou—and of course if we are to follow sound conservation policies we shall be obliged to restrict the number of caribou they take—something must be done to feed these people. But when I look at the estimates this year I find they are less than they were last year. That may be all right, but I have not found that there has been any increase to provide these people with meat. Something must be done, Mr. Speaker.

Now I shall leave buffalo for a minute and come back to the reindeer situation. We brought in these reindeer, and the idea was that we would do so in order to provide the starving people with meat. After we brought in the reindeer the government decided that it would be a fine idea to distribute these reindeer to certain Eskimo families who would herd them and live off them. At the slaughtering season, in August or September, when these reindeer were fat they would move them in to the reindeer station and slaughter them and sell the meat to the Eskimos, the Hudson's Bay Company or any other white people. That was fine. It sounded good. As a matter of fact I think I even heard in the estimates committee talk about extending this idea to other parts of the country, putting more reindeer in other parts of the Northwest Territories. Well, herding reindeer is not the same as ranching cattle. In so far as cattle are concerned, you put up a fence and the cattle stay inside. The reindeer are roving over 549,000 square miles of country.

These Eskimos are the sort of people, like you and me, who like to visit with their friends once in a while. Put yourselves in their position. They follow a herd of these reindeer around the country. They say the

reindeer is okay and they eat it, but once in a while they like to see something other than reindeer. They say to themselves, let us go and visit Joe Kuhali, 100 miles away. It is Easter time, and that is a good time to go away. They go away and leave the reindeer. When they come back where are the reindeer? They start running around and finally get half of them back, but half of them are gone. Do you know where they have gone? The caribou move through the country in a wild state during the migration period, and the reindeer follow suit. Reindeer have been shot at Muskox lake, 1,500 miles away from the reindeer station.

As a matter of fact I had a trapper say to me, "A funny thing, I shot a caribou yesterday and this caribou had half its ear cut off; I never saw that before." He said it was cut; there was no fooling about it. Sometimes at the reindeer station they cut half an ear to mark a certain animal for a certain band in which they put him. This reminds me of a story about the difference between caribou and reindeer. A few years back there was an Indian, I think his name was Joe Blondin, who was up around Fort Normandin and Aklavik, and he shot what he thought was a caribou. What happened? The police brought him in because he had shot a reindeer, not a caribou.

Mr. Knowles: It was not Tucker?

Mr. Tucker: You had better not go up there.

Mr. Hardie: You took the words right out of my mouth, my friend. What happened? They brought this man in and charged him with shooting a reindeer, a protected animal. Of course they held court and the crown prosecutor was there. The Indian defended himself. The crown prosecutor said, "Now, there must be some difference between a reindeer and a caribou." Of course he did not know. They called in a scientist. The scientist said that so far as he was aware the only difference between a caribou and a reindeer—I do not know which way it was—was that the caribou's tooth was so many millimeters longer than the reindeer or vice versa. In any event, this man was expected to go out into the wild, open up this animal's jaw and measure the teeth. However, it happened we had a very fair magistrate at that time and this man was set free.

Well, Mr. Speaker, I would say to this house that caribou mean no more to the average person in Canada, and I could talk until I am blue in the face, than the buffalo did before the railroads went west. But in my part of the country they are the very lifeblood. We eat this animal. Something has to be done. I am not a scientist, and I do not know the difference between a tooth of one animal and another. I cannot give you the answers but I am sure the department of northern affairs, through its Canadian wildlife service, knows the answer. I am hoping that the Northwest Territories administration, which also comes under that department, will do something about the recommendations and the results of the surveys that have been conducted by the Canadian wildlife service.

I should also like to say that we are trying to educate our people in that part of the country in conservation measures. There is one book I would suggest should be a part of that curriculum, a book written by Deward Allen entitled "Our Wild Life Legacy". It should be not only in the grade schools of that country but also in the high schools. It should be put into the trapper's associations, because this book will tell those people more about conservation that I could ever tell them.

In closing, Mr. Speaker, I should like to quote a paragraph I once read. I do not know the name of the author, but perhaps someone may know who he is after I have read it. He is the person who should be credited with it. He says:

> Because man has made hash of nature's system of checks and balances, he finds he must go to a lot of trouble from time to time to straighten out his mishandling of the resources given him by nature. But he seems to go about it the hard way, making the same mistakes and trying the same remedies again and again. He plunders the resources, then works overtime to restore them or find a substitute.

I hope that the federal government, who are responsible for the wildlife resources of the Northwest Territories, will have learned from the experience of the United States and all the other provinces of Canada, and will not make the same mistakes over again.

I wish to adjourn the debate.

Mr. Speaker: Unfortunately the hon. member's time is exhausted.

BUSINESS OF THE HOUSE

Mr. Harris: Mr. Speaker, tomorrow and Wednesday we shall take the following items in the following order: first, the third reading of the wheat bills, beginning with Bill No. 82 and then Bill No. 83; then the motions to set

up committees, beginning with that on estimates, then that with respect to research, then that with respect to criminal law, and then the federal district commission.

There is a notice of a further committee on the order paper with respect to railways and shipping, which will appear in *Votes and Proceedings* tomorrow. Then we shall take the resolution with respect to the industrial development bank, the Public Service Superannuation Act, and the Small Loans Act.

It being three minutes after ten o'clock the house adjourned, without question put, pursuant to standing order.

ANSWERS TO QUESTIONS

The following answers, deposited with the Clerk of the house, are printed in the official report of debates pursuant to standing order 39:

BUTTER STOCKS

Question No. 29—**Mr. Blair:**

1. What were total stocks of butter in Canada on January 1, of each of the years 1952, 1953, 1954, 1955, 1956?

2. What were government-owned stocks of butter on January 1, of each of the years 1952, 1953, 1954, 1955, 1956?

Answer by: **Mr. Gardiner:**

1.

Year	Pounds
1952	44,820,000
1953	54,548,000
1954	71,192,000
1955	91,025,000
1956	100,030,000

(As reported by dominion bureau of statistics.)

2.

1952	10,271,000
1953	36,263.000
1954	49,184,000
1955	73,412,000
1956	81,215,000

(From records of agricultural prices support board.)

CANADIAN NATIONAL RAILWAYS—FREIGHT CARS

Question No. 69—**Mr. Knowles:**

1. Has the Canadian National Railways placed orders for an additional supply of (a) box cars; (b) freight cars of other types?

2. If so, with what firms have such orders been placed, and what are the numbers of each type of car ordered from each such firm?

3. When is delivery of such cars expected?

4. Is the Canadian National Railways building any box cars or other types of freight cars in its own shops? If so, how many are being built.

Answer by: **Mr. Marler:**

The Canadian National Railways advise as follows:

1. (a) Yes; (b) Yes.

2. Freight equipment was ordered in 1955 as follows:

50-ton box cars—Eastern Car Company (1,700); Canadian Car and Foundry (1,400); National Steel Car Corp. (650).

70-ton gondola cars—Canadian Car and Foundry (200); Eastern Car Company (100).

70-ton covered hopper cars—Marine Industries Ltd. (200).

Freight refrigerator cars—National Steel Car Corp. (425).

50-ton flat cars—Canadian Car and Foundry (100).

Automobile transporter cars—Canadian Car and Foundry (25).

70-ton ore cars—Marine Industries Ltd. (30).

3. Some of the equipment has already been delivered, and delivery of the remainder will take place throughout 1956.

4. No.

QUEEN ELIZABETH HOTEL—ARCHITECTURAL FIRMS EMPLOYED

Question No. 82—**Mr. Hamilton (Notre Dame de Grace):**

1. What architectural firms have been retained in connection with the design and construction of the Queen Elizabeth hotel in Montreal?

2. On what date were such firms first retained?

Answer by: **Mr. Marler:**

The Canadian National Railways advise as follows:

1 and 2. The design and construction of the Queen Elizabeth hotel are and have been under the direction of the chief architect of the Canadian National Railways in consultation with the firm of Holabird and Root and Burgee and Associates, Chicago, which firm was retained as consultant on November 15, 1946, in connection with the development of the Montreal terminal area. No other architectural firms have been retained.

CIVILIAN DISCHARGE STATISTICS, NATIONAL DEFENCE

Question No. 89—**Mr. Dinsdale:**

How many civilian employees age 65 or over have been discharged by the Department of National Defence each month during the past year, at each of the military camps in Canada?

Answer by: **Mr. Campney:**

Questions

CIVILIAN EMPLOYEES AGE 65 OR OVER WHOSE SERVICES WERE TERMINATED AT MILITARY CAMPS IN 1955.

—	Jan.	Feb.	Mar.	Apr.	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Total
Valcartier	.....	.....	1	.....	1	.....	.....	.....	.....	.....	.....	.....	2

BUTTER STOCKS

Question No. 112—**Mr. Fraser (Peterborough):**

What was the total amount of butter held by the Department of Agriculture on January 31, 1956?

Answer by: **Mr. Gardiner:**

The agricultural prices support board held 72,826,889 pounds of butter on January 31, 1956.

BUTTER DISTRIBUTION TO CHARITABLE INSTITUTIONS

Question No. 117—**Mr. Maltais:**

1. What quantity of butter has been distributed to charitable institutions in Canada under the assistance policy of the Department of Agriculture since February, 1955?
2. What quantity of butter has been distributed in the province of Quebec?
3. At what average price was this butter distributed throughout Canada in the summer of 1955?

Answer by: **Mr. Gardiner:**

1. Up to February 3, 1956—6,309,807 pounds.
2. 2,953,549 pounds.
3. Each institution has received a discount of 21 cents per pound on butter distributed under this program.

MARSHLAND REHABILITATION—FEDERAL EXPENDITURES

Question No. 118—**Mr. Brooks:**

1. How much money has been spent by the federal government under the Maritime Marshland Rehabilitation Act, in each of the maritime provinces in the years 1952, 1953, 1954, 1955?
2. What is the total amount spent up to January 1, 1956 under this act?

Answer by: **Mr. Gardiner:**

1.

Fiscal Year	Prince Edward Island	Nova Scotia	New Brunswick
1952-53	$114.04	$ 867,997.47	$ 777,453.58
1953-54	185.30	986,997.03	1,006,011.10
1954-55	87.52	876,749.77	670,611.75
1955-56 to Dec. 31/55		935,915.30	662,144.14
	$386.86	$3,667,659.57	$3,116,220.57

2. Total amount spent up to January 1, 1956, under the Maritime Marshland Rehabilitation Act: $9,319,960.56.

BUTTER SALES TO INSTITUTIONS

Question No. 124—**Mr. Gauthier (Portneuf):**

1. How many pounds of butter were sold to institutions in each province since coming into force of this policy of the federal government?
2. What amount has been paid by such institutions in each of the provinces for this product?

Answer by: **Mr. Gardiner:**

1.

	pounds
Atlantic provinces	480,684
Quebec	2,953,549
Ontario	1,456,221
Prairie provinces	1,023,789
British Columbia, Yukon and Northwest Territories	395,564
Total sold to institutions at February 3, 1956	6,309,807

Questions

2. Institutions in all provinces have received a discount of 21 cents per pound on butter distributed under this program.

Note: The above figures for the Atlantic and prairie provinces are the actual totals for the areas with approximate estimates for individual provinces as follows:

	pounds
Newfoundland	5,850
Prince Edward Island	55,674
Nova Scotia	224,056
New Brunswick	195,104
Total Atlantic provinces	480,684
Manitoba	291,686
Saskatchewan	259,919
Alberta	472,184
Total prairie provinces	1,023,789

TRANSPORT—EXTENSION OF RAILWAY ACT TO WATER TRAFFIC

Question No. 151—**Mr. Barnett:**

1. Are there any instances where the board of transport commissioners has extended and applied the provisions of the Railway Act to traffic by water, as provided for by the present section 363 of the said act?

2. If so, to what companies, to what traffic carried by them, and between what points?

3. What instances of this application of the act are currently operative?

Answer by: **Mr. Marler:**

1. No.
2. See answer to No. 1.
3. See answer to No. 1.

OYSTER RESEARCH EXPENDITURES

Question No. 169—**Mr. Robichaud:**

1. What was the total amount spent by the fisheries research board for oyster research or culture, in each year from 1945 to 1955, inclusive?

2. What was the total amount spent in Gloucester county, New Brunswick, for oyster research or culture, in each year from 1945 to 1955, inclusive?

Answer by: **Mr. Sinclair:**

1 and 2. The fisheries research board is responsible for research and the Department of Fisheries for oyster culture or farming. Following information is provided on this basis:

Year	Research Board	Department Total for Maritimes	(b) New Brunswick
1944-45	(a)	$21,042	$ 640
1945-46	(a)	25,018	1,762
1946-47	(a)	24,309	810
1947-48	(a)	33,572	2,322
1948-49	$ 10,281	45,876	8,944
1949-50	11,010	56,657	8,567
1950-51	14,867	56,791	8,212
1951-52	14,387	54,279	8,613
1952-53	18,066	52,695	8,866
1953-54	16,570	54,236	8,918
1954-55	18,973	54,198	8,513

(a) Prior to 1948-49 expenditure was not segregated to show oyster research separately.

(b) Expenditure records are not maintained by counties. However, one only oyster farming station is operated in New Brunswick and it is located in Gloucester county.

OYSTER PRODUCTION, MARITIME PROVINCES

Question No. 170—**Mr. Robichaud:**

1. What was the total production of oysters in the maritime provinces in each year from 1945 to 1955, inclusive?

2. What was the total production of oysters in Gloucester county, New Brunswick, for each of the above years?

3. What was the landed value of oysters in Gloucester county, for each year from 1945 to 1955, inclusive?

Answer by: **Mr. Sinclair:**

1. Total landings, maritime provinces[1].

Year	'000 lbs.
1945	7,089
1946	8,014
1947	8,051
1948	11,432
1949	11,272
1950	10,684
1951	6,885
1952	7,891
1953	8,160
1954[2]	5,002
1955[2]	6,243

Questions 2 and 3.

Year	Landings[1] '000 lbs.	Landed value $'000
1945	2,012	84
1946	1,743	79
1947	1,849	92
1948	1,883	93
1949	1,829	90
1950	735	38
1951	1,173	80
1952	1,268	87
1953	1,630	120
1954[2]	938	70
1955[2]	2,185	108

[1]Landings are given in terms of landed weight, i.e. in shell.

[2]Preliminary figures and subject to revision.

HOUSE OF COMMONS

Tuesday, February 28, 1956

The house met at 2.30 p.m.

DOMINION-PROVINCIAL RELATIONS

FISCAL ARRANGEMENTS—TABLING OF TELEGRAM AND LETTERS OF REPLY

On the orders of the day:

Right Hon. L. S. St. Laurent (Prime Minister): Hon. members will recall that on February 22 I laid on the table a copy of a letter I had addressed on February 18 to the premiers of the provinces concerning fiscal matters. I should now like to lay on the table copies of the replies I have received from all provinces. It appears from the contents of these replies that a number of the provincial governments desire to resume the conference on fiscal arrangements early in March. I therefore sent a telegram to the premiers proposing that we have another meeting in Ottawa on March 9 next. I might also table a copy of the telegram. Perhaps hon. members would wish to have this correspondence printed as an appendix to the *Hansard* report of today, as was done with the former correspondence.

Some hon. Members: Agreed.

Mr. Fleming: Will that conference be held in camera?

Mr. St. Laurent (Quebec East): Yes. It will be a continuation of the meeting in committee which was held in camera when the premiers were here last October.

(For text of letters and telegrams see appendix, pages 1657-60.)

[Later:]

Mr. J. M. Macdonnell (Greenwood): May I ask the Prime Minister, following what he said previously, whether the fact that there is to be a conference of dominion and provincial governments early in March indicates that the matters under discussion are still open for further negotiation?

Mr. St. Laurent (Quebec East): I think the terms of the letter I wrote to the premiers, a copy of which I tabled in the house on February 22, expresses exactly what is the attitude of the Canadian government at this time.

TRADE

INTERNATIONAL WHEAT AGREEMENT—INQUIRY AS TO STATUS OF NEGOTIATIONS

On the orders of the day:

Mr. J. G. Diefenbaker (Prince Albert): Mr. Speaker, I should like to direct a question to the Minister of Trade and Commerce. Is he at this time prepared to bring the house and the country up to date on the negotiations in connection with the international wheat agreement? Is he in position to give assurance to the house and the country that, regardless of the number of bushels agreed to by the several nations, Canada is prepared to enter into an agreement whether or not Great Britain is a member?

Right Hon. C. D. Howe (Minister of Trade and Commerce): Mr. Speaker, I am unable to give the house any information on the international wheat agreement negotiations. We have a team there but the reports to date are not conclusive. It is the intention to largely follow the advice of our farm leaders who are there on the ground. When we have more definite information I shall be glad to make it available.

CIVIL DEFENCE

EVACUATION OF MAJOR CITIES—ACCEPTANCE AS GOVERNMENT POLICY

On the orders of the day:

Mr. G. R. Pearkes (Esquimalt-Saanich): Mr. Speaker, may I ask the Minister of National Health and Welfare if the evacuation of our major cities in the event of a national emergency has been accepted as government policy for civil defence?

Hon. Paul Martin (Minister of National Health and Welfare): Mr. Speaker, I received notice of this question from my hon. friend only a few moments ago. The federal civil defence authorities in co-operation with the civil defence authorities of the various provincial governments have been engaged in evacuation tests in certain communities in Canada to determine the feasibility of this method of defence. Likewise we have been co-operating in this particular with the authorities in the United Kingdom and in the United States.

Inquiries of the Ministry

Mr. Pearkes: That does not quite answer my question. I asked whether it had or had not been accepted as government policy.

Mr. Martin: With great respect, I think I have answered. I said we have been co-operating with the provincial authorities with a view to determining the feasibility of the evacuation of Canadian communities. Once we have determined that in co-operation with authorities in other countries who are engaged in this matter, final decisions will be taken.

Mr. Pearkes: Then it has not been accepted yet?

Mr. Martin: I should like to say that my hon. friend has been constructive in this matter year after year, and I know he would not want to add to the problem, which obviously is a very difficult one. I would hope I might say that his remark is not intended in any way to discourage the effort now being made by various communities throughout the country. I know I express a view that my hon. friend fully shares.

Mr. Pearkes: There is no thought of discouraging anybody. I should like to be helpful if I can.

Mr. Martin: My hon. friend is always helpful.

PUBLIC SERVICE

HOUSE OF COMMONS AND SENATE—SALARY INCREASES FOR STAFF

On the orders of the day:

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, may I direct a question either to the Prime Minister or to the Minister of Finance? Will the necessary steps be taken so that employees of the House of Commons, and of the other place as well, will participate in the salary increases of which the Prime Minister gave notice to civil service organizations a day or two ago?

Hon. W. E. Harris (Minister of Finance): I answered this question some time ago, when I answered my hon. friend by saying that we were giving consideration to all these questions.

Mr. Knowles: I should like to ask a supplementary question. In view of the fact that my previous question referred to prevailing rates employees, may I now take it that sessional employees in this building are also covered?

Mr. Harris: You may take my answer precisely as it was, that we were giving consideration to all persons concerned.

[Mr. Martin.]

NATIONAL REVENUE

REQUEST FOR CHANGE IN APPLICATION OF AUTOMOBILE EXCISE TAXES

On the orders of the day:

Mr. Michael Starr (Ontario): I should like to direct a question to the Minister of Finance. Has the government considered the advisability, in view of the fluctuating nature of special excise or luxury taxes, of introducing legislation to make automobile excise taxes payable on the basis of actual sale to new owners and not, as at present, when the automobile is shipped to the dealer for subsequent sale?

Hon. W. E. Harris (Minister of Finance): The house will recall that we had some discussion of the problem of excise taxes on motor cars during last session. In the interval we have had representations from both the dealers' association and the association of motor car manufacturers. My recollection is that the matter my hon. friend has just mentioned was included in one, if not both, of those representations. That being the case, we shall of course consider it, though this is not to be taken as a statement that we will adopt it.

ST. LAWRENCE SEAWAY

EXPROPRIATION OF PART OF CAUGHNAWAGA INDIAN RESERVE

On the orders of the day:

Mr. G. H. Castleden (Yorkton): I should like to direct a question to the Minister of Citizenship and Immigration. Have negotiations been completed between the St. Lawrence seaway authority and his department for the purchase of that portion of the Caughnawaga Indian reserve which is being expropriated for the seaway construction?

Hon. J. W. Pickersgill (Minister of Citizenship and Immigration): I have not been so advised.

PROTECTION OF CANADIAN PROPERTY AGAINST CHANGE IN WATER LEVELS

On the orders of the day:

Hon. L. B. Pearson (Secretary of State for External Affairs): On February 22 last the hon. member for Lambton West asked me if I could say what the level of lake Huron would be upon completion of the St. Lawrence seaway, and if it would be at all possible to divert more water to the Chicago drainage system. I gave a provisional reply at that time which I can now confirm.

I should point out that while it is not possible to predict what the level of lake Huron will be at any time in the future,

I am informed that the levels of this lake will not be affected by the completion of the St. Lawrence seaway and power project. Therefore the question of increased diversion at Chicago as a consequence of the seaway does not arise.

[*Later:*]

On the orders of the day:

Mr. J. W. Murphy (Lambton West): Mr. Speaker, I should like to direct a further question to the Secretary of State for External Affairs. Perhaps the question I asked originally was not as clear as I intended that it should be. I was not concerned about the effects of the St. Lawrence seaway project on the great lakes levels. Previously I think the Minister of Transport said that upon completion of the seaway the great lakes level would remain more or less constant. He was referring to the lower lakes, lake Huron and lake Michigan. My concern was about the damage to property from high water levels even at the present moment. I was hoping the minister would consider the effect of the high levels because of the diversion of the two streams into lake Superior which are man-made and whether, apart from the St. Lawrence project entirely, more water could be diverted through the Chicago drainage scheme.

Hon. L. B. Pearson (Secretary of State for External Affairs): I shall be very glad, Mr. Speaker, to look into that aspect of the matter and give a reply as soon as possible.

HEALTH AND WELFARE

SUPERVISION OF SALE OF SLEEPING PILLS

On the orders of the day:

Mr. A. M. Nicholson (Mackenzie): I should like to direct a question to the Minister of National Health and Welfare. Has the minister noticed in this morning's *Globe and Mail* the suggestion by Magistrate Hopkins of Hamilton that there be more rigid supervision of the supplying of sleeping pills without doctors' prescriptions? Could the minister indicate what action, if any, his department is taking?

Hon. Paul Martin (Minister of National Health and Welfare): Mr. Speaker, as soon as I saw the story in the papers this morning I suggested to our offices that we make an examination of the alleged facts. But I might say in addition that under the Food and Drugs Act sleeping pills are required to be sold only on the prescription of a doctor, a dentist or a veterinarian. Control is constantly being exercised by the inspectors of the food and drug directorate. Anyone selling sleeping pills other than on the prescription of a doctor, a dentist or a veterinarian violates the Food and Drugs Act and is liable to penalty.

FRUIT

BRITISH COLUMBIA—REQUEST FOR STATEMENT FOLLOWING INTERVIEW WITH MINISTER

On the orders of the day:

Mr. A. B. Patterson (Fraser Valley): I should like to direct a question to the Minister of Agriculture. Could the minister comment at this time on the results of his recent conversations with the representatives of the British Columbia berry and small fruits growers?

Right Hon. J. G. Gardiner (Minister of Agriculture): Mr. Speaker, I wish to thank the hon. member for having given me notice of his question. Representatives of the British Columbia berry and small fruits growers discussed their problems with the provincial authorities before coming to Ottawa and expressed their intention of doing so again on their return to British Columbia, after which we will probably hear from them again.

FLOODS

MANITOBA—LIKELIHOOD OF FLOODING ON ASSINIBOINE RIVER

On the orders of the day:

Mr. O. C. Trainor (Winnipeg South): I should like to direct a question to the Minister of Agriculture. Is the minister aware that informed prediction indicates that there is every likelihood of a very serious flood condition along the Assiniboine river valley this coming spring? If so, can the minister state whether or not his department or any other department of government is taking any steps to mitigate the impact of this condition on the citizens of the communities there?

Right Hon. J. G. Gardiner (Minister of Agriculture): There are always, of course, possibilities of floods in the Assiniboine valley, and of course there has been a very heavy snowfall in Manitoba this year. No doubt many persons do have the idea that there may be high water this spring. We have been building dikes along the river in the neighbourhood of Portage la Prairie, and they are not quite complete. That work will be going on during the coming summer. Other matters which are being checked and dealt with are the possibilities of controlling floods from higher up the Assiniboine, partially in Saskatchewan and partially in Manitoba.

Inquiries of the Ministry

SASKATCHEWAN—ACTION TAKEN IN KAMSACK AREA

On the orders of the day:

Mr. G. H. Castleden (Yorkton): I should like to ask the Minister of Agriculture a supplementary question in view of the reply given to the question by the hon. member for Winnipeg South (Mr. Trainor). What action has been taken to prevent a recurrence of the floods on the Assiniboine river in the Kamsack area in Saskatchewan?

Right Hon. J. G. Gardiner (Minister of Agriculture): Mr. Speaker, I will take that as notice and answer the question later.

STORMS

SUGGESTED ASSISTANCE TO BE GIVEN EUROPEAN NATIONS

On the orders of the day:

Mr. Colin Cameron (Nanaimo): I should like to address a question to the Prime Minister. Can the Prime Minister now inform the house whether the government is preparing to make any contribution to the relief of the current distress in Europe?

Right Hon. L. S. St. Laurent (Prime Minister): No decision has been made in that regard up to the present time, Mr. Speaker.

[*Later:*]

Mr. H. R. Argue (Assiniboia): I should like to ask the Prime Minister a question arising out of his reply to the hon. member for Nanaimo. Will the Prime Minister, in his forthcoming visit to Washington, discuss with President Eisenhower the possibility of a joint disaster assistance program for Europe in order to avoid any possible conflict in the disposal of food surpluses?

Mr. St. Laurent (Quebec East): I think I will have to use my best judgment in my conference with the President at the time it takes place.

PUBLIC BUILDINGS

QUEBEC CITY—LOCATION OF NEW POST OFFICE

On the orders of the day:

Mr. J. Wilfrid Dufresne (Quebec West): I should like to direct a question to the Minister of Public Works. Has the Minister of Public Works received a resolution passed by the Quebec municipal council and the Quebec chamber of commerce suggesting that the new post office site be changed? If so, what steps are being taken in this connection?

Hon. Robert H. Winters (Minister of Public Works): I have not received a resolution.

[Mr. Gardiner.]

(*Translation*):

Mr. Dufresne: Mr. Speaker, may I ask the Postmaster General whether he has received this resolution from the Quebec city council, along with the resolution passed by the Quebec chamber of commerce?

Hon. Hugues Lapointe (Postmaster General): Mr. Speaker, in answer to the question put by the hon. member, I will say that I did in fact receive such a resolution, together with a brief from the chamber of commerce, and that I have duly forwarded them to my colleague, the Minister of Public Works (Mr. Winters).

(*Text*):

SHIPPING

SINKING OF DEPARTMENTAL VESSEL "HILUNGA"

On the orders of the day:

Hon. Robert H. Winters (Minister of Public Works): I should like to answer a question raised on February 24 by the hon. member for Vancouver-Quadra in which he asked whether or not the public works vessel *Hilunga*, which foundered on the west coast, was designed only for service in minor waters, class 1, whereas she foundered in minor waters, class 2. The answer is that the *Hilunga* was designed for home trade voyages, class 3, and home trade voyages, class 2, in the summer season only. The vessel foundered within home trade waters, class 3.

Mr. Howard C. Green (Vancouver-Quadra): Is it not true that the *Hilunga* was en route to the Queen Charlotte islands when she foundered, although she happened to go ashore on the mainland? Would a trip to the Queen Charlotte islands not take her beyond the class of waters in which she is supposed to be used?

Mr. Winters: Yes, Mr. Speaker; I think that is the case. But the fact is that she foundered within waters for which she was designed.

POST OFFICE DEPARTMENT

REQUEST FOR NEW ENGRAVINGS FOR NEXT ISSUE OF STAMPS

On the orders of the day:

Mr. W. M. Hamilton (Notre Dame de Grace): Can the Postmaster General inform the house whether his department plans to have new and improved engravings prepared for the issue of stamps which was announced recently, in the light of press comment and certain criticisms levelled at them recently?

Hon. Hugues Lapointe (Postmaster General): Mr. Speaker, the answer is no.

MUNICIPAL IMPROVEMENTS ASSISTANCE

INQUIRY AS TO INTRODUCTION OF AMENDMENTS TO ACT

On the orders of the day:

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, may I direct a question to the Prime Minister. Can the Prime Minister inform the house whether amendments to the Municipal Improvements Assistance Act will be introduced at this session along the lines of the discussion at the federal-provincial conference last October and in the light of the request made by the Canadian Federation of Mayors and Municipalities?

Right Hon. L. S. St. Laurent (Prime Minister): No, Mr. Speaker. It is not probable that any amendments to that act will be introduced at this session, although there has been no formal decision in that regard up to the present time.

UNEMPLOYMENT INSURANCE

REPORTED TIE-UP IN CAMPBELLTON AND EDMUNDSTON OFFICES

On the orders of the day:

Hon. Milton F. Gregg (Minister of Labour): Mr. Speaker, on February 16, a week ago last Thursday, the hon. member for Restigouche-Madawaska asked me the following question:

> I regret that I was unable to give the Minister of Labour notice of this question because I just received a telegram concerning the matter. What action, if any, is being taken to overcome the terrific tie-up and delays in the unemployment insurance offices in Campbellton and Edmundston?

I replied that I would take the question as notice and give a reply. I did look into the matter immediately and on Monday, a week ago yesterday, I was prepared to give a reply to my hon. friend but I should like to give it to him now since he is in his seat.

The reply is that at no time this winter has there been a "terrific tie-up" at these two unemployment insurance offices. Furthermore, following the heavy pressure of work on all offices during the first two weeks in January, there has been no undue delay in the processing of claims either at Campbellton or at Edmundston.

Mr. J. C. Van Horne (Restigouche-Madawaska): Mr. Speaker, I should like to ask the Minister of Labour a supplementary question. I thank him for his answer, but I should like to know what action is being taken with regard to the 1,172 cases from Campbellton and Edmundston that have been tied up in Moncton. I might mention the fact that I made a survey—

Some hon. Members: Order.

Mr. Gregg: Mr. Speaker, what I have said with regard to delay in taking care of claims applies to those two offices mentioned originally by my hon. friend.

Mr. Van Horne: That is the precise question, sir. Apparently—

Some hon. Members: Question.

Mr. Van Horne: I am asking the question as to what action has been taken with regard to the 1,172 cases belonging to the Campbellton and Edmundston offices which have been tied up for up to seven weeks in the Moncton office of your unemployment insurance commission.

Mr. Gregg: What I have said applies to those workers in those two counties that are served by the offices mentioned, wherever their claims may be. Since my hon. friend has shown some disbelief in my reply, Mr. Speaker, I should very much like to have your permission to make a little longer reply than that which I made a few minutes ago.

Some hon. Members: Agreed.

Mr. Gregg: When I received that complaint a week ago Thursday I immediately investigated the matter, as I have told the hon. member. On that Saturday I was in New Brunswick myself. I was not at Campbellton or Edmundston, but I did take steps to satisfy myself that there was no undue delay.

I returned to my office and on Monday morning I received this wire, dated Campbellton, February 18. It is addressed to me:

> Unless immediate action is taken to remove the bottleneck and mixup in Campbellton unemployment office I seriously fear that a riot will occur very soon. Seasonal workers are up in arms and many are experiencing delays of up to six weeks while their families live in utter poverty. Immediate action is required by you.
>
> J. C. Van Horne

I am sure this is a matter which, since it affects two municipalities in New Brunswick and workers who are fellow New Brunswickers, is one that particularly affects the hon. member and myself. I should like to have the opportunity of explaining to him through you, and to the house, that no steps were left untaken to see that there was no hardship being experienced by the workers in those two communities.

The commission told me that since the usual New Year's rush several weeks ago, both offices had been able to bring their work well up to date. About the day the hon. member made his complaint there was only a total of nine claims uncompleted which were over three weeks old, and these were being dealt with; some of them were under adjudication by a board of referees.

I was informed also that there was no evidence of confusion at either office.

These things I was prepared to convey to the house last Monday when I received the wire which I have read to the house. When I received that wire I again checked through the unemployment insurance commission. After another inquiry they told me there were no serious delays in these offices. I told them I had received contrary information from a source which I was bound to consider completely responsible.

Some hon. Members: Oh, oh.

Mr. Gregg: While I did not doubt their word, I proposed to telephone an independent source of information on the spot. It appeared to me that in a town of less than 10,000 people, if such a crisis existed as to warrant the terms "bottleneck", "mixup", "riot", "up in arms", "utter poverty", then surely the mayor of the town of Campbellton would know all about it. I called the mayor of the town of Campbellton by long distance. I asked him if he would tell me of the unfortunate things that were happening in the town, due to delays in dealing with claims at the unemployment insurance commission. He replied that nothing of that kind had come to his attention. I then asked him if he had had or had heard of any complaints of delays or difficulties at the unemployment insurance office. He said he had heard of none. I asked him if I could quote him in regard to this question and he said I could.

Mr. Van Horne: May I ask a supplementary question? My information comes—

Some hon. Members: Question, question.

Mr. Van Horne: My question is that I would like to know what action has been taken in regard to the 434 cases at the Campbellton office as of last Friday, and there were more the week before that. I should like also to know what action has been taken in regard to the 740 cases from the Edmundston office which are tied up in the Moncton office.

Mr. Sinclair: Tell us about the riot.

Mr. Gregg: Because of the variation in figures I will take this question as notice.

POTATOES

NEW BRUNSWICK—REQUEST FOR STATEMENT ON TOLERANCE IN POTATO GRADING

On the orders of the day:

Mr. H. J. Michaud (Kent, N. B.): May I direct a question to the Minister of Agriculture? Is the minister now prepared to make a further statement with regard to the tolerance in potato grading as requested by the New Brunswick potato industry? If the minister has no announcement to make today, when would he expect to be in a position to do so?

Right Hon. J. G. Gardiner (Minister of Agriculture): Mr. Speaker, the hon. member was kind enough to forward me a copy of his question and I presume what he refers to is the answer to the question asked by the member for Victoria-Carleton (Mr. Montgomery). The question was asked on February 23, that was last Thursday, and had to do with the visit of the potato producers committee from the province of New Brunswick.

The position at that time was that the potato producers committee from New Brunswick interviewed the agricultural prices support board on February 16. They asked for an increase in the spot grade price from $1 to $1.20. It was indicated to them by the agricultural prices support board that could not be done.

They asked for a tolerance in connection with the spot grading, a guaranteed tolerance of 20 per cent. There is a tolerance in the proposed agreement which is estimated on each load of potatoes delivered at the starch plant to be spot graded. They asked to have that guaranteed at 20 per cent. The answer they received was that the request would be given consideration. A representative of the agricultural prices support board is going to New Brunswick tomorrow to discuss the question with the government and the potato committee. If and when they reach agreement the decision will be announced forthwith.

INDUSTRIAL RELATIONS

PROVISION FOR CONTINUATION OF CERTIFICATION OF UNIONS

On the orders of the day:

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, may I direct a question to the Minister of Labour? Is the minister yet in a position to answer my question of February 10 as to whether any necessary steps will be taken to provide for the continuation of all certifications under the Industrial Relations and Disputes Investigation Act despite any changes in union names that may result from the coming merger of the Trades and Labour Congress of Canada and the Canadian Congress of Labour into what will be known as the Canadian Labour Congress?

Hon. Milton F. Gregg (Minister of Labour): The matter is still under discussion with the unions concerned, and I hope to have a reply soon for my hon. friend.

IMMIGRATION

TIM BUCK—INQUIRY AS TO SPECIAL SECURITY MEASURES

On the orders of the day:

Mr. J. Wilfrid Dufresne (Quebec West): Mr. Speaker, I should like to direct a question to the Minister of Citizenship and Immigration. Is it the minister's intention to recommend special security measures to be taken upon the return of Tim Buck from Moscow?

Hon. J. W. Pickersgill (Minister of Citizenship and Immigration): Mr. Speaker, I have given no consideration whatever to the question.

Mr. Dufresne: May I direct exactly the same question to the Minister of Justice?

Hon. Stuart S. Garson (Minister of Justice): I have nothing to add to the answer given by my colleague.

FISHERIES

ESTABLISHMENT OF FLOOR PRICE ON DOGFISH LIVERS

On the orders of the day:

Mr. T. S. Barnett (Comox-Alberni): I should like to ask the Minister of Fisheries if he is in a position to make a statement to the house as to what consideration the fisheries prices support board is giving to the establishment of a floor price on dogfish livers?

Hon. James Sinclair (Minister of Fisheries): The fisheries prices support board asked that a study be made, and a study has been made of this question. At the meeting next month the board will study the report.

GRAIN

PROVISION FOR GUARANTEE OF BANK LOANS TO PRODUCERS IN PRAIRIE PROVINCES, ETC.

Right Hon. C. D. Howe (Minister of Trade and Commerce) moved the third reading of Bill No. 82, to provide for short-term credit to grain producers in the prairie provinces to meet temporary financial difficulties arising from inability to deliver all their grain.

Mr. J. G. Diefenbaker (Prince Albert): Mr. Speaker, despite the fact that in recent days there have been those on the government side of the house who have contended that we of the opposition have been taking too much time in the discussion of this bill, the events of the last few days have entirely

supported the stand we have taken, in particular the change that was made on Thursday afternoon in connection with clause 9 of the bill. This has proved that out of debate and out of consideration by parliament, changes do take place.

When some three weeks ago I advanced the argument that clause 9, subclause 3, would have the effect of bringing about imprisonment for debt in the cases of those who had been convicted of deception in connection with the loans they had secured by reason of false statements, that suggestion was ridiculed by members of the government. But on Thursday last the government without any hesitation removed that particular portion of the section. Several ministers of the crown who a few days earlier had ridiculed the argument that imprisonment for debt was thereby being brought into effect joined the general clamour in favour of the removal of that subclause. Each and every one stated that he realized the effect of the clause, though only a matter of a few days earlier their attitude was one of contemptuous ridicule of those members of the opposition who advanced the argument as to the danger inherent in the clause in question.

We of the official opposition have made our position clear. We are opposed to this legislation. The right hon. Minister of Agriculture (Mr. Gardiner) has stated that in taking that stand we do not represent a majority opinion of the farmers of the western prairies. In support of his statement the minister said that he had visited western Canada and that almost on every hand the attitude of the farmers was that this was a good legislation.

I did not find such an attitude among the farmers in my constituency or in those portions of Saskatchewan which I visited. In every case, and there was no exception, I found the sternest opposition being expressed to this legislation in that in effect it means that the farmer is substituting one debt for other debts, and is paying interest on his earnings in the preceding year, something that cannot be justified in any way.

The government has tried piecemeal means to meet the demands of the western farmers. First it brought into effect legislation by an order in council allowing farmers to exchange good wheat for poor wheat being stored in the elevators. That legislation was proclaimed as the solution of the problem of storage facilities being used to store wheat that was more or less unsaleable. That stopgap proved unsuccessful, as only a few bushels of wheat were exchanged as a consequence of the introduction of the measure to provide for such exchange.

Then there was the advance of up to 10 cents a bushel on grades of wheat Nos. 1 to 4. That does not meet the situation in western Canada, in particular in northern Saskatchewan. Generally speaking, the farmers in northern Saskatchewan produce grades Nos. 5 and 6, and that measure does not help them in any way.

My hon. friends say that financial and credit conditions on the prairies are not serious. I know not where they get their information. I do not in any way preach the doctrine of blue ruin and I disavow this nonsense about secession which was expressed the other day. I have never heard any suggestion of secession except years ago from a small minority, vocal but unimportant, who advocated such a course. I know of no reputable person in western Canada today who in any way resorts to such a pitiable argument that because of difficulties of the moment, that portion of Canada should secede.

But they are aroused. There is no question that the businessmen and the farmers are aroused. Go anywhere in the western provinces today, and in particular I mention Saskatchewan of which I can speak, and you will find that the farmers are asking for some financial assistance to carry them over at this time so they will be in position to meet the necessary encumbrances that face them.

What is the solution? Bank loans. My hon. friends supporting the government say that this policy is acceptable. I cannot understand how it is, then, that only 4 per cent of the western farmers have in any way taken advantage of this legislation. In the first place it does not meet the situation. It is ineffectual. In addition to that it is so tied up with bankers' red tape that if it could be made effectual it has actually been prevented from being such.

We have made our position clear and I am not going over the details again. Our position is simply this: We believe there can be no justification on the part of the government for withholding implementation of the demands of the vast majority of western farmers by providing cash advances on farm-stored wheat. The credit situation is serious. It will have its repercussions across Canada. The retail trade, the automobile trade, manufacturing in general all are being affected by the failure of this government to meet the situation that prevails—call it temporary if you will—under which the farmer, having earned his return, is entitled to consideration. I cannot repeat too often that the western farmer is not asking for a hand-out. All he is asking for is that which the government promised him, the provision of markets, when the wheat board act was brought into effect, as the wheat board in fact became the only institution permitted to purchase the farmers' wheat.

Having said that, I realize there is little we can do except to protest. Protests, whilst ineffectual in the House of Commons, are often effectual outside the House of Commons. We have made our stand clear. We were answered by all kinds of arguments. The greatest example of eyewash of all was the argument that, if cash advances were provided, the wheat board would resign—

Mr. Speaker: I am sorry to interrupt the hon. member, but on two or three occasions he has referred to cash advances. Perhaps he will agree with me that at this moment the same latitude which is afforded on second reading of a bill is not afforded on third reading. Furthermore, debate must be restricted to what is in the bill, and not take in any other policy that might have been proposed. Furthermore, the subject of cash advances is certainly one which must be out of the question in debating third reading of the bill, because there was an amendment on this very question which was defeated by the house. On second reading I understood it was very difficult to eliminate the possible references to cash advances, but I should hope that on third reading we would not have to have second reading speeches.

Mr. Diefenbaker: Possibly I should have said earlier that I intend to move an amendment to the motion, and I shall tell you now what the amendment is. It is designed to give the government a longer opportunity to consider whether or not cash advances on farm-stored wheat are not indeed the most appropriate means whereby the present financial situation on the prairies can be met. The motion I intend to move is as follows. I move, seconded by the hon. member for Eglinton (Mr. Fleming):

> That the word "now" be left out, and that the words "this day six months" be added to the end of the question.

I so move, and the arguments I advanced were all preparatory and anticipatory of the amendment I intended to move, in order to indicate the reasons for so moving.

Mr. Speaker: The hon. member is moving the six months' hoist. That certainly does not give him the opportunity of discussing a matter which has already been decided upon by the house. The hon. member for Prince Albert moves, seconded by the hon. member for Eglinton:

> That the word "now" be left out, and that the words "this day six months" be added to the end of the question.

Some hon. Members: Question.

Mr. H. A. Bryson (Humboldt-Melfort): Mr. Speaker, when this bill was first introduced into the house, we in this group objected at every opportunity. In doing so we stated we did not believe that the principle involved in the bill was going to fulfil the requirements of the situation. We do not believe that the farmers can borrow themselves into prosperity. We do not believe that the farmers can borrow themselves out of debt.

Certainly the clauses and the conditions that were discussed in connection with this bill the other day would lead us to believe that our decision to oppose this legislation was completely justified. By amending certain clauses the government gave evidence that it saw in many instances that the clauses were unrealistic. Of course we maintain and always have maintained that both the bill and the clauses were unrealistic, because of the government's misunderstanding of the true situation farmers in western Canada are facing.

It seems that in drafting the clauses and the conditions the government did everything possible to discourage farmers from taking advantage, if there was any advantage, of this legislation, rather than encouraging them to do so. Certainly the risk that was involved in this legislation with regard to interest did not seem to be warranted. Certainly, on the admission of the Minister of Trade and Commerce, from the 1951 experience it would seem that even at that time there was very little risk involved.

When we consider the difference between the circumstances that exist today and those that existed in 1951, surely the risk today has been almost completely eliminated. In 1951, as we know, the grain was out in the field, and there was a considerable risk involved in loaning money under those conditions. Now the conditions are different. As far as the quality and condition of the grain are concerned, the farmers have harvested possibly the best crop they have had for several years. So we believe that the risk involved certainly does not warrant the 5 per cent interest charge being levied in this case. By increasing the guarantees to the banks, any risk the banks might take are completely ruled out. By the same token the government leaves no question regarding risk, in so far as any of the other aspects are concerned. As I mentioned a moment ago, the grain is in good condition, and I see no reason why there should be an interest rate of 5 per cent.

In regard to the penalties under clause 9, the government again realized how unrealistic this was, and was prepared to make certain amendments to that clause. When we read clause 9 as it was presented to this house, we cannot help thinking the government feels that the farmer must be quite a questionable character as far as living up to obligations of repayment is concerned, because clause 9 left no risk whatsoever with regard to repayment by the farmer.

Every one of the clauses seemed to be purposely provided to limit the uses of this bill, and went a long way to discourage farmers from taking advantage of it. Listening to the Minister of Agriculture, who just returned from a trip to the west, one gets the impression that he is convinced in his own mind that farmers are quite happy and quite satisfied with this legislation. He mentioned in particular the information he had that the farmers in my riding were quite satisfied with it, and he gave as evidence of that the fact that he talked to a certain individual in Winnipeg.

My guess is that he was much more concerned about the coming provincial election in Saskatchewan, and I presume he went out there to oil the old Gardiner machine. Certainly he still has lots of oil, but the parts of the machine are not as new as they used to be. The minister prophesied that those who had spoken against the legislation in the house will go back to Saskatchewan and sing a different tune, but he should disabuse his mind completely of that idea because we intend to go back and talk exactly the same in the west as we have talked in the east. There will be no difference, and I am sure nobody in the house knows better than the minister that that is exactly what we are going to do.

As I mentioned in the first instance, we have consistently opposed the legislation. We do not believe it is just in principle, and we can see now that so far as carrying out the provisions of the legislation is concerned, the government has done everything possible to make sure that it is not going to give the assistance that is necessary. On third reading of the bill we in this group will continue to oppose the legislation, and once again I take the opportunity to say on behalf of the group I represent that our opposition is as adamant as ever.

Mr. E. G. Hansell (Macleod): Mr. Speaker, I think I should perhaps say a word or two before the question is put. I am not going to enter upon a lengthy debate. I simply wish to state our position on third reading. I have not spoken on the bill before with the exception of the one clause having to do with the interest rate, and at that time I moved an amendment. I have scanned *Hansard* over the weeks with a view to finding something new to say on the subject, and I cannot find anything new. Everything

that can be said has been said. Somebody to my right whispers that perhaps I am a little previous in making that observation. Perhaps my friends have more brains than I have. I will give them credit for that, but I cannot see that there is anything new to say.

In scanning through *Hansard* I was rather impressed with one thing, and I offer this criticism in a gentlemanly fashion. It occurs to me that my C.C.F. friends to the right, for whom I have the greatest regard as friends even though I do not have much regard for their political philosophy, seem to assume that perhaps they alone are the champions of the wheat farmers, that nobody else is interested in the wheat farmers and that therefore they are putting up the one and only great fight. I do not think that is right. I will even give the government credit for being humanitarian enough to be interested in the western farmers. I think they are humanitarian enough and smart enough politicians to be interested in the western farmer.

It is not a matter of being interested in the economic welfare of anyone. It is a matter of arriving at the best possible decision in order to meet an emergency. That is the issue and the government have evidently decided that this bill best meets that emergency. We in this corner of the house do not believe that it best meets the emergency. We do not think the farmers believe that it best suits the emergency. The reason is that there is only one agency through which the farmer can sell his wheat for export. We are entirely in favour of that selling agency, the Canadian wheat board, because we believe the wheat board can go out and find markets just as easily as any other selling agency.

Nevertheless the wheat board is the only selling agency. It is an arm of the government; therefore if markets are not found the government must take the responsibility. They have assumed that responsibility only to a degree. They have said that the best they can do is this bill. We do not believe it is the best they can do.

I cannot go into the subject of cash advances, Mr. Speaker, because you have already ruled that out of order, and I will not do so. If I did I would only be repeating what has already been said a dozen times in the previous debate. Our position is that we are going to vote for the amendment. We are against the bill because we do not believe it represents the best that can be done under the circumstances. If we were in the position of being the responsible government we believe we could bring down a much better bill to meet the emergency. I do not think I need to say any more with respect to the matter.

Mr. George H. Hees (Broadview): Mr. Speaker, I rise to say once again very briefly that this whole mess into which the government has got itself and the country with regard to wheat is due to one thing and one thing only; that is, the government's complete inability to sell our wheat.

Mr. Speaker: Order. At page 1436 of *Hansard* I find the speech the hon. member made on second reading, in which he said:

> . . . I should like to deal briefly with the basic reason why this government finds itself in such an unholy mess today with regard to wheat sales. The simple reason is that the government's selling efforts have been inadequate and utterly pathetic.

If the hon. member intends to repeat the same speech may I say now, although I do not want to rule in anticipation, that if he intends to deal with sales he will be completely out of order, because debate on the third reading of a bill is limited to what is contained in the bill. I would refer the hon. member to May, fifteenth edition, page 554, where I find the following:

> The procedure on the third reading of a bill is similar to that described in relation to the second reading, but the debate is more restricted at the later stage, being limited to the matters contained in the bill.

At page 504 there are these words:

> The purpose of the third reading is to review a bill in its final form after the shaping it has received in the earlier stages. For this reason amendment, other than verbal, is no longer permissible on third reading. Hence also debate is confined strictly to the contents of a bill, and cannot wander afield as on second reading.

May I say in passing, having read the hon. member's speech on second reading, that I do not think it should have been allowed either.

Mr. Hees: Mr. Speaker, I am speaking to the amendment, which is that the bill be given the six months' hoist, to give the government more time to consider how it could better handle the whole wheat situation.

Mr. Speaker: The hon. member should bear in mind that the six months' hoist is merely an amendment which is traditionally moved in order to kill a bill, but the discussion must still be relevant to the bill and limited as it should be on third reading.

Mr. Hees: Mr. Speaker, I believe that the shipments of wheat which the government makes have a great deal to do with the wheat situation that we—

Mr. Speaker: There is no doubt about that, but it just so happens that Sir Erskine May,

who has been Clerk of the House of Commons in the United Kingdom for many years and is a recognized authority on procedure, tells us that on third reading debate must be confined to the contents of the bill. Is there anything in this bill pertaining to the sale of wheat?

If there is not, the hon. member may not debate that subject.

Is the house ready for the question?

Some hon. Members: Question.

The house divided on the amendment (Mr. Diefenbaker) which was negatived on the following division:

YEAS

McCulloch (Pictou)	

Mr. H. R. Argue (Assiniboia): I rise at this time to make a further protest with regard to the passage of this legislation. There may have been some doubt in the minds of some hon. members on the opposition side when this debate began some weeks ago as to whether there should be all-out opposition to this bill. But as the days have gone by we have become more and more convinced that the prairie producers, almost unanimously, are opposed to this kind of legislation. In the years I have been in parliament since 1945 I think it is correct to say that on no other issue has there been the same degree of unanimity, the same degree of bitter

opposition amongst prairie producers, as there has been to this very bill that is now before us.

I am amazed when I think of the record of the government in this regard. When the government has it within its power to carry out the wishes of western producers at no great cost, actually for a charge that in relation to other charges made by the government is very small, it seems to me there is one main reason why the government has not agreed with the prairie producer. It is that the Minister of Trade and Commerce is not prepared to admit at any time that he has made a mistake.

I think any democratic government and any minister in a democratic government should be prepared to take a second look. Any one of us can make a mistake and judge a situation incorrectly. I believe the minister judged this situation incorrectly, and when he saw widespread determination amongst the producers he should have agreed to their request.

I do think the type of situation we had last fall is likely to be repeated many times in the future. As a matter of fact I would expect that in the majority of the years that lie ahead we will find widespread congestion, we will find the producers having great difficulty in delivering their grain. Therefore, Mr. Speaker, some kind of system will have to be implemented to make it possible for farmers to obtain money before they are able to deliver their grain.

One of the reasons they are going to be faced in the years ahead with the same kind of situation they are faced with today is the fact that modern methods of production—

Mr. Speaker: Order. I quite understand the wish of the hon. member to revive this debate. It may be that in the past I or my predecessors have shown more latitude with respect to third reading, but the principle of this bill has been passed and we are now dealing with third reading, and debate should be confined to the contents of the bill.

Mr. Argue: Well, Mr. Speaker, I shall endeavour to keep my remarks strictly referring to the contents of the bill. The main content of the bill to which I object at this time, as I have objected time and time again, is the 5 per cent interest clause, an onerous burden on the prairie producers. The prairie producers are objecting to the 5 per cent not only because they dislike paying interest, but because they are opposed to the principle of being forced to pay interest on the fruits of their year's labour.

Mr. Richardson: Mr. Speaker, may I ask the hon. gentleman a question?

[Mr. Argue.]

Mr. Argue: Surely.

Mr. Richardson: This is February 28. I should like to ask the hon. member if he agrees with what he said on January 26, as reported at page 563 of *Hansard*:

> In certain fields credit has been provided at reasonable rates by government legislation. We have a National Housing Act which enables a great many people who own their own homes, paying an interest charge of 5¼ per cent. That is good legislation. We have the Farm Improvement Loans Act, which is another example, under which farmers can obtain credit at a rate of 5 per cent. That, too, is good legislation.

Does the hon. member not think this, too, is good legislation?

Mr. Argue: Mr. Speaker, I am surprised at a question like that, because this legislation is not comparable in any respect to the legislation that has been referred to.

Some hon. Members: Oh, oh.

Mr. Argue: I should like to ask the hon. member who asked the question whether he would support legislation in this house which forced him to pay 5 per cent on his monthly cheque that he gets from the accountant's office; that is, the indemnity he receives? That is precisely what the government is suggesting.

An hon. Member: It is not the same thing at all.

Mr. Richardson: Mr. Speaker, I shall be glad to answer that question. It is an entirely different principle altogether.

Mr. Argue: In other words, since it is an entirely different principle, I take it that the hon. member would join with the opposition in such an instance in opposing legislation requiring members of parliament to pay interest on their own wages or salaries. Therefore I suggest to him—

Some hon. Members: Sit down.

Mr. Richardson: Excuse me, Mr. Speaker, but the hon. member asked me a question. The loan is partly on wages, if you will, but it is also very largely upon inventory.

Mr. Argue: That shows, Mr. Speaker, what little knowledge the hon. member has of the situation in the prairie provinces. I would ask some of the hon. members from Saskatchewan and Manitoba in the Liberal party to explain to him that $1,500 does not even cover the wages a prairie producer should be entitled to for one year's work. I do not know how the hon. member can imply that a prairie producer should be satisfied with $1,500 to cover wages and a substantial part of his inventory. This shows just how little grasp of the situation has been obtained by

hon. members on the government side of the house. The Minister of Trade and Commerce and the Minister of Agriculture understand the grain problem, but they have made a very poor job of explaining the situation to their colleagues.

Mr. Studer: Mr. Speaker, may I ask the hon. gentleman a question? What kind of job has the opposition been doing here for the last six weeks if they have not been able to convince anyone? They had better go home and stay there.

Mr. Argue: I am not going to endeavour to speak for the whole of the opposition, but I think I can say for the hon. members of the C.C.F. group that we have been doing a wonderful job, and that we have been convincing people since this debate started on January 27. We have convinced the Social Credit party, and they have changed their position. We have convinced the Progressive Conservative party and they, too, have changed their position.

An hon. Member: Sit down.

Mr. Quelch: Mr. Speaker, I might say that the statement about our having changed our minds is not a statement of fact. We explained fully at the resolution stage why we voted in favour of the resolution, in order to enable the government to bring down the bill. Once it was brought down we did not like certain things in the bill and we therefore voted against it. There has been no change.

Mr. Argue: I take it from the explanation offered by the hon. member for Acadia that when he votes it has nothing to do with the state of his mind or what he thinks, and that his mind has not been changed but his vote has been changed. I should like to see some changes in the votes of hon. members opposite. I should like to see the hon. member for Swift Current-Maple Creek (Mr. Studer) endeavour to change the opinions of some of the hon. members who sit around him. As a matter of fact, Mr. Speaker—

Mr. Studer: Mr. Speaker, may I ask the hon. member a question?

Mr. Speaker: May I ask the hon. member for Swift Current-Maple Creek and all hon. members who wish to ask questions, if the hon. member for Assiniboia yields, to relate all this discussion strictly to what is contained in the bill.

Mr. Argue: I shall endeavour to do that, Mr. Speaker, but because of the many interruptions and questions from hon. members on the government side of the house who apparently know very little about this legislation and are endeavouring to get some of the facts at this very late date, I was endeavouring to make some explanation.

I would hope, Mr. Speaker, that even at this stage some hon. member on the government side of the house would see the justice in our position and would join with the three opposition groups in opposing this legislation. We have consistently opposed it; there is no doubt about that. We have taken a good deal of the time of this house in opposing this legislation. We are now on the fourteenth day, all or part of each of those days has been spent in opposing and discussing this legislation.

During that time hon. members of this group have made 37 speeches, hon. members on the government side have made 25 speeches, hon. members of the Progressive Conservative party have made 20 speeches and hon. members of the Social Credit group have made 20 speeches. We have not been endeavouring to stage a filibuster. We have not been endeavouring to block this legislation or to prevent the government—

Mr. Speaker: I can find nothing in the bill which refers to filibusters or to the number of speeches that have been made.

Mr. Argue: I wish you had given the Minister of Trade and Commerce that statement after the debate had been going on for one day. He would not then have needed to use that word. Then at a later date state he was very fearful lest this discussion might degenerate into a debate. We are thoroughly opposed to this legislation, and our opposition is based mainly on the interest clause, clause 3 of the bill. We believe that the banks are not the institutions to be making advances or loans. We think the basis on which loans are made, namely up to a maximum of $1,500 without the farmers having an over-all right to obtain loans, is inadequate. We would like to see different legislation. We would like to see the producer given the fundamental right of obtaining an advance on grain in suitable storage.

As I say, we are opposed to the interest clause of this bill. Because we are thoroughly opposed to it I have a further amendment that I intend to move in the hope that the government will reconsider clause 3, or preferably that the government will take out all provision for interest to be paid by the farmers and that the costs of these loans will be paid for by some other means. Failing this, at least the government should take the position set forth the other day which asked for a reduction in the interest charges. Therefore, I

move, seconded by the hon. member for The Battlefords (Mr. Campbell):

That Bill No. 82 be not now read a third time but that it be referred back to the committee of the whole house for the purpose of reconsidering clause 3 thereof.

Hon. George A. Drew (Leader of the Opposition): Mr. Speaker, I could have risen on a question of privilege a few minutes ago, but as I proposed to make certain remarks on the motion for third reading I deferred my comments until now.

With much that has been said by the hon. member for Assiniboia during the course of this debate I have been in agreement, but I thought it was an unfortunate attempt to make a silly and smart remark when he said that the arguments of the C.C.F. had convinced the Progressive Conservatives. I may have hoped that some of their arguments, along with the arguments made by other opposition members, would have reminded private members opposite that they have some obligation in regard to this, and that if the government is able to ride roughshod over the house it is only because of their willing support.

Mr. Speaker: I do not think the hon. member should say of a group of members that if the government is riding roughshod over the house it is with their willing support. I do not think any hon. member—

Mr. Knowles: Change it to unwilling.

Mr. Speaker: There are many expressions that can be changed and they would still mean the same. I do not want to make a case of this, but I do suggest that it is far from relevancy to a motion for third reading of this bill.

Mr. Drew: I am not going to debate the point, but I must confess that a certain delicacy seems to be creeping in here if the high-handed attitude of the government cannot be described as riding roughshod over the house. As to whether hon. members opposite are willing or are not, that is something that must be left entirely to themselves. If they are willing, that of course is their choice; if they are unwilling, then that is another thing. But they themselves can best indicate their attitude toward this measure. However, I do want to say that a measure of responsibility, a very large measure of responsibility, rests upon private members opposite in regard to the passing of a bill, particularly in regard to the passing of a bill against which such strong arguments have been made.

I am going to point out once again that it has needed no convincing by the C.C.F. so far as the Conservative party is concerned. The Conservative party had taken a perfectly clear position long before this came into the house. I had stated our position clearly as being in favour of cash advances without any interest, in fact before that was stated definitely with the same clarity by the C.C.F. party.

Mr. Ellis: You voted for the resolution.

Mr. Drew: I hear that interjection again, that we voted for the resolution. Of course we voted for the resolution. Resolutions are often voted for in order to have the legislation brought forward. This particular legislation was brought forward and we voted against its second reading, and we are going to vote against the third reading for the same reasons.

But I want to make it quite clear that our position in regard to cash advances without interest has been consistent right through, and since long before this arose. In fact it is more than three years since we urged the introduction of legislation which would provide such advances with the authority of parliament, not under some letter written by the Minister of Finance (Mr. Harris) to authorize the banks to do something which had not yet been authorized by parliament.

I do want to mention one particular matter which I think should be of concern to everyone in this house. One of the points we brought forward early in this discussion and in regard to which there has been no statement whatever by the government is the need of some clear statement to the prairie farmers as to what their position is going to be only six months from now, when the 1956 crop is going to be harvested.

That suggestion very much amuses the Minister of Finance. Of course his chuckles are not recorded on *Hansard,* but it will be recognized by hon. members that the Minister of Finance regards the plight of the prairie farmer as something funny when this suggestion is made.

I want to point out that as yet no explanation has been given as to what the government proposes to do. The Minister of Finance need not pretend that all government action is in suspense until his august voice has been raised on the budget. After all, this government did not hesitate to commit parliament while parliament was not sitting. This government did not hesitate to have the Minister of Finance commit this parliament by a letter. Then we were told by the Minister of Trade and Commerce that since that had been done, the government was going to go ahead with it no matter what arguments were made.

I hope no suggestion will be put forward that section 13, subsection 1 of this act is an answer to that question. That subsection reads:

> The governor in council may, by order, extend the application of this act to authorize and govern guaranteed loans that may be made by banks on or after the 1st day of October, 1956 and before the 1st day of June, 1957.

We have had no indication from the government as to whether it would be their intention under this act to extend those provisions if the same conditions prevail this coming autumn as prevail at this time. Our position is that inadequate though that may be, we should know whether the government feels that this will meet the situation if on top of the large crops we have had we have another bumper crop this year, as we may well have with the weather conditions we have been experiencing in western Canada during the past few months.

The prairie farmer is going to be in a most uncertain and precarious position in planning for his coming crop year unless he has some indication from this government at this time of what it proposes to do. There is no more appropriate time for that statement to be made than on the third reading of this bill, before it becomes law and is made a part of the statutes of Canada. Therefore at this stage I once again point out that we have had no indication of the intentions of the government.

I point out that it is of the utmost importance to the prairie farmers that an indication be given as to what are the intentions of the government. It is no answer to say that under subsection 1 of section 13 the government would have the power. Let the government tell us whether they will exercise that power if conditions are similar to what they are now, or if they have been aggravated by another very large crop.

The opportunity presents itself for the government to make this statement now. May I repeat that whether the government makes that statement or not, the government is still failing the prairie farmers. One of the best possible pieces of evidence that it is failing the prairie farmers is the fact that it is necessary for it to bring in other legislation, with which we shall deal after this has been disposed of. The fact is that the other legislation, which will receive the support of the house, has become necessary simply because of the failure of this government to move the wheat crop, a failure with which they must deal in that way.

So far as this legislation is concerned, before it passes third reading and goes forward to become law, let us hear from the government as to what their intentions are under that clause which they have drafted, clause 13 (1), and whether it is their intention to extend the application of this bill if conditions remain similar to what they now are.

Mr. Victor Quelch (Acadia): I am going to say only a very few words, but I should like to reiterate what I have already said as to the reasons for voting on the bill and on the resolution as we have done. I should like to point out that we have voted against this bill ever since it received first reading. True, at the resolution stage we voted in favour of the resolution to allow the government to bring a bill down, and we were hoping at that time that the government would allow that bill to be sent to the agriculture committee so the farm organizations could express their views on it to members of parliament. In that way we would have obtained the real feeling of the farmers, and there would have been less talk by the Liberals as to what the farmers really thought about it. We should have known exactly what they thought about it. From what we have already heard from them, we are satisfied they would have expressed opposition to the bill.

Since we have received the bill we have opposed it because there are a number of features in it that we dislike. It is true that when we were in committee the government did remove two of the clauses that we considered were of a somewhat vicious nature. True, the bill now cannot be described in any way as vicious. I would just say that it is of little value. Rather than have our statutes cluttered up with a bunch of valueless acts, it would be just as well for the government to withdraw this legislation, which would pave the way for the government to bring down legislation that received the approval of the various farm organizations.

When we were in committee we moved that the interest rate be reduced from 5 per cent to 3 per cent. We pointed out that all that would be necessary would be for the government to borrow whatever money was necessary from the Bank of Canada and place that money to the credit of the wheat board, so that we could make these payments at a lower rate than the 5 per cent set by the bill. The amendment now before us proposes that the rate of 5 per cent be reduced, and therefore we intend to support the amendment.

Mr. George H. Hees (Broadview): Mr. Speaker, in compliance with your wishes I

intend in my remarks to keep strictly to the bill. This bill is entitled:

An act to provide for short-term credit to grain producers in the prairie provinces to meet temporary financial difficulties arising from inability to deliver all their grain.

This bill has been brought before the house because of the reason expressed in the title, the inability of the farmers to deliver all their grain. If they had been able to deliver all their grain there would be no bill before us. Why have they been unable to deliver all their grain? Simply because the elevators have been full and there has been no room for their grain. Why have the elevators been full? Simply because this government has not been able to move the grain out of the elevators. Therefore I submit respectfully that the ability of this government to ship that grain, to move it out of the elevators, has a very direct bearing upon this bill before us.

Before making suggestions as to how the government could do a better job of moving that grain out of the elevators so the farmers could move their grain from their farms into the elevators, let us examine this government's shipping activities as compared with those of others with whom they are competing on the same basis. We know from the figures supplied by the minister's own department that during the past crop year our four main competitors have shipped on the average 40 per cent more grain than they did in the previous crop year. During the last crop year Canada shipped 1·3 per cent less grain than during the previous crop year.

Now let us examine our efforts in the first quarter of this year as compared with our efforts in the first quarter a year ago, and see how we are doing this year. This year, in the first quarter of the crop year, we shipped 20 per cent less grain than we did in the same quarter a year ago. Then in the most recent—

Mr. Speaker: Order. I cannot agree with the hon. member. I was looking again for the page of his speech on second reading that I quoted to him earlier. I recall that at that time he quoted the figures on exports by other countries, but I cannot allow him to discuss the sales of wheat now. In his reasoning a moment ago I followed him, as every hon. member did, and he could have gone on and on as to why they had not been able to sell the grain and, once he had found the reason for that, why they had not been able to do this. He could have gone on to cover the entire political and economic situation on an international basis.

A debate on a bill is one debate through all its phases. On second reading the hon. member has spoken on this very reason that he is now trying to put forward on third reading. Unfortunately the rules do not allow him to do that.

Mr. Hees: Mr. Speaker, what I was just going to say, and to say briefly, was something which I think has great significance and which has not to do with the international situation. It has to do with our efforts to move grain out of the elevators in the month of December as compared to what we were able to do in this country during the same month a year ago. The latest figures are available for December, showing that in December we shipped 30 per cent less wheat than in the same month a year ago. The significance of that is—

Mr. Speaker: Order. I shall have to bring this to a conclusion. The hon. member knows very well that I should love to see him put his remarks on *Hansard* concerning any subject on which he wishes to speak, but it just so happens that at this moment he cannot. Unless I am to establish a bad precedent, which I cannot allow myself to do, he will have to bring his remarks to a close, unless he wants to speak to the contents of this bill.

Mr. Hees: Mr. Speaker, naturally I shall bow to your ruling. If you feel my remarks are out of order and I should not speak any more on this bill, then of course I have no alternative but to resume my seat.

Mr. G. H. Castleden (Yorkton): The fate of most of the members who had the opportunity of speaking here this afternoon has been that they were ruled out of order, because they were not allowed to speak on any particular clause on this third reading or because what they wished to discuss has already been discussed on second reading or in committee.

I suggest that at the present time we are speaking on an amendment. The amendment is that this bill be referred back to the committee to discuss the interest clause, which is clause 3, and the suggestion that it be reconsidered by the government. Therefore, in discussing this, we are discussing the matter of interest, and the question of whether or not the producer should bear the burdens of that interest. I am not going to enter into the question of whether or not members of the other opposition parties supported our position on this measure throughout the whole debate. I should like to say that we welcome their support and are glad to be with them.

An hon. Member: You will be glad to be with us.

Mr. Castleden: Well, since the hon. member has interrupted I will read to him a passage from the speech—

Mr. Speaker: Is this quotation on the interest rate, which is the subject matter of the amendment?

Mr. Castleden: At the resolution stage the hon. member for Acadia made a statement as to what was their stand.

Mr. Speaker: I think that matter has been fully dealt with not only by the manner in which hon. members have voted at previous stages but also by the speeches that have just been made. The hon. member will certainly do well at this moment to speak to the amendment.

Mr. Castleden: Well, I should like to refer the members of the Social Credit party to page 618 of *Hansard*, where they can read the final statement of the hon. member for Acadia at that time.

Some hon. Members: Order.

Mr. Castleden: We are very pleased to have them supporting us and we support them at this time in opposing the legislation.

Mr. Speaker: Order.

Mr. Castleden: Surely the responsibility of placing the interest charge on the producers rests squarely on the government. We are discussing a clause which we think should be referred back to the committee so the interest charge may be deleted. The bill introduced is referred to as a bill to provide loans for producers in farm areas. I maintain it should not be called an act to provide prairie producers with interim financing, but rather an act to provide guarantees to bankers with respect to loans. Also I think the producers should not be compelled to carry the burden of interest because of a situation that has been brought about by the actions of the government.

The Minister of Trade and Commerce (Mr. Howe) stated, "It is the duty of the Minister of Trade and Commerce to sell wheat and it is the duty of the Minister of Transport to move the wheat." I understand the Minister of Transport has given his answer. We maintain it is because of the failure of these two ministers to carry out their duties that the present situation has been brought about. Therefore if the government is responsible for the situation it should bear the burden of interest. That is why we want this clause taken out of the bill. We say that the government should assume the cost of carrying the interest charges on all these loans.

Opposition to the measure largely stems from the fact that members of the opposition feel that an injustice is being done. We have tried to be as emphatic as possible. We have filled some 254 columns of *Hansard* with our opposition, the official opposition 150 columns, the Social Crediters 108 and the government 98.

Mr. Speaker: Order. I am getting to be of the temper, if I may be permitted to have one, to use the provisions of standing order 34, paragraph 2, to the full. If it becomes obvious to me that hon. members have nothing else to say with regard to the bill which is relevant to what is supposed to be a debate on third reading, then I do not think I should sit here merely to preside over debates where members are doing nothing but repeating what has been said over and over again. Standing order 34, paragraph 2, reads as follows:

> Mr. Speaker or the chairman, after having called the attention of the house, or of the committee, to the conduct of a member who persists in irrelevance, or repetition, may direct him to discontinue his speech, and if then the member still continues to speak, Mr. Speaker shall name him, or, if in committee, the chairman shall report him to the house.

I want to tell hon. members that they can debate as fully as they wish the third reading of this bill within the limits prescribed by the rules, but I will not stand for any abuses of the rules.

Mr. Castleden: I shall be very pleased to bow to your ruling, Mr. Speaker. I do submit, however, that these figures have not been used before.

Mr. Harris: That is not the point.

Mr. Castleden: In speaking in opposition to this measure again, may I say there are very many reasons for us to oppose it and almost any reason we give from now on must be based on the fact that the government has failed in its duty. We oppose the bill because it does absolutely nothing to remedy the cause of the situation existing in the west today. We are opposing third reading of the bill to show that we are continuing our opposition throughout. The bill before us is a bill to relieve what is called a temporary cash shortage situation, I note that under clause 9 it can be perpetuated by order in council of the government.

Mr. Speaker: Order. The amendment deals with clause 3.

Mr. Castleden: I can probably return to that after we have dealt with the amendment now before the house. I think the points I wish to make are clear. We think that the responsibility for carrying the burden of interest should not rest on the backs of the producers. Therefore we support the amendment which will send the bill to a committee

to reconsider it and, if possible, wipe out the clause having to do with interest.

The house divided on the amendment (Mr. Argue) which was negatived on the following division:

Mr. Speaker: I declare the amendment lost. Is the house ready for the question? The question is on the third reading of this bill. Those who are in favour will please say yea.

Some hon. Members: Yea.

Mr. Speaker: Those who are opposed will please say nay.

Some hon. Members: Nay.

Mr. Speaker: In my opinion the yeas have it.

And more than five members having risen:

Mr. Speaker: Call in the members. Do hon. members consider that for the purpose of this division their members have been called in?

Some hon. Members: Agreed.

Mr. Speaker: Would the whips so indicate? The whips having so indicated, the question is on third reading of this bill.

The house divided on the motion (Mr. Howe (Port Arthur)) which was agreed to on the following division:

Motion agreed to and bill read the third time and passed.

WHEAT

PROVISION FOR PAYMENT OF CARRYING COSTS OF TEMPORARY EXCESS RESERVES

Right Hon. C. D. Howe (Minister of Trade and Commerce) moved the third reading of Bill No. 83, respecting the payment of carrying costs of temporary wheat reserves owned by the Canadian wheat board.

Motion agreed to and bill read the third time and passed.

COMMITTEE ON ESTIMATES

MOTION TO APPOINT SELECT COMMITTEE

On the order:

Resuming the adjourned debate on the motion of the Prime Minister: That a select committee to be designated be appointed to consider such of the estimates as may be referred to it and to report from time to time its findings and recommendations to the house.

Hon. W. E. Harris (Minister of Finance): I think it would do to call it five o'clock, sir.

Mr. Speaker: Is it agreed that I do now call it five o'clock? Hon. members realize we must have unanimous consent for this purpose.

Some hon. Members: Agreed.

PRIVATE BILLS

MORRIS GILBERT

On the order:

Second reading of Bill No. 109 (Letter W-3 of the Senate), intituled: An act for the relief of Morris Gilbert.—Mr. Hunter.

Mr. Speaker: There are several divorce bills that are coming up for second reading. What are the wishes of hon. members at this time? Shall I call them all in one motion?

Mr. Stanley Knowles (Winnipeg North Centre): It is not my wish, speaking for myself only, to discuss any of these bills individually today. They will come back to us on another occasion. I would make the request, however, that with respect to the bills in connection with which we have not received the evidence, they might be allowed to stand. I recognize that this is only a request and that I cannot demand it, but on that basis I would be willing that the other 30 bills be considered in one motion if the house so wishes. However, with respect to the five bills for which we do not have the evidence, I suggest that they stand. They are Bills Nos. 124, 125, 139, 141 and 143.

Mr. Speaker: As I informed the house the other day, I do not recognize that the hon. member has the right to make that request but I said it was a matter of accommodating ourselves. I do not suppose hon. members have any objection.

Mr. Knowles: The alternative would be to call them one at a time and I could move the adjournment of the debate on each of those five bills.

Mr. Speaker: Yes, and the hon. member may speak on any bill and we may not pass any of the bills today. I understand that, but as I said, we want to accommodate ourselves and I think hon. members will agree to have Bills Nos. 124, 125, 139, 141 and 143 stand. Is it agreed?

Some hon. Members: Agreed.

Mr. Speaker: Shall all the other divorce bills standing on the order paper be read a second time now?

Some hon. Members: Agreed.

Mr. Knowles: On division.

[Mr. Howe (Port Arthur).]

SECOND READINGS—SENATE BILLS

Bill No. 109, for the relief of Morris Gilbert.—Mr. Hunter.

Bill No. 110, for the relief of Margaret McDonald Williamson Gebbie.—Mr. Hunter.

Bill No. 111, for the relief of Gwytha Olwyn Lillian Pring Evans.—Mr. Hunter.

Bill No. 112, for the relief of Georges Durand.—Mr. Hunter.

Bill No. 113, for the relief of Mary Rose Kenny Deline.—Mr. Hunter.

Bill No. 114, for the relief of Katherine Marle Saretski.—Mr. Hunter.

Bill No. 115, for the relief of Rose Juliana Evelyn Kedroskie Quincey.—Mr. Hunter.

Bill No. 116, for the relief of Jeannette Morin Parent.—Mr. Hunter.

Bill No. 117, for the relief of Mona Ruth Davis Goldberg.—Mr. Hunter.

Bill No. 118, for the relief of Ruth Goodman Silverstein.—Mr. Hunter.

Bill No. 119, for the relief of Simonne Auger Boule.—Mr. Hunter.

Bill No. 120, for the relief of Leslie Archibald Hood.—Mr. Hunter.

Bill No. 123, for the relief of George Hugh Wadge.—Mr. Hunter.

Bill No. 126, for the relief of Marion Mildred McKnight Newman.—Mr. Hunter.

Bill No. 127, for the relief of Marie Laura Francoise Lamothe Newcome.—Mr. Hunter.

Bill No. 128, for the relief of Frances Caplan Sirota.—Mr. Hunter.

Bill No. 129, for the relief of Joyce Smith Gwinnell.—Mr. Hunter.

Bill No. 130, for the relief of Joan Sheila Rosser Roland.—Mr. Hunter.

Bill No. 131, for the relief of Shprintza Gelber Shildkraut.—Mr. Hunter.

Bill No. 132, for the relief of Sabina Rosenzweig Rosenblum Faust.—Mr. Hunter.

Bill No. 133, for the relief of William Eugene Chabot.—Mr. Hunter.

Bill No. 134, for the relief of Joseph Charles Sylvio Demers.—Mr. Hunter.

Bill No. 135, for the relief of Florence Ethel Bigelow Hamilton.—Mr. Hunter.

Bill No. 136, for the relief of Amy Katharine Newman Cowans.—Mr. Hunter.

Bill No. 137, for the relief of Sara Martin Lesser.—Mr. Hunter.

Bill No. 138, for the relief of Annetta Smith Marchand.—Mr. Hunter.

Bill No. 140, for the relief of Dorothy Mary Humphreys Pepper.—Mr. Hunter.

Bill No. 142, for the relief of Hilda Sarah Twyman Gagnier.—Mr. Hunter.

Bill No. 144, for the relief of Donald Henry Emslie.—Mr. Hunter.

Bill No. 145, for the relief of John Wesley Hamilton.—Mr. Hunter.

Mr. Speaker: These bills are referred to the standing committee on miscellaneous private bills.

QUEBEC NORTH SHORE AND LABRADOR RAILWAY COMPANY

On the order:

Second reading of Bill No. 148 (Letter Z-2 of the Senate), intituled: An act respecting Quebec North Shore and Labrador Railway Company.—Mr. Brisson.

Mr. Speaker: In the absence of the sponsor this bill will stand.

CRIMINAL CODE

AMENDMENT RESPECTING POLLUTION OF INTERPROVINCIAL RIVERS

Mr. J. G. Diefenbaker (Prince Albert) moved the second reading of Bill No. 66, to amend the Criminal Code (nuisance).

He said: Mr. Speaker, in rising to move the introduction of this amendment, I will first read the amendment and then refer to the pertinent section. The amendment, 165(A), which I move, is that:

The Criminal Code, chapter 51 of the statutes of Canada, 1953-54, is amended by inserting therein the following section:

"165A. Every owner, lessee, or person operating any industrial plant, oil refinery, chemical works, sawmill or other plant or works, or any other person, who discharges or throws or allows to be discharged or thrown any noxious waste product, raw sewage, oil, sawdust, chemical or other matter or thing into a river, stream or other water any part of which is interprovincial or which flows into any interprovincial water, which has the effect of endangering the lives, safety, health or comfort of the public is guilty of

(a) an indictable offence and is liable to a fine of twenty-five thousand dollars for a first offence and of fifty thousand dollars for a second offence or

(b) an offence punishable on summary conviction.

The section of the Criminal Code to which I wish to add the section in question is section 165, which reads:

(1) Every one who commits a common nuisance and thereby

(a) endangers the lives, safety or health of the public, or

(b) causes physical injury to any person, is guilty of an indictable offence and is liable to imprisonment for two years.

(2) For the purposes of this section, every one commits a common nuisance who does an unlawful act or fails to discharge a legal duty and thereby

(a) endangers the lives, safety, health, property or comfort of the public, or

(b) obstructs the public in the exercise or enjoyment of any right that is common to all the subjects of Her Majesty in Canada.

In other words, the amendment which I am suggesting is to cover the general situation arising out of the pollution of interprovincial streams in Canada. In the case of navigable streams offences are created in so far as the Fisheries Act is concerned when anything in the nature of an effluent and the like is dumped into a stream and causes harm to fish; but in so far as interprovincial rivers are concerned, as the law stands today there is practical immunity for those who dump effluents into the river because of the wording of the section in question which permits wanton and wilful pollution of streams when there is no effect upon the health and comfort of the individual.

There are many examples of this, one outstanding example being the majestic Ottawa river which adjoins these parliament buildings. I believe that in the realm of God's richest bounty clean river water should have a high place and ought not to be allowed to be sacrificed to private greed or to wanton and wilful pollution. There is nothing today in the law to protect the public against wanton and wilful pollution by a small minority who for their own purposes contemptuously disregard the public interest in so far as interprovincial rivers are concerned.

This problem has been before the house on two previous occasions. At the time the amendments to the Criminal Code were before the house I placed before hon. members details of a situation which had arisen on the North Saskatchewan river whereby the residents of North Battleford and Prince Albert in Saskatchewan and The Pas in Manitoba were for a long period of time unable to utilize the waters of that great river because of acts of pollution taking place in the province of Alberta. Those acts of pollution took place east of Edmonton and because there was little or no interference with personal enjoyment of those waters in the province of Alberta we in Prince Albert found ourselves in the position where there was little or nothing we could do to protect our people—the same applied to North Battleford and The Pas—from the action of those who were pouring effluents into the stream in Alberta.

There was a time when there was little interest in this matter, but today more and more people are commencing to realize the awfulness of the possibility that these magnificent streams will be so polluted as to constitute nothing but floating sewers. *Forest and Outdoors* of June 1945, the official publication of the Canadian Forestry Association, summed up the situation in these words:

Dump a few tons of muck in the middle of Lafontaine park or the C.N. exhibition grounds and such screams of indignation will rise that the noise will sound like an H-blast.

Yet every day millions of tons (correct: millions of tons) of sewage and industrial waste are dumped into Canada's rivers, streams and lakes, and few people give it a thought.

The article then goes on to indicate the terrific nature of this problem which has intensified in extent and amount during the last 25 or 30 years to a degree that never could have been contemplated at the beginning of that time. There is reference to the Ottawa river as follows:

Two provinces get into the Ottawa river picture. The unsavory, bacterial and chemically poisonous flotsam of Ontario (thus runs the report by Dr. Lucien Piche available from the Quebec biological bureau, University of Montreal, in effect) flows into Quebec down the Ottawa river, and as it goes it mingles with similar outpourings and offscorings from Quebec itself. It is not what you might call a pastel picture.

There is no way of meeting this problem from the provincial point of view. I think it was the Minister of Justice (Mr. Garson) who suggested that there would be a right to proceed by way of injunction in the province of origin because of effects created in an adjoining province on an interprovincial river. An eminent counsel, a former president of the Canadian Bar Association, Mr. McCuaig, Q. C., of Edmonton, has said that he knows of no such right under the law as it is now constituted.

The situation in the United States became so serious that in 1948 a federal board was set up. In that country the criminal law rests with the state. The federal control board in combination with those who implement the criminal law in the several states has been able to meet this problem in part.

It is because this problem must be faced that I bring this amendment before the house. If it is not faced, in a very few years all over Canada interprovincial streams will be subject to the same pollution as the Ottawa river is today and as the North Saskatchewan river is rapidly becoming. When this matter was before the house beginning on March 18, 1955, the Minister of Justice claimed that it was a matter for the provinces. I face that challenge immediately and point out this fact: Not only is there no right for anyone in Manitoba to take proceedings even though he is adversely affected by the waters of the Saskatchewan flowing into his province because of what takes place in Saskatchewan; there is no means by which provinces can achieve that degree of united purpose which would meet this problem. In the month of July, the city of Ottawa asked the federal government to investigate the pollution situation on the Ottawa river. On July 14, 1955, I brought this matter up in a question recorded on page 6109 of *Hansard* as follows:

[Mr. Diefenbaker.]

I should like to direct a question to the Prime Minister. Has the government received an application from the corporation of the city of Ottawa to investigate the pollution situation in the Ottawa river? Is it the intention of the government to set up a commission to investigate the question of pollution of navigable waters? If so, would the Prime Minister give consideration as well to having any commission investigating the serious pollution situation in the Ottawa river also include interprovincial rivers in other parts of Canada?

The Prime Minister used these words:

I have received no application yet from the city of Ottawa although I have read newspaper reports, which are frequently ahead of the actual accomplishments that they seem to be reporting. The matter of water pollution is a matter of concern to all forward-looking Canadians. We are going to have a larger population in this country than we have at the present time. It is a serious matter because, of course, pure water is essential to the comfort of the population. Nothing specific has been done about it yet but we are all thinking of what will be the best way to assure even to future generations that the bountiful supply of water with which nature has endowed this country is going to be available in potable form for their use.

I commend those words. They represent a statesmanlike view of the situation and of the need for action. That was on July 14, 1955. I then asked the Prime Minister a further question:

Would the Prime Minister say whether or not some amendment to the Criminal Code in order to punish wrong-doing of the kind might be within the consideration of the government?

The Prime Minister said:

All means should be explored and considered seriously to achieve the desired objective. I would not like at this time to say that the federal government is going to take the initiative. It is normally, or has been in the past normally, a matter of local and private interest for each locality. We do not want to be looked upon as going beyond what is reasonably within our jurisdiction. I regard it as something that is of concern not only locally but nationally for the future of the country. I am sure it is something which will be discussed, or at least will be talked about, at the next federal-provincial meeting. I think it will be possible to create an atmosphere where no one will regard the other one's activities as overstepping what he should be concerned about.

In that statement the Prime Minister said that it has normally been a matter of local interest. I immediately challenged that suggestion with reference to an interprovincial river. It is of more than local interest. When a river crosses the boundary lines of one or two provinces it immediately becomes the concern of the federal government. The federal government concerns itself over the comfort and health of fish in that type of river. Is it too much to ask that the same regard be given to the demands of human beings? Certainly the situation is very serious.

In Prince Albert today we are back in a position in regard to which, if I were to read some of the descriptive words about the nature of the pollution of the water in that city of 20,000 population, I would certainly be regarded as using unparliamentary words. I am taking the north Saskatchewan as an example because I live there. The situation is so serious that on two occasions for over two months one could not take water out of the tap. The stench was such that it was impossible to utilize that water. The situation is bad again this year but not as serious as it was two years ago. That is because one of the corporations has made a great effort and gone to great expense in order to remove its contribution to the pollution of that stream. The Prince Albert *Daily Herald* described it in these words on January 18 of this year in an editorial:

> That we should be subjected to this annual scourge of polluted water is a crime, we are all in agreement. It is on the question of what can be done about it that opinion loses unanimity.

I am not going to read what has been done. There has been a great deal of co-operation on the part of the government of Alberta with the government of Saskatchewan and with the authorities in Saskatchewan, but the problem still remains. I repeat that it cannot be met through the courts under the law as it now stands. I mentioned Mr. McCuaig's opinion. I quote from the—

Mr. Garson: I wonder if my hon. friend would like to quote Mr. McCuaig's opinion in full, so that we shall know exactly what it comprehended?

Mr. Diefenbaker: I am quoting from the report on Mr. McCuaig's opinion by the mayor of Prince Albert:

> I met with Mr. McCuaig, who was our legal counsel in Edmonton, during the 1953 pollution outbreak. I discussed the possibility of obtaining an injunction against the city of Edmonton on the grounds of their polluting our water supply. He informed me of the legal difficulty of a city in one province obtaining an injunction against a city in another province, and stated that as yet he has found no legal method by which this can be accomplished.

Mr. Garson: May I ask my hon. friend if we are clear that Mr. McCuaig's opinion did not deal with an invocation of the Criminal Code section dealing with common nuisance? I had rather understood my hon. friend on a previous occasion in this house to indicate that Mr. McCuaig had expressed an opinion that the nuisance section in its present form could not be invoked. Apparently that is not the case.

Mr. Diefenbaker: My hon. friend will again bring up that argument. I am saying that there is no civil recourse, and it should not be necessary on an interprovincial scheme to have active and wanton pollution whereby people are denied the God-given water that in the years to come will become less and less available to the people of this country because of the improper acts of those who disregard the rights of others. There has been only one case on the subject since we dealt with this on the last occasion; that is an outstanding judgment by Mr. Justice Caron in the district of Montreal, in the case of Jacques Drouin and the city of Dorval. In that judgment, for the first time the judge goes as far as to determine that riparian owners on navigable waters have a right of action; but nowhere is there any authority for the right of an individual on an interprovincial river that is not a navigable stream within the meaning of the federal legislation applicable to navigable streams in this country.

Mr. Garson: My hon. friend is now speaking about civil action.

Mr. Diefenbaker: That is what I am saying. I am saying there is no civil right and that therefore there must be something in the nature of criminal proceedings. That is what I am leading up to. There is not such a right today under the criminal law. The opinion of counsel has been given that the section in question, dealing with nuisance, does not allow for any proceedings being taken under the Criminal Code as now constituted.

Having first pointed out that the person has no civil rights on an interprovincial river whose water supply has been polluted, I am now endeavouring, following that, to show that the only means is to put teeth in the criminal law so that wrongdoers who would take advantage of the situation and thereby destroy this bounty of nature shall be severely punished. I have a description here of the terrible conditions prevalent on the Ottawa river. It is to be found in an article by Reg. R. Fife in the January, 1955 issue of *Rod and Gun*. He points out that today, as far as the Ottawa river is concerned, less than 150 miles of water takes the domestic and industrial sewage, including all effluents, of 800,000 people and several large polluting industries, or the sewage of 5,000 people per mile of river. The article goes on to say:

> Now polluting industries are quick to point out that their effluent or waste waters have no harmful bacteria and so are not dangerous to public health. However, the power of the water to assimilate and destroy the bacteria . . . is decreased because the water uses its oxygen to oxidize the industrial wastes.

I can see no reason why the attitude of the minister has been in opposition to such an amendment being made. Last year he raised

objection to the fact that my amendment did not include municipal pollution. That was done for a purpose. Municipal pollution is a matter for each of the provincial health departments. The responsibility to assure that municipalities shall live up to the law becomes a matter of individual concern to the several departments of health in the several provinces. But so far as an interprovincial stream is concerned there is no responsibility on anyone, and why the minister should take the stand that a matter of serious moment such as pollution should not be covered by an amendment to the Criminal Code is rather difficult to understand. Indeed, in the March, 1956, issue of *Rod and Gun* there is an editorial that sums up the situation and I adopt what it says therein. It reads:

> Before the House of Commons as we go to press is a bill which would make it a criminal offence to pollute interprovincial waterways beyond the point of human safety and comfort.

Then it goes on to say what the suggested fine is.

> *Rod and Gun* readers will remember that pollution from the area of the city of Edmonton swept down the 400 miles of the North Saskatchewan river to Prince Albert in neighbouring Saskatchewan. It so affected the taste and purity of the water there that residents of P.A. were quite rightly up in arms over the whole thing. The water was unfit for human consumption—especially if you were the human that had to drink it. It is also almost certain that it had killed every game fish in the river over that 400 miles . . . There was enough evidence of dead fish around the P.A. water intake to further disturb the residents of that fine city.
>
> In all the uproar that followed . . . the most significant thing to come out was that there is no legal machinery to properly handle pollution of interprovincial waterways. In fairness to the firm in Edmonton that some investigators feel was responsible for the first outburst it must be stated that they have, without any pressure from anyone, spent over $150,000 to try to reduce the noxious properties of the waste water they discharge into the river. However, just because one firm has done this is no guarantee that others will follow suit. And it may be stated with certainty that more than one Edmonton industry is discharging polluting substances into that river, just as there is more than one industry responsible for the deplorable situation on the once magnificent Ottawa river . . .
>
> This problem is quite different legally from that posed by pollution entirely within provincial boundaries which then becomes a provincial matter unless the offence involves those waters affected by the Fisheries Act, regulations under the Migratory Birds Convention Act, national harbours board regulations concerning the protection of navigable waters or regulations under the Canada Shipping Act.
>
> Certainly there is a lot to be done within provincial boundaries, and in every province in Canada, where a shirking of responsibilities on the part of elected officials combined with a base display of public apathy has given us a situation that is close to desperate in several areas.
>
> The Canadian parliament has before it a bill which can correct a long standing and evil situation. . . . For these public waters do not belong to us. They are there for us to use and to enjoy, for us to build a great nation upon. But they are not ours to defile and to destroy. They are a part of the priceless heritage it is our duty and our privilege to pass on to other generations of Canadians.

That in general is the representation I wish to make in support of the amendment I suggest. It will put teeth in the law. As the law stands today there is no right under section 165, the present nuisance section, or any other section of the Criminal Code, to prosecute wrongdoers on interprovincial rivers. All that section will do is to cover the individual who dumps a bit of stuff into a river within the province in which the prosecution takes place. But nowhere and under no authority can anything be done by people living in provinces adjoining the province in which the pollution has taken place. The penalty—

Mr. Garson: I wonder whether my hon. friend would permit a question at this point? Under the amendment to the Code which he proposes, if someone in Edmonton were guilty of an offence under it, which offence caused difficulty in Prince Albert, would he not agree that the prosecution of that offence would have to be conducted by the Alberta law enforcement authorities?

Mr. Diefenbaker: I do not have before me the section of the Criminal Code that covers exactly that type of thing where an offence happens affecting two jurisdictions. One of the earlier general sections of the Criminal Code provides for eventualities similar to that; but whether or not my hon. friend is correct, suppose the pollution took place in the province of Alberta: all that would need to be done would be for a charge to be laid in the province of Alberta and the witnesses transported to the place of trial within Alberta.

Mr. Garson: May I ask my hon. friend another question? If that be so, then would not the same condition of affairs and the same reasoning apply to a charge for committing a common nuisance which had been committed in Alberta, which caused a bad effect in Prince Albert and which could be prosecuted in Alberta by taking Saskatchewan witnesses to Alberta for that purpose?

Mr. Diefenbaker: With that general proposition I am not in agreement. In making pollution on interprovincial rivers a criminal offence I think the prosecution could be taken in either place, where the pollution actually took place or in the province in which the effects of that pollution were felt. The ordinary nuisance section as it now stands reads:

> Every one who commits a common nuisance and thereby

(a) endangers the lives, safety or health of the public, or

(b) causes physical injury to any person . . .

If the section as it now stands covered cases such as this, then a person in Prince Albert or any other place in Saskatchewan affected by the pollution would be able to take a prosecution against the Alberta company. But as the law now stands, there is no provision whatsoever. That is not my opinion, although I entirely concur in it; that is the opinion of counsel. Under the law as it now stands, there is nothing that can be done by a resident in one province to meet the nuisance of pollution in an adjoining province.

Mr. Garson: Would my hon. friend permit a question at that point?

Mr. Diefenbaker: Yes.

Mr. Garson: Would he point out in his amendment the provision therein which makes it possible for a person in Saskatchewan to prosecute an offender in Alberta? What language in his amendment provides for that possibility?

Mr. Diefenbaker: I have already said it is the general principle covered by the general law and set out in detail in the earlier portions of the Criminal Code.

Mr. Garson: Mr. Speaker—

Mr. Diefenbaker: Just wait a minute. I have already said that under the section as it now stands proceedings could be taken in Prince Albert if the present nuisance section covered the situation. I say that it does not cover that situation because pollution of an interprovincial stream does not come within the law as it is now constituted. It is because of that fact that I want this amendment added so as to cover interprovincial streams. Then immediately there will be available the right of action and there will also be teeth in the law.

As the matter stands today the maximum penalty—even if the present section applied—on indictment is two years or the matter could be proceeded with by way of summary conviction in which case the maximum penalty would be $500. But $500 penalties, even if they were applicable, would be simply nothing to corporations which wantonly and wilfully pollute these waters. I go back to this principle, and I am trying to make it clear to my hon. friend. As the law is now, or as the section reads now, there is no right of action for the pollution of interprovincial rivers. The amendment will make it an offence.

However, if my hon. friend wants to take the stand that the present section meets the situation, then I ask him why he stands so firmly against an added section which will reinforce what he says is already there. Last year he took a different stand. Last year he took the stand that this was not a matter for the criminal law at all, in spite of the fact that that is the manner in which the United States has met the situation. It has met it, first, by a federal board and second, by each of the states having the authority over the criminal law joining in punishing those guilty of pollution of interstate streams.

My hon. friend cannot have it both ways. If he says the law today covers the situation, my answer to him is that no counsel who has been retained anywhere has come to that conclusion. If on the other hand—

Mr. Garson: May I be permitted to ask a question at that point?

Mr. Diefenbaker: Yes.

Mr. Garson: Were not the opinions which were given by counsel based upon a stated set of facts relating to the question that was presented to them and were the opinions not dealing with those facts and not with a general statement of the law?

Mr. Diefenbaker: As a matter of fact, Mr. Speaker, as an eminent counsel yourself you know that the only way in which counsel can come to an opinion is on the basis of the facts. There is nothing intricate about the facts in this case as far as Saskatchewan is concerned. The people cannot drink the water. Pollution takes place a few miles east of Edmonton. Those are simple facts. They are known facts. They are obvious facts. On the basis of those simple facts, unclouded in any way by any other considerations or any doubt as to the existence of any of those facts, counsel has advised that there is no right of action because this is an interprovincial stream and the section as it now stands does not meet the situation of pollution under those circumstances.

If my hon. friend were to say that possibly counsel did not get all the facts or that they might have been misstated, I would reply that there can be no mistake here. The simplicity of the facts is such that a child could understand them. The water is polluted. The people cannot drink it. They live on a river. They trace the pollution back to five miles or ten miles east of Edmonton. They establish that the pollution in fact took place there and on an earlier occasion. Those facts are simplicity itself. Upon those facts counsel gave his opinion.

Mr. Garson: I do not like to interrupt my hon. friend but may I say that these matters are all within his own knowledge and not within mine.

Mr. Diefenbaker: I beg the minister's pardon?

Mr. Garson: I say that I do not like to interrupt my hon. friend—

Mr. Diefenbaker: That is all right.

Mr. Garson: —but these matters are all within his knowledge and not within mine. May I ask him if one of these facts to which he refers was that it could not be established that the odour and the taste of the water in Prince Albert could be traced to a specific pollution which took place in Alberta? Of course, if that were the case, then counsel would give an opinion that there was no use of prosecuting because, on the facts, it would not be possible to bring the charge home to the accused.

Mr. Diefenbaker: Of course, Mr. Speaker, this is just a smokescreen, if I may say so with all due respect. On proceedings being taken, if the evidence was not available, then whether the law was changed or not, the result would not be a conviction. But accepting the facts that wrongdoing by pollution took place east of Edmonton and that the pollution which took place caused the noxious water in Prince Albert, counsel's opinion, on the basis of those facts, was that there is no right of action. He went even further and gave the opinion that there would be no civil right of action in our province for the wrong done in Alberta nor in the Alberta courts for the wrong done in Saskatchewan by an Alberta company.

Mr. Harris: What does my hon. friend think of that opinion?

Mr. Diefenbaker: I accept counsel's opinion. I do not place myself above a former president of the Canadian Bar Association.

Mr. Garson: Do you agree with it?

Mr. Diefenbaker: As a matter of fact, I agree that there is no right of criminal action and I take counsel's advice that there is no right of civil action. As a matter of fact, if you read the Caron judgment, you will find that while it says there is a right of action on navigable streams, it raises grave doubts as to whether on other streams there is any right of action. This is a most interesting judgment. I am not going into the facts. I have quoted the case so that anyone may read it. How doubtful the law is is indicated by the fact that this is the first case in which a riparian owner on a navigable stream has been upheld in an action arising out of pollution. That is the first case in which such a thing has happened. The judge did not arrive at that judgment without considerable doubt with regard to several of the conclusions to which he came. If there is any doubt as to the right of civil action, I ask why it is that the government is standing so adamant against giving people a little bit of protection under the Criminal Code.

They protect you under the Criminal Code for petty pollutions, for common nuisances. I should like to know. Is it because there are some strong interests that are opposed? Is it because some strong interests realize that if teeth are put into the law those interests are going to be placed in a position where no longer may they wantonly disregard the rights of ordinary citizens? Is that why? When the situation is as serious as the Prime Minister (Mr. St. Laurent) admitted last July, as serious as it now is—and in years to come it will become more and more serious—I put it to the Minister of Justice (Mr. Garson): why, in the face of the actions of individuals or corporations which put the public welfare at naught, does the government have such a resolute, such a relentless stand?

If my hon. friend says the amendment may not cover all the situations now, further amendments could take place. But give to the ordinary citizen in Canada this amendment and it will not be long before great corporations will realize that the public interest will hold them responsible under the code. I have exhausted my time, sir, but I do hope that the government has changed its attitude a little since last year, although I must say, having regard to the interruptions of the minister, it seems apparent to me that the crime of wilful pollution is still to be outside the ambit of the Criminal Code. I do hope he will give more consideration to it than he did last year, and thereby enable the preservation of one of the greatest resources that we have. Think of the magnificent Ottawa river, famed in legend and in history, and then think of it today, almost an open sewer because it is interprovincial. Surely that situation is but another example that calls for resolute action. The only way to do it is to put the fear of possible punishment in the hearts of those who would wantonly destroy God's greatest gift to mankind.

Mr. Charles Cannon (Iles-de-la-Madeleine): I had not intended to take part in this debate, but while listening to the hon. member for Prince Albert (Mr. Diefenbaker) a thought came to my mind which I felt I should put on *Hansard* and bring to the attention of the hon. member. I do not believe the solution

he proposes would be a practical one. It is not a solution for the difficulties that exist. It is not a proper method of preventing the pollution that is now taking place. I appreciate, as he does, the importance of the problem. He has indicated it to us very clearly.

But while listening to him I could not help thinking of the great pulp and paper industry in Canada, and especially in my province. When I think of the importance of that industry which produces 6 million tons of newsprint, of which 3 million are produced in my province, I cannot help but ask myself what would be the result of the legislation advocated by the hon. member. A good many of the mills engaged in the paper industry are situated on interprovincial streams. The object of my hon. friend would evidently be to prevent them from polluting the waters of these interprovincial streams. Unfortunately these mills cannot operate without dumping into the waters that run near the mill all sorts of refuse which, according to the definition of the amendment proposed to the Criminal Code, would be illegal. The amendment reads:

> Every owner, lessee, or person operating any industrial plant, oil refinery, chemical works, sawmill . . . who discharges or throws or allows to be discharged or thrown any noxious waste product, raw sewage, oil, sawdust, chemical or other matter or thing into a river . . .

No paper mill can operate without getting rid of the chemicals that have to be used in the manufacture of paper. Those chemicals have to run away in the water near the mill.

Mr. Diefenbaker: Would the hon. member permit a question?

Mr. Cannon: Yes.

Mr. Diefenbaker: He raises a very challenging point, but is it not a fact a similar situation has been met in the United States by demanding that those companies use proper destructive measures to neutralize the noxious properties of the things that they dump into the streams.

Mr. Cannon: I do not think it has been found possible, from a practical point of view, to do those things. In any case, there are also the waste wood products apart from the chemicals that flow into these waters.

My point is that the remedy suggested by my hon. friend would not be a practical one because it only consists of fines. Supposing you did condemn these paper companies to pay a fine. You could condemn them again and they would pay another fine. If you wanted them to observe the law to the letter and be absolutely immune from penalties, you would force them to close down. No one wants to see this great paper industry which produces 6 million tons of newsprint, a large percentage of which is exported, closed down. Everyone will agree to that. Therefore, I say it is not a practical solution. Some practical solution might be found if a committee were established to find a solution. But I say that simply passing a law to say that dumping refuse or matter into a river that pollutes it is illegal is not a solution to the problem. For that reason, I shall vote against the amendment if there is a vote called.

Mr. A. M. Campbell (The Battlefords): I am interested in this particular problem, Mr. Speaker, for the same reason that the hon. member for Prince Albert (Mr. Diefenbaker) is. I would correct him in one respect. I understood him to say that the water of the city of North Battleford had been polluted, but that is not exactly true. It is the town of Battleford that suffered from water pollution and not the city of North Battleford.

There was a lot of discussion and many questions were asked of the cabinet ministers during 1954 when the pollution of the North Saskatchewan river took place. It seemed to be almost impossible to establish what should be done to stop the pollution. We have not that immediate problem at the moment. The province of Alberta and the one chemical plant that was responsible for the pollution at that time have been doing good work. The question of pollution is not a problem today. There is always a chance of a recurrence. As I said last year, if we get another government in the province of Alberta or if that government gets lazy and careless and allows industry or whoever it is who dumps their refuse into rivers to get out of hand we will still have that same problem recurring.

The minister made a suggestion in 1954 which I thought was a good one. The people in my home constituency also thought it was a good one. We tried at that time to set up an interprovincial body to look after the water of the three western provinces. Two of the provinces were willing to work with that combination of the three provinces but one province refused to do so.

The only comeback that anyone has, as far as I can see, is to take action through the Criminal Code. This is probably a debate for lawyers rather than for laymen, but looking at it from a common-sense point of view, section 165 of the act is pretty vague. I know the minister takes a pretty definite stand as to its being strong enough but I would remind the minister that when the pollution took place in the city of Prince Albert in 1954 it took a long time to find out what the cause was and where the source was. Both the hon.

member for Prince Albert and I asked questions of the Minister of Fisheries, the Minister of National Health and Welfare and others. We asked all the ministers we could think of who might be connected with the problem as well as the Prime Minister. I can recall the Minister of National Health and Welfare saying on many occasions how complicated the whole matter was and how difficult it was to put the blame on any particular industry that was located 400 miles away.

The amendment to the Criminal Code that has been proposed reads as follows:

> Every owner, lessee, or person operating any industrial plant, oil refinery, chemical works, sawmill or other plant or works, or any other person, who discharges or throws or allows to be discharged or thrown any noxious waste product, raw sewage, oil, sawdust, chemical or other matter or thing into a river, stream or other water any part of which is interprovincial or which flows into any interprovincial water, which has the effect of endangering the lives, safety, health or comfort of the public is guilty—

It seems to me that it would be far easier for any lawyer or any court to find the source of the pollution and to get to the source of the pollution if this amendment were adopted. They will see that one industry is dumping refuse or that a certain city is doing so. They can see with their own eyes and the evidence is right there.

Mr. Garson: Will the hon. gentleman permit a question? If this amendment were passed would not his own city of Battleford, the day after it passed, be guilty of an offence under it?

Mr. Campbell: Could be; however, that does not absolve the town of Battleford if it is causing pollution in the river. It does not absolve it at all. I think the people of the town of Battleford are just as much interested as anyone else in the problem of pollution.

Mr. Garson: Will the hon. gentleman permit another question? Would he then suggest that the day after the act was passed all the municipalities and counties in Canada that were breaking the law be prosecuted?

Mr. Campbell: As I said, Mr. Speaker, when I began to speak, I am not a lawyer. It looks to me as if this amendment would clarify the act. I am not saying I am entirely in support of this amendment. What I want is something that will give us protection and I do not care whether the protection is the result of an amendment or a bill which comes from Tom, Dick or Harry, or the government or anyone else. I want protection for my people. If the minister can stand up and show us that this bill is no good and that it will not work, that is fine; what I want him to do is to give us a solution to the problem.

An hon. Member: A solution to the pollution.

Mr. Campbell: We have had a lot of pollution in Eastern Canada about which I have been reading just recently in the report on the boundary waters commission that was set up in 1946 between the United States and Canada. Anyone who reads that report realizes the terrific problem pollution presents all over Canada. I have been speaking of only one small part of Canada.

The hon. member for Prince Albert (Mr. Diefenbaker) and I and others are interested in seeing that what happened in 1954 never happens again, and if the minister has a solution that is better than the one proposed by the hon. member for Prince Albert, I will be all for it.

Hon. Stuart S. Garson (Minister of Justice): Mr. Speaker, in the very few minutes that are left before six o'clock I should like to emphasize that so far as the government is concerned we are deeply sympathetic with the objective of the hon. member who has introduced this bill. What we doubt is the efficacy of the method which he proposes to use. The hon. member is quite right in saying that not only in Canada but throughout North America, and I dare say throughout most of the industrialized and civilized world, this problem of the pollution of water courses is encountered.

Mr. Diefenbaker: But others have acted.

Mr. Garson: My hon. friend says that others have acted.

Mr. Diefenbaker: Yes.

Mr. Garson: If my friend had read some other issues of the magazines which he was quoting here today, *Rod and Gun*, for example, about the conditions in the United States I am sure he would not say others have acted. I am sure my hon. friend can himself recall many articles in various sporting magazines in which attacks have been made upon pollution in the United States, which indicated that the extent of pollution there was more widespread and much more intense than anything which we have encountered in western Canada.

The whole question here concerns what is the best method of solving this problem of pollution. With great respect to my hon. friend the member for Prince Albert who, as we all know, is one of the most able and eminent criminal lawyers in Canada, I might say I think he carries his professional complex into the present problem. I do not think a solution can be found for the problem of pollution in Canada by police court proceedings; I really do not think so; for as the

question which I asked the hon. member for The Battlefords just a moment ago would indicate—

Mr. Knowles: Six o'clock.

Mr. Garson: —if we pass the amendment he has proposed we will be in the position to prosecute, I would just hazard a guess, at least 50 per cent of the industries and the urban municipalities of Canada the morning after it is passed. Let us suppose we prosecute them all, bring them into court and fine them. What contribution have we then made to the solution of the problem?

Mr. Diefenbaker: Would the minister allow a question? Last year when the wording was identical the minister said it did not cover municipalities. This year he said it does. Is this not a fact?

Mr. Garson: No. I think my hon. friend is wrong in that. If he will refer to *Hansard* he will see that my remarks had relation to an amendment to his amendment which was moved by the hon. member for The Battlefords.

Mr. Diefenbaker: It is exactly the same.

On motion of Mr. Garson the debate was adjourned.

Mr. Deputy Speaker: It being six o'clock I do now leave the chair. May I remind hon. members that at eight o'clock the house will resume the business which was interrupted at five o'clock.

At six o'clock the house took recess.

AFTER RECESS

The house resumed at eight o'clock.

COMMITTEE ON ESTIMATES

MOTION TO APPOINT SELECT COMMITTEE

The house resumed, from Thursday, February 9, consideration of the motion of the Prime Minister:

That a select committee to be designated be appointed to consider such of the estimates as may be referred to it and to report from time to time its findings and recommendations to the house.

Mr. E. D. Fulton (Kamloops): Mr. Speaker, when this motion standing in the name of the right hon. Prime Minister (Mr. St. Laurent) for the appointment of a select committee to consider certain estimates was before the house some days ago I spoke briefly and in the course of my remarks dealt with the origin and purpose of the committee as they were revealed to us, at least in another parliament, the parliament of the United Kingdom, and also with some of the thoughts expressed in this parliament when we first decided to set up such a committee.

I suggested that the proper purpose was not so much to relieve parliament as a whole of work as to enable parliament better to accomplish its job of reviewing government expenditures. In that connection I think I can say fairly that all are agreed that for the task of making a detailed review of the estimates the committee of supply is a somewhat cumbersome method of proceeding. Therefore it has been decided, if I interpret the feeling of the house correctly, that this committee should be set up which will make a detailed examination of such departments as may be referred to it and that in the course of those examinations it should do the job which the committee of the whole house sitting as the committee of supply cannot do.

What I want to suggest this evening in the few minutes remaining to me is that the special committee on estimates, as set up last year and as envisaged in the motion presented to us by the right hon. Prime Minister, cannot do the job which parliament desires should be done. It cannot do the job because it is much too limited and circumscribed by its terms of reference. The motion reads:

That a select committee to be designated be appointed to consider such of the estimates as may be referred to it and to report from time to time its findings and recommendations to the house.

There are certain very obvious limitations upon the power of that committee if the committee is appointed only on the basis of that motion. The first and most obvious limitation is that the committee will have no power to call for persons, papers and records; it will have no power to call witnesses. The second obvious limitation is that the committee will have before it for consideration only such estimates as the government by the control of its majority in the house may refer to it. I think in those two respects the committee will be seriously hampered in its job of making a detailed, impartial and independent examination of the estimates.

We saw last year in the work of the committee which was set up then for the first time, and which it is true operated to some extent on an experimental basis, just what those particular limitations meant. Let us take the first limitation I mentioned, namely that the committee has no power to call witnesses. What does that mean? It means that all that is to be presented to the committee is the evidence which the government is prepared to have presented to it. That was our experience last year.

We moved in committee that we be given the power to send for persons, papers and records, and that motion was denied. That motion and different variations of that motion were moved on a number of occasions and each time it was denied because the government spokesman on the committee said it was not the government's intention that we should have the right to hear anyone but the people the government wanted to present to us.

So what happened? I was a member of the committee while it was reviewing the estimates of the Department of Citizenship and Immigration. The Minister of Citizenship and Immigration (Mr. Pickersgill) had himself made a member of the committee. Every time we asked for power to call witnesses the minister said it was not desirable or necessary that we should call for witnesses, that he and his departmental officials were prepared to answer all questions we might lay before the committee. Well, sir, I know and you know as a practical politician that the only witnesses whom the department was prepared to submit to the committee were those who—

Mr. Speaker: I object at the present moment to being referred to as a practical politician.

Mr. Knowles: Your Honour is not an impractical one.

Mr. Fulton: Your Honour is neither impractical nor unversed in the art of practising politics. Your Honour does not practise them in this house but you know what is meant by the term practical politician. What happened was what could be expected to happen. We got only those witnesses that the government was prepared to allow to come before us, and those witnesses were to say only those things which the government was prepared to have them say. So far as an independent expression of opinion in the operation of government departments was concerned, its ability to obtain an expression of opinion which did not reflect the government's point of view with respect to the operation of the department, the committee was completely ineffectual.

I think we should contrast the method of operation of the estimates committee in the United Kingdom. There the committee is master of its own procedure. It is true that on the committee there is a majority from the government party which is natural in the composition of a committee made up of members of the house, but they have established the principle, first, that the committee shall have the power to call witnesses as it may determine and, second, that the committee itself will decide what departments or what segments of a department it shall investigate.

The committee does that without any prior notice to the department concerned or indeed to the government itself. They break up into a number of sub-committees and a sub-committee will decide what branch of the government's operations it wishes to investigate. The sub-committee reports back to the main committee and the main committee then authorizes it to proceed in that way. I am making these remarks on the basis of a memorandum supplied to the hon. member for Eglinton (Mr. Fleming) by a member of the United Kingdom parliament.

The committee descends without warning on a government department and says, "We want you to tell us what you have in mind when you ask for this appropriation of X thousand pounds." The government department has no opportunity to prepare its case and it is not protected by the minister having the right to say what witnesses shall be heard by the committee or by the minister having the right to call upon only those departmental officials whom he is prepared to present.

That is a true outline of the conditions under which our committee was compelled to work last year and will be compelled to work this year under the terms of the reference we now have before us. We were confronted last year with the absurd situation that we did not have the power to call witnesses as a committee while the minister of the department under investigation had the power to say which of his officials would come and speak. The committee had no power to call witnesses while the minister was able to speak as a member of the committee and say, "I have decided that I shall get the deputy minister, or the director of this branch, or the director of that branch, but when he speaks he cannot speak as a witness, he speaks as the emanation of the minister." Those were the words used by the Minister of Citizenship and Immigration to describe the status of the officials of his department before the committee.

What more frustrating, what more absurd or ridiculous situation could a committee of this house be placed in? It simply could not come to grips with the department. It had to deal only with those who the minister said would be called before it. When they spoke, they spoke as emanations of the minister and, of course, they were bound to reflect and to defend the government's policy.

Whatever may be said as to the nature of this committee—and I am going to move

an amendment that the committee be empowered to send for persons, papers and records—I fancy it may be said by the Prime Minister, or by the Minister of Finance in his capacity as house leader, that this committee is still an experimental committee. I say to you, Mr. Speaker, that if this experiment does not succeed it will be a sorry day for parliament, and this committee will not succeed unless it is given a fair chance. The committee will not be given a fair chance unless it is allowed to do the job parliament and the country would like to see it do.

I wish to impress upon the government the fact that the United Kingdom parliament, the parliament of a country which is sometimes regarded as essentially, I was going to say "conservative" but if you do not like the word I will say "cautious", in its approach to such questions, when it set up a committee in 1912 with some misgivings from some members of that house, did not hesitate to give it all the powers it needed to do the job. The motion, as I have said, was introduced by the chancellor of the exchequer, Mr. Lloyd George. It was an experimental committee. It was a new departure, but they set it up with all the powers it needed. Here are the terms of reference of the United Kingdom committee, as found on page 360, volume 37, fifth series, of the United Kingdom *Hansard*. It was decided that a select committee be appointed to examine into and report on such of the estimates presented to the house as might seem fit to the committee. The committee had the power to decide which departments it would examine. After discussion, when the motion to set up the committee was carried, as a matter of course—as we find recorded in the United Kingdom *Hansard*—after the vote approving the committee had been carried, the question that the committee have power to send for persons, papers and records was put and agreed to.

So in that parliament, from which to a large extent we take the guiding principles of the procedures we follow here—and in this connection I suggest we could take a great deal of guidance for the work of this committee on estimates, because they do most important, far-reaching and beneficial work—they had no hesitation in giving this committee the power it needed to allow it to function in the interests of parliament as a whole, and not just in the interests of the government to be, what it can only otherwise be, a whitewash committee to defend the government's program as revealed through the estimates. They gave it the power to send for persons, papers and records, the first time they set it up. That was in 1912, and it is now 1956. Surely this government is not so reactionary that after 44 years of the example of what they do in the United Kingdom and all the benefits that will follow, they will refuse to give the committee of parliament the power to do what a committee of parliament should do.

I therefore move, seconded by the hon. member for Lanark (Mr. Blair):

That the motion be amended by adding thereto the following words:

"and that the said committee have power to send for persons, papers and records".

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, we in this group are pleased that the government has submitted once again a proposal for a committee on estimates similar to the committee that was established last year. We shall be glad to support the motion.

We are also pleased that the hon. member for Kamloops has moved an amendment that would give the committee power to send for persons, papers and records. I shall say something on the amendment a little later in my remarks, but I should like first of all to say that we do not take the position that the committee on estimates takes the place of the committee of supply. No one tries to argue that, but at any rate we are glad to know it is recognized that in the last analysis it is the committee of supply, consisting of all the members in the house, that is responsible for every dollar that is to be voted by parliament. Nevertheless, despite the fact that the committee of supply is the most important cog in the machinery so far as the voting of money is concerned, we feel that it is a good idea that year by year a few departments should be referred to a committee on estimates.

One of the values to be gained from such a committee may not sound like a political value in the sense of the word which offended Your Honour a few moments ago. Nevertheless it is a real value. The study that takes place in a committee of this kind can be quite educational for the members of the committee and through them for members of the house as a whole. Indeed it can go even further than that. I am satisfied, indeed, that one of the real values of some of the important committees that have been held across the years has been in the education that has been afforded to members and through them to the country as a whole. I think of the excellent committee that we had a number of years ago on the question of old age security. I believe more came out of that committee than a mere recommendation; I think it was educational in its effect. Those who were on the external affairs committee last year, when General McNaughton and

other witnesses appeared before it to discuss matters in relation to our water supply and power resources, learned a great deal as a result of what went on in that committee. Similarly, it is an exceptionally good idea that a few departments each year can be scrutinized thoroughly and a few members become acquainted with the workings of those departments in the committee on estimates in a manner which is not possible in committee of supply.

However, it seems to me that the value of the estimates committee is greatly limited if it is not possible to call before the committee witnesses chosen by the committee itself. After all, if the only people who appear before that committee are those who are chosen by the minister, the value of that committee can be limited to such values as we get out of discussion here in the committee of supply. If members are going to learn what is going on, it seems to me they should have the right that is involved in the amendment that has been moved by the hon. member for Kamloops.

I think it is a fair question to ask, in this day and age, as to who is running the government in this country. Is it the cabinet or is it the civil service? I do not ask that question with malice aforethought, and I am fully conscious of our constitutional position, which specifies that the minister is completely responsible to parliament for all that goes on in his department, for the recommendations that he makes to parliament and for the positions that he may take on matters that are raised here on the floor of the house. Yet there are times when some of us wonder whether a particular minister exercises that responsibility merely by being the mouthpiece of civil servants who are behind him, civil servants whom we sometimes refer to, if we do not like their decisions, as bureaucrats. I know that the minister must protect civil servants and that it is the job of parliament to see that civil servants are protected, but I think the whole question of whether it is the cabinet or the civil service that is making the major policy decisions, that is really running the country, has become of such importance that it would be a good idea for the estimates committee to be able to call before it some of the senior civil servants and others in various departments so that they might be questioned along with the minister in order that we may, as I say, get this question sorted out as to who is really making some of the major decisions.

I do not think this is the time or the place to give examples and thereby to get into a discussion of one department or another. But all of us have various departments in mind where questions of the kind I have alluded to might well be investigated. It seems to me that we would do well to have before the estimates committee some of the officials of the treasury board. It does seem to us that some of the most important decisions affecting government policy and national life are either made in treasury board or if there are policies or decisions that the government might like to consider they are vetoed or rejected by treasury board. I think it would be a good idea if we could have some of the senior officials of treasury board, and even intermediate officials, come before the estimates committee under the aegis of one department or another so that we could find out just how they work and who are making these major decisions.

I listened with interest to what the hon. member for Kamloops (Mr. Fulton) had to say regarding the practice of the estimates committee in the United Kingdom where it descends without warning on a particular department and inquires into its expenditures. I realize that that function is supposed to be performed by our treasury board, and I am satisfied that our treasury board does a good job in terms of checking the estimates of the various ministers to try to eliminate waste wherever possible and to try to cut down and avoid extravagance. But I confess that I am more concerned as to the part that treasury board plays in making major decisions of policy.

I find it very hard to discuss this matter in the abstract without at least mentioning some of the things in which some of us are interested. I could, for example, refer to questions such as increases in old age pensions or the question as to why it takes so long to get moving in the field of health insurance. I could raise the question of the pensions of superannuated civil servants or the question of the war veterans' allowance. I could raise any one of a dozen matters of this nature where what is involved is not waste or extravagance, in the terms in which my friends to the right so often use those words, but basic policy as to what the attitude of the country should be towards improvements in fields such as I have indicated.

I think it is a fair request that these people who are behind the ministers, and for whom the ministers, I admit, are responsible, should at least once in a while come before a committee of parliament so that we can find out whether the ministers are telling the civil service what they want or whether the civil service is telling the government what policies should be pursued. For these reasons, Mr. Speaker, I think, it

will be clear that we not only support the motion to establish a special committee on estimates but we would also like to see it given the wider scope that is involved in the amendment moved by the hon. member for Kamloops. Therefore we shall support the amendment and we shall support the establishing of the committee itself.

Mr. W. Ross Thatcher (Moose Jaw-Lake Centre): Mr. Speaker, I should like to speak very briefly on the motion now before us. I am one of those who support strongly the setting up of the estimates committee. I certainly feel that it did valuable work last year. It has always seemed to me that one of the chief duties of an elected representative is to thoroughly examine government expenditures to see that the taxpayers' dollar is being efficiently, properly and economically spent. Yet the experience I have had as a back-bencher is that there is no task in the house which is more frustrating, more disappointing, or more baffling, than the attempt to carry it out.

As hon. members know, under our British system of government, parliament is supposed to be supreme where finances are concerned. Yet in actual fact that theoretical supremacy is so ineffectively carried out, that I often wonder whether or not it actually exists. What are the reasons for this situation? I believe the main reason is due to the fact that our parliamentary machinery for examining the estimates is hopelessly outdated and outmoded. Our present method was formulated back in the days of confederation, and there have been very few improvements introduced into parliament since that time.

In the days of confederation, government had few financial complications. The government had little concern about national defence. It did not have to worry too much about social welfare. Things like the gold subsidy, the grain subsidy and so on did not enter into the picture. Back in 1868 the total budget of this parliament was $7·6 million. For the year 1874-75 the total of the estimates was still only $42 million. In 1910 the total of the estimates was $110 million. In 1913, the year before the war, the total budget was only $150 million.

I suggest that in those days it might have been possible for parliament to examine the estimates in the committee of supply, but times have changed. Canada has developed into a modern nation. Our population has increased many times, and government has become more complex. Today huge sums are spent for national defence, social welfare and the like. It is no exaggeration to say that this year our budget will be almost $5 billion. On top of this sum, government crown corporations will be spending additional hundreds of millions of dollars. In other words, the government will be spending more than one-fifth of our whole gross national product. That means in effect, that today we are spending about 650 times what we spent in 1868. Yet the parliamentary machinery for examining these expenditures is relatively the same as it was back in the days of confederation.

When the estimates are tabled in the house, when this blue book is brought down and placed in front of hon. members, we are literally drowned in a morass of statistics and figures. I say that any hon. member in this house, no matter how diligent he may be, finds it physically impossible to do a thorough job of examining the estimates in addition to his other work.

I say further that our method in this parliament of examining estimates is so inefficient and so unbusinesslike as to be almost unbelievable. What is parliament's vehicle for examining the estimates? As you know, Mr. Speaker, the vehicle is the committee of the whole which in effect is the whole House of Commons with the Speaker out of the chair. The government introduces these estimates—perhaps 600 or 700 pages of them—to the committee of the whole. That committee is unwieldly, clumsy and hurried. It is hopelessly large. Usually questions are mixed up and bandied across the floor with regard to details, with regard to policy, with regard to amounts. Often there is little sequence to the questions. Some of them have little relation to each other. Often they do not even appear to be coherent. While it is true that members in the back benches can question cabinet members, nevertheless it is extremely difficult to secure the kind of information that a member should have.

Not only is this house poorly equipped to deal with estimates, Mr. Speaker, but more and more in recent years, it has been inclined to treat estimates as matters of secondary importance, that can be dealt with after all other business has been finished. I feel that the time allotted by the government for the debating of estimates is not satisfactory. We have now been sitting for about seven weeks and I think we have spent one day in discussing estimates. Far too often, it seems to me, the early weeks or months of a session of parliament are spent in debating relatively minor issues and later on the estimates are brought forward in a last-minute rush. In

the last session the Minister of Finance (Mr. Harris), as reported at page 937 of *Hansard* of 1955, made this statement:

> There has grown up in the country an impression that during the final week and especially on the final day, it has been our custom to pass large sums of money at a rate which is not in accordance with the seriousness of the subject. To my mind that opinion is false; . . .

In this connection I must say that I cannot agree with the Minister of Finance. Last year parliament had sat for five months. At the end of that five months' period it had passed only $189 million of estimates or 4·2 per cent of the total. The remainder was passed in the last few weeks. In the last week of the session of 1953—the last seven days—estimates totalling $866 million were put through. In the last week of the session of 1954, estimates totalling $2,715 million were put through. In the last week of the session of 1955 estimates totalling $563 million were put through. To anyone who studies the picture I think it is obvious that when estimates are passed with such speed they cannot possibly have been given by this parliament the kind of examination that they merit.

Who is to blame for the situation as it exists today? Since the government decides the order of business, I think it must accept a major share of the responsibility. In fairness I suppose I should say that the opposition is partly to blame because far too many of us are prone, early in the session, to make loquacious and sometimes repetitious speeches on matters which perhaps are not as important as are these estimates. Often the difficult but rather humdrum task of going over the accounts is neglected. I have a definite feeling that today, Mr. Speaker, it is not parliament which is the watchdog of the treasury, but rather it is a small group of civil servants. Even though those civil servants, mostly members of treasury board or the finance department do an effective job, I say that this is not a healthy situation. I think it exists only because private members of all parties, including the Liberal party, have permitted the control of the national purse to be gradually taken away from them.

The resolution before us tonight is going to improve the situation. I think it is a reform. It is at least going to mean that four departments will be thoroughly examined. But even if the resolution passes, as I know it will, I do not think parliament has gone far enough. I am still convinced that in this house too little use is made of standing committees. I think this fact is all the more regrettable because on the back benches, parliament has a great deal of effective talent which is not being used. Many back-bench members are able business and professional men. They come down here anxious to do a useful job. Yet usually they are not allotted specific work. I suggest to you, Mr. Speaker, that these back-bench members could be effectively used, if they were put on committees—particularly estimates committees—to go over and examine government spending. I believe that every single government expenditure should be referred to one standing committee or another. I believe that every department should be referred in a similar manner. For instance, agriculture estimates should go to the committee on agriculture. The estimates of the Department of Finance, the Department of National Revenue and the like should go to the banking and commerce committee. Perhaps there should be a special committee on defence to examine defence expenditures, veterans affairs expenditures and so on. Before any estimate is brought into this house I repeat, that I believe it should have been thoroughly checked and gone over by some standing committee. Certainly any private business, before spending money in the way in which we are spending it in this parliament, would make absolutely certain that the expenditures had been thoroughly justified.

Mr. Speaker, there is another field of government expenditure with respect to which I do not think parliament is doing its job. I refer to our crown corporations. I have been here since 1945. There are many crown corporations that I cannot remember ever having come before parliament, except in the committee of the whole for a five-minute or ten-minute examination, which was more or less routine. I am thinking at the moment of the Polymer Corporation, Canadian Arsenals Limited, Canadian Government Elevators, the printing bureau, the Canadian farm loan board and so on. Federal crown corporations today number 30, I believe. In those crown corporations the taxpayer has an investment of several billion dollars. Some of them from time to time go to the treasury for substantial subsidies. Yet today the average member of parliament has less knowledge of the operations of those corporations, than have many shareholders of ordinary companies. It is quite true that some of the crown corporations such as Trans-Canada Air Lines, the Canadian National Railways and, from time to time, the Canadian Broadcasting Corporation come before a parliamentary committee. But I say again to you tonight, Mr. Speaker, that that practice should be extended. Once a year every company owned by the government should be

obliged to come before one standing committee or another to be examined in detail.

I have one more suggestion to make tonight, Mr. Speaker, and I have made it in the past. It has always seemed to me that opposition members are handicapped in examining these estimates by a lack of research and technical assistance. Because of the time required by other parliamentary committees, without that assistance it is extremely difficult effectively to query experienced government officials. When a minister comes before the committee of supply or before a standing committee, invariably he is flanked by experts or by his officials, and their job is to justify the expenditures which the government is making. The opposition, on the other hand, has no such assistance. I think they could do their job a good deal better if they were given some kind of help in that regard. I believe that the importance of this committee which the minister is proposing to set up tonight cannot be exaggerated. It is a reform but it does not go far enough. It is a step in the right direction. It is going to mean that four departments will be examined, but in my opinion every department should be examined. Until we take such action parliament is not doing the job of examining estimates effectively.

Mr. Roland Michener (St. Paul's): The resolution which stands in the name of the Prime Minister (Mr. St. Laurent) reintroduces a practice which was begun last year and which was found useful. I should like to add what has been said already tonight in urging the Prime Minister and the members of the government, in fact all members of this house, to consider the amendment as a means of doing better what this resolution proposes to do.

Last year the estimates committee did perform a very useful function in more than one way; that has been pointed out already. Certainly it helped to educate the members of the house in the details of administration. It cleared a great many of the inquiries which otherwise would have been made on the floor in the committee of the whole. The proposal introduces a very minor extension of the powers of the committee, because basically the committee will be a committee of the house constituted in the same proportions as the house is constituted with the supporters of the government in the majority and therefore with the basic decisions of the committee under the control of the administration. As I say, the extension is relatively minor, but it seems to me that in last year's committee we had a useful instrument which could be substantially better if it had the power to inquire a little deeper, to go beneath the surface and bring out the real facts on which the decisions of economical and effective administration must be based.

Now, I concede that there might be objections to giving the power to a committee to inquire into the affairs of the department about which some minister may be touchy. He may fear that opposition parties will seek partisan advantage by the exposure of maladministration. I think if any member of this house, in fact if any member of this government will look at the matter fairly and clearly, it redounds to the advantage of the government basically to improve the administration because the government takes the final responsibility for the quality and character of the administration which goes on in the various departments of government. If that administration can be improved through the medium of a committee of this house or by giving a committee more power to make such improvements, then in the long run the advantage will accrue to the government of the day as well as to parliament as a whole in the discharge of its traditional function of voting the funds the administration requires to carry on its duties.

In supporting this I do suggest that the members of the government regard this as one means of doing more effectively what has been done fairly well in some instances in the past, not only to the credit of this house and the committee but to the credit of the government itself whose administration can thereby be improved.

Mr. Colin Cameron (Nanaimo): I wish to associate myself, Mr. Speaker, with those who have spoken earlier in asking that the powers of this committee be extended. I remember the committee last year, in its initial year, and I have a very clear recollection of the manner in which the committee found its work hampered by the lack of the power which is requested in the amendment submitted by the hon. member for Kamloops (Mr. Fulton). I think perhaps that some of us who sit in this house have become, shall I say, rather insulated from public opinion and fail to realize that this institution of parliament is now on trial in the public mind. I think it is not too much to say that there is a most deplorable and dangerous attitude of cynicism towards parliament as a vehicle of democracy today.

I wonder sometimes if the reason for that is not to be found in the state of affairs that was described to me by a very eminent Canadian citizen who at one time sat in this house. He remarked to me that there is a popular illusion we have a government, whereas the real fact of the matter is that

we have an administration with a political front. I submit, sir, that is a very dangerous situation. One of the ways in which this cynical attitude towards parliament can perhaps he dissipated is by parliament to display the intention of really examining the work that is done in its name, and revealing to the general public the results of that examination.

Sometimes it has been changes of procedure of an apparently minor character that have very drastically altered the whole structure of parliament. One could recall, for instance, that it was purely the accident of a monarch being unable to speak the English language that set up the beginnings of our cabinet system as we know it today. We should be very careful, sir, not to imagine that our very new institution of parliament, and it is a very new institution in the shape it has taken today, is one which could not very well be deprived of real effective power, not through any deliberate action on the part of its members but by the failure to realize the danger points in our procedure. I suggest to you, sir, that one of the most grave danger points is when the government of the day, the executive of this parliament, is afraid to entrust to a committee of this house the power to examine ruthlessly, without let or hindrance, into all the actions that are taken in the name of this parliament.

Mr. J. M. Macdonnell (Greenwood): I should like to add a word to what has been said in favour of the amendment. I think if any intelligent stranger were in the gallery, and I am sure there are plenty here tonight, and had listened to this amendment he would have said "Well, that is the most reasonable thing I ever heard; why would they not do it?" As I listened to the hon. member for St. Paul's (Mr. Michener) and the hon. member from farther west, I felt that way. I have got to my feet merely to say this. If the amendment is turned down, and we have some reason to think it will be by what I believe the great Disraeli once referred to as brute votes, I hope it will not be turned down without reason given. I hope it will not be turned down in the ordinary, rather mechanical way that we are so often denied what we ask. I do hope that reasons, or what hon. gentlemen opposite regard as reasons, will be given as to why this suggestion, so eminently reasonable on the face of it and in the light of the experience we have had in this house, is to be turned down. I hope every effort will be made to state a case against these reasonable arguments.

Mr. W. B. Nesbitt (Oxford): Mr. Speaker, I do not wish to take up the time of the house in making remarks in this regard that have already been made. I agree with the hon. member for Moose Jaw-Lake Centre (Mr. Thatcher) who said that the increased complexity of government since 1867 has made the proper examination of estimates in the committee of supply a virtual impossibility. Since 1867 government has become increasingly complex. Government departments have grown to such an extent that in effect most government departments are, through the very necessity of our modern way of life, run by civil servants. As a result it is almost impossible for any cabinet minister, no matter how brilliant and capable he might be, to fully understand and have complete knowledge of all the work of other government departments if for no other reason than the fact that cabinet ministers frequently change from one portfolio to another.

The present system we have in committee of supply is, of course, as every hon. member knows, that the minister is there usually with one or two assistants to advise him and to answer questions from hon. members of either the opposition or the government. Very often, in fact very often indeed, the questions which are asked are extremely detailed and the minister is unable to answer them and the assistants are unable to supply him with the information immediately. Consequently, the minister will acknowledge the question and say, "We can answer it tomorrow or the next day", and will undertake to furnish the information at a later date. I am sure many hon. members have had the experience of having this information supplied as the minister promised but often several months after the question was asked and frequently after the house has closed. I am not criticizing the ministers for this for I realize the complexity of their job and its great scope. Frequently, it is impossible to get the answers right away but it certainly is not very helpful for the proper examination of the estimates in the house.

The present committee the government is setting up is certainly a step in the right direction. Having been a member of the estimates committee for some of the time during the last session, I think it certainly is a help and a step in the right direction, but the suggestion of the hon. member for Kamloops (Mr. Fulton), which has been supported by other hon. members on this side of the house, is indeed an even farther step in the right direction.

Last year when the estimates of certain branches of the government were referred to the special committee on estimates the result was very much the same as what happens in the committee of supply. The government called or made available as witnesses various senior civil servants who had a considerable

knowledge of the departments from which they came. Some of them, however, are undoubtedly in the same position as cabinet ministers in that their departments are now so large it is almost impossible, even for senior civil servants who have been in the department for many years, to know all the facts about their own departments. As a result, last year in the committee on estimates questions which were asked frequently had to be put over until the next day in order that the answers could be looked up or some other official consulted. To a lesser degree, but sufficiently seriously so that it is almost in the same position, the same problem exists in the estimates committee which exists in the committee of supply.

If the committee on estimates were empowdered to call witnesses before the committee and any particular witnesses that the members of the committee desired to have called, I am sure we would get a much more capable and complete examination of the estimates of this house.

Mr. John B. Hamilton (York West): Mr. Speaker, I too will take only a few minutes of the house's time tonight in connection with this matter. Had I not heard the remarks of the hon. member for Moose Jaw-Lake Centre I perhaps would not have said anything at this time. However, the hon. member for Moose Jaw-Lake Centre (Mr. Thatcher) referred at some length to the fact that many people here did not take a very active part in connection with the estimates which came before the committee of the whole, and perhaps that was because there was not ample opportunity to do so. I think that was perhaps an unwarranted criticism. When I think back to the many hours that I have stood on my feet in this house in connection with continual examination in relation to transport and national defence last year I feel there was plenty of opportunity and if people wanted to inquire into those estimates they had the chance to get to their feet.

That, of course, does not mean that we are going to obtain the answers which we should get. It seems to me that the hon. member for Oxford put his finger on one of the major problems, that is, in the examination we are constantly faced with a frustrating situation where we have two or three people standing between us and the person we are examining and it is most difficult to get a straight answer under circumstances of that kind. I do not think anyone who has not been accustomed to conducting examinations wherein one questions a witness directly can appreciate the frustration that arises in the house as one watches these conversations which take place between the minister and the experts who sit before him. As long as that condition exists we are not going to be able to carry out a proper examination in this house and therefore any move which will give us an opportunity to examine the parties directly is going to be a step in the right direction.

A second point I would make is that we have reached a stage where nearly half of the total estimates refer to the Department of National Defence. If we are going to have a continuation of the policy as I have seen it here of getting down finally to the place where we get no answer whatsoever on the basis of security, and this has happened time after time, then the work of the opposition is going to become almost unbearable.

I think we all feel that conditions of security are most important. I would be the last one to suggest that we should cut away any cloak of secrecy that is required, but when you talk about frustration I must point out it is really frustrating to find that an answer is refused you in the house and when you pick up the newspaper next day, or *Time* magazine the next month, you find the answer that you could not get right in this very chamber. It seems to me that if there were an opportunity of examining the large masses of defence expenditures on the basis of direct question of the people involved there would be ample opportunity to discern very easily those matters on which we might be entitled to information and those matters on which, for obvious reasons of security, we should not be allowed to ask for the production of papers or witnesses.

As long as this portion of the estimates continues to climb and to amount to almost 50 per cent of the total budget, then I say a step must be taken along that line as well.

In connection with the suggestion of the hon. member for Moose Jaw-Lake Centre, that we perhaps need some assistance, I would say this. Give us the vehicle here to enable us to get close to the problem and I am satisfied that there are people quite capable of conducting a thorough examination. I am quite satisfied also that there are those qualified in accounting and the other professions who will enable us to do a good job. All we have to have is an indication from the government that they are prepared to really face close scrutiny in connection with these expenditures.

Hon. George A. Drew (Leader of the Opposition): Mr. Speaker, this is not strictly a formal motion, this is a most important motion. For some years we kept urging that a practice similar to that which has been so successful at Westminster be adopted here. We urged that there be committees on

estimates and that the procedure which had actually helped the government as well as the opposition should be employed so that in that way facts could be obtained which otherwise would not be available.

The procedure which was adopted last year as an experiment fell far short of the practice which has succeeded at Westminster. The fact is that this offers very little in the way of real information. We are here tonight to discuss a motion standing in the name of the Prime Minister (Mr. St. Laurent), but the Prime Minister has not even spoken to explain why we have this kind of motion before us.

Mr. Harris: That is not so. I spoke to it on behalf of the government.

Mr. Drew: I will qualify that by saying that the Minister of Finance (Mr. Harris) made a short statement which I would not have dignified as a statement on behalf of the government because there was no explanation as to why this procedure should be adopted. We simply had the statement that we were going to go ahead on an experimental basis again. If that is to be taken as the kind of statement this government makes in regard to this motion, then everything that has been said about the high-handed manner in which this government has acted is more than justified on this particular occasion.

