I repeat that we in this group should like to see the government go much further than it is now doing. I point out again that even in the matter of a large loan, the rate is substantially above 1 per cent per month. Hence the adoption of our proposal would save money for borrowers borrowing all sums that will be governed by this act. There is no doubt in my mind that members of the Social Credit group will support this measure because it is, at any rate, a move toward lower interest rates. Of course one of their spokesmen will state precisely where they stand.

In this debate this afternoon I noticed that the hon. member for Greenwood (Mr. Macdonnell) did not say whether or not the Conservative party thought a 2 per cent per month rate was excessive. I want to point out that in any discussion we have had in the past with regard to this subject, we have yet to hear from a spokesman for the Progressive Conservative party. The hon. member for Notre Dame de Grace (Mr. Hamilton) this afternoon criticized members of the C.C.F. group because he said we had made the statement that we should like to see the capital used for service industries increased. I noticed the rather remarkable absence of any statement by the Conservative party as to how it stands with reference to the service that is being provided by these small loans companies.

While I think this legislation does not go nearly as far as it should, I believe we would be certain of having at least these provisions adopted and recommended by the banking and commerce committee if we knew the position of the Progressive Conservative party. But they are shifting from one foot to another. They are not taking a very responsible position this afternoon. They cannot be open to any great criticism, apparently, because they are not going to take a stand one way or the other. As I have said, we are prepared to support second reading of the bill, believing—

Mr. Hosking: Move an amendment and they will vote with you.

Mr. Argue: I imagine they will vote for this bill at some stage or another, but they have to be coaxed. They cannot make up their minds right off the bat. We can see that. Of course, if we criticize them there will be a long and academic explanation by the leader of that group as to why they took this very fair, responsible and parliamentary position of not saying how they would vote on second reading of the bill. We saw the attitude they took some time ago when a measure was divided into two parts. On the resolution they voted one way and on the bill another way. The explanation was that they had to see the bill.

This afternoon they have seen the bill. They have had weeks to see the bill. Yet even after seeing the bill they will not say whether the small loans companies, in charging Canadians 2 per cent per month, are in fact charging exorbitant rates. I believe that on this issue, as on other issues this session on which our group has already taken a position, we are in fact speaking for the great mass of Canadians generally who believe with us that a rate of 2 per cent per month is exorbitant and that even if we

reduced the rate, as it should be reduced, to 1 per cent per month, the small loans companies and the chartered banks will be able to stay in business and make a substantial profit, but at the same time we would save the ordinary people of this country a very substantial sum of money.

Mr. Victor Quelch (Acadia): Mr. Speaker, I am glad that Bill No. 51 is to be sent to the banking and commerce committee. When that bill is before the committee I believe we should investigate not only the question of consumer credit but also that of merchandise credit, because today merchandise credit is playing a larger and larger part in the sale of commodities.

When the question of small loans was before the banking and commerce committee back in 1938 I recall that we made an exhaustive study of the whole question. We had before the committee representatives of the credit unions, the small loans companies, the Canadian Bank of Commerce and many other financial institutions. One thing of great interest was that at that time we also paid attention to the relationship between merchandise credit and consumer credit.

It is interesting to note what the committee reported on that question in their third report. I should like to quote from page 418 of the report of the committee of June 1, 1938:

> The practice of mass-production resulted in a pressure for mass-consumption, with a widely advertised acceptance of "a small payment down and the balance on easy terms". Thus a large load of modern debt is in the form of unpaid balances for goods already consumed or in the process of consumption. These debt charges do not come directly within our reference or, for that matter, do they ordinarily come within legislative action; while legislatures have everywhere meticulously concerned themselves over debts incurred by borrowing money, legislatures have not shown equal concern over debt incurred by the purchase of goods.
>
> Whatever the legislative distinction; in practice, there is a relationship between merchandise-credit and money-credit that cannot be safely ignored in prescribing the rate of charges in borrowed money. A strict comparison of the rates of merchandise-credit with cash-credit is difficult, if not impossible, largely because the cash price of goods so often bears a portion of the credit-cost.
>
> However, it is safe to say that the two branches of consumers' credit are to some extent interchangeable. Upon evidence submitted to the committee, some of the money loaned at rates exceeding 2 per cent a month was borrowed to effect reduction in payment for goods, especially to avoid penalties under instalment plan of payment. And evidently there is a wide variation in the rates of charges involved in instalment sales. The committee was told that rates as high as 186 per cent per annum had been paid by Nova Scotian fishermen in the purchase of fishing equipment on six months' credit; while on certain household equipment the rate involved in instalment sales is about 12 per cent per annum.

Well, if that was true in 1938 I think it is probably even truer today, because we know that buying on the instalment plan and by charge accounts has become quite a big business in this country. I think, therefore, it would be very wise for the banking and commerce committee to spend some time investigating that situation and perhaps make recommendations regarding it.

The proposed amendments in this bill are improvements to the act in regard to the definition of costs, in regard to interest rates and in regard to the amounts of the loans that can be brought under the act at specified interest rates. But unfortunately this bill will not help the majority of the small loans borrowers, because the majority of the loans made under the Small Loans Act are for less than $300. For instance, I quote from one of the pamphlets put out by one of the large small loan companies, Household Finance Corporation, entitled "Consumer Finance in Canada". On page 5 it states:

> In Canada, there are now over 165 household offices in cities and towns from coast to coast. These offices make over 600,000 loans annually, in sums up to $1,000. Sixty-eight per cent of the loans are for sums of under $300—

Now, 68 per cent of all their loans are under $300, and those borrowers will not get any help at all from this bill because they will still be paying 2 per cent per month interest. I think most of us will agree that in all probability these borrowers of small amounts are just as much in need of assistance as some of those who borrow larger amounts. I believe we should try to set a straight rate of 1 per cent per month on the whole of the first $1,000. I realize, of course, that the cost of making loans in small amounts is higher, the overhead is higher, but on the other hand the rate of 1 per cent per month is approximately 13 per cent per year and that is an exceptionally high rate. I believe that a rate of 1 per cent per month or 13 per cent per year should be sufficiently high to cover the loans made under the Small Loans Act, even if you had to average the costs in order to get a fair rate.

As has been mentioned by the hon. member for Assiniboia, the average rate charged by the Canadian Bank of Commerce in 1954 was 10·46 per cent. I believe if it is possible for the Canadian Bank of Commerce to get on satisfactory with a rate of 10·46 per cent, it should be possible also for the small loans companies to get on with a rate of 13 per cent. This would allow them a slightly higher rate than the Canadian Bank of Commerce in order to meet their requirements. I know it is often said that it is a different class of borrowing; the people who go to the small loans companies are the people who are not

sufficiently creditworthy to get loans from the Canadian Bank of Commerce. But of course that is not true. The reason the very large percentage of people go to the small loans companies instead of the Canadian Bank of Commerce is that they want privacy. If they borrowed from the Canadian Bank of Commerce they would have to get an endorser or perhaps two endorsers. They do not like to do that, and they are prepared to pay a higher rate rather than get an endorser. It is not merely a question of privacy. I think we all realize the position of anyone who has to go to another individual and ask him to guarantee his loan at the bank. Consequently they go to the small loan companies and pay a higher rate.

Now, since the amendments to the Bank Act in 1954 the chartered banks are able to take chattel mortgages. It may be possible for the Canadian Bank of Commerce and other banks to make loans through the personal loan branch without insisting upon an endorsement, in a similar way to the small loans companies. But there are many loans made under the personal loans branch that are unsecured. I have been informed that 40 per cent of the loans made by the personal loans branch of the Canadian Bank of Commerce were unsecured, and 29 per cent of those made by small loans companies were unsecured. The cost on this type of loan would be less than for a loan that had to be secured by a chattel mortgage.

Then another reason people go to the small loans companies is due to what you might call the high pressure salesmanship exerted by the large amount of advertising that is carried on. I believe that is one place the small loans companies could cut down; that is the cost of their advertising. The point is that this may be due partly to the fact there are too many small loans companies operating in Canada. When you increase competition beyond a certain point it actually has a tendency to increase costs.

I was not certain of that point myself, but I was very much interested in the discussion on an insurance bill that took place before the banking committee the other day. Mr. MacGregor told us that if too many companies got into the field in competition with one another it actually increased the cost of advertising and increased the cost of insurance to the purchaser. If that is true of insurance I should imagine it would be true of the small loans business. If you get too many people in the field making small loans there is an increased amount of advertising necessary, and that unnecessarily increases the cost to the borrower.

[Mr. Quelch.]

I notice there has been quite a large increase in the small loans companies operating in Canada recently. In a report on small loans companies and moneylenders by the superintendent of insurance for 1954, we find this on page 6:

> In my report last year, I referred to the greatly increased interest being manifested in the small loans business in Canada by established lenders outside Canada, more particularly by those with head offices in the U.S.A. Several of these lenders entered the field during 1954 through provincially-incorporated subsidiary companies and the same trend has continued up to the date of this report.

It seems strange to me that if the net profits of these small loans companies are so small, it is claimed down around 2 per cent, that so many more companies should be set up. Two per cent is not a high rate of profit. I cannot imagine a profit of 2 per cent encouraging the setting up of additional small loans companies. The suggestion that some of these companies are operating at 2 per cent is fantastic, but I have seen that statement in some of their advertising.

You have only to pick up the report of the superintendent of insurance and turn to the pages of balance sheets to find that their profits have been very much greater than that. The amount of the reserves and the amount of capital reinvested in the company is shown. You have to take the amount of profit reinvested in the company in order to ascertain the true picture of these companies. I think the mere fact that we have so many companies flocking into this country shows they are making a pretty substantial profit.

Now, I am not satisfied that a rate of 1 per cent per month or approximately 13 per cent a year would put the small loans companies out of business. I believe they could reduce their costs in many ways. They could certainly reduce the cost of operation by cutting down on a lot of their advertising. We have all received in the mail recently what I would call a very expensive type of advertising. One needs only to walk along Sparks street and Bank street to realize that almost every other building is plastered with the signs of small loans companies. One would come to the conclusion that Ottawa must provide a very profitable source of income for small loans companies, because I have never seen as many small loans company offices in any town as apparently are operating in the city of Ottawa.

Then I imagine they could take a lower rate of interest on the profits they themselves have reinvested back in their companies, and they could take a lower rate of profit generally. I am satisfied that these three things alone would make it possible for them to operate on a rate of 1 per cent a month.

I believe the government should also approach the chartered banks for the purpose of trying to get them to take a greater responsibility in the field of personal loans. Apparently up to 1954, the Canadian Bank of Commerce was the only bank that had entered seriously into the field. No doubt when this bill is before the committee we shall be able to find out what action has been taken by other banks since the amendment to the Bank Act permitting chattel mortgages.

It seems to me that at the present time banks in this country are becoming altogether too prone to lean upon the government. Any time there is any risk involved they appear to want the government to guarantee them against loss. Of course any time the government guarantees them against loss, and pays part of that loss, it is subsidizing the banks. Surely the banks of Canada are in a sufficiently strong position to be able to stand on their own feet without everlastingly wanting the government to guarantee them.

In view of the great concessions the banks do get from the government of this country, I think as a service to the country they should be prepared to enter more and more into the personal loan field.

Then, of course, there is another class of people who have no credit or little realizable wealth. These people would not be considered credit worthy. They would not be able to borrow from the banks. It is very doubtful whether they would be able to borrow from any small loans company. Their only hope is to go to some welfare organization such as the Red Cross for help.

As time goes on the government will have to give consideration to setting up some kind of an institution to help the really down and out individual. It stands to reason that a person who is in a very difficult financial situation would probably have very little chance of borrowing from a bank. He would be forced to go to a small loans company—the amount of the loan could be small—and pay 2 per cent per month interest. He is the very last type of individual who can afford to pay 26 per cent interest a year. Those are the people who really need help.

I hope further consideration will be given the matter, to try to find ways and means of making credit available to those people at a low rate even if it means some sort of additional guarantee to the banks for making these loans.

Mr. A. H. Hollingworth (York Centre): Mr. Speaker, there is no legislation which I have welcomed more since the opening of this parliament than this legislation. In my opinion its general tenor indicates reform legislation at its best. It is an endeavour to legislate in the best interests of the average Canadian citizen.

I believe, Mr. Speaker, there is a prevailing opinion today throughout the country—and I think it is a sound one—that loan companies and finance companies have been making excessive profits at the expense of the average Canadian citizen. This bill is designed to correct that state of affairs. Even at the reduced rates it is my opinion that the loan companies can make a fair and reasonable profit. Hence sufficient money will still be available for those people who wish to borrow, and who are not able to meet the rather high standards of the chartered banks. Since they will still be able to borrow money, they will not be thrown into the waiting arms of the loan sharks.

Let us briefly consider how small loans are made available today. First of all we have the chartered banks; second, we have the credit unions; and third, the small loans companies. With regard to chartered banks, hon. members know that personal loans are available at the rate of 6 per cent. As the result of legislation passed in 1954, the banks are now able to take chattel mortgages as security. Whether or not this has appreciably increased the number of loans granted by the chartered banks is not as yet known. We should have that information fairly soon.

Of course, as the hon. member for Assiniboia has mentioned, the Canadian Bank of Commerce has gone into this field; but some of the other banks are reluctant to do so because they feel they cannot charge more than 6 per cent, and they cannot add those different services to the basic amount of the loan. In other words, Mr. Speaker, it is a matter of interest. If the banks could charge, say, 12 per cent for small loans I believe they would go into this field more readily. Of course that brings up the most difficult question which I think was considered a year or so ago by the banking and commerce committee. No decision has been reached.

Again, I suppose, the bank is more interested, on the present basis of 6 per cent, in lending money to finance companies, and they in turn lend it to the public.

With regard to the second form, namely credit unions, as the committee which investigated this whole problem in 1939 said, credit unions can remain effective only with homogeneity in social, religious and economic relation. That is to say, they are confined largely to special circumstances, although I admit they are prevalent in certain parts of this country, particularly the caisse populaires in the province of Quebec, where they are doing

an excellent job. I understand they usually charge 1 per cent a month. However, no credit unions pay income tax.

Finally we come to the Small Loans Act, the small loans companies and the money-lenders.

Mr. Argue: Six o'clock.

Mr. Hollingworth: In 1939 the commons banking and commerce committee recommended that the Small Loans Act be passed.

Mr. Speaker: Order. Since it is six o'clock I do now leave the chair.

BUSINESS OF THE HOUSE

Mr. Harris: Mr. Speaker, may I just have a moment? It may be that I will not be here at ten o'clock tonight nor perhaps tomorrow. Last night I announced the business of the house for the remainder of today and indicated that after this item and the Canadian Farm Loans Act we would go on with the Trans-Canada Highway Act, and I think we will confirm that. Tomorrow it is understood that we will have fisheries and then transport, and on Monday and Tuesday a supply motion.

I would hope that, unless something should occur in the meantime to change our plans, we would find it possible to arrange that in the short period of Wednesday afternoon we might complete the debate on the atomic energy committee and pass it by Wednesday night.

At six o'clock the house took recess.

AFTER RECESS

The house resumed at eight o'clock.

SMALL LOANS ACT

AMENDMENTS RESPECTING COSTS, LICENCES, REPAYMENT, ETC.

The house resumed consideration of the motion of Mr. Harris for the second reading of Bill No. 51, to amend the Small Loans Act.

Mr. Hollingworth: Mr. Speaker, at six o'clock I was saying that in 1939 the banking and commerce committee dealt with the Small Loans Act, and subsequently parliament passed that act. At the same time the Money-Lenders Act was in force. Actually it seems to be an anomaly because only four companies were subsequently incorporated under the Small Loans Act, including two of the largest small loans companies in this country, Household Finance Corporation of Canada and Personal Finance Company of Canada. Actually most of the small loans companies have been incorporated under the Money-Lenders Act. As far as I can find out the terms of the two acts are pretty much the same.

The rates of interest provided were 2 per cent per month as a maximum up to 15 months, and then 1 per cent per month subsequently. As I say, at present there are only four companies which were incorporated under the Small Loans Act, but 61 companies have been licensed under the Money-Lenders Act. The parliamentary assistant to the Minister of Finance told us this afternoon that the Money-Lenders Act is to be repealed. I think that is a rather good idea, because confusion is apt to result unless one reads the two acts together.

As hon. members are well aware, the terms provided by the bill before the house are 2 per cent per month for loans not exceeding $300; 1 per cent per month for loans exceeding $300 and not exceeding $1,000; and half of one per cent for loans exceeding $1,000. I should have mentioned that under the old act the ceiling for small loans was $500, but under the bill we are considering this evening the ceiling will be $1,500.

At the outset may I say that I am certainly not accusing the small loans companies of sharp practices. I think in general they have shown integrity in their dealings with the public, but with respect I do question their good taste and wisdom in their high-pressure advertising. Certainly one is made aware of their advertising. There was a song popular not so long ago that ended with the words, "I owe my soul to the company store". The first two or three times I heard that song I thought Tennessee Ernie was saying, "I owe my soul to the finance co."

There certainly are usurers who are willing to live off the avails of destitution, if I may use the colourful phrase used by the hon. member for Peace River (Mr. Low), during the debate last year in a speech which I enjoyed very much. Certainly I am not accusing the finance companies of this, nor indeed did the hon. member for Peace River; but I do submit that an attempt has been made on the part of some finance companies to entice the unwary, the unwise and the timid into their counting houses there to be despoiled of their financial independence.

Particularly, Household Finance Corporation have used the slick, glossy pap of the typical supercharged United States huckster, much to the distaste and annoyance of the average Canadian. The Household Finance Corporation blasts forth over the radio every morning in Ottawa the merits of their loans.

That is all well and good, but when one lives in Ottawa during the session and has to hear this every morning it does become rather annoying.

We are interested in the profits made by small loans companies, and for this information we go to the report of the superintendent of insurance for Canada dealing with small loans companies and moneylenders. I believe this was referred to by the hon. member for Assiniboia. I should like to refer to the report for the year ended December 31, 1954. This report is interesting for the information it provides, but it is interesting also because of several omissions which I should like to point out to the house.

For example, only those companies registered under the Small Loans Act or the Money-Lenders Act are referred to. In other words, if a company does not make any loans under $500 there is no record of it in this report. I found that there was a very interesting reason for this. I hear it stated over the radio that Household Finance Corporation makes loans from $50 to $1,000, but on perusing this book I found no reference to any loans over $500.

There is a section which deals with other small loans companies and moneylenders, which indicates the volume of loans made other than small loans. In other words, I find nothing under Household Finance Corporation for loans of more than $500. Upon looking into the matter further I find that there are two companies. There is the Household Finance Corporation of Canada which lends up to $500 and does business under the Small Loans Act, and there is Household Finance Company Limited which makes loans of over $500. Unfortunately there is no record of that company in this book.

As I say, we are interested in the profits made. I notice that for 1954 the profits of Household Finance Corporation of Canada operating under the Small Loans Act were $5,952,000, or practically a cool $6 million. It is true, as someone mentioned this afternoon, that out of that would have to come a considerable amount of income tax, and naturally they pay dividends to their shareholders. But I think we will all be ready to admit that the profits were considerable.

Now, if we may go to the other large small loans company, Personal Finance Company of Canada, we find that their profits amounted to $923,000. The interesting part about this is that the report deals with the profits of Personal Finance Company of Canada from loans of more than $500. Those profits are indicated as being $2,500,000, or two and a half times as much. Therefore if we project this result into the results of Household Finance Corporation, if we multiply their profits of $5,952,000 by 2·6, we come up with profits of about $16 million. I am not saying that Household Finance Corporation made that much money, but I do say it shows that this is a most lucrative business.

I think the government has done a wise thing, something which will be appreciated by Canadian people from coast to coast, in bringing this reform legislation before the house. In view of the profits indicated I do not think the finance companies are going to suffer if their interest rate is reduced to 1 per cent.

There is one other thing I should like the house to consider, but I suppose I would be out of order in discussing it. This has been brought to my attention by my constituents and other persons. I think the larger acceptance corporations or discount houses should be brought under this legislation. I do not suppose we can do that, but I think that is one of the next problems we will have to face.

In any case this bill is going before the banking and commerce committee, where it certainly will be studied exhaustively. One interesting point to consider is whether the ceiling should be raised to $2,500. Hon. members will recall the very able speech by the hon. member for Essex West (Mr. Brown), that genial member from southern Ontario, in which he made a very good case for an increase of the ceiling to $2,000. I took note also that in the very able presentation by the parliamentary assistant this afternoon he pointed out that in California the ceiling was raised to $5,000. That is something the committee can carefully study when the bill goes before it.

Again, should the rate be 1 per cent right across the board? I should think there are cogent reasons why that should be considered. Or, again, should the ceiling for the 2 per cent per month be reduced to $200? Once again, the committee will have to determine that.

At this stage I should think that we would need to have more evidence on these points, but I want to make it very clear that I am supporting the general principle of the bill. I am sure that after the committee studies this bill an act will ensue which will incorporate the best features, will provide justice for the Canadian citizen and, at the same time, will enable the finance corporations to enjoy a reasonable and fair return in their business. After all, they are legitimate business concerns in a free competitive society.

I take great pleasure, therefore, in congratulating the government, and particularly

the Minister of Finance, on their foresight in bringing in this bill and on their practicality, which at the same time is strongly tempered and imbued with social justice.

Mr. W. Ross Thatcher (Moose Jaw-Lake Centre): I had not intended to speak on this subject until this afternoon, when I heard my old friend and colleague the hon. member for Assiniboia (Mr. Argue) make his remarks.

The subject we are discussing, of course, is charged with emotion. Every hon. member, I am sure, regardless of his party would like to make sure that the working people of Canada can borrow money at the lowest possible rates. Yet it seems to me that parliament must take great care that in adopting arbitrary interest ceilings it does not force these companies in the small loans business to take their capital elsewhere and invest it in some other field.

In the year 1954 some 800,000 Canadians borrowed money from small loans companies. Most Canadians from time to time get into financial difficulties. If such a Canadian happens to be an employer, usually he can go to the bank and use an overdraft. But for working people usually this is not possible. In such cases they invariably go to a small loans company and make a cash loan. I think real hardship will follow if parliament, either indirectly or inadvertently, makes it impossible for people in the working class and in the lower income groups to get capital from those companies.

I certainly approve of government regulation in this field. I think everything possible should be done by parliament to eliminate sharp practices. Everything possible should be done by parliament to make sure that excessive and unjust interest rates are not charged by these loan companies. But I also think we should not forget the economic facts of life.

Today in Canada there are thousands of places where any company can invest its funds. Therefore I say again, let us make certain that our legislation is not restrictive to the point where these companies take their cash out of the small loans field and invest it somewhere else. Let us be sure that we do not prevent people in the lower income groups from obtaining urgently needed credit.

To illustrate the danger of this, I should like to remind my hon. friend from Assiniboia and my other C.C.F. friends of an act which the Saskatchewan government passed some 11 years ago. It was called the Saskatchewan moratorium act. During the depression years we had a great many farm foreclosures by mortgage companies in our province, and many of these foreclosures were unjustified. So the C.C.F. government, in good faith and with good intentions, introduced legislation which in effect prevented the mortgage companies from foreclosing on the home quarter section. I supported the legislation, and I thought it was sound at the time.

Unfortunately it has not worked out that way. For those who had already borrowed money and did not need any more, it was wonderful. They did not have to worry, even if they could not make a payment. However, the contrary was true for those who needed money in the future. The mortgage companies, feeling that they had no longer security of investment in the province of Saskatchewan, moved out lock, stock and barrel. As a result, in our province today you simply cannot buy a farm on credit unless it is through the Canadian farm loan board, and those loans are few and far between. In my opinion that legislation, which as I say was introduced with every good intention, has had the effect of virtually ruining farm credit in Saskatchewan.

So I say tonight, let us as members of parliament benefit from this example and make sure that we do not achieve the same results with these small loans companies. I think there should be no illusions. These people must be allowed to make a reasonable profit if we expect them to remain in the field. It is up to the banking and commerce committee to go into this whole question, study it carefully, and then decide what is a legitimate and reasonable profit. Personally I have always contended that parliament should give greater encouragement to the banks to get into the small loans field. But if we want them to do this we are going to have to permit them to charge interest rates that are more in line with what we permit the small loans companies to charge.

I remember that several years ago Mr. N. J. McKinnon, general manager of the Canadian Bank of Commerce, appeared before the banking and commerce committee. He stated that at that time, under existing laws, it simply was not feasible for the banks to enter extensively into the small loans business. The interest rate the banks are able to charge today is 6 per cent. That works out on a monthly basis to about 10·46 per cent. Mr. McKinnon told the banking and commerce committee that if the banks could charge 1 per cent per month, he was reasonably certain they would go into the small loans business more extensively.

So I suggest, Mr. Speaker, before you rise, that this might be a point for the banking and commerce committee to investigate. I think if the banks were to enter this field the small

loans companies would be forced by competition to lower their rates, and then it might not be necessary to do so much by legislation.

I repeat, let us approach this whole problem, not emotionally but realistically and sensibly, in an endeavour to give all working people the lowest possible interest rates. But let us not wake up and find that we have low interest rates, but no money available for loans.

Mr. F. S. Zaplitny (Dauphin): Mr. Speaker, the hon. gentleman who has just taken his seat referred to the danger of capital being taken elsewhere, that is out of the lending field, if interest rates are made too low. I am glad he also coupled with that a desire to have all the facts placed before the committee, because in the report of the operations of small loans companies as of the end of December, 1954, there are some figures which show the position of some of these companies.

I shall not weary the house by going through the whole list, but I think this one will serve as an example, and I think it might allay the fears the hon. member may have as to the danger of the capital of this company going into another field.

Mr. Byrne: Apparently it will not be going into Saskatchewan.

Mr. Zaplitny: I have the report of Household Finance Corporation of Canada as of December 31, 1954. It is shown in their balance sheet that while they have an authorized capitalization of $5 million the actual capitalization is only $3,070,000. On that capitalization they have outstanding balances at this time of $55,495,730.52, and their total assets now stand at $57,783,971.94. Even more interesting and significant is their revenue account. Bearing in mind that their total paid up capitalization is only $3,070,000, we find that their income earned on loans for that year came to $12,758,246.95. Added to that we have recovery of bad debts, doubtful accounts and disposition of some office property, which gives them a gross income for the year of $12,812,433.21.

Further down their expenditures are shown, and taking them off we find that their gross profit for that year came to $5,952,743.75 on a total capitalization of $3,070,000.

Mr. Benidickson: Before income tax.

Mr. Zaplitny: Yes, before income tax. I doubt if a company that can make a gross profit of almost $6 million on a total capitalization of $3 million are going to feel that they will want to take their capital elsewhere to a different field. The parliamentary assistant to the minister has interjected, "before income tax." In order to satisfy his mind on that point, let us go to the dividend account. Of course dividends are not paid until taxes are paid. We go down further and find that dividends to shareholders in that year came to $3,048,510, and on a capitalization of $3,070,000 that is just a wee bit short of 100 per cent, almost dollar for dollar in the form of dividends.

I can assure the hon. member for Moose Jaw-Lake Centre that any commercial company that can pay its shareholders every year a dollar in dividends for every dollar they have invested is not going to take its capital elsewhere and look for a better investment unless, of course, they are exceedingly greedy. I would not want to accuse even this company of being in that category.

I doubt that the bringing down of interest rates generally as visualized by this legislation or as advocated by the members of the C.C.F. group over the years constitutes any danger so far as availability of capital is concerned for the small loans business. Not only that, but we find in looking at the statistics that the number of small loans companies is increasing very rapidly. The amounts they spend on advertising their business come to a tremendous figure. Such companies do not increase in number, nor do they put on a high pressure advertising campaign, if they are in a field which is not profitable. The fact is that they do spend huge sums of money on advertising, and while I would not say their advertising is dishonest it is not very far from being dishonest and is certainly misleading in the way it is put. For that reason I do not share the fear expressed by my hon. friend that this type of legislation, or the type of legislation envisioned by the hon. member for Assiniboia, would constitute a danger to the availability of this kind of money.

I want to refer also to the remarks of the hon. member for York Centre (Mr. Hollingworth). If I heard him correctly this afternoon, and I speak now subject to correction because it was a little difficult to hear at that time, he said that credit unions do not pay interest. If that is what he said, and that is the way I understood him, of course I will have to say that he is quite mistaken. Credit unions do pay interest, and they do a great deal more than that as far as the people they do business with are concerned. They provide life insurance at no extra cost to those who make use of their facilities. They also provide loan insurance, so that if the person who borrows money from the credit union is no able to repay the loan because of death, disability or some other reason the loan is written off as provided in the bylaws of the

credit union. In the case of death the life insurance is, of course, payable to the beneficiary.

Therefore the credit unions are providing a service which is not comparable at all to that provided by the private small loans companies. But the chief difference between the operations of the credit unions and those of the small loans companies is the fact that the credit union is a non-profit organization. That in itself is a very important difference which sometimes is not recognized by the government.

Not so many years ago we had occasion, when discussing an income tax amendment, to try to impress upon the government the fact that co-operative institutions generally and credit unions in particular are non-profit organizations and therefore should not be treated in the same way as private companies for income tax purposes. We were not altogether successful, although we did persuade them to some extent.

The reason I bring that into the discussion at this time is that the hon. member who has just taken his seat referred to the desirability of the government providing encouragement to the banking system to get into the small loans field. I should think it would be far more desirable all around that if encouragement at the government level is to be made available, it should be made available first of all to the credit unions. Because of the nature of the credit union, which is a non-profit organization, it does the most for the community in which it operates, not only for the people who invest their money directly in the credit union or make use of its lending facilities but also for the community generally, because every dollar that goes into the credit union remains in the community. None of that money goes to the headquarters of a huge company outside the province or sometimes outside the country, as is the case with the small loans companies. Every dollar circulates within the community.

They charge an interest rate of about 1 per cent per month, and when they have completed their fiscal year they sit down and draw up their accounts. If they find that the amount of interest money is more than is required for their general operations, they then divide the surplus in two ways, either in paying a certain amount in interest on the money that investors have placed in their credit union for the purpose of lending, or by reducing the interest rate to those who have borrowed money, or both. Therefore when they have a surplus at the end of the year the result is that the interest rate is much less than 1 per cent per month, because a rebate is made to the borrower in so far as it is possible to do so in order to give him the best possible break.

But the important thing to remember is that the money invested in the credit union, money that is circulating in the community, is left there for the purpose of building up the community. None of that money is siphoned off in the form of profit to go outside the community, outside the province or outside the country. Therefore if the government is inclined to give encouragement to lending institutions as a principle, I respectfully suggest that the credit unions are the best possible vehicle through which they can provide that kind of encouragement and do the most good in the community and in the nation at large.

Motion agreed to, bill read the second time and referred to the standing committee on banking and commerce.

CANADIAN FARM LOAN ACT

AMENDMENTS TO REORGANIZE CAPITAL STRUCTURE, INCREASE AMOUNT OF LOANS, ETC.

Right Hon. J. G. Gardiner (for the Minister of Finance) moved the second reading of Bill No. 84, to amend the Canadian Farm Loan Act.

Mr. W. M. Benidickson (Parliamentary Assistant to the Minister of Finance): Mr. Speaker, this is an amendment to a bill that I think over the years has proven very much worth while to the farming community. Its original purpose was not especially to lend money in great volume to farmers, but it was to be a sort of pace-setter in so far as interest rates were concerned, because interest rates were chiefly in the eyes of the legislators of 1927 and 1929 when this original bill passed the House of Commons. Since that time, however, some $100 million has been lent to farmers under the terms of the farm loan act. I think about 43,000 loans have been made. In the last year of record, namely the year ending March 31, 1955, the new lending amounted to $8,200,000.

In addition to this worth-while legislation providing farm credit, hon. members are aware that since the war we have also had in operation a form of government guarantee of loans made by banks to the farmers under the provisions of the Farm Improvement Loans Act. The difference between the two acts could probably be roughly described as long-term credit with respect to the Canadian Farm Loan Act and intermediate credit with respect to the Farm Improvement Loans Act. Originally the farm loan act board was accompanied by a provision for supervising loans to fishermen. Hon. members will well

remember that last year the house passed a bill which could be described as parallel to the Farm Improvement Loans Act, namely the Fisheries Improvement Loans Act. In consequence of that legislation the farm loan board will no longer be required to supervise loans to fishermen.

The bill before us tonight in summary could be said to simplify the capital structure of the farm loan board. It will simplify its capitalization, and it will also simplify the system with respect to reserves. It will broaden the board's activities by increasing the maximum amount of loans that can be provided under the act. It will simplify and improve the lending procedure by eliminating the short-term second and chattel mortgage loans, and it will dispose of the capital of the board acquired in connection with its operations under the Canadian Fisherman's Loan Act which I have described.

As the act stands at the present time, the capital of the board consists of $5 million which was originally advanced at the inception of the board, together with issued shares of stock to the amount of $2,240,301. The $5 million initial capital advance was made during the early years when the board was becoming established, and for three years it did not bear interest. But since that time it has borne interest paid by the board to the government in a manner similar to that in respect of any other borrowings of the board from the government. It is considered desirable to convert this original capital into an ordinary loan. The bill will provide for the repayment to the government of the original advance, and it is intended to refinance this repayment through an ordinary loan by the government to the board at current rates of interest.

The bill will further provide for the cancellation of the $2,240,301 issued capital stock of the par value of $1 per share, and in substitution the board will be capitalized by 30,000 shares of stock of the par value of $100 a share, the total value of which will be $3 million. With respect to reserves, under the existing statute the board has been required to set aside at least 10 per cent of its net annual earnings in a special reserve fund. This reserve is known as the "statutory reserve" and at the present time it amounts to $878,000. But this is not a reserve in the ordinary sense of the word because it has not been available, under the statute, for the payment of losses. In addition to this statutory reserve the board, under long practice, has had a special reserve built up on the basis of one-half of one per cent of its lending. This reserve now amounts to $2,349,258. In substitution for these two reserves the bill will provide for the establishment of a single reserve account to which all losses may be charged, and it is stipulated in the bill that the amount of the reserve will never exceed the amount of capital which, as I have indicated, will be $3 million.

Prior to 1952 the board could raise money only by the issue and sale of bonds to the minister of finance. This was an awkward and cumbersome method of financing, and in 1952 parliament made provision for simple borrowing by the board from the minister of finance without the necessity of issuing bonds. It is now proposed to go a step further and drop the bond issuing provisions entirely, and to convert all the board's borrowings into simple straight loans from the minister of finance. The original purpose of the bond-issuing power was to enable the board to borrow money directly from the public, but this was never done.

As part of the simplification of the capital position of the board, the bill will also provide for disposing of the capital and assets of the board under the Canadian Fisherman's Loan Act. Lending under that act was discontinued, as I have indicated, following the coming into force of the Fisheries Improvement Loans Act. The amounts involved are not substantial but are somewhat complicated from the point of view of the balance sheet and the annual report which is submitted to members of parliament.

The farm loan board received a capital advance of $29,000, and in addition the government holds 161 shares of stock of the board of the par value of $1 each, issued respecting loans to fishermen. It is proposed that the board shall repay the capital advance and retire the stock less the operating deficit which has accrued under this act. This deficit amounts to $5,203, and will be absorbed by the government. There are still a few outstanding fishermen's loans, and the bill will provide that the proceeds will be paid into the consolidated revenue fund as and when those loans are repaid by the fishermen. When completed this will wind up the Canadian Fisherman's Loan Act operation.

So far as the lending limits are concerned —and I think this is the most important feature of the present bill and the procedure under it—the board can now lend $10,000 on first mortgages plus $2,000 on second mortgages for a shorter term. Under the present legislation the board finds it mandatory, in connection with second mortgages, to take chattel security. The bill that is now before us will eliminate short-term second mortgage lending. I have indicated to the house we have very important and worth-while companion legislation for intermediate credit in

the Farm Improvement Loans Act. This bill will eliminate this type of second mortgage for short periods, and the chattel mortgage features of it, and it will increase the maximum amount of loan under the act under first mortgage procedure to $15,000.

The bill will change also the percentage ratio of loan value. Prior to the amendment of the act in 1952 the board was not able to lend beyond 50 per cent of the appraised value. In 1952 this was increased to 60 per cent. It is now proposed to further increase the ratio to 65 per cent. It is also proposed to drop the provision for setting up an advisory board. I think the hon. member for Greenwood (Mr. Macdonnell) will welcome this statement, because in 1952 when this provision was presented he felt that it would not be a useful part of the act.

Mr. W. G. Dinsdale (Brandon-Souris): I have been interested, Mr. Speaker, in the remarks of the parliamentary assistant concerning this important piece of legislation. I say it is important because the provision of credit to our farm population is a subject that has occupied the attention of parliament for a good many years. It was not until 1927, however, that this house took any definite action to deal with the specialized need of our farm population for a special type of credit. The original passing of the farm loan act came, I believe, as the result of pressure from the Progressive group which at that time made up a fair percentage of the representation in this house.

The general changes that have been outlined by the parliamentary assistant move in the right direction. Section 6 deals with the major changes so far as the terms of the farm loan act are concerned by increasing the amount of the first mortgage to $15,000 and also providing for the granting of a loan at 65 per cent of the actual value of the land upon which the loan is made. That is moving in the right direction. During world war II the subject of farm credit receded somewhat into the background, and also during the immediate period following world war II when farm income was unusually buoyant. It is just in the last three or four years that organized farm opinion has begun to pay more attention to this problem, and the amendments that we have before us I am sure have come as a result of the demands from farm organizations for more generous credit provisions in the act.

At the outset of my remarks I said that the farm economy requires certain special features by way of credit provisions. In the early years the credit needs of the farmers were largely taken care of by private loan companies which operated alone in this area up until world war I. This was particularly true during the development of the wheat economy on the prairies. However, in the boom period of world war I credit facilities became somewhat overextended, with the result that a huge indebtedness was incurred by prairie farmers. This indebtedness was still outstanding at the onset of the depression, and necessitated special adjustment legislation in order to assist the farmers in getting out from under their burden.

The first entrance of the government into this loan field came in the province of Manitoba in 1917, when the provincial government passed the Manitoba farm mortgage act. I should say that the provinces of Saskatchewan and Alberta followed suit very soon afterward. Unfortunately, because of inefficient management, because of the unpredictable nature of grain growing on the prairies, the wild price fluctuations and so forth, provincial activities in providing credit did not continue to function successfully beyond 1923. It was then that the agitation from the Progressives, the farm representatives, began. They were thinking in terms of the provision by the federal government of more extensive credit facilities.

Now, while these amendments are a step in the right direction, I think it is fair to state that they do not go as far as the special capital needs of our agricultural economy require. As a result of the unhappy experience of private lenders in this particular type of lending operation, the supply of capital from that source has been drying up. This means that more and more the farmer—I am speaking particularly from the standpoint of the western farmer, but I think it would apply generally—is dependent upon the sources of credit such as are provided under the farm loan act.

The parliamentary assistant indicated that this act was originally thought of as a pace-setter, encouraging lower interest rates and generally setting the pattern for the specialized needs of farm credit. However, it seems to me, Mr. Speaker, the activities of the farm loan board have today gone beyond the demands of pace-setting, and the board is in the position, because of the changing circumstances, where it is one of the major agencies for providing this kind of service to the farm population.

I say the farmer has special needs for credit. He has need for short-term credit. This is taken care of to a large extent by the banks, and by self-financing through friends. According to the latest figures I have seen on this matter, most of the short-term

credit used by the farmers comes from self-financing sources. Also, of course, the credit union method of providing short-term emergency credit has become increasingly popular among our farm population. The real problem arises in connection with long-term capital provision. This was the basic function that the original farm loan board was established to perform.

Agriculture needs long-term credit more than any other type of business activity. The return on the farmer's investment is comparatively small and the recovery of the investment of necessity, because of this small return, occupies a long period of time. In most cases, particularly in reference to financing in the grain economy, it requires long-term financing up to a period of 40 years. Under the Canadian Farm Loan Act long-term financing is provided for up to 25 years. Therefore there is a real deficiency in this regard in the act as it stands at the moment.

Another special problem of the farm economy in regard to credit is the necessity of providing capital at the lowest possible interest rate. When I say "lowest possible interest rate" I do not wish to imply subsidization of this type of financial activity. I believe, of course, that the loan should pay for itself; that the necessary administrative costs, and so forth, should be provided by the interest rate. Because exceptionally long-term financing is required, there is a necessity to keep the interest rate as low as possible. This the farm loan board has endeavoured to do. When it was originally established it did fix the initial interest rate considerably below the going rate of funds available from other sources, particularly from private sources.

Another principle that has to be kept in mind in regard to farm credit is the need for flexible repayment. Again, this uncertainty of income, this fluctuating income, which certainly we have had brought home to us quite forcibly during this present session, places the farmer in a position where he never knows from one year to another whether he is going to be able to meet his current liabilities. If he is not in a position where he can feel fairly secure concerning his credit operations, then of course he shows a great deal of reluctance to finance on this basis.

The farmer, because of his unfortunate experiences in the past during successive boom and bust periods, is very suspicious of credit; yet, because he is operating a separate family farm unit, he requires a comparatively high percentage of capitalization. If he is going to operate successfully he must use considerable amounts of capital. These matters should all be kept in mind in reference to the provisions of this act now before us.

As I said at the beginning, the amendments are a step in the right direction, but there are still grounds for maintaining that the act has not moved as far as necessary, particularly when we consider the tremendous changes that have taken place in the farm economy since the act was originally placed on the statute books.

There are two more points I would like to make before I conclude my contribution to this discussion, Mr. Speaker. There are two types of credit need that have not been met in any shape or form by any type of capital operation in Canada up to the present time. The first is the special need that arises where the farmer finds himself operating an uneconomic unit. The main reason that his farm is regarded as an uneconomic unit, or is undercapitalized if you prefer that term, is because it is not large enough and is not fertile enough to bring sufficient return to provide a satisfactory income and living. Obviously, if he is going to change his farming operation into an economic one he has to obtain credit from some source in order to improve his position. Here is just where he finds himself up against a brick wall, because there is no possible source of credit. Private lenders, of course, turn him down flat; also, he is unable to get any assistance from either the Canadian Farm Loan Act or the Farm Improvement Loans Act.

I have come up against specific examples of this sort of problem in my own area. A young farmer, for example, finds himself occupying a large expanse of territory which is semi-arid, submarginal and suitable mostly for grazing purposes. He is not in a position to buy the necessary cattle to turn his farming operation into an economic one. He is turned down by the Farm Improvement Loans Act and also by the farm loan board on the basis of the 60 per cent value stipulation, which, in the present amendment, has been changed to 65 per cent. That is a problem that must be faced in meeting the needs of the farm economy. Whether it can be done through the existing acts or whether it requires a broader approach to the problem I am not in a position to say, but certainly it requires some further study.

Then in this day and age, when farming has become a commercial operation, there is a special need of assistance for young farmers who are attempting to get started in farming operations. There is limited assistance under the Veterans Land Act so far as veterans are concerned and young farmers who can come under that act are assisted most generously

in getting established. However, outside of that particular program there is no adequate provision for credit assistance for the younger farmer wishing to get started.

I have some figures which indicate how the financial situation has changed in the last half century. In 1882 when western Canada was first opened up to homesteading a homesteader could get into business with an investment of some $660, and within five years he could have parlayed that original investment into something like $3,320. Today in order for a young farmer to be successfully launched the following minimum amounts are required:

Land	$13,500
Buildings	8,956
Machinery and equipment	8,469
Livestock	1,580
Cash for first year's operation	2,099
	$34,604

As the parliamentary assistant has indicated, provision for credit of this kind is available under the act, but it is limited to a maximum of $15,000. This is a problem which has been discussed in this house before, as well as in the legislatures, particularly of the provinces of western Canada. I believe two provinces have acted to provide some assistance in this regard, Ontario being one and Quebec the other. Up to the present time the western provinces have not gone beyond the discussion stage.

It is obvious that today there is a trend away from the farms. If we are going to encourage young Canadians to establish family farm units there will have to be provision for much more generous credit than is available under the act as it stands. In recent years there has been an increase in the number of tenant farmers, and no doubt this arises from the difficulty the farmer faces in getting started today because of the almost fantastic rise in the cost of farm operations. No doubt it also accounts for the rapid exodus from the farms to more lucrative occupations in the cities and urban areas.

Perhaps what we need is not an amendment to the act but a separate act which could be described as the farmers' establishment loan act. Or as an alternative the farm loan act could have a special division to be described as the farmers' establishment loan division. However, on the whole I think this bill is a step in the right direction, and I trust that any remarks I have made as to improvements that are required will be kept in mind when the amended act goes into effect.

Mr. W. M. Johnson (Kindersley): Mr. Speaker, like the hon. member for Brandon-Souris (Mr. Dinsdale) I welcome the fact that the government has recognized the problem of agricultural credit, but I am disappointed that it is moving to resolve that problem at such a snail's pace. The problem of agricultural credit is particularly serious in Canada at the present time when agriculture is receiving such a small share of the national income, when we have a period such as last year when agriculture received only 6·8 per cent of the national income. This points up the necessity for the establishment of an over-all agricultural credit policy to assist farmers in increasing their efficiency in order to offset the rising costs of production.

Agricultural credit is a serious problem in Canada at this time because of the transition which is taking place in many of our areas. In western Canada we have experienced a move toward larger farms, and we notice that the size of the farm is increased according to the efficiency of the equipment. That same move is taking place in Ontario, Quebec and the maritimes, indeed all across Canada. The size of the farm is co-ordinated with the efficiency of the farm machines which are being developed.

It is particularly important that we have a sound over-all agricultural credit policy to provide an opportunity to those of succeeding generations, who are desirous of taking up the occupation of farming, to take over the farms which their fathers have established on a sound and businesslike basis. As the hon. member for Brandon-Souris pointed out, in most instances the cost of becoming established is so prohibitive that unless assistance is provided by the father or by some magnanimous credit agency the young farmer is unable to become established. In many cases land which would become available as a family farm unit is absorbed by some other farm operator in the district who does not require it for the sake of efficiency but merely because he has a habit of acquiring more land.

We require an agricultural credit policy which will provide short-term, interim and long-term credit arrangements. As the parliamentary assistant pointed out, the Farm Improvement Loans Act is performing a most useful function in providing interim credit to farmers for the purchase of farm machinery, livestock and so on to ensure the maximum efficiency of their farms. I do not think we can say that the Canadian farm loan board has been achieving that same efficiency as a long-term credit organization.

The bill which is presently being discussed increases the percentage of the appraised value upon which a first mortgage can be granted. The parliamentary assistant has pointed out that this percentage is being increased from 60 to 65. At the same time the

maximum loan for a first and second mortgage is being increased from $12,000 to $15,000. I had hoped at the time the resolution was introduced that the bill would include more than it has included, because it is necessary for this long-term credit policy to provide legislation that will achieve the function of establishing farmers on a sound basis in the agricultural industry of our economy.

The present Canadian Farm Loan Act has taken a very niggardly approach to giving credit to farmers for the avowed purpose of increasing the efficiency of the farm. Indeed, the total loans made have never approached the limit set for the board. The highest amount of outstanding Canadian farm loan board loans has been $30 million, as compared with an allowable $90 million. In 1954 this loan amount stood at $25·3 million, which indicates that the legislation does not encourage farmers to take advantage of this credit because of various defects in the Canadian Farm Loan Act.

One of the reasons would be, I think, the small margin upon which the board has to operate. Because of this small margin there is a very strong tendency to avoid making loans to high risk borrowers. In other words, if the farmer is in a hazardous position, if his farming operation does not appear to be an economic unit, the farm loan board is very reluctant to make him a loan so he can increase the efficiency of his unit.

I think another feature is the inadequate field staff with which the Canadian farm loan board has to operate. This is another indication of the operation of the Canadian farm loan board in trying to keep down expenses, whereas in effect it results in reductions in the loans that are actually made. There is an extensive delay in making appraisals. Because of the time element involved, there are many farmers that have not had an opportunity to purchase land, simply as a result of this delay.

I think the size of the loan as it stood before this amendment, $12,000, and the present $15,000, is still far too small. It is a small part of the actual purchase price for most farms. In addition to that, the board evaluations have in most instances been a half or less of market prices. The board has been very conservative in its appraisals, and has not given any recognition to the increase in land values that has taken place over the past number of years. The very fact that the percentage of the appraised value has been raised from 60 to 65 per cent is an indication of the fact that the appraised values have been far too low.

Another reason there have not been more loans made under the act would be the fact that for a second mortgage a chattel mortgage is required on the livestock and assets of the farmer. This, in effect, ties up all the farmer's assets and puts him in an impossible position to get any further credit from any source whatsoever. Then in addition—

Mr. Benidickson: The chattel mortgage will not be mandatory under this bill.

Mr. Johnson (Kindersley): I thought that was what the minister was pointing out. I am not too good at reading bills but I thought that was so, and I am pleased that the parliamentary assistant has drawn that to my attention. As the hon. member for Brandon-Souris pointed out, the terms of repayment under the Canadian Farm Loan Act are altogether too rigid. The fact that the repayment must be made in a period of 25 years by annual payments, with of course the option to prepay, does not take into consideration the weather cycles that periodically confront western Canada and, indeed, the whole of Canada. We need to have a flexible repayment policy that is geared to the average returns from the farm. By that I mean that, if a farmer has a good year, he should be expected to pay more to retire his debt. On the other hand, if he has a crop failure consideration should be given to that, and he should not be expected to pay any significant amount in that year.

The Canadian Federation of Agriculture is certainly indebted to Mr. J. C. Brodrick, of St. Catharines, Ontario, for the investigation he has made into the need for agricultural credit in Canada. The house is doubtless aware of the recommendations made by the federation of agriculture pointing out the necessity for lengthening the period of repayment of the loans, increasing the maximum to $20,000, and changing the maximum assessment percentage to 80 per cent of loans up to $8,000, with a graduated reduction on the balance up to $20,000. The very fact that the Canadian Federation of Agriculture has had a discussion on this and has brought forth a comprehensive resolution on the necessity for an agricultural credit policy would certainly highlight the need for the establishment of an over-all credit policy for Canada.

I would suggest that we have a very good pattern to follow in establishing a long-term agricultural credit policy. I am one of those who are operating under the Veterans Land Act, and I must say that I have been most satisfied with the operation of that act. It takes into consideration the individual capacity of the settler and, through guidance and through a flexible repayment policy at a very low rate of interest, gives him every opportunity to establish himself.

I should like to see the government go one step further and study the policy which has been in effect for some time in the United States. I am thinking of the farmers' home administration, which was set up in 1939 and modified in 1946. The administration receives its funds by annual appropriation from the government. The loans are made to those who have a good chance of succeeding if given assistance. The attitude is taken that the most important asset of the farm is the farmer, and if he is willing to work and has the ability and the guidance, there is every possible chance that he will succeed.

Loans are made on 100 per cent of the appraised value of a farm. They do not believe in going half way. They will give a farmer assistance on the basis of an economic unit and will fix up the farm home. Indeed, it is one of the provisos of the farmers' home administration that the farm must be established as an economic unit and one fit to be inhabited. In fact there was one instance in the United States where the farmers' home administration took over a farm to set up a bankrupt individual and get him back on his feet. They of course insisted that he build a new, modern home to house his wife and children, and of course funds were supplied for that purpose. The interesting aspect there is that the house he had been occupying had to be improved in order to be fit to house hogs.

They believe in going at things in a reasonable fashion so the farmer has every possible chance to succeed. They have a flexible repayment policy which, as I indicated, should be incorporated in this legislation so that if the farmer has the finances to repay the loan in any particular year he would be encouraged to do so.

He should also be given all possible assistance through agricultural research and by way of receiving the advice of officials having to do with the administration of the act so that he may be an efficient operator. You can see, Mr. Speaker, that there is a big field open with respect to this whole subject of agricultural credit. Many improvements can be made and are necessary in short-term, intermediate-term and long-term credit; and I suggest to the parliamentary assistant that the best way for this to be brought about is to refer the bill to the standing committee on agriculture for thorough study. It should be referred to the committee so those interested farm organizations such as the Canadian Federation of Agriculture who have discussed this matter, may have the opportunity to present their views in order that the bill may be revised in such a way as to provide a dynamic source of agricultural credit which is so needed in Canada today.

Mr. J. A. Smith (Battle River-Camrose): Mr. Speaker, in rising to take part in the debate on the bill to amend the Canadian Farm Loan Act I do so with mixed feelings. We were very pleased in reading the terms of the bill to notice that some provision has been made for a certain amount of relaxation of the limitations which have been in previous bills of this type and which in our opinion have more or less fettered the operation of the legislation as a whole. On the other hand, in studying the bill we were somewhat disappointed because of the fact that the changes do not go quite far enough.

In studying the legislation I have noticed that throughout the years there have been constant revisions, which in my opinion have all been good, and the proposed revisions this year are also good to the extent they go. On the other hand, they just do not go far enough.

Mr. Benidickson: Four years ago the loan ceiling was only $5,000.

Mr. Smith (Battle River-Camrose): Just one minute; I am going to bring that out. I noticed that a few years ago the ceiling was $5,000. It was increased to $10,000 and now it is anticipated that the maximum ceiling will be $15,000. I have mentioned that this is good but not good enough. I also note that throughout the years there have been changes in the percentage of money lent on the appraised valuation of the property concerned.

I notice that the amount has been increased from 50 per cent to 60 per cent and now to 65 per cent. We are prepared to give credit where credit is due, Mr. Speaker, but we will give just as much credit as is due and no more. We do not feel that the legislation is perfect in any way yet, and for this reason we should like to see further amendments.

I am particularly interested in the problem of the young man who wishes to take up farming. Some years ago a man could go out west, take up a homestead for $10, buy a team of horses, a sulky plow, a hayrack and so on for a few more hundred dollars and become established. That day is long past, and as we go down through the years we find that it has become ever more costly for a man to establish himself upon a farm. In fact in my part of the province of Alberta it would cost a minimum of $20,000 today for a young man to become established, and that not on the best grade of land in that part of the province but on average land.

That is a lot of money for a young man to have to pay to become established as a farmer.

We must remember that after he has paid $20,000 for the land he has to buy a full line of machinery. If he is engaged in mixed farming he has to go into cattle and so on. This is a costly investment, and for that reason I wish to submit, with all due respect to what has been done in the past, that a ceiling of $15,000 is far too low. I have here a copy of an application that one of my constituents submitted to the Canadian farm loan board. He was trying to borrow $10,000. It so happened that last summer he visited the branch office and met the man in charge at this particular point. He explained his case and was told that he did not have sufficient security for the board to grant him a loan of $10,000. One of the reasons advanced, of course, was that he did not have enough cultivated acreage.

I am thinking in terms of a farm of five quarter-sections of land. On these five quarter sections there were, according to this man's statement, 460 acres under cultivation. At that time the man had 50 head of cattle. Those of us who are acquainted with farming in the west will realize that it takes a goodly amount of pasture to feed the cattle through the summer and to have feed for them throughout the winter. He not only had 50 head of cattle but had 50 head of hogs; he was in the hog business as well. He had a full line of machinery, and an approximate estimate of the net value of the property he owned at that time would be $27,500. Nevertheless he was refused.

Mr. Benidickson: Was that the valuation of the appraiser?

Mr. Smith (Battle River-Camrose): Just a minute; if you give me time I will get to you. He was refused a loan by the manager of the particular branch. They did not send out an appraiser. He had $27,500 worth of property, requested a loan of $10,000, and an appraiser has not been there yet. Just the other day I advised this young man to submit a further application, because I hoped that the terms of the new act would make it possible for him to borrow the $10,000 he requested.

The matter of appraising has been mentioned. I have been given to understand by people who have attempted to deal with the farm loan board branch that the appraisers of this particular branch are the toughest appraisers to be found in the province of Alberta. Let us keep that in mind. What is the purpose of the legislation about which we are talking? Its purpose is to make loans to farmers. As I have mentioned, I am particularly concerned about having young farmers established on the land. Here was a young man who was prepared to take over his father's farm. He could not do so because of the fact that the farm loan board was not prepared to lend him a total of $10,000 on property that, according to a fair assessment, was worth $27,500.

In going through the history of this particular board it is interesting to find some of the things that have been said about it by people who have studied its operations throughout the years. I am quoting now from a statement of policy submitted by the Canadian Federation of Agriculture on January 26, 1956. They have this to say about the present Canadian farm loan board:

> The farm loan board provides only a relatively small proportion of the mortgage credit in this country—perhaps 15 per cent of the total.

This is interesting, Mr. Speaker, in view of the remarks made by my good friend the hon. member for Brandon-Souris.

> Its lending policies are conservative, and its own financial policies are also very conservative.

I do not know just what the policies of the present Progressive Conservative party happen to be, but I know that there is something wrong with the present policies of the Canadian farm loan board. Perhaps there is also something wrong with those of the party I have just mentioned. The statement continues:

> In a recent report the Auditor General noted that the farm loan board is providing for reserves substantially in excess of the requirements of the act under which it operates, and that nothing in the accounts pointed to the necessity for such reserves.

I submit, Mr. Speaker, that these reserves have been built up as a result of the fact that loans were not granted unless the farm loan board had more than gilt-edged security behind them.

> Because of its relatively small volume of lending, its costs per loan are high. If the board were to discontinue setting aside its special provision for losses above the legal requirements the interest rate could be reduced by one-half of one per cent. If further, its present low volume of lending (less than $8 million in 1953-54) could be doubled or better, lowered costs would, no doubt, compensate for a further one-half of one per cent reduction in the interest rate.

The reserves have already been mentioned and I will not deal with that matter. I can see no reason in the world why greater use should not be made of this particular act. This afternoon we listened with great interest to a description of the advertising policies used by small loans companies throughout Canada. They are highly successful. I think that all the farmers of the west are

asking is that the farm loan board, through its directors, branch managers and so on, give the farmers of the west an even break—no more—in securing legitimate loans. I wish to point out again, Mr. Speaker, that we welcome the relaxation that is being given to us in this particular bill, but in committee we shall likely ask that further relaxation or loosening up be given. We are not entirely satisfied by any means.

I have already mentioned the conservative policies of the board. It seems to me that this particular board must take its guidance from the parliament of Canada and, through the parliament of Canada, from the government and so on. In other words what it means is this. The present government of Canada has been exercising a conservative influence upon the Canadian farm loan board. I did not expect that influence from the present government.

I have also mentioned the fact that on the part of the officials of the Canadian farm loan board little or no attempt is made to sell the product they have; and the product they have is the authority to make loans available to the farmers and the fishermen of Canada when they are necessary. I would also mention the cumbersome type of application form used by the present Canadian farm loan board. I submit, Mr. Speaker, that there is only one other form, to my knowledge, that is any more complicated than this one, and it is the form the farmer must fill out when he files his income tax. I believe that the man who drafted this form must also have drafted its sister form, the farmer's income tax form. I believe it would take an exceptionally good lawyer to satisfy the directors of the Canadian farm loan board that these questions were answered properly.

Then there is the matter of appraisement. Just what is wrong with the present system of appraisement? In the particular case I have mentioned no appraisal was made, of course; there was just an offhand statement, "No, you don't get it". There was no attempt to find out whether or not the statements which this young man submitted were correct. When a man drives in from the country to the city and makes a personal application for a loan, surely the least we should expect from the farm loan board is a survey or investigation, through the municipal officials or some other body, to find out as a preliminary whether or not the figures submitted by this particular farmer were fair, honest and so on.

Mr. Benidickson: Will the hon. member give me, either now or privately, the name of this applicant?

[Mr. Smith (Battle River-Camrose).]

Mr. Smith (Battle River-Camrose): Certainly. I have already written to the office to which I am referring for a copy of the correspondence in this connection. I wrote about 10 days ago. If I do not get it I plan on taking the matter up with you in any case. The information will be available.

Mr. Argue: Let us hope you get results.

Mr. Smith (Battle River-Camrose): I hope so as well. As to the method of appraisal, may I say that we have all kinds of land inspectors and assessors in the province in which I live. Surely there is no reason in the world why an appraisal made, say, by the municipal assessors should not be accepted. In the province of Alberta we are headed for and hope some day to have a uniform system of assessment throughout the whole province, an assessment that is fair. Surely there should not be such a great spread between the assessed value of land as given by the municipal inspectors on a uniform basis and the appraisal given by the farm loan board officials at the present time.

I was much interested in the remarks made by the hon. member for Moose Jaw-Lake Centre a few moments ago when he said that the loans made under the farm loan board were few and far between. I think perhaps he was talking in terms of the province of Saskatchewan. I can also say that, to my knowledge, the loans made in the province of Alberta are few and far between. I am given to understand, Mr. Speaker, that there are certain areas in the province of Alberta which we cannot say have been blacklisted but in which we do say it is practically impossible for the farmers to secure a loan from this particular board.

An hon. Member: They are greylisted.

Mr. Smith (Battle River-Camrose): They are not greylisted nor blacklisted but just listed. They just do not get loans. Why? I submit that in the committee stage some of the questions I have asked should be answered.

In closing, Mr. Speaker, I repeat that we like to see a step in the right direction. We appreciate it. But we would far more greatly appreciate a bigger step in this direction which would result eventually in establishing young men on the farms of western Canada.

Mr. G. T. Purdy (Colchester-Hants): Mr. Speaker, in rising to say a few words in this debate I should first like to congratulate the parliamentary assistant to the Minister of Finance on the clear and concise report he gave with respect to the amendment to this act. Since his presentation I have listened with interest to the remarks made by the

hon. member for Brandon-Souris the hon. member for Kindersley and the hon. member for Battle River-Camrose.

Dealing with the last first, I would say that the hon. member devoted most of his remarks to a criticism of one special case which had come to his notice. Dealing next with the hon. member for Kindersley, I would say he commended the government on a special case, and that was his own. Going back to the first, I listened to the remarks of the hon. member for Brandon-Souris but I cannot really admit that he contributed too much to this debate. It seemed to me that his thinking was along the same lines he exhibited the other evening when he attempted to cure the ills of the maritime provinces on the decentralization problem by telling us we should go back to the policies introduced by the Conservative party at the time of confederation.

I would come now to the bill itself Mr. Speaker. I would say that I agree entirely with the principle of this bill, but I do not entirely agree with the application of its principle to date. At its annual meeting held in Truro in January of this year, the Nova Scotia federation of agriculture passed the following resolution under the heading of "Farm Credit Policy":

> Whereas our present credit facilities are not adequate to meet the requirements of an expanding industry in a way that producers may increase their production units to a profitable and efficient level.
>
> Resolved that provincial and federal authorities make every effort to expand all types of farm credit policy.

I am very hopeful, Mr. Speaker, that the amendment to this bill is carrying out the policy advocated. Perhaps those of you who are interested in the problems of Nova Scotia will recall that our provincial legislature has set up a royal commission to study all phases of agriculture credit. I would say that is a step in the right direction.

Now, sir, perhaps some of you will say to me, what right has a member from Nova Scotia to participate in an agriculture debate? I should like to state here that Nova Scotia, small as it is, has a farm population of 112,000, according to the census of 1951, compared with a farm population in Canada of 2,827,000. In other words Nova Scotia, in spite of all that has happened in the past, still has 4 per cent of the farm population of Canada.

I am going to deal now more specifically with the workings of the Canadian Farm Loan Act in Nova Scotia. In trying to lead up to this I placed a question on the order paper as far back as February 13 requesting a breakdown of the farm loans granted and applied for in Nova Scotia during the last calendar year. I might say that my reason for doing this was based on that resolution passed by the Nova Scotia federation of agriculture previously referred to. I was afraid that the Canadian farm loan board had forgotten there was any agriculture in Nova Scotia. As yet I have not received a reply to this question, so in dealing with this problem I must base my remarks on the last annual report of the Canadian farm loan board, for the year ending March 31, 1955.

As I have said, Nova Scotia has 4 per cent of the farm population of Canada; yet according to the figures in the annual report, at March 31, 1955, Nova Scotia had 3·4 per cent of the farm loans outstanding as compared with the rest of Canada. I am coming now to the application of the farm loan program in Nova Scotia in the last year. I want to again impress the fact upon you that Nova Scotia has 4 per cent of the farm population of Canada. According to this report, in the last year Nova Scotia was given only 1·2 per cent of the farm loans which were made, that is according to number, and according to amount we fared even worse because we got only 1·07 per cent of the loans.

In view of those figures, and in view of the fact I have not been able to get an answer to the question I asked concerning loans made in the calendar year, I find myself in the position where I must agree with the criticism which was raised at the annual meeting of the Nova Scotia federation of agriculture. They said that the Canadian farm loan board had lost interest in the farmers of that province.

Where is the parliamentary assistant? I hope he will follow me when I say that I trust this new program will mean the farmers of Nova Scotia will not be forgotten. I have given you the figures showing what we have had. Our farmers think this is a great plan if it is properly applied but they cannot see that, on the percentage of loans granted under the present scheme, they are being properly treated.

The farm loan board maintains an office in Halifax, the capital of Nova Scotia. With all respect to my good friends from Halifax, I would say that Halifax is not in touch with the rural portions of the province because it is so far away. Last year this loan office granted to the farmers of Nova Scotia 31 loans totalling $88,750. I might say in all sincerity that if a farmer loan organization in Nova Scotia, where there are 112,000 farm people and with all the applications they have had, cannot put out more money than that, then either agriculture in Nova Scotia is doomed or the farm loan board is not doing its duty.

Let me go back a bit. A few years ago it was my privilege to sit in this house, and it still is. With all respect to my good friends from Halifax—the war was on and Halifax was carrying the load for Canada, as every Nova Scotian did, but Halifax bore the brunt of it—I advocated that the place for the Canadian farm loan board was in the centre of agricultural production in Nova Scotia, not away out on the headland with the shipping, which had very little connection with agriculture. Although I made my point, it was indicated to me at that time that in addition to administering the Canadian farm loan, the farm loan board had to look after fishermen's loans. There was nothing I could say to offset that, because farming and fishing in the interior of Nova Scotia had nothing in common.

In view of the remarks of the parliamentary assistant I now find, sir,—and I am now saying this to the parliamentary assistant and through him to the Minister of Finance—that the terrific job the Canadian farm loan board had to do to look after loans to fishermen in Nova Scotia was to make four loans to the total of $1,291.11. Because of this new outlook on farm loan advances, I hope the rural people of Nova Scotia will be able to get a proper office in the centre of the province.

In addition to the improvement in the farm loan board administration, I hope the board will put its offices in the centre of the farming population where they will be in close contact with our farming problems. Why should the Canadian farm loan board, lending money to the farmers of Nova Scotia, be located where it is? Halifax is a wonderful city, but on the other hand the federal Department of Agriculture has its main offices in the constituency of Colchester-Hants. The Veterans Land Act, which lends money to put people on the land, has an office there, and the Nova Scotia government in all its wisdom—and it is a good government—has the agricultural college at Truro. The headquarters of all their agricultural activities is there. If I could only impress upon our federal people, if they are to play a real role and do a decent job for the farmers of Nova Scotia, the necessity of bringing their activities to the farmers rather than have the farmers going to them, it would be a great day for the farm loan board, for the Minister of Finance, for his parliamentary assistant, and for the member for Colchester-Hants.

Thank you very much.

Mr. Winters: Mr. Speaker, I wonder whether I might make a suggestion at this time. I wonder whether hon. members would agree to give this bill second reading tonight on the understanding that if that is done I shall move that it be referred to the standing committee on banking and commerce?

Mr. White (Middlesex East): No, sir. I move the adjournment of the debate.

On motion of Mr. White (Middlesex East) the debate was adjourned.

Mr. Winters: I move the adjournment of the house.

Motion agreed to and the house adjourned at 9.57 p.m.

ANSWERS TO QUESTIONS

The following answers, deposited with the Clerk of the house, are printed in the official report of debates pursuant to standing order 39:

GEORGE W. OFFEN—PAYMENT OF DAMAGES

Question No. 145—**Mr. Tustin:**

1. Did the Royal Canadian Air Force accept responsibility for damage to gill nets of George W. Offen, Carrying Place, Ontario, by their crash boat in the Murray canal zone on November 26, 1953?
2. If so, was any settlement made, and in what amount?
3. Was any influence brought to bear on Mr. Offen to accept this settlement? If so, by whom?
4. What value did Mr. Offen place on his complete losses?

Answer by: **Mr. Campney:**

1. No.
2. Although no evidence of legal liability was adduced, an *ex gratia* payment of $650, representing the cost of the gill nets, was offered and accepted.
3. No.
4. $5,150.

MILITARY PENSIONS—RETIRED PERSONNEL

Question No. 176—**Mr. Balcom:**

1. Has consideration been given by the government or the Department of National Defence to increasing the service pension of officers (male or female) of the permanent forces of Canada who retired before 1950, so as to bring their pension in line with those permanent force officers retired since the second world war?
2. If so, has a decision been made?
3. If not, will the matter be studied and reported upon?

Answer by: **Mr. Campney:**

1. No.
2. Not applicable.
3. No.

MILITARY PERSONNEL—AIR TRANSPORT COSTS

Question No. 185—**Mr. Diefenbaker:**

What was the total amount paid to (a) Trans-Canada Air Lines; (b) Canadian Pacific Air Lines; (c) British or commonwealth air lines; (d) foreign air line companies, from January 1, 1955 to date, in respect of transportation for (i) officers; (ii) other ranks of the Canadian defence services?

Answer by: **Mr. Campney:**

(a) (i) $1,192,358.83; (ii) $586,036.19.
(b)* (i) $136,488.53; (ii) $223,851.25.
(c) (i) $3,797.20; (ii) nil.
(d) (i) $70,269.34; (ii) $17,867.51.

Amounts given are for the period January 1, 1955 to January 31, 1956.

*—Excludes cost of transporting personnel—officers and men—under contract with C.P.A. to and from the Far East.

Questions

EXECUTIONS OF PERSONS RECOMMENDED TO MERCY

Question No. 199—**Mr. Diefenbaker:**

How many persons who had been recommended to mercy in the verdict of the trial jury have been executed in Canada since January 1, 1930?

Answer by: **Mr. Garson:**

Twenty-one persons.

BUTTER SALES TO D.V.A. HOSPITALS

Question No. 214—**Mr. White (Hastings-Frontenac):**

1. How many pounds of butter have been sold to D.V.A. hospitals in Canada under the assistance policy of the Department of Agriculture since February, 1955?
2. What was the price per pound for such sales?

Answer by: **Mr. Gardiner:**

1. The number of pounds of butter purchased by D.V.A. hospitals in Canada under the assistance policy of the Department of Agriculture since February, 1955, to February 28, 1956 was 252,144 pounds.

2. Each D.V.A. hospital has received a discount of 21 cents per pound on butter distributed under this program.

BUTTER SALES TO ARMED SERVICES CAMPS

Question No. 215—**Mr. White (Hastings-Frontenac):**

1. How many pounds of butter has been sold to army, navy and air force camps and establishments under the assistance policy of the Department of Agriculture since February, 1955?
2. What was the price per pound for such sales?

Answer by: **Mr. Gardiner:**

1. Nil.
2. See answer to No. 1.

POST OFFICE DEPARTMENT INSURANCE

Question No. 239—**Mr. Lennard:**

1. Does the Post Office Department carry insurance for any purpose?
2. If so, for what purposes, in what amounts, and with what company?
3. If no such insurance is carried, by what method is provision made for losses (a) which must be borne by the Post Office Department itself; (b) when it is necessary to recompense users of the postal service?

Answer by: **Mr. Lapointe:**

1. No.
2. See answer to No. 1.
3. (a) and (b): Charged to postal revenue.

HOUSE OF COMMONS

Friday, March 9, 1956

The house met at eleven o'clock.

SPEECH FROM THE THRONE

ACKNOWLEDGMENT OF ADDRESS IN REPLY

Mr. Speaker: I have the honour to inform the house that I have received a communication from His Excellency the Governor General, signed by his own hand, reading as follows:

Government House
Ottawa

7th March, 1956.

Members of the House of Commons:

I have received with great pleasure the address that you have voted in reply to my speech at the opening of parliament. I thank you sincerely for this address.

Vincent Massey

NATIONAL HOUSING ACT

ANNOUNCEMENT OF INCREASE IN INTEREST RATES ON INSURED LOANS

Hon. Robert H. Winters (Minister of Public Works): Mr. Speaker, I should like to inform hon. members of the decision to increase the maximum interest rate on insured loans under part I of the National Housing Act from 5¼ per cent to 5½ per cent. Corresponding increases will take place with respect to rates applicable to the other types of loans under the act. These rates are ceiling rates. Lenders are, of course, free to make loans at lesser rates if circumstances so warrant.

The statute authorizes the governor in council to fix the maximum rate of interest that may be charged for various types of loans. In respect of insured mortgage loans, the interest rate cannot exceed the yield on long-term government securities, plus 2¼ per cent as of the time the rate is fixed.

It is the expressed policy of the government to adjust the mortgage interest rate from time to time within the provisions of the statutory formula so that the lowest rate will be established which will attract on the market adequate mortgage funds. In accordance with this policy the rate was reduced from 5½ per cent to 5¼ per cent in February, 1955. It is now felt that rates under the act should revert to their former levels.

Actually, the interest rate on long-term government bonds would have justified an increase from 5¼ per cent to 5½ per cent last August, but the flow of funds to housing then, and until quite recently, has been good, with the result that no such action has been taken. Bearing in mind the continued high level of interest rates in general and the anticipated demand on investible funds in 1956, an increase is necessary now so that builders and home owners will have continued access to mortgage funds under the National Housing Act in the year ahead.

The change in the interest rate will have effect Monday morning, the 12th of March.

Mr. G. K. Fraser (Peterborough): Mr. Speaker, may I ask a question? Will applications that are in before that date come under the 5¼ per cent?

Mr. Winters: The rate becomes effective Monday morning, March 12. It will depend on the stage of the application being processed.

Mr. Fraser (Peterborough): If they were processed before that date, Monday morning, they would then come under the 5¼ per cent; is that right?

Mr. Winters: It depends on what date the application was approved. I do not wish to express myself particularly on that point because there are several stages in the processing of an application. Where Central Mortgage and Housing Corporation has given an undertaking to insure before next Monday the 5¼ per cent rate will apply.

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, would the minister permit a supplementary question? Will the government be introducing any liberalizing amendments to offset this restrictive change?

Mr. Winters: I think hon. members are aware that there is already a notice of motion on the order paper to amend the National Housing Act.

CRIMINAL CODE

AMENDMENT RESPECTING PAYMENT OF FINES UNDER SUMMARY CONVICTION PROVISIONS

Mr. J. G. Diefenbaker (Prince Albert) moved for leave to introduce Bill No. 167, to amend the Criminal Code (payment of fines).

Some hon. Members: Explain.

Mr. Diefenbaker: The object of the bill is to provide that when a fine is imposed under the summary conviction provisions of the Criminal Code there shall be mandatory action taken by the court to assure, subject to certain necessary reservations, that a warrant of commitment shall not issue for imprisonment forthwith of the person on whom the fine has been imposed in the face of the financial inability of that person to make immediate payment.

Motion agreed to and bill read the first time.

EXTERNAL AFFAIRS

MIDDLE EAST—REQUESTED SUSPENSION OF SHIPMENT OF AIRCRAFT TO EGYPT

On the orders of the day:

Mr. G. R. Pearkes (Esquimalt-Saanich): May I direct a question to the Minister of Trade and Commerce who I presume is acting as Prime Minister today in the absence of the Prime Minister? Will he issue a suspending order to prevent the aircraft assigned to the Egyptian air force being shipped from Halifax tonight? I understand that the Dutch freighter is due in Halifax this afternoon and after loading will sail tomorrow. This, therefore, is a final appeal to the government because if the government does not intervene—

Some hon. Members: Order.

Mr. Pearkes: —I am afraid—

Mr. Speaker: Order. I realize the importance of the question and the genuine desire of the hon. member to have something done with respect to the matter he has just raised, but this is not the time to make an appeal to the government and to try to prove why an appeal should be made. This is the time to ask questions. Having listened carefully to the question asked by the hon. member, it seems to me that the very same question was asked yesterday and dealt with at length. Replies were made by the government then to each and every question asked.

Mr. Pearkes: I wonder whether I might explain to Your Honour that this is not the same question in that I am asking for a suspending order whereas yesterday we asked for prohibition. This is different. A suspending order was issued before, and if I may I should like to direct my question to the minister and ask that a suspending order be issued at this time. That will be my final appeal.

Right Hon. C. D. Howe (Minister of Trade and Commerce): The Prime Minister made it quite clear in answering questions yesterday that the government does not intend to intervene in the matter of the shipment of Harvard planes.

[*Later:*]

On the orders of the day:

Mr. Howard C. Green (Vancouver-Quadra): May I direct a supplementary question to the Minister of Trade and Commerce in respect of the question asked by the hon. member for Esquimalt-Saanich. What possible harm would be done if the shipments of these planes were at least delayed?

Mr. Speaker: Order. This is not a question for the purpose of eliciting information.

Mr. Green: I submit that that question is asking for information.

Mr. Speaker: May I submit to the hon. gentleman that, in my experience, there has never been any hon. member standing at this time to ask a question who did not firmly believe that his question was one that should be asked on the orders of the day.

MIDDLE EAST—REQUEST FOR STATEMENT ON SITUATION

On the orders of the day:

Mr. J. G. Diefenbaker (Prince Albert): Mr. Speaker, I should like to address a question to the Secretary of State for External Affairs. Is he in a position to give any report regarding the apparently critical situation in the Middle East, and when he is replying will he tell the house and the country why the government adopt different principles in regard to arms sold by a contractor to the Egyptian air force than in sales by a government corporation dealing with Israel?

Hon. L. B. Pearson (Secretary of State for External Affairs): Mr. Speaker, though I did not receive notice of this question I rather anticipated that it might be asked, or one like it, and I therefore welcome the opportunity of making a statement on the matter referred to by my hon. friend, namely the situation in the Middle East.

The situation in that area, particularly the relations between Israel and her Arab neighbours, has been tense and the cause of potential conflict since the first day of Israel's existence.

There have been ups and downs in the position, but it has always been disturbing and worrying. Events of last week have added to our worries. However, there have been in the last year more immediately disturbing developments, such as the El Auja and lake Tiberias incidents, which did not result in conflict, and we must hope that not

only will conflict be avoided now but, more important, that the cause of conflict will be removed.

The situation, Mr. Speaker, seems to have eased somewhat in the last few days following the shock caused by the abrupt dismissal of Sir John Glubb from the Arab legion of Jordan and there have been somewhat reassuring statements from Middle East leaders.

Hon. members will have noted that Premier Ben-Gurion said on Wednesday: "This government will not start a war". At the same time, it was stated in Washington, from what are referred to as official sources, that there was nothing to indicate that an attack from either side was imminent.

The governments of the United States, the United Kingdom and France have been in consultation with a view to doing everything possible to avoid armed conflict in the area, and we ourselves are keeping in close touch with these governments on this and other matters almost daily.

Hon. members will also have noted that the Secretary General of the United Nations, a careful man not given to exaggeration or overoptimism, has recently stated his considered view, in reply to a question as to whether the Middle East was on the brink of war, that "We have moved away from the brink". He did not believe that there would be war, and he added that it was "even a little premature in his opinion to say that an arms race had developed".

It is true that during the week there have been disturbing reports of border incidents, but it should also be noted that neither Israel nor her neighbours have considered these serious enough, or as representing a dangerous enough development to warrant a request that the United Nations security council be called to deal with an imminent threat to peace; something that they have not hesitated to do in the past.

My view, therefore, is that the situation, while tense and difficult, as it has been for years, and while giving no ground for complacency and much for anxiety, is not such as to warrant interference in the shipment by a Canadian company of a few training planes which were equipped with no arms whatever and could not be made structurally effective for that purpose without at least two months' factory work. Such a shipment should not add to tensions or dangers in the area and could not upset any balance of armed strength between contending parties, nor does it represent in any way favouring one of those parties against the other. The record of the government in this matter over the years sufficiently disposes of that idea.

In conclusion, Mr. Speaker, I would like to repeat, and to emphasize what has already been said in this house, that neither Israel nor any of the Arab governments concerned can hope to gain anything from a resort to arms to settle their present differences. On the contrary, war would be disastrous to all concerned. It would result in the mobilization of world opinion, in the United Nations and elsewhere, in condemnation of the aggressor and in support for the victim of aggression. I cannot believe that this is a situation which any country in the Middle East desires to bring about. I can give this house and the country an assurance that the Canadian government will play its part with other friendly governments in efforts, especially through the United Nations, to avoid any such disaster and in helping to bring about peace and stability in that area.

Mr. Diefenbaker: Mr. Speaker, we welcome these statements of the minister which reveal more optimism than was apparent in the debate in the British House of Commons a day ago.

Some hon. Members: Question.

Mr. Diefenbaker: I repeat that the house and the country will appreciate the minister's optimism. I would now like to ask him if his unprepared text would permit him to answer the question I asked in addition to the one he has already answered. Why does the government of Canada apply different principles in connection with the sale by a private contractor of arms in dealing with the Egyptian air force than it does in the case of the government agency dealing with Israel.

Mr. Pearson: Mr. Speaker, the hon. gentleman did not give me notice of his question so he would probably allow it to stand and I will take it as notice. I wish, of course, to reject the assumption that there is any application of different principles in this matter.

Mr. Knowles: Mr. Speaker, I should like to ask a supplementary question. If notice of this question is being asked to stand, would it not be a good idea to suspend tonight's shipment of planes to Egypt?

INQUIRY FOR RETURN

TRANS-CANADA PIPE LINE—INCOMPLETENESS OF RETURN FILED

On the orders of the day:

Mr. M. J. Coldwell (Rosetown-Biggar): Mr. Speaker, I wish to raise what is really a question of privilege. I hold in my hand a copy of sessional paper No. 174B dated Tuesday, February 21, which I have looked over

carefully. The return asks for a copy of all memoranda, correspondence, telegrams and other documents exchanged between the government of Canada and the governments of any of the provinces since January 1, 1954, regarding proposals for the building of the trans-Canada pipe line. In going over the return I find that in a letter to the Prime Minister from the provincial treasurer of Ontario, dated November 7, 1955, there is an indication that the provincial treasurer of Ontario handed the Minister of Trade and Commerce the preliminary report from Mr. Grant Glassco on certain aspects of the trans-Canada pipe line, as well as sending one to the Prime Minister. This is not included in the order for return and I think it should be. The final report of Mr. Glassco is properly included as one that was sent to the Prime Minister by the premier of Ontario on November 25.

Then, in a letter from the Minister of Trade and Commerce to the Ontario provincial treasurer dated September 17, 1955, we read:

> During our recent discussion about the trans-Canada pipe line, I left with you copies of a letter to me from the vice-president of the company, Mr. Coates, dated September 1, 1955, together with a revision of the proposal upon which Trans-Canada's letter was based.

This letter is not included in the order for return and I take it this is a document exchanged between the government of Canada and the government of Ontario. If not in my return I would have expected to find it in the return for the hon. member for Dauphin, which return was for a copy of correspondence, etc., exchanged between the government and Trans-Canada Pipe Lines, but it is not there either. Having searched the records, I am asking that these documents be included.

Right Hon. C. D. Howe (Minister of Trade and Commerce): With regard to the preliminary report of Mr. Glassco to the provincial government, may I say I received a telephone call from Mr. Porter in which he said certain errors had been discovered in Mr. Glassco's report. He asked me to return the report to him and said that he would replace it by the report which was tabled. Naturally, having been asked to return the document, it is not in my possession. I had it but I do not have it now. As far as the letter referred to is concerned, I will have a search made today and see that it or any other letter that has not been tabled is tabled.

Mr. Coldwell: I take it that the document you returned was corrected and is in the file?

[Mr. Coldwell.]

Mr. Howe (Port Arthur): That is right.

Mr. Coldwell: And the other documents will be looked after by the minister to see that they are tabled, if available?

Mr. Howe (Port Arthur): Yes.

HARBOURS

HALIFAX—REPAIR OF SHED NO. 27

Mr. S. R. Balcom (Halifax): I should like to direct a question to the Minister of Transport. Is it the intention of the national harbours board to proceed at once either to rebuild or to replace shed No. 27 that collapsed recently owing to the unusually heavy fall of snow in Halifax?

Hon. George C. Marler (Minister of Transport): I have been advised by the national harbours board that this matter has received prompt attention and that steps are being taken either to repair or to reconstruct the shed and that it will be put back into operation as soon as possible.

UNEMPLOYMENT INSURANCE

INQUIRY AS TO PAYMENT OF RAIL FARE OF UNEMPLOYED

On the orders of the day:

Mr. J. W. Murphy (Lambton West): Yesterday I directed a question to the Minister of Labour. I wonder whether I could ask another question in order to clarify what I had in mind yesterday. It concerns the province of Quebec where certain labourers were specially trained to perform certain agricultural services. Would these people, for instance, be under, shall I say, the practice of the co-operative idea? Will the two governments, provincial and federal, pay the transportation charges if they were asked to go to, say, Ontario to engage in those special services?