This motion stands in the name of the Prime Minister. Let us hear from the Prime Minister why we cannot have a proper committee on estimates. Let us hear from the Prime Minister, in whose name this motion stands, why we cannot have papers produced, why we cannot have witnesses come before us in the proper manner so that we can get information. Since we have had no explanation it then becomes necessary to discuss the nature of this motion and what the results will be.

Under the terms of this motion we will have to rely upon the answers of ministers when we are in this committee. We have found during this session that we cannot rely upon the answers of ministers when they are given in this house. We have seen it over and over again where statements have been made which within a very short time were denied by the minister himself. We had the case here of the 15 aircraft sent to Egypt. The Secretary of State for External Affairs (Mr. Pearson) made a statement just recently about the policies of the government, but the Secretary of State for External Affairs did not know anything about this when the matter was brought up in the house. First when he was asked about this shipment he said he had not heard about it. Then he was asked whether the aircraft could be armed and he left the impression that they could not. Then we had pictures by the Royal Canadian Air Force to show that they could. Then later on we had a discussion on external affairs.

Some hon. Members: Order.

Mr. Drew: I am quite prepared to wait until my words can be heard. When this subject was being discussed during the debate on external affairs it was pointed out that this was not a small matter involving a few aircraft and that we were asking for a committee to examine the export of arms. This involved a matter of $81 million and the Secretary of State for External Affairs stated that that of course included NATO shipments. It did not include anything of the kind. He did not even know that the NATO shipments were separate and that $202 million was the figure for NATO shipments during that year.

Mr. Speaker: Order. I had hoped that the Leader of the Opposition would not go too far afield and I would not have to intervene, but having done so I hope he will come back to the motion before the house.

Mr. Drew: I submit that I am directly on the motion. If Your Honour feels that you must intervene, then you must. I am pointing out that under this motion we will be called upon to accept the statements of ministers because there will be no other source of information. I have been pointing out how unsatisfactory that has been. It will be recalled that in the same discussion the Minister of Trade and Commerce (Mr. Howe) was most scornful when some question was raised as to the date of an order in council. He kept emphasizing that the order in council had been passed on a particular date, and then he had to come to the house and admit that there had been no order in council. The Prime Minister did not know whether there was an order in council or not and the Minister of National Defence (Mr. Campney) knew nothing about it. Those are the facts that have been disclosed already in the case of that particular shipment of arms.

Mr. Cannon: On a point of order, the Leader of the Opposition is discussing exactly the same matter that Your Honour said was not in order.

Mr. Drew: I do not recognize the hon. member who has just spoken in that quarter of the house, but in any event I must say that I am not aware that his point has any relation to the subject under discussion.

An hon. Member: Oh, oh.

Mr. Drew: If the hon. member who just made that interjection at this late date understands anything about the subject we are discussing I would hope that he would rise and make some contribution to this debate. It would be a novelty if we could have some opinion expressed by hon. members on the other side in regard to subjects of this kind when they come before the house.

Mr. Cannon: Mr. Speaker—

Mr. Drew: Unless it is a point of order or a question of privilege I am continuing my remarks. In so far as this procedure is concerned, in the case of the Department of National Defence, which deals with nearly half of our expenditures, we will be called upon to take the answers of the minister and I have shown quite clearly that he does not know what the facts are in regard to the department which he administers. That is the preposterous position in which we are left.

If this motion is to proceed, then let us have some reason why we should not have information that would be available to us in any ordinary procedure of committees that would be set up to inquire into the affairs of this house. It has been said in some publications which I have read recently that the parliament of Canada is no longer in a position where it can deal with public affairs. If there is any reason why this parliament is not able to deal with matters tonight it is because we are denied information. This is another example of procedures which stifle the true basis of discussion and the obtaining of facts upon which we should be informed.

What reason can there be why we should not have a committee empowered to call witnesses and to call for papers? In Westminster where they have a much larger field of responsibility the committee dealing with the national defence estimates was permitted to call the chief of the general staff and senior officers in different positions to give answers which informed the members of that committee in regard to essential facts. We have no such power.

It would be a pretence for any member of this house to suggest that a committee of this kind can present a finding actually based upon facts. I ask the Prime Minister in whose name this motion stands to give any reason to this house why we should not have the power that an ordinary committee would have to inquire into facts and to make recommendations which would assist the government as well as other members of this house and the public in regard to the affairs which are entrusted to our responsibility.

The house divided on the amendment (Mr. Fulton) which was negatived on the following division:

Mr. Speaker: I declare the amendment lost.

Mr. Fleming: Mr. Speaker—

Mr. Thatcher: Mr. Speaker—

Mr. Speaker: Does the hon. member for Moose Jaw-Lake Centre wish to announce a pair?

Mr. Thatcher: No, sir. I wish to move another amendment.

Mr. Speaker: The hon. member for Eglinton.

Mr. Donald M. Fleming (Eglinton): Mr. Speaker, the government, looking down from its lofty height, does not deign—

Some hon. Members: Oh, oh.

Mr. Fleming: —to participate—

An hon. Member: Stand up.

Mr. Fleming: —in a discussion of this subject—

An hon. Member: Stand up, Donald.

Mr. Fleming: I will stand up and I hope some of you over there will have the grace and courage to stand up and let your voices be heard. Most of you are mute and you might as well have been born mute for all the good you accomplish here.

Some hon. Members: Oh, oh.

[Mr. Drew.]

Mr. Fleming: There is a commoner expression that is synonymous with "mute" that I could apply to a good many members of this house. It is a simple four-letter word.

Some hon. Members: Oh, oh.

Mr. Fleming: Mr. Speaker, this discussion is obviously not going to be allowed to degenerate into a debate if the government can prevent it. The Prime Minister (Mr. St. Laurent) maintains his frigid silence.

Some hon. Members: Oh, oh.

Mr. Fleming: He has nothing to say to the house—

An hon. Member: You might try that some time.

Mr. Fleming: —on this motion which stands in his name. Challenged by the Leader of the Opposition (Mr. Drew), he chooses to ignore the house.

An hon. Member: Which one? Which leader of the opposition?

Mr. Fleming: Mr. Speaker, I wish I could hear all these interesting—

An hon. Member: You heard that one.

Mr. Fleming: —if somewhat ludicrous interjections, but I cannot hear them all when they all come at the same time. If hon. members will take their turns I will be glad to deal with them individually.

Mr. Speaker: I would ask hon. members to remain silent so that the hon. member who has the floor may be heard, and I ask the hon. member to address himself to the Chair.

Mr. Fleming: Mr. Speaker, it is quite obvious that some of the remarks I have been called upon to address were obviously not intended for you.

Mr. Speaker: I was afraid at one time that that might be so. May I express my gratitude now.

Mr. Fleming: With the utmost earnestness may I assure you that I will never accuse you of being dumb.

An hon. Member: Speak for yourself.

Mr. Fleming: It is not that this matter is lacking in importance but that the government just does not deign to discuss important business before the house, and they will not deign to discuss important business before the house as long as their submissive and so well disciplined followers are prepared to be submissive.

Some hon. Members: Oh, oh.

Mr. Fleming: I have a word to say now about the timing of this motion. It was introduced on the 9th of February and we have now come to it nearly three weeks later.

An hon. Member: Three weeks of wheat.

Mr. Fleming: The arrangement of the business of the house—

An hon. Member: Stand up.

Mr. Fleming: I will have something to say to you by way of substituting another word for the first word but the second one will be "up" too.

Mr. Speaker: Order. I presume the hon. member is still addressing himself to me and that when he says "you", he means the Speaker. He has certain words, which apparently are not very flattering, to address to me.

Mr. Fleming: By the same token I take it that the honourable but irregularly vocal member who offered his interjection was similarly addressing the chair.

I said that the arrangement of the business of the house is in the hands of the government. The government themselves must take responsibility for the fact that they have chosen not to bring this motion on at an earlier date. In sessions gone by we have repeatedly urged that the government should bring on early in the session the motions designed to set up committees. This motion as well as the other motions to set up committees which are going to be debated after this one, could very well have been brought up in this house some weeks ago and the committees that are to be set up could have been set up then and could now have had several weeks' work done. The fact that the government have chosen to put other business first is the responsibility of the government, and three valuable weeks' time have been lost to committees already by that government action.

Some hon. Members: Wheat.

Mr. Fleming: Yes, wheat. The government chose to bring on the wheat debate and to keep it going.

Some hon. Members: Oh, oh.

Mr. Speaker: Order.

Mr. Fleming: The government have chosen to keep it going because they called the wheat debate each day in the interval. They could just have easily called these motions some weeks ago. They knew perfectly well there was going to be a debate on wheat and they deliberately chose to call that item first. Hence the responsibility rests upon the government.

Some hon. Members: Oh, oh.

Mr. Fleming: It is extraordinary, Mr. Speaker, how vocal these Liberal members are when they are in a seated position and how silent they are when they are in any other position. They are very heavy in some respects.

Mr. McIvor: Mr. Speaker, I rise on a point of order. As a member on this side of the house may I say that I do not like to be called giddy; neither do I like it to be said that I sit here dumb. When you are right and when you know your cabinet minister is right, I think it takes more courage to keep quiet.

Mr. Fleming: Of course, Mr. Speaker, the record will show that I did not use the word "giddy". Some other words passed through my mind but the record will show that I did not use the word "giddy".

This proposal to set up an estimates committee appears in the same form as the government's motion of a year ago which they introduced on February 8, 1955. Actually they got it under way at a much earlier date in the 1955 session. We in this part of the house for years have urged the setting up of a proper committee on estimates. We have drawn attention to the fact that it is a paramount duty of the House of Commons to maintain strict control upon government expenditures. The control of the public purse must be exercised by the House of Commons. The committee of supply is an extremely old piece of parliamentary procedure. It goes back many years to a time when public expenditure was only a fraction of what it is today. The committee of supply is a clumsy, awkward piece of machinery for undertaking the function of a detailed review of proposed governmental expenditures. For this and other reasons, noting the shortcomings of the committee of supply in relation to its paramount duty, we urged the establishment by this house of a committee on estimates.

But, Mr. Speaker, the kind of committee that we are now offered—and it is the same kind of committee as the government proposed last year—is a very different kind of committee on estimates.

Mr. Reinke: You are never satisfied.

Mr. Fleming: The hon. member for Hamilton South (Mr. Reinke) must be feeling his oats these days. Either that or he finds the discipline that has been imposed upon him most objectionable because of late I have noted that he just cannot keep that tongue of his from wagging when he is in a seated position.

Mr. Reinke: Mr. Speaker—

Some hon. Members: Order.

Mr. Fleming: If the hon. member wishes to prove to the house that he can speak while standing on his feet, I suggest that he embrace the opportunity at an early date in this discussion and speak in debate in a proper way but not do it by defying the rules of the house as he has been doing so frequently lately. I suggest to the hon. member in good part that he observe the rules of the house. If he wishes to speak, I suggest that he rise and speak in debate.

Mr. Reinke: Mr. Speaker—

Some hon. Members: Order.

Mr. Fleming: Mr. Speaker, the hon. member will have his opportunity if he chooses to use it in the proper parliamentary method.

This is a different kind of committee that is proposed. As we saw last year, this is a truncated and deformed committee. It is a committee on estimates in name but it is not a committee on estimates having any real power to discharge the proper function of a committee on estimates. There should be a standing committee on estimates in this house. We were prepared to have a committee like this set up on an experimental basis and if the house should feel that it wants to have the experiment continued another year before the committee is made a standing committee, we are not going to be critical of that procedure. But we wish to see the committee given powers which are adequate to enable the committee to discharge its duties.

The committee on external affairs to which the estimates of the Department of External Affairs have been referred now for a decade, is a standing committee of the house and as such it has power to send for persons, papers and records as it chooses. There is no reason whatever why such powers should be withheld from this proposed special committee on estimates. I quite agree with what was said earlier in the discussion tonight—I do not call it debate; I call it one-sided discussion—as to the desirability of referring the estimates of other departments to other standing committees of the house. For instance, the committee on agriculture could review the estimates of the Department of Agriculture, and the committee on industrial relations could review the estimates of the Department of Labour and so on.

As the house has disposed of one amendment I wish to address myself particularly to another aspect of the powers of the committee than that which was the subject matter of the amendment introduced by my colleague the hon. member for Kamloops (Mr. Fulton). I wish to address my remarks to the matter of the business that is permitted to come before the committee on estimates.

There have been those who state that all the estimates of all departments should be referred to select committees. If that is to be done, of course more than one committee will have to be used for the purpose. There will have to be various committees among the group of standing committees of the house used for this purpose. It is not possible to have one committee carry out all the functions of reviewing the estimates of all departments. Therefore, as far as the committee on estimates is concerned, there must be a selection of the particular departments whose estimates are to come before that committee for review. In the United Kingdom the practice is for certain departments or even certain sections of departments to be selected for this purpose.

The rotation of departments is a good thing if we are not going to have the estimates of all departments reviewed in select committees. There is a great benefit to be achieved in the control of government expenditures by preserving so far as possible the element of surprise in the selection of the particular departments, sections or crown corporations whose estimates are to be reviewed in detail. There is such a thing as a department being so well prepared defensively on their estimates that they sometimes defeat the general purpose that a committee on estimates can help to serve in relation to all departments.

Now, sir, I come to the question of how the departments are to be selected. I say, in the first place, that there is much to be said for the idea of having these particular departments selected by the opposition. In the United Kingdom the practice in the public accounts committee is to allow the opposition to select the particular accounts or departments which are to be reviewed by the committee. Indeed, they have gone so far as to establish the practice of selecting a member of the opposition as chairman of the public accounts committee.

Mr. Harris: We are talking about estimates, not public accounts.

Mr. Fleming: I know, and I am referring to that as a useful guide. I will come in my remarks to the estimates committee at Westminster. I am pointing out here that the practice at Westminster in relation to the public accounts committee is a useful practice. In these committees, in the case of the public accounts committee, in the case of the estimates committee, indeed in the case of a good many other committees, it is the opposition members on those committees who do the work. Government members as a rule are

not interested in probing into expenditures or estimates. It is left to the members of the opposition to do that investigatory work. We have not reached the point here, of course, where the opposition is permitted to make the selection, even in the interests of a strict review of proposed departmental expenditures. The opposition did propose to the Prime Minister (Mr. St. Laurent) at this session that four departments should be selected for review in the committee on estimates, namely the Departments of National Defence, Trade and Commerce, Justice and Fisheries. The Department of National Defence is one that naturally suggests itself because of the extent of the expenditure in that department. The others are important departments, and at this particular time there is much to be said for taking the estimates of these departments before the committee on estimates.

But the government would not accede to that proposal, so we come to the second alternative, the one that is in effect here. It is that the government selects the particular departments whose estimates are to be referred to the committee. It is a strange thing, it is an anomalous situation indeed and one that could be found I am sure only in a House of Commons completely dominated by the government as the majority in this house has been dominated by the government, that a committee set up for the purpose of investigating and inquiring into proposed government expenditures is to have its work controlled for it by the government. Think of it, sir, it is the government's administration; it is the government's estimates that are to be reviewed by this committee. Nevertheless, if the majority in this house remains submissive to the will of the government, the government will decide what amongst its estimates this committee will be permitted to review. I say you could not have a more effective hamstringing of the work of a committee on estimates than that. I urge upon the house that this committee is not going to be given an opportunity to do the effective work that needs to be done by a committee on estimates if the government is simply to dictate to the committee in the manner now proposed the work that is to come before it.

I come to the third alternative, sir. It is the alternative that the committee itself, instead of the government, should make the selection. We have been told by the Minister of Finance (Mr. Harris), as leader of the house, in his very brief remarks on February 9 at pages 1041 and 1042 of *Hansard* when introducing this resolution, that the estimates of the Departments of Labour, National Health and Welfare, National Revenue and Post Office are to be referred to this committee. This is the government's decision, the government's selection. The committee itself is to have no opportunity to make a selection. I point out to this house that the committee on estimates at Westminster, a committee which we are told has functioned very satisfactorily in the opinion of all political parties since 1912, has the power to select the work it will do. It is not a case of dictation from the government and reference to that committee. The committee, being a standing committee, makes its own selections of the departments whose estimates it chooses to review. This preserves the freedom of the committee. It preserves the valuable element of surprise in reference to all government departments.

I imagine the Minister of Finance will be prepared to recognize the benefit of surprise in an undertaking of this kind because a great deal of his work is concerned with a similar responsibility of reviewing the estimates of other departments. We know from last year's experience in the committee that the minister whose estimates are under review has a great deal to say about the procedure to be followed in the committee. Here, we have a situation where the government is making the selections of the departments. I say that at the very least the committee should have the right to make its own decisions. I am not overlooking the fact the government is going to have a majority on this committee, but in relation to the exercise by that majority of its function in the committee I say that due regard should be had to the proposals put forward by opposition members in that committee.

Now, we are told that this committee is still in the experimental stages. It has been quite evident, sir, that there has been a division of feeling in the cabinet on this matter. There are some ministers who are prepared to be modern and bring their estimates before a proper committee on estimates. On the other hand, there are ministers here who have become so accustomed to the privileges and powers they enjoy that they look with the utmost disfavour on any proposal that their estimates should be brought under detailed review in any manner by a select committee of the house such as the committee on estimates.

The committee to which I am referring at Westminster is a committee of 36 members which divides itself into five subcommittees. Those committees carry on their detailed examination and sit extensively during the session. Indeed, sometimes they have sat while the house was not in session—even after the conclusion of the session. They make their own selection of the particular department, crown corporation, section or agency

they are going to investigate and that has been a most useful procedure.

In the interests of good government, in the interests of the control of expenditure, I say that the committee would do well to ponder these following words. I shall give the reference after I have read the words, Mr. Speaker.

> If the order of reference is not wide enough and does not go far enough I suggest to the minister that it should be widened. This is something new; it is an experiment. If in the government's mind it is a reform let us treat it as a reform and see that it is properly framed so that it operates. If it is only a concession to my hon. friends of the opposition then let us make our concession freely and willingly, not grudgingly.

And further:

> Nevertheless the control, criticism, and scrutiny of the estimates is one of the bulwarks of the opposition. The opposition should, if it is doing its duty, take every possible step to see to it that these expenditures are appropriate and in the interests of the country. May I say as one who enjoyed being in the opposition for two parliaments that I have great sympathy for the opposition, and believe it is the duty of the government and the house to give the opposition every opportunity to scrutinize these estimates.

Those references may be found on pages 953 and 954 of *Hansard*, February 8, 1955.

Those words are not the words of a member of Her Majesty's loyal opposition. Those were words uttered in the debate on the corresponding government motion a year ago by the then hon. member for Quebec South, Mr. Power. I commend his words, not only to his successor but also to the Prime Minister, and I repeat the concluding remarks of Mr. Power when he said that he believed it is the duty of the government and the house to give the opposition every opportunity to scrutinize these estimates.

Mr. Speaker, does any member of the government seriously pretend that the opposition is given every opportunity to scrutinize the estimates when the government will not give the committee power to send for persons, papers and records—I say no more on that—or to give it power to select the business that it is to do? Is it giving the opposition the opportunity that Mr. Power recognized that it ought to have in the interests of good government when the government says, "We will decide what business shall be permitted to come before that committee on estimates and by the same token we will decide what estimates shall not come before that committee on estimates"? That is the position of the government to date in this debate. It is going to select the business to come before that committee.

I made mention of the way the committee on estimates functions at Westminster. The committee there decides what estimates—

Mr. Cannon: May I ask the hon. member a question, Mr. Speaker? I should like to ask him if when the Conservatives were in power there was a committee on estimates?

Mr. Fleming: In Britain? I am sorry the hon. member has not been following the debate. It has been said by other hon. members and I said it not more than five minutes ago, that the committee on estimates has been a standing committee of the House of Commons at Westminster since 1912, and its function—

Mr. Cannon: I meant when the Conservatives were in power in this house; was there a committee on estimates?

An hon. Member: Perhaps he cannot remember that far back.

Mr. Fleming: No, there was not, but I will tell the hon. member that the expenditure in those days was just 10 per cent of what it is today. In other words, that is a 900 per cent reason why there ought now to be an effective committee on estimates.

Mr. Cannon: Is it a matter of figures or is it a matter of principle?

Mr. Fleming: I think the hon. member, if he is concerned about the matter of principle, is apparently going to have to ask himself whether he even condescends to approve of the introduction of the motion to set up even this truncated and deformed committee on estimates. These members are so brave, Mr. Speaker, until they are called upon to make a speech and I suggest—

Mr. Cannon: On a question of privilege, Mr. Speaker, I think I can stand up and make a speech as well as anybody in this house.

Mr. Fleming: Apparently the only time the hon. member chooses to make a speech is when in defiance of the rules of the house he gets up and smuggles a speech into the remarks of another hon. member.

An hon. Member: That is not so and you know it.

Mr. Fleming: I think the house would welcome a speech from the hon. member.

Mr. Speaker: May I ask the hon. member not to continue the incident by further provoking the hon. member who has interjected.

Some hon. Members: Oh, oh.

Mr. Fleming: Well, Mr. Speaker—

Mr. Speaker: Order. There seems to have been some disappointment at the remark which I just made and I should certainly like to clear up the matter. The hon. member may continue if no one wishes to speak further on the point.

Mr. Fleming: Mr. Speaker, I am sorry that I should ever give provocation to the hon. gentleman. I can assure you that such a thought was farthest from my mind.

Mr. Speaker: Order. I am sorry to have to stop the hon. member again but when we debate a certain motion our remarks must be relevant to the matter that is before the house. Now, if the hon. member is to enjoy provoking other hon. members and then criticize them because they have made an interjection, we are not being relevant to the motion that is before the house.

Mr. Fleming: Mr. Speaker, I will make only one observation if you will permit me, and that is I do not think it is any part of the practice of the house that hon. members when they consider themselves provoked should be permitted to defy the rules of the house and get up and make speeches when others are speaking.

Mr. Speaker: I fully agree with the hon. member; I fully agree with him. However, there has to be some understanding with respect to these things. The rules of the house do allow certain interruptions and unless the hon. member resumes his seat no one will have the right to interrupt him, but when the hon. member for Iles-de-la-Madeleine stood up, the hon. member resumed his seat, thereby indicating that he was allowing him to put his question.

Mr. Fleming: But the hon. member did not put a question.

An hon. Member: Yes he did.

Mr. Speaker: It is difficult to find out exactly what is going to happen until the hon. member has said something in order to discover whether he was going to ask a question or make a speech. The hon. member should continue to speak to the motion.

An hon. Member: Ten o'clock.

Mr. Fleming: Apparently it is ten o'clock, Mr. Speaker. Will you call it ten o'clock?

On motion of Mr. Fleming the debate was adjourned.

At ten o'clock the house adjourned, without question put, pursuant to standing order.

Questions

ANSWERS TO QUESTIONS

The following answers, deposited with the Clerk of the house, are printed in the official report of debates pursuant to standing order 39:

MARGARINE—RADIO BROADCAST FEBRUARY 1

Question No. 111—**Mr. Fraser (Peterborough):**

1. Did the "Trans-Canada Matinee" broadcast on February 1 deal with butter-coloured margarine?
2. If so, was this program sponsored, and by whom?
3. If not, were any organizations represented by the speakers on the broadcast?
4. What were the organizations?
5. Were those taking part in the broadcast paid?
6. If so, how much did each receive, and what organization did they represent?
7. What was the total cost of the broadcast?

Answer by: **Mr. McCann:**

The C.B.C. answers as follows:

1. Fifteen minutes of the one-hour broadcast consisted of two "points of view" on coloured margarine.
2. No.
3. The two speakers appeared as individuals. One is an officer of the Nova Scotia branch of the Canadian Association of Consumers.
4. See answer to No. 3.
5. Yes.
6. Statements of payments to individuals have been held to be not in the public interest as being detrimental to the position of the corporation in negotiating for such services for broadcasting.
7. Total payments in connection with the one-hour broadcast were $200.

C.B.C. "NEWSMAGAZINE"

Question No. 127—**Mr. Thatcher:**

1. What was the total cost to the Canadian Broadcasting Corporation of producing the feature "C.B.C. Newsmagazine", presented 7.30 p.m. to 8.00 p.m. last February 5?
2. Where did the idea for the program originate?

Answer by: **Mr. McCann:**

The C.B.C. answers as follows:

1. $9,000.
2. With the Canadian Broadcasting Corporation.

BRITISH COLUMBIA SEAPLANE FLOATS

Question No. 141—**Mr. Barnett:**

1. How many seaplane floats, or landings, in British Columbia are in operation under the jurisdiction of the Department of Transport?
2. At what points, or places, are these located?
3. How many seaplane floats, or landings, in British Columbia under the jurisdiction of the Department of Transport are under construction, (including those for which tenders have been called)?
4. At what points, or places, are these located?

Answer by: **Mr. Marler:**

1. 17.

2. Alert Bay, Co-op bay, Ganges, Kamloops, Mayne island, Mansons Landing, Minstrel island, Masset, Nelson, Ocean Falls, Patricia Bay, Powell Lake, Prince George, Prince Rupert, Queen Charlotte city, Tofino, and Vancouver.

3. 1.

4. Tahsis.

FEDERAL ASSISTANCE TO HOSPITALS

Question No. 184—**Mr. Garland:**

What response has been received from the provinces regarding the offer made by the federal government to assist the provinces in the matter of hospital insurance and laboratory and radiological diagnostic services?

Answer by: **Mr. Martin:**

The minister of health of the province of British Columbia has advised that his government is prepared to participate in a program as outlined at the recent conference. No official communications have been received from the other provinces.

FISHERIES TRAINING PROGRAM—FEDERAL ASSISTANCE

Question No. 193—**Mr. Balcom:**

What financial assistance, if any, is given by the federal government to provincial departments of fisheries towards a program of training fishermen in the repair and preventative maintenance of gasoline and diesel engines?

Answer by: **Mr. Sinclair:**

None.

CORRESPONDENCE BETWEEN PROVINCIAL PREMIERS AND THE PRIME MINISTER

CANADIAN NATIONAL TELEGRAPHS

RXMOA272 78—St Johns Nfld 27 448P—

1956 Feb 27 PM 3 34

Rt Hon Louis St Laurent QC MP
Prime Minister of Cda Ottawa

In reply to your letter of February eighteenth I have to say that in our view no particular purpose is likely to be served by the holding of a conference stop We feel that any questions in which we are interested can be taken up with you or the Minister of Finance stop We are not however opposed to the holding of the conference and if you call one we will endeavour to be there stop Kindest regards

J. R. SMALLWOOD

PREMIER'S OFFICE
Prince Edward Island

February 24, 1956.

Rt. Hon. Louis S. St. Laurent, P.C., Q.C.,
Prime Minister of Canada,
Ottawa, Canada.

My dear Prime Minister:

I acknowledge receipt of your letter of February 18th, with the enclosures therein.

If it is decided to hold another conference to discuss federal-provincial fiscal relations, I would be prepared to attend on either March 2 or March 9 if I received a few days notice of which date would be more satisfactory.

Yours sincerely,

A. W. MATHESON.

Nova Scotia favours resumption of federal provincial conference stop Prefer March ninth but if necessary can arrange March second stop Would attend myself with provincial treasurer and one or two officials only

HENRY D HICKS
Premier of Nova Scotia

THE PREMIER
Halifax

February 21, 1956.

Dear Mr. Prime Minister:

This will acknowledge receipt of your letter of February 18. After the proposals therein contained have been studied by our officials, I shall reply further.

The only comment I might make at the present time would relate to the last paragraph of page two of your letter wherein you suggested that only two premiers had requested a resumption of the conference. Perhaps I was not specific enough at our meeting in Ottawa, or did not state our views with sufficient formality, but I did intend to convey the impression at that time that Nova Scotia favored a resumption of the conference. However, in view of your recent letter, this is perhaps not so important as we shall again consider our position to see whether, in view of certain other paragraphs in this letter, we still think it would be worth while to reconvene the conference.

Yours very truly,

HENRY D. HICKS

ONTARIO

Office of The Prime Minister and
President of the Council

Toronto, Ontario,
February 22, 1956.

Dear Mr. Prime Minister:

This will acknowledge receipt of your letter of February 20, 1956 on the proposed fiscal arrangements and the attached memorandum of answers of the Minister of Finance for Canada to the questions raised by the provinces.

Certain features of the proposal referred to in your letter and in the memorandum of the Minister of Finance are improvements over the present fiscal arrangements, but it appears to us that the basic formula which uses the weighted average of the per capita tax yields of only Ontario and British Columbia—to all intents and purposes this means Ontario—does not recognize the heavy financial burdens that are imposed on this province and its municipalities in servicing a rapidly growing population and industry which produce such a large proportion of the federal government's revenue. In view of the enormous obligations and commitments that we face, we feel strongly that a formula that provides a special payment to all the provinces except Ontario fails to meet the special needs of this province. As a first step in this approach, we believe that the equalization payments should be calculated on the basis of the four provinces having the highest per capita tax yields.

We shall be glad to meet with you, your colleagues and representatives of the other provinces in a resumption of the conference preferably on March 9.

Yours very sincerely,
LESLIE M. FROST

The Right Honourable Louis S St Laurent
Prime Minister Ottawa

Will attend meeting March ninth if decided upon

Douglas L Campbell Premier Manitoba

PREMIER'S OFFICE
Saskatchewan

Regina, February 22, 1956.

The Rt. Hon. L. S. St. Laurent, Q.C.,
Prime Minister of Canada,
Ottawa, Ontario.

My Dear Prime Minister:—

Thank you for your letter of February 18 and for the attached memorandum from the Minister of Finance.

I note you are desirous of ascertaining whether or not the provinces favour meeting again in committee to discuss the proposals which you advanced in your letter of January 6. In spite of the fact that the federal government feels it would not be warranted in making any increases in its basic offer, the government of Saskatchewan would favour a federal-provincial meeting for the reasons which I outlined in my letter of January 11. We would be prepared to attend on either of the dates which you have suggested although March 9 would probably be preferable.

There are still a number of matters which were discussed at the federal-provincial conference in October regarding which the Saskatchewan government feels there should be some further discussions. This is particularly true of resource development and also assistance to the municipalities by making operative the Municipalities Improvements Assistance Act. If the majority of the provinces indicate their desire for a meeting again in committee we shall be very happy to attend. If, however, there is no widespread request for such a meeting either Mr. Fines or I will be glad to avail ourselves of your kind invitation to discuss with you or Mr. Harris those aspects of the federal government's proposal about which we are particularly concerned.

Should it be decided to reconvene the committee we would appreciate hearing from you at the earliest possible date.

Yours sincerely,
T. C. DOUGLAS.

Right Hon. L. S. St. Laurent,
Prime Minister of Canada,
Ottawa, Ont. (care TC urgent)

Re your letter February eighteenth Alberta government believes fundamental changes are necessary in federal government proposals to fulfil adequately their intended purpose stop Unless federal government prepared to consider such changes can see little value in further conference but will concur if majority desire meeting stop If conference convened would urge date to be deferred until early April as March most inconvenient for provincial treasurers engaged in piloting budgets through respective legislatures stop If deferment impossible would prefer March ninth.

ERNEST C. MANNING,
Premier of Alberta.

518P.M.

OFFICE OF THE PREMIER
BRITISH COLUMBIA

Victoria

February 21st, 1956

The Right Hon. Louis S. St. Laurent,
Prime Minister of Canada,
Ottawa, Ontario.

My dear Prime Minister:

Your letter of February 2, 1956 and the memorandum from your Minister of Finance giving answers to a number of questions raised by treasury officials are acknowledged.

If a further meeting in committee is found generally desirable, I shall be glad to attend it. If, however, no general meeting is to take place, then I must press for a conference between our respective governments, further to discuss the terms of the proposed agreement, insofar as they apply to a province like British Columbia which is not dependent upon fiscal subsidies; is experiencing an unprecedented economic growth; and requires a greater allocation from the cultivation of income tax fields to keep pace with a development which, apart from its provincial worth, will yield vast returns to the nation.

Your letter indicates that discussions with the individual provinces will be conducted by yourself and Mr. Harris on behalf of the federal government. Mr. Bonner, our attorney general and I will represent British Columbia, and on the assumption that technical staff will be present, I propose taking with me Messrs. Fisher and Gunderson, and possibly Mr. Veitch.

Our current session of the legislature will not terminate its labours until the second week in March. I would, therefore, urge that our meeting do not take place before March 9, 1956.

The memorandum from Mr. Harris is being studied and comments thereon will be made either before or at the meeting suggested.

Yours faithfully,
W. A. C. BENNETT
Premier

LOUIS S. ST. LAURENT.

HOUSE OF COMMONS

Wednesday, February 29, 1956

The house met at 2.30 p.m.

HOUSE OF COMMONS

PRESIDENT OF ITALY—CHANGE IN HOURS OF SITTING ON MARCH 5

Right Hon. L. S. St. Laurent (Prime Minister): Mr. Speaker, on Thursday last I informed the house that His Excellency the President of Italy had accepted our invitation to visit Canada during his North American tour and would be arriving in Ottawa on Saturday, March 3, to remain until Monday, March 5, and that he had consented to address both houses of parliament in this chamber on Monday, March 5, at 2.30 p.m.

In order to carry out those arrangements and to enable us to greet His Excellency in this chamber and hear his address, it will be necessary to delay the opening of the ordinary proceedings of the house until 3.30 on Monday afternoon. If I might have the consent of the house, I should like to move:

That when this house adjourns on Friday, March 2, 1956, it stand adjourned until Monday, March 5, 1956, at 3.30 o'clock in the afternoon.

Mr. Speaker: Has the Prime Minister leave to put this motion at this time?

Some hon. Members: Agreed.

Mr. Speaker: Is the motion agreed to?

Some hon. Members: Agreed.

Motion agreed to.

TRADE

ANNOUNCEMENT OF TRADE AGREEMENT WITH SOVIET UNION

Right Hon. C. D. Howe (Minister of Trade and Commerce): Mr. Speaker, I am happy to announce the conclusion of a trade agreement with the Union of Soviet Socialist Republics. The text of this agreement is being tabled for the information of hon. members. If the house agrees, I suggest that the text be printed as an appendix to *Votes and Proceedings*.

My colleague, the Secretary of State for External Affairs (Mr. Pearson), opened the way for this agreement during his visit to the U.S.S.R. last October. At that time it was agreed in exploratory talks that negotiations should take place in Ottawa. A delegation from the U.S.S.R. arrived here four weeks ago, and the negotiations have been in progress since then.

The agreement which has been reached is set forth in five documents.

The first of these documents makes provision for the exchange of most-favoured-nation treatment along lines similar to existing agreements with various other countries. It includes other provisions having to do with the conduct of trade between the two countries. It recognizes that either government may apply prohibitions or restrictions of any kind for the protection of its essential security interests. Our strategic export controls are therefore not affected. This agreement provides in addition on a reciprocal basis for the non-discriminatory treatment of merchant ships while in port. On the Canadian side, the effect of this latter provision is simply to confirm the treatment which in fact has been available all along to ships of U.S.S.R. registry.

This agreement is to continue in force for a period of three years; agreement of both countries is required for any extension. It was signed on February 29 by accredited representatives of both governments and is now in force provisionally. By its terms, it is subject to ratification within 90 days from the date of signature and within this time opportunity will be provided for a debate in parliament. A resolution of approval will be introduced for this purpose.

The second document is a letter from the Canadian government reserving the right to establish values for ordinary and special import duty on any Russian product that might enter Canada in such increased quantities as to cause serious injury to domestic producers. In determining such values, the prices of similar goods imported into Canada from third countries are to be taken into account. This procedure is intended to deal with situations which might be created if Russian goods were to be sold in Canada at very low prices, even if they are not proven to be lower than their domestic values in the U.S.S.R.

The third document is a letter from the government of the U.S.S.R. acknowledging the Canadian letter on customs valuation.

Trade Agreement with Russia

The fourth of the five documents forming the agreement is a letter by which the government of the U.S.S.R. guarantees to purchase and take delivery from Canada, during the three years of the agreement, a total of between 1,200,000 and 1,500,000 tons of wheat, in annual lots of between 400,000 and 500,000 tons. The exact amounts to be purchased in the second and third years, within these annual amounts, will be determined by the government of the U.S.S.R., taking into account the volume of Soviet goods sold to Canada. The total over the three years, however, will amount to not less than 1,200,000 tons and the amount in any individual year to not less than 400,000 tons. The Russian purchases of wheat are to be made at the prices and on the terms at which the Canadian wheat board is making sales to its major customers at such times as the Soviet purchases take place.

The fifth document is a letter from the Canadian government, acknowledging the letter from the government of the U.S.S.R. on wheat.

Mr. Donald M. Fleming (Eglinton): Mr. Speaker, may I ask the minister what is the best estimate of the dollar value of the import and export trade that is expected under the terms of this pact?

Mr. Howe (Port Arthur): Mr. Speaker, I said once before that I had lent my crystal ball. I am afraid I cannot give the hon. member an answer.

Mr. Fleming: Surely the department has some idea. None at all?

Mr. Drew: The minister is not usually so reluctant to make guesses.

[*Later:*]

On the orders of the day:

Mr. J. G. Diefenbaker (Prince Albert): Mr. Speaker, may I ask a question arising out of the agreements with the U.S.S.R.? I have not seen the text. Would the minister say what the prospects are in connection with the provision for the sales of wheat therein? Will it be of low-grade wheat now glutting the elevators, and on what basis are the prices of wheat determined under these particular agreements?

Mr. Howe (Port Arthur): Mr. Speaker, may I say at once that it is a misconception to suggest that low-grade wheat is clogging our elevators. As a matter of fact, we have to withdraw offers of low-grade wheat; it is all sold. The wheat that the U.S.S.R. is to take represents a fair distribution over our milling grades of wheat. The prices will be the prices of the day on which the wheat is bought. All wheat is offered at one price. The offer will be at the same prices and on the same terms as are made to Britain, Germany, Japan and our other principal customers.

STARRED QUESTIONS

R.C.A.F. PERSONNEL—FIVE DAY WEEK

Question No. 19—**Mr. Knowles:**

1. Have cleaners, messmen, furnacemen and employees in similar categories working on Royal Canadian Air Force stations across Canada yet been put on the five day week?
2. If not, at what stations has the five day week not yet been put into effect for such employees?
3. Is consideration being given to putting all such employees, on all Royal Canadian Air Force stations in Canada, on the five day week? If so, when will this take place?

Mr. Hellyer: Mr. Speaker, the answer to part 1 of this question is that when the government implemented the five day week for operating staffs, certain categories of employees were excluded. Among the excluded categories are staffs engaged in providing food and housekeeping service to civil servants, military personnel, and transient guests. Employees of the R.C.A.F. in the classification messmen have, accordingly, not been placed on the five day week. Some R.C.A.F. employees in the classification of cleaner and helper provide service to living accommodation.

Because it is considered inadvisable to have employees in the same classification at the same location working varying work weeks, the standard 44-hour work week, with one minor exception, has been retained for cleaners and helpers employed by the R.C.A.F. Heating staffs employed by the R.C.A.F. work a standard five day 40-hour week at locations designated by the government, in accordance with the announced policy. In some instances, it has not yet been possible to obtain sufficient qualified staff to implement fully the five day week for heating staffs. Where this is the case, overtime compensation is given for hours worked in excess of 40 per week.

The answer to part 2 of the question is that the five day week is not in effect for such employees at the following R.C.A.F. locations: Goose Bay, Newfoundland; Debert and Greenwood, Nova Scotia; Lac St. Denis, Mont Apica, Parent, Senneterre, Moisie, St. Sylvestre and Rimouski, province of Quebec; Edgar, Foymount, Angus, Fingal, Collins Bay and Mountain View, Ontario; Gimli and Macdonald, Manitoba; Claresholm, Penhold and Cold Lake, Alberta; Fort Nelson, British Columbia; and White Horse, Snag, Teslin, Smith River, Aishihik, Watson Lake in the Yukon Territory.

As to part 3, a fairly full statement on policy in respect of these categories of

employment was given to the house by the then minister of finance, Mr. Abbott, on February 16, 1954, as appears at page 2122 of *Hansard* of that year. Government policy on the hours of work for federal employees is periodically reviewed and when changes are to be made they will be made known at that time.

MAIL DELIVERIES, ST. JAMES, MAN.

Question No. 23—**Mr. Churchill:**

What action is being taken to provide in the industrial area of St. James, Manitoba: (a) twice-daily mail deliveries; (b) special delivery and parcel post services; (c) additional drop boxes; (d) facilities for outgoing mail at the St. James airport?

Mr. Lapointe: Mr. Speaker, this question deals with mail delivery in the industrial area of St. James, Manitoba. In answer to part (a), I wish to say to my hon. friend that a survey is under way at the present time to determine what delivery can be made. As to parts (b) and (c) of the question, any decision will depend upon the result of this survey.

As to part (d), there is already a receptacle for outgoing mail in the waiting room of the airport and a postage stamp vending machine is being installed. I am informed that existing airmail schedules do not warrant postal operation at the airport during day time or evening hours at the present time.

MEMBERS OF PARLIAMENT—GRIEVANCES OF GOVERNMENT EMPLOYEES

Question No. 26—**Mr. Knowles:**

1. Are there any restrictions on the right of government employees to bring any grievances they may have to the attention of members of parliament?
2. If so, what is the nature of such restrictions, and what groups or categories of employees are covered thereby?
3. If there are any such restrictions, on what authority are they based?

Mr. Pinard: My answer, which will apply to the three parts of the question, is as follows. There may be administrative rules in particular departments, made under the authority of the minister, to manage the department, which indicate certain procedures to facilitate dealing with grievances. But I know of no statute or regulation of general application that would restrict the right of any government employee to bring a grievance to the attention of a member of parliament.

INCOME TAX REFUNDS

Question No. 27—**Mr. Knowles:**

1. Has consideration been given to making it possible for a person who has been unemployed for 60 or 90 days to obtain, without further delay, a refund of income tax deductions made while he was employed?
2. If so, what is the result of such consideration?
3. If not, will consideration now be given thereto?

Mr. Harris: Mr. Speaker, the government has in the past been asked to consider the proposal which is referred to by the question, in common with a number of other applications for earlier refunds of income tax where persons may during the course of the year marry and presumably not have a taxable income for the balance of the year. Up to the present time we have always felt the administrative difficulties of making the refunds earlier than the end of the year are too great to consider. In addition they are somewhat costly and we would prefer to continue the present practice.

REQUEST FOR FEDERAL PENITENTIARY, DRUMHELLER, ALTA.

Question No. 29—**Mr. Johnston (Bow River):**

1. Has a brief been received by the Minister of Public Works from the city of Drumheller, Alberta, requesting the erection of a federal penitentiary in that city?
2. If so, what action, if any, is being taken by the government in this connection?

Mr. Winters: The answer to the first part is no, and the answer to the second part is that it is answered by the first.

QUESTIONS PASSED AS ORDERS FOR RETURNS

ICE-BREAKING—GULF OF ST. LAWRENCE

Question No. 61—**Mr. Bell:**

1. When did ice-breaking operations begin and cease at the opening and closing of the season in the gulf of St. Lawrence each year for the last ten years?
2. What was the attempted open point on the St. Lawrence each year?
3. How many days were the vessels on duty on this work during each of the above mentioned years, and what was the cost of such operations?
4. Have any non-government ships been damaged by ice due to late departure or early arrival during the last ten years? If so, what vessels?
5. Have any surveys been conducted with respect to the opening of the St. Lawrence all winter? If so, with what results?

FLIGHTS BY DEPARTMENT OF TRANSPORT AIRCRAFT

Question No. 128—**Mr. Hamilton (Notre Dame de Grace):**

1. Between the dates of November 26 and November 30, 1953, and November 25 and November 29, 1954, were any flights made by Department of Transport aircraft of a type suitable for carrying three or more passengers in addition to the crew of the aircraft?
2. If so, for each such flight: (a) between what points was it made; (b) for what purpose; (c) how many passengers were carried?
3. If passengers were carried other than officials or employees of the Department of Transport, what were the names of such passengers?

Motions for Papers

POST OFFICE ADVERTISING

Question No. 132—**Mr. Hamilton (Notre Dame de Grace):**

1. For the calendar years ending December 31, 1954 and December 31, 1955, how much was spent by the Post Office Department for the purchase of advertising in (a) newspapers; (b) magazines, programs and periodical publications; (c) radio?
2. In the case of magazines, programs and periodical publications (a) what was the name of each such publication; (b) for each publication, and for each year as designated above, how much was paid?

PENSIONS—MEMBERS OF PARLIAMENT

Question No. 168—**Mr. Gagnon:**

1. Do any members of parliament receive pensions, either military or civil, from the government? If so, how many?
2. Who are they and what amount of pension does each receive per year?

DIPLOMATIC MISSIONS—PERSONNEL

Question No. 175—**Mr. Dufresne:**

What are the names, duties, places of origin, and present nationalities of all the employees attached to the Canadian diplomatic missions throughout the world?

REFUNDS OF WARTIME COMPULSORY SAVINGS

Question No. 202—**Mr. Knowles:**

1. What is the total amount of wartime compulsory savings refunds not yet returned to those to whom such refunds belong?
2. What is the total number of persons to whom such refunds have not yet been made?
3. What steps has the government taken to get these refunds to the persons to whom they belong?

PERSONAL INCOME TAX REFUNDS

Question No. 203—**Mr. Knowles:**

1. What is the total amount of personal income tax refunds, to and including 1954 or the latest year for which figures are available, not yet returned to those to whom such refunds belong?
2. What is the total number of persons to whom such refunds have not yet been made?
3. What steps has the government taken to get these refunds to the persons to whom they belong?

MOTIONS FOR PAPERS

FRASER RIVER FLOOD, 1948

Motion No. 28—**Mr. McCullough (Moose Mountain):**

For a copy of all correspondence, telegrams and other documents exchanged between the government of British Columbia and the federal government, regarding the request for assistance in respect to the Fraser river valley flood in 1948.

Mr. St. Laurent (Quebec East): The usual notification will be given to the government of British Columbia before the order is complied with.

Mr. Speaker: Adopted, subject to the remarks made by the Prime Minister.

[Mr. Hamilton (Notre Dame de Grace).]

PREMIUM IRON ORES—U.S. TAX APPEAL

Motion No. 30—**Mr. Knowles:**

For a copy of any telegram or other communication sent by the Minister of National Revenue, or by his department, to any United States treasury official with reference to a tax appeal against Premium Iron Ores, dated at any time since October 1, 1955.

Mr. McCann: There is no objection to this order passing, Mr. Speaker, subject to the usual reservation with reference to the consent of the other government concerned.

Mr. Speaker: Is it the pleasure of the house to adopt this motion, subject to the remarks made by the Minister of National Revenue?

Some hon. Members: Agreed.

CANADIAN BROADCASTING CORPORATION

ALLEGED CRITICISM OF PUBLIC AFFAIRS TELEVISION BROADCAST

On the orders of the day:

Mr. Donald M. Fleming (Eglinton): May I ask the Minister of National Revenue if he has received or is aware of any complaint in regard to a C.B.C. public affairs television broadcast of last Sunday evening, conveying criticism based on the allegation that the program was loaded against the government and against the Liberal party? If so, what action, if any, has he taken in the light of the complaints or criticism?

Hon. J. J. McCann (Minister of National Revenue): The matter has not been brought to my attention.

Mr. Fleming: May I ask the minister if he will make an inquiry of the C.B.C. and report to the house?

Mr. McCann: I imagine, Mr. Speaker, it will be the other way around. If there has been criticism or objection, the C.B.C. will bring it to my attention.

NATIONAL DEFENCE

AUSTRALIAN ATOMIC TESTS—INQUIRY AS TO CANADIAN REPRESENTATION

On the orders of the day:

Mr. P. T. Hellyer (Parliamentary Assistant to the Minister of National Defence): Last Wednesday, as reported at page 1428 of *Hansard*, the hon. member for Assiniboia asked the Minister of National Defence a question about Canadian representation at the Australian atomic tests.

Further to the minister's reply at that time I can now advise the house that, in agreement with the United Kingdom and the Commonwealth of Australia, Canada is to participate in the series of atomic trials to be

held in Australia in late 1956. Members of the Canadian services and the defence research board will assist in the trials and items of Canadian service equipment will be exposed to the effects of the weapons. Sixteen officers of the three Canadian services and 11 officers of the defence research board will take part in these trials.

RADAR INSTALLATIONS INDICATED ON RESTAURANT PLACE MATS

On the orders of the day:

Mr. A. M. Nicholson (Mackenzie): I should like to direct a question to the parliamentary assistant to the Minister of National Defence. Has the hon. member read the story in last night's *Citizen* that Murray's restaurant had place mats which indicated the position of the distant early warning radar installations in northern Canada? Has there been a leak in security regulations which enabled the advertising agency and Murray's to publicize this information?

Mr. P. T. Hellyer (Parliamentary Assistant to the Minister of National Defence): Mr. Speaker, I thank the hon. member for having given me notice of his intention to ask this question. While I have not lunched at Murray's recently, I understand the officials of the department have noticed the place mat which does not purport to be an official map, and there is nothing about it which has not already been made public officially.

Mr. Nicholson: May I ask the parliamentary assistant a supplementary question? Can he indicate whether Murray's have withdrawn those place mats?

Mr. Hellyer: I understand that the head office of Murray's has recalled supplies of these place mats from their unit in the Lord Elgin hotel, and from Murray's restaurant on Queen street.

SHIPPING

SINKING OF DEPARTMENTAL VESSEL "HILUNGA"

On the orders of the day:

Mr. Howard C. Green (Vancouver-Quadra): Mr. Speaker, may I direct a question to the Minister of Public Works? Who authorized the trip of the ship *Hilunga* to the Queen Charlotte islands on the occasion when she foundered, and has any disciplinary action been taken in respect of this trip?

Hon. Robert H. Winters (Minister of Public Works): Mr. Speaker, the ship was ordered out on the authority of the district engineer. The captain has been suspended pending the results of an investigation.

PUBLIC SERVICE

INQUIRY AS TO METHOD OF PROCESSING GRIEVANCES

On the orders of the day:

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, may I direct a question to the Secretary of State to clarify one point in connection with the answer he gave a few minutes ago to a starred question standing in my name? Is it clear that if there are any departmental directives telling government employees that they must process their grievances only in certain ways, that does not prohibit them from discussing their grievances with members of parliament?

Hon. Roch Pinard (Secretary of State): I agree with that. Whether there are any such administrative rules which would preclude employees from bringing their grievances to members of parliament, I must say I know of none.

GRAIN

INQUIRY AS TO ACTION TO RELIEVE SHORTAGE OF BOX CARS

On the orders of the day:

Mr. H. R. Argue (Assiniboia): Mr. Speaker, I should like to direct a question to the Minister of Trade and Commerce. Has the minister learned of the recent statement of the Saskatchewan wheat pool that a severe box car shortage has made deep cuts into current farm income? Are any steps being taken to make box cars available so that outstanding orders for box cars may be filled at an early date?

Right Hon. C. D. Howe (Minister of Trade and Commerce): I do not know who is to be the judge of the number of box cars that would be satisfactory. It is my understanding that the difficulties during the past month or so have been due to a shortage of motive power to clear sidings of snow and to do all of the work that has to be done under severe winter weather conditions. The numbers of box cars engaged in the west have been rising steadily since last autumn. Whether there are sufficient box cars in western Canada is, I suppose, a matter of opinion. The Saskatchewan wheat pool has given its opinion; I am giving mine.

ADMINISTRATION OF JUSTICE

SASKATCHEWAN—CARRYING OUT OF DEATH PENALTY

On the orders of the day:

Mr. A. M. Nicholson (Mackenzie): Mr. Speaker, I should like to direct a question to

the Minister of Justice. Has the minister had a chance to read the story by Charles Woodsworth in last night's Toronto *Star* suggesting that Saskatchewan has requested that they be relieved of performing the death sentence for murder cases in Saskatchewan from now on? Has the minister any comment?

Hon. Stuart S. Garson (Minister of Justice): Mr. Speaker, I have had a chance to read the article in question, and my comment would be that since confederation the responsibility for the custody of a prisoner sentenced to death and the responsibility for the actual carrying out of the death sentence has been that of the provinces. During this long period of time they never questioned this responsibility and have carried it out.

It seems to me that if any change in this responsibility were to be considered at all it should not be considered until we shall have received the report of the parliamentary committee on capital and corporal punishment and lotteries, the preparation of which is shortly to be under way. Until we shall have received that report we should not consider requests of this nature, and that is the position I took in the letter of reply which I wrote to Hon. Mr. Sturdy.

Mr. M. J. Coldwell (Rosetown-Biggar): Mr. Speaker, may I ask a supplementary question? In view of the fact that the Saskatchewan government has turned its jails into corrective institutions where young men are incarcerated, does the minister think some arrangement could be made between the provinces and his department so that executions may be removed from these corrective institutions to places where more hardened criminals are incarcerated if we are going to continue capital punishment at all?

Mr. Garson: Mr. Speaker, any arrangements that we make with any one province, I think we would have to be prepared to provide for others. No one has suggested until the present time that the manner in which the province carries out death sentences is other than a provincial responsibility. I would be quite open to suggestions as to any means by which we might be of help to the carrying out of death sentences by this province. But we could not consider assuming this responsibility ourselves or even consider a consideration of assuming it until we receive the report of this committee. Otherwise we would be anticipating the report of the committee in a manner which would be most inappropriate.

[Mr. Nicholson.]

CIVIL DEFENCE

MONTREAL—INQUIRY AS TO ADDITIONAL EQUIPMENT

On the orders of the day:

Mr. W. M. Hamilton (Notre Dame de Grace): Mr. Speaker, could the Minister of National Health and Welfare inform the house if the federal civilian defence organization plans to make available to the city of Montreal any additional trucks or equipment under the same terms as the two camouflaged vehicles located yesterday?

Hon. Paul Martin (Minister of National Health and Welfare): Mr. Speaker, I have always understood that the hon. gentleman was imaginative but I never realized he was so inquisitive. I can only say in answer to his question that that matter is now receiving my full attention.

[*Later:*]

Mr. John B. Hamilton (York West): I should like to direct a question to the Minister of National Health and Welfare, supplementary to the question asked by the hon. member for Notre Dame de Grace. Will the minister confer with the Minister of Justice as to whether legal action should be taken against the city of Montreal in connection with the question asked by the hon. member for Notre Dame de Grace?

Mr. Martin: There are some occasions when I think a co-operative effort is calculated to achieve better results. I had the privilege of discussing this matter the other day in my office with the mayor of Montreal, and I think my method will prove more effective than the suggestion of the hon. gentleman.

ST. LAWRENCE SEAWAY

LAKE LEVELS—DEEPENING OF WELLAND CANAL

On the orders of the day:

Mr. J. W. Murphy (Lambton West): Mr. Speaker, I wonder if I might ask two questions, both of which, I think, should be directed to the Secretary of State for External Affairs since they concern lake levels. Perhaps the minister could take them as notice, because I imagine he does not have the information at hand; in fact, I am quite sure he would not have it.

Is the Welland canal kept open after navigation closes in the fall in order to take water from the great lakes? The second question is: if in the St. Lawrence seaway project the Welland canal is to be deepened, how much extra water would flow through that canal?

Hon. L. B. Pearson (Secretary of State for External Affairs): The hon. member is quite

right, Mr. Speaker; I do not have that information at the moment but I shall take his questions as notice.

UNEMPLOYMENT INSURANCE

REPORTED TIE-UP IN CAMPBELLTON AND EDMUNDSTON OFFICES

On the orders of the day:

Hon. Milton F. Gregg (Minister of Labour): I would like to give the further information promised yesterday to the hon. member for Restigouche-Madawaska (Mr. Van Horne).

The regional office for the Atlantic provinces is at Moncton. All claims from the two offices of Campbellton and Edmundston, as from others, have to pass through the regional office for processing and then return to the local offices for payment. Therefore the number of claims actually under process at the regional office varies from day to day.

Only by physical count is it possible to get a picture of the status of the claims flowing through the regional office on any given day. In view of yesterday's question, I asked the commission if they would conduct a detailed count and report on the status of all claims at the Moncton regional office, originating from the local offices of Campbellton and Edmundston, as at the close of business yesterday.

Also the points at issue are not only the number of claims but rather the question of undue delay or the length of time that they have been under process since the date the claims were filed at the local office.

With that explanation, I now give the results of last night's work at Moncton regional office. A physical count of all claims originating in the above two offices and pending at the Moncton regional office was made last evening, February 28. The following is the breakdown:

Campbellton, N.B., office: 168 regular claims. Of the 168 regular claims, 118 are less than one week old. I interject here that by "old" I mean the length of time since the claim was first filed at the local office. 36 are less than two weeks old; 8 are less than three weeks old; 6 are three weeks old or more.

Edmundston, N.B., office: 128 regular claims. Of the 128 regular claims, 91 are less than a week old; 27 are less than two weeks old; 7 are less than three weeks old; 3 are three weeks old or more.

Delays in regular claims are for various reasons, some beyond the commission's control, such as: (1) Awaiting credits for contributions payable in respect of service in the armed forces; (2) insurance books lost or mislaid by claimants, requiring reference to previous employers for particulars of contributions; (3) awaiting transfer of contribution records from other regions in respect of claimants who worked in other than the Atlantic region and have since moved there.

The figures would not be complete without this reference. It will be recalled that in my statement in the house on 25th January I said there would be some delay in the computation of certain claims to be reconsidered under the reinterpretation of 119 (b) of the act, because of the heavy loads that the offices would have to encounter.

Therefore, I would like also to report on those that are at the regional office, Moncton, in this category, as of last night.

Campbellton, N.B.: Of the 70 claims for recomputation, 41 are less than two weeks old; 29 are two weeks or more old.

Edmundston, N. B.: Of the 240 claims for recomputation, 231 are less than two weeks old; 9 are two weeks old or more.

I apologize for taking so much time of the house on this matter, but answering this question gives me a chance, which I welcome, of paying tribute to the good work of the commission staff at the regional office in Moncton and at the local offices at Campbellton and Edmundston, that has made such a very satisfactory picture possible.

Mr. Van Horne: I would like the Minister of Labour to give the figures for ten days and 20 days ago.

Mr. Gregg: I made it perfectly clear that with the flow in and the flow out of claims, unless the whole machinery is stopped and the entire staff is put on it to make an analysis and count all those claims that are going through, it is impossible to do it except as it was done last night. The variations within the week or ten days referred to by my hon. friend would not be very great.

Mr. Van Horne: I wish to ask a supplementary question of the Minister of Labour. I presume—

Some hon. Members: Order.

Some hon. Members: Question.

Mr. Van Horne: Is this the purpose for the hiring of approximately 38 extra persons recently by the Edmundston regional office servicing the Campbellton and Edmundston offices?

Mr. Gregg: I presume that the purpose is to take care of the extra work arising from the winter. During the winter months all our offices have to take on extra casual personnel to help to cope with the situation in the wintertime.

Inquiries of the Ministry

HEALTH AND WELFARE

REQUEST FOR APPOINTMENT OF COMMITTEE TO REVIEW OLD AGE LEGISLATION

On the orders of the day:

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, may I direct a question to the Minister of National Health and Welfare? Will the government consider appointing a special committee to review the whole subject of our old age legislation in line with the recommendation made in the excellent report on our older citizens released last week by the welfare council of greater Winnipeg?

Hon. Paul Martin (Minister of National Health and Welfare): My hon. friend asks me if we will consider setting up a committee. I do not think there is any need for it in the light of the report to which my hon. friend directs my attention. But may I ask him if he has seen the article in a recent United States publication that urged the United States to follow the old age security program adopted by this parliament three years ago?

Mr. Knowles: I suppose the proper thing for me to say is that I shall take notice of that question. However, I suggest that this government—

Some hon. Members: Order.

Mr. Knowles: I suggest that this government—

Mr. Speaker: Order.

An hon. Member: You know the rules.

Mr. Knowles: I was asked a question.

Mr. Speaker: I was not intervening in order to interrupt the hon. member. I was just trying to ask that those who were making a noise refrain from doing so. I was going to allow the hon. member to make his comment, because I realize that when a minister, in replying to a question, makes a comment which may be debated, it may call, on the part of the member who receives the answer, for a debatable retort.

Mr. Knowles: My reply is that I am glad to note that in the United States there is recognition of the excellent principle upon which our old age security legislation is based, but I suggest that, following the United States custom, there is room for a much larger amount of old age security pension to be paid in this country.

[Mr. Gregg.]

COMMITTEE ON ESTIMATES

MOTION TO APPOINT SELECT COMMITTEE

The house resumed, from Tuesday, February 28, consideration of the motion of Mr. St. Laurent (Quebec East):

That a select committee to be designated be appointed to consider such of the estimates as may be referred to it and to report from time to time its findings and recommendations to the house.

Mr. Donald M. Fleming (Eglinton): Mr. Speaker, last night just prior to the adjournment, following your second last intervention, as recorded on page 1655 of *Hansard*, I commented to you in reference to the earlier intervention of the hon. member for Iles-de-la-Madeleine (Mr. Cannon) that the hon. member did not put a question. Then *Hansard* records that an hon. member said, "Yes, he did."

I should like to make this comment. It is quite true that the hon. member for Iles-de-la-Madeleine asked a question and it is indeed true that he asked three questions. I accepted his questions and endeavoured to answer them. But what I was referring to at that time was the fact that after I had answered his three questions he then insisted on getting up and making a statement. That was what I was referring to in this statement that I made, which another hon. member has apparently thought was alluding to the earlier questions of the hon. member for Iles-de-la-Madeleine.

Sir, prior to the intervention of the hon. member for Iles-de-la-Madeleine (Mr. Cannon) I was, as *Hansard* records at the bottom of the page 1654, the first column, making this singularly unprovocative remark:

I made mention of the way the committee on estimates functions at Westminster. The committee there decides what estimates—

Then there is a dash and then the intervention of the hon. gentleman began. I did not return to the thread of my comment. I wish to deal with the practice at Westminster in reference to the selection of work on the part of the committee on estimates. The committee on estimates at Westminster decides what work that committee will take in hand in review of estimates. I am informed that in the first instance they usually refer that subject to a subcommittee of the main committee. I suppose in our practice here we would call it the steering committee. That subcommittee consists of the chairman, the chairmen of all five subcommittees and also two or three senior members of the committee on estimates. The opposition, through their representatives on that subcommittee or steering committee, has full scope in the choice of the estimates to be examined.

The recommendations of the subcommittee or steering committee are then submitted to the whole committee and a decision is taken there in the light of the recommendations of the subcommittee. So you will see there is no attempt on the part of the government to select, before the committee even meets or is set up, the work that the committee is to undertake. The committee makes its own decision as to what estimates it is to consider. The whole estimates of a department may be referred to one of the five subcommittees for examination or the estimates of several departments, but frequently only certain items of the estimates of one or more departments under which money is provided for certain purposes are referred. The complete freedom of the estimates committee to select the work that it is to take up is emphasized at every stage of the procedure.

We have been told that this is the continuation of an experiment. We had one year's experience with the experiment. I suggest that if the experiment is to continue we ought to make it a useful experiment. Last year we experimented with a system under which the opposition was given no voice whatever in the selection of the departments. The government itself, before the committee was permitted to function, made the selection of the departments. If we are going to experiment further, then let us extend the scope of the experiment. Let us experiment this year with a committee that has a free hand to select its own business in review of the estimates.

Having experimented last year with a committee that was hamstrung and fettered, let us experiment this year with an unfettered committee and derive the benefit of the experience from it. I propose therefore to move, seconded by the hon. member for Vancouver-Quadra (Mr. Green), the following amendment:

> That the motion be amended by deleting therefrom the words "as may be referred to it" and substituting therefor the following: "as may seem fit to the committee."

I point out to the house that if the amendment is adopted it will bring the powers and procedures of the committee in this regard completely into line with the well established practice at Westminster, a practice that has now been in effect for 44 years and is working to the satisfaction of all political parties there.

Let me say in conclusion, Mr. Speaker, that there was a time when the practice at Westminster with regard to the committee on estimates was apparently approved by the government here. As found at page 937 of *Hansard* for February 8, 1955, the Minister of Finance (Mr. Harris), in introducing the resolution, said this:

> Of course, in the years since the world war there has been repeated discussion on the subject and in each of the committees on procedure which have been set up we have had extensive talks as to the method by which to bring about a better way of dealing with the estimates.

Then, note these words:

> If hon. members are interested, they would have noticed that the 1947 committee recommended that we adopt in general terms the system obtaining in the United Kingdom.

I take it that the Minister of Finance would not have made that observation on the report of the 1947 committee of this house on procedure were he not putting that reference forward with approval. I say to all members of the house that if they wish to pay attention to the recommendation of the 1947 committee of this house on procedure they will proceed to bring the powers and procedures of the proposed committee on estimates into line with those prevailing at Westminster. They can do that in this respect by adopting the present amendment. If they do not adopt the present amendment they are simply proposing to continue a fettered and hamstrung committee. Therefore, Mr. Speaker, I move the amendment.

Mr. Speaker: Would the hon. member for Eglinton be good enough to send me a note as to the reference in which he found the wording of the United Kingdom order of reference?

Mr. Fleming: I was giving a paraphrase. I was not reading directly. I was giving a paraphrase from a source from which I have had full instructions on the procedure prevailing at Westminster. I can tell you, Mr. Speaker, if you wish, that it is from an hon. member of that house of long experience.

Mr. Speaker: The reason I ask is that I have doubts that the amendment is in order. Those doubts might be removed if I were to find the order of reference and explanations as to how it has come about in the United Kingdom. However, I will conduct my own research.

Mr. Rene N. Jutras (Provencher): Mr. Speaker, as one who was a member of the committee on estimates last year from the beginning and who was present at almost all hearings, and consequently as one of those who had to listen to the same diatribe that we have had to listen to from the hon. member for Eglinton (Mr. Fleming) and the hon. member for Kamloops (Mr. Fulton), I think I should ask the indulgence of the house for a few minutes today. As we all

know, when the committee was set up last year the official opposition put up a barrage of technical amendments and adopted all kinds of tactics to delay the proceedings of the committee and to prevent the committee from getting to work on the estimates of the departments.

Mr. Fleming: Nonsense.

Mr. Jutras: The hon. member for Eglinton is not in a position to speak on that particular point because, although he was a member originally, he remained a member for a very short while.

Mr. Fleming: It is all on record.

Mr. Jutras: But I admit that his colleague, the hon. member for Kamloops, certainly tried to emulate him in this respect. As every member who was on the committee for any length of time knows, as soon as the hon. member for Kamloops was taken off the committee the committee got to work and from that day on we did very useful work.

An hon. Member: Whitewashing the government.

Mr. Jutras: The record speaks for itself. Anybody can look at the record. If you open *Hansard* for last year you will find that members from all quarters of the house, members of the official opposition as well as members of the C.C.F. and Social Credit groups and members on the government side, agreed that the committee had served a very useful purpose last year. Some did have certain qualifications. That is understandable coming from the opposition, but after some weeks of sitting, after we actually got down to work on the estimates, it is apparent from the record that the committee served a very useful purpose to the house and to the members themselves.

The only trouble with the hon. member for Kamloops and the hon. member for Eglinton is that when they came to the committee they attempted to do everything else but consider the estimates. This committee is a committee on estimates. The purpose of the committee is to consider the estimates of the department which is referred to the committee. The attempt made from the very beginning was to try to do something altogether outside of that jurisdiction. Then even when the time came to consider the estimates, the effort of the hon. member for Kamloops was to bring someone from outside to do the questioning for him.

Mr. Fleming: To get a witness before the committee.

Mr. Jutras: We all know the hon. member for Kamloops. He is an intelligent gentleman. He is a lawyer and even a Rhodes scholar. Yesterday he complained that he could not come to grips with the estimates. If he had applied himself in any way to coming to grips with the estimates, I am sure that he could have done so without any difficulty. However, as I say, he was in a frame of mind where he was so imbued with the idea of having somebody from outside or of doing something else apart from considering the estimates that, as he put it, he found it extremely frustrating indeed to be on that committee. I just want to remind him that if he was frustrated, he has no idea how annoyed the rest of the members of the committee were when we had to put up with these delaying tactics in sitting after sitting of the committee.

In the discussion yesterday and today the point made by both hon. members of the official opposition is twofold, as I understand it. First of all, they complain of the inability to send for persons, papers and records. I see that Mr. Speaker is looking at me. We had an amendment with respect to that matter and I am prevented from referring to it. I will certainly refrain from doing so, Mr. Speaker, although I should very much like to refer to it.

We now come to the next point. The next point raised by both hon. gentlemen—and it was raised today by the hon. member for Eglinton who indeed moves an amendment to that effect—is this. If I may I should like to read from the speech of the hon. member for Kamloops. As reported at pages 1639 of *Hansard* he said:

> The second obvious limitation is that the committee will have before it for consideration only such estimates as the government by the control of its majority in the house may refer to it.

That in effect is the complaint of the hon. member for Eglinton, if I understood him correctly. Although I have not the wording of the amendment before me, the amendment is in effect trying to correct that situation. What is the complaint in this regard? The complaint of the opposition is that the matter of referring the departments to the committee is left to parliament. That is what it is. He says that it has for consideration "only such estimates as the government by the control of its large majority in the house may refer to it". In other words—and this is strange indeed—here is the official opposition complaining because it is left within the authority of parliament to decide what will come to the committee. They are arguing and then moving an amendment with a view to taking this authority out of parliament and placing it in a committee of the house. That suggestion seems strange to me, coming from the official opposition.

Mr. Fleming: Why do you not be realistic about it?

Mr. Jutras: It is not a question of being realistic. All matters are referred to the committee by parliament, not by the government. Now the complaint is that parliament is dominated by the government members. Of course that is so and it always will be the situation no matter who is in power. The majority in parliament decides but it is parliament that decides. It is parliament that decides what departments will come before the committee. Now we have this odd situation of finding the official opposition complaining that this authority should be removed from parliament because parliament is not competent to decide what departments should go before the committee.

Mr. Fleming: How ridiculous can you become?

Mr. Jutras: That is a complete reversal of the stand of the opposition, if I may say so.

Extensive reference has been made to the United Kingdom committee on estimates. The one thing—and it is a most important thing—that all hon. members who referred to it failed to point out is that in the United Kingdom, as we know, the estimates have become so extensive, voluminous and large that members of parliament have given up the task of trying to study every one of the estimates in their parliament. As a compromise they have this estimates committee and all they attempt to do is to make a spot check, so to speak, on the estimates. Hence of necessity they are obliged to take certain items or certain departments in order to make a study of those particular items. But there is never any attempt to go through all the estimates. Here in this country we are still at the stage where the amount of our estimates and the number of our estimates are such that it is still physically possible for parliament and for a committee to make a detailed study of every item of our estimates. That is what we were doing last year with all the departments which came before our committee. We made an extensive and detailed study of every department that came before us.

I did not hear the opposition suggest that we should adopt the United Kingdom practice. I do not think we have yet reached that stage. I do not say that we may not reach it before very long. I recall, for instance, that a few years ago we streamlined our estimates. We reduced the number of our estimates because they were getting fairly bulky and difficult to run through. But today I suggest that it is practical yet for the committee to make a complete study of the estimates. I suggest that the example of the United Kingdom type of committee which is set up for a different purpose altogether is not a fair comparison and does not apply to this country.

Reference was made to the United States committee or to their standing committees in congress.

Mr. Fleming: No. No reference was made to that matter.

Mr. Jutras: Yes, there was. It was not made by you. Some other members made reference to it. Of course over there in the United States there is a different set-up altogether.

Mr. Fleming: There was not any reference at all to it in this debate.

Mr. Jutras: Yes. I recall some reference to it.

Mr. Fleming: A year ago; not in this debate.

Mr. Jutras: If I wish to make reference to it, I am entitled to do so. There is nothing to prevent me from doing it.

Mr. Fleming: It is a red herring.

Mr. Jutras: Let me say this to the hon. member. There are many people in this country—and I have run across the situation on many occasions—and many members in the opposition who are confused on many occasions. They see what goes on in Washington. They see how the system operates over there. Then we here in this country get requests for more or less getting the same thing done in Canada. They of course forget that we operate under quite different systems of government.

Shortly before the opening of this session it was my privilege to visit one of the standing committees of congress. As a matter of fact, I was invited to sit around the table with the members of the committee for part of a sitting and I was able to observe closely how their committee was operated. It is not for me to judge their method of procedure, but I certainly came out convinced that it could not be applied or followed with the system of government that we have. As I say, their system of government is entirely different from ours and their procedure does not apply here.

After all, Mr. Speaker, when the hon. member for Kamloops or any other hon. member of the opposition says that with this type of committee he has been unable to come to grips with the problem in the estimates committee, I suggest that if he has been unable to do so it is simply because he has not applied himself to the task. Towards the end of the session particularly, everybody expressed the feeling that a good job had been done by the committee. At no time did the ministers refuse to answer any questions

that were asked by either opposition or government members. At no time did the ministers or anyone else refuse to produce officials of the department for questioning by the committee. We had all the help of the department and all the officials who were asked to be present came. All the information was laid before the members. As some hon. members pointed out, we not only got a lot of information but I am sure all members learned a great deal about the various departments. I am sure the committee could function in the same way this year.

In conclusion, I should like to read one sentence that was uttered by the hon. member for St. Paul's (Mr. Michener) in the committee last year. We had completed an examination of the first department to come before the estimates committee, the Department of Citizenship and Immigration. Everybody was commenting on the success of the committee up to that stage. Speaking for the opposition, the hon. member for St. Paul's said:

> I should also like to put myself and my associates on record in expressing our appreciation of the assistance which has been given to this committee,—

He was referring to the officials who had appeared before the committee. He continues:

> —and I would like also to say that I hope Mr. Thatcher has recovered from his deep pessimism about the prospects of this committee.

I commend those words to the hon. member for Eglinton (Mr. Fleming) and the hon. member for Moose Jaw-Lake Centre (Mr. Thatcher).

Mr. Clarence Gillis (Cape Breton South): I have listened to this debate during this session and the last session with some interest. I feel that a lot of the discussion is irrelevant. If one reads the resolution, one finds it is wide open. It merely asks us to set up a committee to which estimates can be referred from time to time. There is not anything in the motion itself that refers to any particular department.

Mr. Fleming: We were told on February 9 what they were going to be.

Mr. Gillis: It has been suggested that there are certain departments that would be referred, and it is with that point I wish to quarrel for a few minutes. I think that setting up a committee with the end in view as expressed by the official opposition that ultimately all estimates should get a working over by that committee, would mean the abdication of parliament. It is the duty of this parliament, in committee of the whole, to examine the estimates and not send 30 men from the house to go out and examine them without the remainder of the house knowing anything about the discussion. It certainly is not giving the other members of the house much chance to decide whether the money voted is legitimate or otherwise.

Another tendency this committee has, Mr. Speaker, is to make the rest of the members lazy. If you appoint two or three members from each group in the house to examine the estimates, it is their responsibility and the rest of the members are not going to look at the estimates. They are going to depend on their members on the committee. Another thing, at the end of the session when the estimates are being considered you will often find that the members on the committee, who you expected would be discussing those estimates are not here. Other members in the group did not look at the estimates because they felt that was the responsibility of the member appointed to the committee.

In my opinion, and it is my own opinion, the sending of the estimates of the departments of labour, health and welfare and the other two departments is unnecessary. I feel it is not very much trouble to examine the estimates of a department of government that is spending the money within the country. I do not think any committee will take the estimates of any department in which the money is spent in the country and change the estimates by one cent. If you look at the items in the estimates of the department that are to be sent to the committee, you will find every one of them is a fixed responsibility. The amount changes from time to time, but not very much. I believe the department officials could justify any of those expenditures. The fact of the matter is that in labour, health and welfare and post office we are asking for increased expenditures all the time, not reductions.

I think if each group in the house did what this group has been doing we would not have much trouble examining estimates. Before the estimates are brought down each member of this group is told he will be responsible for a certain department. I am told, "Your departmental estimates will be labour." It is my responsibility to take the labour department estimates and go over them item by item. If I think there is something wrong in some section I can pick up the telephone and get the information. If I do not like what I am told I can criticize the item here when the Department of Labour estimates are before the committee of the whole. I am in a position to do that because this group has given me that responsibility. One member of this group is responsible for going over the estimates of one particular department.

I do agree with the appointment of the committee, and for this reason. In the estimates this year $1,775 million have been allocated to the Department of National Defence; $15 million to defence production and $7 million to civil defence. All these defence expenditures amount to about 39·20 per cent of the total tax dollar. If there are any departments in which there could be waste and extravagance or duplication in money spent outside of the country, where it is difficult for any member of this house to make an examination of the justification of the amounts spent, it is in those departments. I think those departments should be examined by a committee. I do not think it should be a committee appointed merely to work over the estimates. As I have said for a good many years, when you have one minister responsible for three defence departments, the navy, army and air force—even although he has excellent deputies—when you are spending money on NATO all over the world; when you have money going into civil defence, a new type of organization about which we know little, then I think someone should take a look at these expenditures. Defence production is another one. Purchases are made for the defence department. The Minister of National Defence (Mr. Campney) is not in any position to report to this house with any degree of accuracy as to whether the money is being used judiciously or otherwise.

If we are to set up a committee, then it should be a continuing committee. The spending that we should be examining is the spending of the departments that I have mentioned. They are not fixed responsibilities. A great deal of money is going into that particular organization, and if a committee were appointed by this house, and if the members of that committee were picked carefully, they would sit there and work conscientiously. If that committee had the right, as suggested by the amendment just proposed, to call in the heads of different departments to give an account of their stewardship, the committee would be a brake on defence spending. The fact that they could be called in would place the men who are spending that money in the position where they would take another look at every item. They would do that if they were answerable to a committee of this house.

I imagine that expenditures on defence are going to be with us as long as most of us will live. These expenditures are growing all the time, and they will continue to grow and become greater. If we want a committee, then I suggest to hon. members that we are wasting time by putting before that committee for examination estimates that are fixed responsibilities. I do not think they get as good an examination in that way as they would get if they were taken up in the house and worked over in the ordinary way. It would require little change. A great deal of value would be derived from setting up a continuing committee whose responsibility it would be to consider the various defence departments. I have just suggested civil defence, defence production and the general national defence departments.

Mr. Charles Yuill (Jasper-Edson): Mr. Speaker, I have listened with a great deal of interest to the discussion on this committee. I find myself at a loss to agree entirely with the arguments adduced, but I must admit that many points have been thought-provoking. I think they are real. If we had some medium by which we could take the good points of these arguments and crystallize them into action, then we would be serving a more useful function.

There has been discussion as to the method by which the estimates should be presented for perusal. I think it is impossible for any estimates committee to deal with them intelligently at any one session. It might be worthy of consideration to take them in order of importance and perhaps rotate them so that there would be enough estimates presented to occupy the full time of the committee authorized to deal with them. I am inclined to believe, from what I saw as a member of that committee, that nothing would be presented that would cause the government any worry if they agreed to the request that the committee be given the right to call in anyone to enlighten them on the job they have to do. I do not think it necessarily means that with respect to every estimate that comes up you would be calling in scores of people from the outside. I do not think that is necessary at all. But if on the discussion of the estimates a reasonable doubt should arise, and we should have a little further information, then we should have the right to call for that information. I think that is conducive to good business. I would be the last one in the world to subscribe to that suggestion if I thought it was going to become a medium for political manoeuvring, where people were jockeying for political aggrandizement. I do not think that should be done at all.

There is another thing that I feel is not conducive to good business, and that is to have ministers sitting in as members of the committee. I have the highest regard for all of the hon. gentlemen, but I do not think I can reconcile that with my own good judgment. I do not think they should sit in as judge and jury both, and that is really what they are doing. It would be better in many

ways to have them sit there in their true capacity and not be identified as a member of the committee.

At this point I should like to pay tribute to the ministers for the frankness with which they answered all the questions that were put to them. I should like to pay a tribute to those of their staffs who were so efficient and so ready with their answers to the problems that were perplexing members of the committee at that time. That is all to the good. They are to be highly commended; but I think we should consider the advisability of having the minister sit in the committee in the capacity of both judge and jury.

I heard certain statements made. The hon. member for Provencher (Mr. Jutras) commented on the amount of valuable time that was wasted through debating whether or not we should be privileged to call in witnesses. If it were recognized that they would be available if necessary—and it would be necessary only rarely—then it would relieve the tension and give us perhaps a greater opportunity more intelligently to deal with the business in hand.

Hon. George A. Drew (Leader of the Opposition): Mr. Speaker, the motion before us has been carefully explained by the hon. member for Eglinton (Mr. Fleming). The purpose of the amendment is clear. It would have as its effect an arrangement similar to that which has proved so satisfactory at Westminster where this practice was adopted. I regret very much that in regard to a matter so important to this house we should have no statement from the government on the motion standing in the name of the Prime Minister. We are still waiting to hear from the Prime Minister any reason why the reasonable requests made on an earlier motion, and now before the house on this motion, cannot be considered by the government. The only statements that have been made, other than the very numerous interjections from a seated position, are the statements made on February 9 by the Minister of Finance (Mr. Harris), in which he made no attempt to explain why the government was not following the very satisfactory practice adopted at Westminster, and the statements we have just heard this afternoon from the hon. member for Provencher (Mr. Jutras).

If anything favourable can be said about the speech of the hon. member for Provencher it is that it did at least attempt to deal with some aspects of the discussion now before us. The Minister of Finance, in a few words on February 9, as reported at page 1041 of *Hansard* of this session, simply informed the house that we were not going to have this procedure that has proved satisfactory elsewhere. He also gave certain bald information, without explanation, as to why that was being done. For that reason, we are brought up to the statement of the hon. member for Provencher today, because it becomes necessary to deal with one or two statements he made, in view of the fact that we have no other statements to deal with in regard to this subject. The hon. member for Provencher told us today, in what sounded like an attempt to make an authoritative statement, "It is for parliament to decide what departments will go before the committee." Mr. Speaker, nothing could better illustrate how important it would be that this subject be dealt with under the established procedure, because the hon. member for Provencher obviously does not know anything about it.

The hon. member for Provencher is obviously unaware that on February 9 the Minister of Finance stated that two months ago, that was two months before February 9, the decision had been made. These are his words as found at page 1042 of *Hansard*:

> We had considered what estimates we might refer to the committee this year. We did that some two months ago and decided to refer to the committee the estimates of the Department of Labour, the Department of National Health and Welfare, the Department of National Revenue and the Post Office Department.

Since the only statement that has even pretended to give anything in the way of an explanation has been made by the hon. member for Provencher, I think I should put on the record a letter I wrote to the Prime Minister (Mr. St. Laurent) and the reply I received. It will be quite clear from that, if there is any uncertainty in the mind of any hon. member, that parliament has not been asked to decide and that this decision was made in December and was made by the government. When the Minister of Finance says, "We decided" he means the government and not parliament. Parliament was not sitting in December; hon. members know that parliament met on January 10.

On January 27 I wrote the following letter to the Prime Minister:

> The Rt. Hon. Louis St. Laurent, P.C., Q.C., M.P.,
> Prime Minister of Canada,
> House of Commons,
> Ottawa, Ontario.
>
> My dear Prime Minister:
>
> In view of the fact that a motion stands in your name on the Order Paper to set up a committee to deal with estimates, I thought I should indicate to you the departmental estimates which we would prefer to have considered.

In the following order, we would like to have the committee consider the estimates of these departments:

Defence
Trade and Commerce
Justice
Fisheries.

I would hope that it might be decided this year that the committee will have power to call witnesses and obtain the production of papers and records. Naturally this power would be subject to review by the committee in any case where security might be involved. I do urge, however, that subject to this reservation, provision be made that the committee have this power.

Yours sincerely,

The letter is signed by me.

In reply I received the following letter dated February 2:

The Honourable George Drew, P.C., Q.C., LL.D.,
Leader of the Opposition,
House of Commons,
Ottawa, Canada.

Dear Mr. Drew:

May I thank you for your letter of January 27 with respect to the business of the estimates committee.

Last December we considered this question and decided that we would refer to the committee the estimates of the Departments of National Revenue, Labour, Health and Welfare and Post Office, and these departments have been making suitable arrangements in the meantime. Under the circumstances I do not think it would be desirable to change these plans.

With respect to your request that the committee have power to call witnesses and require the production of papers and records, may I point out that the Minister of Finance, in moving the setting up of this committee last session, made it clear that as this was an innovation it was desirable, in the experimental period, to keep the work of the committee as close as possible to the practice and procedure in the committee of supply. I think you will agree we are still in the experimental period, and we would prefer to continue the experiment on the basis begun last year.

Yours sincerely,

The letter is signed by the Prime Minister.

It is quite clear that the decision was made in December and that no choice has been left to parliament to make any decision in this respect.

The suggestion has been made, by the only spokeman from the government side who has even pretended to deal with this subject, that the opposition is complaining that parliament must decide what will be done. That statement is pure unadulterated nonsense. Parliament is not being asked to decide. Where is there anything before this house that places parliament in the position to make any requests? What we are complaining about is that parliament has no chance to decide and we by this resolution are giving parliament a chance to actually have some authority. We are proposing a method that would be consistent with the procedure followed in the jurisdiction upon which this practice is based. I would point out, however, that we need not go to Westminster to find reasons why there should be the right to call witnesses and also to call for the production of papers and documents. Every standing committee of this house has that authority now. Under the rules of this house every standing committee has the right and power to call for the attendance of witnesses and the production of papers and documents. We are not suggesting some strange innovation.

May I say that the only place from which any suggestion has come that we should make a comparison with the procedure in the United States is from the hon. member for Provencher. It would appear that he had gone to Washington to see if there was anything there which we might follow, for he tells us of his experience following the activities of that committee. Certainly we are not suggesting the adoption of a policy of that kind. We are suggesting the application of a procedure already incorporated in our rules in regard to standing committees. All that would be necessary to make this possible now would be for the government to decide that this committee will become a standing committee, and I make that proposal now, that this committee be a standing committee.

It has already been suggested here that this committee meet regularly. We want it to meet regularly. Let us have it a standing committee and then automatically it would have the right to call witnesses and to call for the production of papers and documents. As it is, this committee is nothing but a pious pretence. When the hon. member for Provencher said that they all came out satisfied with what had been done, he meant that the Liberals all came out satisfied that they had suppressed any opportunity of really getting at the facts that would have been available if witnesses had been called. That was the satisfaction they felt.

We listened this afternoon to a very clear declaration of true government policy, although it was not uttered by anyone with any apparent authority from the government on this occasion. The hon. member for Provencher suggested that it was absolutely unnecessary and unreasonable to expect that we should seek more than the answer of a minister or the people he proposed to bring forward. We have had plenty of evidence that we cannot rely on the statements of ministers. We have had plenty of evidence that they do not know what they are talking about when they make statements on behalf of their departments. We are not satisfied with statements of ministers here who one after another have made positive statements in regard to different problems within their

departments and then within hours in one case and within days in other cases were proved to know nothing whatever about the subject they were discussing. We point out that if this were a standing committee, a perfectly normal procedure would be to call witnesses and to obtain evidence in regard to the facts.

Mr. Deputy Speaker: Order. I have just refreshed my memory and I find that a motion was negatived yesterday. A motion was moved by Mr. Fulton, seconded by Mr. Blair, in these words:

> That the motion be amended by adding thereto the following words:
> "and that the said committee have power to send for persons, papers and records."

In view of the fact that this motion was negatived by the house, I think the hon. Leader of the Opposition should refrain from references to that particular phase of this problem.

Mr. Drew: Yes, Mr. Speaker, I shall not pursue it further. I regret that Your Honour did not notice that the hon. member for Provencher had been discussing that point at some considerable length.

Mr. Jutras: On a point of privilege, Mr. Speaker, I purposely did not discuss that point when the Speaker looked at me.

Mr. Fleming: It is on the record.

An hon. Member: Look at *Hansard*.

Mr. Drew: *Hansard* fortunately now speaks for itself.

An hon. Member: Let it speak for itself.

An hon. Member: Don't change it.

Mr. Drew: If the government really has any serious thought of making this committee on estimates an effective or an operative committee, and if there is one department that should be under examination, it is the Department of National Defence. That department, after all, directly or indirectly is responsible for the expenditure of nearly half of our very large budget. That department is one which certainly cannot be examined satisfactorily in the committee of the whole house.

Again I regret that it is necessary to deal with the speech of the hon. member for Provencher, because so little of it was relevant; but since it is the only statement made on behalf of the government I must take it that, up to this point at any rate, we should regard it as the explanation that is intended to come from the other side in regard to this motion standing in the name of the Prime Minister.

In his discussion of the subject he pointed out that there was a very different situation at Westminster, that there the estimates are so involved that they would not be able to consider them in detail. Nevertheless he suggested that here there is, of course, ample opportunity to deal with them in the committee of the whole house. Well, there is not a thoughtful hon. member of this house who does not know perfectly well that it is impractical in the committee of the whole house to deal with the estimates of the Department of National Defence and, for that matter, with any other department, in the way they should be dealt wtih and could be dealt with. Why was it that in setting up standing committees there was the power granted to those committees, as a matter of right, to call witnesses and to call for the production of papers and documents?

Mr. Deputy Speaker: Perhaps the Leader of the Opposition has forgotten that I just drew to his attention the fact that discussion of that particular phase of this matter is out of order.

Mr. Drew: Mr. Speaker, I would point out once again that I was dealing with what was said by the hon. member for Provencher, and I was dealing with it in order to correct a misstatement which was made and which was permitted without any interjection from Your Honour when it was made.

Mr. Deputy Speaker: I was not in the house when the words to which the hon. member has referred were spoken. I am now charged with the duty of trying to keep this debate relevant and in order. I have drawn to the attention of the Leader of the Opposition the fact that this very question was negatived yesterday. Under those circumstances I can do nothing else but ask him to refrain from referring to that phase of this problem.

Mr. Drew: I would point out that the 1947 committee on procedure recommended that we adopt in this house the same procedure in regard to all our committees that has been adopted at Westminster. That report of a committee of this house still stands as a matter of record. That report of a committee of this house, which after all represented the decision of members supporting this government as well as other members of this house, recommended a course which would have resulted automatically in our right to suggest the departments that should be examined. But even without that recommendation I submit that if this government really has any serious intention of making this committee operate, if this government is not merely making a pious pretence in its profession of offering some opportunity to examine the estimates, then it would name automatically, and even without request, the Department of National Defence.

Let any hon. members who are uncertain about how far the committees go in Westminster, which was suggested as the model by a committee on which the majority were members supporting this government, study the situation there. They will find that there the opposition is permitted to make suggestions as to the departments that should be called. There the opposition is given an opportunity to obtain information in regard to important subjects. If hon. member will read *Hansard* reports of the proceedings at Westminister they will find there the most detailed examination of the estimates of the department of defence in the government of the United Kingdom. They will find that members of that committee travelled to different parts of the United Kingdom and called at various military installations, where there were brought before them not only senior officers but officials. They had senior members of the general staff before their committee, and they asked them questions. The most detailed information was given.

Is it to be suggested that here in Canada we are in a less favourable position to place under examination our staff officers and our officials dealing with defence activities than they are in Britain? In this country our defence activities are extremely important and call for the allocation of nearly half of our very large budget. Nevertheless not one hon. member in this house would suggest that there are as secret problems involved in our own case, nor would they suggest that the scope and the general scale of the responsibilities of our department of defence are commensurate with those of the department of defence in London.

They are able to come before a committee. They are able to give information. Upon the basis of that examination—granted only an examination in this case of a single department at one time—they are able to place before the house detailed recommendations which have resulted in substantial reform, not only in the matter of administration but in the matter of accounting methods as well.

We are suggesting nothing that is unusual. We are suggesting the practice we have adopted in regard to all our standing committees. We are suggesting a practice that has worked favourably in that jurisdiction that was recommended as our model for a committee of this house in 1947. May I once again emphasize that what we are asking is reasonable. What we are asking is consistent with our own practice. What we are asking is consistent with the practice that has been adopted elsewhere under a jurisdiction which follows our own parliamentary traditions.

One thing that is certain—and I repeat it because it is in reference to the only statement that has been made on behalf of the government, or rather, I should say, on behalf of the government from the government side of the house in regard to any of the details—is that parliament has not been asked to choose the departments. Parliament is not being permitted to choose the departments. If the hon. member for Provencher really believed, as he implied, that parliament should have that authority, then let him vote for this amendment and let the hon. members opposite vote for this amendment. Then he would be consistent for the first time.

However, this resolution—an important resolution, one sufficiently important that the government feels that it should be considered as only in its experimental stages—stands in the name of the Prime Minister, and we are waiting to hear from the Prime Minister any valid reason why this reasonable request should not be granted.

Mr. J. R. Garland (Nipissing): I desire at this time to say a few words concerning the proposed amendment, which expresses dissatisfaction with the setting up of the committee as it is presently proposed. First of all, I think all parties in the house agree that the committee is desirable. I know that over the years I have had the pleasure of being here it has been recommended and urged by members in various quarters of the house. Therefore I think it is desirable. I believe the public have a right to expect that the closest possible scrutiny will be given to the expenditures that are made here. Our expenditures are now approximately $5 billion, and from the correspondence I get and my contacts at home in my own riding I know that the people are concerned that the very closest examination be given the money that is expended here. I think the committee is welcomed by the members, and despite what the Leader of the Opposition has just said I think it is a fair statement to say that those who were members of the committee last year were well satisfied with the results.

I should like to take a moment to put on record the words of the hon. member for St. Paul's (Mr. Michener) who, I might say, made a very worth-while contribution to the deliberations of the committee last year. I refer to the proceedings of the committee on estimates for Friday, March 18, 1955, and at page 427 I find that the hon. member for St. Paul's had this to say:

> I should also like to put myself and my associates on record in expressing our appreciation of the assistance which has been given to this committee . . .

The important thing is that these remarks were made on the last day of our consideration of the estimates of the Department of Citizenship and Immigration, which all of us will remember was the most controversial so far as discussion was concerned. Then, the hon. member for Jasper-Edson (Mr. Yuill) had this to say:

> I would like to add my word of congratulation and commendation to the officials for the straightforward way in which they gave their answers to some of these problems. I think they have done a splendid job and I really feel that this committee is worth while . . .

I think it is fair to say that the chairman of the committee summed up the attitude of the members when he made these remarks:

> It is very heart-warming to all concerned to think that when this important work of examining the estimates of a department of government on behalf of the people of Canada is over, that in spite of the differences we have had everybody can feel that the work has been well worth doing . . .

I have also taken the trouble to re-examine the work of the committee last year. It is now proposed that the committee be set up again and at present we have an amendment to the motion before us. I think the committee could be more useful, but I believe it can only become more useful with a change of attitude on the part of the official opposition. I say this in all seriousness. It is my understanding, and I believe the understanding of almost every member in the house regardless of party affiliation, that the committee should be used to get at the facts and examine the expenditures of the various departments under review, and that it should not be used as a forum for airing and re-airing a debate that has already taken place in this chamber.

I think the official opposition can be criticized on that point. Hon. members will recall that there were 36 sittings last spring, and I have taken the trouble to examine them. Of the 36 sittings, 16 were devoted to the Department of Citizenship and Immigration. In other words over 40 per cent of the time taken by the committee was devoted to one department. In the estimates of the four departments examined there was an expenditure of $347 million involved; yet 40 per cent of the time of the committee was spent in examining 10 per cent of the estimates, so far as amount is concerned, that came before us.

As hon. members will recall, most of the time was spent in attempts on the part of the official opposition members of the committee to bring before the committee and rehash the report or working papers—I forget the description—of the subcommittee of the civil liberties section of the Canadian Bar Association. Sixteen of the 36 sittings of the committee were spent on that department.

In my opinion the opposition have it within their power to make the committee more workable so that it will do a better job for the country generally. When the Leader of the Opposition is naming members of his party to that committee I suggest that he might well take a look behind him rather than beside him and put on the committee some of the backbenchers in his party, those to whom in our case he refers as following blindly. Incidentally, I do not see much division over there when it comes time to vote. He might give consideration to others than the ones who are involved in leadership over there, although perhaps "leadership" is too strong a word. I want to be fair. I think he might well consider some of those members who are elected to represent his party because of their ability as businessmen and responsible citizens in their own ridings. I am sure that in that party, as in all parties, there are many men who are capable of doing a job on the committee and are anxious to do so. I think he should give that some consideration. Let us forget political significance as far as this committee is concerned.

Mr. Drew: I am sure this is relevant to the motion.

Mr. Garland: I have often heard it said what a worth-while job is done by the committee on external affairs. For several years now the estimates of the department have been examined by that committee. I think it is a reasonable conclusion that the reason the committee has done useful work is that there has been a degree of unanimity as far as policy is concerned. The members of that committee have taken part in the work of the committee with a genuine desire to examine the estimates.

I think that can be done, and I would urge that more businessmen be given the opportunity to be members of this committee so as to get on with the job. I believe that suggestion will commend itself favourably to the majority of the fair-minded people of Canada.

Mr. O. L. Jones (Okanagan Boundary): Mr. Speaker, I should like to make a few remarks in support of the resolution and the amendment. Both remind me very strongly of the situation Samson found himself in when his locks were shorn. He had a great name for power and strength, yet he found himself with neither strength nor a mind of his own. I feel that we have somewhat the same situation here. The committee has a powerful sounding name and is going to do wonderful

things but its teeth have been removed, particularly when the power to call for papers and witnesses is not granted.

I am not going to go any further on that. I would criticize the resolution very mildly, and I should like to make what I hope will be suggestions to improve committees of this type as far as the present and future sessions are concerned. Many of us who are just rank and file members of this committee have for a long time felt frustrated and that we were wasting time because the items came before the committee and went away in the same condition exactly, intact as the government first presented them. We had made very little impact on them beyond, as someone said, the fact that we obtained a great deal of information and we had questions asked and answered. But we got no action as a result of those questions or that information. I have often heard good proposals made by the opposition scorned and turned down because they were not made from the government side.

It is that frustration which I feel is making our committees in general ineffective and almost useless. I would call the committees on which I have sat something much like what President Roosevelt used to call his evening fireside chat. That is about all the effectiveness we have. We are lulled into thinking we are doing something when actually we are only having a pleasant time, and we come back to the house and start the thing rolling again. It seems to me that under the present set-up of committees we are not even told to take it or leave it. We are told to take it. We do not get the chance of leaving it. We are obliged to take it. The government majority see to it that we do, and that is the result at the end of the sitting.

I realize that the government must keep certain control, but I cannot for the life of me see why in committees they should keep the same rigid, strong and overwhelming control they have in the house. I would suggest to them that we would get far more effective results from the committees if the government allowed their followers to have a free vote all through the working committees so the net result would be a consensus of opinion from those committees which would represent all parties.

Failing a free vote in all committees I would suggest, as has been done in Great Britain, that the government, in order to create a balance of fairness in that committee, should ask one of the opposition members to be chairman. I think it has been done in England very effectively and fairly. That takes away that strong bias, that strong tendency to railroad things through according to government plan. It would indicate that the government are anxious to work with the opposition. I have seen good proposals made by the opposition, proposals which when made would carry the majority of the committee, but I have seen the vote withheld until the government side of the committee mustered some members in to vote with them. Those members came in.

I remember one instance two or three years ago. They knew nothing about the subject under discussion. They did not know the pros and cons of it. They did not know whether the resolution was a sound one, because they had not been there for the debate. Nevertheless they voted solidly, reminding one, as has often been said in this house, that they were a bunch of rubber stamps O.K.'ing what the government wanted on that particular item. This committee should have more power. True, it should not have power to pass laws, but it should have power to recommend something tangible to the house. I know that some recommendations have been made in the past, but they were very few and far between.

We are accused of being behind Great Britain by 40 years, but I suggest that we take steps to give more power to our committees, to change along the lines I have suggested. More than that, if the government wanted an effective committee and wanted an effective balance of views from the members in this house, I would suggest that every committee be composed of 50 per cent government supporters and 50 per cent opposition members. Failing that, I would suggest making the proportion 55-45. The present imbalance is not giving a true reflection of the thoughts of the people of this country while their members sit on the committee.

I am not going to say anything more about that matter, but I seriously make the suggestion that we are all anxious to see these committees functioning well, to the benefit of the people of this country. Until you get a better balance between the government group and the opposition group I am satisfied that you will never get effective action from any committee that is set up, no matter under what terms. More power must be given those committees to get the evidence required in order to come to conclusions.

Mr. E. D. Fulton (Kamloops): Mr. Speaker, I am intervening again in the discussion on this resolution mainly because of the speech made by the hon. member for Provencher (Mr. Jutras), a large part of which he devoted to what I think can correctly be described as a personal attack on myself and my participation in the work of the estimates committees last year.

However, I do not intervene solely for that reason, though I shall have something to say with reference to his charges. I intervene because, in addition, from two hon. members who have spoken from the government side we have heard words which make it abundantly clear, beyond any possibility of doubt that in the view of the members sitting opposite, committees of this sort will do effective, useful and acceptable work only so long as they come out with a unanimous report approving every action of the government and every proposal laid before them by way of estimates.

We have that view established out of the mouth of the hon. member for Nipissing (Mr. Garland). He states his view of a good committee, namely the committee on external affairs. He said they believe—and I took down his words as accurately as I could—that committee does useful work because there is a large degree of unanimity.

Mr. Garland: On policy.

Mr. Fulton: That is the criterion.

Mr. Garland: Unanimity on policy.

Mr. Fulton: All right; I will accept that limitation. The criterion or the operative principle there must be borne in mind. What they dislike is opposition or questioning. Whether it be on policy or detail makes no difference. We have seen it too often, whether the criticism was with respect to policy or detail. That is when they begin to find the work of the committee unacceptable. It is almost a form of lese majesty; you are daring to criticize the views, the suggestions and proposals placed before you by this omnipotent, all-wise and always correct government.

That is their attitude. We saw it quite clearly mirrored in the statement of the hon. member and in the statement of the hon. member for Provencher. He said that the hon. member—referring to myself—criticized the work done by the committee last year and suggested that it could be improved. He said "If he found it annoying, I wish he would know just how annoying the other members on the committee found his efforts to criticize and to have changes made".

Mr. Speaker, I expected the hon. members of the Liberal party to be annoyed. I know that they are annoyed whenever any attempts are made to expose the fact that the proposals of the government are not sound; and particularly are they annoyed when attempts are made—as they are being made here today and as was done last night—to give the committee the power to make an impartial and independent inquiry into the government's proposals.

I find myself somewhat complimented and flattered by the words of the hon. member for Provencher. To listen to him you would think that, single-handed and alone, I had been able to frustrate the entire work of the committee, and that every other member of the committee was full of irritation over the motions I placed before that committee last year, and as we are now placing before the house this year, in an attempt to free the hands of the committee and make it possible for that committee to obtain independent evidence.

Let us look at the record, Mr. Speaker. I point out to you that last year, out of a total membership of 26, the Liberal party had 16 members, over two to one against the combined opposition. In the committee eight motions were made in an attempt to empower it, first of all, to call witnesses and call for papers. Then an attempt was made to have documents produced, something which was denied to us time after time. There were eight motions. Here is the record of the vote on those eight motions. The first motion was defeated by a vote of 7 to 11. I would ask you to bear in mind the fact that the proportionate membership of the committee was 16 Liberals out of a total of 26 or over two to one.

Mr. Hosking: How do you get "two to one"?

Mr. Dickey: You are talking about quality, not quantity.

Mr. Fulton: I am sorry; I should say over half the committee.

Mr. Hosking: There is a slight difference. It is the usual distortion.

Mr. Fulton: All right, then; over half the committee. The first vote was 7 to 11. Was that a situation where the Conservative members were alone in that vote? Here are the statistics which show that it was not a single-handed effort, and it was only the opposition that was putting forward these suggestions. The second vote was 8 to 14. In each of these votes, except where I otherwise indicate, we were supported by members of the C.C.F. and Social Credit parties on that committee. The third vote was 5 to 10; the fourth vote, 5 to 10; the fifth vote, 8 to 13; the sixth vote, 3 to 13, and that is the only vote in which Conservative party members voted alone against the government. The seventh vote was 4 to 7 and on that occasion only one Social Credit member supported us. The eighth was 8 to 14.

That is the record of what actually took place there. It should, of course, be pointed out that, as we know always happens in these cases, the government members present voted solidly to support the views of the minister,

who was not very backward in indicating the way he wanted them to vote.

But far from it being a single-handed attempt by one member, or even by one party, to expand the powers of this committee so we could get at the facts, the record of these votes clearly shows that in every case but one it was the combined vote of at least two and in most cases the three opposition parties. In each of the votes except one the proportion voting for the motion which we offered was higher than the proportion of the total combined membership of the opposition on that committee. That is the record, sir, and I think it is important that the house should bear in mind that there was a high proportion of the members of the committee last year who felt that efforts such as we are making now in the house to enlarge the scope and powers of this committee should be supported.

Coming then to the amendment moved by the hon. member for Eglinton (Mr. Fleming) now before us, let me point out that this suggests the committee itself should decide exactly what items of the estimates it will take up. This is in accordance with the practice that has prevailed in the United Kingdom parliament since the inception of their committee in 1912. When Mr. Speaker himself was in the chair at the time the hon. member for Eglinton presented this motion, as I recall it he asked for the authority upon which the hon. member said this was similar to the practice at Westminster. Although I believe that the motion presented at Westminster does vary in some slight particulars from the motion on the basis of which the committee was first set up, in principle it does not vary. Here is the motion introduced by the Chancellor of the Exchequer, as recorded at page 360 of *Hansard* of the United Kingdom parliament for 1912:

> That a select committee be appointed to examine and report on such of the estimates presented to this house as may seem fit to the committee.

The motion of the hon. member for Eglinton is, of course, entirely in accordance with the practice prevailing over there.

What is necessary, sir, to make the work of this committee useful, to make the work of this committee contribute to a detailed and impartial scrutiny of the estimates presented by the government is not a change of attitude on the part of the members of the official opposition, as suggested by the hon. member for Nipissing (Mr. Garland). What is necessary is that the government should be willing to release the fetters which it seeks now to place upon this committee. If these fetters are permitted to remain, as we saw very clearly last year when the committee got to work, they will be squeezed even tighter and tighter to further hamper the work of the committee.

So far as the statements by the hon. member for St. Paul's (Mr. Michener) and other hon. members are concerned, which have been read, their effect is that we had before us senior civil servants. They were courteous, yes. They answered questions, yes. All those things were done, but we were not able to get other witnesses whom we wished to have before the committee. So far as those who did come were concerned, and so far as the questions which were put to them were concerned, they answered them in a courteous, friendly and helpful manner. The compliment paid by the hon. member for St. Paul's goes no further than that. To take that and try to say the hon. member for St. Paul's was saying we felt the committee was working in the way it should work is, of course, typical of the way in which my hon. friends opposite have to distort remarks out of their context and meaning in order to bolster their own very weak case.

I invite hon. members opposite to accept their responsibilities as members of parliament, to take an impartial approach and not reject the opportunity of determining themselves exactly what departments or what segments of departments they wish to investigate. If that is to be done, then this motion should be supported so the committee will have some independence of action.

If the motion is not supported by hon. members opposite, what are we to conclude? We are to conclude that they have no freedom of choice; that they have no opinion, no personal preference, no thoughts other than those suggested to them by the government as to which department they desire to investigate and how they wish to conduct the inquiry. They would be refusing to support a motion today, as they refused last night, which would give the committee the power, and that is all that is asked, to conduct its inquiry in the way it wanted. Instead of that, they will say, "No, we do not want to take even that power; we would prefer to conduct the inquiry exactly along the lines which our masters, the government, submit to us."

I urge my colleagues, even those who support the government, to remember that they will always have a majority on the committee. I take it that it is too much to hope that that situation would ever be changed. If they wish to follow the party line to that extent, they can still control the work of the committee, but will they not give themselves an opportunity to exercise a little independence of action by supporting the motion now before the house?

Hon. J. W. Pickersgill (Minister of Citizenship and Immigration): I am not rising to take part in the debate but on a question of privilege. If I understood correctly, the hon. gentleman who has just spoken implied that a document was denied to the committee by the government at the time my estimates were before the committee. As I was the only member of the government there at that time, that is a clear implication that it was denied by me.

I think if the hon. member will take the trouble to look at the proceedings of the committee he will find that he had a copy of the document and I did not. I asked him to lay it on the table of the committee and he refused to do so. If any document was denied to the committee, it was denied by the hon. member for Kamloops.

Mr. Fulton: On the same question of privilege, I may say I am surprised the minister would be so ready—

Mr. Pickersgill: To state the facts.

Mr. Fulton: —would be such a stranger to the actual facts. The minister will recall that he admitted in the committee and in this house that on reflection he found his department was in possession of the documents. They were in his possession and they were, therefore, in the possession of the department and the motion I presented to the committee sought the tabling of those documents by the department. We had so much controversy as to whether one set of documents was the same as the other that the obvious and proper way to settle it was to call upon the minister and the department to produce the documents, and a motion was made accordingly. My motion was voted down in the committee at the insistence of the minister.

Mr. Pickersgill: The record is there and it speaks for itself, as the Leader of the Opposition is so fond of saying.

Mr. Fulton: I have checked the record, and that is what it says.

Mr. Deputy Speaker: Is the house ready for the question?

Mr. J. G. Diefenbaker (Prince Albert): Mr. Speaker, I rise for but one purpose, namely to ask the Prime Minister (Mr. St. Laurent), in whose name this motion appears, to explain why the committee is to be circumscribed by having submitted to it only those departments that have been hand-chosen by the government. I do not know why the Prime Minister has not said something. Lately he has been on a number of sit-down strikes in regard to these matters of such great importance to the country.

[Mr. Fulton.]

If the motion is sufficiently important to merit its introduction by the Prime Minister, surely the house and the country are entitled to know from the Prime Minister, rather than from lesser members on the government side of the house, why so reasonable a request on the part of the opposition is being denied. When one reads the letter of the Prime Minister to the Leader of the Opposition it is a strange thing to find the Prime Minister saying that certain departments have been chosen, the Department of National Revenue, the Department of Labour, the Department of National Health and Welfare and the Post Office Department, and that suitable arrangements have been made.

They have made suitable arrangements to appear before the committee. I do not know what these words "suitable arrangements" mean, but it is passing strange to me that departments should be warned months in advance that they are to be investigated, so they can make the necessary arrangements to give evidence before the committee.

What are those necessary arrangements, Mr. Speaker? It looks very much as if parliament is to have a peek into certain matters after those departments have made suitable arrangements to permit us to do so. As I see it, that is not the kind of investigation that was envisaged by the setting up of this committee, unless it is to be a kangaroo committee.

Mr. Fulton: It will be.

Mr. Diefenbaker: No; I prefer to believe that it ought not to be. Surely the Prime Minister can explain why. Is the committee to be blindfolded? It is not allowed to see documents; it is to be denied witnesses, except those chosen by the government. Finally, it is to be restricted to those departments which have made the necessary suitable arrangements. Surely a committee set up in that way will return the kind of report that the government expects suitable arrangements will demand on the part of that committee.

Mr. Michener: A directed verdict.

Mr. Diefenbaker: I have no argument about some of the departments of government that are to be submitted, but why not the Department of National Defence? That is the spending department today; that is the department that more than anything else over and over again is used as the basis for high taxation. The argument is used that taxation is high because of defence costs. Why is the Department of National Defence not included? It is not for me to say whether or not a military authority holding a high position was right when he said recently that

$120 million or more had been poured down the drain in connection with the production of certain aircraft already obsolete and out of date. Surely there was something to be investigated.

I cannot understand why this committee is to be confined to the departments the government chooses as those worthy of being investigated. The committee is to be a watchdog over the estimates, but it is to be muzzled in regard to that department in which the greatest expenditures take place. It is to be muzzled and blindfolded because it cannot call witnesses or see documents. It is to have brought before it such witnesses as the minister of the department, or the government in its wisdom, feels are proper to give evidence before it.

What kind of a verdict will be handed down by a court when one of the parties before that court picks out those witnesses who are to be heard, or if the judge just wants to hear one side, or the evidence of such witnesses as he desires to hear? What kind of a verdict would be rendered by a court of that kind? What kind of an independent verdict will be rendered by a court, the majority of whose members are appointed by and are responsible to the government? What are we trying to do? Is this to be just a caricature of a committee?

What possible objection can there be to allowing the committee to choose the departments it might look into and consider? Surely the government has not arrived at the point where it is afraid that its majority on the committee might choose departments other than those which the government desires? I do not think the government has much to fear in that regard. Then, if it is not afraid, why not at least give the committee the authority even though that authority, having regard to the experience of the past in those committees, may not be exercised except when the government permits the members of that committee who support the government to cast their votes accordingly? Why not include in this list of departments the Department of National Defence?

Again, I ask, what is this committee going to do? Is it going to be effective? The one in Great Britain is. I hold in my hand—and I am not going to fill up *Hansard* with quotations—"Constitutional Law" by Wade and Godfrey Phillips. On page 109 they set forth the functions of this committee. Without quoting from what is stated there, may I say it shows that the full committee of the house in a single session brought down 14 separate reports. It is effective; it investigates. It does not warn the department in advance by saying now, this is the department that is coming before the committee to be considered after it has made the necessary suitable arrangements.

I ask the Prime Minister, as the sponsor of this motion, will he not himself tell the house and the country why this committee is being restricted to the investigation of the chosen departments rather than permitting it at least the one prerogative right to determine what departments it wants to hear, or at least allow it the right to determine two of the four departments. Otherwise what have you? You have hand-chosen departments, government-chosen departments, placed before a government-controlled committee, and I am afraid it will be in the position of a tape recorder to record the government's wishes.

Mr. W. B. Nesbitt (Oxford): Mr. Speaker, I rise on a question of privilege in view of the remarks made this afternoon in this house by the hon. member for Nipissing, the implications of which were extremely obvious, to the effect that the Leader of the Opposition did not allow any of the backbenchers in this party to take part in the discussions in the estimates committee.

I merely point out to the hon. member that I was a member of this committee last year. The hon. members for Perth (Mr. Monteith), Elgin (Mr. McBain), St. Paul's (Mr. Michener), Brandon-Souris (Mr. Dinsdale) and Ontario (Mr. Starr) served on this committee. I do not think, Mr. Speaker, they could be described as other than hon. members of the back benches of this party, and I thought I would like to see this matter put straight.

Mr. Auguste Maltais (Charlevoix): Mr. Speaker, I always listen with very great interest when the hon. member for Eglinton is speaking. I listened to him with great interest this afternoon and also last night. I was most impressed when listening to his arguments based on what was happening at Westminster. I even read his entire speech at noontime. However, after listening to the Leader of the Opposition this afternoon I must admit I am very much less impressed.

Coming back to the remarks made last night by the hon. member for Eglinton, he intimated that if this committee is still going to be set up on an experimental basis he would be ready to accept it and he would not be critical. I presume that the hon. member for Eglinton, being so closely associated with the Leader of the Opposition, should have had a meeting with his leader, because the Leader of the Opposition put on record a letter which he wrote to the Prime Minister and the answer he received.

I think that was a clear indication that this government was ready to recommend the

setting up of the committee on an experimental basis. How is it that the hon. member for Eglinton, after spending so much time and borrowing a lot of argument from Westminster, could present an argument like the one we now have, in view of the implication of the letter from the Prime Minister and the statement he made last night?

As a member of parliament I am, of course, always fearful to take part in a debate with which great legal minds such as that of the hon. member for Eglinton are associated. However, Mr. Speaker, it is my impression that when we are called upon to vote on a motion like this, parliament by the same token is really called upon to decide what it wants to do to formulate its own procedure.

I do not think the Leader of the Opposition is right in saying that parliament is denied the right to carry on its business in the way the Conservative party understands it should be carried on. Of course, it happens that I am a supporter of the Liberal party and most likely I would not be here if I had not supported the Liberal party; my opponent would have been here. But being a supporter of the government, and because I also happen to be a member of parliament, I could not help but be surprised when the hon. member for Kamloops referred to the big majority following up and endorsing the government. How could he be surprised? That is the way the population of Canada wishes it to happen. They would not expect me to divorce myself from the government measures recommended to the House of Commons which are to my own conscience the proper measures which should be adopted. It so happens that while I support the Liberal party I also support the government in putting into realization those policies which the people want.

I was also surprised at the remarks of the hon. member for Kamloops who, after listening to the hon. member for Provencher, said he did not blame the hon. members of the Liberal party for being annoyed when he suggests ways and means—

Mr. Fulton: I said I was not surprised.

Mr. Maltais: You took that word right out of my mouth. I am not surprised that the Conservative party feel rather embarrassed that amongst the departments which this government intends to recommend for examination is the Department of National Health and Welfare. I would say, Mr. Speaker, that I would be rather annoyed if I were to be called upon to give my justification for some estimates regarding social security concerning which I held a widely different view in former years from the view which I am now pledged to hold because of the popularity of some of the measures. Surely hon. members of parliament who are associated with the Liberal party can understand that very well.

Those, Mr. Speaker, were the remarks I wanted to make following the comments made by the hon. member for Eglinton and the hon. member for Kamloops.

I am always impressed also when I hear the hon. member for Cape Breton South, because he speaks with great common sense. There is no doubt that if the amendment which we now have were to be adopted, it would put in the hands of this committee all the power to bring before this committee any department which it might wish to call upon for examination. If this amendment were to be adopted we would be in a position where hon. members of this house would have to depend on the committee to tell the House of Commons which departments should be called upon to be scrutinized.

As a member of parliament who is not a member of this committee, I am also interested in the different departments. I also feel a certain amount of responsibility when certain estimates are called to be approved by this House of Commons. The right of each individual hon. member of this House of Commons would be denied if such power and authority were given to 30 members of this house who comprise the committee.

From comments made on more than one occasion by hon. members of the Conservative party one would be inclined to think they were the ones who were given the responsibility to lead this country. It has always been my opinion that it was the responsibility of the government to recommend to the house the estimates and the money for the administration of this country, and that it was the responsibility of this same government to take their case to the public to find out whether or not it had been properly administered.

Experience has shown that things have not been too bad in that particular sense. The only role for which I think I could be responsible in approving estimates as a member of parliament is to be convinced, to be justified before giving my assent to the estimates which are recommended to the House of Commons of which I am a member. I do not think I would need a lot of experts in many fields and departments to find out if the money spent on public works, for family allowances and for the assistance of agriculture has been unwisely spent. I do not need experts for that.

The hon. member for Cape Breton South pointed out the need for control to check on money spent outside the country in order

to learn if it has been spent wisely. One has to rely on the statements of officials and ministers of the crown. Surely it is rather amusing sometimes to hear the arguments of some hon. members on my left regarding statements which ministers of the crown have made, as they endeavour to discover contradictions in the statements made to the house. But the hon. member for Eglinton makes the statement to the house that if this proposal for the establishment of this committee is going to be carried out on an experimental basis for this year, then it is useless being critical about it. The hon. member can obtain information which he could use to form his opinions. The committee is going to be set up on an experimental basis.

They have not the responsibility of government yet. This is a measure I should say is very important, but there are many more important measures in the administration of this country. On a measure like this the Conservative party within 24 hours might give differing views of what they intend to do.

Mr. W. M. Hamilton (Notre Dame de Grace): I have just a few remarks to put forward on this particular amendment. Before doing so I should say that there was one statement made by the hon. member who has just resumed his seat which impressed me more than a little, although it impressed me adversely. That was his indication that he does not need a number of experts to convince him in respect to the items in the estimates. That may be. It may be that an hon. member such as the one who has just resumed his seat is omniscient enough to know all it is necessary to know about government expenditures totalling $4½ billion. It may be that an hon. member such as that gentleman knows in detail what is going on in the 20 government departments. It may be—

Mr. Maltais: On a point of order, I think the hon. member is giving a different meaning to what I just said. I said I did not need an expert because I have faith in this government.

Mr. Fleming: Therefore you do not need to think.

Mr. Hamilton (Notre Dame de Grace): That is the point I was coming to. I shall attempt to develop my argument. It may be that the hon. member who has interrupted with his pseudo point of order knows in detail what the 150-odd thousand government employees are engaged in doing. It may be—

Mr. McIvor: Order. One at a time.

Mr. Hamilton (Notre Dame de Grace): It may be that in his years in this house—or few years as the case may be—he has acquainted himself with all the facets of the government and its operations, but frankly I do not think so. That is my first point.

Since it is obviously impossible for any one individual to have the necessary knowledge and the necessary background information in order to be able to delve adequately, deeply and satisfactorily into the estimates that are put before us, it would seem to me that the only other sound and sensible course of action is to utilize the help and advice of others who may be able to give it. It is not sufficient to say, as the hon. member did, that he does not need a lot of experts to convince him because he has confidence in the government. That is tantamount to saying that if he were in a court of law he would hear only one side of a case. It is tantamount to saying that he does not really need to know very much about a given subject in order to stamp it with his approval because he believes that right or wrong, no matter what the situation may be, the men who put forward that proposition must have his support.

In so far as I personally am concerned, I am quite prepared to confess as an individual my inability to know in great detail all that goes on in the manifold ramifications of this government's operations—

An hon. Member: I am not surprised.

Mr. Hamilton (Notre Dame de Grace): —and to say that I shall be very happy, in opposition to the hon. member, to hear at any time as many experts as possible on the subjects that come before this house.

Having made that comment on the hon. member's speech, there are one or two other points with which I should like to deal. I could not help wondering once again this afternoon, as I sat listening to the debate in this house, just what kind of government, apart from one bearing the political label "Liberal", we have at the present time. I have heard it referred to in various ways: as government by rubber stamp; government by fiat; on occasions, perhaps too strongly, government by dictatorship, but I rather came to the conclusion this afternoon that we now have government by letter.

I do want to express my astonishment, my dismay and my disappointment in the right hon. gentleman who heads this government, who holds the title of Prime Minister and is the titular, if not any more the actual, head of the government, in that the only evidence we have had of his connection with this motion, which stands in his name on the order paper, is, first, the fact that his name is attached to it and, second, as was developed this afternoon, the fact that he wrote a

letter in connection with the subject to the Leader of the Opposition. It might very well be pointed out that even that letter had to be pried out of him by previous correspondence.

I feel that it is a straightforward reflection on this house that we should be asked to accept legislation of this kind, to debate and vote on it, with no more comment than, I think, from three honourable—shall we call them "ordinary"?—members of the government party. I do not like the term "backbenchers" because one of the members who spoke is a front bencher in the rump. Of course we did have a point of order raised by the Minister of Citizenship and Immigration—

Mr. Pickersgill: I did not raise any point of order.

Mr. Hamilton (Notre Dame de Grace): It was a point of privilege rather than a point of order. And we had the previous statement of the Minister of Finance. The two of them put together did not make even the basis for decent notes for a speech, much less any adequate comment on this particular motion.

We have watched the Prime Minister sitting in this house since the inception of this debate, with the exception of one very brief absence this afternoon, when I thought he was getting tired of it and had given up completely any connection with it. I must say, however, in fairness to the Prime Minister that he had only this one very brief absence when the debate was going on.

Sometimes he has looked interested and has perked up. There was a moment last night while the Leader of the Opposition was speaking when I thought he might take his courage in both hands and rise and speak to the house. But then he sank back again. When the hon. member for Prince Albert was making a few pertinent remarks this afternoon there was a moment when I thought the Prime Minister might get up, but again he sat back.

Mr. Gauthier (Portneuf): How smart.

Mr. Hamilton (Notre Dame de Grace): I do want to say that while I may not always agree with what the Prime Minister has to say, I appreciate the opportunity to hear his point of view. In fact I appreciate the opportunity to hear any member's point of view, and none more so than those of the cabinet. If for no other reason than to give us that point of view, if for no other reason than to give it to me if he feels he does not want to give it to anybody else—

Some hon. Members: Oh, oh.

[Mr. Hamilton (Notre Dame de Grace).]

Mr. Hamilton (Notre Dame de Grace): —I want to add my own personal request that before the debate is over he make some contribution. No matter how limited, no matter how erroneous it may be in my opinion, I plead with him to make some contribution in the age-old tradition of decent, responsible government.

The amendment before us suggests that the committee should be permitted to select the departments it will consider. At the present time, under the motion as originally put forward and as further evidenced in the debate this afternoon, the government selects the departments that are to be examined by the committee. It flashes the red light to them a long time before and says in effect: Boys, get ready; the estimates committee is going to have a look at you. It will not be a very good look. We as a government will see to that by hedging them around with restrictions, by loading the committee with our members and by seeing that nothing that will bring about a really deep investigation goes through the house. We are going to do our best to protect you, but you never can tell about those opposition people who are on the committee. They work hard, they dig pretty deep, and even with all the stumbling blocks we put in their way it is quite possible that if you are not adequately prepared they might find out your misdeeds or misdoings.

Therefore the government say to their selected departments: Get ready for the committee. Smooth anything that you think might be embarrassing to yourselves. Prepare figures and make sure that the only figures you prepare are ones that will not be embarrassing to anybody. In effect the government say: We will be very annoyed if you go to the estimates committee and find yourselves caught off base, and that is why we are giving you all this notice. In effect that is the intent, purpose and actual operation under the present system.

Imagine the additional effectiveness of the committee if it made its own decision following its formation and within the matter of a few days called before it a given department and began to ask the minister of the department and, through him, the officials, questions as to its operation. How is it that defalcations in banks, for example, are discovered? As has been the case from time immemorial, they are discovered when the bank examiners walk in unexpectedly and say, "Let us have a look at your books and your operations".

An hon. Member: Order.

Mr. Hamilton (Notre Dame de Grace): I think there is a point of order, Mr. Speaker.

Mr. Gauthier (Nickel Belt): You are making your own.

Some hon. Members: No.

Mr. Fleming: They are talking in their sleep.

Mr. Gauthier (Nickel Belt): You are looking for one.

Mr. Hamilton (Notre Dame de Grace): How is it that in businesses weaknesses, inaccuracies and defalcations are found? They are found when the auditors come in, sit down and examine the operations of the particular business. For a good many years it was my privilege to be one of the businessmen about whom the hon. member for Nipissing was talking. I want him to know that never in my experience did the auditors telephone me or my organization a week, a month or three months before and say, "We are going to come in and examine your books and records, so will you please make suitable arrangements."

I do know that on occasion in small ways—fortunately there have never been any big ones—the element of surprise has demonstrated its advantages in my ordinary business experience. For instance, let us take the case of petty cash from which someone had temporarily borrowed a few dollars to tide them over to pay day and had put in an I.O.U. That is the sort of thing which if you knew what was going to happen beforehand you would cover up by putting the money back in the box today instead of on pay day. However, the auditors walk in unexpectedly, and I have had them come to me and say that there was an I.O.U. in the petty cash from someone on the staff and ask me if I knew that this was taking place and whether I had authorized it.

I realize, Mr. Speaker, that some of these business illustrations are difficult for the professional politicians on the government side to comprehend, but I put them forward because I know they are easily understandable to the businessmen in this section of the house. I believe definitely that the element of surprise is lost by warning departments in advance, preselecting them several months before and then having their operations rubber stamped by the government majority. The principle of warning departments in this way is not a fundamentally sound idea. It detracts from the usefulness, vitality and ability of the committee to seek out information.

Another point in that connection which might well be made arises from the reference in the Prime Minister's letter, to the departments making suitable arrangements. To me that indicates a lack of confidence on the part of the Prime Minister and the cabinet in the civil service and the departments under their direction. If I should ever occupy a seat on the treasury benches, where I would listen to the catcalls from this point, it would be my hope to have the kind of department that people could come and look at at any time, a department that would not have to have advance warning. If you have to have advance warning it indicates that something is wrong. It indicates that it is necessary to sweep the dirt under the carpet.

In this connection the last question which I would leave hanging in the air is simply this. What is the government hiding that they have to follow this particular course of action? Why will they not face up to an unfettered committee free to follow where its instinct and intelligence lead? The Prime Minister is still in the house, Mr. Speaker. I am sure he might have something to say on this subject. I hope that he will in some way express his opinion on his own motion. I do not think he would want to bring into this world a baby that was completely fatherless. That seems to be the way it stands at the present time.

Some hon. Members: Question.

Mr. Speaker: Is the house ready for the question?

Some hon. Members: Question.

Mr. Speaker: Just before I put the question, for the information of the hon. member for Eglinton and the house, may I indicate why I said earlier that I had some doubts as to the amendment being in order. I may say immediately that I will allow the amendment. I will allow it, not because I am not sure of my ground but because I believe that the point is a rather difficult one and one upon which I think it is appropriate that I should only enter a caveat before I allow the amendment.

The two grounds are as follows. The first is that whereas the motion which is on the order paper merely proposes to set up a committee without giving the order of reference, the amendment is a major alteration to the notice of motion and proposes what the order of reference will be. According to Beauchesne, third edition, citation 315:

> A new notice must be given in the *Votes and Proceedings*, under standing order 45,—
>
> Now standing order 41.
>
> —when a material change is to be made to a notice of motion before it is taken up by the house.

The second point has to do with the difference between the wording of the amendment or the motion as amended, and the wording which is supposed to have been copied from the United Kingdom order of

reference for the formation of such a committee. I was lucky enough to obtain, through the good offices of the hon. member for Eglinton and the hon. member for Kamloops, the book which was referred to earlier in the debate by both hon. members. It is entitled "Parliamentary Debates, 5th Series, volume 37, 1912". The Chancellor of the Exchequer, who was then Mr. Lloyd George, in bringing in his motion, moved it in the following terms:

> That a select committee be appointed to examine and report on such of the estimates presented to this house as may seem fit to the committee.

The question that I should like hon. members to ponder is this, and it is the reason I am not making a ruling. I have in my hand treasury paper No. 6 of the United Kingdom which is entitled "Parliamentary Supply Procedure" and was issued by the treasury for official use in January, 1949. At page 58 I find the following:

> For present purposes the important part of this report—

An earlier part of the report recommended that the house continue having a committee on estimates.

> —is that in which the committee reaffirmed the desirability that the estimates should be examined by a select committee, in addition to and if possible prior to, their consideration in committee of supply.

In the United Kingdom I believe they do not withdraw from the committee of supply the estimates that are to be considered by the committee on estimates.

Mr. Fulton: Nor do we.

Mr. Speaker: Here our practice has been different. As to the estimates pertaining to government-owned railways, to the Department of External Affairs, or to the departments referred to the committee on estimates last year, it had been the practice to move that these estimates be removed from the committee of supply and referred to the committee on estimates and then, when they are reported back by the committee, there had to be another motion to send them back to the committee of supply.

I ask hon. members who made that motion to get them from there where they are now and who made that motion to bring them back? That is government business, and must be moved by the leader of the house. If the house wish to accept this motion, as the wording is now it would read as follows:

> That a select committee to be designated be appointed to consider such of the estimates as may seem fit to the committee and to report from time to time its findings and recommendations to the house.

Unless the house were assured that there would be made by the leader of the house a motion to extract some estimates from the committee of supply, saving all the power of that committee to consider them later, and that when they were reported by the committee a motion would be made by the leader of the house to send them back here, it would be absolutely inoperative. That was the procedure until it was altered by standing order 57.

As I said before, I am not going to make a ruling because I am not too sure about the practice of the United Kingdom, and I do not want to deal any further with it because I think in doing so I would be debating a question which has been at issue between the two sides in the house.

The house divided on the amendment (Mr. Fleming) which was negatived on the following division:

Mr. W. Ross Thatcher (Moose Jaw-Lake Centre): Last evening I had some remarks to make on this resolution, but I did not have an opportunity to move an amendment. I would like to do so at this time. Perhaps the house will bear with me for two or three moments while I give the reasons why I wish to move this particular amendment.

I stated last night that I certainly support the setting up of the estimates committee. I think it did good work last year; but certainly no one should assume that if this committee is set up our parliamentary machinery for examining estimates will be brought up to date. Nor should anyone assume that because we set up this committee, parliament is adopting a procedure which is genuinely efficient and effective. At best we are just beginning to come to grips with the over-all problem.

I hold in my hand page 2 of the estimates of this year. As I understand it, when this committee is set up four departments are to be referred to it. But what about the other 15 major departments? I can only assume that they are still to be dealt with by the committee of the whole. I find on page 2 of the estimates not only 19 major departments, but also a good many minor departments which will still have to be dealt with by the committee of the whole.

This afternoon the hon. member for Cape Breton South suggested that he felt it was the duty of parliament to examine the estimates. I could not agree with anything more. Unfortunately, today it is not parliament that is really scrutinizing these estimates; it is the civil service as represented by the treasury board and certain officials of the Department of Finance. I have nothing against the committee of the whole going over the estimates after they have been worked over by individual committees, but I say it simply is impossible to efficiently examine estimates in committee of the whole alone. That committee is too hurried; it is clumsy; it is unwieldy. While you can ask questions of a minister, it is almost impossible to get answers which are satisfactory.

I say, Mr. Speaker, that every single estimate, before it is brought into the committee of the whole, should be reviewed first by one parliamentary committee or another. Early in the session the agriculture estimates should be referred to the committee on agriculture and colonization; finance and national revenue should be referred to the banking and commerce committee; perhaps the defence estimates, which the opposition spoke about this afternoon, should go to a special defence committee, and so on. I repeat, every single estimate which is brought down in this house should first of all go to a special committee.

I should also like to say a word about our crown corporations. I for one am not satisfied with the way in which crown corporations are being dealt with in parliament. I have been here since 1945, and as I said last evening

there are many crown corporations that I do not think have ever come before parliament. I think for a moment of the Polymer Corporation and the Canadian Commercial Corporation.

Mr. Speaker: Order. I am afraid the hon. member is repeating almost in exact terms the speech he made yesterday, which I had the pleasure of listening to.

Mr. Thatcher: Well, I do not think I am, sir. I wanted to explain my amendment before I moved it. I ask you to think for a moment, Mr. Speaker, of Central Mortgage and Housing Corporation. Here is a company that is spending literally hundreds of millions of dollars. Is it not reasonable that some parliamentary committee should look into the way it is spending that money? I think for a moment of the St. Lawrence seaway authority. That agency is going to be spending a good many millions of dollars. Should not some parliamentary committee look into the way in which that money is being spent? I think for a moment of the Bank of Canada. After all, the Bank of Canada directs Canadian financial policy. Surely it is sensible for some parliamentary committee to look into its activities. I think of Eldorado Mining and Refining Company, a company which has so much to do with the production of uranium for the free world. Surely it is sensible for a parliamentary committee to examine the way in which that company is spending its money.

I could mention crown assets; I could mention the Export Credits Insurance Corporation, a company which plays such a role in encouraging Canada's export trade. I say that every crown corporation owned by the people of Canada should be brought before one parliamentary committee or another at least once a year. Therefore, Mr. Speaker, I am going to move, seconded by the hon. member for Lapointe (Mr. Girard):

> That the motion be amended by adding at the end thereof the following words:
> "and that the estimates of any department or crown corporation, not already referred to a standing or select committee, be referred forthwith to such a committee for examination and report."

I say, Mr. Speaker, if the house would pass this particular motion, in future if there is waste and extravagance in some of these departments or corporations, parliament would have a much better chance of finding it.

Mr. Speaker: I have listened very carefully to the terms of the hon. member's amendment and I regret to have to inform him that I cannot accept it. Citation 315 of Beauchesne's Parliamentary Rules and Forms, third edition, reads as follows:

> A modification of a notice of motion standing upon the notice paper is permitted, if the amended notice does not exceed the scope of the original notice.
>
> A new notice must be given in the *Votes and Proceedings*, under standing order 45, when a material change is to be made to a notice of motion before it is taken up by the house.

I would also refer the hon. member to certain rulings which have been made on this subject. I have one in mind particularly, where the house was considering the setting up of a committee for the purpose of considering the accounts of a government-owned railway. An amendment had been moved to empower the committee to also consider the accounts of a private company. This was ruled out of order by Mr. Speaker Black at page 642 of Beauchesne's third edition. Mr. Guthrie raised a point of order and said it is a substantive motion and should be brought before the house as such with notice given in the ordinary way. Mr. Speaker Black declared the point of order well taken.

There are other rulings in Beauchesne to which I could refer the hon. member. One appears at page 633 and is the ruling of Mr. Speaker Lemieux. Another one appears at page 635, a ruling of Mr. Deputy Speaker Fred Johnston. I am sorry, but I cannot accept the amendment.

Mr. Thatcher: Mr. Speaker, I am certainly not going to challenge your ruling. As a matter of fact I rather expected it. However, in view of the latitude you showed when the last motion was moved I was rather hoping you might let me proceed. As I say, however, I am not going to hold up the house at this time.

Mr. Harris: Mr. Speaker—

Mr. Speaker: If the Minister of Finance speaks now he will close the debate.

Hon. W. E. Harris (Minister of Finance): Mr. Speaker, I shall be very brief and will endeavour to be finished before six o'clock. I have two or three observations to make, the first one being that the hon. member for Eglinton complained that we delayed the placing of this motion before the house. Surely it is obvious to the house, Mr. Speaker, that the legislation which should have been disposed of first this session was that on which an engagement had been made to introduce that legislation in the house.

When we met here we were under the criticism of previous years that we had interrupted the address debate, and because of the new rules we were asked to continue the debate

until it was concluded. We did that. We then took up the legislation, as I say, on which I had given an engagement to the banks; and if we had not done that I am satisfied that hon. members of the Conservative party would have claimed we were ignoring parliament and not submitting to the judgment of parliament that decision of last November.

I want to refer very briefly to what the hon. member for Moose Jaw-Lake Centre has said about all estimates going to committees. I realize that he is away ahead of many hon. members of the house, but perhaps that is consistent with the attitude he has taken throughout. I might also say he is apparently consistent in trying to save money in the speeches he makes in this house. It was suggested to me by one of my colleagues last night that it would be interesting if we sent to some committee all the suggestions made by opposition members for the spending of money, to have a price tag put on them.

Last night the hon. member for Winnipeg North Centre made a remark which I think we ought to examine not now but at some future time. His suggestion, I think, was that we should continue to send before this committee members of the civil service, of whatever rank they may be, ultimately to find someone who would disagree with government policy. Now it is my—

Mr. Knowles: On a point of privilege, Mr. Speaker, the minister—

An hon. Member: Sit down.

Mr. Knowles: —the minister should not put words in my mouth which I did not utter at all. I said we wanted to find out who was running the government of this country.

Mr. Harris: Yes. And, Mr. Speaker, he went on to say that he wants to find out whose idea a particular thing was. The whole essence of parliamentary government is that the civil servants will carry out the orders of parliament and government policy. Whether or not they agree with it in the first instance they are of course obliged to give their opinion, and once an opinion is given and once a policy is announced it is their duty to carry it out.

I have just one more point, and it has to do with the remarks made this afternoon by the Leader of the Opposition with respect to the business of this committee. I have always said that this was an experiment, and I took some pains during my address a year ago to point out the difference between what we thought an estimates committee should be—and when I say "we" I mean parliament and all parties in it, not the government—as compared to that of the United Kingdom. I made the point that we did not expect, and I had never heard anyone in this house suggest, that we would end up with an estimates committee such as they have in the United Kingdom.

In the United Kingdom the committee of supply deals with policy and the committee on estimates deals with detail. Thus far we have not come to a conclusion here as to whether or not the estimates committee should deal with policy or detail. Nevertheless we never did expect—at least I do not think anyone expected—that we would have a committee which would travel throughout Canada, take evidence from sundry people, and publish a report months after the estimates were placed before parliament. The whole purpose of the estimates committee is to deal during the current session with the estimates that are submitted, so that parliament may be entitled to reject them if it feels it advisable during that session.

I have nothing further to add except that with respect to the work of the committee we did as the Prime Minister indicated we would do in the letter he wrote in response to the letter written by the Leader of the Opposition. In this letter the Prime Minister indicated that we had decided to recommend to parliament that four departments come before the committee. It should be noted, however, that in reading that particular portion of my address the Leader of the Opposition did not go on to read the following paragraph in which I said that having done that, and having in mind the amount of time parliament would have, we would do our best to meet the wishes of the opposition and call some other departments if we had time.

Motion (Mr. St. Laurent, Quebec East) agreed to.

BUSINESS OF THE HOUSE

Mr. Harris: Mr. Speaker, tomorrow we shall continue with these motions and the business I indicated on Monday night, I think it was. On Friday we shall take the estimates of the Department of Fisheries.

At six o'clock the house adjourned, without question put, pursuant to standing order.

Questions

ANSWERS TO QUESTIONS

The following answers, deposited with the Clerk of the house, are printed in the official report of debates pursuant to standing order 39:

BUTTER—SELLING PRICES

Question No. 30—**Mr. Blair:**

1. What is the present government selling price of butter on the Canadian market?
2. What was the government selling price of butter on the market on the corresponding date of last year?
3. What are the factors entering into the difference in selling prices at present and on the corresponding date last year?
4. Does the government propose to follow the policy of former years with respect to carrying costs of butter owned by it and the industry including producer co-operatives, as stated or implied by the minister?
5. If not, does the government propose to compensate owners of butter against loss with respect to such carrying costs?

Answer by: **Mr. Gardiner:**

1. The present selling price of Canada first grade butter in Canada is on the basis of 58 cents per pound.

2. On the same date last year, the selling price of Canada first grade butter in Canada was on the basis of 61 cents per pound.

3. By absorbing the handling charges, the government is offering butter in Canada at the lower price for the purpose of encouraging increased domestic consumption.

4. The board made known at June 30, 1955 that they did not propose to follow the policy of former years.

5. No, since any storing of butter was done voluntarily.

PEACE RIVER AREA—ECONOMIC SURVEY

Question No. 54—**Mr. Leboe:**

1. Has the federal government made any economic surveys of the British Columbia-Alberta sections of the Peace river area within the last 10 years?
2. If so, when, and who made these surveys?

Answer by: **Mr. Gardiner:**

1 and 2. Economics division, Department of Agriculture made the following economic surveys: (a) High Prairie area in 1951; (b) Wanham-Spirit River area in Alberta and adjoining area in British Columbia in 1953; (c) Fort Vermilion area in 1953.

P.F.R.A.—FEDERAL EXPENDITURES

Question No. 119—**Mr. Brooks:**

1. How much money was spent by the federal government under P.F.R.A. in each of the prairie provinces, in the years 1952, 1953, 1954, 1955?
2. What is the total amount spent up to January 1, 1956 under this act?

Answer by: **Mr. Gardiner:**

1.	Manitoba	Saskatchewan	Alberta
1952-53	$311,742	$3,305,045	$420,275
1953-54	486,957	2,944,281	449,228
1954-55	227,963	2,964,180	630,797
1955 to Dec. 31/55	165,864	2,567,074	400,884

2. Total P.F.R.A. to January 1, 1956—$53,893,950.

Note: Expenditures for major irrigation and other reclamation and land protection works, administered by the P.F.R.A., are not included in the above.

CIVIL DEFENCE ALLOCATIONS, PRAIRIE PROVINCES

Question No. 166—**Mr. Pearkes:**

1. What amounts have been allocated to the various provinces for civil defence, during the years 1954 and 1955?
2. On what basis are the amounts allocated?
3. What amounts, from the funds allotted, have been spent by each province?

Answer by: **Mr. Martin:**

1. Amounts allocated for each of the fiscal years 1954-55 and 1955-56:

Newfoundland	$ 45,863
Prince Edward Island	10,827
Nova Scotia	92,128
New Brunswick	63,777
Quebec	603,375
Ontario	692,036
Manitoba	117,286
Saskatchewan	91,490
Alberta	118,922
British Columbia	187,272

2. Under the terms of order in council P.C. 1955-30/1240 of August 26, 1955, funds are allocated on the basis of 11 cents per capita of population as reported in the 1951 census, with an additional 9 cents per capita of population in areas that have been designated by the federal civil defence co-ordinator as target areas.

3.

	1954-55	1955-56	
	Expenditures	Projects approved to Feb. 15, 1956.	Expenditures to Feb. 15, 1956.
Newfoundland	$ 21,373	$ 30,500	—
Prince Edward Island	—	—	—
Nova Scotia	17,925	39,434	—
New Brunswick	12,433	27,087	—
Quebec	—	—	—
Ontario	18,122	219,544	15,760
Manitoba	25,892	58,256	9,480
Saskatchewan	42,807	51,682	24,782
Alberta	118,922	47,845	—
British Columbia	158,350	173,013	41,285

POST OFFICE DEPARTMENT—INSTRUCTIONS REGARDING BURGLARIES

Question No. 167—**Mr. Hamilton (Notre Dame de Grace):**

1. Has the Post Office Department issued instructions to postmasters concerning the procedure to be followed when a theft or burglary is discovered?
2. If so, do such instructions, or any others, comment on release of information to the press in connection with thefts or burglaries from the post office?
3. Has it been suggested or directed in any form that no information in connection with such events be released by the local postmaster?

Answer by: **Mr. Lapointe:**

1. Yes.
2. Yes.
3. No.

SMOKED HERRING EXPORTS TO BELGIAN CONGO

Question No. 191—**Mr. Regier:**

1. At what time and in what manner did the Department of Trade and Commerce make inquiries in the Belgian Congo as to the possibility of disposing for human consumption of the smoked herring that was evidently sold under authority of order in council P.C. 1954-981, June 30, 1954?
2. Were any of the replies to the Department of Trade and Commerce to such inquiry in the form of a letter or other written communication?

Answer by: **Mr. Howe (Port Arthur):**

1. On December 1, 1953, an air mail letter was dispatched to our trade commissioner in Leopoldville requesting an urgent report on market prospects in the Belgian Congo for hard cured smoked round herring (bloaters).

2. A reply by cable was received on December 14, 1953, stating that the responsible firms in the Belgian Congo were reluctant to import the bloaters. A follow-up letter was sent the same day (December 14, 1953) by the trade commissioner confirming in detail that no market existed in the Belgian Congo for this particular fisheries product.

HOUSE OF COMMONS

Thursday, March 1, 1956

The house met at 2.30 p.m.

CIVIL SERVICE ACT

AMENDMENT TO GIVE PREFERENCE TO BILINGUAL CANDIDATES

Mr. Fernand Girard (Lapointe) moved for leave to introduce Bill No. 159, to amend the Civil Service Act.

Some hon. Members: Explain.

Mr. Girard: Mr. Speaker, the proposed amendment is intended, without interfering with the preference now rendered to our veterans, to grant a certain preference to bilingual competitors eligible for appointment as the result of civil service examinations. The bill does not require civil servants to be bilingual but it gives a certain preference to candidates who fit better the bilingual character of the country.

Motion agreed to and bill read the first time.

PRIVILEGE

MR. DUFRESNE—REFERENCE TO PRESS REPORT OF REMARKS IN DEBATE

On the orders of the day:

Mr. J. Wilfrid Dufresne (Quebec West): Mr. Speaker, I rise on a question of privilege. On Tuesday, the 28th of February, 1956, as stated in *Hansard* of that date on page 1617, I asked the Minister of Citizenship and Immigration the following question:

Is it the minister's intention to recommend special security measures to be taken upon the return of Tim Buck from Moscow?

A newspaper report the following day, February 29, incorrectly stated:

A Quebec Conservative member of parliament suggested ironically in the Commons today that Canadian communist leader Tim Buck would need "protection" when he returns from the communist party congress in Moscow.

This news report had the effect, no doubt inadvertently, of leaving the impression that I was asking for protection for Tim Buck, while my purpose was to suggest that protection should be taken against Tim Buck.

I deplore the interpretation given to this question by the press. I believe it is most unnecessary for me to declare again my firm determination to fight, by any means at my command, communism in Canada. My very question was prompted by my desire to protect the Canadian people from the danger of communism, and the possible and probable stepping up of communist activities in Canada as a result of Tim Buck's return—

Mr. Speaker: Order. I had hoped that the hon. member could finish his statement before I was obliged to intervene. Unfortunately I must tell him that, for the purpose of that question of privilege, it looks as though he is going beyond what is necessary.

Mr. Dufresne: Mr. Speaker—

Mr. Speaker: Order. The hon. member has stated his question of privilege and has put the record straight.

ST. LAWRENCE SEAWAY

EXPROPRIATION OF PART OF CAUGHNAWAGA INDIAN RESERVE

On the orders of the day:

Mr. G. H. Castleden (Yorkton): Mr. Speaker, I wish to direct a question to the Minister of Transport. What is the amount of the settlement which the St. Lawrence seaway authority has agreed to pay as compensation for the land being expropriated from the Caughnawaga reserve? I regret that I have not given the minister longer notice.

Hon. George C. Marler (Minister of Transport): Mr. Speaker, the hon. member was good enough to send me notice of this question just as the house opened. I am unable to tell him what is the amount of the settlement to which he refers. It will be necessary to consult with the authority to find out whether the information is available and whether it should be made public.

UNEMPLOYMENT INSURANCE

EASTERN QUEBEC—ALLEGED DISQUALIFICATION OF WORKERS

On the orders of the day:

Mr. Leon Balcer (Three Rivers): Mr. Speaker, I should like to direct to the parliamentary assistant to the Minister of Labour a question of which I did not have time to give him notice. I should appreciate it if he would give me an answer at some future time. Did the Minister of Labour (Mr. Gregg) or his department receive any representations

from woodworkers in eastern Quebec who have been disqualified for their unemployment insurance because they could not afford to pay their train fare to go and work in the bush around Clova, Quebec? If so, can he tell us whether the number of unemployed so disqualified is some 2,000 or over and what steps the department is going to take with regard to the matter?

Mr. J. A. Blanchette (Parliamentary Assistant to the Minister of Labour): Mr. Speaker, in the absence of the Minister of Labour may I take the question as notice? In the meantime I might say that representations have been made to the Minister of Labour with regard to the subject matter of the question and that the matter is being fully gone into. A definite reply will probably be made in the course of the next few days.

NATIONAL DEFENCE

APPOINTMENT OF COMMANDER OF NO. 6 MILITIA GROUP

On the orders of the day:

Mr. Thomas M. Bell (Saint John-Albert): I wish to direct a question to the parliamentary assistant to the Minister of National Defence. Has the new appointment of commander of No. 6 militia group been made? If not, when may we expect this appointment?

Mr. P. T. Hellyer (Parliamentary Assistant to the Minister of National Defence): Mr. Speaker, the appointment has not been made. At the moment the matter is awaiting the approval of the Minister of National Defence (Mr. Campney).

Mr. Bell: I should like to ask a supplementary question. When the new appointment is made, will consideration be given to maintaining the same rank that is now called for in the establishment?

Mr. Hellyer: Mr. Speaker, full and careful consideration will be given to all the factors involved.

ADMINISTRATION OF JUSTICE

ALLEGED ILLEGAL GAMBLING ACTIVITIES IN ONTARIO

On the orders of the day:

Mr. W. B. Nesbitt (Oxford): I should like to direct a question to the Minister of Justice in view of the report on the front page of this morning's *Globe and Mail* to the effect that certain illegal gambling activities in Ontario are protected by federal charter. Has the minister any comment to make?

Hon. Stuart S. Garson (Minister of Justice): I have not seen the report. If the report is to the effect that these clubs are engaging in illegal activities, I would not think it would make much difference whence they obtained their charter. In any case this would be a matter for consideration by the law enforcement authorities of the province.

TELEVISION

WINNIPEG—REQUEST FOR ESTABLISHMENT OF PRIVATE STATION

On the orders of the day:

Mr. O. C. Trainor (Winnipeg South): Is the Minister of National Revenue aware of the current demand in the city of Winnipeg for a second television station under private auspices? If so, will the government give consideration to allowing a private station to become established there or will they insist on the maintenance of the current government monopoly?

Hon. J. J. McCann (Minister of National Revenue): I am aware, Mr. Speaker, of a request rather than a demand for a private station in Winnipeg. Of course this involves a matter of government policy, and when there are changes in policy they will be announced.

EXTERNAL AFFAIRS

ORGANIZATION FOR EUROPEAN ECONOMIC CO-OPERATION—ALLEGED OFFER OF ATOMIC MATERIALS BY CANADA

On the orders of the day:

Mr. J. G. Diefenbaker (Prince Albert): I should like to direct a question to the Secretary of State for External Affairs in connection with the 17-nation organization for European economic co-operation, a meeting of which is now taking place in Paris. Has Canada agreed at this conference to make available to European nations large amounts of atomic raw materials, and what is the basis upon which that offer was made by Mr. Wilgress?

Hon. L. B. Pearson (Secretary of State for External Affairs): A conference is taking place, but I am not aware of any such offer as indicated by my hon. friend. I will look into the matter and see if I can say anything about it tomorrow.

ARTS, LETTERS AND SCIENCES

INQUIRY AS TO SETTING UP OF CANADA COUNCIL

On the orders of the day:

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, I should like to direct a question to the Prime Minister. Has the government reconsidered the stand which the Prime Minister announced on January

12 with regard to the establishment of the Canada Council? If not, will the government give further consideration to the establishment of this council at an early date?

Right Hon. L. S. St. Laurent (Prime Minister): The government is giving consideration to that matter, Mr. Speaker.

PIPE LINES

TRANS-CANADA PIPE LINES—EXTENSION OF TIME FOR FINANCING

On the orders of the day:

Hon. George A. Drew (Leader of the Opposition): Will the Minister of Trade and Commerce state whether the time for the financing of Trans-Canada Pipe Lines has been extended, and if so by whom?

Right Hon. C. D. Howe (Minister of Trade and Commerce): I understand the province of Alberta has extended the time under the export permit issued to Trans-Canada by that province. I know of no other extension.

TRADE

INQUIRY AS TO NEGOTIATIONS CURRENTLY PENDING

On the orders of the day:

Mr. Donald M. Fleming (Eglinton): May I ask the Minister of Trade and Commerce if there are any trade negotiations, that is negotiations looking toward trade treaties, under way with any nation at the present time apart from GATT?

Right Hon. C. D. Howe (Minister of Trade and Commerce): Well, there is the international wheat agreement, of course. That is under negotiation but I know of no other negotiations.

ATOMIC ENERGY

SPECIAL COMMITTEE TO EXAMINE INTO ROLE OF GOVERNMENT IN NON-MILITARY RESEARCH

The house resumed, from Friday, February 24, consideration of the motion of Mr. Howe (Port Arthur):

That a special committee be appointed to examine into the role of government in the field of non-military research in Canada, including:

(a) operations in the field of atomic energy,

(b) operations of the national research council.

That the committee be empowered to sit during the sittings of the house and to print such papers and evidence from day to day as may be ordered by the committee and to report from time to time; and that notwithstanding standing order No. 67 the committee shall consist of 20 members.

Mr. J. H. Dickey (Parliamentary Assistant to the Minister of Defence Production): The purpose of this resolution is disclosed by its terms as they appear on the order paper. It is to set up a special committee of this house to consider the role of the federal government in non-military research in Canada. In making this study the committee is expected to review the operations of Atomic Energy of Canada Limited and of the national research council, and to consider also research in its general aspects.

In previous sessions committees of a similar nature were set up. The first was in 1949, and that committee was known as the committee on atomic energy. In 1950 we established a sessional committee on the operations of the national research council.

In 1953 we had a second committee on atomic energy. All of these committees, Mr. Speaker, did valuable work. However, during the last several years considerable changes have occurred in the organization of the atomic energy project and in its relations to the national research council. Further study by a committee of this house of the activities of the government in both these fields seems to be appropriate at this session. The operations of Atomic Energy of Canada Limited and of research laboratories are quite complicated, and a committee of this house gives the members an opportunity to appreciate the problems involved and to obtain much more detailed information on these matters than would otherwise be possible.

There is no question that after the previous committees had met the members of this house had a much better appreciation of what was involved. It is also true that the last five years have brought about an increasing interest in research on the part of hon. members. This has been indicated by a wider variety of questions asked and in particular by the interest in the debate two years ago on the amendments to the national Research Council Act. At that time the Minister of Trade and Commerce (Mr. Howe) made a full statement about the operations of the national research council, and accordingly I do not propose to go into any detail today. I would, however, like to point out certain changes which have occurred in the administration and operation of the national research council and in general government support of academic and industrial research.

Mr. Speaker: Order. Might I make a suggestion to the hon. member? There is a microphone a little further away from him. Would it be possible for him to take the place that the hon. member has just vacated, because it is very difficult for hon. members to hear the statement that he is now making. I think the house will appreciate the co-operation of the hon. gentleman.

Mr. Dickey: The major changes which have occurred in the organization since 1950 are, first the setting up of Atomic Energy of

Canada Limited as a crown company in 1952 and the transfer to it from the national research council of responsibility for work on atomic energy. The company has now been in existence for four years, and our experience shows that the new arrangement has been entirely successful. In addition, the fact that the president of Atomic Energy of Canada Limited is also the president—

Mr. Nicholson: Mr. Speaker, on a point of order, the hon. member is speaking louder but there is a good deal of talking in his general area. This important statement the hon. member is making should be appreciated by all if hon. members around him would speak a little more softly.

Mr. Hees: If he would hold the speech up a little and speak out.

Mr. Dickey: The president of Atomic Energy of Canada Limited is also the president of Eldorado Mining and Refining Limited, and this has meant a consolidation of activities connected with atomic energy, including both research in the atomic field and the production of uranium.

In spite of the necessity of separating Atomic Energy of Canada Limited from the national research council, co-operation between those two bodies has remained extremely close.

The other main change since 1950 has been the completion of several buildings and division of the national research council which were under way at the time of the first committee. The maritime regional laboratory, which was under construction then, is now in full operation.

The division of building research has now a building of its own and has been expanded to something like full size. The division of radio and electrical engineering is now housed in its own building on the Montreal road and the division of applied chemistry has been expanded and also now has its own building.

As far as research in general is concerned, there has been a very considerable increase in activity and interest in the last five years. With reference to government research, I shall not enlarge on the position since it was dealt with during the past two sessions of parliament, except to say that at the present time $70 million per annum is being spent by the federal government on research. I think that one can say with justice that the per capita expenditure on government research in Canada of a nonmilitary nature is now on a level where it compares favourably with any country in the world.

Further, I think that one can well be proud of the quality of the work which is being done in various government organizations. A considerable expansion has also taken place in government support to university research. As far as the national research council is concerned, this increase has been a dramatic one, the amount rising from a few thousand dollars at the end of the first war to something like $2½ million today. In particular university support by the national research council has multiplied by a factor of about five since the end of the second war. There is no question that support from the national research council over the years has been a major factor in the development of university research in Canada.

I should also like to say something about industrial research in which there has been an increasing interest and activity over the past few years. We are at a stage in this country in our industrial development where we must to a greater and greater extent think for ourselves along technical lines. There is a very satisfactory trend in this direction which must be continued. The only way, however, in which industrial research can really develop is on the basis of appreciation by industry that it is necessary. All that the government can do in this regard is to make tax concessions to try to take care through government laboratories of the smaller industries and to help the larger industries in the transition period before they get their own research going, to advise and encourage and to set the example by operating first-rate laboratories itself.

I believe that the Canadian picture in industrial research is encouraging. We have developed research in the federal government to a stage where we can be thoroughly proud of the results. Most provincial governments have also become interested in research with a provincial outlook. Our industries are becoming research conscious and we are giving them every possible encouragement from the point of view of taxation. All in all, I think we are on the right track and the future of Canadian research should be a bright one. However, since we are in a transition period it appears to be an excellent time for a committee of this house to look into the whole question of the status of Canadian governmental research.

Mr. Howard C. Green (Vancouver-Quadra): Mr. Speaker, in opening my remarks I should like to reread the terms of the resolution which are as follows:

> That a special committee be appointed to examine into the role of government in the field of non-military research in Canada, including:
> (a) operations in the field of atomic energy,
> (b) operations of the national research council.
> That the committee be empowered to sit during the sittings of the house and to print such papers and evidence from day to day as may be ordered

by the committee and to report from time to time; and that notwithstanding standing order No. 67 the committee shall consist of twenty members.

There are some features of that resolution which I think deserve further consideration. One is that in effect it calls for two inquiries, one into the field of atomic energy and the other into the operations of the national research council. The official opposition support the idea of having these two fields investigated, but we believe it would have been wiser to have separate committees. After all there is a great deal to be considered in each of the fields and during the discussion of this question last session the Minister of Trade and Commerce stated that he believed that there should be two committees rather than one.

Mr. Howe (Port Arthur): Oh, no. Can my hon. friend quote me on that?

Mr. Green: Yes, certainly. At page 6215 of *Hansard* for July 15, 1955, the Minister of Trade and Commerce is reported as follows:

Next year we shall be very glad to consider it.

There had been discussion about a committee.

I think it is better to have a committee on atomic energy. I believe it is a big enough field. If other committees in the fields of science are needed, perhaps they could be separate committees.

A second feature of this motion is that it takes out of the scope of the committee the field of military research. I believe the government was correct in not asking this committee to investigate that field, but I suggest that the field of military research is one in which an investigation might save the country a great deal of money. At the present time large sums of money are being spent in this field and there is an increase in the estimates for the current year. Yet parliament has practically no way of checking these particular expenditures.

The other features of this motion to which I should like to refer is that there is severe restriction upon the powers of the committee in that it will not be allowed to send for persons and papers. If hon. members will look at the order paper they will see that Item No. 9 is a motion to set up a committee to consider the work of the federal district commission and that committee is to have the power to send for persons and papers. Item No. 13 covers a motion to set up a committee to consider certain aspects of the criminal law of Canada, which committee is also to be given the power to send for persons and papers. The last item on the order paper is a motion to set up a committee on the Canadian National Railways and Trans-Canada Air Lines. That committee also is given the power to send for persons, papers and records. We believe that the committee on atomic energy and research should be given the same powers. It is my purpose before I sit down to move an amendment to that effect. I hope the government will consider such amendment on its merits.

We believe that this committee is a very important one. In earlier years when there has been a committee on atomic energy the members have acted in a responsible and conscientious way, and I am sure they will do the same thing this year. I know that the Minister of Trade and Commerce would agree with those remarks. I do not believe there has ever been a better committee of the house than the committees that have been set up to consider the question of atomic energy and the operations of the national research council.

Today I propose to deal only with the atomic energy field. The other field, namely, the operations of the national research council, will be dealt with in the first place by my colleague, the hon. member for Lambton West (Mr. Murphy). In so far as the atomic energy field is concerned, we are not satisfied with the position of parliament. It is quite significant that in making the opening speech in this debate today the parliamentary assistant barely mentioned the atomic energy field. Most of his remarks had to do with the national research council. I do not intend to belittle the work of that council because we have great admiration for the work it has done. I simply point out that the government itself in its opening statement today has given the house practically no information with regard to the atomic energy field. That indicates very clearly the point I wish to make, that we do not believe parliament is in its proper position with regard to the atomic energy field.

In the first place, there is almost a complete lack of information given to the house about what is happening in this particular field. It is true that each year certain estimates are passed which deal with atomic energy activities but the questioning during the discussion of those estimates is of necessity of a very desultory nature. It is quite impossible to gather much information in that way, and parliament, and beyond parliament, the people, have been getting very little information about what is going on in Canada in this field.

On two occasions there has been a special committee of the house on atomic energy, the first being in 1949. It was only set up after years of pleading by members of all three

opposition parties. The original Atomic Energy Control Act was passed in 1946 and at that time, leading off for the Conservative party, I urged as earnestly as I could that there should be a committee of the house on atomic energy. That request was not granted. Finally, three years later in 1949 the first special committee was set up.

That committee found that the field was so wide and so important that it recommended that a committee be se up in the following year. I have here the recommendation of the 1949 committee which is as follows:

> Your committee has been in existence for only six weeks and in that time has been unable to complete its examination into the field of atomic energy development. Furthermore, this field is a new one, is widening rapidly, and may well be of tremendous importance to Canada. For these reasons your committee recommends that a special committee be reconstituted next session.

The recommendation made by the 1949 committee is still a valid and sound recommendation because as we know the field has been widening steadily in the meantime and much more rapidly than anyone expected in 1949. However, the government would not set up a committee again in 1950 and we did not succeed in getting the second committee until the year 1953.

I believe that what is needed is a standing committee of the house on atomic energy. As things are at present, the Minister of Trade and Commerce alone knows what is going on in this field. His parliamentary assistant may have some information. The hon. member for Ottawa West (Mr. McIlraith), who was chairman of the special committee in 1949 and also in 1953, I believe, may have some knowledge. But essentially the only member of the parliament of Canada today who has any detailed knowledge of the atomic energy field is the Minister of Trade and Commerce himself. I make no comments today about its being that particular minister but I think this is an unsound situation to exist in the parliament of Canada.

This field is much too important to have the detailed knowledge concerning it possessed by only one person. The United States has gone at this particular problem of keeping the elected bodies in touch with the atomic energy field in a different way. I realize that their governmental system differs greatly from our own, but in this particular respect I think we could very well copy at least a portion of the organization they have set up. They have three watchdog committees over atomic energy. One is made up of defence people, a second of scientists appointed from all over the United States, and the third is the congressional committee, a joint committee which is really the congressional watchdog committee on atomic energy. Their job is to make continual studies of the development of atomic energy and to keep congress fully acquainted with such developments.

I understand they actually have a permanent staff, and right from the start they have been in very close touch with what has gone on in the United States in the atomic energy field. I see no reason why, under our parliamentary system, we should not have a standing committee on atomic energy. I admit that the problem is a difficult one. I am not trying to be partisan at all in these remarks. I admit it is a difficult problem to meet, but I believe that one of the best ways of keeping the membership of the House of Commons informed on what is happening in this field and also of keeping Canadian newspapers and the Canadian people informed would be by having a standing committee.

At one time we met the explanation or the excuse that there was so much secret information in the atomic energy field that it would not be possible to have any such committee. I have here a statement made by the classification officer of Atomic Energy of Canada Limited since this house has been sitting. I am quoting from a dispatch from Chalk River on January 31, 1956, by John Bird. It is a Canadian Press dispatch. In it we find these statements:

> Officials of A.E.C. were emphatic in saying that all the atomic information necessary for development work on power stations is available to private industry. Statements to the effect that secrecy considerations impeded the release of such information were termed incorrect.
>
> "There is a mistaken impression that atomic energy for peaceful uses still is hush-hush," said Dr. G. O. Baines, classification officer for A.E.C. "Very little now is secret at Chalk River and other atomic plants not engaged in weapon production."

I believe that industry in Canada now knows far more about the atomic energy field than do members of parliament themselves. Mr. Speaker, parliament simply must be brought into this picture, for several reasons. One is this. It is a new field. This atomic energy field is the most important new field in Canada in the lifetime of any member of this house. There has never been a more important field opened up in the lifetime of anyone in this house today. It is a most important field in war. By reason of the development of atomic energy we were able to win the war in the Pacific in short order. By the same token we might very well have lost the war just as rapidly if the Germans had achieved this development before the allies. It is a most important field in peacetime as well. New questions are raised. There is need for new policies; and the responsibility for those new policies, in the final analysis, is not on the government of

Canada but on the parliament of Canada. How can the parliament of Canada accept that responsibility if it is not informed of what is going on in this field? I point out to the Prime Minister (Mr. St. Laurent) that the government must be extremely careful to keep parliament informed of the developments in this field.

Another reason is this. Now that power is being produced from atomic energy, where and how is it to be used? That is one of the problems that should be faced by this parliament. Last summer there was a conference at Geneva. It was the first international conference on the peaceful uses of atomic energy. Canada was represented and the members of parliament of Canada, by reading the newspapers, learned what the Canadian officials had to say about this field. I have here a dispatch from Geneva dated August 8, 1955. This was all information that could have been given to the parliament of Canada last session. There should have been discussion about the matter here on the floor of the house. I am quoting from a report of a paper read by Dr. John Davis of the minister's own department. By the way, I believe that Dr. Davis is one of the outstanding men in the service of this country today. This report states as follows:

He said—

That is referring to Dr. Davis.

—as many as ten atomic power stations each capable of generating up to 100,000 kilowatts of electric energy, may be required in Canada in the late 1960's or early 1970's.

Dr. Davis told the conference the majority of the plants probably will be located in southern Ontario.

This is important information to people from all over Canada.

Others may be needed in the maritimes and possibly in southern Manitoba.

Dr. Davis also said a larger number of nuclear power plants with a generating capacity of from 2,000 to 3,000 kilowatts could make a more modest contribution to Canada's energy requirements.

They would likely be required in the north country and by industries such as pulp and paper which could use both the power and the by-product heat.

Then there were further reports of the statements made by Canadians at Geneva. I have here another dispatch two days later, on August 10, 1955, in which we find this statement:

The Canadian paper—

That is the official government paper, presumably.

—said that between 1960 and 1970, an increasing number of thermal plants under construction in Canada will be of the nuclear variety.

It said a ratio of one to one in the construction of new nuclear and other thermal plants at that period "would mark the beginning of an entirely new era—that of the emergence of atomic power as a major, if not the major, source of electricity in Canada."

It is obvious that this atomic power is mobile. It can be carried to different parts of the country. Again, since this house has been in session, we have had a dispatch indicating that atomic power will probably be used at a power station on an Arctic island to generate power for signals between the northern radar chains. Just about ten days ago Mr. W. J. Bennett, the president of Atomic Energy of Canada Limited, was quoted as follows:

Mr. Bennett said that Chalk River scientists are considering design studies for a small reactor which would supply power and space heating in remote areas of northern Canada where the cost of conventional thermal fuels is excessive.

Development of such a reactor would make possible a vast reduction in northern costs. Fuel now is transported to outposts at a cost ranging to $100 a ton. With adequate heating supplies vegetables now imported at great expense could be grown in glass houses far within the Arctic circle.

Northern Affairs officials look forward to construction in such small reactors as a major contribution to the extension of the boundaries of settlement.

Then another reason that this field is of such great importance is this. A large segment of the mining industry of Canada is now directly involved in the atomic energy field. I refer to the mining of uranium ore. Fortunately Canada has large uranium ore resources. We are one of the most fortunate nations in the world in that regard. That is one reason why we should always be in the forefront in this particular field. But the mining of uranium ore is not like the mining of lead and zinc ore in my old home district of Kootenay in British Columbia or in the other mining districts of Canada. While the mining of those ores is under provincial control, the mining of uranium ore is under the control of the dominion.

It is under drastic federal control exercised I believe through a crown company, Eldorado Mining and Refining Limited. There are regulations for the mining of this ore. It can only be sold to that crown company. A smelter cannot buy uranium ore without the consent of Eldorado. Furthermore, Eldorado is the sole processor in Canada of uranium ore. This field of mining uranium has expanded in a tremendous way. I have here the latest report of the atomic energy control board of Canada for the fiscal year 1954-55. We find on page 9, under the heading "Prospecting and Mining", the following:

Several events combined to make the year under review very significant for uranium mining. Production was larger than in any previous year because it was the first in which the plant of

Eldorado Mining and Refining Limited at Beaverlodge in northern Saskatchewan was in operation for a full year. Also, for the first time, production at this plant was augmented by ore shipped to it from private properties in the district. In addition, contracts for large production from one property in Saskatchewan, and three in the Blind River district of Ontario were negotiated and production from these is expected to begin shortly. The scale of these operations is indicated by the fact that the purchase price of concentrates to be delivered under these contracts totals over $338 million. Promising results were obtained at several other properties in fairly advanced stages of exploration.

This report is over a year old and I have no doubt that the situation is even better at the present time. The report also has this to say:

Prospectors were active in almost all provinces and territories and more persons were searching for uranium than for any other metal, and many new discoveries were reported.

Then there is a report dated October 27, 1955, in which Mr. Bennett is quoted as predicting that Canada would be producing $180 million worth of uranium in 1958, making it the third ranking metal in gross dollar value in the Canadian production picture. As I pointed out, here is a mining field in which the dominion government is supreme and members of parliament should know all about the uranium policy of this government. Having been given that knowledge, they should be in a position to make suggestions as to ways in which that policy could be improved. I need only point out the great confusion that last year followed upon certain statements by the Minister of Trade and Commerce, then by the Prime Minister, and then again by the Minister of Trade and Commerce with regard to the uranium policy of this government.

Another reason why this is of such importance to parliament is that the development of the Northwest Territories is involved. It was in that area, at Great Bear lake, that the first mine was developed, and Eldorado, through its subsidiary known as Northern Transportation Company Limited, has a very important part in the opening up of northern Canada. We have had some rather bitter complaints from residents of the Northwest Territories about the rates charged by this crown company in northern transportation. I have here a dispatch dated November 27, 1955, reporting representations made before the Gordon economic commission concerning what were alleged to be these outrageous charges levied by this crown company for transportation in the north.

The report says:

Spokesmen for one community—the famed gold-mining town of Yellowknife—charged that the federal air transport policy is bankrupt and that a federal crown company operating in the north is making fantastic profits on water shipping.

The article goes on:

But all agreed that the most urgent need is for more transportation facilities and a reduction of high shipping charges.

. . . While discussion centred on the rail line, Yellowknife emphasized that much could be done to reduce shipping tolls by reassessing federal policy.

A federal crown company, Northern Transportation, was making exorbitant profits—about 350 per cent on the federal investment—in water shipments on the Great Slave lake and Mackenzie river routes.

"It is hard to believe," said Yellowknife's spokesmen, "that the federal cabinet is aware of the exorbitant profits which its own company is extracting from the relatively few people who live in the Mackenzie river area. We do not believe that the people of Canada as a whole would condone this exploitation.

Now, that statement may have been exaggerated, but in any event this question of transportation in northern Canada is under the control of a crown corporation operating in this atomic energy field, and that particular question should also be very carefully investigated by the parliament of Canada.

Another reason in support of my submission that parliament should be put much more fully into this picture is the amount of money that is involved. This atomic energy development in Canada has already taken a great many millions of dollars of the taxpayers money, and it is taking more every year. Parliament votes the money and should know all the facts before this money is voted. I believe that in the last four years parliament has voted something like $120 million for this purpose. The votes for this year, as I estimate them, aggregate something over $36 million.

Last year the Minister of Trade and Commerce under questioning about the expenditures told me, as reported at page 6215 of *Hansard* for July 15, 1955, the figure for this current fiscal year 1956-57 would be $34,066,000. As I say, the estimate now introduced is at least $2 million higher and no doubt there will be supplementary estimates. He said:

It goes down. This is a big year; $34,006,000 next year; 1957, $31 million;—

I am not sure from the figures whether the minister was referring to last year or this coming fiscal year. I took it originally he had in mind that the expenditure for 1956-57 would be $31 million, but no matter which of these figures is correct the expenditures are very heavy. Parliament has a responsibility to examine much more fully than it has done in the past into these figures. We should have an effective check on the expenditure, and there is no such check at the present time. Take, for example, the new

N.R.U. reactor. When the announcement was first made that it was to be built we were told the cost would be $30 million. Last year the minister said at page 6155 of *Hansard* that the cost would be between $35 and $40 million. This year we read in the papers that the cost is now up to $50 million. I hold in my hand a dispatch from the Vancouver *Sun* dated December 8, 1955, which says:

> Atomic pile cost now $50 million
> Chalk River, Ontario.
> Cost of the N.R.U. atomic energy reactor has been boosted a second time by $10 million.

Whether those figures are accurate is beside the point. The fact is, the reactor is going to cost many millions of dollars more than parliament was told it would cost in the beginning.

Another reason why parliament should go much more fully into this field is in connection with what is happening today. Today in Paris the nations are meeting to set up what is known as the international atomic energy agency.

Mr. Martin: In Washington.

Mr. Green: The dispatch is from Paris. Am I correct in saying Paris, or is it Washington?

Mr. Howe (Port Arthur): I understand there are two. One is meeting in Washington, and another, made up of a group of European nations, is meeting in Paris. I think that is the situation.

Mr. Green: Just last week President Eisenhower signed an order committing 85,000 pounds of uranium 235 to peaceful purposes over the next forty years, thereby clearing the way for huge financing operations to build nuclear power plants in those parts of the world that are not able to build them themselves. The reports indicate that at least $1 billion worth of nuclear fuel would be available for sale or release to private power stations during that period.

Canada from the start has been one of the nations in the lead in the atomic energy field. I think it is very praiseworthy that we are helping to establish this international agency. The purpose, of course, is to spread peaceful atomic knowledge as widely as possible in the world and to work out the allocation of reactors and atomic fuel for the nations that are not fortunate enough to be able to develop these particular things themselves. Here again Canada is stepping into this broader aspect of the atomic energy field and parliament should have a chance to keep informed at all times about those developments.

For the reasons I have outlined, Mr. Speaker, the official opposition urge that this committee, which is to be set up this year, be given very wide powers and great latitude. The members of the committee should be taken to Chalk River, and also be given the opportunity to visit Beaverlodge in northern Saskatchewan and the refinery at Port Hope. They should inquire into the activities of all governmental agencies, the atomic energy control board, Atomic Energy of Canada Limited, Eldorado Mining and Refining Limited, and Northern Transportation Company Limited. In addition, they should be given a thorough explanation of the government's uranium policy and be put in a position where they can make recommendations which would lead to the promotion and the better control of the mining of uranium in Canada.

Then, another very important question which they should be allowed to consider is the extent to which Canada can stand on her own feet in this field. I pointed out earlier that we have the uranium and that we started out with the leading nations, United States and Great Britain. It does seem of great importance that we be able to stand on our own feet. For example, we are not yet able to process fully our own uranium ore. I hold in my hand the report of Eldorado Mining and Refining Limited for the calendar year 1954. On page 7 I find:

> As indicated in previous reports, the operation of the new refining circuit will permit the company to produce a purified or metal grade product.

They are referring, of course, to the Port Hope plant. I continue:

> This is an essential step towards the production of uranium metal in Canada.

Last year Mr. Bennett said he anticipated that Canada might soon be in a position to carry out all three stages of uranium processing at its Port Hope plant, thus ending the necessity of exporting it to the United States to finish the product for use in our own reactors. In the press this week I find a warning given in Vancouver by Professor G. M. Volkoff of the University of British Columbia that Canada could find herself buying back her own uranium in the future in the form of complete power units manufactured in England or in the United States. He was speaking to a natural resources conference in Vancouver and he said:

> Now is the time for Canada to manufacture and export complete nuclear power plants to the rest of power-hungry world.

We cannot be too careful to adopt policies in this country which will enable us to process our own raw materials in Canada to the greatest extent possible. I hope that in this atomic energy field we are not going to get in the same position we are in in some of the

others, such as the iron ore field and others I could mention, under which we dig out the ore and let it go to the United States and buy back the finished product which has been made by the people of the United States.

Another aspect of this question where we think Canada should stand on her own feet in this field is in the production of heavy water. All of our atomic energy reactors at Chalk River use heavy water as a moderator. I have been a member of the two atomic energy committees which have been set up. I visited Chalk River on each occasion, and I call on the other members who served on that committee to endorse my statement that we were told on each occasion the heavy water for Chalk River was produced at Trail, British Columbia. We were told that the plant had been installed by the United States atomic energy commission. There was not any doubt of that; but we were told that the heavy water came from Trail. That statement has been made time and again in the intervening years. I have four or five press dispatches confirming it. One appeared in the Ottawa *Journal* of May 19, 1954, which reads:

> Since Canada entered the atomic energy field her experience has been with experimental reactors partly controlled or moderated with heavy water produced at the Trail, British Columbia, smelter plant.

The next dispatch is dated January 25, 1955, and it appears in the *Journal* again. It reported a speech by Mr. Bennett. It refers to the new reactor, and reads as follows:

> The experimental reactor would use heavy water, produced at Trail, British Columbia, as a moderator or control agent and possibly also to cool the plant.

A press dispatch dated April 27, 1955, which also appeared in the *Journal*, reads in part as follows:

> Heavy water, produced at Trail, B.C., smelter now costs between $720,000 and $1,200,000 a ton. This must be cut because the demand by 1970 is expected to be several hundred tons a year. Methods also must be found to speed output, now about six tons a year from Trail.

An article appeared in the Vancouver *Province* dated December 9, 1955, written by John E. Bird, reporting on the NRU reactor, which reads in part as follows:

> N.R.U. will use heavy water to moderate or slow down the activity of the reactor and to keep it from generating too much heat and melting the fuel rods.
>
> . . . Heavy water is produced by a highly-technical electrolytic process at the smelter plant at Trail, B.C., at a cost of about $60 a pound. N.R.U. will contain 43 tons valued at more than $5,000,000.

[Mr. Green.]

I also have here a report entitled "Canada's Atomic Energy Project" issued under the minister's own name in March 1953. We find at page 326 a description of the early difficulties in setting up the atomic energy plant. It says:

> . . . but of greater importance to the Montreal laboratory was its dependence at that time—

These are the significant words:

> —on the United States for the manufacture of heavy water and the reduction of Canadian uranium to the form of metal.

Yet this year when dispatches appeared reporting that the plant at Trail was to be closed down the minister told this house, and I am quoting from page 833 of *Hansard*:

> The government of Canada has never had any interest in the plant nor has it obtained any material from that plant.

I questioned him, pointing out what we had been told when we were serving on the atomic energy committee, and he confirmed his earlier statement. He said, as reported at page 834 of *Hansard*:

> I am surprised that the hon. member has been told that the heavy water at Chalk river came from Trail because it is not to my knowledge that that is the case. We purchase our heavy water from the atomic energy commission of the United States and it is my understanding that it comes from quite a different source.

The point I wish to make is simply that in the first place there should not have been that misunderstanding. Somebody obviously was wrong. I do not know whether the minister was wrong in the statement he made last month or whether the information given to us down through the years was wrong.

Mr. Howe (Port Arthur): Could it not be that the hon. member who is speaking is wrong?

Mr. Green: I admit I can be wrong, just like the minister.

An hon. Member: But not as often.

Mr. Green: He made one statement directly contradictory to the statements that have been made down through the years by other people who are also in a responsible position in the atomic energy field.

Mr. Rowe: You are quoting the minister's own statements.

Mr. Green: Perhaps the minister will be able to explain why there is this difference. I do not, however, wish to deal particularly with the difference in the statements. What I am getting at is the possibility of Canada producing heavy water herself.

We also urge that provision be made for a permanent atomic energy committee of this house and also that every hon. member of

the house should be given the opportunity of visiting the plant at Chalk River. I am sure that suggestion will meet the support of all hon. members who have not yet been there. I think it would be very beneficial to the nation as a whole if all hon. members of parliament who are not to serve on this committee were to be given the chance of going to Chalk River to see what is actually being done there.

In conclusion, Mr. Speaker, I would point out that Canada having been in the forefront in the atomic energy field must stay there. It is a wonderful opportunity for this nation. I believe there has been nothing of more importance in recent times in so far as the development of the nation is concerned. In fact, if there is proper leadership and proper activity in this field it can do a great deal to make Canada one of the greatest nations in the world. But that can only be done, Mr. Speaker, if parliament is kept informed and is kept in this picture. That in effect is the essence of my plea today, that parliament be put right in this picture and be kept in this picture throughout.

I move, seconded by the hon. member for Lambton West (Mr. Murphy):

That the motion be amended by inserting after the word "house" in the sixth line thereof the following:

"to send for persons and unclassified papers and records."

Mr. M. J. Coldwell (Rosetown-Biggar): First of all, Mr. Speaker, I want to say that I think the minister or the government will have to give a very good explanation as to why the authority to send for persons, papers and records was left out. It may be that there are reasons connected with the atomic energy development which require a certain amount of secrecy. That may be a valid reason, but as I say I think a very strong reason will have to be given to the house; otherwise I think the house should vote for the amendment just moved.

I find it difficult to understand why the house has been denied this right when the resolutions for other committees which have been set up contain such a provision. There may be a special reason in this case, but I think we should be told what the reason is if one exists.

I should like to say also that I agree wholly with the hon. member for Vancouver-Quadra (Mr. Green) when he says that parliament should be kept fully informed of all developments in this field. I believe the hon. member made a suggestion that is worthy of consideration when he said that hon. members of parliament might be given the opportunity of going to Chalk River and of seeing what is being done there.

Committee on Atomic Energy

I have served on previous atomic energy committees, and speaking as one who has served on those committees and who has been at Chalk River several times, and who has had the opportunity of meeting the scientists who are working with reactors and in the various laboratories located there, I wish to say that I learned a great deal and I have developed an interest in this field which I might otherwise not have had although right from the day the first atomic scientists' bulletin was issued in the United States I have subscribed to these bulletins and have tried to follow the developments they have outlined as well as I could and the warnings they have given and the uses which they have indicated can be made not only of one product, heat, but of the by-products to be used in medicine and in scientific fields generally.

I said that I had enjoyed the work of the previous committees and found the information useful. I should also like to say how much I was struck with the devotion as well as the ability of the scientists engaged at Chalk River. I was amazed to find how many of them were young. I have forgotten now just how many were under 30, but it was quite a number. I do remember that there was only a mere handful who were over 40 when we went up the first time, and I think when we went up the second time as well.

I was shocked last week to read that Dr. Cipriani had passed away. He was one of the foremost scientists in the world in this field and a more charming personality I have never met. In outlining the work of the atomic energy commission and that of his own particular field of medicine, not only did he give us the information which could be given but he did it in such a manner that we did not forget it. I just want to say that when we go there this time I know we shall miss Dr. Cipriani.

This committee will be dealing also with research. I am not sure that it was wise to put research and atomic energy before the one committee. It is a big field. We may be able to cover it, but having been on committees which have inquired into both atomic energy and research in the past I am of the opinion that two committees might have been advisable.

Now that atomic energy and atomic developments are under a crown company I think it is wise that we should go into the operations of that company. I have a great deal of sympathy for the idea that crown companies should be brought before parliamentary committees, annually if you will but at least periodically, in order that their operations

may be examined into carefully by such committees. I think that that would be a step in the right direction. I know how difficult it is for members of parliament to attend to the business of the house and serve on committees. I do not think you could call every department and every crown company before a special committee to be examined every year, but I think it should be done periodically. We do examine two crown companies each year, Trans-Canada Air Lines Limited and Canadian National Railways, and from time to time we have the Canadian Broadcasting Corporation before a committee of parliament.

It is true that there is a tremendous interest in research. The establishment of the national research council years ago was something that has been of great benefit to our country. There is one criticism, however, I should like to make and that is that much of the result of the research which could be of guidance and indeed of some importance to the consuming public of this country is not made public.

In the United States they have the consumers' association. This began in a small way in one of the universities. They have a large population in the United States and consequently it was quite within the realm of possibility to set up an organization with sufficient funds to do a proper job for the consumer. That is what is being done by the consumers' research association in the United States. I often read the magazine they put out. I call it a magazine although they refer to it as a bulletin. I find therein a great deal of information regarding domestic supplies and other things which one might be inclined to buy from time to time. They make an appraisal of these different items.

I know that work of this description is being carried on to a limited extent by our national research council and the result of that research might be of great benefit to the people of this country who provide the funds for the research council. Those of us who were on the committee several years ago saw the results of investigations which had been made of a widely advertised detergent—I think I mentioned this before in the house—which while it may have washed clothes at the same time it would have destroyed them. Yet the people of this country had no information regarding those experiments carried out in the laboratories of the national research council.

I should like to see the people of Canada reap a direct benefit from research of this description carried on by the national research council. I am not indicating that that is the kind of research which the national research council does in any big way; I think it is more or less of a sideline with them. They have more important fields of research in which to operate. During the last few years we have provided the national research council with more laboratories situated on the Montreal road. I am sure we have all seen the impressive buildings in that area and I have no doubt that as time passes the facilities will be expanded and the national research council will be performing even greater services for our country and for industry than ever before.

I think that this committee will be one of our worthwhile committees and I am glad that my hon. friends have suggested that I be a member of the committee again this year. I am looking forward to participating in its work.

The hon. member for Vancouver-Quadra suggested that the committee might go into military research, on the atomic side and, I believe, on the more general research side as well. I do not know how feasible that would be but I agree with his argument that there is possibly a waste of money which should be looked into and which might result in savings. I am convinced that the Department of National Defence should be examined into most closely by this house. We do not do it. I doubt if there are more than a few hon. members of the house who know what the expenditures of the department are, how they are made and to what extent they can be justified by those who make them.

I have every sympathy with any suggestion that is made for an investigation into the expenditures of the Department of National Defence provided it is made by parliament. I am not impressed with any arguments that it should be made by an outside body. I think the time has come when this house should go into those expenditures and therefore I have a great deal of sympathy with my hon. friend's suggestion with regard to military research.

I do not think I need to say anything more. The hon. member for Vancouver-Quadra covered a great deal of the ground which others might have been inclined to cover, and I am glad that he did. I think the time for appraisal of the work of the atomic energy authority and the national research council will be when the committee makes its report to the House of Commons. We shall then have authentic information before us and be able to speak more intelligently about what is going on in both fields.

Mr. A. B. Patterson (Fraser Valley): Mr. Speaker, we welcome the motion of the right

hon. Minister of Trade and Commerce (Mr. Howe) for the appointment of a special committee to examine into the role of government in the field of military research in Canada, including operations in the field of atomic energy and the operations of the national research council. Not only is the importance of these matters increasing but the necessity of continued and accelerated research in every field of endeavour is in my opinion becoming increasingly more urgent as the days go by. Not only is research essential to the raising of the standards of living and the development of our economy but in many respects it would appear that research is necessary for our very survival itself.

I listened with interest to the speech of the hon. member for Vancouver-Quadra (Mr. Green). With respect to the atomic aspect of this motion, he stated that we as members of the House of Commons have very little information regarding the operations of Atomic Energy of Canada Limited and developments in the field of atomic energy. As I listened to the hon. member I thought he had gleaned considerable information from different sources, and he certainly appeared to speak with some degree of authority on the various aspects of the situation. However, as he has said, I believe there is room for more information to be given to us with respect to the activities of these various corporations and the research that is carried on in connection with them.

With respect to the suggestion that there should be two committees rather than one, I believe it has considerable merit. As we think of the two fields that have been mentioned, it would certainly appear that one committee would not have the time to study and examine their operations fully. Therefore I think the suggestion that there should be two committees is a good one, and as it is a suggestion that has been advanced by the Minister of Trade and Commerce (Mr. Howe) in times past I believe that possibly more consideration could be given to that matter.

The amendment that has been proposed will receive our support because we feel that in the setting up of a committee of this kind there should be avenues open to the members within their terms of reference whereby they can make a detailed study and examination of the entire situation. With regard to the first term of reference that is given for the guidance of the committee, namely, to examine into the role of government in the field of non-military research in Canada including operations in the field of atomic energy, we were of course ushered into the atomic era in 1945 when the impact of atomic power was first demonstrated in the bombing of the cities of Hiroshima and Nagasaki, Japan.

It seems to me a rather sad commentary on human intelligence that what has been called man's greatest achievement is the discovery and utilization of an energy that is capable of blasting man into oblivion. It seems to me that it was as a result of the fear and impetus provided by the prospect of world war that this energy was brought into being at the time that it was. We are living now in a day when this main deterrent to war must be converted to peaceful uses. Rather than being the destroyer of mankind it must be brought to a position where it becomes his servant and is developed in the interests of peace and for creative purposes. On page 8 of the ninth annual report of the atomic energy control board for 1954-55 we read the following:

> During the past year there were developments of great significance in the power reactor program in Canada, notably the decision to design and construct a demonstration power reactor. This decision marked the turning point in the research and development effort which began in 1942. It is the first and an essential step in applying the nuclear information which has been accumulated in the post-war years.

Research in this field as far as possible uses of atomic energy are concerned is more or less in the preliminary stages and we believe that as research continues this tremendous energy and force will be utilized for the benefit of mankind and will take the place of many of the sources of power being utilized at the present time.

I do not propose to say any more about the first part of the motion dealing with atomic energy but I should like to refer to the second part which has to do with the operations of the national research council. I understand that the council has now been functioning for a considerable number of years and has been doing most commendable work in the various fields of investigation. The objectives of the national research council are very broad. They include the ascertaining and tabulation of various agencies in Canada which are carrying on scientific and industrial research, the noting and scheduling of lines of research and investigation that are being carried on, the co-ordinating of these agencies to prevent overlapping and the inducing of co-operation between these various agencies. One of its purposes is to acquaint itself with the problems of technical and scientific research and to apply that knowledge and skill to the solution of the various problems that confront industry. Its purpose as well is to make a scientific study of unused resources, waste and the by-products of farm, forests, fisheries and

industries. It also has the purpose of enlarging the pool of scientific manpower available in these particular fields.

I have already stated that the council has done very commendable work, and I think we would do well to commend them today for the progress that has been made. On page 10 of the 38th annual report of the national research council of Canada for 1954-55 I find the following under the heading "General Statistics":

> The national research council in 1954:
> (i) provided $2·5 millions to support fundamental research in the universities . . .
> (ii) employed 548 scientific staff, 711 technical personnel, 775 general service and administrative staff, and some 100 postdoctorate fellows;
> (iii) operated four laboratory divisions in the sciences; applied biology, pure chemistry, applied chemistry, pure and applied physics; operated three engineering divisions . . .
> (iv) answered technical inquiries from Canadian industries at the rate of 7,500 per year.

Certainly I think that shows a fine picture of the work that is being carried on. We commend the council for their activities and urge them to enlarge the scope of those activities, realizing the importance of their inquiries in all phases of research.

The resolution before us deals with the operations of the national research council. I suppose it takes in as well the various areas of research that are open to it. I realize, of course, that there are those avenues of research which are opened up through secondary industries, on the by-products of gas, oil and coal production. Included in the objectives of the research council we also find research in connection with our forest industries. Certainly this is an extremely wide field for research. Just to give an illustration of this particular field, I should like to refer to an article in the *British Columbia Lumberman* of February, 1956. It is entitled "Better Residue Use, Automation, Said Keys to Lumber Marketability". From this article I should like to read just a brief paragraph:

> Mill residues can be used for hardboard and particle-board production, paper, and paperboard.

Then a little further on it continues as follows:

> Several studies are under way to treat sawdust before its application to overcome the temporary nitrogen depletion induced by the sawdust. This treatment of sawdust would improve its characteristics as a soil conditioner.

This product is extremely important in the field of agriculture.

> If pretreatment can be accomplished at a moderate cost, the potential market is vast.

I also had brought to my attention the research that is being carried on with respect to decadent cedar. This perhaps is of vital interest in the British Columbia economy because I am told that from a point just north of Kamloops up as far as Prince George, and also in the Smithers and Terrace areas and along the coast there are billions of feet of decadent cedar. This constitutes a serious fire hazard and up until recently it has just been looked upon as something to be despised and something that caused a great many problems to the forest service. Research is being carried on into a pressed wood constructed of this decadent material. It has now been tested out. For instance, it was used in the steps of a bunkhouse in a lumber camp. Part of the step was constructed from fir, part from oak and part from decadent cedar pressed wood. After a period of use, with loggers treading on it with their great caulked boots, it was discovered that the fir had fairly well disintegrated, that the oak showed considerable wear but that little impression was made on this board that was made from decadent cedar. It would therefore appear that in this particular field of research alone vast fields are open. In this case I have cited, not only can they clean up the hazard that is caused by this condition but they can also place a valuable product upon the market. Others that have been mentioned in this particular reference to the research council included the fisheries. Possibly we can speak about that matter on the estimates at a later date. But all of these various fields open up tremendous avenues for research and for development. We feel that this is an extremely important aspect of our economy at the present time.

What about the role of government in these particular fields? I believe there is room for participation by various agencies. I think industry can play an important part in these research developments. Certainly it is doing that. A brief presented to the royal commission on forestry by the Canadian Pulp and Paper Association gives an illustration of what industry is prepared to do and is doing in the field of research. At page 29 of this brief we find the following:

> Company research programs
>
> All of the integrated companies of the pulp and paper industry maintain research laboratories and full time crews engaged on various research programs and multiple investigations. In addition, all of these companies contribute considerable sums towards the various fundamental and applied research programs carried out by the Pulp and Paper Research Institute in Montreal. This organization is recognized as one of the world's leading institutions in the realm of cellulose research.
>
> The total expenditure on this research by the above companies to improve technology, quality of product, processing and the practice of forestry, exceeds $850,000 annually. More than 90 research technicians are engaged full time in British Columbia on this work.
>
> The above companies also contribute considerable sums from time to time to the British Columbia research council to aid in the work of various objective programs carried out by the council, as

well as a number of minor items of research and investigation outside the actual operations of the companies.

Industry is not prepared just to sit back and say that it is a government responsibility, that it is a field in which government should carry the load, but certainly is making a worth-while contribution in this field.

Our educational institutions are doing a remarkable work in this connection as well. Some of the provinces at least have set up research councils. I can speak for the province of British Columbia, as I know a little bit more about it than I do of the others. In that province the facilities have been greatly expanded and work is going on at an accelerated speed in the various fields of research in the forestry industry and in others. As I say, industry, our educational institutions and provincial governments are carrying on to the best of their ability. Personally I think that the federal government should accept considerable responsibility in this particular regard, encouraging all the agencies to intensify their studies to the end that our resources be utilized to their fullest possible extent. It would seem to me that they could assist from the technical point of view, the financial point of view and in many other ways as well. This afternoon we welcome the setting up of this committee and hope that its inquiries will stimulate interest in this vital work which is so essential in our modern age.

Right Hon. C. D. Howe (Minister of Trade and Commerce): Mr. Speaker, in speaking to the amendment which has been proposed and which would provide that this committee may send for persons and papers, I should just like to give a few of the reasons why the government believe that the amendment cannot be accepted.

First, let me say that there has been complaint about the fact that the committee is to investigate both the national research council and the field of atomic energy. Hon. members will recall that last year I placed the same motion on the order paper calling for a committee that would include both. This motion was allowed to stand on the order paper all during the session. Several times I pressed the house leader to call it, and he said the opposition were not willing to have it considered.

Mr. Green: On a question of privilege, Mr. Speaker, when the minister makes a statement like that the only thing I can do is get up and contradict him. He does not know what he is talking about.

Mr. Howe (Port Arthur): Did you ask at any stage of the session that it be brought forward? You and I agreed on the wording of the resolution, but did you at any stage ask that it be brought forward?

Mrs. Fairclough: That is a far cry from saying we did not want it brought forward.

Mr. Howe (Port Arthur): I wanted it brought forward, but the fact is I did not succeed in getting it brought forward. I was told the reason was the opposition did not want it brought forward.

Mr. Green: That statement is not correct. I do not think the minister is very fair or very wise in dragging up now a year later what somebody else told him that somebody else said. I was acting for the opposition in dealing with the house leader and there was not any misunderstanding between us whatever.

Mr. Howe (Port Arthur): I am sure there was not. The result was that the motion was not brought forward.

Mr. Murphy (Lambton West): On the same question, Mr. Speaker, the minister has spoken about the reason for the committee not being set up. As a matter of fact, before Easter I discussed the question with the hon. member who, we expected, would be chairman of the committee. The motion was on the order paper at that time. I indicated to him, and we had previously expressed the same idea, that we wanted witnesses called. Before the Easter adjournment I asked the hon. member, who represents one of the Ottawa ridings, if we could have witnesses called. He said that the proposed resolution did not call for that, but he would try in some way to arrange that witnesses could be called without changing the terms of reference.

Later on, Mr. Speaker, when the expected chairman asked for a list of our witnesses I was the member in my party responsible for giving the hon. member for Vancouver-Quadra a list of some 20 expert witnesses we had prepared. The list included the presidents of some universities, some scientists, representatives from the chemical industry and other scientific bodies, as well as one or two industrialists, a representative of the agriculture industry and from labour. When the government saw that formidable array of witnesses the motion was never called.

Mr. Howe (Port Arthur): I do not wish to make a point of this. I just wish to point out that the resolution was put on the order paper early in the session last year and the motion was never brought forward for the consideration of the house. It has been put on the order paper this year and it is being considered today. I sincerely hope the motion

will be approved and that the committee can undertake its work early in the session. If there is a complaint that it is unreasonable to expect one committee to investigate both branches of science, the committee could easily adjourn part of its work until next session, when it could be reconstituted and complete its work.

The reason the government has not provided for the calling of persons and papers is that this committee is carrying on its investigation in a field in which there are important secrets in the possession of those who would naturally appear before the committee. It has been said that much of the work at Chalk River has been declassified, and that is true. Canada has always taken the view that the work there should be declassified unless there is a very good reason for continuing secrecy. I think a witness to the fact that important secrets are in the possession of the staff at Chalk River is the security provisions that are observed at that place. We spend enormous amounts of money simply to protect the security of Chalk River. We have guards around the property. It is very difficult to get access to the property, except through Ottawa.

Why is secrecy preserved? The reason is that at Chalk River we do a considerable amount of work for the atomic energy commission of the United States having to do with the field of weapons. There is hardly any period when we have not had work of that kind in process at Chalk River. The reason is that the pile there is able to do some work which no other pile can carry out successfully. Then, too, we have almost free access to such information in the non-military field as is acquired by the atomic agency in the United States and also the atomic agency in the United Kingdom. The reason we had that complete access is that Canada has a wonderful record in the field of security. We have never had a serious breach of security from the Chalk River plant, and I think no other country can say as much about its own security.

I believe those who have served on similar committees in the past will know that both at Chalk River and in the research council any person will be produced, provided he is a senior man in the organization. So far as the production of papers is concerned, there are papers the secrecy of which must be guarded. It is much easier to let the senior personnel decide what papers can be produced without a breach of security, rather than to let the committee make that decision. If today this parliament decided that a committee would be appointed with authority to send for papers, I believe the flow of papers to Atomic Energy of Canada Limited would be very sharply curtailed not later than tomorrow. Where there are secret documents in the possession of the organization, to authorize a committee to ask for those secret documents, with authority to demand that they be produced, would be fatal.

If there were any complaints that the right persons were not appearing before the committee, there would be a reason for the amendment before us today. If there were any suggestions that papers which could be properly produced before the committee were not being produced, then there would be a reason for this amendment. I claim that when there are papers that could not possibly be produced to the committee, and when there may be junior personnel in the both organizations unfamiliar with security regulations who might be asked for by the committee and allowed to talk freely in the fields which were their own particular responsibility, you would be creating a very dangerous situation indeed. That is the reason for the government's inability to agree to the amendment that is before us at the moment.

Mr. Trainor: Will the minister permit a question?

Mr. Howe (Port Arthur): Yes.

Mr. Trainor: Does he maintain that all wisdom in the atomic energy field is concentrated in Canada at Chalk River?

Mr. Howe (Port Arthur): No; the difficulty is that all the wisdom in several countries is on file at Chalk River, and much of that wisdom is still under security provisions. It was received under security provisions; and it is the duty of those at Chalk River, if they have material of that type in their possession, not to produce it to a parliamentary committee or to anyone else.

Mr. Trainor: May I ask the minister another question? Would it not be possible for the government to indicate in regard to any request made that the information requested was classified?

Mr. Howe (Port Arthur): That is what we can do at present, but if the committee had the authority to ask for the information, whether classified or not, they could say, "We have authority to have it produced and we want it produced". What would be the position of the government then?

Mr. Trainor: I do not think there is any request or demand for classified information in this amendment.

Mr. Howe (Port Arthur): I agree. In this amendment, of course, you are asking for the authority to demand the production of

classified information. Under the resolution on the order paper you get anything that is not classified simply by asking for it. We claim that the resolution that has been sponsored by the government gives the committee everything that can be produced both in persons and papers.

Mr. Trainor: I do not quite concede the point the minister makes. I think it is still possible for the government to maintain control over classified information and allow the committee to get evidence with regard to unclassified information from people outside of government circles.

Mr. Howe (Port Arthur): Mr. Speaker, as far as persons outside government circles are concerned, the committee is free to call anybody it likes. I am sure they would come before the committee without being sent for.

Mr. Green: Because of the way the resolution is drawn the committee has no power to send for persons.

Mr. Howe (Port Arthur): The committee can invite persons to appear. I know one man who lives in Sarnia who is just burning to appear. He would come without an invitation, and no doubt will. But if it is a matter of sending for persons and papers outside the possession of government departments, and if my hon. friend will amend his amendment to that extent we might consider it.

Mr. Green: To what extent?

Mr. Howe (Port Arthur): To send for persons not employed in the government service and papers not in the possession of any department of government.

Mr. Rowe: What others would you get?

Mr. Howe (Port Arthur): You will get the others, anyway.

Mr. Rowe: You mean daily papers?

Mr. Murphy (Lambton West): May I ask the minister a question? This is very important. Do I understand the minister to say that he would be willing, if the amendment were so altered, to permit the committee to invite persons other than people at Chalk River and at the national research council? Would we be free, if we were members of that committee, to invite scientists and others to give evidence, and to send for papers? I am quite sure there will not be any difference between the minister and any member of that committee respecting classified material, because there never was a member on that committee, and I hope there never will be, who wanted to have classified material.

Mr. Green: May I ask the minister whether it would be satisfactory if the restriction were put in that classified papers could not be seen? I had not the slightest intention of asking for classified papers, and I do not believe any other member of the house would, either. The minister knows very well that the work done by the previous committees indicates very clearly that they have a very deep sense of their responsibilities to the nation.

Mr. Howe (Port Arthur): Permit me to ask my hon. friend this question. Has the experience of earlier committees not convinced him that the officers who appeared before the committee had a very real sense of the importance of the committee, and did they not produce any paper that could properly be produced and brought forward? Have not the members of the government service produced what has been asked for by the committee?

Mr. Green: The committee has not been in a position to ask that people be brought before it. It may not be considered essential at this time that other people should be asked to appear. On previous occasions the committee simply had not the power to ask for anybody or to ask for any record. Government members also compose a majority of the committee. I think they are probably two to one. I do suggest the amendment could be worded in such a way that classified papers could not be sought. Certainly I have no desire at all to have classified papers produced. But we believe the committee should be in the position that as the members proceed with their work, if they think so and so should be called in, perhaps a civilian research man, it can send for him. Even then it would be still within the power of the government majority on that committee to say no, we do not believe that man should be called.

Mr. Stuart (Charlotte): Mr. Speaker, I have been a member of this committee since it was first set up some years ago.

Mr. Knowles: Who has the floor?

Mr. Stuart (Charlotte): I have been at Chalk River and at Deep River on different occasions, and I have sat with the committee in Ottawa at the research council. I would say without any thought of contradiction that the key men in the organization appeared before that committee. They did everything possible to give the committee the information we asked for. To my knowledge there has never been any information we tried to get that was not made available to us, and I for one would want to go on record as being very satisfied with the way in which the scientists and others engaged in research at the national research

council and at Chalk River produced the evidence we asked for, and with the way in which we were received at Chalk River. We were shown all over the entire organization. They were only too glad to furnish information on any questions that we asked.

In so far as classified information is concerned, I agree with the hon. member who has just spoken. No one would expect to see other than unclassified information. I do not believe the committee will have any trouble at all in getting any reasonable information that the organization would have at this time.

Mr. Howe (Port Arthur): Mr. Speaker, we are discussing the amendment, and the amendment would certainly put it within the power of the committee to demand the production of classified information. For that reason the government must oppose it.

As far as the work of the committee is concerned, we are glad to have the committee go into every branch of atomic energy. We hope it will take an interest in Eldorado Mining and Refining. That is a fine operation and covers a broad field. We are very glad to have it explore the relations between Eldorado and the private uranium industry; we are glad to have the work of Northern Transportation explored.

I may say that each year since Northern Transportation has been in operation the rates on the Mackenzie have been reduced, and I rather expect there will be another reduction this year. The reason that has been possible is that the capital of the company has been expanded, the standard of equipment raised and improvements put in for traversing portages. It has been able to maintain a high standard of service and at the same time lower the costs of that service. The work of Northern Transportation Company has extended to the distant early warning line, and there again these might be classified material which cannot be produced; but I think almost any work of the Northern Transportation Company can be investigated by the committee without difficulty.

I would remind hon. members that the rates of Northern Transportation Company are approved by the board of transport commissioners. A hearing before the board of transport commissioners is necessary before there can be a revision of rates in that area. I would also remind hon. members that there are competing services in the area which have a hard time getting along and each time there is a reduction in the rate by Northern Transportation there is a good deal of hardship caused amongst the competitors. However, the committee is free to weigh all those factors, and I would be very interested to see the report of the committee in that connection.

Mention was made of the fact that Canada at the moment does not produce uranium metal. Considerable progress has been made in that direction. We have had no great urge to get on with that phase of manufacturing, for the reason that we were able in the early stages to buy our metal from the United States at prices lower than we could possibly obtain by manufacturing the metal ourselves. That situation is changing, and I think within another 12 months Canada will be manufacturing its own metal.

Mr. Diefenbaker: Would the minister allow a question in that connection? There was a reference in the press yesterday to the fact that Mr. Wilgress, the permanent representative of OEEC in Europe had stated to the representatives of the 16 or 17 nations belonging to that organization—I am not sure what the number is—that Canada would make uranium in raw form available to European countries within that organization. Has there been a change of policy by the government in this regard, or has there been a decision made?

Mr. Howe (Port Arthur): I did not see the statement by Mr. Wilgress, but I assume he said that if the organization then being considered was set up, Canada could make it available—I presume he meant uranium oxide —which is the next stage before the metal. We could do that and would be glad to do that if there were proper international security. Without the security and without international rules it is very difficult to make uranium available to any country except the United States and the United Kingdom. But if proper organizations were formed and proper rules established, it might be possible to make uranium oxide available to other countries.

Mr. Diefenbaker: What is Canada's plan for control?

Mr. Howe (Port Arthur): There is a meeting being held in Washington with a number of nations who are considering what organization under the United Nations will establish the rules of the road. There is another organization meeting under the auspices of NATO in Europe which is also considering the problem. I assume these efforts will be joined in time and eventually we will get international rules which will provide the proper security. We hope so.

Mention was made of heavy water. The heavy water operation at Trail was one of the first established by the United States. Reference was made to the Montreal laboratory which was established in 1942 and disbanded in 1944. I think probably the small

quantities of heavy water which were used in that operation were obtained from Trail. That was one of the very early experimental operations, and I daresay at that time Trail may have been the only source of heavy water.

However, the process for making heavy water has been greatly improved and the cost of heavy water has been substantially lowered. The heavy water we bought for Chalk River was purchased from the atomic energy commission of the United States. It was delivered to Chalk River in trucks direct from south of the border. While I cannot guarantee that some of the heavy water did not come from Trail I would think it highly unlikely, from what I know of the transaction. However, I will be glad if the committee will look into that matter in its sessions this year and if I am wrong I shall be glad to be corrected.

I do not know that anything more needs to be said. The important matter before us today is whether or not the government motion shall be amended. As I say, we feel this particular amendment cannot possibly be accepted, and we trust that a vote can be held shortly.

Mr. J. W. Murphy (Lambton West): Mr. Speaker, like other hon. members who have preceded me in this debate I welcome the setting up of this particular committee. As a matter of fact the resolution itself has a rather familiar ring, because over the last three years, as Your Honour knows, I have had a resolution on the order paper to set up a committee to study ways and means of accelerating research in Canada.

Today there is naturally more interest in research than five years ago or even two years ago. We are in an atomic era, an age of automation, and our emergence into this period has been a long, slow process. The subject of research today is vital not only to this government and to governments on lower levels but to industry, labour and agriculture, and in fact it is of interest to every segment of our economy.

I was interested in what the minister's parliamentary assistant had to say respecting industry. I do not think any hon. member can stand up and say that it is the responsibility of government to do things that industry should do for itself. I do, however, maintain that crown companies, for instance, Polymer, which are under the jurisdiction of the government, could and should give leadership.

Speaking of research, they have given leadership. The report is available to anyone in this house or to anyone in Canada, wherein the president of Polymer said one or two years ago that because of research the operations of the plant had been extremely successful. I was very glad to see that because for a number of years I, like everyone else, was conscious of the necessity of research. If we as a trading nation are going to maintain even the position we hold today it has to be done, I think, by more intensive research and by more money being spent in the field of research. While I did maintain in the past that we should take an occasional look at the tariff structure I have also maintained, as the minister himself said a year ago in discussing this matter, that in many instances industry could cut out frills and reduce costs.

On that very subject, according to authorities which I have read, our country is in the same position as the United States was in 1920 with respect to research. That to me is most lamentable. True enough many of our industries here are branches of industries in the United States or in some other foreign country and have depended too much in the past on the research done in those particular countries. I think we will all agree with that. I should like to point out, however, that industries in this country should become more research conscious. It is true that some of the large industries have constructed laboratories and have hired scientists and technicians but the strange thing to me, and I think all hon. members will find it strange, is that very few of the top scientists in this country are working in industry.

I do not mind making a startling statement when I say, as I suggested a moment ago, that many of our top industries are simply branches operating in Canada, such as the chemical industry and I might mention particularly the oil industry; we know Imperial Oil Limited is a subsidiary of Standard Oil of New Jersey. In recent years they have been spending a great deal more on research than in the past, but they were dependent on the research carried on by the parent company. Here we have a large organization which is not spending in proportion to what another Standard subsidiary is spending, and I refer to Humble Oil Company. I think the statement was made the other day by its president, Mr. Jack White, that they were spending many millions of dollars this year on research. That was an encouraging statement. They are enlarging the laboratory at Sarnia, and will now be more independent of the parent company.

But other oil companies do not have their laboratories in this country. I can think of one company with its refinery not too far from the city hall in Sarnia which depends for its research work upon engineers in New

York. There are other established oil companies in this country which also have their research done by the parent companies. They make no attempt to hire engineers and graduates from our own universities in order to establish research branches which are so important to the success of any company.

Industry in this country must realize that the time has passed when they can depend upon their parent companies for research. If we are going to maintain our position as a trading nation we must take advantage of the knowledge of these engineers and scientists. The companies that do take advantage of this knowledge are the ones that will be successful. I could quote the statements of different companies.

What is alarming to me and I think to every hon. member of the house is that we do not seem to have a co-ordinated research plan in this country like they have in Great Britain. There they have a scientific committee and if I mentioned that one thing without saying anything else this afternoon I think I would be doing a lot to impress my fellow members in this house with the importance of this subject. They have had this committee for years. It sits in the house in London and is composed of members of parliament with a member from each scientific society or association. They have about 175 to 190 members who meet regularly. The chairman is a senior member of the government.

No change was made in this practice even during the time the Labour party was in power. The committee advises all departments of the government on matters with which research is connected. I should like to refer briefly to "This is Britain" a monthly news letter issued by the United Kingdom information office in Ottawa. This particular issue is dated May, 1954, and I quote:

> The parliamentary scientific committee, which has been described by Lord Samuel as "unique in its history and, indeed, unique among the parliaments of the world", recently published its annual report for 1953.

The committee is referred to as one of a number of informal, unofficial, all-party groups which have grown up spontaneously but which had managed to establish itself with more continuity and formality than some of the others. It goes on:

> Membership is open to members of parliament of any party in both the House of Lords and the House of Commons, and also to the nominated representatives of those scientific and technological organizations in the country which, under its constitution, can be affiliated. No organization can be a member of it which is engaged in promoting some scientific process or project for profit or commercial gain.

[Mr. Murphy (Lambton West).]

It states further:

> Membership in 1953 comprised 163 members of parliament and representatives of 85 scientific and technological institutions.

The aims and activities are said to be:

> 1. Provide members of parliament with authoritative scientific information from time to time in connection with debates.
> 2. Bring to the attention of M.P.'s and government departments the results of scientific research and technical development which bear upon questions of current public interest.
> 3. Arrange for suitable action through parliamentary channels whenever necessary to insure that proper regard is had for the scientific point of view.
> 4. Examine all legislation likely to affect the above and take such action as may be suitable.

That is amazing in view of what has taken place in the thinking of many people in this country and in Great Britain with respect to research. I have here a report of one of the Haldane lectures by Sir Henry Tizard dealing with research. This was delivered on May 5 of last year, and the lecturer drew upon his own wide fund of experience in order to discuss some of the problems which exist. He went on to discuss the problems which arise from the intellectual gap between the man trained in science and the man trained in the humanities, and advocated that the majority of future administrators should have a broad scientific education.

I think many will agree that it would be preferable in this atomic age and age of automation if more members of the government were scientifically trained. I am not criticizing the government because of its present set-up, because we who were members of previous atomic energy committees know that never at any time was there any conscious spirit of politics in any of our discussions. The committee members have had a high regard for each other, and I hope that spirit will be maintained. An astounding thing about research in this world is indicated in this lecture, where it states:

> Fifty years ago there was very little conscious effort to enlist the help of science in problems of defence.

In other words, 50 years ago there was very little interest in science or in research. The lecturer went on to say:

> Mr. Harold Cox, a Cambridge mathematician and economist, probably presented a very general view when, after referring to French and German developments, he said: "We shall be far more strengthening our national position by buying the best that foreign inventiveness can give than by making wasteful experiments at our own expense".

The attitude in that regard has changed. In another lecture on the strategy of research delivered on January 12, 1956, we find the following:

> During the past 50 years research has changed from luxury into necessity of existence.

I think it is about time that industry in Canada took upon itself the responsibility of having its research work done in Canada and not by the parent companies regardless of where they may be situated. This scientific committee in Great Britain has been referred to by the leaders of government for the past several years as a body which was mainly responsible for Great Britain being able to get out of the difficult position in which it was after the war and again become a great trading nation. That was not only the opinion of members of the house and of the different governments in Great Britain; it was also the opinion of casual observers outside of Great Britain.

I should like to emphasize that because, after all is said and done, what these experts can say on the subject is much more important to us than what I can contribute. I have a report here from the United States department of commerce dated February, 1952. It is headed, "The Rising Inventive Competition of Great Britain, A Challenge to U.S. Development Engineers and Manufacturers." In the report they have this to say:

> One of the principal instrumentalities in improving their industrial and scientific economic position is their parliamentary and scientific committee, which in itself is an unofficial partnership of members of the houses of lords and of commons on the one hand and members of the national scientific and engineering institutions and of recognized research organizations and bodies on the other.

I am naturally interested, Mr. Speaker, in the amendment moved by the hon. member for Vancouver-Quadra which I seconded, because in my former resolutions I have always asked for witnesses to be called. I do think that if the committee were empowered to call outside witnesses, witnesses other than those in the employ of crown companies, we would get the benefit of their advice, and in my opinion it is vitally important that we should have it.

On the matter of the scientific committee in Great Britain, I recall that a couple of years ago Sir Robert Watson-Watt spoke to a club in Ottawa. He is certainly well known to all members of the government, because he was an adviser to the defence board during the war. At that time he pointed out how important it was to have a scientific committee such as they have in Britain, where complacency has no place.

In the past I have quoted many authorities. I am on record over several years. In fact I am on record to such an extent that one individual, writing in the January issue of a magazine called *Canadian Chemical Processing Outlook,* incorporated a good deal of what I had said and made several suggestions which have been made by me in the house on more than one occasion. I should like to take this opportunity to correct one thing he said. He stated that all members of all the different parties in the house had agreed to a scientific committee. As a matter of fact the matter was never discussed to that extent, and I believe I am the only member in the house who ever suggested it. To that extent, at any rate, he is wrong.

I have said before that we would like to have such witnesses appear before the committee, and I hope that during the dinner hour or later the minister will change his opinion; because if we were able to call such witnesses it would provide the medium for a combined approach, political, educational, industrial and agricultural, to the question of research in Canada and what parliament could or should do to accelerate efforts in this field.

When the minister spoke a few minutes ago he said that one reason we should not call witnesses or send for papers or records was that all the wisdom of several countries is, according to him, on file at Chalk River. I do not know whether or not that is accurate. I have always had the idea that the McCarran act, introduced in the United States because of espionage here during and after the war, was used as the excuse for that nation not to pass on any information to Great Britain and Canada. Whether that legislation is still in effect I do not know, but if it is I wonder whether the minister made his statement more or less off the cuff and it is not actually correct.

As I said earlier, if we have the power to call witnesses we would like to call those I mentioned a while ago. We would like to call those engaged in agricultural and scientific research and the presidents of universities, because our universities are in a desperate situation today. They are called upon to face many problems and their presidents could give us ideas that I think would be important to the members of the committee. In addition, we could hear representatives of agriculture, labour and industry whose contributions I believe would be valuable to the committee.

I say this because, after all is said and done, no civil servant is going to come before any committee and say anything that is contrary to government policy. We would not expect him to do so. But the independent witness is free to come here and give evidence from his own experience that I think would be valuable. As another reason for not calling such witnesses the minister said something about them going to Chalk River. It was never our intention at any

time that these witnesses would go to Chalk River or would see anything of a classified nature in the form of either documents or machinery. While I am sure the committee will serve a most useful purpose, I am satisfied it would be much more effective if we could hear such witnesses.

I should like for a moment to reply to a statement made by the parliamentary assistant in introducing the resolution. He mentioned that Canada spent $70 million last year on research. That is only about $4.50 per capita. I have gone on record before, and the statement has never been challenged, that in the fiscal year 1954-55 the United Kingdom spent $15 per capita and the United States $25 per capita. In the same year the central governments of those countries, the United Kingdom and the United States, spent $11 and $15 per capita respectively. These amounts are far in excess of the per capita spending in this country.

We also have in Canada a problem that has been discussed for ten or eleven days, the disposal of agricultural surpluses. I am one of those who believe that politics will never solve the farm surplus problem. I also believe that if we made better use of our scientific knowledge agriculture probably would not be in the position it is in today. It is a rather strange thing that Holland and Denmark, where agriculture enjoys the highest reputations as a profession, do not have any problem in disposing of their agricultural products. They have adopted scientific methods. In other words, they have successfully adapted industrial methods to farming. There is no such thing as a subsidy for agricultural products in either of those countries.

Of course in this country we find that we have terrific surpluses of agricultural products that are hard to dispose of. I might mention here that two or three years ago the chemurgic industries in the United States acquired and disposed of about $1½ billion worth of surplus farm products which were hard to dispose of, and in fact a good part of them would have become waste if those industries had not acquired them. I think the same thing could be done here if our research were co-ordinated, which it would be if we had the scientific planning to which I referred a while ago.

We have research done by the provinces, by various departments of the federal government and in various universities. But there does not seem to be any planning to get the best out of the research, and to get the most out of the money spent on research.

[Mr. Murphy (Lambton West).]

I believe we must bear in mind that the universities today are facing some difficulty, as I said a while ago.

Something which is important to us in this country is the upsurge of engineering education in Russia. They have already surpassed the western world in the number of engineers they have graduated. It might be easy enough to say yes, they graduate 50 per cent more engineers than do the United States, Britain and Canada, and that would not mean very much because it might be possible that those engineers were not properly trained. But as a matter of fact, we now know that those engineers they graduate in Russia are top trained men. As a matter of fact they were a revelation to our own scientists and to those of the western world who met at Geneva some time last year. We might as well face the problem here, namely that we must give more attention to education in this country.

I think the only way in which we are going to get more students in the universities to take up engineering is to initiate our work in the collegiates, through our teachers and boards, and see that these scholarly students in the higher grades are given an opportunity or are induced, really, to take up engineering as their life work. When they get to university we should probably adopt the same system as they have in Britain, with bursaries. In any event these smart, intelligent students should be encouraged to take up engineering, mathematics and physics in order that they can make in this country the contribution we need from our own people. We must not let these people, after they graduate, go to the United States or any other country. That trend has been going on for far too long. Years ago I said that, in the case of these engineers, the crown companies should give leadership in hiring them and also in the payment of their salaries.

Just the other day, Mr. Speaker, we regretted very much to see in the press a report that 40 or 50 of these young Canadian graduates in engineering left one of our Toronto area airplane factories to join a similar industry in California at a 100 per cent increase in salary. In order to see the demand there is for engineers in that country all you need to do is pick up the Sunday New York *Times*. This country in the past has faced and is going to continue to face the emigration to the United States of our top scientists and graduates in engineering and physics because they are going to pay them 50 to 100 per cent more than we are paying at this time. If we are going to keep them, we must pay them more money.

I will say this. There are in Canada many scientists—we see them at Chalk River—to whom the salary or remuneration is not one of the considerations for staying in Canada. The man to whom the leader of the C.C.F. referred this afternoon is one of them. He was so devoted to his work that it did not make any difference to him whether he had $50 a day or $10 a day. He drove an old 1929 Ford car to go fishing and he was happy in his work.

But the engineers who graduate are not all of that kind. These young people will have families to support, in all probability, after a few years. We must keep them in Canada. We are going to need them. Industry must take the responsibility of hiring these people to do research in this country.

To the crown companies of this country I say, give leadership to the other industries in this country and pay the salaries to which these people are entitled, and thus prevent them from going to the United States or some other country. It has cost the taxpayers of this country no less than $25,000 to educate each of these young men. Let us keep them here. They are an asset to this country. We want them. As this country develops, with all our wealth of natural resources which no other country in the world possesses—they are hardly scratched—these men are as necessary to us as are the minerals that are in those underground deposits.

If it is necessary for this government to make grants for education, let it take the responsibility that is necessary in order to maintain our economic position in the world today. Let the government make these grants. We must have engineers. Somebody might hesitate to take the grants. There is no reason why in some way or other moneys could not be made available to these students. I will say this. Because of the high taxation in this country the revenues of many universities have been drying up. I suggest that donations, up to a reasonable amount, made to universities by people or companies be exempt from income tax. I hope that more will be granted in the future than has been granted in the last few years in order that we may meet the challenge which this country faces.

I am going to say this, Mr. Speaker. This subject reminds me, as I think it does most people, of what the Red Queen said to Alice:

> . . . it takes all the running you can do, to keep in the same place. If you want to get somewhere else, you must run at least twice as fast.

On reading that statement first, as I recall it, I thought there was not much to it. But I think anyone interested in this particular subject will read it a second time.

For three or four minutes of the time at my disposal, Mr. Speaker, I should like to deal with a problem which we faced last fall, in spite of what the hon. member for Vancouver-Quadra said about my dealing with research. I may say that I am going home tonight so I will not be obliged to face his comments. I will not say any more about the matter.

Last fall, Mr. Speaker, I think Canadians not only in Ontario but all across this country were alarmed by the statement made by Mr. R. L. Hearn, the Ontario hydro chairman. I think it was made some time in September or October. He warned the Canadian government, and I know this appeared in the press of Ontario, to broaden its atoms for peace program or miss the boat. To me the statement was most important because, as you know, the Ontario hydro, Atomic Energy of Canada Limited and a certain electrical company—the three of them—are participating in the construction of a plant to produce electricity from nuclear power. He suggested that more industry and utilities participate, and that the shutters of secrecy surrounding most of this country's atomic research should be removed. He went on to say that with the completion of the St. Lawrence hydro project and the additional power from the 50,000 cubic feet per second now being developed above Niagara Falls, Ontario will have used up all its hydro potential.

In Ontario we do not have oil or gas to any extent. Down in my area we have some, but it is not a big factor when compared with the total consumption. In this province we have a great deal of uranium. We do not know—and maybe we shall not know for a century—how much uranium there is in the province of Ontario, let alone in the other provinces of Canada. This resource should be developed. I foresee the time, probably in about 15 years, when we will be able to develop hydro power from atomic energy more cheaply than we are getting it today from water resources.

The president of Atomic Energy of Canada Limited, I think it was sometime in November, said in New York that Canada is considering an exchange of information on the peaceful uses of atomic energy with a number of countries besides the United States and Great Britain. In my opinion the irony of that is that here we were willing to exchange information with the United States and Britain, yet the United States would not give us any information, or very little. As I understand it, she would not even give Great Britain any information regarding how the *Nautilus* was powered by atomic energy, when some people from Great Britain were in the United

States last fall. The president of Atomic Energy says he is going to make this information available to other countries. I assume that is quite all right.

It is unfortunate that the western democracies do not share the information they have on atomic energy and other aspects of this atomic era. It simply means that if the United States is ahead of Britain in one development and will not release the information, Britain will probably get it within a year or two, because there is no such thing as keeping such information very long. The scientists in one country are as good as in another, and they will get the information sooner or later. We all know of instances in which scientists in different countries have come up with the same idea at different times.

It was profoundly disquieting to read that our Soviet rivals had already passed the western world in the industrial application of atomic energy. More important, it is increasingly evident that the Soviet union intends to use the industrial atom as an instrument of foreign policy, along with and perhaps in preference to the military atom. Nations which are poor in natural resources, whose resources are poorly distributed and which are now emotionally and politically unstable, could become our industrial equals and unfriendly competitors through the use of atomic power reactors donated by Soviet Russia. The only way out of the world's political and economic dilemma is to provide the power for agrarian nations to become industrialized, and for partly industrialized nations to industrialize completely.

I think we must now face up to the fact that in the atomic age dollars are no longer power. The prime material power is the absolute power of atomic energy. With the atom, mankind has finally secured a key to power unlimited, and power is the prime mover of industrialization. We must use industrial atomic energy to increase the living standards of the so-called have-not nations. As a back bencher I express the hope, for what it is worth, and I think the hope is shared by many members of this house, that the western democracies today, as they face the challenge of the U.S.S.R. and her satellites, can work together as a team and pool such information as we have been discussing in order to be collectively in a better position to challenge any forces that might be interested in overpowering us.

We have today a resurgence of industry through atomic energy. There is a great deal of interest in different countries in atomic energy today where even a few years ago there was not. As an illustration, France has a department of government to deal with research. As a matter of fact, this year Italy has spent more money on research than any other European country. These smaller countries, Mr. Speaker, like Norway and Denmark, and some of those in western Europe, are spending a great deal more per capita on research than we are. Strange as it may seem, they appear to have recovered economically and are today in a competitive position. If we in this country are to meet foreign competition in foreign markets and in our own markets, we must do so through research.

I am going to say that nature, history and geography have combined to richly endow this country, but prosperity and employment are not ensured simply because those resources lie within our boundaries. They will be ensured only to the extent that we as a people utilize those resources. As I said a moment ago, and I think it is worth emphasizing, today we should be in a position where we process more of these resources instead of buying back the finished products after manufacture in foreign countries.

The papers are filled with articles these days by scientists and industrial leaders speaking of the need for accelerated research and the dangers of our continued dependence on other countries. We knew last year, Mr. Speaker, that Britain, which is foremost in the field of research, had no unemployment. The same situation prevailed in the United States, whereas in this country we had a goodly number. I will not mention the number because I do not want it even suggested I am making political capital out of this sacred subject.

The Acting Speaker (Mr. Applewhaite): I am sorry to interrupt, but I am afraid I must inform the hon. member his 40 minutes have expired.

I shall recognize the hon. member for Nanaimo (Mr. Cameron) in just a moment. First I should like to presume to make a suggestion for the consideration of the house. I am not going to make a ruling, though I and my predecessor in the Chair are a little worried. It is quite obvious that a number of hon. members, knowing this motion was coming up, have prepared material for speeches on various forms of the role of government in the field of non-military research in Canada. At the moment we have not that resolution before us. We have an amendment which we are supposed to be debating which states that there shall be added to the resolution the power of the committee to send for persons, papers and things.

If we are going to stick strictly to the letter of the law of the rules, that is what

we should be debating at the moment. My suggestion would be, if it meets with the approval of the house—and I am not trying to impose my will on the house—that anyone who has a speech to make on the question of whether the committee should have the power to send for persons, papers and things, should do so. Then we should dispose of that amendment one way or the other in order that speeches which may be made on the more general aspects of the role of government in research will be more in order. As I say, I am not proposing to impose this view upon the house. Perhaps in order to find out whether it meets with your approval or not I might at this moment ask, is the house ready for the question on the amendment?

Mr. Green: May I point out that you cannot discuss the amendment apart from the body of the motion. The motion sets out what this committee is to do, and the amendment proposes an alteration in the method by which that work is to be done. I submit that a speech having to do with the general work of the committee is perfectly in order even while the amendment is before Your Honour.

The Acting Speaker (Mr. Applewhaite): I am not arguing that point of view. A great deal of material included in members' speeches might have a bearing on whether or not the committee should have the power to send for persons, papers and things. I did express the view, which I still hold, that a great many of the more general remarks being made on this question of government role in research are not really strictly applicable to the question of whether or not the committee's powers should be extended but is more applicable to whether or not there should be a committee.

However, if it is not the view of the house I have no intention of enforcing that opinion. It may be that on occasions we shall have to ask members not to get too far afield from that aspect of the resolution which has to do with the amendment now proposed.

The hon. member for Nanaimo.

Mr. Colin Cameron (Nanaimo): Mr. Speaker, I think what I have to say will come within the ambit of the amendment proposed by the hon. member for Vancouver-Quadra, and support his contention as to the necessity of the committee having power to call before it certain witnesses, witnesses who would not necessarily be available however willing the government might be to provide them from among their own employees. I believe that in considering this question, Mr. Speaker, we have to face the fact that today science has become so specialized that very often the opinions of eminent figures in one branch of science are of little value in considering another aspect of the same question.

The matter I want to discuss this afternoon is one that I have raised before in the house on other occasions, namely the possible genetic effects of our activities in the atomic field. In order to place before the house the serious view that is taken by many eminent scientists with regard to the possibilities of the atomic age, I want to quote from an article by Dr. A. H. Sturtevant, of the California Institute of Technology, who is generally regarded as one of the leading geneticists of the United States. He had this to say on the danger of mutations from high-energy irradiation. He sets forth the facts in this form:

> 1. High-energy irradiation produces mutations.
> 2. The frequency of induced mutations is directly proportional to the dosage of irradiation. There is almost certainly no threshold value below which irradiation is ineffective.

He cites numerous other basic facts with regard to that, and later on he has this to say:

> The "maximum permissible" exposure will become a matter for careful consideration if nuclear reactors come to be widely used as power sources, since under those conditions also there will be an increase in the background radiation. The amount and character of such increases will depend in part on the type of reactors used, and on the details of their design and operation—and it is a matter of public concern that this factor, as well as economic ones, be taken into account in a program for the non-military development of atomic energy.

I suggest this to the house, Mr. Speaker, that a committee that has not the power to call before it competent geneticists as distinguished from physicists to give their opinions to the committee on the possible dangers of an atomic energy program is a committee that is not going to be able to ask the questions that we should be asking very definitely today.

I listened carefully to the minister's reasons for refusing to accept the amendment of the hon. member for Vancouver-Quadra, and I wondered just how it is going to be possible for this committee to do what the resolution suggests it ought to do, namely examine into the non-military operations in the field of atomic energy, if that committee is not going to be able to call before it competent witnesses to give it some idea of the possible results of whatever program may be revealed to us during the sittings of that committee.

In fact, Mr. Speaker, I wondered whether the minister's objections to this amendment were not perhaps based on his reluctance to assume the difficult job of riding herd on the government majority on that committee; because of course it is perfectly obvious that if the government members on the committee

are on their toes then no witnesses, no papers and no records will be asked for that would in any way embarrass the government or endanger the secrecy of classified information. But I do seriously suggest, sir, that we are not going to obtain an effective picture of our atomic energy program unless we have some idea of the possible dangers of that program for peaceful purposes.

I hold in my hand an extract from the *Canadian Chemical Processing* magazine of April of last year which contains an article by Professor James G. Foulkes, M.D., of the University of British Columbia, on the question of the dangers of background irradiation. In this article Dr. Foulkes quotes Dr. H. J. Muller of the United States, another leading United States geneticist, a gentleman who you will recall, Mr. Speaker, was refused permission by the atomic energy commission of the United States to appear before the recent Geneva conference on atomic energy. It was generally supposed at that time that Dr. Muller's evidence as a geneticist would be embarrassing to the United States defence authorities.

Dr. Muller is quoted in this article as saying:

> Despite a number of unfortunate publicized statements by non-geneticists casting doubt on the mutagenic effectiveness of small doses of radiation, the work has gone so far as to make it inconceivable, on physico-chemical grounds, for a single ionization track traversing a cell nucleus to be without its proportionate probability of inducing a gene mutation.

He goes on to say:

> Such considerations have led one scientist to conclude that "the long-range genetic danger of exposure of mankind as a whole to low-level, but widespread and persistent radioactivity, is the most ominous of all the dangers of the atomic age."

I have read the reports published by our government on this matter, reports published by the atomic energy control board of Canada, by Atomic Energy of Canada Limited and by Eldorado Mining and Refining Limited, but I have not found the slightest reference in any of them to any investigations or research in this matter. Apparently we are prepared to go ahead blindly, not to consider the possible genetic results, and hope that the economic benefits may blind us to any possible dangers to the human species. I think, Mr. Speaker, this is a question on which we have to ask some very serious questions, and this committee is not going to be able to ask them if the Minister of Trade and Commerce persists in refusing to allow it to call competent witnesses to give us advice on this matter.

A few weeks ago I had the opportunity to get in contact indirectly with one of the leading geneticists of Great Britain, Professor J. B. S. Haldane. A member of my family is studying biochemistry and genetics under Professor Haldane. In discussing the danger of genetic mutation from both military and non-military uses of atomic energy, Professor Haldane asserted that while he could consider it was not yet probable that the increase in background irradiation was sufficient to cause dangerous mutations, he was very insistent on this point that no one knows. And because no one knows, Professor Haldane has instigated an inquiry and an investigation at the British atomic energy centre at Harwell into the mutation effects on various laboratory animals of exposure to radiation at the level that we can expect with the widespread use of atomic reactors. I would feel much happier in my own mind, Mr. Speaker, if I could see some evidence in Canada of a similar anxiety and care to insure the future of the human species. It may sound laughable, but I say this. There is no one in this chamber, not a single soul, whose opinion is of any value.

Mr. Gillis: And not many outside of it, either.

Mr. Cameron (Nanaimo): There are a few outside, but hon. members of the government and of this house persistently close their ears to the warnings of the few people in the world who know.

I suggest, sir, that such a course can only lead to catastrophe. I would hope that whether or not the government decides that it is going to permit a committee of this house to investigate these activities and call before it competent witnesses, we shall have before long some statement from the government which will indicate that it realizes that the development of atomic power is fraught with very great danger and its operations must be conducted with the utmost care.

I have heard, for instance, no indication from the government nor have I seen in any publication in this country an indication that the serious and difficult problem of the disposal of atom waste has been in any way effectively coped with. It is a problem to which the scientists of Great Britain are giving a great deal of attention at the present moment, and it is a cause of great anxiety to them. We in this country appear to be quite blandly indifferent to the possible problems we are creating. I suggest that while we may revel in the idea of endless power produced for a minimum of expense we should also realize there is only one purpose in producing power in any way at all, and that is to add to the happiness and satisfaction of human beings. But we are not going

to do that if we permit in succeeding generations more and more deleterious mutation. Scientists tell us that the probabilities are that they are nearly all degenerative in nature and cumulative in their effects.

I should like to see this committee set up, and I should like to see this committee have some inclination to reassure us on this point, because this happens to be one of the things which once done can never be undone. Once we have succeeded in creating a level of background irradiation that does carry with it this danger, there is nothing on earth that we can do to reduce that level in the future. It is there for good, or for evil in this case.

I hope the Minister of Trade and Commerce will realize that the people of Canada through the hon. members of this house are entitled to the utmost frankness in the way of disclosures of information about the program that has been undertaken by the government. I hope if he is not going to do that he will then alter this resolution so this committee will not be described as one which is to examine into the operations of the government, because obviously it is not going to be allowed to do this; but it will be described instead as a committee of this house to receive certain information from the government with regard to its atomic energy program.

Mr. J. H. Harrison (Meadow Lake): Mr. Speaker, I am rather in agreement with you that we perhaps should be discussing more particularly at the moment whether or not the amendment should stand, and I am a little hesitant to begin the remarks I intended to make in view of the opinion you expressed a few minutes ago, with which I entirely agree. I wonder if the house at the moment is ready for the question; if so I would then rather talk on the main substance of item No. 15 on the order paper, which is before us.

The Acting Speaker (Mr. Applewhaite): I think perhaps I was the one who initiated this. I might say in view of the opinion held by several hon. members—and perhaps the opinion is held by a large number of hon. members in the house—and in view of the nature of the speeches which have been made since the amendment was moved, I think if the hon. member's speech deals with the role of the government in research he will find himself in no difficulty with the Chair.

Mr. Harrison: Thank you very much, Mr. Speaker. I greatly welcome this committee to inquire into the fields of atomic energy and the national research council. I think the committee will do extremely useful work in disseminating information to the general public about such bodies as the national research council that the public at the present time does not have the advantage of learning.

I think at the moment we should realize why we are faced with the necessity of setting up such a committee. The reason for that, I believe, is quite apparent. The reason is the growth of the uranium industry in Canada during the last three or four years. We might ask, too, why we have had such a growth and how we have developed a uranium industry in such a short period of time. I think it is entirely due to the foresight and optimism of our Minister of Trade and Commerce. We owe a great deal to the minister in this as we do in many other respects.

Because of his foresight I am in a position to say to you now that in my riding we are presently producing about three-quarters of the uranium produced in Canada. This has come about within the last three years, and is entirely the brain child of the Minister of Trade and Commerce. In that regard as in many other matters in which his foresight is apparent in this country, I think he has contributed more to the standard of living of the Canadian people than any other man either living or dead.

I should like to join with those hon. members who a few minutes ago observed that they hoped this committee would be able to look into the operation at Chalk River as has been done before, and also that it might look into the production end of uranium in the Beaverlodge uranium area. I do hope the committee will be able to do this because tremendous strides in production have been made in that area in the last two or three years, and I think it should be looked into.

As I mentioned a moment ago, I think the people of this country are poorly informed concerning what bodies such as the national research council do. This was forcibly brought to my attention last fall when the new mill at the Gunnar uranium mine at Beaverlodge was opened. The Gunnar mine is unique among uranium mines. There is nothing like it in the world and very likely there will not be another mine like it. It is the only open pit uranium mine in existence. As such it is a potentially low-cost operation.

To give hon. members some idea of how it works out, may I say that a charge of 300 pounds of dynamite produces about 15,000 tons of ore. The ore is picked up by 3-yard shovels and dumped into 30-ton Euclid trucks, which then make a quarter mile run to the ball mill. This plant was designed on a test tube basis by a gentleman named Ross in the national research council.

I want to give hon. members some idea of what research can do for industry. Mr. Ross asked that 100 tons of ore from the mine be sent to Ottawa for processing. After a year's research he found that there were four processes which could be made applicable to the ore, and he picked out the acid leach process for the Gunnar mill. He designed the equipment from the test tube investigations and mining men who were present at the opening, such as Jules Timmins and others who had spent their lives in mining, said that it was the first time that they had seen a mill anywhere approach its rated capacity within less than a year or perhaps two years. In this particular instance the mill reached 125 per cent of its capacity within two weeks, something that has never occurred in mining in any place in the world.

That was due entirely to the research done by this Mr. Ross at the national research council in Ottawa. The net result is that you have an operation there that can compare most favourably with operations in other parts of the world. Other operations lose from 5 to 10 per cent of uranium, but this process was 99¼ per cent perfect as far as recovery of uranium from the ore is concerned. It is even better now, and I understand at the present time they get 99¾ per cent recovery.

It will be seen from this what research can contribute to our economy. This mill was designed for 1,250 tons a day, but within two weeks of its opening was handling 1,500 tons of ore a day. This is a different type of operation from the Federal mill at Beaverlodge, only 20 miles north. There they are mining in a conventional manner. They process about 650 tons of ore a day, and it takes nearly twice as many men to do the job as at Gunnar.

When I go into this district I am always asked when the Minister of Trade and Commerce is going to go in there to look at what they consider he is responsible for. They are quite ready to admit that that place would not exist if it had not been for the foresight of the Minister of Trade and Commerce. I hope that when this committee goes to work it will be given an opportunity to go in and look at the mills up there.

I can tell hon. members that at Gunnar they will find a perfect example of automation. There are four chemical processes which are of a split second change nature. The changes from one to the other are all done automatically from a panel. No one is required for the operation of the plant. If there is a breakdown in any part of the process that is indicated on the panel, which also indicates where the trouble is and what has to be done to fix it. Practically all the men are employed in actually getting out the ore and keeping in repair the machines used for drilling and so on. There are two or three supervisors walking around the plant, but they are all you will see.

If this committee goes anywhere I hope it will visit the Beaverlodge area where it can see the Eldorado mill. The Gunnar mill is to be expanded from 1,250 tons to 2,500 tons. The Lorado mill is to be constructed this year with a capacity of some 1,500 tons. This expansion will place Canada in 12 months' time at the very top of the world's uranium producers. If the committee does go there I hope the Minister of Trade and Commerce will go along so that the people up there will be able to congratulate him upon his outstanding foresight, imagination and, something for which he is often criticized, his optimism.

At six o'clock the house took recess.

AFTER RECESS

The house resumed at eight o'clock.

Mr. Green: Mr. Speaker, this afternoon there was some discussion about the form of the amendment I had moved, during which a question was raised with respect to whether we were trying to get permission to send for documents which were classified as distinguished from unclassified documents. I think it is common ground that no one in the house has any intention of asking permission to send for classified documents, and in order to clarify that point I would ask the consent of the house to make a change in the amendment so it will read: "to send for persons and unclassified papers and records."

Mr. Speaker: Has the hon. gentleman leave to amend his amendment in the sense he has indicated?

Some hon. Members: Agreed.

Mr. W. G. Dinsdale (Brandon-Souris): Mr. Speaker, I want to take part briefly in the discussion tonight because I feel that we are dealing with one of the most important subjects that could come before the House of Commons. In my opinion the subject of research, as we move into the age of automation, is going to be increasingly important as we attempt to grapple with the industrial changes that will arise and, more important than the industrial implications, the sociological effects that will follow in the wake of the increasing trend toward automation.

In my remarks tonight I am going to concentrate, as has already been emphasized, on

the amendment before the house. The slight modification in form that has just been presented by the hon. member for Vancouver-Quadra makes the task somewhat easier, because it seems to remove the one objection that has been forthcoming from the government side up to the present time concerning an amendment of this kind. I feel it is very important that the committee have the privilege of calling for persons and papers; otherwise the basic purpose of the committee is going to be thwarted.

By very definition the subject of research requires the broadest treatment and access to every available source of information. Because of that it is important that there be no artificial restrictions imposed. As has been pointed out by previous speakers, the resolution as it stands on the order paper is somewhat restricted in nature, in that it confines the discussion to the fields of atomic energy and the operations of the national research council.

I listened carefully to the senior member for Halifax (Mr. Dickey) in his introductory statement, and I noticed that there was some hope for a broadening of the terms of reference when he added to the two main categories an additional broad category in words to this effect, that the committee would consider research in all its general aspects. If his interpretation of the phrase, "consider research in all its general aspects", is similar to mine, then I feel we have a fairly broad approach to the problem of research available to the committee.

I had intended to concentrate on one aspect of the problem, but just before the house rose at six o'clock the hon. member for Nanaimo (Mr. Cameron) introduced a discussion of the probable genetic effects of atomic radiation on human beings. As he indicated, this has been one of the burning issues that have arisen in popular discussion since the advent of the atomic age. The hon. member for Nanaimo suggested that there had not been much formal action taken by way of consideration of the effects on human heredity of atomic radiation.

I should like to add one small piece of information to that which he has already placed before the house. Last fall the subject of the peaceful uses of atomic energy received somewhat prolonged consideration at the general assembly of the United Nations. One of the recurring topics under that general heading that appeared in the committee discussions there was the probable dangers to human heredity from the increasing level of atomic radiation. At the present time some 20 nations are meeting in the United States in an attempt to set up an atomic energy commission which will have as one of its major considerations the gathering and the sharing of information on all aspects of the peaceful uses of atomic energy. This, of course, would include all available information concerning the probable effects on human mutation.

I use the word "probable" advisedly, because actually very little scientific research has taken place concerning this problem. There have been plenty of armchair scientists who have indulged in speculation concerning the facts, but there is very little concrete scientific data. The phrase "armchair scientists" was used, incidentally, by the late Dr. Cipriani, who was Canada's expert on this matter at the last general assembly session of the United Nations, and I join with the hon. member for Rosetown-Biggar (Mr. Coldwell) in regretting sincerely the sudden passing of that eminent physicist.

Dr. Cipriani, who had given some consideration to the problem of the genetic effects of atomic radiation, had come to the conclusion as a result of his investigations that there was no immediate danger. He quoted by way of example some rather interesting experiments that had been taking place in Sweden. Sweden has done some initial experimental work in this regard because it is a small country, and there they can control the data with which they are working. To a large extent the population is homogeneous and occupies a small geographic area. One further factor of importance is that the level of radiation is considerably higher in Sweden than in most other areas.

Some very worth-while work is being done on the effects of atomic radiation on human heredity, and I am sure that when the atomic energy commission arranged by the United Nations Organization at its last general assembly session is functioning adequately, this problem will be coped with successfully. I merely add those words in passing.

I now come to the main subject with which I wish to deal tonight. Of course I support the position taken by the other spokesmen of this party, namely the hon. member for Vancouver-Quadra, and the hon. member for Lambton West, who from time to time in this house has taken the lead in urging action on the general problem of stimulating research activity in this country. I should like to come back to the aspect that I have stressed on two previous occasions in this house when there has been an opportunity to discuss the general subject of research. I refer to the role of government—to use the phrase that is included in the general resolution—in social science research.

The resolution stresses non-military research in Canada. From the use of that phrase I take it that the government, in putting forward this resolution, is trying to get away from the emphasis that has dominated research activity in this country ever since the founding of the national research council in 1917. It grew out of the emergency of world war I. Since that time the major emphasis in research in Canada has been on the military aspects, the development of weapons or, as that particular type of development is popularly known, the hardware aspects of research.

In Canada a small beginning has been made in the realm of social science research on the part of the government as well as on the part of voluntary organizations. We have in Canada a social science research council which is largely a voluntary group, and we also have a humanities research council. They have been doing notable pioneering work in the important area of social science research. The government also is operating in this field to a certain extent. For example, the national research council includes one psychologist in an advisory capacity, so that at least the door is slightly ajar for the entrance of social science research activity. The defence research board has moved a little bit further into the area because it is employing psychologists to deal with some of the general problems of human relations that arise when you have men concentrated together in the various branches of the armed forces.

Perhaps the most worth-while contribution in the field of human relations, however, has been in the Department of Citizenship and Immigration, where we find sociologists and social psychologists doing some excellent work in the problem of the integration and assimilation of our new citizens. That is an extremely important task to which this particular department has devoted some attention. Then of course you have any number of economists operating in the Department of Finance as well as in the Department of Trade and Commerce and similar departments, so that in a small way and in a rather uncoordinated fashion the government is playing a role in the newer scientific field of social science research.

I bring this subject before the house tonight, Mr. Speaker, because as the motion stands there does not seem to be much opportunity for further consideration of this important aspect of research in Canada. The scope is going to be narrowed stringently indeed even though the senior hon. member for Halifax indicates that there will be opportunity for discussion of general research problems. Unless we have the motion amended to provide for the calling of persons and papers the door will be pretty well shut to a consideration of the government role in social science research.

It would mean, for example, that there would not be the opportunity of calling in any representatives from our universities. Almost from time immemorial, universities have been the centre of creative activity in western civilization. I fail to see how it would be possible to deal adequately with research generally if we do not have the opportunity of calling before the committee some representatives of Canada's outstanding universities. It would be an extremely short-sighted policy indeed that would deny us this opportunity. Actually it would result in the work of the committee being almost fruitless.

Coming back now to the major emphasis I want to make tonight. While the government has done something in the realm of social science research, the voluntary groups have been much more active, particularly the Canadian social science research council. At the moment this council is faced with a rather difficult situation. Its traditional source of funds is drying up. Unfortunately Canada has depended largely upon United States foundations for the funds with which to carry on the important work of providing fellowships and scholarships at the graduate level in the area of social science. Each year recently the Canadian social science research council has been providing some 130 research fellowships. The money for those fellowships has come largely from two sources, namely the Rockefeller foundation and the Carnegie foundation. The Carnegie foundation, for example, has been contributing $90,000 annually. These contributions come to a total of some $8 million since it was first established in 1911. The Rockefeller foundation has been contributing $35,000 annually, and altogether a total of $12 million since it was established in 1914.

The Americans are becoming extremely reluctant to support Canadian research activity in this way. The difficulty first arose because of the report of the royal commission on the arts and sciences known as the Massey commission, which at that time was trying to encourage a more active participation on the part of the government and the people of Canada in our own social science research activity.

The introductory statements of the Massey commission said something to this effect: We have gained much from United States aid. In this preliminary stocktaking of Canadian cultural life it may be fair to inquire

whether we have gained a little too much. Granted that most of these United States donations are good in themselves, it does not follow that they have always been good for Canadians. We have not much right to be proud of our record as patrons of the arts. Is it possible that, besides the munificence of a Carnegie or a Rockefeller, Canadian contributions look so small that it seems hardly worth while making them? Or have we learned, wrongly, from our neighbour an unnecessary dependence on the contributions of the rich? Perhaps we have been tempted by a too-easy benevolence, but this leaves us in an undignified position, unworthy of our real power and prestige.

Now it seems that United States sources of support of the kind I have indicated took exception to the criticism of their contributions in this way. It was meant, of course, to be a prod to greater Canadian participation, but unfortunately it has had just the reverse effect. In the words of Blair Fraser, who was writing in *Maclean's* magazine last September 3 on this problem, the United States benefactors are now taking the attitude so far as Canada is concerned, you put up or shut up. Unfortunately there has been a very discouraging effect on the growing demands on the funds available from the voluntary Canadian social sciences research council.

In recent months there has been an attempt to influence Canadian industry, as well as the Canadian government of course, to meet the growing needs in the area of human relations. There has been no success as yet so far as the approach to the government is concerned because, as we know, no attempt has been made to implement the recommendations of the Massey commission in this regard. Last year the W. Burton Hurd memorial foundation was established, and a considerable effort was exerted to interest Canadian industrialists in making substantial contributions to this memorial fund.

Speaking personally, Mr. Speaker, I know of no more worthy name that could be associated with this fund. I see the hon. member for Winnipeg North Centre (Mr. Knowles) looking at me. I think he came under the influence of Professor Burton Hurd in his days at Brandon College, back in the twenties when Brandon College was evidently turning out C.C.F.'ers. I came under the same influence in the thirties when the same institution was turning out Conservatives. Later Professor Hurd went to McMaster University where he chaired the department of political economy. His name, therefore, as one of Canada's outstanding economists, one of Canada's pioneers in the field of population studies, should have rallied enthusiastic support. Unfortunately it did not, and only $15,000 was realized through this effort. Unfortunately the money was not of the foundation type; it was not a continuing sum of money. It was a one contribution proposition only.

In this area of social science research, therefore, the situation is becoming extremely critical from the financial standpoint in the first instance, and also from the lack of co-ordinating effort to adjust to this obviously growing need. The government is moving gradually into the field in its various departments, but we are moving so slowly we are not even keeping pace, to use the phrase that the hon. member for Lambton West used this afternoon. As technological change increases as a result of the progress toward automation, we are going to be left far behind.

We are already behind in this matter of trying to gather the necessary information. We can only do that as the committee is permitted to bring before it people from the universities. Activity of this kind is largely confined to the universities. We can only get the necessary information concerning the needs and the action required if we are permitted to bring before the committee the men who are endeavouring to deal with the growing problem under the various circumstances and conditions I have outlined.

The Minister of Trade and Commerce gave us one argument for not agreeing to the amendment before us, the problem of guarding classified information. It seems to me, Mr. Speaker, that difficulty would be entirely removed if the revised amendment presented by the hon. member for Vancouver-Quadra is taken into consideration. I would certainly suggest that all hon. members should see their way clear to support this very important amendment.

One final word. I feel that in a committee of this kind we can only make a beginning in tackling the challenge of research. If it is going to be successful, if we are really going to meet the challenge of the changing situation, it should be a continuing committee, and we should have the opportunity each year of bringing ourselves up to date with the changing circumstances.

Mr. Clarence Gillis (Cape Breton South): Ordinarily, Mr. Speaker, I would not speak on a resolution to set up a committee. But since the amendment has been moved I think I have something to say on this particular subject. I am not posing as an expert on atomic energy or research. I do not suppose there are many in this house who could.

All we know about the subject is what we have read in the press, lectures we have heard and conversations we have had with people who have attempted to make a study of it.

I think the idea of setting up the committee is timely. I am not particularly concerned with the matter of national research, but I am concerned about the peaceful uses of atomic energy. If you once got into that subject in all its ramifications, you could talk a long time and perhaps get tangled up so badly you would not know where you were when you finished.

I am going to stick to one aspect of it, and that is this matter of radiation. The people of Canada, and perhaps the people of the world, require some assurance on that subject. Since 1945 we have heard many statements broadcast and there have been panel discussions on the subject of what atomic blasts are doing to the world. For quite a while people were jittery. Today they have become kind of apathetic. Since 1945, despite all of the warnings and so forth, nothing has happened here, although we did have the demonstration of the Japanese fishermen getting badly burned by the fall-out from an atomic explosion that took place a long way off. The matter is still being discussed. The time has come for the Canadian government to begin to get as much information as there is available on the subject for the purpose of reassuring our people that at least they are making some study of the matter.

Along with the hon. member for Brandon-Souris (Mr. Dinsdale), and a couple of other hon. members, I had the pleasure of attending a portion of the last session of the United Nations under the capable leadership of the Minister of National Health and Welfare (Mr. Martin). When you go there as an observer you do not have any particular duties to perform. You have a free hand. You can sit in on any of the committees that are sitting, and also attend the general assembly when it is in session. As the hon. member for Brandon-Souris mentioned, at the last session of the United Nations the political committee talked at great length on this subject of the effects of radiation on genetics, and what radiation was going to do to the human race in the future. After sitting there day after day and listening to the discussions of men who are perhaps the best informed in the world on the subject, at least a little of it rubbed off on us. In addition, we did have the pleasure of meeting with the late Dr. Cipriani, who was an expert in that line at Chalk River, and we had discussions with him. It is unfortunate that a man of his age and his knowledge and personality had to leave us at this time and take his knowledge with him.

You meet some people whom you never forget. He was that kind of person. He told us a lot about this particular subject. He was the kind of person who does not use the technical language that is used by some people. He seemed to be the kind of person who could get down to where you were and talk to you in understandable language. I gathered from what I heard in that committee, and from what the late Dr. Cipriani had to say privately on the subject, that not much is known about the effects of radiation.

There always has been a certain build-up of radiation in the world. That build-up takes place to a greater extent in some countries than in others. I think I am correct in saying it was mentioned that the north of Scotland had a higher radiation build-up than any other section of the world. The Scandinavian countries, and I suppose British Columbia, would have a higher build-up than the prairies. There always has been a build-up in radiation. You get it from many things.

Dr. Cipriani's judgment was that it was difficult to say very much right now as to whether or not it was building up to the danger point, for the simple reason that there is no data on it. No formula has been perfected by the different countries as to how to get a uniform measurement. Each country was using a different formula, with the result that what one country was doing could not be compared with what another country was doing. The committee's job was to try to set up an atomic energy agency that would function within the structure of United Nations.

Of course there was difficulty for a long time in getting it set up because every time the matter of radiation measurements and that kind of thing came up they had their opposition there also. The opposition would appear with a bombshell and say, "We must discontinue the blasts for a long time".

They finally agreed on setting up an agency. It has been set up. The scientists of the world have formed a committee. That committee is either meeting now or will meet shortly. The hon. member for Brandon-Souris says it is meeting now. Their objective is to get some data on the radiation build-up that has taken place in the world since the discharge of the atomic and hydrogen bombs. Until that agency gets proper measurements that will be comparable in every section of the world I do not think anybody can say anything with any authority

as to what the situation is today with respect to radiation and genetics. That data is not available.

Now is a good time for the Canadian government to demonstrate to our people that we are interested in this particular subject. Perhaps the Minister of Trade and Commerce was quite correct when he objected to the first amendment and said that classified material that was on the secret list should not be made public. The hon. member for Vancouver-Quadra has amended his amendment and is now asking only for the right to call witnesses and have unclassified material; that is, material that is not on the secret list, which he thinks should be made available. I do not think there is much on the secret list today, anyway.

I am supporting the amendment because I think it is necessary that we should begin to tell our people that we are making an active study of the subject.

While attending the United Nations session I was impressed with what the United States was doing in this field. For example, for three weeks at least while I was there they had a display of all the equipment that is used in the atomic energy field in the Carnegie building just across from the United Nations building. They took the uranium right from the ore state and traced it down to the splitting of the atom. Every machine that is used in any of these plants was there in miniature form operating exactly as it operates in a real plant. They had a capable man on each machine to tell exactly what the function of the machine was. There was a lot of equipment there, because it took me exactly three hours to go through the display and get a little idea of what each of the machines was doing and of the possibilities of the atom in the future in a peaceful way.

I was amazed to find the things you can do with that material today. In the development of agriculture, for example, there was a demonstration of what it will do for wheat and the many ways it can improve it. We were shown how perishable foods are preserved; but the thing that impressed me most were the possibilities of the atom for medicinal purposes, for health purposes. There was a demonstration showing the improvement in the X-ray machine and the use of isotopes in determining what is wrong with the human body. There is no guess work any more with the new equipment they have in the X-ray field and with the use of the isotopes for determining what is wrong with the body. According to the lecture I heard there is no guess work any more. This new equipment shows every tissue in the human body; it shows what is going on. The technician can tell the doctor what is wrong.

They tell me that most of the large hospitals in New York are equipped with that type of equipment. It is very expensive and it is scarce at the present time, but they assured us it would not be far in the future until most of the larger centres will be furnished with that kind of equipment. If we are sensible, and I think from all indications we are now learning how to live together in the world through fear, if through nothing else, we can put the atom to use for peaceful purposes. If we do that, the possibilities are unlimited.

My understanding is that the government of the United States has provided all that equipment. It must have cost a lot of money. They put on that demonstration, as I understand it, at Geneva and then they took the equipment over to the last session of the United Nations for all to see. If I had seen nothing else, my trip to New York was worth while because of that demonstration and the possibilities it illustrated of the use of the atom for peace in the future.

I think we are missing the boat when our government is not keeping as closely as possible in touch with that kind of thing and showing our people the possibility of using this atom, which is scaring everyone today because of the possibilities of war, for peaceful purposes. We should be playing up the constructive uses of the atom and playing down the idea of war. As I said before, I think we will have peace for some considerable time through fear; but in order to guarantee that peace we should harness the machine that can be used for destruction and put it to the constructive uses I have mentioned; and we should gain the support of the Canadian people and people throughout the world for the constructive use of the atom.

For the reasons I have mentioned I am supporting the amendment. I believe it is right to set up a committee; but in addition to having a committee I believe it should be able to call in men from the Department of External Affairs and men from the atomic energy plant at Chalk River who would be able to tell the committee what is being done by other governments and what our government is doing to co-operate with other countries in this field.

We are not disseminating enough of that kind of information. I think we could make a start with this committee if we accepted the amendment that has been moved by the hon. member for Vancouver-Quadra. That is my main purpose in rising, Mr. Speaker, and I suggest to the Minister of Trade and Commerce, now that the hon. member for Vancouver-Quadra has moved his amendment

and has pretty well specified what he needs in the way of evidence and documents, the acceptance of his amendment.

As the hon. member has said, anything that might be secret would be off the official list. Our acceptance of his amendment would probably shorten this debate. It would be good business if the minister would accept the amended resolution and let us get the committee set up and get down to business.

Mr. Thomas M. Bell (Saint John-Albert): Mr. Speaker, I should like to mention a phase of research which I think should be covered by this committee. It is a field that means a great deal to a large number of Canadians, and it is a field which is apt to be overlooked. I refer to the general fisheries research field which should be considered by this proposed committee.

For authority to consider fisheries under this motion I would think that part (b) of the operations of the national research council would be sufficient. Section 7 of the Research Council Act, chapter 239 of the Revised Statutes of Canada, 1952, states, and I quote just the last part of the section, Mr. Speaker:

> The council . . . also has the duty of advising the committee on questions of scientific and technological methods affecting the expansion of Canadian industries or the utilization of the natural resources of Canada.

The role of the federal government in fisheries generally is a matter of constitutional charter, but I think it would be sufficient to state that section 91, subsection 12 of the British North America Act, which gives the federal authority the right to regulate and limit sea coast and inland fisheries would be enough authority here, with the exception of course that the provinces still retain provincial and civil rights in regard to fisheries.

I would hope that the powers of the committee, as the hon. member for Vancouver-Quadra has suggested in his amendment, would include the right to call for all papers—those would be unclassified papers—and persons and records.

There is generally a new interest in the exploration of the sea. A few years ago it was all air but today, with the increasing interest we find in the sea, we read of the frogmen in the deep, underwater television and all these new ideas concerning the ocean depths. This brings to mind the potentialities of this seemingly small but important fishing industry that has no strong lobbying power and no great industry upon which it can rely for subsidy and assistance in research. Nevertheless it is an important factor in our future.

In order to begin I ask the question, just what is being done now in fisheries research? I am pleased to report that as far as I can see personally we are making very good progress in this particular field. As the Minister of Fisheries recently said—and I must admit that the Minister of Fisheries is research conscious—when he addressed the Fisheries Council of Canada on January 4, with the commissions and other bodies today it is necessary to keep up and continue research in all branches of fisheries.

Recently I had some questions and answers tabled with regard to the money that is spent by the government on fisheries products in relation to the total market value. If my quick arithmetic serves me well I think it is fair to say that on fisheries research we are spending between one-half and three-quarters of 1 per cent of the total market landed value of our fisheries. This is comparatively good, I think, but like everything else it can be better, and I suggest that further stimulation needs to be given to fisheries research and perhaps better co-ordination.

What would be some of the problems into which this committee could inquire regarding fisheries research? I suggest that there would be the small problems that are encountered from day to day, such as the problems of lobster fishing and of the seasons, all of which have to be looked into. Last year we had the unusual circumstance of herring cluttering up the lobster traps due to a peculiar condition which caused their death. This was a matter that required scientific investigation. When the results came out it was found that this particular heart condition affecting the herring was depleting the lobsters.

Then there is the problem in connection with clams and green crabs which is causing so much trouble. The clam industry goes back to the days of Champlain, when he found it necessary to rely on these lovely, delicious clams to help sustain life in the early days in Canada.

There is another problem which is a continuing one, and which the Minister of Fisheries has said presents one of the greatest challenges to the department. I refer to the decline in salmon production. This is a field which deserves considerable attention. According to information which has been tabled, the value of research in this connection has been made clear and I admit that the figures given are good when considered in relation to the total value of the salmon catch. But we are getting nowhere as far as the salmon industry is concerned.

As far as the situation in New Brunswick is concerned, there are said to be four or five reasons for this decline in salmon production. First there is the industrialization,

which is inevitable. Then there is the spruce budworm, which brings in the Department of Agriculture. There has been a conflict of statements in this regard. Some research experts say that the spruce budworm has had no effect upon salmon production, while others say that it has had a direct effect. I believe the fisheries research authorities have said that this spraying has been going on for only a few years and that the cycle of salmon growth will not have been completed for one or two more years, and that therefore definite conclusions cannot be reached in this respect.

This is a problem for our research experts, and I submit that this committee should satisfy itself that such problems are looked into. If this were done we might be able to reverse the serious decline of 66 per cent which has taken place in our salmon industry from 1930 to the present time. Japan has shown the way in recent years. By the use of modern research methods they have been able to triple their salmon output.

Having said that, I come to the third question. What could be done in this fisheries research field? There are many solutions for the problems confronting the salmon industry, but one that comes quickly to my mind is the successful efforts which have been made to hurry the growth of young trout and salmon. This biological discovery was made by chance by a fisheries expert in the maritimes, whose name I think was Kenneth Shillington. He found that by segregating hardy types of salmon and trout he could increase their growth as much as one pound a year. If this discovery is fostered and promoted by our experts it should prove a quick solution to the problem that confronts both the commercial fisherman and the angler.

Further research work should be done in connection with lobsters, in the use of the new steel traps and in other ways. Coming to clams again, this problem is more of a technological nature, in the development of new diggers and other efficient methods of fishing.

If this committee finds it feasible to call in the fisheries experts there are two questions which should be foremost in their minds. First there is the biological inquiry that should be made. Most fisheries experts will agree that we have to consider the life of the sea from a strictly biological point of view. What is that life like? Where does it exist? In what parts of the sea will it be found? Ocean currents, temperature and the like all have to be considered.

After this fundamental biological knowledge has been taken into account and the complete life history and environment of the particular fish ascertained, then we would be prepared to consider the second or technological aspect. That of course would take in the complete life of the fish up to its eventual delivery to market.

In this connection I think we should consider what has been done in this field in other countries, and I would refer in particular to legislation passed in the United States on July 1, 1954. While this legislation might not be completely feasible for Canada, it has provided co-ordination and stimulus for the fishing industry in that country. This legislation is commonly known as the Saltonstall-Kennedy act and was the result of successful lobbying by Messrs. Saltonstall and Kennedy. The legislation provided that the department of the interior, under which fisheries comes, would receive 30 per cent of all tariffs obtained from the import of fish products. The pertinent part of this legislation which I intend to quote will give an idea of what my theme is this evening. The act was set up:

> (1) to promote the free flow of domestically produced fishery products in commerce by conducting a fishery educational service and fishery technological, biological and related research programs, the moneys so transferred to be also available for the purchase or other acquisition, construction, equipment, operation, and maintenance of vessels or other facilities necessary for conducting research as provided for in this section, and
>
> (2) to develop and increase markets for fishery products of domestic origin and (3) to conduct any biological, technological, or other research pertaining to American fisheries.

In the report of this committee a further significant matter was brought out. That is the fact that this legislation in itself did not provide everything. It was a fact that when the legislation was being lobbied, promoted and discussed in the United States it was necessary to set up committees and call in experts in the various biological and technical fields of the fisheries industry to make their statements and offer their independent suggestions as to the future of the industry. That should be the lesson of this legislation for us. It was not enough in itself; it had to have the expert stimulation that was so necessary.

Having said that, Mr. Speaker, I should like to review the thoughts I have expressed. I pointed out that I believe the committee should consider research into the fishing industry in as detailed fashion as possible. We should inquire what is being done. I suggested that our fisheries research in Canada is good. However, it has to be better because we have a small new industry and continual promotion is essential. Having said

that, I dealt with one or two problems into which inquiry should be made. I suggested what could be done, what might be put before the experts or what the experts might do to help the industry. Finally, I mentioned the Saltonstall-Kennedy legislation. I think we should definitely take note of it and, if it is within the powers of the committee, invite an expert who has dealt with this matter in the New England states to appear before the committee.

I call for greater emphasis on and greater investment in this necessary part of our industrial life in Canada. The fishing industry is so essential to both coasts of this country that we should be certain it is given due promotion. We must always remember that the economy of the maritimes is lagging, and the fishing industry is lagging within that economy. I hope that this committee, with amended powers, will take note of my plea for the necessary consideration of an important phase of our industrial life.

Mr. E. G. Hansell (Macleod): Mr. Speaker, I was one of those who urged last session that such a committee be set up then. I urged it on the basis of a rather important statement made by President Eisenhower of the United States. The committee was not set up last year; unfortunately it did not function. However, we are happy to support the setting up of the committee this year, and also to support the amendment that has been moved providing for the calling of persons and papers.

In reading the resolution closely I find that the most pertinent part of it, as far as I can see, is that which refers to the role of government. The motion reads:

> That a special committee be appointed to examine into the role of government in the field of non-military research in Canada, including:
> (a) operations in the field of atomic energy,
> (b) operations of the national research council.

I hope I have not read the motion incorrectly, but as I read it, it does not really call for the setting up of a committee to examine the operations in the field of atomic energy or the operations of the national research council proper. Rather it calls for an examination of the part the government should play in these matters. I do not know how extensive its work would be, and I am suggesting that perhaps the Minister of Trade and Commerce overlooked that point.

If we take the resolution literally, any examination into the field of atomic energy itself or into the operations of the national research council could possibly be ruled out. The chairman of the committee could say that we are not concerned with these things, that all we are concerned about is the role the government is going to play in them, whether it is going to enter into these fields or whether it is not, whether the government should take over the results of the work of the national research council and run the whole show of atomic production, or whether that should be left to private enterprise.

I trust that is not the intention of the government and the actual meaning of the wording of the resolution. I take it, and I am sure the house is under the impression, that the actual meaning is that the committee can examine into all questions covering operation in the field of atomic energy and concerning the national research council. I point that out because I do not want anything to happen once the committee is set up.

Reading the resolution again, I refer to the pertinent point, the role of government. I suppose everyone knows what the word "role" means. I thought I did, but for the sake of making sure I sent for an English dictionary. I find that the first definition given here is "actor's part". I hope the government is going to be a little more than an actor in some drama, because usually actors are sort of fictitious individuals who portray a good deal of unreality. However, the definition continues and says, "One's function". I think that is the definition that is meant by the role of government, what the function of government should be with respect to these various fields of research.

In anything a committee does, Mr. Speaker, in anything parliament does, in anything the government does, and with respect to all laws passed in this house, I am sure we should have one particular objective in mind. I believe we have reason to ask one pertinent question, particularly when it comes to the discussion of the work of this committee. As those who are responsible for the eventual destiny of the nation, I think the one over-all and fundamental question that we have to deal with is this: What is the purpose of life? In the matter of this resolution, I do not think we should look at it with the idea of seeing, for instance, how a corporation that enters into the business of atomic energy could make a million dollars. Rather I think we should look to see how, through the discoveries that are made and the development of these sciences, the nation can reach that ultimate objective of a full life.

When we begin to think of the subject in those terms I fancy several extremely important factors are brought into operation. The first one I am going to speak of is this, and here I ask another question. We should ask ourselves this question: What are we

able to do in the realm of physical or material sciences to reach the objective which I have already stated, namely the full and abundant life for the Canadian people? We have now reached an age when, in the material sense, nothing seems to be impossible. Through scientific ventures we seem to be able to do almost anything which the human mind conceives.

We now talk of the discovery of atomic energy. We perhaps think of this energy as a new thing, but it will not be too long, perhaps within the space of a generation, until we shall be talking of another new type of energy, namely solar energy. As the nation progresses, one thing displaces another. Before we get atomic energy to a place where it is recognized and used by the nation, it may become almost obsolete overnight through the advent of solar energy.

There is another matter I believe the committee and the government should take into account when we are thinking of research into all these modern sciences, and it is this. What do we produce these modern appliances for? What do we produce anything for? Is it not for the good of the people? Do we not investigate these various fields of science with a view to bringing into operation the result, whatever the case may be, for the benefit of the people of the country? Is that always done?

While I believe that private industry is playing its normal part and perhaps more in these matters, I am wondering whether private industry recognizes its purpose. Is the purpose of private industry to make millions? Is that the ultimate purpose? Of course if we live in a dollar complex and simply say, "It is the purpose of life to build up a fortune", then we are just missing the object of life. The purpose of industry is to produce, and the purpose of production is to satisfy the requirements of the nation.

Let us consider this field of research. For instance, I am told that we can produce steel so hard that it will never wear out. I am told that. I read that in various journals that come to my desk. Then I ask the question: Are these things that are built of steel built to be used? Are they built for permanency? Let us consider the automobile. It is possible to manufacture an automobile of steel that will never wear out. Why do we not do it? The reason is that when they manufacture an automobile, they manufacture it for the purpose of it wearing out. The same is true with regard to anything else. As my friend the hon. member for Bow River (Mr. Johnston) says, it is the same with the electric light bulb. I fancy they could manufacture a light bulb that would burn forever, or burn for a lifetime. Why do we not do it then? The reason is that eventually, if we do that, we shall come to a place where industry will be slowed down.

Let us look at the matter fairly and squarely. Suppose it is slowed down. Even today we find that labour is beginning to recognize that problem and say, "We will do things now by working 30 hours a week instead of 40 hours". Suppose that is so. What about it? Suppose we can do these things by working 10 hours a week. What about it? Why not? Let us go on a holiday for the rest of the week. Why not? If the function of an economic system is to produce an abundant living, why not? I think this consideration enters the picture, namely that industry, in the course of economic events, must get back its investment before the new can displace the old.

The Acting Speaker (Mr. Applewhaite): Order. I feel sure that the hon. member for Macleod will not consider that I am being unreasonable if I point out to him—as he pointed out to us at the beginning of his speech—that this resolution deals with the role of government in research. I think he is perhaps getting rather far afield from the role of government in research.

Mr. Hansell: Mr. Speaker, I shall try to stay within the subject of the role of government. What I was trying to point out was this, and I was coming to it as the next point. One of the things government should do, if it is in the realm of research and discovers certain things that can be put into production and operation, is so to manage the affairs of the country that they are put into operation now, and not a generation from now. Things should not be held back by reason of the fact that there are huge investments in the present role of industry, and they must be recovered before the new thing can be put on the market.

That is what I was coming to in respect of the role of government in these matters. I think the role of government in this respect is certainly to make available to the people the results of research. If the results of research are not made available to the people, it is all going to be for nothing as far as this generation is concerned.

I do not know what we have done toward making available to the people the results of research, even with the national research council. I believe that private enterprise has done a pretty good job by itself in research, in development and so forth. I believe the government should synchronize its work with private industry for the purpose of giving the results of research to the people of Canada.

I have another point in my notes, Mr. Speaker, but I am sure you would rise again and remind me that we are dealing with the role of government in research. I was going to say that I am quite certain if the government paid attention to the importance of providing the people of Canada with incomes sufficient to make the results of research available to them, this research would go ahead at a pace such as we have never seen before. In the end the results of research have to be passed on to the people. The only way the people are going to get those results is by buying them.

I pass that on to the minister. I know he is aware of it. But I know he would get up and say, "Well, I am the Minister of Trade and Commerce and the Minister of Defence Production. National research comes under my department, but the functioning of the economy of the country is in the hands of another department, so you will have to get after them." I thought I would just express some of these views, because I believe that angle of our national objective should be pronounced.

Mr. Roland Michener (St. Paul's): As you have just reminded the house, Mr. Speaker, we are considering the setting up of a committee to examine into and report on the role of government in research matters. This proposed committee could be one of great benefit and far-reaching significance. How well it does its work, and how well it can do its work, seems to depend to some extent on its powers. We have that secondary issue before us by way of an amendment.

It seems to me that this committee should have a scope which permits it to go beyond the hearing of evidence from those now engaged in scientific research in the various agencies of the federal government, and to call from industry and the academic world from all parts of Canada people who are able to contribute advice or information which the committee will need if it is to give any clear lead as to what is the proper role of government. I believe we all concede the importance of research, and I need not dwell on that. We also recognize the government's need of advice which can be obtained through the instrumentality of a committee such as this.

The federal government is not the only government to set up a committee of this kind, or to obtain assistance from advisory sources. I refer to the advisory committee on scientific policy which has been performing similar functions for the government of the United Kingdom. I should like to indicate my view of the importance of what is done in the field of research by quoting from the seventh annual report of this United Kingdom committee. It makes this very significant summary:

> Today a country's wealth and power are largely determined by the extent of its scientific knowledge and by its capacity to use that knowledge.

To me that means a country's standard of living and its capacity to defend itself. A country's wealth and power is largely determined by the extent of its scientific knowledge and its capacity to use that knowledge. Those are the issues on which the government wants assistance from this committee.

I suggest that the importance of research and scientific knowledge is such that the government cannot afford to be wrong if it is to keep Canada in its proper place amongst the nations of the world. At the moment there is no single agency which has the oversight of all the multifarious research activities in which people engage, some under the aegis of the government and some under provincial and industrial direction. There is no single agency today which is in a position to oversee the entire field and give the advice which this committee will be asked to give. It is true that there are a great many agencies, and we all know the more important of them. One of them is the national research council, but even it does not cover the whole field and is not in the position which this committee will be to review and advise the government on its proper role.

Perhaps there is a parallel here between the C.B.C., which is actually engaged in broadcasting as well as regulating broadcasting, and the sort of supervisory commission which has been suggested as necessary and desirable to regulate the C.B.C. and the private agencies. This committee would stand above the national research council and look over not only its work but other research activity in the country in which the federal government could possibly be interested.

Another agency of the federal government, as is well known, is the committee on scientific research of the privy council, comprising six or seven ministers under whose direction the national research council functions. Then we have the research branches of the various departments of government, beginning with agriculture which has been engaged in this field the longest, and running through mines, the board of grain commissioners under the Department of Trade and Commerce, fisheries and some other departments which have fairly substantial research branches. Then we have the universities. We have industrial laboratories, some engaged in very extensive research such as that done by the pulp and paper companies.

Then we go on to agencies under provincial jurisdiction. Alberta has a research council. There was a research council in Ontario, and there is the Ontario research foundation today. As I have said, there is a multitude of agencies now working toward the desirable end of applying scientific knowledge to the good of Canadians and the Canadian life.

I think I might illustrate the problem which is before the house by referring to the experience which the Ontario government had seven or eight years ago when, under the leadership of the present Leader of the Opposition (Mr. Drew), who was then premier of Ontario, they set up a commission under the public inquiries act which had almost the same terms of reference as are suggested for this select committee of the house. It was to consider what was the proper role of the provincial government in this field of research; where it could properly spend money in research and where it should not, and how its responsibilities could be correlated with those of the federal and other authorities so there would not be overlapping, and all would be integrated for the greatest usefulness. That commission, under its terms of reference, recommended legislation under which an advisory council was formed and functioned for several years with the sole purpose of assisting the government in determining how far it should go in spending public funds on research.

If I may refer to that Ontario commission briefly, the first task it undertook and recommended was that of providing more trained personnel through scholarships, something which the federal government is now doing on a more extensive scale through the national research council scholarships, which were paid out in the sum of something over $600,000 last year. Ontario research scholarships in the amount of $50,000 annually have provided advanced training, post-graduate training, for a number of people who are now available for scientific research. It is obvious that the basis of research is the people who are trained to do it.

That was the first proper role of government which was recommended. Then the council set about co-ordinating the work of federal, provincial and private agencies through advisory committees which were established, one in each of seven or eight important fields, such as the advisory committee on agriculture and the one on fisheries and wildlife. I believe that similar advisory committees have been usefully serving the national research council.

These committees bring together at one time and place and several times during the year all the men and women who are engaged in a specific type of research, where they exchange experiences and learn what each other is doing and avoid in that way the duplication which is so easy and so wasteful in the scientific field where there is so much to be done.

Then there were grants in aid of specific research, and so on. That effort to obtain proper advice is a parallel to what we are doing here today. The complication which exists because of the federal nature of our government is one of the problems that make it particularly necessary that such a committee should review periodically the role of government. There has to be not only the co-ordination of the federal government activities with those of industry, private institutions and universities, but the provinces also have a jurisdiction. There is the problem of integrating the research expenditures and work of eleven governments that operate in their own fields.

Another difficulty which may arise from the reference which is made in this resolution is the distinction between civil and military research. The resolution limits the committee to inquiring into non-military research in Canada. It may not be easy to say what is non-military. A very interesting example came to my attention the other day. There are two researchers, Dr. K. C. Fisher and Donald Smith, who are doing research in the Arctic area on a very humble little animal known as the lemming. I do not recall the hon. member for Mackenzie River (Mr. Hardie) mentioning this animal among his pets in the very interesting address he gave the other night; but the lemming is a celebrated animal in the Arctic which, according to tradition, is reputed to commit mass suicide by rushing into the sea and drowning itself.

There are two university professors looking into this matter at the expense of the federal government under the defence research council; therefore it is a military type of research. They are trying to find out how the lemming lives in that cold climate and whether he does or does not drown himself en masse. They are trying to find out all about the lemming. It is a very interesting piece of research. The suicide theory has been exploded, and I expect that in the long run some very useful information for civilians who live and work in the north country may come out of this. I mention it simply to point out the difficulty in trying to draw a clear line between what is civilian and what is military in the research field.

I am sure this committee will not be circumscribed in inquiring into matters which are on the borderline, as everyone has freely agreed it should not have the authority to

call for documents which are classified or which are necessarily secret for defence reasons.

If the committee proceeds with full power, I suggest that some of its likely subjects of recommendation are, first, the field of the actual doing of research, which is part of the work of the national research council today. It is engaged in carrying out actual specific research projects, and in very substantial numbers. This is a proper role of government.

In Ontario, the Ontario research foundation does that same kind of work. It is a co-operative effort of government and industry, the capital having been put up some years ago by the two, with industry subscribing part of the capital and the government the remainder. It is a custom researcher. It receives orders from industry and carries them out, and gives the answers where it can and charges a fee. I daresay that is the method under which the national research council carries on some of its work. This is one proper role of government, the actual doing of research.