Hon. Milton F. Gregg (Minister of Labour): Mr. Speaker, I should like to look at my hon. friend's question. Perhaps if he would be good enough to give me information on a special case I would be better able to give him an exact reply. In replying to his question generally I should like to say that the practice of assistance to workers, whether they were trained prior to going or were already fit, to move from one place to another, has been done sparingly, as my hon. friend will understand, and subject to a means test.

Mr. Murphy (Lambton West): I have just a short supplementary question. Yesterday the answer of the minister applied to winter.

Would the same practice apply, say, to spring or any other season of the year?

Mr. Gregg: Yes. It does not apply to any particular season of the year.

HEALTH AND WELFARE

REQUEST FOR AMENDMENT OF OLD AGE ASSISTANCE REGULATIONS

On the orders of the day:

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, may I direct a question to my hon. friend the Minister of National Health and Welfare. In view of the increased assessments on homes taking place in Winnipeg and in many other municipalities across Canada, will the government consider amending the section in the Old Age Assistance Act regulations which sets the income value of an old age pensioner's home at 5 per cent of the assessed valuation, so that the pensions paid under that act will not be reduced because of this action by municipalities?

Hon. Paul Martin (Minister of National Health and Welfare): As my hon. friend knows, this is a matter over which I as Minister of National Health and Welfare would have no control. It is a matter that involves consideration by the provinces as well. I will give my hon. friend's question some further consideration to that already given. The matter is one that does not rest with the federal government alone.

Mr. Knowles: But the regulations are federal regulations.

Mr. Martin: No. The regulations are not federal regulations. The regulations are devised by all of the provinces and the federal government. This is a good opportunity to tell my hon. friend that he should not persist in giving that information to the public, as I know he did on at least two occasions.

Mr. Knowles: Then will the minister take up with the provinces the desirability of making such an amendment to the regulations?

Mr. Studer: Take back what you said.

POST OFFICE DEPARTMENT

BRITISH COLUMBIA—REFERENCE TO THEFT OF PACKAGE

On the orders of the day:

Mr. W. M. Hamilton (Notre Dame de Grace): Mr. Speaker, I have a question for the Postmaster General. Since evidence at a recent trial in British Columbia disclosed that a package containing $44,500 was placed in a wastepaper basket for safekeeping—

Some hon. Members: Question.

Mr. Speaker: An hon. member asking a question is entitled to give enough facts to make his question intelligible.

Mr. Hamilton (Notre Dame de Grace): Since evidence at a recent trial in British Columbia disclosed that a post office package containing $44,500 was placed in a wastepaper basket for safekeeping and subsequently stolen, will the Postmaster General take steps to inform his branches that such a procedure is not advisable?

NATURAL GAS

REQUEST FOR ANSWER TO QUESTION ON ORDER PAPER

On the orders of the day:

Mr. Erhart Regier (Burnaby-Coquitlam): Mr. Speaker, I should like to address a question to the Minister of Transport. In view of the coming debate on the Trans-Canada pipe line, can I expect an early answer to question No. 94 on the order paper, which deals with the price of natural gas?

Hon. George C. Marler (Minister of Transport): Mr. Speaker, I think the answer is ready and it will be in *Hansard* either today or Monday.

DRUGS

USE OF STILBESTROL IN POULTRY AND LIVESTOCK FEEDS

On the orders of the day:

Mr. James A. McBain (Elgin): Mr. Speaker, I wish to direct a question to the Minister of National Health and Welfare. Is it now legal in Canada to use the drug stilbestrol in poultry and livestock feeds?

Hon. Paul Martin (Minister of National Health and Welfare): Mr. Speaker, in view of the importance of this matter, I have already indicated to the hon. member for Essex West (Mr. Brown) and the hon. member for Kent, Ont. (Mr. Huffman) my intention to make a reply to this question perhaps early next week.

RABIES

REPORTED OUTBREAK IN SOUTHERN ONTARIO

On the orders of the day:

Mr. J. A. Charlton (Brant-Haldimand): Mr. Speaker, I should like to address a question to the Minister of Agriculture. In view of the fact that I have not had an answer to the question I asked on Wednesday with reference to the serious outbreak of rabies,

are we to take it that the government is not yet sure of its policy in regard to this rather serious matter?

Right Hon. J. G. Gardiner (Minister of Agriculture): No, the department is being very careful to ensure that the figures that are given are absolutely correct.

ROYAL CANADIAN AIR FORCE

INQUIRY AS TO CRASHES IN EUROPE

On the orders of the day:

Mr. Gordon Churchill (Winnipeg South Centre): Mr. Speaker, I have a question for the Minister of National Defence, notice of which I have not given him, but if he cannot reply now perhaps he might take this as notice. Has the Minister of National Defence a report available on the reported collision and destruction of four R.C.A.F. planes in Europe recently?

Hon. R. O. Campney (Minister of National Defence): No, Mr. Speaker, not in any more detail that we have read in the press. It so happens that the destruction of the four planes in question was observed only by a number of civilians and there have been great discrepancies in their stories. Therefore a most careful investigation of the remains of the planes and a most careful examination of the witnesses is now under way. Until we receive a detailed report I do not think it would be desirable to make any further comment.

SUPPLY

The house in committee of supply, Mr. Robinson (Simcoe East) in the chair.

DEPARTMENT OF FISHERIES

General services—

135. Departmental administration, $301,000.

Mr. Stick: Mr. Chairman, last week when the adjournment of this debate took place I was speaking about fishery problems. May I now join with the other hon. members of this house in welcoming the minister back to his seat. I do so because this department needs a head and when the head is away it does not get the consideration it should.

Many questions have been raised during this debate regarding territorial waters and our jurisdiction over them. May I say that in the debate in the committee on fisheries in 1953 we examined a bill entitled "an act to protect the coastal fisheries". That was on February 13, 1953. An extended examination of that bill took place. For the benefit of those hon. members who do not appear to understand what the three-mile limit means I wish to quote from the proceedings of the fisheries committee dated February 9, 1953. At that time the minister was replying to some questions on this matter and he said this:

> It was this matter of territorial waters to which most of the debate related. We have had such debates on previous occasions when fisheries bills were up. The desire of most fishermen in Canada is understandable, that our territorial waters be extended out as far as possible to preserve the inshore fisheries.

In reply to a question which I asked him the minister made this reply:

> The French and the Americans still have certain rights on the Newfoundland coasts; but fishing on the Grand Banks is probably a very good example of the fact that in the background the British, in respect to having freedom of the seas, as do many nations, feel that they have a historic right in the fisheries which are not within our three mile limit, but which may be upon our continental shelf.

On that occasion I quoted the judgment of the international court at The Hague. Without going into too much detail, I should like to put on record some of that judgment. This is what I said at that time, as recorded on page 11 of the minutes of proceedings of the committee:

> The 20th day of October, 1818—Convention signed at London between Great Britain and the United States on the 20th day of October, 1818. That was the first. That dispute was taken before The Hague court, and now I will read the judgment. The judgment of the court at The Hague was as follows:
>
> In case of bays the three marine miles are to be measured from a straight line drawn across the body of water at the place where it ceases to have the configuration and characteristics of a bay. At all other places the three marine miles are to be measured following the sinuosities of the coast.

Here is the judgment:

> Now therefore this Tribunal in pursuance of the provisions of Art. IV hereby recommends for the consideration and acceptance of the high contracting parties the following rules and method of procedure for determining the limits of the bays hereinbefore enumerated.
>
> 1. In every bay not hereinafter specifically provided for the limits of exclusion shall be drawn three miles seaward from a straight line across the bay in the part nearest the entrance at the first point where the width does not exceed ten miles.
>
> 2. In the following bays where the configuration of the coast and the local climatic conditions are such that foreign fishermen when within the geographic headlands might reasonably and *bona fide* believe themselves on the high seas, the limits of exclusion shall be drawn in each case between the headlands hereinafter specified as being those at and within which such fishermen might be reasonably expected to recognize the bay under average conditions.

Then it goes on to specify certain bays. It specifies Fortune bay, in Newfoundland and, as may be of great interest to my friend,

the hon. member for Digby-Annapolis-Kings, is specifies the bay of Fundy. It goes on to say:

> It is understood that nothing in these rules refers either to the bay of Fundy considered as a whole part from its bays and creeks or as to the innocent passage through the Gut of Canso, which were excluded by the agreement made by exchange of notes between Mr. Bacon and Mr. Bryce dated February 21, 1909, and March 4, 1909; or to Conception bay, which was provided for by the decision of the Privy Council in the case of the Direct United States Cable Company *v.* The Anglo American Telegraph Company, in which decision the United States have acquiesced.

Now we come to the crux of the whole matter of the three-mile jurisdiction. After the international tribunal at The Hague made the ruling on the three-mile limit, that was not found satisfactory over a period of years. The matter was debated by the league of nations, but no decision was arrived at there. It was taken from the league of nations to the United Nations, with the same result, so that today the three-mile limit is recognized by certain countries and not recognized by others. It may be interesting to note which countries favour three miles and which countries favour 12 miles. I was quoting from Sessional Papers, Volume XLV, No. 24, 1911. I also quoted from the Digest of International Law by Hackworth, Volume I, chapters I-V, page 628:

> Various points of view with reference to the breadth of the territorial waters were expressed provisionally or in principle in the second committee of the Conference for the Codification of International Law held at The Hague in 1930, at its thirteenth meeting held on April 3. The delegates of certain states were in favour of the acceptance of the principle of a zone on the high sea contiguous to the territorial sea in which the coastal state would be able to exercise certain control. The views as expressed in the meeting of April 3 on these subjects were summarized as follows: Union of South Africa, 3 miles; Germany, 3 miles; United States, 3 miles; Belgium, 3 miles; Great Britain, 3 miles; Canada, 3 miles; Chile, 6 or 3 miles; China, 3 miles; Colombia, 6 miles; Cuba, 6 miles; Denmark, 3 miles, Spain, 6 miles; Finland, 4 miles—
>
> —and perhaps what is more important to us in Newfoundland—
>
> —Italy, 6 miles; Poland, 3 miles; and Portugal, 12 or 6 miles.
>
> So you will see generally from this that the matter has not been finally settled yet.

It was interesting for us to note that Portugal favoured a 12-mile limit, because Portuguese trawlers go out year after year fishing on the Grand Banks off Newfoundland and also fishing in our territorial waters outside the three-mile limit. We in Newfoundland believe that the Grand Banks are the breeding place of the codfish that come to our shores in such numbers year by year and we believe that, as a result of this intensive fishing that is going on at the Grand Banks at the present time, there are signs of depletion and if it is continued year after year it will affect the inshore fisheries in Newfoundland. If that is so, this question of territorial waters and of international agreements regarding conservation should be taken up and continued vigorously by this government.

I have spoken on this before and I cannot emphasize too strongly today, as far as the future fisheries of the codfish in Newfoundland are concerned, particularly on the southwest coast and certain parts of the northeast coast, that this matter will have to be pursued with the governments of Spain, France and Portugal so that some international agreement may be reached and some form of conservation may be agreed to between the countries. I make this plea this morning because I think that in the course of time we shall have to do something about it.

With regard to the territorial waters, again it may be interesting to note that quite lately Peru and Ecuador extended their jurisdiction over the territorial waters up to 200 miles. They seized fishing boats well off the coast, about 200 miles out, and brought them in to port. They were released only after a fine had been paid. It may be interesting to note also a statement by President Truman in 1945 regarding the continental shelf. I quote from page 16 of the report of the proceedings of the committee on February 9, 1953:

> In 1945 President Truman made two declarations on a statement of policy of the United States government. One of those declarations related to the continental shelf in which the United States claimed sovereignty over the subsoil resources in the continental shelf and at the same time made it very clear that the character of the waters above it remained unaffected.

This means that the United States claims jurisdiction over the continental shelf but not the waters above it. It may be interesting to note also that the United States has certain fishing rights on the south coast of Newfoundland. The Grand Banks are part of the continental shelf off the coast of Newfoundland. Now that the United States has claimed jurisdictional sovereignty over the continental shelf, it may be that in the course of time there will be one step further, that they claim jurisdiction over the waters above the continental shelf. If this takes place, Canada will be in a position to claim jurisdiction over the Grand Banks.

The time has come, in all this confusion in international law about the three-mile limit and whether it should be three miles, ten miles or 12 miles, for a decision to be arrived at by someone. Somebody has to take the lead in this matter. I advocate now without

any reservation that Canada, which in international affairs is playing its part so brilliantly, now take the lead and notify the other powers that it will extend jurisdiction over its continental shelf for the full 12 miles. That is quite a statement for me to make, but I am convinced that somebody must give the lead and I believe that Canada is the proper one to do it. This government must take its courage in both hands, make that announcement and stick by it. I believe that if we do that other nations will follow our example and, instead of having a three-mile territorial jurisdiction, which is in dispute so often, we would settle the matter once and for all, and most of the countries in the world would accept the 12-mile limit. That is all I have to say regarding the territorial jurisdiction over our waters.

There is one point in this discussion on fisheries that I think is very important. I have studied the set-up of the fisheries organization of the federal department in British Columbia. Let me say right here that as a result of my visit there a few years ago I was amazed at the efficiency of the officials, their grasp of the situation there and their control over the fisheries of British Columbia. I discussed this matter with Mr. Mayhew, who was then Minister of Fisheries, and said, "We want that kind of organization on the east coast of Canada." Our fisheries are being organized, it is true, and many improvements have been made in the last three or four years, but until we have such an organization on the east coast as they are on the west coast of Canada our fisheries are going to suffer. Let me give you my views of an outline of fishery prospects for the whole of North America. On the Pacific coast all or practically all fisheries are regulated. They are regulated because if intensive fishing takes place depletion will also take place and to preserve the fisheries on the west coast of Canada conservation measures must be taken and have been taken in conjunction with the United States of America. Therefore if you cannot catch any more fish—I use the term "fish" in its broadest sense—on the west coast without depletion you can understand that you cannot increase your catch there very much. The same situation has taken place on the fishing banks off the New England coast. The same thing is true off the Nova Scotia coast.

Therefore the only natural fishing resource left in the whole of North America today is Newfoundland, Labrador and possibly Greenland. You have 170 million people in the United States and Canada with a natural increase of about 4 million a year. These people have to be housed, clothed and fed. If the fishing industry is to supply the increasing population and the big demand of these 170 million odd people for fishery products, they will have to go further afield and look for the natural product. The only place left for them to go is Newfoundland and Labrador.

Evidence of that has been plainly shown during the last two or three years when we have had Nova Scotia merchants coming from Nova Scotia to Newfoundland to buy our salted codfish in its raw state. That tendency is going to increase. Therefore it is necessary in my opinion that a complete survey of the fishery prospects of the whole of the east coast of Canada be undertaken without delay. It will be too late when depletion takes place. The time to begin that is now. In that connection I should like to point to the Atlantic salmon. Many years ago we used to catch Atlantic salmon in very large quantities, but the catch has been decreasing year by year and the need for preservation of the salmon and for conservation methods has reached such a state now that something drastic will have to be done.

Last year I also mentioned our herring fishery. The herring used to come into Fortune bay literally in millions. For some reason or other they left Fortune bay and about a year or so later they struck into bay of Islands. In the last two or three years they have been leaving bay of Islands. Nobody knows where the herring go or the reason for this coming and going. In answer to a question of mine last year, the minister said that the lack of fishery scientists was the cause of the delay in making a survey of the herring fishery. I do hope that in the coming year something definite will be done so that we may know more about our herring, where they go and why they do not come into our shores regularly. Our herring fishery has become a very important fishery. The demand for our herring is increasing and prices are good. When the minister is replying perhaps he might say something about this matter.

I was very glad to hear the minister say the other day that the salt codfish industry is beginning to look up. It is only two or three years ago that we had a depression in the industry. I am glad to see that the methods adopted by the Department of Trade and Commerce in the marketing of our salt codfish are beginning to have beneficial results, and I must give credit where credit is due. I am very glad to hear that we have no surplus of salt codfish this year. In fact, prices are beginning to become better. This is a matter of great satisfaction to our fishermen because they have been fishing under very adverse conditions for a number of years. This will

encourage our fishermen to continue their calling and go out on the high seas to earn their daily bread.

The parliamentary assistant to the Postmaster General, who comes from a fishing community in Nova Scotia, made a statement the other day with which I wholly agree. He appealed for wharves and breakwaters to protect our fishermen in the different places from which they fish. I agree wholeheartedly with what he said, and I should like to give one example now of what happened in my riding in a place like Whiteway where they never had any protection or wharves. They asked me whether I could get them a wharf. So badly were they in need of a wharf for protection that they offered to work on it if the timber could be supplied. The wharf was built. It is a wharf and breakwater combined. The very day that the wharf was completed 5,000 pounds of mackerel were landed on the wharf. That was early in September and from September until November, when the mackerel fishing season ended, 250,000 pounds of mackerel were landed on the wharf. That is encouraging, and we want more encouragement.

We like to see our friends from Nova Scotia come and buy our fish. We place no restrictions on them. It creates competition with our own merchants and the consequence is that our fishermen probably get a better price. But how long the people from Nova Scotia will come there to buy our raw material is a matter of doubt because what has been happening is that they come there, buy our raw fish, process it and sell it in the markets in which we sell it. The time is coming when we are going to process our own fish.

This makes it all the more important that there should, as I said a moment ago, be conservation. The fisheries must be regulated on the east coast as they are on the west coast. Some control must be exercised, some organization must be set up similar to that on the west coast, and I think the time to do it is now. There is not much more I can say regarding the fisheries on the east coast except that reference has been made to the number of fishermen decreasing. When the minister replies I should like him to give me statistics for the last five years as to the number of fishermen so that we may know definitely one way or the other whether our fishermen are leaving the industry or whether they are staying with it. Some people think our fishermen are leaving the industry, and in some places they may be. If this is a fact, then it is all the more reason for regulations and for encouragement to our fishermen to carry on their vocation in life so that this industry, which is becoming more important to Canada day by day may, be preserved.

I am not going to talk any more about the nutritious food which comes from the sea, but it is increasingly evident to me in Ottawa and other places I visit that the people of Canada are becoming more fish conscious than ever. If we are to supply the demand we must preserve the natural elements of our fishery products so that Canada may get the food which is required and so that our fishermen may get the returns which are so justly due them.

Mr. Murphy (Lambton West): I would be very ungrateful, Mr. Chairman, if I did not first say how much I appreciate the courtesy of the Minister of Fisheries (Mr. Sinclair) last Friday when he said he would hold over an item in the estimates dealing with lamprey control until I was present. I am very glad, too, that he indicated to the house I was speaking to a group on Friday night and dealt to a great extent with the efforts of this government, in partnership with the United States government, in connection with conservation. I should like to tell the minister, too, that the group was much larger than I expected, numbering some 450 as a matter of fact, who were conservation conscious. I was amazed that in that little area in southwestern Ontario people should gather in such large numbers because they were concerned about fish and wildlife and other aspects of conservation.

In the course of the discussion afterwards, and even prior to the meeting, it became quite apparent why they were so vitally concerned. I think I should make a point of this when I deal with the lamprey situation, and I should like to deal with that now rather than wait until that particular item is called in case I am not here then. All you need to do is to look at any good map of Ontario to note the number of streams that flow into Georgian bay, lake Huron and lake Superior which are infested with this curse of the fishing industry, the lamprey, to note how seriously it will affect fishing in these areas. The point I should like to emphasize just now is that this will seriously affect the tourist revenue of the Dominion of Canada. Three or four years ago I wondered why some people were not going back to areas in northern Ontario in which there was good fishing, that is speckled trout and other types of trout. I have learned since that it was because the lamprey had gotten into the streams and into the lakes and, as a matter of fact, had made sport fishing a bygone sport in those particular areas. I think that is a viewpoint we must not overlook because after all is said and

done, the tourist industry of Canada is of vital concern. It brings in United States dollars and we are looking forward to the day when the tourist revenue can be increased and multiplied. I think the efforts of the government and this joint commission will make a great contribution to that most important industry.

I think a great many people, including members of the House of Commons, do not realize that Canada has the greatest fresh water fisheries in the world. This may seem strange to a lot of people, and of course the share of the fresh water fishery is small when compared to what is obtained on the west and east coasts. Nevertheless, it is important. I have dealt at some length with this problem in the past and the committee that was set up last year was presented with the most interesting evidence. The United States government has only recently appointed their members to the international joint commission. I am hoping that the minister will, later in the session, suggest that perhaps in June or July we might have a one day sitting to get a report from the joint commission showing what has been accomplished, because the efforts of both governments through the international joint commission are being very closely observed. I know that personally I would welcome an opportunity of listening to these experts from the joint commission as to what has been accomplished. As I said a moment ago, I am sure that there are three million or four million people in Ontario alone who would also be interested in knowing what has been accomplished.

I never realized before, Mr. Chairman, but since I have made a study of this problem for about a year I now realize it is much bigger than I ever expected. At that time we heard that there were some 50 streams around lake Huron just north of Manitoulin island that were the spawning grounds for the lamprey. Of course, at that time there was no assurance those were the only streams, I appreciate that. We have since learned from a number of reports that there are spawning grounds in lake Erie. I am sure the minister has files in his office that give more data than I could give. I have noticed statements from our own fishermen that even streams down my way going into lake Huron also seem to be spawning grounds. I am going to relate to the minister a little experience to illustrate how serious this thing is becoming. Last year a little way from my place on lake Huron an old chap was fishing off a jetty for perch. He caught one and thought he had something that weighed about 15 pounds from the way it was fighting. When he landed it he found that there was a lamprey attached to the perch and it would not let go until he had the fish on the dock. When the trout in lake Huron have been devoured these lamprey are bound to attack some other type of fish. Reports have been coming in from the fishermen of lake Erie as well as lake Huron that other types of fish have been taken into nets showing evidence of having been attacked by these lamprey. I think that confirms what was said before, that when the lamprey have destroyed all the trout in the great lakes, which amount to about $5 million a year, they will then attack the whitefish and the pickerel.

I may say, as the minister no doubt knows, that my fishermen say there is already evidence that they are attacking the pickerel.

Mr. Macdonnell: What size are they?

Mr. Murphy (Lambton West): Oh, about four, five or six pounds. If that happens, the lamprey will destroy the commercial fishing industry in the great lakes. The point I should like to emphasize is, as I said a moment ago, that this job that faces the international joint commission is much bigger than we expected. Here is a department of fisheries report and I think I should put on the record what it says at page 52. It shows to what extent efforts have been made to eliminate this curse of the fishing industry, and what vital efforts must be made now and later to rehabilitate the industry in those areas. Now, this deals with lake Superior:

> The lamprey control program which is presently confined to lake Superior, the last stronghold of the valuable lake trout in the Great Lakes system, was forwarded by federal funds and the co-operation of provincial personnel of the Department of Lands and Forests. Approximately 600 streams tributary to lake Superior on the Canadian side of the lake were surveyed and assessed as potential lamprey spawning streams.

Mr. Chairman, it is going to be a terrific challenge to man to combat this predator because if there are that many spawning streams on the Canadian side there may be that many on the United States side or even more. Last session it was suggested that effort would be confined to lake Superior to hold the line. I disagreed with that idea and I still do. I quarrel with the suggestion of the provincial department of government on this idea of having hatcheries and restocking the lakes. I think we all agree that if it becomes necessary to assist nature to rehabilitate the fishing industry, it can be done only through hatcheries. Some argument developed last fall between myself and the fishermen on one side and an official of the Ontario government on the other side who contended that

restocking the lakes and keeping the hatcheries open was like spitting in the ocean. At that time I said and I think it is worth while repeating—that they had had a grand experience in that activity because that is all they have been doing over the last several years, namely spitting in the ocean.

Just recently, as a matter of fact, a statement came out from much higher authority in that particular government saying how successful they were in stocking some inland lakes with trout and so on. But the stocking of lakes or the restocking of them is a sort of relative term. You can stock a small lake with maybe a few thousand trout and it would be a successful operation. But a few thousand trout in lake Huron or in lake Superior would be like spitting in the ocean, and it would be a small spit if we had that many dumped in the Atlantic or the Pacific ocean. It is therefore a relative term. If we are going to accomplish anything in these commercial fishing areas, the figure must be in the millions or billions of fingerlings.

I am going to emphasize here my own opinion which is substantiated by the fishermen in my area and, I am sure, by other fishermen. In the first place, let us make a joint attack. Let us make the attack in lake Huron as well as in lake Superior. The other day the minister indicated that United States scientists had perfected a jelly or some poisonous substance which could exterminate four or five generations of lamprey while they are still in the mud. That was certainly good news because, as we know, these lampreys stay in the mud for four years before they ever go out to the great lakes. When they go out they are four or five inches long and when they come back to spawn they are 20 to 24 inches long. That is the growth in one year, and indicates the amount of food they have consumed and the damage which they can do. I therefore submit that we must gamble a little bit.

In the first place we must get more money for this project to eliminate this curse to the fishing industry not only in lake Superior but in the other inland lakes. We must get more money to enable the joint commission to make that joint attack. If we wait, with respect to lake Huron, until the lamprey is exterminated in lake Superior, that will be at the earliest—if all the lampreys can be exterminated—a matter of four or five years. I think that is recognized as being a fair estimate. It might be 8 or 10 years before they are exterminated. In the meantime the lamprey will have become so injurious to the industry in lake Huron and in the other lakes below that there will not be any fishing industry left and it will be a terrific job at that time to kill the lamprey unless some new means have been devised whereby there can be made an attack which will be much more effective than what we anticipate even at the moment.

I understand three hatcheries have been opened in Michigan or are being opened there —and the same in Wisconsin—in order to restock these lakes. They apparently realize that restocking is necessary. I suggest, Mr. Chairman, that if we can start now on a real effort to restock these lakes with these small fingerlings, in four, five or six years they would grow to the extent that they would be commercial fish, and by the time we had the lamprey under control the trout industry would be re-established. The lampreys, as a rule, are not going to attack small fingerlings. As a rule they will not attack until the fish are three or four years old. I urge that this extremely important industry receive the encouragement of the individual members who are interested in the problem and also of those on the treasury benches to whom the ministers must submit their estimates. I appreciate the extra amount that the minister obtained this year for this particular job. When he replies to the various arguments of the different members, I hope that he will state how much is the United States contribution and also whether individual states are making special efforts.

I have noticed some items in the press—as I think I said when I spoke on this subject some time ago this year—to the effect that the state of Michigan appropriated some $500,000 to rehabilitate the fishing industry, with regard to both commercial and sport fishing. That was a project over several years. There is an item—I am sure the minister has it—from Washington. I do not know what publication it is in. It may be that it is an Associated Press item. I cannot give the date. I hope I may just quote from it. It says that about 5,000 poisons have been tested and several of them appear to be promising. This is in connection with a substance to exterminate and kill the lamprey. The other item I want to refer to is this. It is an item out of Washington. I think it is last April, Mr. Chairman. It is as follows:

> Warren F. Looney, State Department official who helped negotiate the treaty last fall, said it was estimated that it would take six to eight years to bring the lamprey under control. The measure has strong support in Canada and is assured of passage in the Canadian parliament . . .
>
> Senator Charles Potter (R. Mich.) urged ratification of the treaty and said Canada is spending as much on lamprey control as the eight U.S. states fighting it in the Great Lakes.

I do not know just what he meant by that statement. I had in mind that he may mean

what the eight U.S. individual states are contributing, but I am not quite sure. I have noticed other items indicating that some of the individual states were making great contributions. I know the minister has this matter under consideration. I do not hesitate to express my own view. On the United States side they have lake Michigan, whose waters are all in the United States. I am hoping that their contribution will be pretty well in proportion to the area of the lakes themselves.

I do not intend to take up a great deal of time on this subject. I have dealt with it at some length. I think the public is fully aware of the seriousness of the situation. As a matter of fact, the Canadian Chamber of Commerce, which represents Canadian chambers of commerce from coast to coast, passed a resolution at their last meeting in Winnipeg. I know the minister has a copy of the resolution, which is pretty much the same as others which have been forwarded to him. As hon. members might suspect, that resolution of course was prompted by the Sarnia chamber of commerce at my suggestion. The Canadian chamber of commerce had no difficulty in accepting it.

I am going to say in conclusion, Mr. Chairman, that the people to whom I have spoken, who are in the commercial fishing industry, are more satisfied today than ever before that the necessary steps will be taken by this joint commission, through their respective governments, to rehabilitate the fishing industry. I am glad to make that statement because I personally have confidence in the ability of the minister to execute progressive measures with respect to this problem.

Like the fishermen of all those great lakes, I regret that the setting up of this commission was not proceeded with years ago. It is unfortunate for this country and unfortunate for those who border the United States, and for the people of both countries, that the eight states bordering on the great lakes and our own province were so dilatory. They knew the challenge before them and yet they made picayune attempts not only to curb or destroy the lamprey but to rehabilitate an industry which they knew was dying because of the lack of co-operative efforts to exterminate this curse of the industry.

As one of the members of the committee—I was not a member at first but I was put on purposely with this particular project in mind, and I hope that if another committee is set up I shall be given the same honour, and there are others whose constituencies border on the great lakes who are equally interested—may I say I feel satisfied in my own mind that because of the many representations made to the minister, which he can forward to his associates in the government, more money will be made available for this purpose. It is going to take more money. I think the minister himself will say that. To be frank about it, we cannot fight this menace with $1 million a year from both governments, nor can we even curb it, let alone exterminate it. I have no doubt in my mind that when one considers the number of streams that flow into lake Superior alone, apart from those that flow into other lakes—we know now that they spawn in lake Erie—it may take $3 million, $4 million or $5 million a year before this menace is exterminated. But even if it does take that amount of money, we shall be re-establishing an industry that today is losing $5 million a year. If we do not exterminate the lamprey and they start feeding on pickerel and whitefish we shall be crucifying an industry which means probably $15 million or $20 million a year to both countries, and that is not peanuts.

I have every confidence that under the present setup, together with the encouragement that has already been given, every step will be taken to exterminate this curse. I do hope that the minister will take it under his earnest consideration and indicate to the joint commission that joint efforts must be made to exterminate the lamprey by not only holding the line in lake Superior and exterminating them there but also continuing intensified efforts in the other lakes as well.

Mr. Michaud: Mr. Chairman, I should like at this time to make a few observations in relation to the fishery industry as applied more particularly to my own part of the country. Before I do so I also wish to express my delight at the clear indications of the minister's improving health. It was gratifying indeed, during the course of his address last Friday, to be able to observe that he is now on the road to full recovery of his former good health and aggressiveness.

During his remarks the minister made some reference to the Canadian Fisherman's Loan Act which was passed by parliament during last year's session. I am personally interested in this measure because I expect many beneficial results from its operation. However, I remain somewhat apprehensive that one probable drawback in this connection will be the over-caution with which the banks will avail themselves of this legislation. But, as happened with the Farm Improvement Loans Act, it is hoped that, in due course of time, the banks will again realize the advantages of these government-guaranteed loans. Indeed, it is important that this legislation be

made wholly operative if it is to provide all the assistance which it is intended to provide to our fishermen.

Following the introduction of this legislation in the house last year, we recall that an amendment was introduced enabling credit unions to participate in this loan project. This amendment followed representations made by the credit union associations before the fisheries committee. The opportunities requested in these representations were granted, and I trust our credit unions will now avail themselves of these new opportunities of serving their members who wish to take advantage of this policy. We must acknowledge that a great number of credit union members live in rural areas, where they have not been accustomed to deal with banks. We know, of course, that in many instances lack of capital may prevent the individual credit union from engaging freely in these transactions. We would expect, however, that through their federations suitable arrangements could be made to obtain the necessary capital to meet this purpose.

On different occasions in this house, Mr. Chairman, I have spoken of the urgent need of restoring the oyster industry along the southeastern New Brunswick shores. In the Buctouche-Cocagne-Grande Digue area alone at one time this industry represented an annual net income of over $30,000. It was similar in importance to the Richibucto area.

I wish to repeat now what I have already stated on other occasions in this house, that within the past few years our oyster beds have become completely unproductive. I know that the officials of the department are aware of these conditions and are endeavouring in every way to restore the productivity of these oyster beds. It was my privilege last summer to accompany two of these officials on a survey to secure new data on the situation. I only hope that these endeavours will be maintained. The restoration of the oyster industry along our shores is of great significance to the general economy of our fishing population.

I believe I should now stress before this committee the importance of having an educational program for our fishermen. I again recall with satisfaction the experiment undertaken two years ago among our lobster fishermen. This, I can assure you, has been greatly beneficial. It is remarkable that many of those fishermen who took exception to the scientific principles expounded at that time are now endorsing those self-same principles. I believe it is reasonable to assume that further beneficial results would accrue from a well sustained and well adapted educational program.

I must bring to the attention of this committee the necessity of providing our fishing centres with more freezing and storage facilities for fresh fish. A few of these plants are now operating along the shores and the results provide positive evidence of how profitable it would be to possess more of these plants. I am pleased to note that a co-operative enterprise at Richibucto has recently laid plans to engage in this modern process of fish conservation. I refer to the Cartier Co-op. which last year purchased a large, all-equipped plant, ready for operation. The project involves a number of fishermen from the northern part of Kent county. These fishermen must be commended for their foresight, courage, and endeavour, and they are well deserving of every assistance in the pursuit of their plans. This government is already informed of the organization of this project and will be expected, through its various service branches, to lend its full support and assistance.

Mr. Chairman, the question of the opening date for smelt netting in Kent county has always been a matter of great contention. Prior to 1955 the opening date for all nettings was November 1. About this time last year representations were made by groups of fishermen in my riding to have the opening netting date for gill nets advanced to October 15. I made representations to the department and three days before October 15 I received word confirming that the date I had requested, October 15th, had been granted not only for gill netting but for all nettings. Of course, I should not like to say anything against this measure of generosity exhibited by the department. However, for some reason or other it seems that certain classes of fishermen did not like the idea of having October 15 as the opening date for all nettings. They thought it was a little too early and since they were not entirely satisfied I was the one who heard about it.

Following my arrival here for the opening of the session I intended to make further inquiries about the matter, and submitted those to the parliamentary assistant. He was kind enough to give me a reply to my inquiries yesterday, and for that I want to thank him. I should like to insert in the reports of this house the table which the hon. member submitted to me. It is headed "Smelt Fishing Seasons in the Gulf of St. Lawrence", and gives the opening and

closing dates for gill nets, box and bag nets in the various areas. The table is as follows:

Smelt Fishing Seasons
in
Gulf of St. Lawrence

County	Gill nets Open	Gill nets Close	Box and bag nets Open	Box and bag nets Close
N.B.				
Restigouche	Sept. 15	Feb. 28	Sept. 15	Feb. 28
Gloucester	Sept. 15	"	Oct. 15	"
Northumberland	Oct. 31	"	Oct. 31	"
Kent	Oct. 15	"	Oct. 15	"
Westmorland ..	Oct. 15	"	Oct. 15	"
N.S.				
Cumberland ...	Oct. 15	"	Oct. 15	"
Colchester	Oct. 15	"	Oct. 15	"
Pictou	Oct. 15	"	Oct. 15	"
Antigonish	Oct. 15	"	Oct. 15	"
Inverness	Oct. 15	"	Oct. 15	"
P.E.I.				
Prince	Oct. 1	"	Oct. 15	"
Queens	Oct. 1	"	Oct. 15	"
Kings	Oct. 1	"	Oct. 15	"
Quebec (Except Magdalen Is.)	Sept. 1	Feb. 15	Nov. 25	"
Quebec (Magdalen Is.)	Oct. 1	"	Oct. 1	"

I gather from this that the intention of the department in fixing these new dates was to have more uniformity in the opening date. I assume we must subscribe to this principle.

The activities of the Department of Fisheries, Mr. Chairman, are of great interest to the people of the maritimes. Many depend upon fishing for their livelihood. It is true that the standard of living of our fishing communities has been greatly improved during the last few years, but a still greater measure of economic stability is essential. I urge upon the government, through its Department of Fisheries, that it use every means and put forth every effort to promote this aim.

Mr. Regier: I too, Mr. Chairman, am very pleased to see the minister in his seat and again performing his functions as Minister of Fisheries. I think I can safely say that, so far as the people of British Columbia are concerned, as long as we must have a Liberal government we would rather have the minister who is now occupying this post occupy it. I believe he has proved himself as able a cabinet minister as the people of British Columbia have ever had in Ottawa. His responsibilities are tremendous indeed. When he took over the Department of Fisheries the department was in for a rough ride from one end of Canada to the other. Fortunately we seem to have overcome most of the major problems for the time being that faced the fishermen in British Columbia.

However, as was pointed out a short time ago the fishermen on the great lakes still have that great problem of the lamprey and there is the problem of the rehabilitation of the whole fishing industry in the maritimes and in what I understand is supposed to be called the Atlantic province of Newfoundland. I am pleased to see that some progress is being made towards this rehabilitation of the eastern fisheries. However, I should like to call the minister's attention to a few other matters. I know that the Minister of Public Works is responsible for all major construction efforts of the federal government. However, I believe the Minister of Public Works, from the statements he has made, relies to a very great extent on his colleagues in the cabinet for informing him of the needs of their particular departments. I am hoping that the Minister of Fisheries will soon speak to the Minister of Public Works and outline to him the need for a fairly large number of rather inexpensive wharves suitable for the fishermen in the lower mainland areas.

I know that a great new fishermen's wharf is being built at the city of Vancouver. However, I have been given to understand that that wharf is already overcrowded before it is completed. Many of these fishermen live in the rural areas around the city of Vancouver and if small wharf facilities could be supplied to them, say, along the shores of Burrard Inlet or the Fraser river or Pitt river, I am sure these facilities would be very much appreciated.

I should like to call the minister's attention to another fact, though he may be already fully aware of it. I feel that some more public relations work might be done to develop closer understanding among the fishermen on the west coast of the intentions of his department. The fishermen of the Fraser river are not yet convinced of the need for the closing of the fishing above Westminster bridge. Some of them have lived there 40 or 50 years, have their homes there and are well established far away from the deep sea fishing. The minister's efforts thus far to convince them of the need in the interests of conservation to limit their ability to fish in the districts where they are used to fishing have thus far not been too successful and have not been as successful as they should be. Either his argument is very weak or not enough effort has been put forth in explanations to the men.

I should also like to reiterate the demand that others have made, I believe, in this house from time to time, that some move be made to establish our territorial waters in British Columbia from land's end in the north to land's end in the south, if I might put it that way. The people in my constituency feel that those waters that would be enclosed by such a line ought to be rightfully claimed as our own waters.

I was very pleased to read the minister's statement on page 1748 of *Hansard*, in connection with power development, in which he said:

> We feel, first of all, that every non-salmon stream in the province should be developed for power before a salmon stream is touched. In that respect, we feel that, before the Fraser is touched, that part of the Columbia river in Canada should be exploited to the full.

I hope the minister is very keenly aware of the fact that unless the federal government, which last year assumed some responsibility for power development on the Columbia river, undertakes some initiative in the matter of early development of power in the Columbia basin, the federal government may find the provincial government making a deal that will completely frustrate the good intentions of the minister. Because of the failure of initiative on the part of the federal government, we may see the British Columbia government take some action that most Canadians might have reason to regret.

I am pleased to hear the minister report that some progress is being made in the means that have been initiated by his department to aid fishermen and that loans are now available. I hope the use of these loans will be more actively advocated by the minister's department. I believe the insurance feature is coming into widespread use, and I know that the department has given serious consideration to making all fishermen eligible for unemployment insurance. There is a demand, as the minister well knows, all over Canada for the inclusion of fishermen under the Unemployment Insurance Act, and I hope that a year from now some satisfactory means will have been found.

The section of the house to which I belong, the C.C.F., will always support any Minister of Fisheries in any conservation measures that he will undertake. Within the limits of adequate conservation measures, we do, however, adhere to the philosophy of full production for the people of our nation, and going along with that, and equally necessary, is a policy of complete and full distribution of what we are able to produce. This applies to the fishing industry as well.

We are pleased to see the minister playing a very active role in his department in the field of international co-operation as regards the fishing industry. I should like at this time to express my appreciation of the fact that, as I have noted in the report on the Fisheries Prices Support Act, the department came to the aid of the cod fishermen and also to the aid of hungry people in the world in that they supplied over $900,000 worth of codfish to the hungry peoples of Greece and of South Korea. Only this morning I again had a look at the mail, which I receive so very often from people in my riding asking me to do what I can to see to it that Canada's surplus foodstuffs are used to feed the hungry people of the world. This action on the part of the prices support board, which is under the minister's jurisdiction, was a most notable one and will receive the hearty endorsation of the Canadian public at large. I note that the fisheries prices support board paid half of the cost of this large gift and the Department of External Affairs paid for approximately the other half. We could well have many more such programs.

However, the cause of Canadians using their surplus foodstuffs in the interest of aiding world peace, I feel, has been harmed somewhat by the deal that the fisheries prices support board made in the case of herring bloaters, and I should like to spend a few minutes on that. The report states that herring bloaters were purchased through the prices support board to protect the 1954 herring industry. Those who held unsold stocks of herring bloaters were advised to submit their offers by June 30, 1954. I notice as a result of the offers received the board purchased, under the authority of an order in council passed on June 30, 1954, a total of 72,929 boxes for which they paid 80 cents or 55 cents a box, depending on grade. These prices were paid, in the words of the report, "at producer's plant or in storage." According to the report, these herring bloaters were not sold at prevailing market prices because one of the reasons for the purchase was to preserve the stability of the market and therefore it was considered inadvisable to sell them at a reduced price. Eventually the bloaters were sold to a reduction plant to be used for the manufacture of fertilizer, and these 18 pound boxes of herring bloaters were sold at 9 cents a box.

It is to be noted that the freight charges on the herring to the reduction plant exceeded $9,000 and the net returns to the prices support board from the sale were slightly in excess of $6,000. One is rather inclined to ask why the government would pay $9,129.56 to haul a lot of herring to a reduction plant and sell them there for the sum of $6,563.61. It seems that not only were the fish given to the reduction plant for nothing but the government added some $3,000 in order to deliver the fish at the doors of the reduction plant.

When I received the report I put a question on the order paper. Question No. 73, as found at page 1190 of *Hansard*, reads:

> Before the passing of order in council P.C. 1954-931, June 30, 1954, authorizing the sale of

smoked herring at 9 cents per box for reduction purposes, was any inquiry made of the Department of External Affairs, the Colombo plan organization, or any subsidiary of the United Nations to determine whether this food could be disposed of for the relief of hungry people?

The answer I got was rather interesting. It reads:

The smoked herring—bloaters—in question were hard cured, smoked, round herring, a product largely unknown in fish consuming areas outside of the Caribbean. These fish were entirely of 1952 production, could only be classed as of standard quality, and were very dry.

There is more to the answer but before I leave this part of it I want to refer to the report of the fisheries prices support board in connection with this matter. The report says that some of the purchases were of choice quality and not of standard quality. The report of the fisheries prices support board also says that the purchases were of the 1952 and 1953 packs. The answer I received from the minister's department in reply to my question was that the fish were entirely of 1952 production. I see a conflict in the answer there and I also see a conflict in the answer where it is claimed they were only of standard quality whereas the prices support board says that a certain number at least were of choice quality.

Mr. Sinclair: I do not like to interrupt but I am so surprised that they should be called choice. Would you tell me again where they are described as choice?

Mr. Regier: If the minister will look at page 8 of the report he will see that in the first paragraph it says:

In all, 72,929 boxes were purchased by the board. Of these, only 257 were choice grade of the 1952 pack.

That is all it says, and it also says that with respect to 1953 production purchases were to be of standard grade.

Mr. Sinclair: That is right.

Mr. Regier: I think the minister will have to agree that his reply was not very accurately worded. Possibly that is more or less a minor matter. However, the minister goes on to say in his answer:

The Department of Trade and Commerce did make inquires in the Belgian Congo where the product is known, but no interest could be developed.

I was a little surprised when I saw that because I have never heard of the people in the Belgian Congo being very hungry and I had asked whether any attempt had been made to supply these choice and standard quality fish to some of the hungry people of the world. Therefore I asked a further question. I asked at what time and in what manner were these inquiries made and were any replies received. I got a reply from the Department of Trade and Commerce saying that on December 1, 1953, an airmail letter was dispatched to Leopoldville and a reply was sent from there on December 14, 1953, saying that no interest could be developed in the Belgian Congo.

My quarrel with the answer is that the date supplied me here as to the time of the inquiry indicates that this was merely a routine piece of information supplied by the Department of Trade and Commerce to the trade commissioners, certainly the trade commissioner in Leopoldville, as to the possibilities of finding a market where we could sell our herring. That was completely evading the question I had asked, namely, whether any attempt had been made to find any place where we could dispose of these admittedly good fish as a gift.

A few moments ago I endorsed the actions of the fisheries prices support board. When we have surplus fish, by all means let all taxpayers share the cost of helping the industry, protecting the price and using the fish as a method of expressing our good will to needy people in whatever part of the world they may live. However, I feel that in this case somebody blundered somewhere because these herring were bought with the taxpayers' money at 80 cents and 55 cents per box and at a subsidized rate were sold for reduction purposes at 9 cents a box. I do not think such action helps the cause of the fisheries prices support board or the intentions of the minister with respect thereto. It may be that the minister does not have enough funds available to supervise adequately what may be relatively minor operations in his department. In looking at the amount of money in the estimates for the various ministers for the coming year I notice that, next to the Secretary of State, the Minister of Fisheries receives the least of all.

Mr. Sinclair: Very economical.

Mr. Regier: I notice that he is even getting less money this year than he got last year. I do not know why he is asking for less money. Possibly the Minister of Finance may have been particularly harsh with the minister when he spoke to him. I think an amount of $12,753,283 out of a federal budget of $5 billion is hardly adequate for the fisheries industry in relation to the value of that industry and the great need on the Atlantic seaboard. I fully sympathize with the minister and I only hope that the cause of using surplus food supplies to help needy people in the world and thereby also help-

more because of deals such as the one involved here in the giving away of these herring.

(*Translation*):

Mr. Cannon: Mr. Chairman, I would not like to let the debate on the administration item of the Department of Fisheries estimates go by without speaking on behalf of the people of Magdalen islands.

On behalf of my electors and on my own behalf, may I first tell the hon. Minister of Fisheries (Mr. Sinclair) how glad we are to see him back in his seat. It is always a pleasure to hear his voice and see him in action. We have been quite worried over his accident and we have missed him very much during his absence. We are most happy to see him back among us and I hope that we will have many an opportunity of admiring his warm eloquence and of seeing that he has recovered his customary energy.

I am sure, Mr. Chairman, that the committee would be interested to be told of the output of the Magdalen islands fisheries in 1955. I am quoting from *A pleines voiles* (At full sail)—a very fitting name for a publication dealing with fisheries—figures pertaining to the total production of Magdalen islands for 1954 and 1955, showing the quantities as well as the commercial value of the products of the islands. I am pleased to inform the committee that in 1955 the total value of the products of the islands amounted to $2,609,000, while in 1954 it was but $1,602,000; it has therefore increased by over a million dollars. That very significant increase is due to the fact that fish production on Magdalen islands is undergoing great changes at present.

We used to concentrate nearly all our efforts on the processing of smoked or salted fish, but since 1955 we have been manufacturing frozen fillets. In addition, we export cod and frozen fish to the United States where it is used in making up the famous fish sticks.

An examination of those figures shows that 1,093,932 pounds of fillets have been frozen in bulk in 1955, while no such processing took place in 1954. If we look at the value of those products, we find that, precisely, the greatest increase was in cod, the production of which went up from $377,758 in 1954 to $545,137 in 1955. There was also an increase in plaice and sole, whose production has reached $133,635 in 1955 against an insignificant quantity in 1954, and these are the fish used in making frozen fillets.

As I do not wish to overtax the patience of my colleagues by reading all those figures, I would like to have permission from the house to place them on the record.

An hon. Member: Agreed.

Mr. Cannon: Here are the figures:

Total Production of the Islands for the years 1954 and 1955

Species	Different products 1955	Quantities 1954
Lobster:		
Crates of sterilized cans ..	6,072	8,342
Half-crates of frozen meat, sealed cans	9,833	3,114
Pounds of lobster shipped in the shell	829,360	707,233
18 lb. crates of smoked herring	146,166	109,887
260 lb. barrels of local and foreign bait	37,706	2,276
Herring:		
25 lb. boxes of frozen herring	44	104
100 lb. barrels of pickled herring	1,303	83
Tons of herring meal	2,220	nil
Tons of herring oil	88	nil
Cod:		
Pounds of salted boneless fillet	1,538,850	1,507,900
Pounds of salted raw cod ..	26,000	788,231
100 lb. crates of dried cod ..	1,100	2,215
Pounds of bulk frozen fillets	1,093,932	nil
Mackerel:		
200 lb. barrels of pickled mackerel	9,632	4,047
200 lb. barrels of pickled fillets	1,354	1,649
100 lb. barrels of pickled mackerel	296	nil
Crates of round canned mackerel	nil	378
Crates of canned fillets of mackerel	3,200	nil
Lbs. of frozen fillets of mackerel	5,808	nil
Lbs. of frozen whole mackerel	nil	40,240
Lbs. of fresh mackerel on ice	10,000	nil
Harbour Seal:		
Units	nil	3,590
Smelt:		
Frozen, in lbs.	9,120	53,900
Plaice and Sole:		
Lbs. of frozen fillets	445,450	1,190
Lbs. frozen round smelt	nil	4,400
Haddock:		
Lbs. frozen fillets	140,922	nil
Miscellaneous:		
Tons of fish waste meal (Gorton Pew)	300	nil

Here now is a table showing the main kinds of fish with their respective market value:

Species	Market value 1955	1954
Lobster	$ 897,318.00	$ 853,003.00
Herring	586,288.00	210,135.00
Cod	545,137.00	377,758.00
Mackerel	273,882.00	127,715.00
Plaice and Sole	133,635.00	negligible
Miscellaneous	173,719.00	33,398.00
Total	$2,609,979.00	$1,602,009.00

This development, Mr. Chairman, is due to the fact that recently new industries have been set up in my constituency, whereas an older well established firm, the Gorton Pew Company, which operates salt fish plants on the islands, has turned one of these into a frozen fillet plant. Moreover, I am told that this company, which operated its plants at Grindstone, plans to build a new one at Amherst. There is also in my constituency a company by the name of Canapro, which produces fish meal.

I am glad of this improvement and diversification of our production but, at the same time, I wish to point out that the change should not be too radical. We should not produce frozen fillets and fish meal only. We should continue also to produce smoked herring and salt cod, as we did in the past, because we must keep our traditional outlets for these products and, as the old proverb says, we should not put all our eggs in the same basket.

If we carry out too radical a change and if our market for frozen cod fillets and fish meal should slump, we might find ourselves in a very bad situation if we did not carry on with our salted and smoked products industry as we have done up till now.

The figures I have just quoted to the committee, Mr. Chairman, amply show that progress is being made in the Magdalen islands. I am glad to point them out and to express my appreciation to the government, as well as to private enterprise, for all they have done towards increasing the yield of the island fisheries. However, there is still much to be done in this field and, merely to give the committee an idea of how much remains to be done, I shall quote a paragraph from a letter which has come to me from one of my constituents:

> To give you an idea of the average income of the islands cod fishermen, here is the case of two associated fishermen of my acquaintance, whose catch for the last fishing season amounted to 40,000 pounds of fresh cod and 12,000 pounds of salt cod, sold for a gross income of $1,800.
>
> If you deduct from that amount the costs of equipment, upkeep of the boat, fuel, salt, etc., the individual net income is less than $600. The situation is such that a great many young men who like fishing have to go outside the islands to find a trade far less interesting but far more profitable.

That is why, Mr. Chairman, I submit that we must continue to help our fishermen—

(Text):

The Deputy Chairman: Order. I hope this is convenient for the hon. member. I would point out that it is one o'clock and I do now leave the chair.

(Translation):

Mr. Cannon: Very well, Mr. Chairman, I will continue after recess.

At one o'clock the committee took recess.

AFTER RECESS

The committee resumed at 2.30 p.m.

Mr. Cannon: Mr. Chairman, at one o'clock I was saying that the income of the Magdalen islands fishermen was very low and that we should continue to try and help them increase it. I would have a few suggestions to make to the department in that connection.

During the last session of this parliament we passed an act to help fishermen to get loans in order to buy equipment. That act is now in force. However I have received complaints from my electors who claim that it is not much help to them on the ground that in order to be able to borrow from the banks on part of their equipment they have to pay in cash at least 30 per cent of the purchase price for new equipment and 40 per cent for used equipment. They tell me, on the islands, that these terms are not favourable enough and that they do not really help fishermen.

Those who have the means to pay such large cash amounts can deal directly with the merchants who are ready to sell them their goods for 30 or 40 per cent down. If we really want to have a law which will help the fishermen to buy the equipment they lack, through loans from the bank, the minimum down payment should be reduced.

The hon. minister said in his speech that the number of applications for these loans was comparatively small. I submit, Mr. Chairman, that this shows the value of my argument and that the rather small number of applications is due to the facts I just mentioned to the committee.

Now, the federal government allows the fishermen a grant of $165 a ton when they build new fishing vessels. We even find in the estimates an amount of $200,000 to that effect. Unfortunately, the act is not administered by the federal government, but by the governments of the various provinces, and there is not enough co-operation between the federal and provincial governments in the selection of those who are entitled to these grants. The decision is up to the provincial government. Well, without going into details, it can easily be understood that the choice the provincial government of Quebec makes with regard to the people entitled to the grants is not always the one I would make myself. I therefore suggest that the federal government control the allocation of these grants and decide as to whom they should be made.

As a matter of fact, this situation brings about some extraordinary anomalies. For instance, if a fisherman wants to get a grant of $165 for his fishing vessel, he has to go through the provincial loan office and borrow from the provincial government, even if he has enough money to pay the difference. In other words, our fishermen of the Magdalen islands cannot get the federal government grant of $165 a ton without having to borrow from the provincial government, even if they don't need to do so. Then, what happens when a fisherman has all the money he needs, except for the $165 a ton grant, is that he borrows $1 from the provincial government in order to qualify for the grant.

Mr. Chairman, I submit that we have here an anomaly of which we should rid ourselves. I understand that, when this grants policy was agreed upon, the Department of Fisheries didn't have as many employees, and its administrative services were not as well organized as they are now, but I feel that with its increasing importance, the greater number of its employees, its improved administrative services, it is time this department look after the distribution of these grants.

Mr. Chairman, I wish also to deal with the matter of lobster trap insurance. This insurance brought good results in my riding. Some 30 per cent of the lobster fishermen have taken insurance; you may think that this figure is very small, but, as a matter of fact, it is the largest figure obtained in all Canada. I am told that among fishermen, those on Magdalen islands have been the most numerous to avail themselves of this insurance. On the other hand, I have heard it said that the possibility of abolishing this kind of insurance may be considered in view of the small number of fishermen who use it. I wish to warn the department against such a step, because I believe that this insurance act affords a valuable service and that with a little advertising among fishermen in other parts of the province of Quebec and the maritimes, it would be possible eventually to convince them of the necessity of this insurance.

I was pleased to hear the hon. minister state that fish consumption was increasing and I congratulate him as well as his department. I am positive that this increase is the result of the enlightened efforts made last year to popularize the consumption of fish. As a matter of fact, we have had the opportunity to appreciate the efforts made by the Department of Fisheries when we were invited to relish the delicious dishes prepared with the products of our fisheries. I want to mention, not only the meal then served to us, but also the new recipes given to our housekeepers. I know that some of these recipes were given to the wives of our members of parliament and some of my colleagues have confessed that the results were simply marvellous. I congratulate the minister and his department and I hope that they will continue to popularize the consumption of fish.

Mr. Chairman, in order to encourage such consumption, to provide further education for the fishermen and to foster modernization in general, I submit that larger amounts should be spent on education, the opening up of markets and the political economy of the Department of Fisheries. I note with surprise that the amounts for those items have decreased somewhat this year. In my opinion, such savings are not wise; they will not give satisfactory results. I submit the amounts should have been increased rather than decreased, in order to open up new markets and help the work of the department.

Now, I read with satisfaction in the minister's speech—I do not know whether it was in last year's speech or in the one he made this year because I read both—about the investigation work he has ordered, to find new fishing banks or new scallop beds. Scallops are quite popular and there is reason to believe that if more intense research were done, new scallop beds would be found in

the gulf of St. Lawrence, as well as other herring banks; we know that there are large quantities in the gulf of St. Lawrence, but their exact location is not known.

While I am on the matter of the gulf of St. Lawrence, I would like to mention the problem of territorial waters. Several hon. members have referred to this matter and the minister himself spoke briefly on it, which shows that it is an important problem. I believe that Canada, at the United Nations and elsewhere, should insist on the settlement of that matter of vital importance for our fishermen and should demand that the limit of territorial waters be set at at least 12 miles.

In this connection, may I suggest that Canada should insist that all the waters of the gulf of St. Lawrence be considered as Canadian territorial waters. A line should be drawn from the southwestern tip of Newfoundland to Cape Breton and it should be laid down that within this line all waters are to be Canadian territorial waters. After all, the gulf of St. Lawrence is surrounded by Canadian territory and we would be justified, I think, to designate that part of the gulf of St. Lawrence as Canadian territorial waters reserved to the fishermen of this country.

I could not bring these remarks to a close, Mr. Chairman, without returning to the subject of unemployment insurance for fishermen. The house knows that ever since I have been sitting here I have unceasingly attempted to obtain unemployment insurance for the fisherman. Last year I managed to have myself temporarily named to the committee on industrial relations and to have adopted by this committee a very precise recommendation according to the terms of which the house was requested to extend unemployment insurance benefits to fishermen, as quickly as possible. It was even recommended that salaried fishermen be immediately allowed to come under this act, and that the question of what could be done for the others should be left for later consideration. I know that it is not under the direct jurisdiction of the Minister of Fisheries, but it is a matter in which fishermen are interested and I feel sure the Minister of Fisheries will look into it actively. It is to be hoped that this situation will not last too long a time and that we shall soon see practical results.

Mr. Chairman, may I suggest that there should be closer co-operation between the Department of Fisheries, the Department of Transport and the Department of Public Works, which I often have to approach to obtain the construction of harbours and breakwaters. It seems to me that, if the Department of Fisheries saw fit to give us its support, we would be a little more successful, and that is why I suggest greater co-operation between those departments.

Incidentally, I take this opportunity to call the attention of the hon. Minister of Fisheries to the urgency of digging a channel at Oyster bay and of putting up a breakwater at Grosse Isle North and another one at Hâvre aux Maisons as well as at Anse Millerand, Anse à la Cabane and Anse au Ruisseau. A breakwater would be a great help to the fishermen of those three localities. We also need a breakwater at Premier Etang. Once again, I lay before the hon. Minister of Fisheries these requests from the fishermen of the Magdalen Islands and ask him to make every effort to have those works undertaken as soon as possible in the interest of the fishermen.

In conclusion, I once more congratulate the hon. Minister of Fisheries on the remarkable way he got over his injuries and wish him, on behalf of my electors of Magdalen Islands, a complete recovery as soon as possible.

(Text):

Mr. Hahn: Mr. Chairman, I wish to express the good wishes of this group to the Minister of Fisheries who is back with us once again and looking well. I sincerely hope that no further complications set in and that he will continue to take his usual place and look after his department, as he has so ably done in the past.

This morning the hon. member for Burnaby-Coquitlam indicated he hoped that some further expenditures would be made on wharves and that the minister would talk to the Minister of Public Works to see whether or not something could be done in that way. I would like to echo those sentiments because in my riding there have been a number of instances where from time to time fishermen have found it difficult to get their boats to the wharves owing to dredging that needs to be done on the Fraser river.

The hon. member for Burnaby-Coquitlam did make a statement which I am sure he did not expect me to pass by without comment. He said: "The federal government may find the provincial government making a deal that will completely frustrate the good intentions of the minister." He was referring to the building of power dams on the Fraser river. I should like to assure the hon. member for Burnaby-Coquitlam that he need not

have any fear along that line. I am sure he should be satisfied by now that there is no man who has the interest of British Columbia industry—and the fisheries industry is one of those, and a major one, I might say—at heart so much as has the premier of British Columbia. I believe the Minister of Fisheries himself made reference to that when he spoke last Friday, although it was not my privilege to be present to hear him. He said, as reported at page 1751 of *Hansard*:

> The provincial government has also been most helpful. They have announced that no licences will be granted on the Fraser river for a power dam until the problem of the movement of fish has been solved.

I am sure that if the Minister of Fisheries is satisfied that the provincial government of British Columbia will not hinder our fishing industry, certainly the hon. member for Burnaby-Coquitlam should take that as evidence that nothing will take place in that regard.

Before carrying on with the text of my comments, I wish to thank the hon. member for Fraser Valley for taking my part in the debate the other day when the minister first spoke; but I must say there is a certain advantage in speaking at this time. I have had the opportunity to discover what the minister himself had to say on certain questions and the advantage of knowing that many of the questions I would have asked have already been answered. This gives me the opportunity to revise my remarks in the hope that I shall not be repetitious in the debate.

There is one thing that should be emphasized, though, and it has been brought out particularly by several hon. members, including the hon. member for Fraser Valley, who asked that unemployment insurance be made available to the fishermen. I know this does not come under the jurisdiction of the Minister of Fisheries, but he should use his influence, as he has in the past, to try to get a greater number of fishermen under the terms of the act. It is a fallacy to say that no fishermen are under the act, because certain part-time fishermen who do qualify for part-time insurance are entitled to it and they are getting unemployment insurance at this time provided that they fall within the group that was taken care of under section 119 as revised by the Minister of Labour earlier. However, I am satisfied that the minister is cognizant of the fact that this provision is not sufficient in itself, and that section 45(2) should be changed, or its complete deletion should be striven for at this time.

I feel that it would be to the advantage of the fishermen themselves and the Department of Labour if it were made possible to extend the terms of the Unemployment Insurance Act to cover a certain section of the country to which I shall refer later. I think an effort should be made to see whether or not it would be feasible to make these workmen recipients under the terms of the Unemployment Insurance Act, with slight modifications, of course.

There is one matter which I think I should mention and that is the co-operation I have always experienced in my dealings with the Department of Fisheries and the minister of that department. I must say it is one department which sends out information bulletins regularly and I seem to get my share of them. If I have ever required information I have never failed to get it; all I have to do is ask for it, although I must admit that I sometimes find it a little difficult to reconcile what appears to be conflicting information. I shall refer to that more specifically in a short while.

One of these bulletins interested me very much. I do not think the minister touched upon this matter and he might wish to comment on it later. I refer to the December 1 issue of a bulletin issued by his department through the office of Mr. Campbell. This has to do with the progress report of the fishermen's indemnity fund. It says:

> Benefits under the fund were increased in British Columbia in December, 1954, when the basis of payment of total loss claims was increased from 60 per cent to 70 per cent of the appraised value of the vessel. At the same time the deductible percentage was lowered from 30 per cent to 15 per cent.

Both of these factors are important and highly commendable.

There was one factor in the report, however, that did give me some concern and that is the fact that certain areas were not paying their way, one might say. I do not wish it to be construed that I am suggesting each area should pay its own way because insurance does not work on that premise. However, I found it interesting to note that of the boats that were insured, British Columbia stood highest in the group; the value was much higher in British Columbia than in any other province. At the same time British Columbia was the only province which made a profit; something like $32,694. Each of the other provinces lost money; an over-all deficit of $28,807. The bulletin does say, however, and this is very important:

> It should be pointed out that losses on the Atlantic coast have been unduly severe as a result of two hurricanes; one in 1954 and one in 1955.

I was hoping the minister would comment on that matter, but not specifically on the monetary loss. More particularly I hoped

he would comment on the loss of life in connection with the losses of vessels. I am satisfied that too many people in Canada today have the impression that fishing is a pretty easy way of life for a man and I would like the minister to comment on that. If no loss of life has occurred in this connection possibly the minister could give us an indication of the loss of life of fishermen at sea.

I mentioned earlier that the reports I received gave me considerable concern because they did not appear to agree in some instances.

I have here a report dated February 9 which was also issued by the Vancouver office of the Department of Fisheries concerning salmon spawning. I intend to read just one paragraph from the first page:

> Outstanding feature was the failure of the chum run to almost every section of the coast. Immediately evidence of this condition could be perceived, drastic conservation measures by special and early close-down of net fishing operations were applied. The run proved to be not more than one third of normal and definitely was the lightest return in the history of the fishery. Despite the drastic regulatory restrictions—

I would like the minister to comment on that phrase, "despite the drastic regulatory restrictions".

> —the escapement for reproduction purposes was, with few exceptions, exceedingly light, and with present information the situation definitely will require special conservation measures four years hence in an effort to rehabilitate this particular cycle. The spawning escapement of the cycle year 1951 was such that a normal run was to be expected; and because of its coastwide character it can only be assumed that the failure was the result of very unfavourable survival conditions either in the fresh water or later during existence in the ocean of the progeny of the 1951 brood year.

I would ask the minister to comment on that particularly because during the past two years it has been the privilege of the hon. member for Fraser Valley and myself to draw to his attention certain changes he proposed in the regulations with respect to closures on the Fraser river. I should like to again repeat the question the hon. member for Fraser Valley asked the minister earlier. Does the minister feel that the closure of the Fraser river above the Westminster bridge is the answer to the problem? I am satisfied that he will have had sufficient opportunity by this time to have studied this problem at great length. That is the question which I think requires an answer. If closure is not the answer to the question, I wonder if the minister would consider a modification of his earlier proposals made in the past two years.

There are other questions that enter into the subject of conservation in which I am vitally interested. I wonder if the minister could define for us the number of fish that were caught by gill netters in the season during which the river was open for fishing above Westminster bridge in former years as compared with this year and last year, let us say, in order that we may have a more complete picture. I am not aware whether or not the department differentiates between the number of fish which gill netters and seiners catch, but in view of the fact that such a conservation scheme is in effect and because there was such violent opposition to it in past years, I think the fishermen are entitled to know what change has taken place in the net result. I think, too, that we are entitled to this information.

In his address the minister touched on the question of fish caught in Pacific waters, but that is another matter with which I wish to deal. As I understand it, as a result of the meeting at Tokyo a certain understanding was reached with the Japanese and United States fishermen. I wonder if the minister could bring us up to date on this particular question and tell us what has transpired since that time.

In view of the minister's visit to the U.S.S.R., at which time he was unfortunate enough to have experienced an accident, I would ask him to comment on what view we hold towards U.S.S.R. and what their view is towards us in relation to fishing practices and what is proposed to be done about the matter. I raise this question because I notice that the fishing vessel owners' association recently intimated their desire for equality of catch between gill netters and seiners, if I properly interpret the account set forth in the February 1956 bulletin of the association.

I said earlier that reports form the Department of Fisheries conflicted with what certain other parties had in mind. One thing that has come to my attention particularly, in respect to a matter that gives us great concern and also causes great concern on the Pacific coast, is mentioned in the fisheries magazine and has been mentioned in many other bulletins issued by the department, that is the flood conditions that take place on the Pacific coast in the spawning area, which virtually wiped out some 60,000 pinks and 30,000 early chum salmon in the Chehalis river. That was not the only river affected. The report states:

> The Chilliwack river system including the Vedder river suffered less disastrous results, but even here losses of up to 50 per cent of pink and early chum spawning will likely materialize.

The gravity of this situation cannot be overemphasized. We cannot have fish if we do not have the spawn to begin with. If they happen to die en route, it is just as bad if they die as the result of excessive rainfall as

if they go over the top of the dam. So I should like the minister to comment on that phase and relate it, as he is so capable of doing, to the question the hon. member for Fraser Valley raised with respect to the bulldozer helping the fish to return home to spawn.

There is another point in the same article from which the hon. member for Fraser Valley quoted. It is the following:

> Even though the Fraser river is navigable for fish for hundreds of miles, there are comparatively few places which salmon choose for their spawning grounds.

In one of the other articles, we find a notation that on the Capilano and Indian rivers, because of the forest cover along the rivers, the spawn were not lost to the same degree as along the Chehalis, where the trees have been taken away from the mountain. Because we realize that the spawning grounds are not so plentiful, I was wondering whether any thought had been given to conserving the woods of those areas where we do not have the fish spawning, and having those particular areas kept wooded at all times so they will not suffer from excessive wash coming down the mountainside.

There is a conflict in the reports, however, in regard to the fact that a certain Vancouver publication—I believe the Vancouver *Sun*—mentioned the precarious position of the coho salmon spawning and in this instance the fisheries report—and it was part of the same one that I mentioned earlier—made reference to that on the 9th of the month. I received a follow-up from the minister's office explaining the complete story, in so far as the public was concerned at least. It was indicated that the coho situation really was not too bad. It took the northern coast, for instance, from Smith inlet north to the Alaskan boundary, including the Queen Charlotte islands, and it said that the spawning generally was satisfactory. It said that in the Butedale area the seeding showed a marked decline and in the lower Queen Charlotte islands it was light. In the Vancouver island area, it said that some areas fared better than others. Then, breaking that down, it said:

> Alert bay area, Cowichan area and Kyuquot area were above average. Pender Harbour was satisfactory; Quathiaski and Comox fairly good, but less than the brood years. Barkley sound, Nootka, Quatsino areas were light. Nanaimo was very light. In the Fraser river system, however, several of the areas showed a marked increase over the brood years.

This is very interesting in view of the fact that we have this statement made by apparently responsible individuals outside the organization itself who went into the coho situation. It goes on:

> These included Kamloops, Yale-Merritt and the Mission-Harrison and Chilliwack. Unfortunately a good early seeding in the lower sections of the Fraser suffered extensive damage from the phenomenal rainfall in early November and resulting flood conditions.

Breaking that down into areas, I find there were five areas. One was satisfactory, which I consider to be a normal year. I do not know whether or not my definition of the term "satisfactory" is proper, but that is what the minister's department calls it, and I should think that is in order. One area showed a marked decline. Another was light. Then there was the statement that some areas fared better than others. I find only one of those indicated as being satisfactory. In the group about which it is stated that some areas fared better than others, only one is satisfactory and all the others range from light, fairly good, and less than the brood years, to very light. I would not call that whole area satisfactory, under those circumstances.

Then there was another area with a marked increase over the brood years. That was the last area I mentioned, in the Fraser river system. However, from the earlier report I read to you in respect to the area that was flooded, I find that the Chilliwack region, the Harrison lake region and the Pitt river region were all in that area—one-half of the area, actually—and the spawn there was from 50 per cent to 90 per cent lost. That would indicate, then, if my analysis of the situation is right—and probably the minister can show me where I am wrong, because he has all the facts and figures at his command—that we are not warranted in suggesting to the fishermen that we do not face a serious condition in so far as the elimination of our cohoe fishery is concerned. I am somewhat concerned about that.

Possibly my conclusion may be wrong, but I think we should be privileged to get more information from the minister on this. I should like to ask the minister to comment on this aspect in view of the fact that there seems to be a notion abroad among the fishermen that there is a confidential report that has not been made public with respect to this matter. I am not accusing the minister or his department of withholding information. I just think we have the right to know, and I shall look forward to hearing his reply to that particular question.

There is just one other item with which I wish to deal at this time. I intend to spend more time on the power dam situation and its effect on the fisheries on another occasion,

but now I turn to a release from the dominion bureau of statistics in its daily bulletin of Monday, 6th February. It is headed:

Catch of Sea-fish Down Nine Per Cent In Volume and Ten Per Cent In Value In 1955.

It goes on to say:

Canadian sea-fishermen landed nine per cent less fish in 1955 than in the preceding year and the value of the catch fell about ten per cent.

Here again we have a primary industry that is losing some of its cash returns. It is somewhat different from the agricultural situation. Here it is not a matter of surplus, but we have a difficulty in catching sufficient fish to keep our stocks, as we would like them, at a maximum. In his address, the hon. member for Fraser Valley mentioned that we are pleased that we do not have a surplus of fish on hand and we are able to get rid of our stocks and our canned supplies. I do not necessarily agree with that point of view. I always like to have a few cases of things on hand just in the event of next year not being too good. In this instance it would not help the fishermen in any event because they would not get any greater cash return. However, the fact of the matter remains that as one who was in the grocery business for many years and saw my customers denied the right to buy a tin of sockeye salmon I feel that a few cases of sockeye kept on hand are not going to hurt at all. We should not have too much difficulty disposing of them. Let us not make it too much of a practice.

In the next paragraph I find the following with respect to the declines:

In 1955 the values of all three major Pacific fisheries declined appreciably from their 1954 levels: salmon by 22 per cent . . . halibut by 38 per cent . . . and herring by 9 per cent . . .

I believe those are the three chief fisheries of the Pacific coast and as such they are bound to have their effect on so many people not only in my community but also in the community of the Minister of Fisheries. For that reason I think we should put greater and greater emphasis on the need of a greater degree of co-ordination and co-operation between the minister's department, the Department of Labour, the Department of Public Works and every other department that might have anything to do with the matter in order that these people may continue to get as big a return as possible from their investment. The fishing vessel owners association have indicated that they feel they have some responsibility to the gillnetters and I believe the department should also realize that it is not only the fishing vessel owners who are faced with a problem with respect to the gillnetters which they want to resolve but that the department also has a duty in this regard.

If conservation does not bring about an improvement over the situation we had a couple years ago then, while I do not necessarily say that it is necessary to go back to that situation, we should determine means whereby we can be sure of having a supply of salmon each year.

There is no object in protesting, as the hon. member for Burnaby-Coquitlam did, about dams and so on if we have no fishing industry to protect. The objective is to have a fishing industry. Maybe the answer should be to let the fish go up the river and spawn first and then go out and catch all we want to afterwards.

Mr. Stuart (Charlotte): Mr. Chairman, I too should like to congratulate the minister on his speedy recovery from his serious accident and assure him that all members welcome him back to the house. The manner in which he presented his statement when these estimates came before the committee indicated very clearly, I believe, that the Minister of Fisheries has great knowledge of his department which is of great value to those interested in the fishing industry.

During the short time the minister has headed the department a great many improvements have been made which the fishermen perhaps had expected over the years but concerning which no action was taken until recently. In that regard I refer to the fishermen's insurance plan which was introduced a short time ago. Obviously it was practically impossible for the fisherman to insure his fishing boat. The rates charged by the average insurance company made it prohibitive. With the plan now in effect almost any fisherman can insure his boat, which to him is his bread and butter. The rates being charged by the department are most reasonable, and at the same time I believe that the losses are very small. The insurance plan is a sound plan, and I can assure the minister that the fishermen in the area from which I come appreciate this very much.

Only last year a plan was introduced whereby those engaged in the salt fish industry were assisted. The federal government undertook to be responsible for 50 per cent of the cost of salt. There again I wish to assure the minister and the officials of his department that this was a move in the right direction and one which is appreciated. Not only is the contribution of 50 per cent of the cost of the salt beneficial to the fishermen but the fact is that many fishermen have been encouraged to salt their own catch. Previously they would sell their catch for 2, 3, or 4 cents a pound, but when this plan was introduced many of them decided to salt a greater portion of their

catch themselves, which means greater revenue to the fishermen. The fishermen of the area from which I come are most appreciative of this action on the part of the government.

The fishermen's indemnity act which went into effect a short time ago has not, of course, been in operation for a sufficient time to find out just what benefits the fishermen may expect. I realize that the banks in the maritime provinces have not had any experience with this type of loan in the way that western banks have had with the farm loan act. Therefore it will perhaps be some time before the scheme is organized properly, but I do hope that it will provide the assistance for fishermen for which it was intended. I am sure that over a period of time it can be worked out in such a way that it will be of benefit to all fishermen.

Another matter I wish to mention briefly is the kitchen over in the west block. In the past two or three years I have attended two or three luncheons there, and I believe that all those taking part in that organization deserve a great deal of credit. I must say at this point that in the ten or eleven years I have been here there has been a great improvement in the serving of fish in the city of Ottawa. The fish served today is far better than two years ago, five years ago or ten years ago. I believe the fisheries department should receive some credit for the improvement. The kitchen in the west block should be maintained and expanded, if possible.

I noticed in a pamphlet put out by the fisheries council a few days ago, which I had intended to bring with me, it was stated that in the city of Toronto and other places they had been given a great deal of encouragement to carry on this type of informational and educational work in connection with the fishing industry. It has always been my belief that in order for our fish to take the place they should take with the consumers of this country we must continue to produce a better article in a fresher state and see that it is cooked properly. I feel that the great disadvantage we have had throughout the whole country has been the fact that those who would have liked to have fish in their homes were not given any information as to how it should be prepared.

Until the last few years, in many cases they got fish which was not fresh and once it had been served they were not satisfied with that particular type and did not buy it a second time. With the facilities we have today for bringing fresh fish to our cities where the great bulk of the population is, I believe that every encouragement should be given the industry to produce a better article, get it in the homes and keep it there. I know that encouragement is being given the industry by the fisheries department and the biological board, and I believe we are doing a very good job in that regard at the present time.

The fishermen in the maritime provinces also appreciate the accelerated effort by the department in the important field of research. They are doing a very fine job which I know is appreciated by all fishermen. Last fall I attended a meeting of officials of the fisheries department of this country, those of the United States and others connected with the industry at a place called Hinkley's Point in the state of Maine. It was one of the finest international gatherings I have ever attended. Each individual spoke very frankly. The main discussion at that time was a survey in connection with the herring and sardine fisheries on the Atlantic coast. I believe the officials of the two countries and those engaged in the canning industries of the two countries are of one mind. It is a fine thing to find the officials of the fisheries departments in these two countries ready and willing to sit down and work out these problems together, in co-operation. It will save a great deal of repetition as a result of one country doing the same work as the other one is doing. When I found that type of co-operation there, I was convinced that the survey will be a success. I know that the departments are extremely anxious that it be carried on. I have discussed with the minister a similar survey which was conducted on the Pacific coast a few years ago. According to reports that we received from that section of the country it was most successful, most advantageous to the industry and most advantageous to the department. We shall be pleased to see that type of investigation carried on on the Atlantic coastline.

By other hon. members who have already spoken mention has been made of the serious shortage of clams in that area. We all realize that the clam industry has never been a great producer of wealth. At the same time it was an industry that employed a goodly number of persons during the winter months when dollars were not too plentiful. I agree that the situation today is serious. At the same time I believe that the green crab which has infested our waters in that area during the past few years may be to a great extent responsible for the situation. Then again, the great improvement in the prices which were paid to the producers has encouraged a much greater number to be employed in that industry. I know the department is doing everything possible to try to find some answer to the problem. I hope they may be able to come up with something which may be helpful.

Only a few weeks ago—I believe it would be seven or eight weeks ago now—I was at the biological station in St. Andrews. At that time they put on a film strip which portrayed the dragging of scallops. I have mentioned this matter to the minister. In my opinion it was one of the finest types of work that the department could ever hope to produce which would be helpful to those engaged in the industry. The way in which the light from the ship was regulated on a sled behind the drags made it possible to sit and watch the scallops being dragged off the ocean bottom. It gave a clear picture of the way that the drags might be improved. I myself have dragged some scallops. With the information provided by this film strip I know that I could today devise a drag that would drag more scallops than those I used a few years ago. Work of that type is most helpful to the industry; it is most interesting to the industry and it means dollars to those engaged in it. We have not the scallop fishing they have in Digby and over that way, but our scallop fishing this past winter has been encouraging enough that we have had with us at least two or three boats from Digby dragging in Charlotte county area waters this winter. I trust the department will continue with this type of work because it will be found that it pays dividends and is most helpful to those engaged in the industry.

I also wish to say that the information compiled by the biological board in St. Andrews —and I take it for granted that the same is true with regard to the other stations—has always been made available to the industry. They have always tried in every way to be helpful and to encourage those who are trying to produce a better product. We have in the little town from which I come the largest exporter of lobsters perhaps on the North American continent. The assistance it has been able to obtain from the biological board has been most helpful. As a result, within the last few years, tanks have been installed in many of the larger restaurants in different parts of the United States to which fresh lobsters are shipped. They are kept alive in glass tanks. Those who come there and who like to have a lobster dinner—the best food in the world—can go to the tank, pick out the lobsters they wish, have them cooked and served to them in that restaurant. The biological board are to a great extent responsible for that improvement. I believe it will be of great assistance in building up this industry and in creating a greater demand for this wonderful food.

At the present time lobsters are being transported by trucks from the Conley lobster plant in St. Andrews as far as Florida. They are making weekly trips with live lobsters from St. Andrews to Florida. This is something which indicates clearly that even though the lobster is a most perishable article, with the proper facilities it can be placed in the restaurants and in the homes of a great portion of the population of this continent.

I have one suggestion to make in this regard. Conley's Lobsters Limited at one time owned a small lobster pound on the small island, namely Banes island which is in the Deer island area. When their business began to grow it became necessary to find larger quarters. This small pound was abandoned and has not been used for several years. The officials of the company assure me that that pound could be placed at the disposal of the biological board at any time they might wish to take it over for purposes of experimentation. I believe the matter should be looked into carefully. I am still one of those who believe that this industry can be helped greatly by looking after our spawn and small lobsters. I should like to see the department take an interest in this pound, which I know can be taken over without any cost to the department other than that of the personnel who look after it. The experiments that could be carried on there would be carried on in a place where the fishermen themselves could see them. I believe the benefits that might come from such experiments would be worth while.

I have just one bit of criticism to offer. During the past year the seining regulations in connection with the sardine industry were changed by the department. At the outset I wish to say that I did not oppose that change. I was opposed to it but a great number felt that it was an experiment which should be tried for one year. For that reason I did not oppose it. However, I was of the opinion that it would be harmful to those who are operating sardine weirs in the area, and I am still of that opinion. Nevertheless, it was carried on during the year 1955. I received a great many protests from fishermen all over the Passamaquoddy bay area. I do not think for a minute that it is the quantity of fish they catch that is harmful. It is the commotion that goes on all night in the areas where these weirs are built that is harmful. I am going to suggest to the minister to give serious consideration to giving these fishermen 1,500 feet or 2,000 feet protection instead of 1,000 feet. With 1,000 feet protection from a sardine weir, with this work going on all night, the commotion is most harmful. Those who build weirs place them in one particular spot and are obliged to wait until the fish

come to them. I believe this is one matter that should be given serious thought.

I was informed today—and I am not in a position to state whether or not this information is correct—that with respect to sardines that were on the north shore—that is the area between what is known as White Head or Bliss harbour and point Lepreau, a school of sardines has been there since last December. Purse seiners have been in the area all winter. They have been able to provide the canneries in that part of the county with good supplies—nearly a daily supply of sardines. This fact is very much appreciated by those working in the canneries and who were unable to work last summer owing to scarcity. This has provided a very good income for those engaged in purse seining. I do believe that that school of fish has pretty well left the north shore at this time. The report I got this morning was to the effect they had found sardines in the Passamaquoddy bay area and the seiners were in there.

I did not communicate with the minister because the house met early this morning but at one time the regulations we had governing the area in which purse seiners were allowed to operate was from White Head, near Bliss harbour not including the St. Andrews bay area to point Lepreau. The seiners were not allowed to go inside St. Andrews bay. If purse seiners are operating in St. Andrews bay today I know the telegrams, telephone calls and letters I may expect in volume. I really believe that it should be stopped. There are sardine weir fishermen in the Passamaquoddy bay area right now who are preparing their weirs for spring. There is great expense in connection with these preparations, and I do believe they should be protected. Again I would say it is not the quantity of fish that the seiners will get in that area, but it is the breaking up of the schools of herring. They may be difficult to find after the seiners have been amongst them for a few weeks.

This letter I received today is from a fisherman who has been engaged in the industry for 35 years to my knowledge. He pointed out what we may expect, and in his letter today the forecast he made has proven true. There were large schools on this north shore during December, January and part of February, but the catch during these last few days has been practically nil. Now, in my humble opinion the seiners have not caught 5 per cent of the fish that were there; I do not argue that. As I have said, it is not the quantity that they catch but it is the commotion and traffic through the places where they stay winter after winter that does the damage. I might repeat what has been said to me on many occasions, that 85 per cent of the sardine fishermen are opposed to this. Again, as I stated earlier, hundreds of people have been employed in these canneries who needed the employment. It is very difficult to strike a balance and know just where to draw the line; no one realizes that more than I do. I spent several winters on that coastline in this very type of work. I realize that those who go out in the winter months to make their bread and butter on this coastline earn all they get. But the feeling is very strong in connection with purse seining, and in the opinion of a great many it breaks up the schools of fish so that when spring comes it is impossible to find them anywhere. This is a very serious matter.