Then a second role is that of sponsoring research by others, either by financial grants in aid, or in the case of industry I should think probably by matching similar contributions by industry. In the case of universities, very extensive research is carried on today under grants from the federal government as well as from the provincial governments, and that is a proper role of government.

Then there is the problem of co-ordination of the work among the various agencies I have mentioned. The committee will undoubtedly have something to say about that if it does its job well.

The most important role of government is to make known the results of useful research when those results have been obtained, because after all the application of scientific knowledge gained through research to the ordinary affairs of life is what creates the wealth and power to which I referred earlier in this speech.

There is one other matter which is also of considerable importance, and that is the problem of utilizing the scientific personnel and facilities of the country to the best advantage. As I said, there is a limited number of people and limited facilities, and this committee could properly inquire into the use of those limited facilities.

Finally there is the question of providing more personnel. It seems to me that this is one of the most important problems which this committee could consider. We all know that as soon as an engineer gets his diploma from a university today he is offered a job at an attractive salary, and he is strongly tempted to stop his education at that point and begin working. He may be married by that time; he wants to get a start in life, and away he goes into business. This has been carried on to such an extent that today there are practically no engineers doing post-graduate work, and that to my mind is a most serious concern which should be placed before this committee and should be the subject of a recommendation.

I appreciate that we are getting into the field of education, and there complications of jurisdiction arise; but that does not mean that we should not do our part to solve the problem of creating more post-graduate work in the engineering field so there will be more qualified people who can do this essential work necessary to maintain Canada as an industrial nation in this twentieth century.

I suggest that what we need in Canada is a Canadian M.I.T.—and I think the minister will know what I mean—

Mr. Howe (Port Arthur): I do not know what you are talking about.

Mr. Michener: —when I refer to the Massachusetts Institute of Technology—

Mr. Howe (Port Arthur): I not only don't know what he means but I don't know what he is talking about.

Mr. Michener: That is an institution where not only under-graduate engineering but post-graduate work is given the greatest possible emphasis. I am not prepared to say how we can establish something comparable to this in Canada, but I do suggest that this is a field of inquiry into which this committee could very usefully look and for which it could find some answer.

Another reason why engineering—

Mr. Howe (Port Arthur): Don't forget that.

Mr. Michener: —is not the subject of so many scholarships is found if you will look at the national research council, where you will find that scholarships granted for post-graduate work are relatively small as compared with those granted to chemists or physicists and others engaged in those fields which we sometimes call the purer sciences. But there is another side to this problem of post-graduate work for engineers, and that rests with the professors. The professors in the engineering field are able to do consulting work to their own advantage during the summer months. They do not have the same interest or compulsion, perhaps, to establish and promote graduate schools in the engineering field.

That concludes what I have to say except for this final word. This committee can be of the greatest importance in directing public funds into channels which to my mind are as important as any thing for which public funds can be used. The statement with which I began, to the effect that the wealth and power of Canada largely depend upon the use which we make of our scientific knowledge and personnel, is not an overstatement. I hope the committee will be given sufficient power to do this job, and that it will have done a productive job when it is finished.

Mr. Carl O. Nickle (Calgary South): Mr. Speaker, I join with my colleagues on all sides of the house in welcoming the formation of this committee to undertake an examination into the role of government in the field of non-military research. I do hope, however, that the Minister of Trade and Commerce will accede to the request embodied in the amendment to the resolution moved by the hon. member for Vancouver-Quadra. That amendment as further amended at eight o'clock would give this committee authority to send for persons and unclassified papers and records.

The minister did make a case, I think, as regards classified records or documents. I do not think any hon. member of the house would want to have any part in running any danger of making available information of a classified or secret nature. I believe, however, the amendment with the restriction as to papers and records being only those which are unclassified would certainly get around that problem.

As for the matter of sending for persons, the minister suggested it was possible that persons who are concerned with the government in the field of atomic research or the operations of the research council might inadvertently let loose some classified information if they were being examined by members of that committee. I think if individuals in the government service can be trusted to the extent of having access to classified information, we can certainly trust their discretion not to reveal information of a classified nature in appearances before a committee such as is proposed. I therefore hope that the minister will accede to the amendment as amended.

There is one phase of the operation of this committee which I think is quite important. Outside of the field of government activities, atomic energy research and national research council research, we have the problem of the role of government in encouraging and assisting research undertaken by industry generally, in other words by private interests. I hope this committee will have the opportunity to examine most fully the policies of the government through an examination of members of the government and members of the proper government departments as to the policies and procedures being followed by the government in encouraging private enterprise, corporations or industries to undertake a larger part of the job of essential non-military research in Canada.

Very obviously a good part of the government's role in private research is involved in the operations and the policies of the income tax department. I believe that much more could be done by the government through income tax concessions in various forms to encourage private industry to itself undertake a greater measure of essential research. I also believe the government could encourage industry to stimulate purely creative research backed by industry by allowing as credits for income tax purposes, in other words the deduction from taxable income, grants to foundations, universities and scholarships awarded by corporations or industries to universities in order to further stimulate the broad field of research in industry in Canada.

One side effect, and an important one, of any expanded research program in Canada, both that undertaken by private industry and that undertaken by the government, would be in effect a measure of conservation of one of Canada's most vital resources. I refer, of course, to the research brains developed in Canada. There should be provided in Canada opportunities for our research brains to undertake creative employment within Canada in all phases of industry, and thus slow up the migration of a good part of our Canadian-produced talent to the United States and elsewhere in the world where the opportunities for research are greater than they are in Canada today.

In the few moments that remain before ten o'clock I should like to speak briefly about one or two phases of research in the hydrocarbon field which, of course, is of considerable interest to western Canada where we have such huge reserves of all forms of hydrocarbons. We have something like 40 billion tons of coal, and in the bitumen sands there is estimated to be something between 100 and 300 billion barrels of liquid bitumen. Then there are our vast resources of crude oil and natural gas.

In connection with the tar sands there has been co-operative research by government and industry for a good many years. This research has been in the usage of the tar

sands and is most vital to Canada, because those sands contain in the form of bitumen more than the entire resources of conventional crude oils in the world. Those tar sands constitute for Canada and for the world resources of almost limitless magnitude for the centuries ahead, when the more conventional types of oil may be depleted.

For many years the national research council has undertaken extensive research into better methods of separating the bitumen from the sand, and so has the Alberta research council. During the last world war and for some years afterwards private industry undertook similar research. In the last year or two there have been some new developments.

A rather interesting one occurred more or less by accident. A man who was not a trained researcher, who was not a trained chemist or an engineer, carried out some experiments in the basement of his home in Calgary to determine some simple means of separating the bitumen wrapped around the grains of these tar sands of northern Alberta. By accident he finally hit on something which has considerable promise.

He found that if the bituminous sand was mixed with kerosene and then put through a centrifuge with cold, salty water there would be brought about a separation of the bitumen and the sand. In the last two years some hundreds of thousands of dollars have been spent by private groups in an effort to turn this idea into an economically feasible method of separation of the bitumen and the sand.

Research is being carried a little further in an effort to develop more efficient and more economical means of mining these huge beds of bitumen sands in northern Alberta. Research is being carried on to a limited extent in connection with the next problem of what to do with the bitumen once it has been mined and separated from the sands.

There is a big field for the future in which government and private industry can spend not only a great deal of money but effort and time in the hope of arriving at a solution of the great problem of turning these tremendous natural resources into something that can be used for the good of this country.

In connection with coal there has been a great deal of research both in Canada and elsewhere in the world. Coal is now being turned into a great many products used by mankind. Some of our women are now wearing clothes made from coal, and there is a whole host of medicines derived from coal. Cosmetics and a full range of other products in everyday use are derived from the basic product of black coal. The national research council has done a great deal of fine work in the development of coal-fired gas turbines, and research at McGill University has accomplished a great deal in that regard as well. This is a field of research which if continued to an effective conclusion should open up new prospects for one of Canada's depressed industries, the coal industry of the maritimes and the prairies.

Until a few years ago natural gas was considered a waste by-product of oil, but in the last two decades gas has become not only a fuel but a major raw material for the production of a whole host of chemical and petrochemical products. For example, during the last war natural gas which had been going to waste in the Turner valley field near Calgary, at a place called Hell's Half Acre, was used to produce munitions for the allied war effort. Natural gas combined with air provided the means of making munitions. That particular wartime plant near Calgary is now in operation combining the components of natural gas with the components of air to turn out fertilizers. The ammonia plant is now playing a most important part in the economy of that community, and is providing a sizeable portion of the chemical fertilizers being used in this country, with considerable left for export.

This procedure of turning gas and oil into a host of products has resulted from research. Today many products are being produced from hydrocarbons which are found in abundance in many parts of Canada. As an instance we have the gas, a petroleum by-product, which provides the artificial rubbers being produced by the Polymer Corporation at Sarnia, and then we have everything from fertilizers, medicinal products, clothing and a whole range of chemicals that are now being produced. In the years to come there will be a long list of all sorts of products which will help to make Canada and the world a better place in which to live.

On motion of Mr. Nickle the debate was adjourned.

BUSINESS OF THE HOUSE

Mr. Harris: As I indicated last week, we will begin tomorrow with the Department of Fisheries. If we happen to complete that department we shall take the resolution with respect to the special committee on railways and shipping. I assume that there may not be very much to be said on that, and it may go through. If there is still time we will take the resolution standing in my name on the order paper.

At ten o'clock the house adjourned, without question put, pursuant to standing order.

ANSWERS TO QUESTIONS

The following answers, deposited with the Clerk of the house, are printed in the official report of debates pursuant to standing order 39:

CHARTERED BANKS—PROFITS, TAXATION, ETC.

Question No. 181—**Mr. Johnston (Bow River):**

1. What were the profits of the ten chartered banks for each of the years 1950 to 1955 after making appropriation to contingent reserve, and provision for depreciation of bank premises and equipment?

2. What provision was made by these banks for dominion and provincial taxation in each of these years?

Questions

3. What was the percentage of profits shown in answer to question (1) to paid up capital in each of the years mentioned?

4. What was the actual rate of dividend paid by these banks for those years?

Answer by: **Mr. Harris:**

The information requested in questions 1, 2 and 3 with respect to the fiscal years 1950, 1951 and 1952 was given in *Hansard* of March 30, 1953 and with respect to the fiscal year 1953 in *Hansard* of March 3, 1954. That requested in question 4 with respect to the fiscal years 1950, 1951, 1952 and 1953 was given in *Hansard* of March 3, 1954. For the fiscal years 1954 and 1955, with amounts expressed in thousands of dollars, the information is as follows:

—	(1) Net profits	(2) Provision for income taxes	(3) Percentage of net profits to paid-up capital	(3-a) Percentage of net profits to shareholders equity	(4) Rate of dividend on paid-up capital
1954	$	$	%	%	%
Bank of Montreal	7,344	6,925	16·72	5·46	14·0
The Bank of Nova Scotia	3,161	2,760	21·07	6·26	18·0
The Bank of Toronto	1,370	1,488	22·83	5·55	17·0
The Provincial Bank of Canada	524	385	10·48	6·29	8·0
The Canadian Bank of Commerce	6,404	6,807	21·35	7·84	12·0
The Royal Bank of Canada	9,558	9,276	22·86	6·50	15¼
The Dominion Bank	1,474	1,390	21·05	6·64	13·0
Banque Canadienne Nationale	1,562	1,211	22·31	8·61	12·0
Imperial Bank of Canada	1,549	1,818	22·13	6·72	15·0
Barclays Bank (Canada)	86	42	2·87	1·37	nil
The Mercantile Bank of Canada	Loss	nil	nil	nil	nil
1955					
Bank of Montreal	8,042	7,043	17·87	5·78	14½
The Bank of Nova Scotia	3,502	2,800	23·35	6·86	20·0
The Toronto-Dominion Bank	3,228	2,852	21·52	6·75	15·0
The Provincial Bank of Canada	575	382	11·50	6·33	8·4
The Canadian Bank of Commerce	7,260	7,050	19·37	6·92	12·0
The Royal Bank of Canada	10,858	11,215	25·85	7·19	17¾
Banque Canadienne Nationale	1,604	1,381	22·91	7·33	12½
Imperial Bank of Canada	2,183	1,990	21·85	6·47	16·0
Barclays Bank (Canada)	12	nil	·40	·19	nil
The Mercantile Bank of Canada	Loss	nil	nil	nil	nil

Notes to columns:

(1) Net profits after appropriations to contingency reserves, provision for depreciation and for income taxes

(2) Includes provision for foreign income taxes in some cases. Does not include taxes on retransfers deducted from inner reserves.

(3) Paid-up capital at fiscal year ends.

(3-a) As the undivided profits and rest accounts of the banks represent undistributed profits and monies paid in by shareholders, a more accurate picture is given by showing profits as a percentage of the shareholders equity at fiscal year ends.

Questions

ALCOHOLIC BEVERAGE CONSUMPTION

Question No. 192—**Mr. Knowles:**

What was the total consumption (or apparent consumption) in gallons, in Canada, of (a) beer; (b) wines; (c) spirits, in (i) 1950; (ii) 1951; (iii) 1952; (iv) 1954; (v) 1955?

Answer by: **Mr. Howe (Port Arthur):**

Apparent consumption of alcoholic beverages in Canada.

Fiscal years ended March 31	Spirits* (Pf. Gal.)	Beer* (Gal.)	Wines* (Gal.)
1950	6,969,898	181,442,510	4,894,649
1951	8,030,052	178,270,724	5,200,300
1952	7,614,185	188,749,469	5,163,719
1954	9,390,851	210,673,643	5,521,263
1955	9,292,154	209,625,582	5,862,551

* Includes net imports.

POWER INVESTIGATIONS, NOVA SCOTIA

Question No. 207—**Mr. Purdy:**

Would the carrying out of the full scale investigation of the power possibilities of Minas basin and Cobequid bay, presently being advocated in and on behalf of the province of Nova Scotia, come within the type of proposals which might be referred to the federal government for assistance in accordance with the discussions at the federal-provincial conference on October, 1955?

Answer by: **Mr. Lesage:**

This is a hypothetical question as no such request has been received from the government of the province of Nova Scotia.

HOUSE OF COMMONS

Friday, March 2, 1956

The house met at eleven o'clock.

ATOMIC ENERGY

URANIUM—ANNOUNCEMENT OF MODIFICATIONS IN GOVERNMENT PURCHASING POLICY

Right Hon. C. D. Howe (Minister of Trade and Commerce): Mr. Speaker, on August 3, 1955, I made an announcement with respect to the government's purchasing policy for uranium. In that announcement I stated that, while Eldorado Mining and Refining Limited, the government procurement agent, has a commitment to purchase all acceptable uranium concentrates which are offered under the published price schedule up to March 31, 1962, Eldorado has no commitment to purchase all uranium which is offered at prices higher than those contained in the published price schedule. In the circumstances, it seemed desirable that the mining industry and the public should be informed as to the future policy with respect to purchases under the special price arrangement. I stated that uranium purchased under the special price arrangement was being supplied to the United States atomic energy commission, and that there was a limit on the amount of uranium which would be so purchased. Since it was not possible for security reasons to express this limitation in terms of quantity, it was decided, as an alternative, that Eldorado would not negotiate contracts after March 31, 1956, and that such contracts would not be negotiated unless there was satisfactory evidence that production could commence not later than April 1, 1957.

It has now been decided to modify these arrangements as follows:

Eldorado will continue to receive applications for special price contracts up to and including March 31, 1956. On or shortly after that date Eldorado will notify those applicants which are considered to be eligible for the negotiation of contracts. In making the selection of eligible applicants, the following criteria will be used. First, there must be satisfactory evidence that the applicant has an economic ore body and, second, there must be definite assurance that the property can be brought into production not later than September 30, 1957. There will be no change in the present provision regarding deliveries. Deliveries under all contracts must be completed by March 31, 1962.

These modifications have been adopted because it has become quite evident in recent weeks that certain of the properties which were considered to be potential producers last August will not be able to meet the production deadline of April 1, 1957. Consequently, it is not anticipated that the total quantity of uranium which will be produced under the special price arrangement, by reason of the extension of the production deadline from April 1, 1957 to September 30, 1957, will be greatly in excess of the quantity which it was estimated might be purchased when the original production deadline of April 1, 1957, was established.

In my announcement of August 3, 1955, I also stated that the government would take under consideration the establishment of policy covering the sale of uranium which might be surplus to Canada's requirements and the commitments entered into with the United States atomic energy commission. Because of the war potential of uranium, the government must establish its export policy with due regard to security provisions. This is one of the reasons that Canada is taking an active part in the discussions of the draft statute for an international agency for atomic energy, which are now under way in Washington. It is considered advisable that any announcement as regards the establishment of export policy should await the outcome of these discussions.

Mr. Howard C. Green (Vancouver-Quadra): May I ask the minister a question arising out of his statement. I noticed that he mentioned deadlines in 1957 and in 1958.

Mr. Howe (Port Arthur): No, 1956 and 1957.

Mr. Green: I thought he said extending one deadline to 1957 and the other to 1958.

Mr. Howe (Port Arthur): No, the deadline for receiving applications is March 31, 1956, and the deadline for beginning production is September 30, 1957.

Mr. Green: Does that mean, in effect, it is the policy for the period of a year?

Uranium—Purchasing Policy

Mr. Howe (Port Arthur): This is the only policy we have.

[*Later:*]

On the orders of the day:

Mr. J. G. Diefenbaker (Prince Albert): Would the Minister of Trade and Commerce, in view of his announcement today regarding uranium, be prepared to say that that means in effect, with the amount of uranium already on hand in stockpiles and the expected production of the mines that will give notice, that they will have until a certain date to give notice and that beyond that it is not expected that any further extension in the production of uranium will be necessary to meet demands in the immediate future?

Mr. Howe (Port Arthur): That was not the nature of my announcement. I said that Eldorado Mining and Refining Limited would take delivery of uranium up to 1962 at the published price of uranium, which has been in effect for some years.

Mr. Diefenbaker: But does that mean—

Some hon. Members: Order.

Mr. Diefenbaker: I should like even a "yes" or "no" answer as abrupt as the one a moment ago. Does this mean that in the expected production in the future, of those mines now in existence and those that will give notice up till the 31st of March, all the needs for uranium production in Canada will have been met?

Mr. Howe (Port Arthur): That I cannot say. The bulk of the uranium under contract goes to the atomic energy commission of the United States. When the contracts are completed, the contracts that are filed before the 31st of March this year and approved by Canada and by the atomic energy commission we are informed that the foreseeable needs of the atomic energy commission of the United States for uranium from Canada will have been fulfilled.

COMMITTEE ON ESTIMATES

PERSONNEL OF SPECIAL COMMITTEE

Mr. W. G. Weir (Portage-Neepawa) moved:

That the following members: Messrs. Blair, Byrne, Cameron (Nanaimo), Cannon, Decore, Deschatelets, Dupuis, Fleming, Garland, Gauthier (Nickel Belt), Hees, Henry, Jutras, Martin, MacEachen, Macnaughton, McLeod, Power (St. John's West), Robertson, Starr, Stewart (Winnipeg North), Stuart (Charlotte), Thatcher, Trainor, Tucker and Yuill, shall constitute the membership of the special committee on estimates, as provided by the resolution passed by the house on February 29, and that standing order No. 67 be suspended in connection therewith.

Mr. Speaker: Do hon. members wish me to read the names?

[Mr. Green.]

Some hon. Members: Dispense.

Mr. Speaker: Is it the pleasure of the house to adopt this motion?

Motion agreed to.

SPORTS

OLYMPIC TRIALS—REQUEST FOR FINANCIAL ASSISTANCE

On the orders of the day:

Mrs. Ellen L. Fairclough (Hamilton West): I should like to direct a question to the Prime Minister. Can he say whether or not he has received a request from the committee in charge for financial assistance for the Canadian Olympic trials to be held in Hamilton this year?

Right Hon. L. S. St. Laurent (Prime Minister): No such request has recently come to my attention. I will take the hon. lady's question as notice and I will make sure whether or not there has been at any time a request received.

POST OFFICE DEPARTMENT

HAMILTON—REQUEST BY LETTER CARRIERS FOR INVESTIGATION OF CONDITIONS

On the orders of the day:

Mr. Claude Ellis (Regina City): Has the Postmaster General received a request from the Hamilton branch of the federated association of letter carriers for an independent board to investigate labour conditions in the Hamilton post office? If so, can the Postmaster General assure the house if such a board will be set up?

Hon. Hugues Lapointe (Postmaster General): A few weeks ago I did receive—I believe it was around the 10th or 12th of February—a telegram from this association asking for the setting up of such a board. The request followed the suspension of one particular employee in the Hamilton post office. Upon receipt of this telegram, I sent senior officers of the department to investigate this particular case and upon receiving their report I came to the conclusion the setting up of such a board was not warranted.

QUEBEC SOUTH—INQUIRY REGARDING SITE OF PROPOSED POST OFFICE

On the orders of the day:

Mr. Frank G. Power (Quebec South): Mr. Speaker, may I address a question to the Minister of Public Works? Has the minister now received a resolution from the city of Quebec regarding the site of the proposed post office in the constituency of Quebec

South? If so, what is the nature of the resolution and what action, if any, is contemplated by the minister?

Hon. Robert H. Winters (Minister of Public Works): Mr. Speaker, I have now received a letter from the city clerk of Quebec, enclosing two resolutions, both signed by the city clerk. One is a resolution of the conseil de ville and the other is a resolution of the comite administratif.

Both resolutions express objection to the site that has been chosen on Henderson street for the construction of a new postal building.

In selecting this site and developing our plans we have worked in close and friendly co-operation with the city authorities. The site has been acquired and cleared and plans are at the stage where we are ready to invite tenders for the foundation. Any change of site now would involve considerable delay and probably additional expense in getting this building under way.

I have informed the mayor that if the city council and the citizens of the city of Quebec are willing to have this project deferred, we will be prepared to receive any representations he may care to make and to participate in discussions with respect to an alternative site which it is presumed the city would arrange to make available in exchange for the one we now own and on which we are ready to build.

EXTERNAL AFFAIRS

WEST GERMANY—REPUDIATION OF LIABILITY FOR OCCUPATION TROOPS

On the orders of the day:

Mr. J. G. Diefenbaker (Prince Albert): I should like to direct a question to the Secretary of State for External Affairs. Would he be prepared to tell the house the attitude the government is taking regarding the expected repudiation by West Germany of its liability for occupation troops? And in respect of the Canadian troops stationed in West Germany, what are the hopes of the present conference that is taking place between certain NATO countries and West Germany towards altering West Germany's expected stand in this regard? Would the minister also say how much more will have to be paid by Canada with respect to the occupation troops during the coming year if Germany persists in the stand?

Hon. L. B. Pearson (Secretary of State for External Affairs): Mr. Speaker, the hon. member has raised a very important question on which I may be able to make a statement a little later when the discussions with the government of the Federal Republic of Germany, to which he has referred, have proceeded a little farther. Meanwhile, I should say at once that no repudiation of the type which he has indicated is anticipated on the part of the government of the Federal Republic of Germany in respect of obligations which it has assumed. But I hope I shall be able to amplify this reply a little later.

ORGANIZATION OF EUROPEAN ECONOMIC CO-OPERATION—ALLEGED OFFER OF ATOMIC MATERIALS BY CANADA

On the orders of the day:

Hon. L. B. Pearson (Secretary of State for External Affairs): Mr. Speaker, yesterday the hon. member for Prince Albert asked about a reported offer of atomic materials by Canada to European countries. The short answer to the first question is: no such specific offer was made by our representative who was attending as an associate member the meeting of the OEEC council now taking place in Paris. However, Mr. Speaker, this meeting of the OEEC council did consider and approve a report setting out proposals for co-operation among the member countries in the development of nuclear energy. Our representative, having regard to the fact that many of the European countries concerned do not possess supplies of uranium, mentioned in his statement that Canada is an important producer of this material and would welcome the opportunity to market uranium within a suitable international framework.

Mr. Diefenbaker: Mr. Speaker, would the hon. gentleman give some indication of the type of agreement that Canada is supporting in order to maintain security and at the same time provide a market for uranium?

Mr. Pearson: Well, Mr. Speaker, a suitable international framework will have to make provision for the kind of security that my hon. friend has mentioned; and, as my colleague the Minister of Trade and Commerce has just said, discussions are now proceeding in Washington with a view to working out a statute for an international atomic energy agency which was approved in principle at the last United Nations assembly. That statute, I am quite sure, will contain appropriate provisions for security to be adopted by those taking part in these discussions.

Mr. Green: May I ask the Minister of Trade and Commerce or the Secretary of State for External Affairs whether Canada has in contemplation any plan for the sale or lease of uranium to the "have-not" nations similar to the plan announced by the President of the United States?

Inquiries of the Ministry

Mr. Pearson: Mr. Speaker, the plan announced by the President of the United States was to make available by sale or by lease uranium 235, a material which is not produced in this country at all. But provisions for the sale of uranium to all friendly countries, "have" or "have-not", is one of the things that will be discussed by those taking part in the conference in Washington to work out an international atomic energy agency which would, among other things, deal with this question.

PRINCESS MARGARET

INQUIRY AS TO VISIT TO CANADA

On the orders of the day:

Mr. Donald M. Fleming (Eglinton): Mr. Speaker, may I ask the Prime Minister whether Canada may hope this year to have the honour of a visit from Her Royal Highness Princess Margaret?

Right Hon. L. S. St. Laurent (Prime Minister): I have heard of no plans for a visit of Her Royal Highness to Canada this year.

FINANCE

REFERENCE TO CREDIT OF BANK OF CANADA

On the orders of the day:

Mr. H. R. Argue (Assiniboia): I should like to ask the Minister of Finance (Mr. Harris) whether the credit policy made public by the governor of the Bank of Canada last night might have the result of curtailing construction and other activities, and whether such a policy is advisable in view of the present substantial unemployment?

Hon. W. E. Harris (Minister of Finance): Mr. Speaker, the governor of the Bank of Canada is expecting to come before the banking and commerce committee for the purpose of discussing the annual report and I presume this particular aspect of their activities last year will be included in the discussion and my hon. friend will be able to ask him that question.

HOUSING

SUBSTANDARD HOUSES RENTED BY GOVERNMENT AGENCIES

On the orders of the day:

Mr. J. W. Noseworthy (York South): Mr. Speaker, may I direct a question to the Minister of Public Works. Can the minister tell the house whether any steps are being taken by the government to ascertain whether the federal district commission or any other government agency or any government department is still renting any substandard houses such as the one owned by the federal district commission and declared to be a firetrap by the Ontario fire marshal, in which five children were burned to death on January 11?

Hon. Robert H. Winters (Minister of Public Works): Mr. Speaker, a copy of this question has just now been handed to me and I have therefore not had an opportunity to look into the details of this particular aspect of the disastrous fire but I cannot imagine that the government owns and rents many such dwellings. The only basis on which I think they would be acquired would be under expropriation proceedings and where there are already people living in the houses but where it is the intention to have the property used at the earliest possible date for the purpose for which it was expropriated. In the meantime there are always short periods during which the tenants of the houses are allowed to remain before they are asked to vacate.

I should imagine those are the circumstances, and I assure my hon. friend that it is not the government's intention to have people continue long in occupancy in premises such as those.

LIMITED DIVIDEND HOUSING PROJECTS— CONTINUATION OF POLICY

On the orders of the day:

Mr. H. A. Bryson (Humboldt-Melfort): Mr. Speaker, I should like to direct a question to the Minister of Public Works (Mr. Winters). Is it the intention of Central Mortgage and Housing Corporation to continue making repayable loans in respect to limited accommodation for single aged persons in hostels beyond June 30, 1956?

Hon. Robert H. Winters (Minister of Public Works): Mr. Speaker, I know of no change in policy there. I think the hon. member is aware of the formula that applies across the country, and has had particular application in Saskatchewan, which provides for a certain number of units for single accommodation in limited dividend housing projects.

[*Later:*]

Mr. Bryson: I should like to ask a supplementary question of the Minister of Public Works arising out of the answer he gave to my question a moment ago. Why has June 30, 1956, been advanced as the cut-off date for applications to the Central Mortgage and Housing Corporation for hostel type accommodation?

Mr. Winters: I do not know at the moment. I shall have to find out.

ST. LAWRENCE SEAWAY

EXPROPRIATION OF PART OF CAUGHNAWAGA INDIAN RESERVE

On the orders of the day:

Hon. George C. Marler (Minister of Transport): Mr. Speaker, yesterday the hon. member for Yorkton (Mr. Castleden) inquired as to the amount of the settlement which the St. Lawrence seaway authority has agreed to pay as compensation for the property expropriated from the Caughnawaga Indian reserve.

In reply to this question, I wish to say that so far no agreement has been reached as to the compensation to be paid.

Mr. G. H. Castleden (Yorkton): Mr. Speaker, I should like to ask a supplementary question. Is the negotiation being carried on between the department and the Indian band, or is the negotiation between the minister himself and the Department of Citizenship and Immigration?

Mr. Marler: Mr. Speaker, negotiations are being carried on by the authority with the Department of Citizenship and Immigration.

TRADE

RUSSIA—INQUIRY AS TO MATERIALS COVERED BY TRADE AGREEMENT

On the orders of the day:

Hon. George A. Drew (Leader of the Opposition): Mr. Speaker, will the Minister of Trade and Commerce tell hon. members of the House of Commons what goods or materials will be sent to Canada by Russia under the favoured nation agreement announced in this house the day before yesterday?

Right Hon. C. D. Howe (Minister of Trade and Commerce): Mr. Speaker, I answered the same question a few days ago. I said that my crystal ball was out on loan and I had not the faintest idea of the answer to the question.

Mr. Knowles: Who has it?

Mr. Drew: Mr. Speaker, I think it would be appropriate if we got answers that were not intended to be smart like that one. The answer that was given was not the answer that I asked for. The answer that was given was in regard to a question relating to the dollar value and it was then that the Minister of Trade and Commerce showed reluctance to estimate the amount. I believe that this house is entitled to know what goods and supplies are contemplated as a likely exchange for the wheat which it has been said would be sent to Russia.

Mr. Howe (Port Arthur): Mr. Speaker, the exchange of wheat is an exchange of wheat for dollars. What Russia will be able to sell here is something that I suppose she is as doubtful about as we are. There has never been a large trade between Canada and Russia and I do not know what Russia will succeed in selling here. I am unable to mention anyone who might know; I do not think anyone knows.

Mr. Drew: Will the right hon. Minister of Trade and Commerce say that in the three weeks of discussion which took place here there was no discussion as to the goods and supplies that would be sent from Russia to Canada?

Mr. Howe (Port Arthur): I did not hear any discussion along that line.

Mr. Drew: That is not the question.

Mr. Howe (Port Arthur): I did not attend the meetings and no such discussion was reported to me. The only imports that we have obtained are certain furs which are not produced in Canada and a certain amount of manganese. There may be other commodities which Canadians will find it desirable to buy, but I do not know what they are.

Mr. Drew: Will the right hon. Minister of Trade and Commerce say that the Russian trade representatives who were here asked no questions in regard to the goods or materials which we might be inclined to buy under a trade arrangement of this kind?

Mr. Howe (Port Arthur): They certainly asked no questions of me. They are well aware that this government does not buy anything. This is a free enterprise market and I think they are well aware of the fact that their ability to sell here will depend on the price and quality of their goods and their salesmanship.

Mr. Drew: Mr. Speaker, will the right hon. Minister of Trade and Commerce assure this house that the officials to whom he entrusted the negotiations did not discuss with the Russian trade representatives the goods and supplies which it might be expected Russia would send to this country under the favoured nation agreement?

Mr. Howe (Port Arthur): Mr. Speaker, any discussions which the officials may have had with the Russians were without authority from me. Whether there were discussions or not, I do not know. If I did know I would gladly tell my hon. friend, but unfortunately I do not know.

Mr. Drew: Mr. Speaker, may I ask the right hon. Minister of Trade and Commerce if he

will make appropriate inquiries from his officials to inform himself so that he may tell hon. members of this house?

Mr. Howe (Port Arthur): The answer is no.

Mr. M. J. Coldwell (Rosetown-Biggar): Am I to understand that the wheat will be paid for?

Mr. Howe (Port Arthur): Yes, in dollars.

Mr. E. G. Hansell (Macleod): Mr. Speaker, I was just going to ask the same thing. Did I understand the minister to say the other day that the trade agreement would be brought before this house for discussion? When that is done, will the house resolve itself into committee of the whole or will the agreement be sent to the banking and commerce committee? If that is so, then an opportunity will be given later for a full discussion in respect to the questions which have just been asked?

Mr. Howe (Port Arthur): A motion providing for the approval of the agreement will be put on the order paper. The disposition of that resolution will be, I suppose, considered by the leader of the house and by hon. members.

WHEAT—INQUIRY AS TO DELIVERIES TO RUSSIA

On the orders of the day:

Mr. H. R. Argue (Assiniboia): May I ask the Minister of Trade and Commerce how soon he feels deliveries of wheat and exports of wheat can be made to Russia, following the signing of this very welcome agreement, and whether exports can take place quickly after it has been agreed to by parliament?

Right Hon. C. D. Howe (Minister of Trade and Commerce): I understand that negotiations are in progress for the purchase by Russia of 400,000 tons of wheat, and I understand that the purchase arrangements provide that the ships will be furnished by Russia. I understand that the wheat will move as soon as Russia can arrange for the transportation of the wheat. I expect that sales will be completed within a very few days.

PUBLIC SERVICE

EXTENSION OF FIVE DAY WEEK TO ALL CATEGORIES

On the orders of the day:

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, may I direct a question to the Minister of Finance, arising out of the statement made on Wednesday by the parliamentary assistant to the Minister of National Defence in response to a starred question standing in my name? Is the extension of the five day week to further categories of government employees, and eventually to all categories, under review? If so, will any such extension be made in the near future?

Hon. W. E. Harris (Minister of Finance): The civil service federation, in its presentation to the government last fall, did advocate a course of gradual adoption of the five day week, and we are considering it along with all the other representations that it made.

BUSINESS OF THE HOUSE

INQUIRY AS TO MEETING OF PUBLIC ACCOUNTS COMMITTEE

On the orders of the day:

Hon. George A. Drew (Leader of the Opposition): I wish to direct a question to the Prime Minister. Now that the chairman of the public accounts committee has been appointed, will the government take appropriate steps to arrange for the calling together of the public accounts committee as soon as possible?

Right Hon. L. S. St. Laurent (Prime Minister): That is a matter for the house and the committee. The committee has been established. It has now been organized, and I would expect that the chairman would give notice at an early date for a meeting of the committee.

Mr. Drew: I feel sure he would welcome a suggestion from the Prime Minister as to the speed with which he should do so.

SUPPLY

The house in committee of supply, Mr. Robinson (Simcoe East) in the chair.

DEPARTMENT OF FISHERIES

General services—

135. Departmental administration, $301,000.

Mr. Sinclair: Mr. Chairman, in the last two years when I reported on item 1 of my estimates I gave quite lengthy reports on both the functions and the activities of each of the branches of the department. I think it will be unnecessary today to cover most of that ground again, so I will confine my remarks today to the developments of significance during the last year in the fishing industry in Canada. Naturally the most important

things to the fishermen of the country are the size of the catches and the price they receive for those catches.

Therefore I will start, as I did in other years, with a short review of catch and market value and then offer the committee these short tables showing this year's catch and markets compared to last year's. In our salmon fishery on the west coast we had a disappointing year because last year was one of the low years in the four-year sockeye salmon cycle. However, that was more than compensated for by very large runs of pink salmon. The salmon situation as far as a market is concerned is a satisfactory one. As a matter of fact, the whole fish market situation at the present time is quite satisfactory. We have no surpluses, and in the case of canned salmon I believe the operators are actually allocating salmon to their customers.

The herring catch this winter on the west coast is now over 200,000 tons, one of the greatest catches in our history, and will probably finish by being the record of all time. Halibut on the west coast fell in price. A year ago we had the greatest catch in our history and that did have a softening effect on the market price. On the east coast the distinguishing activity has been the continued transition in the cod industry away from salt cod towards fresh and frozen products for the United States and Canadian markets, a very healthy development. As far as salt cod is concerned, markets are good and all stocks on hand will be disposed of by the end of the market year.

The other great fishery of the east coast is, of course, the lobster fishery. It is a very closely regulated catch but we are happy to report very high prices compared to earlier years, and that industry is in good condition. I have tables that I have put on the record in other years, first of all a weekly summary which we prepare showing prices of the principal fish in the various fishing areas and the prices of those fish a year ago. This table shows that in almost every species there is a measurable increase in price at the present time over conditions a year ago.

The second table is a summary of the landings of the principal fisheries in pounds in Canada, by species and by areas. The third table is the landed value, that is, the proceeds to the fishermen of these catches. The fourth and fifth tables describe exports to countries and the type of exports to those countries. If the committee is interested and I have their permission I should like to have these tables inserted in the record.

The Deputy Chairman: Is it agreed?

Some hon. Members: Agreed.

Mr. Sinclair: The tables are as follows:

Department of Fisheries
Weekly Prices Received by Fishermen
1956

Atlantic Coast	Current Week to February 18	Corresponding Week last year to February 19
Cod (market)		
Halifax (offshore price)	3½	3¼
North Sydney	(1)	(1)
St. John's, Nfld. (steak & market, offshore)	2¼	2¼
Haddock (large)		
Yarmouth	6	5½
Halifax (offshore price)	5½	5
North Sydney	(1)	(1)
Ramea, Nfld.	2¾	3¼
Rosefish		
Louisbourg (offshore price)	–	2¼-2½
Halifax (offshore price)	2½	2½
Ramea, Nfld. (offshore price)	2¼	2
Plaice		
Halifax	3½	3
Ramea, Nfld.	2¾	2¾
Sardine-Herring		
Black's Harbour	2½	2½
Lobsters (market)		
Yarmouth	70	60
Grand Manan	65-70	(1)
Scallops		
Digby	50	48
Smelts		
Richibucto	8	7
Chatham	10	(1)
Summerside	8	10

(1) No reports.

Pacific Coast
1956

Pacific Coast	Current Week to February 18	Corresponding Week last year to February 19
Salmon (Redspring)		
Vancouver (dressed)	38	35
New Westminster (round)	(1)	30
(Whitespring)		
Vancouver (dressed)	25	25
New Westminster (round)	(1)	20
Herring (fresh)		
Vancouver	–	–
Soles (for freezing or fresh)		
Vancouver	6-8	8
Prince Rupert (Lemon & Rock)	3-3¾	3½

Maritimes and Quebec	000 lbs.	46,520	38,099

The domestic consumption of fish is slowly rising. I think that is due partly to the efforts of the industry and our own department to make known the advantages of fish as a food and also to the improvement both of transportation facilities and cold storage facilities across this country. Last year saw a substantial increase in the number of cold storage units which is, of course, a help to the fishing industry. Because of the condition of the industry it was not necessary to apply price support to any phase of the Canadian fishing industry last year.

On the east coast we did introduce last year a salt subsidy as a measure of encouragement to those fishermen who are engaged in the salt cod industry. It has worked out quite well and it has been, of course, of maximum aid to the fishermen in the more remote parts of the Atlantic provinces. On the west coast there is a problem which is now under consideration to improve the position of the fishermen, and that is the matter of the very great number of dogfish present in the west coast waters. These are small fish of the shark family which have a great nuisance value as predators of other fish. During wartime their livers were valuable as a source of vitamin oils. Fishermen could make money fishing dogfish just for their livers, and that kept down the number of these predators. But since the war the price of liver oil has declined because of the development of much cheaper synthetic vitamins, and on the whole it is no longer economic for the fishermen to fish dogfish in the off seasons for their livers.

A year ago the fishermen's union out west asked me whether we would pay a floor price for dogfish carcasses to be made into fish meal for which there is a reasonable market. Dogfish is not as good a source of fish meal as herring or whale, but we had an experiment conducted last year by one of the fish plants to see if dogfish could be used, and the fisheries prices support board has conducted a further study this winter. They have now assembled their information and it looks as though at least 50,000 tons of dogfish a year could be taken on the west coast in the off season. The ordinary herring reduction

[Mr. Sinclair.]

plant is not quite fitted perhaps to process dogfish, but the whaling plant on the west coast and other plants, with some modifications, probably could. That matter will be discussed by the fisheries prices support board at their meeting this month.

Since we last met the Fisheries Improvement Loans Act which was passed by this parliament, has been proclaimed and the first loans have been made under it. As I predicted last year from the experience we had gained with the Farm Improvement Loans Act, the initial number of applications and approvals is small. The Farm Improvement Loans Act took at least a year or two to get really under way, but I think that the fishermen of the country are appreciative of this new source of credit through government-guaranteed loans.

Our country is one of the major fishing countries of the world, and we are particularly blessed with rich fisheries on our coasts. Some of these fisheries, lie beyond our own territorial waters, and over the years we have devised a number of very excellent international commissions to control and conserve these high-seas fisheries off our coasts. We have treaties now covering the northwest Atlantic, which includes the ten nations that fish the northwest Atlantic. We have treaties on the Pacific, the north Pacific, Japan, the United States and ourselves, and also the international salmon commission and the international halibut commission. We have the international whaling commission covering the 17 nations of the world which have whaling operations.

I think that the work of two or three of these commissions is very important this year. The first is the commission which has just been established to conserve the fisheries of the great lakes and to proceed with the extermination of the parasite sea lamprey there. Parliament approved the convention last year and we appointed our commissioners last fall. The Americans have only recently appointed their commissioners and the commission will have its first formal meeting some time late this month or early in April. We of course have not awaited the actual setting up of the commission to start work on the extermination of the lamprey. Two years ago we made our first appropriation of about $165,000. Last year we raised that to $330,000. There were a number of members from Ontario who suggested that this should be still more, but at that time I explained that money was not the limiting factor, it was our ability to secure the scientists and equipment for this lamprey control work.

We had a very good season last year in this work, and you will see in your estimates this year that the amount has been increased by $130,000 over last year's appropriation. We think we can find the staff to carry out extended work. There has been one interesting development during the course of the year, the development of a poison which seems to be quite effective in destroying the larvae stage of the lamprey during the four years that they are buried in the mud. If that works out successfully it will speed up a great deal our program for the extermination of the lamprey. All Ontario members from the great lakes area have been keen on this but the hon. member for Lambton West (Mr. Murphy) has spoken about it on several occasions. Actually he is away today with our films and our lamprey specimens addressing a game club on this problem. As a result of that, when we come to item 152 I propose to have it stand until some time later in the month when he will be here so he can speak on it.

The next commission in which hon. members have a special interest this year is the international Pacific salmon commission. This commission was formed by Canada and the United States and controls the great sockeye fishery of the Fraser river. This is the weakest year of the four-year cycle of the sockeye salmon, and as a consequence the salmon commission, at their recent meeting on the west coast, approved the most stringent control regulations which they have yet asked us to implement. They point out that not only is this the weakest of the four-year cycle years, but they also point to the very great improvement in the fishing efficiency of both the Canadian and United States salmon fleet, with the most modern of boats, nylon nets, drum seines, power blocks and all these other improvements.

One of the proposals made by the salmon commission, and one which was mentioned in a question earlier this session by the hon. member for Esquimalt-Saanich (Mr. Pearkes), was the proposal that all fishing be stopped in outside Canadian waters. It is only in recent years that we have actually begun to fish those waters. Before the sockeye would swing around the end of Vancouver island into the strait of Juan de Fuca, where the United States fishermen would get their half of the fish. The sockeye would then go into the gulf of Georgia and up the Fraser river where our fishermen would get their half of the fish. In recent years, especially since the last war, we have encouraged the fishermen to get out to sea and establish historic rights on the high sea fishery, and also to put us in a little better position. In the past, we got the second half of the fish.

The salmon commission has been extraordinarily successful in dividing the catch. I think there was a difference of less than a fraction of one per cent over the last 10 years. Nevertheless, we were always in a position of getting the second half of the fish. I though it would be much better if we had the first crack, then the United States got their share and we topped off by fishing in the second Canadian water. So far as the other four species of salmon are concerned, which are not covered by this commission, the outside fishing is most important. Unless we fish out there the United States fishermen get the first crack at these fish as they pass Puget sound on their way to the Fraser river. It was for that reason that two years ago I encouraged the fishing industry to bring in 15 big deep sea seiners so we could build up our share of this fishery in outside waters. It is for this reason that the suggested closing of these waters is of particular importance to the Canadian fishing industry.

This proposal, I am informed by my legal advisers, is in direct contravention of the commission treaty which was approved by this house in 1937. Article 4 of the treaty says that if any of the Canadian waters are to be closed, all the Canadian waters are to be closed; if any of the United States waters are to be closed, all the United States waters are to be closed. It is quite true that over the years there may have been minor variations in that we did agree upon closing inside areas for week end closures of different lengths, but never have we agreed, in violation of the treaty, to a complete closure of a very important Canadian fishing area. I have, therefore, written the chairman of the international commission telling him, first of all, that this is in contravention of the treaty approved by this parliament, and while I have the power as Minister of Fisheries under the Fisheries Act to order such a closure, I was not given the power by this parliament to exercise it under the terms of the international Pacific salmon convention. I have asked him, therefore, to reconsider the proposal and see whether the same conservation results can be achieved without this precedent of completely closing an important Canadian area, an area which is of very great importance to us in other fisheries as well as in the sockeye salmon fishery at the moment.

I told the chairman that the Canadian people are most appreciative of the magnificent job the commission has done in re-establishing this great fishery. I said that if, over the years the commission has found from its experience that certain articles of the convention are hampering its work, then we in this parliament certainly would be very glad to hear its recommendation for change, and that would be the proper way to do it.

One other important issue in connection with the Fraser river is this matter of fish and power. The Fraser river salmon fishery is the most important single fishery in Canada. It is the greatest single salmon fishery in the world. The landed value and the market value of this one fishery exceeds the landed and market value of all the cod, for example, on the east coast or of all the lobsters on the east coast. It has been saved, as I said, by the very wise management of these scientists and the administrators of the international salmon commission. The present average market value is about $25 million. The salmon commission feels quite confident that within the foreseeable future they can double that to $50 million a year. Of course, that is welcome news to the fishing industry of British Columbia.

On the other hand our province—when I say "our province" I am of course a British Columbia member—is growing at an extraordinary rate, especially in the development of industry. Industry in this country is always hungry for power. In British Columbia we have both public power and private power and those agencies have, since the war, engaged in a great program of expansion. I think, for example, that our province was the only province which did not have brownouts or blackouts because our public and private power agencies were able to keep ahead of the times.

Now the point has been reached when they are beginning to look towards the Fraser river in their search for more sources of power. This, of course, has alarmed the fishing industry. There are two general proposals. One is that 10 low level dams could be constructed, four on the lower Fraser and six on the Thompson, which would be capable of a very large production of power but which, in the opinion of the fishing industry, would do practically irreparable damage to that industry. The other suggestion is for one very high level dam, a dam of over 700 feet, on the main stem of the Fraser. The position taken by the fishing industry and the Department of Fisheries on this matter is a very simple one. We feel, first of all, that every non-salmon stream in the province should be developed for power before a salmon stream is touched. In that respect we feel that, before the Fraser is touched, that part of the Columbia river in Canada should be exploited to the full. At one time the Columbia was a great salmon stream but the construction in the United States of six big dams impaired the fishery and the construction of the enormous Grand Coulee dam

ended all movement of salmon above that dam into Canadian waters.

At Mica creek on the Columbia there is a possibility of tremendous power developments. A year ago some power people were saying that Mica creek was too far from Vancouver and Victoria, from the industrial area of British Columbia, to be economically possible. Last summer on my way to Russia I stopped off at Norway and Sweden to see the fisheries people there, and I was especially interested to find that in Sweden they ship power 600 miles from northern Sweden down to the industrial area around Stockholm. The distance from Mica creek to Vancouver is around 300 miles. It is true they use different techniques in Sweden, very high voltage, 800,000 volts, and a different type of conductor, bundle conductors; but there is no reason why exactly the same technique should not be used in British Columbia to bring Columbia power into the Vancouver area.

The second position of the fishing industry in British Columbia and of our department is that even when the known salmon streams are exhausted there should be no dams built on the Fraser until we have discovered how we can safely pass the adult salmon over the dam on the way to the spawning ground and the more difficult thing of passing the salmon fingerlings down over the dam on the way to the sea. Since this is probably the most important fishing problem which we are going to be confronted with in Canada for the next two or three years, I would like to take a moment or two to tell hon. members from other parts of Canada the essence of the problem.

The five species of west coast salmon, as they enter the river to spawn, stop feeding. Unlike the Atlantic salmon, when they have spawned they die in the river they do not return to the sea. And so these salmon enter the streams in tremendous numbers with this as yet unexplained blind instinct which brings them up back to the little creek in which they themselves were spawned two, four or five years before to spawn and to die.

The sockeye salmon, our most valuable salmon, is the one in which that homing instinct is most developed. It is also the salmon which goes the farthest. Some of these salmon go 700 miles up the tributaries of that great river to find their spawning grounds. These fish live off their bodies during this long and difficult passage, and any delay by a dam or by any other obstacle, by a natural obstacle of a falls or by high water making the speed so great that the salmon cannot breast it, any delay like that means that the salmon has not got enough energy stored in his body to get to the spawning ground in time to spawn. Each of these series of ten dams of course means ten delays, which in this case would result in the greatest of all salmon runs, the Adams river run, a small tributary of the Fraser, being met with these ten delays.

The actual passage of adult fish up over dams is not too difficult. We have had this problem for quite a number of years on both coasts. Dams are getting higher and higher but it is still possible to bring them up. There is another problem which arises, and that is the difference in water temperatures. Instead of having an even flow in the river you have these great storages of water with a limited spill over the dams at certain times; therefore, there is a change in water temperature.

One of the ways in which the salmon does find its way is by constantly breasting the current. Some of these dams will create enormous lakes behind the dams, so even when the adult salmon is up over the dam he is then at a loss. Instead of breasting the strong stream and forging his way on he is lost in a lake in which there is very little current. The other point, of course, is that these great lakes formed behind dams raise the water level in the lower stretch of the flooded area and cover spawning grounds which have been used by the salmon in the past.

As far as the fingerlings are concerned, they of course move in very much greater numbers. They have a much more difficult time. They can either go over the top of the dam or go through the turbines. If they go over the top of the dam damage is done in two ways. Either the fingerling touching the concrete face of the dam gets its very tender skin abraded off, or it dies of shock as it hits the pool at the bottom.

The turbine is another hazard, as one could well expect. The penstocks drawing the water for the turbines will suck the small fish down. They sustain the first damage as they pass through the whirling blades of the turbine as they go through. Much the greater damage, however, is done through the tremendous changes in pressure on the sides of the turbine. A 100-foot penstock has a water pressure of 45 pounds per square inch. On this side the fish is whirled through suddenly, and there is no pressure other than air pressure on the other side. It is like the way in which they make puffed wheat. They put grain under great steam pressure and suddenly release it and the wheat blows out in a puffed form. When that happens to the little fingerling it ruptures the blood vessels and the fingerling dies.

What have we done to study these problems? Our own department has been working

on this problem almost since it was formed. Scientific research has been working on it pretty constantly since 1921. On the United States side the state of Washington, of course, was the most concerned. The United States army engineers have done work on the dams on the Columbia on the United States side. In Norway and in Scotland, where they have runs of Atlantic salmon, they have done quite a bit of work on this, but their problem is very different from ours in that they are dealing with fish whose numbers are in the hundreds and we are dealing with fish whose numbers are in the millions.

Last summer, in Russia, after the whaling commission meetings were over my main interest in getting to Siberia was to see what the Russians had done on this problem. We have not been able to have very much of an exchange of scientific documents with them until the last four or five months, but we knew they had the same problem because they have a great Pacific fishery, of the same types of salmon as we have, along the shores of Siberia, in the Amur river, and Kamchatka. We knew that they had done a great deal of work on electrical fishing, using electricity as a means of fishing, and of electrical pumps for the transportation of fish. But when I got up there I found that part of Siberia still almost a virgin wilderness. There is very little industrial development there, and in the first 1,500 miles of the Amur river there is not a single dam. In the sea of Okhotsk and Kamchatka fisheries there are no dams at all; therefore, the Russians have not had to grapple with this problem yet. In some of their western rivers, the Volga and the Don, they do have the problem of moving up sturgeon and other river fish around their power developments. It is a very different problem because these fish live in the river and feed in the river, so are not destroyed by delays. Their number is small and they are slow-moving fish.

Well, in the last 30 years our department has solved these dam problems as they came up by building fishways and by building fish ladders. The highest dam built so far in British Columbia on a salmon stream is in the Capilano river in my riding, a 350 foot dam. It is too high for any fishway that we had knowledge of. So there we actually trap the fish at the foot of the dam and take them around in tank cars, several miles around the dam, to where the stream enters the back of the lake above the dam, so they can start on their way again. But the problem in the Fraser is a much greater one. In the Capilano, for example, they move about 6,000 fish a day that way. At Bonneville dam on the Columbia the United States army engineers have devised a means which can carry a maximum of 200,000 fish a day. But to get salmon in the Fraser to the head of the spawning streams, our facilities will have to carry at least 750,000 fish a day on the lower Fraser and above the junction of the Thompson half a million in the Thompson, and a quarter of a million a day on the upper main stem of the Fraser.

In the last few years the salmon commission and the two departments of fisheries of Canada and of the state of Washington have conducted a lot of practical experiments. At one high dam, the Baker dam in the state of Washington, a dam of about 100 feet, we found that 70 per cent of the fingerlings going over the top were killed, and 30 per cent of the fingerlings going through the turbines were killed. But over and above that there is a mortality of the fingerlings who survived either the great drop over the dams or the passage through the turbines because, although they are still living when they have got through, they have been damaged and they are not as lively as if they had not had that experience. Because of that they undoubtedly fall prey much more easily to predators in the river, the trout, or the predators in the sea, and therefore the losses are probably even higher than that.

We have done a great deal of work in the matter of the diversion of the fingerlings before they reach the dam. The numbers are probably 50 times as great as the adult salmon going up. As far as the spillways are concerned, we insist on these dams on salmon streams having a smooth surface on the spillway face so abrasion is cut to a minimum. Instead of having the fish hurled down into the pools, all the new dams have a lip at the foot like a ski-jump, so the fish are carried up in a spray before dropping into the pool at the base.

On the Capilano dam we do more than that. We had a serrated edge put into the base so the ski-jump effect goes off in different levels, but even then the mortality is still high. As far as the penstocks are concerned, that can be solved with very high dams. The fingerlings are mostly in the top 100 feet of the river or lake and are very seldom below 200 feet, so if you put the turbine penstocks more than 200 feet down the fingerlings will not be drawn through the turbines.

On our rivers, we have tried in many ways to divert the fingerlings just as they come down the stream before entering the pool above the dam. We have tried screens and light, we have tried air bubbles, we have tried electrical impulses, we have tried electrical fields and we have tried a curtain of chain

which seems to be the best at the moment. We have also tried scent, both the scent of seals and human scent from which the little fish are instinctively turned away, and we have also tried colours. Some of these things have been quite successful in the lab but when you transfer these experiments from the lab to a river such as the Fraser, none of these things are strong enough to withstand the surging current carrying logs and roots which sweep away any type of barrier.

Another problem is to divert enough water to the sides of the lake to carry the fingerlings. There are proposed 10 dams of less than 100 feet in the Fraser. Our officials say this means the end of the salmon run in this part of the river. There will be ten delays on the fish getting up to the Adams river, for example. If the mortality of fingerlings coming downstream is just 50 per cent for each dam, that mortality is a geometric progression. With ten dams and a 50 per cent mortality it means you have a one thousand and twenty fourth part of your fingerling salmon at the end of the last dam, and that ends the fishery. These dams would have to handle five species of salmon and these species have different migration periods. Since the dams are all less than 100 feet we will have a mortality from suction through the turbines as well as death from going over the top of the dams.

I understand that the power company most interested in the Fraser now proposes to build just one low level dam on the Fraser which will carry them along until such time as the Columbia power can be brought down.

The Moran dam is a very different problem. It will be one of the highest in the world, over 700 feet high. There will be no penstock trouble because they can be situated below where the fingerlings are. The problem is how to get the migrant fingerlings down the 700 foot drop. The engineers are suggesting a lip just below the spillway to divert the fish down the side by tubes, but it will take a long gradient, otherwise the fish will go down just the same as over the top.

The other difficulty at the Moran dam is the enormous lake which will be created behind it. I have read it will be 164 miles long, so the salmon which gets over the dam instead of encountering the river current will be lost in the lack of current in an enormous lake. This lake will also mean the flooding of many spawning beds.

What are we doing about it? We are stepping up our research program on fish migration. Mr. H. R. MacMillan, one of the members of the salmon commission, gave a grant of more than $100,000 to the fisheries institute of the University of British Columbia for research and the British Columbia electrical power company, one of the companies involved, has given a grant of $50,000 to the university. These grants to the university will of course enable them to do more research but much of the research has already been done by the fishery scientists of the salmon commission and the department. What the university will be able to do will be to assemble all known data on this problem of the movement of fish over dams, and place it before the proper authorities.

The Chairman: I am extremely sorry to interrupt the minister but I must advise him that his time has expired.

Mr. Nowlan: I am sure the committee would want the minister to proceed.

The Chairman: Does the committee agree that the minister proceed?

Some hon. Members: Agreed.

Mr. Sinclair: I have only one little piece left. I was going to say that the other thing which makes the situation easier is the very harmonious relations there have been between industry and the fishing groups in British Columbia over the years. Up until now we have been able to have fish and power in British Columbia and the attitude of the British Columbia Electric Company in making money available to study this problem is an example of that kind of feeling. The provincial government has also been most helpful. They have announced that no licences will be granted on the Fraser river for a power dam until the problem of the movement of fish has been solved.

I was going to raise the matter of one other international commission which is probably the one which has always intrigued hon. members the most. I refer to the fur seal convention to cover the fur seals of the Pribilof islands. Originally there were four nations participating, Japan, Russia, Canada and the United States, which had agreed to end the high seas hunting of these seals and keep a reserve to restore them. Japan and Russia dropped out and the United States and Canada have carried on alone for the last 15 years. There has been a great achievement in the restoration of the species which in 1911 seemed to be on the point of extinction. Our problem now is that fishermen say there are too many fur seals which destroy fish which they use as food. We get one-fifth of the kill on the Pribilof islands in return for abstaining from killing them off the coast of British Columbia. Last year our receipts from that were $1,214,331, about $200,000 more than the previous year. The

average price received for the skins was $94.80. The Japanese and Russian fishermen in recent years have also been unhappy about the number of fur seals in the north Pacific and so a meeting was convened in Washington last December to see if we could arrive at a new four-power treaty to solve this problem. Seals of course are animals and this is not a true fishery matter, but it is an interesting industry.

Negotiations have proceeded very slowly but we hope that in the end we will have a treaty which will be acceptable to us, by which we will have a closer control over the numbers and which will still return to us about $1 million a year.

I thank the house for giving me these few extra minutes. I shall simply close by saying that generally the fishing industry is in pretty good condition. As I said last year, fishing is still probably the most dangerous and the most ill-paid occupation in Canada, but to the men engaged in the industry it is more than that. It is a way of life, and as long as the fishing industry is a little better this year than the previous year the fishermen are reasonably happy and like other fishermen, either sport or commercial fishermen, they are always optimistic that the next catch is going to be the big one.

Mr. Nowlan: Mr. Chairman, I am sure that those of us who have listened to the minister's opening statement this morning, as on similar occasions, have been pleased with the casual and yet interesting and almost dramatic way in which he deals with some of the phases and activities of his department.

I am quite sure when the time comes for the minister to retire from public life he need not worry about his opportunity to earn a living because he will certainly be able to write novels about the sea from which he will probably earn far more money than he earns today.

I want to say most sincerely that the minister makes his department most interesting. Possibly there are very few departments in the government where that opportunity is presented, which may be one explanation. As the minister said in his concluding remarks, this is a way of life for many people. It is a hard way of life. I think all people who know the fishermen—this certainly applies on the east coast—will agree that they are among the poorest paid for the hardest work of people engaged in any occupation in Canada today. Yet few of them would change. They love the life and have developed a type of citizenship and outlook which permits them to make a contribution which is well worth while.

[Mr. Sinclair.]

Taking it in all, I submit that this department warrants more interest than has been shown in the past. It may be merely a coincidence or an accident, but I am certainly glad to see the estimates of this department being brought down at this relatively early stage in the session. Back over the years I have found that the fisheries estimates have been brought down in the latter part of the sessions. Last year I think they were brought down on June 24 or 25, and the same with other years. It is good to see that we are to be given a little more time in which to consider these matters and I think also to emphasize the position of this department in the economy of Canada rather than to have these estimates considered as being something to be got on with whenever it was convenient, more particularly when the weather was hot and we might not be ready to spend so much time talking about these matters.

Perhaps I should say at this point how delighted we all are to see the minister back again apparently restored to health. We were all shocked and I think I can say frankly worried at the reports we heard of his accident and consequent injuries. It is good to see him in his present shape. I am sure that if during these estimates he finds he is being asked too many questions or is being bothered in any way we will be only too glad to have him remain seated. I would hope that before we finish with his estimates the minister will find it possible to refer to what he saw in the Scandinavian countries and even in Russia and to make a comparison between their methods of fishing and industrial production with our own.

Before I was diverted to making a personal reference, I was saying that this is a most important industry. There are all these people engaged on the east and west coasts, in the central part of Canada and the great lakes, and in the north on Great Slave lake and others. I profess to have no knowledge whatsoever of the fishing industry except in a most casual way and that only with reference to the east coast. As the minister has said, the hon. member for Lambton West (Mr. Murphy) has taken particular interest in the fisheries of the great lakes. I was glad to hear the minister say that if this particular item were reached it would be allowed to stand until that hon. member was present. There are other hon. members from Ontario who no doubt will be speaking today, and there are also members from the west coast who will be dealing with the fisheries on the Pacific.

I checked yesterday to find the relative value of the production of this industry as

compared with other industries in Canada. The 1955 figures for other industries are not available as yet, so I took the 1954 figures. As the minister said this morning, the landed value of fish for 1954 was $86 million. That is not a tremendous amount, but it is fairly substantial. The 1954 market value, which is a fair criterion, and which would be the value of the product when frozen, processed and ready to move from the plant, not the retail value, was almost $192 million for 1954.

We hear a great deal about the tobacco industry in this country, but it might be interesting to note that the production of that industry for 1954 was just about one-quarter of the market value of our fisheries. We hear a great deal about our farm implement industry and the tremendous exports of farm implements, but the total 1954 production of that industry was $113 million as compared with $192 million for our fisheries. Even the gigantic motor car industry showed only a total production value of $559 million, or roughly two and a half times the market value of our fisheries. I could go on and make other comparisons, but I bring forward these figures in order to bring this industry into a clearer focus than it has been in the past.

I submit that this industry deserves more careful attention and consideration than it has always received in the past. It is a unique industry. During the past few weeks we have heard a great deal of discussion in the house about wheat, and the production of other crops has been discussed, which is proper and right, but this industry is unique in that there is no ownership in it at all. Not only is it public domain, but it is a watery public domain and no one has any vested interests in it, except in so far as territorial waters are concerned.

I sometimes wonder that people have the courage to spend substantial sums of money developing plant and investing in equipment without any assurance that the industry will be protected and with the possibility that nationals of other countries or even our own nationals who are not to well controlled may come in and destroy the very basis of the industry. As I say, in that respect it is a unique industry.

As the minister said, there are two basic problems confronting the industry, the problem of marketing and the problem of conservation. As he said also, the problem of marketing seems to be a little better this year. At least we do not have to have floor prices. As the minister has said, the surpluses are going to be disposed of and from that standpoint the industry is in better shape than it has been in prior years.

I think a great deal of credit should go to the economics and marketing divisions of the department. Personally I rather regretted a reduction in these items. It is true the reduction is not large, but I submit that more money should be provided for the marketing and economics divisions of this department. Those activities should be stressed.

The fact is that we still eat too little fish in this country. Not enough emphasis has been placed on the eating of fish. The minister has indicated that the industry is co-operating in an advertising campaign. I think the industry should be encouraged to spend more money on advertising and the department should be prepared to co-operate by supplementing that advertising. Better packaging, improved curing methods, faster freezing methods and quicker transportation have increased the demand for fish. The people of Canada should be encouraged to eat more fish, and I am thinking of the Nova Scotian finnan haddie that we have from time to time in the parliamentary restaurant. If more people knew of that product the consumption would increase tremendously. I suggest that you cannot find a better cured fish anywhere in the world. That is just one example of the improvement which has been going on consistently in this industry.

Because of these improved methods and because our population is increasing and will continue to increase, we hope fairly rapidly, there is no doubt that the demand for fish will increase as well. I think this demand could be spurred if there were more direct assistance from the marketing branch than has been the case heretofore.

Then there is the problem of our exports. I am speaking now purely for the east coast where our exports other than to the United States and forgetting for the moment lobsters and a few special products such as that, take the form of cured and salted fish.

The minister has said in other years that that was a very uneconomic way of disposing of this, and that of course the emphasis should be laid on the development of the fresh fish consumption. That is true, but, after all, we have to have the cured fish outlet in order to take care of surpluses, because fish is not a product which can be stored indefinitely. There has to be a cured fish market. I know that many fishermen in my own constituency, perhaps carrying on in a small way, when they find that fresh fish sells for only 1¼ cents a pound, do the curing themselves and hold it until the fall when they can get a much higher price than on the fresh fish market. Therefore I do not think we should overlook the importance of

maintaining and developing the market for our salted and cured fish. At one time that was the principal one, of course. There was an extensive market in Spain and other parts of Europe, in the Caribbean, in South American countries and so on. That has been widely restricted today. The demand is less today, but there is still a substantial demand in the Caribbean. I noticed the other day that the republic of Haiti have sent a trade delegation here to negotiate or discuss the possibility of amplified trade arrangements between our two countries. When we entered the British West Indies trade agreement in the early 1920's, it was undoubtedly a good thing, but I think it did create prejudices and frictions with other Caribbean countries which were at that time buying tremendous quantities of our salted and cured fish. I urge on the minister that he lose no oportunity whatsoever in attempting to develop in every way possible those other markets in the Caribbean and in South America in those products.

Of course, the trouble down there is that for the most part those people have a very low purchasing power. They are among the poorest paid in the world and they cannot afford to buy an expensive product. We shall have to have manufacturing and processing carried on in this country so that we can afford to put those products in those markets at prices at which those people can buy them. If that is done—and I believe it can be done—and the industry restored to some extent to what it was many years ago, it certainly will be of assistance to those of us who represent the fishing industry in the eastern part of Canada. I shall say nothing more about marketing at the moment. There will undoubtedly be much more said about that subject as the day goes on, but I simply say again that this Caribbean market is a traditional market for the Atlantic provinces. I am not minimizing the fresh fish trade. Gradually, as fresh fish production is improved more and more, that market will perhaps play a less and less important part in our economy, but it still is an important factor and should not be overlooked.

The matter of conservation, to which the minister referred, is the other important phase of the department to which we all have to give a great deal of attention. We have the bifocal problem, shall we say, of our territorial waters and the high seas. In the territorial waters there should be no problem. We have control of those waters. We make the regulations, and it is simply a matter of enforcing them. The responsibility for that is our own. But when we get beyond those territorial waters on to the high seas, there you get the problem in its very essence, and today it is, I think, a pressing problem.

Think of the changes that have taken place in the methods of fishing in the past few years. Almost all of us in this chamber have memories of the times when fishing was carried on by means of the schooner and the dory. That was the method that had been carried on for 500 years. When the Portuguese said last year that they had been fishing on the banks for 500 years, that was true historically. That was the method that had been employed. Then came the evolution from the schooners to the great voracious trawlers. In a lucky day, I should say, a trawler would haul out as much fish as a schooner would get in a month. In the old days, of course, we had the hardy men of the sea, such as the Minister of Public Works has in his constituency, going out in the fishing schooners, the *Bluenose* and the other champion craft which were built for the international competitions. That day, unfortunately, is gone. That was part of the colour and the drama, and it went with the coming of the mechanical trawler. With the mechanical trawler has come a greater threat to the fish as a whole, because today you have the trawler with its trawls and its equipment—with the most modern electronic equipment with sounding devices enabling them to move along, as I understand it, and pick out very accurately where the schools of fish are located. There are also, of course, ship-to-shore telephone communications, by means of which they can receive instructions from hour to hour as to their movements. Altogether, although the banks are very large and the fish, you might say, are very small, their chances of avoiding those trawlers today are getting less and less as the days go by. It has become a highly scientific and technical procedure, though still very dangerous and rough on the men taking part. As a result of all this—and when you remember that there are more ships on the banks today from other countries than there are from Canada, that they come in there from Portugal and other parts of Europe, from the United States and from all over the world—you might say that fishing in that area, with these modern devices and equipment, has made the necessity for conservation even greater now than it ever was before.

The minister says, quite properly, that the only way you can deal with this is by international conventions. We are very happy to have made great progress along the lines of international conventions within the past few years, but they move painfully slowly, as the minister indicated almost as

an aside in what he told us about one of the great lakes commissions, when he said that only in the past three or four weeks one of the contracting parties had found time to appoint personnel to that commission.

I was just reminded of the province of Nova Scotia, a small province. I wonder how many hon. members outside the fishing industry realize that the average landed catch for that province within the past two or three years has been in the neighbourhood of 375 million pounds of fish per year. That is over one million pounds of fish a day, on the average, being brought in to the wharves of that one province. When you amplify the picture by considering all the fishing countries in the world that are searching for and catching fish over the areas of the banks today, I suggest to you that the time has come when a much more radical approach must be made to the problem. I know the minister is hoping that through the commissions there can be evolved regulations that can conserve the fish, and it must be done.

Yesterday, in reading a report of his department, one of the research bulletins, I was struck with the fact that when the lobster fishermen first began catching lobsters in the maritime provinces and the province of Quebec almost 100 years ago, that lobster fishery developed in a few years, so that 75 years ago they were catching over one hundred millions pounds of lobsters a year. Of course, they were large and heavy lobsters. From that the fishery dropped to approximately 20 million pounds. Now, through conservation and control, it has been kept roughly in balance between catch and production and we are at around 35 million pounds again. I think that is approximately the situation. It shows what conservation can do and it also shows what will happen, that there is a rapid fall if there is no conservation. So I say that we need to put more emphasis on that.

These waters are at our front door. One does not want to become provincial, one does not want to become perhaps supernationalist, but we have a greater interest in them than any other country in the world and they are being exploited by all the countries of the world. I think the time has come when our government will have to take more stringent steps and make a firmer approach to the matter than has been the case in the past. It is going to be slow, it is going to be laborious, it is going to be tedious. You are going to be stymied by one country after another which wishes to avoid being involved in too stringent regulations. However, as I have said, I think the time has come when there must be more emphasis put on the matter than there has been in the past. I know that the minister entirely approves but he of course is faced with the difficulties of international negotiation and the slow tedious process of dealing with commissions. Besides, he has many other things to do.

But we can easily get disease or pestilence in our fish. Take what happened last summer with the herring when suddenly overnight hundreds of thousands of herring were found dying in the waters because of some disease or pestilence that had struck and which virtually extinguished them. At the same time, of course, pollution was created in the waters which made the life cycle of other fish much more difficult. There again there is a necessity for such action.

As I said, there are two approaches to the matter. One is the international approach which the minister suggested and urged and which I suggest he pursue still further. Then there is also the approach of control of our own waters. I know the minister can say that he knows exactly what I will say because I said it last year. In fact the discouraging thing about it is that last night I looked up what I said last year and I thought I could almost say the same thing over again word for word. It is rather discouraging but nevertheless I think it is important because the problem of our territorial waters is an important one to many members and I think to the country as a whole.

I am not going to weary the house by repeating things I have said before on this phase of it so far as my own constituency is concerned. Perhaps when the specific items are before us later today I will elaborate on the matter a bit. But you have the situation where under the old law that exists today international law recognizes the three-mile limit as territorial water. Historically, of course, that is based on the old theory of the cannon shot. History tells us that the old cannons could fire three miles out from shore. Therefore you could exercise control over those waters and beyond that was the high seas. If that theory was sound then, it has certainly got to be reviewed today in the light of present developments. Where you would apply the limit no one of course knows because today it is not a question of three miles. With a bomber I suppose it is 3,000 miles or with an intercontinental ballistic missile it might be 5,000 miles.

No one wants to suggest extremes such as those, but there are those who have suggested 10, 12 or 20 miles. I understand that some South American countries extended the limit last year to 200 miles, and altogether

the situation is most uncertain. I believe the question was referred to the international law committee of the United Nations, and last year the minister told us that the committee was about to report and that the United Nations would take some action thereon. But we know how dreadfully slow and tedious any action on the part of the United Nations can be.

The minister also told us last year that an interdepartmental committee had been set up of which Dean Curtis formerly of Dalhousie law school was either the chairman or the technical advisor. I have forgotten which. Dalhousie law school is of course where he really got his educational foundation although he may have moved away temporarily to the University of British Columbia.

We will not debate that, Mr. Chairman. I know where he got his training in the days before he was exposed to the vagaries of British Columbia.

What I want to say, and I realize that my time is running out, is that the minister told us last year when I mentioned this matter that Dean Curtis' report had been submitted to the Secretary of State for External Affairs and that he understood that after the government had considered it it would be made available to parliament. That was a year ago. Perhaps I should not say a year ago because this year the estimates are before us earlier, but it is nine months ago and I am sure that the government has had time to consider the report. I should like the minister to tell us if he will make the report available to parliament because I think it is a most important thing.

We need to know what the policy of our government is with respect to international control of our own territorial waters. Before the estimates are through I think the minister should clarify the position with respect to the report of the interdepartmental committee and also what position the representatives of the government are prepared to take when the matter is considered further by the United Nations this fall. Certainly the time has come when the whole set-up must be reviewed. I could make references to my own constituency but I am not going to do so because, Mr. Chairman, I see that you are looking apprehensively at the clock.

But we have this situation with respect to trawlers. The minister knows it and the anomaly of the problem must irritate him more than anything else. I presume that sometimes he feels frustrated and helpless about it and would like to throw the problem out the window. I suggest that he throw the trawlers out the window. Of course, from the standpoint of my constituency that would be a delightful way of solving the problem. However, as the committee has been told before, under international law any United States trawler can come up to within three miles of our coastline. When I say "within", that is really euphemism, because in a fog the three miles becomes constricted to about 30 yards if the water is deep enough. All the fishermen in my constituency can certify that is so because of the lobster traps, trawls and everything else that they lose to some of these American trawlers. Despite their sonic equipment and everything else they suddenly become lost and wander up along the coast. On the other hand, Canadian trawlers over 65 feet long, manned by Canadian crews and built with Canadian money, are required to stay outside the 12-mile limit which I think is the rational approach to the matter. If the minister will say that we are going to have a 12-mile limit, our government is going to insist on that limit and we are going to take that position with the United States right away and we are going to urge a 12-mile limit before the United Nations, I think it would clarify the air.

But at the moment you have that conflict between international law and our own internal regulations. No wonder everyone is frustrated and angry about it. Certainly Canadian trawlers feel they have the right to go up to the 3-mile limit if the Americans are allowed to do so. On the other hand, the inshore fishermen do not want to see the trawlers nearer the coast than they can help. I should like to see the situation worked out so that all trawlers would be kept 12 miles off our coasts. That would protect the inshore fishermen who perhaps are not the most important in this industry from an economic point of view but still have that way of life to which the minister referred. There are scores and scores of villages and thousands of people involved, some of them, I presume, in the constituency of my friend, the hon. member for Charlotte, some in the constituency of Saint John-Albert in New Brunswick on the other side of the bay, and all up and down the coast of my constituency of Digby-Annapolis-Kings.

Of course the minister has power with respect to this matter. You may remember that I twitted him a bit a year ago in that he had taken unto himself the power to draw a line in St. Margaret's bay and say thus far shall you go and no farther. He barred the trawlers from crossing that line. Of course, that happened to be just before the last provincial election.

Mr. Sinclair: Pure coincidence.

Mr. Nowlan: That year it was a coincidence. By another coincidence there is another provincial election in Nova Scotia this year, and I think it would be a fortunate coincidence if he would make the same ruling with respect to the coastline of the bay of Fundy as he did three years ago with respect to St. Margaret's bay and say that all trawlers, big or small, must keep outside that line. That would not only be a coincidence but it might accomplish miracles for him because some miracle such as that is needed if his political friends are going to achieve the results they want.

That, Mr. Chairman, is the second phase of this matter to which I want to draw his attention, the conservation and control of our own territorial waters. I am not going to develop it further at the moment but I hope that before the item passes the minister will clarify the position of his department and the government with respect to this matter.

Mr. Kickham: Mr. Chairman, I should like first of all to thank members wishing to speak on the first item of the fisheries estimates who have given way to me because I will be away this afternoon and for the next few days. I should like to say that I am greatly pleased to see the Minister of Fisheries taking an active part in administering the affairs of his department. I followed very closely the serious injuries he received in Russia last year. I think most hon. members in this house realized that the minister possessed an abundance of mental and physical energy, much more than many of us in this house possess. I feel it is quite possible that this abundance of energy stood him in good stead. He has made a partial recovery at least and I hope that in the very near future recovery will be complete.

Since taking over the administration of the Department of Fisheries, the minister, I feel, has displayed a great interest in his department. We had evidence of this only last week when he invited members from the Atlantic provinces to meet with him and exchange views on the administration of his department. He afforded Liberal members from the four Atlantic provinces an opportunity of expressing their views and making suggestions with regard to the administration of his department. This procedure is contrary to an editorial I read in *Maclean's* magazine, the issue of March 3. I quote what the editor said:

> Anyone who has been glancing lately at *Hansard* or at a reasonably good newspaper must have been reminded that parliament has ceased to be the chief official critic of the nation's conduct and its conscience. Much worse, the parliament of Canada has ceased to be, in any real sense, the government of Canada. It still has the power to govern. Nevertheless, it continues to acquiesce blindly in all cabinet actions and pronouncements—voting almost as dependably on its party lines as that final horror of legislative horrors, the Supreme Soviet of the U.S.S.R.

In reply to that accusation which is directly applied to all Liberal backbench members, I want to say that only recently the Minister of National Health and Welfare invited members to a study group meeting on the administration of his department. I can recall numerous instances in the past when the Minister of Trade and Commerce has also welcomed members of the Liberal party to discuss the affairs of his department. It is stated very often in the press and in this house that the Minister of Trade and Commerce is, in reality, a dictator. In my opinion his treatment of the backbench members in inviting them to discuss matters of policy in connection with his department does not savour of dictatorship.

Leaving that matter now, because I do not wish to take up too much of the time of the house, I shall refer to some of the problems of the fishing industry in our province. The fishing industry in our province has been making great strides in the past few years with the assistance and co-operation of the federal and provincial governments. In the speech from the throne at the opening of the provincial legislature, the premier of our province, Mr. A. W. Matheson, announced he will establish a department of fisheries. He is to be commended for this action. Prior to this time fishing interests were taken care of by the department of industry and natural resources. I am sure that the fishermen of our province will greatly appreciate the move to set up the department of fisheries because I think it recognizes the position of the fisherman in our economic life and that has been long overdue.

I was interested in a remark the minister made when he said that, after discussion with his officials, it might be possible to establish a floor price for dogfish. He mentioned the west coast particularly, but if such a policy can be adopted by his department I should like to see it applied to the east coast also. In the months of July and August our fisheries are very seriously handicapped by an invasion of these fish. If the livers were worth something and something could be realized from the fish through processing them into fish meal, it might be that it would not cost the Department of Fisheries a great deal to provide an inducement to fish those predators. I am sure that our fishermen, who normally fish for hake, cod, and haddock after the close of the lobster fishing season, which is June 1 in our area, would be very pleased to fish for these dogfish.

I should like to say a word about a problem that has confronted me particularly. It relates to a branch of the shellfish industry in our province, namely quahaugs. There are large quantities of quahaugs present in polluted waters in our province. I understand that as a result of some arrangement between the public health department in the United States and the same department in Canada, there is a prohibition against taking fish from polluted waters, and that is quite reasonable. But in the case of some mollusks, such as oysters, permission is granted to transplant them to other areas for recleansing purposes. I took the matter up with the two departments last year. Both departments are involved in this question, but evidently the stumbling block was that no scientific research had been carried on up to this time as to how long a quahaug should be placed on a beach to be purified.

The minister and his officials in one meeting suggested it might be possible to recleanse the quahaugs in pounds. I like that suggestion very much. I believe it was made by Dr. Pritchard because of the fact that it would save the cost of reraking the fish from any beaches where they might have been relaid for recleansing purposes. However, I hope we can get permission to relay. I am most anxious that we eventually will, because on the return of a heavy volume of seaweed these hard-shell clams will eventually die. There is a market for them in Canada. They are ground into meat and sold in Canada. They are not sold in the United States because there is no market for them. I understand that in the United States they use only the tender small quahaugs called littlenecks. It would give us a lot of employment. It is estimated that the industry would be worth in the vicinity of $100,000 a year to the labour employed in the transplanting of the quahaugs from those areas to other areas for purification purposes and their repossession and processing.

I know the minister is most deeply interested in this, and I hope that he shall have permission in the very near future to transplant these quahaugs.

I also like the suggestion made by the hon. member for Digby-Annapolis-Kings (Mr. Nowlan), who preceded me in this debate, that it is most unfair for those who are financed and equipped with draggers by both the federal Department of Fisheries and the provincial department of fisheries to encroach on the inshore boats. They should at least keep off three miles. We have had that difficulty at home, and our dragger fishermen are now realizing why it is a great discouragement to the inshore fishing boats to fish when their gear is being taken up by larger vessels. In that connection I should like to say that at Souris we have one fresh fish filleting plant and two by-products plants that have been in operation for two or three years. In the coming season we shall have another large fresh fish filleting plant operating at Souris. I hope that sufficient encouragement will be given to the inshore fishing boats to fish cod, hake, flounder and haddock after the close of the lobster fishing season at some fishing centres.

These inshore boats have been fishing in past years. I know of one case where fish have been trucked as far as 30 miles from where they are landed to the fresh fish filleting plant. I would like to see all the lobster inshore boats fish, as I have already mentioned, at the close of the lobster fishing season. I would also hope that the processing plants could pay sufficient money for their fish to induce those fishermen to go out and fish and have the fish brought to the processing fish centres. It would be a great advantage because dry periods are experienced by the dragging fishing vessels, and the inshore fishing boats would supplement the supply and would provide for continuous operation of the plant and continuous employment of the employees.

I have just another word, Mr. Chairman, before I close. I should like to say that because of the assistance that has been given by the federal government by way of a subsidy of $65, per registered ton for boats over 40 feet in length, and also the assistance that has been given by the provincial department, we shall have about 15 draggers owned and operated in our own province this year. I think that with the intake from the inshore boats we can keep both of these processing plants and both of the by-product plants in full operation.

Mr. Barnett: Mr. Chairman, I believe there is just time before I ask you to call it one o'clock to join with the other hon. members who have taken part in this debate so far in saying how pleased we are that this morning the Minister of Fisheries was able to be back in his seat and in the form he was when he gave us an outline of the activities of his department.

Like the hon. member for Digby-Annapolis-Kings, I would have been very much interested if the minister had been able to give us a more extensive picture of some of his observations on fisheries while he was abroad. I realize that perhaps the estimates of his department may not be the most appropriate place for that to be done; but I do hope that the minister will keep that in mind and some time before the session is over will find

suitable opportunity to give to the house a picture of some of the things that he saw.

Would you call it one o'clock, Mr. Chairman?

At one o'clock the committee took recess.

AFTER RECESS

The committee resumed at 2.30 p.m.

Mr. Barnett: Mr. Chairman, at one o'clock I was about to enter into some comment concerning the first item of the fisheries estimates and some of the matters that appear to me to be of interest and concern at this time.

I think the minister made it clear this morning in his opening remarks, and probably it will appear even more clear in the statistics which he put on the record, that fisheries is now one of our great national industries and that it is wise for hon. members of this house to realize that what has become rather a trite saying, "There are only two great sources of food for the people of the world, the agricultural industry and the fisheries industry" is indeed true and that we in this country are blessed with a very rich heritage in both those fields of food resources.

Like the Minister of Fisheries, I come from a west coast constituency. I do not intend to attempt to enter into any extended discussion of the fisheries of the Atlantic coast or of our inland fisheries except to say that as a member of this house who has some appreciation of the value of this resource I am interested in the well-being of the great Atlantic fisheries. I am also interested in the fact that much remains to be done in that area before the economic value per pound of fish caught approaches that of the west coast. Those who live on the west coast realize that even with the present relationship in the markets of the world of the value of our product to the pound caught, our fishermen by and large do not enjoy anything more than a reasonable return for their efforts.

There is one aspect of the current fishery situation which appears to me to be of equal concern to the fishermen of the Atlantic coast and of the Pacific coast. Reference was made to this by the hon. member for Digby-Annapolis-Kings when he was speaking of the matter of territorial waters. I would have been glad if the minister had been able to give us a positive assurance that this particular problem was on the way towards some satisfactory solution.

I was quite interested to read recently in the publication of the fisheries council of Canada a report on the present situation as it exists. This is one which I feel should be brought fully to the attention of the house. This report is an excerpt taken by them from the *Financial Times* published in Great Britain and it makes some reference to the international law commission and to the report which it has made. The gist of this report seems to me to be that we are entering into a veritable no-man's land of international law at the present time when we discuss the situation. It makes reference to the fact that various nations have been making a variety of claims in this connection. While I generally agree that we Canadians should attempt every means of reaching an amicable international understanding upon this question, I cannot help but wonder after having read this report whether or not the time has come for us to put forward, perhaps just a little more firmly than we may have done or than on the surface we appear to have done, our own feelings and our own position in relation to this situation.

I know that the minister is aware there is a strong feeling among the fishermen in British Columbia that we should assert our rights to territorial waters lying inside our offshore islands, Vancouver island and the Queen Charlotte islands. Certainly there are indications from the position taken in some instances by our neighbour the United States that we would not perhaps be doing anything in that respect that they have not done if we were to take that position. However, I do hope that it will not be long before the international law commission's report will produce some definite international action and international agreement on it.

There is one statement which I think points up the fact that this has come into the realm where people such as hon. members of parliament should be concerned about it. Referring to the opinion of the international law commission the bulletin of the fisheries council of Canada states on page 5:

> It feels that the task of harmonizing the different views, which often originate in different political or economic conditions, should rather be entrusted to a diplomatic conference.

That, I take it, means that we in this parliament should be attempting to assist our government to crystallize its point of view on this subject. As far as I can see, and I am expressing only my own opinion on this matter, there should be little question that Canada should be willing to stand for a recognition of territorial waters, at least as far as fishing is concerned, to the 12-mile limit and that we should be behind the idea

of developing international recognition for the inclusion of waters which lie inside our headlands in addition to that 12-mile limit.

I admit, Mr. Speaker, that since I have been coming to Ottawa I have had an opportunity of acquiring more knowledge of some of the eastern species of fish. I will even go so far as to confess that I have developed an appreciation of some of the products such as the haddock and the cod that come from the Atlantic coast. I would suggest to those who come from the Atlantic provinces that if they would only be willing to overcome the foolish idea which they try to promulgate, that there is some basis for favourable comparison between what they call salmon and what we produce in British Columbia, those of us from the Pacific coast would probably be willing to participate in an all-out sort of co-operation in developing a wider appreciation of all the fishing products that are produced.

In this connection I may say that as a result of visits that were made to the test kitchen of the Department of Fisheries my wife has been trying out on me some of the recipes that come from there and the results by and large have been quite favourable. That may have something to do with increasing my appreciation of eastern fisheries products.

An hon. Member: By and large.

Mr. Barnett: An hon. member says, "By and large". I do not believe in being too unqualified in public praise. While I am on this subject of the different fisheries I must confess that I have been shocked in recent weeks to discover from conversations with hon. members in this house that many do not realize that we have a herring fishery on the west coast. For that reason I think I should draw attention to the fact that the minister's statistics will reveal that the west coast herring fishery is larger than the Atlantic coast herring fishery and from the point of view of total tonnage caught represents something more than half the total poundage of fish products produced in British Columbia.

There was one problem which the minister did not deal with this morning and on which I had hoped he would make a statement. Perhaps he will find an opportunity before these estimates pass to do so. I refer to the widespread concern over the mid-Pacific salmon fishing. Many fishermen of British Columbia are firmly convinced that the salmon being taken in the mid-Pacific are immature and should properly be caught after reaching maturity by our fishermen closer to shore. They feel that something should be done in the way of immediate action to prevent the taking of these salmon, principally by Japanese vessels. I do not think the minister will feel that it is necessary for me to expand upon the rather unfortunate implications that might arise out of a growth of this feeling in British Columbia. I think it would be worth while if we had some explanation of what is being done in this connection and also some factual information as to what the situation is from the scientific point of view in regard to the claim that we are losing a large potential salmon fishery as a result of the mid-Pacific fishing.

I was glad the minister made some reference to the problem created by the increasing depredations of dogfish. This is a particular problem facing the fishermen who fish in the waters between Vancouver island and the mainland. They are increasingly concerned over the destruction of nets and gear and the increasing effects of dogfish upon the salmon fishery. I hope that this problem will be resolved in a way which will make it possible for the fishermen to utilize to advantage some of their time during the off season for other species.

It is true, as the minister pointed out, that there was a drop in the income from our fisheries last year and this has resulted in the fishermen of British Columbia taking an increased interest in the question which was discussed last year of providing access to the benefits of the Unemployment Insurance Act. I know that this matter as it affects the fishermen of the Atlantic coast has been drawn to the attention of the committee already and I recognize also that it is not a matter coming directly under the jurisdiction of the Minister of Fisheries, but nevertheless I think it would be appropriate at this time if I were to urge him to use his influence toward a solution of this problem—perhaps I should say to continue to use his influence, because he did give us some assurances along this line last year in the industrial relations committee.

There is another matter which I feel is of some concern and which is brought to my mind by the salmon spawning report issued by the able chief supervisor of fisheries in British Columbia for 1955. I raise this matter because, to me at least, it involves a question of policy extending beyond the activities of the Department of Fisheries. In the annual report of the department which we have just received reference is made to some of the activities of the protection and fish culture branches. In respect to the salmon spawning streams it is pointed out that the fishery officers of the protection branch have continued their program of fry salvage and stream clearance throughout the year. It is stated that over one hundred streams had

log jams, rocks and debris removed. That reference will be found on pages 17 and 18 of the report.

I do not quarrel with the fact that that activity has been and will be of continuing value, but I think the report of the chief supervisor of fisheries on spawning makes it clear that that program of itself is not enough. Running through his analyses of spawning of various salmon species over the past year like a refrain is reference to the fact that in many instances what might have been a satisfactory spawning situation was ruined because of flood damage. In one report, referring to the spawning of chum salmon, it states:

> Here again flood damage resulting from the storm of November 2nd and 3rd caused extensive damage to the early spawning. Some damage also resulted to the moderately good supplies in the Squamish system.

Then referring to the Victoria area it has this to say:

> It is estimated, however, that 75 per cent of the spawn deposition in these streams was destroyed by the November flash flood.

I bring this matter to the attention of the committee because I think it involves policies beyond those which the Department of Fisheries can exercise.

If the Department of Fisheries, which is charged with the responsibility of protecting and increasing our salmon runs, is going to be able to do the job that it should be doing there must come about a recognition that part and parcel of the policy which will make this increase in our valuable salmon industry possible is in the development of a program of stream control. Perhaps this is a subject that might very well have come up during the recent discussion on conservation introduced by the hon. member for Kootenay West. In fact, had it not been that there seemed to be a great number of speakers interested in that debate, I might very well have had something to say about it then.

To me this is obviously a problem that is going to require co-operation between federal and provincial authorities. It is going to require a plan which involves our forest industry and involves almost every aspect of soil and water conservation. I bring it up now to urge that consideration of this problem beyond that merely of the Department of Fisheries be given by the government. It seems to me that the activity that is being carried on in a modest way in respect to clearing log jams, out of streams, and so on, is going to have little value unless a much broader program is developed that will result in measures being taken to eliminate the flash flooding, which, as the chief supervisor has pointed out, has almost destroyed satisfactory spawning in many of the areas during the past year.

There are quite a number of other items that I have noted. I should like to bring up some of them when we are discussing the details of the estimates. But there are a few more problems here on which I should appreciate a clearcut statement from the minister.

One of the questions that has been asked of me is as to the eligibility of the Indian fishermen of British Columbia to qualify for loans under the act that was passed last year. I should hope that the minister could give a clearcut statement on that point so that there could be no misunderstanding of the actual situation.

Another question that is of concern to some of the Indian fishermen who live in the vicinity of Ripple Rock is as to what the effect upon their fishery is going to be when that big blast is set off. Some of them are fearful that not only will there be some destruction of the migratory stocks of fish that are in that area at the time but that the result of the blast will be such as to entirely wipe out the local stocks of ground fish and will leave them without access to winter subsistence fishing, on which they rely for part of their food. I would appreciate having some statement based on the best available evidence as to what the results of that blast will be in that respect.

I think that covers all the points that I shall attempt to deal with at this time. There are one or two other matters, but I note that the time at my disposal now will not allow me to enter into discussion of them and so I shall defer them for consideration at a later time.

Mr. Patterson: I am sure it has been an inspiration to all members who have listened to the introductory remarks of the Minister of Fisheries today as he outlined the work of his department. I remember that on other occasions when he has made the opening speech in connection with his estimates we always felt that he gave a very vivid outline of all the activities that come under his jurisdiction. He has the happy knack of not only giving information but imparting some inspiration with it as well, and certainly his remarks today have been no exception to that rule.

I should like to join with the other members who have extended a welcome back to the Minister of Fisheries. We followed with concern the reports of his accident and illness and we were in hopes that the time would not be too long before he would be back here to

assume his responsibilities in the department and in the house. So I join with the others who welcome him back and wish him continued health. I should be very much interested to hear of his impressions and his observations on his recent trip to Asia. I am sure he gleaned a great deal of valuable information and, when the opportune time presents itself and he does speak on that matter, I am sure it will be of real interest to all members of the house.

I should like to say that I regret that the hon. member for New Westminster is not here today to take part in this debate. He was called away because of death in his family; otherwise he would have been participating on this first occasion in this debate. I am sure his analysis of the situation and his outline of the problems would have been much more detailed than I shall be able to give today, but he may be back in time to participate before the conclusion of the debate.

We have been reminded of the continued and increasing importance of the fishing industry to the economy of Canada. We have learned a great deal since the opening of the session on the importance of the agricultural industry, and we who come from non-wheat-growing areas listened with real interest to those debates. Now we hope that the members from the prairie provinces will bear with us as we discuss some of the problems relevant to the industry that is very vital to us, namely, the fishing industry.

Last fall there was a great deal of concern over the fact that first reports were to the effect that the salmon industry was going to suffer some severe setbacks, but we were encouraged again to read further reports that what had been lost through the depletion of the catch of the sockeye was being made up to quite an extent by the catch of pinks. I shall just refer to a brief article in the Vancouver *Daily Province* of September 22, 1955:

> Big Run on Pinks Aids Salmon Trade.
>
> A huge run of pink salmon at the last moment has saved the British Columbia fishing industry from one of the worst years on record.
>
> Eventual catch of pinks by the end of the season is expected to nearly equal the record catch of one million cases set more than 25 years ago.
>
> A. J. Whitmore, chief fisheries supervisor, said the result has been that this has become "a good average year".

I met some of the fishermen at about the time when their prospects were rather dark. They were very much concerned over the situation and wondered how they were going to be able to carry on operations and finance their domestic programs through the coming year. Another matter of real concern is the damage caused by floods to which the hon. member for Comox-Alberni has referred. This was emphasized in one of the local papers in my own area, the Fraser Valley *Record* of November of last year. In that paper it is stated:

> A preliminary review of potential damage caused by the recent storm and record rainfall in the lower mainland areas shows that many important salmon spawning areas suffered severe losses. Most seriously affected was the recent pink salmon spawning in lower Fraser streams; in several instances the results almost suggest a state of disaster and where the local fisheries officers feel that 10 per cent survival of a large spawning is the best that might be hoped for.

In connection with the spawning areas, I should like to refer to a brief article that was handed to me. It is taken from the New York *Times* of February 28, 1956. It is rather strange that the information as to this particular project should come to me from New York, but no doubt it is because of my inability to keep up with all the reading material that we receive from the different departments. The article is entitled, "Salmon Eggs Aided by Canadian Science". It is a Canadian Press report from Nanaimo, British Columbia, and reads:

> Reduction of the losses of salmon eggs on British Columbia spawning beds is the aim of scientists at the Pacific biological station near here. Field tests on a strip of the Fraser river resulted in reducing mortality rate to 35 per cent from an average of 90 per cent, one scientist reported. Ability of water to flow through gravel and provide oxygen to eggs while removing noxious substances from egg clusters is under close study. The findings are expected to disclose the type of gravel best suited to spawning beds and may lead to creation of artificial spawning beds in streams, the scientist said.

This brief article concludes:

> One expert said the day may come when bulldozers will prepare spawning beds with specified gravel on a gradient sufficient to provide a predetermined flow of water through the gravel.

When the minister concludes the debate on this item perhaps he might refer to that matter and enlarge upon it for our benefit.

We were very happy to hear the minister state today that domestic consumption of fishery products is rising. I remember participating in the debate on another occasion when I referred to the assistance that might be given in the matter of training chefs. I do not know whether or not that has anything to do with the situation. Culinary techniques may be improving, but we are glad that there is an increase in the domestic consumption of fish and this no doubt will reflect itself in the industry.

We are also glad that there are no surpluses on hand. I believe this is very encouraging for the fishing industry. The minister referred to the various international commissions that had been set up and made particular mention of two of them. One of them was the commission set up under the great lakes convention. We were interested

to learn that the Canadian government has already taken action to set the machinery in motion in this respect, and we wish the commission every success as it tackles the problem of the lamprey eels about which we heard so much last session. We hope that its efforts will result in the rehabilitation of the fisheries on the great lakes.

At that time we were privileged to see some films provided under the auspices of the fisheries department. One of them had to do with the lamprey eel, and there was also one on the lobster fishery. I was wondering whether it would not be possible this session to have further films shown with respect to our fisheries and fishery activities. I am sure they would be of tremendous interest and of great benefit to us in getting a better picture of the entire fishing industry. If it is possible we would certainly be happy to see that done.

Reference was also made to the international Pacific salmon commission and to the stringent regulations that have been recommended by way of a conservation program. Whatever steps may be necessary to conserve this vital industry will, I am sure, receive the co-operation of the industry when such steps have definitely been proven to be necessary and their efficiency has been established.

There is one matter to which reference was not made and which was not mentioned by the minister. I have not heard anything recently respecting the efforts to secure an international treaty on pinks. It may be that something has been done in this connection but I have not had any report brought to my attention, or if I have I have forgotten it. Perhaps the minister might refer to that matter and bring us up to date on the efforts that have been made and the negotiations that have been instituted. I believe I remember that last year the minister referred to the fact that now that there has been more or less of an equalization of the catch between the Canadian and United States fisheries the United States might be more willing to agree to such a convention.

I should like to refer to the fisheries on the Fraser river. Our fishermen have had their difficulties in the past, and on different occasions we have had the opportunity of bringing various problems to the attention of the minister and the house. Some of them still continue. An announcement was made to the effect that earlier closures were to be instituted on the Fraser river as a conservation measure and also to safeguard the quality of fish being caught. I understand that this year closure is to go into effect on the 15th of September.

There are two questions I should like to ask the minister in this connection which he might answer a little later in the debate. First of all, I should like to know if the minister is absolutely convinced that the results obtained have justified the action taken with respect to earlier closure on the Fraser above the New Westminster bridge. Second, is the minister contemplating any further changes in these regulations, either by way of modification or to make them even more stringent than at present? In this connection I might say that some of the fishermen are under the impression that this is the last year that fishing in that area is to be permitted. I hope the minister will clarify this matter and also let us know whether any other regulations are being considered in this regard.

Of real concern, of course, to those in the Fraser valley and in other sections as well is the discussion that is at present going on with respect to fishing and power, and to which the minister referred in his address. We all know somewhat of the proposed development of the power potential of the Fraser river. I think all concerned are in agreement on the necessity of protecting the valuable fisheries industry. The minister referred to the harmonious relations existing between all concerned in this matter, the fisheries department, the provincial government and the power industry.

I have the report of the fisheries association of British Columbia the "Facts on Fish", dated January 24, 1956. The first two paragraphs are as follows:

> Recognition that the Fraser river is primarily a salmon stream and should be protected as such was the gratifying conclusion to be drawn from the recent announcement of the formation of Western Development and Power, Limited, a subsidiary of the British Columbia Power Corporation.
>
> The announcement by Dal Grauer, President of British Columbia Power Corporation, declared the two principal functions of the newly formed company would be
>
> "(1) To develop hydroelectric power on the Fraser river to the extent that the maintenance of salmon spawning will allow and on the Columbia river where there is no salmon problem, and
>
> (2) To study industrial opportunities in the areas which can be served with this power and to bring in new industries to use it."
>
> The fishing industry commends Mr. Grauer and his company for their aims and ambitions.

The fourth paragraph in this report is as follows:

> In a public statement following the announcement, Mr. E. L. Harrison, Vice Chairman of the fisheries association declared the B.C. Power Corporation's announcement was of the greatest significance to the future welfare of British Columbia. It put into sharp focus the principle that preservation of the salmon resource for the benefit of all

Canadians is of top priority in the planning for the future by governments and most interested industries, he said.

Then this report refers also to the gift that has been made to the University of British Columbia by the power corporation for research work in this connection. I am reminded, too, of the statement made by the minister that Mr. H. R. MacMillan has made a contribution of $100,000 to the same research program. The Vancouver board of trade, as revealed in this same report from the fisheries association of British Columbia, lends its support to the attitude taken by the various authorities.

On page 2 of the report we find this:

A resolution which reflects the sentiments of the influential Vancouver board of trade was submitted to the provincial government last month and its contents was of great importance to the fishing industry. Following a preamble which pointed up the need for preservation of the fishing industry the resolution stated:

I am just going to read the first three items because they refer specifically to the matter under discussion.

1. The board endorses the policy of the provincial government which is to expand the industrial output of this province, to develop the interior and northern areas and to wisely use and conserve our natural resources for the overall benefit of the people of British Columbia.

2. The board endorses the policy of the provincial government that no hydro developments will be permitted on commercial salmon producing rivers until it is proven that such developments will not adversely affect the salmon fisheries in any serious degree.

3. The board believes that the present and potential water of "non-fish" rivers should be utilized for the development of hydro-power before applications are considered for the use of water for such purpose on fish streams in order that increased hydro-power may be available while scientific work continues on the still unsolved problem of up and down stream migration of salmon past dams.

The view of the provincial government, as referred to by the Minister of Fisheries, was that no licence should be issued until this problem is overcome.

There is one other matter to which I should like to refer. I am just going to refer to it, and I am not going to spend any time enlarging upon it. I should like to mention the suggested diversion of the flood waters of the Columbia river into the Fraser. No doubt we have read the statement made by the chairman of the international Pacific salmon fisheries commission in this connection. Apparently he is very hesitant about placing any approval whatever on such a program. He refers to the different problems which must be overcome such as water temperature, content of water and so on, all of which could be seriously affected by the diversion of glacial waters into the Fraser river. I want to refer to an article in the Vancouver *Province* of Thursday, December 8, 1955, written by Alan Jessup. In this article we have a reference to this proposal, and I quote:

Furthermore, the suggestion of increasing the Fraser's power potential by diverting the head waters of the Columbia into the Fraser, also makes salmon interests shudder.

Fishermen argue that changes in water temperatures in spawning rivers have a direct effect on the survival of fingerlings. They contend that to divert waters on one river into another with subsequent changes in temperature could cause untold damage. It is further suggested that the Columbia, fed from ice fields, may be colder than the Fraser.

Fortunately fishing and power interests have graduated from the initial intolerance each displayed toward the other. Both are anxious to reach a compromise. But on the cold, hard facts of the salmon's life cycle there is not too much room for compromise.

I am sure every safeguard will be taken and this matter will be thoroughly investigated before any action is taken.

I should like to make just a brief reference to the matter of fishermen and their relation to unemployment insurance benefits. I have a letter from the United Fishermen and Allied Workers' Union dated August 11, 1955. I should like to quote one paragraph which has a special reference to this matter.

As you are no doubt aware, our union has been campaigning for a number of years for unemployment insurance to be provided to all commercial fishermen. We were very disturbed to find that parliament did not move more forcibly in the direction of unemployment insurance for fishermen at the last session.

We noted there were promises made to the effect that there would be further investigation and hope expressed in the near future commercial fishermen would obtain coverage under the Unemployment Insurance Act. However, these promises and hopes will not answer the critical problems facing the commercial fishermen of British Columbia this year. That is why we are writing to you at this time and urging you to take immediate action on behalf of the fishermen.

I had the privilege of attending a very large meeting of the fishermen last fall in the city of New Westminster where this was one of the matters under discussion and consideration. At that meeting we were requested to give our support to their proposals and their request for unemployment insurance benefits. In this connection, it was suggested that in order to assure the coverage of fishermen by this act coverage should be extended to all bona fide commercial fishermen whether they were gill netters, seiners or trawlers, and also for the purposes of the act the buyer of the catch should be classified as an employer. I believe it is one of the problems that was mentioned, to designate the employer relationship.

At that meeting a certain survey that was conducted by the unemployment insurance

commission in 1951 was referred to. I have not seen the report, but it was referred to in that meeting. In that survey it was stated that the problem of establishing employer relationship would not be insuperable. It also suggested that the obvious person would be the purchaser of the catch. I just pass these suggestions along from this meeting of the fishermen which I had the privilege to attend. I am sure that in the consideration of this matter the unions would have other suggestions which would be of assistance. I hope the minister will make some reference to this matter when he closes the debate.

These are some of the matters that I wanted to bring to the attention of the minister at this time. I repeat, we are vitally interested in this industry; we know the Minister of Fisheries is also vitally interested in it. His enthusiasm and energy are appreciated, and I trust that in the further continued administration of his department every possible way will be explored to extend the value of this industry in the economy of Canada.

Mr. Carter: Mr. Chairman, before coming to the remarks which I wish to make on this item I should like to associate myself with the sentiments that have been expressed by previous speakers and say how glad I am to see the minister back in his seat again and restored once more to his usual health and vigour. I should like also to compliment him on the clear and concise exposition which he gave us this morning on the introduction of his estimates, and also on his vivid and graphic description of the problem facing his department, particularly on the west coast.

May I also say how pleasant it is to hear the word "fish" once more after sitting continuously for days on end and hearing nothing but wheat, wheat, wheat for the past three weeks.

Mr. Weir: Order.

Mr. Carter: In his remarks this morning the minister indicated that the over-all general picture was a little better than that of last year. This, of course, is not true in my own riding, and I do not think it is true in the over-all picture of my own province. The production was spotty, particularly in the shore fishery, and our production of light salted cod, our traditional product, was about 200,000 quintals lower than the previous year.

The minister expressed gratification at the continued expansion of fresh fish production. Continued expansion, of course, is good only if markets are available to absorb the surplus catch. There is a very great danger of over-production which would result of course in a softening of prices and lower returns to the fishermen.

As far as Newfoundland is concerned, continued expansion of fresh fish production at the expense of salt fish production would be little short of a calamity. In my opinion we have already proceeded too far along this road. The fresh fish industry alone cannot bring maximum prosperity to our Newfoundland fishermen for the simple reason that when the fish are running the fresh fish processing plants cannot handle the amount of fish that the fishermen can catch, and consequently their production is limited to the capacity of the plant.

In Newfoundland, expansion of the fresh and salt fish industry should go hand-in-hand so that the surplus fish which the plants are unable to handle could be put up in salted or pickled form. Our two greatest needs in Newfoundland are expansion of markets and outlets and a greater diversification of our fisheries and fish products so that the fisherman can be employed continuously at his occupation and at the same time be able to sell all the fish that he can produce.

Personally, I am a great believer in the future of the salt fish industry. In spite of the difficulties now being experienced, I believe that from the long-range point of view it can become more stable and less vulnerable than the fresh fish industry. There will always be a market for salt fish because it is an essential food and a valuable source of protein and salt which are essential to the health and nourishment of peoples who live in hot climates.

I believe the time will come when our own traditional markets, our traditional Mediterranean markets, will expand once more to their former proportions. In the very nature of things, as a result of industrial forces such as automation, as well as of other forces, sociological and ideological, the time must come when the people of Spain, Portugal, Italy and Greece will enjoy a much higher standard of living than they do today. That day may be long delayed, but it is certain to come, and when it arrives our fish will then be more competitive in those markets. I also look forward to the day when we shall once more be sending salt fish to Brazil, which at one time took as many as half a million quintals from us. Brazil is a country blessed with tremendous national wealth and the day will come when that wealth will be developed and Brazil will be on her way to economic recovery. Anything that we as a nation can do to hasten that day will be of great benefit to Newfoundland because Brazil can absorb practically our total production of salt fish.

The recovery of the salt cod industry is, of course, dependent upon quality production. I had hoped that the minister would have made some reference to bonus payments for

choice and prime Italian and Spanish cures to encourage quality production for those markets.

The minister referred this morning to the salt rebate which he announced last year. On the whole I believe that the salt rebate has been fairly successful although of course in the minds of fishermen it has not been anything like the cash equivalent of the price support payments or deficiency payments which they had formerly received. There is, however, one aspect of this salt rebate question which is worthy of consideration. Because the amount of salt used in producing heavy salted fish is almost twice as much as that which is used in producing light salted fish, one effect of the rebate has been to encourage the production of heavy salted fish at the expense of the production of light salted fish. It is estimated that possibly we could have sold 200,000 quintals more of light salted fish than what was produced. Light salted fish is, after all, our traditional product. History tells us that the light salted fish in Newfoundland goes back to the days of the Napoleonic wars when the British fleet had blockaded the coast of eastern Europe and supplies of salt were not available. Necessity became the mother of invention and our people developed the process of curing the fish with about half the amount of salt they would normally use. This came to be a very distinctive product of Newfoundland, one that was specially favoured in Mediterranean markets and one that we must endeavour to keep at all costs.

If we are to encourage the production of light salted fish and offset the effect of the present salt rebate we should have a different rate of rebate for light salted fish from that which we have for heavy salted fish. In fact, to equalize the two, the rebate should be doubled or practically 100 per cent on light salted fish. It certainly should not be less than 90 per cent. This would also benefit the fishermen of Nova Scotia because it would prevent an oversupply of heavy salted fish which would tend to soften the prices in the Nova Scotian markets.

While I am speaking about the salt rebate, Mr. Chairman, I should like to point out to the minister that the forms drawn up in connection with this rebate are far too complicated for the ordinary fisherman to cope with; indeed, one would almost require a college degree to be able to fill them out correctly. Some of the fishermen in my own constituency had great difficulty with these forms and they were very resentful of the fact that after having received assistance from the teacher, the priest, or the magistrate or whoever came along, these forms were returned for correction after considerable delay and in some cases the amount of salt that they used was questioned.

In transactions involving the purchase and selling of salt fish there is a great need for much more uniformity in weights and measures than exists at the present time. For example, in Newfoundland 1 hundredweight of fish is 112 pounds. In the maritimes 1 hundredweight of fish is 100 pounds. The Newfoundland fisherman who sells his fish by the hundredweight therefore has a loss of about 12 per cent on his transaction as compared with his counterpart on the mainland. To solve this problem I would suggest that regulations should be drawn up which would compel that fish be sold everywhere by the pound.

There is also a wide discrepancy in the way fish are measured which has a very distinct bearing on the cull. In Newfoundland the length of a fish is measured as the distance between the hollow part of the nape and the small part of the tail. On the mainland the length of the fish is the total over-all length from the peak of the nape to the tip of the tail. Thus an 8-inch fish which would be classed as a small fish in Newfoundland would be considered well over a 12-inch fish on the mainland. Similarly an 18-inch fish which would be considered as medium in Newfoundland would be classed as being over 22 inches in the maritimes, which results in a much greater return due to the difference in cull.

I should also like to see established the practice of selling and using salt by weight instead of by volume. In this way I believe we could develop a much more definite and precise line of distinction between fish classed as heavy salted and that which is called light salted. At the present time, with salt being used by the volume, there is a great deal of overlapping and different degrees of heavy and light salted fish, which is not in the best interests of quality production.

I said a few minutes ago that our greatest needs are more outlets and greater diversification. More imagination is needed in the development of fish products. In addition to the different ways in which salted and pickled fish can be processed I believe more attention should be given to the canning of fish, both fresh and salted. For example, fish cakes can be made either from fresh or salted fish and in each case they are delicious when served with onions and potatoes. I believe a product could be made up which would prove most acceptable in the domestic market. I hope that in time it may be possible to develop a food product made up of a blend of fish proteins and wheat, something which is causing so much trouble for our friends

on the prairies. We would thus be able to kill two birds with one stone.

I was glad to hear the minister refer this morning to the extension of the domestic market and in this connection I should like to pay a tribute to the Canadian National Railways for the lead they have given in the development of the Canex container. Now anyone who travels on the Canadian National Railways can enjoy a meal of delicious fish made possible by the use of this container. I hope that samples of this fish will be made available in our parliamentary restaurant and perhaps the minister could arrange with Mr. Donald Gordon to have samples cooked up in the Union station restaurant and at other stations along the railroad. He might consider also giving out samples to advertise this quality product.

Since the Newfoundland minister is the minister of immigration perhaps samples of Italian cured fish could be made up and presented to Italian immigrants when they come to this country. On second thought, perhaps it would be worth while to ship samples overseas to be distributed to prospective applicants before they even consider coming to this country.

I have said before that our two chief needs are markets and outlets and diversification. I give those two prior position over the means of production because I think it is unbusiness-like to consider improving the means of production until we have found a way to dispose of all we can catch with the means of production we now have.

However, there is considerable interest in the mechanization of our fisheries in Newfoundland and in this connection I should like to point out to the minister the need of a more flexible system of bounties than we now have. Many of my fishermen are not taking advantage of the federal bounty because in order to do so they must build a boat which they consider is far heavier than they need. Being far heavier it would be more expensive to handle, to keep up and maintain, and when the planks became waterlogged after a few years she would be heavier in the water and therefore more difficult to propel. I would suggest that the present system of bounties be revised so that they would be available for much smaller boats than is now the case. I think perhaps there could be two or three classes, perhaps for boats of ten tons and boats of twenty tons.

I should like to say something about the bait service but I shall deal with this matter at greater length when that particular item is before the committee.

I was disappointed this morning when the minister made no reference to unemployment insurance benefits for fishermen. When the prices support item is before the committee I hope to say a few words on that subject and discuss the problem of stabilizing the fisherman's income.

Before I close I should like to say a word about the fisheries development program. I believe that what we need is an over-all program which would embrace, not only Newfoundland but all the Atlantic provinces. I think we are making a big mistake in going about our fisheries development program piecemeal without any correlation or integration. We have plenty of competitors in the world markets without having to spend time and energy competing among ourselves. I believe that if we take this approach to the problem it will be much better in the long run, not only for the fishermen of my province but for all the fishermen of eastern Canada.

Mr. Bell: Mr. Chairman, I should like to refer briefly and generally to the royal commission on Canada's economic prospects and the treatment that it gave to the fisheries field generally. Someone has said that if the Gordon commission did nothing else but get Canadians to imagine what their country will be 20 or 30 years from now it will have justified its existence.

Fisheries were referred to in the excellent brief presented by the fisheries council of Canada, and I understand also that some of the provinces dealt with fisheries in their own briefs. I have not had time to read and study the fisheries council brief in detail, but I should like to refer briefly to four or five points which were mentioned as being of importance. Significantly they are points that have future consideration which I think is most important in the fisheries business today.

The first reference was to immigration. I think it would be an excellent idea to consider the immigration of fishermen to Canada. This could be handled somewhat like the agricultural worker. These men could be induced to come here with their special training and thus add something to our culture. There would be limitations upon what could be done with them. I suppose it would be necessary to insist that they stay in their intended occupation and perhaps some assistance could be given. It is an excellent idea and I do not anticipate that there would be much difficulty with the present minister of immigration, who appreciates the sea and fishermen and all that is connected with them. The minister of immigration has a further interest in the sea now that he is the owner of a small vessel.

In their brief the fisheries council dealt also with power plants constructed on our streams and rivers, and their effects upon the fishing industry. The Minister of Fisheries has gone in considerable detail into the problems out west. We have exactly the same problem on the Saint John river. I shall not mention that, but there is a further problem that is of a slightly different nature. That concerns the power dams that are being discussed now with regard to the bay of Fundy itself. Of course, as has been mentioned in the past, the future of the fishing industry will have to be seriously considered if this dam takes shape in the bay of Fundy.

I was interested to hear the minister mention that out west experiments have been made in training the fish to follow various scents at dams. I do not remember whether the minister said they followed noise or sounds, but I read in the newspaper a short while ago that at Bowdoin college in Maine they have been able to train fish or cause them to follow various musical notes, and they expect that in the future a pied piper going up and down the banks of the river will lead the fish through the various obstacles that may be there.

Third, mention was made in their brief, and rightly so, of federal aid for research. Last night I managed to squeeze in a few remarks regarding fisheries research in the discussion on the research committee. Most of the members took the opportunity to get into the atomic field, but I feel—and I know the minister agrees—that it is very important that federal aid and federal research generally be discussed and stimulated through this new field that is open to us now.

In regard to the Saltonstall-Kennedy hearings in the United States which I mentioned last night, with which I know the minister is quite familiar, it was not the legislation, perhaps, that was important; it was the fact that so many experts attended and so much publicity was given to the hearings when the committee was considering this bill in 1954. I feel that would tie in with future needs, the stimulation and interest that would be given in our research committee if fisheries were on the list of subjects.

I do not wish to say any more on that except to repeat what I said last night, that I realize the minister is research-conscious. I also know that the fisheries department has a very commendable research program now. It has about a half or three quarters of the landed catch invested in research but, after all, we do need more money and better research. The investment will be returned in the future.

[Mr. Bell.]

Fourth, the United States markets were mentioned. I was quite pleased to see the fisheries research council mention this, because we are very much concerned about those markets. I do not want to go into a discussion of tariffs in general here, but I feel that in the maritimes now we have something good in the fish sticks, something the United States market wants. We feel it is a hardship to be taxed so heavily by tariffs that it is almost impossible to get finished sticks into the United States market. We are always going to have an unfavourable balance of trade with the United States, as things look now. Why not take cognizance of that fact and compensate for it by recognizing that we have a product here that the people in the United States want? It could not possibly disrupt any other markets. We want to encourage this industry, and it would help us to be able to export one of the few finished products we shall ever have.

Those are the remarks the fisheries council made. May I just refer briefly to the New Brunswick brief presented to the royal commission on Canada's economic prospects, which dealt briefly with the fishing industry in that province. Some early history was mentioned at the beginning of their brief, and they brought the picture up to the post-war period when they were, quite rightly, hopeful of the future. The capital investment and the general catch has been good since 1945, and they made note of that.

The consumption was mentioned. The consumption of the maritimes generally is quite low. I have noted a discrepancy in their figures. The minister has stated on previous occasions that the maritimes have a consumption of about 15 pounds a year, but the New Brunswick delegation stated in their brief that we have a consumption of up to 35 pounds. I do not know whether that applies only to some cities or whether it is general, but I feel it is important to know who is consuming the fish in Canada.

In Canada generally consumption is about 13 or 14 pounds per year, and much can be done there. Perhaps the minister can comment on that. Of course, the competition maritime fish products meet in the central Canadian markets is tough and always will be tough. We have to fall back on our luxury fish such as oysters, lobsters and the fine maritimes salmon.

Mr. Nowlan: We have good codfish, too.

Mr. Bell: Yes. After the remarks that have been made in a good vein, I must say with regard to the parliamentary restaurant, that there has been a notable upward trend in the quality and quantity of the fish on its menu, and it deserves a great deal of credit for that.

Reference was also made to the biological interest that we have in New Brunswick regarding the fishing industry. I should like to mention the fact that we have a biological station on the east coast at St. Andrews. There is a smaller facility of the fisheries department at Saint John. Recently there have been certain moves and discussions regarding the possible transfer of two departments, I believe, from St. Andrews to Halifax. I appreciate the difficulty the minister has there. I should imagine his experts and those who know what can be accomplished by that concentration have told him that it would be better to move some of the departments to Halifax. I believe he has promised to consider this matter and has said that for the time being these changes will be dropped, but I would suggest to the minister that there is quite a need for biological study in the bay of Fundy. We have the Saltonstall-Kennedy legislation, which I have mentioned. I understand that vessels are being provided out of these funds and are going right into the bay of Fundy itself. It is essential that co-operation should exist, and this interest in the bay of Fundy should be continued.

Then the New Brunswick economic brief dealt with some suggestions which I should like to mention here today for the consideration of the department. First of all it mentioned that our fishing units are small, and there must be a trend toward larger units. That is difficult to accomplish. I understand that there would be difficulties owing to personal connections; but I feel—and I think nearly everybody will agree—that any concentration or centralization is desirable, and the interests of the individuals are probably looked after by the co-operatives and the other small units. In other words we do not have to fear a monopoly in the fishing industry, because these other factors limit any of the dangers of a monopoly.

Conservation has already been dealt with today by the minister himself and by other speakers. In my area there are three species of fish that are worthy of special consideration. The clam has its problems. The green crab is always bothering it; but the new clamdiggers and other inventions will in the future help us to preserve this valuable fish. Lobster is also a delicacy and enjoys quite a good market, but there are many problems connected with it. The lobster industry now has the new steel traps which are a hope for the future.

Conservation measures in the lobster industry are very controversial. I understand that a member of the department recently said, and I was quite pleased to hear him speak out, that the closures in the season have not been proved definitely of value, and there is certainly more room for experimentation there.

As the minister said, the salmon constitute our greatest challenge, and I think he meant that particularly with reference to the east coast because we are faced with a tremendous problem there. I am not sure of my information, but I read a while ago that the New Brunswick regional supervisor had retired and I understand that his replacement still remains in Halifax. While I realize that he may be just as capable an individual, we feel that an on the spot, experienced man who could give attention to the particular requirements of the salmon industry would be desirable.

Having said that much about salmon, I simply wish to say that I believe a strong decision by the department, tough as it may be, is necessary. We are coming to the day when somebody has to be hurt in the protection of our salmon interests down there and, as I say, a strong stand is necessary based on what the experts feel is best for the future of that industry. Otherwise we will just be like any other area that becomes industrialized. It will be the end of the salmon. I read the other day that the Don river in Toronto was once one of the greatest spawning grounds in North America, and I could not help but think that we are really up against time more than anything else as far as the future of this specialized industry is concerned.

Transportation has been mentioned by the hon. member for Digby-Annapolis-Kings, and again I should like to urge consideration of this matter. It was also mentioned in the New Brunswick brief. We need refrigerated cars and attention to these matters so that the competition we meet in the central market will be lessened and fresh fish will be enabled to go into that and other fields.

These are my thoughts, Mr. Chairman. I believe that the briefs and other information given to the Gordon commission are definitely of interest to us. I know that the department has probably taken considerable note of them, particularly the fisheries research council, and these are our hopes for the future. My own personal thoughts are somewhat the same as those of the previous speaker. I think there are little matters as far as the department is concerned that can be looked into and that research, conservation and other problems can be furthered. What we need in the fisheries field today is a little more stimulation and imagination, which the research committee could give. That would create interest

throughout Canada, bring about improvement with respect to our salmon, and the future of the fisheries would be secured.

In this connection I should like to say finally that in my opinion the minister's trip to Russia was certainly stimulating and imaginative. While it may have been costly, it was the kind of advertising I mean because everybody was aware that the minister was over there on matters having to do with fishing and whaling, and the trip had its good effects. We are pleased to see the minister in good health, and look forward to discussing in detail the further items of the estimates.

Mr. Cameron (Nanaimo): Mr. Chairman, I am not going to add to the congratulations that have been showered on the minister. I am sure he has had enough, and at any rate he comes from British Columbia and has merely displayed the ability that we expect from a cabinet minister from British Columbia.

It is interesting to note, Mr. Chairman, that one of the first matters to engage the attention of the first government of Canada was the question of protecting our fisheries from the encroachments of foreign fishermen. I suppose that struggle has gone on to some extent to the present day.

I am glad to take part in this debate because for one thing the Pacific biological station is situated at Departure Bay on the outskirts of Nanaimo, and I should like to pay tribute now to the staff of that station for the excellent work they have been doing.

A very encouraging development lately that I have come across has been the growing appreciation on the part of fishermen of the work of the scientists at the Departure Bay station. It has replaced the former rather sceptical attitude, the attitude of the practical man to the trained professional scientist. That point of view is now changing and I think this is quite largely due to the work of the staff members there. I noted last year that they went to the trouble of establishing a very interesting display at the fall fair in Nanaimo, which attracted a great deal of attention and large crowds. I have also noted the manner in which the staff members have made their services available to various local organizations through lectures on their particular subjects. It is to be hoped that the funds made available to this station will certainly not be decreased and will, if necessary, be increased. As I say, the fact that the fishermen are now realizing the value of the work will give added support to it.

I was relieved and reassured by the statements of the minister with regard to the problem of power versus fish. Whether or not there is a final ultimate solution to the problem I do not know. I do not know if anybody does, but I am always rather reluctant to see sources of food supply endangered for any other purpose whatever. One of the first things we have to do is eat, and to destroy a source of food supply for a possible advantage in another field is, I think, a very shortsighted policy. I was relieved to hear the minister say that those who are interested in the development of power have now reached the conclusion that they must adapt their operations to the maintenance of our large fishing industry on the Pacific coast.

There are one or two matters I want to bring to the minister's attention at this point because I can see no other place in the estimates to do it. During his address this morning he mentioned the fact that the department has been encouraging the fishermen to fish in the deep sea waters, the open waters off the shore. I have had quite a number of discussions with fishermen in my constituency on this question. Whether or not the suspicion is well grounded I do not know, but I am reporting it to the minister. Many of them seem to feel that the department is pursuing a policy intended to result in having more of the fishing conducted on the Pacific coast by the newer type higher-powered vessels than has been the case in the past, and that one of the methods by which the department is seeking to encourage offshore fishing is by imposing ever more rigid closure seasons on the inside waters. Many of the gill netters and the trollers feel that they are in effect going to be squeezed out of the industry.

I realize, of course, as the minister does, that there is and always has been this battle of the gears going on, more efficient methods driving out less efficient methods, but on the other hand I think we have to remember what the minister told us this morning, that for many fishermen it is not merely a means of livelihood but a way of life. In that regard I know that many of them feel, whether or not it is justified, that the department's policies are endangering their continuation in that way of life.

I have also heard some complaints with regard to the effect of the beam trawlers on certain species of fish. I have heard definite complaints that they have had a most destructive effect on the ling cod supply in the enclosed waters and also on the groundfish that my colleague, the hon. member for Comox-Alberni, mentioned earlier today; that these deep trawlers are scraping the bottom of every living thing and that much of it is being destroyed. Again, that is a matter on which one would have to have expert evidence. I am reporting these things to the

minister for his consideration because these are complaints that I have heard.

There is another matter which affects not merely the Department of Fisheries but also the Department of Citizenship and Immigration. I am rather glad the minister is in his seat. This matter concerns the fishing rights of Indians on rivers. I met with the council of the Cowichan band of Indians before I came east to Ottawa. They placed before me their complaint in this regard. I may say they were able to back up their claim with documentary evidence in the form of agreements signed many, many years ago, which provided that they were to be permitted to continue using weirs on the river, particularly on the Cowichan river, as had been their custom from time immemorial.

This right was abrogated, but in return they were to have certain other fishing rights which they claim they have not been granted. Many of them feel they would like now to go back to the old weir system. I tried to persuade them that was an impossible policy and would be a contradiction to any proper system of fisheries conservation. I do suggest, however, that these Indians have a legitimate grievance and there should be some compensation paid them for the forfeiture of these ancient rights which have been prescribed in definite agreements.

Those are the matters I particularly wanted to bring to the minister's attention. I was hoping that we might have heard from him, and perhaps we may hear on a later occasion, some information with regard to his inquiries into the fishing industry in Russia. I believe that would be of great interest to us. I realize it has nothing to do with the administration of his department, but I should like to express the hope he will seize the first opportunity to give us some description of the sort of industry he discovered there and his opinion as to whether or not their methods could be adapted to our own fishing industry.

Mr. Pearkes: I cannot resist the desire to congratulate the minister on his return and restoration to good health. I am certain that his department still needs a guiding hand. There is a great deal of work to be done for the fishery industry of this country. I am sincerely delighted to see him looking so well.

During his speech this morning the minister referred, as I did on February 21, to this all-important question of power versus fish on fish-producing streams in British Columbia. This problem overshadows all other problems in so far as the fishing industry of British Columbia is concerned. The minister called attention to the value of our salmon fisheries industry, $25 million to $50 million, but we are faced with the fact that other industries which will be developed from the power produced on our rivers exceed that amount by many, many times.

As I pointed out previously, only a very small proportion of the horsepower which is available in British Columbia is at present being utilized. There are power-hungry industries crying out and straining every nerve to find additional sources of power. Now, we can either sit down and do nothing about this, or else inaugurate a very active and vigorous program to find out how to pass the fish up and down stream over, around or through these various obstacles. There are diverters with which experiments are being conducted; there are different types of spillways, fishways and so forth. However, the problem has not so far been solved. Whether it is by light, electricity, sound or scent, a solution must be found and we cannot take half measures.

I do not think any reasonable amount of money expended in the search for a solution will be money wasted. Of course we are pleased to hear of the very generous donations which have been made to the University of British Columbia by industry to assist the federal government and the universities in finding the answer to this problem. But again, the federal government cannot sit back and leave it entirely to industry to solve the problem. I believe that under the Fisheries Act the minister has certain powers. Well, it is not the use of prohibitive powers we want, it is positive work that we must have. Having referred to this matter previously, I do not intend to pursue that subject any longer. Again I stress that it is the most important of all the problems with which we are faced.

The minister referred to the closure of San Juan strait, and that is a very serious problem for the fishermen of my constituency on Vancouver island. The fishermen from Vancouver island have been following the policy which the government suggested and have been operating farther and farther out to sea, thereby catching a better quality of fish. Now, why should we surrender that advantage? At first we thought we would have to surrender the right to fish on the Canadian side and have only fishing on the American side. I am glad that has been adjusted. I do not see why the right to catch the best quality of fish should be given up in order that second rate fish may be caught in the straits of Georgia or elsewhere. Surely some other form of conservation could be used. I am quite certain that the fishermen of

Vancouver island are just as anxious to conserve the fish as any other part of the industry, but that they should be asked to carry all the load is something which seems to me unfair.

Then I would raise this question. If you are going to put on this closure on the sockeye, is that going to apply to the other species, the cohoe and the pink? It is extremely difficult to separate those various species because the runs are, in part, simultaneous. A person may be out fishing for pinks and inadvertently catch a spring because the runs overlap. I say, therefore, it is extremely difficult to permit the catching of one type of salmon and prohibit the catching of another type at the same time. I feel that there must be some other way in which conservation can be enforced.

Then I should like to ask whether that is going to apply to the sports fishermen as well. During the fisheries estimates last year I discussed the question of licences. There was an order in council passed which limited the type of individual who could apply for a commercial licence. We are faced with the fact that a good many people take out a licence to supplement their normal means of livelihood by catching fish commercially during a short period of time. They are business and professional men. They take their summer holidays, take out a commercial licence and go fishing. But, then there is the straight sports fisherman. Is he to be barred from fishing in those waters? If so it may have quite a serious effect upon our tourist industry. The attraction of being able to fish during the summertime in those waters brings many people to the district.

When the minister replies I wonder whether he can tell us how many licences were issued last year. According to the order in council which was passed, I believe the licences were limited to Canadian citizens or ex-members of the armed forces, and there had to be a certificate to the effect that they were engaged in catching fish for sale. These were the general qualifications. There were some other exemptions regarding British subjects who had previously been fishing and men who had been helpers.

When the minister replies I wonder whether he can give us information as to the effect of that order in council, whether the number of licences issued has been reduced in any way; whether he has found that there have been any large number of applications from people who were British subjects but not Canadians, and whether the helper clause has been conducive to getting young men to come and enter the fishing business, sons of fishermen and so forth, which is almost a sort of apprentice class.

There is just one other point I wanted to raise. The minister referred in his final sentence to the question of the pay which fishermen receive. He called attention to the fact that fishermen were one of the more poorly paid classes of people. I am going to be unkind for a moment; I am going to tell him to look at the mote in his own eye, because his fishery officers are the poorest paid officers in any of the departments. I happen to know some of these young men who are acting as fishery officers in British Columbia. I know they are extremely conscientious and hard-working. They are out in all kinds of weather and under circumstances which are quite trying, on account of the fact that often they have to get wet, and go through the bush and up and down the streams at all times of the year, sometimes in very severe weather.

I want to call the minister's attention to these figures which I jotted down this morning. I have taken only one of the junior grades, grade III fishery officer. His salary ranges from $3,870 to $4,260. A grade III commissioner in the civil service starts at $4,290. In the Department of Citizenship and Immigration a grade III officer runs from $4,750 to $5,500; whereas a grade III field officer in the Department of Agriculture, which is somewhat similar, starts at $4,110 and goes up to $4,500, and in another branch of the same department from $4,170 to $4,920.

Perhaps the minister would take that up with the civil service commission. I bring to his attention the fact that his own officers are poorly paid. I know they do good work. I speak feelingly in connection with that. Perhaps if he can bring his field officers in line with the field officers of similar grades in other services it might stimulate an increase all through the industry. We have to raise the standard of the fisheries department and the fishery industry, and not have it regarded as a depressed and poorly paid industry. We cannot make progress if we continue to accept that condition.

In his remarks the minister did not give us the conclusion which had been reached in connection with the prolonged meetings which have been going on in Washington or New York regarding the fur seal. We do not seem to have received any answer. I am glad that after all these years it is now recognized that there are others who feel that perhaps there are too many fur seals. I called attention to that some years ago and I did not get very favourable response. I am pleased that this has been noted.

Then, of course, there is the age old question of the 3-mile limit. We want that settled as far as Hecate straits and the waters around the Queen Charlotte islands are concerned. We are told again that there have been commissions sitting on it. We would like to hear the results of the commissions' work rather than the mere fact that they are sitting. We have been told that they have been sitting for at least three years. Surely they must have reached some conclusion.

Mr. Kirk (Shelburne-Yarmouth-Clare): Mr. Chairman, rather than repeat what has been said to the Minister of Fisheries I will just tell him what one of the fishermen said to me when he heard of his accident which took place in Russia, as you know, last summer. He said to me, "Tell him that just at the time when at last we really have someone who is more interested in fisheries than any other minister we ever had—" and I will leave out a few other words— "they have ruined our chances forever". I think that expresses pretty well the feelings of the fishermen of the area, and certainly it expresses the feelings of the members of the house who have spoken today.

I should like to draw the attention of the committee to one fact, and I do it particularly for the benefit of some of my fellow Nova Scotians who, because of their innate modesty—

Mr. Knowles: Hear, hear.

Mr. Kirk (Shelburne-Yarmouth-Clare): —rather hesitate—I am referring to other Nova Scotians—to refer to the amount of fish that is caught in their province or in their constituencies, or the value of the fish. But thanks to a question put on the order paper by the hon. member for Halifax it was drawn to the attention of the house that in the western part of Nova Scotia, in the constituency of Shelburne-Yarmouth-Clare, the constituency in fact which my friend who just made the interjection is very proud of—I understand that although he did not have the honour of being born there his ancestors came from there—more fish are landed than in any other constituency in Nova Scotia, and their landed value in dollars is greater than in any other constituency in Nova Scotia. I thank the hon. member for Halifax for having brought that to the attention of the house.

There are three or four items I should like to mention, which have been mentioned by the Minister of Fisheries. I do not intend to speak at any length, but I would like to mention first of all to what our fishermen generally refer to as the insurance plan, but which I notice the Department of Fisheries refers to as the indemnity plan. They can call it what they like. As far as we are concerned it is an excellent plan, and our people were most appreciative when it was established. It has been very successful as far as I can find out on both coasts, and particularly in my own area in so far as insurance on vessels and boats is concerned, but it has not been so successful in so far as insurance or indemnity on lobster traps is concerned.

I have talked to a great many fishermen. Many of them have taken advantage of it and they have spoken to others about it, but there still seems to be a certain group of fishermen who do not wish to take advantage of such an indemnity plan although I do not understand why. It is an excellent plan, the rates are not high and the protection is worth a great deal. Perhaps the greatest evidence we had of that was at the time of the hurricane in September, 1954, when so many boats were damaged and so many traps lost.

I should like to say to the minister that by and large even those who have not taken advantage of this plan think it is a good one, and I do hope that as time goes on more fishermen will take advantage of this plan.

When the minister brought into the house his bill for fisheries improvement loans he mentioned that it was impossible to do this until such time as such an insurance or indemnity plan had been established. I realize that this bill which was only introduced last June has not been in effect long enough for us to be certain what its effect will be, but here again the reports are most favourable and I hope when the minister replies to the various questions and comments that have been made he will give us some idea of how many fishermen have taken advantage of this act, and what loans have been made. Perhaps he will say whether or not he feels, as we in our area do, that its success is assured and that over a period of two or three years it will mean to the fishermen what the Farm Improvement Loans Act has meant to the farmer after the first two or three years of its operation.

So far as the salt fish rebate is concerned I am very much inclined to agree with the hon. member for Burin-Burgeo. I think the plan has been a good one. I know that our fishermen object to some of the forms that have to be filled in—perhaps I should say the forms which have to be completed—but I have never seen anyone who has a form to complete who has not felt that the form was too long and too complicated. The main point, however, is that the idea was good and

it may well be that there will be a different percentage for the light cured fish.

The question concerning territorial waters, which I have mentioned on several occasions, has been mentioned two or three times today. I do not know that any answer can be given at the present time, but I have done quite a bit of reading on the matter and I must confess that the more I read the more I realize the complications in the problem. I liked the phrase which I read in one of the fisheries bulletins which went something like this: "The legal position in relation to the breadth of territorial waters therefore remains unsatisfactory." I cannot think of a nicer way of expressing what has been the cause of a great disturbance to all of us over a period of years with reference to the 3-mile limit and the 12-mile limit and the bit of water between the 3-mile limit and the 12-mile limit which our trawlers cannot make use of but which United States trawlers can. It is some satisfaction to all of us to know that the matter is being studied, that the Curtis commission has reported that the international law commission recognizes that the practice is not uniform throughout the world, and that some attempt is being made to meet what is a difficult situation.

May I say to the minister that in my constituency there are three or four fish firms that have taken advantage of the bait freezer assistance. They think the plan is an excellent one, and I should like to see more of the smaller fishing plants in the smaller communities take advantage of such a plan. I think they would do so if they realized the amount of good that such a plan can accomplish, the number of fishermen who could make use of it and not have to travel 8, 12 or 15 miles by road or water in order to get their bait. I think there must be some way of simplifying the procedure through which we must go in order to obtain assistance for the establishment of a bait freezer. Perhaps I should not say the procedure should be simplified; I perhaps should have said that it needs to be expedited.

In talking with the fishermen at home during the last few months I have found that more and more they are becoming keenly interested in the protection service, particularly with reference to lobsters. Suggestions are being made by those in the fishing business, as well as the fishermen themselves, that this should be done and that it should be done in order to protect the lobster fisheries and in order to give a greater yield over a period of years.

Not long ago the Minister of Fisheries made an announcement concerning restrictions on the mesh size of the trawl fishing nets, and it has met with general approval. I think over a period of years conservation and protection have been meeting with general approval; and what is more important than anything else, it is meeting with the approval of those who are directly concerned, that is those who are actually doing the fishing themselves.

In conversation with members of the Department of Fisheries and with the minister himself over a period of two or three years, I have pointed out to this department that it is felt on our coast where we have the largest number of small-boat fishermen of any area in Nova Scotia, that we should have at least one larger fishery patrol vessel. I know there is one fairly large vessel which covers all the coast. We have all the smaller vessels and there is no question about the work that is being done by them; but the fishermen feel, particularly at the western end of Nova Scotia, that if we could have one large vessel 125 feet long which could be used more or less as a mother vessel along with the smaller boats in that area, and which could be used in times of emergency when the small fishing boats are broken down, it would be much more effective.

At the present moment it is difficult for the 65-foot patrol boats to get out in very bad weather, and that does seem to be the time when the fishing boats break down. When we look for a navy vessel or a transport vessel they are always so far away from the scene of the emergency that they do not prove very successful at the particular time. I am suggesting that our present plan of air-sea rescue could be improved greatly if we were to have one, two or three 120-foot or 125-foot patrol boats. I think I made it quite clear when speaking directly to the Minister of Fisheries that the people of western Nova Scotia are sure that when he makes that move he will find the most advantageous place for one of these larger vessels will be at the southwestern end of Nova Scotia.

I might ask the minister, while I am directing questions particularly to him, if he will give the house some idea of the success of the metal lobster traps with which the department has been experimenting in my own constituency.

I do not think even these few remarks, Mr. Chairman, should end without making reference to the fact that the Department of Fisheries is always in close touch with the Department of Public Works and the Department of Transport to find out from those departments and from the fishermen themselves their actual needs. For example, we can give assistance in protection and in marketing; we can give assistance and advice in

so far as the construction of boats is concerned, but all that is of little value to us if we do not have the proper wharves and breakwaters and the necessary dredging done in order that the fishermen can set out from those piers and wharves in order to get their catch. The same applies to the Department of Transport, which is concerned with channel marking, lights, fog alarms and so on.

I must say with due appreciation that all the officials of the departments I have just mentioned with whom I have been in contact have not only been most interested in their jobs but have been most courteous. I find in talking with the fishermen that they too appreciate the attitude of these departments. I do not think there is any better evidence of that than the attitude which is apparent from the top of the department right down to the lowest echelon. We hope that same forward looking policy which has been so much in evidence in the last few years will continue during the next few years.

Mr. Bryce: Mr. Chairman, first I should like to congratulate the minister upon being back safely, and hope that he will have good health from now on. I spoke to him when he came back but in case anyone should think I was missing him I do so again.

Perhaps I have no place in a discussion about fish because the fisheries in Manitoba are run by the Manitoba government, but I have always been greatly interested in fishing. I can remember back in 1900 or 1901 when I went out with fishermen on the Firth of Clyde fishing for herring, and I have never lost that desire to go out in a boat every chance I get.

I think the minister knows what I am going to talk about. I have always been interested in the co-operative fund which I know has been a boon and blessing to a lot of fishermen. I have made a visit or two to the east coast and I know the wonderful job that is being done. I notice there is an item in the estimates of $10,000 for British Columbia. I do not begrudge that in the least, but I would like to see some of this education being made available to the fishermen of the prairie provinces. It would be a wonderful thing if arrangements could be made to provide some of these educational facilities, because I know they would make good use of them.

I understood from the minister last year that fishermen's loans are now available to the fishermen of the prairie provinces. When the minister closes this debate I hope he will tell us about the indemnity fund. I know that would be a boon to the fishermen on lake Winnipeg and lake Manitoba. It would be a great help to them if they could have insurance for their boats. As a rule fishermen are not great on insurance, and they have never had the opportunity of getting cheap insurance. I do not know whether this comes from the department, but I presume it would come out of the consolidated revenue fund. I should like to see this extended to the prairies. I believe the problem last year was lack of staff but perhaps that can be overcome.

When the minister rises to speak would he tell us what progress is being made with the film that was being prepared on the northern lakes, where fishing conditions are similar to those on lake Winnipeg. Has the film been completed and will it be available this summer or fall for exhibition purposes?

I may say something more on the particular items, but will conclude now by congratulating the minister upon the paper he and his officials are putting out. It is a good paper, and it is an economical paper because it is printed on both sides.

(Translation):

Mr. Van Horne: Mr. Chairman, I wish to avail myself of this opportunity to speak of an increasingly serious condition, the disappearance of salmon from our rivers, like the Restigouche and its tributaries, along the shores of New Brunswick. Salmon is deserting our rivers and the federal government is not doing anything to remedy the situation. In this case, as in so many instances, it prefers to remain inactive.

I simply ask the government to launch an immediate investigation to determine what steps could be taken to restock the rivers of eastern Canada with salmon.

I also ask the government to take at once whatever means may be necessary to remedy the situation as a result of the inquiry.

Admittedly, past investigations into the economic development of the maritimes were followed by practical and helpful recommendations. There can be no doubt that if the federal government had acted upon the recommendations made as a result of such investigations, people in the maritimes would no longer suffer from the chronic economic depression which is driving our young men away from home and which compels too many of our citizens to live in an unbelievable and pitiable state of poverty unknown elsewhere in the country.

I ask that the investigation into the disappearance of salmon from our shores and

rivers be made with the firm intent to implement without delay resulting recommendations.

Moreover, why is the government penalizing our fishermen, like our farmers and farmhands, by depriving them of the benefits of unemployment insurance? Would the government deny that our fishermen, farmers and bushworkers are among the hardest working people in this country? From early morning until late at night, they spare no effort. The government agrees with that, but has neither the courage nor enough sense of duty to give justice to our fishermen and to our farmers, by extending to them the benefits of unemployment insurance. I urge the government to be fair, honest and loyal towards our fishermen, our farmers and their employees by making them eligible for unemployment insurance benefits.

I also ask the Department of Fisheries to put an end to its policy of discrimination as far as the restocking of lakes and rivers is concerned. I can prove that our good liberals have no trouble at all getting their lakes restocked with trout at no cost while any other group or person has to pay for that service.

I have given the Minister of Fisheries (Mr. Sinclair) some striking examples of that. I simply ask that the restocking of all our lakes, private and otherwise, and of all our rivers, with trout and other fish be carried out at no cost to the owners.

I also ask that a fishway be constructed at Grand Falls to allow the salmon and other fish to go up the Saint John river, which separates the United States and Canada. We all agree that the project would allow salmon to make their way to the top of Grand Falls. The minister himself, in a letter to me, apprized me of the fact that it would only be a matter of stocking the upper reaches of the Saint John river to ensure that the salmon would make their way up the river through this fishway.

I would also ask that a fish-breeding station be established immediately at St. Leonard, New Brunswick, to ensure the restocking of the lakes and rivers in Madawaska.

I hope that the Minister of Fisheries, now that his health is improved, may be able to look after the affairs of his department more actively. I was deeply concerned by the most unfortunate mishap he had during his trip in Russia.

I invite him to make a tour, or even several tours, in my province to see for himself the pitiable and inexcusable conditions his department tolerates in the northern part of New Brunswick.

(*Text*):

I do not wish to repeat in English what I have just said in French, save to bring to the attention of the house that our once great salmon fishing industry in our northern New Brunswick rivers is fast disappearing. I request that an immediate survey be made to determine the causes of the disappearance of our salmon, and I request that the recommendations resulting from this survey be implemented without delay.

In regard to salmon fishing, as in regard to almost everything else in the maritimes, we have been treated with the customary indifference, indolence and apathy so characteristic of the federal government. I ask the government to wake up and recognize the seriousness of this problem, which demands immediate attention and action.

For many a year the salmon fishing seasons on our famous rivers, such as the Restigouche, the Upsalquitch, the Kedgwick, were times of great activity and employment. All these rivers are heavy-laden with tradition, story and song. Many of our professional guides on these rivers enjoy international reputations. These famous rivers have played host to great anglers from all corners of the world. This once great sporting industry faces utter ruin unless action is taken, and taken now.

In this instance, as in so many others, such as in the development of hydroelectric power in New Brunswick, such as in the long overdue restoration of our confederation-guaranteed preferential freight rates, which have been permitted to rise 98 per cent since 1947, as in the building of the Chignecto canal, and as in so many other things, the government gives the impression that it considers us in the maritime provinces to be merely so many people in the way and that it would be happy to be rid of us.

An hon. Member: What nonsense!

An hon. Member: Only some people.

Mr. Van Horne: Let me say this. We are a part of Canada and we will be treated as Canadians. I say again and again and again, give us a square deal or quit. If this government cannot help us in regard to this particular problem, then let it stand aside and let us pass, to claim the heritage for our people that this great country can and will provide, just as soon as we have replaced this tired, old, weary government with the type of progressive government which only the Conservative party can provide.

Mr. Stick: I only have a few moments. I have listened to the tirade from the hon. member for Restigouche-Madawaska, who blames this government for almost everything. When we came into confederation a certain gentleman who was very prominent here in Ottawa said to me, "I hope you do not make the same mistake those in the maritimes make who for the past 80 years, since they joined confederation, have been grousing about it."

Mr. Nowlan: They did not join confederation—

Mr. Stick: May I say to the hon. member that, if he and the people of the maritimes show a little more energy themselves, probably they will get the treatment from Ottawa that they deserve.

Mr. Chairman, may I call it five o'clock?

The Deputy Chairman: It being five o'clock, the house will proceed with the consideration of private and public bills.

Item stands.

Progress reported.

PRIVATE BILLS

The Acting Speaker (Mr. Applewhaite): There are again several divorce bills on the order paper. Is it the wish of hon. members that they all be taken in one motion?

Mr. Knowles: Perhaps we should take them one at a time.

MARTHA BAILLY MAHER

Mr. C. E. Bennett (for Mr. Hunter) moved the second reading of Bill No. 124, for the relief of Martha Bailly Maher.

The Acting Speaker (Mr. Applewhaite): Is it the pleasure of the house to adopt the motion?

Mr. Knowles: On division.

Motion agreed to on division and bill read the second time.

HELENA ROY BUCKLAND

Mr. C. E. Bennett (for Mr. Hunter) moved the second reading of Bill No. 125, for the relief of Helena Roy Buckland.

The Acting Speaker (Mr. Applewhaite): Is it the pleasure of the house to adopt the motion?

Mr. Knowles: On division.

Motion agreed to on division and bill read the second time.

SYBIL VIOLET GODFREY RUSSELL

Mr. C. E. Bennett (for Mr. Hunter) moved the second reading of Bill No. 139, for the relief of Sybil Violet Godfrey Russell.

The Acting Speaker (Mr. Applewhaite): Is it the pleasure of the house to adopt the motion?

Mr. Knowles: On division.

Motion agreed to on division and bill read the second time.

ROSLYN YAGOD KIVENKO BELKIN

Mr. C. E. Bennett (for Mr. Hunter) moved the second reading of Bill No. 141, for the relief of Roslyn Yagod Kivenko Belkin.

The Acting Speaker (Mr. Applewhaite): Is it the pleasure of the house to adopt the motion?

Mr. Knowles: On division.

Motion agreed to on division and bill read the second time.

JESSIE MACFARLANE BOYLE ROBERTS

Mr. C. E. Bennett (for Mr. Hunter) moved the second reading of Bill No. 143, for the relief of Jessie MacFarlane Boyle Roberts.

The Acting Speaker (Mr. Applewhaite): Is it the pleasure of the house to adopt the motion?

Mr. Knowles: On division.

Motion agreed to on division and bill read the second time.

QUEBEC NORTH SHORE AND LABRADOR RAILWAY COMPANY

Mr. Lomer Brisson (Saguenay) moved the second reading of Bill No. 148, respecting Quebec North Shore and Labrador Railway Company.

Mr. Green: Could we have an explanation by the sponsor?

(Translation):

Mr. Brisson: Mr. Speaker—

Mr. Knowles: Hear, hear.

Mr. Brisson: —the Quebec North Shore and Labrador Railway Company was incorporated by an act of parliament in 1947. Under that act it was granted the privilege of building a railway line which was to run from Seven Islands harbour, on the St. Lawrence, to Ungava bay. Since then the said company has built a 355-mile line to Schefferville. I had the opportunity of looking over that line, and I can say that it is equal to any railway line in Canada.

The company has spent $125 million on building that railroad and another amount of $125 million on different facilities for the

mining of iron ore in Ungava. In 1955 the Iron Ore Company was already shipping 8,200,000 tons of ore from Seven Islands harbour and expects to ship 12 million tons in 1957.

The company has not yet completed construction of the railway up to Ungava bay and that is precisely why it is asking the house, by means of this bill, for a further 10 year delay in order to complete its construction.

I therefore propose that this bill be given second reading and that it be referred to the committee on railways, canals and telegraph lines, for consideration. There, members of the house wishing to have more details could obtain all information from the vice-president of the company, when he appears before the committee.

Mr. Green: Thank you very much.

(*Text*):

Mr. Clarence Gillis (Cape Breton South): Mr. Speaker, I listened to the explanation of the hon. member for Saguenay with a great deal of interest but very little comprehension. However, I imagine he would be at the same disadvantage if I addressed the house in my mother tongue, which is Gaelic, so I make no apologies for not understanding him.

Mr. Knowles: Go ahead.

Mr. Gillis: The records of the house will show that in 1947, when the first bill was passed to permit the present company to build a railroad from Seven Islands through to Knob Lake I took objection to it on second reading. My objection was that the development of the natural resources of this country is contingent upon transportation, and as we had already decided to farm out the iron ore resources of part of Newfoundland and the Ungava region to companies largely controlled in the United States I figured at that time that the government of Canada should at least have the Canadian National Railways build the transportation line from Seven Islands up to where it is today around Knob Lake or Schefferville.

In the past our experience has been that while capital can be found by private companies to go into an area where there are natural resources to be exploited, the history of the Canadian National Railways shows very clearly that once the resource is exploited and there is no longer sufficient remuneration for the railroad to show a substantial profit, the squeeze is then on for Canadian National Railways to take over and maintain the service. We have loaded down that system with debt for a good many years, with the result that it was pretty well hamstrung until the government stepped in and accepted the responsibility. The unfortunate part of the whole thing is that when we have to take over a railroad we take over the bonds at par and assume all the financial responsibility as if it was a going concern, rather than letting it go into liquidation in the way that any other legitimate business would be treated in the event of bankruptcy.

Once you establish a railroad it has to be maintained. Service has to be given to the public whether it is profitable or otherwise to do so. The iron ore deposits are a wasting resource. All mining operations are. The ore is taken out and sooner or later the resource is depleted. If this should be the only industry or resource in the area and the time should come that the railroad is no longer profitable, then the C.N.R. will be saddled with its operation.

Part of the road has already been built. Some 355 miles have been completed and put in operation. Iron ore is being taken out, and the railroad is performing the service for which it was intended. But there are still 300 miles of the line to be completed from Knob lake to Ungava bay. Some $123 million has been spent already in developing the line that has been completed and it would appear that it will take that much, if not more, to complete the rest.

Of course exploration has not been completed in the area that the road under consideration now will serve, and no one is sure exactly what will be found. Nevertheless these people want to proceed with the line. In view of the fact that the company already has over 300 miles of line, some considerable mileage of which is in Quebec and some in Labrador, I think the government should still consider while we are discussing the principle of this bill if we should not retain some rights for the Canadian people in that area.

The iron ore deposits are in the hands of United States companies. I have talked to people who have been in the area, and these companies are doing as they like with respect to the maintenance of towns and so forth. In my opinion the future of the North American continent is based on steel, and the sections of this continent that have the basic steel industries in their hands for the foreseeable future are the people who are going to run this North American continent.

Today the Canadian people have not any stake in that part of the country. In view of the fact that 355 miles of that line are owned by United States companies and the whole resource so far as iron ore deposits are concerned is in the hands of United States companies, I think this government should consider the possibility of having the Canadian National Railways complete that end

of the line so as to retain something in that area in the right of the Canadian people.

I am surprised from time to time to hear members of this house, particularly Liberal members—and you hear this outside of this house most frequently—state that they would rather see our resources in the hands of outside interests than in the hands of the Canadian government. I would rather see our resources in the hands of the Canadian government than in the hands of United States financiers who have no responsibility in this country and are not answerable to anyone except to the extent that they are answerable through bills similar to this for the exploitation of our resources, building railroads and so forth.

I have told Liberal members, "You would rather see the resources in the hands of people who are not answerable to you." Is it not better to have transportation which is opening up a part of the country, and the resources, in the hands of men like the Minister of Trade and Commerce, the Minister of Fisheries, the Prime Minister and the Minister of Labour, who once every four years have to give an account of their stewardship to the Canadian people. If they are not doing right the people can do something about it. But when you farm out the resources for 10, 15 or 20 years and they are in the hands of people who are not answerable to the people of this country, then in my judgment you are asking for trouble and sooner or later you are going to get it.

I think transportation, as exemplified by the Canadian National Railways today, where management has to come before a committee of this house to give an account of their financial arrangements and their plans for the future, is the proper kind of development in the field of natural resources. Transportation presupposes the development of a certain section of the country. I think the section of the country about which we are now talking is going to be a very important section. We are pushing into one of our last frontiers in that particular area. I believe at least 50 per cent of the capital invested in the development of the resources and in the construction of the railway should be held by the government of this country, through the Bank of Canada, in the right of the Canadian people. Then the Canadian people would be in a position legally to talk to those to whom we farm out our resources.

I do not intend to belabour this point, because I have put it on the record time and time again. I do feel that before the bill about which we are now talking passes, perhaps some consideration should be given by the house to the advisability of the government having the Canadian National Railways develop that new area that has not been explored as yet. Then we would at least hold a transportation line in that 300 miles in the right of the Canadian people.

Motion agreed to, bill read the second time and referred to the standing committee on railways, canals and telegraph lines.

HYDROCARBONS PIPELINE LIMITED

Mr. G. D. Weaver (Churchill) moved the second reading of Bill No. 151, to incorporate Hydrocarbons Pipeline Limited.

He said: This is a bill, Mr. Speaker, to incorporate Hydrocarbons Pipeline Limited. There is nothing unusual about it. It follows the usual form of bills that have been introduced and passed from time to time in recent years having to do with the transportation of oil or gas in pipe lines. All the first directors of the company are residents of the city of Winnipeg. The head office of the new company will be in Calgary. When the bill is passed the company will come under the provisions of the Pipe Lines Act. This is being promoted by Canadians. Hydrocarbons Limited was incorporated in 1955 by letters patent under the dominion Companies Act.

At the moment this company, that is Canadian Hydrocarbons Limited, is engaged through subsidiaries in the distribution of propane and butane throughout western Canada, and in western Ontario. Canadian Hydrocarbons Limited proposes to take a substantial interest in the equity capital of the new company. The new company is to be formed for the purpose of constructing and operating a products pipe line between the province of Alberta and the city of Winnipeg in Manitoba, with a possible extension to the head of the lakes. The products to be transported will be liquid petroleum gas products such as propane and butane, and it is planned that the line will be of 6 to 8 inches in diameter.

I think it might be of interest to hon. members at this point if I outlined the petroleum scale. You have heard many pipe-line bills discussed in recent years, petroleum pipe lines, natural gas pipe lines, and now here is a company which proposes a pipe line with a much smaller gauge and transporting something a little different. At the lower end of the petroleum scale you have asphalt and heavy petroleum, varying in specific gravities up to the lighter petroleum distillate and so on until you get to kerosene. Then lighter still is gasoline with which everyone is familiar. Not many are familiar with the fact that next on the scale from gasoline is naphtha.

Then you come up to the borderline between liquids and gases, in which field are butane and propane. Finally, the top of the scale is dry, natural gas. The heavier petroleum products, of course, occupy the largest share in the scale and they require—I believe the Interprovincial pipe line is somewhat less than 20 inches and Trans-Canada pipe line about which we have heard so much and which will carry natural gas, is supposed to be 30 to 36 inches.

In the early days of the Turner field their production only went down as far as naphtha. There was no true gasoline taken from that field. Later on, about 1930, they struck the lower part of the scale. What came out of the ground there was a wet gas that had to be put through separating machines and the naphtha was separated out. This naphtha, without any further processing, was used in the same way that you would use gasoline. The farmers in Alberta would go to the wells and buy the naphtha which was separated from the wet gas and use it in their tractors. It was pretty hot for automobiles, but many of them used it in their cars. The remainder, which included the products I am speaking of, butane and propane, and the gas, at that time was burned and wasted in that way.

This gas would be let off through a standby pipe that would be probably 5 or 6 feet high and perhaps 3 inches in diameter, and it looked just like a big bunsen burner. That gas flame showed up like a bunsen burner flame. It shot up just about as high as the top of this chamber, and day after day the flames at nearly every well would be burning away and you could see the reflection of those flares in the sky a hundred miles away. That gas was power, and this was a waste of something that was essential to all industry. Fortunately, as time has gone by that waste no longer takes place. All the gas will be transported to the various parts of the country where it will be put to useful work. This bill takes care of the last field, that field that is, depending on the pressure, either gas or liquid.

I am sure all hon. members have seen the bottles of this product that are shipped all over for use in stoves. It can be used as tractor fuel, except that it is a little bulkier and harder to handle than gasoline, but it acts just as a gasoline. It complements the use of natural gas. It also has to be removed from natural gas before the gas can be shipped. It will be removed at the well head, stored and transported by this small-gauge pipe line to Winnipeg and later to the head of the lakes. It is expected that the line will go roughly via Edmonton, North Battleford, Saskatoon, Brandon and Winnipeg.

The investment required for the construction, together with the gathering system and storage facilities, will be between $30 and $35 million, with an additional expenditure of about $20 million for the possible extension of the line from Winnipeg to Fort William. This latter figure also includes the additional storage facilities.

Hon. members can see that when the last products of the wells' production are put to work it will mean a saving to all the gas and oil companies in two ways. It will mean that the producers will be able to get a better price for their products at the well head, and it will also mean that the processing companies, such as the Trans-Canada Pipe Lines, will be able to get natural gas at a better price at the well head and everyone, both producer and consumer, will benefit from it.

As with all other private bills, this bill will automatically be sent to one of the standing committees, in this case the standing committee on railways, canals and telegraph lines. Competent officials of the company will be present to answer any questions of a technical nature that hon. members might wish to pose.

Mr. M. J. Coldwell (Rosetown-Biggar): Mr. Speaker, just before this bill passes second reading may I say I appreciate the fact that the hon. gentleman has moved the bill because it is standing in his name today, but it is quite a bill. When I look at the powers to be conferred by this particular bill I find they are exceedingly wide and large.

The house has been asked to adopt the principle of this bill without knowing anything about it. When I say "without knowing anything about it" I mean it is the last bill placed at least on my file. It has been before the gentlemen of the other place; I see it was passed by them on February 29, and it reached here I think today. Probably it was placed on my file this morning, so that one has not had even a chance to read the powers that are conferred. If hon. members will look at the powers they will see that they are very wide, very comprehensive and embrace almost anything that a company could wish to do, including the operation of airfields, the building of towns, the control of real estate, the subdivision of property and every other thing that is conceivable.

Personally, before I give consent to the second reading of this bill, Mr. Speaker, I suggest to the hon. member that we should have an opportunity to look it over. I would

like to read, as a matter of fact, what the mover and the hon. gentlemen in the other place had to say about it. This is a bill that contemplates a $35 million project with the possible expenditure of another $20 million. This $55 million project has been brought in this afternoon without any opportunity for hon. members to read the provisions of the bill or at least study the representations that have been made.

It is true that it goes to a standing committee of the house. That is all right; but once we adopt the principle of the bill we give a certain approval to it. Before we are asked to do that, Mr. Speaker, we should at least have some opportunity of looking into the matter. I therefore move the adjournment of the debate so we may do that.

The Acting Speaker (Mr. Applewhaite): Is it the pleasure of the house to adopt the motion?

Mr. Harris: No.

The Acting Speaker (Mr. Applewhaite): Those in favour of the motion will please say yea.

Some hon. Members: Yea.

The Acting Speaker (Mr. Applewhaite): Those opposed to the motion will please say nay.

Some hon. Members: Nay.

The Acting Speaker (Mr. Applewhaite): In my opinion the yeas have it.

On motion of Mr. Coldwell the debate was adjourned.

LILLIAN HANNAH MAXWELL GALLANT

Mr. S. R. Balcom (for Mr. Hunter) moved the second reading of Bill No. 152, for the relief of Lillian Hannah Maxwell Gallant.

Mr. A. M. Nicholson (Mackenzie): Mr. Speaker, just before this bill is read the second time I should say that I have perused the evidence very carefully and I must congratulate Their Honours who have been working on this case. His Honour Senator Gershaw was the chairman of the committee, and he was assisted by Senators Burchill, Cameron and Fergusson.

In this case, as in the case of so many of the divorces which come before us, we find that the excessive use of intoxicating liquor has been one of the main factors in wrecking this family. The petitioner mentioned that during the first year they were married everything went along very well, but her husband was away from town a good deal and started coming home under the influence of liquor and things went from bad to worse, until the case reached us.

I am sure that Their Honours the senators have not the time nor the facilities to do anything about this particular case, but the interest they have taken in examining the witnesses would indicate that this is a matter of real concern, and we share the sympathy of Their Honours the senators who heard the evidence of the petitioner as she appeared before the senate committee.

The Acting Speaker (Mr. Applewhaite): Is it the pleasure of the house to adopt the motion?

Mr. Knowles: On division.

Motion agreed to on division and bill read the second time.

GORDON MACKAY BUTLER

Mr. S. R. Balcom (for Mr. Hunter) moved the second reading of Bill No. 153, for the relief of Gordon MacKay Butler.

The Acting Speaker (Mr. Applewhaite): Is it the pleasure of the house to adopt the motion?

Mr. Knowles: On division.

Motion agreed to on division and bill read the second time.

ELEANOR JODELIS MILIUS

Mr. S. R. Balcom (for Mr. Hunter) moved the second reading of Bill No. 154, for the relief of Eleanor Jodelis Milius.

The Acting Speaker (Mr. Applewhaite): Is it the pleasure of the house to adopt the motion?

Mr. Knowles: On division.

Motion agreed to on division and bill read the second time.

MARIE MADELEINE RACHEL GREGOIRE SHANK

Mr. S. R. Balcom (for Mr. Hunter) moved the second reading of Bill No. 155, for the relief of Marie Madeleine Rachel Gregoire Shank.

The Acting Speaker (Mr. Applewhaite): Is it the pleasure of the house to adopt the motion?

Mr. Knowles: On division.

Motion agreed to on division and bill read the second time.

SHIRLEY MILDRED GLAZERMAN WOLFE

Mr. S. R. Balcom (for Mr. Hunter) moved the second reading of Bill No. 156, for the relief of Shirley Mildred Glazerman Wolfe.

Private Bills

The Acting Speaker (Mr. Applewhaite): Is it the pleasure of the house to adopt the motion?

Mr. Knowles: On division.

Motion agreed to on division and bill read the second time.

DOROTHY JEAN MIDKIFF DESNOYERS

Mr. S. R. Balcom (for Mr. Hunter) moved the second reading of Bill No. 157, for the relief of Dorothy Jean Midkiff Desnoyers.

The Acting Speaker (Mr. Applewhaite): Is it the pleasure of the house to adopt the motion?

Mr. Knowles: On division.

Motion agreed to on division and bill read the second time.

LORINC ORVOS NAGY

Mr. S. R. Balcom (for Mr. Hunter) moved the second reading of Bill No. 158, for the relief of Lorinc Orvos Nagy.

Mr. Erhart Regier (Burnaby-Coquitlam): This is a case in which the husband and wife were married on February 9, 1927. This, Mr. Speaker, was 29 years ago. The husband is now applying for relief from his legal marriage. There is as a result of this marriage one child, a girl who is now 14 years of age. These people came to Canada from Hungary back in 1929 and due to circumstances that we know not they have a considerable amount of difficulty with the English language. That creates rather interesting reading when one reads the evidence as heard by the hon. members of the other place.

In this case the husband charged his wife with having been guilty of adultery. The wife put up a defence on her own behalf. The wife apparently from time to time is an employee of the T. Eaton Company of Canada in Montreal. Her income is $21 a week. Where that woman found the money with which to defend her case, I do not know; she could hardly have saved that money out of the meagre wages she receives. However, I notice that at one stage of the proceedings her attorney was reprimanded because he had not brought with him a number of witnesses as well as the respondent. I should like to submit that this lady who chose to defend herself through the good graces or by the charity of the barrister she engaged was being reprimanded for not having brought witnesses with her, a matter which certainly would have involved a great deal more money.

The reason I raise the money question is because the Minister of Finance challenged—I should not say he challenged, but he cast some slight aspersion upon—the accuracy of statements I was making concerning legal fees which women like this were expected to pay if they chose to defend themselves. Only the other day I had another case called to my attention wherein the other place awarded $75 for the defence and the woman received a bill for one-half of one winter's divorce proceedings of $1,015. How a lady like the one in this case earning $21 a week is supposed to defend herself against the extreme pressure exerted by many people surrounding her in her environment, I do not know.

However, on reading the case I came to the conclusion that this man surely is not worthy of the time and consideration of the parliament of Canada. I am glad that some of the hon. members in the other place sharply reminded his lawyer that even if adultery was proven they were not required to grant a divorce unless the husband could prove that he was coming to them with clean hands. They explained that they were under no obligation to award the divorce.

The husband says in this case that he has been paying this woman $100 a month on the condition that she would remain in the home and not break it up. It is rather significant, Mr. Speaker, that no payments were made until three months after she had left the house.

The wife charges that the husband made an agreement through a notary public offering her $100 a month if she would leave the home. She claims she left the home and then waited for three months for payment without success, and then finally the husband began making payments of $100 a month and he made them to her in such far away places as Toronto. One is very inclined to feel that the woman in this particular at least is telling a true story.

I do not intend to go into it at this time, but there is a huge mass of conflicting evidence. The detectives in the case are employed by Maxim Associates. I believe a year ago I called the attention of the house to this notorious agency that was repeatedly appearing before the other place and was apparently making some good pay on this type of enterprise.

There is another very interesting sidelight. Upon invitation the woman apparently returned from Toronto to again take up residence with her husband. However, when she returned and he came back from work and found her in the house he immediately used his fists upon her. He admitted that he

did this, and said he only wanted the daughter and not the woman. At this point he threw her out of the house and she had to find a room in which to live.

My reason for speaking is that if second reading is granted, this woman—if she is correctly advised and if she has the necessary funds—will apply to our miscellaneous private bills committee for a rehearing of the case. That would mean that some 50 members of this house would have to spend a full day rehearing all the gory details.

I maintain that the husband has not presented a clean enough record to be entitled to take up a full day's time of 50 members of this House of Commons. For that reason I move, seconded by the hon. member for Moose Mountain (Mr. McCullough):

That the word "now" be left out and the words "this day six months hence" be added at the end of the question.

Mr. A. M. Nicholson (Mackenzie): Mr. Speaker, in support of what has been said by my colleague I might mention that the solicitor for the petitioner seemed to assume that if adultery were established the divorce would be granted automatically. At page 22 of the evidence the petitioner's lawyer had this to say:

What has it got to do with this hearing supposing her husband did beat her, the proper thing to do would have been to take a separation action before the court in Montreal.

The Chairman (Senator Ross): If they separated by reason of acts of cruelty on his part, it is a ground for us refusing to grant the divorce.

Later on the counsel had this to say:

Supposing he did beat her once and then she left the house in 1954, would that excuse adultery? We are here before this honourable committee on a question of adultery—on a divorce matter, which is granted on adultery being proven, and unless you can prove to us that our man is not coming here with clean hands, well all right.

I understand that this is the first contested case which has come to our attention this year. The principle was established last year that we did not necessarily have to grant a divorce even though adultery was claimed and proved. I think if this wife had been suing for divorce she would have had no trouble in submitting evidence that would have warranted the other house recommending that a divorce be granted, but her lawyer did not come here with that in mind. However, the questions which he asked the petitioner I think would establish in the minds of most fair-minded people that the husband had no business coming to parliament with his sort of record and taking up the time of members of the Senate and of this house in reviewing the evidence which is available to all those who care to read it.

I hope that our colleagues from the province of Quebec will not merely sit out this particular vote but will support the motion for the six months' hoist.

Hon. W. E. Harris (Minister of Finance): Mr. Speaker, I am a little surprised that my hon. friends of the opposition seem to have discovered a new principle of law.

An hon. Member: What opposition?

Mr. Knowles: There is only one real opposition.

Mr. Harris: I beg your pardon; that some hon. members of the opposition seem to have discovered a new principle of law which has been drawn to the attention of counsel for the applicant in this case. I listened to the hon. member for Mackenzie read portions of the evidence, and as far as I could follow them I have no quarrel with the statements that were made. There has been more than one case in which adultery has been proved on both sides where a divorce has been granted. Because of the nature of the circumstances the divorce was granted. It may well be that hon. members may object that where there is adultery on both sides there should be no divorce granted no matter what the circumstances may be, but I would point out that that is not necessarily the guiding rule.

From what I have heard this afternoon, there were perhaps some unhappy occasions between the two parties in this particular case regardless of the question of adultery. I was not able to follow the hon. member for Burnaby-Coquitlam in his reference to the $100 a month. I understood him to say that the husband had offered the wife this money to remain in the household but had not paid it to her until she had left the household. I am not too familiar with the nature of the difficulty there.

But let us suppose that this is a case where there has been marital trouble, where in fact the husband may be assumed to have been guilty of adultery himself. There is an undoubted right on the part of parliament to reject the application, and no one quarrels with that. But the point made by the hon. member for Mackenzie is that this man should have his application rejected because he seems to have been guilty of some form of misdemeanor, be it adultery or otherwise. I think perhaps the hon. member is being a little premature.

Any citizen of Canada has the right to come here with a petition, and we ought to judge that petition on its merits and not on the merits of the petitioner. I think the hon. member will agree with me that that is so. It may well be that a person guilty

of a misdemeanour will petition this parliament in order to establish his rights, and surely my hon. friend would not suggest that because there has been a misdemeanor the petition should be rejected on that ground alone.

For that reason I wonder if the motion has been made with full consideration of what we are supposed to do in the House of Commons. Are we not supposed to pass on the merits of the petition for divorce after consideration in committee? My understanding always has been that the purpose of second reading—

Mr. Knowles: Would the minister permit a question before he leaves that phase of the matter? I understand that from the minister's point of view a person guilty of a misdemeanor may seek certain rights, but is it not so that in this instance the alleged right which the husband seeks would cause suffering so far as the wife is concerned, in that she would be denied certain moneys to which she is now entitled? Do not both sides of the matter have to be considered?

Mr. Harris: I have never understood that in hearing a petition before parliament we would not hear arguments on both sides. If in this case the wife has a certain right with respect to moneys, as has been suggested, that right no doubt would be taken into account by the committee, and probably was taken into account in the other place. If it was not, I suppose it was because it was not presented to them. If I have not made the answer my hon. friend expected I would be glad if he would try to clarify for me what he is trying to suggest.

Mr. Knowles: Apparently the minister has not caught the point I was trying to make. My point is that in granting the request that has been made my hon. friends who have read this case feel that a wrong would be done to the wife. Does not that have to be taken into consideration by the house before we can entertain the minister's argument about granting a person his alleged rights?

Mr. Harris: I do not suggest that giving second reading here was a decision in favour of the husband with respect to the wife. I do not think anyone has suggested that second reading of the divorce bill does that. In fact I recall that in discussion, the last time we spoke of divorce bills in this house, it was said and repeated, I think, by Mr. Speaker that on second reading what we said in this house was that, assuming that subsequent investigation did in fact establish what was asserted in the petition, then we might grant third reading to a bill. Perhaps I have not expressed it as elegantly as others might do.

Mr. Knowles: That was an unfinished discussion. It would depend on how far one reads citation 769 in Beauchesne's third edition.

Mr. Harris: That may be so, but I have always been given to understand that that is the principle in second reading of private bills brought before the house. If my hon. friend wants to discuss the matter with Mr. Speaker on another occasion, I have no objection to him doing so, but while I have been here I have never thought that I was obliged, after second reading, to approve a private bill in committee, and much less was I committed to giving third reading to it by the mere fact that we had given second reading.

I would not delay the house unduly, but quite apparently the citation does in fact refer to the conditional nature of second reading.

. . . the house, in agreeing to its second reading, affirms the principle of the bill—

The principle, quite obviously, is that a divorce may be granted. It goes on to say:

—conditionally, and subject to the proof of such allegations before the committee.

Mr. Knowles: Read on.

Mr. Harris: I shall be glad to do so:

Where, irrespective of such facts, the principle is objectionable, the house will not consent to the second reading;

I think there has been a confusion in the thinking of hon. members opposite. Perhaps I am doing them an injustice. I know there are members in the house who in principle will not vote for a divorce bill because they disapprove of divorce as such, as a matter of conscience. That is one thing, but what is cited in the rule I have just read is a wholly different thing. What is in the rule here is the principle of granting divorce in itself.

Mr. Knowles: Our concern is over the principle of this bill.

Mr. Harris: The principle of this bill is to grant a divorce if the facts are proven to the committee. It is not a decision in principle that the divorce should be granted. There is a great deal of difference between the two. I think my hon. friends opposite might sometimes just give a little consideration to whether or not they do oppose all divorce bills. I have heard the hon. member for Winnipeg North Centre say "on division" every time we have passed a bill this session and probably on earlier occasions. I have never heard him say in this house that he

was opposed to all divorce. If he is opposed to all divorce, I can understand his action. If he is not opposed to all divorce, I cannot understand it, except on a basis which I would not impute to my hon. friend under any circumstances in this house.

An hon. Member: What, never?

Mr. Knowles: I think the minister knows to what I am registering opposition when I oppose individual divorce bills.

Mr. Pickersgill: Explain for the benefit of the rest of us.

Mr. Knowles: I am sure the Minister of Citizenship and Immigration knows too.

Mr. Sinclair: I do not know.

Mr. Knowles: I am sure the Minister of Fisheries knows too.

Mr. Pickersgill: I can assure you it is a genuine desire for information on my part.

Mr. Harris: Could I give my hon. friend the opportunity merely to answer my question? Is this a matter of principle? Is he by conscience bound to oppose all divorce?

Mr. Knowles: Is the minister not capable of talking for another three minutes?

Mr. Pickersgill: Quite.

Mr. Harris: I am sorry, Mr. Speaker, I am capable of speaking a good deal longer, but there is not very much purpose in speaking on this question.

Mr. Knowles: Since the minister is going to speak anyway, perhaps I can make it clear that every time a divorce comes up we are opposed to the principle of parliament dealing with such divorces.

Mr. Harris: On that point then, Mr. Speaker, I suppose that every member of parliament is entitled to take any view he likes about the British North America Act; that it should not be enforced or it should not be operative in parliament. I take it that my hon. friend—

Mr. Knowles: Does the minister interpret the British North America Act in that respect as having anticipated that parliament would deal with individual divorces?

Mr. Harris: I have not the slightest doubt in the world that that was the thought because, from the day I started practising law, I came here to speak for divorces in the other place, when we had no divorce jurisdiction in the province of Ontario.

Mr. Knowles: I am helping the minister out, because there are only two minutes left.

An hon. Member: They are both breaking the rules.

Mr. Knowles: Is the minister not aware that other lawyers believe that the provision in the British North America Act providing that parliament would make general rules concerning divorce was made with no notion that we would be handling individual divorce cases?

Mr. Stick: I rise on a point of order. I understand that you, Mr. Speaker, are in the chair and we are not in the committee of supply. The hon. gentlemen who have been speaking have been talking back and forth to each other and not addressing the Chair at all.

Mr. Harris: I apologize at once, Mr. Speaker. I agree with my hon. friend from Winnipeg North Centre that there have been two views taken of that section of the British North America Act. I suppose that as a so-called reformer he would like to undo in 1956 something that parliament has been doing for a number of years, just on the general principle that what has been is wrong and therefore it can be improved upon by something he might devise.

Mr. Knowles: Is my hon. friend, as a Liberal, opposed to reform?

Mr. Harris: As a Liberal, I am confident that the Liberal party over the years has been the party of reform and the only effective party of reform in this country.

Mr. Harkness: You deceive yourself.

Mr. Deputy Speaker: May I take this opportunity of saying that I agreed with the point of order raised by the hon. member for Trinity-Conception (Mr. Stick). I also hope that the discussion of the last five or ten minutes will not be taken as a precedent as to relevancy on the second reading of a particular divorce bill.

On motion of Mr. Harris the debate was adjourned.

EXTERNAL AFFAIRS

REFERENCE OF ESTIMATES OF DEPARTMENT TO STANDING COMMITTEE

Hon. W. E. Harris (Minister of Finance) moved:

That items numbered 92 to 115 inclusive of the main estimates 1956-57, be withdrawn from the committee of supply, and referred to the standing

committee on external affairs, saving always the powers of the committee of supply in relation to the voting of public moneys.

Motion agreed to.

PUBLIC ACCOUNTS

REFERENCE TO COMMITTEE OF PUBLIC ACCOUNTS AND AUDITOR GENERAL'S REPORT

Hon. W. E. Harris (Minister of Finance) moved:

That the public accounts, volumes I and II, and the report of the Auditor General of Canada for the fiscal year ended March 31, 1955, be referred to the standing committee on public accounts.

Motion agreed to.

COMMITTEE ON ESTIMATES

REFERENCE OF ESTIMATES OF CERTAIN DEPARTMENTS

Hon. W. E. Harris (Minister of Finance) moved:

That items numbered 179 to 197 inclusive, relating to the Department of Labour; items numbered 244 to 281 inclusive, relating to the Department of National Health and Welfare; items numbered 285 to 291 inclusive, relating to the Department of National Revenue; and items numbered 324 to 327 inclusive, and 528, relating to the Post Office Department, as listed in the main estimates 1956-57, be withdrawn from the committee of supply, and referred to the special committee on estimates, saving always the powers of the committee of supply in relation to the voting of public moneys.

Mr. Fulton: May we ask the minister if he could inform us which of the four departments it is intended to take first in the special committee on estimates?

Mr. Harris: National health and welfare, sir.

Motion agreed to.

BUSINESS OF THE HOUSE

Mr. Harris: On Monday we shall have private members' day, as I think is generally known.

At six o'clock the house adjourned, without question put, pursuant to standing order.

HOUSE OF COMMONS

Monday, March 5, 1956

The house met at 3.30 p.m.

HIS EXCELLENCY GIOVANNI GRONCHI

INCLUSION OF ADDRESS TO BOTH HOUSES OF PARLIAMENT IN PROCEEDINGS OF TODAY

Right Hon. L. S. St. Laurent (Prime Minister): Mr. Speaker, I beg leave to move, seconded by the hon. member for Vancouver-Quadra (Mr. Green):

That the address of His Excellency Giovanni Gronchi, President of the Republic of Italy, delivered before the members of the Senate and of the House of Commons of Canada in the chamber of the House of Commons on March 5, 1956, together with introductory and related speeches, be included in the House of Commons debates and form part of the permanent records of this parliament.

Motion agreed to.

INDIAN ACT

AMENDMENTS WITH RESPECT TO CHANGES IN ADMINISTRATION, LOANS, ETC.

On the order:

Introduction of bills—The Minister of Citizenship and Immigration—Bill intituled: An act to amend the Indian Act.

Mr. Speaker: There is by clerical error a bill intituled "An act to amend the Indian Act" placed on today's order paper, and I have ordered that this entry be deleted because it is based on a resolution which appears under government orders, No. 26, and therefore the bill cannot be introduced until the resolution has been agreed to in committee of the whole, reported and concurred in by the house.

HOUSING

PROVISION FOR CONTRIBUTIONS TO MUNICIPALITIES, HOME LOANS, HOUSING RESEARCH, ETC.

Hon. Jean Lesage (for the Minister of Public Works) moved that the house go into committee at the next sitting to consider the following resolution, which has been recommended to the house by His Excellency:

That it is expedient to introduce a measure for the further improvement of housing and living conditions and for that purpose:

(a) to provide for payments of contributions to municipalities in order to assist in the clearance, replanning, rehabilitation and modernization of blighted areas, up to twenty-five million dollars and such other amounts as may be subsequently authorized;

(b) to increase the amount of a home improvement loan that may be guaranteed under part IV of the National Housing Act, 1954; and to increase the aggregate amount of home improvement loans that may be guaranteed, from one hundred and twenty-five million dollars to two hundred million dollars;

(c) to increase the aggregate amount of all loans in respect of which insurance policies may be issued under part I of the act from two billion dollars to four billion dollars;

(d) to provide five million dollars out of which to pay expenses of Central Mortgage and Housing Corporation incurred in carrying out its responsibilities under part V of the act relating to housing research and community planning;

(e) to provide fifty million dollars for federal-provincial land assembly and housing projects; and

(f) to provide for a number of administrative and other changes deemed necessary for the more efficient administration of the act.

Motion agreed to.

TRANS-CANADA HIGHWAY ACT

AMENDMENT TO PROVIDE FOR HIGHER CONTRIBUTION TO COSTS OF HIGHWAY

Hon. Jean Lesage (for the Minister of Public Works) moved that the house go into committee at the next sitting to consider the following resolution, which has been recommended to the house by His Excellency:

That it is expedient to introduce a measure to amend the Trans-Canada Highway Act to provide that the Minister of Finance may pay a higher contribution for a portion of the highway in a province not exceeding 10 per centum thereof; to extend contributions to costs incurred up to December 31, 1960 and to terminate all contributions on May 31, 1961; and to provide further that the aggregate of all expenditures under the act may be increased to a maximum of two hundred and fifty million dollars.

Motion agreed to.

MOTION FOR PAPERS

PREVAILING RATES EMPLOYEES, RENOUS, N.B., NAVAL STATION

Motion No. 33—**Mr. Knowles:**

For a copy of any surveys, or any reports based thereon, with respect to wages and hours of work of prevailing rates employees on the naval station at Renous, New Brunswick, made at any time since April 1, 1955.

Mr. Gregg: Mr. Speaker, while the employees at this station are employees of the Department of National Defence, nevertheless the surveys and the reports referred to in

the motion are carried out by my department. To make these surveys useful my officials must collect information from employers and trade unions. Heretofore that information has been considered as confidential. In view of the fact that I can assure my hon. friend that a recent survey has received consideration on behalf of these employees, I hope he will drop the motion.

Mr. Speaker: Does the hon. gentleman agree? Is it agreed?

Some hon. Members: Agreed.

CANADIAN NATIONAL RAILWAYS

NEWFOUNDLAND—ARRANGEMENTS TO ABSORB EMPLOYEES LOSING EMPLOYMENT

On the orders of the day:

Mrs. Ellen L. Fairclough (Hamilton West): Mr. Speaker, I should like to direct a question to the Minister of Labour. Will the minister inform the house as to what arrangements, if any, have been made to absorb the employees of the railways in Newfoundland whose job will be jeopardized by the dieselizing of the lines?

Hon. Milton F. Gregg (Minister of Labour): Mr. Speaker, I will consult with my colleague the Minister of Transport (Mr. Marler) and see if an answer can be given to my hon. friend's question.

IMMIGRATION

PROCEDURE TO BE ADOPTED FOLLOWING COURT DECISION

On the orders of the day:

Mr. Colin Cameron (Nanaimo): Mr. Speaker, I should like to direct a question to the Minister of Citizenship and Immigration. In view of the recent decision of the supreme court in the Brent case, would the minister tell the house if it is his intention to suggest amended legislation, or is he issuing orders to his officials to comply with the ruling of the court in their procedures?

Hon. J. W. Pickersgill (Minister of Citizenship and Immigration): Mr. Speaker, I think it goes without saying that the ruling of the court will be complied with and that no further orders will be based upon a regulation which the court has said the governor in council did not have the power to make.

I am giving consideration with the officials of my department to what further course it may be advisable to take in the light of this decision of the court, and until I have had an opportunity of discussing that with my colleagues I shall not be in a position to make any statement to the house.

[Mr. Gregg.]

COMBINES INVESTIGATION ACT

JUTE BAG INDUSTRY—ACTION TO BE TAKEN CONCERNING ALLEGED COMBINE

On the orders of the day:

Mr. H. O. White (Middlesex East): Mr. Speaker, I wish to direct a question to the Minister of Justice. Are any investigations now under way or proposed into an alleged price-fixing arrangement in the jute bag industry in Canada? If so, would the minister report any progress?

Hon. Stuart S. Garson (Minister of Justice): Mr. Speaker, my hon. friend did not give me notice of his question but my reason for not being able to answer it is not because of that fact; it is because of the ruling with which I am sure he, as an hon. member of this house, is familiar, that it is never our practice in any of these combines inquiries to disclose that an investigation is under way until the actual report has been tabled in the house. Our reason for withholding this information is the obvious one, that were we to do otherwise, we would blacken the name of and create a prejudice against people who might be quite innocent.

POST OFFICE DEPARTMENT

REFERENCE TO ADVERTISEMENT IN "FINANCIAL TIMES"

On the orders of the day:

Mr. W. M. Hamilton (Notre Dame de Grace): Mr. Speaker, I have a question for the Prime Minister. In view of the fact that an advertisement of the post office in the *Financial Times* of March 2 this year is signed by Hon. Alcide Cote as Postmaster General, may I ask if he has replaced Hon. Hugues Lapointe as Postmaster General with a more active minister?

Right Hon. L. S. St. Laurent (Prime Minister): Mr. Speaker, I think it should be obvious even to the hon. member that that must be a typographical error.

TRANSPORT

YARMOUTH-BAR HARBOR—INTERRUPTION IN FERRY SERVICE

On the orders of the day:

Mr. T. A. M. Kirk (Shelburne-Yarmouth-Clare): Mr. Speaker, in the absence of the Minister of Transport may I direct a question to his parliamentary assistant and ask him if he can give the house any information concerning the unfortunate interruption of the ferry service by the motor vessel *Bluenose* between Yarmouth, Nova Scotia, and Bar Harbor, Maine?

Mr. L. Langlois (Parliamentary Assistant to the Minister of Transport): Mr. Speaker, I thank the hon. member for having given notice of his intention to ask this question. As it has been reported in the press it is true that the S.S. *Bluenose* suffered some damage to her starboard propeller some time last week after having apparently struck some submerged object or other underwater obstruction whilst manoeuvring in Yarmouth harbour. The ship is now steaming toward Saint John, New Brunswick, where she will be placed in drydock, it is expected, some time tomorrow. The representations made over the week end by the hon. member regarding a substitute service for the service provided by the *Bluenose* before the accident have received the consideration of our department. However, until such time as the damage and the period of lay-up in drydock have been ascertained it will be impossible for the department to consider a substitute service. I can assure my hon. friend that as soon as the nature and extent of the damage have been ascertained the situation will be reviewed.

Mr. G. C. Nowlan (Digby-Annapolis-Kings): May I ask a supplementary question. In view of the fact that the parliamentary assistant has said that this ship will be off service for several months, would it be possible to have a substitute service provided during the period of her convalescence, no matter how long that may be.

Mr. Langlois (Gaspe): I did not say what the hon. member has attributed to me. I said that it was pretty hard, until we know the exact length of time the ship is going to be in drydock, to make arrangements for a substitute service. Indeed, if that period is to be relatively short, as I hope it will be, we may not even have time to make arrangements for a substitute service before the ship is back in operation.

THE BUDGET

INQUIRY AS TO PROBABLE DATE OF PRESENTATION

On the orders of the day:

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, may I direct a question to the Minister of Finance. Does the minister intend to bring down his budget on Tuesday, March 20? If not, what date has he chosen?

Hon. W. E. Harris (Minister of Finance): The answer to the first and second question is that I have not chosen any date yet.

Private Bills

PIPE LINES

TRANS-CANADA PIPE LINES—INQUIRY AS TO COMPARATIVE COSTS OF GAS

On the orders of the day:

Mr. J. A. Byrne (Kootenay East): Mr. Speaker, I should like to direct a question to the right hon. Minister of Trade and Commerce, or in his absence to the parliamentary assistant. Would he care to comment on the newspaper reports over the week end that gas from Western Canada to be distributed by Trans-Canada Pipe Lines Limited will cost 60 cents per thousand cubic feet to Sudbury consumers while Chicago consumers will receive gas for 34 cents?

Mr. J. H. Dickey (Parliamentary Assistant to the Minister of Defence Production): In the absence of the minister I would not be prepared to comment, and I shall take the question as notice.

NATIONAL DEFENCE

ROCKY POINT MAGAZINE—TRAVELLING PAY OF EMPLOYEES

On the orders of the day:

Mr. G. R. Pearkes (Esquimalt-Saanich): Mr. Speaker, may I direct a question to the Minister of National Defence. When the minister was out on the west coast was his attention drawn to a complaint by employees of the Rocky Point magazine regarding their travelling pay and, if so, was he able to reach a satisfactory solution?

Hon. R. O. Campney (Minister of National Defence): Mr. Speaker, the answer to the first question is no, which also takes care of the second question.

Mr. Pearkes: I will be pleased to bring it to the minister's attention now.

PRIVATE BILLS

HYDROCARBONS PIPELINE LIMITED

The house resumed, from Friday, March 2, consideration of the motion of Mr. Weaver for the second reading of Bill No. 151, to incorporate Hydrocarbons Pipeline Limited.

Mr. M. J. Coldwell (Rosetown-Biggar): Mr. Speaker, when this bill was before the house on Friday evening I objected to its being read a second time largely because hon. members had not had sufficient time to look over the bill which was presented to us on Friday morning and moved for second reading on Friday evening. I wanted to consult the debates on this bill in the other place, and I have now done so. I find that there was very little debate there, in fact

I think the hon. member who introduced the bill into this house gave us more information regarding the company than I could find in the Senate *Hansard*. I understand that it went before a committee there and was investigated to some extent but no report of the proceedings was taken.

I am not objecting to this bill going before the appropriate committee, but I think when a bill is placed before us we should have sufficient time to find out what it is all about. I did not know what it was all about on Friday evening and that is why I moved the adjournment of the debate. I am not offering any objection now because when the bill is before our committee the members of that committee may question the people who are promoting it and we shall have more information when it comes back to the house than we have at the present time.

I have seen some references in the public press, of course, to the bill and to the proposal. I find that in this case, as in Trans-Canada Pipe Lines, there are some United States interests connected with it. That is something that members of the committee should inquire into very carefully because, I think, we have to do much more to safeguard resources of this description for the Canadian people than we have been doing in the past.

Motion agreed to, bill read the second time and referred to the standing committee on railways, canals and telegraph lines.

LORINC ORVOS NAGY

The house resumed, from Friday, March 2, consideration of the motion of Mr. Hunter for the second reading of Bill No. 158, for the relief of Lorinc Orvos Nagy.

Mr. Harris: Stand.

Mr. Speaker: Has there been an agreement that this debate is not to be resumed today? You just cannot stand the resumption of a debate unless it is by unanimous consent. Is it agreed?

Some hon. Members: No.

Hon. W. E. Harris (Minister of Finance): Mr. Speaker, I should have risen a few moments ago to agree with the leader of the C.C.F. party that there was no reason why he should not have had the adjournment of the debate the other night on the private bill with respect to the pipe lines, because I did not realize at the time that he had only received the bill that morning. I agree that one should have time to give consideration to the terms of the bill before one should go forward with it. That, of course, is by way of parenthesis at the moment. I did not want to hold up the second reading.

[Mr. Coldwell.]

In this particular case, sir, I have on more than one occasion said "Stand" to a debate on a private bill and I have always had unanimous consent to it, as I recall. However, I take it that is not the purpose of the hon. gentlemen opposite, though I might respectfully point out that they do not have the carriage of the bill nor do they have the adjournment. It happens that I have a budget meeting going on at the moment. It has been going on for something over two hours, and I was hoping to be able to continue with that immediately the orders of the day were over. However, if they do not feel they could grant that—

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, all the minister needs to do is to move the adjournment of the debate. I think Your Honour's comment was perfectly right that this debate is in a different category than bills that have not been proceeded with at all. As far as I am concerned, if the minister wishes to move the adjournment of the debate on this bill, we are agreeable.

Mr. Harris: I do so move, sir.

Mr. Speaker: Is the motion for adjournment agreed to?

Some hon. Members: Agreed.

Motion (Mr. Harris) agreed to and debate adjourned.

INDUSTRY

MOTION URGING ALL POSSIBLE EFFORTS TO PROMOTE DECENTRALIZATION

Mr. W. G. Dinsdale (Brandon-Souris) moved:

That, in the opinion of this house, the government should consider the advisability of taking advantage of every possible opportunity to promote the decentralization of industry, particularly with reference to defence industry, thereby,

(1) helping to reverse the trend towards concentration of population in large metropolitan areas with the accompanying social evils;

(2) encouraging a more equitable distribution of population and development right across Canada, and

(3) assuring the strategic dispersal of vital war industries in the interests of national defence.

He said: Mr. Speaker, it is three years since I first placed this motion on the order paper. In previous years we have exhausted the number of days allotted to private members before arriving at this particular resolution. But in the interval I have been interested to notice that a good many of the resolutions that are placed before this house from time to time by members in various parties relate to the implications of the resolution that we have before us today, that is, the desirability of decentralization

and diversification of industry for the general well-being of national development in Canada.

At the very outset, Mr. Speaker, I would emphasize that I am speaking not only in terms of decentralization as between regions. I also wish to emphasize, right at the beginning, that there is a desirability of decentralization and diversification within the various provinces themselves. I raise that point because in this country it is quite obvious that there is the general tendency for the few large urban centres that we have—the half dozen or so large metropolitan communities—to become increasingly larger at the expense of the smaller communities across the country.

Even though we have been delayed somewhat in time in coming to this resolution, it seems to me that it has become more important as time goes on. Since the war we have been passing through a post-war boom. All the experts in economics are now quite free in acknowledging that we have passed through this transition period of post-war adjustment which, from the standpoint of Canada, might be described as an economic honeymoon. We have been placed in an extremely favourable position in relation to the economies of other countries. But that honeymoon is now past and the fact of the situation is that we must face the economic realities if we are to continue to progress as we have during recent years.

Unfortunately, during the transition period the tendency for industry to concentrate in the two central provinces and in the larger urban areas has been intensified rather than decreased and today we are faced with a situation—to sum it up in general terms—where 60 per cent of the population, 80 per cent of the manufacturing and 50 per cent of the total mineral production is concentrated in the provinces of Ontario and Quebec. We therefore have a concentration of industry, population and—what is perhaps more important so far as our activities in this house are concerned—political power. The latter is perhaps one of the most significant features of this trend that has been noted.

The Gordon commission has been meeting across Canada within recent months and I have followed with a great deal of interest the press summaries of the various briefs presented to this important commission. In every province—particularly those in the maritimes and in the prairie region—without exception the briefs have emphasized the necessity of carrying out the principle of the resolution we have before us. For example, the brief from the Manitoba government expressed the need in these terms:

> Decentralization of industry is essential to a sound national economy and it is imperative that steps be taken and programs developed which will ensure the spreading out of industries throughout Canada.

That is the official viewpoint of the Manitoba government. I was especially interested to note the other day the brief presented by the joint labour groups, namely the Canadian Congress of Labour and the Trades and Labour Congress. They went right back to first principles so far as this equitable economic development of Canada is concerned, and they did so in the following words:

> Nothing in the confederation debates is clearer than that the Fathers intended and expected that confederation should benefit all parts of the new nation. They would have repudiated instantly and with horror any idea that one province, one region or a group of provinces or regions should progress while the others stood still or fell back.

That is taking us right back to the first principles upon which this country was established. Perhaps from time to time it is necessary to go back to consider all the complex factors that were involved at the time of confederation. Certainly it was the vision of Sir John A. Macdonald and Georges Cartier that they would build a country strong and free from the Atlantic to the Pacific. To this end they adopted a national policy to help build a strong and democratic economy to accomplish what was considered in their day an almost impossible task, and even in the light of contemporary engineering capacity is still regarded as a tremendous engineering feat, the construction of the Canadian Pacific right through to the west coast.

Since that time we have tended to lose sight of the problems Canada was up against in the launching of this federal experiment. More recently in Canadian public affairs the necessity for development on a national scale has become somewhat obscured by the game of regional politics. The west has been played off against the east, and as a result of economic frustration the west has gone splintering off in various political directions. I think, Mr. Speaker, that the time has come, as has been underlined by the recent activities of the Gordon commission, for a serious re-appraisal of economic policies in the light of Canada's great position and power as a nation in world affairs. If it was important at the beginning of Canada's national existence to the development of this unique experiment in sovereignty in the northern part of the North American continent, it is even more imperative now in view of the much more important position that Canada occupies in international affairs.

Decentralization of Industry

It will be noted, Mr. Speaker, that the resolution is divided into three parts. It refers not only to the general principle of decentralization, but also we have enlarged on that particular aspect and have broken it down into three of the more important facets that are involved in carrying out this principle. First of all, there is the tendency for industry and population to concentrate in small regional areas, particularly urban areas. This has been one of the most characteristic phenomena of the last 100 years in the western world. We have seen the development of the factory system, which emerged out of the industrial revolution. Because of the large amount of labour involved in factory industry there has been an influx of workers, an influx of population from the rural areas to the urban areas, and that is a process that has continued up until recent times. Out of this concentration of population in urban areas there has been a growth in social problems which, down through the past hundred years, it has been almost impossible to cope with by government on all levels as well as by private agencies of various kinds. Indeed, there is a general feeling that uncontrolled urbanization, unplanned urbanization, has given rise to some of the extreme social problems that we are still confronted with in Canada as well as in other western countries.

Characteristic of urban growth has been the emergence of slums, blighted areas, within the heart of our large industrial cities. In Canada we obviously are still trying to cope with the problem of slums in the big cities, because just the other day we had placed before the house by the Minister of Public Works (Mr. Winters) some further attempts to deal with the problem of slum control, and that is merely the physical manifestation of the problem. The underlying social difficulties are much more damaging to our way of life.

In the city we have people operating largely on an impersonal level. The close relationship of the neighbourhood, which is characteristic of the rural social situation, breaks down and there tends to be an atomization of individuals. They live as separate entities in many cases. This can be demonstrated by the indices relating to symptoms of social disorganization. In many instances human beings become less than human. In the big, booming, pushing confusion of our large urban areas there is a tendency for values to change. Individuals crowded together in this situation, instead of finding satisfaction on the spiritual and intellectual level, tend to be largely motivated by physical impulses. There is all sorts of evidence in this regard; the rapid increase in commercial recreation; the rapid increase in the consumption of alcoholic beverages. The hon. member for Winnipeg North Centre (Mr. Knowles) had some returns tabled within recent days, as recorded on page 1738 of *Hansard*, which indicated—I do not have to give the figures—that the consumption of alcoholic beverages has increased at a very rapid rate within recent years. I venture to say that had we the information we would see that the consumption in urban areas is much above that in rural areas. In other words, people wishing to escape from the confusion of the city do so by means of the cup that cheers.

Related to this problem of the effect upon individuals in the modern, big, booming cities, we have the impact upon the basic social institutions of the nation—and the nation is strong only in so far as the basic social institutions are strong—the family, the church, the school, and so forth. I merely emphasize the family in passing because it is the most important. No society can be great, no society can progress unless the dignity and the integrity of the family are preserved.

In the city we are constantly hearing about the problem of juvenile delinquency, the increasing divorce rate and similar evidences of family disorganization of that kind. The family in the cities, in many instances, instead of being the healing place of the soul, as it should be, the place where personality is moulded, the place where we acquire our values, the place where conscience is formed; instead of performing these functions adequately, tends to become a place of tension, disorganization and confusion. Evidence of that development again could be put forward in the statistics relating to mental illness in this country. I had a return from the Department of National Health and Welfare in this regard just a few days ago. It is dated Tuesday, February 14, 1956. It shows that in every province in Canada between the years 1950 and 1954 the admissions to our mental institutions have doubled. In 1950, the total was 16,411; in 1954, it was 29,351.

Just to carry this particular line of thought one step farther, the country has been shocked within recent weeks—in fact, we have had the subject raised in this house on several occasions by hon. members from the communities affected—by the upsurge in sexual deviation, another problem in the disorganized and confused atmosphere of the big urban community. Values become so distorted that we wonder today what is normal in the city. We rub shoulders with criminal types, with bohemian types of all kinds, and

we are completely oblivious of the fact because personalities remain largely anonymous, unknown to one another. We are completely unaware who the man right next to us might be.

When these tragedies occur there is a great outcry and particularly when the psychopath—because these persons are nothing more or less than psychopathic people who, because of the confusion in the home and so forth, have not developed a social conscience that can conform with the values of our way of life—when the psychopath, indulging in deviation, commits murder attempting to hide his deed and satisfy his twisted conscience. These are all evidences of the problem and I say it is one of the difficulties that underlie the problem, this tendency for population to concentrate in large cities; because of the very nature of industrial development the populations concentrate in large urban areas.

The government has moved slowly to do something about the social problems emerging out of this concentration. Up until 1929 very little attention was paid to the social difficulties that followed in the wake of the industrial revolution. One of the pioneers in this regard was the late Mr. Woodsworth, who was active in the city of Winnipeg during world war I when the industrial revolution first hit that community, and it was aggravated by the rapid influx of waves of immigrants, with the resultant social difficulties. That situation made its impression upon the social conscience of Mr. Woodsworth, who was a clergyman, and he became very active in agitating for reforms. In fact, I believe he was one of the pioneers in founding the social welfare council in Canada. He also later became involved in politics, as is well known, and I do not know whether or not that was a good thing for one of his convictions.

It was in 1929 with the onset of the depression that the government of Canada was forced to take action. Prior to that time we had acted according to the tenets of laissez-faire liberalism and hoped everything would adjust and regulate itself automatically for the best of all concerned. The first comprehensive attempt to cope with the problem was the new deal of Mr. R. B. Bennett passed in 1935 which did not get very far because of the vagaries of politics in this country at that time. Since that time these new measures have found their way to the statute books of Canada.

I want to make this point. All that governments can do both on the federal and provincial level is try to absorb the shocks by means of grants in aid, whether they be to government departments or to individuals within the country. Governments can only make transfer payments. Much of our government's social welfare legislation has been in the form of financial welfare trying to bolster the economic situation of the individual caught in the disorganization of a changing society. That helps of course but it does not get down to the basic problem. The basic problem is the disorganization of our social institutions and the effect this has on personality and the development of citizens of mature stature in a democratic society.

The institutions that are really doing the job and are really getting to the heart of the matter are the churches. The basic function of the church is to provide meaning and motivation to the people in a particular nation. For example, in order to restore stability to the family unit we have heard this theme for the past few years, "The family that prays together stays together". That seems to me to go to the heart of this problem that has grown out of urban concentration in Canada.

We also have all sorts of new professions, social workers, psychiatrists, criminologists and marriage counsellors. We also have the work of the labour unions, chambers of commerce and farm organizations which endeavour to cope with the underlying difficulty. It is quite significant too that the entire service club movement has emerged within the last 30 or 40 years in this country. These are the groups which are getting down to the basic problem.

One association which I think is really coming to the heart of the matter so far as the approach we are taking in this resolution is concerned, and that is the decentralization of industry, is the Canadian community planning association which has an active organization right across the country in every province. The Canadian community planning association is dealing with the problem of concentration in urban areas. It is endeavouring to plan communities in such a way that the social and traffic problems which are so besetting us today will be solved. We also have our own national capital plan which will attempt to unravel some of the mistakes of the past over the course of the next few decades.

One of the essential measures of the community planning association is to restore the neighbourhood atmosphere wherein people can recover the feeling of belonging to a closely knit group of fellow humans. It is trying to meet the need and the desire that

lies deep in every one of us to have a rose-covered garden by developing green belt areas where a neighbourhood atmosphere can be restored.

The emphasis of all these voluntary groups is towards the decentralization and relocation of the Canadian population on a more equitable basis throughout these wide open spaces to which we have fallen heir. If we are going to accomplish that it means, of course, that there must be a decentralization of industry. Manufacturing, secondary industry, is a large user of labour today. If we are going to be able to restore our urban communities it means that we have to get the population out of the centre of these communities. We have to scatter industry on a much broader geographic basis.

I admit at once that everybody talks about this. As I look through the resolutions that are still before the house I find they relate themselves very closely to this subject. The subject of decentralization is almost like the subject of the weather; everybody talks about it but no one does anything to change it. I will admit further that it is an extremely difficult project to carry out particularly where you have to go against the laws of economics such as the tendency for industries to congregate together for the sake of mutual support.

At this point I wish to go back to the first principle I enunciated at the outset of my remarks. In the past we had to fly in the face of economic reality for the sake in the first instance of establishing this country and later for preserving its sovereign strength as a nation in the midst of challenging circumstances, originally from south of the border, and then later involvement in two world wars. Therefore I suggest that something more than economic factors must be considered if we are going to deal with this problem.

I do not intend to merely talk about this subject; I have one or two specific suggestions which over the long-run period will, I feel, help to bring about a greater degree of decentralization of industry. The tragedy is that the trend has all been in the other direction. Instead of the situation becoming easier through the passing of time the concentration has been aggravated in recent years. That is perhaps why we in less populous regions make so much noise about it in this house. If there were evident a reversal of the trend, perhaps we would be mollified to a certain extent.

First of all, and I merely mention this subject in passing, it has become obvious during recent weeks in this house that western agriculture is in a declining position. We had some three weeks' discussion on this subject so I do not feel obliged to reiterate the points that were made. Because of the revolution that is taking place in agriculture through mechanization and other causes, we see a condition of a declining population in rural areas. For example, in 1921 40 per cent of the labour force in Manitoba was occupied in agriculture whereas in 1951 only 24 per cent of the total labour force in that province was occupied in agriculture. That means that our ability to absorb and employ people in agriculture is declining.

That is one reason why the prairie regions, with the great spaces they possesss, have not been able to participate fully in the immigration program which has been carried on since the war. A most disappointing percentage of the newcomers have settled on the prairies. The only way we can provide employment for newcomers is to have an opportunity to industrialize. The only way we can prevent this migration from the rural areas which is still going on is to have a diversified industrial program on the prairies. We must consider the position of agriculture as the first point.

Second, our trade policy is a most important factor in this difficulty. In Canada we have been shifting from a United Kingdom to a United States market emphasis. This has resulted in the United States having more and more influence and control in our Canadian economy. Because of the high level of development of the United States economy and the great market they provide for mass raw material exports, we find we have been exporting an astounding amount of newsprint, minerals and metals in recent years. I do not have to harp on this point because it is obvious that if we are going to emerge into a position of strength population-wise, and in financial and industrial terms that our position in world affairs calls for, we must get away from economic primitivism and move more and more toward exerting some of that vision which was exerted at the time of confederation. We must get into secondary industrial activities. If we want to express it in original terms, we must apply some of this national policy to western Canada and the maritimes—they will speak for themselves later on I trust—that was applied by Sir John Macdonald to central Canada at the beginning of the life of this nation.

Then there is the matter of our petroleum industry and the possibility of decentralization. We are going to be considering in this house shortly an important measure, the trans-Canada pipeline, and it is hoped, speaking from the western viewpoint, that gas will be sold at the minimum economic

price. Unless that is done we are not going to enjoy the special benefits which the possession of this form of energy should give to western Canada. Unfortunately many important projects have been delayed because of the delay in getting under way with this activity.

There is a taxation feature which should be considered by the federal government. Canadian oil companies are at a disadvantage in competing with United States firms in the Canadian oil field because of the less advantageous position our Canada oil people occupy in comparison with their United States counterparts. The United States government gives special incentives to such an extent that much of the United States risk capital operating in the Canadian financial market is made up of money saved because of the absence of excessive taxation. That government also gives a more generous allowance for depletion.

From another standpoint transportation is important to the prairie west, particularly to Manitoba, because we stand mid-way. Under the topic of transportation I should like to include briefly the subject of highways. The federal government is moving slowly and cautiously into the area of highway construction by its grants in aid to the trans-Canada highway. That is a beginning which we in Manitoba feel will have to go much further. Considering the matter from the standpoint of national defence requirements, the opportunities offered by the tourist industry and the provision of access to our natural resources, it seems to us that the federal government will have to take a much more active hand in developing a suitable highway system than it has up to the present time. It has large returns from excise taxes on automobiles, petroleum products and so forth and that money could not be put to better use than in the development of a highway system in the interests of the general development of Canada.

We are interested also in the St. Lawrence seaway and we give hearty approval to that measure because it is going to improve the transportation situation in Canada. But if the people of Manitoba as well as those in other sections of the prairies are to benefit, certain factors will have to be kept in mind. It must be remembered that the terminal facilities at the head of the lakes are not adequate to deal with the larger vessels which will be coming through. The harbour facilities will have to be deepened. Unless these problems are taken care of in the over-all planning of the St. Lawrence seaway there will be no direct benefit to the prairie economy.

The highway from the head of the lakes to Winnipeg is going to be totally inadequate according to present standards as soon as the seaway is put through and the head of the lakes becomes the busy seaport it is anticipated it will be.

Then there is the problem of air transportation in the west. On a per capita basis the people of Manitoba use air transport more than the people of any other area in Canada. We were disappointed when the application of Canadian Pacific Air Lines for a through freight franchise was turned down. That works to the disadvantage of Manitoba. We were disappointed also when Winnipeg, which now has an international airport, was denied the privilege of passenger rights on the line operating from the west coast to Europe.

These are just indications of the subtle discrimination that exists against the less populous regions. They are also evidence of the active role which the federal government can play. It is just the accumulation of these small things which will have to be overcome.

We are always interested in freight rates, and in this connection I should like to mention a little difficulty which we ran into in my own constituency. In-transit or stopover rates are not permitted in Canada, other than on grain. We have a little industry employing some 60 people operating in a small town fabricating west coast lumber into laminated structures. Because of the present freight differential they find it most difficult to compete in the eastern markets. A stopover privilege or an in-transit rate would make it possible to fabricate that lumber and ship it without any undue freight disadvantage. The industry would then be competitive in the east. Fortunately they are able to use truck transportation to save the situation at the moment, but if the pressure is continued this industry will be forced out of business.

Mr. Deputy Speaker: I am sorry to have to interrupt the hon. member but I am obliged to advise him that his time has expired.

Mr. Dinsdale: Could I have one more sentence, sir?

Mr. Deputy Speaker: Has the hon. gentleman leave to proceed?

Some hon. Members: Agreed.

Mr. Dinsdale: Thank you very much for your courtesy in this regard, Mr. Speaker. I wish to raise two more points and I shall do so as briefly as I can. I have emphasized the role that government might play in this process and I would just like to mention the role that private industry is playing.

The movement of branch plants to the west is already well under way. There is a large

enough domestic market now to provide sufficient business for an economic location of a branch plant of the larger plants with headquarters in eastern Canada. I should like to give one illustration of outstanding success in this regard. We have a very thriving electrical manufacturing industry that was established by four young engineers who broke away from the larger industrial firms, General Electric, Westinghouse, Great Northern and so forth. They saw an opportunity for industrial development on the prairies in the rural electrification that is going on. They pooled their talents, developed an excellent transformer and a mechanical circuit breaker, and succeeded in capturing the prairie market for rural electrification, and they are also well into the Ontario market and making headway in the Quebec market.

That is the sort of thing that is taking place from the standpoint of private initiative and private enterprise, and we should not ignore that particular development. It should be encouraged in every way, so far as tax concessions are concerned. It is difficult to get equity capital for these small firms. We must always keep in mind that over 75 per cent of Canadian employing firms have less than 15 employees, and they are the nucleus around which the other industrial developments will grow that will make Canada the strong nation industrially and economically we know she is destined to be.

Now for one final point. This is the matter of defence industries. I could not let this subject pass entirely without mentioning that recently General Worthington, who is in charge of civil defence, has been talking about the need for decentralized population. He makes the claim that no city should have more than 50,000 people. He goes further and says that it should not have more than 50,000 people even if there were no threat from hydrogen bomb warfare. His reasoning is that once a city grows beyond that level it runs into the social problems that I outlined at the outset of my remarks.

The field of defence industries is one area where government should participate directly, and certainly with a great deal more enthusiasm than it has in any period of emergency. During world war II we in the west were depopulated because of the rush of the population to the factories in the east. It has been little better during the Korean episode. We find most of our defence industries, in fact all of them, concentrated in the two large urban areas of Montreal and Toronto. I do not have to labour that point. It is obvious in this day of the threat of the H-bomb that if we are going to have any reasonable and sensible defence program at all, basic to that program should be the decentralization and the relocation of at least our defence industries.

Mr. A. R. Lusby (Cumberland): I have listened with great interest to the remarks of the hon. member for Brandon-Souris, the sponsor of this resolution. I think he mentioned that possibly members from the maritimes might wish to speak on behalf of their part of the country, and that is my intention to a considerable extent.

It is my thought that in this debate we should consider first the general principle of the decentralization of Canadian industry, which is, I think, the core of the whole resolution; and then the possibilities of a practical application of such a principle, particularly with regard to the nature and scope of the role that the federal government might properly and legitimately play in relation thereto. It seems to me that in connection with the first object of our consideration, which of course is more general, there are not as many difficulties arising as in the case of the second.

The term "decentralization of industry" may, I suppose, be applied either to a national decentralization—that is, a wider distribution of industry generally over the whole country—or merely to, shall I say, an intra-provincial decentralization, which would be a spreading of industry within the boundaries of one particular province. If I understand the hon. member for Brandon-Souris correctly, he said that his remarks were intended to be applicable, to some extent at least, to both types of decentralization. In this regard, I note that in the present resolution there are listed three objectives, as I might call them. Summarizing them somewhat, I would say that these are indicated as being attainable through a decentralization of industry: a less pronounced metropolitan concentration of people; a more equitable distribution of population and development right across Canada; and, third, a strategic dispersal of war industries.

In view of the vast geographical expanse of the provinces where Canadian industry is, and where, unfortunately, it shows all too many signs of continuing to be, largely concentrated, a merely intra-provincial decentralization of industry might constitute at least a partial step toward the attainment of the first and third objectives mentioned in the resolution. That is not so, however, as regards the second objective; for any results in that quarter, only a national decentralization would be effective.

It might be pointed out, in so far as an intraprovincial decentralization is concerned, this government and this parliament would,

it seems to me, have comparatively little concern with that type. Only national decentralization, as I have defined it, is really entitled to the status of a national problem. I take it this resolution is intended to apply, at least primarily, to such national decentralization. In any event, I should like to say that in so far as my own remarks are concerned, when I refer hereafter to the decentralization of industry, I am thinking in terms of what I have called national decentralization, such as would affect the dominion as a whole and not merely one or two provinces.

It must be recognized that there are many difficulties in the way of the practical application of any wide principle of decentralization, but I am convinced that the principle itself is sound and that the possibilities of promoting it by such measures as may properly lie within the federal purview are worthy of the earnest consideration of this house as offering a prospect of materially advancing the best interests of Canada as a nation. It is my opinion that a widespread decentralization of industry would promote the best interests of every part of this country. I am aware that such an opinion is likely to be received with an attitude of extreme scepticism and possibly one of downright rejection by those provinces that industrially are now pre-eminently the favoured ones of Canada.

That attitude, to my mind, is an utterly mistaken one, though perhaps not unnatural, and of that attitude I intend to speak more in a few minutes. But, in so far as decentralization means spreading industry into those provinces which now are industrially deficient, I think there is no shadow of doubt whatever that it would be of incalculable benefit to such areas. To no region in Canada is that statement more applicable, in my opinion, than it is to the maritimes. For there the lack of sound industrial development and opportunity has, I maintain, been one of the greatest handicaps, if not the greatest, which have plagued us ever since the beginning of this century.

I turn again to the three objectives—as I say, I think that is the proper term—which are listed in the present resolution. I do not think any lengthy argument is necessary to emphasize the inherent value of all three. Let us examine the first. Let us consider whether it is in any way desirable to have vast numbers of people gathered in restricted, crowded, built-up areas, and whether any real justification remains—if it ever existed—for the growth of cities which number their population in the millions.

I think perhaps I am treading on safe ground there because I do not believe either Montreal or Toronto has yet reached a plural figure. Whatever the answers may have been in the past, I think that today two things, namely traffic and the hydrogen bomb, provide two new and cogent negatives to the question; and that is apart altogether from the high incidence of crime, misery and general human degradation which so often characterizes the life of a really huge city.

In distant ages national populations tended to swarm together in walled cities for the purpose of making more effective defence against their enemies. In more recent centuries heavy concentrations of population in cities tended to simplify the problems of communication and transport which then existed. Of course for countries such as England or Japan, it may well be that the huge city is the inevitable and inescapable result of limited land areas and dense populations. But not one of these factors applies with any force to the Canada of today. In proportion as our cities are overgrown, they simply present the choicer targets for the hydrogen bomb in time of war and an increasingly hopeless congestion of traffic in time of peace. Certainly in this half continent of ours there is no lack of space for population dispersal if it is considered desirable that the population shall be more widely scattered.

I agree with those who advocate—and this is not a new idea—as the ideal for the conditions under which modern man must live, a wider dispersal of urban populations into comparatively scattered towns and cities of no more than moderate size. That is the ideal. In so far as the present resolution tends to encourage some progress toward that goal, I think it has a worthy aim.

Some of the observations I have just made apply with equal force to the third objective mentioned in the resolution. The destruction of a substantial proportion of our total population by means of a single hydrogen bomb dropped upon one huge city would, even apart from all humanitarian considerations, have a disastrous effect upon our will and our capacity to carry on war. Equally crippling would be the eradication of any large segment of our defence production facilities in a similar sudden manner. In case of war industries located near our cities, as unfortunately many of them are today, one single bomb might serve a dual purpose.

We are told that the duration of any future total war will be necessarily brief, a matter of a few weeks at most. No doubt that is correct. Nonetheless, any shreds of victory will certainly accrue to that side which has best preserved its people and its war-making potential. The wider dispersal of our defence

industries as well as our population would be a tangible step toward that end.

All matters pertaining to national defence are, of course, of vital concern to every Canadian from the Atlantic to the Pacific. In the maritimes, however, we face no problems, at least no serious ones, concerning the undue concentration of either people or industry. On the contrary, our lack of industrial development, with the attendant lack of opportunity for our young people, has led to a steady and continuing hemorrhage of our population to other parts of the continent. In earlier days this was chiefly to the United States, so that it is said there are more persons of Nova Scotian descent in New England than there are in their own ancestral province. In more recent times the flow has been rather toward central Canada, a change of direction which undoubtedly is beneficial in so far as Canada is concerned, but which nonetheless has upon the maritimes very much the same effect, with far too slow a rate of growth in our population.

We need more population in the maritimes, Mr. Speaker. We need more population fully as much as does any other quarter of the dominion. To achieve it I think we must have a greater development of our industrial potential. Certainly in the foreseeable future there is not the slightest danger, in so far as our part of the country is concerned, that any steps which may be taken toward attainment of these ends will lead to an undue concentration of either people or industry, such as that which already obtains in certain areas of central Canada. If anyone here should doubt that statement, all I can do is assure him that we are certainly willing to incur the risk with the utmost equanimity.

The third objective mentioned in the present resolution is to a marked degree a concomitant or perhaps one might call it a component of the broader second objective. Bearing that point in mind, I would say that from the economic point of view it is the latter which is the most significant factor of the whole resolution in so far as my part of the country is concerned. A more equitable distribution of population and development right across Canada, to use the words of the resolution, would fill a real and long-felt need in the maritime provinces. In view of what I have said, Mr. Speaker, I find myself, both from a regional and from a national standpoint, in accord with the principle of decentralization of industry as it is advocated in the present resolution.

At the outset, however, I said that after considering the principle itself, I thought we should then consider the possibilities of its practical application, particularly with regard to the nature and scope of the role which the federal government might legitimately and feasibly play in relation thereto.

I think it is clear that that role, even at its widest, must be subject to marked limitations. It is the aim of the federal government, of course, to maintain at all times a national economic climate favourable to industrial development and expansion. That is an aim, I may add, which has been attended with a remarkable degree of success. But the attainment of that aim does not in itself contribute to the decentralization of industry. It certainly is essential for industrial development and expansion anywhere but, as I say, it does not lead to the decentralization of industry. In fact it may perhaps be fairly said that because of the success with which that aim of general prosperity has been pursued in this country there exists today this tremendous concentration of industry in central Canada.

The federal government, of course, cannot meddle in fields of purely provincial jurisdiction or, under our system of free enterprise, compel the location of private industries in any specified area. Private industry will go where it appears most profitable to go. Consequently it seems to me that all efforts toward decentralization of industry must be directed to make it profitable for industry either to remain in or to migrate to the area which it is wished to build up.

Now, what does lie within the possible purview of the federal authority in this regard? I was interested in reading a few days ago, Mr. Speaker, of the representations with respect to the maritimes contained in the recent joint submissions of the trades and labour congress of Canada and the Canadian congress of labour to the royal commission on Canada's economic prospects, the Gordon commission. In view of the fact that maritime prosperity has advanced at a slower rate than has that of other parts of the country, the submission urged that the maritimes should be regarded as a special area. The submission did not confine itself only to the area of the maritimes, but it did urge that the martimes be regarded as a special area. They urged that, to bring industry to the workers, governments at all levels—this was not directed merely to the federal government—should adopt a four-point program consisting of tax concessions and other financial inducements to firms to remain in or go to special areas; the channeling of purchases, particularly by the dominion government, to firms in special areas; further assistance t industries through the subsidization of freight rates; and the subsidization power production in special areas.

I might add here incidentally that a number of people laid stress upon hydro and atomic power plants, but my own feeling is that the real future of electrical development in Nova Scotia is and should be directed to the development of electrical power by coal. I think that would be in the best interests of the maritime provinces. However, those four points were made in the brief. I think whatever difficulties of practical application there may be with regard to any of these proposals, they are all deserving of careful study. I hope this government will give long and sympathetic consideration to any recommendations which may emanate from the royal commission with respect to that four-point program to which I referred.

It must not be forgotten, of course, that this government is not entirely a stranger by any means to actions designed to build up industry in certain areas. For instance, this government extends a very large measure of assistance to our Nova Scotia coal industry through a system of subventions. Then again special freight rates designed to benefit maritime industry have long been in effect.

It seems to me that one promising avenue of new federal assistance to build up maritime industries, thereby furthering national decentralization of industry, might lie in the allotment of government contracts, on a preferential regional basis, to firms in the maritimes in this particular instance. In my own town of Amherst we have several industries which from time to time have been successful in obtaining orders from the federal government, particularly the Department of Defence Production. The employment thus provided has been of inestimable value, not only to the town but to the surrounding county. I believe that is an example of encouragement which can be given to industry, and to the people in an area doing vital defence work, in areas other than the highly industrialized part of the country. I might say that in particular we have in the town of Amherst a plant engaged in the manufacture of aircraft components. It seems to me that of all the industries perhaps the aircraft industry is as vital as any and is one that should be as highly decentralized as is feasible. I think a further allocation of orders to the Amherst plant, as well as further assistance in the provision of any facilities required to undertake additional government work, would be a most desirable move in the interests of such decentralization.

Some little time back, Mr. Speaker, I mentioned that a policy of decentralization of industry was unlikely to receive wholehearted support from those provinces which are now industrially in a favoured position. I think I said also that that was a natural but mistaken attitude. My statement was really prompted by a certain cartoon which recently appeared in the Halifax *Chronicle-Herald*, the work of Chambers, the inimitable staff artist of that paper. I have the cartoon here but I am not going to ask leave to table it. It is entitled, "The Geese that feed the Goose that lays the Golden Eggs", and has reference to a reported remark of the premier of Ontario that his province was Canada's goose. I understand that remark was more in connection with the fiscal arrangements which are the subject of discussion at the moment. However, I think the attitude there displayed goes much farther. The cartoon portrays our general feeling in the maritimes that Ontario lays no golden eggs for us, but on the contrary she draws from us the wherewithal to lay the eggs for herself.

If I may use another barnyard simile, I should like to say that the attitude embodied in the remark of the premier of Ontario tends to confirm a maritime suspicion that central Canada is not only the heartland but also the hogland of Canada. The latter term has no reference to the production of hogs on the farms of central Canada. It refers to those in high provincial places. That is the feeling. I believe, Mr. Speaker, that such remarks as that of the premier of Ontario give a foundation for this feeling in the less favoured parts of the country. I submit also that the attitude shown by such a remark, and it is undoubtedly shared by many others in the favoured provinces, is not only erroneous but shortsighted because in the long run the prosperity of any province of Canada is undoubtedly dependent upon a reasonable degree of prosperity being achieved throughout the rest of the country. I believe that, in turn, calls for a wider distribution of both people and industry across the whole country.

During this session there has been some talk of the possible federal role in matters of education. I should like to suggest that it might not be amiss if the federal government could devote a little effort towards attempting to educate the provincial leaders of central Canada to the truth of what I have just said.

Mr. Clarence Gillis (Cape Breton South): I welcome the opportunity to take part in this debate, Mr. Speaker. I have moved similar resolutions in this house a good many times in the past, but provoked very little discussion. I am glad to join with the prairie member from Brandon, who has now moved this resolution indicating that other parts

of the country than the maritimes are vitally interested in the question of the decentralization of industry.

Now, to determine the value of any matter that may come before the house, one has to ask this question. Are we justified in taking up the time of the house on the subject under discussion? I think all the evidence that is available on the need for both provincial and federal governments taking a look at the concentration of industry in central Canada justifies the time we will spend on this resolution. The hon. member for Brandon-Souris (Mr. Dinsdale) pointed out that at the present time with respect to the dollar value of manufacturing, in the distribution and concentration of industry there is some 82 per cent in the two central provinces of Quebec and Ontario. The rest of the country has to struggle along on the other 18 per cent. I think that statement alone should bring to the mind of the federal government the necessity of taking another look at the matter of a better distribution of industry and manufacturing in order to give the country a more balanced economy, and as suggested, make for better protection in the event of war.

These considerations alone justify our discussing this resolution. The hon. member for Brandon-Souris put figures on the record, which he obtained from recent statistics, which show that 51·7 per cent of manufacturing and distribution is in the province of Ontario, and 30·3 per cent in the province of Quebec. That shows a trend toward more centralization, because as I have looked at these figures over the years I have found that they have been going up all the time. The last time I looked at them they were around 80 per cent; today they are 82 per cent.

Instead of anyone paying any attention to past discussions in the house on the question of decentralization, we find that the trend is still continuing. It may not be accidental, because this is the pattern that was followed in the United States. The United States built the centre and left the east and the west pretty much as hewers of wood and drawers of water. That influence has crept into Canada, and we are getting exactly the same development.

I want to make it quite clear that so far as the maritime members are concerned we are not suggesting there is nothing we can do for ourselves. At one time the Minister of Trade and Commerce said he was getting tired of listening to maritime members asking for handouts. We are not asking for handouts, Mr. Speaker, and I shall prove that before I finish. I would like to impress on the minds of hon. members that what we are asking is to establish adequate industry, to have a balanced economy and to have some control over our finances. We had that in the maritime provinces before confederation.

If hon. members will take a look at a survey made by the late Norman Rogers, an economic survey of the maritimes over the past 60 years now, they will find that over 50 major industries were siphoned off from the maritimes and located in either Quebec or Ontario, many of them during my own lifetime. The late Mr. Rogers enumerated those industries. Some of them were quite large. There were cheese factories; a skate factory at Dartmouth; a sugar refinery. A nut and bolt factory, a very large one, was moved from Trenton to Montreal as late as 1946. A plate mill at Sydney was closed down and the business taken away to Ojibway, Ontario. There were many other industries. There was a fertilizer plant which was moved from Sydney; there were shoe factories. At least 50 very substantial industries, including the control of seven banks that were established before confederation, staffed and managed by Nova Scotians and maritimers, who used their capital to finance industry and agriculture in the maritime provinces, were moved away. We are not asking the government to bring back all of these industries, but I believe that many of those that were siphoned off and centralized in the central provinces could have made just as great a contribution to the economy of Canada in the maritimes as they can in either Ontario or Quebec.

As I said before, the pattern we are following in Canada is the United States pattern. There may be a good reason for it. Maybe the United States industrialists, United States capital and citizens of the United States on Canadian boards of directors have influence enough on these boards to guide industry and investment to that part of the country to which they want it to go.

I took a look at an old file in my office just for fun today. I picked out a brief that was presented by the United Mine Workers of America to the government back in 1948. It had to do with the Nova Scotia steel industry, and on the point I am just making, the influence of Americans on Canadian corporations, they had this to say:

> There is now ample evidence indicating that American interests control or may shortly control Dosco's huge steel and coal empire.
>
> The American Securities Corporation, 25 Broad street, New York, has acquired since its formation in 1946, what we understand is a substantial interest in Dominion Steel and Coal Corporation Limited.

Mr. Charles G. Terry, president of American Securities Corporation and chairman of the finance committee of Colorado Fuel and Iron Corporation, is now a director of Dosco. Mr. R. J. Wysor, past president of Republic Steel Corporation, has also received a similar appointment to Dosco's board.

It would not seem accidental that American financial and industrial interests are acquiring an interest in one of Canada's great steel plants and deposits of high quality coal. Rather would it appear quite certain that the discovery and development of the enormously rich Quebec-Labrador iron ore field would be a fully adequate reason for American interests wishing to acquire control of Nova Scotia's two major industries, viz, steel and coal.

That statement was made back in 1948. I am not stating that they have control of the corporation, but I am suggesting that men as influential and as experienced in the fields of steel, coal and iron development could be a very large factor in influencing the development of coal, steel and iron in that particular part of the country, and maybe in other industries or in most industries in Canada. We are getting that kind of influence from the United States in developing the kind of centralized economy that we have in Canada at the present time because that is the pattern they follow in the United States.

It is rather hard to answer the question why there has not been a greater expansion of our basic steel plant. There has been some modernization, but it is creating unemployment. The investment in plant for turning out steel has increased very little since 1939. There is talk of another expansion in the production of raw steel, but I could never understand why there was not some fabrication down there. I could never understand why a modern plate mill that employed 600 people, that was established by the federal government during the war, was allowed to go out of production when 90 per cent of our steel plate is imported from the United States. That mill just petered out and was sold. I could never understand why, as recommended by the McKee report—that big company came in there and made an examination of the economy—a tin plate industry was not built around basic steel. They have the steel, the iron ore, the limestone and the coal all within a few miles of where raw steel is turned out.

I think this is a charge that no member of the government can refute. During the war, the government was pouring millions of dollars into corporations for the purpose of developing industry that was to be used for war purposes, and I could never understand why in view of the development of a munitions industry and other kinds of plants that were used for war purposes, and particularly since we started to supply NATO, all the equipment for war is produced in Ontario and then dragged across the country and shipped over to Europe, when the shortest route to Europe is from Sydney where this equipment could be produced much cheaper than in any other part of Canada, in my judgment. You can charge the government with inequality in that respect. The government was making money available to corporations that went into war production.

As I said before, the maritimes are not pleading or begging; they are merely making a claim which they can justify. The maritimes sacrificed considerably for confederation, but we want to build a nation and we are not squawking about that. We recognize our geographic limitations; we recognize our limitations under the British North America Act, and we accept the things that have to be done.

However, we do not feel there is any justification for the fact that over the years the industries that were established in that part of the country were siphoned off and concentrated in two of the Canadian provinces, which has given them an 82 per cent monopoly in the fields of manufacturing and distribution. I do not think any government which permits that kind of development is nationally minded and is thinking of the best interests of all the people in the country.

Let me call as a witness a good Nova Scotian Liberal who in my judgment is a very good man. A dominion-provincial agricultural conference was held in Ottawa in December, 1955, and a gentleman by the name of Waldo Walsh, the deputy minister of agriculture for the province of Nova Scotia, attended that conference and spoke on the subject of centralization and the lack of national planning as far as the federal government is concerned. I think he makes it quite clear that maritime farmers are entitled to some rebate in view of the tariff and the amount of money they spend protecting central Canadian manufacturers. Mr. Walsh had this to say:

Mr. F. Waldo Walsh, Nova Scotia's deputy minister of agriculture, did the Canadian nation a real service last week. At the dominion-provincial agricultural conference in Ottawa he let out some of the economic facts of life as encountered by citizens of these Atlantic provinces.

The print is rather poor.

He intimated what this province paid, and pays yearly, to make the Canadian confederacy possible.

He is referring to Nova Scotia.

Referring to centralized industry in Ontario, he said:

"The great cities where the industry is, where the cars are made, are there because this country has established a system of tariffs and protection that enables them to be there.

Decentralization of Industry

Last year Nova Scotia bought approximately $23,000,000 worth of cars from three firms, all within 60 miles of Toronto. The tariff on them made us in Nova Scotia pay $2,865,000 more than if we bought the cars in the United States without a tariff.

We bought in that same year $100,000,000 worth of goods from Ontario. Tariff and protection on that cost us about $10,000,000."

Mr. Walsh's presentation has since received the public support of his minister, the Hon. Colin Chisholm. While there are men of Mr. Walsh's forthrightness in our public life there may be a slight chance of rescuing the Atlantic region from a state of economic vassalage.

There is a man for whom I have a great deal of respect. In very clear language Mr. Walsh tells us about the amount of money we are paying for protection of the Canadian manufacturers in so far as automobiles are concerned, and he quotes figures concerning the amount of money the province of Nova Scotia is paying to protect central Canadian manufacturers. It must be remembered that these figures relate to only one province. Similar statistics could also be produced for the provinces of Newfoundland, New Brunswick and Prince Edward Island. You could perhaps multiply by three the figures Mr. Walsh gave, and you would have a much better understanding of the amount of money the maritime provinces are paying to protect central Canadian manufacturers. I think that places us in the position where hon. members from the maritimes particularly—hon. members from the prairies and British Columbia can perhaps make the same argument if they look at their own provincial figures—

Mr. Coldwell: The prairies can, too.

Mr. Gillis: I think the type of discussion we are having is valuable. I believe the government should pay particular attention to this discussion, especially in view of the fact that two men who hold the offices of minister and deputy minister in a government similar to the federal government have come out and made the kind of kicks that Mr. Walsh and the minister of agriculture in the Nova Scotia government have made.

I think it is time for the federal government to take a look at the dispersal of industry in so far as it is able to do so itself. The federal government itself has established a lot of industry by way of crown companies, all of which is scattered in the two provinces I mentioned. Much of the industry in the central provinces was heavily subsidized or received grants which were written off by accelerated depreciation. I think the time has come for the federal government to thoroughly check what can be done in relation to economic conditions. It is my hope that when the commission which is studying the economic strains and stresses across the country makes its final report the government will take some action. As I said before, I hope the report is short enough so we can all read and understand it.

It is all right for hon. members to get on a platform or to speak on the radio or to rise in this house and say, "I am a Canadian; I am proud of Canada". Well, so am I; but you know, we have nine different kinds of Canadians in this country, and perhaps ten. There is a vast difference between the economic circumstances and the social possibilities in each of the provinces. The budget of the city of Toronto is much greater than the budget for the whole of one of the maritime provinces. When we talk about being proud of Canada, I think it should mean that we are proud of all of Canada, not of just two or three provinces.

An effort should be made to get a more balanced economy in this country. It would not take very much; you would not have to shift a great deal of industry from Ontario or Quebec to New Brunswick in order to cure the ills of that province. I am sure the Minister of Labour remembers what happened in his own riding. A textile mill at Marysville had operated for over 100 years; then the mill was closed down and the operation was shifted to Cornwall, Ontario, where a more modern mill was available. The company was able to make a little more profit, but the expense to the government of having to retrain those people, and the effects upon the economic and social life of the community in my opinion far outweighed that little extra money the company was able to make. That trend is continuing all the time.

I am glad to see that there is some hope in the maritimes, because the people are convinced that self help is the best thing. They have formed an organization which in my judgment will do much to reverse the trend and overcome this lopsided economic development we have today.

I see in the transportation improvements which have taken place, particularly in Nova Scotia, great possibilities of development in the future. We now have the Canso causeway which overcomes the bottleneck that existed in the movement of steel, coal and other products between the mainland and Cape Breton island. Then there is the ferry from North Sydney to Newfoundland which will help to develop interprovincial trade between that province and Nova Scotia, particularly Cape Breton island. There is also the bridge across the harbour from Halifax to Dartmouth, which will open up the eastern end of the province on the Dartmouth side. Then there is the Bar Harbor, Maine, and

Yarmouth, Nova Scotia, ferry. All these transportation improvements will bring about an improvement in industry and aid in the movement of our products.

In this connection something has taken place that should have taken place 30 years ago, the formation of the Atlantic economic council. It is all right to appoint royal commissions, but there have been dozens of them appointed. They simply write reports, most of them stereotyped, and you cannot get anything out of them; they are simply a rehash of the things that happened 50 years ago. But this Atlantic economic council is building up its membership and is gathering real facts.

In my judgment if in the years that lie ahead we can get a proper survey, if we can have proper planning in the utilization of the resources of the maritimes, if we can increase our interprovincial markets, which is the objective of the Atlantic economic council; if we can group those million and a half people into a market for the products of the maritimes and can save the millions of dollars which we pay in the way of protection for the manufacturers in central Canada; if we can utilize those savings in our own end of the country, these provinces can be self-sustaining. If the people really get behind those who are developing that Atlantic economic council these results will be achieved.

Until that time comes I think the federal government should co-operate with the provincial governments in that end of the country which are now doing some planning along the lines of self help in order to give them assistance or to take up the slack in areas where industry, like the mining industry, has gone out. A small defence industry employing 1,000 people would give great relief to the people of Nova Scotia if it were located there. I am sure that is equally true of New Brunswick, Newfoundland and Prince Edward Island, but it is particularly true of the province I mentioned.

Much has been said here about there being no power, but the fact is that Nova Scotia can supply the power. Make no mistake about it; there is power enough in the province to take care of any industry and there would still be a surplus. I believe there are resources in New Brunswick which would be easy to develop. I am pretty sure that if Joe Smallwood of Newfoundland were given the opportunity to take in an industry he would find the means to do so.

I do not want to monopolize the time of the house in dealing with this particular subject, but it is one I have thought about quite a lot. I have moved a similar resolution time and time again. I am glad to join with my prairie friends and those who have indicated their support of this resolution in asking the government to take a square look at the social and economic developments in this country, to determine for themselves if it is a good thing to adopt the pattern which has been adopted in the United States where they have a super centre and rely upon the east and west for their raw materials and natural resources and brawn. All these are brought into the centre to be developed, and in many cases this is a complete waste of effort.

I should like the government to consider also whether the maritime provinces should be asked to pay protection on automobiles and other things as was indicated in the editorial by Mr. Walsh, the deputy minister of agriculture in Nova Scotia. I hope that every member of this house, or at least some from the different regions in Canada, will put themselves on record in connection with this motion, and that later on the responsible minister will stand up in his place and assure the house that if this question is not thoroughly analysed in the report of the royal commission now studying Canada's economic possibilities, a committee of this house will be able to sit down and go into this matter with the end in view of bringing about a more balanced economy in this country.

Mr. R. F. L. Hanna (Edmonton-Strathcona): Mr. Speaker, I had not originally planned to take part in this debate, but I thought it would be desirable to lay before this house and hon. members some facts about the developments that have taken place recently in and around the city of Edmonton. I think these illustrate how the decentralization of industry is actually taking place in Canada at the present time without any government interference or direction.

I do not take the view that government interference or direction is necessarily a bad thing in every case. There are some occasions when it is absolutely necessary. For example, we have our Department of Defence Production endowed with certain powers which we on this side of the house at least think are absolutely essential to our national defence. During the lengthy debate last summer our friends across the aisle apparently did not think too much of the necessity for that particular department to have the powers which we on this side think it should have. Today the hon. member for Brandon-Souris seems to want to put more teeth into the very provisions for government control of industry which he scorned only a few months ago. I say this because the government would really

have to throw its weight about with private industry in order to accomplish what he suggests ought to be done.

I do not want to take up the time of the house by quoting at length from *Hansard* some of the things the hon. member for Brandon-Souris said in opposition to government control and direction of industry. His remarks will be found at pages 4612, 4613, 4614 and so on of *Hansard* for last year. In his speech on that occasion the hon. member vigorously opposed state domination, democratic socialism, national socialism, state socialism, state capitalism or, as he said, whatever name you like to use to describe this trend toward increasing domination by the state. Those are the very words he used. He decried what he described as a tendency toward a completely authoritarian system of direction by the state. As recorded on page 4615 of *Hansard* he had this to say:

> ...I am surprised when I find members of the nominal Liberal party succumbing to what has been described as the dominant dogma of our age, that chaos, confusion and crisis can be stopped only by an increasing resort to coercion and force on the part of the executive arm of government.

I am surprised to find a member of the nominal Conservative party now succumbing to this very same doctrine that he opposed so vigorously on June 9 last year.

Mr. Dinsdale: Mr. Speaker, I did not wish to interrupt the hon. member, but I rise on a point of privilege. I was very precise in all my remarks and I specified several methods—by means of taxation, by means of transportation policies without any interference from the aspect that my hon. friend is making at the moment—whereby the government could assist. In my remarks I went out of my way to point out that private enterprise was taking the initiative in this matter and was away ahead of the government.

Mr. Hanna: Mr. Speaker, I am sure I do not wish to be unfair to the hon. member for Brandon-Souris, but he has just now mentioned discriminatory taxation, for example, and other things. Does that not amount to coercion if it is carried far enough?

Mr. Dinsdale: This is a straw man.

Mr. Hanna: However, I should like to put on record some of the things that industry is doing along the lines of decentralization, in the constituency I have the honour to represent. I think we have some excellent examples there of what we might call forms of decentralization based on sound economic lines. In the vicinity of Edmonton we have had hundreds of millions of dollars invested in industry during the past 10 years, in an area that was formerly the centre of a chiefly agricultural community. Of course some people will say, "You found oil and gas out there." We certainly did, and we are very happy about it. That is one of the main reasons for the industries that we have there today, but I suggest that is not the whole story.

We have several large oil refineries, and we have the terminals of two huge pipe lines, one going to the west coast and the other going to central Canada. But we have much more than that. At Edmonton we had a vast petrochemical industry established a few years ago. In other days we could visualize such huge industries being established only in the world's major cities, such as New York, Detroit or perhaps Montreal or Toronto, but now we have them in Edmonton. The combined investment in this type of industry alone runs to over $100 million, and expansion is still taking place.

Of course some people will say that is purely because oil and gas were found there, but I suggest there is more to it than that. We have also had established at Edmonton in the last very few years—less than five years—iron and steel mills, roofing mills and so forth. At the town of Fort Saskatchewan, which is located some 20 miles from Edmonton and has a population of about 2,000 people, we have a huge nickel refinery, and several other industries of a similar nature are planned there. That, in my opinion, is decentralization of the very best kind, where no government controls at all entered into the picture. There was no government interference of any kind. Industry has established itself there simply because it was economically wise and prudent so to do.

Then we have two pulp and paper mills projected for the Edmonton area, involving a capital investment of over $10 million. One of the pulp and paper mills is being built at a little place called Hinton, 180 miles west of the city of Edmonton. There again we have real and practical decentralization on a voluntary basis.

A little over a year ago a new cement plant costing over $12 million was started in the federal constituency of Edmonton West. It will be starting production this month. This cement plant in Edmonton West was no sooner begun than another company moved into Edmonton-Strathcona and now has near the production stage a second cement plant. Here again was no government direction, but the free play of free competition going full steam ahead in the development of this great country along sound economic lines. So I could

go on indefinitely. Other cities in Alberta are experiencing similar industrial activity, but on a somewhat smaller scale—Calgary, Red Deer, Lethbridge and so on.

Before I close I should like to emphasize this point. Those industries I have mentioned have sprung up at Alberta points since world war II because of very sound reasons. I am convinced that industry generally is keenly aware of the merits of decentralization. The captains of industry are not so slow; I think they have studied most of the points that have been brought up here this afternoon by hon. members. They know the values inherent in decentralization in this day and age, and I think they are not unaware of the fact that we are living in an atomic and hydrogen bomb age. But the captains of industry are also aware of the cost of decentralization. They have weighed, considered and evaluated all the factors concerned. They know there are many considerations other than merely decentralization for the sake of decentralization. I think we must go along with them a long way and recognize that the economic factors of the situation are very important.

Would any hon. member here suggest, for example, that there could be a paper mill established on Baffin island, just because it happens to be remote from our large cities? Where would the raw materials come from? Where would we get the power? Where would we find the workers for such an industry? Probably most important of all, where would we find the markets? How much would such an industry cost if it could be established in such a remote area, and who would meet these extra costs?

An hon. Member: The taxpayer.

Mr. Hanna: My hon. friend says "the taxpayer". I do not want to be unfair to the hon. member for Brandon-Souris, but I should like to know from him just what industry he would like to establish in his own constituency that is not already there. Who is it proposed would do the directing of industry to the many constituencies that we represent here in this house? Would it be left up to the local member of parliament? I certainly hope not. I suggest that this is more a matter for local chambers of commerce to attract industry to these various locations by pointing out the economic benefits that would accrue to the industry and to the community generally by the establishment of a new industry there.

These are some of the questions that deserve consideration before we go off the deep end in this house on a proposition to legislate for the decentralization of industry. Decentralization in this day and age can be made to appear plausible on the surface, but I am sure that it is fraught with many dangers unless we take many other factors into consideration. Decentralization sounds fine, but without a little bit of economic sanity behind it, I believe it is largely a snare and a delusion. We simply cannot fly in the face of economic realities, as has been suggested here this afternoon.

I have nothing but praise for Canadian industry and what it has done so far toward decentralization. I believe decentralization is a good thing. I do not believe that all the industries in Canada should be concentrated in the central provinces. We in Alberta want all the industry we can get, and we are going out after it. The more that comes, the happier we will be. But I believe that we must be realistic about this thing. We could not possibly have deserved, shall I say, a petrochemical industry at Edmonton before the discovery of oil because it simply did not make economic sense.

As I have said, I am not opposed to decentralization of industry. For those areas which, like the one I have the honour to represent, have acquired new industries, we can assure hon. members here that it is a good thing indeed. But our industries have not been brought to Alberta by any kind of government direction. There were strong economic factors behind the new investments that have been made in our community. Without consideration of the economic factors we cannot get very far in the long run.

However, I am satisfied that we shall see more and more decentralization of industry in Canada in the years ahead as our country grows and develops and as new resources are discovered in the various parts of the country. I certainly hope that our good friends in the maritimes get their share. Nevertheless, I think we shall make a great mistake if we try to place on the statute books of Canada any legislation which will arbitrarily force industry to move from one part of the country to another.

Mr. J. H. Blackmore (Lethbridge): Mr. Speaker, it has been a great pleasure to listen to the contributions to the debate this afternoon. I have appreciated greatly the facts which have been placed before the house. Before I begin to discuss what I was planning to discuss, perhaps I should refer to the fine speech of my friend the hon. member for Edmonton-Strathcona (Mr. Hanna). May I point out to him that there is one respect in which he is utterly mistaken, and that is when he supposes that the industrial development in Alberta was not the result of any government activity.

An hon. Member: Oh, oh.

Decentralization of Industry

Mr. Blackmore: Mr. Speaker, I hope the hon. member does not spoil the effect of his fine speech by silly remarks from here on. In the first place, the first thing that started the development of Alberta was the introduction of treasury branches in Alberta, bringing down the interest rates. They brought down interest rates from 8 per cent to 5 per cent. Do you think that would have no effect on the industrial development of any province? That is as simple as it can be.

Then they began to reduce the debt. Do you suppose that any sensible corporation would go in and spend a vast amount of money in a province which was plunging into debt at the cataclysmic rate at which Alberta was going into debt before the Social Credit government took it over? We owed $167 million in Alberta when the Social Credit government took it over. Of every dollar of our revenue we were paying 49 cents out in interest on the debt alone. That is an extremely serious matter. No sensible leader of a corporation would invest money in a province that was in such a desperate financial condition as that. Those are only two things.

Now may I say a word in respect of the discovery of oil and the suggestion that it was not good management on the part of Alberta that caused the phenomenal development of oil. It was good management. There was a definite plan for the development of the oil, and by reason of that plan the oil development took place. Only one or two things need to be said. In the first place the province of Alberta said, "We are going to reserve the parcels of land which are contiguous to any parcel on which oil is discovered; that will mean that it will be impossible for two or three big companies to come in, drill for oil and then blanket the whole province with a monopoly."

Mr. Hanna: Will the hon. member permit a question?

Mr. Blackmore: As many as you like to ask me.

Mr. Hanna: I should like to ask the hon. member whether he does not consider that the activities of the federal government over the years, particularly those of the former department of mines and resources, had something to do with this oil development in Alberta?

Mr. Blackmore: Up to the time the Alberta Social Credit government had got well under way with its policy, all the federal government did for Alberta was to slap her in the face. That was all they did, slap her in the face. When we first came down here 20 years ago we were just objects of derision. We were just poor doers down at heel because our province had been plunged so terribly into debt. We were not supposed to know how to manage our affairs. We knew how to manage ourselves well enough so that in 1921 we threw the Liberals out and put the United Farmers of Alberta in. They tried to govern the country in something like an economic way. Then in 1935 we put the U.F.A. out and put in the Social Credit government which changed the whole future of Alberta.

An hon. Member: Oh, oh.

Mr. Blackmore: Yes. That is perfectly right. If the hon. member will just ask me questions one at a time I will answer him, and then he will not be foolish. He does not know one thing about Alberta where I know six. He is a foolish young man who has been doing his level best during the last two or three years to throw out of Alberta one of the very best governments on the face of this earth, one with a record which he himself has been adulating this afternoon in his speech. He has been trying to throw that government out, and has been lying about it and misrepresenting it all over the country until we had a most disgraceful situation in the last election in the spring of last year. I will prove every word I am saying right here on the floor of the house before we get through.

If the hon. member has anything to say about it, it is wise for him just to remain quiet and listen and learn. I have been in Alberta ever since I was 2½ years old. I have been in Alberta for 62½ years. I was in the organization that put the U.F.A. in office. I supported the U.F.A. while it was in office. I was in the organization that put the Social Credit government in office. I have watched the development of Alberta with the greatest of interest ever since I was old enough to go to university, which was in 1909. With all due respect to the hon. member, I say to him that he can learn a great deal from the hon. member for Lethbridge about the economic development of Alberta.

Now I wish to say just a word or two with respect to the development of oil. It was not as the result of any accident at all that we got the oil development. If two or three big companies could have come to Alberta, drilled oil wells, found oil and then just bought the monopoly—a great big blanket monopoly—all over the province, the like of which has occurred, for example, in New Brunswick with respect to the woods, it would have been just good night to the development of oil in Alberta.

If there had been in Alberta groups of men who were principally concerned with building a great big pork barrel from which the henchmen of the party would help themselves to money to go out and prostitute the people all over the country and keep them ignorant about facts concerning the province, as was done in British Columbia under the Liberals and Conservatives, so that the fine resources—

An hon. Member: Oh, oh.

Mr. Blackmore: Just a moment now, please. You can have all you wish when the time comes, but believe me you had better know your stuff before you begin asking me questions about these matters. Now, out in British Columbia there were tremendous resources just frittered away, and the effect the Social Credit government has produced in British Columbia has been simply staggering.

Mr. Fulton: It certainly has.

Mr. Blackmore: You cannot laugh that off. Developments have taken place all over the province. Just wait until the next election, and you will find what the people think about them.

Mr. Pickersgill: May I ask the hon. gentleman a question?

Mr. Blackmore: Well, come on.

Mr. Pickersgill: Has the hon. gentleman been reading the British Columbia newspapers recently?

Mr. Blackmore: Of course he has been reading the British Columbia newspapers, as far as he needs to do so.

Mr. Johnston (Bow River): Was that about the Mackenzie King book?

Mr. Blackmore: He is well informed about British Columbia. I should like to go back to the oil question for a moment.

An hon. Member: You had better.

Mr. Blackmore: We are not discussing British Columbia now. If there are hon. members who want to discuss British Columbia, then bring them on. There is no doubt in the world that British Columbia was plunging into debt at the same staggering rate as Alberta was until Social Credit took over. This government of British Columbia has cleared off the debt at a phenominal rate since it took power, and has developed roads and other things as well. However, this is not the time for such a discussion. Today we are discussing the matter of the decentralization of industry.

The hon. member for Edmonton-Strathcona made the statement that he thought everything that has happened in Alberta since 1947 has been accidental. It was very far from that, I can tell you now, and I can prove it beyond a doubt. I spoke about the first thing being to avoid monopoly. Because the Alberta government adopted a policy of crown reserves in respect of oil to prevent monopoly, by 1948, one year after the Leduc discovery, there were 62 different companies of varying strength and sizes drilling for oil in Alberta. Why was this? It was because they knew they would be protected from the big concerns, and they would be protected by the simple device of crown reserve. There is no answer to that.

Here is another thing we did in Alberta. We said to the companies, "We will not charge you a flat rate of royalty. If you have a very fine well that produces abundantly, is close to markets, and it is easy to make money from that well, then we may charge you a royalty of 16 per cent. But if you discover a well that is not so good, is rather far from the markets and is not a profitable well all the way round, we will not charge you any more than 4 per cent". This one simple device guaranteed so much protection to the oil companies it brought them in by the scores and kept them there. It will keep them there from now on, too.

Those are just two of the simple things that were done. There were about eight of them that I could name if we had enough time. I have them at my finger tips. However, we are discussing the matter of decentralization of industry. I will tell you that the only thing the federal government has done for Alberta ever since I have been there has been to put blocks in her way and stop her from developing, just as they stepped in and stopped British Columbia from developing the Castlegar dam with their so-called rivers bill. They just got in the way, as a stubborn mule would. Do you know what they did as a result of that? They took out of the hands of the British Columbia government and people a means of making $252 million in 50 years.

The Acting Speaker (Mr. Applewhaite): Order. I think I should point out to the hon. member for Lethbridge that if he is permitted to make remarks which might be thought in some quarters to be provocative on subjects dealing with the development of natural resources, it will only be fair that the Chair should permit those who perhaps will not agree with him to meet some of his arguments. The resolution we have before us does deal with taking advantage of every possible opportunity to promote the decentralization of industry, particularly with reference to defence industry.

I think perhaps the hon. member could discuss that subject without finding it necessary to go into the development of natural resources in one particular province and extend the scope of this debate as it must be extended if he is permitted to make statements which other members may feel they should answer.

Mr. Blackmore: We would be very happy to provoke them to talk. We have quite a lot of men here who will deal with their nonsense. However, I do not desire to enter into that matter except to answer what the hon. member for Edmonton-Strathcona said. He made remarks that would be interpreted by the good people who were sitting around him at their face value, when as an absolute fact those remarks were erroneous and misleading.

Mr. Hanna: Will the hon. member permit a a question? He has said the federal government put blocks in the way of the development of Alberta oil and gas. Would he mind explaining to the house how the federal government put blocks in the way of the development of oil and gas?

The Acting Speaker (Mr. Applewhaite): I have no intention of allowing the hon. member or other members of the house to go further in pursuing that particular subject, the development of natural resources in any province. It may be, and doubtless is, a very fit subject for discussion in the parliament of Canada, but not under a resolution dealing with the decentralization of industry with particular reference to defence industry. I would ask members of the house to give that line of thought some little consideration during the next two hours.

It being six o'clock, I do now leave the chair.

At six o'clock the house took recess.

AFTER RECESS

The house resumed at eight o'clock.

Mr. Blackmore: Mr. Speaker, in the few moments that remain at my disposal tonight in the discussion of the matter of the decentralization of industry and its desirability, I should like to devote my attention particularly to the need for decentralizing industry. I think the hon. member for Cumberland (Mr. Lusby) gave a very good talk. I appreciated the way in which he approached the subject. As I recall it, he indicated to the house and the country quite clearly that it was impossible for us to have a really sound and flourishing Canada unless every part of Canada is sound and flourishing. Consequently, what occurs in the province of Newfoundland is of vital concern to the province of Alberta and to every other province in the country and, therefore, what occurs in British Columbia or in any other province is of vital concern to the province of Newfoundland.

Little by little I can feel that hon. members, as each succeeding parliament convenes, are coming to realize this more and more, much more than they did in 1935 when I first came here. Bit by bit we Canadians shall begin to see that we must look after ourselves as a whole if we wish to go forward to the glorious destiny which all of us realize Canada can have.

How can this matter of the decentralization of industry be brought about? As I recall it, the hon. member for Cumberland quoted from a recommendation to the Gordon commission. If I am correct, four devices were outlined, as a result of the application of which we might render the decentralization of industry much more common and possible in Canada.

When I visited Britain in 1941 with the empire parliamentary association delegation, I was rather impressed to learn that Britain was divided into twelve regions for the purposes of the war, and each of those twelve regions, as I was informed, had a government of its own. Each had an industrial life of its own. Each had a military establishment of its own, so that in case all the other eleven were overcome by the foe the twelfth one could stand up and fight with all the power and vigour that it was capable of fighting with, with what remained of Britain.

Canada could very well aim at some such thing as that. As matters are now, I think we must all realize rather unhappily that if we get involved in a struggle and the industrial areas of Ontario and Quebec are seriously impaired it will greatly damage our fighting strength. If we were relying upon those two sources for our food and other supplies, and the enemy disrupted our transcontinental railways, it would put us at a tremendous disadvantage. We would be wise to give careful thought to all of this, and probably aim to make each province a self-sufficient unit as far as we can. I think the resources of the provinces are such that in the main that sort of ideal could be almost attained.

When we look at what has happened to the maritimes, as the hon. member for Cape Breton South (Mr. Gillis) pointed out so well this afternoon in that fine speech; when we look at the industries in the maritimes we

find that a most serious deterioration has occurred since they entered confederation. As hon. members will recall, the hon. member pointed out that 50 different industries had been siphoned off, as he said, from the maritime provinces into Ontario and Quebec. That might have been pretty good business for Ontario and Quebec, but it was bad business for the maritime provinces and in the long run it will be bad business for the two central provinces as well.

There are enough resources in this nation to support a population of many, many happy millions; but we shall never have the many, many happy millions so long as all the industry supporting this nation is concentrated in those two central provinces. Out in the other provinces there still is need of economic strength to support an adequate population.

What can we do about it? Well, let us examine for a few minutes the case of New Brunswick and see what happened to her as a result of entering the confederation of Canada. I hold in my hand the submission of the province of New Brunswick to the royal commission on dominion-provincial relations, issued in April, 1938. This submission is a most valuable document, because it undertakes to analyse for us what has happened to New Brunswick and what brought it about. Before I finish my remarks I may read some passages from this document, which, by the way, I commend to the most earnest consideration of every hon. member. First of all, I may say that New Brunswick attributes most of her ills to three main factors; an adverse tariff, which has injured her terribly; adverse freight rates, which have also injured her; and lack of control of credit.

If I may read from page 49 of the document, I think hon. members and the people of the country will be glad to hear these words:

> The disadvantages from which New Brunswick has suffered in relation to the tariff were further accentuated and increased by the unauthorized burden of excessive freight rates on the railways in the maritime provinces after 1912.

May I interrupt there to recall what I was saying just before the house took recess. I said that all the federal government had done for Alberta up to the time the Social Credit government was elected in 1935 was to slap her in the face. One of the means by which she was slapped in the face was by the use of a most onerous and iniquitous set of freight rates, which it was positively a disgrace to foist upon any community whatsoever. The cost of getting goods out and the cost of getting our goods back were such that we hardly had anything left after those rates had been paid. Some of the most monstrous items could be mentioned, but I shall not go into them at present because it would take too much time. I continue reading from the submission:

> Principally as a result of these two elements industries became centralized in the province of Ontario and Quebec.

The two elements there were tariffs and freight rates. The submission continues:

> Large companies having their head offices in Ontario and Montreal bought up many industrial plants in New Brunswick and then closed them down. The manufacturing in New Brunswick at the present time is insignificant as compared with manufacturing in other parts of the dominion.

I do not know what was the matter with the federal government that they did not do something or other to try to stop the purchasing of those industries by these great concerns in Ontario and Quebec. It will be argued that this is a free enterprise country. I will grant that it is a free enterprise country. It is also a country which was organized under the British North America Act to see that every part of Canada prospered equally, and just as soon as the powers that were in Ottawa began to realize that that kind of thing was taking place something should have been done, but something was not done.

An hon. Member: What?

Mr. Blackmore: Someone asks "what". I would be delighted to go into that. I do not think I shall have time to go into it tonight, so I shall have to discuss it at some later time, but certainly something ought to have been done. To say that something could not be done is simply to be utterly unrealistic and to acknowledge that the British North America Act, and Canada under that act, was a failure to begin with, which I am not ready to concede.

It goes on to say in the next paragraph:

> In this connection it is well that the commission should bear in mind that the Canadian banks have been centralized in Ontario and Quebec. Prior to confederation and for some years afterwards we had our own banking institutions in this province and our people were able to obtain money for the encouragement of industry here.

I would think the very first matter of which the government in Ottawa would have taken cognizance was that very fact. Anyone with any intelligence whatsoever could see that if the banks of the maritime provinces came under the control of the banks in Ontario and Quebec, then the industries in the maritimes could be denied credit and could be seriously impaired if not destroyed, greatly to the immediate advantage of the industries in Ontario and Quebec, thereby rendering the maritimes practically vassal states to the two central provinces. It should not have taken intelligence of any high order

to see that, and it should not have taken intelligence of any high order to have devised some means whereby that sort of thing could have been offset.

I do not hesitate to point out what I know every hon. member in the house readily recognizes, that unless we can remove the three disadvantages which the province of New Brunswick points out in the submission, as a result of which New Brunswick is faced with impossible odds, that province will never attain the greatness which she was designed by the Creator to attain. She will never be able to develop her resources and add to her population, and she will never be able to be strong in that sense. She will always be a hewer of wood and a drawer of water, not because she has not the resources or the people willing to risk and toil, but because there is a paralysing force imposed upon her as a result of the indifference—or the co-operation, although I hope not the co-operation—of Ottawa.

What can we do? What the government needs to do and what the people of the country need to do, because we are all vitally interested, is this; find out what can be done in respect of these three matters and encourage people in the country to think about this matter. As I pointed out in a previous speech, there are altogether too many Canadians who view Canada with a snake's-eye view and not with a bird's-eye view, which soars aloft and sees the possibilities of this magnificent heritage which has been bequeathed us. There are possibilities not only for industrial strength but for increased population and over-all greatness arising from the loyalty of people who realize that they are getting a square deal and have a future worth looking forward to; that they can safely raise a family with assurance that the family is going to be able to have the means of supporting dignified and abundant lives. To say that such an ideal is impossible of attainment is to be utterly unrealistic, I maintain, and is tantamount to being a little Canadian instead of a big Canadian, a snake's-eye Canadian instead of a bird's-eye Canadian.

Let us now continue with the New Brunswick submission. The people who wrote the submission do not complain very much, but they do not pull many punches. On the same page it goes on to say:

> The head offices of these banking institutions were removed, after confederation, to Montreal and Toronto where they were situated more immediately in touch with the financial interests by which they were controlled.

[Mr. Blackmore.]

Let us recall what the hon. member for Cape Breton South said this afternoon in relation to the picture which is indicated there. I quote the next paragraph of the submission—

> The result has been that industries in New Brunswick have not been able to obtain financial assistance in cases where such assistance would enable our local industries to compete with those in the provinces of Ontario and Quebec.

To what extent is that true today, Mr. Speaker? That is a question which must be asked and answered. We must also ask to what extent can we by actions in this parliament grant to New Brunswick the means of overcoming this handicap. I do not wish to go into financial matters in too great detail, but it is quite obvious that financial conditions go right to the very root of the matter.

I wish to put it on the record that I commend the hon. member for Edmonton-Strathcona, for the very fine speech he made this afternoon, in which he expressed great understanding and appreciation and exactly the kind of ideals that Alberta people everywhere wish to express. But I point out that one of the great steps in giving Alberta a chance to get ahead was the treasury branch. The province of Alberta, exercising the powers given to her and Saskatchewan under their charter on entering into confederation, was able to lend money out of the treasury of Alberta, which meant that she was able to put at the disposal of the farmers and others in Alberta the credit of the province of Alberta as far as she possessed credit financially.

An hon. Member: Even cabinet ministers.

Mr. Blackmore: That is exactly what was demanded when we first put in the treasury branches. Then we had papers like the Calgary *Herald* and other big, wise know it alls beginning to complain how members of the legislature and cabinet ministers did not dare trust their money in the treasury branches. We had a campaign such as only those people can conduct; and members of the legislature and the cabinet, freely accepting the responsibility that was on them, began to do their banking business in the treasury branches thereby strengthening the treasury branches as a whole and the credit of Alberta so the farmers could produce more. What the members of the legislature did was to help Alberta to become strong, just as the people in a credit union help all the other people who are in the credit unions to be strong. This is plain common sense, and even a simpleton could understand it.

Very largely as a result of the treasury branches in Alberta the province was able to get a measure of control of her credit.

The bankers were not willing to lend in Alberta before the treasury branches were set up. An ordinary man in my district was not able to get a loan from a banker to save his life. The bankers turned up their noses and called common farmers uncredit-worthy. They said it was because the people were indebted, or for any one of a dozen other reasons. But as soon as the treasury branches were established in Cardston and Raymond and several other towns, the bankers came out on the street and buttonholed the men they had said were not credit-worthy before. The bankers were very ready to lend money to them then at 5 per cent, whereas before they would not have lent it at 8 per cent. I mention this just to show how potent was the effect on the Alberta economy of the introduction of the treasury branches. I submit that if we could build a set-up in the province of New Brunswick under which the province with the assistance of the dominion government, using Bank of Canada funds, could set up something comparable with the treasury branches of Alberta it would be simply astonishing how rapidly the economy of New Brunswick would begin to revive, just through a simple device like that.

There is one other thing worth considering. If it be that New Brunswick is too small a province, too insignificant to manage an important financial concern, then why not have New Brunswick and the other three Atlantic provinces combine their financial strengths? Let this Atlantic economic council, about which the hon. member for Cape Breton South spoke this afternoon, be given the power to establish financial means in the four Atlantic provinces as a result of the use of which they could begin to rebuild their economy. If that were done then we would find an immediate change for the better, which change would accelerate as the days went by, just as it has in the province of Alberta.

As I said a few minutes ago, there is simply no need for us to sit here and say that nothing can be done about this situation. There is no reason why we should be objects of contempt to such people as the communist leaders of Russia. There are plenty of producers in this country if we use free enterprise the way it could be used. We could then make Russia look like a nation of pikers. Let them do the best they can under their state ownership and socialism; we could do still better. What we lack in this country is not production, because we can produce until further orders.

That has been proved over and over again. We literally smothered our foes in two world wars with production, using private enterprise. The thing that on those occasions made it possible to use private enterprise to such advantage was that we then had the money with which the people could buy. That indicates quite clearly that it is a matter of finance. To say that we cannot devise means in this country whereby we can make our financial instruments the servants of our productive instruments is to prove ourselves unworthy of being where we are. I read further from page 50 of this report:

> Pertinent cases may be cited where local industries in this province have been destroyed because of the difficulty of financing and we submit that finances have been withheld as local industries might come into competition with similar industries in the last mentioned provinces.

I appeal to all hon. members. Can you think of a more hopeless position in which a group of people could be than that in which the province and the people of New Brunswick found themselves under circumstances like that? At the same time you have people boasting all over the place about free competition. There was not anything resembling free competition under those circumstances. New Brunswick could no more compete freely with industries in Ontario and Quebec than a man could compete with a wrestler when he had both hands tied behind him. There is one suggestion I make as to how we can overcome the disadvantage which confronts us.

There is further discussion to be found on page 63, but I have not time to go into that because my time is practically exhausted. This indicates how the tariff was used to choke off and destroy the fish canning industry of New Brunswick. I wish I had time to read all that will be found on page 64. They set out a number of little technicalities, rules and devices which permitted the tariff to be used to place difficulties in the way of this great industry which represented an investment of $2 million, and it was practically ruined. I am not sure whether it had to close its doors.

Mr. Deputy Speaker: I am extremely sorry to interrupt the hon. member, but I am obliged to advise him that his time has expired.

An hon. Member: Let him go on.

Some hon. Members: No.

Mr. Blackmore: Mr. Speaker, I do not wish to question your ruling, but the point is that we did not start until three minutes after eight. I did not get under way until a quarter to six, and I was interrupted with question after question. I have said practically all that I proposed to say. My message is

this. Let us not assume that there is nothing that can be done about this situation. Let us stand up to our responsibilities.

Mr. Deputy Speaker: Order. I should like to say once more that I have found the officials at the table extremely accurate in this matter of time. The hon. member commenced speaking at 5.45 and spoke until six o'clock. He recommenced again this evening at 8.02 and therefore his time had expired at 8.27.

Mr. Blackmore: Did you take off the amount of time Mr. Speaker occupied and the amount of time occupied by questioning?

Mr. A. M. Fraser (St. John's East): Mr. Speaker, in rising to take part in this debate, first of all I should like to congratulate the hon. member for Brandon-Souris for moving this resolution. I think he has raised a question which is important and timely. With the principle that the government should encourage the decentralization of industry I have no quarrel whatever, but the practical application of that principle is another matter. I hope to be able to consider that further on in my speech.

There is perhaps no need for me to remind the house that there are many economic factors governing the localization of industry with which this whole question is intimately bound up. First there is the question of the availability of raw materials. Second, there must be an available and adequate supply of skilled labour. Another essential is the proximity to large markets, and here I am thinking not only of the actual number of consumers composing the market but the purchasing power possessed by those consumers. We know that if a demand is to be effective it must have purchasing power. Another indispensable factor is cheap and efficient means of transportation, and another is a plentiful supply of power at reasonable rates.

To these important economic factors perhaps two more might be added, namely an adequate supply of capital and an adequate supply of managerial ability. However, these are much more mobile factors and respond more quickly to the magnet of the other factors, particularly the movement of capital which naturally gravitates through the sensitive mechanism of the money market to those areas in which it can be employed to the best advantage.

It is obvious that for all these reasons some areas are better endowed by nature than others to become great industrial centres. It is hard to resist the pull of natural advantages, and indeed it is not always desirable to attempt to do so. All through history economic and geographical factors have powerfully influenced the location of industry, and in our own time modern technological developments have contributed to industrial concentrations.

I should like to turn now to the problems that arise out of the centralization of industry, especially when that centralization becomes excessive. First of all, undue centralization of industry militates against a wider and more even distribution of prosperity throughout any country. Second, it causes a drain on labour skills and business ability from the periphery to the centre of the country. I have often heard it said that the Atlantic provinces have been threatened with the loss of some of their best brains to other parts of Canada. This movement of population imposes a heavier burden on those who remain. A single example might perhaps suffice to illustrate this point; the per capita cost of provincial services immediately rises.

Another aspect of this problem to which I think we might devote a few moments is that it is a self-perpetuating process. The exodus to the centre swells the mass market, for instance, of central Canada, thereby increasing the advantages of industrial location there. At the same time it produces precisely the opposite effect in the peripheral provinces. In a sense it is a vicious circle, with cumulative effects that are very serious to the lesser industrialized provinces. Then again, it causes population congestion in the great metropolitan centres, with certain social and moral disadvantages to which various hon. members, including the mover of the resolution, have drawn our attention and upon which it is unnecessary for me to dwell at any length. Certainly it makes great problems for municipalities in such matters as juvenile delinquency, traffic difficulties and so on.

In my opinion one of the most important aspects of this question is the strategic aspect. We all know that we are living in a thermonuclear age and that nuclear air attack, if it comes, which God forbid, will cause heavy casualties in our populous centres. The incidence of these casualties will be all the greater because of congestion of urban centres. Then too, from the standpoint of the effect of such attacks upon the country's economy, that economy is undoubtedly rendered more vulnerable by undue centralization of industry. If a country's industrial centres are knocked out, the entire economy can be paralysed because the flow of goods to the rest of the country will dwindle to a trickle or perhaps even cease altogether. Wider dispersal would mitigate this problem.

Undoubtedly Canada has the great advantage of wide spaces, and it seems to me that

this advantage should be utilized to the utmost that is practicable. What I have said particularly applies in the case of defence industries which, of course, are all-important in war. We do not want to be faced with a situation in which the fighting strength and power of resistance of the country may be knocked out by a few terrible blows on great industrial centres. It is my view that the problems of civil defence—and we know they are very grave and very complicated—are aggravated by undue centralization of industry.

The problem of industrial centralization has, in my opinion, particular relevance to my own province of Newfoundland. Here the impact of industrial centralization is felt by both the consumer and the producer. Newfoundland has derived great benefits from the union with Canada. That is recognized very clearly in Newfoundland, particularly as regards social services; but I should like to point out that there is another side to the picture.

Prior to confederation the Newfoundland consumer could buy in the cheapest markets. Now this freedom has been circumscribed to some extent by the Canadian tariff system. Here I should like to refer to a few figures concerning the distribution of Newfoundland's external trade before union, when separate statistics were kept. In the year 1947-48, for instance, Newfoundland exported to Canada goods to the value of $11 million, but imported from Canada goods to the value of almost $55 million; so that even before confederation the mainland of Canada enjoyed a favourable trade balance with Newfoundland by almost five to one. Since confederation, although no official figures are available, there can be no doubt that sales from the mainland of Canada to Newfoundland have greatly increased. An estimate by one competent source has placed them at about $150 million. That, of course, is unofficial, but I think it is a fairly accurate estimate.

Of course there has been a marked diversion of Newfoundland purchases since union from other countries to the mainland of Canada, particularly from the United States. Unfortunately, however, there has been no corresponding increase in Newfoundland sales to the mainland of Canada. That is perhaps inevitable in the economic circumstances, for the mainland and Newfoundland economies are competitive rather than complementary.

This is particularly true in the case of two of Newfoundland's three staple exports, namely fish and newsprint. The only important exceptions are iron ore and, to a lesser degree, fluorspar.

Decentralization of Industry

It will not have escaped the notice of the house, I know, that recently the provincial government of Newfoundland, under the dynamic and imaginative leadership of Premier Smallwood, to whom I was glad to hear the hon. member for Cape Breton South pay such a handsome tribute earlier in this debate, has undertaken a bold program of industrial development. New industries, some 16 in number, have been established with government assistance and under government sponsorship, though not under government management. Some of those industries look to the Newfoundland market; others to the mainland markets. Sales in the Newfoundland market benefit the Newfoundland consumer and help to some degree to offset the disadvantages of centralization of industry.

Sales to mainland markets are, however, handicapped by distance. Newfoundland is at the end of the line, on the extreme east coast. It is, of course, a maritime province in the sense that it is an oceanic province, an island province. Low coastal shipping rates are essential to the Newfoundland consumer and producer alike. We must have low-cost shipping facilities. The keenest possible competition among shipping services is necessary in order to keep down shipping rates.

Here I feel I must refer to a matter which is giving very great concern to Newfoundlanders at the present time. That is the attempt of certain mainland shipping interests to exclude ships of United Kingdom registry from Canadian trade. This exclusion would be fatal to Newfoundland. I cannot overemphasize that fact. It would be really a death blow to the island's economy. It should be borne in mind that the only other means of transportation of goods into and out of the island is by means of a narrow-gauge, single-track railway which is greatly overburdened at the present time.

Another aspect of this situation to which I should like to draw the attention of the house concerns its fiscal effects. Newfoundland's contribution to the federal treasury is, I believe, much greater than it might appear at first sight, because of the sales made in Newfoundland of goods produced on the mainland of Canada. Federal excise tax and federal sales tax are paid on those goods produced on the mainland and sold in Newfoundland, but when the taxes come into the federal treasury they come not from Newfoundland but from the provinces of the origin of the goods.

Then also I think it is important to point out that a considerable part of the corporate income tax paid by mainland companies on manufactured goods sold in Newfoundland and personal income tax paid by employees

of all ranks in these firms are, to some extent, due to the sales made of these goods in Newfoundland. That, of course, is true also of other provinces which are consuming centres for the great industrial regions of our country.

As has been pointed out by the hon. member for Cumberland who, I thought, made a most admirable contribution to this debate, there are practical limitations on the role which the federal government is able to play in this matter of encouraging the decentralization of industry. First of all there are the constitutional limitations of our federal system. Second, there are the economic limitations imposed by economic laws operating within the private enterprise system. Both these systems, in my opinion—that is the federal system and the private enterprise system—are essential to the development of our country.

It is true that this framework imposes certain unavoidable limits upon the opportunities with which the federal government is presented to encourage decentralization. Nevertheless, I believe that even within this framework there are steps which can be taken by the federal government. Of course these have been taken, and they have contributed in large measure to the development of the provinces in all parts of the country. I am confident that these steps will continue to be taken by the government which has done so much to promote the prosperity of the nation as a whole.

Amongst these I would single out for special mention the maintenance of equitable freight rates; co-operation with provincial governments in scientific surveys of natural and industrial resources, particularly in the underindustrialized areas of the country; and the placing of government orders, where these are possible and economical, with firms operating in underindustrialized areas.

I offer these comments in no merely provincial spirit but from the standpoint of Canada as a whole. In this great country of ours the prosperity and the well-being of the whole are inextricably bound up with the prosperity and the well-being of all the parts. The optimum development of the industrial resources of every province of Canada is in the best interests of the Canadian nation as a whole.

Mr. G. C. Nowlan (Digby-Annapolis-Kings): Mr. Speaker, I am glad to have the opportunity to take part in this debate, but only for a brief period, I hope, because I realize it is an important one and that there are many other hon. gentlemen who want to take part in it. The day is a rather short one because of the fortunate circumstance at 2.30 this afternoon, when we had the opportunity of greeting the head of the Italian state. I therefore intend to speak but briefly. In fact, however, I should like to speak for a long while.

[Mr. Fraser (St. John's East).]

One sometimes gets disturbed—I will not say irritated—by what one hears. This afternoon I thought suggestions were made—perhaps it is oversensitiveness on my part—that some people were a little bit worried about the maritime province or felt that the maritime provinces were making some special plea on this occasion. Actually, Mr. Speaker, that is not the case, and I think all of us from the maritimes rather resent any such implication. I almost caught that suggestion, I thought, from the remarks of the hon. member for Edmonton-Strathcona, who said he did not think anything could be done by legislation and that nature would have to take its course.

After all, some of us remember the fact that before they joined confederation, the maritime provinces happened to be the most prosperous section of what was then the Dominion of Canada, and that some parts of Canada which now boast of their wealth were occupied only by Indians. Sometimes we almost wish they still were, to be a little bit facetious about the matter. Certainly the natural resources about which they boast today were part of the natural heritage which we assumed was being taken over by the provinces which at that time formed confederation. At any rate, whatever may be the accident of geography today, the fact remains that in those eastern provinces there was a remarkably high degree of prosperity. After confederation that prosperity—to put it mildly and to use a conservative understatement—did not maintain the same relative position.

I realize that there are historical reasons for that fact. In the first place, just before confederation there was the civil war and the great prosperity which the maritime provinces enjoyed through being able to ship goods to the United States. I almost think one could be frank and say that they shipped goods to both sides over the border during that conflict. There was also the fact that the great wooden shipbuilding industry, which had flourished in the maritimes, had given us a predominance in trade not only with what was then Canada, the eastern provinces and British North America as such, but also in trade all over the world.

Of course, shortly after confederation came the economic development of the steel ship and wooden ships passed out of commercial

practice and practicality. It may be—and I think possibly the criticism can be fairly levelled—that in the maritime provinces, particularly in Nova Scotia, an effort should have been made to shift from wooden ships to steel ships, to maintain the position which we theretofore had occupied. But whether or not that is a fair criticism, the fact remains that the shift was not made. As a result, shortly after confederation the relative prosperity of the maritimes lapsed and we did not keep pace with the rest of Canada. I am also prepared to admit that in the maritimes sometimes there has been too much of a habit of placing one's head on the shoulder of confederation and weeping over the ill effects of confederation upon the maritime economy.

I think we have overplayed that, frankly. I think, to a large extent, it was political. After all, confederation became a political issue in our province. The Liberals were opposed to it. They fought it and they carried all the maritime governments against it after confederation and, in fact, once before it. When prosperity slipped away, whether it was their fault or whatever the reason, there was a natural tendency to say, "Well, didn't we say confederation was a bad thing." Then all the maritime governments began weeping on the shoulders of confederation; it became a provincial policy to place the blame largely on confederation. That is part of the background of this feeling which we sometimes hear suggested, as we did this afternoon, that we have overemphasized the disabilities which we have suffered.