Years ago the sardine fishermen in the area from Pocologan down the north shore to Bliss harbour, Back bay, Deer island in St. Andrews bay area, depended to a great extent on the spring school of herring for a great portion of their annual income. During the last few years we have not had a spring school of herring, and as I have said many believe it is the winter seiner who is responsible for it. I have not any idea myself other than I know that, before the winter seining was introduced, somewhere in the area I have mentioned we would get that spring school of fish. At that time of year stocks were usually sold out and the price was as a rule better in the spring than any other time of the year. If this regulation with regard to that area is still in effect and it is open for purse seining, I would ask the minister to look into this very carefully. The school that was on the north shore has been broken up. If there is a school of sardines, as I am informed, already in the St. Andrews bay area and the purse seiners break them up again and there are no sardines in the spring, we are all open to a great deal of criticism.

There is another matter that I want to mention and it was brought out by the hon. member for Restigouche-Madawaska (Mr. Van Horne). He mentioned the serious situation with regard to the salmon industry on the rivers of the province. It would appear from his remarks and the remarks of many others that this great industry is being neglected by the federal fisheries department. I have heard this same criticism in the house directed to the federal government in connection with conservation of our forests, our streams and so on. I do not want any member of the house to think for one minute I am blaming one government more than any other, because in my lifetime we have had different provincial governments in my province. In this house I have always

been critical of any provincial government which will allow our raw materials to be exploited and then come to the federal government for aid. For many many years these salmon pools on our rivers have been put up for auction and sold to millionaires from outside our country. This has happened under both Liberal and Conservative governments. Our own citizens have been denied the right to fish in the pools on these rivers. However, mention is never made of the fact that the federal government provides the personnel to protect these rivers, yet every dollar of revenue from licences of any kind or from the sale of the pools goes into the provincial treasury. I believe that before too much criticism is aimed at the federal government in this regard we should clean house in our own province. Before I am accused of making a political speech, which is usually the accusation I receive, I want to say that I have said this when we had Liberal governments in my province and I say it today when we have a Tory government.

An hon. Member: More so now.

Mr. Stuart (Charlotte): And not any more now; I have spoken on the same subject in this house on different occasions. I do not believe it is right for any provincial government to allow their crown lands, their fisheries or any other resource of this country which belongs to the people of the country to be exploited by citizens in that province, and then come to the federal government asking for assistance and condemning the federal government for not playing their part. I believe we have the power in our own province to start conservation measures. Now, I will resume my seat because I have taken more time than I intended. I know the minister will give these matters I have brought to his attention serious consideration. I know his health will improve and he will be able to carry on and do the same type of job as he has done since he came here as Minister of Fisheries.

Mr. Nesbitt: I would like to take this opportunity, and I am sure all other hon. members in the house join me, of saying how glad I am to see the minister back in his seat and looking so well after his unfortunate accident. You know, Mr. Chairman, there is an old saying that if you tell a man often enough he is looking sick, eventually he will get sick. I think perhaps after the first item of the minister's estimates is completed that saying will work in reverse and if there is any recovery still necessary it will be completed by the time the minister's estimates are finished.

[Mr. Stuart (Charlotte).]

It may seem very strange to hon. members from the maritimes or British Columbia that a member from central Canada should have any remarks to make about fisheries. However, as the minister and his staff well know, and I hope many other hon. members know, the fishing industry on the great lakes is of very considerable value. In the report of the minister's department it says that the sale value of fish from the great lakes was aproximately $8 million, a little bit less, but almost $8 million. Now, the fishing industry on lake Erie, and lake Huron particularly, not only provides a source of income but it employs many persons. It is a particularly valuable industry because the bulk of the fish caught in those lakes goes to the United States and provides us with United States dollars which, because of our present balance of trade with that country, are very valuable indeed.

As I have already mentioned, this industry is very valuable and its value can be increased, although in the last few years, as hon. members know, because of the lamprey eel and other things, the fishing industry has certainly dropped off in the great lakes area. It is our hope that it will revive, increase in value and employ more people.

A fisherman's life on the great lakes is a pretty healthy one. In my younger days, when I was going to school, I used to spend a great deal of each summer visiting and sometimes working on the fish boats going out of Port Dover, which is in the constituency of the hon. member for Norfolk. Port Dover, as some hon. members may know, is the largest inland fishing port in the world. At the present time there are 25 or 30 modern diesel tugs operating out of this port. I am sure the minister and his staff are aware of this, and I do not wish to take any further time dealing with facts which they already know.

When the great St. Lawrence seaway project is completed in a couple of years a couple of problems which are now in existence will become increasingly important. These two problems will certainly have an effect on the fish population of the great lakes, particularly of lake Erie. These two problems are, firstly, the danger of animal and plant life from the ocean, which are not indigenous to fresh water, getting into the lakes and upsetting the balance of nature and possibly causing considerable harm.

With regard to the first matter, I should like to refer hon. members to what happened with respect to the lamprey eel. As far as I have been able to understand it, the lamprey eel may well have been in lake

Ontario for many thousands of years because, apart from the international rapids and the Lachine rapids, there was nothing to prevent them from getting into lake Ontario. However, Niagara falls was too much of a barrier even for the lamprey eel, and it never got into lake Erie and subsequently lake Huron and lake Superior until there was some other means of passage. Apparently the means of passage was provided by the Welland canal. Well, the Welland canal is of varying size and depth. It has been in existence for well over 100 years. First, there was a 7-foot draft canal, and then a 14-foot draft canal, and now we shall have a 27-foot draft canal. Despite the earlier canals, apparently the lampreys were never noticed in lake Erie until 1921. It is my understanding that lampreys got into lake Ontario by riding—I was going to say "piggy-back", but perhaps I should say "piggy-bottom"; that may be a better term—or sticking to the bottom of boats and going through the lakes. There is a possibility they may have been getting through the locks as they were being filled up from time to time. My colleague, the hon. member for Lambton West, dealt with this problem this morning. Lampreys have caused great depredations in the fish population of the great lakes, particularly lake trout. I understand they are now starting in on the whitefish. This should teach us a little lesson.

The Minister of Fisheries is certainly to be highly commended on the lead he has given in efforts to control and get rid of the lamprey eel. I am very glad to see that an additional $130,000 is included in the estimates this year for that purpose. If we succeed in controlling and eventually getting rid of the lamprey eel we certainly do not want them coming in from the ocean again once we have got rid of those we already have. After the construction of the St. Lawrence seaway project it might be advisable for the minister, if he has not already done so, to take steps to make sure that some type of screening process takes place to prevent, not only more lampreys from getting up into the lakes, but also other forms of undesirable ocean life. The minister may very well say: It has not come in so far. Maybe it will not come in, but after the St. Lawrence seaway is completed we shall have a 27-foot canal, almost double the present depth. There will be a great increase in shipping on the great lakes. At the present time most of our foreign ships come from Norway, Sweden and Holland. With the increased depth of the seaway we will probably have ships from all over the world which will have various things sticking to their hulls. It may be well for the minister, as I said before, to take some precautions to prevent undesirable marine life, both plant and animal, from getting into the lakes on the bottoms of ships or swimming into those much larger and much deeper locks.

While the Welland canal has been in existence for over 100 years, in one way or another, yet the lampreys never got into lake Erie in any quantity until 1921, and did not cause serious damage until the late 1930's. In this regard I should like to make a couple of suggestions to the minister. First of all, I think the great lakes fisheries research committee should investigate the possibility of placing new types of ocean fish in the lakes. This is a sort of procedure the reverse of what I have already mentioned. We have had one very good example of that in the great lakes, namely, the great lakes smelts. The smelt, as hon. members from the maritime provinces know, is a very small edible fish. Smelts in the great lakes have provided a valuable source of fish food and, I may say, pleasure to individuals who go smelting in the springtime. As I understand it, smelt got into the great lakes from a small lake in Michigan which was stocked with those fish. They came down a small stream into lake Michigan and spread around. That is one explanation I have heard; there may be others. As I say, these smelts have provided a very valuable source of food and pleasure to the residents around the great lakes. It may be that other forms of ocean fish could be put into the great lakes that would survive under fresh water conditions and would not upset the present fish population, and might in fact increase, give employment and cause us to sell more fish as well. This is just a suggestion. It may be that the research committee is looking into this matter. I hope it is. If it is not, I hope it will take this hint.

When the lampreys are controlled—and we have had various estimates of the time it will take—I hope the minister's department will take the lead in making attempts to rehabilitate the great lakes with lake trout and with other forms of fresh water fish. This will probably be done by the provincial authorities, but an additional subsidy from the federal government might be very helpful.

I mentioned before—and I repeat it because I do think it is important—that once the seaway is completed, and before it is completed, some plan, some arrangement for screening the Welland canal in particular should be put into effect to prevent the lampreys at least from getting back into the lakes once they are controlled.

The second matter I would like to deal with is pollution in the great lakes, and in

lake Erie in particular. I mention lake Erie because it is a very shallow lake. I believe the average depth is around 70 feet, if my memory serves me. The deepest spot in the whole lake is only 190 feet, and it is at the end of Long Point island. In this regard, I should like to refer to a clipping from the *Sentinel-Review* of Woodstock, Ontario, dated Friday, March 2, 1956. I shall read just a portion of the clipping. The heading is:

Welland health director says Erie being polluted.

The paragraph reads as follows:

Dr. L. W. C. Sturgeon, director of the Welland county health unit, told the Ontario pollution board Thursday lake Erie is becoming more contaminated every year.

We have an abundant supply of good water from lake Erie, but the drainage problem in the Welland and Port Colborne areas is complicated by the abundance of heavy clay.

Dr. Sturgeon said new types of virus diseases are being encountered, such as a mild outbreak of jaundice in one district school last year.

I mention this in passing because it illustrates the desirability of looking into this matter of pollution. Pollution of necessity consists of two types. There is pollution by sewage, which is, of course, animal or vegetable waste matter which eventually would dissipate. In fact, in some cases, it might even form a type of food for some of the fish of the lakes.

The other type of pollution is caused by chemicals, and it would tend to be cumulative in effect. I refer to the type of pollution that might very well be caused by ships blowing off once a day, cleaning their bunkers of oil which goes all through the water. Hon. members know that our beaches along the Atlantic coast have been spoiled because of oil collecting on the beaches and in the water. This might have a very serious effect on the fish life of the great lakes. With the greatly increased shipping that will come with the completion of the St. Lawrence seaway, with certain chemicals being used for cleaning the decks and the holds of ships and that type of thing, this waste will be dumped in the lakes and it might have accumulative effect.

If we look far enough into the future, ships eventually might very well be powered by nuclear energy and their waste products might be dumped into the lakes unless steps are taken at this time to control this type of action. Not only will the fish life in the great lakes be endangered, but the water which may be used for municipal purposes in the states adjoining the great lakes and also in Ontario will be polluted. If pollution is allowed to accumulate in lake Huron and lake Erie it will not only kill the fish but will present serious problems to these municipalities which will have to use this water in the immediate future.

I know this does not come under the heading of fisheries exactly, so I shall not pursue it further, but I did want to mention it in passing in order to show that the increase in traffic on the great lakes which will come as the result of the seaway will increase the possibility of pollution.

I should like now to refer to the remarks of the Hon. Lionel Chevrier who, as all hon. members know, is the head of the St. Lawrence seaway project. I wish to refer briefly to some statements he made when speaking about potential traffic on the seaway in an address he gave in Copenhagen, Denmark, on May 20, 1955:

Estimates of the traffic which will utilize the seaway in the years immediately following its completion suggest a total of 30-35 million tons of cargo per year. This may be compared with approximately ten million tons currently passing through the St. Lawrence canals.

He goes on further to say:

Overseas trade was pioneered by Norwegian interests in 1933, it expanded sporadically in the years before world war II, but was discontinued during the hostilities. Re-established in 1945, this trade has since expanded at a phenomenal rate.

By 1954, the total volume exceeded 780,000 tons and involved 14 shipping lines and 120 vessels. It is worth noting as a measure of growth that the number of shipping lines involved doubled between 1952 and 1954. This has been accomplished it must be remembered, despite the handicaps of the existing 14-foot canals.

Referring to future traffic in foreign shipping, Mr. Chevrier had this to say:

Estimates vary considerably, but there is substantial reason to believe that the present volume of this traffic (over one-half million tons)—

That is, foreign shipping coming from abroad.

—will be more than treble in the years immediately following completion of the seaway.

. . . It could be expanded some 25 times its current level without exceeding the tonnage of similar traffic now handled by ports in comparable U.S. coastal districts.

I mention this because Mr. Chevrier is, as I think all hon. members will agree, the leading authority on the St. Lawrence seaway project and its potentialities in this country and perhaps elsewhere as well. I think these figures should not be taken lightly by any means. The shipping and the pollution, which are already rapidly growing on the great lakes, will continue to grow at a great rate with the completion of the seaway. The problem of waste materials being dumped from ships and the problem of sewage disposal in the lakes will also increase. In deep lakes like lake Huron it may be a long time before the effect is felt, but in shallow lakes such as lake Superior, from which comes the

bulk of fish from the great lakes at the present time, the effect will soon present a problem to municipalities.

In this regard I have a suggestion which I hope the minister might consider. I suggest the setting up of a joint commission with the United States to control pollution of the great lakes. If such a commission were set up it could investigate the present sewage pollution problem and the chemical pollution problem and other factors, and could endeavour to estimate what damage if any, future pollution might cause. It might be that pollution would not be found to be a serious matter, but it would appear serious to me. This commission could investigate the type of pollution that is likely to occur in the great lakes in the foreseeable future, the amount of such pollution and the effect, if any, on the fish population.

If such a commission were set up I think particular attention should be paid to the cumulative effect of chemical pollution particularly by oil and chemicals being dumped into the lakes. If the commission were to decide that a serious problem could develop in future as the result of increased pollution, steps could be taken to control pollution before it takes place, before it destroys the fish life and renders the waters of the great lakes unliveable for the fish and unusable for the human population in the surrounding area.

There is no point in shutting the barn door after the horse is stolen. If vision and foresight had been used in the past we would not have the lamprey problem today. I feel that the Minister of Fisheries and the officials of his department have both foresight and vision. I suggest to the minister that the setting up of such a commission to study the volume of anticipated pollution and its effects should be borne in mind, and it would be my hope that the department would do something about it before it is too late.

Mr. McWilliam: Mr. Chairman, I wish to make a few remarks under this general item. First, however, I wish to state briefly, but nonetheless sincerely, that I am sure we are all pleased to see the minister well on the way to complete recovery.

All phases of fisheries have been discussed since this item was brought forward; therefore my remarks today will be limited. On the whole the Department of Fisheries is making good progress. The status of the department as a component part of government continues to rise, which is a good omen for the future of the industry.

The peculiar habits of the different species of fish, the divergent views on international fisheries, and the limited number of qualified biological and research workers available, are only a few of the problems that have to be faced. These are problems which I contend cannot be solved over night. Advances have been made in all branches of the department, new and improved legislation and regulations have been introduced over the years, all of which is encouraging and beneficial to the industry. Broad statements have been made about the inefficiency of the department and its officials. Statements have been made to the effect that there is a serious decline in fisheries. None of these statements has any foundation in fact.

At this point, Mr. Chairman, I wish to place a few facts on record. The 25th annual report of the Department of Fisheries for the year 1954-55, on page 55, gives a general review of the fishing industry which I feel should be placed in part on the record for the information of those who have not read the report:

> Canadian fishermen generally enjoyed a satisfactory year in 1954. Total landings of fish and fish products amounted to slightly over 2·0 billion pounds compared with approximately 1·85 billion in 1953. Much of this increase was attributable to substantially heavier landings of cod and haddock, in the Atlantic area. In addition British Columbia's herring fishermen recorded their first full calendar year production since 1951.
>
> Average returns, with few exceptions, compared favourably with those of 1953. Gross landed value totalled approximately $97·7 million as against $90·2 million and the marketed value of the year's production is estimated at close to $185 million as compared with $174·2 million in 1953.
>
> The total value of exports reached a record $132·6 million.

To those who are interested in fisheries, I suggest that they read this annual report. I am sure they will agree that the scope of the department's work is very extensive and the results obtained have been very good.

The 1955 annual report of the New Brunswick department of industry and development, fisheries branch, states in part on pages 12 and 13:

> New Brunswick's sea and inland commercial fisheries reached a total of 212,450,000 pounds of fish and shellfish for a landed value of $7,186,900 during the calendar year 1954. In comparison with 1953 this represents an increase of 9·4 per cent in quantity and 5 per cent in value.

How, then, does anyone justify the statement that New Brunswick fisheries are in serious decline?

In regard to species of fish caught in the world-renowned Miramichi river, which runs through the riding of Northumberland-Miramichi, such as salmon, smelts, oysters, lobsters and other varieties of fish—all of which are delicacies—I shall make a few comments when the particular item comes before the committee.

I wish to say a few words on a matter that has been the subject of much discussion inside and outside this house; that is, unemployment insurance benefits for fishermen. I realize the difficulties that are faced in the working out of a plan to embrace fishermen, owing chiefly to the fact that the majority of fishermen are self-employed.

I do not need to remind the members of this house that of all occupations fishing is the most strenuous and hazardous and, as far as the east coast fishing is concerned, the industry with the smallest financial return to the individual. The majority of Atlantic provinces fishermen find it extremely difficult to eke out an existence. They are at the mercy of the elements, and many of them spend their entire lives in the fishing industry, with very little to show for a lifetime of endeavour, through no fault of their own.

There are no better Canadians than the east coast fishermen. They carry on under all sorts of adverse conditions. They do not come begging to parliament when they have a crop failure, or a loss of boats and gear caused by storms, and they have never witnessed a crop surplus. These hardy fishermen go back to the sea with faith and courage to recoup their losses by their own efforts. They are to be commended for their spirit. It is unfortunate that some of this admirable spirit is not shown by another group, in another part of Canada. It would have a splendid effect on the present and future morale of our country.

These east coast fishermen know and appreciate that the Minister of Fisheries and the Minister of Labour, whose department administers the Unemployment Insurance Act, are exploring every avenue with a view to enacting legislation that will make fishermen eligible for unemployment insurance benefits, or some other plan that will provide assistance during periods of unemployment. I know the matter is receiving most serious consideration by the two ministers and their officials. I trust that a solution will be found in the near future to provide these benefits for this group, which is so deserving of this advantage now enjoyed by most Canadians, particularly in view of the adverse conditions they must face —conditions beyond their control—which make the provision of a livelihood an almost insurmountable task.

In the matter of protection, much is heard on the east coast of New Brunswick about illegal fishing of lobsters and salmon. I think there has been a definite improvement in late years. However, I feel that additional protective services would benefit the lobster and salmon fisheries. Salmon fishing associations, both commercial and sports fishing, have requested additional protection, particularly in the spawning areas.

At this point I should like to say a word about the dates for east coast salmon fishing. As a conservation measure the date was set ahead last year to June 5. This date was arrived at after a recommendation was received by the department from the Atlantic salmon co-ordinating committee. This was the first time all the Atlantic provinces, including Quebec, agreed upon an opening date. This date was concurred in by the department after all factors were considered, and the recommendation was put into effect, strictly as a conservation measure. It is generally felt that it was a necessary step; and when the records are compiled after the trial cycle period, the department will be in a better position to assess the future of the east coast salmon fisheries.

In closing, I wish to ask the minister if he has anything to report on the research that is being done in connection with the possibility of spawning the early run salmon at our hatcheries. I also wish to ask him if he will arrange for the showing of the films on the life and habits of the lobster to the Miramichi lobster fishermen at an early date, prior to the opening of the season in area 7B.

Mr. Knowles: Like other members who have spoken, I should like to extend my congratulations to the Minister of Fisheries on his restoration to good health. I am also happy to join in congratulating him on the excellence of his administration of the Department of Fisheries. I have been pleased to note some of the innovations that have taken place during the period he has been minister, including the fishermen's indemnity plan, as well as other steps he has taken to improve the lot of those engaged in this industry.

I should like to join with the previous speaker and others who have spoken in this debate and express the hope that, along with the Minister of Labour, it will not be long until he will find a way in which to bring fishermen under the coverage of the Unemployment Insurance Act.

However, my purpose in rising at this time is to say a few words not merely because of an ancestral interest in fishing but because I happen to be a member of a group that is extremely important to the fishing industry. I refer to the consumers of Canada. I join with the member for Charlotte in congratulating the department on what it has done in its kitchen over in the west block and on what it has done generally in its consumer services. But it does seem to me, Mr. Chairman, that there is still room for a great deal

to be done by way of research, publicity and education with regard to the cooking of fish.

I do not know of any food that can be more delectable than fish when it is properly cooked. The opposite is also true. I do not know of anything I would rather stay away from than fish when it is not properly cooked. We can find examples of both extremes in this city, but I think the words of the hon. member for Charlotte were well spoken when he said that due to the work that has been done by the department there has been a noticeable improvement in the preparation of fish in Ottawa during the past few years.

When one starts to talk about the cooking of fish he realizes he is getting very close to the activities of the housewives of the country, and he must be very careful. I have in mind not so much the cooking of fish in homes but the cooking of fish in restaurants, cafeterias and other public places across the country. I feel very strongly that there is room for improvement there and I should like to make one or two suggestions to the minister.

We know, of course, of the kitchen that his department has in the west block and of the work that is done there, but I feel that the benefits and advantages of that study and work might be much more widely disseminated throughout the country. I wonder whether there has been any attempt at liaison or co-operation with the nutrition division of the Department of National Health and Welfare. I am glad to see the minister nod his head in assent. When I mention the word "nutrition" I think it will be clear that I have in mind not only the desirability of fish being a delight to the taste. I have the notion that there must be a tremendous amount of nutritional value in fish which is lost because in a great many places it is not properly cooked. I believe, therefore, that not only would it be good for the industry to do some educating in this field, but it would also be good for the health of the Canadian people generally if steps were taken so that the full nutritional value of fish were made available to all our people.

As the minister and other members of the house will know, the Department of National Welfare is at the present time conducting a survey amongst Ottawa civil servants to determine whether or not they are eating adequate breakfasts. I think such a survey is a very good idea, but I suggest that if it is possible to conduct a survey of that kind among a selected group of people, surveys might be made to determine the nutritional value of fish cooked in one way or fish cooked in another.

Mr. Brooks: Kippers for breakfast.

Mr. Knowles: My good friend the hon. member for Royal says that kippers should be provided for breakfast for all civil servants in Ottawa. I have no objection to that, but if so I think the project will have to be extended and a good meal of lake Winnipeg goldeye will have to be provided at some other time of the day. However, I am not going to pursue that today. I was led into it by my good friend from Royal. What I was starting to say was that I think it would be worth while for some department of government, or perhaps through liaison among several departments, to conduct surveys to ascertain the nutritional value of fish and then take whatever steps are possible to make the advantages of such a survey known to our people.

There are various ways in which the advantages of research into the proper cooking of fish could be disseminated. There are a number of departments of government which are responsible for feeding a great many people. For example, I think of the Department of National Defence. There is also the Department of Veterans Affairs with its veterans' hospitals. There is the Canadian National Railways, which provides a great many meals, and there are a great many government departments that have restaurants, dining rooms and cafeterias.

In addition, Mr. Chairman, if some new ways can be found of making sure that the goodness that is in fish is always retained when it is cooked, another way in which that knowledge could be distributed throughout the country would be, I suggest, by placing it in the hands of the provincial departments of education. I do not want to raise any constitutional issue here through the fact that the provinces have control of education, but recognizing that principle I think the provincial departments of education, under many of which instruction is given in what is called home economics, domestic science or cooking, would be glad to have that information so it could be passed on to the young people who are taking these courses in our schools throughout the country.

One of the things that must be said about the Canadian housewife as a good cook is that she is always ready for new ideas, and if the department would take steps to spread such new ideas by means of publicity of various kinds I think that would be most acceptable. I recognize that the minister's department has prepared some very interesting booklets already. We have all seen and had the privilege of sending to some of our friends and constituents that well set up little

book on the cooking of fish. Perhaps that particular book is a little along the highbrow line.

Mr. Lennard: It was very simple.

Mr. Knowles: Maybe my hon. friend and I are thinking of different books. I think something a little more proletarian might have wider acceptance.

Mr. Sinclair: We have a good selection for all heights of brows.

Mr. Knowles: That is fine. I believe I have made my point. The minister appreciates the fact that these suggestions are offered in the spirit of trying to be helpful. I think it would be good for the industry. More fish would be sold if this kind of information were spread abroad, and I think it would be good for the health of the people of Canada.

Mr. Balcom: Mr. Chairman, the compliments that have been paid to the minister and his staff have been well merited, but perhaps they would not be worth very much unless they were backed up by the fishermen themselves. I believe the sentiments of the fishermen were very well expressed last Friday by the hon. member for Shelburne-Yarmouth-Clare. I merely want to add that what that hon. member said is also true of every fishing village in Halifax county.

The work of the Department of Fisheries is well and concisely laid out in the 25th annual report of the department, which is the 85th annual fisheries report of the government of Canada. There is ample evidence there of the good work the Department of Fisheries is doing, and in that I want to include not only the minister, his parliamentary assistant and all the officials in Ottawa but all the fisheries officials who are stationed in the outposts, and I suppose I might include Halifax as one of the outposts. We have always found them very co-operative.

I might mention a few of the ways in which we are benefiting greatly and concerning which there is such a decided improvement. The first is the boat insurance which the fishermen have taken advantage of and which has been of great benefit to them. Then there is the lobster pot or lobster trap insurance which in particular has helped the fisherman, for it has given him a real opportunity to fish in places to which he might not otherwise go because of the danger not only to his traps but to himself. As everyone knows, lobster fishing is a very dangerous occupation. Then there is the salt subsidy which was very helpful to fishermen throughout the country, particularly in the more inaccessible places. They appreciate it to the full.

Last year we were pleased with what happened. I do not think it was perhaps necessary for the government to go out of its way to investigate this matter and voluntarily do what it did, but it returned the customs and excise duty to the companies which had paid these taxes when they brought ships into the country. Speaking for these companies I may say that I know they fully appreciate the work that is done. In this debate it has been said that St. Margaret's bay was cut off from trawlers and draggers at a time when perhaps votes were needed. I just want to say here that was not the case at all. I wanted to say at that time, if I had been able to do so, that when we do something we do it for the fishermen, not for the sake of the votes.

Then when home recently I saw on the street a shopmobile, a large trailer in which the federal government, working with the provincial government, are giving our fishermen an opportunity to repair and maintain their engines and motors.

There are perhaps three or four things that I might suggest should be done. I remember that when I was a young person in the country we had a number of lobster factories, and each village had what they call a lobster pound or lobster car in which the lobsters were kept waiting for the boats to call for them or for a time when the price might be a little bit better. It struck me that possibly there might be some assistance given to these country fishermen.

Last Friday I was pleasantly surprised to learn from the minister that last year the export lobster catch was valued at $16,714,000. This, it seems, was three times the value of fresh and frozen salmon exports.

Mr. Sinclair: On the east coast.

Mr. Balcom: On the east coast. I have a note here that, of course, British Columbia canned salmon export was over $16 million.

Mr. Sinclair: How much?

Mr. Balcom: Over $16 million. Another suggestion I should like to make is this. In going around the country I see some extremely careless handling of fish just as, when you go to the Annapolis valley, you see careless handling of apples.

Mr. Sinclair: Except in the Okanagan valley.

Mr. Balcom: The situation must have changed since wartime. I wish that all officials at all levels, when they are visiting these various places, could go to these wharves and give the men instruction on how to handle fish. You see them throwing

them out on the wharves, or forking them out. This procedure just ruins the fish. Fish should be handled just as though they were the most delicate piece of china.

Then of course we are always asking for wharves, breakwaters and shelters. While this matter is not entirely in the sphere of the Department of Fisheries, through them I think the fishermen can be helped because even if there are only two fishermen in a small village, it probably means that 10 or 12 people are dependent on those fishermen. These people cannot go anywhere else and find employment. They must stick to their last there.

In travelling around the country, every one of us has seen how fish can be ruined in so many of our hotels. I wish that your dietitians, who do such a wonderful job in your own department, could visit these hotels and tell them that the best halibut is not improved by frying it or broiling it in tomato sauce.

Then as another suggestion I would hope your department would continue its efforts to stabilize the United States market. After all, I believe they take half our Canadian fish products. Every day I know you are receiving demands for further research. I am glad to read that there is now some possibility that lobster shells will be utilized. I know that your Halifax biological station has been working on this matter for some time, and I know that if anyone can find some further use for them, they will be able to do so.

I would draw to the attention of the minister the fact that in Nova Scotia clams seem to be decreasing in number and in some places going away entirely. I should like to mention one or two places, namely Musquodoboit harbour and Ostrea lake. At one time there were two factories in that vicinity. I think now we have one working only part time. They have to go many miles—I suppose up to 100 miles—to get their clams. I am glad to hear that your department is now working on this matter and has a machine in that area and will continue it down into Guysborough county. Perhaps the reason clams die and disappear from some places might be the subject of an investigation that could be made by our maritime universities. I would not mention any special one, but they could work in co-operation with your own biological station.

Mr. Leboe: Mr. Chairman, I suppose some hon. members are wondering what I would have to say about fish, living as I do up in the interior of British Columbia. But of course that is where the important spawning grounds of the salmon are. We have about 300 miles of the Fraser river in my riding. This river, with its tributaries, contributes a great deal to the fishing industry.

My reason for rising at this time is just to make one or two observations in respect of the rumblings of the battle that is shaping up as between fish and power. I should like to say that the fishermen certainly have a good case for keeping the fishing industry alive, in that they are producing food. When we consider the great populations of the world that are without sufficient food, we cannot but realize that the fishing industry is extremely important.

The thing I had in mind is this. I have read the statement of the minister at page 1920 of *Hansard*, in answer to a question by the hon. member for Kamloops, in which he said in effect that no permit woud be given for power dams until certain conditions had been met which were laid down by his department. The thing I should like to say is this. If by any chance a dam cannot be built on the Fraser river to provide power for the interior of British Columbia, I feel that we have an alternative in the use of gas which will be coming down from Fort St. John. There might be a slight difference in the cost factor of hydroelectric power and thermoelectric power.

If a block is to be put in the way of building a dam because it cannot provide a way for the fish to reach the spawning ground—that is, if it is decided that we cannot build the dam—and if the authority which is in charge of that particular phase of the fishing industry says it is in the interests of Canada that the dam should not be built, then I feel that compensation should be given so that the cost of thermoelectric power in that area should be no more than it would be for hydroelectric power.

I feel that we must get power in that area very soon. I realize that engineers are now working on plans to see if they cannot provide some way for the fish to get up to the spawning grounds and the young fish to get back again. I am hoping that if we do find we cannot build a dam there to supply the people of the interior with power, consideration will be given to making the thermoelectric power just as cheap as the hydroelectric power would be. I do not feel the people of the interior should be asked to subsidize the fishing industry. I believe we must keep the fishing industry alive, and there may not be too great a difference between the cost of thermoelectric power and hydroelectric power. If there is some difference, I believe it should be taken care of by some sort of subsidy.

Mr. Robichaud: It is fitting that a week ago today, on Friday, a day when fish is the order of the day, the Minister of Fisheries should introduce to the members of this committee the first item of the 1956-57 estimates of his department. In a well presented and concise report the minister has given an up to date review of conditions in the fishing industry in Canada. I am convinced that all members of this house were pleased to hear from the minister that the whole fish marketing situation is quite satisfactory at the moment, and that no surpluses of consequence exist. In most cases future prospects are encouraging. Before proceeding with my remarks I want to join with previous speakers and associate myself with those who have congratulated the minister upon his return to this house and to the department. We are certainly all delighted to see him looking so well and so fit to carry on the administration of his ever-growing department.

As one who has been closely connected with the fishing industry almost since childhood, and representing one of the largest fishing constituencies on the east coast, I feel I cannot miss this opportunity of making a few observations on this question which is of vital importance to my constituents. In Gloucester county we have one of the largest and most modern deep sea fishing fleets on the Atlantic coast. From an outmoded and obsolete fleet consisting mainly of sailing vessels and still using the antiquated hand line methods of their forefathers, our fishermen in the past 10 years have quickly adapted themselves to modern methods and today are the proud owners of a fishing fleet estimated to be worth over $2·5 million. Our 60-odd draggers built since 1946, equipped with powerful diesel propulsion units, with ship to shore telephones, sounding fathometers and even direction finders, are considered today one of the largest and most efficient fleets of their kind on the whole Atlantic.

An analysis of fishing operations which was made by the economic service of the fisheries department last summer shows that 10 of the draggers operating from the port of Caraquet alone have landed in six months of operation over 9 million pounds of fresh fish. In fact this Gloucester county fleet landed, during the period from May to November, 1955, a total of 27,459,000 pounds of cod, 12,694,000 pounds of flounders or plaice and 892,000 pounds of haddock. In addition this same fleet has also landed millions of pounds of redfish, commonly known on the market as ocean perch.

I repeat, Mr. Chairman; such amazing results have been obtained during a period of only 10 years, which started in 1946 with the modernization of both fishing methods and processing facilities, aided by the industry as well as the federal and provincial governments. Federal grants since the introduction of this building program 10 years ago have contributed over $300,000 to assist in the construction of vessels of the dragger type in Gloucester county alone. The fishermen's loan board of New Brunswick, which I was privileged to serve as secretary for the first six years of its existence, has been instrumental in the introduction and construction of this most progressive fleet which is today a valuable asset to the management in the fishing industry because they also have a stake in the success of any modernization program that may improve the supply of raw materials to processing plants and supply the consumer with a high quality product. The performance of this new fishing fleet has revolutioned the entire industry, and offers an example of co-operation and controlled ambition which has led to an evolution without precedent in the industry concerned.

Let us not arrive at the immediate conclusion, however, that such a sudden and accentuated effort, resulting in ever-increasing production, does not create problems for those interested in the future of this industry. Ever-increasing capital costs have brought about increases in interest payments, marine insurance premiums and depreciation charges, as well as substantial increases in expenditures for the replacement of fishing gear and other expensive repairs. In order to meet his heavy obligation the dragger owner must increase the intensity of his fishing effort almost to the extent of his physical ability to resist fatigue and exhaustion. It is not unusual to see our Gloucester draggers leave port at midnight on Sunday and fish without interruption, 24 hours a day, for five or six consecutive days before returning to their home port to unload their catch of 60,000 to 70,000 pounds of fresh fish.

These same hard working fishermen are subject to controls and regulations in the hands of the federal government. They have no assurance that the raw materials which they are extracting without letup will be replenished and last indefinitely. It is the duty of the government, therefore, to conduct the necessary research and impose the conservation regulations and control that are required to perpetuate the stock. In this respect the government is to be commended for its participation on the international commission for the northwest Atlantic fisheries which was established in 1951. The aim of this commission is to investigate, protect and conserve the fisheries of the northwest Atlantic ocean in order to maintain an optimum

sustained catch from those fisheries. This objective should meet with the approval and support of all those interested in the fishing industry. Its decision to recommend the introduction of controlled mesh size regulations for trawl nets should be considered as a step in the right direction, and taken as a warning against the possible depletion of certain varieties of fish.

Some of the members who have preceded me in this debate have expressed their concern over existing regulations regarding territorial water limits. The world controversy regarding such limits is no doubt complicating the conservation program now under way under international commissions and our own federal Department of Fisheries. They all express the hope that this important matter will be solved to our satisfaction when the international law commission of the United Nations presents its recommendation to the general assembly late this year.

We cannot regard as fair the present policy of restricting the operation of Canadian trawlers to 12 miles offshore while foreign vessels are allowed to fish up to the 3-mile limit. I cannot agree entirely, however, with the suggestion made by the hon. member for Digby-Annapolis-Kings who said, as reported at page 1756 of *Hansard*:

> I should like to see the situation worked out so that all trawlers would be kept 12 miles off our coasts.

Such a restriction would be most detrimental to certain sections or certain aspects of the industry, such as, for example, the flounder or plaice fishery. This special variety has shown an increase in New Brunswick from a total catch of 600,000 pounds in 1945 to close to 10 million pounds in 1955. Such an increase would have been impossible if trawler operations had been limited to the 12-mile limit, as suggested by the hon. member.

However, I agree with the same hon. member that there should be restrictions to protect the inshore fishermen in certain areas. This problem is apparent along the shores of the bay of Chaleur in my own constituency. After the introduction of draggers in 1946 and up to the fall of 1952, dragger fishermen abstained from interfering with the inshore fishermen in the bay of Chaleur area before late October or early November. However, in September, 1952, we had a provincial election in New Brunswick which resulted in a change of government. Probably by coincidence, on September 23, the day after the election, a number of draggers invaded the bay of Chaleur waters and have ever since interfered with inshore fishermen.

Mr. Brooks: May I point out to the hon. member that the new government did not take over the day after the election; it was some days after. They do not change immediately.

Mr. Robichaud: I might tell the hon. member that the fishermen were aware then there would be no objection from the provincial government, in trying to protect the interests of the inshore fishermen. Once again, Mr. Chairman, I suggest that those inshore fishermen must be protected, and it might be advisable to enforce, by regulations, the gentlemen's agreement which existed up to September, 1952, in connection with certain sections of the bay of Chaleur.

Mr. Brooks: May I ask the hon. member a question? Does he not know that the federal government, not the provincial government, has control of trawlers?

Mr. Robichaud: Mr. Chairman, if the hon. member had been listening he would have heard that I said this was done by a gentlemen's agreement, and that representations were made to the federal government to protect the waters of the bay of Chaleur. I might also inform the hon. member that the deputy minister of the department of industry and development and the director of fisheries of New Brunswick were here in Ottawa in January—I think it was January 15, 1953—and made representations to the Department of Fisheries against the protection of the waters of the bay of Chaleur for inshore fishermen.

Mr. Brooks: Yes; again I want to keep the record straight. This was in 1953. The hon. member said the day after the new government of New Brunswick was elected. That was in 1952, not 1953.

Mr. Robichaud: Again I want to make clear to the hon. member that after September 22, 1952, there was no one in New Brunswick to protect the interests of the inshore fishermen.

Mr. Nowlan: Where was the Minister of Fisheries?

Mr. Robichaud: The Minister of Fisheries received recommendations from the fisheries division of the department of industry and development of New Brunswick.

Mr. Brooks: You are just trying to talk politics.

Mr. Robichaud: During the course of the debate on the fisheries estimates last year I brought to the attention of the house the situation of the herring fishermen on the Atlantic coast. Again I want to mention at this time that our herring fishermen are still using the same outmoded and inefficient methods adopted over a century ago. Would the minister advise the house as to whether

the Atlantic herring investigation committee, which was operated as a joint effort of the government of Canada, the government of Newfoundland before that province entered confederation, and the provincial governments of the maritime provinces and Quebec, has completed its investigation, and if a report has since been published, as this committee, I understand, was dissolved in 1950.

The herring fishery on the Atlantic coast has reached an importance which calls for full consideration by the fisheries research board and the government. Our fall run of herring in the gulf of St. Lawrence waters is considered to be of the best quality available, and is comparable to any production of its kind originating in any European countries. It is generally recognized that the herring resources of the Atlantic coast are not fully used. If new fishing methods have been discovered by the fisheries research board these methods, if practical, should be made known and made available to the individual fishermen. Further efforts should be made to develop a method of catching herring which could be made adaptable to the large number of inshore fishermen all along the coast of the maritime provinces and particularly in the gulf of St. Lawrence area. In New Brunswick alone in 1954 the herring catch exceeded 52 million pounds.

In the last 10 years additional herring plant facilities have been added in Nova Scotia and New Brunswick, and the demand for food purposes, as well as for the meal and oil industry, is increasing every year. A dependable source of supply, an extended fishing season, and more knowledge of the characteristics of herring populations have become necessities if we want this particular phase of the industry to expand as it really should. Much greater developments in this industry are possible, and I ask the minister to assure us that every effort will be made in order to carry on with the initial surveys, undertaken in the last three years, for the success and benefit of this particular industry.

New Brunswick, with its 30-odd varieties of fish and shellfish, and a total production of close to 200 million pounds of fish a year, is a heavy producer of oysters. Gloucester county alone produced in 1955 over 11,000 barrels of this delicacy, or one-third of the total production of oysters in the maritime provinces. This particular fishery, which is well established in certain areas of my constituency, depends largely on research work and on special methods of production and conservation to meet its current problems and provide for further expansion.

The department, through its research board, has centred at Ellerslie, Prince Edward Island, its activities in this respect. A substation for oyster research and for the study and application of methods of oyster culture has also been established at Shippigan. Last year in the course of my remarks I brought to the minister's attention the fact that the staff of the substation was being reduced, and that very little is being done there to revive this gradually vanishing industry. Unless proper conservation methods are enforced and new production methods are introduced, the declining yield which has been so evident in other areas could easily extend to Gloucester county.

We now have in the oyster-producing areas of the maritime provinces a total of about 1,500 oyster leases covering approximately 3,500 acres. A good portion of these leases, or privately-owned oyster farms, are located in my constituency of Gloucester. Again, Mr. Chairman, I urge the minister to increase the staff at the Shippigan substation in order to carry out further investigations to improve the position of the oyster industry in the area. Collection of spats and test-planting should be done on a much larger scale. I even suggest that one of the scientists from the Ellerslie experimental station be stationed at Shippigan for the summer months in order to direct on the spot an activated and more elaborate survey of the situation. Additional help is available locally, and an educational program should be launched without delay to introduce lease-owners to practical methods of spat collection and oyster farming.

In this respect, I do ask the department to have, sometime in late April or early May, a demonstration course at Maisonnette, an area where oyster farming is being done on a large scale. I look forward to this course in April or May of this year.

Last year the department saw fit to change the minimum length of oysters for market from 3½ to 3 inches. This measure has resulted in an unusual increase in production in certain areas, and furthermore has had an adverse effect on consumer market conditions in central Canada. If such a measure had to be introduced for the benefit of the industry, a reduction of one-quarter of an inch the first year would have been advisable and would have prevented a glut of small oysters on the market which resulted in a substantial reduction in prices paid to fishermen.

An oyster committee appointed by the Montreal fish merchants' association has protested vigorously against this measure, and is seriously disturbed and annoyed over the fact that the firms in Montreal dealing in oysters were not consulted before such a change in regulations was adopted. They are not concerned mainly over the additional

quantity of oysters involved, but rather by the large percentage of small oysters which are being offered the market.

Another change in regulation which could be very detrimental to the oyster industry is the introduction of an early season in many parts of New Brunswick and Prince Edward Island. Under the new regulations oyster fishing is permissible on private leases from August 15. Any one familiar with the oyster industry and with weather conditions in the maritimes should know that the temperature of the water at that time of the year is such that it is not advisable to remove any quantity of oysters from their natural bed. It is true that the fishermen do not have to rake the oysters as from August 15 and offer them for market. The opening of a season, however, is an incentive or an inducement to lease owners to participate at once in the revenue which they may expect from the harvest of their oyster crops.

As a result, oysters which are just about over the spawning period and are still feeding heavily are removed from water at a temperature in the vicinity of 60 degrees Fahrenheit and are transported to markets in Montreal or Toronto in outside temperatures ranging from 60 to 75 degrees. Oysters in very poor condition are delivered and offered for sale, and these could easily affect market conditions for the entire season. If the owners of oyster leases as well as public-bed oyster fishermen were consulted, I am convinced that an overwhelming majority would oppose the opening of the season before September 15 for private leases and September 25 for public beds.

Mr. Chairman, I would suggest to the Minister of Fisheries that a survey be made in this respect by officials of his department in order to give the whole matter the attention and consideration it deserves. I sincerely hope that the activities of the research board in this field will be accentuated, and that every possible effort will be made to increase the availability of seed stock for seeding and planting purposes.

It is generally recognized that companies and individual fishermen engaged in harvesting fishery resources cannot control or regulate the source of their raw material. It is therefore the responsibility of the government to conduct necessary research, impose conservation regulations and negotiate when necessary with foreign countries on controls to perpetuate stocks. We realize that oceans do not lend themselves readily to scientific study, and that progress in fishery research will be slower than similar experimentation with land crops or any agricultural product.

We welcome an increase of 25 per cent in the amount provided in the estimates for the fisheries research board. This is a move in the right direction which will meet with the approval of the primary producer as well as management in the industry. I urge the government to provide the minister with a sufficient appropriation to maintain an efficient organization for carrying out federal policies and regulations, such as inspection of plants and products and all other activities pertaining to the development and future of the industry.

The presence of fish, of an adequate supply of raw material, alone is not sufficient to maintain a healthy industry operating on sound and solid principles. The primary producer, whose fishing occupation is a way of life, must be assured that his remuneration will provide a very important share of his family cash income. In order to give this assurance, the fish processor and buyer should be in a position to keep their prices at a level which will enable the fisherman to meet his obligations. It is the responsibility of the government to see to it that both domestic and export markets are supplied with quality products which will gradually increase consumption and provide necessary outlets to take care of increasing production.

If we take for example the cod fishermen or the flounder fishermen, we find as the result of economic surveys that a landed price of at least 3 cents per pound must be paid for his catch in the fresh state in order to provide sufficient income or revenue to meet his obligations and for him to maintain a reasonable standard of living in comparison with other classes of society.

As we make provisions to protect the dairy farmer in regard to his butter, the wheat grower in regard to his wheat, the labour class by unemployment insurance and fair wages, the civil servant by security and pension funds, we must also find means of protecting the fisherman by assuring him of a minimum price on certain commodities of fish. As cod fishing is the basic occupation of the large majority of full-time commercial fishermen on the Atlantic coast, I suggest that a minimum price of 3 cents per pound should be obtained for this particular variety.

However, under existing conditions with rigid inspection, careful processing and packaging, together with well planned marketing, it is possible with the co-operation of all concerned, including the primary producer, the industry and the government, to assure the cod fisherman of an adequate and satisfactory return for his production without having to introduce a floor price or some kind of assistance or subsidy.

Mr. Chairman, I want to emphasize once more the need for the continuation of an educational program and a well-prepared publicity campaign to prevent the unfortunate practice of illegal fishing among lobster fishermen. In the last three years tremendous progress has been accomplished in this field, and all branches of the department concerned must be congratulated for the results obtained. I wish to assure the minister that we are looking forward to a continuation and further expansion of this educational policy.

I would suggest, however, that more consideration be given to the large number of fishermen on the east coast of New Brunswick whose only language is French and by whom instructions in any other language cannot be properly understood. I would suggest that more use of the press be made for publicity and educational purposes, including French daily newspapers whose circulation is very popular in most French speaking fishing communities on the New Brunswick east coast.

I was amazed to learn that the Halifax office had notified the department that no French posters and no application forms in French were required for Gloucester county fishermen in connection with the rebate applicable to salt used by fishermen in the processing and curing of certain varieties of fish. The department should be made aware of the fact that out of approximately 800 fishermen in Gloucester county 75 per cent, or approximately 600, are French speaking and cannot understand or speak any other language.

Mr. Chairman, with the consent of the house I could conclude in two or three minutes.

The Chairman: Has the hon. member leave to proceed?

Some hon. Members: Agreed.

Mr. Robichaud: Thank you. Some members have made mention in this debate of the brief submitted to the royal commission on Canada's economic prospects by the fisheries council of Canada. I agree that this brief is excellent and well prepared and covers many aspects which could face the fishing industry in years ahead. There are two recommendations, however, which I would approach with great caution.

First is the suggestion put forward that the government should consider the emigration of fishermen to Canada. Before acceding to this request I suggest that we should first consider the possibility of improving the situation of our own Canadian fishermen. We in the maritime provinces are complaining that our young men are deserting our industries for the central provinces. Before considering increasing our fishing force with immigrants, let us first make this profession more attractive to our young generation; let us prepare them through proper education. Then and only then will we be in a position to keep in the maritimes the large number of young men who are now forced to move out in search of a better situation.

Another recommendation in this brief which I would approach with caution is the question of government control on vessel importation and the existing import duty on vessels up to 100 feet in length from most favoured nation countries. We have too many shipyards scattered all along our shores seeking business to hamper them further by allowing the duty-free importation of the type of vessels which they have been supplying the industry for many generations. The skill, ability and craftsmanship of our Canadian shipyard workers is so eminent that they should be given every opportunity to take full advantage of Canadian outlets for their products.

I am in full agreement with the remarks made with regard to bringing our fishermen under unemployment insurance benefits. I will reserve my observations on this subject until we consider the estimates of the Minister of Labour.

Mr. Sinclair: I wonder if I could have the indulgence of the committee for just a moment, since it is obvious that item 1 is not going to be carried today. First of all I should like to express my personal thanks for the many kind things said about my own health. I think the hon. member for Oxford put it very neatly when he said that with all these expressions of good wishes in regard to my health I certainly should feel much better.

I am also glad that for the first time the fishing members have had a chance to have the estimates of the Department of Fisheries first discussed. I think the participation of members from every part of Canada and from every party will show the fishermen of Canada that there is an increased interest in fisheries.

The other thing I should like to mention is the fact that quite a number of members have suggested that when I do reply I make some mention of my own experiences in the field of fisheries in the Scandinavian countries, in Russia and in China last summer. I do not think that would be quite appropriate in a discussion of the estimates of the Canadian Department of Fisheries, but I have written to the chairman of the standing committee on marine and fisheries informing him that, if it is the desire of that committee,

I will be very glad to appear before it and report on my experiences over there and be questioned by the members of that committee.

Progress reported.

PRIVATE BILLS

Mr. Deputy Speaker: There are a number of private bills at the committee stage on the order paper, namely, items No. 36, No. 37 and No. 38, and also Nos. 39 to 169 inclusive, the latter being divorce bills. Under standing order 54, shall these bills be considered under one motion?

Some hon. Members: Agreed.

Mr. Macdonnell: Mr. Speaker, are you including Bill No. 146 and Bill No. 147 in that, one an act to incorporate the Canadian Equity Insurance Company and the other an act to incorporate Interprovincial Trust Company?

Mr. Knowles: Yes, he did.

Mr. Macdonnell: Should we not have some report on these?

Mr. Deputy Speaker: The bills have already been reported from the standing committee and are now going to the committee of the whole for consideration. This is merely a matter of the committee of the whole dealing with all these bills on the same motion. Is that agreed?

Some hon. Members: Agreed.

CONSIDERED IN COMMITTEE—THIRD READINGS

Bill No. 146, to incorporate the Canadian Equity Insurance Company.—Mr. Hunter.

Bill No. 147, to incorporate Interprovincial Trust Company.—Mr. Hunter.

Bill No. 122, respecting the General Synod of the Church of England in Canada, the Missionary Society of the Church of England in Canada, the Woman's Auxiliary of the Church of England in Canada and the Church of England Consolidated Trust Fund.—Mr. Carter.

Bill No. 11, for the relief of George Francis Alford Yull.—Mr. Hunter.

Bill No. 12, for the relief of Joyce Ethel Jacques Horgan.—Mr. Hunter.

Bill No. 13, for the relief of Jean Thomson Duquette.—Mr. Hunter.

Bill No. 14, for the relief of Rosa Straub Gehlsen.—Mr. Hunter.

Bill No. 15, for the relief of Cecile Bezeau Barnabe.—Mr. Hunter.

Bill No. 16, for the relief of Dora Gina Costello Dash.—Mr. Hunter.

Bill No. 17, for the relief of Fernand Desmarais.—Mr. Hunter.

Bill No. 18, for the relief of Elsie Abbot Marsden.—Mr. Hunter.

Bill No. 19, for the relief of Freda Ethelwinne Henders Jacobson.—Mr. Hunter.

Bill No. 20, for the relief of Hazel Loretta Noseworthy Johnston.—Mr. Hunter.

Bill No. 21, for the relief of Veronica Iris Collier Horvath, otherwise known as Veronica Cross Horvath.—Mr. Hunter.

Bill No. 22, for the relief of Maria Romano Bove.—Mr. Hunter.

Bill No. 23, for the relief of Nora Marian Tilley McBain.—Mr. Hunter.

Bill No. 24, for the relief of Marguerite Tremblay Nathan.—Mr. Hunter.

Bill No. 25, for the relief of Dolores Marion Zolov Karpman.—Mr. Hunter.

Bill No. 26, for the relief of Rosalie Rosetti Acason.—Mr. Hunter.

Bill No. 27, for the relief of Edmund Joseph Cochrane.—Mr. Hunter.

Bill No. 28, for the relief of Edna Hannah Keene Newberg.—Mr. Hunter.

Bill No. 29, for the relief of Charlotte Jean McAndrew Boyd Thompson.—Mr. Hunter.

Bill No. 30, for the relief of Wilma June Keast Noel.—Mr. Hunter.

Bill No. 31, for the relief of Patricia O'Neill Primiani.—Mr. Hunter.

Bill No. 32, for the relief of Evelyn Nellie Keemer Mein.—Mr. Hunter.

Bill No. 33, for the relief of Pierre Roger Vuille.—Mr. Hunter.

Bill No. 34, for the relief of Marie Gertrude Antoinette Hotte Ouellette.—Mr. Hunter.

Bill No. 35, for the relief of Euphrosina Kowalyk Whalley, otherwise known as Rose Kowalyk Whalley.—Mr. Hunter.

Bill No. 36, for the relief of Matilda Stoner Adams.—Mr. Hunter.

Bill No. 37, for the relief of Gertrude Bailiss Goodlin.—Mr. Hunter.

Bill No. 38, for the relief of Leokadja Laura Rozycka Haber.—Mr. Hunter.

Bill No. 39, for the relief of Teofila Kurjata Marciniak.—Mr. Hunter.

Bill No. 40, for the relief of Shirley Gelber Kaufman.—Mr. Hunter.

Bill No. 41, for the relief of Margaret Pounden Greenstien.—Mr. Hunter.

Bill No. 42, for the relief of Gaston Maille.—Mr. Hunter.

Bill No. 43, for the relief of Mary Dufresne Cosco.—Mr. Hunter.

Private Bills

Bill No. 44, for the relief of Julienne Marchesseault Jasmin.—Mr. Hunter.

Bill No. 45, for the relief of Helen Mary Farrell Hickey.—Mr. Hunter.

Bill No. 46, for the relief of Hazel Mair Grant Mander.—Mr. Hunter.

Bill No. 47, for the relief of Joseph Roland Gaston Charette.—Mr. Hunter.

Bill No. 48, for the relief of Beulah Sybil Chapman Maus.—Mr. Hunter.

Bill No. 49, for the relief of John Elwood Way.—Mr. Hunter.

Bill No. 50, for the relief of Thomas Charles Desmarais.—Mr. Hunter.

Bill No. 53, for the relief of John Caldwell Scriver.—Mr. Hunter.

Bill No. 54, for the relief of Marie Therese Provost Lapointe.—Mr. Hunter.

Bill No. 55, for the relief of Margeryann Williams Farrow Chesney.—Mr. Hunter.

Bill No. 56, for the relief of Kathleen Birdie MacPhail Morgan.—Mr. Hunter.

Bill No. 57, for the relief of Sylvia Colato Le Pottier.—Mr. Hunter.

Bill No. 58, for the relief of Antonina Dieni Choumanchuk.—Mr. Hunter.

Bill No. 59, for the relief of Rena Amelia Duncan Chenier.—Mr. Hunter.

Bill No. 60, for the relief of Stanley Edgar Barnes.—Mr. Hunter.

Bill No. 61, for the relief of Molly Joyce LaPlante Baggott.—Mr. Hunter.

Bill No. 62, for the relief of Jean Dorothy McLean Lewis.—Mr. Hunter.

Bill No. 63, for the relief of John Walter Thoburn.—Mr. Hunter.

Bill No. 64, for the relief of Panorea Delaporta Alivizatos.—Mr. Hunter.

Bill No. 65, for the relief of William James Stoddard Edington.—Mr. Hunter.

Bill No. 67, for the relief of Audrey Hilda Voysey Beaudoin.—Mr. Hunter.

Bill No. 68, for the relief of Frederick Howard Blaikie.—Mr. Hunter.

Bill No. 69, for the relief of Muriel Tetreau St. George.—Mr. Hunter.

Bill No. 70, for the relief of Patricia Colleen Hewitt Nelson.—Mr. Hunter.

Bill No. 71, for the relief of Ruth Mildred Thompson McBain.—Mr. Hunter.

Bill No. 72, for the relief of Joseph Theophile Lambert.—Mr. Hunter.

Bill No. 73, for the relief of Lillian Baron Goodman.—Mr. Hunter.

Bill No. 74, for the relief of Madeleine Erna McArthur Blais.—Mr. Hunter.

[Mr. Deputy Speaker.]

Bill No. 75, for the relief of Queenie Molly Wolfson Phillips.—Mr. Hunter.

Bill No. 76, for the relief of Annie May Elizabeth Godson Brooks.—Mr. Hunter.

Bill No. 77, for the relief of Ada June Mannard Wilmoth.—Mr. Hunter.

Bill No. 78, for the relief of Rose Florczyk Greenwood.—Mr. Hunter.

Bill No. 79, for the relief of Beryl Grace Leaper Shufelt.—Mr. Hunter.

Bill No. 80, for the relief of Ralph Patrick Dowling.—Mr. Hunter.

Bill No. 81, for the relief of Alice Guernon Peladeau.—Mr. Hunter.

Bill No. 85, for the relief of Elizabeth Baird McDowall Whitlock.—Mr. Hunter.

Bill No. 86, for the relief of Adrien Patrick Dicaire.—Mr. Hunter.

Bill No. 87, for the relief of Jessie Altha MacBride Burnside.—Mr. Hunter.

Bill No. 88, for the relief of Marianne Adorjan Balogh.—Mr. Hunter.

Bill No. 89, for the relief of Helene Marguerite Peck Cooper.—Mr. Hunter.

Bill No. 90, for the relief of Una Margaret Prower Douglas Heubach.—Mr. Hunter.

Bill No. 91, for the relief of Hilary Hope-Hawkins Hardie Henders.—Mr. Hunter.

Bill No. 92, for the relief of Marie Arthemise Marguerite Denise Laperriere Mercier.—Mr. Hunter.

Bill No. 93, for the relief of Harry Hood.—Mr. Hunter.

Bill No. 94, for the relief of Delima Chalifoux Prevost.—Mr. Hunter.

Bill No. 95, for the relief of Frances Raven Sherman.—Mr. Hunter.

Bill No. 96, for the relief of Constance Louisa Kelly McKenna.—Mr. Hunter.

Bill No. 97, for the relief of Jean Mailman Greenleaf.—Mr. Hunter.

Bill No. 98, for the relief of Grace Elizabeth Davidson Alexander.—Mr. Hunter.

Bill No. 99, for the relief of Frederick Arthur Waltho.—Mr. Hunter.

Bill No. 100, for the relief of Jean Decary.—Mr. Hunter.

Bill No. 101, for the relief of Sylvia Barbara Murphy Simon.—Mr. Hunter.

Bill No. 102, for the relief of Amy Elizabeth Torrance Fraser Walker.—Mr. Hunter.

Bill No. 103, for the relief of Margery Cooper Mason.—Mr. Hunter.

Bill No. 104, for the relief of Caroline Scortaru Ungariano, otherwise known as Caroline Scortaru Ungar.—Mr. Hunter.

Bill No. 105, for the relief of John Joseph Rahilly.—Mr. Hunter.

Bill No. 106, for the relief of William Ross Gould.—Mr. Hunter.

Bill No. 109, for the relief of Morris Gilbert.—Mr. Hunter.

Bill No. 110, for the relief of Margaret McDonald Williamson Gebbie.—Mr. Hunter.

Bill No. 111, for the relief of Gwytha Olwyn Lillian Pring Evans.—Mr. Hunter.

Bill No. 112, for the relief of Georges Durand.—Mr. Hunter.

Bill No. 113, for the relief of Mary Rose Kenny Deline.—Mr. Hunter.

Bill No. 114, for the relief of Katherine Marle Saretski.—Mr. Hunter.

Bill No. 115, for the relief of Rose Juliana Evelyn Kedroskie Quincey.—Mr. Hunter.

Bill No. 116, for the relief of Jeannette Morin Parent.—Mr. Hunter.

Bill No. 117, for the relief of Mona Ruth Davis Goldberg.—Mr. Hunter.

Bill No. 118, for the relief of Ruth Goodman Silverstein.—Mr. Hunter.

Bill No. 119, for the relief of Simonne Auger Boule.—Mr. Hunter.

Bill No. 120, for the relief of Leslie Archibald Hood.—Mr. Hunter.

Bill No. 123, for the relief of George Hugh Wadge.—Mr. Hunter.

Bill No. 124, for the relief of Martha Bailly Maher.—Mr. Hunter.

Bill No. 125, for the relief of Helena Roy Buckland.—Mr. Hunter.

Bill No. 126, for the relief of Marion Mildred McKnight Newman.—Mr. Hunter.

Bill No. 127, for the relief of Marie Laura Francoise Lamothe Newcome.—Mr. Hunter.

Bill No. 128, for the relief of Frances Caplan Sirota.—Mr. Hunter.

Bill No. 129, for the relief of Joyce Smith Gwinnell.—Mr. Hunter.

Bill No. 130, for the relief of Joan Sheila Rosser Roland.—Mr. Hunter.

Bill No. 131, for the relief of Shprintza Gelber Shildkraut.—Mr. Hunter.

Bill No. 132, for the relief of Sabina Rosenzweig Rosenblum Faust.—Mr. Hunter.

Bill No. 133, for the relief of William Eugene Chabot.—Mr. Hunter.

Bill No. 134, for the relief of Joseph Charles Sylvio Demers.—Mr. Hunter.

Bill No. 135, for the relief of Florence Ethel Bigelow Hamilton.—Mr. Hunter.

Bill No. 136, for the relief of Amy Katharine Newman Cowans.—Mr. Hunter.

Bill No. 137, for the relief of Sara Martin Lesser.—Mr. Hunter.

Bill No. 138, for the relief of Annetta Smith Marchand.—Mr. Hunter.

Bill No. 139, for the relief of Sybil Violet Godfrey Russell.—Mr. Hunter.

Bill No. 140, for the relief of Dorothy Mary Humphreys Pepper.—Mr. Hunter.

Bill No. 141, for the relief of Roslyn Yagod Kivenko Belkin.—Mr. Hunter.

Bill No. 142, for the relief of Hilda Sarah Twyman Gagnier.—Mr. Hunter.

Bill No. 143, for the relief of Jessie MacFarlane Boyle Roberts.—Mr. Hunter.

Bill No. 144, for the relief of Donald Henry Emslie.—Mr. Hunter.

Bill No. 145, for the relief of John Wesley Hamilton.—Mr. Hunter.

Bill No. 152, for the relief of Lillian Hannah Maxwell Gallant.—Mr. Hunter.

Bill No. 153, for the relief of Gordon MacKay Butler.—Mr. Hunter.

Bill No. 154, for the relief of Eleanor Jodelis Milius.—Mr. Hunter.

Bill No. 155, for the relief of Marie Madeleine Rachel Gregoire Shank.—Mr. Hunter.

Bill No. 156, for the relief of Shirley Mildred Glazerman Wolfe.—Mr. Hunter.

Bill No. 157, for the relief of Dorothy Jean Midkiff Desnoyers.—Mr. Hunter.

PERSONAL FINANCE COMPANY OF CANADA

On the order:

Second reading of Bill No. 160 (letter G-5 of the Senate), intituled "An act respecting Personal Finance Company of Canada".—Mr. Lefrançois.

Mr. Weir: Stand.

Mr. Carrick: Mr. Speaker, in the unavoidable absence of the hon. member for Laurier (Mr. Lefrançois), I move that this bill be read the second time.

Mr. Knowles: Mr. Speaker, has the hon. member the consent or request of the sponsor to move second reading of this bill? I understood it was going to be allowed to stand in the absence of the sponsor.

Mr. Carrick: I did not get my instructions directly from the sponsor. I received them indirectly, but I believe he consents to my speaking to the bill on his behalf.

Mr. Weir: On a question of privilege, Mr. Speaker, may I say that a more or less tentative agreement was reached that these bills would stand today when the sponsors were not here and we would proceed with other orders on the order paper. On that understanding, I hope we can carry out that arrangement.

Mr. Carrick: That is quite satisfactory.

Mr. Deputy Speaker: Under the circumstances Bill No. 160 will stand.

Canada Elections Act

CANADA ELECTIONS ACT

EXTENSION OF RIGHT TO VOTE AT ADVANCE POLLS

Mr. Stanley Knowles (Winnipeg North Centre) moved the second reading of Bill No. 121, to amend the Canada Elections Act.

He said: Mr. Speaker, as I indicated when first reading was given to this bill, its purpose is to extend the privilege of voting at an advance poll in connection with a federal general election to any qualified voter who finds that he will be absent from his constituency on election day. As hon. members will have noticed, the bill consists of nine pages, and some may wonder if there is not more in the bill than is suggested by that simple explanation. The fact is that everything else in the bill is consequential upon the one change which is sought by the bill, namely, the extension of the privilege of voting at advance polls to all qualified electors who find they will be absent on election day.

I am sure that many, if not all, members in the house will agree with me that at least in urban areas the most common complaint at election time is that many voters who will be away on election day find that they cannot vote at the advance poll. This is particularly annoying to voters who are aware of the fact that there is such a thing as an advance poll and who discover that only a very limited group of people may vote at that advance poll.

As hon. members are aware, the privilege of voting at advance polls is restricted at the present time to commercial travellers, fishermen, persons employed upon railways, vessels, airships and so on, members of the reserve forces and of the Royal Canadian Mounted Police. In recent years federal general elections have for the most part been held in the summer period and rumours are that the same will be true next time. In fact I understand that those who, like the Minister of Trade and Commerce, like to look into crystal balls when they are not out on loan are already guessing as between June 17 and June 24, 1957, for the next general election. At any rate, with elections coming in the summertime a great many people do find that they are away on holidays at election time.

Some people may find it possible to get back to their constituencies in order to vote but for many people this is either impossible because of the distance they have gone away from home or because of the cost involved. It seems to me, therefore, that it is a legitimate grievance that many people have, namely, that there exists an advance poll but that many qualified voters do not have the right to vote at that advance poll. In my own province of Manitoba that grievance is felt very strongly at federal elections because the privilege of voting at advance polls is extended in provincial elections to all qualified voters who find they will be away from home.

I urge this amendment to the Canada Elections Act, Mr. Speaker, not only to meet a grievance which is often expressed by voters but because it seems to me that it implements a principle underlying the whole business of voting. In our democratic approach to these things we feel that people should be encouraged to vote, that every person who is qualified to vote should have it made possible for him to get to the polls and to cast his vote.

No one would suggest that a measure of this kind has any partisan motive, at least not so far as a member of an opposition party is concerned, for the fact is that if you go through the results of general elections you will find that generally speaking the winner in a constituency has also obtained the largest number of votes cast at any advance polls in his riding. In other words, although it is not a universal rule, those who vote at advance polls tend to vote in the same proportion as do the people who vote on the regular election day. Therefore in no sense is one advocating anything that is of partisan interest. Likewise, in no sense is one advocating a special privilege. Rather we are simply advocating that the principle of the universal franchise be implemented by the further extension proposed in the bill.

In addition to meeting a grievance and implementing a principle, I feel that taking this step would have the effect of removing a feeling of discrimination which does arise every time we have a federal general election. Those whose names are on the voters' lists, those who are qualified voters, who in turn discover that they cannot vote at an advance poll whereas certain groups of people can vote at those polls, feel that this is a form of discrimination. The reasons that people are obliged to be away from home on election day are many and varied. People feel that the attempt of any law-making body to decide which of those reasons are legitimate and which are not is practising a form of discrimination which is not consistent with the principle of universal suffrage.

There is another way in which people feel there is a form of discrimination. I have already alluded to it in my suggestion that some people who are away from home on election day can afford to get home in order to vote while others cannot afford to make such a trip. I therefore feel, Mr. Speaker,

that here is a chance to remove these feelings of discrimination with regard to voting at advance polls, and I urge the house to give serious consideration to this proposition.

As I have already indicated, it is generally thought that the election for the 23rd parliament of Canada will take place in 1957. One of my friends to my right wanted to put it off a year the last time I mentioned that date. But whether it is in 1957 or in 1958—

An hon. Member: Or 1956.

Mr. Churchill: You are sure of 1955.

Mr. Knowles: Whenever it comes, Mr. Speaker, we seem to have been having considerable fun over on this side of the house in trying to set the date. The one individual who will fix the date is, of course, holding his counsel on that matter. In any event, I think it is generally believed that the election will be in the summer period. Therefore, Mr. Speaker, the dissatisfaction that has been felt in the last three general elections will be felt again unless action is taken on this matter before the next general election.

If I may get back to what I started to say a moment ago without again inviting interruptions by my friends around me—

Mr. Nowlan: Don't you welcome them?

An hon. Member: Why use the expression "friends"?

Mr. Knowles: If the election is a possibility in 1957, that fact makes it urgent, if a matter such as this is to be dealt with, that it be dealt with at this session. Toward that end I invite the house, particularly the members on the government side, to consider seriously and favourably the idea of approving this bill in principle by voting for it on second reading and letting it go to the committee on privileges and elections. With the number of details that are contained in this bill, it would obviously have to be gone over by a committee. If a matter like this is left until another year, it may not be implemented in time for the next election. In other words, Mr. Speaker, the time to deal with this matter is at this session, if we are going to remove the grievances to which I have referred and if we are going to implement the principle of the universal franchise to this extent in time for the next election.

Another reason for urging the house to approve the bill and let it go to committee is the necessity of looking at all the various clauses and all the various details in the bill. Purposely—not just because there is a rule against it—I am going to refrain from discussing any of the details of the bill. As I have already indicated, the bill calls for a number of changes which are consequential upon the primary change which is made so as to extend the privilege of voting to all qualified electors.

One of the changes involves putting the voting at advance polls on a different set of days than is at present the case. That change has been suggested so there may be a longer period between the voting at the advance polls and the voting on the general election day, in order to enable the various election officials to make the necessary deletions from the election lists and do all the other things that are necessary to make sure there will be no duplication of voting at the general election as a result of this change.

There are other changes that are made necessary, such as the date on which nominations would close and various details of that kind. If I were even to specify what those details are, I can well imagine that some hon. members would prefer one set of days rather than another for the advance poll voting. However, Mr. Speaker, that is not the point. The point at stake on second reading of this bill is this simple principle, namely that the right to vote at advance polls be extended to all qualified voters.

I have had occasion to mention a few of the details which it has been necessary to work out and incorporate in this bill. May I take this opportunity of expressing my thanks to two individuals—they are servants of this parliament rather than servants of the government—who have assisted me in drafting my bill. Those officials, as anyone would imagine from reading the bill, are, of course, our parliamentary counsel, Dr. Maurice Ollivier, and the chief electoral officer, Mr. Nelson Castonguay. I wish to make it perfectly clear that my having mentioned their names does not mean that they are either for or against the principle of this bill; but their help, in order that I might draft a bill which would set forth the mechanics to carry out this principle, has been most valuable and I am grateful to them for their assistance.

In other words, Mr. Speaker, what is before the house is a bill—although it has details that some hon. members might like to alter a little here or there—that is more than just an abstract proposition. It is not just a pious resolution suggesting that it would be a good idea to have a wider extension of the privilege of voting at advance polls. Rather it is a bill that sets out the mechanics by means of which it can be done. On that basis I feel that the matter should receive the approval of the house and that the bill should be sent to a committee so it can be studied.

I would emphasize the point that the assistance I have received from the officials whom

I have named has enabled me to put in the bill appropriate clauses to provide against any additional corrupt practices at election time. As a matter of fact, I think it is fair to say that the necessity for that protection which results from extending this principle has resulted in producing mechanics toward this end that I believe are even better than those that are in the act at the present time.

There may be those who will feel that the exact terms of my bill extend this principle too widely. I do not think so. I do not think any law-making body, even parliament, should set itself up as the judge between two different reasons that two different persons may have for being away from home on election day. When you start to draw lines of that kind you can readily become unfair. That is the reason I have drawn my bill so as to make it possible for any person to have this privilege, provided he will take an affidavit to the effect that he has reason to believe that he will be absent on the ordinary polling day and that he will be unable to vote on that day in his own polling division.

You will note, Mr. Speaker, that my bill requires any person wishing to exercise this privilege to take an affidavit. It is true it is just an affidavit to the effect that he believes such and such to be the case. Nevertheless, I feel that is a sufficient safeguard so that the right to vote at the advance poll will not be abused. I feel that, too, because of our own experience in the province of Manitoba. We have had this universal right to vote at the advance poll for many years, and it has not been abused. In the main people still find that their interest is in voting on the general election day, and that is when they vote. The numbers who vote at the advance poll are really not very great.

Nevertheless, Mr. Speaker, if some members feel that some point should be found between the present very severe restrictions which are in the act and the very wide provision that is set out in my bill, then of course that is the kind of detail we can discuss in committee and perhaps we can reach agreement on it if the bill is permitted to go to the committee on privileges and elections. I can say, as ministers often say when they are introducing bills and trying to win favour from the other side, that after second reading of this bill I will have pleasure in moving that it be referred to the standing committee on privileges and elections. I feel that a measure of this kind, though it might not affect a great many people, will nevertheless further our interest in the full practice of democracy. It will increase the interest of our people in voting at election time, and I suggest that anything of this nature is all to the good at this stage in the history of democracy.

So, Mr. Speaker, I commend this bill to the consideration of the house. I hope there will be a fair amount of discussion on it during this debate on second reading, and that there will be an opportunity for members to learn what are the opinions of the people around the country. I was interested in noting that the Canadian Chamber of Commerce has already written to members of parliament urging that this bill be supported. I happen to know that various labour organizations of this country also support the principle of this bill, as indeed both the chamber of commerce and labour organizations have done for some time.

As I say, I hope the principle will be discussed by interested members representing all parties, and that when that discussion is over second reading will be approved by the house so the bill can go to the committee on privileges and elections where any amendments might be made, so that before the end of this session this change in the elections act might be upon our statute books.

Hon. Roch Pinard (Secretary of State): I have listened with great interest to the remarks that have been made by the sponsor of this bill. As the minister responsible in parliament for the chief electoral officer, who administers our election act, I think I should say a few words to express my views on this proposal the result of which would produce, I think, a very serious, if not radical, change in our electoral legislation.

The hon. member has mentioned the interest of outside organizations such as the Canadian chamber of commerce as well as other chambers of commerce throughout the country, which have expressed the view that this bill ought to receive the support of the government. I have read those representations and I may say that they appear to be, as I am myself, in agreement with the principle of the proposal. However, I am sure that if they were to give careful study to the act as it now stands, and to the proposal that has been made, they might very well come to the conclusion they ought to change their views and should, as I am going to do, oppose the proposal now made by the hon. member.

I think everyone is in agreement with the principle. I have said so myself on a number of occasions. If we are to have a democracy which will produce as many of the beneficial objectives as possible, if we are to allow as free and general an expression of the will of the people as circumstances will permit, then we will all favour the principle underlined in

this bill. In other words, we will want to have as many Canadians as possible express their views on the choice of their representatives in this House of Commons. I am in agreement with the principle, but I think there are a number of reasons which, in my view, command us to be cautious in this matter and not go as far as the proposal which is made.

Under this bill the hon. member simply suggests that we ought to allow anyone, for any reason whatever, to cast his vote at an advance poll for the simple reason that he may be away from his polling division on polling day. In other words, all that would be needed to justify the establishment of an advance poll would be for someone to think he may be away on polling day and he would be allowed this privilege of voting at such a poll. As the act now stands provision is made to cover what I consider to be the exceptional cases, and those classes of people have been mentioned by my hon. friend. These classes include people who, by their occupation and not because of holidays or other reasons, cannot vote on election day.

I think if we were to go as far as my hon. friend would like us to go it would destroy the significance of polling day to the Canadian people. The whole machinery of the election act is prepared in order to allow an expression of opinion of the people on that one given day which is established and which is determined, even if my hon. friend would like to make predictions, by the government.

It is true that it is sometimes a little more difficult to exercise your right to vote during the summertime. It is true also that elections have been held during that period when holidays are being taken by the Canadian people. But I think under the proposal that is now being made, if we were to allow anyone who felt he might be away to cast his vote at an advance poll on the ninth and tenth day preceding the polling day, I would imagine a number of people would take advantage of that situation. It would tend to not only increase election costs, though that would be only every five years, but in the final result you would have established a new rule and the election day would not be the date for which the election was called.

This should be the only day upon which allowing for exceptions when they have to be made, the people of Canada will choose their administrators for the next years to come. Instead of that you would establish two other days upon which this would also be done. I do not think I would be exaggerating if I were to say that if this practice were established you might very well find that some day there would be more people voting at the advance polls than would be voting on election day.

I do not believe we want to allow this sort of thing to happen, for a good many reasons. Election day is fixed for a Monday. Nomination day is fixed 14 days ahead of that date, when candidates are chosen to conduct an electoral campaign. During that period of 14 days political parties expound their ideas. Candidates tell the people of Canada what they want to do to defend the interests and the rights of their constituents. During that period of time, which I believe is essential, the people make up their minds. I think that period of 14 days is essential to everyone who wants to exercise his right to vote with sound judgment. In other words this period of time, which is short enough in itself, should be completely allowed to the people of Canada in order that they may make a sound choice.

If we were to allow, as the proposal indicates, two other days to be considered also as polling days, we would find, I believe, that the significance and the importance of election day itself would be gradually reduced. I would not be surprised, in fact, to find that the interest of the people would be greatly reduced. By permitting many more people to vote at advance polls you would reduce the importance of the election itself. I believe the time would come when people would completely lose interest. We sometimes complain of the lack of interest of the public in elections. If anyone were allowed to consider that this privilege, this right, which is essential, could be exercised at his discretion on another day than polling day, then I believe you would certainly not serve the purpose that we have in mind, which is to allow as free an expression as possible of the will of the people.

This question was considered last year in committee. There was a similar proposal by a member of the C.C.F. party. I read the minutes of evidence with care, and I believe the question received considerable attention by the members of the committee at that time. The proposal that was then submitted, and which was similar to the one we are now considering, was defeated by an imposing majority. Reasons other than the ones I have already mentioned were also brought forward.

Other reasons than those which I made known do also justify us in thinking that this measure should be opposed. There is the question of cost. We have been informed by the chief electoral officer that during the last election about 240 advance polls were established. The cost of these advance polls

was about $100 each. The voters who availed themselves of the right to vote at those 240 advance polls numbered a little over 10,000. I have been informed by the chief electoral officer that if we were to accept the proposal made by the hon. member we would have to increase a number of advance polls considerably in both the rural and urban districts. It is his own feeling that it would necessitate the establishment of about one advance poll for every 15 polls in the urban districts, and one advance poll for every five polls already established in the rural districts.

The result would be, at the cost I have already mentioned, that it would require about $500,000 to take care of them all. I am not stating that this question of costs should in itself be considered as a very serious obstacle, provided of course that we would be able to obtain results which would be beneficial to the Canadian people. But I do not think such would be the case. If we were to establish too many of these advance polls, as I said before, interest would be lost in the election day itself.

As was mentioned in the committee last year, we would allow impersonation to take place to a greater extent than has happened in past elections, as a result of these advance polls being established. It would impose upon political parties the necessity of multiplying the number of agents in each of those advance polls. It would be very costly for political parties, and again it would not eliminate the danger of impersonation of electors.

Another important thing comes to my mind. There would be a period of nine days, according to the proposal we have here, during which the deputy returning officer would be in possession of the ballots cast. In other words, during that period of nine days an official, appointed, it is true, by the government in the person of the deputy returning officer, would have in his possession a great number of ballots—I believe the number would tend to increase at every election—that were cast at these advance polls. It would mean that during that period of time this man would be in a position to determine, not for whom the votes had been cast but what proportion of the votes that appeared on the electoral list had already been cast. It would mean that there would be a number of returning officers in those advance polls in Canada who would be able to say just what proportion of votes had already been cast and we would then be able to know during the nine days that remained, for instance, only 40 or 45 per cent of the electors had not yet cast their votes, so that the election would be of interest only to the remaining group of people in Canada.

[Mr. Pinard.]

I think that is a wrong principle. I am in favour of extending the right to vote to as many people as possible, but I believe this is a wrong approach. For all of these reasons I believe we should oppose this measure. We should oppose it because of the fact that it would reduce the importance of polling day itself; because it would increase the cost, and for that reason it would not benefit the country. Finally, it would render possible violations of the Canada Elections Act to a greater extent. For all these reasons I am going to oppose the measure.

Mr. Maurice Boisvert (Nicolet-Yamaska): Mr. Speaker, if the hon. member for Winnipeg North Centre had convinced me that his proposition was one to raise the percentage of votes in a general election, I would have been in favour of it; but he did not convince me that such a proposition would increase the percentage of votes in any general election.

My first reason for opposing it is that it would confuse the minds of the electors with respect to the propriety of casting their votes. We are all in favour of the principle of enlarging the right to vote, but in doing so we must bear in mind that the people of a democratic country are called upon to vote on a definite date, as was stated by the Secretary of State, and only those who cannot be in a position to cast their votes on that definite date are entitled to vote at an advance poll.

At the present time those who are given the right to vote at an advance poll are as follows, and I propose to read the explanatory note which is embodied in the bill:

The privilege of voting at an advance poll shall extend and shall extend only—

A list appears of the limited number of voters including commercial travellers, fishermen, and such persons as are employed upon railways, vessels, airships, members of the reserve units of the Canadian forces and members of the R.C.M.P., et al.

We know that by reason of their duties such people are not in a position to cast their votes on a definite polling date. I therefore consider that it is right to extend to them the right to vote on another date, but I am nevertheless opposing this bill very strongly, especially in view of the clause which would extend the right to vote at an advance poll to anybody in any circumstances. This is the amendment proposed by the hon. member for Winnipeg North Centre to section 95 of the elections act. This section reads as follows:

Mr. Speaker: Order. Will the hon. member be good enough to make his point without referring to the clause.

Mr. Boisvert: The clause in question mentions, as I started to say, that anybody in any circumstances would be entitled to go to an advance polling booth and make a declaration that for one reason or another he should be entitled to vote at this poll. What does that mean? It means that Mr. So and So from Nicolet-Yamaska, having an idea that he should make a journey—

Mr. Knowles: To Winnipeg.

Mr. Boisvert: —from Montreal to Winnipeg, would go to the advance poll and say, "I intend to make a pleasure trip to Winnipeg", or to any other place.

An hon. Member: It would not be a pleasure trip if he were going to Winnipeg.

Mr. Boisvert: Having stated that, the man would be entitled to vote at the advance poll. It would be a very easy process if any voter were entitled to vote at an advance poll as is proposed by my hon. friend, and it would disturb the election in that many people might decide that for one reason or another they had to vote at the advance poll. What would be the result? Half the population would go to vote at the advance poll and the other half would wait until they could vote on the real polling date. At the next general election perhaps three-quarters of the voters in a constituency would decide to vote at the advance poll, and we would have to change the law and eventually amend it so that everyone would be required to vote at an advance poll and we would have achieved the same result.

Mr. Knowles: Pretty soon you will have everyone in Winnipeg.

An hon. Member: Will the hon. member be here then?

Mr. Boisvert: Therefore why not leave it as it is? I am always afraid of innovation.

An hon. Member: You are old-fashioned.

Mr. Boisvert: And that kind of innovation—

Mr. Knowles: Is the hon. member not a Liberal? I thought Liberals believed in reform.

Mr. Boisvert: I believe in reform if it is in the right direction but this is in the wrong direction, as are many of the proposals which are made in this house from the other side.

Mr. Knowles: My hon. friends are moving to the right, all right.

Mr. Boisvert: Coming back to the proposition, I would state as a second consideration that in urging more advance polls for people who would like to vote ahead of time the hon. member is also proposing to extend the period between the polling date and the nomination date from 14 to 25 days, I believe.

Mr. Knowles: Twenty-one.

Mr. Boisvert: I think to do so would be to take another step in the wrong direction for a reason which I shall state. We are aware that it is extremely easy to find candidates for any general election. If we extend too much the period of time between the nomination date and the polling date it will be very difficult to find the right candidate to run in any riding in this country and I would think that enlarging the period of time is a bad move.

It would also increase the cost of elections. We find that a period of 16 days from the date of nomination to the polling date is quite an expensive proposition. Hon. members on the other side frequently claim that this is true. If we extend that period of time all parties, and even the C.C.F. party, would be faced with an expenditure much greater than the expenditure we are presently obliged to meet in general elections.

Mr. Speaker, I move the adjournment of this debate.

On motion of Mr. Boisvert the debate was adjourned.

At six o'clock the house adjourned, without question put, pursuant to standing order.

Questions

ANSWERS TO QUESTIONS

The following answers, deposited with the Clerk of the house, are printed in the official report of debates pursuant to standing order 39:

CANADIAN NATIONAL RAILWAYS PENSIONS

Question No. 17—**Mr. Knowles:**

1. How many retired employees of the Canadian National Railways are in receipt of pensions of less than $25 per month?

2. How many are in receipt of only the basic pension of $25 per month?

3. How many are in receipt of non-contributory service pensions, (a) $25.01 to $29.99 per month; (b) $30.00 to $39.99 per month; (c) $40.00 to $49.99 per month; (d) $50.00 to $59.99 per month; (e) $60.00 to $69.99 per month; (f) $70.00 to $79.99 per month; (g) $80.00 to $89.99 per month; (h) $90.00 to $99.99 per month; (i) $100.00 to $124.99 per month; (j) $125.00 to $149.99 per month; (k) $150 or over per month?