Whether or not that was justified in the past, it is not for me to say. But I can say this. I think the maritimes have tried to accomplish something despite some of the obvious disabilities from which they suffer. This is not the place to discuss it. When the estimates of the Minister of Transport are before us one could take a full 30 minutes in that committee, then continue after an interruption for another 30 minutes, speaking on the freight rate structure and the disabilities which have been imposed upon the maritimes because of it.

When we entered confederation we were told, it is true, "You are not going to be able to ship to the south. You are not going to be able to enjoy the trade pattern which you have enjoyed heretofore. But there is going to be an east-west pattern developed, and you are going to profit immeasurably by that." The Intercolonial Railway was built for that purpose. Up until 1911 or 1912, before the outbreak of world war I at any rate, that pattern was fairly well maintained. Since then it has been forgotten, and as a result the freight rate structure is such that it is very difficult for industries in the maritimes to enjoy this east-west trade that was at one time promised to them.

Notwithstanding that, Mr. Speaker, there are firms in the maritime provinces which have maintained a national position, and not only those in the luxury trades such as confectionery. For instance, the hon. members for Halifax have one great national firm there, and there is another one in New Brunswick. Despite all the difficulties of the textile industry, that industry in Nova Scotia is still maintaining a national position. There are the heavier industries such as Enterprise Foundries at Sackville, which manufactures stoves and furnaces, amongst the heaviest articles manufactured today. They are still maintaining, either by good management, by ability or by fighting against this adverse trend, a national position. There are many other firms in the maritimes which have done likewise. As the hon. member for Cape Breton South suggested this afternoon, it is true that many have disappeared. On the other hand, there have been at least some which have been able to maintain their position.

The situation in the maritimes has not been one of stagnation. It has been one of development, but our complaint is that relatively the development has been, I will not say immaterial but at least not in keeping with the developments that have taken place in other parts of Canada. I just happened to be glancing over a report of the Nova Scotia Light and Power Company. We have a public utility commission in Nova Scotia, and we have a large privately owned utility. There are also two or three smaller ones. When you glance over that report you notice that during the last five years the output of electricity by this firm has been doubled. It has been trebled since the war and they are envisaging doubling it again in the next seven years, and again doubling it in the following seven years. They do realize that there is development taking place in the maritimes, particularly shall I say in Nova Scotia.

If one looks at the population figures one sees that our population in that province increased by 11·2 per cent between the two censuses of 1941 and 1951. I notice, and I am sure the Halifax members are proud of this fact, that the population of the city of Halifax has increased between 1941 and 1951 by over 35 per cent. It has only been exceeded by four other cities in Canada, the four western cities of Edmonton, Calgary, Vancouver and Victoria. We are not, therefore, in

a position of weeping on someone's shoulder. We are not sitting here crying at the moon, and we are not saying that the situation is hopeless or that nothing has been done. We are appealing to the government to help us.

Our people there have tried to help themselves. I should like to say of the Nova Scotia Light and Power Company, to which I referred a moment ago—I am sure the hon. member for Cape Breton South would support me in this if he were here—that instead of using oil in its generating plant, as it could have done being situated at Halifax, it has installed steam generating plants using Nova Scotia coal for the development of that steam, thereby increasing the use of Nova Scotia coal. If their plans are carried out for doubling and redoubling the output in the next 14 years, there will be a tremendous increase in the use of Nova Scotia coal by that one plant alone.

As I have said we have tried to do, and I think we are doing, something to counteract this situation which developed following confederation. As the hon. member for Cape Breton South said this afternoon, I think the organization of what is briefly called APEC, or the Atlantic provinces economic council, is a forward step. We believe it will have a marked impact on the development of the maritime provinces. You now have the four Atlantic provinces, not just the maritime provinces but the four Atlantic provinces of Newfoundland, Nova Scotia, New Brunswick and Prince Edward Island, associated in one economic council with a secretariat and staff organized to make studies of the problems with which we are confronted and attempt to arrive at some solution on a common basis. I am quite sure when that economic council, financed by three Liberal governments and one Conservative government at the moment, make their recommendations they will not accept the suggestion that was made this afternoon that there is nothing the federal government can do to assist in carrying this into effect. I believe there is.

As I said, whatever developments we have made—and I emphasize this because sometimes I think the suggestion is that we have done nothing for ourselves—nevertheless it is the relative position which disturbs us. I should like for a moment to give one or two figures with respect to that. I am speaking now of the three maritime provinces. In 1949 we had 9·2 per cent of the total national population. By 1954 that had dropped, not terribly but nevertheless it dropped, from 9·2 per cent to 8·7 per cent. Our percentage of labour employed had dropped from 8·3 per cent in 1949 to 7·5 per cent in 1954. Perhaps most important of all, Mr. Speaker, the percentage of new investment and capital investment had dropped from 6·5 per cent to 4·8 per cent, which is a very substantial drop in new investment.

In so far as Nova Scotia itself was concerned, I could not get the figures for the maritimes for 1954, but I did check with the dominion bureau of statistics this afternoon and they gave me these figures for the percentage of new investment and capital investment in Nova Scotia in 1950, as 3·7 per cent. In 1955, last year, it had dropped to 2·8 per cent. In this connection it should be pointed out that our manufacturing investment dropped over 24 per cent between 1949 and 1955. In other words, Mr. Speaker, the 2·8 per cent of the national investment which we had in 1955 was largely represented by institutional investment, hospitals, schools, plus investments made by the Minister of National Defence in enlarging national defence organizations in the maritime provinces and in Nova Scotia.

As I said, when you see that our manufacturing proportion dropped 20·3 per cent, despite the fact that in other parts of Canada it increased tremendously, you can understand that we are somewhat concerned about the situation. If it had not been for the investments made by the Department of National Defence in their installations—not in productive facilities such as factories—at Shearwater, at Stadacona, at Greenwood in my own constituency, and at Cornwallis in my own constituency, and all over because of our geographical position, because we happen to be one of the provinces on the eastern seacoast which has to be prepared for whatever emergency may come, we would be in a worse position. Because of our geographical location we have had this tremendous expenditure in national defence installations, which accounts almost entirely for the new capital investment which has taken place in the maritimes. It has accounted for almost all of the new capital investment which has taken place in Nova Scotia during the last few years.

We all know, Mr. Speaker, or we all hope, that this type of expenditure will not be permanent; that it is something based on an emergency, and it is not productive except for the moment. Because of the enlarged barracks and the increased and enlarged installations we of course get the wages and salaries of the personnel and their purchases, and it all contributes to an expanding economy. But when the time comes, as we hope it will, that these expenditures can be restricted, then the economy of the maritimes

vis-à-vis the rest of Canada will be even worse than before these expenditures were made.

When you see the briefs which have been filed with the Gordon commission—I am not going to read the figures which were given this afternoon—which show that over 80 per cent of all of the industrial development is taking place in the two central provinces; and when you envisage all this great further development which is going to take place along the St. Lawrence river basin and in southern Ontario, I do not think those of us who come from the maritimes can be criticized if we suggest that something should be done to reverse this trend and try to make national production more widely distributed in this country.

The hon. member for Edmonton-Strathcona said, "Well, you cannot of course do this by legislation". No one is suggesting, at least in this resolution, that it can be done by legislation, but legislation can accomplish something. I did not hear him objecting in the last three weeks when we were discussing legislation which was certain to be of benefit to some parts of Canada, Mr. Speaker.

We have on the order paper legislation which presupposes the expenditure of some millions of dollars for the construction of a pipe line, which will be of assistance to some parts of Canada but certainly not to the maritime provinces. We have had on the order paper and in the estimates hundreds of millions of dollars for the construction of the St. Lawrence seaway, which certainly is not going to benefit the maritimes; in fact, it is going to be an absolute deterrent to them in every way, shape and form, and that legislation was perfectly acceptable. I do not think there were any shudders or any nausea when it was passed.

I can say this. The members from the maritime provinces support that legislation because we believe in Canada, and we want to see a strong Canada developed, even stronger than that which we have had heretofore. But we do believe a national policy works both ways. A national policy should not be created to make only a strong centre, which we perhaps are a little bit envious of but which we accept. We also believe it should be extended to the periphery of this country as well.

Today we heard something about the constitutional problem; that constitutionally this parliament cannot do anything. But, Mr. Speaker, the constitutional problem is greater in the United States than it is here because, if I remember my constitutional history and constitutional law at all, in the United States the residuary power is vested in the individual states, and only delegated powers are vested in the central government, whereas our position is the reverse.

Well, what do we find in the United States? We find that country has been able to pass legislation and to offer tax exemptions, for instance, to industries which will locate in certain states, giving certain inducements so far as freight rates are concerned to industries which will locate in certain states. The President has directed national defence industries to locate in certain states. These are three steps which have been adopted and carried into practice by the United States of America. I suggest, Mr. Speaker, if that can be done by that country with their constitutional problems, then the same thing can be done by our country where the constitutional problem is far less.

The hon. member for Cape Breton South spoke this afternoon about the steel industry and what could be done there. We all believe this in the maritimes, Mr. Speaker: the thing which made us prosperous in the past, and which made us great, really—and we were great; we were small but we were great provinces—was the fact that we had an export position. We could take part in international trade, and we were able to ship to the markets of the world.

We still have that export position. You cannot tell me that with a steel plant such as we have in Nova Scotia, or such as could be developed there, the Minister of Defence Production or this government could not direct that more of those products could be made in Nova Scotia or in the maritimes so they could be shipped more economically to our NATO allies and to other parts of the world. There are scores of things such as this that could be done.

I am not going to elaborate further because I made a promise to myself that I was not going to speak so long as to interfere with the half a dozen others who I am sure want to speak, but I do say in conclusion there are things the government could do. There are certain constructive measures that could be taken either by freight rates, by taxation, or by the allocating of industries, and probably in more ways. If we had the time, if we had two or three days in which we could debate this, I would like to make further constructive suggestions with respect to it. But I do say that I heartily approve of this resolution, and I believe that every hon. member should approve it. We are all proud of Canada; we are all proud of the fact that we are Canadians, but we do believe, those of us from the periphery, that something along that line should be done.

Perhaps those from the west coast, because they have been blessed by Providence with greater wealth and natural resources than we have been blessed with in the east, do not suffer from the peripheral position to the same extent we do; but this country can never become the country that the fathers of confederation envisaged unless we develop a national policy which will make all parts of Canada relatively prosperous. It is not that we expect the 80 per cent of the industrial development, or anything of that kind. But I know, I am convinced, that steps can be taken to rectify this trend which has developed here, not during the last few years but for many years. The time has come when it must be rectified; I believe it can be. I think this resolution, although of course it is only a resolution, envisages and presents to the house the possibility that it can be done.

(*Translation*):

Mr. Fernand Viau (St. Boniface): Mr. Speaker, the resolution introduced in the house this afternoon by the hon. member for Brandon deserves another reading for the information of the hon. members. It is as follows:

> That, in the opinion of this house, the government should consider the advisability of taking advantage of every possible opportunity to promote the decentralization of industry, particularly with reference to defence industry, thereby,
>
> (1) helping to reverse the trend towards concentration of population in large metropolitan areas with the accompanying social evils;
>
> (2) encouraging a more equitable distribution of population and development right across Canada, and
>
> (3) assuring the strategic dispersal of vital war industries in the interests of national defence.

The principle of that resolution or motion presented by the hon. member is perhaps very commendable, but we are indeed surprised that the opposition should put forward such a resolution since it amounts to inviting the government to implement a regimentation policy which has long been denounced by the Liberal party. We would understand a motion like this being introduced by a socialist group, such as the C.C.F. party but coming as it does from a Progressive Conservative member, it surprises the house.

Of course only an authorized spokesman of the Progressive Conservative party can present such a motion in its name. This new stand in favour of regimentation can only be explained by the fact that his party has never, for more than a quarter of a century, put forward a clear-cut policy as far as the economic and social welfare of the Canadian population is concerned.

A few weeks ago, we witnessed a tragedy on the T.V. screen when the young representative from Three Rivers (Mr. Balcer), proud of his membership in the Progressive Conservative party and in his capacity as chairman of the national association of his party, was utterly unable to state the Progressive Conservative policy in answer to questions put to him by newspapermen on behalf of the Canadian population.

It is therefore not surprising that the house was astonished this afternoon to hear a member speak in favour of a policy of regimentation because but a few months ago, in fact last July, the official spokesmen of the Progressive Conservative party emphatically opposed certain powers that parliament proposed to grant to the right hon. Minister of Trade and Commerce and of Defence Production (Mr. Howe).

Industrial decentralization consists in using regimentation to uproot certain industries established in the industrial provinces of Quebec and Ontario, and forcing them to establish themselves in other provinces, following a survey of the industrial situation throughout Canada, from the Atlantic to the Pacific.

Tonight I would like to state the views of western Canada, and more particularly those of Manitoba. I believe that the policy so well shaped by the Liberal government of Canada has, everywhere and at all times favoured industrial decentralization because, after all, even in Manitoba, during the war, we witnessed the departure of a large number of our young people and heads of families who enlisted to defend their country. Others went to work in industries established in the provinces of Quebec and Ontario; in spite of all that, many Canadian citizens came to settle in the western provinces and particularly in Manitoba.

Since the great victory of the allies in 1945, numerous industries have established themselves in Manitoba, where an imposing number were already operating. For instance, in my own city of St. Boniface we have the largest stockyards and packing plants of the British Empire, while in greater Winnipeg there are large textile, clothing, sugar beet, cement and other industries. Since 1945 more than 500 new industries have been established, a fact which has enabled the people of western Canada to receive each month a large amount in the form of salaries. The establishment of these industries has obviously contributed to the economic advancement of the Canadian nation.

Salaries in western Canada packing plants are in excess of $14 million. I wonder if the hon. member for Brandon would not be the first to protest, if the government were forced, as a result of this motion having been carried, to require, for instance, the packing plant in Brandon to remove to Portage la Prairie, shall we say, so that the people of that community could be allowed to enjoy the economic benefits accruing from such a plan. Yet, that would just about be the policy which would follow upon the passage of that motion.

I do not think we should adopt that motion since the Liberal government, after all, ever since it came into power back in 1935, has taken all possible steps necessary towards improving the economic and social well-being of the Canadian people.

As regards decentralization, may I point out that industry has always been encouraged along that line by legislation introduced in this house and now placed on our statute books.

The report of the industrial development bank indicates that it has on numerous occasions extended financial assistance to those Canadian citizens who wished to establish industries in western Canada. We might add too that the National Housing Act has made possible the building of a great number of houses in western Canada. All that has brought constant benefits to the Canadian people. These are but two instances of beneficial legislation enacted by the Liberal government. Such legislation is abundant. With the support the Canadian people has always given the Liberal government, I am sure that we will be able to keep on improving the economic standards of our country, which makes the envy of all the other nations of the world.

I am opposed to such a motion because it would mean the enforcement of an act of regimentation which, as I stated a moment ago, is inconsistent with the policy of the Liberal party. Moreover, through the increase in population in western Canada, and the establishment of industries in always increasing numbers and through the help of the minister of industry and commerce of Manitoba,—who has done everything in his power and has even appointed a foreign representative to find ways and means of bringing new industries to western Canada, all that with the support of the federal government—western Canada will soon enjoy constant prosperity in the industrial sphere. I would rather support a policy of steady economic progress, such as we have always enjoyed since the Liberal government came to power in 1935.

The beneficial steps taken not only by the provincial ministers of western Canada but especially by the federal Liberal government were meant to ensure the progress of the agricultural industry which has steadily improved not only under the right hon. Minister of Agriculture (Mr. Gardiner) but in particular under the direction of the right hon. Minister of Trade and Commerce. I am sure that but a small minority among Canadians, during the depression, would have been ready to burn them in effigy and that, with the present economic and social development going on throughout the country, the Canadian people are willing to erect a monument to these ministers. All this is due to their knowledge of our problems and of course to their desire of forever upholding the great principles of the Liberal party.

Mr. Speaker, these are the few remarks I wished to make tonight. I am sure that what we want is to maintain our policy which has been so firmly established for a long time and to reject any legislation conducive to regimentation.

(*Text*):

Mr. A. J. Brooks (Royal): Mr. Speaker, I wish to take only a few minutes this evening to discuss this resolution. The resolution is quite familiar to me, because I have heard similar resolutions moved in the house a number of times. I want to congratulate hon. members who have spoken already, particularly the hon. member for Brandon-Souris, who moved the resolution, and the hon. member for Digby-Annapolis-Kings, who spoke of the situation in the maritime provinces. As a matter of fact it was such a splendid speech and illustrated our position so well that I feel it is hardly necessary for me to say anything. I want to thank the hon. member for Lethbridge for taking up the cudgel on behalf of my own province of New Brunswick.

This subject has been debated in the house on many occasions. I remember in the late thirties when it was brought up. Then during the second world war we asked that industry be decentralized and different sections of the dominion given a share in the production of war materials. We brought up the matter

during the so-called cold war and requested that the outlying sections of Canada, such as the maritime provinces and certain sections of the west, be given some opportunity to produce war materials. Even now we do not consider it is too late for the government to give consideration to this important problem.

It has been pointed out that with industry concentrated in great centres like Montreal, Hamilton and Toronto, in case of an attack, if such a thing should happen, the country would be in a very poor position indeed. Our war industry could be entirely destroyed without much effort on the part of the enemy.

Despite the fact that these matters have been discussed in this house for many years, what is the net result? As has been so well illustrated by speakers here today, I think it can be said that the net result is that there is more industry today in Quebec and Ontario than there ever was before. The people of the maritime provinces and other parts of Canada who were poor before are today poorer, while the people in the central part of Canada are richer today. That is a state of affairs which we hoped would be corrected.

It is not necessary to go back into history to the days of confederation, because those days are past and gone and we must look to the future. To review the situation which has existed in this country for 80 years is not going to help us. Of course we can tell how in 1871 New Brunswick had 10 per cent of the industry of this country while its population was not 10 per cent of the whole. There was hardly a village or town in any part of New Brunswick or the maritime provinces that did not have its small industry. The economy was well balanced, the people were happy and contented, and they stayed in their own part of Canada.

As the hon. member for Cape Breton South has said, today Ontario has 49 per cent of the industry of Canada, Quebec has 33 per cent, while New Brunswick with a population of practically half a million has only 2 per cent of the total industry of Canada. Such a situation is not healthy, and I feel it is one which should be corrected.

The sad deterioration of our position during past years can be blamed, as was pointed out by the hon. member for Lethbridge, upon certain things. Let me say to the hon. member for Edmonton-Strathcona that the government does have something to do with this. As was pointed out by the hon. member for Lethbridge, an adverse tariff is one of the reasons why the maritime provinces have lost their industries. That is something over which federal governments, not provincial governments, have had complete control since confederation.

[Mr. Brooks.]

The hon. member referred also to adverse freight rates. The federal government has complete control of freight rates. The hon. member for Digby-Annapolis-Kings referred to the lack of control over credit, which is a matter under the control of the federal government. There is another item which could be added to the list mentioned by the hon. member for Lethbridge. This did not apply in days past, but it has applied for the last 20 years. I refer to the lack of cheap electrical power in those provinces.

I should like to quote the remarks made by a former premier of the province of New Brunswick, Hon. J. B. McNair, who is today the chief justice of our province, during the dominion-provincial plenary conference of 1945. Referring to the situation in his own province he had this to say:

> Let it be remembered again that the control of all matters national in their scope and which affect most vitally the social and economic well-being of the people in the provinces is now vested in the central government. I have already mentioned the main items. The chronic unbalance in the Canadian economy with the heavy concentration of industrial, commercial and financial power in certain favoured areas, is due to the play of forces under the control of the dominion parliament and government since confederation. That situation is capable of being remedied, and only remedied, through national policy.

That was the opinion of the premier of New Brunswick, a very able man, as expressed in 1945, and it is the opinion of the people of New Brunswick today and has been the opinion of the people of the maritime provinces since confederation. As I said before, that opinion has been expressed repeatedly to governments in this country, but today the situation is no better, in fact it is even worse than it was 25 or 30 years ago.

During the second world war billions of dollars were spent, but only one-half of one per cent was spent for the development of industry in New Brunswick. As the hon. member for Digby-Annapolis-Kings said, we were there down by the sea with the great ports of Halifax and Saint John, with people willing and ready to work, yet industry was concentrated in the central part of Canada and the products had to be carried over railroads which were frightfully congested during that period in order to reach those ports. No effort was made at all to create war industry in the maritime provinces.

Then there were the after-effects of the war. During a debate in this house at the beginning of the war I suggested that we should have more manufacturing in the maritime provinces of the requirements of war. The then minister of fisheries, Hon. Mr.

Michaud, said, "We do not want to manufacture too much in New Brunswick; the result will be that we will have a lot of empty factories in the maritime provinces after the war is over."

There were a lot of empty factories after the war was over. Where were they? They were in Quebec and Ontario. They were sold to commercial concerns at fire-sale prices, and today they are going concerns employing tens of thousands of people. If we had had some industry in the maritime provinces in those days, I believe today we would have industries flourishing in that part of the country. That was one way in which this federal government at that time could have helped the people of the maritimes.

I do not wish to take up a great deal of time, as most of the points have been covered. But this question of decentralization is not new in Canada, and it is not new in other countries of the world. The hon. member for Lethbridge mentioned the fact that they have decentralized war industries in other countries. They have not only decentralized their defence production industdustries, but they have decentralized other industries. In Paisley, in Scotland, they are establishing atomic energy reactors, so that part of the British Isles may be productive as far as industry is concerned.

I remember that some years ago the British government said that Durham was in a depressed area, and that it would start some industries there in order to make it as economically sound as other parts of Great Britain. The same thing was done in Wales. In southern United States years ago were producers of cotton, which they sent to the northern part of that country. As producers of the cotton for the north they were simply hewers of wood and drawers of water, but that situation was changed. The federal government and the Tennessee valley authority realized that those people would become great industrialists if they had cheap power in that part of the country. Cheap power was given them, and today the southern states have become greatly industrialized and they are not the poor section of the United States.

From 1919 to 1939 the New England states lost 40 per cent of their industries and 25 per cent of their working population. The people of those New England states said that something must be done, and in 1939 an effort was made to get more industry for the New England states. The great textile factories were bought up and used for other purposes, with the assistance of the federal government at Washington. Today there is a great improvement in the situation in that part of the country, owing to government policies. I have here an article in the Christian Science *Monitor* of January 16, 1956, which says:

> Today, New England industries are producing an amazing array of products used in nuclear installations and equipment throughout the country.

They are doing that through the atomic energy commission. It also says:

> Similar defence department contracts have served to spur New England's leading industry: aviation.

It goes on to say that today, with the impact the government has given to that part of the United States, industry is in better condition there than it was many years ago. The *Christian Science Monitor* also speaks of decentralization in the matter of defence production, in an article dated December 28, 1955:

> Production Shift Set
>
> . . . air force secretary Donald A. Quarles laid down the policy Dec. 28, approved by the defence department, reversing the old idea of building up war industries after the start of hostilities.

The main paragraph, which I shall call to the attention of the house, reads as follows:

> Mr. Quarles stressed the need for dispersal of war industry but emphasized that vulnerability was the key consideration and that dispersal is one factor in reducing vulnerability.

That is a statement by a very able man, and it is a statement that should well be taken into serious consideration by the government in this Dominion of Canada. A good look should be taken over this dominion, and industries should be given to the parts of the country I have mentioned.

Mr. Speaker, you may ask us how you could help the province of New Brunswick. The hon. member for Digby-Annapolis-Kings very aptly told us different ways in which the government could help. I and other members from New Brunswick have on many occasions here in the past few years told how our province could be helped without any cost to this dominion. What we need to encourage industries and to bring industries to the east is cheap power. I was surprised to hear the hon. member for Cape Breton South say they had as much power as they needed in Nova Scotia. I rather question that, because I read not so long ago that Nova Scotia could have had a $10 million pulp and paper mill in the southern part of that province if it could have had cheap power with which to operate.

Mr. Gillis: That is only propaganda.

Mr. Brooks: I do not know; it was published by the merchants' association in the maritime provinces. I think we can find power, but we must have cheap power to encourage

industries to come. Our provincial government of New Brunswick, under our present premier, is making every effort toward this objective, the production of cheap power. All that he asks of the federal government is, not to lend the province one cent but to back the bonds of the province of New Brunswick in order that we might get money at 2½ or 3 per cent, whereas if we had to go out on the market we would have to pay 5 per cent. This would make the difference between cheap power and dear power.

Another way in which it can be done is, as I said a moment ago, by the Department of Defence Production giving us more defence production in those provinces. You can read those reports we get every two or three weeks. Except for dairy products, coal or something like that, which is an actual resource that we produce in our province, there is hardly one item that is manufactured. There are millions of dollars worth of goods from the central provinces and only this small dribble from the maritime provinces.

The hon. member for Cape Breton South and the hon. member for Digby-Annapolis-Kings spoke about the production of steel. As I have said, I was contradicted the other day and the hon. member has said it again today. I cannot see any great benefit to us in the development of the St. Lawrence seaway. We shall have to pay our share—pay our part of the shot, as they say—but we shall get no material benefit that I can see. But we could have benefited. In Labrador there is $6 million worth of iron ore. It is making Quebec—and I hope it will make the Atlantic provinces and Newfoundland—wealthy, but I shall venture to say that if this great deposit of iron ore had not been found in Labrador, the St. Lawrence seaway would not have been built for some years at least.

But what is happening to this ore? The railroad is built up to Knob Lake in order to carry this great wealth to the sea. What happens to it there? There is not much of it going to different parts of Canada to be smelted and fabricated. It is going to pass the door of New Brunswick and the door of Nova Scotia and go down to the United States. The great wealth of this country is taken away from our people in order to enrich the people to the south of us. As was suggested this afternoon, if a smelter were established in New Brunswick or in Nova Scotia, or if the Dosco smelters were extended, we would have there something that would bring wealth to our province and would help to balance the economy of this dominion. We have coal in Cape Breton.

[Mr. Brooks.]

To the Minister of Defence Production the other day, when he was saying that we might trade with Russia and that one of the things we would buy from Russia would be manganese, I could have pointed out that we in the province of New Brunswick have discovered a considerable amount of manganese. I understand that this is one of the chief minerals used in the hardening and development of steel. In the maritimes we have everything that is needed—lime, coal and iron—to develop a great steel production there. As I said a moment ago, not one dollar, except the money that is spent in digging the ore out of the ground, will go to Canadians. Most of it is going to be shipped to the Americans to the south of us. That is no way to build up our provinces by the sea. That is no way to build up this Dominion of Canada of ours.

Mr. Lennard: While you are at it, you might tell the Minister of Labour to pay a little bit more attention to you.

Mr. Brooks: I am not going to take up any more of the time of the house. The hon. member for Digby-Annapolis-Kings spoke about an organization that was formed. We are told to help ourselves. We have never tried to shirk helping ourselves. I cite the effort at Beechwood to develop power. Is that not a great step toward helping ourselves? We should like to get a little bit more help from others. This organization which was mentioned a few moments ago and which has been set up in the Atlantic provinces is called the Atlantic provinces economic council. It was formed for no other purpose than to help ourselves. I should like to read from one of their by-laws under the heading of "Membership":

1. The membership shall consist of persons from the Atlantic provinces representing such interests as agriculture, construction, fisheries, labour, mining, manufacturing, banking and investments, insurance, transportation, public utilities, wholesale and retail trade, universities, tourist business, professions and other lines of business prominent in the said provinces.

2. It shall be the privilege of any member or members of the council to withdraw therefrom at any time upon giving to the secretary thereof written notice of their intention so to do at least seven days prior to the date fixed for the annual meeting.

Then under the heading "Objects and Purposes" we find the following:

The objects and purposes of the Atlantic provinces economic council shall be:

I. To survey and study the advantages and difficulties, including alternate transportation, under which the population of the said Atlantic provinces is operating for the purpose of:

1. Discovering the forces which should make for economic growth and stability within the said provinces;

2. Making recommendations concerning methods calculated to ensure the economic future of the said provinces;

3. Promoting or opposing legislative and other measures affecting trade, commerce, manufacture and industrial development of the said provinces.

II. To stimulate:

(1) Concrete expression as to matters vital to the economic welfare of the Atlantic provinces among organizations participating in its membership;

(2) United action among the said provinces;

(3) The promotion of the Atlantic provinces' agriculture, commerce, fisheries, industry, public utilities, transportation and other matters of common concern.

In this connection I might say that this council which has been formed in the Atlantic provinces is based on similar councils which were formed in the New England states, and which were to a great extent responsible for the interest of the federal government and the obtaining of industries in that section of the country.

In closing I wish to repeat that there is a responsibility on the federal government. The matter of freight rates cannot be dealt with by the province of New Brunswick or by the people of New Brunswick. The matter of tariffs cannot be dealt with by them. The matter of using our raw material in this country and prohibiting it from going outside to be processed, fabricated and manufactured cannot be dealt with by the people of the small provinces. There is where the federal government can help and there, I say, is the responsibility which rests upon the federal government in this country.

Mr. S. R. Balcom (Halifax): Mr. Speaker, on Saturday I took time out to go down to the union station to give my personal welcome and my applause to the President of Italy. It was fortunate that I went down, inasmuch as it gave me an opportunity of seeing our Second Canadian Guards in action. I am full of praise for that body of men which was just recently organized. They are fine looking young men. The officers gave their orders clearly and well, and the men acted as though they were one. I therefore felt very proud of them.

You may ask, Mr. Speaker, what this has to do with decentralization. I should like to suggest that when these young men are fully trained the Minister of National Defence, in his wisdom, send at least one company of them to Nova Scotia. If I might do so, I see the hon. member for Digby-Annapolis-Kings in his seat and I would suggest that they be stationed in his riding at Aldershot.

Mr. Nowlan: Arrange it with the minister.

Mr. Balcom: In speaking on this resolution I am sure that I will be expressing, in greater or less degree, the views of every member of this house. I suspect, however, that there are many different ideas on what decentralization means. A town a hundred miles from Toronto or Montreal compares its relative position with that of one or other of these great cities, and a sigh is emitted, touched perhaps, as was said this afternoon, by envy. In Nova Scotia or in the far west we must sigh much more loudly in order that the sound may carry the necessary distance to Ottawa, or what should be more important, to the point of the concentration of private enterprise industry in the upper provinces. That perhaps accounts for the superior lung power of those from the provinces more distant from the centres of larger population.

I am concerned mainly with decentralization of industry that will encourage a more equitable distribution of population and development right across Canada. In our private enterprise economy the government cannot instruct or direct industry to locate in any particular spot. The choice of a location for a plant involving the expenditure of any substantial amount of money is usually made after careful consideration of all the factors that will affect the cost of doing business. That is good, sound logic. A firm weighs the risks and then takes the plunge. Except in a few rare instances, competition is such that it must scratch pretty hard to make things go; at least that applies in the maritimes. Most Canadians feel that the responsibility for such decisions should rest with the firms, and that in the long run this will bring the greatest good, in a material sense, to the greatest number.

The government does not direct industrial location, nor can it by legislation endow an area with resources, eliminate distances by act of parliament or remove the tariffs and other obstacles to trade put up by other countries. What then can it do to encourage a more equitable development across Canada? When confederation took place the greatest single problem confronting the individual provinces was the cost of providing adequate transportation facilities. This is still the most important single factor affecting the development of Nova Scotia's economy today. Distance from the central Canadian markets on the one hand and tariff barriers in our export markets on the other have us in a very tight squeeze.

For this reason I urge upon the government the need to maintain and extend its efforts to reduce trade barriers. If we are to sell fish, lumber, wheat, base metals, we must accept goods in return. We cannot have our cake and eat it. Our people demand a high

standard of living, so we must develop our natural resources and trade them in the world market if we are to provide that standard.

The government has more direct control over transportation costs as they affect the outlying provinces. Speaking as a Nova Scotian I have said before in this house, and I urge again, it is time we took another look at the Maritime Freight Rates Act. There is no need for me to go into the history of this legislation and its application. It is sufficient to refer to the relative position of the steel industry in Nova Scotia compared with its competitors in Ontario. In public statements the president of Dosco has said that since the war the freight rate on steel bars to the main industrial market in Canada has practically doubled, while for one of its competitors the increase was less than 10 per cent and for the other roughly 60 per cent in the same period.

This is only one example, but it is enough to show that unless some action is taken the relative position of the Atlantic provinces will deteriorate rather than improve with the growth of Canada. Many factors have contributed to this; the growth of highway transport to the more populous areas, horizontal rate increases, and so on. While the freight picture is worsening, other more encouraging things have happened. Progress has been made on the trans-Canada highway; air travel facilities have been steadily improved; the national harbours have been greatly developed. All in all, our transportation facilities have come a long way.

The most important single development in this field in recent years has been the St. Lawrence seaway. Some years ago, in 1950 to be exact, when this project was still in the planning stage, I asked what study the government had given to the economic effects of this undertaking. In particular I was concerned that due attention should be given to the possible ill effects the seaway might have on certain maritime industries. I should like to be assured that some responsible federal agency has been given the responsibility for continuous study of this matter. This aspect of the project should be regarded as a national responsibility, and it should not be just left to the provinces to point out the difficulties. If as much effort were put into this as is going into research on how to keep the St. Lawrence river open the year round, we would be very happy.

The government is to be commended for the work it has initiated in the provision of research facilities. The national research council in Ottawa and its maritime regional laboratory in Halifax are an imaginative effort for regional service. The provision of vocational and trade training in conjunction with the provinces has been important to industry in Nova Scotia. This is true of the fisheries as well as manufacturing generally, and the construction industry. Perhaps most important of all is the possibility of developments in atomic energy which will be available to all parts of Canada, irrespective of location. This is a field in which federal development should pay off for all provinces in equal measure.

We are, of course, interested in obtaining defence industry, but in particular we are interested in privately owned industry. Defence industry may be a temporary matter. You build up a locality with defence factories, then the pressure is off and they close leaving many people unemployed. We are interested in holding what we have. As so many speakers have said tonight, since confederation we have lost many industries. In particular, Halifax has lost several. There was a time in 1867 when we had many English distributing houses. They have all gone and are now found either in Montreal or Toronto. We had several cigar factories. They are all to be found today submerged in some upper Canadian plant. We had a broom factory, and we had shoe factories. In time they were sold to those industries in Upper Canada. Recently we have all received letters from the boot and shoe industry, particularly the rubber footwear industry, concerning importations from Hong Kong and what they are doing to the industry here. It was just that sort of thing that happened in Nova Scotia over the years.

Then at the time of the Halifax explosion there was a cotton factory which was blown up. What did they do with the money they were paid as compensation? Did they put it into another factory at Halifax? No; that also went to Montreal. Then on the east side of Halifax harbour, in Dartmouth, there was a very fine industry which closed.

May I call it ten o'clock, Mr. Speaker?

BUSINESS OF THE HOUSE

Mr. Harris: Tomorrow and Wednesday we shall take the resolution to set up the committee on railways and shipping owned and operated by the government; then the resolution to set up the federal district committee;

then the one with respect to the Criminal Code, followed then by the resolution in my name with respect to the Industrial Development Bank Act, and then second reading of the Small Loans Act. I should add that the latter two bills will be going to the banking and commerce committee after second reading.

Mr. Green: What about the committee on research and atomic energy?

Mr. Harris: We will come to that, I hope, later.

At ten o'clock the house adjourned, without question put, pursuant to standing order.

Questions

ANSWERS TO QUESTIONS

The following answers, deposited with the Clerk of the house, are printed in the official report of debates pursuant to standing order 39:

BOX CARS

Question No. 53—**Mr. Johnson (Kindersley):**

1. How many box cars belonging to (a) the Canadian National Railways; (b) the Canadian Pacific Railway, were in the United States on (i) July 31, 1955; (ii) August 31, 1955; (iii) September 30, 1955; (iv) October 31, 1955; (v) November 30, 1955; (vi) December 31, 1955?

2. How many box cars belonging to United States railways were in Canada on the above dates?

Answer by: **Mr. Marler:**

The following figures have been supplied by the transport controller.

1. C.N.R. cars on U.S. lines

	Total	Box cars	Others
July 31, 1955 ..	16,360	14,332	2,028
Aug. 31, 1955 ..	15,846	13,719	2,127
Sept. 30, 1955 .	15,227	13,011	2,216
Oct. 31, 1955 ..	16,346	14,169	2,177
Nov. 30, 1955 ..	15,638	13,489	2,149
Dec. 31, 1955 ..	13,499	12,334	1,165

C.P.R. cars on U.S. lines

	Total	Box cars	Others
July 31, 1955 ..	12,182	11,001	1,181
Aug. 31, 1955 ..	12,240	11,133	1,107
Sept. 30, 1955 .	12,119	10,968	1,151
Oct. 31, 1955 ..	13,540	12,168	1,372
Nov. 30, 1955 ..	12,920	11,338	1,582
Dec. 31, 1955 ..	12,235	10,753	1,782

2. U.S. cars on C.N.R. lines

	Total	Box cars	Others
July 31, 1955 ..	14,760	6,969	7,791
Aug. 31, 1955 ..	15,658	7,559	8,099
Sept. 30, 1955 ..	16,844	7,862	8,982
Oct. 31, 1955 ...	17,635	8,202	9,433
Nov. 30, 1955 ..	16,953	8,363	8,590
Dec. 31, 1955 ..	17,553	8,438	9,115

U.S. cars on C.P.R. lines

	Total	Box cars	Others
July 31, 1955 ..	6,936	4,218	2,718
Aug. 31, 1955 ..	7,898	4,724	3,174
Sept. 30, 1955 ..	8,424	4,774	3,650
Oct. 31, 1955 ...	7,869	4,483	3,386
Nov. 30, 1955 ..	8,000	5,277	2,723
Dec. 31, 1955 ..	8,475	5,101	3,374

C.N.R. SERVICE—MONCTON-SHEDIAC, N.B.

Question No. 98—**Mr. Murphy (Westmorland):**

1. What was the agreement for service from Moncton to Shediac, New Brunswick, at the time the Canadian National Railways took over the company then operating train service from Moncton, New Brunswick and Shediac, New Brunswick?

2. What service is now provided by the Canadian National Railways for the Moncton to Shediac, New Brunswick, rail run?

3. Is any immediate curtailment of this service planned?

Answer by: **Mr. Marler:**

The Canadian National Railways advise as follows:

1. An examination of old records has been made and there does not appear to be any such agreement on file.

2. Train No. 77, operating daily except Sunday, leaves Shediac at 7.00 a.m. and arrives Moncton at 7.45 a.m. Train No. 78 operating daily except Sunday, leaves Moncton 5.25 p.m. and arrives Shediac 6.14 p.m. Freight service between Moncton and Shediac (Point du Chene) is operated as required.

3. No.

C.N.R. RAILWAY CAR PURCHASES

Question No. 135—**Mr. Argue:**

What are the numbers, types and prices of railway cars, if any, purchased by Canadian National Railways during (a) 1954; (b) 1955, from (i) Canadian Car and Foundry; (ii) National Steel Car Company?

Answer by: **Mr. Marler:**

The Canadian National Railways advise as follows:—

(a) (i) Canadian Car and Foundry Company, Ltd.—1200, 50-ton box cars; 100, 30-ton flat cars; 120, 50-ton Hart convertible; 218, first class coaches.

(ii) National Steel Car Corporation, Ltd.—1400, 50-ton box cars; 210, 70-ton hoppers; 600, 75-ton ore cars; 30, baggage cars.

(b) (i) Canadian Car and Foundry Company, Ltd.—110, 70-ton flat cars; 6, passenger equipment.

(ii) National Steel Car Corporation, Ltd.—200, 50-ton refrigerator cars; 20, baggage cars.

It is not the practice of the management to disclose the unit price of railway equipment.

FEDERAL ANTI-FLOOD PROJECTS, SASKATCHEWAN

Question No. 165—**Mr. McCullough (Moose Mountain):**

1. How many projects to combat flooding have been undertaken by the federal government in the province of Saskatchewan under the (a) Prairie Farm Rehabilitation Act, during 1954 and/or 1955; (b) Canada Water Conservation Assistance Act, during 1954 and/or 1955?

2. What was the cost to the federal treasury in each case?

Answer by: **Mr. Pinard:**

1. (a) None. (b) None; no request has been received from the provincial government of Saskatchewan for assistance under the Canada Water Conservation Assistance Act.

2. Answered by No. 1. Note: Some are helpful controlling floods but such benefit is incidental to the main purposes of the Prairie Farm Rehabilitation Act.

MAIL BAG REPAIR—B.C. PENITENTIARY

Question No. 194—**Mr. Hahn:**

1. Are mail bags in need of repair mended at the British Columbia penitentiary?
2. If so, how many were mended during each of the months January to December, in 1955?
3. Is transportation to and from the penitentiary being done under contract?
4. If so, what are the terms of said contract?
5. If not, what means of transport is employed in carrying them from point of origin to ultimate destination?

Answer by: **Mr. Lapointe:**

1. Yes.

2. January, 5,428; February, 5,862; March, 7,469; April, 5,606; May, 4,545; June, 4,428; July, 4,273; August, 2,740; September, 3,684; October, 2,714; November, 4,955; December, 5,969.

3. Yes.

4. (a) Repairs to all classes of bags—a flat rate of 30 cents per bag—effective April 1, 1952.

(b) All materials required for repair to be furnished by Post Office Department. These materials are to be stored by the penitentiary without additional cost to the Post Office Department.

(c) Penitentiary to maintain records of materials used as required by Post Office Department.

(d) Cartage at pack up point to be at penitentiary expense.

(e) Storage of completed bags to be provided without additional cost pending instructions to ship.

(f) Building, machinery and tools to be provided by penitentiary.

(g) Penitentiary to be responsible for counting bags on receipt and inspection on completion before shipment.

(h) All equipment and materials for disinfecting bags is to be supplied by the penitentiary.

5. See answer to No. 4.

CIVIC CENTRE, BANFF, ALBERTA

Question No. 198—**Mr. Johnston (Bow River):**

1. Has there been a meeting during the past three months between the park superintendent and citizens of Banff respecting the erection of a civic centre in Banff?
2. If so, who called the meeting and who were present at such meeting?

Answer by: **Mr. Lesage:**

1. Yes.

2. A meeting was called by the park superintendent and was attended by representatives of the Banff advisory council, the Banff chamber of commerce, and by the executive secretary of the chamber of commerce for Alberta. The names of those present were as follows:

Messrs. T. Brown, E. Burnham, C. Philpott, J. MacAulay, Rev. Gordon Peddie, Hubert Green, R. E. Johnson, R. Bryant, J. D. Anderson, Claude B. Brewster, Norman Tabuteau, W. Clark, D. Griffin, Miss M. Kier, Park Superintendent B. I. M. Strong and Assistant Park Superintendent T. W. Pierce.

NATIONAL GALLERY PAINTINGS

Question No. 201—**Mr. Diefenbaker:**

How much has been expended by the government of Canada, since January 1, 1945, in the acquisition for the national gallery of paintings by (a) Canadian artists; (b) non-Canadian artists?

Answer by: **Mr. Pickersgill:**

(a) $88,777; (b) $1,495,193.

POST OFFICE STATISTICS, MONTREAL AND TORONTO

Question No. 205—**Mr. Hamilton (Notre Dame de Grace):**

1. For each of the cities of Montreal and Toronto, how many staff and semi-staff post offices are in operation?
2. For each such post office, (a) what civil service grade was held by the postmaster on December 31, 1955; (b) what was the revenue for the last fiscal year; (c) how many permanent employees were on the staff at December 31, 1955?

Answer by: **Mr. Lapointe:**

1. One staff office. No semi-staff offices.

2. (a) Postmaster, grade 18; (b) Montreal, $20,397,612.99; Toronto, $29,866,145.20; (c) Montreal, 2122; Toronto, 2074.

LETTER CARRIER PERSONNEL

Question No. 218—**Mr. McBain:**

How many letter carriers and letter carrier supervisors were employed in the postal service on January 1, 1956?

Answer by: **Mr. Lapointe:**

4667 letter carriers.
1566 letter carrier supervisors.

STILBESTROL

Question No. 220—**Mr. Huffman:**

Does the Department of National Health and Welfare object to the addition of a limited quantity of stilbestrol to cattle feed?

Answer by: **Mr. Martin:**

The food and drug directorate of the Department of National Health and Welfare have considered the effects, from the standpoint of public health and fraud, of the use of stilbestrol in cattle feed. Considerable work has been done by the manufacturers, agricultural people, and members of the

Department of National Health and Welfare to determine whether any residues of stilbestrol remain in the flesh of animals fed on stilbestrol-containing diets.

Evidence shows that if the amount of stilbestrol is limited no stilbestrol can be detected in the meat and the composition of the meat is not significantly changed. The Department of National Health and Welfare would have no objection to the use of cattle fed under conditions that do not result in residues of stilbestrol in the meat and that do not produce undesirable changes in the meat.

The Department of Agriculture are taking steps to ensure that the use of stilbestrol in cattle feed under the Feeding Stuffs Act will be restricted to those conditions mentioned above, that only limited known quantities of stilbestrol will be added to certain cattle feeds, that mixing of the feeds will be adequate, and that proper instructions for the use of such feeds will be issued.

APPENDIX

ADDRESS
of
HIS EXCELLENCY GIOVANNI GRONCHI
President of the Republic of Italy
to
MEMBERS OF THE SENATE AND THE HOUSE OF COMMONS
in the
HOUSE OF COMMONS CHAMBER, OTTAWA
on
Monday, March 5, 1956, at 2.30 p.m.

His Excellency Giovanni Gronchi was introduced by Mr. St. Laurent.

Hon. L. René Beaudoin, Speaker of the House of Commons, presided.

(Translation):

Right Hon. L. S. St. Laurent (Prime Minister of Canada): Mr. President, on behalf of the members of our parliament and of the whole Canadian nation, I have the honour to welcome you most cordially in this house and to express to you personally and to the country which you represent our regards and our feelings of respectful and confident friendship.

We are glad to extend also our most cordial welcome to Mrs. Gronchi, whose presence adds to the charm of your visit. May this visit, short as it is, be as pleasant to you as useful to the good relations between our two countries.

(Text):

Mr. President, in welcoming you today to this chamber, we wish to express our pleasure at this symbolic evidence of the renewal and of the strengthening of the bonds of friendship and of understanding between our two peoples which have grown steadily and surely over these last ten years.

In presenting you to this joint meeting of the members of the Canadian parliament, I am introducing to my colleagues and friends a staunch Italian patriot and a European statesman who for close to fifty years has worked consistently and courageously for three great objectives—freedom, parliamentary democracy and a society based on Christian principles. As a very young man, when he took an important part in the activities of the new Christian Democratic movement, and in the first world war and afterwards, he served those objectives and his nation with outstanding devotion.

During the difficult years of the second world war, President Gronchi, working with the resistance, became one of the leaders for the strengthening of freedom in Italy, and later, in company with the late Alcide de Gasperi, he served on the central committee of the national liberation front. No newcomer to parliamentary life, he was minister for industry, commerce and labour in postwar Italian governments, and he was Speaker of the Chamber of Deputies for almost seven years before his election as president of the republic in April of last year.

(Translation):

In greeting Mr. Gronchi we pay tribute to the representative of a country from which has come to us so much of what makes up the richness of our western civilization. We greet also in his person an able and ardent defender of the unity of the western nations. We admire the part he has played in bringing about Italy's decision to participate in the North Atlantic Treaty Organization and the Western European Union.

We derive a great deal of satisfaction from our association with Italy in the North Atlantic Treaty Organization, and, within the last few weeks, in the United Nations, this vast organization which remains the basis of the hopes and peaceful aspirations of so many millions of men and women throughout the world.

We Canadians are convinced that the accession of Italy to the rank of member of the United Nations marks a step toward better understanding between nations, more encouraging prospects of a peaceful solution of differences and consequently toward a reduction of the hazards confronting the peoples of the earth.

It is therefore with great pleasure, Mr. President, that we welcome you on behalf

of the parliament of Canada and that we acknowledge on this occasion the return of your country to the place which is rightly hers in the councils of the nations.

(Text):

I now invite the President of the Republic of Italy to address us.

His Excellency Giovanni Gronchi (President of the Republic of Italy): Mr. Speaker of the Senate, Mr. Speaker of the House of Commons, and members of the Senate and of the House of Commons, Mr. Prime Minister:

(Translation):

I must, first of all, thank you for your invitation, which, beyond the scope of mere formality, has brought me to this honoured parliamentary rostrum. I am particularly sensitive of this honour because, as many of you certainly know, I was for eight years Speaker of the Chamber of Deputies. I need not add that when I can speak directly to freely elected representatives of popular will, I find myself on familiar ground in spontaneous and common agreement on the method of approach to various problems; all the more so in your parliament which, by tradition and habit, can really be said to be one of the most noble expressions and at the same time one of the strongest bulwarks of democratic freedom.

I also consider it a fortunate privilege for me to speak on this occasion as first magistrate of my country; in this way, for the first time in history the voice of Italy, through this assembly, can make itself heard by the people of Canada. I would like to take advantage of this singular privilege to bring you a warm greeting from the Italian nation, whom I have the honour to represent in its national unity.

It is the greeting of a friendly and allied people for whom all physical distances that separate them from you seem to disappear in the atmosphere of common ideals and harmony of interests between our two countries.

These ideals and interests, which have their deep roots in the same heritage of civilization and tradition and democratic way of life, find their ultimate expression in the manifestations of present-day relations between Italy and Canada.

The most important of these manifestations is represented by a continuing solidarity of effort which the two countries carry on, ideologically and materially, within the framework of the Atlantic community.

This solidarity is perhaps the closest existing among members of the pact which unites so many countries of the west, from Europe to this continent, because the interpretation which Italy and Canada give to the general principles of NATO does not reduce its significance to a mere diplomatic instrument or to an exclusively military alliance, but extends it, in full agreement, to all other requirements suggested by the new course of international events.

Such an interpretation does not require statutory or other innovations, since already in the original context of the treaty it was not by chance that article 2—which today is so often referred to—was inserted, largely through Canadian prompting, wherein it is said that:

> The parties will contribute toward the further development of peaceful and friendly international relations by strengthening their free institutions, by bringing about a better understanding of the principles upon which these institutions are founded, and by promoting conditions of stability and well-being. They will seek to eliminate conflict in their international economic policies and will encourage economic collaboration between any or all of them.

As a logical consequence the treaty between free peoples must be rendered always more capable of expressing not only the language of force, but also that of truth and of right. As your Secretary of State for External Affairs said, in a speech that should not be forgotten, a military alliance, by achieving balance of power, is not sufficient to establish permanent peace, but can only create the conditions under which this peace can be maintained and protected by an accepted equality of rights.

In fact, the solidarity between our two countries does not end in military and in material assistance; it is manifested and strengthened daily in numerous other fields such as politics, diplomacy, economy, cultural and social life. I would like to recall that in this city, in September of 1951, in one of the rooms of this very building, Italian and Canadian representatives found themselves in firm agreement on the desirability that relations between Atlantic pact countries should depend not only on their alliance, but rather on their membership in a real community and that all member countries should be expected to give this reality the utmost consideration.

Since that time the Italian and Canadian governments, striving side by side in a common endeavour, have been in the forefront in

upholding this necessity. The traditional universalism of Italian history and thought, and the ideological and political forces which have created from two different peoples and two histories the powerful unity of your country, have found common expression and a happy communion.

It is our conviction that the era in which we live demands solidarity among peoples, because one nation cannot live and cannot develop independently of other nations or without continuous and reciprocal exchange in which each gives and receives according to its capacities and its needs. The evils from which our era suffers derive from the fact that not all men have completely understood the essence of this truth. Human solidarity, that has achieved such extraordinary progress in the field of individual society, has not succeeded as yet in achieving universal and international solidarity.

On their part the democratic countries of the west have long since recognized that the way of international solidarity is the only path to follow in order to safeguard liberty and, with liberty, the possibility of civil and social progress for all peoples. The Atlantic treaty has, from this point of view, something that is unique: never before has such an imposing array of nations, so diversified in their resources yet so uniform in their ideals, merged their energies not to fight and win a war but to ensure the victory of peace over war.

And it is by virtue and in the implementation of this agreement that western democracies have now trodden paths which our fathers not too long ago would have considered hopeless illusions. But what has been done up to now is not sufficient. It is necessary that all nations—our own above all others—understand this reality: that with solidarity there can be universal progress and welfare—without it there can be nothing but the prospect of destruction and misery.

My country is firmly resolved to continue to give its utmost to the efforts being made toward the strengthening of solidarity between democratic countries. We are convinced that they constitute the best contribution which can be made in the present circumstances for the maintenance of peace in the world, and that they represent the indispensable premise toward the establishment of a greater feeling of trust among all people.

In this spirit we were gratified at the recent decision which solved the deadlock on the question of new admissions to the United Nations, and which has, among other things, corrected the absurd exclusion of Italy from an organization for which she had all the necessary moral, juridical and political qualifications. That these qualifications are well founded, no evidence could be more eloquent than the proof of democratic maturity furnished a few days ago—thanks to the patient and broadminded exertions of Italian trusteeship authorities—by Somali populations who, in conformity with the United Nations charter, have been able to establish in free and orderly manner their first representative institutions to which the basic responsibility of that country's future is now entrusted.

The Italian people, besides recognizing in the decision to admit new members to the UNO a valuable step forward on the road to greater international solidarity, find an open door through which their voice can be heard in an important forum, along with those of friendly and allied countries, to serve the interests of security, peace, international justice and progress, interests upon which the political action of my country and government is founded.

In this regard I cannot forget how much this favourable development, to which we owe the removal of the unfair discrimination to which Italy was subjected, is also due to the consistent action of the Canadian government, who took the initiative and to whom I wish to express our most heartfelt thanks.

In this brief visit I have been deeply, even physically, impressed by the extraordinary vitality and potential energy with which your country is endowed. Canada has rapidly succeeded, through her will and effort, in achieving an international position of preeminence and responsibility, especially in that great and prosperous community of nations of which she is an integral and essential part.

But what has impressed me most deeply and strengthened my trust in the possibility of an ever-growing co-operation between Canada and Italy is the further evidence I have gathered from contacts with responsible Canadians in regard to their accuracy of judgment, their foresight and their firm attitudes. Furthermore, I was not surprised to find such a keen interest in European affairs in a country whose history, position and characteristics make it the natural bridge between the old world and the new.

I have taken advantage of these contacts to illustrate to leading Canadians some aspects of the Italian situation, in the same spirit with which two old friends, meeting after a long absence, compare their ideas and inform each other of their problems. In particular, I have told them—and I wish to repeat it again here—that my country, after the extraordinary effort of reconstruction, is now engaged in a work of renewal and development without precedent in its recent history.

To accomplish this work, which is being carried out in a regime of true liberty and democracy, Italians must be able to rely upon two indispensable conditions: maintenance of peace in the world and the solidarity of friendly and allied countries.

It is my opinion and also that of my government that the new course of international events make it advisable that the next session of the Atlantic council, already planned for May 4, should have the extent and implications of a conference where an objective and therefore realistic examination should be made of all those political, economic, social and psychological requirements to which I have already referred.

Another opinion of my government and of myself is that unification of the western viewpoint is the indispensable premise for any action—in our opinion necessary—in order to confer upon joint policies a dynamic and flexible character to counteract the forces which have lately given proof of possessing such flexibility.

On the other hand, without a united directive, every bilateral contact of single western countries with the Soviet bloc would not be conducive to useful and above all conclusive results, and would risk repeating the unwise tactics of ancient history, when Rome lost the Curiatii in the struggle against the opposing faction of the Horatii.

But it is evidently in the general interest of western solidarity that preventive consultations, which up to now have had an extraordinary character, should become the ordinary and permanent method of approaching problems of defence and peace. These problems are indivisible and it would be artificial and prejudicial not to recognize their interdependence and to believe that stable and conclusive solutions are possible for them without having been rationally co-ordinated. I have noted with pleasure that on this side of the Atlantic there is now general agreement on the need to associate all members of the Atlantic community in the responsibility of proposing and elaborating solutions for the major problems of our time, and in the effort to achieve in harmony the realization of such solutions.

I may therefore conclude without dangerous and undue optimism that at the end of this journey, after my visit to these two great countries of North America, I will be justified in bringing with me to Italy the reconfirmed and increased certitude that Italians are not alone in their efforts for a better future, for liberty and peace in the world and prosperity for our peoples.

(Text):

The kindness shown me during my stay here and the reception that you, honourable sirs, have extended to me today, enable me to bring back to the Italian people your message of friendship and encouragement.

(Translation):

I would like to consider as evidence of this friendship those Italians to whom you open your doors and who give to your cities and land their contribution of loyal and industrious activity.

May God guide and maintain our two peoples united on the road to progress and peace.

(Text):

Hon. Wishart McL. Robertson (Speaker of the Senate): May I, Mr. President, thank you on behalf of the Senate of Canada for coming to speak to us, and for the inspiring address you have just delivered.

Not only have many of our most respected citizens or their forebears come from your beautiful land, but your country and ours have, through the North Atlantic pact, solemnly bound themselves together for weal or woe. Your eloquent appeals here and elsewhere for the bringing of life into the spirit of article 2 of the North Atlantic treaty strike a responsive chord. Two years ago in Bonn, Germany, our Prime Minister, reflecting all shades of political thought in this happy land, made a similar appeal; his judgment and yours has been amply justified by the swift rush of current events. For the common good of free men everywhere, it is the earnest hope that your appeals will not fall on deaf ears.

May we ask you, Mr. President, on your return to convey our greetings to the members of the Italian parliament. Some of us had the very great pleasure last summer of meeting with representatives of your parliament, who were inspired with your viewpoint. We hope for a renewal of the opportunity.

We wish you well in your undertakings. May divine Providence bless your endeavours.

(Translation):

Hon. L. René Beaudoin (Speaker of the House of Commons): Mr. President, it is with the keenest pleasure that I welcome you to the parliament of Canada and that I thank you, on behalf of the members of the House of Commons, for the magnificent speech you just made.

We have had in the past the great honour of receiving here in this house many remarkable statesmen coming from neighbouring and

far-away countries, in particular from the commonwealth and the republic south of our border. We are happy and honoured to be able today to add your name to this memorable list of friends of our country.

Besides, we have known you well since long before your arrival in our midst. The hundred voices of renown had revealed to us the great political force you represent in your country.

Though born in Pontedera, near Pisa, it was possible to say of you "He is a Roman", that is to say, a man of thorough austerity, firmness, courage and patriotism.

Your beautiful country is assured of our friendship. Here in Canada part of the population is of Latin origin and therefore feels a strong attachment to Italy. Moreover, no one can forget the contribution made by your country through the centuries and again today to culture, that is to art, literature and music. Let us remember also, in this strenuous international situation which the nations of the world are facing today, that no law has endured so long as the Roman law nor exerted a more decisive influence on modern law.

(Translated from Italian):

In conclusion, I wish to say how glad we have been to welcome the charming Mrs. Gronchi, as well as the Minister of Foreign Affairs, Mr. Gaetano Martino, and his wife. It is our hope that you have all enjoyed your stay in Canada and we wish you a safe and happy return voyage.

HOUSE OF COMMONS

Tuesday, March 6, 1956

The house met at 2.30 p.m.

PRIVILEGE

MR. KNOWLES—REFERENCE TO REMARKS OF PREMIER OF MANITOBA

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, I rise on a question of privilege. I hold in my hand a copy of the Winnipeg *Free Press* of last Wednesday afternoon, February 29. On page 5 I find the report of a speech made in the provincial legislature by Premier Campbell of my province, from which I should like to read just two sentences. My point of privilege is that they reflect on this house and on an important section of the staff of this house. The first sentence reads:

> Premier D. L. Campbell Tuesday objected to a proposal to have a provincial *Hansard* (a written record of legislative debate) on the grounds that abuses would result.

The next sentence is in quotation marks, and it is attributed to Premier Campbell.

> "It is not understood the extent to which the Ottawa *Hansard* is doctored."

Apart from the fact that my friend the hon. member for Lanark (Mr. Blair), the Minister of National Revenue (Mr. McCann), and others will not like the use of the word "doctored", I submit, Mr. Speaker, that all members know that any attempt to alter the meaning of anything said in this house is promptly frustrated, thanks in part at any rate to press publicity given to such efforts. The fact is that our *Hansard* staff produces a faithful record of what is said here and on their behalf, and as a member of the house, I object to Premier Campbell's words.

I have never heard Premier Campbell complaining of the record of the speeches he makes here in Ottawa when he attends federal-provincial conferences. Since it is our staff which records his speeches on those occasions, he should have known better than to make this unfounded charge.

Hon. W. E. Harris (Minister of Finance): On the question of privilege that has been raised by the hon. member, I am sure he will realize that it might not be possible to reproduce in a newspaper the precise intonation and ideas that might be expressed by any speaker. I have not the slightest doubt that the premier did not intend to reflect on anyone in Ottawa, including the staff of this house. I fancy, however, he was probably just making a remark to indicate what we all admit here, namely that *Hansard* does improve our English on occasion, and on occasion we try to improve it ourselves.

Mr. Fleming: Mr. Speaker, on this point, on what authority does the Minister of Finance assume to reinterpret what appear to be the plain words of the premier of Manitoba?

Mr. Knowles: And they are words within quotation marks.

BANKING AND COMMERCE

CONCURRENCE IN FIRST REPORT OF STANDING COMMITTEE

Mr. John Hunter (Parkdale) presented the first report of the standing committee on banking and commerce, and moved that the report be concurred in.

Motion agreed to.

EXTERNAL AFFAIRS

NATO—REPORTED EXTENSION OF ECONOMIC AND CULTURAL PROVISIONS

On the orders of the day:

Mr. J. G. Diefenbaker (Prince Albert): Mr. Speaker, I should like to direct a question to the Secretary of State for External Affairs. In view of his reported acceptance of the need of something being done to effectively implement article 2 of the NATO agreement as was reported in the press yesterday following President Gronchi's speech to this house, would the minister say what he has in mind to achieve an extension of the economic and cultural provisions of article 2 and to thereby assure closer collaboration among the NATO nations?

Hon. L. B. Pearson (Secretary of State for External Affairs): Mr. Speaker, something has already been done, of course, to carry out the provisions of article 2 of the North Atlantic treaty, which deals with political as well as economic and cultural co-operation. I hope that at the next meeting of the North Atlantic treaty council we will consider what more can be done in this respect. I do not think at this moment I could properly enter into the details of what might be done.

Inquiries of the Ministry

Mr. Diefenbaker: Mr. Speaker, I should like to ask a supplementary question. What is the nature of the representations Canada intends to make at that meeting to that end?

Mr. Pearson: Mr. Speaker, that will be decided when we agree on an agenda and when the policy of the government in respect of the items of that agenda is determined.

MIDDLE EAST—REQUESTED REIMPOSITION OF PROHIBITION ON ARMS SHIPMENTS

On the orders of the day:

Mr. G. R. Pearkes (Esquimalt-Saanich): Mr. Speaker, may I direct a question to the Prime Minister. In view of the situation which has developed in the Middle East will the Prime Minister give consideration to re-imposing a prohibition upon the shipment of arms to that area?

Right Hon. L. S. St. Laurent (Prime Minister): I am under the impression that there are no arms going forward at this time. Applications for further permits are kept under consideration and that consideration will not be completed until the situation in the Middle East seems to ease.

Mr. Donald M. Fleming (Eglinton): Mr. Speaker, may I ask a supplementary question. Would the Prime Minister tell the house what applications have been received by the government for permits to export arms to that area?

Mr. St. Laurent (Quebec East): No, I think that all the information that could be conveyed to the house has been conveyed already. The hon. gentleman knows that there was an application in connection with 25-pounder shells to Israel and that is still being considered.

Mr. Fleming: Is that the only application under advisement at the present time?

Mr. St. Laurent (Quebec East): That is the only one I know of that is still under advisement at this time.

[*Later:*]

On the orders of the day:

Mr. J. G. Diefenbaker (Prince Albert): Supplementary to the questions asked earlier in regard to applications for permits to ship arms to the Middle East, would the Prime Minister say whether consideration of this matter is made at the cabinet level, and whether or not he is prepared to say what is the value of the arms being asked for now and being considered by the cabinet?

Right Hon. L. S. St. Laurent (Prime Minister): I could not say offhand what is the value of the ammunition now being asked for, but I can assure the hon. gentleman that the situation in the Middle East is such that everything that might affect it is being considered at cabinet level.

TRADE

WHEAT—REPORTED NEGOTIATIONS WITH CZECHOSLOVAKIA

On the orders of the day:

Mr. H. R. Argue (Assiniboia): Mr. Speaker, I should like to direct a question to the Minister of Trade and Commerce. Could the minister say whether important negotiations are now being conducted with Czechoslovakia for the purpose of selling a substantial quantity of wheat, referred to in this morning's press as 300,000 tons?

Right Hon. C. D. Howe (Minister of Trade and Commerce): Mr. Speaker, I believe that negotiations are under way with a trade delegation from Czechoslovakia. I regard all trade negotiations as important, and I am sure that these are important.

CITIZENSHIP AND IMMIGRATION

INDIAN AFFAIRS—REPORTED ANNEXATION OF PART OF ST. REGIS RESERVE

On the orders of the day:

Mr. W. B. Nesbitt (Oxford): Mr. Speaker, I should like to direct a question to the Minister of Citizenship and Immigration. Has the governor in council approved the annexation order made on February 22, 1956, by the Ontario municipal board annexing to the city of Cornwall, Cornwall island, which is part of the St. Regis Indian reserve?

Hon. J. W. Pickersgill (Minister of Citizenship and Immigration): Mr. Speaker, to the best of my knowledge this matter has not been drawn to the attention of the federal government in any official way. Like the hon. gentleman I have learned of it only through the newspapers.

Mr. Nesbitt: Mr. Speaker, I should like to ask a supplementary question. Does not the governor in council have to approve such annexation order under the terms of section 35 of the Indian Act?

Mr. Pickersgill: I would assume that is correct, but I always like to get legal advice on points of that sort.

Mr. Fulton: May I ask the minister if he has referred the matter to the legal advisers of his department and, if so, when he expects to be in position to advise the house further?

Mr. Pickersgill: Yes, I have referred the matter to the legal advisers of the department. I do not think any occasion will arise to bring the matter to the attention of either

the government or the house until some formal application is made to the government of Canada.

CANADIAN BROADCASTING CORPORATION

ALLEGED CRITICISM OF PUBLIC AFFAIRS TELEVISION BROADCAST

On the orders of the day:

Mr. Donald M. Fleming (Eglinton): Mr. Speaker, may I refer to the question which I asked the Minister of National Revenue on February 29, as reported at page 1664 of *Hansard*. Has the minister had any communication with the Canadian Broadcasting Corporation, either from them or to them, and if so to what effect?

Hon. J. J. McCann (Minister of National Revenue): I have not had a reply. There has been a communication addressed to the C.B.C.

POSTAL SERVICE

REPORTED STATEMENT AS TO INCREASE IN DELIVERIES

On the orders of the day:

Hon. Hugues Lapointe (Postmaster General): Mr. Speaker, on February 15 the hon. member for Notre Dame de Grace (Mr. Hamilton) directed a question to me with regard to the extension of postal service, which was based upon a report appearing in the *Northern News* of Kirkland Lake of February 3. That report indicated that an officer of the department had made a statement to the effect that postal services would be extended.

Since that time I have had occasion to discuss the matter with the officer of the department, and I have also read the text of the address he gave before the Lions Club of Kirkland Lake. I wish to state that at no time did he make a statement which could be construed as meaning what was stated in the report in that paper.

SUGGESTED USE OF SURPLUS TO EFFECT IMPROVEMENTS

On the orders of the day:

Mr. W. M. Hamilton (Notre Dame de Grace): I should like to ask a question of the Postmaster General, supplementary to what he has already told the house. Does the Post Office Department not plan to use any of its more than $6 million surplus to extend and improve postal services for the Canadian public?

Hon. Hugues Lapointe (Postmaster General): The Postmaster General is always anxious to extend postal services throughout the country when circumstances permit.

SPORTS

OLYMPIC TRIALS—REQUEST FOR FINANCIAL ASSISTANCE

On the orders of the day:

Right Hon. L. S. St. Laurent (Prime Minister): Mr. Speaker, on Friday last the hon. member for Hamilton West (Mrs. Fairclough) asked me if I had received from the committee in charge of the Canadian Olympic trials any application for financial assistance. I said at the time that I had no recollection of any recent application. I have had our records checked carefully, and I find no trace of any such application.

PIPE LINES

TRANS-CANADA PIPE LINES—INQUIRY AS TO COMPARATIVE COSTS OF GAS

On the orders of the day:

Right Hon. C. D. Howe (Minister of Trade and Commerce): Mr. Speaker, yesterday the hon. member for Kootenay East (Mr. Byrne) asked if I would care to comment upon newspaper reports over the week end that gas from western Canada to be distributed by Trans-Canada Pipe Lines Limited will cost 60 cents per thousand cubic feet to Sudbury consumers while Chicago consumers will receive it for 34 cents.

My comment is that while I have not been directly involved in the negotiations for gas in the Sudbury area I have been informed by those conducting the negotiations that 60 cents per thousand cubic feet is far outside the area of negotiation. No definite price has been quoted, but negotiations have been proceeding for a much lower price. Incidentally, that price is for firm power, in contrast with the price mentioned for Chicago consumers, 34 cents, which is a price for dumped gas. In other words, it is for gas supplied under that price if no other customer can use the gas under a firm contract. Incidentally, the gas to be supplied to the Chicago area is gas of United States origin delivered from a United States pipe line, and has nothing to do with the trans-Canada pipeline situation.

Mr. M. J. Coldwell (Rosetown-Biggar): Might I ask a supplementary question of the minister? Could he tell us the rate that was quoted some 18 months ago when representatives of International Nickel and the pipe-line company met, and a few months later the rate setting official suggested a rate? What is the rate now suggested to International Nickel? With regard to the other point, that is a matter to be debated on a subsequent occasion, and I shall not detain the house now.

Mr. Howe (Port Arthur): I can simply say this. Naturally the sale of gas is not a matter for this government, although in regard to every sale of gas to a consumer the rate must obtain the approval of the Ontario government or the proper agency thereof. Without disturbing the negotiation, I can say that I am informed that it is more than 10 cents lower than the price before mentioned.

Mr. Coldwell: That which is presently quoted?

Mr. Howe (Port Arthur): No, no quotation has been made in Sudbury. There are negotiations going on, but they are in an area well below the price mentioned.

ROYAL CANADIAN AIR FORCE

LANDING OF BURNING PLANE BY PILOT NEAR WOODSTOCK, ONTARIO

On the orders of the day:

Mr. W. B. Nesbitt (Oxford): On a point of privilege, Mr. Speaker, I should like to take this opportunity of commending the Royal Canadian Air Force pilot who was piloting a Harvard training plane over the city of Woodstock the day before yesterday and, when it caught fire, instead of bailing out, landed the aircraft, which was in flames, at great risk to his life, out of consideration for the people of Woodstock.

NATIONAL DEFENCE

ALLEGED UNSATISFACTORY ARMY ACCOUNTING METHODS

On the orders of the day:

Mr. O. C. Trainor (Winnipeg South): I shoud like to direct a question to the Minister of National Defence. Has the minister's attention been drawn to a news item in the Winnipeg *Tribune* of March 3, headed "Judge Blasts Army Accounting Methods", referring to a judgment by Judge A. G. Buckingham of the Brandon county court? If so, has he any comment to make?

Hon. R. O. Campney (Minister of National Defence): My attention has not been drawn to the article to which the hon. member has referred, but I shall be glad to look it up. Naturally I cannot comment on the article until I have read it.

RAILWAYS AND SHIPPING

ESTABLISHMENT OF COMMITTEE ON RAILWAYS AND SHIPPING OWNED, OPERATED AND CONTROLLED BY THE GOVERNMENT

Hon. George C. Marler (Minister of Transport) moved:

That a sessional committee on railways and shipping owned, operated and controlled by the government be appointed to consider the accounts and estimates and bills relating thereto of the Canadian National Railways, the Canadian National (West Indies) Steamships, and Trans-Canada Air Lines, saving always the powers of the committee of supply in relation to the voting of public moneys; and that the said committee be empowered to send for persons, papers, and records and to report from time to time, and that, notwithstanding standing order 67 in relation to the limitation of the number of members, the said committee consist of Messrs. Bell, Byrne, Carter, Carrick, Cavers, Churchill, Dumas, Follwell, Fulton, Gillis, Hahn, Hamilton (Notre Dame de Grace), Hanna, Harrison, Healy, James, Johnston (Bow River), Knight, Langlois (Gaspe), Lavigne, Legare, Macdonnell, McCulloch (Pictou), Murphy (Westmorland), St. Laurent (Temiscouata) and Weaver.

He said: Mr. Speaker I shall be very brief. The purpose of this motion is to provide for the appointment of a sessional committee on railways and shipping owned, operated and controlled by the government, and it is the intention to refer to that committee the accounts and estimates and bills relating thereto of the Canadian National Railways, Canadian National (West Indies) Steamships and Trans-Canada Air Lines.

I should merely like to point out that the sittings of this committee will afford to hon. members of the house who are members of the committee the opportunity of participating in a review of the accounts of these three companies, and of putting to their officers such questions as they may think suitable in order to acquaint themselves with the operations of the companies and their financial results for the last year. I do not think I need add anything further at this time. I might merely say that my experience last year was that there was a very full discussion of the subjects referred to this committee, and I hope the same will take place this year.

Mr. J. M. Macdonnell (Greenwood): Mr. Speaker, I think the work done or, at any rate, intended to be done by this committee is important. I think it is one of the really important committees of the year. However, in the brief remarks that I intend to make this afternoon I wish to make some suggestions very earnestly as to one or two ways in which I think the work of the committee can be very greatly improved.

I want to picture to the house exactly what happens. The committee is appointed. Then we are notified that the railway officials will be here. Then they come and we receive the annual report. We have the president and the other railway officials there to assist us in understanding the report, to answer any questions which we ask, and in that they are extremely good and extremely obliging. Then probably within the course of the first day we are asked to approve very substantial capital expenditures.

I think it is really a responsibility which no committee, certainly a committee which does not pretend to be a committee of accounting experts, should be asked to undertake on such short notice. While, as I said, the railway officials are always extremely gracious and obliging, nevertheless there is a sense of urgency, a sense that they are busy men and we must not keep them an extra day because they have important things to do elsewhere and therefore we must be as sparing as we can in the use of their time.

I am not suggesting that is unreasonable. I am only suggesting that, if the members of the committee are completely honest with themselves, I do not believe that at the end of the day they really feel that they have grasped the situation and that they have approved the expenditure of money as if it were their own money. In my opinion, only if we were able to do that would we be discharging our duty, and I suggest very earnestly that as things are managed now we just cannot do that.

I speak frankly for myself. I do not feel happy at the end of the day that I have grasped the full situation and I am sure there would be others who would say the same thing. The president of the railway himself spoke about the railway accounts as a "statistician's dream". I think we know what he meant by that and, indeed, it is no disrespect to the operating officials of the railway to say that occasionally they more or less throw up their hands and say well, that is a technical matter, that is a difficult accounting matter, and we will have to ask the chief accountant to explain that to you. The reason I am saying this is that I want to make one or two suggestions which I cannot believe would be difficult to carry out and which I think would enable this committee to function much better, in my opinion, than it is now functioning.

In the first place I should like to suggest that these accounts should be given to us some days in advance, not the morning of the day we are asked to probe them. I think it would be much better if we could have them some time in advance. In the second place, I think it would be much better if we could have some assistance in advance from technicians, accountants and others. We need not have the chief accountant. I am quite sure that over in the Department of Finance or the Department of Transport there are other people who could give us a great deal of help if only we had the necessary time.

I therefore repeat that suggestion with great earnestness and, unless there are some strong reasons against it, I hope it will be adopted. I cannot believe that there are any such reasons. As the situation is now, we pass this resolution, the committee is set up and then suddenly one day we are told that the railway people will be here in the course of a day or two. They come up here, horse, foot and artillery, with all their staff and their papers and documents.

I wish to pursue this matter a little bit further. I wish the house to realize that what we are doing sometimes is to approve extremely large capital expenditures. Sometimes those expenditures are as the result of legislation passed in this house for the construction of this or that addition to the railway. I think we may as well face the fact that sometimes we dump into the lap of the Canadian National Railways management pieces of railway that are extremely difficult for them to operate and as to which, if they were as free as are their brethren in the C.P.R., they would perhaps say, "Don't let us have them".

I suggest another thing. When it happens that we have voted a substantial amount of money for this or that line, at the first opportunity after that line is in operation, when there is a chance to find out, as far as accountants can show us, just what has happened as a result of the building of the line, I think it would be a useful lesson for us and for this house to have these figures.

I am glad to note that progress is being made on the accounting side. I have expressed disappointment in the past because the surest test of all has not been available to us, the test that I should have liked and the one which I am sure will spring to the mind of everybody as the best test of all; viz., how do you compare with the C.P.R.? We have not been able to get that information in any satisfactory form. Indeed, I think I am not exaggerating when I say that we just have not obtained it. For that reason I am glad to observe that pursuant, I believe, to the recommendations of the Turgeon commission of some years ago, there was published last autumn under the authority of the board of transport commissioners what is called "Uniform Classification of Accounts". It is dated September, 1955, and is effective January 1.

In the foreword to this statement it is interesting to note that in 1939 a uniform accounting committee was appointed by Right Hon. C. D. Howe, then minister of transport; but because of more pressing problems arising from the outbreak of the world war the matter was put over until after the close of hostilities. Some time has gone by since then, and I am glad to see that we now have this "Uniform Classification of Accounts". I understand

that from now on we shall have identical forms of keeping accounts and that we shall be able to compare them.

The chief changes, I understand—and this appeared in the press some little time ago—is that the Canadian National Railways is to be asked to alter its form of depreciation. I understand it depreciated rolling stock but did not depreciate track and buildings, treating them in a different manner. I understand that system is to be made uniform so that we shall have uniform reports from both the railways.

I could go on at length, Mr. Speaker, but I do not think there is much point in going over ground that will be covered when the railway officials are here. We all know that the railway business was very much better last year. I have here the figures for the first eleven months of 1955, during which period the operating revenues of the Canadian National rose from $585 million in 1954 to $623 million in 1955. Their net revenue rose from $13 million in 1954 to $52 million in 1955. We are all aware that the phrase "net revenue" refers only to operating revenue, and does not include interest and other charges, which will cause practically the whole of that $52 million to disappear. At any rate the situation is much better, and I think it is all the more reason why our committee should be put in a position to discharge more efficiently the duty which is laid upon it. It is a heavy duty, and I suggest again that efforts should be made so that we can discharge it as well as possible.

I hold in my hand the year-end review of the president of the railway. There are one or two things I saw in glancing over it. The president reports as to the new lines built during the year. There is particular reference to the Kitimat line in the far north; there is a reference to the progress being made with the Montreal hotel; and there is a reference to freight rates. We remember that during the year the matter of agreed charges was advanced. A piece of good news to a person like myself who lives in a riding which the railway traverses is that the grade crossing fund, we will remember, was increased in this house from $1 million to $6 million.

Mr. Marler: It was increased to $5 million.

Mr. Macdonnell: Yes, $5 million. One thing I should like to mention, because I think it was of interest to all concerned, was the appointment of a very distinguished scientist in the person of Dr. Solandt to the staff of the Canadian National Railways. When the officials are here, and when the president reports, no doubt we shall learn from him more of the background of this interesting appointment.

Before I take my seat, Mr. Speaker, I wish to repeat that I feel this committee has an important job to do. I feel it cannot adequately do that job unless it gets the information well ahead of the meeting. We should also have some kind of technical assistance. I do not think that would involve going out and hiring a lot of new and high-priced help at all. If consideration were given to it and the circumstances taken into account, and our need taken into account, it would be quite possible for officials, probably resident in Ottawa, to give us the assistance we need. At the present time what is happening is that almost imperceptibly capital charges are increasing and increasing. We know the reasons for it, but I do think it would be a good thing if we were to have a closer check on it, if we were able to have those who are most responsible give us at first hand, and not under pressure, their views regarding the matter.

I had an idea at one time myself, which I think was unsound and which I have abandoned, that it might be better for the railway to carry its own load in the matter of raising money; that it might be better for it to do all of its own financing, with necessary guarantees, of course, and not to get any further advances from the government. I have been told by those whose opinion I respect that that is not a sound idea because it would add to the cost of getting money. But I would like to have a chance, as I say, not under pressure, to talk to people whose opinion I value as to this whole situation.

Let us face the fact that the Canadian National had a difficult beginning. It was not a planned entity from beginning to end as the Canadian Pacific largely was. It began, you might say, almost as shreds and patches; it was a conglomeration of railways, nearly all of which had found difficult going themselves, and they were put together and had to be made to work as best they could. I think the progress made is very substantial, but I do feel that when this committee comes back to the House of Commons it ought to be in a better position than I consider it to be in now to report to this house and satisfy this house as to the true situation of this huge investment, which earns a gross income of as much as $600 million a year or more, and whose capital value runs into billions of dollars.

Mr. R. R. Knight (Saskatoon): Mr. Speaker, we in this group welcome the setting up of this important and interesting committee. It

is certainly important and interesting so far as I am concerned. I do not think this is the place to make any long speech on transportation. I think the place for criticism, if any, is in the committee itself. Perhaps after the report of the committee comes back to the house those who do not agree with the general finding will then have their opportunity to say something about it.

I will follow a somewhat different line from that followed by the hon. member who just took his seat. I was going to mention some of the little things, the things that are perhaps important to the general public, things which the man in the street looks at when he considers the railroads. I am aware that this committee deals with more than the railroad. We shall have the report of the Canadian National Railways, Trans-Canada Air Lines and what is left of the Canadian National Steamships, if I may put it that way. We shall be dealing with the auditors' reports in regard to all three.

These enterprises are, of course, of tremendous importance and magnitude. I suppose the Canadian National Railways are perhaps a $3 billion operation, or something of that nature, and they are probably almost the largest employer of labour in Canada, if not indeed the largest. Last year they had a deficit of $28 million.

Mr. Marler: I think the hon. member means 1954.

Mr. Knight: Yes. I am pleased to note that the operation was more profitable in the last year; by that I mean 1955. I think every loyal Canadian would like to see the Canadian National Railways eminently successful. I know that we in this group have more reasons than one to wish it well.

This is not time to go back into the history of the Canadian National, but it has had a somewhat unfortunate history. In my opinion it has never had a chance; it has been a sort of overcapitalized conglomeration of unprofitable ventures. The hon. member for Cape Breton South (Mr. Gillis) mentioned that sort of thing the other day when he was talking about the railroad that is being built to bring out the Labrador iron ore. He said that the railroad was being built and equipped to serve that particular function, but if or when the reason for its being disappeared, then he presumed the Canadian National would be asked to take it over to join a number of other lines of the same sort.

Now, sir, the financial structure of the Canadian National Railways has been ameliorated, of course, by the government action of some years ago. So far as I am concerned that, and matters of a similar nature, are matters for the experts, the accountants and the financiers. My interest, as I said at the beginning, just for the moment at least, is in the man on the street, the consumer of the service that is provided.

We are also vitally interested in the welfare of the vast army of Canadian National employees. I think it is a matter of great importance that this road, which is a national road and the property of us all, should stand high in the regard of the public and of the employees who work in its service. I say this particularly because it is nationally owned. Its function and the criterion by which it must be judged is of course the service it provides to the public, and I am not convinced that simply to say it must make a profit is to be realistic.

Everybody knows there have been occasions this year when heavy snow and intense cold brought about a condition which road men would call "tough railroading", and I know that services have been pretty freely withdrawn in certain districts of Saskatchewan on that account. There has also been the fact that grain has not been able to move freely because there is nowhere it may be moved and that, too, is a consideration. I simply want to draw to the attention of the house the fact that I think there are times when it is justified to maintain public service even if in fact that public service does not show a profit in black upon the balance sheet. The popularity of the road depends on the quality of the service.

What are matters of concern to the average user of the railroads? I suppose from a business point of view one must first mention freight rates. I do not think this is the time to go into a discussion of that sort of thing. As far as passengers are concerned, I think the speed and comfort of the service are essential. We are also concerned with the working conditions and the pay of the people who work on the road. On working conditions, pay and pension arrangements, and that sort of thing, morale largely depends.

I think morale is particularly important in this particular operation. Morale is certainly going to have an effect on whether or not the Canadian National Railways is considered as a first-class operation. We have to face the fact that the Canadian National Railways is pitted against efficient and strenuous rivalry from the Canadian Pacific Railway. We have to meet that competition, and in this matter I think the morale of the workers is particularly important.

There are two matters I want to mention in this connection. These may look like small matters, but I think they are important. What do we hear from the man in the street, the

man who travels on the cars? What do we hear when we hear these railroads compared? One might be surprised to know that people regard the possession of domed observation cars by the Canadian Pacific as an important advantage, and the fact that the Canadian National has no domed cars is a matter of importance to them at least. I simply draw this to your attention.

Another matter of importance is speed. As I have stated before I do not see why in this vast country, with travel involving a large number of miles, the Canadian National has to take two hours longer than the Canadian Pacific in reaching Vancouver. It has been explained to me that the Canadian National gets to Winnipeg faster than its rival; we have heard that story before. Many hon. members will recall what Mr. Gordon has described as the greatest railway myth of all time, when it used to be asserted that at any time the Canadian National could spurt up a bit and improve its speed by ten hours on the transcontinental trip and thereby beat the Canadian Pacific into Vancouver or Montreal by that amount of time. He described that as the greatest myth in railroad history, and he may be right.

However, I would draw to his attention and to the attention of the house that when one or both roads decided to step up their time they decided suddenly it was quite possible to speed up by some ten hours, and both roads were able to do that.

One point which has been drawn to my attention two or three times is this. Why in the world when it decided to increase its speed, did the Canadian National not increase its speed to the same extent the other railroad did? What is an hour's time in travelling across this vast continent? Those are little things, but they are important.

Before I started this discussion of detail I was talking about morale, and there are examples of the little things that build morale. Belonging to an effective organization, a crack organization, must have the effect of building morale, whereas belonging to an organization which is less than first class must have the opposite effect.

At this time I should like to pay tribute and extend a word of congratulation to the Canadian National Railways on the improvement in its dining car facilities. While I take no credit whatever for the change in the management's opinion in that regard, the fact remains that for five or six years I have suggested that something be done about dining car rates in this country. As far as I am concerned the national railroad should have only one object in view, and that is to serve the public, to serve the greatest number of the public.

[Mr. Knight.]

A few years ago the situation was such that only a small percentage of the travelling public in Canada was able to buy meals on the train; it was not financially possible for the general public to make use of the dining facilities on trains. It used to make one's heard bleed to see a mother with three or four young children travelling thousands of miles, involving several days and nights on the train. Upon entering the dining car one frequently saw such a woman glancing at the menu, shake her head slowly and then order a glass of milk or something for the children and not eating anything herself. I have seen this myself. Everyone is familiar with the constant cry of travellers, "When do we stop for ten minutes so we can get off and get something to eat"? I think that has been the experience everywhere.

We in Canada compare rather unfavourably with certain European countries in this regard. I am not suggesting that we should adopt the afternoon tea habit, but if you have ever travelled from London to Edinburgh or from Liverpool to London you will have observed that everybody on the train has afternoon tea. My idea of the function of a dining car service, particularly in this great country where people would eat two or three meals a day if they could afford to do so, is to provide a service that will be within the means of all the travelling passengers. I am not talking about the first-class coaches, nor do I refer particularly to the tourist coaches. I am talking about the people who travel on what we call the day coaches. I think there has been a great improvement in this regard, and I should like to congratulate the management for this.

I know there are some people who do not like the present arrangement; they dislike crowds and demand privacy and all that sort of thing. Most of the trains now have arrangements for that. The people who desire a meal involving privacy and better service can obtain it at a somewhat higher price. The condition I have long hoped for and spoken about, wherein everyone can get something to eat at a reasonable price even if it is only a light lunch, a hot dog or a cup of coffee, has come about, and people now do not have to be hungry while travelling.

I have been discussing working conditions, and I cannot refrain from mentioning the question of C.N.R. pensions. I know that in doing this I am infringing upon the field of the hon. member for Winnipeg North Centre (Mr. Knowles), who has made this one of his many causes on behalf of the underprivileged. This is a great organization in which we have not only a moral but a financial interest, and we think it should be more generous with

those people who have served it in the past but who now find themselves caught in the squeeze of the high cost of living. The knowledge that there is a good pension system is a morale builder in any organization.

There are one or two local matters with which we in the west are concerned. I have already mentioned the fact that service has been eliminated or lessened on certain branch lines, particularly in northern Saskatchewan. I have said already that I do not think profit is the only thing that should be taken into account. Service should be maintained, and certainly during the type of winter we have had this year it was not the time to carry out an economy of that sort.

Then I should like to refer also to the box car shortage, and in doing this I assure you I am not going to reopen the debate on wheat. The responsibility for the box car shortage has been bandied back and forth on the government side of the house until we really do not know where the responsibility lies. However, I note from a reply given to a question asked by the hon. member for Winnipeg North Centre, as reported on page 1606 of *Hansard* of February 27, that the Canadian National Railways has a large number of box cars on order. The term "large" is comparative. Who am I to say what is a large number of box cars for an institution like the Canadian National Railways? But I am glad to see that at least some box cars are on order.

One thing that has troubled the farmer in the west is that he hears about space being available in certain elevators but he finds there are no box cars to permit him to deliver his grain there, so he could get at least some money for it. I draw this fact to the attention of the railway. I take it that the management know what they are doing; I take it that they have taken into consideration the present shortage in placing their orders, and I am glad to see that some of the new box cars have been delivered and are being put into service.

There is another question about box cars, and that is the number which are perambulating around the United States. I do not know whether this situation is normal, but if hon. members will look at page 1826 of *Hansard* of March 5 they will see where the minister made a reply to the hon. member for Kindersley (Mr. Johnson) indicating the number of box cars at present on United States lines. Many people have the feeling that these box cars are down there longer than is necessary, and I suppose their wish is that the cars were available here rather than being kept in the United States for so long.

I should like to indicate my pleasure at the success last year of the Hudson Bay railroad. The deficit has been reduced considerably, as has the amount which the government has had to provide for operating expenses. Revenue has greatly increased. The wheat shipments established a record, and I wish there had also been a record established in the case of goods being shipped in. I note that in 1954 there were 36 ships at Churchill and 12,485,000 bushels of grain were shipped to northern Europe. Those shipments exceeded the 1953 figure by five ships and 1,700,000 bushels. As far as the port itself was concerned the turnaround time was reduced to an average of 3·6 days as compared with 5·6 days for the year previous.

The people in the northern part of my province are tremendously interested in this operation. They look upon it as being something of their own. They have always had an interest in this port railroad, which I think can be explained by the feeling that prairie people have for water. You may be interested to know that on a Sunday afternoon you can drive along our rather sluggish and muddy South Saskatchewan—I hope I will not get into trouble by saying that—in my city and see hundreds and hundreds of cars parked on the river bank with the people just watching the water run over the dam. It is a prairie habit to go to the nearest water and this habit is well founded in history. We all remember the drought in the dry years of 1930-37.

Perhaps that is one reason we are interested in our port. We feel that after all we are not so far from the sea, and in the case of some of us it brings us that much closer to the country of our origin. We have a pride in that port and we want it to succeed. We congratulate everybody concerned, the government, the railroad and everyone else upon bringing about the realization of an ambition to get this operation on its feet. If in the next year there is an increase in proportion to the increase of last year, we feel that we will have realized at least the first step in our ambition.

There are many other problems connected with the railroads but I am not competent nor have I the time to discuss them at the moment. There is the matter of truck competition, or the co-ordination of railroads with the trucks. There is the matter of a national board to control transportation. There is also the question of level crossing elimination and all the rest. We welcome the setting up of this committee, and shall look forward with interest to its discussions.

Mr. F. G. J. Hahn (New Westminster): Mr. Speaker, we in this group welcome the setting up of this committee at this time. I

was quite interested in what the hon. member for Saskatoon and the hon. member for Greenwood had to say with respect to the setting up of the committee, because it indicated the wide scope of the problems we are going to have to face when the witnesses and officers of the Canadian National Railways, Trans-Canada Air Lines and Canadian National (West Indies) Steamships are with us again.

As the hon. member for Saskatoon has said, there are many problems, many of them accentuated right across the nation, which is an indication that we should spend considerable time discussing them. The hon. member for Greenwood pointed out the difficulty we have had from time to time in getting satisfactory information. It is not that the officers have denied us the right to question them or that they did not feel free to give us the right answers, but I always had the impression that they were in a hurry. They had a job to go back to and did not have time to talk to parliamentarians who apparently were unfamiliar with the operations of this great organization which we have to study.

I feel that for that reason the committee should possibly be larger. It would seem to me that if we had a larger committee more of these questions might be forthcoming that would bring out the answers to the questions we think of after the committee has gone home. In keeping the committee to the same size—and this might be more desirable, because by adding to the number of members you really add to your difficulty—we should have this group of officers before us for a longer time so we can get at every problem and analyse it in every possible way. The Canadian public may think that members of parliament are not on their toes and doing their job properly, in all likelihood, because of some of the suggestions I make, but it would seem to me that it is quite impractical for a group of us to be handed all the information that we get at such short notice, to read it, to analyse it and then to rationalize it properly in every way possible. We should spend more time and have the officers with us for a longer time to get to the root of every question that might be bothering us.

The hon. member for Saskatoon mentioned some of the little things the people are interested in. I could add one to that group, as an example; the fact that the fast, streamlined train from Jasper to Vancouver just misses the Great Northern going to the United States by a matter of 12 minutes at New Westminster, whereas a change in the schedule would allow the passengers who have been holidaying at Jasper to take the streamlined Great Northern train down to Seattle and San Francisco and the other United States cities from which they may have come. By missing that connection they have a stopover for a full five hours either in the city of New Westminster or in Vancouver.

It is not that we have nothing for them to see, but when people are on a holiday, I have generally found, they make their way to the destination that is their holiday point, and then they want to get home as quickly as possible. They do not want to be dilly-dallying along the route if they have a ticket that calls for going on south. That would be just another small thing, but it is an aggravating point.

Mr. Knowles: Has the hon. member taken that up with his chamber of commerce?

Mr. Hahn: Yes. In fact, it was one of those very chamber of commerce members who brought to my attention the very fact that people from the United States write to them and protest that they do not like that kind of treatment.

Mr. Byrne: Do they ask the Great Northern to change its schedule?

Mr. Hahn: It is rather difficult to get to Jasper by the Great Northern. However, the fact of the matter is that this is a difficult problem. Those people who do want to stay and plan their holiday season in Vancouver and New Westminster have very little difficulty on their return from Jasper in doing so. They merely stop over. They have already made those arrangements and will take the next train out, which would give them the opportunity of spending those five hours in the city if they so desired. However, I am satisfied that we can appreciate some of the vexation and frustration they must feel when they realize that their train left only 12 minutes before their arrival.

The hon. member for Kootenay East asked a question with which I am going to deal. He asked particularly, "Why not ask the Great Northern to change its schedule?". I would suggest that some day he take a train trip from New Westminster to, let us say, southern California, or even Oregon, and find out for how many trains he would have to change the schedule.

Mr. Byrne: Will you pay my fare?

An hon. Member: No, you would get the Liberal party to pay yours.

Mr. Hahn: I have all kinds of friendly advice in these matters. I am satisfied that the hon. member for Kootenay East, in his own way, fully realizes that he is not serious

in his remarks, or he would not raise such nonsensical suggestions in the house.

There is another question which I think is very important, and which undoubtedly will be raised in the committee. It gives me a sense of satisfaction to think that the committee will be able to ask questions on this again. It would appear to me that Canada is very gradually being socialized by means of the Canadian National Railways.

An hon. Member: Hear, hear.

Mr. Hahn: If I had not heard anybody comment "Hear, hear", as the hon. member for Burnaby-Coquitlam did, when I made that remark, maybe I would have been wrong; but he is happy in the thought that Canada is gradually being socialized and he sees here an opportunity to carry on more of the socialism despite the fact that the members of the government, or the members of the Liberal party itself, so frequently say they are the free enterprise party in this country.

Why do I suggest that socialism is creeping into Canadian life more and more? We have for instance, the fact that when the railways first went bankrupt, the Canadian National Railway Company was formed under the government to operate those railways, and for a good purpose; for when free enterprise fails to offer a means for carrying on the services within the country, I feel it is up to the government to provide the people the facilities they require.

However, from that point on we had the gradual development of the Trans-Canada Air Lines, which today will not harbour any competition. As Canadian taxpayers we are being denied the right to cheaper transportation which Canadian Pacific Air Lines would offer us across the pole to Europe. I know this matter is perhaps not one that would concern so many people, because there will not be many people using the facilities to go to Europe from this country. However, it is a matter of some concern when one also realizes that not so many months ago Pacific Western Airlines was denied a service across Canada in direct competition with Trans-Canada Air Lines because Trans-Canada could not stand the competition. They knew that it would mean cheaper fares for the people in Canada who wanted to travel by air.

We have here the creeping paralysis of socialism in regard to such a company as Canadian Pacific Air Lines. When United States travellers or any other travellers who want to go to Europe are denied the same fares as would be available if they went by another air line, then I would say that other company is going to get the business. That is exactly what is happening. People who want to use air services from Winnipeg, such as the Scandinavian Air Service, are denied that also. There is no getting around it. We have here a monopoly which cannot and will not harbour any competition; and that is wrong in principle. If the operations of Trans-Canada Air Lines, Canadian National Railways and the steamship service are to be continued in their present form, then these organizations should be prepared to stand up to any kind of competition.

We are told that the Canadian National Railways are losing money because of the great big truck transport lines, and that the railway is going to inaugurate a piggy-back service to compete with the truckers with the idea of getting rid of the truck competition through having a lower rate for the railway service. If you get rid of the trucking industry what will you have? You will have more socialization, and you will have put a certain number of people out of business.

The setting up of the committee will give us the opportunity to find out how many truckers have been put out of business, and I hope we will not be denied that privilege. We will be denied it unless we are able to call witnesses from the trucking firms. I think we should have the privilege of calling witnesses from Canadian Pacific Air Lines, Pacific Western Airlines, the various trucking organizations and hotel companies who will be competing with the new palace that is being built in Montreal. I think we should have the officials before us in order to investigate these matters. We should have the privilege of asking these witnesses to come before us so they can discuss their problems with us so far as competition is concerned, and how they are gradually being forced out of business because these government-owned organizations are carrying on in this fashion.

I also feel that the setting up of the committee will give us the opportunity to look into the labour problem again. Here I should like to compliment the railway officials for coming to an agreement with the brotherhoods with respect to the hiring of men for work done under contract, as in the case of the Welch company. I understand that matter has been amicably settled. That is a good, sound practice. But these are the things we find taking place, and we must guard against this creeping paralysis of socialism. We must protect the interests of the taxpayers and guard against the setting up of various industries by Canadian National Railways.

Incidentally, the railway does not pay income tax or any other similar tax to the degree that private enterprise does.

It is essential that we should have such witnesses come before us so we may compare the methods of operation of private enterprise industries and the government-owned organizations, and so we may find out exactly what effect this big government-owned industry is having upon private industries. We are rapidly being conditioned to nationalization and we will be completely nationalized before we are aware of it unless we examine this matter very closely.

Therefore I do not look with any degree of kindness upon the idea that we are going to have a committee again where after a couple of days the inference will be present that we had better finish our work because the week end is coming and these people want to get back to their jobs. That is something that has always struck me about our committee work. I know I am a newcomer, and it may be that as a newcomer I take a different view of the whole situation from that of some of the old-timers who have sat on such committees year after year and have got used to it.

Mr. Gillis: You do not understand the whole thing. That is all.

Mr. Hahn: That is very well put. I do not understand it, but I have been sent here to understand it, and I expect these officials to remain here until such time as everybody understands. I am not satisfied that the hon. member for Cape Breton South understands completely why the railway does not use Cape Breton coal any more. If he did he would not ask the same questions year after year with respect to what has happened to the coal industry.

Mr. Gillis: I do understand. It is a casualty of free enterprise.

Mr. Hahn: The fact that Trans-Canada Air Lines cannot stand competition is in itself criterion enough to indicate that we have to stop and take a second look at this creeping paralysis of socialism. I should like the experts from the gigantic railway enterprise, the steamship lines and the air line to define their policy for us, because they seem to be making it. I am satisfied that the Minister of Transport certainly is not going to take a suggestion from the railway officials or any other officials unless he has discussed it with his colleagues and it has finally been decided that is the policy they should follow, but the point is that the Canadian public have a right to know from the officials of this industry exactly what their objective is, why they want to do away with competition from trucks, why they want to do away with competition from Canadian Pacific Air Lines and Pacific Western Airlines. As I say, these are the questions that must be examined and that the Canadian public have a right to understand.

I am quite happy that my hon. friends to my immediate right do not agree with me. If they did agree with me it would indicate that I was off on the wrong foot. They feel that here they have a socialist industry which is continually socializing more of Canada, and they are happy to see it grow. I am not happy to see socialism grow in this country, especially when it is sponsored by a supposedly free enterprise government.

For that reason I am glad to see the committee set up. I have one further recommendation I should like to make respecting it. There are certain members of the house who do not have the privilege of being members of the committee because they do not belong to a political party recognized as being nation-wide. Certain of these members have taken a vital interest in much of what has been done in this country with respect to the development of railways, the shipping industry and the air-lines business. If those members who do not belong to a particular political party make a special request to be members of this committee, I think they should be afforded that privilege.

Mr. W. J. Henderson (Kingston): Mr. Speaker, I should like to say a few words on the motion to set up a sessional committee on railways and shipping owned, operated and controlled by the government to consider the accounts and estimates and bills relating thereto.

To begin with, I should like to say a few words of congratulation to our railways for the additional service they have provided by way of making it more comfortable for people wishing to travel from coast to coast. However, I do not think we should limit our consideration of comfort only to the rolling stock and motive power. I believe we should go a little beyond that. It is a great thing that we have fine hotels, but somewhere between the rolling stock and the hotels some consideration should be given to the railway stations and the methods of travelling to one's home from the station or vice versa.

I am not going to say anything about the Kingston station this time. All I can say is that it is just that much worse by being one year older. However, for a few moments I should like to discuss the matter of issuing monopolistic franchises to certain taxi companies throughout the country with respect to service at various stations. It is true that the

franchises are granted by tender, and that the highest bidder is the one who receives the franchise. I might say at our local station in Kingston it is given, by tender, to a highly reputable taxi company. They received the franchise, and as far as they are concerned they are doing a good job. But taking the matter beyond that point, may I say this. Complaints have been made to me, and on taking them up with the officials I have been told that it is the uniform thing to do, that they must continue to use this franchise method of awarding contracts to taxi companies to deliver people from the station to their homes or wherever they wish to go.

This system may be all right in a large city where there is a problem in connection with the control of traffic outside the station as well as on the station or railway property. But in a city of the size of Kingston people normally have become accustomed to having personalized taxi service, where you become a customer of a taxi company or of an individual operating one or two taxis. He will come and pick you up and take you to the station, and will also be there to meet you to take you to your home from the station.

The idea of the franchise may be all right, as I have said, in a large city; but in a small city I do not agree with that idea. In a place like Kingston, having regard to the location of the station area itself, it assists the railway officials in policing a station area by having only one taxi service calling for people. But if a passenger on a train wishes to have his own taxi come and pick him up, it is necessary for him to walk a city block, carry his luggage, get his own taxi and make arrangements for it to be there rather than taking a taxi which has the franchise.

I should just like to bring this thought to the attention of the house, Mr. Speaker, and indicate a direction of inquiry to anybody on the committee who might wish to go into the matter. Because you wish to travel by rail and buy a ticket, I cannot see why the railway service which provides your rail transportation should therefore, by their franchise, award the taxi service—and I say quite properly "award" it—by tender and direct how you should go to your home. I feel that it should be left to private enterprise. I cannot see why in Kingston or in cities of that size it cannot be left to private enterprise to handle and not be handled by franchise, when there is little reason other than that it is usual in larger cities to do so.

Mr. Deputy Speaker: Order. I wonder if I might take the opportunity of making a suggestion and of inviting the co-operation of hon. members. We are discussing a resolution to set up a committee. Of course relevancy is difficult on such a resolution. An hon. member can discuss various matters dealing with the Canadian National Railways and then say, "For that reason, Mr. Speaker, I feel that it is extremely important to set up the committee". He can attempt to make his speech relevant on that account.

The suggestion I should like to make to hon. members is one which I find, by looking up the debate of last year, was made by Mr. Speaker in the following words, as reported at page 2441 of *Hansard* of 1955:

> Mr. Speaker: I do not wish to limit the latitude which hon. members may wish to take on this motion but I am asking myself whether it is in order at this moment to discuss whatever one might want to put forward before the committee after it is set up.

I thought I would rise at this time to throw out that suggestion to hon. members. I think they might consider it and perhaps co-operate by refraining from discussing subjects which might more easily be discussed when the committee itself is set up.

Mr. John B. Hamilton (York West): Mr. Speaker, I hope the fact that you recognized me just before making those remarks does not indicate that I am going to be restricted too severely in my remarks this afternoon. As a matter of fact I might say to the Minister of Finance (Mr. Harris), the house leader, that I find the practice in the debates in this house about as frustrating as I find courtroom practice in my profession. Last night I was getting ready for research, and today I find that I am to deal with this resolution.

I will not start, Mr. Speaker, by using the well-worn phrase that I intend to spend only a few minutes on this resolution. I will, however, give a commitment that I intend to deal with only one part of it, namely that having to do with Trans-Canada Air Lines. As a matter of fact, I am most surprised that all this resolution stands in the name of the Minister of Transport, because it seems to me to be well recognized that he does not seem to administer the affairs of Trans-Canada Air Lines. That happens to be another of the little side departments which are handled by the Minister of Trade and Commerce (Mr. Howe).

Of course I should not be too much surprised about that fact, because there are many side departments which are handled by the Minister of Trade and Commerce. In fact there are not many trends in business that you can get into these days where you do not find his hand somewhere. But as a preliminary observation may I say this I am wondering whether it is not about time

that the administration of this company was returned to its proper place, namely under the Minister of Transport.

I might be forgiven for saying that I think if it is important enough that the Minister of Trade and Commerce should handle it personally, then perhaps what is required in Canada today is a minister of transport for air. It seems to me that we are moving into a phase in which air transportation is going to be by far the most important part of our transportation scheme in this country. In that statement I am not minimizing the extremely important role the railways have to play. I think everyone in the air transport field believes that for bulk transportation they will continue for many years to come to be the main means of the movement of goods in Canada. But if you follow the statistics, it is quite obvious that from the standpoint of the movement of passengers there is a continuing decline in the movement by the railways and at the same time an increase in volume of business by air.

Mr. Speaker, I am pleased that in this resolution, as I have read it, the committee is empowered to send for persons, papers and records. I noted that the hon. member for New Westminster referred to that fact in his speech and pointed out that it was most important that we take full advantage of our ability in this committee to have contact with those who are expert in the various fields of air transportation in order to see whether we cannot assist in charting a course in transportation in this country which will stand us in good stead for many years to come.

I say to you, Mr. Speaker, that this is the time to do it. This is the period when, if the groundwork is laid solidly, this country can be in the forefront of the air powers of the world. In connection with your observations about relevancy, Mr. Speaker, may I say that I think we need to attune this committee to the situation we face today. I think it is quite relevant. The need for this committee is tied up with many changing aspects of that situation. I might be forgiven, sir, if I said perhaps we should know a little about the question of speed and capacity of the aircraft we have now and what we are going to have in the future.

I should like to refer for a minute to Mr. Gordon McGregor's presentation to the royal commission on Canada's economic prospects, in which he gave us a peek at the situation as we have it today and what we face in the future. He dealt with it from the cost standpoint, from the speed standpoint and from the capacity standpoint.

Trans-Canada Air Lines started with our Lockheed 14. They were worth $105,000; their cruising speed was 175 miles an hour and their capacity was ten passengers. The North Stars cost $685,000; their average cruising speed was 220 miles an hour, and they had a capacity of 40 to 62 passengers. The Viscount costs $1 million per aircraft; their speed is 310 miles an hour and they have a capacity of 40 passengers. The Super Constellation costs $2,300,000; their speed is 290 miles per hour and their capacity is 63 passengers. The long-range jet transport, which we feel will be in service early in the 1960's, is going to cost $5,500,000. The speed will be 550 miles an hour, and the capacity will be 120 passengers.

I might say there are people close to this business who are not exactly sure that we should move immediately into this type of transport. There are those who advocate the use of the turbo prop on a larger scale than the Viscount. They refer to the Britannia as an example, and say that perhaps Canada might be able to get one step ahead in the immediate period by making use of that type of large aircraft. The use of aircraft of that type might conceivably set us back in the long-range picture, but if there is an opportunity to build such a plane in Canada by making use of Canadian dollars to put Canadian workmen to work and build up an industry on a solid and firm foundation—not just on a question of building fighter planes—then perhaps this government, through its agency, Trans-Canada Air Lines, might seriously consider whether it is not feasible and possible to handle purchases of that kind.

In this connection I refer, as a matter of fact, to the submission made by Canadair to the same royal commission, in which they mentioned that they had canvassed the situation dealing with the production of such an aircraft. They indicated that $40 million was required as a production cost for the first 40 aircraft $67 million for the first 100 aircraft; and that it appeared that 300 aircraft would have to be produced in order to make it an economically sound scheme. But such an aircraft has a great military potential. It has been proven conclusively in the United States that only by the use of government funds in the development of military aircraft can we then turn to the production of civilian aircraft on a profitable basis.

I think it will be found that Canadair's brief indicates disappointment that there was no indication from this government that it might consider the production of some of these models for military purposes. As a matter of fact, their figures indicating that 300 aircraft were required to make it a sound business proposition are not quite in line

with the brief of Avro of Malton, which indicates that perhaps 100 aircraft of this transport variety would make a sound business proposition for them. I do not know where the break-even point is in this type of development, but I do know that with the volume that is projected for the future by Trans-Canada Air Lines there is every indication that in the foreseeable future we are going to be in the position where we are going to buy aircraft in 100-lot bundles. If we are going to be in that position, then surely we should be thinking about building those aircraft in Canada.

I spoke about the future and what it might hold in the volume of traffic. I might refer again to Mr. McGregor's brief in which he refers to the over-all traffic potential, and shows that in 1960 they expect $110 million to be their gross revenue. That is an increase of 45·8 per cent over 1955. In 1965 they expect to gross $145 million, a further increase of 31·8 per cent. In 1970 they expect to gross $180 million, an increase of 24·1 per cent; and in 1980 they expect to gross a total of $250 million, an increase of 38·9 per cent.

These are the figures which indicate that in this country alone there is going to be a very good potential market for transport-type aircraft. This committee might very easily look into the question from the purchase standpoint, from Trans-Canada's standpoint, to see whether the government itself, through its expenditures on defence production, might assist in ensuring that our basic plane industry is the type that will go on and be self-supporting for many years in the future.

Another thing that will have to be looked at is the question of what sums of money this government is going to spend to handle the other items that will be required in the future for air transport. It is not just simply a case of Trans-Canada ordering the planes and carrying out the work. This involves all the additional facilities which will be required at air terminals, and of course, most specifically the amounts which will have to be set aside for improving and lengthening runways and things of that kind. Mr. McGregor referred to the question of airports as well.

Mr. Marler: Mr. Speaker, I should like to raise a point of order. Perhaps the question of the kind of aircraft that Trans-Canada Air Lines might acquire might, by some rather difficult process, be considered to be relevant to the accounts of Trans-Canada Air Lines; but when we go on to deal with the question of the sums of money that are going to be spent to provide other facilities for aviation, we are getting directly into a subject which I think ought to be gone into when the estimates of the Department of Transport are before the house, when it will be possible to deal with it adequately. It seems to me that we can go on talking about the facilities that are related to air and to airways, but surely not because we merely mention the name "Trans-Canada Air Lines" in this motion.

The Acting Speaker (Mr. Applewhaite): I think the minister's point is well taken. The resolution which I have just read again deals with the accounts, estimates and bills relating to certain crown companies. Provided that the hon. member is dealing with the activities of those crown companies, I could not object; but the moneys spent on building or improving airports and airways, if they are moneys spent by the Department of Transport as a department as against the moneys being spent on Trans-Canada Air Lines, could not be discussed in the committee, and therefore would hardly be in order on the resolution to set up the committee.

Mr. Hamilton (York West): Mr. Speaker, with reference to the point of order that has been raised, I see no better place to discuss this particular problem, in fact I see no possible way of obtaining the type of information that is required for Trans-Canada to carry on its operation except through qualified people who can be brought before that committee. It may be true that the money that is to be spent will be spent by the Department of Transport; but if you would like me to read this passage from Mr. McGregor's remarks you will see that unless this is done Trans-Canada Air Lines will not be able to carry out this service. On that basis I submit that my remarks are in order, and that committee is the place where we should be able to get the information required to enable Trans-Canada to carry on its business.

The Acting Speaker (Mr. Applewhaite): I am going to suggest to the hon. member and to the house that we permit the hon. member who has the floor to read the passage to which he has referred; but I think I must, as a servant of the house, reserve the right to decide that further discussion of it may not be in order because, as all hon. members will agree, there must be a dividing line between Trans-Canada Air Lines as a crown corporation and the activities of the Department of Transport as a department of government.

Mr. Hamilton (York West): Thank you very much, Mr. Speaker. I shall try not to spend too much time on this disputed point. Mr. McGregor said this:

> New runways will have to be built, and at some airports, runways will require to be increased in size. In some cases, at larger airports, existing

runways will need considerable strengthening to bear the weight of the new and heavier aircraft types and, in other cases, new airports will have to be built in their entirety.

Beginning in 1960, large jet aircraft will require 9,000-10,000 ft. runways. Intermediate range turbo-prop aircraft will require 6,000-7,000 ft. runways, with the shorter range inter-city aircraft needing 5,000 ft. runways.

Here is an indication that within this committee we should have the opportunity of bringing forward witnesses who will be capable of informing us of the type of future that must be plotted in order for our government-owned air line to properly carry out its function. Yet later on in this same brief Mr. McGregor referred to the question of the use of vertical thrust aircraft. He said this:

Furthermore, serious consideration must be given to the potential of the entirely new type of vertical thrust aircraft which has recently entered the design picture. Utilization of such aircraft by T.C.A. is not probable before 1965.

Here is a case where we do need expert advice. In view of the new theories concerning boundary layer control in connection with the use of the various types of aircraft we may be placed in the position where we will be building airports to accommodate Trans-Canada Air Lines with these new and larger aircraft, whereas the latest development of science may indicate that in the very near future we should be able to contract these runways. The course that is followed by Trans-Canada Air Lines will have a great bearing on what chart must be drawn for the activities of the government in connection with this particular sphere of government business.

The Acting Speaker (Mr. Applewhaite): Order. I am going to ask the hon. member to leave it at that. I have followed him, and he has been referring to the activities of government. The physical facilities which the government may or may not have to provide for Trans-Canada Air Lines and other air services in the country in the nature of airports and other public facilities I think are items which will not be considered within—and I quote the resolution—

. . . the accounts and estimates and bills relating thereto—

—of the various crown companies concerned.

Mr. Hamilton (York West): Well, Mr. Speaker, I should like to go on. I have mentioned my other point, the question of buying in Canada, so I shall not spend any more time in connection with that particular part of my address except to say the course that is followed by Trans-Canada Air Lines in connection with its purchases and the acquisition of equipment will be the deciding factor in the future of the aircraft building industry in Canada.

I think that must be borne in mind if we are to have the opportunity of selecting people to appear before the committee, experts who will be able to inform us as to what is the break-even point of construction on this type of aircraft. That would be a most important feature to be dealt with by this committee if the proper personnel were allowed to appear before it.

There is one other point that has been discussed by many hon. members in the house, and it was referred to again by the hon. member for New Westminster. I refer to the question of the over-all competition picture in so far as the government-owned air line is concerned. I think most hon. members should be aware that this air line does not come within the ordinary scope of the air transport board. Section 15(7) of the Aeronautics Act provides:

The board shall upon application grant to Trans-Canada Air Lines a licence to operate a commercial air service under such terms and subject to such conditions as will enable Trans-Canada Air Lines to perform any agreement made, under section 15 or 24 of the Trans-Canada Air Lines Act, between the Minister of Transport and Trans-Canada Air Lines or between the Minister of Transport and any corporation created under section 19 of that act.

This is in an entirely different position from other companies carrying on business in this field. As a matter of fact it is so different that a press comment appeared not too long ago to the effect that Trans-Canada Air Lines traded certain of its routes with Canadian Pacific Air Lines. It gave up certain international routes and in return it got the route from Montreal to Quebec and other places. Obviously if we are going to have a company which is over the so-called regulating body, then the appeal in connection with its operations must be made directly to the cabinet. As a matter of fact, as I have stated before, it would appear that it must be made directly to the Minister of Trade and Commerce.

I asked the Minister of Transport this question last year as reported at page 6592 of *Hansard*:

I wonder if the minister would reply to my question. Does he know the particular reason why Trans-Canada Air Lines remains under the control of the Minister of Trade and Commerce and not under his department?

The Minister of Transport answered as follows:

The subject has not been discussed since I have been minister and, consequently, I am unable to express any opinion on it at the present time.

I can only assume that the whole competitive picture, since this air line is above the regulating body so far as I can determine, is in the hands of one man. There have been various views expressed as to the competitive picture. I might repeat again what the Prime Minister said in addressing the air industries and transport association in November, 1953. That was at the time when we had an application for a competitive air freight line.

The Prime Minister said, as reported at page 6498 of *Hansard*, July 20, 1955 on which date I read his remarks into the record:

> I will assure you that the government does not necessarily intend to guarantee every operator a permanent monopoly in his area. Let me assure you that whichever way the decision goes now (reference to the then pending C.P.A. transcontinental air cargo application) it will not in the long run be a decision in favour of perpetuation of monopoly conditions.
>
> I have stated many times, before representatives of other industries, that the government to which I belong believes that as a general rule the public can be best served under competitive conditions. And I believe that once the air transport industry is soundly established, the decisions to be made by any Canadian government should be in favour of opportunities for competition.
>
> And in view of the tremendous development of our resources that has been taking place, a development which shows no sign of relenting, the demands for the services of commercial aircraft should increase to such an extent that increasing competition will be both desirable and beneficial.

These are the words of the Prime Minister describing what he felt were the conditions dealing with the situation, at a time when another air line was challenging the position of our government air line. I would like to ask, have these conditions not been fulfilled? Since Trans-Canada Air Lines has laid the firm base and foundation referred to in his remarks is it not time that we had some type of competition on a well-regulated basis which would be in the public interest of this country?

We have had statements of policy on this matter before. In speaking before the same association the former minister of transport indicated that the government was then in a position to permit regional competition. We have not had any regional competition yet. Speaking about the position mentioned by the hon. member for New Westminster, surely if we are not in a position to say that this company can now stand competition on a national basis, there must be some point along the line where cheaper air bus service can be established to provide a type of service which all the public can use on a day to day basis.

How are we going to accomplish that? First of all, let us get Trans-Canada Air Lines back under the regulations of the air transport board. If this job is so large that it requires special attention, then let the government appoint a minister of transport for air. Let us have people before this committee who have a knowledge of the future trends of this business, who can chart a course for us to indicate where we are really going.

This is a wonderful opportunity to bring before the committee those who can chart for us the future of civil aviation in Canada. Along with the hon. member for New Westminster, I will be glad to sit there until such time as we have the whole future opened up before us. Let us not miss the opportunity.

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, as has been indicated already by my colleague the hon. member for Saskatoon (Mr. Knight), we welcome this motion to establish a special committee to deal with matters relating to Canadian National Railways, Canadian National (West Indies) Steamships and Trans-Canada Air Lines. In fact this committee is so welcome every year that I sometimes wonder why the government has not decided to make it a standing committee. Perhaps I should not stress that point too much, lest the government take me up on it and then we would not have this debate every year.

However, we welcome this motion, not only because we feel it is the duty and responsibility of parliament to examine the affairs of these crown corporations but because we feel it presents an opportunity for members of parliament to learn what these corporations are doing. I think most of us in this house feel that these corporations are a matter of pride so far as Canada as a whole is concerned. It is true that we have suggestions and complaints from various quarters of this house, but generally we are pleased with the work being done by the management and the many thousands of employees working for these three organizations.

As hon. members will expect, the main complaint I will make has to do with the pensions of retired employees of Canadian National Railways. However, I shall leave that for a moment or two and deal first with one or two other matters.

While I am delighted that we live in the kind of country where people can complain against government policy; while I am delighted that we live in the kind of country where newspapers, even Liberal newspapers can complain against government policy, I must say that I regret the extent to which public bodies such as Trans-Canada Air Lines seem to be coming under quite unfair attack not only by members of this house but by newspapers such as the Winnipeg *Free Press* and others.

This is perfectly in line with the position taken by my hon. friends to the right, of the Progressive Conservative party, and my hon. friends to the left, in the Social Credit party. They go all out for free enterprise; therefore when there is a move in the direction of public ownership they try to scuttle it if they possibly can. However, I think any objective person will recognize that the record of Trans-Canada Air Lines is one of which we all have reason to be proud.

I am satisfied that we would not have the excellent air line that we have in this country known as Trans-Canada Air Lines, as well as the other services of such a high order that are being operated, had it not been for government policy in connection with this matter. I remember quite well when that policy was enunciated in this house by the former prime minister, Mr. Mackenzie King, and spoken to and supported by the present Minister of Trade and Commerce. I believe that was in 1944.

Mr. King laid down the government's post-war civil aviation policy. I remember in particular the Minister of Trade and Commerce speaking in that debate and referring to some of the unfortunate experiences we had had in this country in connection with the building of our railroads. He referred to the large number of railroads which had been built and the financial problems and problems of capitalization which developed and which led to the eventual necessity of forming the Canadian National Railways to take over a number of bankrupt lines.

I do not think I would be unfair to the Minister of Trade and Commerce if I said that in his speech in 1944 he made it clear that the government did not wish to see that story repeated in the field of aviation. The point was made at that time, with which we agreed and with which we still agree, that because of the nature of aviation, because of the greater attention that has to be paid to the safety factor, because of the greater cost involved in building air lines, because of the greater cost to the public treasury involved in providing aids to air navigation and so on, considerations which had been learned out of the experience with the railroads were even more important so far as civil aviation was concerned.

As the minister will recall, we gave full support to the government's policy as laid down in 1944. Indeed, we have criticized the government only with respect to where it has deviated from its own laid-down policy. I want to say that we feel that the policy of having the main air line in this country a people's air line, owned by the people, is a good one. We hope it will be continued, despite these complaints from the left and from the right of us in this house, and also from certain newspapers of this country.

I move on to say one or two things about the Canadian National Railways. First of all I wish to express my pleasure that agreement was finally reached between the management of Canadian National Railways and the Brotherhood of Maintenance of Way Employees with regard to contracts formerly made with R. F. Welch Limited. Had it not been for the amicable settlement of this dispute I think the minister will realize that there would have been some pretty strong words used in this very debate, particularly in view of the commitment that was made to the committee when it met last year. We are glad to know that that settlement has been reached and apparently it is satisfactory both to the management of the railways and to the Brotherhood of Maintenance of Way Employees. I am happy to express this pleasure, not only because of the particular incident itself but because of the fact that it is an illustration of what can be achieved in terms of morale in this great organization when management will listen to the representations of the organizations that represent its employees.

There is another phase of management-employee relations to which I should like to refer in passing. I hope that attention will be paid to this matter. As the minister knows, he and I have had correspondence concerning a particular case, which I shall not mention in detail here for obvious reasons. I mention this type of case—and I have had others similar to it—because it seems to me there is an element of unfairness, very real unfairness, in the way in which the Canadian National Railways, like some other employers, I freely confess, adds further punishment to employees who have already been punished as a result of some misdemeanour. I have in mind other cases than the one to which I have just referred, where employees, to my knowledge, have been found guilty in the courts of some offence. I think of one where apparently the offence was not too serious, because the sentence was only a $10 fine. Nevertheless, in that particular case, because that employee had been found guilty of an offence under the Criminal Code, he not only had to pay the penalty prescribed by the court, but he lost his job with the Canadian National Railways.

Mr. Diefenbaker: What was the offence?

Mr. Knowles: That employee also finds it difficult to get other work because, when he applies for other employment, he is asked where he worked last and why he left. When he tells the story it makes it difficult for him

to secure other employment. However, I am even more concerned—and I note with appreciation the interest of my hon. friend from Prince Albert—about a case in which an employee had charges laid against him but, as a result of two jury trials, was found innocent. Yet this employee, despite the fact that he was found innocent of the charges made against him, by the courts of the land, was nevertheless dismissed from the employ of the Canadian National Railways.

The letter of dismissal referred to this employee as having involved the company in unfavourable publicity, but I submit that the whole thing seems extremely unfair to the employee in question. This particular employee was suspended at the time the charges were laid against him. He was therefore technically an employee of the company from that date until the two trials were over. After the trials were over and he had been found innocent of the charges, he was dismissed from the employ of the company, and the dismissal was made retroactive to the date upon which he had been suspended. On that basis he not only loses his employment but he loses his wages for that considerable period of time when he thought he was an employee under suspension. One can imagine the difficulty he has in getting other work. It seems to me that the whole policy of the company in matters of that kind—because I understand the company works under iron-clad rules it has laid down—should be re-examined.

Mr. Diefenbaker: Could the hon. gentleman say what those charges are, without identifying him, because that rather alters the situation unless they have to do with offences committed during service and while on service?

Mr. Knowles: The charges to which I am referring in the latter case were one of stealing company property and the other of being in possession of company property.

Mr. Diefenbaker: What was the earlier case, the $10 one?

Mr. Knowles: The $10 case is one the details of which I would prefer to convey to my hon. friend privately. The point I am making with regard to the case where there were the two jury trials is that the man was found innocent on each charge by two separate juries and I am satisfied that he was innocent. The case is now being considered by the law officers of the Canadian National Railways as to whether the man has a claim to his wages during the period between the date when he was suspended and the date when he was dismissed. That matter, as I say, is being threshed out between the employee's lawyer and the management. It seems to me that even more than the question of paying this man for this period of time is at stake. As I say, I do not wish to mention the man's name or any other particulars of the case because I cite this not only on his behalf but because I feel that this policy of giving employees two or three extra forms of punishment might well be reviewed, particularly where crimes might be found to be not too serious, and especially where a man is found to be innocent.

Now I turn to the subject which I indicated at the beginning is my main concern in rising at this time. That is my concern that nothing has yet been done by the Canadian National Railways to augment the pensions of its retired employees, particularly that large number who are still receiving only $25 a month—let alone a large number who are receiving very little more than that. The order paper has on it questions of mine to bring the information up to date as to the numbers of retired employees receiving pensions in various brackets. Those questions, although they have been on the order paper for some considerable time, in fact since January 11, have not yet been answered, but I know from experience in former years that as a rule we get well into the month of March before that information is brought down.

Nevertheless, from answers I have obtained in former years, it is clear that there are still about 3,200 retired employees of the Canadian National Railways who are receiving pensions of only $25 a month. There are eight or ten who are receiving pensions of less than that figure. In addition, there are another 3,700 employees whose pensions are more than $25 a month but less than $40 a month. That adds up to something over 6,900 retired employees who are receiving pensions of less than $40 a month. That figure of 6,900 is about 36 per cent of the total of some 19,000 retired employees of the Canadian National Railways.

I know that, once we get into this, the minister and I can rehash the arguments which we have had back and forth for a couple of years, not to mention the arguments I had with his predecessor across a number of years. It seems to me that the time has come when the minister should stop looking at this as just a repetition of the same old debate the hon. member for Winnipeg North Centre brings up, and look on it rather as an issue which should be faced and settled. I asked him on January 26 this year, as recorded in *Hansard* at page 562, this question:

Mr. Speaker, may I direct a question to the Minister of Transport? In view of the action of the

Canadian Pacific Railway in increasing its minimum pension, effective next week, to $60 a month at least to the age of 70, does the minister not think it is time the Canadian National Railways raised its minimum pension from its present figure of $25 a month?

The answer the minister gave on that occasion was as follows:

My attention has not been drawn to the action taken by the Canadian Pacific Railway, and I shall certainly not express any opinion on it until I find out what that action has been.

I had hoped that within a few days the minister might have informed himself of what the Canadian Pacific Railway had done and that he might have made a further statement. Maybe he is holding it for today. If so, I hope it will be a favourable reply. As the minister can well imagine, the day may come when some of us in the house may have something to say about the changes made by the Canadian Pacific Railway. They are not all that could be desired. There is room for some real improvements in their plan. In particular, I would emphasize that, although the Canadian Pacific has provided that all its retired employees shall receive a pension of not less than $60 a month, that obtains only until the age of 70. At the age of 70, I regret to say, the Canadian Pacific pension in all cases reverts to whatever pension the employee would have had but for the supplement added by this recent announcement.

I emphasize the fact that the Canadian Pacific Railway is doing something here which is more than was involved in the specific contractual arrangement between the company and the employees. That has been done in many jurisdictions where pensions of retired employees have been increased. I emphasize that because one of the points the minister and his predecessor have tried to make is that the pension these men are now receiving is in pursuance of the contractual arrangement that existed between the railway and the workers. In the meantime, Mr. Speaker, since these alleged contractual arrangements were entered into, conditions have changed. The cost of living has gone up, the standard of living has gone up, the productivity of the nation and of a railway such as the Canadian National has increased, and it seems to me that Canadian National Railways as a good employer has a moral obligation to these retired employees.

I urge it upon the minister as strongly as I can that he should give consideration to this matter. After all, we are impressed with the way in which the minister has taken hold of his department. He has now been with us for a couple of years or more and is no longer a novice. He no longer has to do only the things that were done by his predecessor. He is a full-fledged minister now, and I suggest it is time that he himself took a personal look as a human being at this problem and came up with an answer to it. If he would like to do so on some occasion we could have a discussion as to ways and means whereby this matter might be dealt with, but the first concern, of course, is that there be a will to deal with it, and to us it is a matter of real regret that as yet neither the minister nor the management of the railways have shown any real concern for the position of these retired employees.

Let the minister not come back and say that the plan so far as those who are working is concerned is better than it was. That is true. It has been improved immeasurably, but by and large that does not help men retired when the pensions that they received were smaller. It does not help at all those who get only $25 a month. I know the arguments about the difference between the contributory and the non-contributory plans, between service pensions and the pensions of other categories, but I submit that whatever argument may be made about the contractual arrangement the Canadian Pacific Railway has given at least a partial answer to that because, as I say, that railway has made this slight improvement.

I repeat what the Canadian Pacific has done. It has provided that any retired employee, whose pension arising out of his contractual arrangement is less than $60 a month, will have that pension increased to the figure of $60 a month at least until such time as that employee reaches the age of 70. As I say, there are some other details about it that we may have to discuss in the house later this session, but for the moment I simply make the point that surely the Canadian National should be able to do just as well as the Canadian Pacific with regard to its retired employees.

I am happy, Mr. Speaker, to have included in my remarks today a few words of pride and commendation, of pride in these crown corporations and commendation for what the government has done. I am happy to have included an endorsation of the government's policy with regard to civil aviation. But the other side of the coin is that we feel resentful and annoyed over the way in which consideration of this important matter has been put off and off. I hope that the present Minister of Transport, as a human being, will give it serious consideration and will do something very soon to raise the pensions of retired C.N.R. employees, particularly those whose pensions are in the lower and the middle brackets.

Mr. Donald D. Carrick (Trinity): Mr. Speaker, I shall detain the house for a few minutes. I rise simply to clear up one point. The suggestion has been made by several members this afternoon that the employees of Canadian National Railways and Trans-Canada Air Lines were somewhat impatient with the committee, were in a hurry to get back to their work and, as one member said, did not desire to waste their time on a committee of parliamentarians. I should like to express my dissent from that statement. I had the privilege of serving on the committee last year, and I think I express the opinion of a great many members of the house when I say that the officials of these two companies showed the utmost courtesy to the members of the committee and gave us no indication at any time that they were not willing to stay just as long as we wanted and give us whatever answers were requested.

I do recall that what happened was that last year we considered whether or not the committee would sit in the evening and let some of the officials of one of the companies return home the next day or whether we would not sit and would require them to come back the next day. The committee decided to sit that evening until eight or nine o'clock, which in my opinion was the proper decision. I merely want to express my dissent from any view that the officials of these companies did not give us the fullest co-operation or were not willing to spend all the time required with the committee.

Mr. C. E. Johnston (Bow River): Mr. Speaker, I do not want to hold up the house too long on this occasion, but there are a few words I should like to say. The hon. member who has just taken his seat tried to imply of course that the hon. member for New Westminster had become impatient with some of the employees of Canadian National Railways because they desired to get home in a rush but such was the case. Let me say that I too am a little bit resentful of committees being rushed—I use the word "rushed" advisedly—and being asked to sit in the evening in order to speed up hearings so that civil servants or employees of companies can get back on the job. In saying that I am not inferring anything against the employees of those companies. What I am referring to, and what the hon. member for New Westminster referred to, is the fact that after a committee has sat all morning and all afternoon it is going a little bit too far for the members to be asked to sit again in the evening. The work of the house should be arranged in such a manner that it will not be necessary to crowd committee work in that way.

Mr. Carrick: May I ask the hon. member a question?

Mr. Johnston (Bow River): Yes.

Mr. Carrick: Would it not be fairer for us not to blame the officials of the railway and airline companies for being unwilling to stay when actually what happened was that there was a difference of opinion among ourselves with respect to whether it was desirable that we should sit? Certainly the reflection was cast on the officials of these companies that they were unwilling to stay, and I think the hon. member will agree with me that was not the fact at all.

Mr. Johnston (Bow River): I would agree that the hon. member for New Westminster (Mr. Hahn) did not give that inference. If he did so, I am sure he did not intend it to be so. He was not throwing out any insinuations against the employees of the different companies. But the fact remains that such was the condition in the committee that we were obliged to sit in the evenings after a long hard day. That is something that should not be required.

Mr. Marler: That was the decision of the committee.

Mr. Johnston (Bow River): That was the decision of the committee, yes; but the hon. member for New Westminster was pointing out that the business of the house should be so ordered that such a thing would not be required.

I am glad that the minister has on this occasion brought forward this resolution to set up this committee to deal with the Canadian National Railways, the Canadian National (West Indies) Steamships and Trans-Canada Air Lines. We believe that is the proper thing to do; I refer to the setting up of the committee. I was a member of that committee last year and I think it did excellent work. I want to say that I think the employees of these different companies were co-operative in every sense. I also think the officials of the department were quite co-operative. But in saying that I would not want hon. members to think that we should again so arrange our work that we would be rushed, as we were in some instances last year.

The hon. member for Winnipeg North Centre (Mr. Knowles) indicated a moment ago that whenever the question of public ownership was raised, the Social Credit members and the Conservative members were all out to scuttle such an idea. Of course I want to disillusion the hon. member in that regard. That statement is not according to the facts.

Mr. Knowles: I should be delighted if you could do so.

Mr. Johnston (Bow River): The stand that we take—particularly the Social Credit members—is that we are not against government participation when there is free competition. I think we in the province of Alberta have probably taken the lead—and successfully so—in having the government enter business in order to protect public interest. For example, I might mention the treasury branches. They are competing on even terms with all other businesses of that nature. We have the government telephones. We are not those people who object to the government in business. What we object to most strenuously, however, is the government setting themselves up in a monopolistic position and then saying to all other comers, "You must stay out, this is a government monopoly". We have that thing in the Canadian National Railways and in respect to their hauling of freight. They definitely object to having the truckers on an equal basis. The Canadian Pacific Railway particularly is the one that is carrying the ball in this respect. They are the ones who are raising the objection. I must say that I am a little bit surprised that Canadian Pacific Air Lines are now complaining about the Trans-Canada Air Lines having unfair competition, because the Canadian Pacific Railway are the very ones who have been so strenuously objecting to the trucking competition. I make haste to say that I do not agree in either case. I do not think that Trans-Canada Air Lines should have a monopoly on air transport and I certainly say that the Canadian National and the Canadian Pacific railways should not have a monopoly when it comes to the hauling of freight.

Those are things that I think we can very well discuss in the committee. That is one reason that I am glad this committee is being set up. As the hon. member for New Westminster has pointed out, one of the great dangers is that, by the government continually interfering in business, they are forcing this country into a position of national ownership. Just at the moment I cannot think of a better example close at hand than that of the government interference with the construction of the trans-Canada pipe line until they have got it into such a mess that now they too will have to come in again and probably nationalize part of that line.

Mr. Knowles: It should have been publicly owned from the start.

Mr. Trainor: That is what you say.

[Mr. Johnston (Bow River).]

Mr. Johnston (Bow River): If the government would keep their nose out of these things, it would not be necessary to have a situation of that kind. But then again, Mr. Speaker, that matter does not come under this resolution. We shall have something to say about it when the time comes.

Mr. Knowles: Tell us what Mr. Tanner thinks about government or private enterprise.

Mr. Johnston (Bow River): I am not discussing Mr. Tanner's views. That is far beyond me. I have my own opinions in these matters. We have our own policy in regard to them and that is what we are stating.

There is one other thing that, as a result of the setting up of this committee, we shall be able to discuss; I refer to the business of the Canadian National (West Indies) Steamships. It seems to me that we should be in a position on this committee—and I am sure the minister will agree with this statement—to call all those witnesses that will be necessary to show us why we have not been obtaining our share of the business of hauling freight to the West Indies. I think we have three Canadian National (West Indies) Steamships boats that are participating in that trade. This last year I think we did better than we did the year before. However, I believe there are some places where a vast improvement can be made in the services that are being rendered to the West Indies. If that service were brought a little bit more up to date, I think probably we would get a greater share of that type of business.

I want to see this committee set up, Mr. Speaker. I do not want to be accused of talking it out. I am therefore not going to say more than that when the committee is set up we shall discuss some of these problems before that committee.

Mr. J. G. Diefenbaker (Prince Albert): Mr. Speaker, there are just a few references that I intend to make with regard to this matter. When one is not a member of the committee, it naturally becomes necessary for one to present his views at this time. First, I want to thank the management of the Canadian National Railways for what they did in finally arriving at a settlement on February 17 of this year in connection with the R. F. Welch Limited dispute which was brought before the house last year by myself and certain other hon. members and which represented a situation that had to be cleaned up in the interests of the morale of Canadian National Railways employees everywhere in this country. When the matter was raised last year, the attitude of some hon. members in this house was one of qualified ridicule. But in the experience of negotiations that have

taken place in recent months, I repeat what I said at the beginning, namely that public discussion leads to the removal of unfairnesses. This is but another example.

Mr. Speaker: Order. As it is five o'clock, the house must proceed to the consideration of public and private bills.

PRIVATE BILLS

LORINC ORVOS NAGY

The house resumed, from Monday, March 5, consideration of the motion of Mr. Hunter for the second reading of Bill No. 158, for the relief of Lorinc Orvos Nagy, and the amendment thereto of Mr. Regier.

Hon. W. E. Harris (Minister of Finance): Mr. Speaker, I have no intention of continuing the debate, but I think I ought to sum up what I said the other day. I have checked it in the meantime. It is simply this. It would seem, while not unreasonable, perhaps somewhat unfair if at this point we should postpone the possibility of the applicant having his petition considered by our committee in the House of Commons. I realize that the hon. member who has moved the six-months' hoist may very well feel that he, having studied the evidence, is firmly convinced that under no circumstances should the petition be granted. That is a matter of judgment that he has a perfect right to make. On the other hand, I think the house would normally expect to get the opportunity of having the evidence considered in our committee, and I must say that I hope the house would vote accordingly.

Mr. Speaker: Is the house ready for the question?

Amendment negatived on division.

Mr. Speaker: Is it the pleasure of the house to adopt the main motion?

Mr. A. M. Nicholson (Mackenzie): Mr. Speaker, before the main motion is decided I should like to make a few remarks. I abbreviated my remarks the other evening to oblige the Minister of Finance in the hope that we might reach a decision before six o'clock. But since that was not possible, and there are a number of hon. members present who were not present on Friday, I should like to review very briefly this case, which, as I said the other day, is the first contested case which has reached us this session.

As my colleague, the hon. member for Burnaby-Coquitlam (Mr. Regier), mentioned, this case involves a Hungarian couple who were married some 29 years ago. There is one 14-year-old daughter involved. If this divorce is granted the father will be relieved of his responsibility to support his wife and daughter.

Apparently at one stage the petitioner signed some document that appears to be a mortgage of about $7,000, which was to be paid in monthly instalments of $100 provided that his wife left. That is not too clearly established. As my colleague mentioned, these people are not able to speak English too well. It appears that there was some difficulty in understanding the questions, and the answers were not always quite to the point. The lawyer representing the respondent tried to establish the fact that these payments of $100 a month were made on the condition that the wife leave the domicile. Eventually she did leave and the payments of $100 a month went through for some 10 months. Then the petitioner's lawyer advised his client against continuing those payments, and apparently a letter was written suggesting that if the respondent returned she and the daughter would be permitted to come home. The petitioner was examined by the counsel for the respondent as follows:

> Q. You refer to a housekeeper. Is it a male or female housekeeper?
> A. Well, it is female housekeeper.
> Q. You describe her as a housekeeper?
> A. She work for me with money. I paid her $50 a month.
> Q. Have you any receipts for that?
> A. Me not need any receipt for that.
> Q. Then you cannot prove or establish that you did pay any money at all?
> A. Well, sure. Well, she was prove it. I not call anybody when I pay her.
> Q. No. You had no witnesses and no evidence that you pay her?
> A. I told the truth.

There was not any proof that this housekeeper was paid. Then, there were some questions about the living quarters. The man was asked about his house. He said there were three rooms and a kitchen. After a little while it turned out to be four rooms and a kitchen. According to the evidence, the petitioner slept in the dining room on a couch and his housekeeper had a bedroom which could not be entered except through the dining room. The petitioner's clothes were kept in this bedroom. That was the evidence submitted. The counsel for the respondent went on to say:

> I do not want to elaborate on this point but the fact remains there is a woman living in the same flat for some reason.

He went on to point out that this is something which should be noted by Their Honours the senators. The chairman, Senator Ross—I may say that I had very happy associations with Senator Ross when he was a member of the House of Commons; he sat on

a different side of the house and we differed in our opinions at times—said:

I do not think the inquiries you have been following are very material because the petitioner is not on trial here. The question is not whether or not he committed adultery. The question is whether or not the respondent committed adultery.

Counsel went on to say:

With your permission, Mr. Chairman, I thought it was a valid defence on the part of the party who may have committed adultery—who is alleged to have committed adultery, if the man who is alleging it, is himself or is, as he suggests, living with another woman. I merely wanted to bring that forward.

The respondent went on to say that she had three more witnesses, and then counsel for the petitioner took exception and said:

But you should have somebody to testify here.

Here is a woman who is working for $21 a week washing dishes. It was not possible for her to bring a lot of witnesses to Ottawa to defend herself. Then Senator Ross said:

I probably went too far. If the petitioner has been guilty of misconduct, it is a discretionary matter for us to refuse the divorce. Perhaps I went too far in my statement.

Later on the counsel for the petitioner, in reviewing the payments of $100 a month, mentioned what I mentioned previously, namely, that payments were going forward to this woman who was living in Ontario. He said:

And, he stopped making the payments in the first place according to my advice because the wife cannot be given anything in the form of a mortgage under the laws of Quebec.

Therefore, these payments were discontinued. Then, counsel for the respondent pointed out:

The idea was that the man insisted she leave, at least that is the idea the contestant will try to establish. It was made when the man tried to insist that she leave the premises.

She did leave. Counsel for the respondent says, at page 16:

He says it is to keep his wife and I will try to prove it is just the opposite conclusion that instead it gave me the conclusion he was willing to offer his wife $100 a month provided his wife was willing to move out. You do not keep the wife in the home by consecutive monthly payments of $100. The point is, as you so very aptly put it, is for the courts to decide on any property issue. It is just I wanted to challenge the suggestion put forward by the witness.

Then, the investigators gave evidence, and as usual there is a good deal of contradictory evidence given by them. I suggest that hon. members have a look at it. When the respondent was being questioned, the counsel for the petitioner was a bit annoyed. At page 22 of the evidence he is reported as saying:

What has it got to do with this hearing supposing her husband did beat her? The proper thing to do would have been to take a separation action before the court in Montreal.

[Mr. Nicholson.]

There was some question about the beating of the petitioner and the petitioner's counsel challenged it. On page 29 the counsel for the petitioner said:

Q. You heard your wife state you beat her?
A. I never beat her in my life only when she tried to come back when you send her a letter to come.

Later on when being examined by the counsel for the respondent, at page 30, he admitted:

I thump her on that time.

The questioning continued on page 31 as follows:

Q. What did you say?
A. Nothing. I just told her go out from my house.
Q. Was that the time you hit her?
A. Yes, I hit her.

Although at one point he stated very definitely that he never beat his wife in his life, after a little mature thought he did admit that he had beaten her.

Now, Mr. Speaker, I do not think it is necessary for me to establish that either of these two parties is a saint. I do not think we have black and white in these cases. However, I do not think we are justified on the basis of the evidence before us in relieving the husband of the financial responsibility to care for his 14-year-old daughter and his wife. If the respondent had been seeking a divorce I think there would have been no question about its going through.

It seems to me this case is very similar to the one we handled last year, No. 490, which passed at this stage and after being reviewed by the committee on miscellaneous private bills it was agreed to report the preamble thereof, not proven, on the ground that the committee was not satisfied that the petitioner was worthy of having his petition granted. I should think that would be the treatment this house should give to this petition in connection with Bill No. 158.

The house divided on the motion of Mr. Balcom (for Mr. Hunter) which was agreed to on the following division:

YEAS

Messrs:

Mr. Speaker: I declare the motion carried. This bill is referred to the standing committee on miscellaneous private bills.

FINANCIAL ADMINISTRATION ACT

AMENDMENT TO PROVIDE FOR PRINTING OF NEGOTIABLE INSTRUMENTS IN BOTH ENGLISH AND FRENCH

Mr. Raoul Poulin (Beauce) moved the second reading of Bill No. 149, to amend the Financial Administration Act.

He said: This bill, now at the second reading stage, embodies an amendment to chapter 116 of Revised Statutes of Canada, 1952, entitled "Financial Administration Act". Section 33 of that chapter provides:

> Every payment pursuant to an appropriation . . . shall be made under the direction and control of the comptroller by cheque drawn on the account of the Receiver General or other instrument, . . .

The present amendment, while adding section 33a to section 33 already embodied in the act, provides that negotiable instruments referred to in such section shall from now on be printed in both official languages, and it covers all segments of every department and of any crown corporation as defined in section 76 (1) (c).

I have no doubt that the change suggested under the present bill will meet the wishes of the wide majority of the members of the house and prove at least acceptable to the others. In point of fact, the spirit, if not the letter, of the constitution recognizes that this is a bilingual country, and every day we hear outstanding English Canadians uphold that point of view. Common sense also bears out that claim. As a matter of fact, if the constitution recognized, to either of the great races it wanted to bring closer, the right of preserving its language, it certainly put at its disposal the right of using the written language as well as the spoken language. One of the best means of recognizing publicly that right to use the written language is by imparting to it an official place on the bills which pass steadily under the eyes of Canadian citizens—cheques and other similar instruments.

It should be emphasized that there are in Canada, outside Quebec, about one million loyal French Canadian subjects who are entitled to that recognition and who are at home everywhere in Canada, in British Columbia as well as in Nova Scotia, just as English Canadians are at home in Quebec as everywhere else in Canada. For instance, have you pondered over the fact that there are more French Canadians outside Quebec than the aggregate population of any of the three prairie provinces, almost as many as in British Columbia alone, or in the three maritime provinces combined? Such a group is entitled, for that matter, to some consideration and to an official recognition of its rights. Who would dare submit such a racial element makes up a class of citizens less commendable than the others? Why then treat them with less care and on an inferior basis?

Besides, what we are asking in this bill is directed only to the federal administration. Nobody has ever thought of asking provincial

administrations to go so far, and I know of none other than the province of Quebec, which in that field does not rest content with following the letter of the constitution but goes far beyond the limit to be reached in abiding by its spirit. The proposition has nothing to do with the private affairs of our people and will never prevent the latter from giving their exchange media the linguistic character of their choice.

A spirit of tolerance and the obvious desire for good understanding which is found in the English Canadian element in this house make up another factor that enables us to hope for the passing of this measure. Of course, there are some snags here and there in some provinces, but I ascribe that situation much more to a lack of information than to intolerance or bad feeling.

In 1952, the then Minister of Finance, the Hon. Mr. Abbott, promised to a delegation of the French Life Council that as soon as circumstances should warrant it all cheques would be bilingual right across Canada. About the same time, the present and genial Minister of National Health and Welfare (Mr. Martin) stated at a public meeting in Windsor that nothing prevented the issuance of bilingual cheques for Canada as a whole, at least in regard to family allowances.

As far as the present Minister of Finance (Mr. Harris) is concerned, for whom I have great respect, he wrote on November 8, 1954, in answer to a resolution the French Life Council had sent to him about the bilingual cheques issue:

> Surely you will agree with me about the swift extension of bilingualism to other parts of the country now going on. I do not have to tell you that is being made with my full support, and, furthermore, it took place without bringing up undesirable controversies. I am positive you will hope with me that the trend will be maintained.

I also hope he did not change his mind and that the present bill will provide the minister with an excellent opportunity to carry out his wishes, the more so since he no doubt needs the warm support of the French element in this country, since one points to him as the potential successor to the Prime Minister at the head of the Liberal party. However, it is my ardent wish—and I trust, sir, you appreciate how sincere I am—that the problem of this succession will not crop up before quite a number of years.

Finally, we have two precedents on which I might rest to ask for bilingual cheques: money and postage stamps.

In 1934, the Conservative party, which was then at the helm of this country, made a praiseworthy gesture when giving us French money and English money. In 1936 the Liberal government which succeeded them made that piece of legislation still better by giving to the present-day money its final and perfectly bilingual character. Which of those great parties would accept today the disowning of its past and take away from that gesture made years ago its character of magnanimity through refusing to take one more step in the fine direction to which they then turned? With a general election fast approaching, such a stand is certainly untimely.

(Translation):

Mr. Speaker, I should now like to conclude my remarks with a few words in French.

In certain quarters, people contend that there is a fundamental difference between money and cheques or other similar instruments, that money has a permanent character while a cheque's useful life is quite short. May I say in the first place while those cheques are undoubtedly short-lived we keep seeing them continually, replaced as they are by others, and they are constantly in circulation. Because of that uninterrupted circulation, cheques take on the same character of permanency as currency itself. Incidentally, the so-called permanent character of paper money is only apparent, for $1 and $2 bills have to be printed every nine or ten months.

Besides, it is known that as a consequence of the development of financial institutions, and of improved methods of doing business, about 80 per cent of the business carried on by the public at large is done by means of cheques. Those modern means of exchange have therefore acquired a great importance.

I readily admit that, according to the letter of the Canadian constitution, there is no actual obligation to use bilingual wording on cheques any more than on paper money or on coins; on the other hand, it can also be said that there is nothing to prevent it.

It is the common sense of the house and the evident desire of hon. members for fairness, as well as the spirit of the constitution, which brought about the acts of 1934 and 1936, to which I referred a moment ago and which legalized the bilingual wording on money. It is to that same common sense and that same desire of the house for fairness—whose members are no longer the same, but they are no less brilliant and are surely as well intentioned as their predecessors—that I now appeal today in favour of a bilingual wording on cheques and other instruments of exchange.

I also appeal to the tolerance and earnest desire for good understanding which seem to be shared by all members of this house.

I do not see why anyone should oppose this legislation, which would merely do justice to a racial element representing one third of the population of this country, especially one whose ancestors were the very ones who opened Canada to civilization, were its first settlers and who valiantly fought for its defence. After the conquest, they displayed the same enthusiasm, the same courage and the same loyalty toward the country's new rulers as they had shown in their attempt to defend it against them. Those who today live in this beautiful country, whatever their racial origin, are indebted to the French Canadian element for the advantage of being at home here in Canada, and for having escaped absorption by the great republic to the south.

In sessional paper No. 225, dated June 15, 1955, tabled in answer to a question I had put on the order paper, I was told that the St. Lawrence seaway authority issues bilingual cheques all over Canada. With a few exceptions, the Canadian Broadcasting Corporation does the same thing.

I compare those two cases with those of bilingual postage stamps and money, and I ask the following question: has any Canadian suffered from that new situation? Has he been deprived of any of his rights or privileges due to the fact that the two official languages appear simultaneously on the bills of exchange I have just mentioned?

If an hon. member could rise in this house and describe a single case of this type, I would be prepared to withdraw my bill at once.

Far from this being the case, Mr. Speaker, many of the most cultured, learned and prominent people, of whatever racial origin, point out everywhere, in Canada and abroad, the advantages of cultural and racial duality. Now then, the basic vehicle of any culture, and the primary characteristic of any race, is first and foremost the language, spoken and written. Why then should written language in Canada be denied all possible chances of demonstrating to the world at large the reality of this highly praised duality?

In closing, Mr. Speaker, I cannot help quoting briefly from an article which appeared on June 17, 1955 in *Le Soleil* of Quebec city under the signature of Gerard Morin. I quote:

> It seems inconceivable that, in the twentieth century, one should still have to fight in Canada for a matter as simple as bilingual wording on cheques issued by the federal government.

I am confident, Mr. Speaker, that this government, being well disposed, will not miss this opportunity to remedy a situation which even its friends consider inconceivable.

(*Text*):

Hon. W. E. Harris (Minister of Finance): Mr. Speaker, as a preliminary point of order, I should like to point out that the bill, while not providing on the face of it for the expenditure of public money, would undoubtedly lead to that result. Whether or not Your Honour has considered that point in this connection, I do not know, but the fact remains that if the bill did become law it would cost us additional money to print on the cheques the other language concerned. I make that point of order for Your Honour's consideration for the moment, and I should like you to consider it before I proceed with what I have to say.

Mr. Speaker: There is no question that the initiative of the Crown in matters of public expenditure must be preserved at all times. As a matter of fact, if the bill were to pass without that point having been raised by the Minister of Finance and it was discovered later that the bill should have been preceded by a resolution, the proceedings on the bill would be null and void. I confess I have not looked at the point. It did not occur to me in any way whatever that there might be some expenditure of public money involved if the bill were to pass. The Minister of Finance, who must know much more than I do about what the consequences might be with respect to the passage of this bill, has said that it would cost additional money, and even if it is very little I would think there is a great deal in what he says. But it seems to me that there have been other bills about which it could have been said than an expenditure of money was involved. I do not want to decide on that basis when, in order to do so, I feel that I am obliged to look at the matter through a magnifying glass.

Mr. Knowles: Mr. Speaker, I wonder if I might say a word on the point of order. I think it is an important point. It relates not exclusively to my hon. friend's bill but to other bills that other private members might seek to introduce. I would ask Your Honour, when you are studying the matter, to consider the headnotes on pages 457 and 459 of Beauchesne's third edition. Both of those are headnotes to rulings by Mr. Speaker Sproule. The one on page 457 reads as follows:

> A bill, which does not involve a direct expenditure but merely confers upon the government a power for the exercise of which public money will have to be voted by parliament, is not a money bill and no resolution is necessary as a condition precedent to its introduction.

Similarly, the headnote on page 459 reads as follows:

A bill designed to furnish machinery, for the expenditure of a certain sum of public money to be voted subsequently by parliament, may be introduced in the house without the recommendation of the crown and without a resolution being first considered in committee.

The point of order has been raised without any warning, as the minister sometimes says to us, so that I have not had the opportunity to search through all the notes I have on the point. However, I have studied this matter rather thoroughly on other occasions and it seems to me that Your Honour should consider whether or not the bill introduced by the hon. member for Beauce (Mr. Poulin) does not come in the category set out by Mr. Speaker Sproule, in that it merely confers upon the government a power for the exercise of which public money might have to be voted later. Surely those two phases are separate. In fact, there have been government bills, which I am sure I could turn up if I had a moment in which to do so, where the same thing develops; that is, where the bills in themselves do not direct an immediate expenditure of money but such money is voted later by parliament. It is an important point. I think the Minister of Finance (Mr. Harris) would agree with me that Your Honour should not be called upon to rule at the moment but should be given time to consider the matter.

Mr. Speaker: I shall be pleased to look into the matter further.

Mr. Thatcher: Mr. Speaker, if you are going to wait until another day to make your decision, I wonder whether I could move the adjournment of this debate. I should like to speak on the subject but there are only two or three minutes left until six o'clock. Therefore, could I make that motion?

On motion of Mr. Thatcher the debate was adjourned.

SMALL LOANS ACT

AMENDMENT TO PROVIDE FOR A REDUCTION IN RATE OF INTEREST

The house resumed, from Friday, February 3, consideration of the motion of Mr. Argue for the second reading of Bill No. 3, to amend the Small Loans Act.

Hon. W. E. Harris (Minister of Finance): Mr. Speaker, I understood from the sponsor of this bill that, when it was called next, he would drop it having in mind the fact that I have on the order paper a similar bill.

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, the hon. member for Assiniboia (Mr. Argue) does not happen to be here at the moment. I certainly do not think anyone else should be asked to speak for him. May I ask the Minister of Finance why he wants this bill to be dropped?

Mr. Harris: It was not that I asked that it should be dropped, but in private conversation with the sponsor of this bill my understanding was that he was agreeable to doing so, having in mind the fact that my bill would go forward to second reading and then to the banking and commerce committee. I may be improperly reporting him, but that was my understanding several weeks ago.

Mr. Knowles: Mr. Speaker, the same hon. member, in private conversation with me, asked whether it was really necessary for his bill to be dropped in order that the government bill be proceeded with. It seems to me that the order of priorities which is set out somewhere in the authorities gives priority to a government bill over a private member's bill. I see no need for my hon. friend's bill to be withdrawn in order that the minister's bill may be proceeded with.

Mr. Harris: I have not the slightest objection. I am only reporting my understanding.

Mr. Knowles: Stand.

Mr. Speaker: Unless there is unanimous agreement that we do not proceed with the resumption of this debate, I just cannot let it stand. You do not let stand the order for the resumption of a debate. I had occasion to say that before. If there is unanimous agreement that we do not proceed, we might be saved by the bell if I speak for another minute.

Mr. Knowles: Carry on.

Some hon. Members: Six o'clock.

Mr. Speaker: Shall I call it six o'clock?

Some hon. Members: Agreed.

At six o'clock the house took recess.

AFTER RECESS

The house resumed at eight o'clock.

RAILWAYS AND SHIPPING

ESTABLISHMENT OF COMMITTEE ON RAILWAYS AND SHIPPING OWNED, OPERATED AND CONTROLLED BY THE GOVERNMENT

The house resumed consideration of the motion of Mr. Marler:

That a sessional committee on railways and shipping owned, operated and controlled by the government be appointed to consider the accounts and estimates and bills relating thereto of the

Canadian National Railways, the Canadian National (West Indies) Steamships, and Trans-Canada Air Lines, saving always the powers of the committee of supply in relation to the voting of public moneys; and that the said committee be empowered to send for persons, papers, and records and to report from time to time, and that, notwithstanding standing order 67 in relation to the limitation of the number of members, the said committee consist of Messrs. Bell, Byrne, Carter, Carrick, Cavers, Churchill, Dumas, Follwell, Fulton, Gillis, Hahn, Hamilton (Notre Dame de Grace), Hanna, Harrison, Healy, James, Johnston (Bow River), Knight, Langlois (Gaspe), Lavigne, Legare, Macdonnell, McCulloch (Pictou), Murphy (Westmorland), St. Laurent (Temiscouata) and Weaver.

Mr. Diefenbaker: Mr. Speaker, at five o'clock I had just referred to the fact that, resulting from discussions in this house, a change has been made in connection with the company to which I made reference, namely, the Welch Company, that has been a most beneficial one, and one that is deeply appreciated by the employees of the Canadian National Railways.

I wish to refer for a moment to Trans-Canada Air Lines, having regard particularly to the remarks of the hon. member for Winnipeg North Centre (Mr. Knowles). He went all out this afternoon and stated that anyone who criticized the operation of Trans-Canada Air Lines was trying to scuttle that corporation. It is not a question of wanting to scuttle the corporation at all. What we of the Progressive Conservative party believe is that the time has come for active competition by private enterprise to be permitted in the operation of air lines. Indeed, we are fortified in our view in that regard by the words of the Prime Minister in a speech made before the air industries and transport association in November, 1953, which were quoted earlier this afternoon. During the period when the Canadian Pacific Air Lines' application to operate a freight service was being considered the Prime Minister said in part, it:—and I merely refer to one or two portions—

> . . . the demands for the services of commercial aircraft should increase to such an extent that increasing competition will be both desirable and beneficial . . .

He also went on to say that in the long run he was not in favour of the perpetuation of monopoly conditions. Well, there can be no justification today for the continuation of that monopoly condition under which Trans-Canada Air Lines operate. I mention in particular the operation of freight transport. The failure to grant a licence to Canadian Pacific Air Lines to operate freight services is holding back to a very considerable degree development in the western provinces and generally throughout those areas of Canada which would be served by the granting of such a licence. I cannot understand the dog-in-the-manger attitude of Trans-Canada Air Lines in continuing, now that it is perfectly established, an attitude antipathetic to competition. There is no reason why competition should not be permitted. It has been denied with regard to freight; it has also been denied to one air line company which desired to operate a passenger transportation service. The time has come to take the hobbles off air development in Canada, to remove the shackles of an outgrown policy that denies competition, and to give Canadians those benefits that competitive enterprise will assure.

In its passenger transportation Trans-Canada Air Lines have provided a high degree of safety, and for that they are worthy of commendation. No one who uses the airways to the extent that some of us do can deny that in too many instances the service bears a resemblance to that expected from monopoly, bureaucratic enterprise. If competition were allowed, the service and the relationship which should exist between the transportation organization and the travelling public would be very greatly improved.

The hon. member for Winnipeg North Centre says that when we take a stand in favour of competition we are out to destroy Trans-Canada Air Lines. Nothing of the sort is contemplated. But surely when a public body has arrived at the point where its service year by year operates almost to the extent of its physical limitations the time has come for active competition.

We in the Conservative party are not opposed to public enterprise as such. There are certain types of industries in the form of public monopolies that can be operated most efficiently as public enterprises; but our experience in Saskatchewan has been this. However desirable the purpose in mind may be, government in competitive business does not succeed. We have had various lines of business in Saskatchewan—I am not going into that this evening—but they did not pay taxes. They did not pay interest on their investment, and yet they found it necessary to close down. They could not compete against private industry allegedly charging exorbitant profits, according to the proponents of the government in that province, and yet the government-operated enterprises were so inefficiently operated that they were unable to return a profit.

When one speaks of development, the government of that province had very desirable aims. They thought they could abolish the lessons of arithmetic and change the experiences of human nature that history

reveals. They tried that. However commendable the aim, the achievement was not equally effective. They had that experience when they came into power. At first they said: "We can develop our natural resources in the province under the government and under state ownership". They found it necessary to change and to depart from that policy, and to lay out the red carpet to welcome private enterprise. I say, if the government of this country would just realize that competition cannot do anything but improve the standards of air transportation, they at least would have taken one step toward the achievement of the improvement of air transportation in this country.

I know there are many members on the other side of the house who agree with what I am saying, if they would just express themselves to the same degree as the press records today in Britain the Conservatives are doing in that country. The Conservatives in Britain are placing Sir Anthony Eden in a position where they demand action, disagreeing as they do with certain policies that he has followed, thereby representing in effect the best traditions of parliamentary government. We cannot expect that, Mr. Speaker. If that ever happened in this house the millenium would indeed have arrived in the present generation. If the government would give private members on its side of the house the right to say whether there should be competition in relation to Trans-Canada Air Lines I think I could predict with the utmost certainty how that vote would go. It would go in favour of the adoption now of fair and reasonable competition controlled by the board of transport commissioners in the public interest and assuring an increase and elevation in service to the public which will not be achieved as long as Trans-Canada Air Lines is in the position that regardless of what it does it will be maintained to the exclusion of private interests operating effective competitive lines. Having said that, I want to refer to a matter that was dealt with by the hon. member for Winnipeg North Centre (Mr. Knowles).

Mr. Knowles: This time you are with me.

Mr. Diefenbaker: Yes. I am not only with you in what I am going to deal with, I was ahead of you in bringing it up. I brought it up as far back as 1946 and I pointed out the injustice that was being done to Canadian National Railways employees who were retired on a basic pension of only $25 a month. That basic pension is today in equivalent purchasing power something like $9 or $10 at the time it was brought into effect. If there is one thing that is necessary to raise the standard of Canadian National Railways service it is that the morale of the employees be maintained at the highest possible level. The morale of Canadian National Railways employees today in most cases is lower than it has been at any time in my experience because the employees feel they are not receiving the consideration they deserve.

One of the things which would assist would be the removal of the present low level of the basic pension. It should be increased at least to $40 a month. That would not be very costly. I am speaking from memory but I believe that pensions today cost approximately 2·7 per cent of the total amount taken in by the Canadian National Railways. The increase in question would be infinitesimal having regard to the total amount of business done and would raise beyond words of description the morale of the employees of the railway company.

There is another thing which could be done. The rules regarding pensions were in effect for many years unchanged. Finally there were reformed or revised rules established within the last three or four years but there are many employees who should be entitled to consideration who find themselves in the paradoxical position of having expected that their disability in connection with the pensions under the regulation would be removed in the revision, only to find they have not been. I suggest to the minister that if he would let it be known to the Canadian National Railways employees across Canada that this committee, which is being set up, would set aside from among its membership a subcommittee to give consideration to the pension regulations in order to remove the anomalies that exist and the injustices that are taking place, he would have gone a long way towards restoring and increasing the morale of these employees.

As a matter of fact the regulations with regard to the continuity of employment are totally at variance with reality. There are many cases of individual employees who should be entitled to longer periods of pension qualification but who are denied the total period they have served because of certain inequities which have crept into the regulations. Another point is that if an employee is out of work and goes on unemployment insurance there is a break in his employment. The hon. member for Perth (Mr. Monteith) has referred to these injustices over and over again. There is no reason at all why the pension regulations should not be changed in order to provide that, during a period when a railway employee is receiving

unemployment insurance, this period should count in his pension qualification period. This has frequently been the contention of the hon. member for Perth. It is something which represents a real demand on the part of the railway employees of this country.

In summarizing I simply say this. The time has come and it is long overdue when the basic pension of Canadian National Railways employees should be increased. Secondly, I join with my friend the hon. member for Winnipeg North Centre in suggesting to the minister that the Canadian Pacific Railway, a private corporation, having seen fit to make changes such as have been referred to by him in detail, there is no justification for the railway of the people of Canada doing less than its competitor is doing. I also suggest that if the Canadian National Railways is to secure its fair and proper share of the competitive dollar in this country it should certainly do a lot more than it is doing to elevate the standard of its trans-Canada train. It is a fine train but it can be improved a great deal more in order to meet the competition provided by the Canadian Pacific Railway and its trans-Canada train. Too frequently individuals having no preference one for the other take the Canadian Pacific Railway train in cases where the Canadian National Railways train would ordinarily be taken.

Now we pass on to another matter which has to do with the transportation of goods and merchandise. Mention has already been made of the box car situation.

The Minister of Trade and Commerce (Mr. Howe) blandly brushes this aside, saying, there are lots of cars; everything is fine. Within the last week, on February 28, the Saskatchewan wheat pool, a non-political organization, came to this conclusion, as reported in a recent press dispatch:

> Persistent shortages of box cars for movement of grain from the prairies have made deep cuts into the current income of many western farmers.

It then goes on to deal with the situation as it exists. I would point out that the manner in which box car distribution has been made on the prairies would seem to indicate that those in authority on the Canadian National Railways have little regard to the needs of the western provinces. It may be that box car traffic hauling other than wheat is more remunerative, but there can be no justification for the cavalier disregard that has been shown to the requirements of the western provinces and the farmers who inhabit those provinces.

The records show that in a period of five months from the first of August until the first of February on the prairies there were some 32,000 less cars hauling wheat than in the previous year. There has been a near collapse of freight transportation for wheat on the prairies and in large measure this is responsible for the financial condition which exists today. It cannot be offered as an excuse that there was no place to which to haul the grain, because there was vacant storage available running well up to 100 million bushels.

These are one or two matters that I wanted to bring to the attention of the minister. I recapitulate. In so far as railway pensions are concerned, what possible reason can be given to deny the almost universal desire on the part of railway employees to have a reconsideration of the rules governing the payment of their pensions and for the removal of injustices, inequities and anomalies which have crept into the administration of these regulations, as they creep into the administration of all regulations when tested in the light of experience?

If that were given there would be a changed attitude. If the minister would travel incognito across the country on the trains of the Canadian National Railways and ask the employees what they think of the administration as they see it today he would receive a reaction of depressed morale which would be a revelation to him. What I am trying to place before the house at this time is that that state of mind on the part of the railway employees is not conducive to expansion or to securing the largest possible share of the competitive freight dollar.

Mr. Elmore Philpott (Vancouver South): Mr. Speaker, I want to take just a minute or two with what seems to me to be an extremely important point having to do with a certain percentage of Canadian National employees whose pensions are totally inadequate to meet the cost of living today. I am not going to go into the numbers of these pensioners because they have been set forth already in the discussion earlier today and there are members on all sides of the house who have brought this matter to the attention of the proper authorities before now. I certainly have done so, not only to the former minister but to the management of the Canadian National Railways.

I submit that there is a special reason why the Canadian National Railways should not fall behind the Canadian Pacific Railway Company in the treatment of any of its employees. I think we all believe in robust competition. One reason why there has been such admirable success on the part of the Canadian National, one reason why the Canadian National has become, not only the pride

of this country in the way of transportation but something that is recognized as one of the world's great transportation systems, is that it has been able to compete at every level with the Canadian Pacific. It seems to me that the Canadian National cannot afford to fall below the level of the Canadian Pacific in the treatment of its pensioners who have too little upon which to live.

I am not as sure as some hon. members on the other side seem to be that the pension scheme of the Canadian Pacific is all that they seem to think it is. I have in my hand here a copy of a brief presented by the Pacific coast C.P.R. pension association in which they press for a basic pension of not less than $75 a month to those under 70 years of age and not less than $60 a month for those over 70 years of age, the idea being that those reaching 70 years of age would automatically receive an extra $40. As I say, I am not quite so sure that the pension arrangements of the Canadian Pacific are as admirable as some hon. members seem to think.

Mr. Knowles: Will the hon. member permit a question? He is referring to hon. members in the plural, but only two of us have mentioned it. Does he not recall that I indicated there were deficiencies in the C.P.R. plan, but that there is one point in it that the C.N.R. might take into consideration?

Mr. Philpott: I say that the time has certainly come when the Canadian National should examine this important matter in order to give justice to those who bore the burden of making that railway a success in past years.

There is one other consideration I should like to advance. These people constitute a minority, but their number is considerable. Some of that minority made up of former Canadian National employees who are drawing such a meagre pittance in the way of pension are at that low level of pension because of their war service. In other words, their war service made them ineligible for an adequate pension because of the salaries and wages they had received.

I wanted to add my voice to others who have spoken in the house to say that the Canadian National must compete with the Canadian Pacific on every level. This publicly-owned system of which we are all so proud should never fall below its privately-owned competitor in its humanitarian and just treatment of its former employees.

Mr. Thomas M. Bell (Saint John-Albert): Mr. Speaker, since no mention has been made of Canadian National (West Indies) Steamships Limited may I say that I hope this year the committee will give its usual close attention to this phase of its inquiry. Last year there was considerable discussion of the West Indies fleet and while we did get some information I felt personally that a definite statement of policy should be made by the minister on behalf of the government as to future plans for the fleet.

We had laid before the committee careful plans for the railway itself in the way of new cars and new facilities, but as far as the West Indies fleet was concerned that was left on the same old year to year basis. I suggest that that is unbusinesslike and uneconomical.

We have had examples during the past year and recently of new demands for service, particularly on the east coast where there is a need for refrigerator ships. This type of service is necessary if our apples and fish are to compete in the West Indies market. Then in addition there have been demands generally for an efficient merchant shipping fleet. With this in mind I hope that this year we will have some statement about the future of this fleet.

Mr. C. W. Carter (Burin-Burgeo): Mr. Speaker, it seems to me to be most fortunate that the debate on this resolution follows the debate of yesterday on the development and decentralization of industry in which transportation plays such a vital role. In his excellent contribution to yesterday's debate my friend and colleague, the hon. member for St. John's East (Mr. Fraser), showed that the economic life and welfare of our province is completely dependent upon our means of transportation. As the main transportation system of Newfoundland is government-owned, I feel I should intervene in this debate to carry on where my hon. friend left off yesterday and develop this theme a little more fully.

It is evident that we must plan now for the future. Time flies very fast and the future comes upon us almost before we are aware of it. The construction of the great St. Lawrence seaway and the setting up of the Gordon commission has shown that we are very much alive to this fact. In no part of Canada is planning for the future more urgent and more essential than in Newfoundland, because not only must we close the very substantial gap between our standard of living and that of the mainland of Canada, but we must also at the same time make confederation an economic reality. At the present time confederation is merely a political fact. It will become an economic reality only when Newfoundland has been fully integrated into the Canadian economy.

As we project ourselves 20 or 25 years into the future, we see that we can expect

to have a population of from 700,000 to 800,000 people. The resources of our provinces must therefore be developed to provide jobs and wealth that will support these 800,000 people with a standard of living comparable to that which will obtain on the mainland 20 years hence. The distribution of that population will be determined largely by the distribution of the natural resources that are to be developed. Transportation will therefore play a vital role.

Three questions naturally arise. First, is our present system of transportation adequate to the task that it will be called upon to perform? The second question is: If not, is it capable of being transformed and made adequate through improvement? The third question is: If this is impossible, what should be done?

In my opinion, the present system is not adequate and can never become adequate to the task of integrating the economy of the province of Newfoundland with that of the mainland of Canada to such a degree as will permit the province to assimilate and support 800,000 people in the next 25 years. The reason for this appears to me to be very simple. Our present transportation was never intended to do that job. It was not built with that in mind, and therefore it cannot be satisfactorily adapted.

During the eighteenth and nineteenth centuries, Newfoundland developed as an economic sociological adjunct of Great Britain. People settled in St. John's and along the northeast coast, and all the large settlements had direct ties with the west of England. During the period of 1900 to 1950, these ties with the old country gradually weakened, and along the south and west coasts there began to develop ties with the United States and with the mainland of Canada. St. John's, however, during that period, retained and partly strengthened its position as the economic hub of our province, particularly when a tenuous system of land transportation began to develop with the opening of the railway and the building of the road system.

That was all right as long as Newfoundland was looking eastward. With confederation, however, have come modifications of our channels of commerce. Trade with mainland Canada increased from $40 million in 1939 to over $150 million at the present time. St. John's, which for centuries was the front door and the principal exporting and importing centre, has now become the back door of our island. Instead of being our nearest point of contact to the country with which we have most in common politically and economically, it has now become our most inaccessible point in the whole province from the point of view of our new political and commercial ties, which have resulted from confederation.

Like Gaul, Newfoundland is divided into three physiographic units, each of which has some important subdivisions that have developed more or less as economic entities. The first of these units may be called the west coast area, which can be represented on a map by a line drawn from the bottom of La Poile bay on the southwest coast to the bottom of Green bay on the northeast coast. The second unit is the central portion of the island, which lies east of the line I have just described to the isthmus of Avalon. The third unit is the Avalon peninsula itself.

The economic centre of the west coast area is Corner Brook, which with its main industry dominates and at the same time provides the hub of the economy of this region. An important subdivision of this area is the St. George's bay area, which stretches south far enough to include Port aux Basques. The importance and independence of this subdivision has been accentuated in recent years by the United States defence installations. This whole unit has developed an economy which to a large extent is independent of the rest of the province. The high and rugged land stretching from La Poile to Cape St. John makes the development of a transportation system between the west coast and the rest of the island very difficult and most costly.

In the northern part of the central portion, the economy is dominated by the Labrador and inshore fisheries, by the sawmill and paper development at Grand Falls and by the mining operations at Buchans. Here again there is a large measure of independence from St. John's.

Mr. Speaker: Order. It seems to me the hon. member is covering much more territory than is required for the purpose of discussing the merits of this motion.

Mr. Carter: I am sorry, Mr. Speaker, if I have gone outside the limits of this resolution. My point was to lead up to the economic facts which must be taken into consideration if a suitable system of transportation is to be developed.

Mr. Speaker: I think the hon. member will agree with me that, once this resolution is adopted and the committee is set up, the committee will not have the authority to establish railroad lines.

Mr. Carter: Thank you, Mr. Speaker. Before I conclude may I say that my purpose in intervening was to emphasize one point,

namely, that a totally new concept of transportation in Newfoundland, something radically different from the present system, is necessary. This is something which Canadian National Railways must take into consideration in the future because it involves the question of whether they will continue to spend further moneys, and they have already spent a great deal, in developing a system which in my opinion can never do the task that it is called upon to perform.

Mr. T. S. Barnett (Comox-Alberni): Mr. Speaker, I listened with a good deal of interest to the remarks of the hon. member for Burin-Burgeo (Mr. Carter) respecting the basic transportation problems of the province of Newfoundland. While he perhaps was not able to give us a complete picture, the fact that the subject has been introduced has prompted me to rise on a specific point to which I hope the committee will give consideration when it is set up. The problem to which I refer is that arising at the present time from the dieselization program of Canadian National Railways in that province. The change in transportation activities is, so I am informed, causing a good deal of concern to the rank and file of the trade union movement in that province and I believe the suggestion they have put forward that consideration should be given specifically at this time to section 39 (1) of the terms of confederation, setting forth certain obligations to be undertaken in respect of employees in that province should receive the attention and consideration of the committee that it is proposed to set up by this resolution. I hope the committee will keep that matter in mind and that serious consideration will be given to that problem by the committee when it reviews the affairs of Canadian National Railways.

Mr. George H. Hees (Broadview): Mr. Speaker, the thing I have never been able to understand is why the government insists on maintaining this T.C.A. monopoly after about 15 years of operation because—

An hon. Member: They are doing a good job.

Mr. Hees: —any businessman knows that in any kind of business where competition is allowed to have full sway, both the public and the competing firms benefit. Everybody wins. The public benefit because they get cheaper prices and better service.

Mr. Hosking: Are you talking about hydro?

Mr. Hees: The competing firms benefit because they are forced to remain efficient and to keep on improving their product and their service. Where monopoly is allowed to hold sway, as it has been for 15 years in the case of T.C.A.—

Mr. Hosking: What is the difference between it and hydro?

Mr. Hees: —then the organization becomes inefficient. Any businessman knows that, and I challenge any member of the house to refute that statement. If monopoly is allowed to be maintained, costs rise and service deteriorates.

An hon. Member: Goodbye hydro.

Mr. Hees: This government, of course, favours monopoly, and the two outstanding examples are T.C.A. and C.B.C. television. If competition were allowed to prevail in those two industries—

Some hon. Members: Oh, oh.

Mr. Speaker: Order. I must insist that the hon. member is not to be interrupted while he makes his speech.

Mr. Hees: If competition is allowed to prevail in these industries, and they are industries, then we will see better and cheaper passenger and freight service, and I believe we would also have a better television service. T.C.A. has a very excellent operating record, but I believe that those who run the operating end would welcome competition. I know they would because they would like to see competition force the administrative end to keep pace with the standards that the administrative services of other competing air lines are forced to maintain.

There is no reason at all why the application made some time ago by Canadian Pacific Air Lines to operate a freight service between Vancouver and Montreal should not have been allowed. After all, if T.C.A. is providing a first class and reasonable freight service they have nothing to worry about. T.C.A. has nothing at all to worry about unless C.P.A. can produce a cheaper and better freight service from Vancouver to Montreal. If they can produce a cheaper and better freight service then, of course, it will be up to T.C.A. to improve their service in order to keep pace. That is the benefit of competition.

There is also no reason in the world why Pacific Western Air Lines' application to operate an air bus service between Vancouver and Winnipeg should not be granted. T.C.A. would not have anything to worry about unless Pacific Western Air Lines could provide a better and cheaper air transport service between these two points.

Mr. Speaker: Order. Are these matters not governed by the air transport board, and is

the air transport board one of the agencies to be investigated by this committee?

Some hon. Members: No.

Mr. Hees: What I say, Mr. Speaker, is, let us have competition in our air services in Canada. Let the Minister of Trade and Commerce (Mr. Howe) stop protecting his sacred cow, T.C.A., and let us have all-out competition between T.C.A. and these lines that have applied to compete for passenger and freight traffic across Canada. As I have said, T.C.A. has nothing to worry about provided it can produce better and cheaper passenger and freight services. If it can, it will maintain its position. If it cannot, it will lose some of the business and, as in all competitive enterprise, the buying public will benefit. T.C.A. will benefit because it will then have to improve its services and efficiency to keep pace with those who are taking business from it. That is the essence of the competitive system. That is what makes business on the North American continent in particular such an outstanding example of what free enterprise can accomplish.

Let us have competition in our air services in Canada and put T.C.A. to the test to prove it is as good as it is claimed to be. If it is, then the public of Canada will be very well pleased.

Mr. J. C. Van Horne (Restigouche-Madawaska): Mr. Speaker, the labour situation on the C.N.R. has been getting progressively and increasingly worse. Before coming to the labour situation itself, however, I should like to say just a word more or less in support of and in agreement with all those who have risen during this discussion and spoken with regard to the basic $25 per month pension paid to some retired people of the C.N.R. How this government can reconcile this basic payment of $25 per month for pensions for some people on the C.N.R. is, I would say, beyond the comprehension of every hon. member of this house. Hon. members on all sides of this house agree—and they have expressed their agreement—and maintain, as do we all, that $25 per month paid to these pensioners is totally inadequate and unfair. Based on today's cost of living, this $25 represents possibly $10 in present-day value, taking into account the increased cost of living. Why this government insists on making these pensioners live in penury and hardship is beyond the comprehension of any Canadian citizen who has given time and thought to the consideration of this problem.

On several specific occasions Mr. Donald Gordon has stated in effect that he was out to squash the unions on the C.N.R. and to put them in their place.

Mr. Speaker: Order. It has often been ruled in this house that public servants, such as the one to whom the hon. member has just referred, are not to be accused in words such as those in which the hon. member has just expressed himself. I am not asking the hon. member to withdraw. But having said what he has said I want to ask him, as a new member, to bear this in mind as he goes along, in case he wants to fortify his criticism, and to remind him of what the precedents have been.

Mr. Van Horne: I am glad you mentioned that matter, Mr. Speaker. This government is co-operating to an extent which is known to all the members and to all the employees of the C.N.R. by making sure the unions are denied rights which are guaranteed to unions under provincial legislation in every province of Canada.

Then again, this practice and this system recently adopted on the C.N.R. of having maintenance and repair work done by contract is undermining the whole structure of unionized labour on the C.N.R. It is true that in many instances these same employees who are laid off from their regular employment are given employment by the contractors who have contracted to do the maintenance and the repair work. But these employees who are forced to leave their regular employment and go to work for the contractor automatically lose the long-fought-for benefits which their unions have succeeded in obtaining for them over long years of negotiation. Then again as to these employees, once they are rehired, in many cases there is no longer a question of pensions because the contractors have no unions. There is no longer a question of extra pay for overtime. The employees are forced to accept reduced wages. They are obliged to start all over again at the bottom of organized labour and work up.

If this system were saving money for the C.N.R., we could possibly say that there was some justification for it. In my riding alone, during the past two weeks two major wrecks have been caused. Investigations have revealed that, in the over 15 wrecks that have happened in the past nine months in my riding alone, soft bed tracks were permitted to exist. Maintenance was not carried out in accordance with the long-established practice for good maintenance of railway tracks and so on. The cost of repairing those wrecks, not to speak of the danger to life and limb,

must be so tremendous as to offset any advantage which might have been gained by giving this work out on contract. The primary purpose for my few remarks tonight is to request this government to stop punishing the men on the C.N.R.

Mr. W. B. Nesbitt (Oxford): Mr. Speaker, this evening we have heard various members set out reasons why there should be competition among the air lines of Canada. In that regard,—and this is something that I do not think has been mentioned as yet—one good reason exhibited by Trans-Canada Air Lines itself as to why there should be competition generally is that in the routes flown by T.C.A. which are competitive, Trans-Canada Air Lines used the newest, most modern and up-to-date planes. For instance, on the New York run they use the new Viscount on their flights and to the West Indies and overseas they use the new Super Constellation. Those are very fine planes. They are safe and comfortable and their upkeep and maintenance is good.

But as is known by many hon. members of this house, I imagine, on the routes where there is no competition the D.C.-3's are still in use. They are good serviceable planes. They are safe. Like the old Ford car, they take you there and get you back, but it takes an awful long time. The same thing applies on other runs. For instance, on some of the runs I believe to the United States such as the run from Toronto to Tampa where there is no competition, the old North Stars are used. Again, they are good safe planes. We have plenty of evidence of that from their performance but in some cases it takes almost double the length of time to get there. I think that is probably one of the best evidences of the advantages of competition. Where T.C.A. has been in competition with other air lines, they have had to use modern up-to-date planes. They have done so and have still managed to maintain their excellent record of safety of which I am sure everyone is proud. But when they have no competition, they use old planes. I think that is a good example of why there ought to be competition.

I have one or two other remarks to make in this regard concerning Trans-Canada Air Lines. The remark has often been made, "Best in the air, worst on the ground". I think perhaps that is a slight exaggeration but I believe there is some truth in the remark. I think many hon. members have had this experience. I have had it myself. I have received many complaints from constituents who have made reservations on Trans-Canada Air Lines but who, when they go to the airport, after having confirmed beforehand, find from time to time that their accommodation is not there for them, that something has happened, that their seat is not there and that they have to miss the plane and go on the next flight. That has happened. I know it will happen in any business but, from the number of complaints I have received, it seems to happen more often than is necessary.

I should like to make one further remark in this regard, Mr. Speaker, and that is with respect to the time of flights of Trans-Canada Air Lines. Time and again particularly on the overseas and Caribbean service —and I have had many persons come to me about this matter—their flights repeatedly seem to be delayed. If it is a matter of weather, we all understand that is a very necessary thing, or if repairs are necessary to the planes. But from what I have heard, it certainly seems to happen more frequently with Trans-Canada Air Lines than with other air lines. I refer to this matter of flights delayed for no apparent reason. If the aircraft are constantly in need of repair, which is the only apparent explanation, something ought to be done about it. People go to the airport. They phone before they go, and they get there half an hour or an hour in advance of the flight time and have to wait two hours, and sometimes three or four hours, and no reason is given for it. If the delay in those flights is necessary, as it probably is,—there must be some reason for it—all that Trans-Canada Air Lines need to do to placate the ruffled feelings of the passengers is to give a simple explanation over the loud hailer and tell the people that flight 272, for example, is delayed because of temporary trouble to the engine or inability to get food supplies on board, or they are waiting for another aircraft, or something along that line. If that were done it would go a long way to increase good will among the passengers of Trans-Canada Air Lines.

Mr. G. K. Fraser (Peterborough): Mr. Speaker, I should like to say a few words with regard to the Trans-Canada Air Lines. Many planes arriving at the Malton airport are delayed in unloading passengers. In some instances they unload 54 passengers from a North Star and crowd them into one room in the Malton airport like a bunch of cattle. They are taken out of their comfortable seats in the plane and put into this one room, and in many instances they have to stand for from half an hour to an hour while passengers from another plane are going through immigration and are having their baggage examined. I had that brought home to me last Friday night when 54 passengers were

crowded into this one room. Among the 54 passengers were four people who were unable to stand, but they could not get near a seat. There should be some way to accommodate passengers in that room so that they could sit down and rest while passengers from another plane are going through.

I mentioned the Malton airport two years ago. I will say that it has been cleaned up to some extent; it is very much better. That also applies to the Trans-Canada Air Lines facilities at Chicago. But they are not so good at Chicago that they could not be greatly improved.

I agree with the hon. member who has just taken his seat who said that we should have a little more competition with Trans-Canada Air Lines to improve the service. I know the employees of Trans-Canada Air Lines are doing their best, but there are delays. This has been mentioned. I know of instances where parties go to the T.C.A. office at the airport and show their tickets indicating that they have a flight out at such and such a time. The Trans-Canada Air Lines officer replies: "We have no record of it. You will have to wait for another plane or wait until all the passengers we have listed are on the plane and then we shall see what we can do for you". There should be a better method of checking. I was told on one flight that they had many hold-overs. I think they call them "holds". Passengers were listed from other transport companies, and they were holding the space whether people wanted it or not. They did not know, or would not know until the flight was ready to go. There should be a better check on passengers and tickets to see that the people who go to the airport are not held up there, or not told to wait for another day.

Hon. George C. Marler (Minister of Transport): Mr. Speaker,—

Mr. Speaker: If the minister speaks now he will close the debate.

Mr. Marler: Mr. Speaker, I shall try to deal with the more outstanding points that have come out in the course of the discussion of this motion. First of all, I am sorry not to see the hon. member for Greenwood (Mr. Macdonnell) in his seat. I would like to tell him through you, Mr. Speaker, that I would hope this year to make it possible to furnish the members of the committee with the accounts which they will be expected to consider in the committee, and to do so just as soon as these accounts have been tabled.

I fully appreciate the difficulty of the task of hon. members in going through the rather elaborate accounts of the Canadian National Railways. I think in particular of the results of the fiscal year that is now concluded. I appreciate also the difficulties with regard to the examination that they would naturally wish to make of the budget of capital expenditures for the current year. I do not know how far we shall be successful in doing it, Mr. Speaker, but I shall do my best to try to make the reports available to the members of the committee just as soon as it can be done.

I would like to say also that so far as I am concerned, and so far as concerns the officers of the Canadian National Railways and of Trans-Canada Air Lines, there was not last year, and I am sure there will not be this year, any suggestion on their part that they wish to hurry through the discussion of the matters referred to the committee so that they could get back to other tasks. I think if there is any sense of pressure which is felt by members of the committee it is merely because they also have other duties to perform, and they are anxious to get back to their other duties.

I say this in no critical way whatever, Mr. Speaker, but it did seem to me last year that in the discussions that took place in the committee, in some instances undue emphasis was placed on what I thought were trivial matters when there were other matters of greater importance that might have attracted more attention on the part of the committee. I say that in no critical way whatever. I must say that so far as I was concerned—I was not a member of the committee—I was treated by those who attended the meetings as if I were a member, and I have no complaint whatever in that respect. But I did think there was an insistence on matters of detail which might have been avoided, and which would have left more time for consideration of more important questions in connection with the accounts.

When one realizes that the annual expenditures of Canadian National Railways are in the neighbourhood of some $600 million, it naturally follows that if the committee is to pay much attention to small expenditures the work of the committee will be unending. At all events, Mr. Speaker, I do want to say I hope hon. members of the committee will not feel under any pressure whatever upon my part, or upon the part of the officers of these three companies, to rush through the work of the committee. I hope the committee will take such time as it feels is necessary to carry out the task that is entrusted to it under this motion.

The hon. member for Greenwood suggested this afternoon—perhaps I should not say "suggested" but canvassed—the possibility

that some assistance might be provided to the committee in order to review the accounts. I cannot see how that would be possible, Mr. Speaker; but I would hope that the figures would be presented to the committee in such a way and that they would be explained by the officials of the company so clearly that the members of the committee would fully understand what was covered by the accounts. I feel perfectly sure that if there were any doubts in their minds with respect to any item in the accounts the officers of the companies concerned would be anxious to give the fullest information with regard to them.

The hon. member for Greenwood (Mr. Macdonnell) referred to the difficulty that we have all experienced in the past in comparing the operations of the Canadian National Railways with those of the Canadian Pacific. He referred to the decision of the board of transport commissioners concerning uniform accounts. I think it is probably generally known that a uniform system of accounting was introduced and became effective on January 1, 1956, so that while it will not be possible to compare the accounts of the two railways in respect of 1955 or earlier years, when we have the figures for 1956 it will be possible to make the kind of comparison that many people would have liked to have made in the past.

The hon. member for Greenwood also spoke about the question of the method of financing the expenditures of the railway. I do not think I can say anything useful on that point at this stage of the debate but I do suggest that when the committee goes into the question of the capital expenditures which are proposed to be made during the present year by Canadian National Railways, and when consideration is given to its other financial requirements, the hon. member for Greenwood will obtain the expressions of opinion which I think will enable him to form a judgment as to whether the practices now followed in the matter of financing Canadian National Railways expenditures are sound or whether they should be improved.

The hon. member for Saskatoon (Mr. Knight) in his remarks said that he did not think it was realistic when we insisted upon the necessity of making a profit. I think, Mr. Speaker, that so far as I am concerned I should at once repudiate any suggestion that I believe for a moment that it would be in the national interest for the Canadian National Railways or any other government agency to operate on the basis that it makes no difference whether or not it realizes a profit in its operations. I think that nothing could be more destructive of the morale of the men engaged in the railway operation or of the initiative and determination of the senior officials if the members of this house came to accept the belief that it does not make any difference whether or not the railway operates at a profit.

I think in our system it is essential that all enterprise, whether it be private enterprise or public enterprise, should have before it the goal of successful operation.

As I understand what was done some time before I became a member of this house when steps were taken to reorganize the capital structure of the Canadian National Railways, I assume that one of the principal purposes of that legislation was to restore to the Canadian National Railways the possibility of earning profits and thus in effect of doing the things that are likely to produce profits. I think we will all agree that in a general sense when an enterprise operates at a profit it is rendering service to the people it is intended to serve. I think it would be a great mistake for us to lose sight of the profit motive and to say that merely because this is a government enterprise we do not have to consider it.

The hon. member for Saskatoon also spoke about some quite minor matters; the fact that the Canadian National Railways had not seen fit to buy and operate what are called dome cars, and the fact that its running time between Montreal and Vancouver was, I think, two hours less than in the case of the Canadian Pacific and that as far as—

Mr. Knowles: Two hours longer.

Mr. Marler: I am sorry, I meant that the Canadian National running time was two hours more than the Canadian Pacific. These questions were dealt with in considerable detail in the committee last year. Mr. Gordon expressed the opinion that the use of dome cars was not in the view of the management of Canadian National Railways sufficiently profitable to the railroad to justify the rather heavy additional expenditures they would involve. He explained very fully that while in theory it would be quite possible for Canadian National Railways to equal the running time of the Canadian Pacific between Montreal and Vancouver, the service of passengers at the places en route had to be considered and their convenience was a greater factor than that of merely arriving within the same length of time as the Canadian Pacific itself.

A number of hon. members have spoken about the subject of pensions to retired employees of Canadian National Railways. I have nothing new to say on that subject. I think hon. members will realize that the difficulty of increasing the pension of a retired employee is just as great whether the amount

of pension to which he is entitled is $25 or more. These difficulties apply all across the field of pensions and fixed incomes which come from annuities and other sources where there is no possibility of change regardless of the movement that might take place in the purchasing power of the dollar.

I should like to touch a little bit more particularly on the question of the contrast between pensions of the Canadian National Railways and the Canadian Pacific Railway. I do not wish to do so at any length because I do not think that is a question relevant to the motion. However, as the question has been raised, I do think I should try to dispose of it summarily. The principal point which I think must be borne in mind is that the pension plan of the Canadian Pacific Railway is not truly comparable to that of the Canadian National Railways. The C.P.R. pension plan has been compulsorily contributory since January 1, 1937. The Canadian National pension plan has been voluntarily contributory since January 1, 1935. Under the Canadian Pacific plan the entry age limit is 40 years whereas under the Canadian National plan it is 45 years. This means that a person who worked full time for the Canadian Pacific Railway from age 41 would receive no pension whereas in similar circumstances a Canadian National employee would receive a pension of $25 per month without making any contributions and the amount would be substantially greater if he contributed.

So far as pensions are concerned, Mr. Speaker, I shall merely speak from memory. So far as the Canadian Pacific Railway is concerned it is my impression that its total outlay for pensions is in the neighbourhood of $17 million a year; so far as the Canadian National Railways is concerned, I see from the 1954 accounts that the total expenditure slightly exceeded $25 million.

Mr. Knowles: Has the minister the comparable figures as to the number of persons to whom those pensions are paid?

Mr. Marler: No, Mr. Speaker, I do not think I should answer the question in just that way because I do not think these amounts I have referred to represent the pensions paid by the railways direct. I think these are the contributions of the railways to pension plans and do not take account of the sums that are paid by the pension funds to beneficiaries. I am merely referring to the burden, because that is what it is, of the two railway companies for pensions. As I said, the figure for the Canadian Pacific Railway was approximately $17 million and for the Canadian National for 1954 it was slightly more than $25 million.

Mr. Knowles: It is true, is it not, that the Canadian National is the larger organization?

Mr. Marler: Yes. I think if my hon. friend would do the arithmetic he would find that the two figures bear a very close relationship, more or less, to the total employment in the Canadian National system and the Canadian Pacific system.

So far as Canadian National (West Indies) Steamships are concerned, I should like to correct the impression given by the hon. member for Bow River (Mr. Johnston) that the company is operating only three rather miserable ships. That statement has no relation whatever to the facts of the matter. The company is actually operating eight vessels. I have had the opportunity of seeing some of them and I think they are good ships for their class.

This last year particularly the company has been following a very aggressive policy in an endeavour to secure as much business as it possibly can for its ships. It spent some substantial sums of money on the installation of additional refrigeration equipment in some of these vessels. There was not time to carry out the whole program but I am sure hon. members will be interested to know that this was translated into a demand for space for Canadian fruit, particularly for Nova Scotia apples, which far exceeded what was available. I look upon this as a most encouraging sign. While I have not the actual figures before me for the operations last year I feel perfectly sure that when hon. members see the results they will be gratified by the improvement which has taken place in the last twelve months.

Since the special committee met last year we have been giving careful consideration to what ought to be done with regard to the future operations of the company. I hope that by the time the committee sits it will be possible for me to make a statement on the subject and to set at rest any doubts there may be as to the future operation of this service. I am not in a position to do that today but I hope to be able to do it at an early date.

I should like to say something on the subject of the so-called Trans-Canada Air Lines monopoly about which a number of hon. members have spoken today. I do not think the time available would permit me to deal with this subject exhaustively, but I do not think I should let the occasion go by and leave on the record the view expressed by a number of hon. members, particularly those belonging to the Progressive Conservative party, as to the desirability of establishing competitive services for T.C.A. I take it of

course that when they speak of providing competitive services for T.C.A. they are not thinking only of the routes which at present are being flown by Trans-Canada Air Lines, but are thinking also of competition in what is generally described as the field of regional operations.

In other words, it was not their contention that competition would be provided only in the field in which Trans-Canada Air Lines operate but also in the other fields in which other operators are actually flying routes at the present time.

I have not been a member of this house long enough to have participated in the discussions which took place, I think in 1953, concerning the application by Canadian Pacific Air Lines for permission to operate a transcontinental freight service and consequently I have not firsthand knowledge of the considerations which went into the decision reached at that time. I have tried to approach the subject of competition on as objective a basis as I could to see whether there was some foundation for the suggestion by the hon. member for Broadview (Mr. Hees) that so long as you had competition you would solve all problems, that in effect it would bring cheaper prices and a better service.

I have been thinking about this carefully for quite a long time and I do not think that that would be the result of establishing competition in the fields in which Trans-Canada Air Lines operate. If one takes the trouble to look at the financial results of Trans-Canada Air Lines operations for the last two years of 1953 and 1954 he will find that in 1953, after making provision for income tax amounting to some $300,000, there was a net income of $256,230. In the following year 1954 the net income was $496,146.

As those figures more or less follow the pattern of earlier financial statements, I think it may truthfully be said that the T.C.A. is providing service to the Canadian people pretty much at cost. I think if one were to look at the total revenues, which were $62 million odd in 1953 and $68 million in 1954, one would realize that the net income figures which I have just given indicate that there was very little profit on the total operations. I am inclined to think that what was said on the subject of competition by Professor Wagner of the University of Manitoba has been quoted before, but I think it bears repetition. He said:

> Competition is only useful for what it achieves. If it achieves greater efficiency, lower costs and changes and better service, it is an admirable principle to insist upon. But if it achieves over-expansion of expensive facilities with division of the market amongst competing carriers, it will lead to heavy burdens on carriers, shippers, and taxpayers alike.

I am convinced personally that the development of competition on a broad national scale could lead only to one or other of two possible results: either we would be operating Trans-Canada Air Lines at a loss or we would have to increase the cost of air transportation.

Mr. Hamilton (York West): Would the minister tell us if that is the same professor who appeared on behalf of Trans-Canada Air Lines at the air freight hearing?

Mr. Marler: I cannot give my hon. friend an answer to that question because I do not know Professor Wagner. I do not know whether he appeared before the committee. I merely thought that he had expressed an idea rather succinctly and I did not think it was necessary to investigate his background to find out whether the words made sense or not.

As I was about to say, it seems to me that the moment we envisage competition on a broad national scale it will follow that either the T.C.A. is going to lose money, which means that its operations will in fact be subsidized out of the public purse, or if it is to remain in a position of earning a small profit it will have to receive a subsidy, or in the alternative to raise its fares.

I know that a lot of people believe that there is some magic about competition and there is a tendency to look abroad and point to what is happening in Europe. I think the hon. member for Prince Albert (Mr. Diefenbaker) when speaking in the debate on the address pointed to what was going on in Europe as an example of the benefits that flow from competition. But when one casts one's eye around the field of civilian aviation, both in Europe and on this side of the water, one will find that competition is working successfully only where there are fields of large volume, where there are great numbers of people to transport.

I do not want to burden the house with a lot of statistics but I should like to give a few to illustrate the point I have to make. First of all, as regards the situation in Europe, we all know that the countries are relatively small and for the most part they have their own national air lines just as we have in Canada. When we look at the important services in Europe, we find that they are for the most part flown by two carriers. For example, take the service between London and Paris. There is an English carrier, British European Airways, and a French carrier, Air France, but there are no others. According to information given to me, these two services in 1954 carried 415,000

passengers. That is probably the most important European service. The London-Amsterdam service in 1954 carried 149,000 passengers. The figures for the other international routes, which I think are not competitive between air lines of the same nation but between the two nations party to the bilateral agreement, are for the most part a little smaller than that, just as in fact are our international services here when we consider the position of T.C.A. in the trans-border services that we have.

A striking example of competition is, of course, to be found in the United States. There, as some hon. members know, there is competition on the more heavily travelled routes. I am quite sure hon. members would be interested in some of the figures as to the traffic carried. On the route between New York and Chicago, for example, it is divided between four air lines, and the total number of passengers carried in 1954 was approximately 541,000. Between New York and Boston, where the route is divided between, to all intents and purposes, two important lines and one smaller line, the total was 534,600 passengers. Between New York and San Francisco the total was 172,000 passengers.

When we come to the trans-border services, to which one of the hon. members referred a moment ago, we find, for example, that between Montreal and New York the volume is approximately 166,000. Between Toronto and New York it is 129,000. Both of those figures are greater than any traffic between any two cities in Canada. The only two cities in Canada that are worth mentioning in the same range of figures are Toronto and Montreal, the traffic between those two cities in 1954 totalling approximately 100,000. When one has taken away Toronto and Montreal and gets down to considering the others, one finds they are mostly in the five figures. For example, Winnipeg-Toronto is a little more than 32,000; Winnipeg-Vancouver, 10,000. One realizes at once that we are not talking about the same thing in Canada as in the United States when we are talking about competitive services between two air lines.

I had not intended to go into this subject on this particular occasion. I think hon. members know that the Trans-Canada Air Lines are not a part of the Department of Transport, but it seems to me that these figures ought to be given serious consideration when we attempt to appraise the value of competition in the operation of our national air lines. I do think, too, that those who are clamouring for competition ought to realize that, if there are to be competitive services in the whole broad field of aviation in Canada, then it must go not only into the territories served by Trans-Canada Air Lines but also into the regions where there are private lines which other carriers than Trans-Canada Air Lines are flying at the present time.

Another point that I think should be remembered is that it would not be possible to provide the kind of service that T.C.A. is providing to places off the main transcontinental airways if there is to be competition on the national scale to which I have referred. I do not think there is any question but that the good operations such as, for example, between Montreal and Toronto, help to sustain the smaller operations where the volume of traffic is smaller and that, in the absence of something attractive such as I have just referred to, many of the smaller places, though they have airfields, would not be able to get air services at the prices they are now paying.

I think I have covered the main points that have been brought up during the discussion this afternoon and this evening. I have not attempted to deal with a number of topics that I believe can be fully dealt with in the committee itself. I feel perfectly sure that if these questions are raised in committee hon. members who are interested in knowing what are the views of the Canadian National Railways—and I am sure the same applies to Trans-Canada Air Lines—will receive the kind of information that they would consider satisfactory.

Motion agreed to.

NATIONAL CAPITAL PLAN

APPOINTMENT OF COMMITTEE TO REVIEW PROGRESS OF FEDERAL DISTRICT COMMISSION

Right Hon. L. S. St. Laurent (Prime Minister) moved:

That a joint committee of both houses of parliament be appointed to review and report upon the progress and programs of the federal district commission in developing and implementing the plan for the national capital;

That the members to act on behalf of the House of Commons as members of the said committee be designated at a later date;

That the said committee have power to call for persons, papers and records; to sit while the house is sitting, and to report from time to time;

That the said committee have power to print such papers and evidence from day to day as may be ordered by the committee and that standing order 66 be suspended in relation thereto;

And that a message be sent to the Senate requesting that house to unite with this house for the above purpose and to select, if the Senate deems advisable, some of its members to act on the proposed joint committee.

He said: In moving this resolution, I should like to express the hope that through this committee parliament will have and utilize an opportunity to examine in detail the progress that the Federal District Commission has been making in developing and implementing the plan for the national capital as well as the programs that the commission has for its future development along the same line.

I think it is appropriate that from time to time parliament should review the developments of and plans for the national capital. Much progress has been made in recent years, which well warrants a review at this time. I am sure all of us in this house recognize the importance of creating a national capital which will be a source of pride and inspiration to Canadians from all parts of the country, a focus and a symbol, if you will, of the things that unite us as a nation.

Parliament has already given tangible expression to the recognition of the importance of doing so, in establishing the Federal District Commission and in providing it with the funds necessary to develop the physical aspects of the capital in keeping with the role which most Canadians wish it to play in our national life. If this parliament is to take its part most effectively in carrying on this great project, we need periodically to inform ourselves of what is being done and what is being planned and to express our views in such detail as seems to us appropriate.

The last committee that went into the general subject was a joint committee of the two houses of parliament, which was established in 1944. It was then to review the special problems arising out of the location of the seat of government in the city of Ottawa and to report on the relations between the federal government and the municipal authorities of this city and their relative responsibilities in respect of the problem.

After fairly lengthy hearings that committee made a number of recommendations relating to the Federal District Commission and its activities and programs and also concerning the annual grants from the federal government to the city of Ottawa. It will be remembered that at that time there was no general legislation providing for grants from this government to municipalities in lieu of taxes, and special grants were made from year to year based upon the circumstances of the time.

Much has happened since that last review. The financial relations with the city have been greatly altered by the enactment and the recent amendment of the Municipal Grants Act under which not only the capital city but many other municipalities throughout Canada receive grants in lieu of taxes which are based on an objective formula applicable everywhere. In June of 1948 parliament established a national capital fund to be expended upon projects for the purpose of developing the national capital and the surrounding area in accordance with an approved plan, and parliament has made appropriations to that fund each year since 1948.

A comprehensive plan for the national capital area was prepared by the national capital planning service under the direction of that distinguished expert on city planning, Mr. Jacques Greber, and was approved by the Federal District Commission. As hon. members who were here then will remember, I tabled copies of this plan in the house on the 22nd of May, 1951. In the meantime the Federal District Commission Act had been revised in 1946 when the commission was enlarged to include members from all provinces of Canada and its powers were extended and clarified. The act was further amended in some particulars in 1951.

I do not think I need to review the various projects that have been put in hand by the commission during this period since the last parliamentary committee was set up. They have all been set forth from year to year in the annual report of the Federal District Commission and these reports will be available to the committee and officers of the commission will be there to explain them and to supply all possible details in connection with them.

As hon. members will remember, it was proposed to set up a committee last year not only to review the activities of the Federal District Commission but also other relations of the federal government with Ottawa and adjoining municipalities. In view of the amendments made to the Municipal Grants Act last year, the government feels that parliament has now laid down a satisfactory framework for municipal grants into which Ottawa and the other municipalities in the national capital area can be fitted and there is no need at this time to ask the committee to review the question of general grants to Ottawa and other municipalities of the district. Consequently it is proposed that the committee this year shall direct its attention fully to the substantial work of the Federal District Commission and the relation of this work to the activities of the municipal and provincial authorities in so far as they bear upon it.

I will not endeavour to go into the substance of the programs of the commission

or the problems which confront it. It may be remembered that I made a rather lengthy statement on the 27th of July of last year at the time the estimates of the Federal District Commission were before the house, and in this I endeavoured to provide information for hon. members and others outside the house who were interested in these matters. I directed attention to certain problems to which I thought the committee might usefully devote some attention.

When the committee is organized the chairman of the Federal District Commission and the officers of the commission's staff will be ready to provide detailed information with regard to what has been done and the plans that are being considered for the future. If the committee so desires, it will be possible to supply the committee not only with an oral presentation but with written material, various maps and charts and perhaps even a model to illustrate the development of the capital and the plans that are being made to further that development.

At this time I should like to take this opportunity to express again the government's appreciation of the work done by the 20 public-spirited citizens who constitute the Federal District Commission. Half of them are drawn from the various provinces, one for each of the ten provinces, and the other ten from the capital district itself. They give a good deal of time and effort to this work which they, I think, rightfully regard as very important not only for this generation but for, we hope, many generations of the Canadians of the future. They are assisted by the national capital planning committee which carries on the detailed planning work under the general direction of the commission, as well as by various subcommittees such as, for example, that on architecture which has the duty of ensuring that the designs of public buildings in the capital area shall be appropriate. In addition, the commission has the advice of Mr. Greber, Mr. Fiset and their staffs as well as its own officers, engineers and other employees, and had the co-operation of the late Mr. John Kitchen.

Under the act it is required that the projects to be undertaken shall be submitted to the government for approval, and the government, of course, must also take the responsibility of asking parliament for the funds necessary to implement the plans and in that way has at least a legal responsibility for the general policies to be followed in developing the capital. But I am sure that this has never been regarded as a party matter. There has never been any division among members on either side of the house about the desirability of planning for the future along reasonable lines, and I feel sure that all hon. members will welcome the opportunity of spending some time with the members of the commission and its officers in examining in detail what has been done, what is being planned and how the funds that are being appropriated annually by parliament are being expended, not only to provide for the requirements of the present day but as well as we can forecast for those of the future of the capital of an ever-expanding country.

Hon. George A. Drew (Leader of the Opposition): Mr. Speaker, I am sure that there will be agreement on the part of everyone in the house as to the desirability of the appointment of the committee which is to be set up by this motion. I think there may perhaps be some difference of opinion as to the extent to which the committee may carry its activities not merely in examining what has taken place but in suggesting a pattern of action in relation to the existing plan or any variation of that plan for the years ahead. This is a subject that has received the support and engaged the interest of every government of Canada since this city became the capital. There is a long and interesting history behind the present commission. Perhaps it may be worth while for us to recall something of what has taken place.

With what the Prime Minister (Mr. St. Laurent) has said about the desirability of a periodic review of the activities of the commission and the submission of a report by the committee in turn to parliament, there will be no disagreement of any kind. From the statements made in the very first meetings of this parliament of Canada it was evident that those who came here from the different parts of the country recognized the fact that Ottawa, by virtue of its choice as the seat of parliament, required assistance, support and some planned development which went beyond any activities which could be expected reasonably from the municipal authorities of one city.

The forerunner of the present commission took form before the turn of the present century. At that time Sir Wilfrid Laurier, in 1899, set up the first commission which carried forward the rather general views that had been expressed earlier and the plans that had been put forward under what was known as the Ottawa improvement commission. In describing the work of that Ottawa improvement commission, Sir Wilfrid expressed his own hope that, as a result of its efforts, Ottawa would become the Washington of the north. In using the comparison with Washington I do not think that Sir Wilfrid was suggesting that we were merely to be a counterpart in any way of the great capital

city of the United States. What I think he was referring to—and in fact it is quite definite that this is what he was referring to—was the way in which Washington had taken form as a planned city, with integrated roads and driveways, under one master plan which had been accepted many years ago. His thoughts were carried forward by those who served in that commission which some time later was widely expanded with regard to the scope of its work.

It was in 1911 that Sir Robert Borden, who was then prime minister, decided upon a much more comprehensive type of plan. He visualized a fully integrated plan which embraced all the streets, parks and public buildings of the community. At that time he set up a special committee to co-operate with the Ottawa improvement commission. It was not such a committee as that which is contemplated in this motion. It was a committee to co-operate with the commission in planning the details of that integration that was contemplated. The first world war intervened and the definite plans that were then taking form in the minds of Sir Robert Borden and his associates as well as those of the members of parliament of those days were held in suspense.

After the war the work of the commission was taken up and it was in 1927 that the present name was adopted by act of parliament. At that time the city of Hull was brought into the consideration as part of an integrated capital area. I think the reference the Prime Minister has made to the 20 public-spirited citizens who are now serving on this commission is applicable with equal force to all those who, throughout the years, have given extremely valuable service in what is definitely a national enterprise.

One citizen of Ottawa who served after this body had become the Ottawa district commission was the Hon. Thomas Ahearn, who devoted many years of imaginative and vigorous effort to the work of this commission. As we go around this city today and see the well-treed driveways along the canals and rivers running through this city, we can all realize that this goes back in large measure to the activities of the commission under the Hon. Thomas Ahearn. He then was succeeded by Mr. W. E. Matthews who served from 1932 to 1936. Then in turn the Hon. Frederic Bronson was appointed and he gave untiring and unselfish service until his death in 1951. I think most of us remember Mr. Bronson and know of the devotion with which he served on that commission.

I think that all of us, regardless of party affiliation, will pay tribute to the tremendous interest which the Right Hon. William Lyon Mackenzie King always devoted to this task. It was in 1948 that he introduced the motion which brought into definite form the actual creation of the capital entity. When he presented the motion which in fact had the effect of creating the capital area on June 28, 1948, he put forward opinions that have some bearing on what we are discussing today. At that time, when he placed before the House of Commons the proposal for the acceptance of a definite capital area with an over-all plan, to which reference has already been made by the Prime Minister and which the present Prime Minister tabled in this house in 1951, Mr. King said that such plan as was adopted must at all times be under the effective control of parliament. I believe that the motion now before us carries that idea into effect, and that it is an essential requirement of the concept of a planned capital area under the supervision of parliament.

Mr. Speaker, I move the adjournment of the debate.

On motion of Mr. Drew the debate was adjourned.

Mr. Speaker: May I for a moment refer to what I said earlier when I interrupted the hon. member for Restigouche-Madawaska (Mr. Van Horne)? In looking over the transcript of what he said I realize that I completely misunderstood what he said, and therefore my intervention was absolutely uncalled for. I thought he had said that Mr. Gordon was out with union officials and visited them in their places, or something to that effect, and that he was going to refer to the conduct of Mr. Gordon after office hours. What I had in mind was citation 488 and citation 250 of Beauchesne's third edition. I am sorry, and I would ask the hon. member kindly to accept my apology. I hope that in intervening in the way I did I did not curtail his freedom of speech unduly.

BUSINESS OF THE HOUSE

Mr. Harris: We shall go on with this debate tomorrow, and continue with the committee on criminal law, and then, if there is time, the resolution in my name with respect to the industrial development bank. On Friday we shall take the estimates of fisheries first, and if there is time, transport.

Mr. Dufresne: What about Thursday?

Mr. Harris: As to Thursday, we shall have to see tomorrow night what we can do on Thursday to make some progress and get something done.

It being three minutes past ten o'clock the house adjourned, without question put, pursuant to standing order.

ANSWERS TO QUESTIONS

The following answers, deposited with the Clerk of the house, are printed in the official report of debates pursuant to standing order 39:

LIME TRANSPORT COSTS

Question No. 123—**Mr. Gauthier (Portneuf):**

What amount has the federal government paid in each of the ten provinces for the transport of lime to farmers, since such policy of the government was put into force?

Answer by: **Mr. Gardiner:**

1. The federal government does not pay directly for the transport of lime to farmers. Under the terms of order in council P.C. 1953-4/815 payments are authorized to provincial governments of British Columbia, Ontario, Quebec, New Brunswick, Nova Scotia, Prince Edward Island and Newfoundland of a subsidy not to exceed 60 per cent of the total amount expended by the provinces for any direct activity in increasing lime utilization for soil amendment purposes, subject to a maximum of $1.50 per ton.

In some instances the provincial activity is in the form of freight assistance and in other instances in the form of direct subsidies.

The amount of the subsidy paid to each provincial government since this policy was instituted in the fiscal year 1943-44 up to and including February 10, 1956, is as follows:

Province	Total subsidy paid to date
Newfoundland	$ 14,651.55
Prince Edward Island	326,130.65
Nova Scotia	790,631.02
New Brunswick	810,407.06
Quebec	2,628,403.23
Ontario	210,999.46
British Columbia	247,166.98
Total	$5,028,389.95

ROGER DURANT

Question No. 174—**Mr. Dufresne:**

1. On what date was Mr. Roger Durant, of Loretteville, Quebec, employed by the government?
2. What are his duties as inspector of animals?
3. What are his working hours?
4. What is his annual salary?

Answer by: **Mr. Gardiner:**

1. The Department of Agriculture has no employee named Mr. Roger Durant but Mr. Jean Roger Durand has been so employed since 1941.

2. He is designated as meat inspection assistant grade 2. Under the direction of Dr. Beauchemin, supervisor of the port of Quebec city for the health of animals division of the Department of Agriculture, Mr. Durand supervises the staff of checkers and fumigators; maintains inspection of garbage feeding premises; inspects premises of customs office, postal express; supervises freight cleansing and disinfection of railway cars, etc.

3. His working hours are from 8.30 a.m. to 5.00 p.m., with one hour for lunch.

4. His annual salary—$3,630 per annum, effective October 1, 1955.

MATERNAL AND CHILD CARE—HOSPITALS

Question No. 177—**Mr. Proudfoot:**

1. What proportion of infants born in Canada in 1955 were born in hospital?
2. What assistance has been given to hospitals under the federal health grants program to improve their care of mothers and newborn infants?

Answer by: **Mr. Martin:**

1. 85 per cent.

2. Since 1948 hospitals have been assisted as follows:

More than $250,000 has been spent to assist with the purchase of more than 500 incubators for the care of premature infants, of various items of delivery room equipment, of sterilizers for the preparation of infants' formulas, and of other technical equipment to improve nursery care.

$2,200,000 has been spent under the hospital construction grant toward the cost of adding 6,600 newborn bassinets in newly constructed or enlarged hospitals.

More than 200 nurses have been assisted in obtaining graduate training in material and newborn care, many of whom are now working in hospitals.

Assistance is being given toward two new courses for nurses, one in Toronto and one in Montreal.

BLOOD DISEASES OF INFANTS—RESEARCH

Question No. 178—**Mr. Proudfoot:**

Is any research of blood diseases peculiar to newborn infants, such as those due to the Rh factor, being assisted through the health grants program?

Answer by: **Mr. Martin:**

Yes. Research studies in Montreal, Toronto and Vancouver are being assisted by the health grants program.

HOUSE OF COMMONS

Wednesday, March 7, 1956

The house met at 2.30 p.m.

THE ROYAL ASSENT

Mr. Speaker: I have the honour to inform the house that I have received from the secretary of the Governor General the following communication:

Sir:

I have the honour to inform you that the Hon. Patrick Kerwin, Chief Justice of Canada, acting as Deputy of His Excellency the Governor General, will proceed to the Senate chamber on Wednesday, the 7th March, at 5.45 p.m., for the purpose of giving the royal assent to certain bills.

STARRED QUESTIONS

BILINGUALISM REPORT, CIVIL SERVICE COMMISSION

Question No. 24—**Mr. Girard:**

1. Has the civil service commission ever asked for a report on the bilingualism of civil servants of the various departments of the government?
2. If so, on what date?
3. What departments have answered?
4. What is the result of this inquiry?

Mr. Pinard: Mr. Speaker, part 1 of this question reads as follows:

Has the civil service commission ever asked for a report on the bilingualism of civil servants of the various departments of the government?

The answer is yes. The commission requested the assistance of each department in providing an indication of the number of bilingual employees.

Part 2 of the question reads:

If so, on what date?

The answer is: On November 25, 1955.

Part 3 of the question reads:

What departments have answered?

Replies were received from the great majority of departments before February 21, 1956, when this question was raised. Since then, all the other departments have sent in their answer.

Part 4 of the question reads:

What is the result of this inquiry?

A number of departments indicated that information of a reasonably accurate nature was not available; others based their reports upon unverified claims as to language qualifications. It should be pointed out that it is not easy to know whether or not an employee is bilingual. In a number of cases, it is impossible to answer such a question by an unqualified "yes" or "no" because it is a matter of degree requiring a qualitative evaluation. In the light of the information obtained, the commission concluded that it would not be possible to arrive at any reasonably accurate figure as to the proportion of bilingual civil servants.

C.N.R. STATION, SWALWELL, ALTA.

Question No. 28—**Mr. Johnston (Bow River):**

1. Are steps being taken by the Canadian National Railways to close the station at Swalwell, Alberta?
2. If so, for what reason?

Mr. Marler: Mr. Speaker, the management of the Canadian National Railways advise that the answer to the first part of the question is no.

The reply to part 1 answers part 2.

POST OFFICE BUILDING, BANFF, ALBERTA

Question No. 30—**Mr. Johnston (Bow River):**

What progress is being made towards the completion of the post office at Banff, Alberta, and on what date is it expected the building will be finished?

Mr. Winters: This building is just about completed. It will be officially opened on Friday, March 9.

DEPORTATION ORDERS—IMMIGRATION APPEAL BOARD

Question No. 31—**Mr. Fulton:**

1. How many orders have been made since January 1, 1946, providing for deportation of persons who (a) were landed immigrants but were not yet Canadian citizens; (b) were or claimed to be Canadian citizens?
2. What are the names and addresses of the persons who will be members of the immigration appeal board?
3. What are the principles which will be followed in deciding whether the board will hold its hearings in Ottawa or elsewhere?

Mr. Pickersgill: The answer to the first part of the question is that statistics were not kept differentiating orders against visitors and orders against immigrants before January 1, 1952. I think general statistics for the earlier periods have been given in certain returns which were brought down at the last session. From January 1, 1952, until December 31, 1955, 2,553 persons who were landed immigrants but who were not yet Canadian citizens were ordered deported.

As far as the second question is concerned, without going through all the files, there would be no means of finding out how many of these people claimed they were Canadian citizens. I think the number is infinitesimally small, but to the extent that anyone made such a claim and it was substantiated he would no longer be subject to the Immigration Act in any way.

As to the names of the members of the immigration appeal board, they are set out in a regulation which appeared in the *Canada Gazette* of January 23, 1956, volume 90. I shall be glad to send this over to the hon. gentleman.

Mr. Fulton: Could those names appear on the record?

Mr. Pickersgill: The chairman is Colonel J. Colin A. Campbell, whose home I believe is in St. Catharines but who is at present living in Ottawa. The vice-chairman is Mr. P. T. Baldwin, formerly of the immigration branch in Ottawa and who lives in Ottawa. The other members are Mr. L. A. Chevrier, who is temporarily living at the Lord Elgin hotel in Ottawa and who was formerly with the immigration branch in Montreal; Mr. E. B. Reid, who I believe lives at Stittsville, Ontario, and who was a member of a branch other than the immigration branch of the Department of Citizenship and Immigration prior to his appointment.

In answering the question as to where the board will hold its hearings, this will be settled by the board itself. Every effort will be made to avoid imposing any hardships on appellants.

FEDERAL BUREAU OF STANDARDS

Question No. 33—**Mr. Knowles:**

1. Has consideration been given to the establishing of a federal bureau of standards, so that advice and protection might be given to consumers with respect to the quality of goods sold in Canada?
2. If so, what is the result of such consideration?
3. If not, have representations been received by the government asking that such a bureau be established?
4. From whom have any such representations been received?
5. Will consideration now be given thereto?

Mr. Dickey: This question relates to the establishment of a federal bureau of standards, and the answer is that the government has not given consideration to establishing such a bureau. As far as I am aware no representations have been received relating to this matter, but more extensive inquiries are being made to make sure that this is the case. While the government will of course examine any such representations, hon. members will be aware that considerable advice and protection are now available to the public by reason of existing federal and provincial legislation as well as certain industrial associations.

QUESTIONS PASSED AS ORDERS FOR RETURNS

BUTTER STORAGE

Question No. 25—**Mr. Fraser (Peterborough):**

1. What was the total cost to the government for the storage of butter during the year 1955?
2. To what company or companies was this money paid, and how much to each?

WHEAT SHIPMENTS FROM PRAIRIE PROVINCES TO ONTARIO

Question No. 84—**Mr. Howe (Wellington-Huron):**

1. From the beginning of the crop year 1955-56 how many carloads of wheat have been shipped from the prairie provinces to Ontario?
2. What were the grades respectively of each such carload and what was the price per bushel paid at the elevator by the purchaser in respect of each carload?

ASSOCIATED SCREEN NEWS LIMITED

Question No. 221—**Mr. Hamilton (Notre Dame de Grace):**

For each of the fiscal years ending March 31, 1952, 1953, 1954 and 1955, and for the nine-month period ending December 31, 1955, what was the total value of federal government business awarded by any means to Associated Screen News Limited?

MOTION FOR PAPERS

CITIZENSHIP APPLICATIONS, N.B.

Motion No. 36—**Mr. Stuart (Charlotte):**

For a copy of all correspondence, telegrams and other documents, exchanged from January 1, 1953 to date, between the Department of Citizenship and Immigration and the attorney general of the province of New Brunswick, regarding applications for citizenship and fees therefor.

Mr. Pickersgill: Since the motion appeared on the order paper I have communicated with the attorney general of New Brunswick, but have not yet heard from him. But I think it is unlikely there would be any objection and, unless there is, I would be glad to comply with it. I hope that understanding will be satisfactory to the house.

Mr. Speaker: Subject to the remarks made by the Minister of Citizenship and Immigration, the motion is carried.

EXTERNAL AFFAIRS

MIDDLE EAST—REQUESTED REIMPOSITION OF PROHIBITION ON ARMS SHIPMENTS

On the orders of the day:

Right Hon. L. S. St. Laurent (Prime Minister): Mr. Speaker, from the newspaper reports which I saw this morning I gathered

that there may have been some misunderstanding concerning certain remarks I made in the house yesterday afternoon in response to questions concerning arms shipments to the Middle East. What I said yesterday was that I was under the impression that there are no arms going forward at this time. I did not say that all exports of arms to that area had been stopped or placed under an embargo.

No requests for arms for export to the Middle East have, in fact, been approved during the present year, and therefore there could be no question of shipments resulting from any such requests. There remains, however, the uncompleted part of an order for Harvard training aircraft for Egypt, about which we had considerable discussion about a month ago. That order was one which was approved last July. The remainder of that order was cleared by customs for export on February 20 last. It has, however, not yet left the country, though it is awaiting shipment. Consideration is at present being given to the question whether there should be any interference by the government with the completion of this order in the light of the situation in the Middle East, and a statement will be given to the house when a decision on this matter has been made.

Mr. G. R. Pearkes (Esquimalt-Saanich): When I rose a minute ago, I had intended asking the Prime Minister a question regarding these aircraft which are reported as being crated on the docks at Halifax, addressed to the Egyptian air force, and awaiting the arrival of a freighter. I was going to ask whether the ban or the embargo that was placed on the new permits could apply to that aircraft now.

Mr. St. Laurent (Quebec East): No, not at this moment. As I informed the house on February 6, the embargo was lifted at that time, and it has not been reimposed.

Mr. D. S. Harkness (Calgary North): Might I ask the Prime Minister a question subsequent to his statement? What is the situation now in regard to the $30,000 worth of 25-pounder ammunition, shipment of which was being considered by the cabinet to Israel? Has that matter been decided, in view of the statement that no further permits had been issued? Does this mean this ammunition is not going to go forward?

Mr. St. Laurent (Quebec East): No decision has yet been reached in that connection, and the situation is as I last stated it to be when I was asked about it in the house.

Mr. Donald M. Fleming (Eglinton): May I ask the Prime Minister within what period of time the house may expect the government to reach its decision with regard to the forwarding of the 12 Harvard aircraft?

Mr. St. Laurent (Quebec East): That will depend upon events as they develop. We shall lose no time in implementing our policy to avoid doing anything that might increase uneasiness about the Middle East situation.

Mr. G. C. Nowlan (Digby-Annapolis-Kings): May I ask the Prime Minister a supplementary question? Is it to be left to the students of Dalhousie University to maintain the embargo on these shipments?

Mr. St. Laurent (Quebec East): I do not know that the students of Dalhousie University have any right to impose any embargo.

Mr. Pearkes: I should like to ask the Prime Minister this question. Earlier this year, when the embargo was placed on the export of all arms, was the permit for the export of those Harvard aircraft at that time withdrawn?

Mr. St. Laurent (Quebec East): No, Mr. Speaker, it was not withdrawn. There was a suspending order made at that time which, as I stated a moment ago, was lifted on the 6th of February.

Mr. Pearkes: Yes, but prior to that the embargo was put into effect, and was not the permit for the export of those aircraft withdrawn?

Mr. St. Laurent (Quebec East): No, the permit was not withdrawn.

Mr. Coldwell: May I ask a supplementary question in order to clear up some confusion that I think exists? I take it these permits are issued to a private company and the planes are not the property of the government. Am I right in that respect, and what company is it to which the permits are issued?

Mr. St. Laurent (Quebec East): It is the Canadian Car and Foundry Company to which the permit was issued.

Mr. Diefenbaker: In view of the inflammatory situation in the Middle East, does the Prime Minister not consider that the shipment of the planes now loaded on the ship in Halifax ought to be stopped, having regard to conditions in the Middle East at the present time?

Mr. St. Laurent (Quebec East): I have just said that when a decision has been reached a statement will be made to the house.

Inquiries of the Ministry

INQUIRY AS TO REQUEST FOR VISAS BY U.S.S.R. DELEGATION

On the orders of the day:

Mr. J. Wilfrid Dufresne (Quebec West): Mr. Speaker, I should like to direct a question to the Secretary of State for External Affairs. Is the minister aware that a delegation from the U.S.S.R. calling themselves "members of the Russian fishermen's syndicate" has requested visas from our Canadian embassy in Moscow to visit Canada during the course of this month?

Hon. L. B. Pearson (Secretary of State for External Affairs): No, Mr. Speaker. I am not aware of any request made for visas by any Russian delegation as suggested.

Mr. Dufresne: I should like to ask a supplementary question. Knowing that visas are going to be asked for, could the minister—

Some hon. Members: Oh, oh.

Mr. Speaker: Order. The hon. member is basing his question on what is a hypothetical ground. I recognize the Minister of National Revenue.

Mr. Dufresne: Mr. Speaker, I have a supplementary question to ask. Assuming that these visas will be asked for—

Some hon. Members: Order.

Mr. Speaker: That is just the point. The hon. member cannot base a question on an assumption.

Mr. Dufresne: Mr. Speaker—

An hon. Member: Sit down.

Mr. Fleming: Just say "if".

Mr. Speaker: Order. It might be preferable if more attention were paid to the one who is occupying the chair.

[*Later:*]

Mr. Dufresne: Will the Secretary of State for External Affairs state whether or not visas will be granted to a Russian delegation which is reported to be attending a meeting of the united fishermen's union in Vancouver on March 19 next?

Mr. Pearson: I cannot answer that question until I find out if the report is accurate. I will be glad to do that.

MIDDLE EAST—INQUIRY AS TO SECURITY COUNCIL MEETING

On the orders of the day:

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, may I direct a question to the Secretary of State for External Affairs? Is Canada pressing for a meeting of the security council in view of the situation in the Middle East?

[Mr. St. Laurent (Quebec East).]

Hon. L. B. Pearson (Secretary of State for External Affairs): No, Mr. Speaker. Canada is not a member of the security council and is not pressing for such a meeting. I do not know that any of the parties most directly concerned with the disputes there have themselves asked for such a meeting.

TRADE

CZECHOSLOVAKIA—SALE OF WHEAT AND BARLEY

On the orders of the day:

Mr. H. R. Argue (Assiniboia): I should like to direct a question to the Minister of Trade and Commerce. Has a contract been signed for the purchase by Czechoslovakia of a substantial quantity of Canadian wheat and is such purchase being financed through the Export Credits Insurance Corporation?

Right Hon. C. D. Howe (Minister of Trade and Commerce): Mr. Speaker, I was handed this memo as I came into the house. I have not read it. It was handed to me by my staff.

Mr. Coldwell: You had better read it first.

Mr. Howe (Port Arthur): No, I do not think so. Hon. members are aware that it is not my practice to disclose current sales—

Some hon. Members: Oh, oh.

Mr. Howe (Port Arthur): —by the Canadian wheat board.

An hon. Member: You should have read it first.

Mr. Howe (Port Arthur): Oh, that is all right. That is my policy. In the case of Czechoslovakian negotiations, however, the Czechoslovakian government has already announced its intentions. I am pleased to confirm therefore that the government of Czechoslovakia, through its official grain procurement agency, will be buying between 100,000 and 320,000 tons of Canadian wheat for shipment during the present crop year. The purchases will be made from agents of the Canadian wheat board on the basis of 25 per cent down payment and the remaining 75 per cent within one year. The Export Credits Insurance Corporation will insure the board's agents with respect to the outstanding balances.

Mr. Argue: Has a substantial sale of barley also been made to Czechoslovakia?

Mr. Howe (Port Arthur): Yes. As I remember it, sales of barley during the present week have been about 40,000 tons, and these have been paid for in cash.

Mr. O. C. Trainor (Winnipeg South): Mr. Speaker, I wish to direct a question to the Minister of Trade and Commerce. Has any *quid pro quo* been offered to Czechoslovakia

in return for the wheat purchases from Canada in the way of trade concessions or otherwise?

Mr. Howe (Port Arthur): The answer is that no *quid pro quo* has been asked for and none has been offered.

GRAIN

WHEAT—INQUIRY AS TO DATE OF FINAL PAYMENT ON 1954-55 CROP

On the orders of the day:

Mr. J. G. Diefenbaker (Prince Albert): Mr. Speaker, I wish to direct a question to the Minister of Trade and Commerce. On February 2 he indicated that as soon as the two companion pieces of legislation on wheat were dealt with he would be in a position to advise when the final payment on the 1954-55 wheat crop would be made. Is he now in a position so to advise and is it the intention of the government to make that final payment in time for the spring work on the part of the western farmer?

Right Hon. C. D. Howe (Minister of Trade and Commerce): Mr. Speaker, I do not think I ever said that. I said that I could not make any statement about the matter until the two pieces of legislation had been disposed of. I regret to say that the two pieces of legislation have not been disposed of in that royal assent has as yet not been obtained. When royal assent is obtained, perhaps if I am asked the question I can do a bit better.

IMMIGRATION

INQUIRY AS TO MEMBERS OF APPEAL BOARD

On the orders of the day:

Mr. E. D. Fulton (Kamloops): May I ask the Minister of Citizenship and Immigration a question arising out of the oral answer he gave a little earlier today? Do I understand from his answer, in which he gave the names of the members of the immigration appeal board and used the words "formerly members of the Department of Citizenship and Immigration", that the three members of the board, apart from the chairman, have resigned their positions or appointments with the department?

Hon. J. W. Pickersgill (Minister of Citizenship and Immigration): I think the hon. gentleman misunderstood what I said. I said that two of the gentlemen were formerly members of the immigration branch and one was formerly a member of another branch of my department. On being appointed to the appeal board they ceased to be members of these branches of the department because they are members of the appeal board, which is a separate entity but which is also under the jurisdiction of the minister, of course.

Mr. Fulton: If the minister had wanted to create an appeal board that would really give the right to an impartial hearing in accordance with the generally accepted principles of justice, could he not have arranged to set up a board with less than three out of four of the personnel from the department whose decision is under appeal?

Mr. Pickersgill: I understand that it is not an appeal from the decision of the department. It is an appeal from the decision of a particular civil servant, and I do not think that these conscientious and experienced civil servants, only two and not three of whom have served at any time in the immigration branch, are going to be any less impartial because they know something about the Immigration Act. What the hon. gentleman is saying is tantamount to suggesting that no member of the bar should ever be appointed a judge.

Mr. Fulton: Mr. Speaker, I am not going to comment on the minister's usual distortion.

Some hon. Members: Question.

Mr. Fulton: However, I should like an answer to my question as to whether, if they wanted to give a really independent hearing or appeal, they could not have found other than three out of four of the members of the board elsewhere than in the department, when it is the decision of one branch of that department which is under appeal. In other words, is this going to be an appeal board or a whitewash?

Some hon. Members: Oh, oh.

Mr. Speaker: I recognize the hon. member for Quebec West.

Mr. Fulton: Is my question out of order?

Mr. Speaker: If the hon. member reads in *Hansard* tomorrow the question he has asked and which I allowed in the first instance, he will see that his question was not of the type that should be asked at this time. The minister answered and—

Mr. Fulton: He did not answer.

Mr. Speaker: The hon. member for Kamloops (Mr. Fulton) contends that he did not receive an answer. I allowed him to try to repeat what I thought would be a proper question but when I noticed that it was not I recognized another hon. member who wanted to ask a question. I think most hon. members

will agree with me. I must insist that the hon. member do not pursue the point.

[*Later:*]

Mr. J. H. Ferguson (Simcoe North): Although the Minister of Citizenship and Immigration is not a lawyer he can probably answer this question. Is he aware that most judges, when a case comes before them concerning the firm with which they were formerly associated before appointment to the bench, retire from the case and ask another judge to take their position?

Mr. Fleming: Answer.

CANADIAN BROADCASTING CORPORATION

ALLEGED CRITICISM OF PUBLIC AFFAIRS TELEVISION BROADCAST

On the orders of the day:

Hon. J. J. McCann (Minister of National Revenue): Mr. Speaker, on February 29 the hon. member for Eglinton (Mr. Fleming) asked me if I would inquire of the C.B.C. as to whether there was any complaint in regard to a C.B.C. telecast on the evening of Sunday, February 26.

I have asked the C.B.C. about this matter. They inform me that they have received no particular complaint about this telecast.

Mr. Fleming: May I ask what a particular complaint is?

Mr. McCann: I presume they use that term in place of a comment.

Mr. Rowe: It was just general, was it?

Mr. McCann: General what?

Mr. Rowe: A general complaint.

LIVESTOCK

SHEEP—REPORTED SCRAPIE DISEASE IN ALBERTA

On the orders of the day:

Mr. E. G. McCullough (Moose Mountain): Can the Minister of Agriculture inform the house of the latest developments in respect to the sheep disease called scrapie in Alberta? Can he inform the house of the extent of the losses to date, and whether or not this disease is confined to Alberta, as well as whether or not any compensation has been paid in respect of such losses?

Right Hon. J. G. Gardiner (Minister of Agriculture): There is a question put in by another member asking for all that information which is in my office now, and it will be answered in due course.

[Mr. Speaker.]

TRADE AND COMMERCE

REQUEST FOR FORMATION OF FEDERAL BUREAU OF STANDARDS

On the orders of the day:

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, I should like to direct a question to the Minister of Trade and Commerce or to his parliamentary assistant arising out of the answer given to my starred question regarding a federal bureau of standards. Is the government not aware that representations concerning this matter were made in the briefs presented by the national labour organizations when they appeared before the cabinet recently? Is the government not also aware that the Canadian Association of Consumers has asked for such a federal bureau of standards?

Right Hon. C. D. Howe (Minister of Trade and Commerce): The government is aware that there is a desire that its work in establishing standards for articles offered for domestic sale be speeded up. My hon. friend knows that there is a federal standards act, administered by the Department of Trade and Commerce. He is aware also that arrangements for labelling under that act are being advanced as rapidly as standards can be set up. I do not know that the formation of a bureau of standards would speed up the work particularly. In any event, the work is going forward.

TRANSPORT

FERRY "BLUENOSE"—TIME IN DRYDOCK AND SUPPLEMENTARY SERVICE

On the orders of the day:

Mr. G. C. Nowlan (Digby-Annapolis-Kings): Is the Minister of Transport in a position now to tell us how long the ferry *Bluenose* will be in drydock, and what arrangements are being made for supplementary service during that period?

Hon. George C. Marler (Minister of Transport): I am unable to predict how long the *Bluenose* will be in drydock, and the reports I have had to date are not sufficiently clear for me to judge whether we should give further consideration to establishing a substitute service.

Mr. Nowlan: May I ask a supplementary question? The *Evening Times-Globe* of Saint John reports that the minister has told Mr. Dan Riley the boat will be in drydock for six weeks. I wonder if he could be as generous with the House of Commons as he was with Mr. Riley?

Mr. Marler: My attention had not been drawn to that statement. I may say I have told no one that the ship would be six weeks in drydock.

RABIES

REPORTED OUTBREAK IN SOUTHERN ONTARIO

On the orders of the day:

Mr. J. A. Charlton (Brant-Haldimand): Mr. Speaker, I should like to direct a question to the Minister of Agriculture. What is the government's policy with regard to the recent rather serious outbreak of rabies in southern Ontario? Is a charge made for the vaccination? If so, what is that charge?

Right Hon. J. G. Gardiner (Minister of Agriculture): Mr. Speaker, I only know that the officials of the department are taking action in accordance with the general policy as set out in the act and regulations. I shall see that the hon. member's question is taken as notice and bring down an answer to the direct question.

HOUSING

LIMITED DIVIDEND HOUSING PROJECTS—CONTINUATION OF POLICY

On the orders of the day:

Hon. Robert H. Winters (Minister of Public Works): Mr. Speaker, on Friday, March 2, the hon. member for Humboldt-Melfort (Mr. Bryson) asked why June 30, 1956, was advanced as the cut-off date for applications to Central Mortgage and Housing Corporation for hostel type accommodation.

The answer is that in May, 1955, Central Mortgage and Housing Corporation established a formula relating to the number of hostel rooms that might be included in a limited-dividend housing project for aged persons. It was decided that the number of hostel rooms should not exceed 50 per cent of the number of self-contained units in a limited-dividend housing project.

In establishing a limitation the corporation had in mind the definition of a "housing project" contained in the National Housing Act.

Correspondence had taken place prior to May of 1955 between the corporation and the Saskatchewan government which the latter interpreted as containing a commitment to finance limited-dividend housing projects sponsored by the government of Saskatchewan which contained a higher percentage of hostel units.

The corporation, because of the interpretation placed on this correspondence, agreed to accept projects in Saskatchewan with the number of hostel rooms being equal to the number of self-contained units that are designed for two or more people. When the corporation agreed to this special arrangement it stipulated that it would apply only to applications received up to the 30th day of June, 1956. This date was selected in order to give municipalities in Saskatchewan which had planned such projects ample time in which to bring them forward. The province was advised on August 29 last that June 30, 1956 would be the cut-off date.

INCOME TAX

PREMIUM IRON ORES—ALLEGED INTERFERENCE IN UNITED STATES TAX APPEAL

On the orders of the day:

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, may I direct a question to the Minister of National Revenue. Has the minister received a reply to the representations which he made to the United States secretary of the treasury on behalf of Premium Iron Ores Limited? If so, what is the nature of the reply?

Hon. J. J. McCann (Minister of National Revenue): Mr. Speaker, no reply has yet been received.

Mr. McIvor: A good answer.

NATIONAL CAPITAL PLAN

APPOINTMENT OF COMMITTEE TO REVIEW PROGRESS OF FEDERAL DISTRICT COMMISSION

The house resumed, from Tuesday, March 6, consideration of the motion of Mr. St. Laurent (Quebec East):

That a joint committee of both houses of parliament be appointed to review and report upon the progress and programs of the federal district commission in developing and implementing the plan for the national capital;

That the members to act on behalf of the House of Commons as members of the said committee be designated at a later date;

That the said committee have power to call for persons, papers and records; to sit while the house is sitting, and to report from time to time;

That the said committee have power to print such papers and evidence from day to day as may be ordered by the committee and that standing order 66 be suspended in relation thereto;

And that a message be sent to the Senate requesting that house to unite with this house for the above purpose and to select, if the Senate deems advisable, some of its members to act on the proposed joint committee.

Hon. George A. Drew (Leader of the Opposition): Mr. Speaker, at the time of the adjournment of this debate last night I had just referred to the fact that emphasis had been placed upon the need for the control

of the development of any capital plans by parliament itself. The setting up of a committee does fulfil that idea if the committee in fact—

Mr. Speaker: Order.

Mr. Drew: —if the committee in fact does deal with the problem with which it is now confronted. Mr. Speaker, I shall wait until it is possible to have my remarks heard.

Mr. Speaker: Would hon. members be good enough to use the lobbies to carry on private conversations instead of using the house for this purpose; and may I ask all those who intend not to remain in the house for the purpose of this debate to leave the house now.

Mr. Drew: Mr. Speaker, ordinarily I am not concerned about any interruptions but I do believe there are some hon. members who are sufficiently interested in the national purpose of a capital plan to wish to hear what is being said not only by myself but by other speakers who will be making comments on this subject.

The plan that was brought into existence by Mr. Jacques Greber under the instructions of the government has been a guide in so far as the general purposes of the commission have been concerned. It would, however, be a great mistake to imagine that this plan has become the definite pattern and that there is any very substantial fulfilment of the intention of that plan.

A number of public spirited citizens from the ten provinces and from the Ottawa district have taken their part as members of the federal district commission. The time has come, however, to say very definitely that a thorough examination of the responsibility of this commission, of its purpose and of the way in which the desire of parliament will be carried into effect is overdue. There has not been any effective measure of supervision by parliament. Parliament is not called upon to deal with specific proposals; parliament has been called upon to vote $2½ million a year for the purpose of making it possible for the federal district commission to carry out certain designated operations. The decision upon the recommendation of the commission is made by the government. If the full amount of the $2,500,000 is spent, the commission will simply have operated within the amount of the appropriation. On the other hand, if the amount is not spent it accumulates and goes forward and the fact is that the amount available is in excess of the $2½ million a year at this time.

I think it is well to look at what did happen at the time the last joint committee of the two houses met and reported in order to see how necessary it is that this committee go much farther.

That committee reported in 1944 and at the time it made its report it covered certain subjects which have not been substantially carried into effect. That report was dated August 1, 1944. The very first recommendation was in regard to the co-ordination of the activities of the federal district commission and the various bodies which would be called upon to deal with the plan for a national capital.

There was reference to the railway facilities and the necessity for negotiations between the federal district commission and the railway companies with the idea of removing certain of the railways and in that way making it possible to produce a much more attractive central area within the city. No effective steps have been taken to implement that part of the recommendation. There were certain other recommendations that were made but substantially very little has been accomplished that was recommended by that last committee.

I should hope that on this occasion the committee will deal with the fundamental problem which the federal district commission faces in trying to implement any national capital plan. When Sir Wilfrid Laurier many years ago spoke of his hope that Ottawa might become the Washington of the north, undoubtedly behind that thought was his recognition of the fact that it had been possible to carry out integrated plans because the whole of that area was placed under one authority.

I do not intend to express my opinion as to how far this authority should be extended or whether it should be extended at all. One thing is certain. If an effective capital plan is to come into operation there must be a clearer definition of the functions of the commission in relation to the municipal authorities, and that means the authorities of several municipalities. There must also be some workable plan under which there would be a measure of continuing supervision by parliament of such agreed pattern as may be brought forward by this committee in its report to parliament.

The fact is that there are a number of developments in this area which provide considerable reason for satisfaction. The various driveways along the rivers and canals are in themselves as attractive as could have been produced under any integrated plan that might have been developed. On the other hand it would be dodging reality to pretend that anything in the nature of integrated development in the central part of the city close to the parliament buildings has in fact been carried out.

There is a very small park area around the war memorial but outside of that there is very little beyond the boundaries of the grounds in which the parliament buildings stand which shows any signs of a capital plan in so far as any visitor to the parliament buildings is concerned. This site is a magnificent one. The view of this site from along the river banks or from across the river is one of the finest of any parliament building that can be seen anywhere. Nevertheless there are some most unattractive buildings and a complete absence of any sign of integrated development in the immediate proximity of the parliament buildings.

It is true that bridges have been constructed, certain new highways built and other preliminary steps of that kind taken, but we are far from seeing even the beginning of the real fulfilment of the concept which was placed before parliament in 1951 when the plans prepared by Mr. Jacques Greber were tabled in this house along with the report which accompanied them. Much land has been acquired in the outlying areas. One of the very desirable purposes of increased authority for the commission was accomplished when the cutting of forest areas in the neighbourhood was prevented. Undoubtedly effective steps in some substantial measure have been taken to preserve a green area around the city of Ottawa. But we are far from seeing any effective realization of the concept of a capital plan which was put before parliament by Mr. Jacques Greber as a result of the work which he had done at the request of this government.

There are a number of things that must be decided by parliament itself if the concept of a national capital which will be a source of pride to all Canadians and be regarded as something which is the common property of all Canadians is to take form within a measurable number of years ahead. The fact is that the federal district commission is not able to operate effectively at this time. That is a matter of common knowledge. The balance of authority between the commission and the various municipal authorities is not satisfactorily established.

The fact that certain municipal grants have been made to the city of Ottawa has very little to do with the fulfilment of these plans. The Prime Minister (Mr. St. Laurent) referred to them last night. These are intended only as payments in lieu of taxes on buildings occupied by the government, whether in Ottawa or in other municipalities, which upset the balance of taxation when they reach a certain percentage of the whole assessed area within the municipality. That payment is made simply for the purpose of providing a fair compensation to the municipality and has really very little if anything to do with the possible fulfilment of these plans.

It is not to be expected that the municipal corporation of the city of Ottawa, the municipal corporation of the city of Hull, the municipal corporation of Eastview or of any municipality in this area could be expected to carry out on their own any of the developments which are essentially a part of the concept of a capital area. What might be fully satisfactory from the point of view of the needs of a municipality in its ordinary position as a municipality would be within its financial ability and undoubtedly would be accepted.

If we are to regard this capital area as something that belongs to all Canadians and that is to be an appropriate show place as the capital of the nation to all visitors who come here, whether they be tourists, diplomatic visitors or otherwise, then the things that are done must be on a scale that could not possibly be undertaken by any one of these municipalities. The ability to carry those out is not greatly furthered by these payments in lieu of taxes which were not intended for that purpose but for the ordinary requirements of the municipality.

Let me deal with some of the questions that must confront anyone who is charged with the responsibility of seeking to carry into effect an appropriate capital plan in this area. These are things which I hope the committee will consider, these are things upon which I hope the committee will report, these are things upon which I hope parliament will ultimately make some decision and give appropriate directions.

Is it part of the proper concept of plans for a great capital city that there should be a well designed auditorium, in which concerts, operas and musical performances of all kinds and great national meetings should be held? I hope the committee will make some decision on that. Many of the hon. members in this house must have been impressed, as I have, by the fact that in other countries even the smallest capital city has its own opera building, has its own auditorium where musical concerts and great meetings can be held, has its own art gallery where there is, in fact, a real presentation of the art of the nation. These are things which have not yet been decided.

I do not believe that the city of Ottawa, as a municipal corporation, can be expected to take the necessary steps to erect the kind of auditorium that should be here in the capital for the purposes I have mentioned. I think that is something that must be undertaken by the federal district commission in association with the municipalities, if that

is to be done. Above all, the committee might well consider the desirability of diverting an appropriate amount of whatever sum is set aside for the activities of the federal district commission to the erection of a truly fine structure that will be in keeping with the fine architectural standards of these parliament buildings in which we now meet.

I hope no one will suggest that, because Ottawa is not one of our largest cities, it will not be possible to have fine music, opera, theatre, ballet and other artistic productions here in this city in keeping with the national character of the culture of our people. If anybody was in doubt about the fact that people will go to a place where any artistic performance of high standard has been developed, that question was answered by the city of Stratford, Ontario, in the Shakespearean festivals which they now hold every year. I think that every Canadian owes a debt of gratitude to the people of Stratford, who were responsible for starting that great festival, which now is one of the best known theatrical festivals in the whole world. In all earnestness I say that they have shown what can be done. I hope other municipalities will follow in other artistic fields and become the centres of musical festivals, of art festivals and of other annual events that will attract crowds of people and give greater impetus to the cultural development of this country. That is the way we shall advance our national culture, far more than any declaration that we desire it. The development of culture will come from the opportunity for culture itself to emerge through the things that we do.

I should think it would be one of the appropriate functions of the federal district commission, under the authority of this parliament, to provide those facilities which would bring here to the capital the cultural activities that would give a truly national character to some of those achievements. From here, then, there would go out to the people of Canada by radio and by television an effective representation of what was taking place. I hope the committee will consider the advisability of urging prompt action in this respect.

We are proud of our great material achievements. We are proud of the way in which our resources have been developed within these past few years. There has been a very natural measure of satisfaction expressed about the rapidly mounting annual income of this country. What has already happened is only a promise of what is going to happen in the years ahead. Therefore I hope that the committee, when it is set up, will consider these subjects and will make appropriate representations that are not only an expression of hope but that indicate the way in which it can be done.

One of the features of this proposed committee that commends itself very much to me is the fact that it is to be empowered to call witnesses and ask for the production of papers and documents. I think that is very useful. I would go further and suggest that this committee might well consider the advisability of visiting Washington, as the nearest large capital, and discussing on the spot the way in which their very effective plans have been carried into effect. Whether or not that is considered desirable, in any event I would hope that this committee would bring here before it experts who can speak with authority about the kind of planning that should be done.

Each capital city must have its own particular character. Ottawa is not going to be a smaller image of Washington, for several reasons. In the first place, we have our own distinctive architecture for our parliament buildings. In the second place, we have a geographical location that makes this the central part of a nation with a wide variety of interests. In the third place, we are surrounded by a countryside far more beautiful than that which surrounds Washington or, in fact, most other capital cities in the world. This committee should consider the way in which we may take full advantage of the magnificent rivers, the rolling countryside, the lovely hills in the distance and all the natural advantages that are available to us for the establishment of a capital city which will be recognized throughout the whole world as one of the most beautiful that can be visited anywhere.

It must be a Canadian city. It must be a city that recognizes the fact that we are not starting, as Washington did, immediately after the occupation of a relatively undeveloped area. We must incorporate within any capital plan a city that has grown without any integration of the various municipal areas that form a part of it. A great deal of attention must be devoted to the question which arises as to how there can be effective integration of these municipalities with connecting driveways and highways while, at the same time, recognizing that each municipality has attained a substantial measure of maturity in a way that makes a completely new development an utter impossibility. We should not strive for that. Some capital cities have done little to go beyond the actual environs of the parliament buildings themselves. London, with all the beauty that surrounds Westminster, has done little to change the streets,

the buildings, that lead into Westminster, and there is no reason why they should. They already have all the beauty of fine architecture and of age and of the history that surrounds them. Ours is a much newer picture. In many parts there are areas which should be removed if that is a practical possibility and give way to a finer type of building.

Something more is needed, however, than the Greber plan. What is needed is a pattern recommended by a joint committee and approved by this parliament. After that I believe it is very desirable that there should be a continuing committee which will review from year to year, and not once in twelve years as in this instance, the stages of development which have resulted from what has been done. I hope the committee will really tackle this problem. It needs to be tackled. The federal district commission, with all the earnest effort of its members, is not able to tackle it under the existing arrangements.

I feel sure that the corporation of the city of Ottawa, the corporation of the city of Hull and the other municipal corporations involved are anxious to co-operate. Let that committee be the place where this effective plan for co-operation is developed. Let us hope that the committee will not merely review what has happened and report to us but will put before us positive, imaginative and dynamic recommendations which will place before us the possibility of the fulfilment of the dream of a capital city which is in keeping with the proud future of Canada in the years immediately ahead.

Mr. M. J. Coldwell (Rosetown-Biggar): Mr. Speaker, last year I was very anxious that this committee should be established and I am happy indeed that the Prime Minister (Mr. St. Laurent) has moved for the appointment of a joint committee and that he has given us some indication of what the order of reference may mean. When I saw the order of reference on the order paper I wondered whether it was sufficiently wide to cover the kind of inquiry and the kind of recommendations that this committee might ultimately make. But last night the Prime Minister said this, as found at page 1876 of *Hansard*:

> . . . it is proposed that the committee this year shall direct its attention fully to the substantial work of the federal district commission and the relation of this work to the activities of the municipal and provincial authorities in so far as they bear upon it.

Therefore I take it that, with the exception perhaps of the matter of the review of municipal grants and that kind of thing, the inquiry is to be wide open. May I say, before I begin what I was going to say, that I was very happy indeed to hear the Leader of the Opposition (Mr. Drew) so warmly support the idea that this city and Canada in general should have suitable cultural facilities. Some members of the house may remember that during the war when we were discussing the possibilities of a war memorial I said I hoped that we might establish in this city a cultural centre, a centre in which there might be a national gallery to house some of the lovely pictures that we have acquired, perhaps a national library and certainly a national auditorium or national theatre, and that we might go even beyond that and do what many of the smaller countries to which the Leader of the Opposition alluded do, namely, not only provide for the opera, drama, ballet and the symphony but also subsidize suitable companies, beginning perhaps with good music or good drama.

I think it is a great tragedy that in this capital city of Ottawa there is no place where a good theatrical performance can be undertaken. There is no place where one can in reality enjoy good music or anything of that sort. Because of the lack of facilities I think the attempts that have been made to establish a repertory theatre have almost invariably met with great difficulties and except for a few public spirited citizens might have failed. One knows how inadequate is the auditorium in which these theatricals are produced—for the production of drama and so on. Therefore I want to support very warmly the plea made this afternoon by the Leader of the Opposition because it is a plea I made a good many years ago and have been repeating from time to time ever since.

As has already been said, this is one of the most beautiful sites for a city in the entire world. There is no city in the world with more beautiful surroundings than the city of Ottawa. Here we see the meeting of the Laurentian granite rock with the limestone rock and subsoil of this area. Here, as it were, is the meeting place of two of the geological regions of this part of Canada. In order to make this a more beautiful city I quite agree that we must have the co-operation of the municipalities and the provinces. One of the jobs that I think the committee should undertake is to make it more possible to have the co-operation of the provinces and the municipalities.

Much of the beauty of this city site is, of course, on the other side of the river in the province of Quebec, and I think everything should be done to ensure the co-operation of that province. I am quite sure that the present government of that province would look upon

the beautification of that area as being advantageous not only to the province of Quebec but to the country as a whole. I think every attempt should be made to get that co-operation and, of course, the co-operation of the surrounding municipalities.

The city of Ottawa, for example, needs to be zoned. It needs zoning very badly. There are all kinds of little laundries and so on in residential sections throughout the city and they should not be there. I know that there are difficulties because I happen to have been a member of the council of the city of Regina when some 30 years ago we established, in the face of a great deal of opposition, I might say, a zoning by-law in that city. I know the difficulties that followed because of the necessity of dealing with some of these laundries and so on that were scattered throughout the city in all kinds of substandard buildings. Therefore I think the city of Ottawa should be encouraged to undertake a real zoning plan for this capital city and follow out that plan over a period of years.

I know that something is being done in the newer subdivisions. In the newer subdivisions we find that as residential sections they have their shopping centres located in a particular spot instead of being scattered all over the subdivision, and that is as it should be. We should encourage the city and even help it if necessary to remove some of the many unsightly and substandard buildings that are to be found in this capital city of Ottawa. You need only to go into some parts of this city to realize the near-slum conditions, I was going to say, that exist here and there. I remember that a few years ago a young lady who was doing some canvassing for an association came back to her people and, in my presence, expressed both horror and indignation at the conditions she saw in certain parts of this city of Ottawa, conditions that she did not realize existed. But they exist and they should be removed.

Then we recall all the tragic fires that we have had lately which have taken the lives of so many young children. Those tragic fires have been due, in large part, to substandard housing in this capital city. I regret to say that, in one instance at least, it was substandard housing owned by the federal district commission. I suppose the commission felt that with no other housing to which the family could go, they could not turn them out; and one understands that point of view. But it places squarely before us the condition that exists here in this city. Even around our own buildings improvements could be made. One of my colleagues was remarking to me this afternoon about a certain condition. He asked me if I had driven my car out the west gate down the cobblestones. I said that I did not usually go that way. He said, "I have a new car and it is already being shaken to pieces because I am obliged to go up and down those cobblestones every time I come to the House of Commons." We could do a great deal to improve our own surroundings and set an example to the city of Ottawa.

I think also that all parts of this city should be within the city limits. I am rather amazed that the best residential section of this city is outside the city limits and has not even a public sewerage system. The people there have put up for years with no sewerage system; they have nothing but septic tanks. As we all know, in time septic tanks become a health hazard in a district. Yet we have this beautiful subdivision or village of Rockcliffe, which should be within the city limits, with sanitary conditions that would not be tolerated in many countries where they have strict sanitary laws. It is about time that something was done about the matter. I do not know what the federal district commission can do about it or what this committee can do, but I am saying something about it in the house this afternoon in the hope that it will arouse some interest among the citizens who live in Rockcliffe. There are one or two of them on the other side of the house among the ministers and there are one or two close to me on this side of the house. I hope they will take an interest and see that the sanitary conditions in Rockcliffe village are greatly improved.

In connection with sanitary conditions, I think the other thing that must be done around some of the residential areas in this city is in connection with the pollution of our rivers. I have heard the Ottawa river described as an open sewer. For some years we had a cottage some little distance up the Ottawa river. I asked the health authorities to tell me whether the river was fit to bathe in. I was told that they thought it would be all right to bathe in the river while there was a good flow of water in June or July but that as soon as it got hot in August at that particular point one had better not let children go into the river because while the water did not show serious contamination, there was contamination; one had better not bathe in it in late summer. That situation prevails for miles all down this beautiful Ottawa river. The thing is a scandal in this progressive country, to find one of our finest rivers, which flows right beside the parliament buildings, characterized from time to time as an open sewer. Of course the river Thames was once that way. I remember reading that about 100 years ago they had to erect curtains around the windows of the

House of Commons in London in order to keep out the smell from the river Thames. Fortunately we have not had to do that here, probably because we are on a rather high piece of ground up above the river; also, as somebody suggests, the sulphur fumes coming from the paper plant may neutralize the germs that may be found in the air above the Ottawa river. Hence we are perhaps safe in that respect.

Then I also hope that quite soon the unsightly buildings around the Rideau falls will be removed. For years we have heard that those unsightly buildings belonging to the government were going to be torn down or were going to be put out of the way. I was once told—I do not know how true it is—that, when France built the large and expensive French embassy adjacent to those buildings, we gave an undertaking that those buildings would be removed. I do not know whether that is true. Did we give that undertaking?

Mr. Harris: Yes.

Mr. Coldwell: If we gave that undertaking, let us carry it out and restore the Rideau falls to their pristine beauty.

Something was said about the green belt. I think we must be careful. When the Prime Minister (Mr. St. Laurent) last July 27 discussed with us the matter of the federal district estimates, I distinctly remember that he said there was no positive prohibition of building in the green belt areas but that the national housing authority had exercised some negative persuasion there. But we need to enter into agreements and to do what we can to preserve these green belts because they are an integral part of the capital plan as outlined by our town planning experts.

We have a very beautiful city in many respects. This afternoon the driveway was mentioned. I know of nothing much finer than that driveway around the city which is now being extended by parkways up towards Gatineau park. I want to say something about Gatineau park too because I think that park must come under the review of the proposed committee. I give all credit to the federal district commission for what they have done within this city but I am wondering whether they are not neglecting their responsibilities in connection with Gatineau park. When I was driving out to Kingsmere last summer and autumn I noticed that new buildings were being erected along the way. My understanding was that this park was to be kept for the people of Canada and that, bit by bit as opportunities occurred, the federal district commission would buy out certain properties around Kingsmere and in the park area as they came on the market. If you are going to do that, why was not the property bought from private interests and the erection of further buildings prevented in that national park area? I cannot understand the policy that would allow the building of new cottages and indeed new permanent homes in that area if the policy as I understand it—and as I think it was generally understood—is the policy that was to have been followed.

In the Kingsmere area we now have, of course, the property of the former prime minister. During this summer we had open-air concerts. I was surprised to learn that a new road had been built around the back of the buildings on that property in order to give access to the area where the concerts were to be held. Why? Because, I was told, the dust and the noise of the approaching vehicles on the old road interfered with the people who lived in that vicinity along Kingsmere lake. Kingsmere lake is the only lake we have near to this city. I understand that the property that had been left by the late prime minister was left to the nation and that persons who live or holiday around there were staying there on sufferance for the time being.

Now, I was also told that there were objections to the band concerts because they interfered with the quiet enjoyment of the people who lived in that area. This property and the cottages on it were left to the people of Canada and not for the enjoyment of the few people who happened to be in possession of them when the late prime minister died. I feel the federal district commission has to look into this and carry out what I believe was the intention of the late prime minister and this parliament in connection with that property.

I was told also that the new road that had been built went through shrubs that had been planted to encourage the development of a bird sanctuary there. I believe these shrubs were largely destroyed in building this road so that the residents in the neighbourhood would not be annoyed by the noise of automobiles, dust and so forth. I believe these are matters that have to be investigated by the committee. Of course, it is essential that the trees that remain in Gatineau park should be carefully safeguarded. I understand there was a woodlands association organized in the city of Ottawa in the thirties during the depression when trees were being cut down for firewood. At that time much beautiful timber was destroyed. I think we have to see to it now that in the planning of this capital district the beauty of the national park should be not only preserved but enhanced.

I may say that I have been all over this park. It is a glorious thing, with wonderful views. Go there in the summer; go there in the fall or go there now and follow the ski trails, and you will see the beauty of that landscape. When the parkways are built thousands of people will be able to drive along the escarpment and look over the Ottawa valley, as I believe the planners intend. What a wonderful national park that will be adjacent to our capital city. Of the four desirable lakes there, Kingsmere, Philippe, Meach and Harrington, only one has so far been unspoiled along the shoreline and that is Harrington lake. The federal district commission is obtaining property at Philippe lake as the opportunity arises. Of course, the longer they leave these properties in private hands and the more the beauty of that park is enhanced, the more valuable that property will become and the more costly it will be for the people of Canada to acquire it either by negotiation or if necessary expropriation. I think we have to make haste in order to acquire the entire parkland for the enjoyment of all the people of Canada.

Then, of course, situated in that area there is one of the historic settlements of this part of Canada, Old Chelsea. I was in Old Chelsea last autumn. When I was there I went down into the little river valley and learned for the first time that that is where Philemon Wright erected his first mill. Some suggestions have been made from time to time that just as in some other parts of the world they are re-erecting buildings of historic value—they did in the Annapolis valley not so many years ago—while the ancient buildings of log and frame which have some historic interest exist in the neighbourhood, they might be preserved in a pioneer village. In this way our children and our children's children will enjoy the facilities and historic significance of this beauty spot in the years to come.

I know that in the past few years as I have gone out with my daughter to the ski trails or picnicking in the summer in Gatineau park, nothing has appealed to me more than the beauty of this area and the opportunities that this country and this city together have to preserve for the future that wonderful parkland, so that there may be picnic grounds, ski trails, bathing spots and all the other facilities that go to make life a little more beautiful than the pioneers of the area knew in days gone by. I should like to see spots set aside, either in the park or near the park along the parkway, where there could be open air concerts. Anyone, for example, who has been in Vancouver and who has seen the beauty of Stanley park, preserved in all its original beauty, will know what I mean. Yet, in that park there is what is called the Theatre under the Stars which is greatly enjoyed by the people of that city. How much such a spot would be enjoyed here!

I am looking forward to the report of this committee. I hope I may be on the committee. I think, as the Leader of the Opposition has said this afternoon, the committee should not only review what has been done but assist the federal district commission and this parliament in making plans for the future, so that we may carry out the plans made over a period of time.

Mr. Ambrose Holowach (Edmonton East): In speaking to this motion, Mr. Speaker, I intend to be guided by the wise counsel that you have given to the house on numerous occasions with respect to relevancy of remarks on a motion preliminary to the setting up of a committee, such as the one we are discussing. I intend to be brief and to the point. We appreciated hearing the statement made yesterday evening by our Prime Minister (Mr. St. Laurent) concerning the program and the work of the federal district commission in developing the nation's capital. It is indeed an inspiration and a matter of pride that we should have such an undertaking.

After listening to some of the speakers who preceded me, it would appear to me that in addition to the technical accomplishments which our Prime Minister outlined yesterday the greatest progress has been in reaching full agreement on the desirability of the objectives of this commission. In the words of the Prime Minister, that objective is to create a national capital which will be a source of pride and inspiration to Canadians from all parts of the country, a focus and a symbol, if you will, of the things that unite us as a nation. It would appear that the next step lies in making more detailed plans and in bringing a better understanding to the members of this house and the other place of what has been accomplished thus far and what needs to be done in the future. For that reason I believe the committee will serve a most useful purpose.

In the absence of the hon. member for Macleod (Mr. Hansell), whom we in this group have designated as our member of that joint committee, I wish to express on behalf of my colleagues our full support of this motion. We attach a great deal of importance to the work of the committee for it will deal with the planning of a more beautiful city and will make this city in every respect truly worthy of being the capital of a great country.

There are other matters which could quite properly be discussed at this point and I am sure that hon. members on both sides of the

house could make valuable contributions. It seems to me that the problems which must face the federal district commission are similar to those which face other metropolitan areas in Canada. These problems have been discussed both in this house and throughout the country generally. There is, for instance, the problem of deciding on the size of the city; there are problems arising out of the rapid growth of population spilling over into the various fringe communities; the problem of city debt and problems of multiple and costly administration. Above all there is the problem of supplying adequate and further sources of revenues in order that these municipalities are able to meet the requirements they are called upon to meet by expanded communities.

It may interest the house to know that last year the government of the province of Alberta recognized this national problem and authorized the setting up of a royal commission to investigate the problems of our two principal cities, Edmonton and Calgary. I commend that report to the members of this committee as an excellent example and evidence of the very generous contributions that were made to growing municipalities by the senior provincial government. The total cost of providing direct and indirect assistance to our Alberta municipalities in a seven-year period was over $311,710,812. For a five-year period direct and indirect aid to the city of Edmonton totalled over $40,942,541 and for Calgary in that same period the total was over $27,681,017.

It is interesting to note that in the province of Alberta financial assistance by way of loans in that same period under the self-liquidating projects act, the municipal expenditure loans act and by way of school construction loans and other means, totalled over $57¼ million to the city of Edmonton and over $55¾ million to the city of Calgary.

In the case of Ottawa there is the additional problem of designing a harmonious plan in order to meet the requirements of the federal government buildings as well as to provide for the beautification of this city.

There is one matter to which I should like to draw the attention of the house. Let me put it this way. It is hardly necessary for us to impress the visitor from a foreign country with the natural beauty and material wealth of this city, of our country. He becomes aware of that. I should like to know what steps if any are being taken by this commission to impress the visitor with our interests and taste in relation to non-material things: drama, music, sculpture, and proper buildings such as a public auditorium in which these are housed and cultivated.

There is some regret that such a joint committee was not set up and functioning last year because it would have meant we would have been that much further ahead in our work, but we feel confident that the joint efforts of the hon. members from the other place and the House of Commons, meeting on a non-political subject and having powers to call for persons and to examine the records, will make great progress.

I am sure our representative on that committee will make concrete and specific suggestions with respect to some of the outstanding problems and when a report is made to this house other hon. members in our group will be glad to express themselves on this subject.

Mr. J. T. Richard (Ottawa East): Mr. Speaker, I rise to make a few remarks concerning this resolution. You will realize no doubt, Mr. Speaker, that I am most happy that a committee is to be formed to look into the program of the federal district commission. This I have requested very strongly for a number of years. I have asked for the setting up of such a committee on many occasions and I am gratified to know that such a committee will be set up at long last. No doubt this has been the result of many years of requests for such a committee from various hon. members. It is true that this committee sat 12 years ago but as one speaker said a few moments ago a committee such as the federal district commission committee should be a continuing committee and not an occasional one.

The constitution of the federal district commission provides for members representing each province in this country. I do not think, however, these men can replace the opinion and the information of the representatives of parliament on the committee. I think that what the national capital needs more than anything else is the proper distribution of information and publicity about its program throughout the country.

This can best be done if hon. members of this house are better acquainted with the workings and programs of the commission. I am therefore happy to congratulate the Prime Minister upon having decided to form a joint committee this year to look into the operations of the federal district commission.

I should also like to join with the hon. member for Carleton (Mr. Drew), the Leader of the Opposition, who made reference to some of the great men who served as chairmen of the commission. I was particularly pleased when he mentioned Hon. Thomas Ahearn and Hon. Frederic Bronson who were most public spirited citizens and were devoted

to the work of the federal district commission. Other men serving on the commission today are also public-spirited and deserve our praise for the work they are doing. I would also add that the officers of the commission are people who are both qualified and willing to do a very good job.

It has been said, Mr. Speaker, that a capital city should be the mirror of a nation, and while it is true that this house of parliament is the voice of the nation and that the population of the city of Ottawa represents a cross-section of the population of this country, I do not think we have reached the point where we can say that our national capital is truly a picture of the architectural and artistic evolution of this nation. Progress has been rather slow in implementing any suggested plan to make this a truly national capital.

As I have said before, the great difficulty with the whole plan is the fact that there is a conflict of jurisdictions. The eminent architect, Mr. Jacques Greber, submitted a plan to the government years ago, but that plan has never received any approval, in whole or in part, by all the jurisdictions involved, municipal, provincial and federal. When any part of the plan has had to be put into effect a decision has had to be reached on the particular part. This takes a long time. Some way must be devised by this committee whereby the greater part of the plan can be outlined for the future for approval by the federal government and for sanction by the provincial governments and the municipalities involved.

No one will deny that we have made great progress in beautifying the city of Ottawa. Other speakers have referred to our excellent driveways and beautiful parks. A number of bridges, including the Sussex street bridge, Hurdmans bridge, Bronson avenue bridge, as well as a number of other projects, have been completed, but we are far from having what could be called a planned city. As one speaker has said, there has been no approval of a green belt. There has been no approval of zoning regulations in the city. Our zoning is some 25 or 50 years behind because even in the best residential sections we find small stores being erected alongside beautiful apartment buildings. One of the duties of this committee should be to direct the federal district commission to exert efforts to convince the municipalities in this area to provide proper zoning.

When we refer to the progress that has been made in the plan to beautify the city of Ottawa I do not want hon. members to think that this has all been done at the expense of the federal government. We who are residents of the city of Ottawa appreciate the fact that we live in the national capital, but it must be remembered that the improvements being carried on in this area represent a great deal of expense to ourselves. As the Leader of the Opposition (Mr. Drew) said, I believe last night, some of the things that have been done and have been shared in by the city of Ottawa were much greater projects than would be required or would be undertaken by the city for its own purposes.

In order to assist in the Greber plan the city of Ottawa some years ago annexed thousands of acres around the city which it did not immediately need. This represented considerable expenditures for sewage, water and transportation, and also increased taxation for the people who had settled in those areas. Many people in Ottawa had their property taken over by the federal district commission. Those people were quite satisfied to live alongside the Ottawa or Rideau river as many of them had been living there for years. However, they had to move to new locations which they acquired at greater cost and on which they had to pay greater taxes.

I say these things in order to indicate that the citizens of Ottawa are co-operating. It is costing them money to be part of the national capital plan. They are willing to incur this cost and they welcome the spirit in which this resolution has been received and the manner in which speakers have expressed themselves yesterday and today. When the committee has received all information from witnesses who will be appearing before it, it should be able to recommend to parliament a more substantial amount of money to be voted immediately to the federal district commission, and also to indicate a program to be followed so as to accelerate the completion of the plan. I hope that the committee will recommend that greater assistance be given by the federal district commission in implementing any particular project in co-operation with the city of Ottawa.

I think there are certain projects in connection with which the city should not be asked to contribute. I have in mind the need for a bridge between Ottawa and Hull. The building of this bridge should not be delayed. I think it is shameful that there is no proper approach by car or on foot between the province of Quebec and the national capital of Ottawa. The federal government has acquired considerable land on the other side of the river and the printing bureau has been moved to Hull. No doubt

the government intends to build other buildings in Hull and the building of a bridge across the Ottawa river should be considered as part of the national capital plan. It is all right to refer to the beautiful buildings we have in Ottawa, but if you are thinking of the aesthetic I do not think there is anything more useful and attractive than a beautiful bridge across such a lovely river as the Ottawa. I hope that the committee will give consideration to the building of this particular bridge which is in such great demand at the present time.

I do not intend to repeat what I said last year about what I considered to be the unfair way in which land was taken over by expropriation proceedings for use by the federal district commission.

I shall only repeat what I have said on previous occasions, that I consider that the Expropriation Act, being an impingement upon the civil rights of a citizen, should be used lightly, sparingly but generously. Many of our people are not very happy. Hundreds of homes in this area have been expropriated by the federal district commission. There was no question of going to court. A private citizen cannot go to court against the government when an amount of $10,000 or $12,000 is involved, though big corporations or religious institutions can afford to do so because the amount involved is substantial. I have had very many complaints in the past about this kind of thing, and I hope this committee will consider the effects of expropriations upon individual owners of property in this area. I am not going to speak any more about it. My suggestions about the Expropriation Act will go to the Minister of Justice when the proper occasion arises, but at present I shall leave it at that.

I only hope this committee will have full opportunity and time to look into all the matters that have been raised by the different speakers here this afternoon. I hope also the government will take into consideration the suggestion I and others have made that this committee sit more often in order that we may play a more important part in planning a truly national capital around this area.

Mr. D. S. Harkness (Calgary North): I think everyone in the house welcomes the setting up of this committee for the purposes outlined in the resolution:

—to review and report upon the progress and programs of the federal district commission in developing and implementing the plan for the national capital.

The terms of reference and powers of the committee seem to be sufficient for the purposes for which the committee is being set up. Possibly the fact that this is a joint committee of members of this house and members of the other place is a good thing from that point of view. In the years I have been here I have noted that joint committees generally have a freer hand than many of the committees composed of members of this house alone. Probably the experience of members of the other place will be of great advantage to this committee.

This is probably an appropriate time to set up the committee and inquire into what the federal district commission has done and proposes to do, because the capital grant of $25 million in annual instalments of $2½ million each, I think, runs out in about a year's time. Therefore undoubtedly recommendations will need to be made in regard to a further capital grant to enable the commission to carry on its activities.

A great deal has been accomplished in the past. One has only to look at photographs taken of various parts of Ottawa 50 years or so ago and from that time on to see what a difference there is in the general attractiveness, shall we say, of the city now as compared to what it was in the old days. I am not going into what extent this has been accomplished by the commission and to what extent it has been accomplished by the municipal authorities of Ottawa and the surrounding municipalities. Probably the major part of the work has been due to the commission. If not done by them directly, at least it was due to the impetus they have given to this whole matter of the beautification of Ottawa.

During the ten years or so that I have been down here, during the times when the house was in session, it has seemed to me that the permanent residents of Ottawa—and this is also reflected in the Ottawa daily newspapers—are seized with the idea that the beautification of Ottawa is primarily a local matter, that it is an Ottawa matter. I think that is a wrong attitude. Certainly if that were the primary idea in the beautification of the city it would be difficult to justify the comparatively large capital grants, to say nothing of the maintenance grants, which are made to the federal district commission, and the work that it does.

In other words I think the work done by the federal district commission must be looked upon as a national undertaking to create here in Ottawa a capital of which the country can be proud and in which every citizen of the country, when he comes here, can go about and take a proper degree of pride. The grants made by this parliament to accomplish this beautification process are justified, I think, on those grounds.

In his statement last year the Prime Minister referred to the national capital as a symbol of the unity of the country and

so on. The city, of course, is naturally very much interested. The people who live here permanently are the people who receive the greatest benefit from the various beautification projects that are put into effect, the parks that are established and things of that sort. I noted that when the Prime Minister was dealing at some length with the federal district commission on July 27, 1955, he spoke of the municipal grants and went on to say:

> Given these grants, there is no reason for regarding the activities of the federal district commission in the planning and creation of a national capital as being in any way a substitute for the payment of full taxes to the city.

It is extremely desirable that the idea be made very plain, and I hope it may be one of the things the discussions in the committee will make plain, that the work done by the federal district commission should in no way be in lieu of taxes or in lieu of a grant or anything along that line, but that this work is undertaken as a means of creating here a city which all Canadians can look upon as a proper capital for this great country.

One of the most important things the federal district commission has to do is in connection with the green belt, which has been mentioned by several speakers already and with which the Prime Minister dealt in his remarks last year at considerable length. This green belt, as I see it, will particularly provide park land on this side of the river. As indicated by the hon. member for Rosetown-Biggar, we have in the Gatineau park a very beautiful natural park of considerable size, which provides a playground to which people from here and from other parts of Canada can go to enjoy themselves. However, to round out the development of this whole area as a capital city we need a very considerable amount of park lands on this side of the river, as envisaged in this green belt.

I should hope that the committee will give a good deal of attention to the green belt and make specific recommendations that will result in something definite being done in regard to the setting up and preserving of this green belt. Some of the remarks made in connection with that green belt last year by the Prime Minister led me to wonder whether at that time the government had any very strong intention of ensuring that this green belt be preserved. The only thing that he definitely indicated was being done was that Central Mortgage and Housing Corporation was instructed not to make loans to people who wanted to build houses in what was envisaged as the green belt. In connection with the green belt he went on to say:

> . . . we find ourselves frequently met with the suggestion that the federal district commission or the government should acquire land in order to control its use.

Then he mentioned various types of property and went on to say:

> . . . and finally, properties in the areas which have been proposed as a green belt around the cities comprising the national capital.

A little later, as found on page 6902, the Prime Minister said:

> These situations which I have described and illustrated all require some zoning and control. It seems to us to be inappropriate that the federal government should undertake this function, even in the capital area. It belongs more appropriately to the provinces and the municipalities to whom our constitution and traditions give jurisdiction in these matters. But this government hopes that these local responsibilities will be effectively discharged.

I would hope they would be effectively discharged, too, but unless the dominion government gives a strong lead in the matter through the federal district commission, even extending to the purchase of a certain amount of these lands in order, as the Prime Minister said, to control their use, I doubt very much that the green belt will actually be preserved. I understand there has been a certain amount of building in it already and, with the rate at which Ottawa is growing and expanding rapidly into the suburbs and beyond, unless some purchasing of land is carried out by the federal district commission or there is a much closer integration of effort among the commission and the municipal and provincial authorities concerned the green belt will disappear. Then the task of restoring it will become very much more expensive and difficult. As I say, it seems to me that one of the things necessary at the present time is to take action to ensure that the green belt is held and made a definite part of the activities of the federal district commission with respect to the whole plan of beautification of the city.