4. How many are in receipt of pensions in part basic and in part contributory, (a) $25.01 to $29.99 per month; (b) $30.00 to $39.99 per month; (c) $40.00 to $49.99 per month; (d) $50.00 to $59.99 per month; (e) $60.00 to $69.99 per month; (f) $70.00 to $79.99 per month; (g) $80.00 to $89.99 per month; (h) $90.00 to $99.99 per month; (i) $100.00 to $124.99 per month; (j) $125.00 to $149.99 per month; (k) $150 or over per month?

Answer by: **Mr. Marler:**

The Canadian National Railways advise as follows:

1. 8 (pensioned under C.N.R. plan prior to 1935).

2. 3,138.

3.

per month	
(a) $25.01 to $29.99	998
(b) $30.00 to $39.99	626
(c) $40.00 to $49.99	422
(d) $50.00 to $59.99	169
(e) $60.00 to $69.99	80
(f) $70.00 to $79.99	73
(g) $80.00 to $89.99	26
(h) $90.00 to $99.99	24
(i) $100.00 to $124.99	23
(j) $125.00 to $149.99	7
(k) $150 or over	11
	2,459

4.

per month	
(a) $25.01 to $29.99	420
(b) $30.00 to $39.99	1,671
(c) $40.00 to $49.99	1,452
(d) $50.00 to $59.99	1,141
(e) $60.00 to $69.99	1,072
(f) $70.00 to $79.99	1,107
(g) $80.00 to $89.99	1,094
(h) $90.00 to $99.99	971
(i) $100.00 to $124.99	2,039
(j) $125.00 to $149.99	1,398
(k) $150 or over	2,311
	14,676

C.N.R. EMPLOYMENT TERMINATIONS, NEWFOUNDLAND

Question No. 93—**Mr. Stick:**

1. How many employees of the Canadian National Railways in Newfoundland, in 1956 to date, have received notice of termination of employment?

2. How many employees will receive notice of termination of employment in Newfoundland owing to dieselization of the railway, and what position will said employees be in regarding rights of pension?

Answer by: **Mr. Marler:**

The Canadian National Railways advise as follows:

1. As of February 2, 1956: None.

2. A number of diesel units will be delivered this summer. Following this there will be adjustments and reductions in motive power staff extending over a nine to twelve-month period. Personnel displacement is estimated at 165, but this figure may vary and every effort will be made to place in other work employees affected. Union representatives have been kept informed of the changes that are likely to result from the dieselization program.

No general statement can be made as to the position in respect of pensions of the employees affected by reduction in staff as all employees are not in the same status and the position of each individual must be considered separately.

NATURAL GAS—RATE CONTROL AUTHORITY

Question No. 94—**Mr. Regier:**

1. Has the board of transport commissioners jurisdiction over the rates charged for natural gas supplied to the pipe-line transmission companies by the owners of natural gas wells?

2. If not, who has jurisdiction in this matter?

3. If so, was a price established for natural gas supplied Westcoast Transmission Company Limited, and (a) what was the rate per M.C.F.? (b) what measuring stick did the board use in setting the rate?

Answer by: **Mr. Marler:**

1. The Board of Transport Commissioners for Canada considers that it does not have jurisdiction over the rates charged for natural gas supplied to the pipe-line transmission companies by the owners of natural gas wells.

2. The board considers that the legislatures of the provinces have jurisdiction because it is not within the legislative jurisdiction of parliament to regulate and control the terms and conditions of the acquisition of natural gas and oil merely because such gas and oil are being acquired by an interprovincial pipe-line company.

3. See answer to No. 1.

AMATEUR RADIO OPERATORS, TRURO, N.S.

Question No. 107—**Mr. Purdy:**

1. Has the government and/or the management of the Canadian National Railways had their attention drawn to the outstanding service rendered by a number of amateur radio operators in and around Truro in connection with the movement of trains and the maintaining of communication services, during the recent storm in the maritimes?

2. If so, is consideration being given to suitable recognition of such service?

Answer by: **Mr. Marler:**

The Canadian National Railways advise as follows:

1 and 2. The valuable service rendered by amateur radio operators in and around Truro when ordinary communication facilities in the maritimes were disrupted was of great assistance to the Canadian National Railways. The management recognize that train operations in the face of serious difficulties were greatly aided by the operators of amateur radio stations and have expressed to the individuals concerned the grateful appreciation of the railway system.

NORTHERN ALBERTA RAILWAYS—TONNAGE-REVENUE STATISTICS

Question No. 149—**Mr. Leboe:**

1. What was the total tonnage hauled by the Northern Alberta Railways to and from Hines Creek and Dawson Creek for the years 1946 to the last year figures are available?

2. What was the freight revenue from these points for the same years?

Answer by: **Mr. Marler:**

1 and 2. The Northern Alberta Railway Company is jointly owned by the Canadian National Railways and the Canadian Pacific Railway Company and is not an agency of the crown. Information relating to its internal operations is not furnished to the Department of Transport. Following inquiries, the dominion bureau of statistics advises that it has no record of tonnages or revenues as between particular points.

WEATHER SHIPS "STONETOWN" AND "ST. CATHARINES"—CREWS

Question No. 182—**Mr. Cameron (Nanaimo):**

1. What are the rates of pay of the crew members of the two weather ships, *Stonetown* and *St. Catharines*, which are stationed in the north Pacific?

2. What are the working conditions with regard to periods of duty and relief?

3. Is time served on these ships accepted for purposes of qualifying for deep sea master and mates certificates?

Answer by: **Mr. Marler:**

1. Yearly rates of pay

Classification	C.G.S. *St. Catharines*	C.G.S. *Stonetown*
Master	$5460	$5460
Chief officer	4224	4224
Second officer	3816	3816
Third officer	3540	3540
Chief engineer	5256	5256
Second engineer	4224	4224
Third engineer	3816	3816
Fourth engineer	3540	3540
Junior engineer	3408	3408
Deck engineer	3408	3408
Chief steward	2988	2988
Second steward	2532	2532
Chief cook	3048	3048
Second cook	2664	2664
Third cook	2472	2472
Boatswain	2580	2580
Boatswain's mate	2460	2460
Fireman	2520	2520
Oiler	2556	2556
Quartermaster	2520	2520
Seaman	2400	2400
Waiter	2088	2088
Donkeyman	2580	2580

Note: All officers receive an additional amount of $120 per annum ($10 monthly) in lieu of overtime. Unlicensed personnel are granted compensatory leave for a period equal to the hours of duty performed beyond 40 hours in a week.

2. Each vessel alternately remains on station for a period of 42 days. Sailing time to and from the station is seven days, making a total of 49 days at sea. On completion of each tour of duty the vessel remains in port for five weeks. General ship work is undertaken while in port and when completed, any compensatory leave earned is granted. The crew of the stand-by vessel *St. Stephen* assist in the maintenance and security of a station ship as required.

3. Yes, on basis of actual sea time performed rather than on total time spent on articles.

SUCCESSION DUTY COLLECTIONS

Question No. 216—**Mr. White (Hastings-Frontenac):**

What amount was collected under the Dominion Succession Duty Act, in each province in the years 1950, 1951, 1952, 1953, 1954 and 1955?

Questions

Answer by: **Mr. McCann:**

DEPARTMENT OF NATIONAL REVENUE

TAXATION DIVISION

Succession Duty Collections

(fiscal years ended March 31)

Province	1950	1951	1952	1953	1954	1955
	$	$	$	$	$	$
Newfoundland	86,082	232,872	261,396	304,502	223,429	241,983
Prince Edward Island	145,990	79,100	22,058	123,184	72,304	109,405
Nova Scotia	601,340	1,009,428	744,421	1,444,701	2,014,099	2,106,114
New Brunswick	655,851	988,426	518,153	946,737	1,097,680	953,246
Quebec	9,093,781	6,319,126	6,818,068	6,770,603	6,641,699	7,402,108

Alberta	1,481,254	1,839,099	1,252,024	2,262,749	1,900,970	2,719,781
British Columbia	3,722,747	2,818,109	4,922,024	4,500,610	6,020,536	7,553,312
Yukon	−114*	7,974	18,145	2,728	37,972	19,479
Total	29,919,780	33,599,089	38,207,985	38,070,529	39,137,594	44,768,029

* Refunds in excess of collections.

NOTE.—The above amounts represent the collections made by district taxation offices located in the respective provinces.

SCRAPIE DISEASE, ALBERTA—SHEEP

Question No. 223—**Mr. Quelch:**

1. How many sheep were in the flock in Alberta recently condemned on account of scrapie?
2. What compensation is being paid the owner of the flock?
3. (a) When was it first ascertained that any of the sheep in this flock had scrapie? (b) How many showed signs of the disease?
4. How many sheep were sold as breeding stock during the two years immediately prior to the time it was ascertained that some of the flock had scrapie (a) in Canada; (b) in the United States?
5. Were any sheep sold for breeding stock after the disease had been diagnosed as scrapie?
6. Have the flocks of the breeders who received breeding stock from the infected flock been checked for any sign of this disease?
7. If so, did any of the sheep show symptoms of scrapie?

Answer by: **Mr. Gardiner:**

1. 649.
2. Not yet determined.
3. (a) January 16, 1956.
   (b) Two.
4. Details of private transactions received from a breeder in the course of disease investigations are regarded as confidential.
5. No.
6. In part; investigations proceeding.
7. No.

SALMON PROTECTION, EASTERN SEABOARD

Question No. 233—**Mr. Van Horne:**

What action, if any, has been taken to protect salmon frequenting rivers along the eastern seaboard such as the Restigouche river and its tributaries?

Answer by: **Mr. Sinclair:**

The department's protection staff in the maritime provinces, exclusive of patrol boat crews, consists of 109 fishery officers, 88 wardens and 199 guardians. All of these employees, with the exception of 10 or 12 guardians who are employed almost exclusively in connection with oyster leases and lobster pounds, carry out patrols along the rivers in their districts to enforce the Fisheries Act and the regulations made thereunder.

The regulations designed to protect the runs of Atlantic salmon during the freshwater phase of their life history are based on the results of scientific investigations as far as possible and these are revised regularly as new facts are developed from research. The salmon runs are also protected by means of licence control for commercial fishermen, catch limits for anglers, restrictive seasons, and size limits.

Further protection is provided by the department's Atlantic salmon research and management program carried out by the

fisheries research board and the conservation and development service. This program has expanded considerably during the last three or four years, and includes the following major projects:

(1) The marking of smolts and subsequent analysis of recaptures as adult salmon to determine the percentage survival at this stage in the life history, migration routes, and the contribution of the production of specific rivers to the various fisheries.

(2) Determination of the optimum escapement required to seed fully specific rivers.

(3) A survey of all salmon streams of the Atlantic provinces to provide a full inventory of possible sources of pollution, location of obstructions to migration, and the extent of suitable spawning and nursery areas.

(4) Experimental predator control to protect the young stages of salmon.

C.B.C.—COLOUR TELEVISION

Question No. 254—**Mr. Thatcher:**

1. How many colour television sets are there in Canada?
2. How much did the Canadian Broadcasting Corporation spend during 1955 on experimental colour television shows?
3. What is the estimated expenditure, if any, which the Canadian Broadcasting Corporation will spend on experimental colour television shows during 1956?

Answer by: **Mr. McCann:**

The Canadian Broadcasting Corporation advises as follows:

1. Statistics not available.
2. Nil.
3. Nil.

HOUSE OF COMMONS

Monday, March 12, 1956

The house met at 2.30 p.m.

DOMINION-PROVINCIAL CONFERENCE

STATEMENT RESPECTING CONFERENCE HELD ON MARCH 9

Right Hon. L. S. St. Laurent (Prime Minister): Mr. Speaker, I should like to refer very briefly to the federal-provincial conference. At the October meeting it was agreed that this conference would resume in committee at a time to be fixed by the Prime Minister after consultation with the premiers of the provinces. In reply to my letter of January last outlining the fiscal proposals put forward by the federal government, some of the provincial premiers did suggest another meeting.

In my letter of February 18, 1956, I said:

> Since our federal responsibilities and commitments are now so heavy that we would not be warranted in making any increase in the basic offer we made in January, it may be that the provincial governments generally would not feel that there would be any advantage to be derived from another meeting to discuss fiscal relations.

The replies to my letter indicated, however, that a further meeting in committee was desired.

The conference resumed Friday morning, March 9, and adjourned at five o'clock that day. Although the meeting was, as had been agreed, in camera, it was agreed at the beginning that each delegation could make public any statement it wished to make during the meeting. Some of these statements have been made public and several provincial representatives have made additional comments to the press. I will not endeavour to add to what has appeared in the press, or comment on the substance of the matter before the budget debate. I should like, however, to table the statement made by the federal Minister of Finance at the conference and also a statistical table distributed to the provincial premiers which shows an estimate of how the federal proposals would operate in the fiscal year 1957-58. It should be noted that these figures are illustrative only and that they are based on an assumed increase of 5 per cent per annum over the 1955 levels in the yields of standard taxes and the insurance premium tax.

Perhaps hon. members would wish to have the statement of the Minister of Finance and the statistical table printed as an appendix to *Hansard*, as was done with the other documents relating to this matter.

Mr. Speaker: Do hon. members agree to this proposal?

Some hon. Members: Agreed.

(*For text of documents see appendix, pages 2065-68.*)

REQUEST FOR NEW APPROACH FOLLOWING REPORTED BREAKDOWN OF CONFERENCE

On the orders of the day:

Hon. W. Earl Rowe (Dufferin-Simcoe): In view of the fact that the dominion-provincial conference has, according to newspaper reports, broken down, will the Prime Minister advise the house whether or not he is prepared to consider a new approach to the problem which would be more satisfactory to the premiers of the provinces?

Right Hon. L. S. St. Laurent (Prime Minister): I had not seen any reports that the conference had broken down.

Mr. Rowe: Broken up, probably.

Mr. St. Laurent (Quebec East): It came to an end. The statement I have laid on the table this afternoon and the statistical table illustrates the manner in which the proposals would operate, and represent the government's proposals. Now, there have been very large additional demands which the government felt, under present circumstances, could not be met.

Mr. Rowe: May I ask a supplementary question? Is it the intention of the Prime Minister to have another conference in the near future?

Mr. St. Laurent (Quebec East): Not unless we see some way of having more funds available for distribution because there was approval of the principle as being a step in the right direction. The contention was that it was not a long enough step, but it was as long a step as we thought we could make under present circumstances.

[*Later:*]

On the orders of the day:

Mr. H. R. Argue (Assiniboia): Mr. Speaker, I should like to direct a question to the Prime Minister. Can he say whether any further concessions were made to the provinces at

the recent conference, and whether those concessions were made at the general conference discussion or at some other place?

Mr. St. Laurent (Quebec East): Mr. Speaker, the provinces would not admit that anything that is proposed is a concession. There were explanations made as to how the retirement from the field of taxation on insurance premiums might operate. I know of nothing further that could be regarded as a concession or as an increase in the burden the proposals would mean for the federal treasury.

Mr. J. M. Macdonnell (Greenwood): I have a supplementary question, Mr. Speaker. Does the Prime Minister consider that the provincial premiers who travelled hundreds, and, in some cases, thousands of miles, to be here on Friday, had been adequately warned that they were coming here only to be told that there was nothing new to tell them?

Mr. St. Laurent (Quebec East): Mr. Speaker, the hon. gentleman can interpret himself the terms of the letter I wrote when I suggested to them that that being the situation it might very well be that they would not generally feel it was useful to have another discussion on fiscal policies at this time.

[*Later:*]

On the orders of the day:

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, may I direct a question to the Prime Minister with reference to the documents he has tabled today? What has happened to the principle of federal control over taxation levels so as to deal with inflation and deflation when necessary in the public interest?

Mr. St. Laurent (Quebec East): The passing of the British North America Act in 1867.

TRANS-CANADA AIR LINES

REFERENCE OF ANNUAL REPORT, AUDITORS' REPORT AND CAPITAL BUDGET TO RAILWAYS AND SHIPPING COMMITTEE

Right Hon. C. D. Howe (Minister of Trade and Commerce): Mr. Speaker, I have today laid on the table, in accordance with standing orders, the annual report of Trans-Canada Air Lines for the year 1955 and the auditors' annual report to parliament of Trans-Canada Air Lines for the year ending December 31, 1955. Copies of both these reports have been made available for distribution to all hon. members. I now wish to move:

That the annual report of Trans-Canada Air Lines for 1955, the auditors' annual report to parliament of Trans-Canada Air Lines for the year ending December 31, 1955, tabled this day, and the capital budget of Trans-Canada Air Lines for the year ending December 31, 1955, tabled on Wednesday, March 7, 1956, be referred to the sessional committee on railways and shipping owned, operated and controlled by the government.

Motion agreed to.

FARM IMPROVEMENT LOANS ACT

AMENDMENTS TO PROVIDE FOR NEW THREE-YEAR POOL, MAXIMUM GUARANTEE OF LOANS, ETC.

Right Hon. L. S. St. Laurent (for the Minister of Finance) moved that the house go into committee at the next sitting to consider the following resolution, which has been recommended to the house by His Excellency:

That it is expedient to bring in a measure to amend the Farm Improvement Loans Act by providing for a new three year pool commencing April 1, 1956, and ending March 31, 1959; to provide further that the maximum amount of bank loans made in the new period and guaranteed under the act shall be three hundred million dollars.

Motion agreed to.

MOTIONS FOR PAPERS

CIVIC CENTRE, BANFF, ALBERTA

Motion No. 34—**Mr. Johnston (Bow River):**

For a copy of all correspondence, telegrams, memoranda or other documents exchanged, during last three months, between the government and the superintendent of the Banff national park and/or citizens of Banff, relating to the erection of a civic centre in Banff.

Mr. Lesage: Mr. Speaker, the motion reads in part as follows:

For a copy of all correspondence . . . exchanged . . . between the government and the superintendent of the Banff national park . . .

Such exchanges are, I believe, of a privileged character as between officials of the government. I therefore could not acquiesce in that part of the motion. As to the balance of it, I have no objection.

Mr. Speaker: Is it agreeable that the motion be carried subject to the remarks made by the minister?

Some hon. Members: Agreed.

DISABLED PERSONS ACT

Motion No. 40—**Mr. Zaplitny:**

For a copy of all correspondence, telegrams, memoranda and other communications exchanged between municipal authorities in the province of Manitoba and the federal government or any department thereof, with respect to the Disabled Persons Act, since January 1, 1955.

Mr. Robertson: Mr. Speaker, we are prepared to accept this motion subject to the usual reservation with regard to securing approval of these governments.

Mr. Speaker: The motion is carried subject to receiving approval of the governments concerned.

Mr. Coldwell: Mr. Speaker, does the hon. gentleman mean subject to the approval of the municipalities?

Mr. Robertson: Yes.

Mr. Coldwell: Surely this is going beyond anything we have ever had before. It holds the house down in receiving information. I do not think we should extend to the municipalities the courtesy that we extend to the provincial governments. I think this is a wrong procedure.

Mr. Robertson: We might allow it to stand in the meantime.

Mr. Coldwell: Yes.

Mr. Speaker: Shall the motion stand?

Some hon. Members: Agreed.

Mr. Speaker: Stand.

RABIES

STATEMENT RESPECTING REPORTED OUTBREAK IN SOUTHERN ONTARIO

On the orders of the day:

Right Hon. J. G. Gardiner (Minister of Agriculture): In answer to the question asked by the hon. member for Brant-Haldimand (Mr. Charlton), I should like to read the following memorandum with regard to rabies control:

Control measures followed in dealing with the present rabies outbreak in Ontario are (1) the isolation and quarantine of all suspicious domestic animals and of all animals which have been in contact with them; (2) in affected areas the strict application of control orders on dogs, with stray animals being impounded or destroyed; and (3) the operation of clinics for the free vaccination of dogs and cats where the incidence of the disease is considered to warrant it.

Every reported suspected case of rabies is immediately investigated by federal veterinary officers. The animal is isolated and, if rabies symptoms develop to the later stages, which is necessary for laboratory diagnosis, its head is sent to the department's laboratory. The veterinarians also quarantine for observation all animals known or suspected of having been in contact with the suspicious animal.

The tying up of all dogs in affected areas, and the disposal of strays, is an extremely important part of the control program. While such an order can be applied under the federal Animal Contagious Diseases Act, most municipalities also have dog ordinances which can serve the same purpose. In the present outbreak in Ontario this has been attended to adequately to date by local authorities.

Where rabies has occurred under circumstances which necessitate complete vaccination of all dogs and cats in the area as a control measure, vaccination clinics for that purpose are operated by the federal Department of Agriculture. Such clinics have been or are being operated widely in all districts of northern Ontario, in Renfrew, Victoria, Hastings and Northumberland counties and in an area around Galt and Guelph in Wentworth, Wellington, Waterloo and Brant counties. Approximately 51,000 dogs and cats have been vaccinated to date in those clinics. There is no charge for the vaccination of dogs or cats at those clinics but the government does not bear any part of the cost of having animals vaccinated privately apart from the clinics.

The present outbreak has centred very largely in northern Ontario which is, of course, the outcome of the fact that the primary focus of infection is in northern wildlife, and the northern areas are the most exposed to wildlife. One hundred and eleven cases were diagnosed in Ontario between April 1, 1955, and March 9, 1956, with 67, or well over half, being in wildlife. Eighty-six of those cases have been in the area north and west from Nipissing and Parry Sound. The next heaviest area of infection has been in that part of the province, which is also reasonably exposed to wildlife, bounded by Haliburton and Renfrew on the north, Hastings on the east and Victoria and Durham on the west. There have been 19 cases diagnosed in that general area.

Apart from central and northern Ontario, only six cases of rabies have been diagnosed in the province in the present outbreak, up to March 9. These consisted of one fox in Bruce county, two foxes in York county, one dog in Simcoe county on January 9, one dog near Galt on February 21 and a cat near Guelph on March 9.

Mr. L. E. Cardiff (Huron): I should like to ask if there is any scarcity of vaccine? I saw a report which indicated that one veterinarian had vaccinated all the animals he could but he was only able to get enough vaccine for a certain number. Is there any scarcity of vaccine?

Mr. Gardiner: I have no report that there is any scarcity. It could be that one veterinarian could be out or may have utilized all he had available. It takes some little time to get more.

Inquiries of the Ministry

CANADIAN NATIONAL RAILWAYS

NEWFOUNDLAND—ARRANGEMENTS TO ABSORB EMPLOYEES LOSING EMPLOYMENT

On the orders of the day:

Hon. Milton F. Gregg (Minister of Labour): Mr. Speaker, in so far as my department is concerned, may I reply to the question of the hon. member for Hamilton West (Mrs. Fairclough), which she asked on March 5. I refer her to the question of the hon. member for Trinity-Conception (Mr. Stick), and the reply which was given by the Minister of Transport, which appears on page 759 of *Hansard*. It will be seen from that answer that there had been no men laid off by the Canadian National Railways on account of dieselization.

Then, a question was placed on the order paper by the hon. member for Trinity-Conception, which was replied to by the Minister of Transport, as reported on page 2010 of *Hansard* of Friday last, which the hon. member for Hamilton West has doubtless seen. I am sure these two replies answer the main points in the questions of both hon. members. But, in so far as it applies to the Department of Labour, should the necessity arise, after everything is done by the Canadian National Railways to provide work for employees laid off owing to dieselization, my department and the national employment service will make every effort to assist in securing other work, as is being done in other parts of Canada.

REQUEST FOR ANNUAL REPORT AND RELATED DOCUMENTS

On the orders of the day:

Mr. E. D. Fulton (Kamloops): Mr. Speaker, may I ask the Minister of Transport whether we may expect to receive within the next day or two the annual report of the Canadian National Railways, and related documents to go before the sessional committee?

Hon. George C. Marler (Minister of Transport): Mr. Speaker, I should like to say that I hope to be able to deposit the annual report for last year on Wednesday next and at the same time the capital budget of the Canadian National Railways.

TRURO, N.S.—REQUEST FOR ADDITIONAL MOTIVE POWER

On the orders of the day:

Mr. G. T. Purdy (Colchester-Hants): Mr. Speaker, I have a question I wish to direct to the Minister of Transport of which I have given him notice. In view of the repeated reports of heavy congestion in loaded freight cars in the Truro, Nova Scotia, yards and nearby sidings, and more particularly in view of the specific report that a rush car consigned to Quebec and arriving in Truro on March 1 was still there on March 9, will the minister press on the railway management the necessity of providing further motive power in the district in order to clear the congestion and relieve industry in our province from this further handicap?

Mr. Speaker,—

Mr. Speaker: Order. The hon. member's question was long enough; perhaps we should let the minister answer now.

Hon. George C. Marler (Minister of Transport): Mr. Speaker, I am sorry that I received the notice just before I came into the house and I have not been able to obtain the information in order to give an answer.

ST. LAWRENCE SEAWAY

LAKE LEVELS—DEEPENING OF WELLAND CANAL

On the orders of the day:

Hon. George C. Marler (Minister of Transport): Mr. Speaker, I should like to reply to two questions put to the Secretary of State for External Affairs by the hon. member for Lambton West concerning the Welland canal. He asked:

Is the Welland canal kept open after navigation closes in the fall in order to take water from the great lakes?

The reply to that question is that, after the close of navigation, water is supplied through the canal for domestic use by adjacent municipalities, for process water by various commercial establishments and for power purposes, and is conducted through weirs and the canal channel but not through the locks.

The second question was:

If in the St. Lawrence seaway project the Welland canal is to be deepened, how much extra water would flow through the canal?

The answer is that the volume of water passing through the canal will not be increased by the deepening to which I have just referred.

GRAIN

WHEAT—REPORTED WIDENING OF PRICE MARGIN BETWEEN GRADES

On the orders of the day:

Hon. W. Earl Rowe (Dufferin-Simcoe): Mr. Speaker, I wish to ask the Minister of Trade and Commerce a question in view of a statement that appeared in the *Financial Post* now on the newsstands. The report is to the effect that the wheat board has widened the margin of prices between grades No. 1 and No. 5

wheat from 13 cents to 40 cents. Will the Minister of Trade and Commerce advise the house if this wheat priced at 40 cents below grade No. 1 is being offered to Ontario farmers as feed grain?

Right Hon. C. D. Howe (Minister of Trade and Commerce): Mr. Speaker, there has been no change in the price of No. 5 wheat for two or three months, as far as I know, but certainly the Ontario buyer obtains the lowest price at which any wheat of the same grade is offered to any buyer. The price of No. 5 wheat is the same to any buyer.

NATURAL GAS

INQUIRY AS TO CONTROL OVER PRICES

On the orders of the day:

Mr. F. S. Zaplitny (Dauphin): Mr. Speaker, may I direct a question to the Minister of Trade and Commerce. In view of the recent statement by the attorney general of Ontario to the effect that the province has no authority over prices to be charged by Trans-Canada Pipe Lines Limited to distributors of natural gas, is it the intention of the federal government to exercise control over such prices?

Right Hon. C. D. Howe (Minister of Trade and Commerce): Mr. Speaker, the government of the province of Ontario undoubtedly has the authority to regulate the prices of gas to the consumer and in fact has passed legislation to that end. With the price to the consumer regulated, it seems to me there is effective, even though indirect, regulation of the price that the pipe line can charge a distributor. I notice in the press that the chairman of the board of transport commissioners was reported to have said that the board has no authority to regulate the price of gas in the pipe line even though the pipe line is interprovincial in character.

UNEMPLOYMENT INSURANCE

WINNIPEG—QUALIFICATION OF CONSTRUCTION WORKERS

On the orders of the day:

Mr. O. C. Trainor (Winnipeg South): Mr. Speaker, I should like to direct a question to the Minister of Labour. Has the minister received a letter from the building trades council of Winnipeg, dated February 9, 1956, on the subject of unemployment insurance coverage for construction workers? If so, what is the intention of the government in facilitating the qualification of construction workers for unemployment insurance benefits, as suggested in the letter?

Hon. Milton F. Gregg (Minister of Labour): Mr. Speaker, I am quite sure I have received the letter, and the steps being taken with regard to it are the same as those applying to similar letters from other parts of Canada in that the commission is very carefully looking into the effects of the application of unemployment insurance as set out in that letter and will be able to make some recommendations thereon later on this winter.

COMBINES INVESTIGATION ACT

BEER—ACTION TO BE TAKEN CONCERNING ALLEGED COMBINE

On the orders of the day:

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, may I direct a question to the Minister of Justice. Can the minister say whether a decision has yet been taken as to whether the government will take any action with respect to the report concerning an alleged combine in the manufacture, sale and distribution of beer in Canada?

Hon. Stuart S. Garson (Minister of Justice): Mr. Speaker, as I indicated on a previous occasion, we submitted this report to counsel in Toronto and after having considered it in a preliminary way he became ill and had to undergo a serious operation. We shall not be able to reach a decision ourselves until we get his opinion.

NATURAL RESOURCES

ASSISTANCE TO PROVINCES IN TAKING FOREST INVENTORIES AND REFORESTATION

On the orders of the day:

Hon. Jean Lesage (Minister of Northern Affairs and National Resources): Mr. Speaker, under the Canada Forestry Act, agreements were made in 1951 and 1952 with eight provinces for the purpose of lending assistance to inventory the various provinces' forestry resources and to assist in reforestation. In order to continue and if possible to extend this aid the federal government has taken the following decisions:

1. To continue assisting the provinces in reforestation programs.

2. To extend from March 31, 1956, to March 31, 1958, the termination date of the present agreements for the forest inventories. This will allow the provinces which so need it a two-year period to complete their inventories and will also allow provinces which did not sign the agreements to enter the program for a two-year period.

3. To offer assistance to the provinces to keep up-to-date the forest inventories. These

agreements, which would be effective for a five-year period ending March 31, 1961, would provide that the federal government would pay half the cost of maintaining the inventories.

The reforestation agreements have been useful and are being continued for those provinces which so wish. New tree nurseries have been established with federal assistance in a few provinces. Under this program nearly 58 million trees have been planted.

The purpose of the inventory program is to assess as well as possible all provincial forest resources and to maintain up-to-date records of this resource so that provincial governments will have a reliable basis for the effective administration and management of their forests.

Inventories, like any other stocktaking, tend to become out of date unless they are revised on a continuous basis. Hence the federal government is prepared to enter into further agreements to pay half the cost of keeping these inventories in step with changing forest conditions.

DRUGS

USE OF STILBESTROL IN POULTRY AND LIVESTOCK FEEDS

On the orders of the day:

Mr. F. G. Robertson (Parliamentary Assistant to the Minister of National Health and Welfare): Mr. Speaker, on Friday last the hon. member for Elgin (Mr. McBain) directed a question to the Minister of National Health and Welfare (Mr. Martin) as follows:

> Is it now legal in Canada to use the drug stilbestrol in poultry and livestock feeds?

A similar question was placed on the order paper by the hon. member for Kent, Ont. (Mr. Huffman) and was answered on March 5, as recorded on page 1827 of *Hansard* of that date. In addition I would refer the hon. member to a comprehensive article which appeared in the St. Thomas *Times-Journal* of March 9.

TRADE

WHEAT—INQUIRY AS TO REPORTED SALES TO HUNGARY

On the orders of the day:

Mr. H. R. Argue (Assiniboia): Mr. Speaker, I should like to direct a question to the Minister of Trade and Commerce. Can the minister say whether negotiations are now being conducted with Hungary for the purchase of a large quantity of Canadian wheat, namely, 3,600,000 bushels as suggested by Vic Mackie in an article recently in the Winnipeg *Free Press.*

[Mr. Lesage.]

Right Hon. C. D. Howe (Minister of Trade and Commerce): Negotiations with Hungary were completed some days ago for the purchase of 5,500,000 bushels of wheat.

FREIGHT RATES

GRAIN, HOGS AND CATTLE—INQUIRY AS TO EFFECT OF RECENT INCREASE

On the orders of the day:

Mr. E. G. McCullough (Moose Mountain): Mr. Speaker, I should like to direct a question to the Minister of Transport. Can the minister say what effect, if any, the boost in freight rates which went into effect on Wednesday, March 7, will have on grain, hogs and cattle shipped to the United States?

Hon. George C. Marler (Minister of Transport): Mr. Speaker, I received notice of this question only a few moments ago and shall have to make inquiries in order to be able to answer.

DISABLED PERSONS

REQUEST FOR ANSWER TO QUESTION ON ORDER PAPER

On the orders of the day:

Mr. William Bryce (Selkirk): Mr. Speaker, may I inquire of the Minister of National Health and Welfare when I may expect an answer to my question of February 17?

Hon. Paul Martin (Minister of National Health and Welfare): Mr. Speaker, I was not aware that the hon. member had not had an answer to a question which he had put to me. I assure my hon. friend that he in particular will receive a quick reply.

SUPPLY

Hon. Stuart S. Garson (for the Minister of Finance) moved that the house go into committee of supply.

AGRICULTURE—ECONOMIC POSITION OF INDUSTRY

Mr. J. G. Diefenbaker (Prince Albert): Mr. Speaker, this motion affords the traditional opportunity for members to advance what they believe to be matters of importance, and to move amendments in order to secure a vote of the house on the matter that is brought before the house. Indeed, under today's constitutional system the right to withhold supply is one of the very few rights still enjoyed by the members of the House of Commons.

Some hon. Members: Oh, oh.

Mr. Speaker: Order.

Mr. Diefenbaker: I intend on this occasion to devote my time to an outline of the position of the Canadian farmer. Other members of the Progressive Conservative party will direct their attention to the amendment which I intend to move and will fill in the necessary details. As far as I am concerned, I will merely outline the problem.

I think it will be agreed generally, for certainly it is the view of the Canadian Federation of Agriculture, the farm union organization of Canada and other farm organizations, that in every province the farmer today is caught in a ruthless and unrelenting squeeze between falling prices of farm products and rising costs of production. I am not in any way advancing an argument of depression when I say that the squeeze is of such a nature that, unless action is taken to meet it, it will, unless curbed, lead inevitably to bankruptcy of Canada's outstanding industry. That trend applies equally to the apple and the potato grower, the field crop producer, the dairy farmer, the livestock producer and the wheat farmer.

It is true that some protection against this trend has been afforded by the Agricultural Prices Support Act, but to too great an extent that act has been applied in piecemeal fashion and, indeed, in considerable measure has become a dead letter. There have been glaring inconsistencies in its administration. I need only mention one in connection with the maintenance of the floor on butter, and there is no objection taken to that. The government found itself in the position of having a surplus, which was not a surplus according to the Minister of Agriculture (Mr. Gardiner), and it committed what to many Canadians was an inexcusable act of policy. It purchased butter, it maintained the price, and then it sold a considerable portion of that butter to a communist country at a price some 21 cents less than Canadians were paying for butter. That, indeed, is regarded by many Canadians as an example of asininity in the government's ramshackle policy in the administration of the protection to which agricultural products are entitled under the act in question.

Take the question of hog prices. We have had this controversy over and over again in the past and yet, while the government denies that hogs are being purchased on the markets at less than the established floor prices, any member from the western provinces must inevitably, in the nature of things, have received letters including bills which indicate clearly that the floor is being breached and that farmers are not receiving the protection to which they are entitled. The fact is that the law lacks teeth to punish wrongdoers. Every farmer must become his own police officer; otherwise his rights cannot be preserved.

There is a constitutional division of powers which I am glad to learn will receive the attention of the Supreme Court of Canada during the coming summer. We hope that once and for all the delineation of powers between the federal and the provincial governments respecting the marketing of agricultural products will be determined.

I think it is only fair to mention that one or more provinces have done something in their own legislatures to protect farmers against a breach of floor prices. In my own province of Saskatchewan I should like to see the legislature, now in session, bring in legislation to preserve and, at least, aid in protecting the farmers, the hog producers, who find themselves today in a position of having to sell on a market in which the floor is being broken.

The squeeze which the farmer suffers results from the disparity in the relationship between the prices of farm products and the prices the farmer has to pay. When they are in proper relationship parity is established, and it is parity that the farm organizations across this country are asking for today. Not charity but parity. When one looks at the general price relationship one begins to realize how far in recent years that desirable end has been departed from. As far as parity is concerned, it must be related to a basic period which is regarded as one in which prices and costs are in approximate equivalence one to the other.

I know of no better definition of parity than that which appeared in yesterday's New York *Times*. I have made the necessary changes in the definition to meet the situation in this country. It is as follows:

> Parity prices are the dollars and cents prices that give to farm products the same buying or purchasing power they had in a selected base period when prices received by and prices paid by farmers were regarded as in good balance. . . . It has been put this way: If you can sell a truckload of barley and buy with the money received so much food, clothing, building materials, fertilizer, farm machinery and other living and production items as you could in a chosen favourable period in the past then your barley is selling at a parity price.

It goes on to point out the difference between rigid price supports which have not proved successful and flexible price supports which have proved successful in the experience of the United States.

The farm problem today is one that affects the people of Canada as a whole. I think the

best description of it is to be found in an editorial in the Ottawa *Journal* recently which had this to say:

> It is everybody's problem in Canada.

Not only farm organizations have spoken of the need of action. Such organizations as the Canadian Congress of Labour and the chamber of commerce in Winnipeg have all pointed out the dangerous position in which Canadian agriculture finds itself today, affecting as it does the people as a whole. I think one of the finest briefs I have read has been that of the Canadian Federation of Agriculture presented to the Gordon commission. It sets out in detail the situation of agriculture and endeavours to project itself 25 years ahead and anticipate the situation of agriculture at that time. It points out that there are 611,000 farmers in Canada today, that the average investment of a farmer is $15,500 and that between 1926 and 1954, if you allow the farmer interest of 3½ per cent on the amount of his investment, the average return of a farmer has been only 30 per cent more than the amount of the hired man's wages. Taking 1948 as a base of 100, we find this: Farm prices in 1955 were 97·8; retail prices 117·2; costs of distribution, 148. That covers nine Canadian farm products. What also took place was this. A larger share of the consumer's dollar goes to the other elements of distribution than goes to the farmer. When the period began in 1948 the share of the farmer was 59·3 cents on every dollar. Today that share has fallen to 53 cents. That is the reason the Canadian farmer is disturbed. He is faced by the advancing shadow of diminishing returns that more and more obliterates his share of the national income. His share of the national income has gone down in the last six years to an alarming extent. If you take the parity price as a basis in 1951 and compare it with the parity price today, this is what you will find. In 1951 farm prices were 10 per cent over parity or 110; that is the ratio figure. In September, 1955, that relationship had fallen to 81. During the same period of time the costs of the things which the farmer has to buy had increased by approximately 2 per cent. That statement is not a partisan statement. It is a statement by the Canadian Federation of Agriculture based on an examination of statistics and given to the dominion-provincial agricultural conference in Ottawa in December, 1955. On the other hand, since 1951 Canadian consumer expenditure has increased substantially, while the farmer's receipts for the same food have shown a marked decline. That is shown in rather full degree and I am not going to quote at any length from the annual presentation to the cabinet by the Canadian Federation of Agriculture on February 14, 1956. When my friend the Minister of Agriculture (Mr. Gardiner) produces what I choose to call statistical prosperity by the figures which he advances, I point out that the summary of the views of this agricultural body is to the following effect:

> . . . the notable exception in this picture of record prosperity is that of the farmer and his family. We do not claim that Canadian agriculture is in a depression such as we have known in the past. We do say that the farming industry is not sharing in Canada's new high level of prosperity . . . From the point of view of prices, farm products now show a price decline, taken as a whole, to about 20 per cent below a fair relationship level—whether this is calculated on the base period of 1925-29 used by the Canadian Federation of Agriculture or the more recent period of 1943-45.
>
> Farmers from coast to coast feel keenly that on the average their returns have become badly out of balance with those of other major groups in the nation. It is important to emphasize purchasing power in this connection because the farmer's difficulties are to be found as much in high prices of the things he buys as in a decline in the number of dollars he receives.
>
> The decline in the farmers' position has not come about as a result of poor crops and lagging farm productivity.

That too is the view expressed by the interprovincial farm union in the brief which they presented to the government on the 16th of the month. I am not going to quote these figures—they are fully set out in the brief—except to say this. Since 1951 the ratio of operating expenses to gross income in agriculture in Canada has gone up 23·38 per cent in 1951, 30·77 per cent in 1952, 41·6 per cent in 1953 and 52·2 per cent in 1954; and apparently the trend continued in 1955, although final statistics are not available. At the same time the decline in net farm income has proceeded downward 10 per cent, 21 per cent and finally 48 per cent in 1954. These figures indicate that year by year the ratio of the operating expenses on the farm is going up and a decline in net income is taking place. The situation is the same in agriculture as it is in any other business. You cannot go on paying more for the things you buy while getting less for the things you have to sell.

The same thing has happened with regard to cattle and hog prices. The details given here indicate a pronounced reduction throughout the period from 1951 to 1954 and the first half of 1955. Cattle, 1951, on the weighted average price per hundredweight at public stockyards were $28.22; in 1952, $20; in 1953, $15.36 and in 1954, $14.45. During the same time the price of grade A hogs went down from $33.30 a hundredweight until in 1955, in the second half of the year, it stood at $23.17.

That trend downward has not been slowed up in recent weeks. That is one of the major complaints among hog producers, namely the fact that the floor as it exists today does not protect.

The *Financial Post* recently, in a 20-page supplement in the November 12 issue, published a summary of Canadian agricultural trends. In it there was an article by David L. McFarlane, Professor of Economics at Macdonald College. I am going to quote just a couple of paragraphs of his remarks. He says:

> Cash farm income, $2,812 millions in 1951 slipped to $2,377 millions in 1954 as prices declined. But farm costs have remained essentially at 1951 levels. Thus net farm income has declined much more rapidly than the gross figure. Net income, $2,189 millions in 1951, fell to nearly half this level, $1,126 million, by 1954.

He does not give the 1955 figures but the increase was of such a nature as to result in no greatly increased medium of prosperity. Then he goes on to say this:

> It is hard for city people—unless in the position of workers in farm machinery plants—to realize that agriculture is having serious economic troubles. Alongside of an industrial boom with payrolls and profits setting records, we find agriculture in the worst position since the early war years.
>
> The real meaning of the news columns which recite the difficulties of grain producers, dairy farmers, potato and fruit growers is something approaching comparative farm depression.

He goes farther in that regard than do the other quotations to which I have made reference. I would quote further in that regard in support of my contention, Mr. Speaker, but since my time is limited I cannot refer in detail to the supporting evidence which in every case bears out the contention of the opposition that the agricultural situation has worsened, and that since 1951 there has been a shrinking of Canadian farm income by approximately 50 per cent. When we went out of power in 1935 we assumed the responsibility of a campaign, repeated over and over again, that when we were in power things were bad but without regard to any world conditions that existed then and without regard to the drought that destroyed production and at the same time destroyed income. Ever since then my hon. friends to the right of you, sir, have posed as the exclusive possessors of the magic solution of all farm problems. They have been carried along by the prosperity that resulted from the war and, following the war, was continued in the postwar period in the cold war that was waged.

It is true, as the Minister of Trade and Commerce (Mr. Howe) was able to say to the hon. member for Assiniboia (Mr. Argue) in regard to the contract with Hungary, that the wheat board is getting rid of a large amount of wheat.

Mr. McIvor: Hear, hear.

Mr. Diefenbaker: I am glad my hon. friend interrupted because I think he will agree that Providence, not the government of Canada, brought about the disasters of flood and frost. The parity situation has been very thoroughly canvassed during recent years. We, in the Progressive Conservative party, tried to get some action on this matter on several occasions, but without success. One of the earliest occasions was in 1941, during the war. The last occasion when we moved an amendment regarding this question of parity prices was on March 23, 1953. At that time we pointed out a situation which was rapidly accelerating, namely the expansion of the spread. Our attitude was ridiculed. After moving the amendment on that occasion at page 3208, I used these words, which in the light of subsequent events were not far removed from the facts. I said this:

> —I believe the demand on the part of Canadian farmers in general that action be taken now, before Canada finds itself in the position of having surplus production. We realize the needs of the NATO countries for all-out production in order to meet the eventuality that peace should cease to exist; and in order to maintain farmers on the farms something must be done to remove the squeeze that is taking place because of falling prices which have resulted, as I said at the beginning of my remarks, in a reduction in income of 12 per cent in 1952 over 1951, while the production of agricultural products was materially increased during the same period and farm costs have risen by 5 per cent.

At that time I moved this amendment:

> That all the words after "that" to the end of the question be struck out and the following substituted therefor:
>
> "in the opinion of this house consideration should be given by the government to the advisability of introducing during the present session legislation to provide floor prices for agricultural products at such levels as to ensure producers a fair price-cost relationship."

At that time we pointed out what was happening. What we pointed out then has been found, in the light of subsequent experience, to be correct. As far back as the national convention in October, 1948, we had enunciated our policy in this regard. I read that declaration in the light of subsequent events.

> 1. The Progressive Conservative party stands pledged to assure the maximum of stability of income to Canadian farmers. To this end we will enact permanent floor price legislation based on the following principles
>
> (a) A definite formula in the Farm Prices Support Act for arriving at floor prices.
>
> (b) The formula will allow for variations in production and demand for individual products.
>
> (c) Floor prices will be announced well in advance of the production period.

(d) The floor price formula will be arrived at in consultation with representative producers.

We will establish a board of live stock commissioners similar to the board of grain commissioners.

We will give every legitimate encouragement to co-operative agencies whether relating to purchase, sale or credit.

We will extend the activities of the federal farm loan board so that farmers may take greater advantage of long term low interest rates in the purchase and development of their farms.

We will extend the facilities for agricultural research—

All these things, in the light of subsequent events, have been found to be actually needed to meet problems which have faced Canada since.

Now then, my time being limited, I cannot refer—

Mr. Speaker: In fairness to the hon. member, perhaps I should tell him that the only reason for saying that, in moving an amendment to a motion to go into supply his time may be limited, is that it has happened the government has not considered the amendment to the motion to go into supply as one of want of confidence. I think the hon. member, if he were to make known the terms of his motion, could very well have this type of motion considered, as it almost always has been, one of want of confidence and then he would not need to worry about being limited as to time.

Mr. Diefenbaker: I intend to move, sir, seconded by the hon. member for Brant-Haldimand (Mr. Charlton):

That all the words after "That" be struck out and the following be substituted therefor:

"in the opinion of this house consideration should be given by the government to the advisability of introducing during the present session legislation to create a parity of prices for agricultural products at levels to ensure producers a fair price-cost relationship."

Now, that is the amendment I intend to move, sir. On the basis of previous experience I would not expect that it would be regarded as other than an amendment that the government would not accept.

Today, in the world in which we live, we face one of the most all-embracing economic massive retaliation attacks by the U.S.S.R. that has ever been launched by any nation in all history. The U.S.S.R. failed in its cold war offensive. Now, it has launched an overall world economic offensive. It goes into a country that it has chosen as its victim and, with the promise of appeasing hunger at the moment, asks the people in reality to translate their hunger and their thirst into a reasonably higher standard of living than they have had in the past, and in return the people in those areas forfeit forever their freedom and their liberty.

In times like these I am one of those who believe that surpluses are not dangerous in themselves. I believe we have a responsibility to maintain a productive agricultural machine, and to assure to the farmer a fair and reasonable share of the national income, which he is not receiving today—and statistics prove it. The general attitude of farmers proves the truth of that statement. What we need is a national policy on agriculture.

There was a farm conference last fall, which representatives of the various provinces attended. That farm conference secured from the minister no general vista of the future of agriculture. No lead was given to producers in Canada, and no picture of the anticipated situation in agriculture. A simple declaration was made with respect to one or two matters. A floor was to be maintained. Except for that, there was not that leadership which the farmers of Canada, indeed the whole economy, have a right to expect. The Saskatoon *Star-Phoenix* said:

And it demonstrated that the federal government has no very clear idea (none that it will make public, at least) about what, if anything, it can do about the Canadian agricultural industry as a whole. Without worrying about the order of their importance, each of these points deserves consideration in some detail.

It asks for a lead. It says no lead was given at that conference, and goes on to say:

What the federal cabinet really will do remains anyone's guess.

Then, it goes on to deal with the difference in opinion as expressed regarding subsidies by the Minister of Agriculture (Mr. Gardiner) and the Minister of Trade and Commerce (Mr. Howe). I suggest, therefore, that there is need for a declaration of policy on national agriculture. The last federal-provincial agricultural conference was disappointing. It achieved nothing except to bring a group together and advise them that something had been done, or would be continued, and then let them go home. It bore quite a similarity to the dominion-provincial conference of Friday last, when the provincial premiers came here and were told that nothing could be done for them except what they had already been told, and now they could go home. That is not the kind of leadership that Canadians deserve today. It is not the kind of leadership that will bring about that national unity that all of us hope for. A national conference on agriculture should be called. Representatives of the federal and provincial governments and of the farm organizations should work out a general policy for domestic and international trade. However, that conference should be delayed until such time as the supreme court

has finally determined the distribution of powers as between the federal and provincial governments.

Tomorrow we are to be visited by the peerless leader of the forces of democracy in NATO. Last summer some of us had the privilege of visiting NATO headquarters. General Gruenther, the spearhead of survival, has over and over again emphasized the need of unity among NATO nations. The president of Italy spoke to parliament a few days ago. What he emphasized above everything else was the absolute need of something being done to strengthen and maintain the NATO organization. Human nature being what it is, if threats of war and fears are removed, if cold war becomes warm smiles, the mortar that holds the NATO nations together is bound to become softened. We need to maintain the strength of NATO, to assure the preservation of the surpluses that are being built up as part of our joint defence. It is for that reason that we in the opposition believe that consideration should be given to the establishment of a food bank in NATO countries. The international food bank under FAO has not proven possible because of the difficulties inherent in such a plan when nations both within and without NATO are members of that organization.

The soviet policy will challenge the free world. If the free world is to maintain its strength and be in a position to bargain from strength in the field of economics, the agricultural machine in our country must be maintained, and the Russians must not be permitted to have the initiative in the economic war.

We believe that one of the reasons for our situation is the fact that we have lost our markets. The British market for agricultural products is gone, to all intents and purposes. The total value of bacon shipped to Britain last year was about $3,600, compared with the tremendous shipments made during the days of the war and subsequently. Surely something can be done about that market. Denmark is getting out now. In September the Danish-British agreement will be terminated. Is this not the time to bring about once more aggressive action in this regard to secure those markets, or at least a portion of them? Is this not the time for the government to reconsider the convening of a British commonwealth trade conference to the end that we shall be able to disperse our farm products rather than concentrate them in the United States, which is close at hand and convenient? Our experience in the past shows us that that is dangerous to the preservation of our agricultural machine, because invariably when we have surpluses the United States has surpluses, and the United States government has greater regard for the farmers of the middle west than it has for the continuance of the right of Canada to export agricultural products to that country.

What about Japan? Japan is a country that has always discharged its financial obligations. That country is a mighty market for agricultural products. It was suggested by a former member of this house, Milton Campbell, who now lives in Hamilton, that the market in Japan has a potential value greater than any other market anywhere in the world. Would it be too much to suggest that consideration be given to the advancement of assistance by way of loans so that Japan would be in a position to trade with us and accept a considerably larger portion of the agricultural production of this country than is the case today?

Fourthly, I mentioned the economic offensive of the U.S.S.R. under which emphasis is being laid on seeking, through the stomachs of men in underdeveloped countries in Asia and Africa, to subvert their hearts. For several years we in the opposition have been contending that there is a dividend in advancing assistance to underdeveloped countries by way of agricultural products and the like by the extension of plans such as the Colombo plan. There were some who said we were idealists when we took that view, but what of the United States now? What of Britain and what of France? All three have declared that more and more we must alter our objectives in facing the new economic conflict from the U.S.S.R. and direct our attention to the contribution we make to assist those countries which have not the economic possibilities we have.

In addressing this house Sir Anthony Eden put it this way. He said that the free nations must, and I quote:

> . . . raise the standards of living and provide economic help and confidence for peoples in underprivileged countries.

I believe that as part of our defence efforts there should be a diversion of some of our surpluses for the purpose of raising standards in underprivileged countries.

I come now to the question of the agricultural products act. The present legislation needs to be revamped. It needs to have teeth put into it. I mentioned the economic section in connection with hogs and the way in which the legislation is being evaded to the detriment of the farmer. The administration of this act has become loose and dilapidated. There is no means of enforcing whatever provisions may be passed by the board operating under that act. Should we not at this session amend the act to the end that it will become effective?

Economic Position of Agriculture

Next I mentioned in general the widespread disparity between the price the farmer receives and the price paid by the consumer. That disparity, that spread, deserves to be investigated. Many hon. members in this house want work to do. They would like to perform a worth-while work but have been denied the opportunity of making the contribution which their ability and training would permit. I would like to see the agricultural committee, when it is set up, undertake to make a preliminary investigation into those spreads. Then if after hearing evidence the agricultural committee finds it is circumscribed to such an extent as to be unable to come to a definite finding on the question which exercises the thinking of farmers all across the country today, I should like to see a royal commission appointed in order to investigate this spread and ensure a greater degree of equity to agriculture in assuring that the farmer would receive the largest possible percentage of the price ultimately paid by the consumer.

Finally, sir, I come to the need of making Canadian agriculture strong, effective and efficient. I have already mentioned that if the present price-cost relationship continues and the spread maintains its present rate of interest, the day is not far distant when the Canadian farmer will find himself in a situation dangerous to the future of agriculture in this country. That is not a partisan view. That is the view of the federation of agriculture, the farm union organization, and agricultural economists.

I have already mentioned that three years ago I had the honour of moving in this house an amendment based on what I then pointed out was a trend that was multiplying in its amplitude and would ultimately be most detrimental to agriculture. Amendments to that end had been moved previously. They were based on a declaration made by the hon. leader of this party in June of 1953 and also on the national policy of 1948.

In 1953 the hon. Leader of the Opposition said in effect, "We will appoint a national agricultural board for the purpose of establishing fair floor prices related to farm production costs."

At that time he and those associated with him endeavoured to place before the Canadian people the situation as they saw it. People did not accept the viewpoint that we then expressed. But looking back on the retrospect of events that have taken place since that time, we are able to say that if the stand we then took had been accepted in 1953, in the motion moved in March of that year, the Canadian farmer today would not find himself in his present position. In the light of experience our views have proven to have been all too prophetically true.

The trend referred to in the amendment moved in 1953 has continued. Canadian agriculture today would not be in its present precarious position if action had been taken at that time on the basis of the experience of our neighbour to the south and also on the basis of the demands of farmers generally.

Therefore, sir, having already given notice of my intention to do so, I move, seconded by the hon. member for Brant-Haldimand (Mr. Charlton):

That all the words after "That" be struck out and the following be substituted therefor:

"in the opinion of this house consideration should be given by the government to the advisability of introducing during the present session legislation to create a parity of prices for agricultural products at levels to ensure producers a fair price-cost relationship".

Mr. H. R. Argue (Assiniboia): Mr. Speaker, we in this group welcome the motion which has been placed before the house this afternoon. We are particularly pleased that the motion is drafted in such terms as to permit us to declare our support of the principle of parity prices. The support of the principle of parity prices is something which the members of this group and our party at large have supported from its very inception. It is part of our philosophy that governments should take whatever action is necessary in order to provide a measure of equality of treatment to all major sections of our economy. We do not agree and never have agreed with those who say that the role of government should be to keep out of the economy, to sit back as a referee and do nothing about falling incomes of various groups. We believe in government action and we certainly believe that government action is now needed.

I want to point out to hon. members of this house that the concept of parity prices is that the government shall so regulate the prices of farm products as to give to agriculture an income which bears a very direct relationship to the income of other groups in our economy. In the past the members of the Conservative party have always said that they have believed in a hands-off policy as far as the government is concerned, that they did not believe in regulation, that they believed in free enterprise, the freedom of prices to go up and down in the market. I am glad to see this apparent complete transformation that has now occurred and an indication that it is their opinion and philosophy that the role of government should be to set agricultural prices in a very direct relationship to the cost of production and to place that on a formula basis.

During this session there has been growing evidence that the Conservative party is learning, that their education is being improved. As the weeks go on they are coming more and more to agree with the stand which has been taken on various issues by the members of this group. We are very pleased at that and we welcome them because we believe that if the principle of parity prices is supported solidly by the three opposition parties it will definitely result in legislation, even from this government, which will bring about an improvement in the agricultural industry.

Mr. Howe (Port Arthur): One more "C" in C.C.F.

Mr. Argue: Pardon?

Mr. Howe (Port Arthur): Add one more "C" to C.C.F.

Mr. Argue: It is becoming all too clear that if the Conservative party is learning and is improving on its education, the Liberal party is doing the very opposite, that anything it has done in the past about legislation to improve the position of agriculture has been forgotten, that it has dropped the Liberal program. I think before I have finished speaking this afternoon I will be able to point out that the government's policy is spelling abject depression for agriculture from one end of this country to the other.

I hear a member of the Conservative party say that it has always been their policy. It is a wonderful thing to hear that, but I am afraid that their performance in the early 1930's demonstrated the very opposite. The record of the Liberals is not good. The Minister of Agriculture (Mr. Gardiner) came into his present position in 1935 and during the next five years they established an index for the prices of agricultural products which was published in the *Economic Annalist*. They took the base period 1935-39 as 100, a period when farmers and agriculture were in a general economic depression. Then on the basis of an index of 100, which could hardly be a reasonable parity index price, we find that the indices in the earlier period under the Conservatives from 1931 to 1934 were as follows for field crops:

	Field Products	Animal Products
1931	65.0	92.7
1932	60.4	70.5
1933	69.3	69.2
1934	80.5	86.5

It is certainly true that in the 1930's under both Conservative and Liberal governments we had parity prices in reverse. The prices of agricultural products, instead of bearing a fair relationship to the cost of production, bore a most unfair relationship. Last year we moved a motion asking the government to give consideration to the advisability of establishing a system of party prices for agricultural products. This motion was moved by the hon. member for Humboldt-Melfort (Mr. Bryson) on May 13, and I am glad to say that that motion received the unanimous support of members of the opposition parties.

Mr. Diefenbaker: It has always been supported.

Mr. Argue: I go back to 1954, one year—

Mr. Hodgson: Go back to before you were born.

Mr. Argue: I would not want to get into the same position as my hon. friend.

An hon. Member: Just go back.

Mr. Knowles: They do not want to hear about 1954.

Mr. Argue: I know this is something the Conservative party would like to forget, I know it is something about which they have not been too proud. On May 17, 1954, the hon. member for Mackenzie (Mr. Nicholson) moved this amendment:

> That all the words after the word "That" to the end of the question be struck out and that the following words be substituted therefor:
> "in the opinion of this house, the government should give consideration to demonstrating its support of the principle of orderly marketing through livestock marketing boards by announcing floor prices with respect to cattle and hogs at levels not less than the average of the prices which prevailed during the period from January 1, 1951 to December 31, 1953".

It will be noted that not only did we present a motion which embodied the principle of parity prices; we spelled out the formula. Had that formula been adopted by the government it would have resulted in cattle prices being not less than $21 per hundredweight, and probably more than that with the increased cost of production. A debate followed that amendment during which some most interesting remarks were made by the hon. member for Calgary North (Mr. Harkness), a member of the Conservative party. The hon. member damned the motion in no uncertain terms when he said:

> In my opinion this particular proposal comes very close to being complete nonsense, and I think bears no relationship to any realistic conception of what the livestock industry is, what conditions are or anything of that sort.

And then later:

> For those reasons, perhaps, the formula is not a reasonable or realistic yardstick to use. The whole purpose of this resolution, if carried into effect, would be to socialize the livestock industry.

When we proposed a formula for livestock prices and demonstrated our support of livestock boards in May, 1954, the hon. member

for Calgary North said that the motion was designed to socialize the agricultural industry. I am pleased that the members of the Conservative party are coming along and are now not only presenting a motion today but advancing the concept of full parity. As I am sure you would anticipate, Mr. Speaker, after the hon. member for Calgary North damned the resolution asking for a formula support price for cattle and hogs the Conservative party voted against a parity floor price for cattle and hogs. It was the policy of the Conservative party at that time, but I am glad that they have changed their policy now and are prepared to support a general system of parity prices.

There is a lot of opposition in the country to the concept of parity prices, and in the main the opposition is led by people who have parity prices for themselves. It is led by the big newspaper companies, it is led by Canada Packers, by Massey-Harris, by the big industrialists, by the great friends of the Conservative party and the great friends of the Liberal party. These people say it is wrong and foolish that the prices of agricultural products should be tied to the farmers' cost of production, but when they have anything to sell they, of course, not only tie their price to the cost of production but after having done that they add a very substantial sum to that formula and obtain for themselves very handsome profits.

When we advance the concept of parity prices all we are seeking to do is to give the farmer and agriculture something that is already enjoyed by every other major industry in the country, namely, that the products they have to sell will be related to the cost of producing those products. Certainly under the policy being followed at the present time there is no relationship between farm prices and the cost of production.

Even some consumers seem to feel that they have a stake in low prices for farm products, that if they can get prices to the farmer for agricultural products down the cost of food will come down, but that is very often not correct. It is quite possible, in fact, it often happens that when the farmer from time to time receives less and less for his product the consumer pays more and more for the same product. Therefore it is not amazing at all to find that from 1948 to 1953 the farmer's share of the consumer dollar was reduced from 59·3 to 53 and that from 1951 to 1955, when the index for farm product prices was dropping from approximately 116 to 98, a drop of 18 points, the drop in retail prices of food was only 3 points. The drop in the case of the producer was six times as great as the very small drop in retail food prices.

I say it is possible to have adequate farm prices and reasonable costs to the consumer. I believe that under the policies that have been followed we have not only allowed farm prices to fall to drastic levels but we have also created in the mind of the consumer the idea that if any savings are to be made they are to be made in shopping for food and that the thing to do is to get food prices as low as possible. How many consumers, how many men and women of this country are looking for bargains in food when they go out to buy. They expect to get cheap food. The hon. member for Moose Jaw-Lake Centre (Mr. Thatcher) would like to see the floor price on butter reduced. He is one who would like to see lower food prices, bargain food prices, but the very same consumers who when they go shopping hope to get bedrock food prices think it is quite all right, quite in order, quite proper, to pay a very high price for a television set, a refrigerator or a new automobile. They do not go around shopping for bargains. They say that they want a good product, a quality product and they expect to pay a good price for a quality product.

I think it is wrong, I think it is ridiculous, for the government to allow food prices to fluctuate to such very low levels from the point of view of return to the farmer as they have been doing in recent times. All food commodities are going down. Under the policy being followed by the government the purchasing power of wheat is lower now than it has been in any ten-year period since 1891. The purchasing power of a bushel of wheat in 1953-54 was 70 cents. In the great depression from 1931 to 1940 the purchasing power of a bushel of wheat was 80 cents. The grain producer is losing out in the price-cost squeeze.

The results of these falling prices are very evident in the returns for farm cash income and farm net income. From 1951 to 1955—1955 is an estimated figure—farm cash income fell from $2,811 million to $2,323 million. In the three year period from 1951 to 1954 farm net income fell from $2,154 million to $1,125 million, or a drop of 48 per cent in net income in a three year period. That is the result of the policy of the Liberal government. That is the result of the policy of the Minister of Agriculture (Mr. Gardiner), a policy that over a three year period allows farm net income to fall by 48 per cent.

Mr. Martin: Oh, oh.

Mr. Argue: The Minister of National Health and Welfare cannot argue against statistics produced by a branch of the department of the Minister of Trade and Commerce. The government keeps saying time after time

that the country is prosperous, that the gross national product is going up, that everybody is becoming better and better off under the policies of a benevolent Liberal government, so they say. They are prepared to point out that the gross national product has risen from $21·4 billion in 1951 to $26·4 billion in 1955, an increase of $5 billion in the gross national product in a four year period.

Most segments of the economy are becoming more prosperous. The standard of living in most sections of the economy is going up, but, to the everlasting disgrace of the government, at a time of increased welfare for most sections of the economy the agricultural industry is falling into a depression at a very alarming rate. Does the government do anything about it? Nothing! Absolutely nothing! Not a single policy is being advanced by the government or even being discussed by the government that is aimed at stopping a further deterioration in the prices of agricultural products.

Has the farmer any reason to expect better treatment? I think he has. Although it has been quoted many times in the house, I think it is well that I should quote again the statement made by the late prime minister, the Right Hon. W. L. Mackenzie King, in a national radio broadcast on December 4, 1943, when he said:

> If, to help the war effort, farmers are asked to accept a ceiling on prices, we believe they are entitled to a floor under prices to assure them against an agricultural depression after the war.

That was a very definite commitment by the late prime minister, another one of the commitments of the Liberal government that has never been kept. It has been made and forgotten. I should not say that the government did not make the gesture of keeping it, that they did not do a lot of window dressing. As a matter of fact, the window dressing it was prepared to do in this regard was to write a provision into a statute not as a governing part of the statute but merely as a kind of slogan. I refer to the Agricultural Prices Support Act passed in 1946. In dealing with the procedure to be followed by the appointed board the act has this to say:

> . . . the board shall endeavour to ensure adequate and stable returns for agriculture by promoting orderly adjustment from war to peace conditions—

And listen to this:

> —and shall endeavour to secure a fair relationship between the returns from agriculture and those from other occupations.

I suggest to the government that if it means what it says in the Agricultural Prices Support Act, it should be proposing legislation that will give to agricultural producers for their products prices that bear a fair relationship to their costs and will give to the farmer returns that bear a fair relationship to the returns given in other occupations.

Once again we find a promise by the government that has never been kept. As far as the agricultural industry is concerned, the government has adopted a policy that is slowly wrecking agriculture in every province in this country, and the situation is not confined to the wheat provinces. Sometimes people say that we in this group talk too much about wheat. But let us relate this motion to every product other than wheat and let us relate it to every province, if you like other than the three prairie provinces. I make the statement that agriculture in every province of Canada is in an extremely difficult position, that the farmers are facing continuously lowering prices for agricultural products in face of a rising cost of production, and that the farmer in Canada today is going broke under the policies of the Liberal government.

We thought that something might be done. We expected something to come from the federal-provincial conference. We expected something would come of that conference because we understood there was on the agenda an item which was to deal with the calling of a federal-provincial farm marketing conference on a general basis. Many of the provincial governments and certainly the farm organizations were calling for a general federal-provincial conference on marketing policies. Agricultural organizations were asking for representation.

What happened? Nothing came of it. They were turned down. When the conference was held on Friday, as far as the farmer is concerned the Prime Minister said no, and as far as everybody else was concerned at that conference he said no. It was probably the most expensive conference that has ever been held in Canada, for the purpose of listening to one two-letter word, namely "no" from the Prime Minister. The premiers and their advisers were called from all across this nation and the Prime Minister and the Minister of Finance in an arrogant manner say to the provinces, "we will have nothing to do with discussing any further improvement in policies—

Mr. Martin: Were you at the conference?

Mr. Knowles: Were you?

Mr. Martin: Yes.

Mr. Argue: From the Prime Minister this afternoon we had confirmation of precisely what I am now saying, namely that the government said no.

Mr. Martin: I rise on a point of order.

Mr. Argue: It will not be a point of order, I am sure.

Mr. Martin: Mr. Speaker, my hon. friend said that the Prime Minister and the Minister of Finance arrogantly said no. Once again my hon. friend is wrong. The Prime Minister was not arrogant. Nowhere in the reply will he find a definite no. It is simply another example of my hon. friend's continuous state of inaccuracy.

Mr. Argue: If I am in a continuous state of inaccuracy as suggested, nobody knows it other than the Minister of National Health and Welfare (Mr. Martin), apparently. The Prime Minister does not know. The newspapers do not know.

Mr. Sinclair: You do not know.

Mr. Argue: Some of the premiers and some of the others coming out of that conference do not know it because their impression was that they had come all across this country to hear said to them, "No. If you want something more, the answer is no. If you want a federal-provincial agricultural conference, the answer is no".

Mr. Deputy Speaker: Order. Perhaps I should add a "no".

Mr. Knowles: Were you there too?

Mr. Deputy Speaker: We are discussing an amendment moved by the hon. member for Prince Albert (Mr. Diefenbaker) and it is not in order to discuss, under that particular amendment, the provincial-federal conference of a few days ago.

Mr. Argue: Mr. Speaker, the point I was trying to make was this. At that conference there was discussed the question of whether or not a federal-provincial conference should be held to discuss agricultural marketing policies. I suggest—

Mr. Deputy Speaker: Order. In order that there may be no confusion as to the course which this debate should take, may I draw the hon. member's attention to the fact that we are discussing an amendment to the motion to go into supply. In Bourinot's Parliamentary Procedure, fourth edition, at page 421 he will find the following extract:

> When an amendment has been moved to the question for the Speaker to leave the chair, discussion should be properly confined to its subject-matter.

The hon. member just mentioned agricultural marketing policies. May I point out to the hon. member that in this session we have already dealt with a subamendment which was in these words:

> Their failure to adopt and implement agricultural and marketing policies designed effectively to keep farm cash income in Canada at a just and economic level.

Mr. Argue: What was the date of that amendment, Mr. Speaker?

Mr. Deputy Speaker: The amendment was moved by the hon. member for New Westminster (Mr. Hahn) and seconded by the hon. member for Jasper-Edson (Mr. Yuill) on January 20 of this year and was negatived on January 24. The amendment which we are at present discussing is in the following terms:

> in the opinion of this house consideration should be given by the government to the advisability of introducing during the present session legislation to create a parity of prices for agricultural products at levels to ensure producers a fair price-cost relationship.

The hon. member will realize that he started off in his remarks to discuss that particular problem but latterly, in my opinion, he has been dealing with other matters. In view of the amendment of the hon. member for New Westminster, which I have just read, in view of the fact that we have had ample opportunities to discuss the general farm problems already in this session, and in view of the fact that the first item of the estimates of the Department of Agriculture has not been passed and that this item affords a further opportunity to discuss the general situation, I feel that hon. members would wish me to attempt to see to it that discussion on this particular amendment is strictly relevant to the amendment itself. I would ask for the co-operation of the hon. member.

Mr. Argue: Mr. Speaker, I had momentarily overlooked the amendment that had already been voted on earlier in this session. I shall therefore be pleased to leave any discussion of that particular question at this time.

The motion we have before the house calls on the government to adopt a system of parity prices for agricultural products, the basis of the policy of the government ever since December, 1943, when it was enunciated by the late prime minister. We say that today there should be no reason that the opposition would have to move this kind of an amendment. That has been the stated policy of the government. But it has forgotten about its own policy. It has turned its back on its own commitments. As far as the farmer is concerned, the government's policies have been a flop. The government has failed the farmer. It has failed the farmer in other ways in addition to failure to provide him

with a system of prices that will allow him to stay in business and make a profit. As a matter of fact, other agricultural legislation on the statute books has been allowed to deteriorate. The value of it has been allowed to wither away.

In 1939 we had the Prairie Farm Assistance Act. The maximum payment at that time was $500, but the value of the payment has largely been cut in half because of the increased cost of production and the decreased purchasing power of the dollar. Prairie farm assistance which has been of great benefit to the farmers in time of crop failure is now only a partial benefit. It is only a shadow of what it once was. The Liberal government cannot say too often in this house and in other places that it believes in free enterprise, that it believes in private enterprise. The Liberal government does not believe in private enterprise at all. It believes in corporation enterprise, big business enterprise. In my opinion there are only two main groups in this country that are today engaged in private enterprise where the individual has an enterprise and where he is in competition with other individuals in the same enterprise. I refer, of course, to the over 600,000 farmers in this nation. One could name the farmers and the local storekeepers. They are the private enterprisers.

They are in a bad way under policies followed by this government which allow and encourage corporations to grow and gobble up the local merchants, and which allow only the huge farmer to make any kind of reasonable return, thus driving the farmers off the land. These policies are wrecking the farmers and making them go broke. These policies are making bankruptcy the way out for many local merchants in this country. So far as the local storekeeper is concerned, about all the government has ever done for them is to print in the *Canada Gazette* the fact that he has gone bankrupt; that is about all the attention the local merchant ever obtains from this government. This government does not believe in private enterprise at all. It believes in a policy which wrecks the only two large groups in our country today that are bona fide free enterprisers, namely the local merchant and the farmer. The policy of the government is to get rid of both occupational groups, in an economic sense, just as fast as it can.

The government's policy is not good at home and it is not good internationally. We have surpluses of agricultural products at home, and instead of worrying or complaining about these surpluses we should be glad we have food surpluses. We should be glad that in Canada today there are substantial reserves of food. We should be adopting a policy that will move that food to the people in Canada who need it and to the people in the world who need increased quantities. The other day the hon. member for Selkirk (Mr. Bryce) stated in this house that many people in his constituency were starving. He got the horse laugh from some people when he made that statement. I make the statement that it is a fact that in every single constituency in Canada, urban and rural, there are people who are starving. They may not be starving in the sense that they are hungry but they are starving in the sense that they are nutritionally starving. They can eat only certain kinds of food, not the protective foods. They cannot afford anything better. There are tens of thousands of old age pensioners, particularly in those provinces where there is no subsidy and particularly in areas where they have to pay large sums for room rent, who are nutritionally hungry. That being a fact, and with such huge surpluses of food as we have now available, butter, pork, milk, grain of all kinds, the government should undertake a plan to enable those people to purchase greater quantities of food.

I would suggest a food stamp plan. I would suggest a supplementary payment for the increased purchase of food for old age pensioners, blind pensioners and all of those persons who are receiving assistance in that way from the federal government.

Mr. Martin: Why don't they do that in Saskatchewan?

Mr. Argue: We are doing far more on a provincial basis in Saskatchewan for old age pensioners than is the Minister of National Health and Welfare (Mr. Martin). I should like to see him and his government match the supplementary payments that are being made in Saskatchewan. I should like to see him hurry up with his health program, about which he is so often so voluble.

Mr. Martin: May I ask my hon. friend a question?

Mr. Argue: Sure.

Mr. Martin: He has suggested he would like to see the federal government do as much for old age security as the government of Saskatchewan. Will my hon. friend not say that the federal government pays more to old age pensioners than the province of Saskatchewan? Will my hon. friend not say the province of British Columbia pays more for old age pensioners than does the province of Saskatchewan?

Mr. Deputy Speaker: Order. I think both hon. members will realize that this discussion is out of order.

Mr. Argue: In that regard I can say the record of the Saskatchewan government is far better in every respect than is the record of the government of which the minister is a part.

I have an amendment to move, seconded by the hon. member for Mackenzie (Mr. Nicholson). It reads:

That the amendment be amended by changing the period at the end thereof to a comma, and by adding thereafter the following words:
"in such a manner as to provide for a fair share of the national income for agriculture."

Before I sit down, Mr. Speaker, I want to say that we in this group would like to see the government appropriate a substantial sum of money to enable food to be available to the hungry people of the world. I am glad we have been able to sell wheat to the iron curtain countries. I shudder to think what would happen to the free world if the communists at this time had a surplus of food and we had a deficit because the communists would know what to do with it. They would be out using it—

Mr. Deputy Speaker: Order. I must once more ask the hon. member to confine his remarks to the terms of the amendment which is before us.

Mr. Argue: Well, Mr. Speaker, with great respect I suggest if you are going to have a parity program for agriculture you have to have in that program a method for disposing of food surplus. I would suggest—

Mr. Hosking: Or controls on production.

Mr. Argue: That is all the Liberals can think about, controls on production; restriction. They never once think of feeding the people in this country who are hungry. They never once think of making our surplus food available to needy people in the world because they have forgotten their Liberal philosophy. They have forgotten to undertake policies which will move surplus foods to the underdeveloped countries. I can see the Minister of National Health and Welfare looking aghast. But I want to say to him that the record of this government in relation to the needs of the people of the world, in relation to our huge surplus of food products, leaves more to be desired than probably the record of any democratic country. We have huge surpluses. This government, on a per capita or on any other basis, does a whole lot less than does the government of the United States.

For that reason, Mr. Speaker, I am pleased, on behalf of this group, to move the amendment to which I have referred.

Mr. Victor Quelch (Acadia): Mr. Speaker, at the outset of my remarks I may say we intend to support the amendment and the subamendment, because a policy of support prices for agriculture is absolutely essential in order that the industry be put in a position where it can operate on a sound basis.

I quite realize that a great deal has been said in this house during the past few years on the question of support prices. Unfortunately, in spite of the fact that a great deal has been said, very little has been done by the federal government in that regard. Until such time as the government does show greater attention to the need for support prices for agriculture that will make it possible for the farmers of this country to receive their fair share of the national income, discussions such as we are having today will continue.

It seems very strange to me that while the government shows very little attention to this question, on the other hand it recognizes the results of the situation. Instead of trying to cure the situation the government merely tries to take care of the result. By that I mean already this session they have brought down four bills making it possible for people to borrow more and more money. They recognize the fact that their policies today are driving the people farther and farther into debt. So, what do we have? We have had four bills already this session to make it possible for the people to borrow more money and go farther into debt. We have had the small loans bill, the farm loans board bill, the industrial bank bill and the bill to make loans available to farmers against wheat in storage.

As I say, apparently they recognize that their policies today are driving the people farther and farther into debt, and instead of trying to change the situation so that people do not have to go farther into debt, they merely open the doors to permit them to go still farther into debt which, Mr. Speaker, is not a solution. It can only lead this country into difficulties in the future.

The policy of support prices is criticized on two main counts. First of all, we hear it said, it is a hand-out; the farmers want another hand-out. The newspapers in eastern Canada and the financial institutions are very good at making that charge. Hardly a week passes that you do not find that charge made in some eastern paper. Strangely enough, I have never seen those papers criticize one

subsidy, namely that on gold, a direct hand-out, year after year, a hand-out far greater than the supports given to agriculture under the Agricultural Prices Support Act, leaving out the question of foot-and-mouth disease. If they are so much opposed to the idea of subsidies, why do these institutions not criticize the subsidy on gold? It all depends on whom the subsidy is for when they criticize it.

One hates to travel over ground that has been travelled over many times before in this house; nevertheless, so long as the present situation exists we shall continue to have to repeat things that have been said in former years, especially by farm organizations that come down here year after year and ask the federal government to take action.

What is the justification for support prices? I maintain the farmers of this country are not asking for a hand-out; they are not asking for anything to be given to them. They believe they have paid a premium on certain insurance, and now they expect the insurance to be made available. Let us go back to the 1930's, the depression years, when the prices of farm products were at a very low level. Anyone in this house who was farming in those years will remember what was said when the farm organizations appealed to the government for support prices on farm products. They were told no, this was an international situation. Prices had fallen in the world markets and the government could not do anything about it. The farmers could not expect to get more than world market prices.

That was the situation in the 1930's, and the farmers continued to get low prices. Then the war came along. Within a very few years after the declaration of war, farm prices went up. It might have been possible then for the farmers to recoup their losses and pay off some of the debt that had been accumulated in those years when wheat had been selling at 19 cents a bushel and other things at a similar level. The farmers were hoping that for a few years, anyway, they would get prices that would make it possible for them to pay off their debts; but what happened? When prices went up in the world markets the government stepped into the picture and said, "World prices are too high. You cannot have world prices because we are going to put a ceiling on them." I maintain you cannot adopt the attitude that on the one hand when world prices are down the farmers have to take them, and on the other hand when world prices go up the farmers cannot have them. That has been the policy of this government in the past, and that is largely the reason the farmers have suffered in the past. If it is fair to make the farmer take low prices when world prices are low, then it is only fair to let him have the high prices when world prices are high, and I shall quote some figures to prove that this has not been the case.

Apparently the government of the day realized there was some justification for what I am saying, because the prime minister of the day, Mr. Mackenzie King, as has already been mentioned, did state that in view of the government's policy the government would take steps to stabilize farm prices after the war, and the Agricultural Prices Support Act was enacted, which contains words to the effect that farm prices will be maintained at a fair relationship. Perhaps I should quote from the section of the act which deals with that question. Paragraph 9, subsection 2, reads:

> In prescribing prices under paragraphs (a) and (c) of subsection (1), the board shall endeavour to ensure adequate and stable returns for agriculture by promoting orderly adjustment from war to peace conditions and shall endeavour to secure a fair relationship between the returns from agriculture and those from other occupations.

Mark this:

> —a fair relationship between the returns from agriculture and those from other occupations.

Today the farmers represent around 16 per cent of the population, and they are getting 6·8 per cent of the national income, which shows that something has slipped very badly somewhere.

In my opinion the Agricultural Prices Support Act is a good act. The only trouble is that it is not wide enough; it does not provide support prices, apparently, for a sufficient number of agricultural products. For instance, it does not include grain. Quite a number of farm organizations have asked that grain be brought under the Agricultural Prices Support Act. As I say, it is a good act. I have no quarrel with the formula that was laid down, namely that the price of farm products today should be maintained at such a level that it will bear the same relationship to the price of other commodities as existed in the base years 1943, 1944 and 1945. That is the general basis for setting support prices.

When you take into consideration the fact that in 1943, 1944 and 1945 the prices of farm products were not high in relation to the prices of other commodities, I think the farmers are justified in expecting that under the Agricultural Prices Support Act farm prices today would be maintained at a parity with those three years. But what do we find? According to the agricultural prices

support board we find that the support price for butter is only 84·6 per cent of parity, of those base years; the support price of 23 cents on hogs is only 83 per cent of parity of that base, and the support price of 38 cents on eggs is only 56 per cent of parity of that base. That shows that the floor prices on the few products supported today are still quite a bit below the formula laid down by the government.

Wheat, of course, does not come under the Agricultural Prices Support Act. As I say, farm organizations have asked that grain should be brought under that act. It is interesting to note that if grain were brought under the Agricultural Prices Support Act, then the price of wheat, on the basis of the three years 1943, 1944 and 1945, according to the dominion bureau of statistics would be $2.27 a bushel.

Some people say, well, what would be the reaction of the public if the government maintained support prices at that level? For instance, what would be the attitude of labour? Well, I understand labour has already taken a stand supporting it. I refer to the brief of the interprovincial farm union council, presented to the government on February 16, 1956, and quote from page 13 in reference to this question:

> That the consumer would not resist any move that would reimburse farmers on an equitable basis has been proven by the fact that the two main organized labour groups, C.T.L.C. and C.C.L., are on record as being in support of the principle of a fair and equitable price to the primary producer of agricultural products.

No doubt labour realizes it has a very substantial market in the farm industry, and if they hope to be able to sell to the farmers in large volume then the farmers will have to be able to pay for the goods they buy from the secondary industries. In order to do so the farmers will have to receive a price that bears a fair relationship to the prices on other commodities.

The wheat producer is, of course, in worse shape than the majority of farm producers because the price of grain has dropped lower than the price of any other farm commodity. Here again the grain farmers are fully justified in insisting upon an adequate support price today, in view of the fact that they did take a price considerably below the world market price in the years 1945 to 1949.

I have in my hand figures showing the losses that were suffered under the British wheat agreement by comparison with the world market price for class 2 wheat in the years 1946 to 1950, during which period the farmers lost $431,676,844. Then as the result of subsidizing the Canadian consumer at the same price at which we sold wheat to Britain instead of at the world market price, the farmers lost another $136,920,921. If you add those two figures together you get an over-all total of $568,597,765. If you subtract from that figure $65 million which the government paid to the farmers on account of their losses, you have a net loss of approximately half a billion dollars.

Therefore I do not think any one can argue that the farmers in asking for a support price today are asking for a hand-out. They are merely asking compensation for something they have already paid. They have already paid the premium of half a billion dollars in regard to wheat and many hundreds of millions in regard to prices on other commodities.

I say this in view of the fact that they accepted prices considerably below the world market prices. There are several ways in which support prices may be paid or in which a parity price may be guaranteed. Personally I think the farmers are justified in asking for 100 per cent of parity with the period from 1943 to 1945 for all their produce whether it is sold in Canada or on the external market. On the other hand, however, we recognize that we have no control over the external market, though we do have control over the prices at which commodities are sold in this country.

We in this group have always advocated the adoption of the two-price system. It is interesting to note that the interprovincial farm union has also adopted this policy; that is, a parity price for the production of agricultural products consumed in Canada, and the best price that can be obtained on the world market, preferably through international agreement, for the farm produce sold abroad with a reasonable floor placed under the goods exported abroad.

After all, when you consider that approximately 94 per cent of all farm produce apart from wheat is consumed in Canada, there is no reason why we should allow the 6 per cent that is exported to set the price for the 94 per cent consumed in this country. Therefore we have advocated the two-price system, not because we do not think the farmers are justified in asking for a parity price on all their produce but because it is far easier to put a two-price system into operation. After we have had it in operation, then will be time enough to think about trying to obtain a parity price on the total production.

There are some people who will say that the adoption of a policy which will give the farmers of this country a price for their commodity that will return to them their fair share of the national income will expand the

amount of our surpluses. In that regard I think the time is long overdue for the government to announce a long-term policy. What is the government's policy regarding agricultural production? I think the government should announce to the farmers just what it wants them to do in regard to production. Does the government want the farmers to reduce their production or to maintain it at its present level? If the government wants them to maintain it at the present level, then no one can argue that a policy of price support is to blame for present levels of production, because if the government does not want production to be maintained at present levels it will have to adopt a policy whereby production can be restricted. But just so long as the government does not want production to be restricted there can be no criticism of the farmers' present level of production. When you consider the international situation wherein, according to the FAO, 50 per cent of the population is hungry, I think we can then agree that a policy of maintaining production at a high level is essential at this time.

We in this group have always stated in so far as external markets are concerned that we feel the government should make food available to all those nations who are unable to obtain it through normal channels of trade by such means as acceptance of foreign currency, by barter agreements or in some cases by way of gifts. In so far as the domestic market is concerned, we feel we still have quite a large potential market for increased agricultural production in this country.

The federation of agriculture in its brief suggested a number of means by which we could increase the consumption of dairy products. The federation suggested a free school lunch milk program, a continuation of the policy of making butter available to institutions, and some form of a stamp coupon program in order to get milk and butter to needy people. From time to time we have advocated a similar policy in this house. We have pointed out that a stamp coupon program could be adopted which would be similar to the stamp program carried out in the United States shortly before the war.

It is also interesting to note that the Canadian consumers' association, in a pamphlet they recently put out, also advocated a free school lunch milk program in order to expand the consumption of milk and an expansion of the program of converting milk into milk powder so it can be more easily stored.

If our surpluses continue to rise after the government has done everything conceivably possible to expand our markets for agricultural produce both in the domestic and external fields, I believe the government should then try to build up fairly substantial reserves of all farm commodities that can be stored against the day when crop failures might come. If when we have built up satisfactory reserves surpluses continue, I think the government would be justified in introducing a policy along the lines of the policy it adopted during the war, known as the wheat acreage reduction policy. I would say that policy would only be justified provided they had done everything in their power to expand the domestic and foreign markets and had built up substantial reserves to carry us over for two or three years of crop failures. They might set up something like the soil bank provided by President Eisenhower of the United States to encourage farmers to take poor land out of cultivation and put it into grass or forest. This would help to restore the fertility of the land; and if it were necessary to expand production later on, that land which had been sown to grass and was therefore in a more fertile state could be broken up and put into grain once again.

I submit that the government definitely owes it to the farmers of this country to announce just what they want in that regard. If they want the farmers to continue to expand their production, then they should guarantee that they will not have to suffer a lower price. If on the other hand the government feels that our production of agricultural products today is as high as it is wise to maintain it, the government should announce that and bring in a policy similar to that adopted in the United States in order to encourage farmers to preserve the fertility of their soil.

Mr. J. A. Charlton (Brant-Haldimand): Mr. Speaker, in seconding the amendment moved by the hon. member for Prince Albert I should like to say first to the C.C.F. party to my left that this is definitely not a new policy on the part of the Progressive Conservative party. To prove this I go back to April 8, 1941, where I find on page 2280 of *Hansard* of that day an amendment moved by the then hon. member for Lake Centre, the present hon. member for Prince Albert, reading as follows:

> That all the words after "that" in the motion be struck out, and the following be substituted therefor:
>
> "it be resolved that the government should take immediate steps to create a parity of prices as between agricultural and other products in order to improve the condition of Canadian agriculture and in order that it may receive a just and fair return, and thus be enabled to make that contribution to Canada's war effort which is so desirable, and which our agricultural population so greatly desire to make."

That should make it plain to the C.C.F. party that this was first brought into the

House of Commons by the hon. member for Prince Albert back in 1941.

Mr. Nicholson: Would the hon. member go back to 1931?

Mr. Charlton: I will go back to 1931 in a few minutes if my hon. friend will just wait. I should like now to quote from a speech made by a former leader of this party, John Bracken, at Lethbridge in 1943, when he said:

In order to prevent wide fluctuations of farm prices we shall, in the case of our major export products, provide a floor price below which they will not be permitted to fall, and we shall allow to the producers the benefit of any advance thereon. Since price ceilings are now being maintained to prevent farm prices from rising to high levels in wartime, we shall see to it that price floors are provided, to prevent farm prices from dropping to unfair levels in peacetime. There should not be price ceilings on farm prices to prevent inflation in wartime, without price floors to prevent deflation in peacetime.

Then on March 23, 1953, the hon. member for Prince Albert moved another motion, to be found at page 3208 of *Hansard* for that year, as follows:

That all the words after "that" to the end of the question be struck out and the following substituted therefor:

"in the opinion of this house consideration should be given by the government to the advisability of introducing during the present session legislation to provide floor prices for agricultural products at such levels as to ensure producers a fair price-cost relationship."

Surely that will answer the suggestion made by the hon. member for Assiniboia that this is a new policy on our part. It is not a new policy; we have stood for this policy for 15 years, and we are going to stick with it. As far as the C.C.F. subamendment is concerned we are quite willing to support it.

In regard to the criticism that we did not support the motion moved by the C.C.F. party on May 17, 1954, I think I should reread that motion, which is reported on page 4797 of *Hansard* and is as follows:

That all the words after the word "That" to the end of the question be struck out and that the following words be substituted therefor:

"in the opinion of this house, the government should give consideration to demonstrating its support of the principle of orderly marketing through livestock marketing boards by announcing floor prices with respect to cattle and hogs at levels not less than the average of the prices which prevailed during the period from January 1, 1951 to December 31, 1953".

This party has never been in favour of a definite stated price for any particular period. We submit that it should be an elastic price. I think probably I should quote the remarks of the hon. member for Brandon-Souris to be found on page 4812 of *Hansard* for that same date. The hon. member said:

As a matter of fact, the present plan has been repudiated by the majority of livestock producer groups in the province because it is too compulsory and, as has been indicated by the hon. member for Calgary North, it approximates socialized marketing. Among the groups who have not given their support to the plan are the Manitoba pools, which in a largely attended meeting in the city of Brandon just a few weeks ago, while supporting the broad principle of producer marketing boards, opposed to the extent of 90 per cent the proposal that has been put forward by the Manitoba farmers union. Also the Manitoba cattle producers association is opposed to the present plan.

I think we were quite justified in opposing that plan when it had been opposed by so many farm organizations across the country. The hon. member for Mackenzie suggested that I should go back to the 1930's, and I am ready to do that. I am willing to admit that when the Conservative government gave up power in 1935 the prices of agricultural products were low, but I would point out also that after five years of Liberal administration the inequality between the prices of the products the farmer had to buy and the prices of the products he had to sell had grown steadily worse.

In 1935, when the Liberals came into power, the parity prices were 20 per cent below; in 1940, after five years of Liberal administration, they had dropped to 23 per cent below parity. That should answer any question about the 1930's. I will say to the hon. member for Mackenzie that we are almost back now to the same ratio; we are closer to it than we have been at any time since 1932. I have here the *Economic Annalist* for February, 1956, volume 26, No. 1.

To prove the statement I have just made, I want to give farm prices of agricultural products from 1935 to 1940 on the basis of 100 for the 1935-39 price. In 1935 the figure was 88, in 1936 it was 96·9, in 1937 it was 119·7, in 1938 it was 105, in 1939 it was 91·8 and in 1940 it was 96·8. There was a rise of only 8·8 points in the period from 1935 to 1940. In the case of commodities and services used by farmers and taking the same period of years, 1935 to 1940, there was rise from 95·4 to 106·8, or an increase of 11·4 points. While farm prices fell 8·8 points the commodities the farmers were forced to buy rose 11·4 points.

Then we have the period from 1951 to the present time. On the same basis agricultural products have dropped from 296·8 in 1951 to a figure of 225·05 for 1955, this figure being the average for the first eleven months of the year. That is a drop of 71·8 points. In the same period commodities and services used by the farmers have risen from 230 to 251·3, or an increase of 21·3 points.

I believe that gives a fairly good idea, Mr. Speaker, of the net position of the farmers of the country today, and after all it is the

net position that actually counts. The Minister of Agriculture can bring all the figures he likes on gross income and net worth statements, but the net income is the only one the farmer knows what it actually means as far as money in his pocket is concerned.

To go back again, I think most people from the west will remember the famous Gardiner dodgers that were used there in 1934 in the campaign prior to the election in 1935. I want to refer to what was on the dodger. It contained these words:

Dollar wheat will give you a job and enable you to own your own home. Dollar wheat will pay for your light and water and give you a telephone. Dollar wheat will pay your grocery bill and buy boots, shoes and clothing for the whole family.

Mr. Rowe: Who said that?

Mr. Charlton: The Minister of Agriculture. He was not minister then but later became Minister of Agriculture. I continue:

Dollar wheat can provide a surplus for a rainy day. Vote Liberal.

What happened?

Mr. Lennard: You cannot buy the overalls.

Mr. Gardiner: There have never been any Tories elected since. That is what happened.

Mr. Rowe: You did a good job of fooling the people.

Mr. Charlton: In 1935 the price of wheat was 87½ cents a bushel. What happened to it from 1935 to 1940? It never did reach $1 a bushel until after two years of the world war. Yet the minister had the audacity to go across the country promising the farmers they would get dollar wheat. As a matter of fact, Mr. Speaker, wheat went down to 60 cents a bushel. The government wanted to pay the farmers 60 cents for their wheat in 1938, I believe.

Mr. Gardiner: Mr. Speaker, I know my hon. friend wants to be correct. The government offered an initial payment of 60 cents, not 60 cents a bushel for wheat.

Mr. Charlton: That is what I just said.

Mr. Gardiner: Oh, no; you said 60 cents for wheat.

Mr. Charlton: The government offered 60 cents as an initial payment.

Mr. Rowe: Your initial payment was less than they got under the former government.

Mr. Gardiner: As a matter of fact the initial payment was made at 70 cents. It was not 60 cents.

Mr. Rowe: That was 17 cents below what was paid by the former government, still 17 cents low.

Mr. Charlton: If the minister will just contain himself I shall go ahead and say what happened. If it had not been for a deputation of farmers from the western provinces they would have only received 60 cents, but there was such an outcry that the government was forced to make the initial payment 70 cents. During the campaign in 1934 before the 1935 election they also promised a terrific increase in exports. I have placed on *Hansard* on a previous occasion what actually did happen to exports prior to the time the Conservatives came into power in 1930 and after the Liberals came back into power in 1935. With the exception of three cases there was an increase in exports to Great Britain when the Conservatives were in power over what they were in 1929 or 1936. The table to which I refer can be found at page 3566 of *Hansard* of April 7, 1953.

It is not necessary for me to go over all these figures. As I say, with the exception of three cases where exports were a little higher in 1929 than in 1934, the year I have here, exports were smaller in 1929 and 1936 than in 1934. These are dominion bureau of statistics figures and I do not think the minister can refute them.

Mr. Gardiner: They are not correct.

Mr. Charlton: The minister has just said they are not correct.

Mr. Gardiner: The price of wheat in 1936 was one of the highest prices we had in that period.

Mr. Charlton: I did not say anything about prices. I referred to the export figures to Great Britain for the various products shown in this table, and I challenge the minister to say they are wrong. They are dominion bureau of statistics figures—

Mr. Lennard: He would not know.

Mr. Charlton: —and I do not think they can be said to be wrong.

Mr. Rowe: Are you taking the average? Maybe he is taking a special day.

Mr. Gardiner: $1.22 a bushel for wheat.

Mr. Rowe: What day was that?

Mr. Gardiner: The average through the year 1936-37.

Mr. Charlton: In the brief submitted to the cabinet by the interprovincial farm union council there is a very interesting table on page 4. As a matter of fact, it shows beyond any doubt that at the present time wheat is selling at a lower price as far as purchasing power is concerned than it was during the period from 1930 to 1939 or at any time during the history of this country with the

possible exception of 1931 and 1932. It is table 3 on page 4 of the brief and is headed, "Purchasing Power of a Bushel of Wheat Basis Fort William". Would it be possible to have this table placed on the record?

The Acting Speaker (Mr. Applewhaite): Did the hon. member indicate the source of the table?

Mr. Charlton: Yes, I said it was taken from page 4 of the brief of the interprovincial farm union council, submitted to the government of Canada.

The Acting Speaker (Mr. Applewhaite): Is it agreed that the hon. member has permission to place these figures on *Hansard*?

Some hon. Members: Agreed.

Mr. Charlton: The table is as follows:

Purchasing Power of a Bushel of Wheat
Basis Fort William

Average for 10-year period based upon	Average year price wheat cents per bu. Basis No. 1 Fort William	Index cost prairie farmers' living and production base 1935-39—100	Price basis purchasing power bu. wheat 1935-39
1891-1900	$ .76·4	59·5	$1.28·5
1901-1910	.89·1	68·3	1.29·8
1911-1920	1.53	111·7	1.33·2
1921-30	1.40·7	129·9	1.08·0
1931-40	.80·5	99·8	.80
1941-50	1.44·3	151·0	.94
Crop Years			
1950-51	1.85·5	215·6	.86
1951-52	1.83·6	227·9	.81
1952-53	1.81·7	224·7	.81
1953-54	1.56·3	224·2	.70
1954-55 (initial price)	1.40	226·4	.61·4

I will not read all the figures. I merely wish to refer to those having to do with the purchasing power of a bushel of wheat on the basis of 1935-39. For the period from 1891 to 1900 the figure is $1.28·5, from 1901 to 1910 it is $1.29·8, from 1911 to 1920 it is $1.33·2, from 1921 to 1930 it is $1.08, from 1931 to 1940 it is 80 cents and from 1941 to 1950 it is 94 cents. From then on the figures are given for crop years. For the crop year 1950-51 the figure is 86 cents, for 1951-52 it is 81 cents, for 1952-53 it is 81 cents, for 1953-54 it is 70 cents. For the year 1954-55 the initial price of wheat is given at $1.40 and on a net basis the figure is 61·4 cents.

We now come to the Agricultural Prices Support Act, which has been on the statute books since 1944. It was not put into operation until 1946. I want to point out at this time that the idea of floor prices was not the Liberal government's idea. A former leader of this party, namely Hon. John Bracken, brought out that idea and it was so well received by the Liberals that they put it into legislation in 1944, just prior to the 1945 election. In a statement over the radio on December 4, 1943, the late Mr. Mackenzie King said this:

> If, to help the war effort, farmers are asked to accept a ceiling on prices, we believe they are entitled to a floor under prices to assure them against an agricultural depression after the war.

Then from the act itself we have its purpose stated in section 9, subsection 2. I should like to read that subsection:

> (2) In prescribing prices under paragraphs (a) and (c) of subsection (1), the board shall endeavour to ensure adequate and stable returns for agriculture by promoting orderly adjustment from war to peace conditions and shall endeavour to secure a fair relationship between the returns from agriculture and those from other occupations.

That wording is taken from the act itself. Then, Mr. Speaker, we have a rather peculiar statement in the annual report of the agricultural prices support board; and I think this is more nearly government policy than that set out in either of the other two cases. On page 3 of the annual report of the agricultural prices support board for 1954-55 which is the latest one available, at the bottom of the page we read this:

> In addition to the above-mentioned products which were given support at levels considered to be in the public interest, although not always as high as desired by producers, the board rejected applications for price support on potatoes and forage crop seeds and continued to hold in abeyance an application for poultry meats.

That, Mr. Speaker, is apparently the attitude of the government, namely to hold in abeyance, pigeonhole, put in the files or in any way at all get rid of it at the present time.

According to this latest available report, that of 1954-55, the total that has been paid out under this act in the number of years in which it has been operative—that is nine years up to 1954-55; that is all I have a record of here—is $83,374,586.71. That is the total cost. Of that figure, Mr. Speaker, I want to point out definitely that $70,067,497.56 had regard to cattle and hog prices as a result of the foot-and-mouth disease, a figure which is most extraordinary and which could not be taken as an example of what this agricultural prices support board cost would be ordinarily. All other costs amounted to $13,307,089.15.

Before proceeding with that matter, I should like to correct an obvious mistake which was made the day the estimates of the Department of Agriculture were before the house. Although I cannot quote from *Hansard* I can give in my own words what was meant. The hon. member for Moose Jaw-Lake Centre made the statement—and incidentally it had a good deal of publicity across the country—that the floor price on butter had cost the Canadian taxpayers in that year, apparently 1954, $8 million; "during the current year" is the way he put it.

I want to point out, Mr. Speaker, that that is absolutely incorrect. I am not suggesting that the hon. member made this statement knowingly. I think he probably just misunderstood the Minister of Agriculture on the same day when he said, as reported at page 1055 of *Hansard*, that the cost would probably be $8 million by May 1 of the next year. I want to point out definitely that I think that figure of $8 million is far too high. The cost up to 1954 was only $3,175,085.71. Taking the minister's own figure of $1,600,000 paid to the trade to reduce the price from 58 cents to 53 cents in 1953, the total would amount to not quite $5 million.

Mr. Gardiner: That is included in the first $3 million.

Mr. Charlton: I know that a great error was made in suggesting that the floor price on butter cost the taxpayers of Canada $8 million in one year. If it is $8 million—and I am not suggesting it will reach that amount; but according to the Minister of Agriculture it might do so by this next May 1—that will be for seven years instead of one. I think it is just as well to get that situation clear.

As I say, the total subsidies paid by the government under this act were some $83 million. As is not known by many, all subsidies are not paid to agriculture. I want to be clear on this point. There is a considerable amount in the way of subsidies that go to industries other than agriculture. From 1946, when the agricultural prices support board came into being, of the total subsidies paid out by this government in only four years out of the nine was over 50 per cent received by agriculture. In five of those nine years over 50 per cent was received by industries other than agriculture, and they are quite numerous. I do not want to go over them.

Mr. Diefenbaker: Clear the matter up.

Mr. Charlton: For instance, in 1954 the following government subsidies were paid:

Government subsidies 1954

Federal:	($ Millions)
Department of Agriculture:	
Feed freight assistance, western grain	19
Hog premiums	5
Agricultural prices support board loss	4
Miscellaneous:	
Payments, co-operative marketing act	4
Lime assistance	1
Premiums cheese	1
Total agriculture	34
Other federal subsidies:	
Emergency Gold Mining Assistance Act	15
Maritime Freight Rates Act	11
Movement of coal	12
Miscellaneous:	
Steamship subventions	4
Payments, re trackage C.N.R. and C.P.R.	7
Other	2
Total other	51

"Other" includes payments re immigrants en route; fishing bounty; payments re Canadian coal; drydock subsidies; subsidies—salvage companies; subventions—air carriers; payments re fisheries price support and destruction of harbour seals. In that case the agricultural subsidies paid out were $34 million and subsidies paid out to other industries were $51 million.

There are many other subsidies in addition to those, Mr. Speaker, that are paid by consumers by reason of tariff protection. However, it is not my intention to go into that now. I admit that tariff protection is necessary in a good many cases. But if this is so, is it not just as reasonable that the farmers should have protection as well? The present economic plight of the farmers generally is serious.

I want to go back again to the brief of the farm union, page 6, where it is definitely stated that 38 per cent of the farmers in this country have a gross income of less than $1,200 a year. I repeat that 38 per cent of the total number of farmers in Canada have a gross income of less than $1,200 a year. The minister might have been right when he said back in 1953, as I distinctly recall, that if the figures could be produced, 90 per cent of the farmers in eastern Canada did not make enough to pay income tax. Probably he was closer to being right than he thought at that time.

Then again, as was stated by the hon. member for Assiniboia this afternoon, from 1951 to date the net income of all farmers in Canada has been reduced by 48·22 per cent. If anyone doubts that statement, Mr. Speaker, all he needs to do is drive around the rural districts and see the number of farm homes and farm buildings that are going to rack

and ruin, actually falling down in many cases. He could visit the county registrar's offices and find out the increase in the number of mortgages that have been put on farms in the last couple of years, or visit the township tax collector and find out how many people are in arrears on taxes in this last year. If anyone still does not believe that the farmers' situation is a bad one now, that is one way of finding out.

This, as I said, is the situation with regard to the farmers' income. While the general economy of Canada has probably never been better, the farmers, one industry, have suffered a 48·22 per cent decline in their income. Practically all others are receiving better incomes than they ever received in their lives before. Is that fair? No one, not even a person on the government side of the house, would state that was a fair situation, or one that could be ignored or about which the government could sit back and take a do nothing attitude.

A *Financial Post* survey shows that 25 corporations dealing with farmers increased their average profits after taxes by 402 per cent between 1946 and 1954. One of the larger packing companies indicates in its annual report that the average profit over the last 10 years was 27·5 per cent of their capital investment. I would venture to say that there are very few farmers who would not be tickled to death if they could average 2 per cent or 3 per cent net on their capital investment every year.

While some of these companies admit that they buy as cheaply as possible and sell for as much as possible, most farmers are forced to pay the prices they are asked and to sell for what they are offered. In order to improve their marketing position, many commodity groups have set up plans under provincial marketing legislation to sell their products. Many such plans are in operation in Ontario now, and have been quite successful. Most farmers feel that this method of marketing is one solution to the problem, but certainly it cannot be said that farmers' organizations are not trying to help themselves by every possible avenue open to them.

In view of the fact that the two main labour organizations, the Trades and Labour Congress and the Canadian Congress of Labour, are on record as being in support of the principle of equitable prices to the primary producers of agricultural products, why does this government stubbornly refuse to make adequate use of the existing floor price legislation? We ask, as we have asked on various previous occasions, that the government bring forward an amendment to include in the Agricultural Prices Support Act a formula which would ensure agriculture producers a fair and equitable basis for arriving at floor prices. The farmers of Canada, comprising approximately 17 per cent of the population in 1954, received 6·8 per cent of the national income. I know quite well, as does everyone else, that the 1955 figure will be still lower. The situation requires a realistic floor price policy for agriculture if the economy of our country is to be maintained at a reasonable level of prosperity.

Mr. F. S. Zaplitny (Dauphin): I rise with pleasure, Mr. Speaker, to participate in this debate and support the amendment moved by the hon. member for Prince Albert as well as the amendment to the amendment moved by the hon. member for Assiniboia. One of the reasons we felt it was wise to add the subamendment was to make it quite clear that what is involved in this debate particularly is a question of principle rather than a question of method. We believe that when we discuss parity prices with respect to agriculture, this parliament should be asked to accept and adopt the principle that agriculture as a whole in this country, being a basic industry, should receive its fair share of the national income. The method by which that can be brought about can be discussed in greater detail after such time as this parliament has become committed to the principle.

This afternoon I should like to discuss this amendment under four headings. First of all, we have to establish who wants parity prices. As this debate continues I have no doubt there will be government members who will be tempted to get into the debate and try to prove that there is opposition to this proposition about parity prices. I think it would be interesting not only to assess who in this house is for and who against the principle of parity prices for agriculture, although that is fairly obvious, but also to note that the members of the opposition have not only in the debate this afternoon but on previous occasions expressed themselves in favour of similar motions to the one which is before us and which were placed before the house by my C.C.F. colleagues.

Therefore, so far as the three parties sitting in the opposition are concerned, there is no question with respect to their acceptance of that principle, but there may be some question as to how it is regarded on the other side of the house. By deduction we shall have to assume that the members of the government are opposed to this principle because in the past they have so expressed themselves. But I believe there are a large number of private members on the government side of the house, and perhaps more

particularly those members representing agricultural constituencies in western Canada, who are thoroughly in favour, in their own minds at least, of the proposition which we are now placing before the house. What I have to say this afternoon will be more or less directed to those members because, while the government may regard this motion as a want of confidence motion—it is their privilege, of course, so to regard it—yet I believe that if the government on this occasion were to announce that they are willing to allow this motion to go to a free vote of the house—and under the rules of the house that can be done—

Mr. Gardiner: May I call the hon. member's attention to the fact that the mover of the motion indicated that it was a want of confidence motion, and went on to make his speech for the length of time he desired.

Mr. Zaplitny: I beg to differ with the Minister of Agriculture on that, because I listened very carefully at that point. What the hon. member for Prince Albert said was that this was the kind of motion which he assumed the government would not be prepared to accept. That is a different thing from saying—

Mr. Gardiner: On a point of order, Mr. Speaker made it known that his time was just about exhausted. He said, "If it is considered a want of confidence motion, then you have all the time you wish", and the hon. member went on and took it.

Mr. Knowles: He had unlimited time, anyway. He was the first opposition member speaking in reply to a minister who had moved a government order.

Mr. Zaplitny: Now that the expert on the rules from Winnipeg North Centre has informed the minister what the rules are, we may proceed with the question.

As I said, I listened very carefully to what the hon. member said when he moved his amendment. What he did say was this: Even though it was suggested to him from the Chair at the time that this motion may be considered a want of confidence motion, he assumed it was the kind of motion that the government was not prepared to accept. Now, that is a different thing entirely from a want of confidence motion.

The government, as a government—and I am speaking now of the cabinet—may have their own views. They may even have divergent views on this question. I rather suspect they have. Perhaps the Minister of Agriculture would be in a position to give us some very interesting details on that. However, they are bound by tradition, perhaps, to adopt a common policy. If they have adopted the policy amongst themselves as being opposed to the principle of parity prices, then of course they will have to argue for their position and they cannot diverge. But there is nothing to prevent the private members, who normally support the government on questions of confidence, from expressing their own opinions as private members on this question, and voting as they see fit when the matter comes to vote.

What I was about to say when I was interrupted by the minister was this. The government could facilitate the situation so far as those private members are concerned by any one of the ministers—and I think most appropriately in this instance it would be the Minister of Agriculture—rising in his place and saying that while the government have adopted a certain position for certain reasons, they would like to have the free and open opinion of all the private members of the house, including those who support the government, on this question of principle. There would be no harm done.

If that were done, then those members who represent agriculture in this house, or who represent constituencies largely agricultural, would be in a position to state their opinions openly and clearly. If, under those conditions, they are still opposed to the principle of parity prices, then of course they should say so and their vote would logically follow their opinion.

But I am afraid that once again, as in the past, we are heading into a sort of cul-de-sac, where private members supporting the government have in their own constituencies and elsewhere in the country made speeches in support of this very principle, and have stated again and again that they are prepared to go along with this principle of parity prices; but when they come to this house, because the government holds them down to the definition of a want of confidence motion, of course they have the excuse when they go back to their constituencies to say, "Well, of course, we would like to have supported the motion. It was in line with our thinking, but in doing so we would have defeated the government and would have had to come back to the people in a general election.

Of course even that is a poor excuse, because in a democratic parliament no member, regardless of where he sits or what government he supports, should let the fact that a general election may result from the particular way in which he votes deter him from voting that way. After all, we are only representatives of the people here. We are the temporary trustees of the public trust as a parliament, and it is the electors themselves who should decide the main issues of the country. Be that as it may—

Mr. Studer: May I ask a question? How many free votes does the socialist government of Saskatchewan allow its members?

Mr. Zaplitny: Mr. Speaker, we are now concerned with what is happening in this chamber, not with what is happening, or what the hon. member claims may be happening, somewhere else. I would suggest he address that question to his colleagues in the Saskatchewan legislature and they might be able to inform him on that question.

Mr. Byrne: Is the hon. member satisfied that he has answered the question?

Mr. Zaplitny: I simply have to state quite frankly that I am not in a position to answer a question arising out of what happens in the Saskatchewan legislature. I leave it to the members of that legislature to answer for themselves. The question before this house is whether the members of this house who sit on the government side—because they are the ones who are going to decide this issue—are prepared to express their opinions and by a free vote, a free opinion on the merits of the principle in this amendment rather than toeing the party line and voting simply to uphold the government. I hope that before the debate is over the Minister of Agriculture will rise in his place and give freedom to the followers of his party to speak and vote on this question as they please.

Who are the organizations, outside of the membership of this house, who are interested in this issue, and what are their views? I would like to call as the first witness the members of the Manitoba farmers' union in convention in Winnipeg on December 5, 6 and 7, 1955. One of the first resolutions that appeared on the agenda of that convention, which was carried, reads as follows:

> Whereas decreased farm income due to depressed prices drastically affects the living standards of the farm family, and
>
> Whereas there appears to be no lessening to any appreciable degree of the price squeeze pressure, and it is quite obvious that the continual deterioration in the agricultural economy is now being reflected to a marked degree in our national economy,
>
> Therefore be it resolved that we urge the federal government to establish a parity price program which will equal 100 per cent of parity on all agricultural products.

That sets out very clearly, without need for much comment, the attitude of the Manitoba farmers' union in convention. I might add that, of course, is also the representative views of the farm unions of all the provinces of Canada.

Then I call as the second witness the presentation made to the Manitoba members of parliament—and that included the federal members of parliament—in December of 1955 by the Manitoba federation of agriculture and co-operation. In that presentation they had this to say, as shown on page 4 under the heading, "Equality for Agriculture":

> We believe that farm families generally, should receive prices or returns that will yield them enough income from farming to maintain a level of living equivalent to that of persons in other occupations with comparable skill, effort and investment.
>
> The M.F.A.C. has, over a long period of time, advocated and worked for equality or parity for agriculture.

That sets out the views of the Manitoba federation of agriculture, which represents a large number of farmers in that province and includes most of the co-operative associations.

We call as a third witness the Canadian Federation of Agriculture, which is the parent body of the M.F.A.C., and their annual submission to the government of February 14, 1956. On the fourth page of their brief they had this to say:

> Farmers feel that the worsening of their relative position has reached a point where it should be recognized that it is a vital concern of the public's, as well as of the farmer's, that this trend be halted. The farmer's position is difficult enough now to ensure that he will make any further production adjustments that are within his ability to make. However, it should be emphasized that a continuation of the recent downward trend in farm purchasing power will create economic hardship, make it difficult to maintain adequate municipal and educational services, and delay rather than encourage the further healthy development of agriculture in this country.

That is the studied opinion of the Canadian Federation of Agriculture in its submission to the government this year. I think it sets out rather adequately that so far as organized agriculture is concerned, and that includes organized agriculture right across this country, they are in favour of the principle of parity income for agriculture.

We know now that so far as the farmers themselves are concerned they want this to be adopted. So far as hon. members sitting in the opposition are concerned we want this policy adopted, too. That leaves the onus on hon. members sitting on the government side of the house to cast the deciding vote. It is a serious responsibility and one which they cannot take lightly, because this question has reached a point in the thinking of the farm organizations across Canada where I predict it is going to be one of the major issues in the next election.

Hon. members who support the government and who represent agricultural constituencies I think will not be able to wiggle out of that position by simply stating they were voting to uphold this government, as if the government were tottering and ready to fall and

had to be upheld on every occasion. They will have to take the responsibility for their actions as individuals representing the constituencies which they were elected to represent. They will not be able to use as an excuse the fact that the government considered this as a question of want of confidence.

I come now to the second part of what I have to say. I have already discussed who wants parity prices, and I would now like to turn to the question of why we want parity prices for agriculture. It is not only because it is a good subject for academic discussion. It is rather because, from a practical point of view, after having canvassed the situation and the position of agriculture from the various angles, the farm organizations have come to the conclusion that unless this government—or this parliament, to be more exact—takes steps in the near future and takes a hand in the economy of this country with respect to both the income of agriculture and the expenses of agriculture incurred in production, then the downward trend of farm income is going to continue. That situation is aggravated all the more by the fact that while the trend of the returns has been downward, and figures have been quoted today which show that the decrease runs as high as 48 per cent in recent years, the cost of production is still either static or rising.

In a situation of that kind it is not enough for the government to say that it hopes the situation will change because of the trade position, or that markets will increase for other reasons. We have reached the point where we are now either going to take a hand in assisting agriculture to get its share of the national income or we will have to say to agriculture, "We are not going to do anything about it", and the farmers will have to decide as individuals or family units whether they are going to stay in agriculture or do as so many have already done, leave the farms and flock to the cities thereby aggravating the unemployment situation during the slack period, and adding to the problems which already exist in the over-congested cities in our country. Therefore it is a serious question.

I would like to refer to page 5 of the submission made by the interprovincial farm union council to the government on February 16, 1956, in which they point out some of the trends I have been speaking about. We have heard a great deal about the grain situation, but I would like to emphasize the fact that so far as agriculture is concerned, livestock in my opinion is much more important than grain so far as the stability of income is concerned.

With respect to cattle we find that a comparison between the years 1951 to 1954 shows a steady downward trend. The yearly weighted average price per hundredweight of total sales on public stockyards for cattle in 1951 was $28.22; in 1952, $20.00; in 1953, $15.30; in 1954, $14.45. The statistics do not appear for 1955, but we have no reason to believe that the picture is any better.

We come then to grade A hogs dressed, in the second period 1954-55. In the first half of 1954 the price was $33.33; second half of 1954, $24.92; in the first half of 1955 the price was $23.52; in the second half of 1955, $23.17.

In recent months hon. members of this group have pointed out to the Minister of Agriculture and the government that in many cases the price has dropped even lower than the established price under the Agricultural Prices Support Act.

Another interesting set of statistics contained in the same submission is a comparison of the return on investment. There are those who regard agriculture as a business. I personally regard it as something more than that; I think it is a way of life. Let us look at agriculture from the business point of view for the time being. We find as contained on page 8 of this submission that in 1954 Canada Packers Limited showed a return on capital investment of 25·2 per cent whereas in the same year, if you take the grouping of all farmers in the province of Manitoba and take into consideration their investment and return, in 1954 their return on investment amounted to ·001 per cent. That is a very striking contrast as to what the returns on investment are for agriculture as compared with another industry.

Figures have been given today to show the comparative share of the national income or the gross national product received by farmers as compared with the national economy generally. We find that in 1952 farmers received 11·4 per cent of the national income, whereas on a proportionate basis they should have received something like 20 per cent. In 1953 they received 9·9 per cent. In 1954 it went down to 6·8 per cent, and no doubt it will be less than that in 1955, probably around 6 per cent. There again we have plenty of evidence to show that on that basis agriculture has good reason for asking that this parliament take action with respect to a parity income for agriculture in order to ensure that farmers get something like their fair share of the national income.

I come now to the third heading, and that is how can we establish parity income for

agriculture. I said earlier that the methods may differ. Other hon. members may have their own ideas as to how this can be done, and I for one will be very glad to hear them. The government itself may have some ideas on this question, but in my own opinion and speaking for myself I think there are two main channels through which we can approach the question of parity income for agriculture.

One of these would be a method of setting a system of floor prices and using subsidies where necessary to maintain those floor prices. Under that system it would be necessary to extend the provisions of the Agricultural Prices Support Act in order to make greater use of marketing boards, because it is only through a system of marketing boards that this act can be properly administered, as I shall show in a minute or two. Wherever it is found necessary, in order to maintain floor prices as a protection or guarantee against a fire sale of a particular product, this parliament should be prepared to vote moneys to be used as subsidies to uphold those floor prices.

I should like to mention this because when hon. members in this house speak about subsidies in order to maintain floor prices, there are many people in the country who do not quite understand what is involved. They have a vision of this parliament having to vote hundreds of millions of dollars annually for the purpose of subsidizing this, that or some other agricultural product. If we have a system of guaranteed floor prices that is not necessarily what is going to happen, and I am fairly sure that is not what would happen.

There would be times when this parliament would be called upon to make an appropriation in order to prevent the surplus of a certain product depressing the price of the whole market at that point, but as long as the market price remained at the level of the floor price or higher it would not cost the public treasury one cent in the form of subsidy to maintain the floor price. That is something that should be emphasized and understood, that a floor price and the willingness to maintain a floor price by means of a subsidy does not necessarily involve the expenditure of public money. It acts as insurance; this government could act as an underwriter in order to prevent prices falling below a certain floor. We should be prepared to use public funds to maintain that floor price.

There is another method which I believe could be used alongside this one, but which is not being used at the present time, and I refer to price control. I remember during last session we were told a number of times that one of the reasons we cannot expect farmers to get better prices for certain products was the necessity of meeting world competition. We were told that therefore they had to keep their prices at a level which would be competitive with the prices of agricultural products elsewhere. They were advised from time to time to cut down their cost of production by greater efficiency, by the use of more modern methods, by greater production per unit and in that way be able to compete on the world markets.

We know that the possibility of their doing that is limited strictly by the factors which enter into the cost of production. If we are going to accept the principle or the idea or the theory that we should try to produce agricultural products at prices which will be competitive with agricultural products grown in other countries, then we will have to take steps to see that the cost of the articles which the farmer has to buy and which enter into his cost of production are controlled.

I think that in order to have a really successful system of parity prices in this country we shall have to employ eventually both these methods or a combination of them, that is a system of floor prices with marketing boards for their administration and a system of price control in order to maintain the cost of production at a reasonable figure. If the cost of production is not controlled we may find that many of the advantages of floor prices would be frittered away by those who are in position to exploit the farmer through profiteering.

In my opinion the whole question boils down to providing sufficient purchasing power within our own country to make it possible for the people to buy at the proper price level all the agricultural products required by our population, and having some machinery set up for the purpose of assisting in the sale of our surplus products on the world market, not at the cost of the producer but if necessary at the cost of the nation as a whole.

I want to emphasize again that the most important and most desirable market for agricultural products that can be found anywhere in the world is the market we have right here in Canada. There are hundreds of thousands, perhaps millions of people who would be using more food, a better quality of food and in greater quantities if they had sufficient income to be able to do so.

This was illustrated most vividly during the years of the war and immediately after the war. When money began to circulate in this country and people began to have steadier jobs at better pay we found that the consumption of agricultural products began to rise so

markedly that during the war years we had to have food rationing because the demand was beginning to exceed the supply. Now the shoe seems to be on the other foot. If we could do something, if we could increase the purchasing power of the Canadian people and bring about that happy relationship where effective demand would more or less equal supply, then we would have an ideal situation.

I should like to finish before six o'clock, and if I could take just one minute I should like to set before the house five points which I believe should be followed in order to bring about this sufficient effective purchasing power to provide a better market for agricultural products in our own country.

First, we should accept the principle of parity for agriculture.

Second, I would advocate a system of floor prices to be established for producers. I emphasize floor prices for producers, because under the Agricultural Prices Support Act we find that even where floor prices are established they work to the advantage of the packers or dealers and do not find their way down to the producer level.

Third, the establishment of low cost credit for our agricultural producer.

Fourth, effective action to prevent monopolies and combines. I was interested in hearing the hon. member for Brant-Haldimand say that an industry which does business with the farmers had increased its profits by something like 402 per cent. I think I heard the hon. member correctly, and if he confirms that figure there is something wrong when we find that the income of agriculture has dropped by 48 per cent in recent years while the profits of this industry which deals with the agricultural industry have increased by 402 per cent. They do not do that by ordinary business practices. We know that monopolies and combines constitute a greater danger and threat to our economy than ever before, and effective steps should be taken to combat that type of practice.

Fifth, and perhaps as important as any of the others, is the fact that if we are to have sufficient effective purchasing power in this country we must expand to the greatest possible extent our social welfare legislation to provide all those who need goods and can use them with the purchasing power in order that they can buy the good things of life that we have in such abundance in this country.

At six o'clock the house took recess.

AFTER RECESS

The house resumed at eight o'clock.

Mr. E. G. McCullough (Moose Mountain): Mr. Speaker, the matter before the house is perhaps one of the most important and challenging that has ever come before this assembly. We are now discussing the matter of asking the government to give consideration to bringing in a policy of parity prices for agriculture. I say this, Mr. Speaker, because unless we can bring about for agriculture policies which will give a fair share of the national income to our agricultural producers I think we shall have difficulty in every part of our economy.

Before the dinner recess I was most interested in the remarks of the hon. member for Dauphin, when he stated he believed that if members on the government side of the house were given the liberty of voting according to their feelings with respect to this matter, and if a free vote were allowed, they would join with members on the opposition benches in supporting this resolution.

Mr. Byrne: We could not do that. Only the Tories want socialism.

Mr. McCullough (Moose Mountain): I think there are three phases in respect of this whole problem; first, the economic position of agriculture; second, what does the future hold for agriculture; and third, how can we achieve our objective? There may be some people who are not too greatly concerned about agriculture. They think perhaps the Canadian economy, with its buoyancy in the industrial field today, is sufficient to sustain a relatively high income for our Canadian people. On the other hand I am sure that agriculture will be in the future, as it has been in the past, the chief segment of our economy upon which we can build the strength of our prosperity. For this reason I think we should examine all phases of the economic position of agriculture at the present time.

It is true that we have many sources of information coming to various members of the house in respect of farm income, both on a national and a regional basis. While it is true that the general Canadian economic picture is not so bad—the figure is just down a few points; 3 per cent or a little less when one considers the whole of the Canadian economy —on the other hand in western Canada we have a situation where the three western provinces during these last three years have experienced a tragic drop in farm income. According to the Canadian *Wheat Pool* of February 6, 1956, the total farm income for 1954 was $2,377 million, or $398 million below

that of 1953. It is also a very important matter that the income of the farmers in Manitoba, Saskatchewan and Alberta—that is, their 1954 income—was down a total of $404 million, some 28 per cent below the 1953 income.

It is true that during this period profits and in many industries wages boomed. But we have the three western provinces with their income down 28 per cent from 1953. As I stated earlier, we have a number of sources from which we can find out the kind of income which farmers are receiving today. While newspapers across the country have expressed concern with respect to farm income, I think this government has not yet awakened to the seriousness of the situation. I have here a clipping from the Montreal *Gazette* of January 18, 1956 in respect of farm income. The Bank of Nova Scotia monthly review has this to say:

> The continued restriction of farm purchasing power in the west and the failure of the farm sector generally to share in the buoyancy that characterized other parts of the economy in 1955 cannot be regarded lightly . . .

Then it goes on to point out the drop in income. Again, the Windsor *Star* of January 12, 1956, contains an article quoting the words of Professor Buckley, who states that although the prairie people are aware of the fact, he thinks the rest of Canada is not impressed with the reality. Then again the Ottawa *Citizen* of December 22 had this to say, quoting H. H. Hannam. The article states that farm income has dropped 23 per cent from 1951, and then Mr. Hannam says:

> How would anyone else like to take a 25 per cent salary cut?

And he goes on to say this:

> We are not hollering blue ruin or depression, but now is the time when the downward trend must be checked.

Mr. Byrne: What do you suggest?

Mr. McCullough (Moose Mountain): I am going to come to that.

Mr. Byrne: Oh, you are going to come to that?

Mr. McCullough (Moose Mountain): I am suggesting, as are many other people, that the members on the other side of the house, namely on the Liberal benches, support the principle of parity prices. Now that we have had an interjection from the hon. member, I hope he will see fit to get to his feet and say what he thinks. I am saying what I think.

Mr. Byrne: I do not think like the socialists.

Mr. Studer: The hon. member is stating what the papers say.

[Mr. McCullough (Moose Mountain).]

Mr. McCullough (Moose Mountain): Again, Mr. Speaker, the *Globe and Mail* of February 17, 1956, contains an article under the heading "Low Incomes driving Farmers from Land". While it indicates again the drop in farm income it has this to say:

> Canada Packers Limited shows an indicated average profit for 10 years of 27.5 per cent on their capital investment. This is more than three times the expected return on general investments and 25 times more than was received by farmers on their capital investment in 1954.

As I said before, it seems difficult to convince this government that we need for Canada agricultural policies to prevent this sort of downward spiralling of farm prices. In that connection the Winnipeg *Free Press* of December 29, 1955 has this to say. The article is headed "The West ignored". Commenting in the report of the Minister of Trade and Commerce on economic conditions in Canada, it says:

> Mr. Howe's review has one other feature of note, and particularly of note to western Canada. The review largely ignores western Canada. It describes the economy in a state of vigorous expansion, bordering on the dangers of speculative excesses and an inflationary boom. This is entirely accurate for most sections of the economy. It is not the whole picture for the prairies. It ignores the state of the farmer.

I fear that is the important point in the discussion which is taking place at this time, Mr. Speaker, and indeed in relation to the arguments and discussions which have taken place since this new session began. From coast to coast the state of agriculture is a fiasco, and this government has not seen fit to do much about it. As I stated before, I think we must examine the economic position of the farmer. I have given some excerpts from newspaper thought in respect of the question, and I should now like to examine it a little more closely.

I have here a chart prepared by the dominion bureau of statistics dated February 26, 1956. This chart shows farm income, farm expenses and value of farm capital in Canada from 1945 to 1954. It shows the gross income, operating costs, depreciation, net income and value of farm capital. I am just going to illustrate the situation in 1951. There was a gross income of $3,578 million; operating costs were $1,238 million; depreciation, $196 million; net income, $2,154 million.

The important thing, Mr. Speaker is this. By 1954 the gross income had dropped to $2,624 million; operating costs had risen to $1,255 million; depreciation was even higher, $245 million. The net income had again dropped from a high in 1951 of $2,154 million to $1,125 million. This chart illustrates and gives a vivid graphic picture of farm

income in Canada. Rather than try to put the whole thing on the record, I should like the permission of the house, Mr. Speaker, to place this chart on *Hansard*.

Mr. Deputy Speaker: Would the hon. member indicate the source of this record?

Mr. McCullough (Moose Mountain): The dominion bureau of statistics.

Mr. Deputy Speaker: Has the hon. member unanimous consent to place this table on *Hansard*?

Mr. Gardiner: May I ask the hon. member if he is putting on the record 1952 and 1953 as well?

Mr. McCullough (Moose Mountain): Yes, up to 1954.

Mr. Deputy Speaker: Has the hon. member unanimous consent to place this table on *Hansard*?

Some hon. Members: Agreed.

Mr. McCullough (Moose Mountain): The table is as follows:

Farm Income, Farm Expenses and Value of Farm Capital, Canada 1945-1954

Year	Gross Income	Operating Costs	Depreciation (thousand dollars)	Net Income *	Value of Farm Capital
1945	1,761,834	686,547	110,145	971,582	5,671,788
1946	2,000,715	761,934	117,094	1,138,637	5,902,005
1947	2,251,085	927,791	128,662	1,206,209	6,415,640
1948	2,810,196	1,008,862	140,519	1,681,563	7,148,643
1949	2,802,494	1,026,231	153,387	1,640,504	7,525,129
1950	2,727,433	1,119,089	174,069	1,448,081	8,223,271
1951	3,578,453	1,238,011	196,271	2,154,527	9,354,900
1952	3,500,548	1,369,860	212,346	1,923,473	9,425,311
1953	3,226,711	1,295,925	232,753	1,699,605	9,358,798
1954	2,624,732	1,255,826	245,692	1,125,641	9,718,961

* Includes supplementary payments made under the provisions of the Prairie Farm Assistance Act.

I should like also to illustrate the purchasing power of the farmer's dollar in 1954 in relation to other years. Again I am not going to use too many figures. We can go back to 1910 and see that the purchasing power of a bushel of wheat was $1.29. In 1954-55 with the initial price at $1.40, the purchasing power of a bushel of wheat had decreased to 61·4 cents. I submit I have put sufficient figures on the record to indicate the plight of agriculture today.

Now, I think we should try to examine the future. I am most impressed with the fact that it was the Conservative party which this afternoon moved for parity prices. I feel we have long since convinced many people in Canada that unless agriculture gets a fair share of the national income, unless we have agriculture policies in this country which will give the farmer a fair relationship between the things he has to sell and the things he has to buy, we cannot have justice and certainly we cannot have a stable economy.

This government may not worry very much about what is happening in agriculture. I, for one, want to join with those people who believe that the family farm is the type of farm we should support in making our policies. I believe policies of that type will add strength to the family and to our nation generally. I am going to suggest to this government that unless they can take this problem in hand and see to it that the family farm is saved from disintegration, we are going to have bigger and bigger farms in this country. This has been the trend in the United States for many years, and perhaps it still is. We see this happening in Canada today. The investment necessary to start a small farm today is too large for the young farmer to undertake. I noticed that in the submission the Manitoba government made to the Gordon commission they indicated that $17,000 was the capital investment in the average Manitoba farm. I believe it would be somewhat higher in Saskatchewan. It is clear that a young man wanting to take up agriculture as his way of life is not likely to be able to finance the undertaking.

We do not have a national policy on credit that would give low interest loans and enable a young man to set himself up on the farm. Indeed, today under the various acts providing for farm loans and farm improvement loans, the interest rate is quite a bit too high. Young people graduating from high school or university who would like to go on farms are forced to find other occupations just because proper financing is not available to enable them to undertake agriculture.

In addition to that there are the fluctuations and vagaries of this system, not the law of supply and demand, but purely the fact that the individual farmer gets little help and is

expected to market his products under conditions over which he has no control.

I want, therefore, to support the principle of parity prices. As I said before, the interprovincial farm union council and the Canadian Federation of Agriculture support parity prices. We have, too, the large labour unions in this country supporting the principle of fairness and equity for agriculture.

I have here a clipping from the *Globe and Mail* of February 20 which I should like to read. It says:

> T.L.C. chief, Claude Jodoin and C.C.L. head A. R. Mosher—whose organizations are soon to amalgamate—agreed also that farmers should get "equitable" or parity prices on all farm products.

In respect to this whole argument on parity prices, there are those who say they are in favour of agriculture getting a fair share of the national income but they are against parity prices. I do not know how you can have it both ways. I do not know how you can say you are prepared to support policies which will guarantee the producers a fair share of the national income, yet at the same time you are against parity prices. I find it difficult to see how such people can be sincere. I feel that the two are synonymous. Parity prices simply mean justice and equity for the agriculture producer.

I do not believe it does much good to go into the past. I think we should be looking to the future. I feel sure the Minister of Agriculture would join the rest of us if he were a free agent and able to state whether or not he was in favour of parity for agriculture. I would suggest that members on the Liberal benches who come from the prairie provinces and represent agricultural constituencies should get up and state what they think about this. I agree with the hon. member for Dauphin. When the federal election rolls around I do not believe any western farmer will believe any of those hon. members who say, "Oh, yes, we are in favour of it; we are in favour of parity prices, but we could not do anything else because we had to support the government." Everyone in Canada knows that this government has such a preponderance of numbers on the benches opposite that they could send 100 members home and still carry measures; there would be little chance of the government being defeated. Of course, at times they are not all in the house. If the government wanted to, it could have a free vote. They could take off the whips and let hon. members rise to their feet and say what they believe.

Since I am talking about farm income, may I say that I have heard the Minister of Agriculture out west state his financial position as a farmer. I do not want to be unfair about this; but he knows full well the vagaries of agriculture, of nature, and the fluctuations in prices with which the farmer has to cope. He knows that for many years as a farmer he himself was in the position that many farmers in western Canada are facing today. If he would try to get his colleagues to say that in the interests of every Canadian we have to do something tangible in order to meet the challenge before us—

Mr. Gardiner: Before my hon. friend concludes will he permit me to remind him that when we first opposed parity prices, or brought in the system we now have, we had a majority of only three or four, I think.

Mr. Knowles: Canada had better government from the Liberals in those days.

Mr. McCullough (Moose Mountain): Now you have a big majority, but that is no reason for doing what you like. More than that, if you were in favour of this resolution you would have the support of all the members on the opposition benches. Therefore I do not think your argument holds water at all.

What we are asking for, Mr. Speaker, is a national policy adequate to meet the need. First, we should have a low interest rate so that any young farmer in Canada could go into agriculture as his life work, as his vocation. Second, and this is most important, we should have a policy which would give stability to the various kinds of production. At the present time there is pressure on the marketing of hogs and cattle. I believe it was just two years ago that the Minister of Agriculture suggested to western farmers that if they wanted to get ready cash they should feed some of their grain.

I notice he is not advocating that today. Why not? He knows that today there is pressure on the hog market and the beef market, and that perhaps prices will collapse. Already the hog market is so depressed that many farmers are receiving returns for their hogs below what is supposed to be the support price. The whole agricultural economic picture is in a state of chaos; it is a fiasco, and this government is not prepared to do anything about it.

I suggest, Mr. Speaker, that those who say higher prices for agricultural products will only mean that the consumers will pay higher prices are not correct. Fair prices, adequate prices, which mean parity to the farmer, do not mean higher prices to the consumer. May I give one specific example in respect of wheat. I have taken the trouble to make some investigations, and I find that one bushel of the higher milling grades of wheat will produce about 72·2 per cent of flour. At the

present prices for top grade wheat the farmer will get anywhere from 96 cents to $1.25 per bushel for that wheat. He will receive 1¾ to 2½ cents a pound. As soon as that wheat is made into flour the price increases to 5¾ cents a pound, and when it is made into bread it retails at 15 cents a pound. One hundred pounds of flour will make 129 loaves of bread, and at present prices they will retail at around $8.66.

Therefore, Mr. Speaker, the house can see what happens. The farmer produces the wheat, but the price he receives for that wheat has very little to do with the price the consumer pays for a loaf of bread. That is also true of canned vegetables and many other things which the farmers produce. Therefore it is not a fact that fair prices to the producer would mean higher prices to the consumer.

As I said in the early part of my remarks, the people who are handling the farmers' products, such as the packers, are receiving tremendous profits, but the farmer himself is in a depressed state. What I am suggesting, Mr. Speaker, is that the time is ripe for this government to take adequate action to underwrite a comprehensive parity price policy for all of Canada.

We have far too much urbanization in this country. Far too many people are leaving the farms, not because they could not be made economic, not because farmers are not using new techniques, or are not attempting to be as scientific in their production as any other business. They are leaving the farms because of the marketing and price situation over which they have little or no control. I am suggesting that the only authoritative body that is given the power by the people of this country is the federal government. Unless they are ready to take action, agriculture in this country will face a very blue future.

Many other countries are awakening to the fact that they must have adequate agricultural prices to meet the challenge of the day. In this country we should have policies under which we would conserve the nutritive content of the soil. We should have a policy under which a farmer could buy fertilizer and add it to the soil so that future generations would be assured of high fertility in our soil. We should have a conservation program under which a farmer could undertake those projects necessary to prevent the erosion of the soil. We have just a hit and miss policy. Under the Prairie Farm Rehabilitation Act some money has been expended, but up to the present time we have not a comprehensive national system for agriculture which meets the challenge of the day. Here is one place where we should make a beginning and establish parity prices for agriculture.

I agree with the hon. member for Dauphin. It would not necessarily mean, if such a policy were established, that we would be paying money out of the federal treasury to support the principle. Only in those times when due to outside influences the market is depressed, would it be necessary for the federal government to step in and use money from the federal treasury to guarantee a fair price to the producer which would bear some relation to the cost of production.

We have seen the prices of things which the farmer grows going down and down into the cellar, and the cost of his production going up and up. We have seen the cost of machinery and the cost of fuel and the cost of everything that goes into his production going up and up. We find that machine companies who hold either a monopoly or a semi-monopoly in that field are able to demand from the farmer the price he will pay for those goods. As a matter of fact, we all know that when the farmer goes to sell his goods he asks, "How much will you give me for this?" When he goes to buy he asks, "How much do you want for this?" Unless this government is prepared to step in and give a fair deal to agriculture we shall continue to have a depressed industry.

Therefore I hope that when the time comes to vote on this motion the government, perhaps through the Minister of Agriculture, will rise and say to the house that all members are to be allowed a free vote. I think it would be refreshing if at this time hon. members who come from the west were to rise and state the real condition of agriculture. Many of them did not do so during the debate on the farm loans bill, but I think that now this important measure is before us hon. members could, to some extent at least, say what they think concerning this important matter.

(*Translation*):

Mr. Robert Perron (Dorchester): Mr. Speaker, the amendment now before the house has to do with the problem of agriculture, certainly the most urgent and complex problem of all those facing our economy at this time. It requires immediate action on the part of the government.

The problem of wheat surpluses in western Canada has provided grounds for extended discussions since the beginning of this session. I will therefore not labour the point.

The two bills which the government has put through, and which involve an expenditure of 30 million dollars to be borne by the taxpayers of this country are sufficiently indicative to the economic status of the western farmer at this time.

While I do not wish to minimize the importance of this matter of wheat surpluses, which is such as to exert a considerable influence on our national revenue, it is certain that the personal problems of each and every farmer in Quebec, taken individually, are just as critical, if not more so.

Mr. Speaker, farm income has decreased by 5 or 10 per cent in 1955 and probably even more in areas where, for instance, hog-raising is practised. In short, it means that since 1952, i.e. for the past three years, the net farm income has decreased by 50 per cent.

After three consecutive years of set-backs, farmers have drained their savings from the years of prosperity and are now penniless; their problem is similar to that of western farmers.

Today, farmers of the province of Quebec have to keep up their farm either by mortgaging their property or by further increasing their debt to the bank, the credit union, their suppliers, merchants, and so on, instead of deriving from their farm an income that will provide them with a decent standard of living.

We hear everywhere that Canada has just had the best year in all her history. Our national income has exceeded $26 billion, and forecasts for 1956 are most optimistic. Company balance sheets show record profits. Individual income has jumped in a similar proportion. Our export and import trade reaches record figures. Production has never been so high.

On the labour front, 1955 has meant another step forward for our labour force, in that they got a guaranteed annual wage from certain industries, and everywhere the renewal of contracts under collective bargaining shows salary increases and additional fringe benefits. The government has even increased unemployment insurance benefits. In short, Mr. Speaker, living conditions seem to be getting better everywhere in this country which is going through an extraordinary development.

This is true of industry, trade and various other sectors of our economy, but it seems that in this development, agriculture has not been able to hold its own and, instead of benefiting from this general prosperity, the farmer is going through a period of depression.

[Mr. Perron.]

This, to my mind, sums up the present position. It is an alarming one. It is certainly the crucial issue at this time and it is up to the government to straighten out, by appropriate means, the economic disparity between some otherwise comparable professional groups.

The amendment moved by the hon. member for Prince Albert (Mr. Diefenbaker) is, I think, well suited to restore the balance in this field.

The government has explained the policy it means to follow to improve the lot of the western farmer; but we have as yet not been told of its intentions with regard to the eastern farmer. There was no reference to it in the speech from the throne, and for the past two months not a single word has been uttered about it by the government. When the right hon. Minister of Agriculture (Mr. Gardiner) made his statement about the estimates of his department, apart from burying us under a stack of statistics designed to prove that everything is all right—which merely shows that anything can be made out of statistics—had nothing to say about any steps the government meant to take in order to bring relief to the eastern farmer.

No problem can be solved by avoiding reference to it, or by quoting statistics to show that all goes well, when everyone agrees that things are pretty bad despite anything that may be said by all the economists and statisticians in the world.

One of the questions of particular concern to eastern farmers, since it is vital to them, is to know whether or not the government will continue its price support policy. I hope that the house will be told about this during the present debate, as this would be in perfect agreement with the amendment now before us.

It is absolutely essential that the support price of butter be maintained at 58 cents per pound for the present year and even for two years. The farmer would then know beforehand where he is going. It would alleviate his worries and the uncertainty which always confronts him. Everyone agrees that in the province of Quebec the dairy industry is the basis of agriculture. It is the one that must be saved first. There is no reason why the support price should not be kept this year at the same level since the cost of production has remained exactly the same and because, since 1949, that legislation has cost very little to Canadian taxpayers while it has, on the other hand, protected the consumer by avoiding

those price variations which are often so costly for him.

If the government does not maintain the same level, the farmers of the province of Quebec who will thus be deprived of their one and only sure source of revenue will be ruined.

I therefore urge the government to come to an immediate decision and to tell the house about it without delay.

Mr. Speaker, I stated at the outset that farm income has dropped from 5 to 10 per cent in 1955 mainly because the price of hogs, which remained at 23 cents a pound, the support price set by the government, for several months, has dropped considerably. This, in turn, brought about a decline of farm income in the district of Quebec, particularly in my riding and in the surrounding counties where hog-breeding is practised on a large scale. In fact, the price of feeds and breeding costs remained stationary while the price of pork which, last year, was 27, 28 and 29 cents a pound, was reduced by 5, 6 and even 7 cents a pound, thus depriving the farmer of the profits which he could reap from this operation.

The only way to correct this situation would seem to be an increase of 3 cents in the support price of hogs, to give the farmer a chance to make ends meet.

In connection with hog raising it must not be forgotten that it is at the government's request that farmers, during the war, invested their money in piggeries so as to obtain a new source of revenue. Nowadays, in a great many cases, this operation is no longer profitable. The only way in which it may be made so again would be an increase in the support price to 26 cents a pound.

Mr. Speaker, the amendment suggested by the hon. member for Prince Albert is such as to solve the farm problem. In fact, I will go so far as to say that it is the one and only solution to this problem.

To sum up, I would say that this amendment should be unanimously carried by the house. I feel too that the government should follow this up by adopting the following two measures.

1. Maintenance of the support price of butter at 58 cents a pound, and

2. An increase in the support price of pork from 23 to 26 cents a pound.

Mr. Speaker, the constitutional responsibility of the federal government is to solve these farm problems, and the farmer is rightfully entitled to this solution.

(Text):

Mr. A. M. Nicholson (Mackenzie): Mr. Speaker, I regret very much that I could not follow the hon. member for Dorchester, but I shall read with interest tomorrow the translation of his remarks. I am sure that speaking as he has this evening he was pointing up the fact that the farmers in the area where he lives are experiencing a most difficult time.

I realize that the members from Saskatchewan have taken up a good deal of time since parliament opened, but I am sure that if there were not a real problem we would not have had such a sympathetic hearing from the chamber as we have had every time agriculture has been discussed.

This evening I propose to stress the fact that the amendment before us has been moved because of a nation-wide problem. Over the week end I was up to my old home in Bruce county, which I left some 35 years ago to go west. When I return now I find that my old neighbours are encountering the same sort of problems we have in the west, with the difference that there are very few people left in Bruce county.

A young lady sat across from me on the train Friday night, going home for the week end. It was pretty obvious that she was a school teacher, and I soon found myself in conversation with her. She told me she was teaching in Toronto, and I asked if she had any notion of going back to her home county and marrying a farmer. She replied, "Never." "Why not?" She said, "When I think of the life my mother has had on the farm, it is not for me, thank you." That young girl was probably getting twice the salary teaching in Toronto that she would get for teaching in the township where she went to school. She was wearing a nice fur coat, probably being paid for on the instalment plan, but apparently her life in Toronto was quite different from the life she had known as a girl on the farm.

Going out from Toronto I noticed that nearly every house had a T.V. aerial. While there were some out in the country, they were not as numerous as in the city. I do not want to give the impression that the people of Bruce county are facing starvation; nothing of the sort, but there are very few young people there. Those who are getting old are enjoying a fair measure of security.

I called on one of my old neighbours, who told me that she would be 90 years of age next year. She was quite proud of a new

electric sewing machine she had bought since Christmas, costing around $200. She had been moved by an appeal from the children's aid society for quilts for children, and she and her sister had made some six quilts on this new machine. Since she will be 90 years of age next year I am sure the $200 machine will last the rest of her life. The machine she had previously had been in use for nearly 50 years. The money for that new machine had come from the soil which had been cultivated by her family for nearly 100 years. There were no children on that farm. Where there used to be some 17 families enjoying a reasonably good standard of living when I was there, today there are only four families.

I was interested in reading some of the evidence produced at the time of the dominion-provincial conference a few years ago, which was descriptive of conditions in Prince Edward Island. This reads:

> —they see the citizens of other provinces grow rich at their expense; they see the best of their youth attracted to other provinces, just as they are entering the period when they might become an asset to the community. The only protest has been an occasional request for "better terms".

Of course the children of Bruce county have not gone to other provinces necessarily, but when they move to larger centres like Toronto, Windsor, London, Montreal or Vancouver they find life to be quite different from what it was on the old homestead. Those who presented this brief showed how the people of Canada as the result of tariff policies channel a great deal of wealth to the central provinces. They pointed out that the only two provinces which have benefited since confederation as the result of tariffs were Ontario and Quebec, whereas all the other provinces have had to pay a heavy penalty.

Just this afternoon in answer to one of my questions on the order paper we had an answer setting out the per capita disbursements on liquor, tobacco and education. I asked for these figures to be broken down on a provincial basis, but I am told that the information regarding tobacco and liquor is not kept on a provincial basis. I find that we seem to have spent very freely as far as tobacco disbursements are concerned, because the per capita expenditure was $31.26, while the per capita expenditure on liquor was $56.92, and for education, $40.26.

But when you consider the per capita expenditure for education in the different provinces you find that in the case of Prince Edward Island, which my grandparents on my mother's side left about 100 years ago because of difficult conditions, this per capita expenditure was only $20.34 as compared with the high in British Columbia of $55.50. Newfoundland was only $21.46, with Alberta next to British Columbia with $48.87.

I think it could easily be argued that it should be a matter of national concern when farm people in a fine province like Prince Edward Island are getting such a small share of the national income that they have available for education only $20.34 per capita as compared with $42.41 in Ontario, $55.50 in British Columbia, and $42.73 in Saskatchewan.

If the farmers of our provinces are to continue to receive a smaller and smaller share of the national income it will be most difficult for us to maintain the educational standard that we think children in a modern society should have.

Having demonstrated during the war that we could plan our production and our economic life so as to have a million of our youngest and ablest people in the armed services and another million in war industries, and still increase our production of foodstuffs so that we were able to drink more milk and eat more beef and pork, it seems to me there is something radically wrong when in 1955 and 1956 we have to cut down the consumption of milk by the children of Canada.

Mr. Byrne: How does liquor consumption compare for those years?

Mr. Nicholson: Liquor consumption is going up, as I indicated; but as part of our national policy it was decided during the war that the production of milk should be encouraged by support prices, and we found that as a result of the subsidies milk production and consumption increased. During the period from 1940 to 1945 we consumed 445 pounds per person per year compared with 420 pounds in 1951, the last year for which I have statistics. There was a drop from 445 to 420. We find that the consumption of other products that are essential for a healthy people is not increasing as it should.

I realize there are many people who are disturbed about the suggestion of providing subsidies. Canadian farmers in all parts of the country are proud people. They do not want something for nothing. Nevertheless I have never heard very many protests about having subsidies in the form of tariffs. As the Prince Edward Island brief points out, every person in that province has suffered a net loss of $17.88 per year because of tariffs, the people of Nova Scotia have lost $12.28, and the people in the province of Saskatchewan have lost $28.16. As a result of the penalty that people have paid because of tariffs,

I think during the transitional period the government of this country certainly might accept the principle that those who are producing food should have something like a fair share of the national income.

I was interested to note that the hon. member for Brant-Haldimand did not spend very much time this afternoon discussing conditions in Canada during the thirties. He could have said quite correctly that in 1954 the farm share of the national income was a lower percentage of the total national income than was the case during the whole period of the thirties. It is true that in 1931 and 1932 the farmers' share was less than it was last year, but if we take the whole ten years between 1930 and 1940 the farmers received an average of 6·1 per cent of the national income for the 20 per cent of the population composed of farm families, compared with 5·6 per cent last year.

That presents a very serious situation for the people of the country. While the farmer's share is going down, while he is tightening his belt, he is able to read in the daily papers very impressive advertisements. Here is a large advertisement taken from the *Globe and Mail*. It points out that for the second straight year the forward-look Plymouth shattered Toronto sales records, and that sales in January, 1956, were up 298 per cent over January, 1954. A similar advertisement taken from a Montreal paper points out that in January, 1956, Plymouth sales were five times as great as in January, 1954.

While the farmers are being caught in a price squeeze and are unable to meet their costs with the lower prices they are receiving for beef, pork and other products, when they go to buy they are paying higher and higher prices. Therefore when the farmers read about all-time high sales and the very high profits being made by corporations, it is very hard for them to understand why the government of the country cannot do something about it.

After the Minister of Agriculture and the Minister of Trade and Commerce told us that the farmers of Canada were enjoying an unusually prosperous period, I took the trouble to send a circular letter to some of the people in my constituency to find out whether I was wrong in my opinion or whether the Minister of Agriculture and the Minister of Trade and Commerce were wrong.

I am going to read a few extracts from two or three of the letters I received in reply. Here is one from a man who says that he has farmed as a law-abiding citizen for 32 years, that up until five years ago he had done well but then he started to go behind. He says that he owes three years' taxes, $364 for seed grain, $780 to the bank and store bills.

Another farmer tells a very similar story. Another farmer has gone to British Columbia for the winter to get enough money to see him through. Another man has gone to Vancouver island. Here is a farmer who has been exceptionally industrious and a good citizen, the sort of citizen any community would welcome. I am sure he has never spent five cents on liquor or tobacco during his lifetime. He has been industrious and a good manager. He points out that he owes the bank $2,500, owes $500 in taxes and needs a new tractor and other machines, repairs to his buildings and a great many other things which he knows he should have but because of receiving less than fair prices for his products and because operating expenses are so high he is unable to go into the market to buy the articles the production of which provides employment for many people in eastern Canada.

I find that the Searle Grain Company has sent us two interesting letters, one dealing with the subsidization of wheat and the other with the challenge that Russia presents to the world. One would not expect the Searle Grain Company to advocate subsidies publicly, but they say we must recognize the fact that we are living in a very strange world. Many countries which normally import are subsidizing exports, and other countries which could buy their grains much cheaper in the world market than they can produce them at home are paying large subsidies. It is quite obvious that the Canadian farmer cannot survive in a world where farmers in every other country have support prices.

Ours is one of the few countries that has not tied the production of foodstuffs to the defence program. The Minister of National Defence is never asked any question about whether he wants $1 million, $50 million or $500 million. The Minister of Trade and Commerce said once that if his colleague in defence wanted a gold plated piano he got a gold plated piano. But when it comes to producing food for the sake of our own economy and to meet the competition of other countries, our government has not been willing to give the consideration that it should to this problem.

The Searle Grain Company points out what has not been given too much attention in Canada, that Russia is now making an all-out drive to challenge the west in the field of economic support. It mentions that before world war I Russia was a major exporter and that in 1954 Russia brought under cultivation—

Mr. Trainor: Will the hon. member permit a question?

Mr. Nicholson: Certainly.

Mr. Trainor: Are you suggesting that we should emulate Russia?

Mr. Nicholson: No, I was not making any such suggestion. I was merely drawing the attention of the house to the report on Russia in the Searle Grain Company letter, which the hon. member should read.

Mr. Trainor: I have read it.

Mr. Nicholson: I think the hon. member will admit that if Russia is going to have 27 million more acres in production than it had previously, compared with our total acreage of 22 million, it poses quite a problem for Canada. While at the moment Russia is prepared to buy some grain from Canada, the bringing in of this large acreage in order to seed it to wheat and other cereals is going to present a problem to Canada as we seek to export our product and when we find that our product is not being subsidized whereas France, Belgium, Holland, Denmark and Britain—all our former customers—are subsidizing on an extremely generous basis.

For example France, which formerly was an importer, has found that this policy of subsidizing has not only solved her production problem, the problem of supplying the market at home, but they have produced so much more than they can use that last year France gave Australia a close run for exports in the world markets. Every bushel of wheat that went into export from France carried with it a subsidy of $1.61 a bushel. Hence I do not think there is any use of people in Canada ignoring the fact that we are living in a new set of circumstances where those who are engaged in the production of food are entitled to leadership from the government.

It takes about two years for people to get to qualify for relief in the cities. If the government of Canada thinks that people should deplete the rural communities to a greater extent and should qualify for relief in the cities if they cannot get jobs, I think the government should say so. Here is a debate that has been going on since three o'clock this afternoon, and there has not been a member rise on the government side of the house to indicate whether or not there is any problem in the part of Canada in which he lives, or whether the only people who see the problems are those of us who sit over on this side of the house.

Mr. Bennett: You make your speech; we will make ours.

Mr. Nicholson: I think it is significant that no one is prepared to say a word in defence of what the government is doing or should be doing. Before the debate ends I think somebody on the government side should certainly say something about it.

Mr. Byrne: It is your amendment, not ours.

Mr. Nicholson: I think there are two important fields that should be explored. We have a large section of our Canadian citizens who are not getting enough food to eat. Over the week end I read with interest a little booklet written by a young reporter for the Toronto *Daily Star* who spent 14 days trying to live as an old age pensioner would live on $20. I am sure that any hon. member who placed himself in the position of this young reporter would realize, with these large surpluses on hand, how niggardly we are with this large sector of the economy, and would want to see that ways and means were found so that some of our surplus food supplies would find their way into the stomachs of our old age pensioners, widows and orphans and all those who are in the lower income tax brackets.

Then I think we must pay some attention to our international responsibilities. Some 10 years ago Canada, along with a great many other countries, joined in tackling the problem of hunger. When we consider that at least half the people of the world must get by on about $100 per person per year, compared with nearly 10 times that amount in Canada, we realize that we should not be cutting down our production or worrying about this surplus. I have here, in "Agricultural Markets and Prices" at page 51, a table which is taken from one of the United Nations publications showing the per capita income in United States dollars for a number of countries, as follows:

Per Capita National Income

Country	Per Capita Income (In U.S. dollars)
Burma	36
India	57
Pakistan	51
Philippines	44
Thailand	36
Columbia	132
Chile	188
Brazil	112
Egypt	100
Canada	870
U.S.A.	1,453

The Canadian figure would be up a good deal since those figures were prepared, but any way you figure them out, I think we cannot remain idly by in this rich, enlightened country, with almost unlimited productive capacity, while there are so many people in the world who have never had even one good meal. I commend the suggestions made by my colleagues who have spoken previously that we continue to produce maximum quantities of foodstuffs for our own use and for the use of our neighbours in all parts of the world, and that we have for agricultural

products a price which will bear some fair relation to the prices which we have to pay for what we buy.

One of my constituents in a letter he wrote to me emphasized the fact that his conditions now are actually worse than they were in the dirty thirties, as he described them. He said that in those days he was using horses and was able to produce his own food, but that in these modern days the horse has gone and he is obliged to pay cash for his fuel and for repairs for his tractors. With dollars so hard to get and expenses so extremely high, he and his neighbours are in a much more difficult position.

Again I think the government of Canada, which had no problem whatever during the war years in finding ways and means to finance an effective war effort, can find all the resources necessary to assure to the 20 per cent of the Canadian people who are making their contribution to the economy of Canada in connection with the production of food a fair share, nothing more and nothing less.

Mr. H. O. White (Middlesex East): Mr. Speaker, in rising to support the amendment moved by the hon. member for Prince Albert, I do so for several reasons. No doubt many of those who have taken part in the debate thus far have, by contact with their constituencies and by reference to the dominion bureau of statistics and to speeches by other members, become aware of the plight in which agriculture finds itself today. I take part in this debate because of the fact that statistics show that farmers are receiving less and less of the total amount of money that is taken in by all the people in the economy, and that they are getting less and less of the national income, 19 per cent of the people receiving about 10 or 11 per cent of the national income.

They are also getting less and less of the consumer's dollar. Of every dollar the consumer pays for food, less and less finds its way back to the primary producer of that particular article, whether it be beef, bacon, strawberries or any other thing you want to mention. Net farm income has shown a steady decline over the past few years.

During this session the Minister of Trade and Commerce and the Minister of Agriculture have explained to the Canadian people through parliament that the farmers are fairly well to do, and that over the years some thousands of millions of dollars have been taken in by the Canadian farmers.

These figures on income, of course, do not mean very much unless you know what are the costs. I do not propose tonight to discuss this from a high windy hill. I am going to take you down to the farm, just as I went to the farms last week end when I was home. I talked to some of the farmers there and I shall tell you what they are saying and what they are doing. When one reduces the subject to this basis, one finds out whether or not the farmers are making a lot of money and just what conditions are.

I find that there are more municipal taxes unpaid this year than for many years. I find also that those co-operatives serving farmers that do extend credit to their members have more unpaid bills and bigger bills than they have had for many years. I talked to these people last Saturday when I was home.

What has brought about these conditions? Not so many years ago we were warning the government that the loss of the British markets and the loss of other export markets would eventually be reflected in the Canadian economy. Such is the case, and it has now caught up with us. We listened to the debates on the wheat surplus in the Canadian west for about three weeks. We can look back and find that not so many years ago we were able to export over 600 million pounds of bacon and 147 million pounds of cheese to Britain in one year, as well as supply our own markets. Is it any wonder then that today, when we are barely supplying our home markets with these products, much less feed grain is being used by eastern farmers to finish livestock and produce cheese, bacon and many other products? This is having an effect not only on the income of the eastern farmers but on the western producer, because we are not buying such large quantities of coarse grains and low grade feed wheat for livestock purposes.

We are finding ourselves in this difficult position also because of inflation, as I have mentioned time and time again. We are living in a world where dollars are plentiful but they do not buy very much. We find ourselves in this position also, Mr. Speaker, because of the United States farm surplus disposal programs. In many cases the United States is usurping our traditional markets for surplus farm products.

While these events are taking place, there are a certain number of people who are more or less apologists for the policy or lack of policy, shall I say, of the government. I am just going to mention a couple of them. There is the president of the Canadian Federation of Agriculture. We find the farmers' union coming into Ontario; and they are getting a foothold in Ontario because farmers believe the federation of agriculture has not been

dynamic enough in supporting an agricultural program for this country. Then the president of the dairy farmers of Canada is saying, "Do not antagonize the government; be careful, and everything will turn out all right." That has been going on for quite a number of years.

Early in this session the Minister of Trade and Commerce said, "We are a party that believes in plenty; we believe in surpluses." Almost in the same breath he said there would be shortages of copper, shortages of steel, shortages of cement and many other things. The only thing of which he was proud was that there were surpluses of farm products. I can tell you that at the time Canadian farmers in southwestern Ontario were harvesting their onions, two carloads of onions were brought into this country from Egypt for no other purpose but to break the price.

I believe that is a rather shortsighted policy. We hear about surpluses in almost all farm products. This year there was supposed to have been a big crop of apples. As I go along the north shore of lake Ontario week after week I go through some of the best apple orchard areas in Ontario, and I am surprised at the number of orchards that have deteriorated in the past 10 years. I could say the same thing of my own county. I wonder sometimes if these surpluses are just fictitious, because when they are saying how many millions of bushels of apples may be produced as compared with five years ago or 10 years ago, they do not take into consideration that our population has been growing by leaps and bounds.

Take a look at the potato business. When we did have a crop of potatoes in this country there were 7,000 carloads of potatoes brought in from the United States; and the tariff is rather one-sided in favour of the United States. We have surpluses in many other products and will have when the products are imported like that.

I want to show you, if I can, just what is happening to those farmers to whom I was talking. I was talking to some of the concentrated milk producers, and they are not happy. Recently they have taken a cut of 10 cents per hundredweight in the price of their milk, from $2.65 to $2.55 per hundred for 3·5 milk. I was talking to one producer who last year produced 700,000 pounds of milk from over 100 cows on 300 acres of land. He is an efficient producer and has cost accounting facilities. He said that the milk cost him a little over $3 per hundred and it is now selling, as I say, at $2.55. At the same time powdered milk and cheese are being imported from New Zealand so there will be dollars available with which New Zealand can buy Canadian manufactured products. This is sacrificing the agriculture industry to the manufacturing industry.

If anyone wonders why agriculture is sacrificed, I can tell him in a very few words. It is because for the last 20 years the government has booted around the agricultural industry; and then every four years when there has been an election, agriculture voted for the government. Agriculture is the only segment of our economy that can be treated that way and still support the government.

Coming back to the price of milk for a moment, I may say that in Ontario there is what is known as the dairy herd improvement plan. A survey of many of the dairy herds in the province was undertaken, and it was supervised by some of the experts from the college. This survey dealt with cost accounting and dairy farming. They found that the average cost of production for a large number of herds in the province of Ontario was $3.17 per 100 pounds of milk. Neither the cheese producers, the butter producers nor the concentrated milk producers were getting much over $2.50 for that very same milk.

Let us take a look at what the butter producer is actually getting. From 100 pounds of 3·5 milk an average of 4·2 pounds of butter will be produced, which sells at 58 cents a pound. That comes to $2.32. If the skim milk is manufactured into powder the skim milk powder is worth 11 cents a pound, which adds 88 cents to the $2.32. From that he must deduct the cost of manufacturing which he pays to his co-operative creamery, and that varies from 85 cents to $1.00. Therefore the farmer receives $2.30 for his 100 pounds of milk that costs him, according to all figures that can be produced, at least $3.00 or $3.17.

Another indication of the trend of the times is the fact that many young men who in the last five years purchased farms are finding it very difficult to meet their taxes and interest on their debt. In many instances the farm is deteriorating; in some instances they have given up, sold out and gone to town. That is not a healthy situation. I grant you that on the other hand there are many people who have bought farms and paid for them, but they have paid for them through the work of two or three people in their family besides their wives and themselves. They have paid for them because they have accepted a very low standard of living in order to pay for the home and the farm.

Let us take a look at the sheep industry. Recently the Minister of Agriculture made some announcement about a disease known as scrapie that has appeared recently in some of the flocks in this country. If they did not know of the seriousness of the disease, they should have known of it. Two years ago in Canada a certain flock was quarantined and none of the sheep could be exported to the United States. At the same time the breeder of those sheep was allowed to exhibit his flock at the royal winter fair. The Canadian people were told it was perfectly safe; it was a nervous disease, and they did not need to worry about it too much. That flock has been destroyed after its breeding stock has been scattered all over the country. I do not think there is one thing that has happened to the sheep industry in the last 100 years that could be as serious as this outbreak of scrapie which the government muffed and blundered through. It could ruin the export market for breeding stock as far as the sheep industry in Canada is concerned.

At very nearly the same time the production of wool in Canada reached an all-time low. This has happened to the sheep industry in Canada in the last few years. This careless attitude is indicative of the approach the government takes to farm problems. They do not require the Canadian manufacturers to indicate on their finished product whether the wool is shoddy, whether it has been used once or ten times over until it has lost all its life, or whether it is new wool that has just been clipped from the sheep. You can talk about grading. The wool is graded many times from the producer to the manufacturer, but once it reaches the manufacturer it is never graded again.

What about the cattleman? Last fall he could purchase cattle for 18 cents, 19 cents or 20 cents a pound. Today they are about 4 cents a pound less than they were last fall when he purchased them. After feeding them all the crops he grew on his farm he will not make too much money this year.

Take a look at the hog producer. I talked to some of them when I was home last week. Figures indicate that the over-all livestock population is increasing in this country. As far as the future markets are concerned, conditions indicate that there will still be a surplus. What about the hog producer? Many hog producers buy the young baby pigs when they are weaned, when they weigh an average of about 30 pounds. Let us say that the farmer who purchases them can buy them for $8. Some of them sold for as much as $12 or $15 last year, but let us say that the farmer could buy them for $8, which would be cheaper than if he raised them. He starts out with a pig that has cost him $8. If he buys all his feed, which sometimes happens, he finds that it takes about 700 pounds of chop to finish a 30-pound weanling pig until it weighs 200 or 210 pounds. The total cost of the feed, plus the young pig, will run to at least $32.50. When he sells the hog it is sold on a dressed weight basis. A 210 pound hog will dress out at from 160 to 165 pounds. I looked over the purchases today, and I found that 161 pounds was the average dressed weight of that type of hog. If he sells it at the floor of 23 cents—I heard my friends to the left say that out west they are not getting that—it will bring him $37.03, or $4.53 per hog net. If my farmer back home wants to have an income of $2,817 next year he will have to feed and finish two hogs every working day of the year, 313 days. He will have to work 365 days. But that does not take care of taxes, interest on the investment or depreciation; and no pigs must die, not one. Therefore it does not look as if it is a very lucrative branch of the farming business.

If he should have his own grain and feed it his labour return per hog might be about $7, but that will not take care of interest, taxes or depreciation, and there will be no provision for any extra labour that he might wish to hire. I took the trouble to call up the federal Department of Agriculture and to speak to one of their swine experts. I asked how much feed it took to finish a hog. He said, "It takes 400 pounds of feed for 100 pounds of gain". The 700 pounds I have given is 20 pounds less than the federal Department of Agriculture figure as the average for this country. If he had some pigs that were not thrifty, or if he was not too good a feeder, he would likely have a loss. I venture to say that many of the farmers who are producing hogs are not making $4.53, or the $7 I have quoted, but probably more nearly $1 or $2.

Some say the farmers are not efficient. I have before me some figures taken from an exhibit sponsored by the Ontario department of agriculture at the 1954 royal agricultural winter fair. These figures point out that never in Canada's history has one hour's labour on the part of an urban Canadian purchased so much food. I will give you a few comparisons. In 1924 an hour's labour would buy 20 pounds of potatoes; in 1954 it would purchase 37 pounds, almost twice as much. In 1924 an hour's labour would purchase 1¼ dozen eggs; today it will purchase 2·6 dozen eggs, over twice as much. In 1924 an hour's labour would purchase 2·8 pounds of beef; today it will purchase 3·2 pounds. In 1924 an hour's labour would purchase 1·6 pounds of pork; today it will purchase 2 pounds. In 1924 an hour's labour would purchase 1·1 pound of butter; today it will

purchase 2·5 pounds. In 1924 an hour's labour would purchase 3·8 quarts of milk; today it will purchase 7·3 quarts of milk.