There is one other point I should like to mention briefly, and it has to do with the preservation of certain historic buildings. The hon. member for Rosetown-Biggar said something about Old Chelsea and the possibility of erecting there a replica of the first mill established in this part of the country. There are certain buildings of some considerable historic interest in and around Ottawa which I think the federal district commission might very well acquire and preserve as one of their activities. They actually own two or three such buildings at the present time. In my opinion one of them is one of the best

examples of domestic architecture, a very fine stone house built somewhere around 125 or 130 years ago.

There are a few other buildings of that nature which I think should be preserved in the interests of all Canadians in order to indicate the type of building in which our ancestors lived. In addition, in many cases they are extremely attractive buildings that are worth preserving simply from the esthetic point of view. I would hope the federal district commission would do more along that line than it has so far and that the few buildings it has under its control at the present time will not be destroyed in order to make way for the erection of some other buildings. This could readily happen, and of course it has happened in the case of a lot of buildings both here and in other parts of Canada.

When the committee is set up I trust that it will have sufficient time during the remainder of the session to cover what I regard as the very considerable amount of work with which it will be faced, and that it will be able to bring in a satisfactory and comprehensive report.

(Translation):

Mr. Rodolphe Leduc (Gatineau): Mr. Speaker, I wish to congratulate the government for setting up a committee to review the progress and the work of the federal district commission in the implementation of the national capital plan. Like all Canadians, I am anxious to see that plan fulfilled so that we may have a capital worthy of such a young, rich and prosperous country as Canada.

As member for the constituency of Gatineau, I am interested in the development of the national capital because two thirds of the national capital district are located within Gatineau county and 17 municipalities of my constituency are within that district.

Moreover, a national park has been planned for the Gatineau hills. It is a scenic area and this will be the first national park in the province of Quebec.

The members of the committee will have much work to do in investigating the present situation and in preparing a report on future projects.

In listening to the comments of hon. members in connection with that committee, I noticed that the Leader of the Opposition (Mr. Drew) is not well informed on part of the implementation of the program.

(Text):

At this point I wish to make a few comments in the English language in order that the Leader of the Opposition will understand what I have to say with regard to certain remarks he made this afternoon which I feel are inaccurate. In his remarks he mentioned that in its report in 1944 the joint committee had suggested that the removal of the railway lines in Ottawa and the station should be carried out as soon as possible. He stated that there had been very little done in this regard.

Mr. Drew: Mr. Speaker, I must correct that immediately. That is not what I said. What I said was that the report had recommended that negotiations take place between the commission and the representatives of the railways to discuss what should be done with the rail lines. I did not mention the station or refer to any detail concerning it. As a matter of fact I was merely summarizing the very general statement in the report of 1944 and indicating that it had not been specific enough to produce any result.

Mr. Leduc (Gatineau): I have here the 55th annual report of the federal district commission for the year 1954 and I wish to read a paragraph on page 14 having to do with the removal of the railroads and the station in Ottawa. This is the key to the plan of Mr. Greber. When the tracks and the station have been removed, arteries will be available for new streets and parkways in the centre of the city. In the report it is stated:

> The national capital planning committee studied the physical features of greater Ottawa and found that the waterways of the Rideau river and canal and the existing railway trackage divided the city into nine separate "islands", thus causing many bottlenecks and hampering the free flow of traffic. In addition the railways had induced the development of industry in residential districts and in areas of government buildings. While the present railway and industrial areas are considered out of keeping with the character of a national capital, the committee recognized the vital role played by industry in the economic life of the metropolitan area. It therefore recommended the removal of all railway lines from the central area and their replacement by a new line along the southern boundary of the future city. Substantial areas of land in the southeast section of Ottawa and the northern section of Hull were acquired for new railway yards, freight terminals and a future union passenger station. The land acquisitions provide space for light and heavy industry which would have to be relocated as a result of the railway revisions.
>
> Construction of these new railway facilities was started in 1950. The work included overhead crossings on the new railway line for the Russell and Metcalfe roads. In 1951 a connection was made at South March between the Beachburg and Renfrew subdivisions of the Canadian National Railways, permitting trains to reach central Ottawa by the new Walkley road line and thus releasing the crosstown tracks for conversion to highway purposes. In November 1953 the Canadian National Railways Montreal-Winnipeg manifest freight trains began using the new line and yards. At the end of 1954 the Canadian National Railways also began to transfer its yard office operations from Bank street to the new facilities. Service trackage will be maintained between the present Union station,

Ottawa East and the Chaudiere areas until the completion of the relocation of existing industries and the union station.

Mr. Speaker, a great deal of work has been done in connection with the removal of the railway tracks in Ottawa. Already talks are being held between the C.P.R. and the C.N.R. with a view to construction of a union station outside of the city of Ottawa. Mr. Greber, when visiting Ottawa last year, stated in a press conference that he was greatly impressed with the progress that had been made in the development of the master plan in Ottawa.

Many people do not realize what has been accomplished since the report was tabled in this house in 1950. Many bridges have been erected in Ottawa. I should like to mention some of them. They include the Mackenzie King bridge, Hurdmans bridge across the Rideau, the Bronson bridge across the Rideau, the two bridges across the Rideau on Sussex street and the improvement of the Chaudiere bridge last year. If more progress has not been made toward the realization of this project, it is owing to the fact that the amount voted each year by this parliament is not sufficient to permit work to be carried on more rapidly looking to its completion. The house must understand that the federal district commission in the last six or seven years has acquired many valuable properties. It has acquired those properties in order to save the Canadian taxpayers' money in connection with the future development of this capital.

I am sure this committee has a real function to perform. With the advice of the members of the federal district commission and of the technical advisers of the national capital committee, I am confident that we shall get all the information we need to prepare a substantial report so that in the near future we shall see the realization of this vast project.

Mr. W. Ross Thatcher (Moose Jaw-Lake Centre): Mr. Speaker, I too rise to support wholeheartedly the setting up of this committee, though I wish the terms of reference had been a little more extensive.

It is almost 60 years since parliament initially became concerned about the rather haphazard way in which the capital area was developing. Apparently back in those years the natural beauty of the district was deteriorating rapidly. As has been pointed out in this debate, in 1899 parliament set up what was known as the Ottawa improvement commission, which later changed its name to the federal district commission. The purpose of the commission was to carry out a program of beautification in the capital area.

Through the years a feeling has grown up across Canada, that this country wants a beautiful, well-planned and distinctive national capital in keeping with our traditions as a growing nation. That attitude was given tangible recognition in 1946 by parliament when, after a joint committee was set up, the powers and responsibilities of the commission were greatly extended. Hon. members who were here then will recall that at that time financial assistance to the commission was also substantially increased. A master plan was drawn up, and the commission have been working steadily toward the achievement of that plan.

Today we have heard a good deal about the need for more culture, art and beauty in the national capital. I am all in favour of such suggestions. Perhaps I should be somewhat hesitant in talking about the more mundane subject of dollars and cents. Nevertheless I should like to do so for a moment or two, because this federal district plan, before it is completed, is going to cost the taxpayers a substantial sum of money. I have done a fair amount of reading within the past few weeks in an effort to find out exactly how much has been spent already. As nearly as I can estimate, the amount now exceeds $60 million. That sum, of course, has been contributed by all the taxpayers of Canada.

This year, as nearly as I can figure, the federal treasury will be giving to the Ottawa district the sum of about $7½ million. Part of that amount is a grant to the federal district commission, part of it is a payment under the Municipal Grants Act, part of it is a payment of interest on Ottawa bonds, and so on.

This master plan, before it is completed—if what I have read is correct—will probably cost in excess of $100 million. As a matter of fact I would be greatly surprised if it is achieved within $100 million. That is a good deal of money. I for one should like to know for certain that this huge sum of money is being well spent and that the taxpayer is receiving value for the expenditure. I suggest that such an investigation is one of the main duties of this committee.

In a general way, I think the work of the commission so far has been good. It appears to me that its operations have been quite efficient. Certainly its activities have made a tremendous impact on the appearance of this city. I note that according to their last report, 75 per cent of the land they will need has now been purchased.

Nevertheless, there are many people in Ottawa and in the country who feel that the progress toward achieving a beautiful national capital has been too slow. I think the hon. member for Gatineau (Mr. Leduc)

mentioned that when Mr. Greber visited here a short time ago he expressed such an opinion. I am certainly inclined to have such an opinion. I could be completely wrong, yet I wonder if some of the very large sums that parliament has been expending in this district for beautification purposes have been, in some ways, siphoned off for purely local projects.

I will say quite frankly, as a western representative, that I have been somewhat concerned by the apparently endless demands upon the federal treasury which Ottawa municipal officials seem to make. I sometimes wonder at what point they will be satisfied.

I have in my hand a clipping which I took from the Ottawa *Citizen* a few weeks ago. It is headed, "Rockcliffe wants F.D.C. to call Meeting on Mosquito Control". It goes on:

> The federal district commission will be asked by Rockcliffe village council to call a meeting of all Ottawa district municipalities to try and work out fair contributions toward mosquito control.

Well, Mr. Speaker, I would say this is the kind of expenditure toward which I do not think the federal treasury should have to contribute. Other parts of the country look after their own mosquito control.

Today the federal government is paying under the Municipal Grants Act an amount which, as I understand it, is 96 per cent of normal taxation. It seems to me that Ottawa and district municipal officials should realize that the federal treasury also is paying out very substantial sums of money for driveways, bridges, parks and the like the costs of which in most constituencies of Canada are borne by the local taxpayers.

I would remind you, Mr. Speaker, and the house that Ottawa is the only national capital in the world where the federal government has absolutely no say in the management of the city. In view of the huge sums of money which have been paid out, and in view of the huge sums of money which are going to be paid out, in the next several decades, I think this situation is intolerable. I feel that it violates the principle of no taxation without representation.

As I said a moment ago, and as many other speakers have said, Canadians from coast to coast have accepted the view that we should have a beautiful, dignified, and distinctive national capital. But that laudable objective is now 60 years old. We have spent already more than $60 million, and there are some hon. members who still think that perhaps our capital is not beautiful.

There is a growing feeling, and frankly I share it, that the slow progress in achieving this objective is due fundamentally to the incompatibility of a small-type municipal government resting in an area which is representative of the people of Canada as a whole. I think there is a growing feeling that parliament, if it is going to achieve its objective more quickly, should exercise more direct control.

I think the time has come for parliament to consider setting up in this area a federal district similar to the one which exists in Washington, D.C., but with certain important modifications. For instance, I see no reason why education should not remain with the provincial authorities. I see no reason why the citizens of the federal district should not still elect representatives to the legislature and to parliament. Perhaps they should even set up a portion of their own council. At this moment I am not interested in the details, but I think the principle of a federal district should be seriously considered by this committee when it is set up.

Hon. members in various parts of the house have made a good many suggestions about the duties of the proposed committee. I have one or two others that I would add. I believe the committee or parliament should consider transferring jurisdiction over the federal district commission from the office of the Prime Minister to the Minister of Public Works. I certainly say that in no derogatory way, but it does seem to me that the Prime Minister is far too busy with more important matters, to bother with the details which are connected with the Federal District Commission.

I believe the Federal District Commission was originally placed under the Prime Minister's office because of the personal interest of Mr. King, but I think it was only meant to rest there temporarily. Our Minister of Public Works is a trained engineer, and I do believe he would have more time to give consideration to the various details involved.

We have heard much this afternoon about the sewage disposal problem in Ottawa and the pollution of the Ottawa river. I have been very surprised at the continued apathy of civic officials in permitting the continuation of this situation, which is endangering the health of so many people.

I say too that this committee, when it is set up, should reassess the whole relationship between the city of Ottawa and the federal government.

In the light of that thought, Mr. Speaker, I should like to propose an amendment for the consideration of the house. I regret that I had some difficulty in getting a seconder. I approached the hon. member for Edmonton East (Mr. Holowach) to ask if he would be kind enough, as a courtesy, to second my motion.

He agreed to do this on the understanding that he might not necessarily support it. I wish to move, Mr. Speaker:

That after the words "national capital" in paragraph 1, the following words be inserted:
"and also to consider the advisability or otherwise of forming a federal district under the jurisdiction of parliament in the Ottawa area."

Mr. Deputy Speaker: I have some doubts as to whether this form of amendment to the resolution is in order, but I shall express an opinion on that later.

(Translation):

Mr. Alexis Caron (Hull): Mr. Speaker, I would like to take a few minutes to express my views on this matter.

Let me first of all congratulate the right hon. Prime Minister (Mr. St. Laurent) who wishes to afford the house an opportunity of getting better acquainted with the work of the federal district commission. It is a necessary step and I know that the members of the commission are anxious to have their activity investigated by the house so that all hon. members may be conversant with developments concerning the national capital.

During the two years that I was mayor of the municipality of the city of Hull, I had the privilege to sit on the federal district commission and to appreciate the tremendous and serious work it has accomplished. It is made up of 20 members, who serve without remuneration and work voluntarily to ensure the development of the national capital. These people deserve the admiration of the nation because they do their work cheerfully and as a service to their country.

As representatives of the city of Hull, we had the opportunity to deal with the federal district commission and those dealings have been indeed most pleasant. The commission did not try to enforce its views; it came to discuss matters intelligently in order to secure certain concessions in exchange for other concessions on its part.

I can therefore state that, in those two years, the city of Hull received fair treatment and, in return, gave fair treatment to the commission, as was only right. A number of matters, especially the matter of expropriation, came up during those discussions. In connection with the Gatineau area for instance, there was a complaint about the fact that, in the neighbourhood of Kingsmere, some private properties had not yet been bought by the federal district commission. It was even suggested at that time to resort to expropriation in order to oust people who had owned these properties for years.

Had the hon. member who spoke thus taken the trouble to study the matter of expropriation in relation to Quebec provincial legislation, he would have found that jurists disagree on that score. We rather feel that the federal government cannot expropriate unless it plans to build a public building to house some of its administrative services.

Since, therefore, the federal government, according to certain authorities, has no right to expropriate, we would very much like these purchases to be made by mutual agreement. In any case it is very unfortunate, as the hon. member for Ottawa East (Mr. Richard) has pointed out, that certain people should be dispossessed of their property and allowed in return only the present real value since they have to spend two or three times as much for new accommodation.

If we must expropriate, we should pay a price based not on the present real value but on the replacement value, so that those who have been deprived of their homes in this way should not have to run into debt when they rebuild. A great many property owners, particularly on the Ottawa side, had their homes expropriated, got $8,000, $10,000 or $11,000 for houses in which they had spent a lifetime and then had to finance the payment of a house costing $20,000 or $22,000 to build. People of 65 or 70 were therefore forced to borrow money they might never be able to repay. Even though it is legal under certain conditions, it becomes somewhat costly, and the eviction of people who have been property owners for years should not be encouraged.

I want to state again that, when we speak of having an auditorium for the development of higher culture, I am all for it.

The federal district commission and the federal government should do all they can to help develop a taste for the arts. However, before we put up such a building, it seems to me we should make it accessible to the people. Traffic between Hull and Ottawa is unbelievably slow. In fact, it takes over three quarters of an hour to cover the distance between Parliament hill and Laurier street, across the river. It is well known that the Alexandra bridge, built in 1900, is a monstrosity and no longer answers today's requirements. It is absolutely necessary that this bridge be replaced, especially as we cannot go on waiting hours to move from one city to the other.

We are told that the situation is now under consideration and that the provincial governments concerned have been approached on the subject.

I think these negotiations should take place without delay, so that this matter will not drag on for ten years, and that the situation may be remedied as soon as possible.

I think it has become essential to build that bridge, and I believe that responsibility should be transferred from the Department of Public Works to the federal district commission. And to those who would remind us that funds are lacking, as it has been mentioned, and that some $60 million have already been spent, I submit that we should spend a few millions more on that construction, and I am all for it.

We should also consider changing the name of the federal district commission to that of the federal capital commission. Some one might say "What's in a name", but I know that people are prone to attach a derogatory sense to the words "federal district". In the past, and again this afternoon, we heard the hon. member for Moose Jaw-Lake Centre (Mr. Thatcher) ask for a federal district similar to the District of Columbia.

I am certain that my fellow citizens do not share this view at all and that they would not like to be transferred from a town or province into another, nor be submitted to a federal district where we might have difficulties with our system of education and otherwise. If the hon. member for Moose Jaw-Lake Centre had discussed the matter with Mr. Greber, he might have learned that not only the District of Columbia, but also the Federal District of Mexico and another such district in South America, that were patterned on the District of Columbia, have been failures from every point of view. This is the reason why Mr. Greber has never recommended setting up such a federal district.

It is useless to think about it, for you may be assured that not only my fellow citizens from Quebec, but also those in Ontario, will vigorously oppose it. We like our present position and want it to remain as it is. We do not want to lose our rights as citizens and we shall preserve them, whatever the expressed wishes of some members may be. Indeed, the mayor of Ottawa told me that she was opposed to it and that the government of Ontario would never allow such a project to be carried out.

Well, Mr. Speaker, before I suggest any such amendment, it would seem to me that we should study the results obtained in other similar districts, so as to know the reactions of their residents who see their tax burden growing and have nothing to say about it. It is true that, in the District of Columbia, the government of the United States pays part of the expense, but the portion attributed to the municipalities constantly grows while people cannot very well say whether they are satisfied or not. We do not propose to act in this way; nor, in my view, does the government.

Someone has referred to the Gatineau park and to some of its charming localities, to Kingsmere in particular. This centre is very beautiful and I do not think that summer cottages could mar its natural beauty. The old wooden buildings found there give the centre its quaint, individual, character. The homes themselves are neither unsightly nor dangerous. We should try to preserve not only the natural beauty of the area but that of the houses which have been built since, as it is part of our heritage.

I need not go any further, I think. I could perhaps object to some of the remarks which have been made on that subject but I know that all these matters will be fully gone into by the members of the committee we are being asked to set up. If, as I hope, I have the privilege of sitting on the committee, I will have an opportunity to refute these arguments.

(*Text*):

Mr. Deputy Speaker: When the amendment to this motion was presented I immediately expressed some doubt as to whether it was in order. I have since refreshed my memory as to the authorities, and I should like to direct the attention of hon. members to citation 546 in Beauchesne's third edition, which reads in part as follows:

> When the house is considering a motion, of which notice has been given, for the appointment of a select committee, a member cannot move in amendment that the committee be given wider powers than those which were set down in the notice.

The citation goes on to give several instances of amendments which were ruled out of order on that account. At page 642 of Beauchesne's third edition hon. members will find a ruling by Mr. Speaker Black to the same effect. Also, citation 355 reads:

> An amendment was ruled out because it raised a new question which could only be considered on a distinct motion after notice.

For these reasons I am afraid that I must regretfully rule the amendment of the hon. member out of order.

Mr. Ray Thomas (Wetaskiwin): Mr. Speaker, I shall be brief because I have no intention of entering into a general discussion of the work of the federal district commission. However, I do want to bring one matter to the attention of the house, and to support the suggestion made by the hon. member for Rosetown-Biggar that we should have something along the line of a theatre under the stars or, as suggested by the hon. member for Edmonton East, that the federal district commission should build an auditorium which would be available for dramatic plays, concerts and the like.

I would point out that the province of Alberta took a step in this direction which the federal government might well follow. The provincial government gave auditoriums to Edmonton and Calgary on the celebration of the fiftieth anniversary of Alberta becoming a province. Those auditoriums cost the provincial government something over $3 million each, and they were donated to those cities to be used in furthering culture, drama and so on.

In order to point up the need for such an auditorium in this area I should like to mention what happened to me last summer. Hon. members will recall how hot and humid it was here in Ottawa during the latter part of the session, and on Sunday afternoon I drove out to Kingsmere in order to get out into the country for a little relaxation and some country air. I wandered around looking over the ground, and started up a path where I found someone taking tickets. Apparently the facilities of the park had been turned over to some organization to put on some sort of concert, play or something of the like. The public was unable to go there and range over the grounds and look around as they should.

The only way I would have been able to get into Kingsmere that Sunday afternoon was by buying a ticket for the play which was going on. There were literally hundreds of people out there that day who no doubt wanted to look around this wonderful show place and avail themselves of the facilities provided for tourists. Walking around the parking lot I saw licence plates from practically every province in Canada and a good many of the states of the United States. Those people were all turned away because the grounds had been turned over to this organization to put on a play.

I have no objection whatever to the furthering of culture or the providing of facilities for charitable and religious organizations or other types of organizations which might want to put on productions of different kinds, but I do not think one of Canada's show places should be closed on a Sunday afternoon in order to provide facilities for some organization to put on a performance for which an admittance was being charged.

I do not mind saying that I felt pretty badly about it. I was rather upset to think that this park which had been turned over to the people of Canada as a show place should be closed to those very people on a Sunday afternoon. I think this points up the need for some sort of auditorium which the federal district commission could turn over to worthy organizations.

I heard a lot of complaining among the people who were there. I did not speak to any of them, but it was quite easy to see what their feelings were. A good many of them had travelled many miles only to find that they could not get into this park.

As I said before, I should like this committee to consider this matter of providing facilities for organizations such as little theatre groups, orchestras and so on.

This or any other park in Canada set up for the welfare and enjoyment of the Canadian people should under no circumstances be closed to the public and the facilities turned over to private organization, no matter what that organization may be. I ask the house, the Prime Minister and this committee to follow the lead of the Alberta government and provide an auditorium somewhere under the control of the federal district commission. This could be located in the green belt or in one of the parks, and these facilities made available to various organizations.

Then our parks and show places could be maintained for the public and made available to them whenever they desired to visit them. As I say, there were a good many people there that Sunday, and I imagine many of them will not be able to make a further visit. I could not blame them for feeling discouraged and rather badly about being turned away that Sunday afternoon.

Mr. W. G. Dinsdale (Brandon-Souris): Mr. Speaker, I think it is advisable in considering a resolution of this kind that we have as widely representative a viewpoint as possible. The last occasion parliament had a chance to review the activities of the federal district commission in connection with the national capital plan was in 1944, at which time considerable interest was generated throughout the country in the prospect of a place of beauty, a city of beauty, arising here in Ottawa.

However, since that time there has been no direct discussion of the matter by a committee, and I have the feeling that Canadians living in provinces more remote from Ontario and Quebec are somewhat out of touch with the developments which have taken place following the plan laid down during the sessions of the committee in 1944. At that time, I recall, looking at the problem from the viewpoint of an outsider, there was considerable interest generated. However, more recently, I am afraid, in other parts of the country the general public has not been keeping in touch with the developments taking place.

I first had the opportunity to visit the capital in 1942. Like most Canadians who come to Ottawa for the first time, my first reaction was that of disappointment. We tend to regard the capital of any nation as a place of beauty, a show place to a certain extent, because of the peculiar position it occupies in the affairs of the country. Unfortunately, because of the lateness in starting to plan our capital city on an organized basis, up to the present time Ottawa, like most of our Canadian cities, has just grown. There has been no organization of any kind. Fortunately during recent years, since the committee of 1944, there is some obvious evidence that the plans laid down on that occasion are at long last beginning to take shape.

Ottawa is also in the fortunate position that it has one of the best possible natural locations for a capital city. In 1942, when I viewed the city for the first time, I did so from what might be called the bird's eye view, from the air. Being connected with the air force at Uplands airport at the time I had a chance to fly over this area quite regularly, and from that perspective the district surrounding our capital city certainly appears one of extreme natural beauty. Any of the deficiencies that are criticized by visitors to Ottawa from more remote parts of the country are the result of delay in development and the unplanned growth of the city since it was first chosen to be capital of this young country. The nature of the early commercial activities, of course, has added some eyesores to the surrounding district which are only gradually being eliminated.

It was more by accident than by good judgment that the most attractive feature of the city at the present time, the federal district commission driveway, associated closely with the Rideau canal, grew out of that early defence measure Colonel By took in the years Canada was under threat of attack from our neighbour to the south. That has now become a central feature of the city and is one part of the capital that we can show to visitors with a great deal of pride.

As we come to the activities of the committee about to be set up, there are one or two suggestions I have in mind that I think should be drawn to the attention of those who have the privilege of serving on the committee. It has been pointed out already in this discussion that the original intention of the planners who first began to think in terms of a more rationalized development of our capital city was to pattern it after the city of Washington, the capital of the United States. As I see the development taking place, particularly in reference to buildings already constructed by the Department of Public Works, I get the feeling that the pattern in that regard is almost too close. The buildings that have already appeared on Wellington street, for example, seem to suggest that we are going to emphasize heavy stone types of structures reminiscent of an architectural age that is now some 200 or 300 years in the past.

I have not examined this question in any detail at all, nor am I any authority on architecture, but the general impression from casual observation is that the emphasis in our public buildings in this downtown area is going to be on huge monuments of stone. Maybe it is a deliberate attempt to reconstruct in Canada the equivalent of Constitution avenue in the city of Washington, D.C., but it seems to me the reverse of the architectural trend that is under way on this continent, where the emphasis in recent years has been on less ponderous structures designed for utilitarian, functional purposes, where the emphasis is not on the appearance of grandeur but rather on the suitability as work areas.

Most of these buildings are going to be occupied by civil servants. I take as a concrete example of this new modernistic trend the sort of structure that you see in the United Nations building, with emphasis on accessibility, surrounded by grassed areas, with a considerable part of the building devoted to window space. The United Nations secretariat building is often referred to as the glass house, mainly because at a distance the walls appear to be entirely constructed of glass.

As I have pointed out at the commencement of these observations, Canada has delayed somewhat long in coming to grips with this problem of building a capital worthy of the nation. That has had certain disadvantages, which have been outlined. We have seen a city grow up around parliament hill that has all the undesirable aspects

of the rapid growth of our modern cities, but it has this advantage. We are now in a position to start from scratch, as it were, so far as the architectural features of our capital plans are concerned. It would seem from a common sense standpoint much more desirable to project our thinking into the future and try to gear our architectural developments to the future, rather than tie them into the past.

It might be true that a certain atmosphere of grandeur is required in order to provide the necessary stately avenues for ceremonial and state occasions. But if we are thinking in terms of the era of capital city development of two or three hundred years ago; if we are trying to recreate here the atmosphere of some of the European capitals, I feel that we are decidedly out of touch with the general atmosphere of a country such as Canada, where there is a certain degree of modesty surrounding the living habits of the people as a whole. That is the main point I want to make in this discussion.

I have one final suggestion I should like to put before the house. The sittings of the committee will provide another occasion to arouse the general interest of the people of Canada from one end of the country to the other. I suggest that we use every possible opportunity by means of television, radio, every form of mass media communication that we have today, to bring the results of the deliberations of the committee before the people of Canada, and to bring before the people of Canada such outstanding events as the annual tulip festival. Only by so doing can we create the sentiment right across the country that will draw the attention of every Canadian citizen to the importance of the comprehensive development of our capital city.

In view of some of the difficulties that have been outlined with respect to the relationships between the various levels of government in trying to come to a co-ordinated agreement on national capital development, if there is no other solution whereby closer co-ordination can be maintained perhaps it would be advisable for this purpose to have a committee of this type sit more frequently so that we will be assured of a capital city, a capital area, worthy of a nation occupying the position that Canada does in the modern world.

Mr. J. M. Macdonnell (Greenwood): Mr. Speaker, I want to add one or two brief remarks and relate them chiefly to some of the things said by the Leader of the Opposition. I read in the resolution that a joint committee is to be set up, and so on, to review and report upon "the progress and programs in developing and implementing the plan for the national capital". The Leader of the Opposition spoke at considerable length about the physical aspects of this development. He spoke about streets and bridges and all the necessary things which enter into a plan, but the point I wish to refer to and which he stressed greatly is what one might call the cultural side of the matter.

He referred to a national theatre and the national gallery. I want to mention that for this reason. It seems to me that the communists are facing us with an entirely new threat, and it is in a sense not a physical but an educational threat. They are making us apprehensive lest, unless we distort our education, unless we stress technical education almost wholly, we may be left behind and one day find ourselves faced with overwhelming threats in the economic world.

It is for that reason that I wish to emphasize what the Leader of the Opposition said. I think there is a danger in our country that we may become not only exhilarated but even fascinated by our material progress. That is natural and inevitable, and I think healthy too, but on the other hand it does mean that we need to be called back, so to speak, from time to time to consider these other aspects of life. Therefore I was glad that the Leader of the Opposition spent a good deal of time not merely talking about the mechanical processes of our day to day lives but speaking about the art of living. By that I mean, of course, literature, painting and all the other things that go with it. When we look back we do know that in ancient days there were cities that have left their mark ever since. The city of Athens 2,500 years ago was, I suppose, about the same size as Ottawa, and it has influenced the whole world by the literary and artistic legacies it has left.

So I venture to express the hope that the committee in considering its work may feel there is a wonderful opportunity here in Ottawa for a lead to be given, and what an opportunity we have in this country, a kind of double opportunity because we have two great cultures. It seems to me that the committee would do well to consider its responsibilities in that direction. We are prospering greatly. We read almost fabulous figures of our material progress, and I hope that in the consideration of those we will not be lead to disregard these other things.

Motion agreed to.

PERSONNEL OF JOINT COMMITTEE

Mr. W. G. Weir (Portage-Neepawa): Mr. Speaker, may I ask leave to revert to motions?

Mr. Speaker: Has the hon. gentleman leave to revert to motions at this time?

Some hon. Members: Agreed.

Mr. Weir: Mr. Speaker, by unanimous consent I move, seconded by the hon. member for Portneuf (Mr. Gauthier):

That Miss Aitken and Messrs. Blair, Buchanan, Caron, Coldwell, Dumas, Fraser (St. John's East), Fulton, Gour (Russell), Houck, Leduc (Gatineau), Low, Mang, McIlraith, Noseworthy, Nowlan, Philpott, Richard (Ottawa East), Robichaud and Weselak act on behalf of this house on the proposed joint committee of both houses of parliament to review and report upon the progress and programs of the federal district commission in developing and implementing the plan for the national capital as provided for in the motion adopted this day; that the provisions of standing order 67 be suspended in relation thereto; and

That a message be sent to the Senate to inform Their Honours that the foregoing members have been appointed to act on behalf of the commons on the said proposed joint committee of both houses.

Motion agreed to.

CRIMINAL LAW

JOINT COMMITTEE—APPOINTMENT OF MEMBERS TO ACT ON BEHALF OF COMMONS

Hon. Stuart S. Garson (Minister of Justice) moved:

That a joint committee of both houses of parliament be appointed to inquire into and report upon the questions whether the criminal law of Canada relating to (a) capital punishment, (b) corporal punishment or (c) lotteries should be amended in any respect and, if so, in what manner and to what extent;

That Miss Bennett, Messrs. Boisvert, Brown (Essex West), Brown (Brantford), Cameron (High Park), Castleden, Fairey, Garson, Leduc (Verdun), Lusby, Mitchell (London), Montgomery, Murphy (Westmorland), Mrs. Shipley, and Messrs. Thatcher, Thomas, Valois and Winch be members of the joint committee on the part of this house; that the quorum of the said committee be 9 members thereof; and that standing order 67 of the House of Commons be suspended in relation thereto;

That the committee have power to appoint, from among its members, such subcommittees as may be deemed advisable or necessary; to call for persons, papers and records; to sit while the house is sitting and to report from time to time;

That the minutes of the proceedings and the evidence of the special committees appointed at the last two sessions to inquire into and report upon the foregoing questions, together with all papers and records laid before them, be referred to the said committee;

That the committee have power to print such papers and evidence from day to day as may be ordered by the committee for the use of the committee and of parliament and that standing order 66 of the House of Commons be suspended in relation thereto;

That the committee have power to engage the services of counsel;

And that a message be sent to the Senate requesting that house to unite with this house for the above purpose and to select, if the Senate deems advisable, some of its members to act on the proposed joint committee.

Mr. Drew: Is there going to be any statement in connection with this motion?

Hon. W. E. Harris (Minister of Finance): There is no statement to make except that this is a continuation of the committee work that has been going on, as I recall it, for the last three years. I understand that the nature of the problem was fairly clearly defined in the latter days of the last session, and that it was the unanimous opinion at that time of the committee and I think of the house that the committee should be reconstituted at this session.

Hon. George A. Drew (Leader of the Opposition): Mr. Speaker, we concur in the purpose of the motion and welcome the intention to set up this committee. My only reason for asking if there was a statement was that I wanted to be sure if there was one that it was made before I made the brief remarks I wish to make.

I do not intend to make any comments about the subject matter of this motion. I say that for this reason. I would not wish it to be thought that we are not greatly interested in every one of the subjects covered by the terms of the motion. We believe, however, that this committee has an extremely important task in dealing with these important subjects, and we do not intend to anticipate the deliberations of that committee by making any comments with regard to the various subjects mentioned.

I have in mind particularly the subject of capital punishment, which has naturally engaged the attention of hon. members here in recent months, as it has that of all Canadians. I thought it appropriate that I should say at this time I would hope that this matter, under no circumstances, would become the subject of partisan dispute. I cannot imagine that a problem that is related to society as a whole and of such an important nature would be dealt with on that basis. I feel sure that it will not be.

I express the hope that when the time comes to deal with whatever recommendations are made with regard to all these matters affecting all society, and as to which there are deep personal feelings that have nothing to do with politics, there shall be a free vote. I may say at this time that so far as the party I have the honour to lead is concerned, there will be a free vote. I feel that it would be useful if that were the understood position throughout the whole house. However, that is for others to say. I am speaking on behalf of the party to which I belong, and I say that our vote will be a free vote whenever it comes.

We look forward to the inquiry into these extremely important subjects, because it is

not only capital punishment but also corporal punishment and lotteries, which will engage the attention of this committee. We shall await with interest the result of their deliberations.

Mr. G. H. Castleden (Yorkton): Mr. Speaker, I just wish to say a brief word in regard to the setting up of this committee. The committee which has been doing such excellent work during the past two sessions should be congratulated on the wide range of knowledge they have obtained from a large field of experts. The calling of those experts has resulted in some very interesting evidence which I believe should be studied not only by all members of this parliament but by the people of Canada as a whole. I believe any person in Canada—at least the vast majority of us—would gain a great deal by reading the evidence of this committee and learning something about modern trends and about the history of capital punishment within our own country.

Among the names of those called before the committee is that of Mr. J. V. Fornataro, director of corrections. I refer also to the evidence given by Professor C. W. Topping, who is professor of sociology at United College, Winnipeg, Manitoba. We find the name of such a man as Mr. J. Alex. Edmison, Q.C., assistant to the principal, Queen's University, and who is director of American Prison Association and also a member of the special committee of the Department of Justice to study remission and parole; Mr. Virgil W. Peterson, operator of the Chicago science commission. The Canadian Association of Chiefs of Police gave evidence. This association in their brief, I note, state they could almost agree with Professor Sellin that there is a trend away from capital punishment these days and that it will disappear in all countries of western culture in the near future.

The general consensus of opinion, I would say, expressed by these experts supported the idea that capital punishment should be done away with. People interested would be surprised to learn that capital punishment has not served as a deterrent to the committing of murder. In the evidence given by Mr. Fornataro he stated emphatically that he was against capital punishment, and that sufficiently significant changes had occurred in today's understanding of behaviour since the original framing of the Criminal Code in Canada which would lead us to the conclusion that the very purpose of our system of justice should be redefined. It is a study of great interest, a matter of public concern across Canada. He states this—

Mrs. Shipley: Mr. Speaker, I rise on a point of order. I expect that I am out of order, but I may say that the hon. member was not a member of this committee last year whereas many of us were. I do not think it would be quite the right thing for the members of the committee to discuss the evidence until such time as we bring in our report. I wondered if it would help if I just mentioned that matter. Positive opinions are being expressed here. If I do not happen to agree with them, as a member of the committee, I do not want them to stand unchallenged until such time as the report comes in. I wondered whether, if I could say that, the hon. member would reconsider the discussion.

Mr. Castleden: I am pleased to have those remarks from the hon. member for Timiskaming. It is because I was not a member of that committee last year, and because I am looking forward to being a member of that committee this year—I have already been named on it—that I was referring to some of the material which I found in reading the evidence which was presented.

If the hon. member had been in the chamber when I began my remarks she would have heard me state that the committee was to be commended for the great work it has done. It was my opinion, on reading the evidence, that the majority of those giving evidence, from their knowledge and scientific study of the matter, were generally opposed to capital punishment. It was not my intention to influence anybody in that regard. I was merely making the suggestion that every member of this house should read that evidence and should make himself as familiar as possible with the information that has been given to us. I think it is most valuable.

I merely made that suggestion to the house. After all, we cannot ignore the verdict of history which rapidly leads us to the conclusion that crime has seemed to flourish most widely in times and in places where the punishment was most rigorous. If you look at the evidence heard during the past two years, I think by and large you will find that it will support that contention.

As an example, it might be of interest to the members of this house to know that just a little over 100 years ago history records the fact that a lad by the name of Nicholas White, a boy of 9 years of age, was sentenced to death at Old Bailey in England for stealing two pennyworth of paint. It would indicate that we have come a long way. It would also indicate that we should continue our study and make it a matter of law in this country that in the punishment of crime we see that we are doing the thing which we expect punishment to do.

I was surprised to learn that the evidence against hanging was that it did not deter. I think one of the strongest arguments that were used against capital punishment—this is how I feel myself, and I approach this with an open mind—is that there has been evidence that people have been hanged, and then some years afterwards it was discovered that they were innocent. As someone has said, hanging is so permanent. To whom can one appeal for justice when such a thing occurs, and when the state has carried out the punishment for a crime which he did not commit?

Speaking of the kind of evidence that might be given and the effort that might be made under such circumstances, Professor Topping said this. He was indicating his belief that capital punishment was discriminatory. He said:

> When a man is battling for his life he will exert his full force and he will draw upon all his resources and the resources of his friends. Specifically this means that he will employ the best counsel possible, even at a fee of $20,000, and that he will rally what friends he has to his assistance. This counsel and these friends will use their best skill to avoid so severe a penalty as death. Legal knowledge, psychology, and experience will be drawn upon. Since the evidence is likely to be circumstantial and based on the principles of logic, conviction is difficult. Murder is a low-visibility crime with few eye witnesses who can be called in to testify at the trial. With powerful friends and resources the struggle will be a long one; no quarter will be asked or given. And there may be delays until the furore has died down; and appeals.

Mr. Speaker: May I interrupt the hon. member? I do so because I fear that the pattern he is establishing in making his speech may be one that will be followed by other members in the course of this debate. It seems to me that the house is not called upon to decide now whether capital punishment should exist, but we are deciding whether we want to have a committee to inquire into it.

THE ROYAL ASSENT

A message was delivered by Major C. Lamoureux, Gentleman Usher of the Black Rod, as follows:

> Mr. Speaker, the Right Honourable the Deputy Governor General desires the immediate attendance of this honourable house in the chamber of the honourable the Senate.

Accordingly, Mr. Speaker with the house went up to the Senate chamber.

And being returned:

Mr. Speaker informed the house that the Deputy Governor General had been pleased to give, in Her Majesty's name, the royal assent to the following bills:

> An act respecting the payment of carrying costs of temporary wheat reserves owned by the Canadian wheat board.

The Royal Assent

> An act to provide for short-term credit to grain producers in the prairie provinces to meet temporary financial difficulties arising from inability to deliver all their grain.

CRIMINAL LAW

JOINT COMMITTEE—APPOINTMENT OF MEMBERS TO ACT ON BEHALF OF COMMONS

The house resumed consideration of the motion of Mr. Garson:

> That a joint committee of both houses of parliament be appointed to inquire into and report upon the questions whether the criminal law of Canada relating to (a) capital punishment, (b) corporal punishment or (c) lotteries should be amended in any respect and, if so, in what manner and to what extent;
>
> That Miss Bennett, Messrs. Boisvert, Brown (Essex West), Brown (Brantford), Cameron (High Park), Castleden, Fairey, Garson, Leduc (Verdun), Lusby, Mitchell (London), Montgomery, Murphy (Westmorland), Mrs. Shipley, and Messrs. Thatcher, Thomas, Valois and Winch be members of the joint committee on the part of this house; that the quorum of the said committee be 9 members thereof; and that Standing Order 67 of the House of Commons be suspended in relation thereto;
>
> That the committee have power to appoint, from among its members, such subcommittees as may be deemed advisable or necessary; to call for persons, papers and records; to sit while the house is sitting and to report from time to time;
>
> That the minutes of the proceedings and the evidence of the special committees appointed at the last two sessions to inquire into and report upon the foregoing questions, together with all papers and records laid before them, be referred to the said committee;
>
> That the committee have power to print such papers and evidence from day to day as may be ordered by the committee for the use of the committee and of parliament and that Standing Order 66 of the House of Commons be suspended in relation thereto;
>
> That the committee have power to engage the services of counsel;
>
> And that a message be sent to the Senate requesting that house to unite with this house for the above purpose and to select, if the Senate deems advisable, some of its members to act on the proposed joint committee.

Mr. Harris: Mr. Speaker, I wonder if the house would find it possible to permit the hon. member for Yorkton (Mr. Castleden) to conclude his remarks—I understand they are almost finished—and the hon. member for Wetaskiwin (Mr. Thomas) to associate his party with this motion, and then it would carry.

Mr. Speaker: Is there unanimous consent to that effect?

Some hon. Members: Agreed.

Mr. Speaker: When I interrupted the hon. member for Yorkton (Mr. Castleden) I was merely asking for his co-operation. I fully realize that the merits of the question to be inquired into are usually debated whenever a committee is proposed. It has been the practice to do that and I do not want to

curtail the hon. member in that respect, but it seems that this time the matter which is referred to the committee for inquiry is one that does not lend itself to the type of debate which was conducted, for instance, when we wanted to institute a committee to go into research. If we were to have a debate as to whether we were for or against corporal punishment I think we would be getting away from the motion that is before the house. I simply ask the hon. member for his co-operation.

Mr. Castleden: Thank you very much, Mr. Speaker. I had nearly completed my remarks, and was suggesting that the material and evidence placed before the committee has been adopted by the house and will be available to hon. members to read.

After the sentence of death has been imposed by the courts in this country an individual has one further recourse. The matter of commutation to life imprisonment is the prerogative of the cabinet of this government. I should like to recommend that until such time as the recommendations of this committee have been brought down, until such time as this house has dealt with those amendments to the Criminal Code which it may wish to make, it would be an excellent thing for the cabinet to refuse to permit any further death penalties to be carried out, until such time as the house has acted on the recommendations of this committee.

I am looking forward to sitting on this committee. I have read the evidence the committee has heard, and I trust we can bring forth recommendations which will be in line with Canada's position as one of the leading nations in relation to capital and corporal punishment and penology generally.

Mr. Ray Thomas (Wetaskiwin): Mr. Speaker, I simply want to say that I am extremely thankful that last year the committee was not forced to bring down its decisions and recommendations, and that it is being reconvened this year for this purpose. I was not a member of the committee during the first session, and I found it practically impossible to reach any decision during the sittings of last session. I was therefore extremely pleased to have had the opportunity during the recess of going over the evidence of the last two sessions. I have never served on a committee where there was so much conflicting evidence, all of which was very well presented. In every case the witnesses were extremely helpful, sincere and co-operative, and gave themselves to the most thorough questioning.

I should like to offer a word of congratulation to the Minister of Justice and the officials of his department, because I found them, as I am sure all members of the committee did, extremely co-operative throughout. Without exception they went out of their way to be of as much assistance as possible. At the same time I should like to say one word concerning how well the joint chairmen of the committee carried out their duties. They did an extremely good job. I hope the committee will be able to come to a good, honest decision on these extremely important matters.

Motion agreed to.

BUSINESS OF THE HOUSE

Mr. Harris: Mr. Speaker, tomorrow we shall begin with the resolution with respect to the industrial development bank, then take second reading of the Small Loans Act and then second reading of the Canadian Farm Loans Act. If time remains at our disposal I shall inform the house what will be taken next. I am inclined to think it will be the resolution with respect to the trans-Canada highway, but I am not certain at the moment.

It being ten minutes past six o'clock the house adjourned, without question put, pursuant to standing order.

ANSWERS TO QUESTIONS

The following answers, deposited with the Clerk of the house, are printed in the official report of debates pursuant to standing order 39:

POST OFFICE CONTRACTS, DOLBEAU AND LA MALBAIE, QUE.

Question No. 173—**Mr. Dufresne:**

1. Who was awarded the contracts for the post offices at Dolbeau and at La Malbaie, Quebec, and at what price?
2. Who was awarded the contract for iron and steel, and at what price?
3. Who submitted the lowest tender for iron and steel, and what was the amount of this tender?

Answer by: **Mr. Winters:**

Federal building at Dolbeau:

1. Louis Dallaire, Normandin, P.Q., at $289,900.

2. (a) Iron and steel is part of the general contract. The contractor listed the following subcontractors on his tender form: Structural steel, Eastern Canada Steel and Iron Works Ltd.; steel joists, Dominion Structural Steel Limited; reinforcing steel, Pierre Warren.

(b) Information not available.

3. Information not available.

Federal building at La Malbaie:

1, 2 and 3. A contract has not yet been awarded.

PREMIUM IRON ORES—PURCHASE OF STOCK

Question No. 189—**Mr. Knowles:**

1. Has the Department of National Revenue any information concerning any transaction involving the sale to Premium Iron Ores of shares of stock in Steep Rock Iron Mines Limited?
2. If so, will this transaction be studied by the Department of National Revenue?
3. Has the department any information as to the position of the United States internal revenue department concerning this transaction? If so, what are the details of such information?

Answer by: **Mr. McCann:**

The secrecy provisions of section 133 of the Income Tax Act operate to preclude the taxation division from furnishing any information in answer to this question.

GEORGE E. ALLEN—PURCHASE OF STOCK

Question No. 190—**Mr. Knowles:**

1. Has the Department of National Revenue any information concerning any transaction involving the sale to one George E. Allen of shares of stock in Steep Rock Iron Mines Limited? If so, what are the details of such transaction?
2. Will this transaction be studied by the Department of National Revenue?
3. Has the department any information as to the position of the United States internal revenue department concerning this transaction? If so, what are the details of such information?

Answer by: **Mr. McCann:**

The secrecy provisions of section 133 of the Income Tax Act operate to preclude the taxation division from furnishing any information in answer to this question.

POST OFFICE BUILDING, ROTHESAY, N.B.

Question No. 204—**Mr. Brooks:**

1. What was the total cost for the site and construction of the public building (post office) at Rothesay, New Brunswick?
2. Were tenders called for the purchase of a site?
3. If so, what tenders were received and what was the price paid?

Answer by: **Mr. Winters:**

1. Cost of site, $6,000; cost of construction of building, $26,479.72.
2. No—property acquired by expropriation.
3. Answered by No. 2.

PUBLIC BUILDING, NANAIMO, B.C.

Question No. 206—**Mr. Hamilton (Notre Dame de Grace):**

1. On what date did the contractor for the public building in Nanaimo, British Columbia, inform the architect concerned that, in his opinion, the building was completed?
2. Did the architect, in his subsequent inspection, locate any deficiencies and so inform the contractor?
3. If so, what were these deficiencies?
4. Have these deficiencies now been corrected to the satisfaction of the architect concerned?

Answer by: **Mr. Winters:**

1. On January 25, 1956, the contractor informed the district architect that the building was ready for inspection.
2. Yes.
3. Miscellaneous minor deficiencies; black topping of loading area not completed; sidewalk to be completed by city of Nanaimo.
4. Yes, except that weather conditions will not permit completion of the paving until spring.

WHARF, LEPREAU, NEW BRUNSWICK

Question No. 209—**Mr. Brooks:**

1. Are steps being taken by the federal government to build a wharf at Lepreau, New Brunswick?
2. If so, is a survey being made and when will tenders be called for construction?

Answer by: **Mr. Winters:**

1. No.
2. A survey is being made to determine the possibility and estimated cost of developing harbour facilities in the Lepreau area.

MEAT EXPORTS

Question No. 229—**Mr. Pommer:**

1. What number of cattle and how much beef was exported from Canada in 1955?
2. To what countries, and how much to each country?

Questions

3. How much pork and pork products were exported from Canada in 1955?

4. To what countries, and how much to each country?

Answer by: **Mr. Howe (Port Arthur):**

1 and 2. Canadian exports of cattle and beef, and the countries to which they were exported, were as follows:—

(a) Cattle (statistical items 2010, 2035, 2040, 2045, 2050, 2055):

Calendar year 1955 Country	Exports of Canadian produce No.	Exports of foreign produce No.
Union of South Africa	3	—
Bermuda	5	—
Barbados	1	—
Leeward and Windward Is.	2	—
New Zealand	5	—
Argentina	12	—
Brazil	5	—
Colombia	592	—
Cuba	41	—
Dominican Republic	33	—
Ecuador	58	—
El Salvador	1	—
St. Pierre and Miquelon	1,594	—
Italy	6	—
Japan	11	—
Mexico	466	—
Peru	593	—
Spain	19	—
Alaska	23	—
Puerto Rico	306	—
Uruguay	7	—
Venezuela	430	—
United States	63,400	76
Total	67,613	76

(b) Beef (statistical items 2605 and 2640):

Calendar year 1955 Country	Exports of Canadian produce Cwt.	Exports of foreign produce Cwt.
Bermuda	1,612	—
British Guiana	564	—
British Honduras	166	—
Barbados	1,576	—
Jamaica	108	—
Trinidad and Tobago	6,183	—
Bahamas	1,441	—

Total	732,746	—

UNEMPLOYMENT INSURANCE OFFICE, MONCTON, N.B.

Question No. 232—**Mr. Van Horne:**

1. How many cases, of all kinds, regarding applications for unemployment insurance were referred to the Moncton regional office by the Campbellton and Edmundston offices, since September 1, 1955, to date?

2. How many cases so referred were not settled within two weeks?

3. How many additional employees, part time and full time, were hired by the Moncton regional unemployment insurance office, since September 1, 1955, to date?

Answer by: **Mr. Gregg:**

1. The number of claims referred to the regional office at Moncton in the period, September 1, 1955 to February 29, 1956 by the Campbellton and Edmundston offices was 3,654 and 3,452 respectively.

2. Information not available.

3. No additional regular employees were hired for the Moncton regional office in the period, September 1, 1955 to February 29, 1956. A total of 69 casual employees (full-time employees paid on an hourly basis) were hired during the period and the number on strength at February 29, 1956 was 57.

HOUSE OF COMMONS

Thursday, March 8, 1956

The house met at 2.30 p.m.

COMMITTEES OF THE HOUSE

PUBLIC ACCOUNTS—CONCURRENCE IN FIRST REPORT OF STANDING COMMITTEE

Mr. Charles Cannon (Iles-de-la-Madeleine) presented the first report of the standing committee on public accounts, and moved that the report be concurred in.

Motion agreed to.

MISCELLANEOUS PRIVATE BILLS—FIRST, SECOND AND THIRD REPORTS OF STANDING COMMITTEE—CONCURRENCE IN FIRST REPORT

Mr. W. J. Henderson (Kingston) presented the first, second and third reports of the standing committee on miscellaneous private bills, and moved that the first report be concurred in.

Motion agreed to.

EXTERNAL AFFAIRS

MIDDLE EAST—REQUESTED REIMPOSITION OF PROHIBITION ON ARMS SHIPMENTS

Right Hon. L. S. St. Laurent (Prime Minister): Mr. Speaker, when speaking yesterday in connection with the remainder of the uncompleted order for Harvard training aircraft which had been approved last July I said that consideration was being given to whether there should be any interference by the government with the completion of this order and that a statement would be given to the house when a decision had been reached. I wish to inform the house that we have come to the conclusion that under circumstances as they exist the government would not be justified in interfering with the completion of this order.

Hon. George A. Drew (Leader of the Opposition): Mr. Speaker, in reference to what the Prime Minister has just said, will the Prime Minister not give consideration to the possibility that, at a time when the situation is so tense and the question of shipment to that troubled area could conceivably be interpreted in a different way than would ordinarily be the case, reconsideration might be given to shipment of aircraft to Egypt at this time, which definitely could be of use in the event of any disturbance arising there?

Mr. St. Laurent (Quebec East): We have given consideration to all those factors and we have come to the conclusion that under the circumstances the government would not be justified in interfering with the shipment which was cleared through customs on February 20.

Mr. Alistair Stewart (Winnipeg North): May I ask a supplementary question? Is the Prime Minister aware at all of the situation that prevails in the Middle East?

Mr. St. Laurent (Quebec East): I think I am, Mr. Speaker.

Mr. J. G. Diefenbaker (Prince Albert): May I ask a supplementary question of the Prime Minister? In view of the announced decision, what is the attitude of the government going to be with respect to the request of Israel? Does it intend to endeavour to equalize the supply of arms or does it intend to intensify the situation in so far as the Arab nations are concerned in relation to Israel?

Mr. St. Laurent (Quebec East): Consideration will be given to all applications as they come forward.

Mr. G. R. Pearkes (Esquimalt-Saanich): Might I address a supplementary question to the Prime Minister? Is there any change in the situation regarding the export of the 25-pounder ammunition to Israel?

Mr. St. Laurent (Quebec East): No, Mr. Speaker. No decision has yet been made in that regard.

[Later:]

Mr. Drew: May I direct a supplementary question to the Prime Minister? Can he explain to the house why, in view of the circumstances which have arisen in the past few days, more favourable treatment in regard to the shipment of military equipment should be extended to Egypt than to Israel?

Mr. St. Laurent (Quebec East): There is no outstanding permit for the shipment of equipment to Israel. There was a permit which was in force for the shipment of the balance of this order of Harvard trainers and we felt there would be no justification for the government to interfere with the shipment of what was included in that permit.

Mr. Drew: Is it not correct that a permit was issued in connection with the shipment of 25-pounder shells to Israel?

Mr. St. Laurent (Quebec East): There had been no completion of that proposed transaction. The 25-pounder shells were to come from government supplies, and when the matter came before treasury board, as it had to do before it could be completed, the situation was such, because of the activities at that time of the security council, that it was felt that the treasury board minute authorizing the sale should not be passed. Since that time I have made a commitment to the house that there would be no further permits issued until there seemed to be some easing in the international situation.

Mr. Fleming: Would the Prime Minister give the date of the decision not to approve the issue of the permit by treasury board?

Mr. St. Laurent (Quebec East): I have not that date in mind, but I could secure it for the hon. member.

Mr. Diefenbaker: Would the Prime Minister say that the decision that was made to allow these Harvard trainers to go forward into this very incendiary region was based on the fact that the government did not want to interfere with contractual relations?

Mr. St. Laurent (Quebec East): No, it was not that the government did not want to interfere with contractual relations but the government had committed itself to a permit for the export of these Harvard trainers, which we did not feel were military equipment at all, and that being the case we came to the conclusion that we could find no justification for cancelling the permit at this time.

Mr. Pearkes: May I ask one further question? Are these Harvards addressed to the Egyptian air force?

Mr. St. Laurent (Quebec East): In giving an answer to that, I shall have to rely on what I have read in the newspapers. This was a transaction between a commercial corporation and its purchaser. The permit was for the export of these Harvard trainers to the Egyptian air force. I would assume that they would be addressed to the Egyptian air force, but I have not seen the crates. I saw the report in the newspapers that that was the manner in which they were labelled on the crates that contained the dismounted parts.

Mr. Pearkes: But the permit was to the Egyptian air force; is that correct?

[Mr. St. Laurent (Quebec East).]

Mr. St. Laurent (Quebec East): The permit was to the Canadian Car and Foundry, the suppliers of the equipment.

Mr. Pearkes: For permission to ship to the Egyptian air force? Did the Prime Minister say that a minute ago?

Mr. St. Laurent (Quebec East): Well, that is my impression. I do not have it in my memory. I do not visualize the terms of the permit; I have seen them; that is my impression.

Mr. Macdonnell: May I ask the Prime Minister whether it is correct to infer that the decision of the government was made on the basis of some undertaking given to a Canadian citizen some time ago, rather than on the tense state of international affairs at the present time?

Mr. St. Laurent (Quebec East): Well, Mr. Speaker, I think the hon. gentleman will have to draw his own conclusions. Here there have been a large number of commercial transactions between Canadian firms and foreign importers. There was a permit for those Harvard trainers issued last July, and they were made ready for shipment. The government came to the conclusion that it would not be justified at this time in interfering with the completion of the shipment of that order which had been approved last July; this further shipment being something which, according to my information, was cleared through customs for export on February 20.

Mr. Drew: I have a supplementary question. Does the Prime Minister suggest that a shipment of serviceable planes to the Egyptian air force is outside of the scope of the policy of the government in regard to the shipment of military equipment to a very critical area?

Mr. St. Laurent (Quebec East): No, Mr. Speaker.

Mr. Diefenbaker: I should like to direct a question to the Secretary of State for External Affairs. He has not had an opportunity yet to explain anything. Will he tell the house whether in his opinion at the present moment the situation in the Middle East—

Mr. Speaker: Order. I think this matter has been more than fully dealt with within the ambit of what we consider question time.

INQUIRY AS TO REQUEST FOR VISAS BY U.S.S.R. DELEGATION

On the orders of the day:

Mr. J. Wilfrid Dufresne (Quebec West): Mr. Speaker, I should like to ask the Secretary of State for External Affairs if he is in a

position to answer the question I asked yesterday regarding visas for a U.S.S.R. delegation.

Hon. L. B. Pearson (Secretary of State for External Affairs): Mr. Speaker, we are in touch with our embassy in Moscow to inquire whether visas have been requested on behalf of the Soviet citizens to whom my hon. friend referred yesterday but have received no reply as yet.

APPOINTMENT OF SPECIAL AMBASSADOR TO THE HOLY SEE

On the orders of the day:

Mr. R. H. Small (Danforth): Mr. Speaker, I should like to direct a question to the Prime Minister. In view of the announcement that Mr. Pierre Dupuy has been designated a special ambassador to the Holy See for certain ceremonies to be held this month, does that decision by the Prime Minister indicate that he has changed his opinion and view as indicated some time ago that anything which might create religious controversy and dissension or disturb the religious conscience of the people should be avoided?

Right Hon. L. S. St. Laurent (Prime Minister): No, and I would not imagine that the presence of someone from Canada to express congratulations to His Holiness on the occasion of his eightieth birthday would create any controversy in Canada.

Mr. Small: A supplementary question, as that is not the question I asked. I asked the Prime Minister whether he has changed his opinion previously indicated to the house.

Mr. St. Laurent (Quebec East): I think my answer implies that there has been no change in my opinion because I do not think that this is anything that comes within the purview of the reference the hon. gentleman has made.

UNEMPLOYMENT INSURANCE

EASTERN QUEBEC—ALLEGED DISQUALIFICATION OF WORKERS

On the orders of the day:

Mr. Bona Arsenault (Bonaventure): Mr. Speaker, I wish to direct a question to the Minister of Labour. Would the Minister of Labour make a statement to the house, following the representations made to him by a delegation of members of parliament from the province of Quebec on March 1 last, with respect to matters pertaining to the administration of the Unemployment Insurance Act and also, further, to a statement issued yesterday by Mr. Samuel Audette, director of the forestry service of the U.C.C. farmers' union, on the same subject?

Hon. Milton F. Gregg (Minister of Labour): The hon. member was kind enough to give me notice of the question. This question was also referred to by the hon. member for Three Rivers (Mr. Balcer) last Thursday. The hon. member for Bonaventure and a number of other members made representations to me on March 1 on this subject, which is again brought to light in the item referred to in the question as given this morning in the newspaper by Mr. Audette of the U.C.C. farmers' union. Perhaps I may be permitted to summarize that, because it clarifies the situation for all concerned.

Mr. Audette stated in this article that lumberjacks who turned down various job offers by the unemployment insurance commission had seen their payments of benefits discontinued. He also said that the jobs were turned down because the lumberjacks did not have the money to travel to localities where work was available or because the wages were below the average woodcutting pay. That is an outline of the general problem, and I can assure you that it is a problem.

When the delegation met me and the matter was brought to my attention, I asked the unemployment insurance commission to carry out an investigation to see whether any unwarranted interpretation was being made of the act against the workers, and that study and survey are being carried on.

I am assured by the commission that they hope to be able to give me a more complete statement on this very important matter which I may present to the house next week. In the meantime, all of the cases that are being complained about are being reviewed by the commission to make sure that the intention and the spirit of the Unemployment Insurance Act are being complied with.

[*Later:*]

Mr. J. Wilfrid Dufresne (Quebec West): Mr. Speaker, has the Minister of Labour been informed that many workers other than lumberjacks in Quebec city have been disqualified for unemployment insurance for refusing work too far away from their own homes? If so, what will be done in this regard?

Mr. Gregg: Mr. Speaker, I think that question bears upon one aspect of the one that I answered in an interim fashion just a few moments ago.

INQUIRY AS TO PAYMENT OF RAIL FARE OF UNEMPLOYED

Mr. J. W. Murphy (Lambton West): May I direct a supplementary question to the Minister of Labour in view of the answer he gave a few minutes ago respecting the situation in some parts of Quebec? Has it

been the practice of the government to assume the payment of rail fare or part of the rail fare of those unemployed people who move to other parts of Canada where employment may be obtained?

Hon. Milton F. Gregg (Minister of Labour): No, it has not been the general practice. It has been the practice in former winters in areas that were, I will not use the word depressed but where industries were slack at that particular time, to see if the situation could be improved, in co-operation with the province concerned, by assisting workers to move from that area into an area where they could get jobs. This winter we have not had occasion so far to use that method.

Mr. Murphy (Lambton West): I wonder if the minister would clarify the one point I had in mind? He spoke of assistance and would that mean the payment of train fare or part of the train fare in co-operation with the provincial government to move these people?

Mr. Gregg: Yes.

TELEVISION

REFERENCE TO RESOLUTION PASSED BY LEGISLATURE OF MANITOBA

On the orders of the day:

Mr. Donald M. Fleming (Eglinton): Mr. Speaker, may I ask the Prime Minister and the Minister of National Revenue if they have received notice of a resolution passed by the legislature of Manitoba on March 6 urging competition in the television broadcasting field in the greater Winnipeg area and the establishment of television stations in other parts of the province of Manitoba? If so, what action is proposed to be taken on this resolution, which I am told was passed by a vote of 47 to 5, with only four C.C.F. and one communist member dissenting?

Hon. J. J. McCann (Minister of National Revenue): Mr. Speaker, this is the first information I have had with reference to the recommendation about which the hon. member has been speaking. In accordance with the government's policy, when the policy with reference to the establishment of stations where C.B.C. stations now exist is changed it will be announced. If it is any consolation to the hon. gentleman, I would say that there is not likely to be an announcement in that regard until we hear from the commission that is investigating matters with reference to the C.B.C.

[Mr. Murphy (Lambton West).]

HOUSING

INQUIRY AS TO REDEVELOPMENT IN MONTREAL

On the orders of the day:

Mr. Claude Richardson (St. Lawrence-St. George): I should like to direct a question to the Minister of Public Works. May I ask the minister, recalling his remarks of January 19, if the joint committee dealing with the so-called Dozois plan in Montreal for housing redevelopment has made a report. If the report has been made, has the minister received a copy and would he care to comment on it to the house?

Hon. Robert H. Winters (Minister of Public Works): Mr. Speaker, I have received a copy of the report of the joint advisory committee composed of representatives of the Central Mortgage and Housing Corporation and the city of Montreal. The report is concerned with the clearing of a blighted residential area in Montreal and the construction of a low rental housing project.

The report contemplates federal financial assistance for the housing project under the terms of section 23 of the National Housing Act, which provides for grants to municipalities for the clearance of blighted areas, and section 36, which provides for joint federal-provincial financing of low rental projects.

We are giving this report very careful study just as I presume the government of Quebec and the city of Montreal will. If as a result of the report the municipality and the province now wish to proceed with a project, the federal government will be glad to give sympathetic consideration to their proposals.

GRAIN

WHEAT—INQUIRY AS TO DATE OF FINAL PAYMENT ON 1954-55 CROP

On the orders of the day:

Mr. J. G. Diefenbaker (Prince Albert): I should like to direct a question to the Minister of Trade and Commerce. In view of his warmly extended invitation yesterday to ask a question as soon as the wheat bills had become law, is he now able to advise the house what is the position with respect to the final payment on the 1954-1955 wheat crop?

Right Hon. C. D. Howe (Minister of Trade and Commerce): Mr. Speaker, now that the wheat board is in a position to know the extent of financial help that can be expected outside present sources of revenue, I will ask the board to consider the position with

respect to a final payment. My hon. friend will appreciate that the wheat board act requires that a recommendation be obtained from the wheat board before the government can give consideration to a payment. After the board has advised the government as to when the payment can be made I will be glad to advise the house.

I might point out that on the 29th of last month the board finished the payment of $22 million and a fraction by way of interim distribution on the same pool.

Mr. Diefenbaker: Could the minister give the anticipated date when this may be looked forward to?

Mr. Howe (Port Arthur): That is a matter for the board to recommend. We are not in a position to consider any date until we have a recommendation from the board.

WHEAT—REQUEST FOR GRADE ACCEPTANCE WHEN SHIPPED BY TRUCK

On the orders of the day:

Mr. J. A. Byrne (Kootenay East): Mr. Speaker, I should like to direct a question to the Minister of Trade and Commerce. Would the minister give consideration to a request by southeastern British Columbia wheat producers for an exception to the wheat board regulation which prevents them marketing their wheat on the Pacific coast when shipped by truck?

Right Hon. C. D. Howe (Minister of Trade and Commerce): Mr. Speaker, I do not know of any regulation of the wheat board which prevents the farmers of British Columbia marketing their wheat within British Columbia in any way they like. The problem is to give a grade certificate for wheat that is in a truck. The inspector can know what the grade is when it leaves the grading point but there is no way of being sure of what wheat is in a truck when it reaches its destination. Therefore the wheat board has decided that it cannot give a grade certificate for wheat in a truck.

FLOODS

HUMBER VALLEY—OVER-ALL PLAN OF FLOOD CONTROL AND CONSERVATION

On the orders of the day:

Mr. John B. Hamilton (York West): I should like to direct a question to the Minister of Northern Affairs and National Resources. In view of the present serious threat of flood in the Humber valley, the area which suffered the worst damage and loss of life during "Hurricane Hazel" a year and a half ago, would the minister take the lead in approaching the provincial and metropolitan Toronto conservation authorities to try to speed up an over-all plan of flood control and conservation?

Hon. Jean Lesage (Minister of Northern Affairs and National Resources): Mr. Speaker, last year the provincial government of Ontario had forwarded to me a request for assistance under the Canada Water Conservation Act. This request was withdrawn some weeks ago.

Mr. Hamilton (York West): I should like to ask a supplementary question. I wonder whether the minister would answer my request that he take the lead in approaching these authorities?

Mr. Lesage: If the hon. member would take a look at the act, he would know that the initiative must come from the province. The initiative was taken by the province last year but the request has been withdrawn. I believe that is all I can say.

TRADE

STEEL—REFERENCE TO PRESS REPORTS OF GREY MARKET

On the orders of the day:

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, may I direct a question to the Minister of Trade and Commerce. Will the minister comment on, or have an investigation made into, the reports of a grey market in steel which appear in today's press?

Right Hon. C. D. Howe (Minister of Trade and Commerce): Mr. Speaker, I know there is a grey market in steel in the United States, and I know that market is being made use of by certain of our builders. However, I am quite sure that there is in Canada no grey market in steel which is dealing in steel manufactured in Canada.

INTERNATIONAL WHEAT AGREEMENT—EFFECT ON CANADA OF REPORTED MEMBERSHIP OF ARGENTINA

On the orders of the day:

Mr. O. C. Trainor (Winnipeg South): Mr. Speaker, I should like to direct a question to the Minister of Trade and Commerce. In view of the announced intention of Argentina to join the international wheat agreement, with the consequent inevitable lowering of the Canadian quota under this agreement, will it have any effect on Canada's participation in the international wheat agreement?

Right Hon. C. D. Howe (Minister of Trade and Commerce): Mr. Speaker, the question under discussion at Geneva is whether there will be a renewal of the present wheat

agreement. My hon. friend is aware that the United Kingdom is not a member of the present wheat agreement. Whether the agreement will be renewed or not is still a matter of discussion. My associate deputy minister, Mr. Sharp, left for Geneva this morning and will return, I hope, next week. By that time we should have a clear idea as to whether the agreement will or will not be renewed.

Mr. Trainor: Probably the minister misunderstood my question. I said: In the light of the announced intention of Argentina, not the United Kingdom, to join this agreement, with consequent lessening in Canada's quota under the agreement, would that have an effect on Canada's participation?

Mr. Howe (Port Arthur): Mr. Speaker, Argentina has never been a member of the international wheat agreement. There is some possibility that that country may wish to join the present agreement—at least I have a dispatch on my desk at the moment which indicates accordingly—but no conclusion can be reached as to the extension of the agreement until we have more information from Geneva.

As I told hon. members earlier, we intend to rely very largely on the advice from our farm advisers at Geneva, who are the heads of the principal farm organizations of the prairie provinces. We have not had that advice as yet and I am not in a position to say whether Canada will or will not be a member of a renewal of the agreement.

FISHERIES

BRITISH COLUMBIA—REFERENCE TO PROPOSED MORAN DAM ON FRASER RIVER

On the orders of the day:

Mr. E. D. Fulton (Kamloops): Mr. Speaker, may I ask the Minister of Fisheries a question in the light of statements made as reported in the press in Toronto yesterday by Dr. Warren of the University of British Columbia in connection with the possibility of the construction of the Moran dam on the Fraser river. In the light of this statement of the tremendous industrial development envisaged, may I ask the minister whether any further discussions are taking place between his department and representatives of the company with regard to research with a view to reconciling the interests of power and fisheries in that area?

Hon. James Sinclair (Minister of Fisheries): The engineers of this proposed dam—I refer to the Moran dam—met with the engineers of my department earlier this year. The engineers of my department pointed out the requirements which would have to be met by such a dam before any approval could be given. So far the engineers of the Moran proposal have not come back with any concrete suggestion as to how to move fish over a dam that high.

ST. LAWRENCE SEAWAY

PROTECTION OF CANADIAN PROPERTY AGAINST CHANGE IN WATER LEVELS

On the orders of the day:

Hon. L. B. Pearson (Secretary of State for External Affairs): Mr. Speaker, on February 28 the hon. member for Lambton West (Mr. Murphy) raised a question concerning the effect of the diversion of streams into lake Superior upon the high levels of the upper lakes and whether more water could be diverted through the Chicago drainage canal.

I am informed that the range of fluctuations in the monthly average levels of the great lakes from year to year is between 4 and 6 feet. Periods of extremely high and extremely low levels do occur but not at regular intervals. Both the normal fluctuations and the extreme fluctuations are a result of natural conditions, since engineers have calculated that diversions or man-made control works in the upper lakes influence these levels in the order of a few inches and require approximately ten years to produce their ultimate effect. Neither the water inflow at Ogoki nor any likely increased outflow at Chicago would, therefore, have any significant effect on the high levels themselves. In times of low levels, however, a matter of a few inches may be significant and, for this reason, an increase in the outflow at Chicago would reduce the general amount of water available in the lakes with results which might be prejudicial to Canadian and United States domestic and sanitary uses of water as well as to navigation interests and result in a not inconsiderable loss of electric power to both countries.

AIR TRANSPORT

TRANS-ATLANTIC SERVICE—REQUEST FOR SECOND CANADIAN LINE

On the orders of the day:

Mr. John B. Hamilton (York West): Mr. Speaker, may I direct a question to the Minister of Transport. In view of the report in the press this morning that a fourth European air line is about to apply to add Montreal as a port of call on its trans-Atlantic service, is the minister considering licensing a second Canadian air line for this service?

Hon. George C. Marler (Minister of Transport): I have not seen the report in this morning's paper and am not able to reply to the hon. gentleman's question.

NATURAL GAS

REFERENCE TO APPLICATION BY PANHANDLE COMPANY TO EXPORT TO CANADA

On the orders of the day:

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, may I direct a question to the Minister of Trade and Commerce. Is the minister aware of the fact that the federal power commission examiner has rejected Panhandle's application for the export of United States gas to eastern Canada? Will this not make necessary a review of the government's natural gas policy?

Right Hon. C. D. Howe (Minister of Trade and Commerce): Mr. Speaker, I have not seen the reference. The application for the import of Panhandle gas into Windsor was for a small quantity and for a short period, and I do not think any opinion will be changed if that is the decision of the federal power commission.

RABIES

REPORTED OUTBREAK IN SOUTHERN ONTARIO

On the orders of the day:

Mr. J. A. Charlton (Brant-Haldimand): Mr. Speaker, I wonder if the Minister of Agriculture is prepared to answer the question I asked yesterday regarding the outbreak of rabies in Ontario?

Right Hon. J. G. Gardiner (Minister of Agriculture): I have not yet received an answer to the question.

INDUSTRIAL DEVELOPMENT BANK ACT

AMENDMENTS TO ENLARGE CLASSES OF LOANS, ETC.

Hon. W. E. Harris (Minister of Finance) moved that the house go into committee to consider the following resolution:

That it is expedient to introduce a measure to amend the Industrial Development Bank Act to enlarge the classes of loans that may be made under the act; to raise the limit on the aggregate amount of loans exceeding two hundred thousand dollars from fifty million dollars to seventy-five million dollars; and to make certain changes in connection with the administration of the act.

Motion agreed to and the house went into committee, Mr. Robinson (Simcoe East) in the chair.

He said: Mr. Chairman, the industrial development bank has been most active on behalf of the government and the business community since its incorporation. I should like on this occasion to put on the record some figures involved in the business of the bank and explain the proposed amendment. As I have said already, it is our intention to refer this to the committee on banking and commerce and I do not propose to engage in a debate on second reading.

The industrial development bank was established under the authority of the Industrial Development Bank Act of 1944. The purpose was to supplement the operations of existing financial institutions in providing medium and longer term credits for eligible industries when financial assistance was not available elsewhere on reasonable terms and conditions provided that the investment in the industry by others was such as to afford reasonable protection.

It was generally acknowledged that businesses, whether they were large or small, provided that they were credit worthy, had been able to raise money from their chartered bank connections for their reasonable short term or working capital requirements, and that the larger and better known businesses had not too much difficulty in raising long term funds from investors in the security markets.

It was recognized, however, that there was a gap in the lending field in that it was often difficult and sometimes impossible for small or medium-sized businesses to obtain term loans to commence or to expand their operations. The loans required tended to be too long in term to make it appropriate for the chartered banks to provide them and too small in amount to make it feasible for the borrower to go to the market with a public security issue. The government's concern was to fill this gap for an important segment of the business community and to ensure that the growth of credit-worthy manufacturing firms and certain other specified types of enterprise of small and medium size would not be impeded by the lack of facilities for adequate financing.

Section 12 (2) of the Industrial Development Bank Act required the Bank of Canada to subscribe for the authorized capital of $25 millions, all of which has been paid up. In addition, industrial development bank was authorized to issue and sell debentures not exceeding three times the amount of its paid-up capital and the reserve fund. Under this latter provision the bank had outstanding on December 31, 1955, debentures totalling $10,200,000, all of which were sold to and are held by the Bank of Canada under the provisions of the act.

Industrial Development Bank Act

The bank was authorized to make or guarantee loans or enter into underwriting agreements to acquire securities of a corporation with a view to the re-sale thereof but only if the borrower was engaged or about to engage in an industrial enterprise. A limit of $15 million was imposed on the aggregate of the amounts of all commitments which individually exceeded $200,000. This limit has been twice changed and is now $50 million. An industrial enterprise was defined to mean:

> A business in which the manufacture, processing or refrigeration of goods, wares and merchandise, or the building, alteration or repair of ships or vessels, or the generating or distributing of electricity, is carried on.

Difficulties arose in many cases in the interpretation of what was and what was not an industrial enterprise, and to avoid the possibility that the bank and the board of directors might become responsible in respect of loans where the eligibility of the enterprise might be questioned and which only the courts could decide were intra vires or ultra vires, section 15(1) of the act was amended at the second session of parliament in 1949. The act now permits, and requires, the board to exercise an opinion as to the eligibility of a prospective borrower within the meaning of the definition.

From the commencement of business on November 1, 1944, to December 31, 1955, there have been 1,499 loans, investments and guarantees authorized, totalling $127,633,883, of which 254 authorizations were cancelled at the instance of the applicants before the amounts had been disbursed. These cancellations, together with reductions in the amounts of other credits before disbursements, totalled $21,011,768, leaving a net number of 1,245 authorizations totalling $106,622,115. Over the same period the disbursements in respect of loans and investments (not including guarantees where disbursements are not involved) have amounted to $99,120,538, and repayments received from borrowers have totalled $53,851,251. These repayments, with net write-offs amounting to $352,161 over the whole period, resulted in an outstanding amount of loans and investments of $44,917,126 on December 31 last. At the same date guarantees outstanding amounted to $184,237, and amounts involved in "Property Held for Sale" totalled $201,366.

Five hundred and forty-seven accounts totalling $39,901,580 have been repaid in full, and $14,722,319 has been received in partial repayment on loans which are current. These repayments, together with the write-offs for losses of $352,161, which I have mentioned, make up the aggregate of $54,976,060 by which the original authorizations have been reduced. The remaining net authorizations on December 31, 1955, numbered 698 and amounted to $51,646,055. The difference of $6,343,326 between these net authorizations and the aggregate of the balances outstanding on December 31—$45,302,729—is represented by the amounts of authorizations awaiting disbursement. Nearly 60 per cent of the number of loans made were for amounts not in excess of $50,000.

Up to the end of its last fiscal year on September 30, 1955, after writing off $355,101 in losses (of which some $3,000 has been recovered since September 30) and after providing a reserve for losses of $700,000, the bank had transferred $7,384,259 to reserve fund in accordance with the provisions of the act.

While I am sure that hon. members will agree that this is a commendable record, the resolution which is before you for consideration has as its objective what I consider should be non-controversial improvements which I am convinced will enable the bank to render assistance to a broader field.

Prominent in the changes we are proposing is a new definition of eligible borrowers. This is designed to cover a large number of operations which under the existing definition were borderline cases or clearly ineligible. No type of business which hitherto has been eligible is omitted from the new definition but, unfortunately, no definition we have been able to devise will eliminate borderline cases. The proposal will, however, considerably enlarge the field of eligible businesses. Some examples are that businesses which were not engaged in manufacturing or processing but which required buildings or investments in machinery or equipment for assembling, installing, overhauling, reconditioning, altering, repairing, cleaning (including seed cleaning), packaging, transporting or warehousing of goods, were not eligible borrowers but will be under the proposed definition. This is also true of the businesses of logging, operating a mine or quarry—but not prospecting, wildcatting, or developing—drilling, construction, engineering, technical surveys, or scientific research or the transportation of persons. On the premise that the bank should be able to finance the same fixed assets that it would be financing if they were directly owned by an industrial enterprise, it is proposed that those who supply such fixed assets to an industrial enterprise under a lease, contract or other arrangement, whereby title to the assets is retained by the supplier, should be entitled to apply for financial assistance in the same manner as an industrial enterprise.

Section 15 (1) of the present act requires that in every case the board must express an

opinion as to eligibility, the non-availability of credit from other sources, and the amount to be invested by others. One effect is that even for an application for a loan of a very small amount the officials of the bank must submit it to the board for authorization. A practical example is that a business in, say, Vancouver applying for a loan, even a very small loan, must await the result of the submission to and action by the board in Ottawa notwithstanding that in the judgment of the chief officer of the bank in Vancouver, who would have to recommend the loan in any event, the business is clearly eligible as a borrower and that because of his knowledge of the applicant and of the available security he considers the risk, if any, to be good. It is common practice in the chartered banks to give limited and defined authority to managers of their branches, and the change now proposed would enable the board to authorize the chief officers of the bank to express the opinion as to eligibility, the non-availability of credit from other sources and the amount to be invested by others and thus up to moderate amounts fixed by the board to make credit available without the prior approval of the board.

Another amendment would enable the bank to purchase or otherwise acquire, with a view to the re-sale thereof, stocks, bonds or debentures of a corporation from a shareholder of the corporation, in addition to the authority it now has to do so, directly from the corporation. This change, it is felt, may in some cases enable the bank to extend assistance which other available security would not justify.

We also propose to raise the limit on the aggregate amount of commitments exceeding $200,000 from $50 million to $75 million. The bank's commitments for loans of this size on December 31, 1955, amounted to $24,513,445 distributed amongst 47 accounts. It is not intended that there will be any change in the policy of the bank, which will continue to be to give particular consideration to the financing problems of small enterprises, but with changes which have taken place in the complexity and cost of modern machinery and buildings, it is felt that provision should be made to ensure that the bank would not be prevented from making its assistance available in desirable cases by reason of the present limit on such loans. With lending resources now approximately $130 millions and with commitments which do not exceed $200,000 totalling $27,132,610 on December 31 last, it will be seen that there will be ample room to provide for all of the smaller applications the bank is likely to receive.

The remaining amendments are of a minor character and for the most part deal with administrative matters.

Mr. Macdonnell: I have listened to the minister's statement with a great deal of interest —really more interest than I had expected— because the changes that are proposed seem to me more far-reaching than might be expected from the nature of the resolution.

The minister has recalled to our minds the circumstances of the origin of the bank. It was just at the end of the war, at a time when we were all concerned about the state of employment that was going to arise after the war.

As the minister has said, the bank was designed to meet situations which neither the chartered banks nor the bond issuing houses could easily meet. I think that his explanation there was clear. One comment that readily occurs to one is that at a time when the minister's instrument, the Bank of Canada, is cracking down on bank loans and following a pretty tough policy of restriction, if reports are correct, we have here a provision whereby a considerable amount of new money can be created by the action of the Bank of Canada; in other words, fresh money, inflationary money unless the inflationary effect is counteracted by other policies of the bank.

When extensions were made before, for instance, in 1952 when the $25 million figure was raised to $50 million, the minister then gave us a very clear and explicit reason for the change which was being made. He referred to the fact that there was a special problem with the air transport companies and that the extra lending power was designed for that purpose. At that time I think that explanation was readily accepted. It was not a time such as we have now of tremendous activity elsewhere, not the extreme activity that we have now anyway, and that went through without question.

I am glad that the minister is proposing to refer the measure to the banking and commerce committee because it does seem to me that this great broadening of powers, which comes somewhat as a surprise, is something that we should scrutinize very carefully. We want to be sure that the government is not extending this beyond what is reasonable. In the 1952 extension the minister's predecessor carried our judgment, I think, because he referred to this special kind of enterprise which I believe carried certain definite hazards and which appealed, I think, to the common judgment of members of the house.

The explanation at this time which the minister has given sounds, superficially at

any rate, much more like a spreading out and a competing with the existing financial institutions to a degree which may raise questions. One thing surprises me. The minister has indicated the extent to which the lending power has been availed of up to now. He has referred to the balance sheet of the bank as at the end of 1955, and while I have not done the mental arithmetic to figure out how much lending power is still left in the bank I think it is very substantial indeed. We can get that later in the afternoon when we come to questions. It will be some tens of millions of dollars, in fact, several tens of millions of dollars. Therefore I am a little surprised that at this stage and with all that lending power still left the minister has felt it necessary to come to ask for this further power. It would suggest a very wide, perhaps even far-ranging, extension into business which might tempt one to question it. At any rate, we can ask about that later in the afternoon.

The progress of the bank to date has been substantial but not rapid. I was surprised that in the last year the bank's loans, if I remember right, have increased less than $2 million. That is a small amount. If we question the actual operation, the number of loans made, the staff of the bank, the expenses of doing business, I think we shall find that it is a pretty expensive operation. As I say, its progress has been slow, and I would think there is a very considerable onus on the minister when we come to questions to satisfy us that this is really necessary.

I am not overlooking what I believe to be the fact, that before a loan may be made under the act—I should like the minister to listen to this—there has to be a statement by the borrower that he has tried to get money elsewhere and could not. I realize there is a certain protection there, but I do feel that we should watch carefully. We will be interested to see the details of the extensions proposed. The minister has referred to some very important lines of business, logging and so on, and when we get the bill we will have the whole situation before us.

These are the general considerations that arise in my mind. I will have questions to ask the minister, but having expressed my general thoughts I think I had better take my seat now, allow others to join in the discussion and await my time for asking questions later. I repeat that we have had this organization in operation for ten years. I think it was established with virtual unanimity. When the extension was made four years ago I noticed that there was little, if any, criticism because at that time we felt the bank was undoubtedly filling a gap which otherwise might not have been filled. In our scrutiny of the bill I think we should be very careful to see that the broadening out, which may take it quite far afield, is really needed and that the government is not just taking one further step into private business which people like myself feel should be watched with the greatest jealousy.

Mr. Cameron (Nanaimo): Mr. Chairman, unlike the hon. member for Greenwood, I am not so much surprised that the powers in the resolution are larger than he anticipated as I am surprised that they are not a bit larger than they are and that the government has not decided to take advantage of the legislation to develop an institution which might do some of the things that have been proposed in the house this session and outside of it to meet some of the needs of our economy.

Since the session opened we have had in the house proposals for federal-provincial development of power, proposals for a national plan of conservation and development and proposals for decentralization and re-establishment of industry in other parts of the country. Just a week or two ago I came across a statement by the governor of the Bank of Canada which led me to believe that perhaps the Industrial Development Bank amendment we were going to have would be of a much more far-reaching nature than it actually is. The statement appeared in the Ottawa *Journal* of February 27 in a report of an address by Mr. J. E. Coyne, governor of the Bank of Canada. In addressing a joint meeting of the Canadian and Empire Clubs Mr. Coyne said that he meant that the savings held by life insurance companies, trust and loan companies, credit unions, pension funds and others should be channelled into a greater flow of such funds into common stocks and other forms of equity investment. He said that it would mean more Canadian savings invested in "growth" projects rather than in traditional fixed interest investments.

Mr. Coyne did not suggest any way in which this channelling could take place. As a desirable development in our economy he merely postulated that instead of such a very large proportion of Canadian savings going into careful, safe, fixed interest investments more of them should be channelled into the type of projects in which foreign investors have been engaging in Canada of late.

In the report the other day of a speech made by an eminent Canadian statesman I noticed that he took a rather dubious view of the rise of United States investment in our growth or developmental enterprise. I have here a statement of the United States direct investment in Canada from the years 1946 to 1954. It indicates that we are experiencing

in Canada a serious development in which control of our most profitable enterprises, the enterprises that are most important in our national development, are coming into the hands of those who are not citizens of this country. I think we can view that situation with some alarm without being accused of being chauvinistic in any way or anti-American. I think it is an extremely serious situation when those who are not citizens of the country manage to gain control of such a large part of our economy.

I note here that the rate of inflow of United States capital in Canada has been rising extremely rapidly in the last five years. In 1950 it was $243 million; in 1951, it was $309 million; in 1952, $363 million; in 1953, $372 million. Then in 1954, when we had what I see is now admitted to have been a recession, United States investment dropped to $346 million. That was the gross inflow of capital. The net inflow of capital, however, has been ranging in the neighbourhood of $350 million for the last several years.

We are sometimes told—indeed we were told it in this house not long ago—that we have to welcome this United States investment in our Canadian development because the Canadian economy is not capable of supplying the necessary capital. Many persons accept that statement at its face value and say, "Oh yes; Canada is a poor, poor country. We ain't got no money". But when we look into the figures of Canadian assets, we realize that an entirely different picture is the true one. Mr. Coyne states that a certain amount of the pool of capital in the control of life insurance companies should be directed to equity investments in the development of Canadian resources. When we see the figures for 1953—which are the last complete figures I have been able to get—and when we note that the total assets of insurance companies were $5,568 million, we realize that there are vast sums of capital in Canada.

It is interesting to see how those sums of capital are invested by those who have the responsibility for their investment, namely the life insurance companies. In many instances, of course, they are constrained by legal restraints as to the fields of investment they may go into. The life insurance funds are invested to the extent of over 60 per cent in bonds and debentures, and 23 per cent in mortgage loans. Only a small percentage—about 10 per cent of their total assets—is invested in either preferred stock or common stock or equity investments. The assets of the life insurance companies have been increasing at an enormous rate in recent years. In 1951 they amounted to $4,880 million. In 1952 this amount increased by almost $400 million to $5,207 million. From reports that I have seen—they are not official reports but they are reports that I have seen in the financial press—I believe the assets of the life insurance companies today total well over $6 billion. Presumably the investments are carried on in much the same proportions as those I have read out.

With regard to the other institutions in which Canadian capital accumulates, we have the loan companies. The loan companies have total assets—and this is again as of 1954—of $253 million. Again we find that the large proportion of it is devoted to investment in bonds, debentures or in real estate mortgages and agreements of sale, and largely in agreements of sale. The percentages are: Mortgages, 70 per cent; bonds and debentures, some 20 per cent. Again only a small proportion—4·79 per cent—is invested in stocks or in equity holdings in development enterprises.

Trust companies are in much the same position, having available funds, as of 1954, of $139 million. Again nearly 50 per cent of this amount is invested in bonds and debentures of the Canadian government, provincial governments and municipal governments. Only 1·3 per cent is invested in stocks or equity holdings.

If we in Canada are going to combat this tendency or trend—which in my opinion is a rather dangerous one—in our economy of the valuable, profitable and economically important investments in resources development falling into the hands of people who are not citizens of the country, then we must take some decisive steps to channel those investments into other fields. That is my reason for being surprised that the government has not taken advantage of this legislation or of this amendment to set up the industrial development bank in that role. It is all very well for us to speak in general terms and say that our Canadian capital should be invested in this field or in that field, that it should be channelled here or there. But unless we set up some instrument for accomplishing that objective, we are of course merely talking to the wind. One can rest assured that those who are in control of these pools of capital know very well what are the best and safest investments for the funds that are entrusted to them and that they are not going to change their fields of investment merely as a result of exhortation. Hence I suggest, Mr. Chairman, that had the government seen fit to expand the powers of the industrial development bank, particularly in the field of the issuance of debentures, to a much larger extent than they are at present permitted, much of these funds might have been channelled into the industrial development bank

and have been made available for loans to those who are engaged in the development of our resources.

The debentures and bonds of the industrial development bank should be as attractive fixed-interest investments as any others, and might very well attract a sufficient volume of funds at the disposal of life insurance companies, trust companies and loan companies to offset the present $350 million to $400 million annual investment of United States funds in the development of Canadian resources. Sometimes I think we forget the process by which these United States investments are made. We perhaps forget that there have been Canadian citizens who have made certain discoveries and have required financing for their development. From these tables that I have been reading, it is perfectly obvious that the ordinary sources of funds for such development are not readily available in Canada from the traditional lending institutions. We have heard a great deal about risk capital, but apparently Canadian capital has an extremely strong aversion to taking any risks. The first thing we know is that a United States Company has decided to undertake this very development that has first been mooted by a Canadian. In reading over the reports in *Hansard* of 1944 when this bill was first introduced into the house I noted that there were members of parliament at that time who considered this step to be extremely dangerous, indeed to be a socialistic innovation. I refer to the setting up of the industrial development bank. It was apparently going to lead us down the path to complete socialism. I would suggest that it has signally failed to do that, and that it has not even functioned to the extent it was expected to function.

Never at any time has the industrial development bank been operating at the capacity of the existing legislation. At the moment it is operating at about half capacity. It has a lending capacity of approximately $100 million but has less than $50 million out now. This is, of course, partly because of the restricted fields of investment to which it was confined but it was also because for a number of years since 1944 the development of Canada was subordinated to some extent to the provision of arms for the Korean war and the provision of defence installations for the cold war. But since 1950 the tempo of development in Canada has increased enormously. I suggest, Mr. Chairman, that if we wish to preserve the Canadian economy primarily as a field for Canadian investment and Canadian opportunity, then the government must take some steps to see that we proceed in that direction.

[Mr. Cameron (Nanaimo).]

I would urge the Minister of Finance to seriously consider adding to his amendment an amendment which would increase the powers of the industrial development bank to issue debentures and to increase their capital stock to permit that, so that they would have on hand funds for development investment to equal or at least approximate the funds which are now brought in from across the line. Only in that way are we going to cope with the problem that more and more Canadians are viewing with increasing alarm.

Mr. Blackmore: It will be my privilege, Mr. Chairman, to again disagree with the hon. member for Greenwood, as I have done so often, and approve of the minister's move to expand the activities of this bank. I see no reason, Mr. Chairman, why we should not develop this bank into something corresponding to the Reconstruction Finance Corporation of the United States. It seems to me that Canada acts altogether too helplessly and baby-like for a nation of her economic strength and population. She does not seem to have enough courage to get up and do anything in a financial way to help herself. This institution could easily be developed into an institution through the use of which we should not sit around on a log and sigh because United States capital does not come in fast enough to develop our oil resources, our gas resources or build our pipe lines or do any of the many things that need to be done in Canada. We shall manage to do these things for ourselves, just as we undoubtedly have the capacity to do. I, therefore, heartily approve of the minister's move in expanding this act. My only disappointment is that he has not expanded it nearly far enough. I think if he had doubled the activities, capacities and powers of the bank this year, he would not have gone recklessly forward in his efforts.

Now, that is the first comment which Social Crediters would make, and I believe all fact-facing people would take that attitude. We come now to this matter of inflation once more. We find the hon. member for Greenwood contributing to the delinquency of Canadian public opinion by trying to convey the absolute falsehood that what we are in at the moment is an inflationary period. He knows, and he has heard time and time again, that the increase in prices from which we now suffer were the direct result of the increase of $5 a ton in the price of steel in April, 1946. Will the hon. member rise and say he does not know that? If he does not know it, will he write it down somewhere in his notebook so he cannot forget it. He knows certainly that in 1946 the steel workers struck for their share of the $5 increase,

thereby increasing the wage rates all across Canada. Certainly he has enough intelligence to know that such a performance in our Canadian economy would result in an increase in price all across the board! Why in the name of common sense does the member get up here and time and again try to delude the Canadian people into thinking that this manipulated rise in prices from which we are suffering is inflation? I just cannot understand the mentality of the hon. member for Greenwood and so many of the people who are in behind him.

Mr. Fraser (Peterborough): Like yourself.

Mr. Blackmore: I am ready to take on any member of the Conservative party any time he likes.

The Chairman: Order. I wonder if the hon. member is making that assertion at the appropriate time? I listened carefully to the remarks of the hon. member for Greenwood and I found them to be on this resolution regarding the industrial development bank. I do not think in this resolution we are discussing inflation and I would ask the hon. member to confine his remarks to the resolution which is before us.

Mr. Blackmore: If Your Honour was listening to the hon. member, it certainly seems to me he would have heard the hon. member say that there was reason for anxiety about the expansion of the activities of this bank by reason of inflation. He said the money that would be coming out would be inflationary money. Surely the chairman remembers that. Then, if the hon. member for Greenwood can make remarks about inflation and get the headlines in this country to delude the people, surely it is fitting that the member for Lethbridge should answer what the hon. member had to say, even if he does not get the headlines.

In respect of this matter of inflation, I am answering what the member for Greenwood implied that we had in Canada at the moment.

The Chairman: If any reference was made by the hon. member for Greenwood to inflation, and I think I listened carefully to what he said, it was certainly a very minor one. I thought the hon. member was discussing this resolution. I feel that hon. members generally will agree that this resolution is considerably confined, and I do not think hon. members would wish me to allow a general discussion on inflation on a resolution of this kind, and I certainly do not intend to do so.

Mr. Blackmore: I am not opening up, Mr. Chairman, a general discussion; I am pointing out how absolutely fallacious the remarks of the hon. member for Greenwood were when he made objection to the expansion of the powers and functions of this bank; that is all. How could an extension of the activities of this bank, as is proposed in this resolution, possibly result in inflation when we have three or four different conditions existing in Canada which are anything but inflationary, namely substantial unemployment; surplus goods of every kind; we have extensive credit buying, indicating there is a shortage of purchasing power, and we have a tremendous amount of resources which are not being used.

In the face of those four conditions, how could anyone maintain that the expansion of money through this industrial bank is going to cause inflation? I will say no more at the present time about this aspect of the question. I simply state that no fact-facing individual who is desirous of giving the truth will object to the enlargement of the powers of the bank on the ground that it may cause inflation. That would be the second general observation of Social Crediters.

The next one is simply that something must be done to prevent the influx of United States capital into Canada to buy shares in our productive enterprise. I wonder whether the government really intends to give this country to the United States. I wonder whether government policy is definitely designed to get Canada so deeply in debt to the United States that she will come one morning and take us all over. We are permitting a vast accumulation of United States capital, as the hon. member for Nanaimo pointed out, to go on, with nothing being done by Canada to offset that, to produce Canadian capital with which to buy our own enterprises and develop them, thereby preventing so great an influx of United States capital. I would say that this move to expand the activities and the powers of this industrial development bank is a move designed to prevent in a measure the enormous use of United States capital in the development of Canadian industry.

The next comment which I would make is simply that the interest rate is going to be too high. I see no reason why the interest rate should be as high as it has been on loans from this institution. I see no reason why money should be borrowed by this institution with which to carry on its activities. I see no reason why the Bank of Canada should not create all the money required for the activities of this bank and put that money at the disposal of this bank at the cost of creating the money. The more I see—

Mr. Fraser (Peterborough): That is inflation for you.

Mr. Blackmore: That is what the Bank of Canada was created for, was it not?

Mr. Fraser (Peterborough): Not for inflation.

Mr. Blackmore: What is the Bank of Canada given the power to create money for?

Mr. Fraser (Peterborough): Not the way you want it.

Mr. Blackmore: The hon. member thinks that any increase in money is inflation. Well, he has not even learned the a.b.c.'s about inflation yet. He just does not know what the word means. He has picked up some antiquated old dictionary and has found in it the statement that an increase in money is inflation. There is no inflation unless there is a rise in prices, and if there is a rise in prices which is not the result of money, that is not inflation.

Mr. Fraser (Peterborough): Just what is inflation, then?

Mr. Blackmore: Inflation is a rise in prices resulting—

The Chairman: Order. I hope the hon. member for Lethbridge will not answer that question.

Mr. Fraser (Peterborough): He does not know the a.b.c.'s of it.

Mr. Blackmore: I did not hear what the chairman said. I answered an argument of the hon. member for Greenwood a short time ago who said that inflation was too many dollars chasing too few goods. Talk about having too few goods in Canada when we have a surplus of every kind of goods we can make, and labour ready to go to work to produce more goods, and a large percentage of our factory capacity unemployed! Talk about inflation in a situation like that! Why, it is just simply ridiculous; it is not to be believed. Therefore, I say, Mr. Chairman, the minister should be taking money out of the Bank of Canada with which to finance the activities of this bank.

These are the only objections and the only criticisms that I have to make in respect of the resolution before us. Therefore, the minister will have the complete approval of the Social Credit movement in going forward and expanding the activities of this industrial development bank to the extent that it will be able to finance a very large percentage of the industrial activity of this nation.

Mr. McIvor: Mr. Chairman, I am intensely interested in the amendments to this act because of certain business people who cannot borrow from this bank. In our cities and towns our retail merchants have had a hard time because of the competition of chain stores and mail order catalogues from Canada and from the outside. These retail stores have decided to compete with the chain stores by changing the internal part of their stores and making it easy for a customer to pick up his basket and pick out the goods he wants the same as he can do in a chain store. The result is that they need to expand their buildings because their business is increasing. What I want the minister to tell me today or later is that these retail merchants, headed by the retail merchants' association of Canada, will be able to borrow from this bank, just as wholesalers and other business people can, for the construction of the extensions to their stores.

Thank you, Mr. Chairman, that is all I have to say now, but I shall say more later on.

Mr. Hamilton (York West): Mr. Chairman, we certainly have wonderful opportunities here to take courses in economics, which cram in all the very different points of view in the course of a very few minutes.

I find myself just a bit on the horns of a dilemma in connection with how I feel about this resolution. I think it is well-known here that members of my party and I are strong advocates of the free enterprise system. I heard someone say "what does that word mean?" I, of course, understand that it is a word that a lot of people dare not pronounce at all, but it is one that I still feel I can use without any fear. It may be that in this particular instance the people who might have made sure that this type of help was available to industry may have overlooked the possibilities.

I believe the real reason for the legislation was to cover the gap which existed under our banking system and that which existed in the United States. Under the legislation in the United States the banks are quite entitled —the terms of reference under which they operate—to take security on real property as a method of giving loans. In this country, of course, that is not possible. Under section 75 of our own Bank Act, subsection 2(c), we find that our banks are not permitted to lend money or make advances upon the security, mortgage or hypothecation of any lands, tenements or immovable property. I know there is one exception to that, which is set out under section 79(1), under which they are entitled, under certain circumstances, to take mortgages of that kind as additional security. But generally speaking, the rule precludes them from making use of that kind of security. That restriction is not apparent under the United States legislation,

and as a result the average industrial borrower is able to get pretty good coverage as far as his financial requirements are concerned. When I speak about the average borrower, I am speaking about the smaller businessman. When we get up into the class referred to by the minister, the people who are borrowing $200,000 or more, in most instances they are able to go out and get a financial house somewhere to float their debentures, and are able to get the help they need. If I understand the amendment in this connection, it will tend to increase the help in that category, but I do not see it becoming any more available, as a result of this particular amendment, to those who are borrowing smaller amounts of money.

I am wondering why the chartered banks did not recognize this need, or shall I say this opportunity of getting into this type of investment. I do not think it was because they had not sufficient funds to handle this type of investment. Their most recent statements to the end of January this year indicate that the total amount of loans made by this government institution might be described as peanuts in so far as their total assets are concerned, and their ability to handle this type of transaction.

I want to give the same word of warning I gave last year when we were considering an item similar to this. If these institutions do not see the necessity for handling this type of loan, if they do not come forward at the time when assistance is needed, then they cannot complain if this government moves into every phase of business. I should think therefore that we might say to those institutions that this gap still exists. They are the people who have the facilities to handle this type of loan from one end of the country to the other.

I think this is one of the weaknesses in the industrial development bank set-up. We get their brochures every year and they indicate that they have only four offices across the country. That may be all right for those who are borrowing large sums of money and the necessity of travelling several hundred or a thousand miles to one of the offices would not be something to overcome them, but the small businessman who may want to borrow $25,000 or $35,000 has this hazard placed before him and there would probably be some reluctance to take this trip to see if he could borrow money. I think the total number of loans that have been made under this legislation offers concrete proof that this type of financing is not being made available to the people who really need it.

Then I think there is another restriction upon the use of the facilities of this bank. This is really an internal matter in so far as administration is concerned. I do not know whether the minister is moving to correct this, but he has indicated that greater responsibility may be given to the regional people in accepting applications for loans. I think it is ridiculous to place a limit of $5,000 on an application that may be accepted by someone who is acting in a supervisory capacity over one-quarter of the country. At the present time applications for greater amounts must be submitted to the head office. There are also time-consuming delays in connection with the administration of this act, and these should be eliminated for the benefit of the borrower who is at the stage where he needs money and needs it in a hurry.

I think the minister said something about the board of directors not having to approve in certain instances, but I think he should move to correct a situation where various people who are acting in a supervisory capacity in one part of the country or the other are going to find themselves in a position where they have no discretionary power at all in the case of the ordinary type of loan.

I know that it is a characteristic of the chartered banks that limits are placed upon the discretion of their managers, but it should be remembered that these banks have branches in almost every town and hamlet in the country and it is much easier for someone to go to a branch to make an application and then have it sent forward for approval.

In considering this particular problem I am reminded of the speech made the other day by the hon. member for Brandon-Souris who had moved a resolution about the decentralization of industry. If we are going to have true decentralization of industry there should be decentralization of the facilities of this bank, which was created for the purpose of ensuring that industry could get the type of assistance it needed.

If we are going to provide these facilities, let us make them available to the smaller groups of people; let us see that they are available to the smaller communities. They should not be concentrated in just a few offices. I see that the office in Montreal has jurisdiction right through to Halifax. The office in Toronto has jurisdiction from Montreal to Winnipeg. Then there is an office for the west and another one for British Columbia. If this bank is to fulfil its true role there should be additional offices opened in order to make its facilities available to other people.

I want to say that the amendment made previously has done a remarkable job in the air transport field. It has enabled the development of air transport to remote districts

by companies whose opportunity to borrow was limited because of the type of flying they were doing. It has enabled pioneering companies of this type to obtain assistance which would not have been available otherwise.

I have only one other observation to make. I notice that this bank does not pay corporation taxes. The other day one of the hon. members to my left argued that it should not be necessary for certain types of government institutions to make a profit, but it seems to me that if we are going to avoid socialism in the use of this particular type of institution we should expect this institution to face the same industrial and business hazards that we expect any other person carrying on any type of business or banking to face.

Mr. McCullough (Moose Mountain): Some members would insist on that though we would end up with economic suicide.

Mr. Hamilton (York West): Some hon. members feel that if we do not agree with what they say we will be committing economic suicide. As a matter of fact, the world has not committed suicide yet and there are very few places where that group happens to be running things. I submit that the operations of this bank should be carried on the same as those of any other type of business. They should be ready to face the same hazards and be able to come back here and show a profit.

As they do not have to pay corporation taxes I suppose it could be assumed that those who borrow probably get a better deal than the fellow down the street who has to borrow from another institution which must show a profit for its shareholders. However, I think generally those institutions are able to show a profit and still operate on the same basis as institutions which do not have to show a profit.

These are observations which I think should be made at this time. If the facilities were extended to provide greater access for the smaller type of businessmen, then I think this would provide a greater future for the employees of this bank. I think there is a tendency in a great many cases with institutions of this kind that their employees get to a certain level and their opportunities then disappear. As a result we find that we lose a great many well qualified people from these institutions to other places in the economy. If we are going to use this type of thing, let us see that it benefits not only those who are borrowing. Let us see whether it can be made to give some benefit to those who spend their lives doing this work.

[Mr. Hamilton (York West).]

Mr. Regier: In the preamble of the annual report of the industrial development bank I notice a portion of a sentence that refers to the objects of the bank. It says that one of its objects is with particular consideration to the financing problems of small enterprises.

The industrial development bank, I take it, was organized to provide a means of granting assistance to small enterprises. It was meant to be a means of sustaining and developing the so-called free enterprises of the dominion. However, when we look at the statistics released recently by the Department of Trade and Commerce and see the economic outlook for 1956, telling us that next year we can expect the sum of $7,500 million to be invested in Canadian enterprise, and when we look at the amount that is being supplied by the industrial development bank to small enterprise, and we realize that this year it was less than $13 million, we come to the conclusion that the government of Canada has very little faith indeed in the solvency of so-called small enterprises.

Small enterprises in Canada is the only type of free enterprise that we have, and I have regretted to see so little assistance available—$13 million out of $7,500 million—to small enterprises. Large enterprise is able to get all the money it needs in the money markets of the nation and, if it is unable to get it here, as in the case of the Trans-Canada Pipe Lines, it then goes south of the border and is able to add to the amount of money available to it. I am quite prepared to grant that a large share of this $7,500 million that is going to be invested next year is being invested by the federal government, the provincial governments, the municipal governments and other local bodies such as hospital boards and so forth. However, the fact remains that nowadays there is oodles of money available for municipal, provincial or federal government enterprise. There is oodles of money available for huge private enterprise. There is very little money available in the nation for small enterprise; and I regret this.

In looking at the distribution of the little money that is available to small enterprise, I regret that, of the $12,700,000 that I believe was loaned by the industrial development bank last year, almost the whole of this money went to that section of industry that was engaged in manufacturing. The industries engaged in providing services received very little money indeed. The hon. member for York West expressed his appreciation of the money that was available to one service industry, for the expansion of air services. However, I believe that if he will look at the record he will see that thus far, out of

the $104 million worth of loans made, the air services received slightly over $3 million, a niggardly percentage. I see that the refrigeration services received only a little over $5 million.

If we look at the list of individual enterprises given on page eight of the report, we note that almost all of the money that was available was made available to manufacturing industry. You had to turn out a product, or your application was almost automatically laid aside and you were declared ineligible. For example, I know the case of a man in southern Manitoba who erected a cleaning plant. These cleaning plants for the cleaning of seed grains are becoming popular across the prairies. This man found, after the completion of the building and the installation of some of the necessary machinery, that his estimate of the costs exceeded his estimate of the funds he would have available, and he applied to the industrial development bank for a loan. He received a very abrupt reply to this effect: "You are a man of good character; your investment in this enterprise will be much higher than the minimum standards laid down. However, because you do not manufacture a product, you are ineligible for a loan." I think that is regrettable.

I think our investment in Canada in enterprises of additional productive capacity is high enough. It is time we called a halt and applied the brakes to this ever-continuing investment to add to the productive capacity of the nation, the ability of the nation to produce more and more of the goods which we already cannot sell and for which we cannot find markets. More of the available resources of our nation might be devoted to investment in the provision of services.

I regret, for example, that more of the funds are not made available for investments on the part of our Canadian municipalities. I feel that amendments might very suitably be introduced whereby the industrial development bank might be used as an instrument to help municipalities to finance self-liquidating projects.

I am not advocating that money be made available to municipalities for the building of sidewalks or any other non-self-liquidating project. However, I think that such things as the municipal distribution of natural gas, electrical energy and municipal water services could very well be financed through the industrial development bank.

I regret that the industrial development bank is not operating to its authorized capacity. I believe it is authorized to make loans to a maximum of $75 million. However, I see that total loans outstanding at the present time only amount to some $44 million. Only a little over half the money available by law to the industrial development bank has yet been made available to Canadian industry. In my opinion the policies of those charged with the responsibility of administering the act are far too conservative. When we look at the record of the losses that have been suffered I think we will have to agree with the statement that the operations of the bank have been on a far too conservative basis. Last year their write-offs were only $37,000 out of an interest income on loans, investments and guarantees of $2,193,848. Looking at the whole history of the bank, we see that since November 1, 1944, it has had interest income—I should like to emphasize the word "interest"—of $12,329,626 while losses only amounted to $355,101. I think that in itself is sufficient evidence to convince anyone that the industrial development bank has not been taking its fair share of risk and has been overly and ultra conservative in its policies. The losses are small.

I believe that another reason why the bank has not been utilized even to the degree now allowed is that the services of the bank are, relatively speaking, unknown to those who have the greatest need of the bank. I think it can be fairly said that there is hardly a multimillionaire in Canada who does not know of the services available to the Canadian people through the industrial development bank. I think it is fair to say that there is not a member of the house or of the other place who does not know of the services available through the industrial development bank. However, as I go about the country I find that very few of the small enterprisers, and these are the only free enterprisers, have ever heard of the services made available by the parliament of Canada through the industrial development bank. I think a lot more energy might well be devoted to making the services that are available known to those who need the services and for whom the services were meant in the first place.

In glancing at who are responsible for the administration of the act and the names of the board of directors from across the country, I fail to see a single representative of the small enterprisers of our nation. I see a goodly number of men who are responsible for some of our major Canadian enterprises and who, if and when they need money, are easily able to obtain it, as are their associates, in the money markets of the world. We have our government bodies to whom money is available by the floating of bonds and debentures. We have our multimillion dollar corporations to whom money is available in the money markets of the world. However, in the case of those owning small

enterprises money for capital expansion is often very hard to get, and in my opinion there should be some representative on the board of directors of those for whom the services of the bank are meant.

We had a resolution the other day concerning the decentralization of industry in Canada. I intended at that time to say a word on the decentralization of the biggest industry in the country, the government of Canada. Among other things that I meant to mention at that time, and I am going to mention it now because it is applicable here, is that in the list of supervisors of the bank I see the name of Mr. N. C. Tompkins, 475 Howe street, Vancouver, B.C. Mr. Tompkins is supervisor for the whole of Alberta, British Columbia, the Yukon and the Northwest Territories. The bank is intended to aid small enterprises, and I do not believe that a man stationed at 475 Howe street, Vancouver, has much knowledge of small enterprises in the northern part of Alberta. I think it is time that the government decentralized its own affairs. If the industrial development bank is supposed to help small industry, its operations will certainly have to be decentralized to a much greater degree than to have one supervisor responsible for as vast a territory as Alberta, British Columbia, the Yukon and the Northwest Territories.

As I mentioned before, I am concerned about the conservative policies of the bank as evidenced by their very small losses. I should also like to add that I think the bank is too conservative in that it provides only some of the debt capital and none of the risk capital of Canadian industry. I believe it could perform a valuable national service if it turned some of the United States capital invested in Canada from the risk capital category to the debt capital category. As far as I can ascertain, the industrial development bank is only willing to enter into the debt capital field and enters the risk capital field only to the extent of surplus funds on hand. I think that policy is wrong and a lot could be done both in the interests of Canadian industry and the national welfare of the country as a whole.

Mr. Mitchell (London): Mr. Chairman, in view of the fact that the bill to follow the resolution is going to go before the banking and commerce committee I have only one very short comment to make. I believe that the act as it has worked in the past has been in fact of considerable assistance to the small business enterprise which finds it difficult to attract capital in its initial stages. I have one worry resulting from the resolution which leads me to ask this question. Is the increase in the authorization for the larger loans going to drain away money which was heretofore available for the smaller loans? Apparently there is no intention to increase the capitalization of the bank. When the bill is before the banking and commerce committee I hope there will be given some explanation as to why it has been found necessary or, in fact, desirable to make more larger loans available to institutions which, it appears to me on the face of it, could well find their necessary capital requirements through more normal money markets.

Mr. Hamilton (Notre Dame de Grace): I have just a few comments to make on this bill, Mr. Chairman. I think all of us from Montreal have followed the rise and development of the bank with particular interest because it is one Ottawa operation which has been decentralized and which has, as it has had since its inception, its head office in Montreal. Just for a moment I should like to pay tribute, in dealing with the resolution, to the officers of the bank and the contribution which they have made not only to the development of the bank itself but in certain ways to the advancement of Montreal. I am thinking particularly of the man who took charge of the industrial development bank at its inception in 1944 and more or less guided and directed it until just a short time ago. I refer to Mr. S. R. Noble. Not only did he do an outstanding job for the government in that capacity but he found time to be a key figure in the development of one of our hospitals in Montreal—I refer to the Julius Richardson Convalescent Hospital Incorporated—and to play his part in the community in many ways. I think that men like him, coming from the public service of Canada, are both a credit to the public service and of great benefit to the community in which they are located.

The hon. member for Burnaby-Coquitlam in his remarks made one statement with which I at least should like to take issue. There may have been other statements I should like to take issue with, but to my mind this was an outstanding one. He said in effect that he felt it is time that we called a halt to this investment in manufacturing capacity in Canada, the producing of goods we cannot sell. He then went ahead to say that he would prefer to see investment in the service industries. We had this afternoon two speeches from hon. members of the C.C.F. party. The one preceding the hon. member for Burnaby-Coquitlam sounded to me very much as if he wanted an expansion of industrial capacity and welcomed the opportunity to find more capital for that purpose. I have already quoted the diametrically opposed remarks of the hon. member for Burnaby-Coquitlam.

Mr. Regier: Not necessarily opposed.

Mr. Hamilton (Notre Dame de Grace): On the *Hansard* record, Mr. Chairman, they are certainly and necessarily opposed irrespective of what, as an afterthought when the discrepancies are pointed out, the hon. members may feel.

I mention this point because I think that any group in this house, on this question of the development of Canada and the development of our manufacturing and industrial capacity, should have a clearly-defined and definite policy.

Mr. Ellis: Tell us yours.

Mr. Hamilton (Notre Dame de Grace): I definitely shall do so. That is what I am coming to. I think the socialist party to my left are pulling in their horns and would like to see us go back to being a nation of hewers of wood and drawers of water. It is very interesting to have this on the record. Certainly one reason that I am in this Conservative group in this house, and one reason why I have a great deal of sympathy with the industrial development bank and its purpose, is the fact that I stand four square for the development of manufacturing capacity and industrial capacity and for the development of the economy of this nation as a whole. That point has been made time and again by members of this party. I think we saw, in some of the remarks that were made this afternoon, an evidence of one clear-cut difference between at least one of the gentlemen to my left—

Mr. Ellis: The Tories put both points of view in one speech.

An hon. Member: You can even change your vote.

Mr. Hamilton (Notre Dame de Grace): Mr. Chairman, perhaps that is a misinterpretation of the fact that the Tories always try to look at both sides of a subject—

Mr. Ellis: And play both ends against the middle.

Mr. Hamilton (Notre Dame de Grace): —and then choose and support that which we believe to be right.

Mr. Dinsdale: Common sense.

Mr. Argue: Nonsense.

Mr. Hamilton (Notre Dame de Grace): Mr. Chairman, you seldom—I almost said never—see a situation such as that which arose in the C.C.F. party this afternoon represented in the ranks of this group.

Some hon. Members: Oh, oh.

Mr. Argue: The whole party does it over there.

Mr. Ellis: It is a commonplace over there.

Mr. Hamilton (Notre Dame de Grace): Mr. Chairman, I enjoy all these interjections. I remember that when I first came to this house, someone said to me, "They will never barrack you or interrupt you unless you are making them uncomfortable and unless you are scoring points against them".

Mr. Ellis: Or entertaining them.

Mr. Hamilton (Notre Dame de Grace): There is nothing that pleases me quite so much as the type of barracking which I am getting from the socialists at the present time.

Having said that, Mr. Chairman, I should like to deal with one or two further points on this bill. The hon. member for Burnaby-Coquitlam made one point which I find here in my notes and on which we certainly find ourselves in agreement, namely the need for this industrial development bank to make itself better known to the small business men in Canada and to sell its services to that group in our economy. In a few moments I shall make reference to the rather weak job which has been done in that particular field by the bank. But I would point out that nowhere in their operating statement for the preceding year do I find any item whatsoever representing advertising or a sales effort of any kind on the part of this bank. As the large commercial banks move ahead and as they quite properly expand their operations and make their services better known to the Canadian public, it seems to me that a similar function might well be performed by the industrial development bank. As one example of the public relations work which is being done in this field by the other banks, I need only cite the monthly news letter published by, for example, the Royal Bank of Canada, the Bank of Montreal and the Bank of Nova Scotia. Those documents play an important part in influencing Canadian business men and in making them conversant with various matters. While I certainly do not counsel a tremendous expenditure on publications by the industrial development bank, nevertheless, since it is apparently going to have even more to do as the result of this bill which is to come before us, I would hope they would make an increased effort to let the small business men of the country know of the availability of their services.

Now, I would refer for a moment, Mr. Chairman, to the composition of the board of directors of this industrial development bank. It is an interesting fact that one-third of the board of directors come from Ontario,

five out of the 15, and two out of 15 come from Quebec. The remainder of the board is composed of one member from each province in Canada. When I set that against the loans being made by the bank I found a surprising discrepancy. For example, taking the current authorizations at September 30, 1955, we find that while Ontario has one-third of the directors, businesses in Ontario have borrowed only some $19·6 million out of a total authorization for all parts of Canada of $67 million. Against that we find that Quebec, with only two directors, has borrowed $26·4 million, substantially more than Ontario. And then, we find that British Columbia, with only one out of the 15 members on the board, has had authorized for the use of businesses in that province some $11·6 million. It would seem to me that there is a substantial discrepancy between representation on this board of directors and the activities of the bank in Canada. While I have no doubt they are all fine and estimable men—I see a number of them are members of the public service of Canada, which makes them doubly estimable, I have no doubt, in the view of this house as in my own view—I would hope that some consideration would be given to dividing this one-third group from Ontario and distributing directorships somewhat more widely across Canada.

Again, the point has been made that the bank tends to work most heavily in the field of large loans, that is large loans for it. But I do not think anyone has yet made the point this afternoon of just how evident that is, because some 50 per cent of its total current authorizations at September 30, 1955, were for loans of $200,000 or over, whereas for loans of under $200,000 they only had the remaining 50 per cent of the bank's authorization. Admittedly many more individual firms were represented by smaller loans, but even there there was only a total of 632 firms with loans of $200,000 or less. In the real small-business class, with loans of $25,000 or under, there were only 240 firms that currently enjoyed the benefit of this banking service. I, for one, would be very happy to see the extension of the bank's activities more heavily in the field of the small borrower, the man who most needs this help, rather than in the field of the large borrower.

Mr. Macdonnell: I should like to ask the minister one or two questions. A point has been made that one effect of the present amendment will be to increase the amount from $50 million to $75 million which may be used for loans of $200,000 and over. In view of the fact that the total lending power is not, I think, being increased, that means that automatically the amount available for smaller loans may be restricted. Can the minister say whether there has been an indication of increasing applications from the $200,000 and over class? Can he say whether the bank expects that, from some of the new businesses which may be dealt with, larger loans are to be especially expected?

Mr. Harris: First of all, Mr. Chairman, there is no particular large loan expected, but as my hon. friend knows, the amount of loans that may be used for loans over $200,000 began at $15 million, was then increased to $25 million, then to $50 million and now it is proposed to go to $75 million. Each of these changes has been made in connection with an extension, if you will, of the lending authority. As he pointed out himself in his earlier remarks, on the last occasion it was when we introduced into the class of matters on which loans could be made commercial aircraft. Now, at this time, when it was felt desirable to extend again the class of businesses to which loans could be made, it was felt that in that group there would be a proportionate number which would be over the $200,000 and for that reason it was thought desirable to increase the limit from $50 million to $75 million. I think the evidence which will be produced to the committee will show that, so far as I know, there is no one thing or one group of businesses except those we are now introducing for the first time which would give rise to the additional lending authority over $200,000.

Mr. Brooks: I just wanted to ask the minister one question. A good many of those speaking in this debate have emphasized the decentralizing effect of this borrowing, and of course that is a splendid feature. I should like to know from the minister just how much it does benefit each section of the country, that is if he can let me know how the borrowing has been distributed in the different sections of the country to illustrate just how there has been decentralization in the matter?

Mr. Harris: I am not in a position to do that at the moment, Mr. Chairman, but before the committee we will produce the figures by provinces or by areas to my hon. friend's satisfaction to indicate how this has been of use to businesses which otherwise would not have had a loan.

Mr. Brooks: You are satisfied it has been.

Mr. Harris: Yes.

Resolution reported and concurred in.

Mr. Harris thereupon moved for leave to introduce Bill No. 165, to amend the Industrial Development Bank Act.

Motion agreed to and bill read the first time.

SMALL LOANS ACT

AMENDMENTS RESPECTING COSTS, LICENCES, REPAYMENT, ETC.

Hon. W. E. Harris (Minister of Finance) moved the second reading of Bill No. 51, to amend the Small Loans Act.

Mr. Macdonnell: Is the minister going to make a statement?

Mr. W. M. Benidickson (Parliamentary Assistant to the Minister of Finance): The minister has indicated, Mr. Speaker, that it is his proposal that this bill be referred to the banking and commerce committee. Because of that, and since we have already had a debate this session on a public bill on the subject of small loans, and because we had a debate last year on the subject of small loans with respect to a similar bill, I propose to be quite brief. I know also that this particular bill has been in circulation for some time and has had fairly widespread comment throughout the country.

Last year, in connection with the debate on the bill proposed by the hon. member for Assiniboia I made some reference to the work of the parliamentary committees in this field in 1938 and 1939. My remarks are contained in *Hansard* of last year in the debates of May 6 and May 27. I do not propose to repeat illustrations of the points of view of the parliamentary committees again today. I do think, however, it would probably be appropriate to summarize the aims and objectives of past parliamentary committees by quoting from a brief that was submitted to the government last summer by the representatives of lenders in the small loans field. Amongst other things they gave the parliamentary committee this credit by saying:

> In the words of the chairman of the House of Commons banking and commerce committee,—

That is the committee of 1938.

> —"throughout its inquiry your committee's objective has been to secure the best procurable rate for the borrower".

That is the end of the quotation of the words of the chairman of the committee at that time. The brief of the lenders in this field went on to say:

> In fact, the entire report of the House of Commons banking and commerce committee presents an excellent analysis of the basic problems inherent in providing consumer loans.
>
> The two-fold purpose of the legislation was:
>
> 1. To protect the borrowers against exploitation by unethical and illegal lenders.
>
> 2. To provide a regulated lending service on a broad scale at a rate sufficient to provide an adequate supply of capital to meet the need.

The Small Loans Act does not apply to banks; it does not apply to pawnbrokers, and it does not apply to lenders whose charges do not exceed 12 per cent per annum. It does not apply to loans that are made beyond $500. The act stipulates that lenders of between $1 and $500 who have in mind a charge in excess of 12 per cent per annum must obtain a licence, must report to the Department of Insurance with respect to their business transactions; and interest and all other charges in connection with the accommodation to the borrower must not exceed 2 per cent per month.

The volume of business in this field has grown rather impressively. In the first year of our supervision, namely 1940, I believe the total volume of business was about $20 million. It is expected that in 1955 the volume will be not quite but almost ten times that amount of lending.

As I have indicated, at the present time there is no regulation with respect to lending over the amount of $500. Our statistics and information as to the extent of personal loans that are made in the field above $500 are not too complete. However, the licensed lenders who lend in the field under $500 do apparently supply to the Department of Insurance information as to the extent of their business in the field over $500. In addition to that, one of the large lending companies in Canada lends exclusively in amounts over $500, and information as to their business is available. And then, of course, there is known to be lending for which there is no report. But we do know there has been a great and rapid development in the amount of money that is being lent in the nature of personal loans in the field over $500.

Our information is that generally licencees under the Small Loans Act who lend both with respect to amounts under $500 and over $500 generally charge 2 per cent with respect to loans over $500. There are a few of the licensed lenders who charge less than that. We know of one or two who, in this unregulated field, charge more. And of course we have heard from time to time of unlicensed people who charge much more than the 2 per cent, which is the amount stipulated under the present Small Loans Act for loans under $500.

The association of licensed lenders have themselves indicated that, because of excessive charges sometimes made by unlicensed lenders in the field above $500, it appears now that it might be desirable to have a higher ceiling for the Small Loans Act. The

bill with which hon. members are familiar proposes that the ceiling be raised, that the government regulation be raised from $500 to $1,500.

If the scope of the act is increased from $500 to $1,500, I think it will be obvious to all hon. members that it would be inequitable and undesirable to maintain the same maximum interest or cost rate for the large loans that is now provided for relatively small loans. Thus the bill proposes that there be a graduated interest or cost rate, and it is proposed in the bill that the rate be 2 per cent on any part of the unpaid principal balance, not exceeding $300, plus 1 per cent on any part of the unpaid principal between $300 and $1,000, plus—if the loan is beyond that—one-half of one per cent per month on any remainder of the unpaid principal exceeding $1,000 up to the proposed ceiling of jurisdiction, which is $1,500.

In considering the propriety of a rate of this kind, hon. members might be interested in some of the rates that are applicable in the United States at the present time. When our act was introduced in the late thirties the regulated ceiling was set at $500, a higher ceiling than was generally provided in most of the states of the United States, which at that time was $300. Having regard to the fact that it is equitable to have a rather lower maximum rate with respect to a large loan in relation to a small loan, our maximum rate was rather lower than generally prevailed in the United States at that time because our ceiling was $500 instead of $300.

I find that the situation at the moment is that in the state of New York the charges under their small loans act are 2½ per cent on lending for the first $100; 2 per cent between $100 and $300, and one-half of one per cent between $300 and $500. They do not take jurisdiction under their small loans act beyond a ceiling of $500.

In the state of New Jersey the rates are 2½ per cent up to $300; one-half of one per cent from $300 to $500, with the maximum loan under their regulations being $500.

In the state of California the rate is 2½ per cent for the first $100; 2 per cent between $100 and $500, and five-sixths of one per cent between $500 and $5,000. It will be seen that they have a very high ceiling of jurisdiction, namely $5,000, which I believe is the largest in the United States.

In the state of Pennsylvania the rate is 3 per cent on the first $150; 2 per cent between $150 and $300, and 1 per cent between $300 and $600. They have a ceiling of jurisdiction of $600.

[Mr. Benidickson.]

In order to give a comparative effective rate of interest in relation to the proposed maximum rates in the present bill and those charged in the states of New York and New Jersey, which I have indicated, the figures would be as follows: If the loan were $300 the charge under the rates recommended in the present bill would be 2 per cent; under the New York legislation the rate would be 2·26 per cent; in New Jersey the rate would be 2·50 per cent.

In the case of a loan of $500, which is the maximum of jurisdiction in those two states, the effective rate of interest under the present bill would be 1·81 per cent; in the state of New York it would be 1·88 per cent; in New Jersey, 2·12 per cent.

The bill recommends that the rate of interest or the rate of maximum cost will continue to be expressed as an all-inclusive percentage of the amount of funds loaned. This was the recommendation of the parliamentary committee of 1938, and I think it is generally the practice in the small loans field in the United States.

The bill contains a prohibition against the splitting of loans. Hon. members will realize that when the maximum rate of interest is on a graduated scale, being less for the larger amounts, there might be a tendency for a lender to exert pressure on an applicant for a loan to divide his application, a portion to be advanced to himself and a portion probably to his wife. As a consequence there would be a higher over-all rate of interest on a split loan provided to the lender. That is being legislated against in the bill.

As I have explained, the definition of cost of loan at the present time is quite embracive and includes practically all possible costs that might be involved in connection with a loan of this kind. However, it has come to our knowledge that in recent years lenders, particularly in the United States, have to a growing degree been asking borrowers to take out insurance policies, and the cost of the premium is an extra cost to the borrower. There has been little experience of that happening in Canada, although some lenders have voluntarily provided life insurance or other forms of insurance in connection with their loans for their own better security. The bill will provide that if an insurance policy is considered desirable by the lender the cost will be included in the definition of over-all cost to the borrower.

The present act provides with respect to overdue loans and loans for rather long periods that the rate of interest will revert from the maximum of 2 per cent to 12 per

cent per annum. A rate of 12 per cent per annum works out legally and technically at ·95 of 1 per cent per month. Hon. members will realize that this is an awkward arithmetical calculation for all concerned, and it is proposed in the present bill that when 12 per cent per annum is referred to it will be 12 per cent per annum payable at the rate of 1 per cent per month, which is a much easier figure for arithmetical purposes.

Notwithstanding the Small Loans Act, the Money-Lenders Act is still in existence. I think that act was originally passed in 1906. For all practical purposes it has been superseded by the Small Loans Act. The continuation of the Money-Lenders Act is confusing to most persons and since its effectiveness is practically nil the present bill proposes to repeal the Money-Lenders Act.

In order to provide time for necessary investigation of lenders not presently licensed but who would become subject to the act, and also to enable licensees to make all necessary changes in practice, it is recommended that the amendments come into force on January 1, 1957.

Mr. J. M. Macdonnell (Greenwood): Mr. Speaker, this is a bill to amend the Small Loans Act, 1939. At the time the original bill was introduced the banking and commerce committee went into the matter fully and there is a report in the proceedings of the committee for that year. In 1946 the situation was reviewed and changes in the interest rates were considered but were not recommended. The banking and commerce committee report of that year again indicates a full discussion of the subject.

This business is of substantial size, as is indicated by the fact that in 1954 the number of small loans made was 831,721. We think it is desirable that the operation of the act should be reviewed, and are glad that the bill is to be sent to the banking and commerce committee where opportunity will be given for both borrowers and lenders to state their cases.

It should be pointed out that conditional sale and hire-purchase agreements where merchandising and loan transactions are included in the one transaction, do not come within the purview of this act. The reason given is that constitutionally this is a provincial matter. No doubt this question can be carefully looked into when the banking and commerce committee meets.

As I have said, we approve of a review of the operation of the act and will vote to have it sent to the banking and commerce committee. In doing so we are not committing ourselves to any particular rate of interest but to a review of the whole situation, where both borrowers and lenders can come and state their case.

Mr. H. R. Argue (Assiniboia): I wish to express my appreciation to the parliamentary assistant to the minister for his very comprehensive review of this field in introducing this important bill. I welcome the proposed bill and the proposed amendments contained in it. I think it is a demonstration once again that parliament can be effective.

There is a view held in some quarters, which we hear expressed from time to time, that if a member of the opposition should propose a resolution or a bill, he automatically spells the doom of the proposition he advocates, and nothing can come of it. That would be rather a bleak attitude to take of this parliament and of parliamentary democracy if because a member of the opposition sponsored something, the government would automatically oppose doing anything about it.

There are, of course, many instances in which members of the opposition have proposed public bills or resolutions which the government, in fact agreed to adopt and put into legislative form. The hon. member for Winnipeg North Centre (Mr. Knowles) proposed and subsequently obtained amendments to acts that would prevent stoppage of pension rights to persons because they had gone on strike. The hon. member for Kamloops (Mr. Fulton) proposed a year or so ago that red wrapping should be removed from packaged bacon, and the government accepted that proposition.

I could go on and name other instances. The hon. member for Kamloops proposed that crime comics be abolished, and that suggestion too was adopted by the government. Other instances could be mentioned. The hon. member for Winnipeg North Centre, advocating that all medical expenses should be deducted from income for taxation purposes, was able to get the government to agree to reduce the 4 per cent provision to 3 per cent.

This is another of those instances where a proposition sponsored by a member of the opposition has found at least a measure of support on the government side of the house. Because of the general agreement among many members of different parties in the house and because of general support throughout the country, it has resulted in steps being taken to improve existing legislation. I am happy over the part I had to play in this field. As the parliamentary assistant pointed out, last session we had a considerable discussion based on a bill standing in my name, Bill No. 304, asking that the maximum rate

on all loans be reduced from 2 per cent per month to 1 per cent per month. Again during this session, of course, I moved Bill No. 3 asking for a limitation of interest to 1 per cent per month.

The argument that is used time and time again against a substantial reduction of interest on small loans is the contention that small loans are in fact risky, that money-lenders, small loans companies and banks have to be particularly careful in making small loans because this is a high risk field. I do not think the evidence of what has happened in the past will bear out that contention, because small loans companies themselves have been able to operate satisfactorily with a reserve for bad debts of just ·26 per cent. The Bank of Commerce, which has done more than any other chartered bank in the field of small loans, from time to time has reduced its reserve for bad debts until this reserve is now ·25 per cent. I think that is the best evidence that the people who obtain small loans are, in fact, excellent risks and, at least to the extent of 99·75 per cent, meet their obligations as they have agreed to do. Therefore I see no reason why they should continue to be charged high and excessive rates of interest.

This legislation will be referred to the banking and commerce committee. I can already see in my mind's eye the representatives of the small loans companies appearing before that committee, pleading that this legislation spells blue ruin for their industry, saying that it is going to cripple them and endanger their solvency, and that it may lead to a serious restriction of their small loans. I do not think their forecasts will prove correct. As a matter of fact, whilst this legislation is important and whilst it proposes to reduce interest rates on certain small loans, I wish to point out that it does not go particularly far in reducing those interest rates.

The main provision, as I see it, is for a maximum rate of 2 per cent per month on the aggregate outstanding on any loan up to $300; for loans from $300 to $1,000 on the aggregate amount outstanding a limitation of 1 per cent, and for the amount beyond $1,000 a limitation of one-half per cent. Is that, in fact, a very major reduction in interest rates? Suppose a person borrows $500 under the proposed legislation. By how much is his interest rate reduced? It used to be 2 per cent per month under the law. If this borrower about whom I am speaking repays his loan in equal monthly payments, the effective rate will be reduced from 2 per cent per month to 1·84 per cent per month, so that on the whole body of small loans, as defined in the Small Loans Act as it operates today, there will be a reduction in the rate paid by borrowers of only 8 per cent. We are all agreed or most of us, I take it, that 2 per cent is too high. But I emphasize again that it is not a very substantial reduction, as far as the small borrower is concerned, on amounts up to $500. It is a reduction in costs of only 8 per cent, that is from 2 per cent per month to a rate of 1·84 per cent per month.

If one takes a borrower who obtains $1,000 and repays it monthly, the effective rate is reduced from 2 per cent per month to 1·48 per cent per month. For a person who makes a loan up to $1,500, the effective rate is reduced from 2 per cent per month to 1·27 per cent per month. So the person obtaining a large loan, defined as a loan of $1,500, will by this legislation have the amount he repays, that is his interest charge, reduced by about one-third. The person who obtains a loan of $1,000 will have his interest rate reduced by about one-quarter, from 2 per cent to 1·48 per cent. But the small borrower, which would include the great bulk of Canadians who borrow under this legislation, will have a reduction of only 8 per cent, from 2 per cent per month to 1·84 per cent per month.

I want to point out that according to the last report of the Department of Finance with respect to small loans companies and money lenders, for the year ended December 31, 1954, of 832,000 loans of $500 or less, 597,000 were for loans of $300 or less. In other words, 72 per cent of all the people who go to small loan companies to borrow money borrow amounts of $300 or less. Therefore this legislation, on the basis of the experience in 1954, will do nothing for almost three-quarters of the people who walk into the offices of small loans companies.

In the interests of the vast numbers of Canadians who obtain small loans I would ask the government and the members of the banking and commerce committee to reconsider the provisions of the bill, and I suggest that there should in fact be a limit of 1 per cent per month on all loans. I point out that a limitation of 1 per cent per month on all loans would reduce the effective interest rate on all loans covered by this legislation at the present time.

There are a number of companies in the small loans field, and the two largest are United States owned. These two largest companies do 83 per cent of the business. Therefore it is United States capital once again in this field, as in so many other fields, and in this field these two wholly-owned Canadian subsidiaries do 83 per cent of the business. We in this group would like to see

Canadian capital more active in this field as we would like to see it more active in other fields.

Here we have United States capital coming into Canada. Is United States capital being lent to Canadians through small loans companies? Generally speaking the answer is no. The United States company sets up a Canadian subsidiary, puts into the Canadian subsidiary a limited amount of United States capital, and then the Canadian company goes to the chartered banks, obtains large sums of money and lends these large sums of money to small loans borrowers.

Mr. Gillis: What are the names of the two companies?

Mr. Argue: The Household Finance Company and the Personal Finance Company. Those are the two big ones, and they make a lot of profit. They are not in the business for fun. In the latest period for which statistics are available Household Finance Corporation, the largest one, had a total interest income of $12·76 million. Its profit before paying taxes was $6·86 million or 47 per cent. I am sure there are very few corporations in Canada that are in the enviable position of Household Finance Corporation which obtains a profit equal to 47 per cent of its gross interest income.

Mr. Benidickson: What was the net after paying taxes?

Mr. Argue: I believe I can give that figure. I do not think I have it at hand, but I have something that I believe is rather comparable.

Mr. Benidickson: Taxes are almost half of the profits.

Mr. Argue: That is correct. The taxes are close to half the gross profit of the company.

Mr. Benidickson: You have not indicated what funds they had employed.

Mr. Argue: No. There are a lot of other things I have not indicated, but the statement I made is completely accurate. On the gross income obtained by this company from interest charges it is able to make a profit before taxes of 47 per cent, and even under the legislation now before the house the 47 per cent will only be reduced by 8 per cent and they will still have a very large profit of 39 per cent.

This legislation is not going to cripple the Household Finance Corporation. It is not going to cripple any of these loan companies. As a matter of fact they will still be in a position to obtain very large profits, profits that in my opinion are exorbitant in every way. Why are they able to make such large profits? Of course the main reason they are able to do so is that the government allows them to charge such excessive rates of interest.

People go to their offices to borrow money in large measure, I believe, because of the high pressure advertising campaigns put on by these companies. They spend enormous sums of money for advertising. The two companies to which I referred spent almost $1 million in the same period for advertising purposes alone. While the parliamentary assistant has pointed out, and quite correctly, that they pay almost half their exorbitant profits in corporation taxes, I want to point out to him that the Department of National Revenue allowed these companies I am sure I am correct—to charge the whole $1 million against expenses for income tax purposes.

Because they are able to charge in that way this very large sum of money spent on advertising, they on the one hand deny the Canadian government substantial revenue and on the other hand—and this is the more serious part of it—engage in advertising that is definitely misleading to a great many potential borrowers. You hear this high pressure advertising over radio and television. You see it in the streetcars and in the newspapers. Do you want to borrow any money? If you are in any kind of trouble go to one of these small loans companies. They are not going to ask you any embarrassing questions. They have a credit manager with a wonderful personality who would just love to see you. Come on in and talk over your business with him. You will not have any trouble. You will not have to sign too many documents. It will be a very simple transaction. We will do it on a personal basis, and the costs are very moderate.

They do not mention the interest rate. They do not mention the fact that their charges are excessive. As a result many people in need of small loans go to the small loans companies; and when they do they must, of course, pay these exorbitant rates of interest. I should like to see our banks occupy this field to a much greater extent. I believe that by and large our banks have been falling down so far as this field is concerned. According to the statistics, the small loans companies spend relatively 40 times as much as the chartered banks on advertising in the small loans field. The fact that the small loans companies spend 40 times as much on advertising no doubt accounts for them getting so much business.

I suggest that our chartered banks should engage in a moderate amount of advertising and make known to Canadians generally that they are prepared to make small loans to

people who are good substantial risks. I have no doubt that would include almost everyone who is interested in obtaining a small loan because, as I have already pointed out, the rate of loss in this field is very small indeed.

In fairness to the chartered banks I want to point out that the Canadian Bank of Commerce has already done a substantial amount in this field. Their experience so far has shown that they are able to compete wtih the loan companies in the same field with a much lower rate of interest. I have in my hand a statement made by Mr. Neil J. McKinnon, general manager of the Canadian Bank of Commerce, to the banking and commerce committee on May 11, 1954, in relation to this subject. He had this to say:

> I believe we are satisfied that we are in the field in the same sense that the small loan companies are. We believe that we are doing a similar type of business for which we are endeavouring to offer facilities at one-half their rates.

I should like to see our chartered banks occupy this field and do a great deal more advertising than they do in order to enable potential borrowers to obtain money, as they suggest, at half the rate of interest.

Mr. Benidickson: Mr. McKinnon said that the profit after taxes was a little over 1 per cent on the funds employed.

Mr. Argue: That is quite correct; and I do not think he complained about that profit. I think he was quite happy that they were able to give that service at the profit he suggested. I think even that operating margin of profit would allow the Canadian Bank of Commerce to do more advertising than it is now doing so that it could increase the amount of money it lends in that field. I do not know what other banks are doing, but I have been reliably informed that the Bank of Montreal is endeavouring to increase its loans in the small loans field and is making loans at a rate of 6 per cent, with certain other charges for drawing up contracts and servicing loans. It is operating with an interest rate of 6 per cent and charges that are not substantially above the 6 per cent rate.