I said something about farm efficiency. The number of farmers has decreased by 35 per cent over this period of 30 years, but at the same time the production by 35 per cent fewer farmers has increased by over 25 per cent in the years between 1935 and 1954 alone, to say nothing of the increase over the preceding years.

Farm production per man in Canada is up 70 per cent. I do not know how much more efficient the government or the Minister of Agriculture wants farmers to be, but I think—

Mr. Gardiner: I think they are probably the most efficient people in the country at this time.

Mr. White (Middlesex East): I agree with you; in many respects they are. What reward are they getting for their efficiency? The more efficient they are and the more they produce, the less they receive. I sometimes wonder if it would not be a good idea for the farmers to sit back for about two weeks and not buy anything. We would see how soon people would begin to realize that the farmers' prosperity is also their prosperity.

I was going to refer to an article concerning the cost of producing hogs, but it was written at a time when pork was 28 cents a pound and it does not apply today very well. However, even when pork was 28 cents a pound, according to figures produced at that time by a butcher in the city of Toronto it was his claim that the farmers were making only $1 a hog and he was making a 23 per cent gain just by selling pork over the counter.

I did say something about onions being imported into this country. I wish to read from an article which appeared in the London *Free Press* on January 17, 1956. Mr. J. E. Reynolds, president of the Ontario fruit and vegetable growers' association, had this to say:

> For instance, a boatload of Egyptian onions—

I believe I previously referred to a carload of onions. That was a mistake; I should have said a boatload.

> —arrived in Montreal while the biggest crop of Ontario Sett onions in history was being harvested.
>
> Other examples: 22 freight cars of potatoes were imported each day during June, July and August; 5,000,000 pounds of cabbage were imported in June, and 9,000,000 pounds of tomatoes entered the country during July, while local produce was left on the vines.

When we complain about this the government tells us it does not want to offend our neighbours to the south. There is a difference between being ignored by our neighbours to the south and having them respect us. They will respect us more if we stand up for our rights instead of saying that we are afraid and we do not want to offend them.

In conclusion I wish to point out that a bill was passed in the legislature of the state of Maryland to prohibit foreign companies establishing themselves in Maryland. Our government say that protesting about such things as I have mentioned might hurt our good relations, but they are going to proceed to enact that bill all right; they do not care how much they offend us. The Lord looks after those who look after themselves, and I think it is about time we Canadian farmers and the government as representatives of the people began to do some of those things as well.

I am glad to support the resolution moved by the hon. member for Prince Albert and the amendment moved by the C.C.F. party.

Mr. G. W. Montgomery (Victoria-Carleton): Mr. Speaker, while New Brunswick is not one of the great agricultural areas of this country nevertheless it is an important industry in the province. In fact, considering its importance and some of the special aspects of it, I believe that the farmers of New Brunswick and of eastern Canada are more severely crushed by the price-cost squeeze than are those in other sections of the country. Quite a large proportion of the farmers in New Brunswick may be classified as mixed farmers, although a certain number, chiefly in my own constituency, might be classified as specialty farmers who specialize in potatoes. I might have something to say about potato farming before I conclude.

Farming is an important subject to the province of New Brunswick; and while I am not a practical farmer, and it has been a long time since I had anything to do with practical farming, I must admit I was fairly well trained in it when I was young. According to the standards of farming at that time I do realize what farm work is like, and I am aware of the length of the working day and of some of the problems involved in farming.

It strikes me as strange when we are told that 1955 was one of the high spots in the prosperity of this country. We are told that in 1955 Canada produced more, exported more and consumed more goods and received more money than in any other year in our history, generally speaking. Nevertheless the farmers with whom I come in contact appear to be poorer, are having a more difficult time to pay their bills, and have less money in their pockets than they have had for a number of years. I can only speak

with some assurance of the people of my own constituency, and of course from what I read in reports about agriculture generally across the country.

Having listened to many speakers this afternoon who are practical farmers, and knowing what little I do about the situation in my own constituency and province, I am certainly in favour of the principle of this resolution. I feel that I would be remiss in my duty as a member if I did not stand up and more or less put myself on record as to the way I think farmers should be treated.

It seems to me there is only one conclusion one can come to in connection with the agricultural industry as a whole, and that is that the farmer is not getting a fair share of the consumer's dollar. That has been stated this afternoon in various ways, but regardless of how it is stated I believe that is what the farmer actually wants. He wants more of the consumer's dollar for the stuff he is producing. The spread between what the farmer gets for the products he raises, and which represent long hours of labour and large investment, and his costs is growing less and less. The percentages have been given and there is no need of my repeating them, but certainly the farmers' prosperity is not keeping up with the prosperity of other groups in the community, in the province or in the country.

Is there a solution? I listened to and read the speech of the right hon. Minister of Agriculture delivered on February 10 last. Apparently the minister had gone to great pains to work out a table of figures which he placed on the record. While there was no proof, there was certainly an inference in those figures that the farmers' cash and net income have increased for the last 20 years. I would not take issue with the minister on that. The minister is a most astute gentleman and clever speaker. He made a most significant statement toward the end of his speech. Having placed the table on the record, having reviewed the figures, he said words to this effect: Add all the facts together and you will get some idea whether the farmer is advancing or whether he is going backward in connection with his operations up to the present time. That was for a period of some 20 years.

I reread that statement. It is a wide open statement. It is one in which you can read an expressed opinion. The right hon. minister has expressed the opinion, or has plainly left the inference, that the farmers of this country are far better off than they were 20 years ago, that they are a going concern, and that most of these complaints by farm and agricultural organizations are more or less unfounded, that they are a group of people who cannot be satisfied.

I am sure that if some city dweller, or someone who knew nothing of the farmer's problems, had been sitting in the gallery and had heard that speech, or had read it later, he would have got the feeling that the group of people engaged in agriculture in this country, farmers if you will, are possibly the best off people in Canada. I think they could honestly come to that conclusion after having studied that speech.

On the other hand, when you talk to farmers or to farm groups and hear them tell their story, you find that the picture is not so prosperous. It is a gloomy picture. At least 65 per cent of the people in my constituency are agriculturists, and the majority of the rest depends upon the farmers. Figures, statistics and net worth statements may not give a gloomy picture, but when I go out and talk to the farmer, when I look over his equipment, when I follow him from the time he starts out in the morning at five or six o'clock until he quits at night, I do not get that picture. As someone has said, the municipal authorities, the local merchants and the bankers do not give you that picture. You get a much gloomier picture than might be taken from the speech of the right hon. minister.

Toward the end of his speech the minister said in effect that the way any man found out how wealthy he was, whether he was better off than he used to be, is to put his hand in his pocket and find some money there. I should like the right hon. minister to go down to my constituency, talk to the farmers and find out how many of them have money in their pockets or can afford to go to town, take a trip or have a little pleasure. They have not the money to do it.

When you get right down to earth and go around the country and see buildings in need of repair, see vacant farms, see farms growing up in bush, see schoolhouses vacant, you get a much different picture. I was brought up in a country community. I went to a school where there were some 40 or 50 students, but today there are only 14 or 15 in that little school. A certain percentage are drained off at seven years of age to the central school, but the reason for the small number is that many of the farms which supported happy and fairly prosperous farmers in those days, people who were able to make a living, who were able to pay their bills, who lived as well as their neighbours did, have no one living on them today.

It was a friendly society. As a matter of fact, I still think a country community is

one of the best places to live. The farmers are located within 50 or 60 rods of one another in a community extending for miles. But the picture today has changed. You ask why has it changed? That is a fair question. I am not here to give the answer, but I can give my opinion based on what I hear. I do not believe that 6 per cent of the young men who have grown up within a radius of 20 miles of the home where I was raised have remained on the farms and carried on the family tradition. Why? Invariably the story is that they go and work at any other job.

Unfortunately they may leave New Brunswick, as a great many of them have done. They go to central Canada, western Canada or the United States and work at ordinary labour or go into business. It seems that almost anything is more attractive to them and more remunerative than farm life, although in my opinion it would have been a good thing for them to stick with the farm.

Many of the farms in my community that are still occupied are worked by older people, and time is running out on them. They are not working their farms very much. They are not able to do so any more. They cannot hire help to farm them, and their farms are deteriorating. It is a sad picture. Nevertheless I believe our people, if they can make as much money and have as good a life, are just as anxious to farm as the people of any other country. In a few cases people in my community have been fortunate, possibly in the potato industry. They were able to accumulate 300 or 400 acres of land, and if they were fortunate enough to have a few fairly good years there is the possibility that they can carry over a bad period. But in the last few years the bad periods have been coming so close together that even these people are beginning to come to the end of their rope, so to speak. The savings they were able to make are being used in order to carry on.

I do not think one needs to labour this problem very much. I feel this way about it. If I were capable of giving the government advice there would not be much use of my doing so, because I think I would be wasting my time in imposing my ideas on the house and the Minister of Agriculture. If the government has not been convinced by those hon. members who have spoken today that something has to be done for agriculture; if the members of the government have not been convinced in their travels throughout the country, or if they are convinced that something should be done and do not know what to do, then I think they should be prepared to accept some advice. I think they should give it a try.

Here is the other side of the picture. I believe it has been mentioned before, but I do not think I would be out of order in referring to it. In my constituency we have a very fine agricultural school. If there is any place in the whole province of New Brunswick where young people can be induced to go into farming it is in my constituency. Any young fellow who has any interest in cattle or stock of any kind, potatoes, mixed crops or grains of any kind has a grand opportunity to get a start. But our experience has been that a great many of these young men having taken two or three courses—the courses run through the winter—do not find it profitable to go back home and put into effect the ideas they have been taught. The smarter they are and the better farmers they would make, the greater the chance is that they will not stay in New Brunswick, and they do not even go to western Canada to take up agriculture.

In other words a fundamental industry, an industry which is very important to this country so far as the production of food is concerned, is losing a great many young men who I am sure would like to stay on the farms and improve our agricultural lands, who are the very persons who would improve the raising, grading and marketing of products because of their education. They are not staying on the farms. It is not that they do not want to but because it is not profitable for them to do so.

For that reason it seems to me that the resolution, if we think about it, does throw some light on the problem. The principle of the resolution indicates to our farmers that we consider they are entitled, in view of the number of hours they work and the risk they take in capital investment, to a fair return for their products and their labour. They are entitled at least to a square deal compared with people employed in other industries, whether in New Brunswick, any other part of the maritimes, or any other part of Canada. They are entitled to an equal deal with the people who are employed in other industries. I believe that legislation such as is envisaged by the amendment could be passed and that, properly administered, it could and would be of great benefit to the farmers.

On motion of Mr. Montgomery the debate was adjourned.

At ten o'clock the house adjourned, without question put, pursuant to standing order.

ANSWERS TO QUESTIONS

The following answers, deposited with the Clerk of the house, are printed in the official report of debates pursuant to standing order 39:

LOANS, CANADIAN FARM LOAN ACT, NOVA SCOTIA

Question No. 142—**Mr. Purdy:**

In the province of Nova Scotia, by counties, for the year ending December 31, 1955, what were the number and amounts of (a) applications for loans under the Canadian Farm Loan Act; (b) loans granted; (c) loans refused; (d) applications still under review?

Answer by: **Mr. Harris:**

The Canadian farm loan board advises as follows:

The Canadian farm loan board does not require for administration purposes and therefore does not maintain records classifying applications and loans by counties.

In the period January 1, 1955 to December 31, 1955:

	Number	Amount
(a)	70	$255,340
(b)	40	$133,200
(c)	30	$115,675
(d)	nil	

CENTRAL MORTGAGE AND HOUSING—LOANS IN B.C.

Question No. 208—**Mr. Goode:**

1. What amounts of federal funds were invested by loan in the province of British Columbia by Central Mortgage and Housing Corporation for housing construction, in 1953-54 and 1954-55?
2. What amount is estimated for 1955-56?

Answer by: **Mr. Winters:**

1. 1953, $5,643,000; 1954, $2,282,000; 1955, $1,933,000.

2. 1956, $1,025,000.

Central Mortgage and Housing Corporation operate on a calendar year basis.

HOSPITAL GRANTS, NOVA SCOTIA

Question No. 212—**Mr. Balcom:**

What money grants, under the national health program, have been given in Nova Scotia during 1955, to the special types of hospitals as designated by the Department of National Health and Welfare as (a) mental hospitals (M); (b) t.b. sanatoria (T.B.); (c) chronic convalescent (C); (d) new hospitals (N); (e) hospital additions (A); (f) nurses' residences (N.R.)?

Answer by: **Mr. Martin:**

During the fiscal year 1955-56:

(a) Addition to mental hospitals—Halifax county mental hospital, $91,250.01; Cape Breton county hospital, Sydney River, $127,500.00.

(b) Nil.

(c) Nil.

(d) New polio clinic—provincial polio clinic, Halifax, $5,443.04.

(e) Addition to active treatment hospitals—Blanchard Fraser memorial hospital, Kentville, $5,250.00; Grace maternity hospital, Halifax, $21,250.00.

(f) New nurses' residence—Victoria general hospital, Halifax, $24,332.66.

PER CAPITA STATISTICS—TOBACCO, ALCOHOL AND EDUCATION

Question No. 231—**Mr. Nicholson:**

What were the disbursements on a per capita basis, in the last year for which statistics are available, in Canada and each of the provinces, for the following: (a) tobacco; (b) alcoholic beverages; (c) education?

Answer by: **Mr. Howe (Port Arthur):**

(a) Estimated total consumer expenditure on tobacco in Canada in 1954, $475·0 million; per capita, $31.26; provincial breakdown not available.

(b) Estimated total consumer expenditure on alcoholic beverages in Canada in 1954, $865·0 million; per capita, $56.92; provincial breakdown not available.

(c) Expenditure on formal education* in Canada in 1952, $581 million; per capita—Canada, $40.26; Newfoundland, $21.46; Prince Edward Island, $20.34; New Brunswick, $35.18; Nova Scotia, $32.24; Quebec, $34.87; Ontario, $42.41; Manitoba, $37.37; Saskatchewan, $42.73; Alberta, $48.87; British Columbia, $55.50; Yukon and N.W.T., $20.44; unallocated, 27 cents.

* Includes operating costs, capital expenditures from current revenue and debt charges (principal and interest) but excludes capital expenditure from borrowed funds, the cost of which is spread over future years. All levels of education both public and private are included. Training and cultural and other related activities are not included. A preliminary estimate places the comparable total for 1955 at around $750 million.

TRANS-CANADA HIGHWAY, BANFF PARK

Question No. 236—**Mr. Harkness:**

1. What work will be done during the coming construction season in the Banff national park on the trans-Canada highway west of Banff?
2. What bids have already been called for this work?
3. What are the names of the bidders and what were the amounts of their bids?
4. To whom were the contracts awarded, and what was the amount of each contract?

Answer by: **Mr. Winters:**

1. (a) The department expects to complete work on the following contracts which are in progress. All mileages are measured from the east gate of Banff national park. The first contract west of Banff is at mileage 10·8.

Questions

Serial	Contract Details	Awarded to	Date	Amount
1.	Mile 10·8 to Mile 14·2—grading and provision of culverts and base course.	Poole Engineering Co., Ltd.....	Aug. 30, 1955	$1,282,040.00
2.	Mile 14·2 to Mile 21—grading and provision of culverts and base course.	Square M Construction Co., Ltd., Edmonton.	Sept. 8, 1955	1,177,630.00

(b) The department expects to commence work on the following contracts:

3.	Mile 21 to Mile 31—grading and provision of culverts and base course.	Tenders received (Contract not yet awarded).		
4.	Mile 43·3 to Mile 51·1—grading and provision of culverts and base course.	Standard Gravel and Surfacing of Canada Ltd.	Feb. 22, 1956	2,074,440.00
5.	Mile 0 to Mile 14·2—construction of bituminous stabilized base course.	Tenders not yet called.		
6.	Construction of 5 small reinforced concrete rigid frame bridges between Mile 13 to Mile 40.	Tenders received (Contract not yet awarded).		
7.	Construction of a bridge and overpass over the Bow river and C.P.R. at Mile 14·3.	Tenders called—not yet received.		

(c) The following work is planned, provided funds become available:

8. Bridge over the Bow river Mile 43·3.
9. Overpass to C.P.R. at Mile 43·5.
10. Bridge over Pipestone creek Mile 45·6.
11. Bridge over Bow river Mile 47·3.
12. Overpass to C.P.R. Mile 48·2.
13. Bridge over Bath creek Mile 50·3.
14. Overpass to C.P.R. Mile 50·6.

2. Tenders have been called for contracts referred to in answer No. 1—(Serials 1, 2, 3, 4, 6 and 7).

3.

Serial	Contract Details	Tenderers	Amount of Tender
1.	Mile 10·8 to Mile 14·2—grading and provision of culverts and base course.	Poole Engineering Co. Ltd.....	$1,282,040.00

4. Answered by No. 1 (Serials 1, 2 and 4).

TOMATO PRODUCTS IMPORTS

Question No. 237—**Mr. Lennard:**

1. How many pounds of tomato products were imported into Canada, during the calendar year of 1955 from, (a) the United States of America; (b) Italy?

2. What was the value of such imports from each of the countries mentioned?

Answer by: **Mr. Howe (Port Arthur):**

1 and 2. Imports of tomato products (includes juice, paste, puree, pulp, and canned tomatoes) (Statistical classifications 136, 137, 138, 139, 140) during the calendar year 1955, were as follows:—

	Lb.	Value
(a) From United States	39,136,951	$3,122,533
(b) From Italy .	12,734,419	$1,572,639

PRESERVED CHERRY IMPORTS

Question No. 238—**Mr. Lennard:**

1. How many pounds of cherries, sulphured or in brine, were imported into Canada, during the calendar year 1955 from, (a) the United States of America; (b) Italy?

2. What was the value of such imports from each of the countries mentioned?

Answer by: **Mr. Howe (Port Arthur):**

1 and 2. Imports of cherries, sulphured or in brine (statistical classification 51) during the calendar year 1955, were as follows:—

	Lb.	Value
(a) From United States	1,125	$ 312
(b) From Italy .	6,616,164	829,131

T.V. STATION CBLT

Question No. 241—**Mr. Pallett:**

1. Is T.V. station CBLT changing from channel 9 to channel 6?

2. If so, what steps, if any, have been taken to ensure that there will be no interference to reception on existing channels in the Toronto area?

Answer by: **Mr. McCann:**

The Canadian Broadcasting Corporation advises as follows:

1. Yes.

2. No steps required as assignment of channel 6 is in accordance with the Canada-United States of America allocation agreement.

MIGRATORY BIRDS CONVENTION ACT—PROSECUTIONS

Question No. 249—**Mr. Herridge:**

1. How many prosecutions have been instituted under section 6 of the Migratory Birds Convention Act, since January 1, 1950, to date?

2. How many convictions were obtained in this period?

3. How many persons were fined, were imprisoned, or were both fined and imprisoned?

Answer by: **Mr. Lesage:**

1, 2 and 3. Prosecutions under the Migratory Birds Convention Act, section 6, since January 1, 1950:

Year	Number of prosecutions	Number of convictions	Number of fines	Number of suspended sentences, etc.
1950	58	57	56	1 sentence suspended
1951	15	14	13	1 sentence suspended
1952	33	33	33	
1953	16	16	15	1 bound over
1954	12	12	12	
1955	18	17	17	
1956	—	*	—	
Total ... 1/1/50 to 7/3/56	152	149	146	2 sentences suspended 1 bound over

* None reported to March 7, 1956.

Questions

No sentences of imprisonment were imposed during the above period for violation of section 6 of the Migratory Birds Convention Act.

SHIPPING STATISTICS—CANADIAN PORTS

Question No. 253—**Mr. Hahn:**

1. How many ships carrying export and import goods called at the ports of Montreal, Quebec, Halifax, Nova Scotia, Vancouver, New Westminster, British Columbia, in each of the years 1951, 1952, 1953, 1954 and 1955?

2. What was the total tonnage of freight other than passenger cargo (a) exported; (b) imported, through each port in each of these years?

Answer by: **Mr. Howe (Port Arthur):**

1. NUMBER OF VESSELS ARRIVED AT AND DEPARTED FROM CANADIAN PORTS IN INTERNATIONAL SEABORNE SHIPPING

Year	Montreal		Halifax		Vancouver		New Westminster	
	Arrived	Departed	Arrived	Departed	Arrived	Departed	Arrived	Departed
1951	1,809	2,145	1,111	1,164	2,424	2,356	736	826
1952	1,927	1,843	1,165	1,133	2,909	2,743	690	831
1953	2,149	2,866	1,157	1,154	3,409	3,353	702	827
1954	2,054	2,751	1,164	1,172	3,609	3,506	766	869
1955*	.....	.....	.....	.....	.....	.....	.....	.....

*Data will not be available until May.

2. CARGOES LOADED FOR FOREIGN COUNTRIES AND CARGOES UNLOADED FROM FOREIGN COUNTRIES

Tons weight (2,000 lb.)

Year	Montreal		Halifax		Vancouver		New Westminster

TAXABLE PERSONAL INCOME DEDUCTIONS

Question No. 255—**Mr. Michener:**

What would be the estimated annual loss in revenue if deductions from taxable personal income were allowed for, (a) real property taxes paid to municipalities in Canada; (b) school taxes paid to municipalities and school boards in Canada?

Answer by: **Mr. Harris:**

In order to answer this question it would be necessary to know the income tax rate of every taxpayer owning real estate in Canada. As this information is not of government record it is not possible to give an accurate estimate in answering this question.

T.V. SYSTEM—BANFF NATIONAL PARK

Question No. 259—**Mr. Johnston (Bow River):**

1. Have there been any requests for permission to erect a community T.V. antenna system in Banff national park?

2. If so, who made this request and what are the particulars in connection with such a proposal?

3. Has the government given any permit for such a construction?

Answer by: **Mr. Lesage:**

1. Yes.

2. A request has been received from Mr. Bert Henderson of Banff. The proposal envisaged: (i) the formation of a company to erect, maintain and operate a community T.V. system to distribute television programs to residents of Banff by means of wire and cable; (ii) the acquisition of suitable site for antenna, and right of way from said site to closest power or telegraph line with permission to carry connecting line on trees, and the stringing of carrier line to residences on telephone poles in the townsite; (iii) an installation charge of approximately $125 to each residence plus a monthly service charge of from $3 to $5; (iv) a capital investment of approximately $25,000 by the company.

3. No.

APPENDIX

STATEMENT BY THE MINISTER OF FINANCE

MARCH 9, 1956

At our October meeting the federal government put forward certain suggestions in broad outline. These were discussed quite fully at that time and later both in conversations and correspondence. They were then developed into definite proposals in the Prime Minister's letters of January 6 and February 18. We have circulated a statistical paper to indicate how these proposals would operate in the first year of the proposed arrangements, that is, in the fiscal year ending March 31, 1958. No one can foretell accurately either the level or the provincial distribution of population, incomes and profits one or two years hence, but we believe that the assumptions on which this table is based are reasonable.

Last October I suggested three principles or objectives that we ought to have in mind—

(a) to assure as far as possible, to both the federal and provincial governments, access to revenues consistent with their responsibilities;

(b) to develop and maintain fiscal arrangements that will contribute to high and stable levels of employment and that will tend to moderate rather than exaggerate the ups and downs in economic activity;

(c) to promote simplicity, economy and equity in the tax system as a whole and in the machinery of tax collection.

The system of tax rental agreements, which is about to enter its tenth and final year, went a long way toward meeting these objectives, but experience has shown that it has not succeeded in meeting all the considerations to which the members of this conference attach importance. The proposals now before you are designed to reconcile as much as possible the various views represented around this table.

These proposals go just as far as we can go at this time in providing fiscal need grants and in reducing the extent to which we are occupying certain tax fields. On the assumptions we have made, our proposal will make available to the provincial governments $640 million in the first year of the new arrangements. This is $108 million or 20 per cent more than would be available to them if the present tax rental agreements were renewed and all the provinces took full advantage of them. The $640 million is made up of:—

(a) Unconditional equalization grants	$152 million
(b) Revenues from the personal income, corporation and succession duty fields, either by rental agreements or collection agreements, or by direct provincial imposition and collection without any extra burden on the taxpayer ..	465 "
(c) Removal of the tax on insurance premiums from the definition of special corporation taxes	23 "
	$640 million

We believe that revenues of these magnitudes from these tax fields are consistent with the actual responsibilities at this time and what seems likely to develop in the next five years. Any province that considers that it requires larger (or smaller) revenues from these tax fields is, of course, entirely free to impose and collect whatever rates it deems proper; but if a provincial rate exceeds the standard rate it will not entitle the taxpayer to any additional credit or rebate from the federal treasury.

On our side, we cannot at this time make any further material concessions that would adversely affect our revenues. Defence expenditures have been stabilized in the past year or two at a high level (nearly $1,800,000,000). We can hope that they will not go higher, but we cannot be sure; neither is it wholly within our control, that they may not have to go up again quite sharply. Many of you will have noticed that defence estimates in both the United Kingdom and the United States have gone up this year.

During the past 15 years, with the consent, often at the urging of provincial governments, we have taken on very large new classes of expenditures in the field of social welfare—unemployment insurance, family allowances, old age pensions and assistance, and other measures—which this year are costing the federal treasury not far short of $900 million,

and are normally growing at a rate which will bring them over one billion dollars within five years. During the past year our total disbursement in these fields (including unemployment insurance benefits) was in fact over one billion dollars. All these payments have contributed to the maintenance of levels of incomes which have undoubtedly relieved the provincial governments of a great load of welfare claims that would otherwise have been pressed upon them and their municipalities. They have also had important beneficial effects on provincial revenues from all forms of taxation. They have been good and constructive expenditures, but their bearing upon the balance of revenues and responsibilities must not be overlooked.

Since we met last April the federal government has undertaken, subject to negotiated conditions, to assume costs in relation to unemployment assistance which in a year like 1954-55 would amount to about $25 million. We have also agreed in principle to assume additional costs of about $180 million a year in the field of health insurance. Now we are proposing arrangements which in the first year of operation and on the assumptions we have made will benefit provincial government treasuries by $108 million over and above the amounts already available to them under the tax rental agreement system. This, I assure you, is the practical limit of our capacity in these fields and at this time, having regard to all our other responsibilities, some of which, as in defence, are, in the last analysis, unlimited.

Our proposed stabilization payments are designed to give to the provincial governments an assurance of relative stability in these three tax fields. In effect we are offering every province unconditionally a guarantee that its annual revenues from equalization payments plus the yield or rental of the standard taxes will not fall below the higher of (a) its per capita rental available in 1956-57 multiplied by the current population, or (b) 90 per cent of its average actual revenues from equalization and stabilization payments and standard tax yields in the two preceding years. This is an offer of an unconditional floor in these tax fields, and a floor that keeps rising with our expanding economy. In the table before you, only Prince Edward Island and British Columbia benefit from this guaranteed minimum in 1957-58. We can all hope that the steady growth of our country is such that the floor will not often come into operation; but the insurance policy is none the less there.

The responsibility of promoting simplicity and economy in the whole field of taxation belongs to all levels of government. As a federal contribution to this objective we are offering two alternatives—tax rental agreements and tax collection agreements.

We are prepared to offer each province a tax rental agreement covering all or any of these three tax fields for the five year period April 1, 1957 to March 31, 1962. The rental to be paid to the province will be the estimated total tax liability of taxpayers in that province at the standard rates of tax. The renting province need pass no taxing statute and will incur no administrative costs. It will, however, be bound for five years.

Alternatively, in the case of a provincial government having enacted and undertaken to maintain a taxing statute that in the opinion of the federal government does not differ from time to time in any material respect from the comparable federal statute and imposes the standard rates, the federal government is prepared to enter into an agreement to collect the tax for the provincial government. The federal government would remit periodically to the provincial government the amounts collected less a fee to cover the cost of collection. The fee we have in mind is 2 per cent of the amounts collected, providing the accounting procedures can be kept reasonably simple. A collection agreement would have to be for a period of, say, three years; or if for two years the fee would probably have to be 3 per cent. The cost of redesigning our collection machinery would not justify entering into agreements on a one-year basis. Notice to extend or terminate a collection agreement would have to be given not later than about the last day of April preceding the year to be affected.

While there seems to have been a general acceptance of the principle of equalization, there is, I realize, some conflict of views on the manner in which it has been applied. Some provinces with very substantial taxable capacity feel that their responsibilities are such that they should be accorded still more room in these tax fields. Other provinces, where taxable capacity is below the average, press for still larger equalization or fiscal need grants. The federal government is squeezed between these conflicting views.

If we were to raise the standard rates and lower the level up to which we equalize, we would find it impossible, except at a quite unacceptable cost to the federal treasury, to establish a formula which would not reduce the payments to most of the provinces to amounts below those available under the current rental agreements. It has been suggested that we should meet this by supplementary grants on a straight fiscal need basis.

While I would like to come as close to meeting all points of view as possible, I do not believe that experience with fiscal need payments, based on a sort of periodic means test, has been such as to encourage us to use them when the more objective approach that we have adopted is available to us.

Other ideas have been put forward and I assure you that they have all been given careful consideration. The co-operative use of these tax fields and the elimination of conditional grants have been suggested. The periodic collective determination of tax policies and an agreed division of the total yield does not seem to me to be a practicable policy. If there is any real support for this suggestion we would, of course, be prepared to study it after we have had some experience with our present proposals. As for conditional grants, it has been a tendency over the years for finance ministers and provincial treasurers to disapprove of them in principle, but their spending colleagues seem to keep pressing for new or expanded conditional grants.

Our proposals as now set out before you are an earnest effort to meet the differing and sometimes conflicting interests of the various provincial governments and at the same time maintain fully the strength of the federal government to meet its wide ranging and vital national responsibilities. Our proposals are not entirely new, but are, we think, a constructive adaptation of our past experience to our present problems. We have tried to meet adequately and sympathetically the needs of those provinces which have been having difficulty in providing standards of service which modern societies consider to be essential. But we have also had to keep in mind the preservation of the national interests of our peoples. The national interests and national security must be preserved if provincial autonomy is to have any real meaning.

DEPARTMENT OF FINANCE, OTTAWA,
8 MARCH, 1956

An estimate of how the federal proposals would operate in fiscal year 1957–58, if (a) provincial populations were as indicated; (b) the yields of standard taxes and the insurance premium tax increased by 5% per annum over the 1955 levels at 1956 rates; and (c) the distribution of taxable incomes, profits and successions between provinces were in the same proportion as in the most recent breakdown available.

(all figures in thousands except per capitas and percentages.)

Tax rental payment available in 1956–57 (3)	14,045	4,130	21,810	18,370	139,535	168,700	28,415	28,420	35,010	50,360	508,795
Increase 1957–58 proposed formula over 1956–57 agreement formula (1)	2,375	70	5,300	3,845	42,840	50,770	5,170	7,045	10,470	3,405	131,290
Per cent increase	16·9	1·7	24·3	20·9	30·7	30·1	18·2	24·8	29·9	6·8	25·8
Tax rental available in 1957–58 if the 1952 agreements were continued (4)	14,690	4,120	22,565	19,065	144,800	177,070	29,240	29,620	37,505	52,670	531,435
Increase in proposed formula over the 1952 agreement formula, 1957–58 (1)	1,730	−10	4,545	3,150	37,575	42,400	4,345	5,845	7,975	1,095	108,650
Per cent increase over 1952 formula	11·8	·2	20·1	16·5	25·9	23·9	14·9	19·7	21·3	2·1	20·4
Per capita increase over 1952 formula	4·00	−·09	6·47	5·45	7·99	7·70	5·01	6·29	6·80	·80	6·64

(1) All equalization payments and total revenue available would be subject to possible deductions in respect of any provincial special corporation taxes levied.
(2) To bring up to per capita rate of payments in 1956–57—P.E.I. $38.24, B.C. $37.55.
(3) Estimated on gross national product at factor cost of $23·4 billion.
(4) Estimated on gross national product at factor cost of $24·4 billion.

NOTE: These figures are illustrative only.
No account has been taken of such increased revenue items as license fees, fire marshall's tax, personal income tax on non-residents etc.

HOUSE OF COMMONS

Tuesday, March 13, 1956

The house met at 2.30 p.m.

COMMITTEES OF THE HOUSE

EXTERNAL AFFAIRS—CONCURRENCE IN FIRST REPORT OF STANDING COMMITTEE

Mr. Maurice Boisvert (Nicolet-Yamaska) presented the first report of the standing committee on external affairs, and moved that the report be concurred in.

Motion agreed to.

RAILWAYS, CANALS AND TELEGRAPH LINES—CONCURRENCE IN FIRST REPORT OF STANDING COMMITTEE

Mr. H. B. McCulloch (Pictou) presented the first report of the standing committee on railways, canals and telegraph lines, and moved that the report be concurred in.

Motion agreed to.

THE BUDGET

ANNOUNCEMENT OF PRESENTATION ON TUESDAY, MARCH 20

Hon. W. E. Harris (Minister of Finance): Mr. Speaker, I should like to give notice that it is my intention, subject to the usual reservations, to place the budgetary motion before the house one week from tonight.

EXTERNAL AFFAIRS

ISRAEL—APPLICATION FOR EXPORT OF 25-POUNDER SHELLS

On the orders of the day:

Right Hon. L. S. St. Laurent (Prime Minister): Mr. Speaker, on Thursday last as a supplementary question in connection with an answer I gave to the Leader of the Opposition about 25-pounder shells for export to Israel, as reported at page 1916 of *Hansard* the hon. member for Eglinton (Mr. Fleming) asked me this question:

> Would the Prime Minister give the date of the decision not to approve the issue of the permit by treasury board?

I told him I did not have that date in mind but that I could secure it for the hon. member. I was not here when the orders of the day were called on Friday and the hon. gentleman was not in his seat when they were called yesterday. I now have the date. It was January 13, 1956. It was a decision by treasury board not to approve the application it had before it at that time, but suggesting that it be considered by the cabinet as a whole.

[*Later:*]

On the orders of the day:

Mr. G. R. Pearkes (Esquimalt-Saanich): I should like to direct a question to the Prime Minister arising out of the statement he just made. Has any decision been reached as yet as to whether the 25-pounder shells will be sent to Israel?

Mr. St. Laurent (Quebec East): No, Mr. Speaker, no decision has yet been reached. The matter has been considered very carefully and is still being considered. I hope a decision will be made at an early date.

REPORTED PROGRESS TOWARD AGREEMENT ON DISARMAMENT

On the orders of the day:

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, may I direct a question to the Secretary of State for External Affairs. Is there any information the minister can give the house concerning the report in today's press that some progress is being made toward agreement on disarmament?

Hon. L. B. Pearson (Secretary of State for External Affairs): I think all I can usefully say at this time is that the subcommittee of the United Nations on disarmament is beginning its meeting in London this week. Pending those discussions, I do not think it would be appropriate for me to make a report. The Canadian government will be represented at the meeting by the High Commissioner for Canada in the United Kingdom, together with advisers from the Department of External Affairs. The government has given a great deal of thought and preparation to the stand it will take at the meetings of this subcommittee, and it is hoped that as a result of the meeting some progress can be made in this vitally important matter.

UNITED NATIONS—INCREASED AID TO UNDERDEVELOPED COUNTRIES

On the orders of the day:

Mr. J. G. Diefenbaker (Prince Albert): Mr. Speaker, I wish to direct a question to the Secretary of State for External Affairs arising

out of his speech last evening in Toronto respecting the need of extending aid and assistance, technological and otherwise, to underdeveloped countries. Has he in mind increasing the amount of the increase as forecast for this year in the speech from the throne under the Colombo plan and extending assistance along the lines indicated as necessary by himself last night having regard to the new Russian attitude?

Hon. L. B. Pearson (Secretary of State for External Affairs): Mr. Speaker, it is already known that the Canadian government will recommend to parliament an extension of our aid under the Colombo plan by an amount that has already been made public. That I think is sufficient evidence that we recognize the need for the extension of this type of assistance.

Mr. Diefenbaker: But over and above that?

[*Later:*]

Mr. M. J. Coldwell (Rosetown-Biggar): Mr. Speaker, may I direct a supplementary question to the Secretary of State for External Affairs following the question asked by my friend the hon. member for Prince Albert. Is the government reconsidering its position regarding SUNFED, and did that have some bearing on the minister's suggestion of last evening?

Mr. Pearson: Well, Mr. Speaker, when this proposal which is known as SUNFED comes before the economic and social council of the United Nations of which Canada is now a member it will naturally be given every consideration by the representatives of the government on that council.

WATER RESOURCES

FLOOD CONTROL PROJECTS—INQUIRY AS TO CHANGE IN GOVERNMENT POLICY

On the orders of the day:

Mr. F. S. Zaplitny (Dauphin): May I direct a question to the Prime Minister. Has the government changed its policy with respect to flood control projects undertaken jointly with the governments of the respective provinces? If so, would the Prime Minister care to state the reasons for this major change in policy?

Right Hon. L. S. St. Laurent (Prime Minister): I think the hon. member will realize the question is framed in such general terms it could not properly be answered on the orders of the day. He speaks of a policy with respect to flood control, and any answer would have to have many qualifications as to what was understood to be a policy. There have been certain cases that were dealt with as major disasters on an ad hoc basis, and since that time parliament has adopted the Canada Water Conservation Assistance Act, which sets out under what conditions parliament has authorized the government to enter into arrangements for the conservation and control of waters when they constitute major projects that could be regarded as matters having a national interest.

Mr. Zaplitny: May I ask a supplementary question which I hope may clarify the information I was seeking. Is it a fact that the government has now decided to follow the policy of proceeding under the conservation act rather than under the Prairie Farm Rehabilitation Act with respect to drainage projects in western Canada?

Mr. St. Laurent (Quebec East): With respect to major projects, they have never been dealt with under the Prairie Farm Rehabilitation Act. They have been dealt with by the prairie farm rehabilitation staff under special appropriations made by this parliament.

SIZE OF PROJECT NECESSARY FOR FEDERAL ASSISTANCE

On the orders of the day:

Mr. G. S. White (Hastings-Frontenac): Mr. Speaker, may I direct a question to the Prime Minister following the answer he just gave to the hon. member for Dauphin. Would an application from a province for federal aid in connection with conservation have to deal with a project involving a certain amount before the dominion government would participate?

Right Hon. L. S. St. Laurent (Prime Minister): There is no stated amount, but it would have to be a major project that it would be fitting to recognize as something of national importance.

Mr. White (Hastings-Frontenac): Would the Prime Minister care to indicate what he means in dollars as representing a major project?

Mr. St. Laurent (Quebec East): No, I do not think I should attempt to do that. Every application will be considered on its merits.

HEALTH AND WELFARE

DR. JAMIESON—REQUEST FOR RECONSIDERATION OF MOVE

On the orders of the day:

Mr. William Bryce (Selkirk): I should like to direct a question to the Minister of National Health and Welfare or in his absence to his colleague the assistant. Will the minister give further consideration to the decision

made to remove Dr. Jamieson from Norway House to Prince Albert, Saskatchewan?

Mr. F. G. Robertson (Parliamentary Assistant to the Minister of National Health and Welfare): I regret that I have not the information to answer this question today, but I will take it as notice and bring it to the attention of the minister.

TRANSPORT

FERRY "BLUENOSE"—INQUIRY AS TO RESUMPTION OF SERVICE

On the orders of the day:

Mr. G. C. Nowlan (Digby-Annapolis-Kings): May I direct a question to the Minister of Transport. Is he in a position to give us any further information on when the *Bluenose* will be back in service and, if not, what schooner will be in service while it is off?

Hon. George C. Marler (Minister of Transport): I am very happy to inform the house that the repairs to the *Bluenose* were completed yesterday, and as soon as I am in a position to make an announcement as to the resumption of service I shall do so.

WOOD ISLAND-CARIBOU—INQUIRY AS TO NAME OF NEW FERRY

On the orders of the day:

Mr. T. J. Kickham (Kings): Mr. Speaker, may I direct a question to the Minister of Transport. Has a name been chosen for the boat now under construction and to go into operation next year between Wood Island and Caribou?

Hon. George C. Marler (Minister of Transport): Yes, a name has been chosen, the *Lord Selkirk*.

CANADIAN NATIONAL RAILWAYS

TRURO, NOVA SCOTIA—STATEMENT ON REQUEST FOR ADDITIONAL MOTIVE POWER

On the orders of the day:

Hon. George C. Marler (Minister of Transport): Yesterday the hon. member for Colchester-Hants (Mr. Purdy) asked a question concerning the railway situation in Truro, Nova Scotia, to which I now wish to reply.

The management of the Canadian National Railways advises me that adverse weather conditions from the beginning of January until the end of February have resulted in congestion in the Atlantic region and have created a backlog of traffic which has not yet been overcome. Traffic volume in both directions has been unusually high, but the management points out that despite the extremely difficult operating conditions, there has been no lessening of efficiency on the part of railway personnel. Everything has been and is being done both day and night to relieve the situation, and additional motive power has been supplied when that action was possible.

With reference to the particular car mentioned by the hon. member, I wish to say that as the complete car movement record has not yet been obtained, information is not yet available to the management as to the causes of the delay which the hon. member mentioned, but I am advised that the car left Truro on March 8 and will be in Quebec city today.

FREIGHT RATES

GRAIN, HOGS AND CATTLE—INQUIRY AS TO EFFECT OF RECENT INCREASE

On the orders of the day:

Mr. H. R. Argue (Assiniboia): Mr. Speaker, I should like to direct a question—

Hon. George C. Marler (Minister of Transport): Mr. Speaker, if hon. gentlemen who belong to the C.C.F. did not ask so many questions I should not take up so much of the time of the house.

Yesterday the hon. member for Moose Mountain (Mr. McCullough) asked whether I could say what would be the effect, if any, of the boost in freight rates which went into effect on Wednesday, March 7, on grain, hogs and cattle shipped to the United States. The only information I can give to him is that the freight rates to which he apparently referred in his question are the rates established on international traffic between Canada and the United States by mutual agreement between the railways of both countries. Effective March 7, 1956, these joint rates on grain and livestock were increased by 5 per cent.

ATOMIC ENERGY

INQUIRY AS TO INVITATION TO HYDROGEN BOMB TESTS IN PACIFIC

On the orders of the day:

Mr. H. R. Argue (Assiniboia): Mr. Speaker, I should like to direct a question to the Minister of National Defence. Has the Canadian government been invited by Washington to send observers to the forthcoming United States hydrogen bomb tests in the Pacific? If not, has the Canadian government considered making such a request?

Hon. R. O. Campney (Minister of National Defence): Mr. Speaker, I shall take the hon. gentleman's question as notice.

Inquiries of the Ministry

DOMINION-PROVINCIAL RELATIONS

INQUIRY AS TO NEGOTIATING INDIVIDUAL AGREEMENTS WITH PROVINCES

On the orders of the day:

Hon. George A. Drew (Leader of the Opposition): Mr. Speaker, I wish to ask the Prime Minister whether it is the intention of the government to negotiate individual agreements with provinces on a different basis, in accordance with the suggestions that have been made by some of the premiers who were in Ottawa a few days ago.

Right Hon. L. S. St. Laurent (Prime Minister): No, I do not think it is the intention of the government to negotiate contracts on different bases. The whole purpose of the studies we have been making over the last year has been to try to find some formula that could be applied generally to all the provinces.

Mr. Drew: I have a supplementary question. May I take it that if any changes are made by way of negotiation with any province they will immediately be indicated to all provinces and to the members of this house?

Mr. St. Laurent (Quebec East): Oh, certainly, Mr. Speaker. If the government found on the representations of any province that there was something that should be and could be considered in favour of that province it would immediately be brought to the notice of the house and to the notice of all the other provincial governments.

Mr. C. W. Hodgson (Victoria, Ont.): Mr. Speaker, I should like to direct a question to the Prime Minister. Is it the intention of the government to give back the taxing privileges that belong to the provinces?

Mr. St. Laurent (Quebec East): Will the hon. gentleman be kind enough to repeat his question?

Mr. Hodgson: Is it the intention of the government to give back the taxing privileges to the provinces?

Mr. St. Laurent (Quebec East): It is the intention of the government to make as much way as circumstances permit it to do in the field of taxation where the provinces and the federal government both have rights.

POSTAL SERVICE

ALTERNATIVE MAIL SERVICE TO TOWNS EAST OF ESTEVAN, SASK.

On the orders of the day:

Mr. E. G. McCullough (Moose Mountain): Mr. Speaker, I should like to direct a question to the Postmaster General. Can the minister inform the house whether alternative mail service to towns east of Estevan, Saskatchewan, will be provided after May 4, if the rail service on the Brandon-Estevan line is curtailed, as stated in the Regina *Leader-Post* of March 6?

Hon. Hugues Lapointe (Postmaster General): Mr. Speaker, the department was advised by the Canadian Pacific Railway of their intention to curtail the service to which my hon. friend has just referred. I believe the service at the present time is daily, and the intention is to make it tri-weekly. As soon as the department was advised we immediately initiated a survey in order to determine how this service could be supplemented so that the localities to which my hon. friend has referred would continue to have adequate postal service.

[*Later:*]

Mr. A. M. Campbell (The Battlefords): Mr. Speaker, I should like to ask the Postmaster General a supplementary question. Has the minister considered the possibility of using a bus service to replace the train services which are now being curtailed in western Canada?

Mr. Lapointe: I am sorry, Mr. Speaker, but I could not hear my hon. friend's question properly.

Mr. Campbell: Has the minister considered the possibility of using a bus service to replace the train services which are now being curtailed in western Canada?

Mr. Lapointe: Mr. Speaker, now that I have heard my hon. friend properly I submit that that policy has been in effect for some years in the department, and that motor vehicle services or bus services replace train services when the latter are curtailed.

DRUGS

USE OF STILBESTROL IN POULTRY AND LIVESTOCK FEEDS

On the orders of the day:

Mr. James A. McBain (Elgin): Mr. Speaker, on Friday I asked a question of the Minister of National Health and Welfare and received a reply yesterday from the parliamentary assistant to the minister. I would now like to ask a supplementary question. Is the parliamentary assistant aware that no such article as the one to which he referred me appeared in the St. Thomas *Times-Journal* of March 9, and is it now the policy of the government to play hide and seek in answering these questions?

Mr. F. G. Robertson (Parliamentary Assistant to the Minister of National Health and Welfare): Mr. Speaker, I must confess that the article which I read myself appeared in the London *Free Press.* I was informed, however, by a responsible member of this house that the same article appeared in the St. Thomas *Times-Journal* of March 9. I regret very much indeed if my information was inaccurate, but I think possibly the St. Thomas *Times-Journal* might receive permission from the London *Free Press* to print this article in their newspaper.

Mr. Fulton: You have not given an answer to the question.

Mr. McBain: I should like to ask a supplementary question, Mr. Speaker. Is it now the policy of the parliamentary assistant to have the questions which are directed to him answered by the daily press?

Mr. Speaker, in view of the fact that the question I asked the other day still remains unanswered may I now direct it to the Minister of Agriculture. Is it the intention of the government to legalize the use of stilbestrol in livestock feeds?

Right Hon. J. G. Gardiner (Minister of Agriculture): Yes, that is the intention.

PUBLIC BUILDINGS

BRITISH COLUMBIA—LOCATION OF NEW FORESTRY LABORATORY

On the orders of the day:

Mr. G. R. Pearkes (Esquimalt-Saanich): Mr. Speaker, I wish to direct a question to the Minister of Agriculture concerning a matter about which I communicated with him some time ago. Has a decision yet been reached as to the location of the new forestry laboratory which is designed for British Columbia? If so, where will it be located?

Right Hon. J. G. Gardiner (Minister of Agriculture): A decision has been reached to put it on the property in Saanich which was purchased some time ago.

PRIVILEGE

MR. MCIVOR—REFERENCE TO REPORTED STATEMENT BY LEADER OF THE OPPOSITION

On the orders of the day:

Mr. Daniel McIvor (Fort William): Mr. Speaker, on a question of privilege I wish to welcome back the Leader of the Opposition after his strenuous time in Fort William, but my question of privilege is that he made a statement as reported in the Fort William *Times-Journal*—

Mr. Speaker: Order. I am sure we all appreciate the return to the house of the Leader of the Opposition and we welcome him back, but I do not think there is any question of privilege involved in the hon. member's statement.

NATURAL GAS

APPLICATION FOR EXPORT PERMIT BY NORTHERN NATURAL GAS COMPANY

On the orders of the day:

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, may I direct a question to the Minister of Trade and Commerce. He has not yet had one today. Is the minister aware that Northern Natural Gas Company of Omaha has applied to the Alberta petroleum and natural gas conservation board for permission to export 300 million cubic feet daily of natural gas? What effect will this application have on the proposed Trans-Canada-Tennessee project?

Right Hon. C. D. Howe (Minister of Trade and Commerce): Mr. Speaker, before answering the question may I say that I prefer to wait to see what disposition the conservation board of Alberta makes of that application.

Mr. Knowles: May I ask a supplementary question? What effect does the minister think this new application will have upon the other hearing before the federal power commission?

Mr. Howe (Port Arthur): I would not care to comment upon judicial proceedings in another country.

HOUSING

LIMITED DIVIDEND HOUSING PROJECTS—CONTINUATION OF POLICY

On the orders of the day:

Mr. H. A. Bryson (Humboldt-Melfort): Mr. Speaker, in the absence of the Minister of Public Works I wonder if his parliamentary assistant would be in position to answer a question I asked some time ago regarding loans under the Central Mortgage and Housing Corporation in connection with hostel type buildings?

Mr. Maurice Bourget (Parliamentary Assistant to the Minister of Public Works): Mr. Speaker, I am not in position to give an answer right away but I shall take the hon. member's question as notice and give an answer later on.

SUPPLY

The house resumed, from Monday, March 12, consideration of the motion of Mr. Garson

(for Mr. Harris) for committee of supply, and the amendment thereto of Mr. Diefenbaker, and the amendment to the amendment of Mr. Argue.

AGRICULTURE—ECONOMIC POSITION OF INDUSTRY

Mr. G. W. Montgomery (Victoria-Carleton): Last evening before the adjournment my remarks were being directed toward that phase of the agricultural industry which in my province plays a generally recognized part, that which is classified as mixed farming. I assure you it was not the growing and prosperous picture I should like to have been able to disclose in connection with this great national asset.

However, in the agricultural industry, as in others, there are exceptions, and there are various degrees of prosperity. Generally speaking one finds a higher degree of prosperity in areas where dairying is more or less the dominant phase of agriculture. There is some stability to it. It has received assistance by way of protection and floor prices and, with the growing consumption of milk and related products, it is a far more stable part of the agricultural industry than some others. In the dairy areas in my province one finds far more steady prosperity.

I understand that approximately one-sixth of the population of our country depends upon this industry. Therefore it needs protection. It needs not only the protection it has; it needs more protection to keep it such a great industry, and it needs assistance to keep it stable. In my opinion that comes within the purview of this resolution.

Another exception I should like to mention, in so far as my own constituency is concerned, is an industry in which I am vitally interested, the potato industry. We have the small grower who mixes this crop with other crops, and we have the large producer who has specialized in the potato industry to the exclusion of all other crops. Some of our most prosperous farmers are those who have specialized in potato production. Within my constituency can be seen some of the finest rural homes that can be found anywhere in the province. These producers have lovely buildings, good farms, between 200 and 500 acres, and plenty of equipment, and they enjoy a degree of prosperity much higher than the great mass of farmers.

Unfortunately we do not have enough of this type of farmers, and the areas are small where this prosperity seems to accumulate. Over the years a percentage of our large potato growers have been fortunate and have prospered in this most difficult and uncertain phase of agriculture. However, whilst this group is small percentage-wise, it is a very important group nevertheless and contributes greatly to our local economic situation and the outlook in general in connection with our national economy. But during the past few years it has been caught in the cost-price squeeze, just as other farmers have. These producers have had only one good year in the last five, and much of this accumulated wealth—these beautiful homes that you see and the large amount of equipment—is commencing to dwindle. Many of those people who have prospered are commencing to find that their wealth is dwindling, and some of them are having a difficult time to get cash with which to pay their bills. This is a most unfortunate situation in a part of agriculture that should be more stable.

I should like to give an illustration. It is a general illustration but I think it will bring out the point that was impressed upon the hon. members of this house yesterday. I hold in my hand the potato report which I get daily. It is dated yesterday, March 12. I will take as an example this city of Ottawa. Wholesalers were paying for potatoes in this city yesterday an average of 2½ cents a pound. In order to make a fairly close check I contacted some of my farmers at home. I find that the price they were getting last Friday, Saturday and yesterday permits the farmer to clear over his cost of production—out of that 2½ cents a pound—between one-fifth and one-quarter of a cent. If you want to put it into bushels, it will give him between 15 and 20 cents a bushel. Out of that 15 to 20 cents a bushel for growing his potatoes he has to live, pay his taxes and provide for the interest on the capital which he has invested.

I think that example clearly demonstrates the extremely narrow margin on which our farmers are working. That is the highest price that has been paid for potatoes this season—and the season begins about the middle of September or the first of September—with the exception of a few local lots which are of the very early variety. Two and a half cents a pound may seem to be quite a good price. By the time the consumer gets the potatoes I have no doubt it is about 3½ cents a pound. But what we are trying to impress upon the government is what the farmer gets for his labour in producing his crop. I think that example demonstrates the situation clearly. Whether you take the farmers on an average or whether you take them individually, the net amount they receive is very small.

It seems to me that the situation illustrates another point which I suppose I should mention to the Minister of Agriculture before

sitting down. I think it demonstrates clearly to him why the potato growers did not joyfully and thankfully receive that starch diversion program which this government offered them in January. I suppose the way they look at it is that they might as well lose money in one way as in another. However, at $1 a barrel they just cannot break even. When potatoes are priced from $2 to $2.15, as they are today and were yesterday and Friday, they can make merely a little profit. We need more stability. There are those people who take a chance and in some years they make a great deal of money; in other years they lose a great deal of money. That is not good for agriculture.

Mr. Speaker, I have tried to fairly sum up the agricultural situation, in my province and generally. I believe that the average is much the same all over eastern Canada. The west, where there are large wheat growers, I know nothing about. However, I think the progress of the farmer is fairly clearly demonstrated. We will put it this way. It is lagging far behind the progress of other groups in this country, and I do not think that is a sound situation.

I am going to quote a few words here as follows:

> The way of life of the farmer is itself a great national asset and his prosperity is the foundation of national prosperity.

I wonder whether any of the hon. members opposite have ever heard those words before? In case they have forgotten I will tell them that they were part of the national federal Liberal program in 1948. The statement continued:

> It is the policy of the Liberal party to foster that prosperity through secure markets at fair prices.

I am quite ready to leave it to the farmers of this country to judge whether or not this government has carried out this pledge to agriculture. It is not for me to be the judge. I think the principle is sound and I can agree with it. I think this government should make every effort to carry it out, or there should be some explanation as to why they cannot do so.

I believe the farmers are entitled to a fair price for what they produce and sell in relation to prices they have to pay for the goods they must purchase. Surely they are entitled to a fair return on their capital investment. Surely they should not be expected to work double the hours worked by other groups and get less and, as a matter of fact, sometimes not break even.

In conclusion, Mr. Speaker, let me say that I believe in the principle enunciated in this amendment. I believe it can be implemented successfully, and I support it. I again affirm my opinion that the farmers of this country are entitled to nothing less.

Right Hon. J. G. Gardiner (Minister of Agriculture): Mr. Speaker, I had thought that the matters which have been discussed yesterday and again today might have been discussed on my estimates. I had therefore intended to make at that time any remarks which I am going to make now. In view of what has been said and the fact that the question is in the minds of most hon. members at the moment, I think probably I should deal now with the remarks which have been made.

The hon. member for Prince Albert (Mr. Diefenbaker), in bringing forward his amendment to the motion to go into supply, moved it in these words:

> . . . in the opinion of this house consideration should be given by the government to the advisability of introducing during the present session legislation to create parity of prices for agricultural products at levels to ensure producers a fair price-cost relationship.

The amendment to that amendment is in words which would add something to the idea but I do not think they change the matter under discussion. As the hon. member for Prince Albert stated yesterday, the matter of parity prices has been before this house on previous occasions. The first occasion referred to yesterday was in 1941, when the hon. member for Prince Albert moved practically the same amendment to the same motion, a motion to go into supply. It reads as follows, as recorded at page 2280 of *Hansard* for April 8, 1941:

> —it be resolved that the government should take immediate steps to create a parity of prices as between agricultural and other products in order to improve the condition of Canadian agriculture and in order that it may receive a just and fair return, and thus be enabled to make that contribution to Canada's war effort which is so desirable, and which our agricultural population so greatly desire to make.

I repeat, the substance of that amendment is practically the same as the one which is before the house now. The conditions, however, are quite different. In 1941, as the amendment states, we were at war. When we were at war, of course, we were under the War Measures Act. When we were under the War Measures Act this government had practically all the authority that is ever given to governments within Canada. In other words, in connection with the marketing of farm products we had the responsibility during wartime for doing what the provinces have responsibility for during peacetime. If the provinces saw fit to take care of some of these necessities on their own, then it was

unnecessary for the federal government to take action. If the provinces did not take action, then on certain occasions we did.

I noticed that the speech the hon. member for Prince Albert delivered on that occasion was practically the same as the speech which he delivered yesterday. If I were to take the time to read it, it would be acknowledged that it is very much the same. It refers to the very difficult conditions through which farmers were passing at that time and refers to the relationship between their income and the income of other parts of the economy. It also criticizes the Minister of Agriculture because the government had no policy. It goes on to state that there had been an increase of 3 million acres in the acreage of wheat that had been seeded in western Canada during the years that were under discussion. The hon. member lays the blame for that at the door of the Minister of Agriculture. He says this, as reported at page 2305 of *Hansard* for April 28, 1941:

> Why has the acreage in wheat been increased by some 3 million acres since the beginning of the war? In my opinion the first and outstanding reason for this increase in acreage has been the lack of leadership of this government. That is evidenced by the fact that in November, 1939, the Minister of Agriculture (Mr. Gardiner) is reported to have stated—

Well, the members of this house will recall that in the years immediately preceding the war we did have a drought period in western Canada. The same thing happened there that happens in any similar area when a similar situation develops. The farmers had a certain acreage in wheat when the drought struck. Each year they had that optimism for which farmers in the west are noted, and believed that next year was going to be better than the year before. The land which had not grown any crop, say in 1931, and was not properly summerfallowed, was seeded next year in spite of the fact that it grew no crop. Fortunately for them they did get a fair crop in 1932, but unfortunately for them as they went along one year after another doing that and increasing their acreage, trying to get back in one year what they had lost in two, they finally finished up with an acreage of between 28 and 29 million. They had started out with a much lower acreage.

Of course the hon. member for Prince Albert told me at that time, as he told me yesterday, that I should have told the farmers what to do. I should have told the farmers then it was foolish for them to put in more acres of wheat. I should have told them that after the war ended they would not need wheat because they could not market it. He said the Minister of Agriculture should have told them that. Yesterday he said the Minister of Agriculture should tell them now what they ought to do. In other words, the Minister of Agriculture should become the dictator that the hon. member is continually saying the members of this government are.

I do not agree with him. As a matter of fact he went on to state that last December we had a conference. The conference met and discussed matters and then the representatives went home, but they were not told anything; they were not told what to do.

From time to time I recall reading about the experiences on the south side of the border. We learn from these experiences. It was found to be quite difficult to compel people to do things by passing laws and saying you must do this or that. We found it was much better to persuade them to do the things we wanted them to do. In the session of 1941 we offered them $4 per acre to take land out of wheat and put it into summerfallow. We offered them $2 per acre to take land out of wheat and put it into oats. We offered them $2 to put it into pasture, and so on. The farmers followed those suggestions. We did not compel them to do that. We did not tell them to do it. We offered to pay them to do it, and they reduced the acreage to 17 million acres in two years.

We thought that was a much more effective way of doing it. I know that in a speech at that time my hon. friend condemned the members of the house who voted for that measure. He condemned the members of the government who supported it, on the ground that they should not put $35 million into the hands of the Minister of Agriculture. Well, I can understand his feeling on the matter, but the farmers in Saskatchewan thought differently. They thought it was worth the millions that were paid in order to take the land out of wheat and prepare it for the production of better crops of wheat later.

Everyone who has ever farmed in western Canada knows that you store up moisture one year by summerfallowing in order to produce a crop the next. By getting the summerfallow land increased greatly in acreage and getting the acreage down in 1941, in 1942 we had the greatest crop we had ever grown up to that time on a lower acreage. This wheat formed a considerable part of the storage we had throughout the war and toward the end of the war.

I make those statements, Mr. Speaker, as coming from the member for Prince Albert and call the attention of the house to them. I could quote them from the record, but it is not necessary to do so. Anyone can take the volume of *Hansard* of that year and read

those statements for himself. I quote those statements in order to indicate that 15 years ago next month the opposition were saying almost exactly the same things they are saying now. They were saying the farmers were going through a very difficult period; they were going through that difficult period because the government had no policy; they were going through that difficult period because the government was not telling the farmers what to do.

But instead of following those directions of the opposition of the time, we followed a policy which we thought was wise. That policy was to call together the ministers of agriculture of all the provincial governments here in Ottawa, and ask them to bring along their officials. We asked the farm organizations in the different provinces to send representatives to this conference, and we set the first week in December as the date upon which we would hold that conference every year. From that time down to this we have had 17 of these meetings. We had the last one in the first week of December last year.

My hon. friend says that we did not decide anything and that I did not give them any instructions. Well, he is right when he says I gave them no instructions. But if he reads the record of the meeting he will find that this year, as every year, I summed up the discussions at the conference and indicated what, in the opinion of all those who were there, ought to be done as a result of the discussions, and that information has been circularized all over the country.

In order to indicate to hon. members what result that has had in the past, as I indicated a few moments ago we started into the war with an acreage of around 29 million acres. In the middle of the war we succeeded in having the farmers reduce that acreage to 17 million acres, and we went on producing from there. But there was more involved in that than simply reducing the wheat acreage. The reason we suggested that the farmers reduce the wheat acreage was in order to make it possible for them to get money. There is complaint now that farmers are not able to get money out of wheat. Well, that is not a new thing. It was a common thing in the days when the last government preceding this one was in power. It was a common thing in the first years we were in office, and it threatened to become a similar thing in the middle of the war, in 1941 and 1942.

Therefore, in addition to offering them $4 an acre to take land out of wheat, we held meetings over the western part of Canada. I held 25 of them myself in different parts of western Canada. I pointed out to the farmers what I have been criticized already this session for pointing out to the farmers, namely that a bin of wheat is a good bank account. I did not need to tell them they could not spend it because they were not able to sell the wheat.

We accumulated 600 million bushels in the elevators of this country in the middle of the war which could not be sold, and I did what the hon. member for Moose Mountain (Mr. McCullough) was accusing me of doing yesterday. He said that at some time or other away back in the past I had told the farmers that it was a good thing to produce livestock instead of wheat. On that occasion, as I said, I held 25 meetings. They were well attended. The officials of farm organizations were at the meetings, and we had very lively discussions. The discussions were on the ground that Britain and our allies required meat; they required eggs; they required cheese; they required canned milk. We said to them, "If you will produce these products you can market them every day of the year and get cash for them, and if you wish to store wheat the wheat will keep until the end of the war."

I notice that on this subject in 1941 my hon. friend the member for Prince Albert twitted me in connection with that by saying I set up a policy which policy was going to get rid of all this wheat by the end of the war. I said to him then it was not a policy, it was a prophecy; and that prophecy was made in this house when I returned from Britain in 1940. I said then, if we did have 600 million bushels of wheat in storage in the middle of the war, and the war were to continue for four or more years, within a year from the end of the war we would require 100 million more bushels of wheat than we would have in Canada.

Well, my hon. friend makes light of that kind of suggestion. He made light of it then, and he said the same things that are being said now. But the facts are apparent for everyone to read. A year after the war was over we were 100 million bushels short. We could have sold another 100 million bushels of wheat very easily, had we had it. If we had had the wheat it probably would not have been necessary for the United States to go back into wheat in a big way, as big a way as they ever were, even in the middle of the war. But we did not have it. The world needed it.

Canada went back into the production of wheat in perhaps a bigger way than she should have gone. The United States went back into the production of wheat, and we are still suffering from some of the results that happened as a result of our anxieties of

that particular time. We were anxious, not for the purpose of enriching the farmers of this country, not for the purpose of doing very much about the economy of this country, but for the purpose of seeing to it that people did not perish from starvation in certain parts of the world. Wheat was then, wheat is now, wheat has always been, the best insurance against starvation happening in the world because of the manner in which it keeps over long periods of years under storage conditions which are not expensive.

Well, we went through on that, and the suggestions of that time turned out to be as correct as suggestions made four or five years in advance can be, particularly when you are dealing with a product such as wheat. These were the experiences we had back at that time, and we came through them.

In 1941 my hon. friend moved that the cure for what we were experiencing was parity prices. Well, I can understand why he moved it. In 1933 the United States adopted a system of parity prices. Between 1933 and 1935 about half the plan they had set up was declared by the courts to be ultra vires and they set up another system, or a changed system. They left the methods by which parity prices were established the same as they had been before, and instead of attempting to compel the people to reduce their acreage they allotted certain acreage to them. If a farmer did have no more than this allotted acreage, then he would be allowed to get the advantages of the parity prices; but if he did not have or reduce to that acreage, then he would not get the advantages of parity prices.

The parity price system which was set up in 1933 had been functioning for a few years, and officials of the farm organizations did then as they do now. They read the publicity which came across the line; they heard the announcements on the radio, and they worked out a plan which they advocated based upon the same experience as farmers had over the first year or two down in the United States. This plan of parity was introduced into this house in 1941. As I said to this house on a previous occasion, we had at that time some extremely capable men on this side of the line. As a matter of fact one or two have been taken from this country to Washington in order to assist in connection with price controls and other things.

One of the best men we had during that period of time was the late Mr. Clifford Clark, deputy minister of finance. I well remember the discussions we had with him and I marvel now at his foresight. As a matter of fact someone said yesterday they thought that if I would get up and express my personal opinion I might be in favour of parity. I am going to say quite candidly to the hon. member that back in the period from 1941 to 1944 I put forth quite a few arguments in favour of parity, only to have them all talked down and myself convinced they were not sound by the gentlemen who were here then, some of whom are now in Washington, some of whom are now in universities on the other side of the line and some of whom have gone.

I have on my desk the latest report from the United States with regard to this matter. The report is made by some of the ablest men in the United States and is called "The Farm Foundation". The names of those who compiled the document are listed on the front page; they form the conference committee. The first gentleman mentioned is Mr. O. B. Jesness, chief, division of agricultural economics, University of Minnesota, St. Paul, Minnesota, and chairman of the committee. Then there is a list covering a whole page of the men who discussed this whole question and considered it in the light of the experience they have had.

I am not going to go through this whole document and read it to the hon. members of this house, but it starts off by mentioning the agricultural marketing act of 1929, when congress undertook to meet the agricultural situation by improving marketing arrangements.

It goes on discussing one subject after another, including the agriculture act of May, 1933, to which I just referred, which set up parity prices, the conservation act of 1936 which made some changes, and also the soil conservation and domestic allotment act of 1936, which was put forward and accepted as a measure of permanent farm policy, and so on.

Jumping over a number of pages I come to this statement:

> The effort to strengthen the farmer's incentive to larger production inevitably came into conflict with the general program of price control legislation.

I well remember the remarks of the then deputy minister of finance when he argued that that would be the result of a policy such as the United States was setting up. We then skip over a few more pages and come to the following statement:

> High level price supports continued after world war II.

They said that in order to get this higher production they required they converted this program into one of trying to induce production, and by doing so they brought about conditions which brought great difficulty later on.

Agricultural policy makers took care from 1941 to 1944 to project measures to insure the farmers against a similar decline after the close of world war II. That is a decline similar to the declines which had taken place following other great wars, speaking more particularly of the first world war as compared with the second world war.

The report goes on from one subject to another until finally we come to the recommendations made for the future. The report suggests that as free agents economically and politically, the farmers will have their own understanding and their own code of conduct as to what they will seek in the way of farm policy. That is exactly the conclusion we came to 17 years ago when we called the first conference in Ottawa of the farmers and farm workers across the country. We concluded that if you put the information into the hands of the 750,000 farmers in this country and allow them to arrive at their own conclusions with the information at their disposal, they will make a better job of formulating a production policy than could any small group in this house even if it included the Minister of Agriculture, as was suggested by my hon. friend the member for Prince Albert.

The hon. member to whom I have just referred thinks I should go out and tell the farmers what to do. I would point out to him that this December conference was attended by the best agriculturists we have in the federal department. They met there and read their prepared papers. The conference was attended by the best agriculturists we have under the provincial governments, and under the farm organizations right across Canada. After two or three days' discussion of the conditions existing in Canada and outside the country in relation to the marketing of our products, those men went back to their home communities and spread that information amongst the farmers. I submit, just as this document submits, that as the result of the experience from 1933 up to the present you can depend on the decisions of the farmers on the land to arrive at a correct conclusion if you give them the information.

Mr. Nicholson: Will the minister permit a question?

Some hon. Members: Sit down.

Some hon. Members: Go ahead.

Mr. Argue: He loves questioning everybody else.

Mr. Gardiner: I do not object to questions.

Mr. Nicholson: Will the minister not admit that the conferences were started to solve the problem of lack of production, and now that we have solved that problem will he not agree that the farmers want some direction from the government?

Mr. Gardiner: I always attend the conferences, and I can tell you that there are many people who will tell you that over the last 17 or 18 years I have given them too much direction. I do not go to a conference to sit around and do nothing.

The second point brought out in the report is that we have organized farm groups. We have them at the conferences, too. The third point is that there are statesmen and politicians. Well, we are there, too.

Mr. Fulton: Are you a statesman or a politician?

Mr. Gardiner: The fourth point is: Educational and advisory agencies, which are so distinctive a feature of the United States agricultural system, must be utilized. We have them at the conference.

The report goes on giving one point after another, saying that one has to give consideration to all these matters. Finally the report suggests, and from the point of view of what we are discussing it is most important:

> The "parity price" formula having outlived its day of usefulness should be abandoned in the interest of gearing a farm program to present economic realities.
>
> We recognize that price parity has been widely regarded as the rock upon which to found American farm policy. But farmers should now squarely face the fact that this mechanism is not compatible with an agricultural policy which will continuously adjust agriculture to technological and market changes and fit the farming industry most effectively into the total economy. It is not good economics to rely upon an automatic formula of price relationships which, in its very nature, is backward looking and tends to impair the flexibility of economic adjustment to changed—and ever changing—conditions.

Just before coming into the house I heard that they took a vote on this question in Washington. I hope this information is correct and that if it is not no one will blame me for taking it off *Hansard*. The vote was 45 to 45 and the vice-president cast the deciding vote against continuing this policy.

An hon. Member: A Republican.

Mr. Gardiner: There are a lot of people in this house who would probably be Republicans if they were on the other side of the line. I am not so sure that the hon. member for Assiniboia (Mr. Argue) would not be. Anyway that was the result arrived at by that group of individuals, the members of which are among the best agriculturists on the other side of the line.

Mr. Nicholson: What date is that?

Mr. Gardiner: It is dated 1952. It is all very well to advocate a policy of this kind. My hon. friends want something more up to date, so I will give them Mr. Benson's opinion on it. Mr. Benson is secretary of agriculture of the United States and he has said a few things which I think we ought to understand. He had this to say in Regina last summer.

Mr. Speaker: I am afraid I shall have to ask the minister to paraphrase this. It appears to be an opinion by someone outside the house on a measure which is now before the house. See Beauchesne's third edition, citation 265.

Mr. Gardiner: After having said a number of other things, he spoke of rigid price supports not promoting prosperity. He went on to say that experience had proved that rigid supports did not provide the abundance which the United States needed for a peacetime economy. I do not think you will object to my reading his views with regard to what we are doing in Canada. He said:

> We are paying you the high compliment of imitation. Your government has long devoted far more attention to the quality of your wheat going into the foreign market than we have. Most of your agricultural controls, likewise, are designed to encourage quality production, rather than to limit output. We hope now at long last to move in this same direction.

When hon. members come before this house proposing to do what the United States did away back 23 years ago, when that country has had experience with it ever since and then the leading agriculturists in the country and the secretary of agriculture in the country state that what we have been doing is more satisfactory than what they have been doing down there, I think we should listen to those opinions and take action accordingly. For that reason I am going to suggest that we find out just what was said at this conference last fall, and what has been said by the federation of agriculture.

I noticed that in his speech in 1941 the hon. member for Prince Albert quoted the presentation made by the federation of agriculture at that time to the government of Canada, and practically accepted their platform as his platform. He said those were the things the government ought to be doing. Yesterday he did the same thing, but unfortunately he did not quote them; he just said that certain things had been done and then went on.

I have in my hand a copy of the speech I made at the end of the conference in December last. After having put the question to the conference as to what they thought about certain things, including our marketing program, including our floor price program I put the question that was raised yesterday as to whether we should call a marketing conference with the provincial departments of agriculture. I put that to them, after having stated that every provincial minister, with one exception, who had attended a meeting with me in my own office, had opposed the holding of such a conference. One minister did not happen to be there the last day, as he had gone home the night before, the minister of agriculture of my own province. He was not there when this question was put and he might have voted the other way, although he did not show much sign of that before he left. I said:

> Is there anyone here who thinks we should not call the conference next year?

This was the same conference we had been having for 17 years. Nobody said anything, so I then said:

> Stand up if there is.

No one stood up. I said:

> Well, it is quite apparent that you agree unanimously with the other two meetings that this conference should go on.

Then I asked if anyone thought that after having a meeting in December and determining among ourselves what was the policy that ought to be followed, it would be a good thing to announce that we were going to have another conference next July.

One only has to state the position to know how foolish it would be. You hold a conference in December, seeding occurs in April, you send out messengers all over the country to indicate to the farmers what you think the condition is, and depend on the farmers making a decision before seeding. Then right in the middle of the period, or long before we have reached the middle of the period, we announce from this house that we are going to have another conference to determine what they should seed. Anyone who is so uncertain in the opinion he has with regard to anything should not try to advise others.

So the conference decided that if we were going to have another conference it ought to be a conference of the ministers of agriculture from the provinces, plus any officials they wished to bring with them. That conference would meet in Ottawa with myself as minister and with some of our officials to go over our plans behind closed doors, and then make an announcement later on whether we thought the plan as we had laid it out last December had been fully successful in preparation for our next December meeting.

The ministers determined that there were two things that they wished to discuss. One was the question which was raised a few minutes ago by the hon. member for Dauphin. They have the idea, which they have expressed clearly, that drainage and other

problems having to do with flooding, so far as they affected farm lands, so far as they affected soil conservation, ought to be carried on by the provincial departments of agriculture. That was their opinion, I am not stating it for the first time, as it has been in the press for the past three or four years and they still talk about it every time we meet.

They wanted to discuss that question. They thought questions relating to the conservation of soil, matters concerning the head-waters of streams, at least ought to be looked into by the departmental officials of the different provincial departments before anything was done to change the situation which exists or to determine what ought to be done.

I am quite sure it does not make much difference which department it is under here; whether it is under the department of agriculture or the department of resources, an opportunity would be given to the provinces, if they desire it, to make known their opinions before anything is done. That is one thing they wanted to discuss.

The other had to do with marketing, but not marketing as is in the minds of some people here. Ninety per cent of most farm products is marketed in Canada and most of it in the provinces where it is produced, and the authority that has the most to do with that marketing is the provincial authority. It is only when the provincial authority does not perform its duties in connection with marketing that there is very much difficulty.

Nobody ever hears anyone complaining about the province of British Columbia not having over the last 20 or 25 years taken care of its marketing problems in connection with farm products. The only thing one did hear in those days was that you could not find a more socialist government anywhere else in the world than they had in British Columbia. They even put policemen on the bridge on the way into Vancouver to check everybody who tried to take food into that city, to see whether or not they were living up to the regulations.

Some of our people called that socialism. That is not socialism at all. Even some of the so-called socialists do not really know what socialism is. That is not necessarily socialism at all. They did start that way in British Columbia. They established the legislation; they carried it through the courts, and it was declared ultra vires. They took it to the privy council, and had it declared ultra vires. They finally provided legislation that went right through to the privy council and was declared to be intra vires. They have been acting under that legislation ever since.

Now the province of Ontario has, I think, some 20 boards set up under similar legislation. The province of Nova Scotia has a number of boards set up under similar legislation. Some of the other provinces also have boards; New Brunswick and Prince Edward Island. The only province that I am absolutely sure does not have them at all is the province of Saskatchewan. We have these people sitting on the other side of the house trying to advise all the rest of us all over Canada what we ought to be doing in connection with these boards, and they have not been able to prevail upon their own government in their own province to set up boards on their own account in order to carry out marketing.

The question they want to discuss is the legal relationships between the provinces and the federal government. We said to them we would have that conference just as soon as we could get them all together. We tried to call it in January before this house met because, as everyone in the house knows, Ontario has taken a chance by putting legislation on the statute books that it is not absolutely sure will stand up in the courts, and so has asked us to assist it in getting that legislation before the supreme court. It has been brought before the supreme court.

They are suggesting, as did the federation when they were here last month, that if that legislation does happen to be declared ultra vires, this government should take some action in order to do what we must be able to do if that province is not able to do it. We have given them assurances that we shall give it consideration. We have not said we will do it, as we must bring these matters to this house; we have said we shall give it consideration. We have called the conference for April 19.

That is one thing, but I have here a presentation made by the federation of agriculture to the federal government on February 14, 1956. I hope I am not going to be out of order in indicating to the house what was stated to the government by this organization. They say, on page 3:

> It cannot be argued that the position of the Canadian farmer is due to the effects of overprotection of their industry, or of excessively high support prices, but rather is the result, in part, of a world situation of which Canada, as an important agricultural exporter, feels the direct and immediate impact.

Then they go on to deal with different products that are produced by our farmers and they come to the dairy industry:

> There is probably no industry in which regularity and stability of supplies and prices is more important than in dairying, both from the point of view of the producer and the consumer. The butter support program which has been in operation for a number of years has provided this regularity and

stability, at very reasonable prices, and in addition has sharply reduced marketing margins in the case of butter. Moreover, the whole program has been relatively inexpensive. It is therefore difficult to understand why the program should be under such constant and sustained attack from certain quarters.

However, it is not our intention today to open up a full scale discussion of this question—but merely to register our wholehearted support of the government's policy, and to express the opinion that the consequences would be disastrous to the dairy industry and harmful to the consumer if the present butter program were not maintained.

The Canadian Federation of Agriculture therefore strongly recommends that the 58 cents floor price on butter be not only continued but established in advance for a further two-year period.

If anyone wants a stronger endorsation of that policy I should like to hear it, because they could not have said anything that pleased the government more, even though it may not have pleased the opposition. Then they go on further and say this, and I think this was said by someone yesterday, though I am not too sure by whom:

To allow Canadian producers to fully develop the market for these products—

That is, dairy products such as cheese, milk powder and so on.

—without risk of having their position seriously undermined by imports carrying abnormally low import duties, the federation of agriculture recommends that the special tariff agreements with Australia and New Zealand be revised to raise the present nominal rate of duty on cheddar cheese to an effective level, and to bring the duty on dry skim milk from those countries to 3½ cents per pound.

It goes without saying—and they refer to it, as a matter of fact—that no member of the government could give them a decision on that question at the time of that meeting. I suppose no one, not even a member of the government, can give a decision until the Minister of Finance brings down his budget and lets us know what he thinks about it and what the government, through him, thinks about it. But that is one representation they have made. I am not wanting to pass up those which are not in absolute accordance with our policy, but there is one about which I think I should say something:

First, it is suggested that the government of Canada encourage, and assist financially, the development of programs to regularly provide milk to children in primary and secondary schools. This is a policy which should be adopted for reasons of public health, quite apart from the admitted assistance it would give to the dairy industry.

Again I point out that that policy can only be started in the province. The provinces have the administration and handling of the schools and milk, and, so far as I know, no province has indicated up to now that it is prepared to go ahead with that policy. I would suggest to my friends from Saskatchewan, having all the influence they have with the government there, that they might make a start there instead of starting down here.

Mr. Studer: They might use butter instead of margarine.

Mr. Gardiner: Someone has said they might use butter instead of margarine. The minister in that province said last session that it would cost them $25,000 to put butter instead of margarine into the government institutions, and therefore he was not going to do it.

Mr. Studer: Shame.

Mr. Gardiner: Now we come to the marketing situation:

One of the organized means by which farmers are grappling with their own marketing problems is the use of producer-controlled marketing boards employing legislation to give legal status to their regulations. Boards have been in operation for many years in some of our provinces.

I mentioned this a moment ago.

In Ontario there is currently a great deal of new development along these lines. And in all of Canada farmers expect that the years ahead will see the continued development and improvement of this type of marketing organization. It is necessary to emphasize, therefore, the very great importance that attaches, both immediately and in the future, to the need for clearing away any constitutional obstacles which may exist to prevent the effective functioning of such boards. At the present time many of the most critical issues involved are embodied in a reference to the supreme court, and the court's views presumably will be known some time this spring.

The Canadian Federation of Agriculture wishes at this time to request that if the court rulings reveal that provincial legislation, together with the present federal act, cannot provide the legal authority necessary to make the functioning of producer boards effective, that the federal government take immediate action to introduce legislation that will make it possible for these boards to be adequately financed and to achieve as fully as possible their orderly marketing objectives.

All I am going to say about that is that when the federal provincial conference was held some weeks ago—not the conference held this last week—the provincial representatives who were here from Ontario met the Minister of Justice (Mr. Garson) and myself and went over all this legislation, and the Minister of Justice has assisted them in every way in getting it before the court and having its validity determined at as early a date as possible. Then it goes on to deal with grain and here is what they say about that:

The Canadian Federation of Agriculture therefore wishes to express its complete support of the Canadian wheat board system of marketing.

Some hon. Members: Hear, hear.

Mr. Gardiner: I will say "hear, hear" to that also. The only policy the government of Canada has in connection with the marketing of wheat is the wheat board. The

wheat board was set up by this government in its present form as a compulsory marketing board to handle the wheat of the farmer through a board to which the farmers are compelled to deliver their wheat. It was set up under this government in 1943. I know that my friends on the other side of the house like to say it was first advocated —in this house, I presume; it was advocated outside of it earlier than that—by the late Mr. Bennett, and it was. But again I repeat that when Mr. Bennett brought it into the house he had the biggest majority there ever was in this house prior to that time, and he was not able to put it through. He therefore withdrew it.

An hon. Member: He was forced to.

Mr. Gardiner: I hear some of my friends saying he was forced to yield. But I should like to see my friends opposite force us to do some particular thing under similar circumstances.

Mr. Drew: We did last year.

Mr. Gardiner: As a matter of fact there were so many men sitting on the government side of the house at that time who did not believe in that policy that Mr. Bennett was not able to put it through, and he made apologies for his own party later on. Nevertheless the legislation was put through in a particular form, and later on we found it advisable to make it a compulsory board.

That has been the policy of this government ever since. We have taken over the marketing of wheat by a wheat board which the farmers wanted. We have said to them, "Go ahead and market that wheat" and we have given them all the facilities and powers necessary to make it possible for them to market it. Again the Canadian Federation of Agriculture says that policy is the right policy and they are in agreement with it. It also urges that every effort be made to bring about a satisfactory renewal of the international wheat agreement. The minister concerned has reported on that matter to the house from time to time, and has indicated that everything possible is being done to bring about that result, although we are not in a position to state whether it will be successful.

Finally, on behalf again of our prairie grain producers, we would endorse the quota system of grain marketing,—

Again that was introduced by this government, through the wheat board of course, but before the wheat board had the power it has at the present time.

—with the request that this system be continued, and combined with a distribution of box cars as between shipping points that will make space available on an equitable basis.

Then they come down to feed freight assistance:

We would simply repeat our request that this policy be continued, and further ask that it be given full recognition as a permanent national policy by being embodied in special legislation rather than maintained by order in council.

That is another policy of this government which they support. They did not come here asking for something different on all these matters. They came here to encourage us to go on to do more, because we had been doing the things which the Canadian Federation of Agriculture thought ought to be done. They go on to deal with international trade arrangements, emphasizing the point they made with regard to dairy products. Then third they recognize the wisdom of individual countries, including our own, so managing their domestic affairs as to keep to a minimum the necessity of imposing import restrictions or selling export surpluses at less than domestic prices.

Then they go on to support the government marketing some of this butter—the small amount they have in addition to what is needed here—outside of this country. Then they deal with farm credits, and they say this:

This second statement of policy which we are presenting for your consideration at this time deals with the subject of farm credit. This statement has already been brought to the attention of the Minister of Finance because of the fact that the legislation dealing with the Canadian farm loan board has been opened up and was due for early consideration by parliament.

That is another thing they agree with. Then they go on to say this:

There are a number of very specific recommendatains contained in this farm credit policy,—

That was put out in a separate document.

—and we will at this time mention only the major features. In general they are aimed at reducing the cost, and broadening and liberalizing the various provisions of our federal farm credit institutions.

Of course they go on to say they would like to have a lower interest. They think maybe the interest rate ought to be 3½ per cent, and they make strong representations to that effect. But the principle of the legislation which has been introduced into this house in order to provide credit for farmers, farm improvement loans and farm loans, which was in effect before this present government came into power, and which has been changed somewhat since—they are in favour of all those policies and simply say they would like to have a lower rate of interest upon them, if that is possible.

To establish a policy for providing emergency or disaster credit on an interest-free basis where the nature and extent of a farmer's loss justifies the granting of such credit.

That was their final request, and they went on to refer to something that was taking place in the province of British Columbia, where strawberry plants had been frozen and where other difficulties had arisen. Again it has been pointed out to British Columbia and to others that legislation of that kind should originate in the provinces. The federal government has not said what assistance it would give if such legislation were passed. They have left it in the hands of the provincial governments to determine whether they are going to do anything and what they are going to do in order to meet the situation before the federal government says anything with regard to it.

That is the presentation in so far as agriculture is concerned. They have dealt with other matters such as radio, television and so on, but I am not going into those matters. What I wish to say to the hon. member for Prince Albert is this. If he thinks, as he did back in 1941, that this government ought to follow the policies which are supported by the Canadian Federation of Agriculture; if he will go back and read those policies now and check up on what has been done by the federal government since then, if he will then read this presentation he will find in it only commendation for the government for what they have done. There is no criticism of the policies that have been put into effect but only commendation for what they have done, and then suggesting a few ways in which it might be possible to improve upon the action taken.

If my hon. friends do not find that strong enough, and if they think that Mr. Hannam was speaking to the government and therefore might not have said that to his own organization, I read you just this from his speech to the Canadian Federation of Agriculture:

> Our present butter program is a case in point.

This is after having indicated the things that have been done.

> It is difficult to conceive of a farm program that is more considerate of consumers and taxpayers interests than this one.
>
> It maintains a ceiling for consumers at about 64 or 65 cents retail, when without it the price of butter might easily go to 80 or 90 cents in winter months as it did several years ago when the board held no stocks. It has not lowered quality. It has cost, on the average, less than $1 million a year—

That was indicated by the hon. member for Brant-Haldimand (Mr. Charlton) yesterday.

> —yet spokesmen for consumers and taxpayers are advocating an alternative type of support program designed to lower the price to the consumer while still maintaining 58 cent support for the producer. They have not explained that, if that type of program were adopted and it succeeded in a substantial lowering of the retail price of butter, it would probably cost the treasury up to $10 to $20 million each year.

In other words, he is supporting the government policy there.

Mr. Cardiff: Would the minister allow a question?

Mr. Gardiner: Yes.

Mr. Cardiff: Did the minister write Mr. Hannam's speech?

Mr. Gardiner: Well, that is just another way of saying, Mr. Speaker, that the president of the federation of agriculture is in such close agreement with the policies of this government that my hon. friend thinks I must have written his speech. Of course, Mr. Hannam comes from the same part of the country as my hon. friend, and he knows that nobody up in that part of the country, not even the hon. member, would allow anyone to write his speech for him.

The suggestion has been made that we should have parity prices. It has been suggested that the federation agrees that we ought to have parity prices. I have in my hand what the federation has agreed to, and what they have said we ought to do. They were in favour of having a mathematical formula worked out which they thought everyone might be able to understand and from which we would arrive at support prices for our different products. In order to explain what they had in mind, they said this:

> Calculation of modernized basic prices (calculated according to the formula recommended by the C.F.A. national farm policy committee.)

It was passed eventually by the federation itself meeting in Edmonton last year. They illustrate here the way it works. The average price of No. 1 wheat, Fort William, 1943-44 to 1952-53, $1.75; index of wholesale prices of farm products 1944-53, 150·9. Then, 1925-29 being taken as 100, cost of commodities and services including living costs, western provinces, in 1953 equals 176·3; then the basic price for wheat, 1954-55 equals $1.75 multiplied by 100 over 150·9 times 176·3 over 100 equals $1.16 multiplied by 176·3 over 100 or $2.05 a bushel, and that is parity. They say the range that should be acknowledged in setting support prices should be from 65 to 85 per cent of the basic price, which would be from $1.33 to $1.74 per bushel, basis Fort William. The floor price which is set, and has been set for years, is $1.40, which is between those two prices of $1.33 and $1.74.

Well, they worked out another one here, and I am not going all through it as I did the first one. It is for good steers. When they finish the calculation they say that parity

price should be $23.06. I think that is very close to the price that was worked out by the farmers' union when they were here a week or two ago. Some hon. members were quoting from the farm union brief. Unfortunately for the farmers' union, as compared with the federation, the farmers' union says that floor prices ought to be parity prices. In connection with the $23.06 the federation says the range of floor prices ought to be anywhere from 65 to 85 per cent of the basic price, or between $14.99 and $19.60 per hundred. When I first read this document, that is exactly what beef cattle were, $19.60, the highest price at which they said there should be a floor. It has been up a little and it has been down a little since, but generally speaking that floor is satisfactory to them.

I have a list here of the calculations for the different products we were talking about. I have already covered wheat and I have covered steers. Eighty-five per cent of the steer price at Toronto is $19.60. That is not the price at the moment, but that is the price stated here as being the top floor price. As a matter of fact, when the federation concluded with this they said they did not want floor prices on cattle. The floor price is worked out here on this sheet, but they say in the statement that they do not want floor prices on cattle.

Why do they say that? They say that because they agree with the government that the floor price we have now is the highest price you can obtain anywhere in the world; it is the price you can get by shipping cattle over to the United States. Anyone who wants to ship cattle there can do so. They say that ought to be the floor price on cattle. We agree with that and we have not attempted, except when we had foot-and-mouth disease in the country, to put a floor price under cattle.

Coming to hogs we find that 65 per cent of the basic price for grade B hogs is $19.99 and 85 per cent is $26.55, while the floor price for grade A is $23 at Toronto or Montreal. We are very close to the middle point, which is $23.07. Again the support price is much as they think it ought to be and as we think it ought to be.

Then we come to butter, upon which they have already expressed themselves, and I would not comment any further on these prices if it were not for filling out the table. We find that they calculate 65 per cent of parity to be 45·6 cents and 85 per cent of parity to be 59·7 cents. Our floor price is 58 cents. Canadian cheese works out to a range of from 23·1 to 33·3 cents, and I believe that today cheese is 33 cents if I read the market correctly this morning. This has been working along fairly well. We put up the 24-cent guarantee and the provincial government of Ontario puts up 6 cents, which makes it 30 cents.

There is a calculation for grade A eggs, Montreal, and a price of 41 cents is 65 per cent of parity and 85 per cent of parity is 53·6 cents. The support price we have established is 38 cents on December 1, for any eggs that are in store. Last year the price throughout the season was higher than this price at which we were stabilizing the price.

Now, I say that is the plan which has been worked out by the federation of agriculture, and I think it should be agreed that it is pretty well in line with what we have been doing by another method. There is one other matter that I think should be touched upon. A lot has been said about these income figures.

I am going to read a statement I got from the department as to what these figures mean:

The Farmer's Share of the National Income

There are no figures anywhere—

This is not my statement; this is a statement I got from the department.

There are no figures anywhere to show what the farmers' share of the national income actually is.

Mr. Nicholson: Why are there not?

Mr. Gardiner: That is a very good question. They tell me one of the reasons is that it would be a little costly. What I am going to ask you is, where did you get the figures you quoted? That is the purpose of reading this.

Mr. Knowles: From the bureau of statistics.

Mr. Gardiner: I continue :

The figures published by D.B.S. show:

1. Income derived from sale of farm products;
2. Income earned as wages and salaries, and
3. Income from various types of production.

The income of farmers, like the income of many other people, is derived from various sources. These are:

1. The sale of farm products;
2. Salaries and wages earned at non-farm work.

This is in brackets.

(In the United States it is estimated that more than one-third of the income of farmers comes from non-farm sources.)

3. Income from investments. Many farmers have considerable sums invested in farm mortgages, in bonds, life insurance, and many other forms of investment. Income from these sources is not farm income in the normal sense but investment income.

4. Income in kind and rent free housing. Farmers use their own food and live in their own houses.

Farm income figures published by D.B.S. attribute much lower values to these items than are actually paid by urban dwellers.

5. The income of hired workers on farms is not listed as part of the farm income but rather as wage and salary income. It is estimated that there are approximately 80,000 hired men on Canadian farms. They probably earn $150 million a year. The hired men and their families, if any, are part of the farm population, but their income is classified properly with salaries and wages.

In the census returns any person living on an acre of land or more and deriving $250 or more from the sale of farm products is classified as a farmer. Farms of this sort probably make up one-quarter of the total number of farms listed in the census returns. The people concerned live on the farms, produce much of their own food but earn their cash income by other types of employment; many are persons who have retired on pension. The pensions are income but they are not listed as part of the farm income.

All of these facts prove beyond a doubt that the so-called farm income is not the equivalent of the income of farmers. Hence arguments based on the proposition that the farm income makes a smaller proportion of the national income than the farm population makes of the national population are fallacious.

And should be corrected.

Mr. Diefenbaker: Who prepared that statement?

Mr. Gardiner: It was prepared in the department.

Mr. Knowles: Which department?

Mr. Nicholson: Did the minister try to get figures from the Department of National Revenue?

Mr. Gardiner: I will give it to you, and it will do you good.

The fact is that farms vary enormously in their earning power from area to area and from farm to farm.

Mr. Charlton: On a question of privilege—

Mr. Deputy Speaker: I understand the hon. member for Brant-Haldimand is rising on a question of privilege.

Mr. Charlton: If it is not a statement of the minister it is written outside the house. How can the minister read that statement in the house if it was produced elsewhere?

Mr. Gardiner: For the same reason that my hon. friend read a statement prepared—

Mr. Deputy Speaker: As I heard the extract which the minister read it did not comment on a proceeding within the house. That is the differentiation.

Mr. Charlton: I understand it does.

Mr. Argue: He said the arguments were fallacious.

Mr. Gardiner: It is exactly the same kind of statement as my hon. friend was permitted to put on the record last night, and I am going to have it corrected.

Mr. Drew: Mr. Speaker, surely if the minister is going to read something into the record he has an obligation to indicate the source of that statement so that hon. members may know where it comes from. That is a most elementary requirement of a statement of that kind.

[Mr. Gardiner.]

Mr. Gardiner: Mr. Speaker, probably the only obligation I am under is to accept responsibility for it myself, and I will.

Mr. Drew: Mr. Speaker, that is begging the question. It is like the treatment the minister accords this house on other occasions. He is reading a statement prepared by someone else, and we have the right to know who prepared the statement.

Mr. Knowles: Can we not have it clear what department prepared the statement? The minister keeps talking about a department, but he does not say what department.

Mr. Gardiner: This was prepared in the Department of Agriculture.

Mr. Knowles: Prepared for the minister by his department.

Mr. Gardiner: By the department without any help from me at all.

Mr. Nicholson: Mr. Speaker, whoever prepared this document, it questions the integrity of hon. members who referred to the share of the national income which has gone to the farmers. Those of us who have used figures have used statistics prepared by the dominion bureau of statistics. I suggest the minister is quoting a statement made by someone outside the house, and he should indicate who is responsible for it.

Mr. Drew: Mr. Speaker, there is another point—

Mr. Deputy Speaker: Order. Perhaps I should clear up immediately the point of the hon. member for Mackenzie that there was some question as to the integrity of hon. members. I did not take any such interpretation at all from the minister's remarks.

Mr. Drew: Mr. Speaker, a point has arisen here which—

Mr. Deputy Speaker: Order.

Mr. Drew: A point has arisen here which cannot be passed over. The minister at this stage now says that this was prepared in his department. If that is the fact, then he is doing something most improper, because he is attributing to unnamed members of his department attacks on statements that have been made in this house. That is a most improper thing. If he is doing that he is undermining the position of the civil servants in his department. The minister can make this either as his own statement, or else give us the name of the person in his department who made this most improper statement.

Mr. Deputy Speaker: Order. As I understand it, the minister even before the Leader

of the Opposition rose to his feet, had accepted full responsibility himself for the remarks he is making.

Mr. Drew: No.

Mr. Gardiner: Yes, I did.

Mr. Drew: This must be now clear. He did not accept full responsibility beyond—

Some hon. Members: Yes.

Mr. Drew: —saying that it had been prepared by someone in his department and that he had accepted responsibility for presenting it here after it was prepared by someone in his department.

Mr. Gardiner: I said more than that.

Mr. Drew: If it is some civil servant making improper comments, then it is unfair to the civil service unless the minister is prepared to tell who it was.

Mr. Deputy Speaker: Order. Perhaps the accuracy of the memory of the Leader of the Opposition and myself will be clarified tomorrow. My memory is that the minister accepted full responsibility for the remarks which he was making.

Mr. Gardiner: And more than that, Mr. Speaker. The remarks that my hon. friend was speaking of were not read from this, as he knows. The statements I made to hon. members over there were made by me—

Mr. Fulton: Mr. Speaker, on a point of order, which is related to the other point, I question whether it is in order for the Minister of Agriculture to be standing up in this house, as I now understand he is, and denying the accuracy of the figures produced by the bureau of statistics in the department headed by his colleague the Minister of Trade and Commerce. That is what he is doing.

Mr. Gardiner: If I had not explained it before—

Mr. McCullough (Moose Mountain): On a point of order—

Mr. Gardiner: I have the floor.

Mr. McCullough (Moose Mountain): On a point of order, last evening I put figures on the record which were taken from the bureau of statistics. The minister rose in his place and asked me where I had secured the figures. I gave the source of the figures. Today the minister is questioning the figures that were put out by the government, their own statistical figures. I think, sir, there is a point of order here. The minister is not saying anything further than that he is taking the responsibility for these figures. He should tell the house the source of the figures and the authority for them.

Mr. Gardiner: On the point of order, in view of the fact that I am not allowed to rise unless I speak on the point of order, apparently, the statements I have read are statements that were prepared for me in my own department. I have not any doubt they were prepared with the assistance of members from other departments. The reason they were prepared is this. I know that the interpretation that is being put on the figures by members on the other side, particularly the C.C.F. group, is not correct. That does not mean the figures are not correct because they have been. The interpretation C.C.F. members are putting on the figures is not correct.

Mr. Charlton: The minister is a past master at that.

Mr. Gardiner: The statement continues:

> The fact is that farms vary enormously in their earning power from area to area and from farm to farm. It has long been established that about 40 per cent of the farms as listed in the census earn about 80 per cent of the so-called farm income. Other people who are listed as farmers in the census earn their incomes from such a great variety of sources that up to the present time it has been impossible to devise any method of estimating with even approximate accuracy what their incomes actually are.

Mr. Nicholson: That is nonsense; they are doing that in the United States all the time.

Mr. Gardiner: If my hon. friend will allow his mind to go back to the time when I last addressed this house, I gave the plan they used in the United States and they make out a net worth return which gives the figures. You do not have that here.

> It is understood that plans are being made to make a study of the question in the hope that more accurate estimates of farm and other types of income may be made.
>
> Gross income from the sale of farm products is determined by (a) the volume sold, and (b) price levels. In recent years income from the sale of milk and milk products in Canada has remained remarkably stable or has risen somewhat. On the other hand, income from the sale of wheat has declined heavily because of the low volume and low quality of the wheat produced in 1954 and because of a slower rate of sale than in the years between 1948 and 1953 when accumulated surpluses and heavy current production were both liquidated.
>
> Meat prices reached abnormally high levels in 1950 and 1951 but declined sharply in the latter part of 1951. Beef prices have been relatively stable in the last three years, but pork prices have fluctuated fairly widely, mainly due to similar fluctuations in the United States pork markets. Income derived from the sale of poultry and eggs has been maintained by rising volume of sales and price levels which, though subject to seasonal fluctuations, compare favourably with those of the late 1940's and early 1950's.

Economic Position of Agriculture

Prices of fruits and vegetables, especially apples and potatoes, have varied from very high to very low levels. Because both products are highly perishable prices have been subject to short-term supply and demand factors. For these products, as well as for eggs and dairy products, support prices and marketing agreements have cushioned price declines and have helped materially to maintain farm income.

Well, that is the federal document; but since my hon. friends will not accept statements from my department I will read them one from the government of Saskatchewan.

Mr. McCullough (Moose Mountain): Would the minister put on the record the amount of fluctuation in hog prices since 1952?

Mr. Gardiner: Would my hon. friend repeat his question?

Mr. McCullough (Moose Mountain): Would the minister care to put on record the fluctuation in hog prices from 1952?

Mr. Gardiner: I will do that when I am discussing my estimates. You will understand it better then.

Mr. Ellis: A one-man filibuster.

Mr. Gardiner: I come now to the report which we found so valuable this session. It is a report of a royal commission of the province of Saskatchewan on agriculture and rural life.

An hon. Member: Page?

Mr. Gardiner: Page 6, quite early in the report. Incidentally, I have read it all since it was here last. It is a very good report taken all in all.

Mr. Argue: Do you agree with it?

Mr. Gardiner: I do not agree with everything that is in it but there are some things with which my hon. friends do not agree either.

Table 1 on page 6 gives the average net farm income per farm operator in Saskatchewan for selected years from 1926 to 1954. I am sure that my friends in the C.C.F. group and all other hon. members in this house will agree with one thing and that is that there is no province in Canada that suffered more during the last two years because of a drop in income than did the province of Saskatchewan. It suffered more than any other province for several reasons—

Mr. Ellis: Federal government policies.

Mr. Gardiner: It is the only province in Canada where there is a socialist government.

From 1926 to 1954 the figures are given for every five years so it will not be a long table. I should like to ask permission to place it on the record when I have finished with it.

[Mr. Gardiner.]

AVERAGE NET FARM INCOME PER FARM OPERATOR, SASKATCHEWAN, SELECTED YEARS, 1926-1954

Year	Net Farm Income Per Farm Operator
	$
1926	1,416
1931	-225
1936	79
1941	505
1946	1,702
1947	2,040
1948	3,132
1949	3,280
1950	2,349
1951	4,936
1952	5,169
1953	4,450
1954	1,194

In 1926 the average net income for the farmer was $1,416. Someone said yesterday the figures for 1931 should be given when an hon. member was giving the house certain information. I have here the net farm income per farm in Saskatchewan for 1931, minus $225. That represents $225 worse than nothing.

An hon. Member: Any questions on that?

Mr. Gardiner: This government came into power in 1935 and the next year, 1936, the net income was $79 per farm.

Mr. Ellis: With the Liberal government in power.

Mr. Gardiner: Yes. We had been in power for only one year and it has taken the present government of Saskatchewan much longer than that to get over the difficulties of 1954.

Five years later, in 1941, the net farm income was $505 per farm. In 1946, the year after the war, it was $1,702.

Mr. Ellis: There was a C.C.F. government in Saskatchewan then.

Mr. Gardiner: Yes, in Saskatchewan, but not here. Then in 1947 it was $2,040. This table gives the figure for every year from there on but I will not read them all.

Mr. Argue: Oh, go ahead.

Mr. Gardiner: I will come down to 1951, however, when the income was $4,936 per farm. Based on the kind of reasoning we have listened to in this house, that represents more than 100 per cent increase from the year before. It was $2,349 the year before. In 1951 it was $4,936. In 1952 it was $5,169. In 1953 it was $4,450, or an average for the three years of $4,850.

Before going on to give the figures for the next year I would like to ask the house one question. If we are concerned about keeping young men on the farms, if we are concerned about attracting people to come here to work on the farms, which would we go about the country repeating, the figures of 1954 when we had a rusted crop and great

difficulties in getting rid of a poor crop, or the figures for the three years which I have just read? I have known people who have come from Holland and settled on farms in this country who have made $16,500 in clear cash in six years. They have rented buildings and bought all the grain they used for feeding. Those fellows are not going to run back home and tell the kind of stories hon. members are telling in this house concerning farm conditions; they are going to tell their stories regarding the three high years if they desire more of their people to come here.

Mr. Nicholson: Where did that happen?

Mr. Gardiner: That happened in Nova Scotia.

Mr. Argue: One case in Canada out of 600,000.

Mr. Gardiner: May I ask my hon. friends again this: If they want the young men of this country to stay on the farms, should they go around telling them that the average income is the income of 1954, and that that is where it is going to stay? Should they not be telling them that it averaged $4,850 a year for three years in Saskatchewan, and at least that much in some other places? Are you going to tell them that with the idea of getting them to go out to the farms to stay there? The hon. member for Mackenzie (Mr. Nicholson) told us yesterday about paying a visit to his home in Bruce and finding only old people on the farms there. If he repeats the stories up there that are repeated in this house I wonder if even the old people will stay on the farm. Certainly the young people are not likely to stay.

Mr. Nicholson: Is the minister suggesting seriously that farmers are getting a fair share of the national income?

Mr. Gardiner: We will come to that; I shall have more to say about that and when I come to it you will not like it. This table indicates that hon. members who come here from Saskatchewan, some of whom are not farmers and some of whom are farmers, are telling the young people of this country that conditions are just terrible on the farm. Anyone who has lived on a farm knows that in connection with wheat the situation has not changed, in so far as having good and bad years is concerned, from the times of Joseph. Even then they prepared in the seven good years for the seven bad years. You can grow No. 1 hard wheat only in a dry country, a country similar to our west. When you live and farm there you must prepare for the poor years in the good years. There have been three years when the average income has been $4,850 a year. All my hon. friends talk about is 1954 when it went down to $1,194, but it is still higher than it has been in any other year during that long period except when you had a Liberal government in power.

Those are the facts taken from that table; they are not facts coming out here. They are not facts put out by this government, they are facts put out by this commission which sat in Saskatchewan.

Mr. Deputy Speaker: I understand that the minister will require permission to place this table on *Hansard*. Has the minister unanimous consent?

Some hon. Members: Agreed.

Mr. Argue: Print the whole report.

Mr. Gardiner: You will find it difficult enough before you are through with it without having it printed here.

Mr. Argue: I had nothing to do with it.

Mr. Gardiner: Someone said something about the farmer having his proper share of the income.

Mr. Ellis: Give us the 1954 figure.

Mr. Gardiner: I gave the 1954 figure, $1,194.

Mr. Argue: And 1955?

Mr. Gardiner: 1955 is not out yet, at least they do not have it. I am giving the commission's figures.

Mr. Argue: The estimate for Canada is lower than for 1954.

Mr. Gardiner: No, it is not.

Mr. Sinclair: If you are a farmer you look awfully prosperous from here.

Mr. Gardiner: I have here on my desk the official publication of the C.C.F. party and they have classified the population of Canada. They show the number of families of working classes at 815,000. This was based on the 1931 census.

Mr. Nicholson: What is the minister reading from?

Mr. Gardiner: "Make This Your Canada".

Mr. Nicholson: What year?

Mr. Gardiner: It was published in 1943 with a foreword by your leader.

Mr. Sinclair: Shortly after the Regina manifesto.

Mr. Gardiner: Families of farm classes are given at 598,700. Those figures indicate that 42 per cent of the population is made up of working classes and 31·2 per cent of farm classes. Middle classes, including small and medium business people, professional, technical, managerial, white collar workers and independent industrial workers, 492,000 families. Those total 1,905,700 families, which they say is 99·4 per cent of the total population.

The next class is the $10,000 a year or more, including finance, industry and professions, 10,500 families, or 0·06 per cent. Among those are the 50 big shots. I wonder if my hon. friends have forgotten all about the 50 big shots. What is the reason why we do not hear any more about them? I would like to ask my hon. friends if the C.C.F. now think that all groups but farmers should be taxed in order to give the farmers more? Is that their present policy? Do they think that all these other people, labourers, middle class and others, should be taxed in order to give the farmers more, or are they only talking about the 50 big shots? Are those the people they are going to tax in order to get more for the farmers?

I do not think that the C.C.F. have been so keen on getting things done, as they should be done, as they try to make out in this house or even outside of it. There is one industry in Saskatchewan which is known to make more money than any other industry there. The government buys all its products and sells all its products. They have not nationalized that industry during the whole period of eleven years they have been there. Why haven't they?

The hon. member for Winnipeg North Centre (Mr. Knowles) asked the Minister of Justice (Mr. Garson) yesterday if action was going to be taken against the producers and distributors of beer in Canada. The only organization that produces and distributes beer in Saskatchewan is the organization which sells beer to the government of Saskatchewan. With all their plans about nationalization and getting industry started which will make money they seem to take a lot of time in dealing with one industry. If they did it would pay more in the way of assistance to farmers and others in Saskatchewan than any other industry they could start with.

In addition to that, my hon. friends' friends are now bringing a cement corporation into Regina to make cement out of Regina clay. I have some doubts whether cement can be made out of Regina clay. I have some doubts about a policy which would ship rock all the way from Winnipeg to Regina in order to make cement. I have some idea about who the persons are who are going to organize this. It is not going to be a government owned and operated organization. These men who object to bonds being guaranteed to build a gas pipe line across Canada are not opposed to bonds being guaranteed by the government of Saskatchewan in order to put up a cement factory out there. All these things were not in this handbook I have here in my hand.

Mr. Knowles: Are you giving credit to Arthur Blakely?

Mr. Gardiner: I had it in my mind long before Arthur Blakely knew anything about it.

Mr. Ellis: Give us the whole story.

Mr. Gardiner: The fact of the matter is that they are going to try to start a factory to make cement, and it is not going to be the government that is going to do it.

Mr. Ellis: The Liberals opposed it.

Mr. Gardiner: The Liberals will take care of you when you come around.

An hon. Member: That is a joke.

Mr. Deputy Speaker: Order. It seems to me that we are now wandering a little far from the subamendment that is before the house, which reads:

"in such a manner as to provide for a fair share of the national income for agriculture".

Mr. Gardiner: Yes, Mr. Speaker, perhaps I have wandered a little far, but I have been trying to find out where they have to go to get the money to give effect to the amendment and whether they have forgotten all about the old policies they had when they first came here. I presume that they are comparing the position today with that in 1951. As I have said before in this house, there has been a constant increase in the farmer's income from 1931 up to the present time, and most of that has taken place in the years when this government has been in power. I still repeat that. But there is one year in which it went up much higher, 1951, and in some provinces it went up still higher the next year. Are my friends advocating that we should return to the conditions we had in 1951 and 1952 in order to give us that higher return?

There is only one reason why we had that high return in 1951 and 1952, and that is that we were at war in Korea. There is no other reason. There is only one reason for the increased cost of farm implements, and that reason is the preparations that we made for defence while we were at war in Korea and the preparations we are making for defence now. So, if my hon. friends are in the position where they are thinking in terms of how we are going to balance these things, then I would suggest to them that, in order to follow the plan they have been following in their speeches, they will have to depart entirely from the program they had before them when they came to this house about 20 years ago. What was that program? Absolutely no part in any defence program. As a matter of fact, I heard members on the floor of this house say they were particularly pleased that their sons had come to them and

said they would take no part. That is not the policy that is being talked of today.

If members on the other side of the house actually disagree with the policies of this government, which result in high expenditures in order to keep up defence, they ought to get up and say so, as they did before these policies were put into effect some years ago. This government has laid down a policy in connection with these matters. Of course, it is costly; it requires great taxation; it requires that farmers pay more taxes than they ever paid before across this country; and it requires, too, that costs of implements made out of steel, implements made out of aluminum, clothing made out of wool or any other fibre, all these are more costly in this country today because we find it necessary to carry on with those policies.

If my hon. friends are going to be honest with themselves and the voters in advocating their policies, they are going to come right out and say either that it should be done or it should not be done. I suggest to them that, if it should be done, there is not much possibility of changing the cost of some of the things that are made out of those materials. Those costs are going to stay up so long as it is necessary to carry on those policies. Neither this government nor any other government in a country so small as this in population can do very much about that, but we are hopeful that the policies of this government, the policies of the farmers in producing food for people throughout the world, and other policies will result in a condition of peace among the nations of the world that will make it possible for us not only to put down the prices of the things the farmer needs but make it possible for them to put them down.

An hon. Member: Are the farmers getting their fair share of the national income?

Mr. Gardiner: I ask my hon. friend what he now thinks about his 50 big shots. Where are they? What does he think about all the population that is off farms? Should they all be taxed to help the farmer out in these cases? Should we all be taxed? With that in mind, I am going to say to the house that I am going to vote against the motion, largely because of the fact that it has been tried out in the United States and voted out within the last few days.

An hon. Member: By one man.

Mr. Gardiner: It took 46 of them. He was just the forty-sixth. That in itself, it having been tried out in the great country to the south, is sufficient reason for me to say I am still going to carry on on the advice I got 15 years ago from the best officials we had in these departments at that time, to the effect that this policy would wind up just as it has wound up. They filled their caves with eggs, they filled their storages with butter; they filled their storages with wheat; and they had to crush their potatoes in piles on the ground in order to utilize them to produce starch, rather than food that could be consumed. All these things resulted from having the policy at that time, and I agree with the present government and the policies that have followed to the effect that that kind of thing is not a good thing to adopt in this country, or for the United States either for that matter.

Mr. Nicholson: I wonder if the minister would answer my last question. Does he consider the farmers are getting a fair share of the national income?

Mr. Gardiner: I have already said in answer to that question that I thought the farmer did require more than he is getting.

Mr. Argue: A lot of words to prove nothing.

Mr. J. A. Smith (Battle River-Camrose): In rising to take part in this debate on the amendment to the motion to go into committee of supply and on the subamendment, I do so with great pleasure. However, before commencing my remarks, I must pay my compliments to the Minister of Agriculture. As I mentioned in another speech, he is a wonderful man. He reminds me somewhat of the United States, of which we have had so much mention this afternoon. He reminds me somewhat of a great orator, shall I say, such as the late Senator Borah of the United States, or the late Huey Long.

We have been told this afternoon in a speech that took nearly two hours that the plight of agriculture in Canada is not too bad. With that impression, which the minister left with me, I must almost immediately take exception. I was very pleased that at the close of his talk the hon. member for Mackenzie got from the minister the statement that the farmers of Canada were perhaps entitled to a slightly larger share of the national income. With that premise before me, I propose to commence.

This amendment is one that should appeal to agriculture from Nova Scotia westward to British Columbia. It should appeal to the potato grower of Prince Edward Island; to the apple grower of Nova Scotia; to the potato grower of New Brunswick; to the dairy farmer of Quebec; to the stock man, the fruit producer and, shall I say, the tobacco raiser of Ontario; to the beekeeper of Manitoba; and now I come to Saskatchewan. I did have in mind to say the grain farmers of Saskatchewan but perhaps, as I followed the course of the minister's remarks so closely, I should say something about the cement farmers of Saskatchewan as well, the stock raisers of

Alberta, the fruit growers of British Columbia. This particular amendment appeals to all branches of agriculture. It is national in scope. It does not select any particular phase of the industry. It requests parity prices for agriculture generally throughout Canada. We are not any longer going to hear through the halls of this building, "We have heard enough about wheat; we have heard too much about wheat". Today we are pleading in the interests of agriculture throughout all of Canada.

To me this particular amendment is one that should transcend the realm of party politics. Apparently it did not do that. I feel that the plight of agriculture in Canada at the present time is something that should be beyond party political lines. History shows us, Mr. Speaker, what happens to great nations when the governments of those nations let agriculture go down. We have had a great deal of history this afternoon. We have been taken from 1930 right up to 1956. Let me go back a little bit prior to that. Let me go back to the good old Roman days. What happened to the Roman empire when they let their agricultural industry decay? It went down slowly and steadily to oblivion.

Mr. Knowles: It must have had a Gardiner.

Mr. Smith (Battle River-Camrose): Maybe they had a Gardiner but they did not have a guardian to see that that did not happen. Again, to come back to modern times, may I point out that students who have studied the cause of the great depression in the United States in the thirties find now that one of the first danger signals which pointed to this ever-approaching depression in the United States was the sorry plight in which agriculture found itself in the United States during the twenties. Also coupled with this danger signal we find that they say that the ever-increasing instalment buying of the people of the United States was another danger signal. Mr. Speaker, I submit that we have those two danger signals right here in Canada today. I am only sorry that our present government is not prepared to pay more attention to these signals that we have with us.

I was very happy in January to notice that the leader of the great republic to the south of us, namely President Eisenhower, in his message on the state of the union assured the farmers of that country that federal administration was prepared to see that agriculture remained a stabilized industry in the United States. I should be only too happy if the Prime Minister of Canada (Mr. St. Laurent) would come before this house with a similar statement.

We have gone back to 1951 already this afternoon, Mr. Speaker. May I take you back just once more. I want to take you back to December, 1951, and to the city of Saskatoon. I am quoting from a statement to be found in the Ottawa *Journal*. It is dated December 7, Saskatoon. The headline of this article runs in this way, "Howe reminds wheat farmer taxpayers raised $65 million". I will quote just a bit further from this article:

> Mr. Howe told the delegates: "You have asked the people of Canada for help on many occasions and it is not so long ago that the taxpayers came through with $65 million"—the reference was to the final payment on the five-year wheat pool.

Just in that connection, Mr. Speaker, I wish to put on the record once again a statement which was made by the hon. member for Acadia (Mr. Quelch) no later than yesterday. He had this to say, as reported at page 2034 of *Hansard:*

> I have in my hand figures showing the losses that were suffered under the British wheat agreement by comparison with the world market price for class II wheat in the years 1946 to 1950, during which period the farmers lost $431,676,844. Then as the result of subsidizing the Canadian consumer at the same price at which we sold wheat to Britain instead of at the world market price, the farmers lost another $136,920,921. If you add those two figures together you get an over-all total of $568,597,765. If you subtract that from that figure $65 million which the government paid to the farmers on account of their losses, you have a net loss of approximately half a billion dollars.

Still in 1951 one of the leading spokesmen of this government reminded the farmers of the west that the taxpayers of Canada had come through with a measly $65 million. Then coming right up to January of this year the same right hon. gentleman, namely the Minister of Trade and Commerce (Mr. Howe), has this to say or it is reported that he had this to say: "Booming economy sees good year ahead". Every branch of industry in Canada, according to the statement, is booming. The statement was supposed to have originated from the office of the Minister of Trade and Commerce. Every branch of industry in Canada is booming with the exception of one, and what is it?

> Agricultural income, down in recent years, appears to have about reached a current bottom.

Mr. Speaker, I noticed with great interest that the Minister of Agriculture (Mr. Gardiner) had searched through the records for evidence to advance showing that the farmers of Canada were not in favour of parity prices. He must have been working about the same time as I was because this afternoon I wish to submit evidence to this house which I believe will support the pleas for parity prices. These pleas that I am going to bring in here this afternoon have been made by every farm organization throughout Canada. In starting on this discussion I might point out that in western Canada we have an active and aggressive farmers' organization which is rapidly growing eastward

across Canada. I am referring particularly to the interprovincial farm union council. This interprovincial farm union council has for years been submitting briefs to the federal government. I do not want to start at 1951 because it would take too much time and I have not an hour and forty minutes at my disposal at the present time. I want to point out that this is the submission made to the federal government on March 16, 1953. In dealing with livestock marketing they had this to say:

> There is considerable evidence to indicate that our western livestock industry is lacking in required stability; this applies not only to cattle and hogs but also poultry and other livestock products.

That was a submission made to the federal government on March 16, 1953.

Again on page 5 of the same submission they have this to say:

> We believe that as long as there are millions of people in the world who are underfed, as evidenced by reports of FAO, that every encouragement—even emphasis—ought to be placed on an all-out production program to bolster dwindling supplies of much needed foodstuffs. However, if as a result of such a program surpluses are built up, then provision should be made that such surpluses—be they long or short term—are not allowed to interfere with the prices on our home market.

At the same time, the interprovincial farm council pointed out this:

> Farmers have often been penalized by even small temporary surpluses, and the export price of their products have determined the price on the home market even in cases where only a small percentage of the total production was exported, and the largest share of it used for home consumption.

We realize, Mr. Speaker, as the minister pointed out this afternoon, that the vast percentage of livestock raised in Canada is consumed in Canada. We can see no reason for the general decline in the price of livestock during recent years.

Again in May of the same year a submission was made by the interprovincial farm union council to the standing committee on agriculture and colonization of this house. They had this to say. I think this is the keynote of their submissions throughout the years.

> The prosperity of agriculture, like any other industry or individual, cannot be judged by any calculation based on gross receipts, but it is the farmers' net income or "take home pay" that really tells the story. While it is admitted that the gross income to the agricultural industry has been increasing, like all other major economic groups in Canada, the fact remains that the net income to agriculture has been decreasing, and, in spite of the higher than average production recently, we are concerned to find that the amount of agricultural improvement loans are, of necessity, rapidly increasing. The amount owing to finance corporations on purchases of various types, as well as the outstanding accounts to local merchants, are a further matter of deep concern, and we are somewhat fearful that the present prices and income to western agriculture, as our share of the national income, does not leave the farmers sufficient reserves to protect them from the natural production hazards to which the agricultural industry is annually subjected.
>
> We believe that some definite steps must be taken by the government of Canada to raise the basic prices for agricultural commodities, and particularly that portion of our production sold on our domestic markets and consumed in Canada,—

That was a submission made in May, 1953. Then again, the same brief deals with livestock marketing and says:

> To those who have made a study of the present unsatisfactory situation of livestock marketing, the need for some new and definite program on a national or regional basis for establishing a plan of forward pricing in order to give the necessary stability to this most important branch of agriculture is becoming more and more evident.

Now, Mr. Speaker, in November, 1953, the same body in their submission to the government of Canada presented the following, dealing with livestock markets. They were not dealing with the price of wheat, the shortage of box cars or the weather, but with livestock markets.

> The farm unions are very concerned with the lack of long range stability of our livestock markets. We fail to see any justifiable reason why livestock prices, particularly beef cattle, should have been so drastically reduced to farmers.

Then, farther down:

> "We note in this September's issue of 'Current Review of Agricultural Conditions in Canada', issued by the federal Department of Agriculture at Ottawa, that our own Canadian people consumed 95 per cent of our total marketings of cattle and that only approximately 5 per cent was surplus for export during the first seven months of 1953."
>
> Therefore, our own government publication provides conclusive proof that the so-called overproduction bogey, so often advanced by others as an excuse for lowering prices to farmers is a myth at this period.

Now, in February, 1954, the Canadian farm union council made another submission to the government and they said:

> We believe the government's floor price system is inadequate for the producer;

Now, this has been brought out time and time again during the course of this session, with particular reference to the floor price on hogs. The matter of whether or not that floor price is being maintained across Canada is of great concern to the people of western Canada. I continue to quote:

> —in many instances only the packers and processors have benefited by the government's support policy. A fundamental flaw in the present Agricultural Prices Support Act is the absence of a proper price formula for establishing floor prices.

What happens far too often is that the floor price becomes the maximum price paid for that particular type of goods. Farm machinery has been mentioned by the minister and he explained the reason for the price of farm machinery being so high. I cannot

say that I agree with the argument he presented. However, here is what the interprovincial farm union has to say about it.

Today, the greatest annual expense on most western farms is the replacement and upkeep of farm machinery. Mechanization, forced on the farmer by labour shortage, has placed him at the mercy of the machine companies. Prices on farm machinery have increased fantastically since price control was removed in 1946 and as is shown by information available to the public—

Remember that there was no war in 1946. At that time there was no Korea to be concerned about. We were one year removed from war and steel was not then going into the making of instruments of war. However, since 1946 price control had been removed and prices of farm machinery had climbed steadily.

Now, the minister seemed to like to quote from a brief which was submitted by the Canadian Federation of Agriculture. I hold in my hand a copy of the annual address given by the president of the Canadian Federation of Agriculture at London, January 26, 1954. This particular section which I am now going to read deals with price support. The president has this to say:

During my first few years of employment in the farm movement, I saw agriculture drop tragically into the worst economic depression in history. From a net income of $663 million in 1928 the Canadian farm income fell and dwindled to $117 million in 1933.

Just to remind ourselves of what was happening at that time, I wish to read further. The president quoted a press item that drew a picture of what was happening at this particular time.

In the autumn of 1932—

By the way, it seems to me the minister did mention something about the good crop we were able to raise in the west in 1932. I do not know whether he remembered that we received 19½ cents a bushel for the wheat in 1932 as well. Let us keep all these figures wrapped up together. I am not going to blame any politician, so let us get ahead.

In the autumn of 1932 oats were sold by farmers for 3 cents per bushel and wheat for 19 cents per bushel. A certain farmer brought 12 hogs to town and received in payment for the dozen animals a $10 bill. A farm woman brought a case of 30 dozen eggs to trade for one pound of coffee. The storekeeper told her that he had more eggs than he could sell and for her to take her eggs back home. Out of the goodness of his heart he gave her a pound of coffee.

Do we want to go back to that? It appears, Mr. Speaker, that we are heading toward that kind of position, and unless the brakes are put on soon we might get there a little quicker than we expect. Suppose we were to visualize a world living in peace, a world in which tremendous sums of money did not have to be spent on needed defence, as is being done at the present time. Let us visualize a world in which everybody is living peacefully and production is at an all-time level. Would we then find a way to get rid of our surplus agricultural products? We do know that today millions are hungry in the world. In Canada we have an abundance that seems to have to stay here.

I wish to continue to quote from the remarks of the president of the Canadian Federation of Agriculture. He said:

In those days we had nothing that could be called distinctly a farm policy. Governments up to that time, were not to interfere in business, but they certainly made one exception in building high tariff walls around some industries.

This particular president seems to think we have a definite long-range agricultural policy in operation in Canada today. I judge that from the remarks of the Minister of Agriculture. What is the agricultural policy that is in operation in Canada today? We have price supports on three agricultural commodities, and that is all. We sometimes question whether price support remains on one or not. I am thinking particularly of hogs. We have a price support on butter, but what happens? We find that we cannot sell all our butter in Canada, and so we decide to sell it to foreign countries at a reduction of 21 cents a pound. This is the two-price system that the hon. member for Acadia (Mr. Quelch) has advocated for years. But we do have people in Canada who are not consuming all the butter that they would like to consume just simply because they cannot afford to buy it. I am now thinking of the old age pensioner who lives, as he does in some provinces, on $40 a month. He cannot afford to buy many pounds of butter; but how pleasant it would be for him if the Minister of Agriculture would take the suggestion made in this house some time ago by the hon. member for Jasper-Edson (Mr. Yuill) and perhaps every month, when the old age pension cheques are sent out to these old folks, include in the envelope along with the cheque one, two or three coupons, which would entitle them to buy a pound of butter at the same price charged to our good communist friends across the sea. I submit, Mr. Speaker, that is something that the minister could spend some time thinking about.

On January 19, 1955, the interprovincial farm union council, at this time still made up of only the four organizations, Alberta, and the B.C. block, Saskatchewan farmers' union, the Manitoba farmers' union and the Ontario farmers' union, presented a brief to the government. I am very happy, Mr. Speaker, to say that in this connection the

Ontario agricultural group has seen fit to join with this interprovincial organization, and I sincerely trust, as the years roll by, other agricultural organizations in the eastern part of Canada will join with this body and attempt to make the problems of agriculture more effective when they present their briefs before the government of Canada and the House of Commons. On page 5 of this particular brief, which I know the Minister of Agriculture has studied just as closely as he studied the one he read from today, which was presented to him by the Canadian Federation of Agriculture, they had this to say. I want to show the house how the policy of the interprovincial farm union council has been consistent throughout the years.

In the opinion of the interprovincial farm union council, there is only one realistic and equitable solution for this problem. That is the immediate adoption of a new national agricultural policy that will provide price guarantees for all Canadian farm products sold on domestic markets on a basis equivalent (and adjusted from time to time) to the cost of living index. This price, naturally, would be in line with the prices of consumer goods and services required by farmers.

I consider this to be a very fair request, Mr. Speaker. On page 6 they had this to say They were dealing with the problems of unemployment.

The interprovincial farm union council believes that adoption of a farm-price guarantee policy will provide a sound foundation for the improvement of general economic conditions in Canada. It would enable farmers to increase their purchases of consumer goods with the result that much of our present urban unemployment would disappear.

Just in that connection, Mr. Speaker, I am satisfied that the farmers in western Canada, particularly in my portion of Alberta, will not this year be going out early in the spring to the machine agent to try to order a combine just to make sure they will get it in August. The combines are sitting right there now. They were not sold last year. The reason they were not sold, and the reason the machine companies are eventually going to feel the pinch of the present economic position of agriculture, is that the farmers do not have the money.

I promised to stay away from wheat. I want to mention eggs and poultry prices. In the same submission I find the following:

While we commend the government for making a start—

That is fair enough. It has to do with eggs and poultry floor prices. Certainly, when the government does something good it should be commended, but when they fail to do something that we think is good we should tell them about it, and I propose to do that as long as I remain in this house. I continue:

While we commend the government for making a start, by insisting that the producer should receive his proper share of the benefits derived from the government support price on eggs, nevertheless we feel that the present egg price support plan is open to justifiable criticism as constituting more a guarantee to the processor than to the producer.

On page 11 they made a plea for parity prices. In closing I should like to ask, what is wrong with parity prices? Why should not the farmers of Canada, like the employers of any branch of industry, be assured their fair share of the national income?

An hon. Member: Hear, hear.

Mr. Smith (Battle River-Camrose): I am glad that somebody agrees with that. I think we have a convert over there, and I hope we can keep him that way. Just keep on smiling, because that smile of yours across the way amuses me.

Let us look at the record. I can read statistics into the record just as well as the Minister of Agriculture (Mr. Gardiner), but I do not have to go to socialist doctrines to get my records. I can find them elsewhere. However, let us look at the record. I hold in my hand a chart. I had better read where it comes from to keep the record straight. This is taken from figures compiled by the dominion bureau of statistics. It is a table which deals with gross and net farm income for the prairie provinces for the period from 1951 to 1955. It says the figures were compiled from the sale of farm products and participation payments on previous years' grain crop. The part in which I am particularly interested is the decline in net farm income from 1951. I find that in 1952 there was a decline in net farm income of 3·13 per cent. In 1953 it was down 21·60 per cent. In 1954 it was down 66·64 per cent.

From what we can gather, there is going to be a further decline this year. What position does that put the farmer in? Surely no one in this house can stand up and argue that the net farm income has not been rapidly going down in the last three or four years.

In closing I want to pay a further tribute to the Minister of Agriculture. I could not help but think as he was making his remarks that he is actually one of the great wheel horses in the field of politics in the history of Canada. He is a man who can stand up and speak for an hour and forty minutes in defence of the policies of his government in the field of agriculture and I admire him for that, but may I say in closing that I would have been far more pleased to have listened to some of the Liberal backbenchers from western Canada attempting to defend the Liberal policies in that regard.

Mr. C. E. Bennett (Grey North): Mr. Speaker, I am not a backbencher from

western Canada but I am a backbencher from eastern Canada and I am interested in farm problems because my riding is half rural and half urban.

Much has been said today about the reduction in farm income. The right hon. minister at the last of his very worth-while review today said it was his opinion that in some cases farm income was down. In certain respects that definitely applies in my riding. In Grey county we produce, as farmers, cattle, pork, poultry, apples and dairy products. Dairy products, of course, remained on an even keel in 1955, thanks to the floor support plan of the government. Poultry and eggs were up a little bit. Cattle remained fairly steady but hogs and apples were away off. The reduction in the price of pork was very serious to a great many of the farmers in my riding because Grey county is one of the leading pork producing districts in Ontario.

The farmers in my constituency realize there is no easy solution to these problems. They realize that if a solution could come about by doing any of the things suggested by the C.C.F. group or by the resolution which was put on the order paper by the hon. member for Prince Albert, this government would have done it a long time ago. The farmers in my area recognize and appreciate the agricultural support policy of this government and the other farm policies that have been invoked by the present Minister of Agriculture.

The hon. member for Prince Albert in introducing his resolution stated that the farm policy of this government operated on a hit-or-miss basis. The farmers in my area do not feel that way. They appreciate particularly the floor support program. They recognize, for instance, that hogs were supported during the epidemic of foot-and-mouth disease at 26 cents and cattle at 25 cents. Not only was the floor support beneficial, we all know the support prevented the collapse of the hog market at that time. The same obtains on eggs. Eggs dropped to 19 cents a dozen in 1949. The minister stepped in and supported them at 38 cents, which means about 32 cents to the producer, and since that time eggs have not fallen through the support except on one occasion last year and that was of brief duration and the minister quickly corrected it.

We all know that other products have been supported, such as cheese, milk, apples, butter and potatoes, to mention only a few.

At the present time the floor under hogs is 23 cents. We do not think it is enough but I would like to put on *Hansard* the fact that if it were not for that floor support hogs would be selling at a much lower price than they are today. It goes without saying that we people who represent farm ridings will support any workable and practical measure that will raise the price of cattle and of hogs because it is in the interest of all of us. No matter what we interpret the word "parity" as meaning, we want the farmer to have his fair share of the national income.

I do not know what the hon. member for Prince Albert has in mind as a means of achieving this position of parity. He did not say very much about that; all he complained about was that prices were down. He did not give us any of his ideas as to how he was going to get the price of hogs or cattle to where he considers the prices would be at parity. He said only that we should have teeth in our hog floor legislation. Even if we have teeth in the legislation it does not put the price up to 26, 27 or 28 cents where we would all like to see it. That is the trouble with all the people who have been talking on the other side of the house. They say, "Let us have prices where they should be," but they do not give us any constructive ideas concerning how to do it.

If the hon. member for Prince Albert was thinking in terms of a higher floor he knows, of course, that many factors have to be taken into consideration. If we put up the price on hogs by means of a floor that contains an inducement to produce, I think we will all readily recognize that the farmer with two or three sows will soon have four or five, and the fellow living at the edge of town who has not gone into pigs will soon go into pigs. We found that out in 1952 when the floor was 26 cents. We did not think it was too high for hogs at all but we found that the government ended up with a great deal of pork. That floor support program in 1952 cost the government $35 million for hogs and $33 million for cattle but it was certainly money well spent in the national interest.

The United States has discovered, and the minister mentioned this, that if you have your floor support too high without any quotas or without a marketing scheme you soon have a surplus which will depress prices and will hurt the farmer in the long run. That is why Mr. Eisenhower in an election year, trying desperately to do something for the farmers did not, you will notice, come up with anything for the cattle producer or the hog producer because the surpluses in the United States are depressing prices.

In this country we are up against another problem. If we have our floor support high enough to attract United States cattle and hogs, after the duty and freight have been

paid, which do not amount to too much, our floor would be supporting the entire North American continent and we just cannot afford to do that.

I would like to mention an exception to the general rule. Hon. members will recall that a few weeks ago United States livestock was coming into Canada because prices there for the first time were lower than ours. I received representations to the effect that we should close the border. This, of course, would be an extremely narrow and short-term policy. As the minister said today, the United States has always been our floor for cattle. There are 160 million people there and it is a great potential market for our farmers.

If I have the permission of the house to do so, I would like to table some figures. These show exports to and imports from the United States for 1953, 1954 and the first nine months of 1955 ending with September, of cattle, beef, hogs and pork. The figures show clearly that the trade is just about all one way and it is of tremendous value to us to keep that border open.

The Acting Speaker (Mr. Applewhaite): What is the source of the figures?

Mr. Bennett: The economic division, Department of Agriculture.

The Acting Speaker (Mr. Applewhaite): Has the hon. member unanimous consent to place these figures on *Hansard*?

Some hon. Members: Agreed.

Mr. Bennett: The figures are:

[a] Quantity not available.

My hog producer is very much interested in the supreme court reference mentioned today by the Minister of Agriculture (Mr. Gardiner). While some of my farmers are still individualists, more and more they are coming to believe that they must have a marketing scheme, preferably one run by themselves through a marketing board, in order to have orderly marketing and establish the prices which they should get on the market. I must say that I personally am coming more and more to that line of thinking.

I happen to be in the apple business and with a bumper crop this year we had no control over the marketing of apples. Without any government assistance at all—we are not asking for that—without any floor support, if we had had a marketing agency so that we would have had some over-all control over the marketing of our apples we would have been much better off this year.

My hog producers feel the same way. I was glad to hear the minister say that there is to be a conference with the provincial ministers of agriculture to discuss marketing legislation. I think that is a step in the right direction. Whether we believe in quotas or just selling through a central agency under a free enterprise system, I think there should be marketing schemes and marketing boards.

Most of my farmers now believe that there should be marketing boards for just about every farm product. As the minister said, there are about 20 schemes in Ontario. In ending my remarks on hogs I would urge the minister to go ahead with this marketing conference just as soon as the decision on the reference is known.

Mr. Gardiner: April 19.

Mr. Bennett: If the minister does not mind, I should like to urge him, if the decision of the supreme court is to the effect that the marketing legislation of the Ontario government is ultra vires and further authority is needed, to see that legislation is ready to be passed at this session. That is one thing we can do to help the farmer to set up machinery so that he can help himself.

My riding is very important from an apple producing point of view. The famous Beaver valley and Georgian bay apples are grown in my district. There are very important orchards too in the Meaford area. I see the hon. member for Durham (Mr. James) is looking at me, and I am ready to admit that perhaps there are some McIntosh apples down there although I have never heard of them too often.

As I have said, we had a bumper crop in the Georgian bay district this year. I am not appealing to the government for any help and I am not even going to offer any constructive suggestions. The only thing I would like to say is that we have had a very poor year. I have heard some hon. members from Nova Scotia and British Columbia complaining, and I just want to assure the house that the Georgian bay grower did not make any money this year either. With our large crop we had high costs for containers, spraying materials, labour and fertilizers. In the end the small grower, if not the large grower, lost money. Instead of the price of apples being $2.50 or $2.75 per bushel, apples were selling at around $1 per bushel and some apples were not even picked.

The Ontario growers this year went on record as being against the idea of a subsidy and perhaps I should explain that. They do not think that the government should grant subsidies year after year to encourage the growing of varieties of apples where it is not economical to grow them. They emphatically oppose the granting of subsidies which help the growers of another province to compete in their traditional markets in Ontario. I remember that four or five years ago this government did one of the few things it has ever done wrong: a subsidy was granted to the apple growers of another province and the following week these growers took the back page of the *Star Weekly* and did considerable harm in our traditional Ontario-Toronto market. Using your own money to ruin your own market is certainly rubbing it in.

I hope the minister will continue the generous grants which have been made under the Cold Storage Act. We found this year that there was a scarcity of cold storage in Ontario and many McIntosh apples were put on the market because of lack of storage. That is another way in which this government is helping the farmer and can continue to help him.

Turning from apples, I should like to speak briefly about butter. The price of butterfat and cream was and is one of the bright spots in the farm picture in my riding. I never hear complaints about the price of butterfat. Most farmers are high in their praise of our butter policy. Our butter policy has been stated many times as being a means whereby the government purchases butter during the heavy butter producing months and feeds it back to the consumer during the winter months, thus stabilizing the price and helping both the consumer and the farmer. The farmer is able to get the same or higher price all the year round, and by putting purchasing power in the hands of the farmer we are helping the whole economy.

I urge the government to maintain this support price of 58 cents under butter. Much has been said about the importance of the dairy industry and I do not think I need to elaborate on that. In my riding the cream cheque is spent on Saturday night or during the week end by the farmer and his wife and is quickly distributed throughout the economy to the benefit of all. Last year the cream producers of Grey county were paid close to $3 million and it will be appreciated what that meant to a riding such as mine.

I am not afraid that the government will abandon the floor price under butter, but I am a little nervous that they may drop it 2 or 3 cents. Some hon. members seem to believe that more butter would be sold and consumed if the price were dropped 2 or 3 cents, but I do not hold that view at all. By thus reducing the purchasing power of the farmer you would be working to the detriment of the whole economy. We have margarine eaters and we have butter eaters and the spread in price between the two is too great to induce some margarine eaters to eat butter just because the price has been dropped 3 or 4 cents.

When introducing this resolution the hon. member for Prince Albert (Mr. Diefenbaker) was critical of the sales which have been made to iron curtain countries. I think too the hon. member who spoke last referred rather disparagingly of this policy. They ask: Why give bargains to communist countries? I suppose that is a pretty popular thing to say, but I submit that the government policy is the correct one. My farmers certainly think it is the correct one.

If the hon. member for Prince Albert considers we can take 15 million or 20 million pounds of butter surplus and dispose of that in a special sale I would like to ask him how he expects to get around the administrative problem. There are thousands of retail and wholesale outlets and how could you make sure that the bargain of 20 or 25 cents was being passed on to the consumer. A sale of 15 million pounds would last only two weeks and would mean a saving of only 25 cents to each person in Canada. I do not think you could do it, but even if you could there would be the more serious objection that you would be undermining the permanent price of butter. We might get away with one fire sale at 40 cents and go back to 65 cents, but you could not do it more than once or twice. The housewives just would not buy butter for 65 cents after getting it at 40 cents. The result would be that sooner or later you would be bringing down the price of butter, and the price would be determined for the 317 million pounds we produce in Canada by that small surplus of 15 million pounds.

I have listened very carefully to the members of the opposition on this butter question and I cannot for the life of me figure out what they advocate. They seem to be in favour of this 58 cents support, although they do not underline its importance to the farmer. They do not say what they are in favour of. Some members opposite apparently are in favour of the two price plan and one of the leading associations interested in the dairy industry in Canada is also in favour of this two-price scheme. Under that scheme, of course, butter would be allowed to find its own level, say 40 cents, and the government would continue to support the producer at 58 cents per pound, paying to the producer 18 cents per pound. You can see how much that would cost by multiplying 18 or 20 cents by 317 million. It would cost $60 million a year, unless of course you had a quota system. That was the plan that was advocated by Mr. Brennan in the United States, but the republicans and democrats over there found that that just would not work, because the cost was prohibitive.

You may say, "Let us have a quota." If you are going to have a quota, you must have a marketing board, and that is a different story altogether. But I do not think we should disturb our butter policy, which is the bright spot in my riding. My farmers say to me, "If you do not say anything else in this session, get up and praise the minister for the 58 cents support, because it is essential to keep it."

The hon. member for Lanark (Mr. Blair) made a very worth-while contribution in the throne speech debate and he quoted some figures that showed that the gap between production and consumption, was 17 million pounds this year. He was worried that that gap might increase, although his figures do not bear that out. In 1953, for instance, the gap was 17 million pounds. In 1954 it was 20 million; and in 1955 it was estimated at 17 million pounds. The president of the Canadian federation of agriculture does not agree that the gap is going to widen; he thinks it is going to close. It is difficult to say what will happen. There are some people who think we are going to be short of butter in three years. The gap might well be closed in one year with the wrong weather. It might be closed on account of our growing population. It is obvious that there are many factors, and it is difficult for anybody to say right now what the situation is going to be with regard to butter two or three years from now. That is all the more reason why we should keep to the present policy.

Let us continue the present policy. Let us support butter at 58 cents. Let us offer butter at reduced prices to our institutions at home, although the minister said two or three weeks ago he had that policy under review and he was not too sure that it was the right one. In any event, let us offer the surplus to the friendly countries in the west, and then to the countries behind the iron curtain. We are getting rid of the surplus. We are supporting one of the greatest industries in Canada, the dairy industry. That dairy industry is very important to the mixed farmer. In my county there is no better way of putting money into the hands of the man engaged in mixed farming than to keep that cream cheque at a decent level.

So I urge to the best of my ability that the present floor support policy be kept on as it is. What is wrong if it costs the taxpayer a little money? We give special tariffs, subsidies and concessions as has often been said, to subsidize industry. Take the western farmer for instance whom we are helping this session. I should like to say this to the C.C.F. group. I came down here prepared and anxious to help the western farmer. After hearing all the repetitious debates that took place here, I was reluctant to vote for those bills. I think the western farmer has not had the kind of representation here that he deserves. Members of the opposition keep talking about the big reduction in the income of the western farmer. True, the western farmer has had a big reduction, just as a millionaire might have a reduction. However, if you take the income of the farmers in the west as compared with the farmers in the east, dividing it by the number of farmers, you will find that the man in the east is much worse off than the western farmer.

I would reiterate what the minister has said today about oleomargarine. How can I go back to my farmers after voting to the western farmers all that money? As the minister said this afternoon, the C.C.F. government told the farmers' union that they would not spend about $25,000 to provide butter instead of oleomargarine in their provincial institutions. They talk about the farmers sticking together. That is certainly a united front. I am ashamed of them.

May I call it six o'clock?

An hon. Member: No.

The Acting Speaker (Mr. Applewhaite): I would put it to the hon. member that there is a time limit to this debate.

Mr. Bennett: It is hard to get wound up again. In finishing off this subject, this butter program has not cost us much money. A few million dollars sounds like a good deal of money but it is a very insignificant sum as compared to what it has done for Canada. If it does turn out in two or three years that we develop a surplus—I believe the minister does not think we are going to develop a surplus—perhaps he might consider a wider base for dairy products support. Perhaps we could support powdered milk and cheese. We are always talking about increased help to the poor underprivileged countries in the east and one of the agricultural products we could ship there would be powdered milk. There are not many agricultural products that we can ship to the Far East.

At six o'clock the house took recess.

AFTER RECESS

The house resumed at eight o'clock.

Mr. Bennett: Mr. Speaker, the amendment that we are considering and the subamendment are as follows. The amendment moved by the hon. member for Prince Albert (Mr. Diefenbaker) reads:

> That all the words after "That" be struck out and the following be substituted therefor:
> "in the opinion of this house consideration should be given by the government to the advisability of introducing during the present session legislation to create a parity of prices for agricultural products at levels to ensure producers a fair price-cost relationship".

Then the hon. member for Assiniboia (Mr. Argue) moved his subamendment which reads:

> That the amendment be amended by changing the period at the end thereof to a comma, and by adding thereafter the following words:
> "in such a manner as to provide for a fair share of the national income for agriculture".

The only reason that I read the amendment and the subamendment is that I cannot see that the subamendment adds anything to the amendment. I would think that the subamendment is redundant, Mr. Speaker. I do not expect you to rule on that point. But if parity means equality, then if there were parity prices as set out in the amendment it would naturally flow from that "in such manner as to provide for a fair share of the national income for agriculture". If you accept that parity means fair, then certainly the subamendment does not add anything to the amendment. There are of course two ideas about the word "parity". To me parity means par, something that is equal. But apparently there is another more technical meaning attached to the word "parity". The hon. member for Assiniboia sets out clearly what he and his party think the word "parity"

means. As reported at page 2026 of *Hansard*, the hon. member for Assiniboia said:

> I want to point out to hon. members of this house that the concept of parity prices is that the government shall so regulate the prices of farm products as to give to agriculture an income which bears a very direct relationship to the income of other groups in our economy.

Then he goes on to chide the Conservative party for getting away from their free enterprise thinking. That kind of parity I do not believe in. I think it has been shown many times that it would be impossible for this government to set floor prices which would contain an inducement to produce. As I said before the dinner recess, our experience during the foot and mouth disease epidemic, when we literally got up to our necks in hogs because the floor price of 26 cents contained an element of profit, I think, was a lesson to all of us. Let us take, for example, potatoes. I would ask the hon. member for Assiniboia whether, if there were a fixed parity price for potatoes, which contained a profit element would not half of the whole province of Ontario be planted out in potatoes. I know that my county would be. I do not think you can work that conception of parity unless you have marketing boards and quotas. You must have control over production. If the resolution means that kind of parity, I am against it. But if it means parity prices, with the intent that the farmer shall get his fair share of the national income, I think everybody in the house is in favour of it.

Mr. Nicholson: No; not everybody.

Mr. Bennett: I am.

Mr. Nicholson: The minister is not in favour of it.

Mr. Bennett: I have only another seven minutes and I do not want too much heckling.

Mr. Ellis: Well, well, a privileged character.

Mr. Knowles: The hon. member is speaking extremely slowly.

Mr. Ellis: The hon. member wants to hand it out but he does not want to take it.

Mr. Speaker: Order.

Mr. Bennett: I think we all want to see the farmer get his fair share of the national income.

Mr. Castleden: Why don't you do something about it?

Mr. Bennett: We want a balanced economy. We want all segments of the national economy to receive their fair share of the national income. I think that is obvious. I think every member of the house wants that.

Mr. Ellis: Why don't you do something about it?

Mr. Bennett: I am a small town lawyer and I know that most of my income comes from the farm districts. When they have money, I have a little bit also.

The government can help the farmer achieve this position but the farmers in my riding are beginning to realize more and more that they must help themselves. The government can offer floor supports. They can offer subsidies. They can pay premiums for grade. They can spend money in research. They can spend moneys to develop our markets, domestic and abroad. They can help the farmer by setting up machinery so that he can help himself; I refer to marketing legislation machinery. But the farmer must help himself and he knows that. He must concentrate on becoming better organized. By that I mean he must give more support and he must stick to his farm organization. In my riding there are two farm organizations. One is the farmers' union and the other is the Canadian federation of agriculture. I can say that there are good farm leaders in both those organizations and they are taking on their responsibilities as they should. As I said before supper, a good example of farmers not sticking together is for the C.C.F. government to buy oleomargarine for their provincial institutions. I am proud to be associated with a department that buys butter for its hospitals from coast to coast starting at Shaughnessy on the Pacific and ending in Camp Hill in Halifax. The farmer can also improve his efficiency by cutting costs. He can do a great deal towards developing a better marketing technique.

From my remarks you may think that I am hipped on this subject of marketing legislation. But unless the farmer markets his products in an orderly fashion, I submit you cannot help him too much in other ways. Marketing legislation and marketing boards of course do not constitute a panacea but I cannot help but think that in my own riding the one farmer who is particularly well off right now—at least he is much better off than are the rest—is the fluid milk producer, and he is well organized. He is under a quota system under provincial legislation. I should like to see that plan developed in other fields. I remember less than two or three years ago when the Ontario apple growers went to the Minister of Agriculture for help and he said, "How can we help you from here? You are just not organized". While I am talking about the Minister of Agriculture, may I say

that I could not help but think of the occasion when the Leader of the Opposition (Mr. Drew) made that extremely abusive, unfortunate and irresponsible statement that he made a month ago when he said he could stand on Sparks street and throw snowballs and they would land on people who would make better cabinet ministers than we have in front of us.

Some hon. Members: Hear, hear.

Mr. Bennett: I could not help but think that the arm of the Leader of the Opposition is not that strong. He would have to have an arm like Johnny Podres and Robin Roberts combined, and some more, because he would have to be able to throw from Sparks street a lot farther than the House of Commons, because as I look across the floor here I see nobody that can take the place of the Minister of Agriculture. The Minister of Agriculture has fought, battled, argued and scrapped for the farmer in connection with farm problems for 20 years now and for the sake of our farmers I hope he continues at his post. My time is running out. I just want to bring in the parliamentary assistant. He is our representative in Ontario and he has done a grand job in representing the farmers.

An hon Member: A mutual admiration society.

Mr. Bell: Are you trying for a cabinet job?

Mr. Speaker: Order.

Mr. Knowles: Saved by the bell.

Mr. Speaker: Order. I have just been informed by the Clerk that it is now 8.10 p.m. Under standing order 56, paragraph (d), it is my duty to interrupt the proceedings and forthwith to put the question on the amendments before the house.

The house divided on the amendment to the amendment (Mr. Argue) which was negatived on the following division:

Shipley, Mrs.	

AGRICULTURE—FROST DAMAGE IN BRITISH COLUMBIA

Mr. A. B. Patterson (Fraser Valley): Mr. Speaker, I have been waiting with a great deal of patience or impatience for the opportunity to present itself to bring before the house a particular grievance. This is a matter of real, vital concern to the residents of my particular area and therefore I feel justified at this time in bringing it to the attention of the house.

Mr. Speaker: As only one hon. member is in possession of the floor there should be only one hon. member standing.

Mr. Patterson: I have listened with a great deal of interest to the debates which have taken place in the house during this session on agricultural problems. I have not taken part in those particular debates, but I believe there are two factors which might qualify me for doing so and which would warrant my participation in debates on agriculture. One is the fact that I was raised on a farm, a farm where they grew a lot of that wheat we have been hearing about, and the other is that I represent a predominantly agricultural area in British Columbia.

I have been endeavouring to fit into the general framework of our discussion this serious problem to which I should like to call attention at this time. It has to do with the serious situation which exists in British Columbia because of the exceptionally severe frosts which struck the province during November last year. Perhaps I should say that we are not used to having severe frosts in British Columbia at any time, and certainly last year was the exception. Not only did it come with great intensity, it came at an early period in the season when no one was expecting it or was prepared for it. The result was that the agricultural producers in my area and in other areas as well suffered very severe losses.

I should like to call attention to this situation tonight. The hon. member for New Westminster (Mr. Hahn) intends to make some remarks in this connection. I know that his remarks will be perhaps complementary to mine and will carry forward some of the statements which I shall make at this time.

The problem which faces us is a serious one. Since these frosts occurred a number of briefs have been drawn up by various interested parties and groups of individuals for presentation to different organizations and governmental authorities. I have one here dealing with frost injury to nursery stock which was prepared by the Canadian association of nurserymen, British Columbia division, in co-operation with the Vancouver island association of nurserymen. It was compiled at the request of nurserymen operating in British Columbia and is the result of a fairly complete survey representing approximately 90 per cent of the nursery injury. It indicates the extent of the frost damage throughout the province and brings to the attention of governmental authorities the problem which the producers are facing. It asks also for financial assistance in one form or another. I should like to place on the record one paragraph from this particular brief to be found on page 2 which reads:

> The resulting losses sustained by nurseries are of such a serious nature that the future of the industry is seriously threatened.
>
> Some nurseries have lost up to 85 per cent of their total production not only for this year but also to their young stock coming along for future years. For example, cherry trees are among the most seriously damaged. The growers have lost all their one year trees which were ready for sale during fall 1955, spring 1956. They have lost a large proportion of the young stock coming along for 1956-57. It will therefore be 1957-58 before a normal crop will again be available and this will be contingent upon the nurserymen being able to finance through this period from 1955 to 1958 when returns from production of this crop should again commence coming in.
>
> This same situation applies to peaches, apricots and some apple varieties although the damage is not as extensive as for cherries.

The estimated losses to nursery stock at wholesale prices for the different regions are as follows:

Vancouver island	$ 75,455.70
Lower mainland	210,159.65
Interior	73,757.00
Total	$359,372.35

We must realize that not only have severe losses been suffered by those engaged in this industry; there will be repercussions in various other fields as well. Employment may be threatened, as already some of the grower nurseries have laid off approximately 80 per cent of their field staff. As I intimated at the beginning of my remarks, this brief states that as a result of the frost losses this industry is in grave danger of extinction. Part of the last paragraph of the brief reads:

> Assistance of a very concrete nature is urgently needed and this submission is made in the hope

that help will be forthcoming and that it will be of a nature appropriate to the gravity of the situation.

That has to do only with the production of nursery stock, one particular phase of the industry in British Columbia. I should like to call attention as well to the losses suffered by the berry growers of British Columbia, especially the strawberry growers who have suffered a crippling blow. The bureau of statistics gives the following farm value of strawberry production in different years:

1952	$2,163,000
1953	2,716,000
1954	2,531,000

Raspberry growers also suffered seriously from the frost, and in the case of this group the production values are as follows:

1952	$1,256,000
1953	1,702,000
1954	1,791,000

We can see by this that this is an industry that is vital to the economy of British Columbia and certainly, speaking for my own riding of Fraser Valley, it is of tremendous importance to us in that section. The estimated loss, as far as the strawberry stock is concerned, is just about 100 per cent. The estimated loss for raspberries for the coming year would be 80 per cent, and possibly that loss would be reduced a little each year as they get back into production.

We can see that this is a very serious problem which our producers are facing at this time. A table has been drawn up. I am not going to take time to read it but, unless assistance is forthcoming, the total estimated losses are as follows: for 1955, $2,214,070; for 1956, $7,086,500. The estimated loss between 1955 and 1960 is $17,244,570.

Following the disaster last fall, meetings were held in the various sections of the Fraser valley to consider what steps should be taken and what approach should be made to the governments in their quest for assistance under these difficult circumstances. It was decided at some of these meetings to make an appeal to the provincial government of British Columbia, and that was done.

Following the appeal to the provincial government, they decided to carry the matter further by an appeal to the federal government for some type of assistance. On February 9 I asked the Minister of Agriculture in this house whether he had received a request from the representatives of the berry growing industry for a meeting, and the reply I received at that time was that the Minister of Agriculture had received communications in this respect from the representatives of the berry growers and he had also received a communication from the provincial government.

Following that particular question and answer, the situation just carried on for a brief time, but there were certain communications that passed between the representatives of the berry industry and myself and also some other authorities. The result was that the delegation came to Ottawa and had a meeting with the Minister of Agriculture. The reaction was very encouraging. At least, the delegation felt it was making good headway and had received a very fair and very fine reception from the Minister of Agriculture.

Another meeting was planned for the following day. Following that meeting, their hopes were shattered. Instead of being met with smiles from the summit, those smiles had turned to frowns. The next time I saw the delegation, they remarked to me that they had received a very spectacular brush-off. As they discussed the situation and as they considered their next steps, they felt the Minister of Agriculture had given them very little hope of any assistance from the federal government. In fact, he gave them the impression that this was a provincial responsibility and that the provincial authorities were quite capable of looking after the situation.

I appreciate the fact that he commended the British Columbia government so highly in this respect, but anyway he implied that there would not be any help coming from this source, that is, from the federal government. However, in order to get the matter clear I asked another question of the Minister of Agriculture on February 28. The question is as follows:

I should like to direct a question to the Minister of Agriculture. Could the minister comment at this time on the results of his recent conversations with the representatives of the British Columbia berry and small fruits growers?

You will note that I asked the question, "Could the minister comment on the results?" but all he did was comment on the meeting. He gave an answer that was neither illuminating nor—

An hon. Member: Nor intelligent.

Mr. Patterson: It has been suggested "nor intelligent". I was not going to use quite that term, but certainly, when I asked what I considered to be a sensible question, and I asked it in a courteous manner, I thought I would get an answer that was at least somewhat intelligent and helpful.

Mr. Knowles: The hon. member is new around here.

Agriculture—Frost Damage in B.C.

Mr. Patterson: Here is the answer, as recorded on page 1613 of *Hansard:*

Right Hon. J. G. Gardiner (Minister of Agriculture): Mr. Speaker, I wish to thank the hon. member for having given me notice of his question.

Perhaps if I had not I would have gotten a better answer.

Representatives of the British Columbia berry and small fruits growers discussed their problems with the provincial authorities before coming to Ottawa and expressed their intention of doing so again on their return to British Columba, after which we will probably hear from them again.

An hon. Member: What does that mean?

Mr. Patterson: That was really a masterpiece of an answer.

Mr. Knowles: He was probably misquoted.

Mr. Patterson: I was slow on the draw. I should have asked a supplementary question, but I sat rather dumbfounded that the Minister of Agriculture would give such an answer in connection with a matter in this category. Anyway it more or less confirmed what the representatives of the growers had said, that this government was not going to do very much to help them out in this particular situation. I have a clipping of an editorial from the Abbotsford, Sumas and Matsqui *News,* printed in my home town of Abbotsford. It is headed "The Berry Grower's Case" and states:

The berry industry did not ask for a handout. It asked for a measure of government support, either loans or guarantees of loans, so growers could finance purchase of new stock, fertilizers and insecticides to get themselves back in business.

This is the particular section to which I wish to refer:

If a man becomes indigent, they—

That is, government funds through various agencies.

—are available.

If a man is unemployed, they are available.

If he is injured and unable to work, they are available.

We recognize that in some of the instances cited the people who receive benefits have themselves contributed a portion of the funds upon which they may draw. But the point we are making is that government assistance, in part or whole, is no new principle in our national life.

Then it goes on to state this:

It seems eminently sensible to the *News* to recognize the same principle when a fruit grower needs help. If loans will help hundreds of valley fruit men get back on their feet the government will be doing a good piece of business in making them available.

A little further on it states:

With help, this situation can be met. Without help, the Fraser valley is likely to see the last of an important industry. The fruit industry is not in a good position to pull itself up by the bootstraps, because a large volume of tonnage is moved by grower-organizations.

As the newspapers are looking at the situation they feel that, under the circumstances, the berry growers of my area are entitled to some consideration and some assistance at this time. Another paragraph in this same editorial states this:

In Washington, just a few miles away governments have recognized the importance of their fruit industry. They have made long term, low interest loans available to both fruit growers and the businesses that supply them.

As the growers in my area are faced with this difficult situation in which they have suffered loss—as far as their strawberry stock is concerned they suffered 100 per cent loss and in respect of other types of berries and small fruits they have suffered serious loss—I want to suggest that this government should be in a position to render some assistance and to help tide them over this difficult period in which they find themselves. We have discussed other agricultural problems. We have discussed agriculture in other sections. During past days we have passed legislation with respect to giving help and assistance. Hence I feel that we are not out of order in requesting that the government take this matter under advisement and stand ready to give assistance to the berry growers and the nursery men in the province of British Columbia.

The Canadian Federation of Agriculture, in their annual presentation to the Prime Minister of Canada and members of the cabinet, Ottawa, February 14, 1956, had this to say in paragraph 3 on page 13:

To establish a policy for providing emergency or disaster credit on an interest-free basis where the nature and extent of a farmer's loss justifies the granting of such credit. It should be noted in this connection that the growing demand for some disaster loan legislation was reflected again this year, in resolutions coming before the federation's annual convention. Because of the fact that there is no existing credit legislation to cover emergency situations of this kind, it is a matter of the most immediate and vital importance that such legislation be provided. The extensive losses due to frost suffered by strawberry and other fruit, vegetable and flower growers in B.C. is a case in point, and the damage was sufficiently severe that U.S. coastal states, struck by the same frosts, were declared emergency disaster areas by the United States government.

I want to make it clear that these farmers, like the farmers in other areas, are not asking for handouts. I just want to refer to the brief of a group of Fraser valley small fruit farmers presented to the minister of agriculture of the province of British Columbia

with regard to the freeze-out of small fruits and allied crops. On page 4 there is this significant statement:

> When a large group of farmers are in financial straits, all businesses in their communities suffer likewise but if financial aid is forthcoming to the farmer, he, and his community, can carry on at a nearer to normal level. Although suffering great losses, the berry growers at the aforementioned meetings stated they did not wish to receive grants in the form of financial aid but rather, as a free enterprise industry, they stand on their own feet and meet this crisis in the normal manner of securing a loan to rehabilitate themselves.

Let me therefore state again that they are not asking for just a handout but that they are asking that credit facilities be placed at their disposal whereby they can again get into business and carry on with the normal processes of agriculture. Just to make this point clear and to emphasize what their request really is, I refer to page 2 of the brief prepared for the federal Minister of Agriculture (Mr. Gardiner) for the government of the Dominion of Canada and submitted by this delegation that was down here recently. The brief states as follows:

> It is with the above serious situation in mind,—

They are referring to the losses and also to the cost of rehabilitating the industry:

> —we formally request the government of the Dominion of Canada to take steps to prepare the necessary legislation which will make immediately available long term low interest loans and/or government backed bank loans to those sections of the agricultural industry who require assistance.

Mr. Speaker, I have given some consideration to various measures, wondering whether it would be possible to fit this objective in within the framework of any of the existing legislation such as the farm loan act or the farm improvement act, but it seems as though some amendment will be necessary in order to accomplish that objective. I may be wrong in my deduction but it would appear to me that that would be the case. Just to mention some of the obstacles in the way of coverage through the farm loan act, there is the matter of the first mortgage; and I might say that this would constitute an extremely serious handicap or obstacle because of the fact that there are a number of the farms that already are mortgaged. Again, the assessed value of farms under this particular measure are still too low to bring the necessary help to these farmers. Certainly the interest rates are far too high. That matter has been mentioned in other connections as well. Then there is the matter of the time required to appraise all the farms that would be affected in these particular circumstances. I notice that under the regulations the assessments would be made between May 1 and December 1 and, they state, not while any snow was on the ground. Unfortunately we still have some snow in British Columbia, I understand. Nevertheless, the delay that would be occasioned by assessing all these individual farms would carry the matter far beyond the time when assistance would bring the desired results.

As we look at the particular act I have mentioned, it seems as though its provisions would not be sufficient to bring the assistance that is needed. It may be possible, I am not sure, that under the Farm Improvement Loans Act some assistance may be given. But again, I have been unable to see just where these conditions would fit in under the regulations made under that particular measure.

Coming back, Mr. Speaker, to the meeting of the delegation with the Minister of Agriculture (Mr. Gardiner) I may say they were under the impression—perhaps the minister will correct me if I am wrong or if they are wrong—that the minister said that so far no proposals had been forthcoming from the provincial government.

Mr. Gardiner: I did not say that, Mr. Speaker, because I had a telegram and a letter from them on my desk.

Mr. Patterson: Thank you, Mr. Minister; that helps a little. But certainly the delegation were of the opinion that that was one of the obstacles. They felt that was one of the things that stood in the way of favourable consideration, the fact that no proposals had been received from the provincial government.

Mr. Gardiner: I might give the whole story. When the delegation came to see me, I was under the impression they had received the letter.

Mr. Patterson: Pardon me, I cannot hear.

Mr. Gardiner: When the delegation came to see me, I was under the impression they had already received the letter. I found out the following morning the letter had not gone out from the office, so I sent it over to the hotel.

Mr. Patterson: Thank you. Well, the provincial government certainly had, as the minister states now, made some representation. I know they were subjected to a little criticism in some sections of British Columbia because they had not backed up the growers' request. The reply the minister gave to my first question was that he had received a communication from the provincial government in that respect.

I should like to refer to the proposals the provincial government made to the federal

government. I have a copy of the telegram that was sent to the minister on February 4, in which the British Columbia minister of agriculture referred to his previous letter of January 17 concerning abnormally heavy losses of small fruit plantings in this province resulting from unusually heavy freezing. The telegram goes on:

> I am directed to advise you government of British Columbia prepared initiate legislation authorizing agreements with government of Canada along following lines quote when abnormal conditions of drought flood or frost cause losses of crops over an area sufficiently large in the opinion of the minister to cause a condition jeopardizing livelihood of substantial number of producers concerned and seriously affecting economy of that portion of the province or where in a livestock producing area the same conditions create similar situations the minister may declare such area a distress area. Government of British Columbia prepared following declaration and gazetting any such area enter into agreement with government of Canada share equally in guarantee to chartered banks against loss from loans made to bona fide farmers in the area within specified time under Farm Improvement Loans Act or other appropriate legislation for purpose of replanting or purchasing feed for livestock. Guarantee would apply only to loans made to producers where farm operation concerned major source of income. Guarantee would not apply areas where other federal or provincial legislation provided insurance against any or all conditions indicated unquote. My government will appreciate earliest possible consideration this matter and advice your government prepared to collaborate in such a policy of rehabilitation and assistance. Would appreciate you arranging have senior officials your department and department of finance visit this province to confer with us.

That is one telegram. Then another telegram, of which this is a copy, was sent to the Minister of Finance (Mr. Harris). It deals with the same matter and submits somewhat the same proposal. I feel that the growers in these areas have made their representation very clear. I do not think they are asking anything that is not fair. They are only asking that they have placed at their disposal facilities by which they can acquire low interest long-term loans in order to rehabilitate this vital industry. I say that farmers in other areas are receiving such aid. Legislation has been passed for that purpose. I certainly feel that now the growers of British Columbia have made their position clear and presented their request, this government should give careful consideration to their request and come to the assistance of the farmers at this time. I know it will be greatly appreciated by all those who have suffered from this catastrophe.

Mr. Erhart Regier (Burnaby-Coquitlam): I do not intend, Mr. Speaker, to occupy the 40 minutes that I might occupy on this important subject because I realize other members in this house are waiting for an opportunity to endorse, at least I hope they will endorse, the sentiments so ably expressed by the hon. member for Fraser Valley (Mr. Patterson) on behalf of the small fruit growers of British Columbia. I sometimes feel it might be about time the farmers of Canada had a Minister of Agriculture (Mr. Gardiner) who represented other than a wheat growing area. There are far more farmers in Canada who do not grow wheat than there are farmers who grow wheat. Most of the time that is spent in this house on agriculture is devoted to the single subject of wheat. I feel that is regrettable and that the farmers of Canada have wider interests.

Mr. Lesage: How about telling that to your friends?

Mr. Regier: I do not wish to express any disagreement with the needs of the wheat farmers. Granted they have needs, but there are other sections of agriculture that are also under the responsibility of the minister. I feel that ever since he assumed that office he has not paid fair attention to these other sections of Canadian agriculture.

Mr. Gardiner: You ought to follow me around.

Mr. Regier: The minister says I have not been around long enough.

Mr. Gardiner: No, I did not say that. I said you ought to follow me around and see how far I do go.

Mr. Regier: I might inform the minister I have followed his political activities even before the days when he became the federal Minister of Agriculture. I feel that the case, which was so ably brought to the attention of this house by the hon. member for Fraser Valley, is one which merits more serious consideration than has thus far been displayed by the minister. I think the two answers he gave to the hon. member for Fraser Valley as found on pages 997 and 1613 of *Hansard*, are a clear indication of the complete disregard he has for farmers who live in areas of Canada other than the prairie provinces. I was pleased to see him answer on February 9 that the questions involved are under consideration. However, I was disgusted when I saw the reply he gave on page 1613, when he said that it was their intention to see once more the provincial authorities on their return to British Columbia, after which he would probably hear from them again. I do not know whether he had in mind that he would be hearing from them again on the floor of this house. However, I do hope that the rest of the time this evening will be devoted exclusively to letting the minister hear from the farmers on the floor of this house.

We in the C.C.F. group are ever willing to support any section of the Canadian population that is adversely affected by conditions beyond their control. We are on the record on innumerable occasions asking the government to help our people who are adversely affected. Only the other day I indicated that I was in full accord in the main with the activities of the fisheries prices support board. We have been consistent supporters of the Unemployment Insurance Act, under which workers who lose their source of income through no fault of their own are assured of at least a minimum income. In this instance several thousand farmers have suffered terrific losses. I am not going to bother the house with any figures. The hon. member for Fraser Valley has ably placed them on the record. However, when you have a group of farmers whose plants have been wiped out to the extent of 75 per cent to 80 per cent, who have no hope of income in 1956, and very little hope of any income in 1957, I feel the subject should not become a matter of political expediency, as I am afraid this may well have become.

I noted the remarks of the hon. member for Fraser Valley with regard to how these farmers might possibly be helped. I do not need to comment upon that. I am sure the minister is resourceful enough to find ways and means of using the existing legislation, or asking the house to amend existing legislation, so that the help that is asked for might be forthcoming.

I should like to remind the government that if this catastrophe had hit almost any other section of the Canadian economy the people would have been running to Ottawa asking for a handout. I should like to commend the berry growers on their modest appeal. On page 4 of the brief that they prepared initially for presentation, as is proper, to their own minister of agriculture in British Columbia, they said:

> They did not wish to receive grants in the form of financial aid.

Farther on they said:

> They stand on their own feet and wish to meet this crisis in the normal manner of securing a loan to rehabilitate themselves.

I would have thought that an appeal of such a nature might find some measure of response.

I notice in the press that the attitude of the government seems to be that this is something that is not beyond the abilities of the government of British Columbia to deal with. I agree it is not beyond the abilities of the government of British Columbia adequately to meet the situation. However, Mr. Speaker, I see no reason why the government of British Columbia should be asked to assume the whole responsibility of helping these farmers. In many other instances we have had the federal government helping out where the provincial government was also able by itself to take care of the situation. I am thinking of the flash flood that occurred in the city of Toronto at the time of "Hurricane Hazel". Nobody can tell me that the government of Ontario was so hard up that it would have been unable to meet the situation. However, the federal government—and I am pleased to note this—did not hesitate to share a part of the load at that time. I can think of a number of other disasters that hit people in various parts of Canada, and the local governments were well able to look after the situation. I cannot blame the government of British Columbia for asking the federal government to share the risk that might be involved in meeting these very modest demands of the berry farmers on a fifty-fifty basis.

If I have any complaint at all about the government of British Columbia in this matter it is that it introduced a bill in the British Columbia legislature and obtained the consent of that legislature under which the government is authorized to spend up to a certain amount of money to guarantee loans to those farmers if the federal government will share the risk with them. I feel that the condition which they attached to their bill completely ties their hands so that in the event that Ottawa turns them down—and I hope Ottawa will not turn them down in the long run—the British Columbia government will be unable to render the help that these farmers so badly need.

I feel the British Columbia government made a mistake. They should have left the door wide open so that if the Minister of Agriculture (Mr. Gardiner) continues to think this is a relatively unimportant problem, unworthy of his attention, the government of British Columbia would be able to act on its own and look after the situation.

I know the favourite reply that we often get from the government on difficulties of this kind. It is that if people cannot make their living in this way they should turn to something else.

Again I should like to refer to the brief—I will not read it—which very adequately points out why these berry farmers are unable to follow the advice that is so glibly given to them to start growing vegetables or potatoes. They point out that they are unable to render effective competition to the mass produced vegetables from other more favourable areas of the province and south of the border. There might be some substance to the advice to them to plant something else if the Minister of Trade and

Commerce (Mr. Howe) would be a little more considerate of the vegetable and potato growers of British Columbia. If his tariff policies were such that they might have reason to believe that they could make a living by growing vegetables and potatoes, I am sure the farmers would gladly comply. However, as in most other respects, he seems determined to sell out Canadian interests to United States interests. Therefore, in effect, this advice to the berry farmers to grow vegetables and potatoes is ill founded, and I do not blame the berry farmers for hesitating to switch to anything else. The replantings of strawberries and raspberries are needed at the present time. The market is running short and we have to import these fruits. I think the growers have a good case when they say their future depends on the replanting of their traditional crops.

I have taken some 15 minutes, Mr. Speaker, to make these few remarks. As I indicated before, there are other speakers who are at least as concerned about the problem as I am, and in concluding I would like to repeat the plea to the Minister of Agriculture (Mr. Gardiner) that he consider other sections of Canadian agriculture besides the prairie provinces. I should also like to address a plea to both the Social Credit and the Liberal parties not to play politics with each other at the expense of the berry farmers of British Columbia.

Mr. F. G. J. Hahn (New Westminster): Mr. Speaker, the hon. member for Fraser Valley (Mr. Patterson) suggested that I would be complimentary but he did not indicate whether that was going to be spelled with an "i" or an "e". I am satisfied that the hon. members in this house, as stated by the hon. member for Burnaby-Coquitlam (Mr. Regier), recognize what a fine job he did in presenting the case of the fruit growers of the lower Fraser valley and Vancouver island as well, of course.

The hon. member for Burnaby-Coquitlam suggested there might be some playing of politics between the Liberal and Social Credit parties in respect to this matter.

Mr. Regier: I said I hoped there would not be any.

Mr. Hahn: Thank you. I think if the hon. member were completely familiar with what was taking place with respect to the conditions in which this brief was presented to the federal government at least he would recognize that nobody was playing politics with this particular group of people. I for one would very much condemn any group who would feel that this is a good time to play politics especially when these people are finding things so difficult and when they need so much help in order to get back into business once again.

The hon. member for Fraser Valley did mention one point I would very much like to complement, and here I use the "e" spelling, and that is the loss that would be incurred from 1955 to 1960 as referred to in the brief that was presented to the federal minister of agriculture. This amounts to $17,244,570. That is a long-term loss which is going to be incurred over the next few years unless these fruit growers go back into business immediately. The most important part of the difficulty, of course, is getting them re-established. It is not a matter of an over-all loss of $17 million at this time but it will mean a loss of production in that amount.

The hon. member for Burnaby-Coquitlam indicated that he did not wish to take too much time in making his remarks because he felt there would be others who would want to take part in this discussion. I am most interested in hearing from the Minister of Agriculture in order to see whether or not he has given any further consideration to this particular question, and therefore I hope to make my remarks brief and give him an opportunity to reply. In respect to this question, however, the minister indicated earlier today that he received a representation from the delegation of fruit growers which approached him. He told them that the problem was a provincial one. In listening to him I was under the impression that he said if the British Columbia government passed enabling legislation something might be done in this matter.

The hon. member for Burnaby-Coquitlam (Mr. Regier) indicated today, and I was advised earlier, that there is legislation on the statute books of British Columbia. I am not sure that what he said is completely correct, but I suppose it is, but he indicated that the British Columbia government is prepared to back bank loans to be made to farmers to set them up in business again. I would be interested in discovering whether the federal government is prepared to assume its share of losses if any are incurred in the repayment of these loans at future date. Is it willing to accept its responsibilties?

The delegation which came to visit the Minister of Agriculture (Mr. Gardiner) was received most kindly. As the hon. member for Fraser Valley (Mr. Patterson) indicated, they were quite optimistic the first day they were here. I understand it was suggested that they remain overnight to see the Minister of Finance (Mr. Harris). It would appear to me that the purpose would be to see a member

of the treasury board to discover whether or not means could be found of passing the buck. I was not just sure which way it was going to turn out. However, when they returned the next day the members who interviewed the Minister of Agriculture decided that the buck was being passed back to the provincial government.

An hon. Member: It was passed the other way.

Mr. Hahn: The buck was passed from the federal government to the provincial government. It is a little difficult to understand these things.

An hon. Member: It will not sink in.

Mr. Hahn: It will sink in about the next election.

An hon. Member: This would not be a political speech you are making?

Mr. Hahn: No, this is not a political speech; I simply want to ask the support of Liberals in this house on this matter. That is all I am asking for on behalf of the people of British Columbia. British Columbia is my province and it is the province of the hon. member who is making these interjections.

An hon. Member: The provincial house is sitting.

Mr. Hahn: The fact of the matter is that this is an opportunity to bring this matter to the attention of the Minister of Agriculture as I am doing at this time. It is my intention to try to get from the minister a statement as to whether or not he is prepared to give the assistance asked for by the fruit and berry producers provided the British Columbia government passed the necessary enabling legislation. It may be that this legislation is not exactly what the minister hopes for. If it is not, I hope he will tell us when he gets up just what kind of legislation he expects the province of British Columbia to pass so that in future they can be guided.

As the hon. member for Burnaby-Coquitlam indicated, I am satisfied that these farmers want only an opportunity to borrow money. I checked the farm loan act and the Farm Improvement Loans Act to see if there was anything that could be used. It may be that either one of these acts requires amending and it may be that the minister intends to bring in such amendments. We have not yet seen the Farm Improvement Loans Act amendments. In any event I am satisfied that the question is an urgent one and needs attention today, not tomorrow. This is not one of those things that should be allowed to run over for a few years.

The fact that there may be no berry crop in British Columbia will be felt not only in that province but by the housewives of Alberta, Saskatchewan and the western part of Manitoba. The people in those areas get most of their berries from that particular region. I am quite familiar with this because I was in the business of selling groceries on the prairies. I lived for a time in Medicine Hat and I saw berries which had come from Mission in British Columbia. I am quite satisfied that if you were to go over the province of Saskatchewan and western Manitoba you would find that they get a good portion of their fruit from that particular region.

The urgency of this question is apparent. In the Vancouver *Province* of January 9 there was an article entitled "Fruit, Nurserymen Seek Frost Loss Aid". I have not the time to read all of this article, but there are one or two points that I think should be brought out. It states:

> "Full extent of the damage is only now becoming apparent," said R. H. Williams of Victoria, president of Vancouver Island Nurserymen's Association.
>
> "Fraser valley strawberry growers alone have lost 16,000,000 plants", he claimed.
>
> "That alone is a disaster. It means they can produce no crop this year even if the plants are replaced."

The Department of Agriculture operates an experimental farm at Agassiz and undoubtedly the minister has been advised by the officials of that farm, who are most efficient in their way, that their nursery stock is gone, that they have no berry plants which might be supplied to the lower Fraser valley. If we are going to get plants it is necessary that enabling legislation be passed now or some form of assistance be made available to these farmers. This should be done now, not later in the year, because this is the time when farmers must set out new plants, otherwise they will lose another full year. This article goes on:

> The position of the B.C. industries is worsened "because competitors in Washington and Oregon are to get federal aid," said another man.
>
> "Those states, which also suffered in the frost, were declared to be disaster areas. So their growers' losses are being made good. We shall face their competition at a time when we can't possibly meet it unless we get help."

These particular farmers are not asking for financial help in the form of a grant; they are not asking for $30 million in the form of storage facilities or anything like that; all they want is what this government has been trying to press upon the farmers of the prairie provinces, that is, an opportunity to borrow. The government suggested that the prairie farmers be granted loans instead

of advances, but these people do not want advances. All they want is the opportunity to borrow, and I submit that they have a just claim.

My grievance is that no means are made available whereby these people who are distressed may be able to stay in business. With this in mind, on January 30 I placed on the order paper a motion reading as follows:

> That, in the opinion of this house, the government should consider the advisability of setting up a committee composed of federal, provincial and municipal authorities or their representatives for the purpose of studying the problems of and determining what constitutes a disaster area in Canada.

I do not intend to debate that particular resolution at this time. As the hon. member for Burnaby-Coquitlam mentioned earlier, it was considered desirable to give the people who suffered from "Hurricane Hazel" some assistance, and I submit that the same considerations should apply here. Only 3 per cent of the land of British Columbia is arable and most of the farmers of the province live in this particular area on 3,500 small farms. Those farmers are in dire need.

It is just twelve minutes to ten o'clock and I have only two short items that I wish to place before the minister in respect to this matter. The first is in the form of a brief, a copy of which I am satisfied the minister has. This reads in part:

> It is with the above serious situation in mind, we formally request the government of the dominion of Canada to take steps to prepare the necessary legislation which will make immediately available long-term low interest loans and/or government backed bank loans to those sections of the agricultural industry who require assistance.

We hear a great deal about the federation of agriculture and the requests that it has made to the minister and the government. Reference has been made to some of those requests at an earlier date. The February 1956 issue of *Country Life* in British Columbia, a British Columbia publication, had this to say:

> To meet disastrous situations a special type of federal government credit agency should be formed to be known as the agricultural emergency loan administration.

I do not intend to read any more of that because I am satisfied the minister is fairly familiar with it because he has been listening to the debates in this house. I feel quite sure that it would not be necessary to pass a completely new act as other means must be available or the Farm Improvement Loans Act could be amended in order that money could be put into the hands of these farmers so that they could put in their berry plants. I should like to have the minister comment upon the legislation the British Columbia government has passed in respect to making loans available to these farmers.

Right Hon. J. G. Gardiner (Minister of Agriculture): Mr. Speaker, one of the hon. members who spoke a few minutes ago made the suggestion that we should do the same for farmers everywhere as we do for the wheat farmers, that we should give them the same consideration. This particular matter has to do with the obtaining of plants to be planted at the right time of the year for those who have had plants destroyed by frost.

We have had similar situations on previous occasions on the prairies and in other parts of Canada and they have always been looked after by the provincial governments. Someone said something about politics in connection with this, but it has not made any difference what political party was in power in the particular province. As I say, matters of this kind have been looked after by the provinces and provincial legislation has taken care of them.

For example, during the years when they had no crops on the prairie provinces and it was difficult to obtain seed, provision for obtaining that seed was made by the provincial governments at a cost of millions of dollars.

An hon. Member: Who paid for it?

Mr. Gardiner: Someone asks, "Who paid for it?" Members from Saskatchewan who are here ought to know who paid for it because it was partly on that issue that they won the province. The provincial governments paid the bill right through.

The matter of dealing with people in British Columbia will be handled just the same as it is anywhere else in Canada. All that was suggested to them was that this was a matter in connection with which the provincial government should take action. Even the delegation which was here understood that. The first letter that I had from the delegation was to the effect that they had seen the provincial government and they did not think that government was going to assume their responsibilities and therefore they came to us. When they got here I discussed the matter with them as I would discuss any matter with anyone who came here. I told them that the matter would be taken up with the treasury and others and I would give them an answer the following day. As I stated a few moments ago, I found that the letter which it was intended should go forward to them before had not left the office. I sent it to the hotel, and they obtained it, I presume, either that night or the following morning. I am not sure they actually came

back, but if they did they were only there for a very short time. But the suggestion was that they should discuss the matter further with the province, and we expected that we would probably hear more about it. So far as I know, we have not heard any more about it, and I assume somebody out there is dealing with the problem.

It is purely a provincial matter and always has been. The federal government never does say in connection with any matter brought in from the provinces that we will not even consider it. We listen to what they have to say, and, where it is a matter that should be looked after provincially, we simply say that, and sometimes that is the last we hear of it. At other times the province takes action and still asks us to help pay for it. In this particular case, as the hon. member has just said, it is a matter of guaranteeing loans of a certain kind in order to be able to buy plants. It is much the same in principle as the loans that were made to farmers to permit them to buy seed in other parts of the country. They eventually pay off these loans in some way or other.

I do not know that there is anything more I can say about it. I do not know whether or not we shall hear any more about it. If we do, we shall give whatever consideration we can to it and give advice along the same lines as in other parts of Canada. We are not going to make an exception of the case. We do not think this is something that is so costly or so difficult to arrange that the province is not able to do it. Knowing, as we do, it is a responsibility of the provinces, we think they should take action.

UNEMPLOYMENT INSURANCE

Mr. J. C. Van Horne (Restigouche-Madawaska): In the remaining few minutes I should like to deal very briefly with a problem that has become increasingly important in northern New Brunswick. It has to do with unemployment insurance.

The information I have gathered in the survey I have made across the northern part of New Brunswick in regard to unemployment insurance comes from employees and officials employed by the unemployment insurance commission itself. One of the gravest problems with which we have to deal is the fact that we do not have reciprocity in regard to unemployment insurance with the state of Maine.

The state of Maine is one of two states in all the United States of America that does not have unemployment insurance reciprocity with Canada. At the moment 1,800 men from the county of Madawaska and 6,000 men from all over Canada have been employed in Maine and are being denied unemployment insurance merely because this government has not taken steps to enter into reciprocity agreements with the state of Maine or, if it has entered into negotiations with the state of Maine, they have not been successful in getting that state to accept reciprocity with Canada. Our people who work there have to pay unemployment insurance; yet when they come back home they cannot collect unemployment insurance benefits.

Another very great problem, which I think has been brought up by several members on the other side of the house recently, had to do with the directives of the unemployment insurance commission in forcing men to go many hundreds of miles away from their homes to work under conditions that prohibit them from earning enough money to live, let alone enabling them to buy their tickets back home. Four hundred or five hundred people from the county of Restigouche were requested to go to La Tuque to cut pulpwood. Some did go, but were unable to earn enough money to buy their tickets back home. Some of them suffered many hardships, having to live in camps where they were improperly treated and the food was insufficient.

As I think has been brought up by several Liberal members recently, this dictatorship in the unemployment insurance commission must be forced to cease immediately. We cannot continue to force our people to accept employment many hundreds of miles away from their homes under conditions that prevent them from earning a living.

Another matter I wish to bring out this evening is this. Until two years ago, people cutting pulpwood on farms, that is, cutting pulpwood for farmers on farmers' lots, were able to get unemployment insurance. Two years ago this was abolished. I do not know why, but one thing is very certain. There was some suggestion at the time that abuses had crept in. I ask, are we going to prohibit driving on our highways because the odd man exceeds the speed limit? Are we going to abolish credit because the odd man does not pay his bills? Are we going to prohibit one class of people from unemployment insurance because possibly a few abuses have occurred? I am not denying those abuses, but I am saying that they in themselves, however true, are not sufficient to deny these people unemployment insurance benefits as a group.

Another point I wish to bring out in the next few minutes that remain to me is this. When I asked the Minister of Labour some weeks ago questions regarding unemployment insurance, the information that I had and on which my question was based came from officials and employees in the unemployment

insurance offices themselves. They were bombarded with complaints and questions because of the tie-up and delays that were occurring in the unemployment insurance office in Moncton. This was very true. The minister answered my question three weeks after I asked him. There is no question but that in that time action had been taken to remove the causes of delay.

If the minister had taken time to inquire, he would have found out also that the R.C.M.P. had been sent to the Campbellton office to inquire and investigate and be on hand when a disturbance there threatened. These items may not appear to you, Mr. Speaker, to warrant the special few remarks that I am making here tonight, but I say that with all the approximately 6,000 people on unemployment insurance in northern New Brunswick, mostly in my riding, there are another 4,000 or 5,000 people in my riding who should be entitled to unemployment insurance benefits and who are not receiving them.

Hon. Milton F. Gregg (Minister of Labour): I just want to touch upon two points made by the hon. member. One was that the Minister of Labour had delayed for two weeks before replying to the hon. member's question. I did delay for a total of seven sitting days. I delayed for those seven sitting days because it was not until then that the hon. member was in his seat to receive an answer to the question.

Mr. Van Horne: Would the minister permit a question?

Mr. Speaker: It is now ten o'clock. Do hon. members—

Mr. Van Horne: I move the adjournment of the debate.

Mr. Speaker: The hon. member cannot speak twice. Having spoken once he cannot later intervene in the debate, even for the purpose of moving the adjournment. I should like to submit to hon. members that there are being carried over from a former debate ten minutes which may be carried over again unless hon. members give unanimous consent to spend those ten minutes now. If hon. members are not agreeable, they will be carried over.

Mr. Drew: Can they be carried over?

Mr. Speaker: As it is ten o'clock, is it the pleasure of the house to adopt the main motion?

Some hon. Members: Agreed.

Motion agreed to and the house went into committee, Mr. Robinson (Simcoe East) in the chair.

DEPARTMENT OF NATIONAL DEFENCE

Defence services—

235. To provide for the Canadian forces, the defence research board and other expenditures relating to defence, including contributions toward the military costs of the North Atlantic Treaty Organization; to authorize expenditures in the current year out of the amount hereby provided, not exceeding $143,000,000, under the provisions of section 3 of the Defence Appropriation Act, 1950, and to provide that, notwithstanding subsection (3) of that section, where equipment or supplies are transferred, the estimated present value thereof shall be credited to this vote instead of being paid into the special account mentioned in the said subsection (3), and when so credited may be expended for the purposes of the Canadian forces; and notwithstanding section 30 of The Financial Administration Act to authorize total commitments for the foregoing purposes of $3,470,423,461 regardless of the year in which such commitments will come in course of payment (of which it is estimated that $1,675,484,744 will come due for payment in future years), $1,722,797,717.

Mr. Harris: Stand.

DEPARTMENT OF VETERANS AFFAIRS

498. Departmental administration, $2,215,472.

Mr. Harris: Stand.

Item stands.

Progress reported.

BUSINESS OF THE HOUSE

Mr. Harris: Tomorrow we shall take the motion to set up the committee on atomic energy, then the second reading of the bill to amend the Canadian Farm Loan Act, then the resolution in my name with respect to farm improvement loans.

Mr. Knowles: Would the minister care to tell us what will happen on Thursday?

Mr. Harris: Yes. We will take the Trans-Canada pipe line resolution on Thursday.

It being two minutes after ten o'clock the house adjourned, without question put, pursuant to standing order.

ANSWERS TO QUESTIONS

The following answers, deposited with the Clerk of the house, are printed in the official report of debates pursuant to standing order 39:

DRAINAGE AND CONSERVATION PROJECTS, MANITOBA

Question No. 76—**Mr. Zaplitny:**

1. Has the government, or any department thereof, entered into an agreement with the government of the province of Manitoba, or any department thereof, for the purpose of constructing or maintaining drainage and/or conservation projects in 1956?
2. If so, what amount of money has the government committed under the said agreement?
3. What is the nature and location of each such project?
4. What amount of money is the government to contribute with respect to each said project?

Answer by: **Mr. Pinard:**

1. No.

2, 3 and 4. See answer to No. 1.

TREASURY LIABILITY WRITE-OFF, SASKATCHEWAN

Question No. 143—**Mr. Leboe:**

What is the total dollar value of treasury bills and other liabilities of the Saskatchewan government that have been cancelled by the dominion government since 1944?

Answer by: **Mr. Harris:**

Pursuant to the provisions of the Western Provinces Treasury Bills and Natural Resources Settlement Act, chapter 77 of the statutes of 1947, treasury bills of the province of Saskatchewan in the amount of $36,336,797.79 were written off in the fiscal year ended March 31, 1948.

RESERVE ARMY STATISTICS

Question No. 211—**Mr. Bell:**

What was the strength of the militia (formerly reserve force), and the number of said personnel attending summer camp in 1953, 1954 and 1955, by commands?

Answer by: **Mr. Campney:**

Average monthly strength of the militia by commands:

	1953	1954	1955
Eastern	8,052	7,698	7,324
Quebec	10,385	10,645	10,344
Central	15,815	15,581	14,992
Prairie	5,414	5,270	5,840
Western	7,125	6,909	7,260
Total	46,791	46,103	45,760

Questions

Summer camp attendance of the militia by commands:

	1953	1954	1955
Eastern	2,588	2,070	3,750
Quebec	3,255	2,588	4,398
Central	5,964	8,702	7,561
Prairie	1,212	1,312	2,245
Western	1,549	1,921	2,614
Total	14,568	16,593	20,568

C.B.C. "TABLOID" PROGRAM, FEBRUARY 6

Question No. 225—**Mr. Fleming:**

1. Did the Canadian Broadcasting Corporation telecast on CBL-T.V. "Tabloid" program on Monday, February 6, a film of a marriage which was solemnized on February 4?
2. If so, who approved of this broadcast on behalf of the Canadian Broadcasting Corporation?
3. Was any remuneration paid to any of those participating in the ceremony?
4. What was the cost of the program, by items?
5. Are any more of such programs contemplated?
6. Does the government consider such programs in good taste on television?

Answer by: **Mr. McCann:**

The Canadian Broadcasting Corporation advises as follows:

1. On February 6, "Tabloid" carried filmed sequences, of approximately six minutes duration, which dealt with the wedding of one of the participants regularly appearing in the "Tabloid" program.

2. This broadcast was approved by the Canadian Broadcasting Corporation, which has full responsibility for it.

3. No.

4. Total cost of "Tabloid" program for this occasion:

Performers' fees	$190.00
Production staff, studios, and technical facilities	337.00
Staging and design	48.00
Film	186.00
Total	$761.00

5. No.

6. The Canadian Broadcasting Corporation is not in a position to answer this question.

SUFFIELD EXPERIMENTAL STATION, RALSTON, ALTA.

Question No. 226—**Mr. Monteith:**

What was the name of the successful bidder and what was the tender price for the following equipment required for the Suffield experimental station of the defence research board at Ralston, Alberta, which tender was let under the approximate date of February 16, 1956, (a) one only, soaker bottle washer, Girton model 49SA 6 wide; (b) one only, model 5A Fort Wayne filler and capper?

Questions

Answer by: **Mr. Howe (Port Arthur):**

(a) A.P.V. (Canada) Equipment Limited, Toronto, Ontario—$3,700.

(b) A.P.V. (Canada) Equipment Limited, Toronto, Ontario—$2,000.

WHEAT STORAGE STATISTICS

Question No. 227—**Mr. Diefenbaker:**

How much wheat of each of the following grades: (a) No. 4; (b) No. 5; (c) No. 6; (d) lower than No. 6, and including feed, was in storage in, (i) local elevators; (ii) terminals; (iii) all other storage facilities, except wheat stored on farms, on the following dates: (a) August 1, 1955; (b) October 1, 1955; (c) February 1, 1956?

Answer by: **Mr. Howe (Port Arthur):**

	(i) Local elevators bu.	(ii) Terminal elevators bu.	(iii) Other storage positions bu.
(a) July 31, 1955			
(a) No. 4 north'n	19,284,130	6,270,635	7,341,817
(b) No. 5	28,628,549	9,164,135	994,275
(c) No. 6	10,103,964	3,293,670	77,509
(d) Feed	Information not available	1,836,704	83,167
(b) September 28, 1955			
(a) No. 4 north'n	*Information not available	9,329,137	7,504,767
(b) No. 5	"	12,602,335	1,870,846
(c) No. 6	"	4,029,129	203,205
(d) Feed	"	1,917,966	20,319
(c) February 1, 1956			
(a) No. 4 north'n	*Information not available	10,154,120	7,618,899
(b) No. 5	"	9,548,578	6,376,884
(c) No. 6	"	2,108,660	2,530,034
(d) Feed	"	282,695	156,407

* Detailed information as to the grades of grain in storage in the different country elevators is only obtained at the end of the crop year.

T. V. PROGRAMS, C.B.C.

Question No. 230—**Mr. Dufresne:**

1. What are the names of the producers of the following television programs: (a) "Plainte contre Inconnu"; (b) "Le Chant du Rossignol"?
2. Who authorized these programs?
3. What is the cost to the Canadian Broadcasting Corporation of the two above mentioned programs?

Answer by: **Mr. McCann:**

The Canadian Broadcasting Corporation advises as follows:

1. (a) Georges Groulx; (b) Jean St-Jacques.

2. These programs were authorized by the Canadian Broadcasting Corporation which has responsibility for them.

3. (a) "Plainte contre Inconnu", $17,024; (b) "Le Chant du Rossignol", $16,715.

NATIONAL PARK SPORTS FACILITIES

Question No. 235—**Mr. Johnston (Bow River):**

1. Are there any national parks in Canada provided with golf courses, lawn bowling greens or tennis courts, owned or operated by the federal government?
2. If so, where are they?
3. How long have they been so operated?

Answer by: **Mr. Lesage:**

1. Yes.

2 and 3.

(a) Golf courses have been in operation in the following parks since the date indicated:

Waterton Lakes (1922); Riding Mountain (1931); Elk Island (1936); Prince Albert (1934); Prince Edward Island (1939); Cape Breton Highlands (1940); Fundy (1950).

(b) Lawn bowling greens have been operated in the following parks since the date indicated:

Riding Mountain (1948); Prince Edward Island (1950); Prince Albert (1950); Elk Island (1954); Fundy (1952); Cape Breton Highlands (1951).

(c) Tennis courts have been operated in the following parks since the date indicated:

Prince Edward Island (1940); Riding Mountain (1932); Prince Albert (1933); Jasper (1950); Waterton Lakes (1925); Georgian Bay Islands (1952); Elk Island (1954); Fundy (1951); Cape Breton Highlands (1941).

Note: In addition to the golf courses listed above, a golf course is operated in Jasper park by the Canadian National Railways and in Banff park by the Canadian Pacific Railway. These courses are open to the general public on the payment of green fees.

CIVIL SERVICE REGULATIONS—SECTION 86

Question No. 244—**Mr. Balcom:**

1. How many civil service employees are covered by section 86 of civil service regulations?
2. How many postal employees are covered by section 86 of civil service regulations?

Answer by: **Mr. Pinard:**

1. 53,729.

2. 18,702.

OLD AGE SECURITY STATISTICS

Question No. 252—**Mr. Smith (Battle River-Camrose):**

1. How many people in Canada were receiving old age security on January 1, 1956?
2. How many non-citizens of Canada were receiving old age security on January 1, 1956?

3. How many of these non-citizens of Canada receiving old age security are citizens of the United States, France, Germany, Scandinavia, Russia, Belgium, Holland, Italy and others?

Answer by: **Mr. Martin:**

1. 768,188.

2. Eligibility for old age security pensions depends solely on age and residence. No information is required from applicants regarding citizenship. It is therefore not possible to state what number of pensioners are non-citizens of Canada.

3. Answered by No. 2.

IMPORTS, 1955—BUTTER, CHEESE, ETC.

Question No. 260—**Mr. Hodgson:**

1. How much (a) butter; (b) cheese; (c) margarine; (d) vegetable oil, was imported into Canada in 1955?
2. From what countries and what amount from each country?

Answer by: **Mr. Howe (Port Arthur):**

1 (a, b and d) and 2. The amounts by countries of butter (statistical classification 2282), cheese (statistical classification 2284), and vegetable oil (statistical classifications 231 to 236 and 1601 to 1627), imported into Canada during the calendar year 1955, were as follows:

Country	Butter Lb.	Cheese Lb.	Vegetable oil Cwt.
United Kingdom ..	4,999	39,109	131,955
British East Africa	—	—	451

1 (c) and 2. Imports of margarine prohibited.

CANADIAN BOOK CENSORSHIP

Question No. 272—**Mr. Knight:**

1. Who is the chief censor of books for Canada?
2. What reading staff is maintained for the purpose of censorship?
3. Who are these readers?
4. Who makes the final decision in a borderline case?
5. How many books were refused admittance to Canada in 1955?
6. What, by categories, were the grounds upon which entry was refused?

Answer by: **Mr. McCann:**

1. There is no chief censor or censorship board in the Canadian government.

2. See answer to No. 1 above.

3. See answer to No. 1 above.

4. See answer to No. 1 above.

5. In 1955, 140 books were prohibited entry into Canada under tariff item 1201 which reads: "Books, printed paper, drawings, paintings, prints, photographs or representations of any kind of a treasonable or seditious, or of an immoral or indecent character".

6. The books referred to in 5 above were classified as immoral or indecent under tariff item 1201.

HOSPITAL COSTS

Question No. 273—**Mr. Nicholson:**

For 1943 and 1953, what was the estimated cost per patient per day in the following hospitals: (a) mental; (b) t.b.; (c) public?

Questions

Answer by: **Mr. Howe (Port Arthur):**

Estimated cost per patient per day (Canada average):

	1943	1953
	$	$
(a) Mental	0·98	2·70
(b) T.B.	2·76	6·29
(c) Public	4·08	10·77

HOSPITAL STATISTICS

Question No. 275—**Mr. Nicholson:**

For the last year for which statistics are available of the number of patient days spent in Canadian hospitals, how many and what percentage were in the following: (a) mental hospitals; (b) psychiatric wards in hospitals; (c) t.b. hospitals; (d) public hospitals; (e) federal hospitals; (f) private hospitals?

Answer by: **Mr. Howe (Port Arthur):**

Patient days, 1953	No.	p.c.
(a) Mental hospitals	21,722,911	39·72
(b) Psychiatric wards in hospitals	488,268	0·89
(c) T.B. hospitals	5,828,000	10·66
(d) Public hospitals	23,056,858 (1)	42·16
(e) Federal hospitals	2,740,063 (2)	5·01
(f) Private hospitals	853,324 (3)	1·56
Total	54,689,424	100·00

(1) Excludes 18,155 days included in (b).

(2) Excludes 470,113 days included in (b) and 667,609 days included in (c); includes fiscal year 1952-53 figures for five hospitals with a total of 11,127 days.

(3) Excludes 108,935 days included in (a) and 870 days included in (c).

HOUSE OF COMMONS

Wednesday, March 14, 1956

The house met at 2.30 p.m.

PRIVILEGE

MR. FLEMING—ANSWERS TO FORMAL QUESTIONS ON C.B.C. "TABLOID" PROGRAM

Mr. Donald M. Fleming (Eglinton): On a question of privilege, Mr. Speaker; in yesterday's *Hansard,* at page 2115 there are recorded six questions that I placed on the order paper concerning the C.B.C. "Tabloid" program on February 6 of the film of a marriage that was solemnized on February 4. There were six questions and apparently the Minister of National Revenue referred them all to the Canadian Broadcasting Corporation. The answers given yesterday are answers that come from the Canadian Broadcasting Corporation because those answers are preceded by the words, "The Canadian Broadcasting Corporation advises as follows".

Now, the sixth question was:

Does the government consider such programs in good taste on television?

The only answer I have been given is that the Canadian Broadcasting Corporation is not in a position to answer this question. May I have the question answered by the government, to whom I directed the question, as to whether the government considers the programming of a marriage ceremony actually solemnized to be in good taste for television programs?

Mr. Speaker: Perhaps this matter could be dealt with when we reach the orders of the day.

RAILWAYS, CANALS AND TELEGRAPH LINES

SECOND AND THIRD REPORTS OF STANDING COMMITTEE—CONCURRENCE IN THIRD REPORT

Mr. H. B. McCulloch (Pictou) presented the second and third reports of the standing committee on railways, canals and telegraph lines, and moved that the third report be concurred in.

Motion agreed to.

CANADIAN NATIONAL RAILWAYS

TABLING OF ANNUAL REPORTS AND BUDGETS

Hon. George C. Marler (Minister of Transport): I wish to inform the house that this afternoon I tabled the annual report of Canadian National Railways for 1955 and the budget for 1956. I am sure all hon. members will be pleased to know that in its operations last year Canadian National realized a surplus of $10,717,689.

I also tabled this afternoon the annual report for 1955 and the budget for 1956 of the Canadian National (West Indies) Steamships Limited. The operation last year resulted in a loss of $95,964, which represents an improvement of $532,446 over the result for 1954. May I be permitted to make a brief statement as to the future operations of the company.

After the company had experienced a very disappointing year in 1953, an impression grew that the government had in mind the termination of the company's operations. My predecessor reassured the house on April 12, 1954, that such was not the government's intention, but said that the results of operations would be carefully considered in relation to the usefulness of the service. Following the consideration of the accounts of the company by the sessional committee on railways and shipping last year, a thorough study was made of the prospects of the company.

Hon. members will recall that until the Canadian National service was started the government had found it necessary to grant substantial subsidies to steamship companies to induce them to provide regular service between Canada and the British West Indies. As the subsidized service was not entirely satisfactory, the government decided to inaugurate a service with Canadian ships. During its 27 years of operation, the Canadian National service incurred annual losses from 1929 to 1940, considerably reduced its accumulated deficit between 1941 and 1948, but experienced further losses after 1948. In 1954, the loss was reduced to about one-half the figure for 1953, and in the year just ended the loss has been a very modest one.

The company has taken measures to reduce operating costs and to develop new traffic, and is expected to participate fully in a gradual increase in the volume of trade between Canada and the British West Indies.

It is anticipated that the service will operate at a loss, but it is expected that the deficits will not average much more than $200,000 per annum and there are reasonable prospects that they may be less. The government believes that this is not too high a price to pay for the continuation of dependable steamship service between Canada and

the West Indies and for the tangible and intangible benefits for our trade and our relations with the British West Indies.

In the circumstances, the government has decided to continue the Canadian National (West Indies) service for at least five years, at which time the subject will again be reviewed in the light of the experience in the intervening time and of conditions then prevailing.

Mr. Speaker, if I have permission of the house, I would now move:

That the annual reports for 1955 of the Canadian National Railways, the Canadian National (West Indies) Steamships Limited, and the Canadian National Railways securities trust, the auditors' report to parliament in respect of the Canadian National Railways and Canadian National (West Indies) Steamships Limited, and the budgets for 1956 of Canadian National Railways and Canadian National (West Indies) Steamships Limited, tabled this day, be referred to the sessional committee on railways and shipping owned, operated and controlled by the government, together with the following items of estimates for 1956-57:

Vote 454 Prince Edward Island car ferry and terminals deficit, 1956;

Vote 460 North Sydney-Port aux Basques ferry and terminals deficit, 1956;

Vote 466 Maritime Freight Rates Act;

Vote 467 Canadian National (West Indies) Steamships Limited deficit, 1956;

and that the resolution passed by the house on January 26, 1956, referring certain estimates to the committee of supply, be rescinded so far as the said resolution relates to votes 454, 460, 466 and 467.

Mr. Bell: Will this mean any new ships for the Canadian National (West Indies) run?

Mr. Speaker: That question could be asked when the orders of the day are called.

Motion agreed to.

[*Later:*]

On the orders of the day:

Mr. Thomas M. Bell (Saint John-Albert): May I ask the Minister of Transport a question arising out of the statement he just made with respect to Canadian National (West Indies) Steamships? Is it reasonable to expect some replacement will be made of the old vessels and if so when will an announcement be made?

Mr. Marler: I might say that no consideration has been given to this matter by the interdepartmental committee which considered the subject of the activities of Canadian National (West Indies) Steamships Limited since the last session of the house. I would suggest to the hon. member that, since he is a member of the sessional committee on railways and shipping, he might take up the subject during the sittings of that committee.

Mr. Bell: Does the minister not remember that at the last session it was pointed out the condition of those vessels was very serious, and if future plans were being made it would be essential that the boats be replaced immediately?

Mr. Marler: I have no such recollection.

STARRED QUESTIONS

CLIFFORD WILLIAMS

Question No. 32—**Mr. Fulton:**

1. What consideration has the remission service given under the Ticket of Leave Act to the case of Clifford Williams?

2. Is it a principle followed in recommending ticket of leave that the convicted person should have served one-half of his sentence? If so, on what basis has this principle been established?

3. Is it considered that Williams is rehabilitated to the point where he could now safely be released on ticket of leave with the prospect of leading a useful and orderly life? If not, what steps are being taken to rehabilitate this young man so that he will not be doomed to spend 28 unproductive years in prison?

Mr. Garson: Mr. Speaker, I propose to deal first with the second question asked by the hon. member for Kamloops, namely whether it is a principle followed in recommending ticket of leave that the convicted person should have served one-half of his sentence and, if so, on what basis this principle has been established.

For many years the remission service of the Department of Justice has followed a rule of general application that requires at least one-half of a sentence of imprisonment to be served before an inmate of a penal institution becomes eligible to be considered for release on ticket of leave, that is, on parole. I am not aware of any parole authority in any country that does not have a rule similar, in principle, to the half-time rule applied by the remission service in Canada.

The proportion of the sentence that must be served varies from country to country, but in every instance the general rule is that some minimum period is required to be served. The rule is applied to the general run of cases in which the sentence of imprisonment imposed by the court is not more than is adequate as punishment for the offence nor more than is required for the reformation and rehabilitation of the convicted person as a result of the treatment that he receives in the institution. Exceptions are, of course, made to the rule in cases such as the Williams case. Those are cases involving very long sentences where after a reasonable period of imprisonment, having regard to the circumstances of the offence, the inmate has shown evidence of reform sufficient to justify the granting of parole to him. I emphasize the fact that in these cases the rule is not applied. Indeed, 6 to 12 per cent of all paroles are granted before the inmates concerned have served half of their sentences.

The half-time rule is well known to the courts, the police, prison officials and inmates. The rule is designed primarily, in the cases where it applies, to ensure some degree of equality of treatment as between inmates. In the cases where it is applicable it does remove uncertainty from the mind of the inmate concerning the time when he may expect to be considered for release on parole and thus helps him to accept the reality of his sentence. If no such rule existed an inmate might during the early part of his sentence continually build false hopes for early release only to have those hopes dashed when he was not released as soon as he expected to be. Such a state of affairs would impede rather than promote his reform and rehabilitation. Moreover, the rule makes possible a minimum period during which the officers in the institution can plan and carry out a proper program of treatment and training for the inmate. Again, it furnishes to the courts and law enforcement authorities generally some assurance that a reasonable proportion of the sentence imposed by the court will be served by the convicted person and that, thereby, the deterrent value of the sentence will be preserved.

In administering the Ticket of Leave Act the remission service of the Department of Justice does not purport either to fulfil or to interfere with any function that should, under our system of law, be performed by the courts. The release of a person on ticket of leave, that is, on parole, is not an interference with the sentence imposed by the court but is, rather, a step designed to assist in the rehabilitation of the offender in society.

The first and third questions relate to a particular case in which the remission service of the Department of Justice is interested. It is the case of Clifford Williams, now an inmate of St. Vincent de Paul penitentiary.

To answer these questions in the sense in which they are framed would necessarily involve a discussion of the merits of the case and disclosure of the contents of confidential reports that have been received in the department concerning it. Hon. members will realize, of course, that confidential reports concerning the background and the development in the penal institution of every inmate are received from a great many sources.

Since the Ticket of Leave Act was first enacted in 1899 it has been the invariable practice of my predecessors to avoid discussion in this house of the merits of individual cases of persons undergoing imprisonment.

Without going in any way into the merits of this particular case, may I say that the latest occasion on which the case of Clifford Williams was placed before the Solicitor General, who has charge of these matters, was October, 1955. At that time, after a careful review of all the reports, he was unable to recommend that Williams be granted parole. This was not the first occasion when my colleague considered the case. A sentence of 28 years upon conviction for the first time is not a usual sentence in Canada and its length itself was sufficient to ensure that the case would not be dealt with on any routine basis and that no arbitrary rules would be applied that would result in the confinement of Williams in the institution for a period that in all the circumstances is not warranted.

I do not propose to express any opinion on the question whether it is considered that Williams is now rehabilitated to the point where he could safely be released on ticket of leave with the prospect of leading a useful and orderly life. To do so would necessarily involve a discussion of the merits of the case and disclosure of the contents of some, at least, of the confidential reports that have been received concerning the case. As to the steps that are being taken to rehabilitate this young man so that he will not be doomed to spend 28 unproductive years in prison, I may say that the officers of the penitentiary have given and will continue to give to him the treatment and training that are appropriate to the circumstances of the case and his willingness to respond. There are in the institution concerned rehabilitative facilities from which every inmate may derive benefit and, in all fairness to this young man, I feel that I should say there is no indication that he is unwilling to avail himself of these facilities.

DIET SURVEYS—CIVIL SERVANTS, OLD AGE PENSIONERS

Question No. 34—**Mr. Knowles:**

1. Is the Department of National Health and Welfare conducting a survey amongst civil servants in Ottawa to ascertain whether or not the said civil servants are eating adequate breakfasts?
2. If so, what are the results of such survey?
3. What steps are being taken with respect to any inadequacies disclosed by such a survey?
4. Will the benefits resulting from this survey be published?
5. Has the department conducted any survey amongst old age pensioners, in any city in Canada, to ascertain whether or not the said old age pensioners are eating (a) adequate breakfasts; (b) adequate meals at any time?
6. If so, what are the results of such survey?
7. What steps are being taken with respect to any inadequacies disclosed by such a survey?
8. If no survey amongst old age pensioners has yet been made, will consideration be given to the conducting of such a survey in several cities at an early date?

Mr. Robertson: This question consists of eight parts. The answer to part 1 is that a

survey of the breakfast habits of approximately 20 per cent of civil servants in Ottawa was conducted from January to May, 1955.

Part 2: Of those employees surveyed it was found that 75 per cent ate a breakfast which conformed to recommended health practices; 16 per cent ate a breakfast definitely below recommended health practices; and 9 per cent ate no breakfast.

In answer to parts 3 and 4, I would say that in each building in which the survey was conducted the results were publicized and the fundamentals of a good breakfast as well as the reasons for eating a good breakfast were explained. The nursing counsellors of the civil service health division of the Department of National Health and Welfare gave particular emphasis to good breakfast habits in all subsequent interviews and are continuing their program of health education.

The answers to parts 5, 6 and 7 are no.

The answer to part 8 is that assistance has been given and will continue to be available to provincial groups of various kinds who are conducting surveys, including some surveys on older Canadians.

NATIONAL CENOTAPH

Question No. 35—**Mr. Jones:**

1. Have any representations been received for a national cenotaph to honour Canada's fallen of all wars?
2. If so, from whom, and what consideration has the government given to this suggestion?

Mr. Lapointe: Mr. Speaker, this question seeks to find out whether representations have been received by the government regarding a national cenotaph to honour Canada's fallen of all wars. I must say that such representations have been received from time to time from various veterans' organizations. More specifically, the dominion executive council of the Canadian Legion, in its annual brief presented to the cabinet on November 10 last, recommended that such a national cenotaph be erected. However, prior to that time, the cabinet had authorized the establishment of an advisory committee to consider and report to me on various matters including the choice of a repository for the world war II book of remembrance. This committee was composed of representatives of government departments concerned as well as the chairman of the federal district commission, representatives of the Canadian Legion and of the national council of veterans' associations in Canada, and the contracting artist for the book of remembrance.

Following the presentation of the Legion's brief, the committee was also asked to make a recommendation regarding the construction of a national cenotaph. The committee submitted its report a short time ago, and it is receiving the attention of the government at the present time. I propose to make a statement on this matter at an early date.

FAY ELIZABETH SPALDING

Question No. 36—**Mr. Fulton:**

1. Was Fay Elizabeth Spalding, a British subject, born in Australia, refused admission to Canada and/or ordered deported in April, 1955?
2. Was she in that same month required by the Department of Citizenship and Immigration to post a cash bond in the sum of $1,000 and to surrender her passport?
3. Was the deportation order subsequently quashed in the supreme court of British Columbia in April, 1955? If so, has the department yet paid the applicant her taxed costs of that action, and if so, when?
4. Did the Department of Citizenship and Immigration then appeal to the court of appeal of British Columbia and receive a judgment dismissing the appeal in July, 1955? If so, has the department yet paid the respondent her taxed costs of that appeal, and if so, when?
5. Has the time for appeal to the Supreme Court of Canada expired, and if so, when?
6. Has the department yet refunded the $1,000 cash or returned the passport, and if so, when?

Mr. Pickersgill: Mr. Speaker, on an earlier occasion, when the hon. member for Oxford (Mr. Nesbitt) asked a question about an individual immigration case, I raised a point of order, and I think perhaps an additional point of order might be raised in this case, in that the question appears to transgress the rule that questions are to elicit information and not to give it to the house. In view of the fact that this question deals with a case which has been before the courts, about which there has been a great deal of interest and about which there are some points of law involved, I think perhaps, with your permission, I might answer it.

Mr. Speaker: Let us perhaps go further into the point of order. I have not had a chance to peruse the question, but it seems to me that if through this medium we are going to ask questions about every case that goes through the Department of Citizenship and Immigration, where there are perhaps over 100,000 cases dealt with, we are going to have to enlarge the order paper. Is this case considered to be of urgent importance, or is it not one that could wait until the estimates of the department are discussed?

Mr. Fulton: No.

Mr. Speaker: Would the hon. member for Kamloops explain?

Mr. Fulton: As you will see on reading the question, this is a very unusual case, and the circumstances surrounding it are unusual in that nearly a year ago the person concerned was required to post—I suggest, quite wrongly—a cash bond in the sum of $1,000. Her case

has been heard in the supreme court of British Columbia and the court of appeal of British Columbia, and a judgment favourable to her rendered in both courts. I believe the time for appeal to the supreme court has expired and I am informed that neither has the cash bail been returned nor have her taxed costs in any of the courts been paid. I understand there are some further developments in this case in recent days about which I hoped to have the opportunity of asking a supplementary question today. This is far from being a routine case. It is one of those cases which I think reveals in its clearest light the improper conduct of the department.

Some hon. Members: Order.

Mr. Speaker: I do not know how many unusual cases of this kind there may be. The hon. member says this is one unusual case. In his view there may be thousands of unusual cases. I am glad that the Minister of Citizenship and Immigration raised the point.

Mr. Fulton: May I be permitted—

Mr. Speaker: I will allow the minister to answer the question, as he was prepared to do, but I am glad he raised the point because I think that in future I will be more careful with respect to such questions.

Mr. Pickersgill: Sir, the answer to the first question is that Fay Elizabeth Spalding is, according to her passport, a British subject born at Melbourne, Australia, on the 14th of November, 1926, and the wife of Alan George Spalding, a resident of Australia. There are three children, aged, at the time she arrived in Vancouver, 4½ years, 3½ years and 11½ months. Mrs. Spalding was accompanied only by the youngest child. At the time she was seeking admission she had only £6 Australian and no return ticket to Australia. She was met by Mr. Lindsay Neil Ingall of Calgary at the Vancouver airport. She stated that her husband was suing her for divorce and that she intended to marry Mr. Ingall as soon as the divorce was granted. She was ordered to be deported on the 14th of April, 1955.

I subsequently received the following cablegram from Melbourne, Australia:

Mr. Pickersgill,
Immigration Minister, Ottawa.

Concerning publicized Vancouver case wife child left Australia without my consent no repeat no prospect immediate divorce Alan Spalding address Inbur, Melbourne.

The answer to the second question is yes. The answer to the third question is yes. Judgment was rendered on May 20, 1955. To the second part of the third question the answer is no. Taxed costs of the action have not been paid to Mrs. Spalding in view of the department's decision to submit a request for leave to appeal to the court of appeal of British Columbia.

The answer to questions 4 and 5 is yes. An appeal was made to the court of appeal and dismissed in July, 1955. Payment of taxed costs would not be made in the ordinary course, I understand, until after the time for leave to appeal to the Supreme Court of Canada had expired. The last day fixed in the order of the supreme court to apply for leave to appeal was January 30, 1956. At that time the case of the Attorney General of Canada *v.* Brent came on for hearing before the supreme court and the Spalding case was left in abeyance with the consent of the Ottawa agent for Mrs. Spalding's attorney. After considering the reasons for judgment in the Brent case, it was decided last week not to proceed further with the appeal in the Spalding case before the Supreme Court of Canada and to settle taxed costs. Action is being taken to that effect.

The answer to question 6 is that in view of the decision not to proceed with the appeal action is also being taken to refund to Mr. Ingall the $1,000 deposited as bond.

Mrs. Spalding's attorney was advised in June, 1955, that Mrs. Spalding's passport would be returned to her for the purpose of leaving Canada, which he, that is, her attorney, claimed she had stated she intended to do. The passport will now be returned to Mrs. Spalding. Consideration is now being given to what action should be taken in this case.

QUESTIONS PASSED AS ORDERS FOR RETURNS

GOVERNMENT-OWNED SHIP REGISTRATIONS

Question No. 219—**Mr. Green:**

1. Are all ships which are owned by the government of Canada, including any agency thereof, registered under the provisions of the Canada Shipping Act?
2. If not, which ships are not so registered?
3. By what department or agency are any unregistered ships operated?

POST OFFICE PERSONNEL, MONTREAL—CHRISTMAS SEASON

Question No. 245—**Mr. Hamilton (Notre Dame de Grace):**

1. How many additional employees, on a part-time or full-time basis, were retained in the Montreal area by the post office to handle the additional work load during the 1955 Christmas season?
2. How many of these had their application supported by a letter from a member of parliament?
3. What were the names of these members of parliament and how many successful applications did each member support?

Orders for Returns

FRUIT IMPORTS, B.C.

Question No. 248—**Mr. Jones:**

What quantities and what varieties of fruit have been imported into British Columbia, during the last year?

POST OFFICE STATISTICS, MONTREAL-TORONTO

Question No. 268—**Mr. Hamilton (Notre Dame de Grace):**

1. For each of the cities of Montreal and Toronto, how many postal stations are in operation?
2. For each such postal station (a) what civil service grade was held by the person in charge on December 31, 1955; (b) what was the revenue for the last fiscal year; (c) how many permanent employees were on the staff at December 31, 1955?

ALEXANDER CONSTRUCTION COMPANY, EDMONTON

Question No. 279—**Mr. Thomas:**

1. What is the total number of contracts awarded to Alexander Construction Company of Edmonton since January 1, 1950?
2. What is the amount of each of these contracts and where located?
3. Has the total amount of payment exceeded the original tender in any of these contracts? If so, by how much?
4. Have materials used by this company ever proved substandard? If so, in what instances?
5. From what suppliers does Alexander Construction purchase its materials?

OLD AGE PENSIONS

Question No. 290—**Mr. Knowles:**

1. What was the total amount of money paid to old age pensioners, (a) by the federal government; (b) by the provincial governments, in each of the following years: 1927, 1928, 1929, 1930, 1935, 1940, 1943, 1944, 1945, 1946, 1947, 1948, 1949, 1950, 1951?
2. What was the total amount of money paid to pensioners under the Old Age Assistance Act, (a) by the federal government, (b) by the provinces, in each of the following years: 1952, 1953, 1954, 1955?
3. What was the total amount of money paid to pensioners under the Old Age Security Act, in each of the following years: 1952, 1953, 1954, 1955?
4. What was the total amount collected for old age security from the three 2 per cent taxes imposed for the same, in each of the following years: 1952, 1953, 1954, 1955?

FEDERAL DISTRICT COMMISSION—ACQUISITION OF PROPERTY

Question No. 295—**Mr. Harkness:**

1. Since the 15th day of May, 1952, what lands or buildings have been acquired by the federal district commission in (a) the city of Ottawa; (b) the county of Carleton; (c) the county of Russell; (d) the city of Hull; (e) the county of Hull; (f) the county of Gatineau, giving the date of acquisition, the legal description and total acreage of the property in each case?
2. From whom was such property acquired?
3. What was the total price paid to the vendor or any other persons in respect to the acquisition of each such property?

[Mr. Hamilton (Notre Dame de Grace).]

4. For what purpose, either present or future, was each such property acquired, and to what use is each such property presently being put?
5. At the present time, has the federal district commission any agreements of sale or options for the acquisition of other property, or has it commenced expropriation proceedings for the acquisition of other property in any of the aforesaid cities or counties?
6. If so, what is the legal description and total acreage of each such property?
7. From whom is each such property to be acquired?
8. What is the total price payable to the vendor or any other person under any such agreement of sale or option in respect of the acquisition of each such property?
9. What is the total price which has been offered to the owner of any such property in respect of which expropriation proceedings may have been commenced?
10. For what purpose, either present or future, is each such property to be acquired, and to what use will each such property be put?

DIVORCE STATISTICS

Question No. 243—**Mr. Knowles:**

1. How many divorces, (a) *a mensa et thoro;* (b) *a vinculo matrimonii,* have been granted by parliament, through the enactment of private bills, in each of the following years: 1867, 1868, 1869, 1870, 1871, 1872, 1873, 1874, 1875, 1876, 1877, 1878, 1879, 1880, 1885, 1890, 1900, 1910, 1920, 1930, 1940, 1950, 1951, 1952, 1953, 1954, 1955?
2. What is the total number of divorces, (a) *a mensa et thoro;* (b) *a vinculo matrimonii,* granted by parliament, through the enactment of private bills, between July 1, 1867, and December 31, 1930? What is the breakdown of each of these totals as to provincial domicile?
3. What is the total number of divorces, (a) *a mensa et thoro;* (b) *a vinculo matrimonii,* granted by parliament, through the enactment of private bills, between January 1, 1931, and December 31, 1955? What is the breakdown of each of these totals as to provincial domicile?

He said: Mr. Speaker, I believe the information sought by question 243, which is on the order paper in my name, could more appropriately be obtained by addressing a communication to the Clerk of the Senate in his capacity as Clerk of the Parliaments. On that basis perhaps question 243 could be withdrawn from the order paper.

Mr. Speaker: Question withdrawn.

MOTIONS FOR PAPERS

POST OFFICE DEPARTMENT—INSTRUCTIONS REGARDING BURGLARIES

Motion No. 35—**Mr. Hamilton (Notre Dame de Grace):**

For a copy of the instructions issued by the Post Office Department to its postmasters concerning the procedure to be followed when a theft or burglary is discovered.

RENFREW AIRCRAFT ENGINEERING COMPANY

Motion No. 37—**Mr. Fleming:**

For a copy of contracts, draft contracts, and correspondence, exchanged during the last five

years, between the government and Renfrew Aircraft Engineering Company, respecting the purchase and sale of land or buildings or capital equipment or houses at or near Renfrew, Ontario.

NATIONAL GALLERY—PRICES PAID

Motion No. 38—**Mr. Diefenbaker:**

For a copy of all invoices or other records revealing prices paid for each and every painting or picture purchased for $500 or more for the national art gallery, since January 1, 1950.

Mr. Pickersgill: I informed the hon. gentleman privately the other day, Mr. Speaker, that the board of trustees of the national gallery had advised me that if this return were made it would make it much more difficult for them to carry on negotiations for the purchase of pictures to the greatest possible advantage of the national gallery. I can only respect that opinion, but I also recognize that this refers to an expenditure of public money and that not only the house but any hon. member in the house is entitled to this information if he wishes to press for it. While I have no intention of opposing the motion, I wonder if the hon. gentleman would not consider whether it is advisable to press it, in view of the position taken by the board of trustees.

Mr. Diefenbaker: I would allow it to stand at the moment.

Mr. Speaker: Motion stands.

DISABLED PERSONS ACT—MANITOBA

Motion No. 40—**Mr. Zaplitny:**

For a copy of all correspondence, telegrams, memoranda, and other communications exchanged between municipal authorities in the province of Manitoba and the federal government or any department thereof, with respect to the Disabled Persons Act, since January 1, 1955.

EXTERNAL AFFAIRS

CYPRUS—REPRESENTATIONS BY CANADA TO UNITED STATES

On the orders of the day:

Mr. J. G. Diefenbaker (Prince Albert): I should like to direct a question to the Secretary of State for External Affairs. In view of the vital importance of Cyprus to the strategic defence of the Middle East, to the commonwealth lifeline, to NATO, and of Canada's position as interpreter to the United Kingdom of the United States and vice versa, has the secretary made any representations to the Department of State of the United States regarding intervention by officials of that country in the dispute between Great Britain and Greece?

Hon. L. B. Pearson (Secretary of State for External Affairs): No, Mr. Speaker, no such representations have been made.

Inquiries of the Ministry

IMMIGRATION

ELIZABETH FAY SPALDING—REPORTED DEPORTATION ORDER

On the orders of the day:

Mr. E. D. Fulton (Kamloops): May I ask the Minister of Citizenship and Immigration a question arising out of the answer he gave to a starred question a few minutes ago? Has the minister just recently issued instructions for the removal of this lady from Canada—where I might say she is now legally married and a resident—under section 7 of the Immigration Act, which would have the effect of circumventing the decision of the court?

Hon. J. W. Pickersgill (Minister of Citizenship and Immigration): The answer, sir, is no. If the hon. gentleman has any information about the alleged marriage of the woman in question I would be glad to have it.

Mr. Fulton: Might I ask the minister if he would direct his inquiry to departmental counsel who, I understand, is in possession of all the information.

PUBLIC SERVICE

PARTICIPATION OF FISHERIES DEPARTMENT EMPLOYEES IN MUNICIPAL ELECTIONS

On the orders of the day:

Mr. A. W. Stuart (Charlotte): May I direct a question to the Minister of Fisheries? Has any order been issued by his department restricting the rights of employees to take part in municipal elections or to be candidates for municipal office?

Hon. James Sinclair (Minister of Fisheries): No order has been issued, and we have no objection to officers taking part in municipal affairs as long as the municipal duties do not conflict with the proper discharge of departmental responsibilities.

HEALTH AND WELFARE

DIET SURVEYS—CIVIL SERVANTS AND OLD AGE PENSIONERS

On the orders of the day:

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, may I direct a question to the Minister of National Health and Welfare arising out of the answer given earlier today by his parliamentary assistant with respect to a starred question in my name? He probably expects me to ask whether his department has surveyed his own breakfast habits. Are there available to us any results of the surveys referred to by the parliamentary assistant in his answer to part 8 of my question?

Inquiries of the Ministry

Hon. Paul Martin (Minister of National Health and Welfare): I was trying to understand what my hon. friend had asked in his first question and I had asked my colleague to tell me; consequently, I missed the purport of the second question. Would my hon. friend repeat it?

Mr. Knowles: Perhaps the minister would rather answer the first question. Are there available any results arising out of the surveys referred to by the minister's parliamentary assistant in his answer to part 8 of my starred question?

Mr. Martin: I think that the obvious answer is the Minister of National Health and Welfare himself.

Mr. Knowles: May I ask the minister if he is an old age pensioner and, if so, how he is getting along on $40 a month?

Mr. Martin: I apologize in part, Mr. Speaker. I was referring to all the questions except the last one. If my hon. friend reads them carefully, he will see how apt my earlier reply was. With regard to the question pertaining to old age pensioners I can only say to my hon. friend, what he knows, that this government gives this matter its continuous concern and attention.

Mr. Knowles: But only $40 a month.

(*Translation*):

NATIONAL DEFENCE

INQUIRY AS TO IMPOSITION OF CONSCRIPTION IN PEACETIME

On the orders of the day:

Mr. Paul E. Gagnon (Chicoutimi): Mr. Speaker, I would like to direct a question to the Prime Minister. Is it true that the government does not dare impose peacetime conscription for fear of an unfavourable reaction on the part of the people of the province of Quebec?

Right Hon. L. S. St. Laurent (Prime Minister): No, Mr. Speaker.

(*Text*):

ADMINISTRATION OF JUSTICE

CLIFFORD WILLIAMS—REQUEST FOR INTERVENTION BY DEPARTMENT

On the orders of the day:

Mr. J. G. Diefenbaker (Prince Albert): In connection with the reply given by the Minister of Justice respecting the Clifford Williams case and the rather shocking length of the sentence, would the minister give consideration, the time for appeal having elapsed, to having an order in council passed to have that case placed before the court to determine whether or not that sentence is far beyond what is fair?

[Mr. Knowles.]

Mr. Sinclair: Are you not against government by order in council?

Mr. Diefenbaker: Twenty-eight years.

Hon. Stuart S. Garson (Minister of Justice): Mr. Speaker, so far as I am aware, we have taken the position at all times in the Department of Justice that the responsibility for the imposition of sentences in criminal cases is that of the courts, and that it is an improper exercise of executive authority to interfere with what is essentially a judicial function.

I understand that in the present case, through the influence of a lady who is taking an interest in this young man, legal advice has been made available to him. I think my hon. friend will agree with me that it would be quite possible for the legal advisers of Mr. Williams to apply for leave to appeal now notwithstanding the fact that the appeal period had passed, based upon the fact that Williams had no legal adviser at the time that the appeal period expired. In the absence of Williams' legal adviser doing that, the only way we would have any authority to take the steps that my hon. friend refers to would be upon an application for remission. Even in that case, I think we would hesitate very much to interfere with the exercise of the function of the courts.

Mr. Diefenbaker: Why not follow the same course you did in the Coffin case?

Mr. Fulton: May I ask the Minister of Justice whether it would not be open to him to take the same action with respect to the Clifford Williams case as he did with respect to the Coffin case, by way of reference to the Supreme Court of Canada? If so, why does he not take that action, the time for appeal having gone by?

Mr. Garson: In reply to my hon. friend's question I would suggest if he examines the two cases he would find that the two sets of circumstances are quite different, and that we were not at all warranted in applying to the Williams case the reasoning that was applied in making the reference to the Supreme Court of Canada in connection with the Coffin case.

Mr. Diefenbaker: Not at all.

Mr. Fulton: Is it not the only way in which this matter can now be submitted to any court?

Mr. Garson: No, it is not the only way. The first way would be for counsel for the accused—

Mr. Fulton: He has not one.

Mr. Garson: Yes; my information is that he has, and that he could apply to the court

of appeal for leave to appeal notwithstanding that the appeal period had expired. Then, if that were refused, the only way in which it could get before the provincial court of appeal would be if, in connection with an application for remission to myself, as Minister of Justice, I should invoke the relevant section of the Criminal Code to refer it to the provincial court of appeal as to sentence. But I apprehend that that is not the proper course for the Minister of Justice to take until there has been an application on behalf of the accused.

Mr. Diefenbaker: Mr. Speaker, in this case, if a waiver of appeal was signed, is it not a fact that no application is then open to the accused? Is that not the position in this case?

Mr. Garson: Mr. Speaker, if it is the position, I am not so informed.

FLOODS

SASKATCHEWAN—ACTION TAKEN IN KAMSACK AREA

On the orders of the day:

Mr. G. H. Castleden (Yorkton): Mr. Speaker, I should like to direct a question to the Minister of Agriculture. Can he give a reply to my question of February 28 last regarding flood control on the Assiniboine river in the Kamsack area in Saskatchewan?

Right Hon. J. G. Gardiner (Minister of Agriculture): Mr. Speaker, I have not the information yet. I have to get it from Regina.

CANADIAN BROADCASTING CORPORATION

PROPRIETY OF "TABLOID" TELEVISION PROGRAM OF FEBRUARY 6

On the orders of the day:

Mr. Donald M. Fleming (Eglinton): Mr. Speaker, earlier today I raised a question of privilege which you suggested might also be raised on the orders of the day. May I now ask the Minister of National Revenue whether he is prepared to answer the question which appears on page 2115 of *Hansard* in relation to the CBL-T.V. "Tabloid" program of February 6, a film of a marriage which was solemnized on February 4? Does the government consider such programs in good taste on television?

Hon. J. J. McCann (Minister of National Revenue): Mr. Speaker, personally I did not see the telecast, and as one member of the government I am not prepared to make any answer with reference to whether it was in good taste or not. I am afraid the hon. gentleman does not quite understand my position with reference to the C.B.C. He complains that I had made the answer:

The Canadian Broadcasting Corporation advises as follows:—

Now, I am not in charge of the Canadian Broadcasting Corporation. I have never interfered in its operation or in its policies. The Department of National Revenue has nothing to do with the Canadian Broadcasting Corporation. The order in council, by which I was appointed, appointed me as the one who would report to parliament for the C.B.C. That I have attempted to do. I purposely have seen that the answers are put as they are, that the C.B.C. replies to the questions that are asked, and they take the full responsibility.

Now, it is not my particular job to poll the members of the government to see whether or not they are in favour of any particular broadcast. If he wants to do that, the hon. member can ask questions of the members of the government and they will give their own opinions. I doubt very much whether any of them have enough interest in those broadcasts to say—

Mr. Fleming: May I ask the Prime Minister whether he approves of this type of television broadcast of an actual marriage solemnized, a film being made of it and broadcast on television, at some expense, which he will find set forth on page 2115 of *Hansard,* including performers' fees?

Right Hon. L. S. St. Laurent (Prime Minister): The hon. gentleman has obtained the facts now. The Canadian Broadcasting Corporation is responsible to parliament. It is a body that has been set up by legislation of parliament, with powers that are provided in that legislation.

I have seen several things on the C.B.C. that I did not think were in good taste. I did not see the telecast to which this question refers, but I have never attempted to exercise any censorship over the activities of the C.B.C. I do not think my personal opinion about the manner in which they select their programs is a matter about which there should be any debate in parliament.

Mr. Fleming: Mr. Speaker, is the way in which the Canadian Broadcasting Corporation carries on its affairs and programs not a matter for discussion in this house, and a proper matter for questions in the house when this house is being called upon to vote

substantial sums of money for the upkeep of the C.B.C. and its programs?

Mr. St. Laurent (Quebec East): It is a matter that is one of public interest, and because it is a matter of public interest we appointed a royal commission to inquire into the whole matter of both television and sound broadcasting. That commission is now sitting and it is—

Mr. Fleming: Not yet.

Mr. St. Laurent (Quebec East): Yes, it is.

Mr. Fleming: Not yet; it has been appointed but it is not sitting.

Mr. St. Laurent (Quebec East): Perhaps it is not hearing witnesses at this time, but it is proceeding. It has given notice of the time during which it will be prepared to receive briefs prior to setting the dates for the public hearings. It is because it is a matter of great public interest, and because it is a matter that involves the expenditure of large sums of money, that the royal commission was appointed to inquire into it and to make a report.

Mr. Fleming: May I ask the Minister of Finance this question? In view of the fact that the estimates of the Department of National Revenue have been referred to the committee on estimates, will the government give consideration to referring also to the committee on estimates items 54, 55 and 56 of the estimates relating to the Canadian Broadcasting Corporation?

Hon. W. E. Harris (Minister of Finance): Mr. Speaker, the government has been in the habit of having a special committee on the C.B.C. every second or third year, usually at the request of the opposition, and I do not see any particular point in acceding to this request.

Mr. Fleming: In the light of the answer given to me by the Minister of Finance, may I ask the Prime Minister whether the government is prepared to have set up at this present session a special committee on radio broadcasting and television, similar to that which was set up at last year's session?

Mr. St. Laurent (Quebec East): No, Mr. Speaker. That question was considered and we came to the conclusion that, having appointed a royal commission, it would not be proper to recommend the appointment of a special committee to proceed to make the same inquiry at the same time.

[Mr. Fleming.]

ATOMIC ENERGY

SPECIAL COMMITTEE TO EXAMINE INTO ROLE OF GOVERNMENT IN NON-MILITARY RESEARCH

The house resumed, from Thursday, March 1, consideration of the motion of Mr. Howe (Port Arthur):

That a special committee be appointed to examine into the role of government in the field of non-military research in Canada, including:

(a) operations in the field of atomic energy,

(b) operations of the national research council.

That the committee be empowered to sit during the sittings of the house and to print such papers and evidence from day to day as may be ordered by the committee and to report from time to time; and that notwithstanding standing order No. 67 the committee shall consist of 20 members—

—and the amendment thereto of Mr. Green.

Mr. George H. Hees (Broadview): Mr. Speaker, the hon. member for Lambton West (Mr. Murphy) for several years has been urging the government to set up a committee of parliament to investigate the results which might reasonably be expected to accrue from a greatly expanded program of research in this country. He and other hon. members in this party have strongly urged the government to empower this committee to call outside witnesses with particular knowledge and experience in these matters so that the committee might gain the kind of information which would be necessary for putting forward to the government useful recommendations for future action. The committee which the government is proposing today does not permit the calling of such outside witnesses. It will permit only the calling of government employees before it, and as the large government majority on the committee can be counted upon to endorse whatever the government has or has not done in matters of research, this committee will amount to nothing more or less than a whitewash committee.

Because of the limitations which have been placed upon it, this committee is denied the means of obtaining the information necessary to reach constructive and useful conclusions, and that is the reason for the amendment which is presently before the house.

One of the reasons why a research committee with power to call outside witnesses with particular knowledge and experience in these matters is so urgently needed is that this country is today steadily dropping behind its industrial competitors in manufacturing progress. This fact was most recently driven home by the latest monthly bulletin of statistics produced by the United Nations in January last and shown on page 12 of that report. These figures, Mr. Speaker, show the percentage increase in manufacturing production which has been made by the leading industrial nations of the world during the six-year

period from 1948 to 1954, the latest year for which comparative figures are available. These percentage increases are as follows: Japan, 230 per cent; West Germany, 205 per cent; France, 38 per cent; India, 36 per cent; United Kingdom, 33 per cent; Belgium, 25 per cent; United States, 22 per cent; Canada, 17 per cent. The average percentage increase for the whole world, excluding the U.S.S.R. and communist Europe, was 39 per cent. Thus we see, Mr. Speaker, that the percentage increase which Canada made in manufacturing progress during the six years for which comparative figures are available is considerably less than that made by each of its industrial competitors.

Now, why should that be the case? We have a perfect right to ask why that should be so; why a country such as Canada with all its natural attributes, raw material, power and the other facilities which it has at its disposal should trail so markedly behind all its industrial competitors. The reason is that in order to make manufacturing progress you have to make sales, and today our products are losing out to products manufactured in other countries because of price or design or both.

One of the steps which we can take to improve our competitive position and to accelerate our industrial expansion is to follow the example of our more successful competitors. They have made full use of greatly expanded research to develop new and better products, new and better designs and more efficient methods of production.

In order to encourage industrial firms to undertake a great deal more industrial research than they are doing at the present time, I think Canada would do well to follow the example of Great Britain, whose percentage increase in manufacturing during the past six years has been double that of Canada. The deductions for tax purposes which are allowed by the British government are as follows, and I will quote from the information given me a few days ago by the United Kingdom information office:

The United Kingdom—Deductions allowed.

1. Current expenditures.

(a) All current expenditures on scientific research related to that trade and directly undertaken by the taxpayer or on his behalf.

(b) Sums paid to any scientific research association, approved for the purpose of research by the committee of the Privy Council for scientific and industrial research.

(c) Sums paid to university, college, research institute or other similar institution approved by the research council.

2. Capital expenditures.

(a) Expenditures of a capital nature incurred on scientific research related to that trade and directly undertaken by the taxpayer or on his behalf.

(b) Expenditures of a capital nature on research undertaken by the taxpayer or on his behalf and thereafter sets up and commences a trade connected with that research.

The report goes on to say:

In the United Kingdom there is a committee of the privy council for scientific and industrial research, a medical research council established under the committee of the privy council for medical research, and an agricultural research council under the committee of the privy council for agricultural research.

In any question of dispute as to what claims for allowances constitute research, the commissioners of inland revenue shall refer the question to the appropriate research council listed above for decision, and the decision of the council shall be final.

Thus we see that in Great Britain all expenditures for research, whether they be current or capital expenditures, are allowed as deductions for tax purposes. In this way, all industrial firms have every possible incentive to improve their competitive position by undertaking greatly expanded industrial research. The results have been clearly demonstrated by the manufacturing progress they have made, and by the industrial expansion which has taken place in that country.

In Canada the government has taken a far less generous attitude toward allowing deductions for tax purposes. I will quote the regulations in force in this country today, which are as follows:

Not more than 5 per cent of the taxable income of the taxpayer for the year preceding the taxation year may be deducted unless the research program in respect of which the expenditures were made has received the approval of the Minister of National Revenue, after he has, if he considers it necessary, obtained the advice of the national research council, that is, the honorary advisory council for scientific and industrial research as constituted by the Research Council Act.

Thus we see that a Canadian firm which wants to start an industrial research program which may cost in excess of 5 per cent of its taxable income for the previous year, may have to wait until half the current year is over before it knows the decision of the minister, and then, of course, that decision may be an unfavourable one. Decisions to undertake research programs must be made well in advance of the beginning of a year. A firm simply cannot wait until the previous year's figures have been audited and then subjected to the red tape of the Department of National Revenue for a decision.

Another factor which militates against a firm undertaking an industrial research program in this country under the present tax arrangements is the fact that industrial research is most needed after a bad year, and in a bad year the amount available for tax deductions will be lower. Thus we see that program affecting research in this country is a completely unrealistic one. Instead of encouraging firms that are doing badly to do better by undertaking industrial research, this government, by its taxation program,

makes it as difficult as possible, if not completely impossible, for a firm to undertake such a research program.

I believe that this government should encourage firms to undertake greatly expanded research programs, as firms in every other industrial nation in the world have been encouraged to do, by concrete means such as tax inducements of the kind I have just cited as being in effect in Great Britain. I believe that this country should introduce some kind of realistic tax allowance program such as they have in Great Britain and which has in no small degree enabled that country to make double the industrial expansion and progress which this country has made during the past six years.

If it will do so it will be taking a very important step forward in accelerating industrial progress and expansion in this country; the kind of industrial progress and expansion which this country should expect when we think of the almost unbelievable raw materials, sources of power, and every other advantage which the country has. That is the way to stop this country being largely a hewer of wood and a drawer of water, and enable it to become one of the really great industrial nations of the world.

In conclusion I would again urge strongly that this government should permit the powers of the committee which is being set up under this motion, to be extended so that outside witnesses with particular knowledge and experience in these matters may be called before the committee, to give the information which will be needed if the committee is to make worth-while and useful recommendations to the government for future and much needed action in this important field.

Mr. H. R. Argue (Assiniboia): Mr. Speaker, we in this group are prepared and pleased to support the resolution now before us that a special committee be appointed to examine into the role of government in the field of non-military research in Canada, including operations in the field of atomic energy and operations of the national research council. There is no doubt that, in addition to the role of government in the field of atomic research, corporations have a useful role to play. I listened most carefully to the suggestions made by the hon. member for Broadview (Mr. Hees), but it seems to me that almost all of his remarks were directed, not particularly to the role of government in the field of atomic energy research but rather to how the government by various policies could assist corporations in carrying on their own research.

Of course that is one aspect that is important and which should be considered, but I believe the government should be careful in granting further concessions of the nature suggested without at the same time giving consideration to what the final results on the economy will be of promoting that type of research rather than the type of research being carried on by the national research council. It is all very well to say that the government by taxation credits or taxation policies should promote private research, but at the same time it should be remembered that by doing so those corporations which develop new inventions may be able, because of our patent policies, to create for themselves a monopoly from which they will get large profits and returns over the years to come. While the encouragement of such research may be advisable, I think other safeguards should be thoroughly considered.

I am sure that the members of this committee will approach this problem with open minds. The members of the various parties in this house view the general role of government in business or the role of government in research in ways that are well known. The Liberal party, the Conservative party and the Social Credit party say that they would like to see the role of government kept to the very minimum. Their emphasis has always been that the government should get out of the business field and, I take it also, out of the research field if they are going to be completely consistent, in so far as it may be possible.

On the other hand, we believe that the government has a useful role to play in this field. We should bear in mind that the original development of atomic energy which resulted in the explosion of the first atomic bomb was brought about mainly, not through the efforts of private corporations or individuals but because governments accepted the important role of leadership in this field and were able to acquire the services of scientists who were experts in this field. By placing national resources at their disposal they were able to develop the first atomic bomb. I believe that the future will show that the government has an important role to play in the field of peacetime research and that we should not hand this field over to private corporations. Rather the government and the members of this committee should consider the advisability of extended government activity in this regard.

Personally I can see no reason why this committee should be confined to considering the role of government in the field of non-military research in Canada. Of course, I would not want anything to be produced before that committee which could be termed classified material, but it seems to me that in

large measure atomic information with regard to military equipment is public and such information might well be made available to the members of the committee. If the members of this committee are going to assess the role of government in this whole field they should be given every facility to inquire into all aspects of atomic energy research of a non-classified nature.

I have shown my own attitude in that regard when I have questioned the government at various times as to whether they had asked that Canadian observers be given the right to see atomic bomb explosions and hydrogen bomb explosions being conducted by the United States and by the United Kingdom. I can see no reason why the government should not at least give consideration to the advisability of having the public representatives, members of parliament, view some of these tests. If my information is correct, members of congress have had such facilities made available to them in the past. I think it would be valuable information for the members of this committee if those same facilities were extended to them, if that were possible.

I should hope that the government would be prepared to provide all possible information to this committee, that its hands would not be tied, that the government would not try to keep as much information away from the committee as possible but rather would take the attitude that it would facilitate the work of the committee. I hope it would not attempt to give the committee a primer in atomic energy or an elementary class in the development of atomic energy, but rather would lay before the committee the fundamentals of this field so that members of parliament can come to a reasonable conclusion as to the role the government should play in this regard.

The hon. member for Nanaimo (Mr. Cameron), in his address on this subject on March 1, referred to the great dangers involved for the world in a continuing build-up of background irradiation, as he termed it. He quoted a number of prominent scientists to prove that there was a danger, in their opinion, that a continuing build-up of background atomic irradiation could result in very serious consequences to the human race. In that same regard, I have in my hand a quotation from a book, "The Story of F A O", written by the North American regional representative, Mr. Gove Hambidge. He has this to say on page 98:

> According to a recent report by geneticist A. H. Sturtevant of the California Institute of Technology, "the entire human race, present and future", is risking damage by irradiation from atomic or thermonuclear bombs exploded in current experiments. "There is no possible escape from the conclusion that the bombs already exploded will ultimately result, in future generations, in the production of numerous defective individuals. And every new bomb exploded . . . will result in an increase in this ultimate harvest of defective individuals".

That is a quotation from a prominent scientist. The hon. member for Nanaimo a few days ago quoted other prominent scientists along the same lines. I would suggest that if it is, as these scientists say, a real danger, this committee and the government should consider whether or not the time has now arrived when further hydrogen bomb explosions should be stopped. I myself believe that, with this possible danger to the world as these scientists express it, this committee should inquire into the genetic effects of the build-up of background irradiation to see whether or not the very genetic makeup of the human race is, in fact, imperilled.

Of course, atomic irradiation, if applied in a non-military field, can be very useful. Atomic irradiation is now being used by the national research council. It is being used in important experiments being conducted by the University of Manitoba in the spreading and development of various plants, including potatoes, tomatoes, carnations, apples, lythrums and so on. I might say that using atomic irradiation on various plants increases the number of mutations that take place as compared with the number that would take place without irradiation. Mutation is a genetic change that is handed down from one generation to another. So, if a large number of mutations in plants can be brought about, then the scientists can select those plants that show the best characteristics and, by a rigid process of selection, can in a short time improve the plants with which they are dealing.

I should like to emphasize that most mutations caused by irradiation are detrimental and that only a few beneficial ones occur. When such mutations are applied to human beings, of course, there is no method of selection that we would want to consider. So, if human beings are exposed to irradiation, and changes in the genetic makeup should take place, then, since most of them being detrimental, there would be a general adverse effect on the human race. However, using atomic irradiation for the development of better varieties of grain and other plants can assist mankind very substantially. The report I have in my hand shows that the use of atomic irradiation with selection has resulted in eight new varieties of Montcalm barley being produced in a short time. Montcalm is a malting barley and is in great demand at the present time, but one of its drawbacks in the field is the fact that it has a weak straw. Irradiation applied to Montcalm barley has

resulted, with rigid selection, in the development of a number of strong-strawed varieties, which should result in increased yield.

That is the way we should like to see atomic energy used, in the main, for the improvement of human welfare by applying it to peacetime uses. The government has had much good work done through the national research council. Last fall I had the privilege of going through the national research council laboratories on the campus of the University of Saskatchewan and I saw some of the very interesting and promising work that is being done in the way of developing boards from straw and in the way of separating protein from grain, the glucose separation process, as it is called, and a great deal of other important work.

I think it would be highly useful and highly desirable if the members of this committee could be given the opportunity to see the work of the national research council at Saskatoon and perhaps also at Halifax. I know from talking to some of the scientists, Dr. G. A. Ledingham and Dr. Burton Craig in particular, that they are most anxious that their facilities and the work of the national research council should be placed before the committee. They felt and I felt also that they were doing valuable work and that the setting up of this committee would result in some public attention being given to that valuable work. I hope the government will consider the advisability of stepping up the grants for the purpose of making atomic energy available to underdeveloped countries. More and more frequently we read reports and statements by prominent people in the western world that we are now beginning to lose the economic battle with the communist world and that unless steps are taken, and taken soon, to make available to underdeveloped nations atomic energy and more of the resources of this continent that are in surplus supply, the U.S.S.R. may fill that need with very drastic results to the free world.

I have in my hand a statement made by Senator William Benton of Connecticut as reported by Marquis Childs in the Washington *Post* of February 28, 1956. Quoting Senator Benton, the report has this to say in part:

> . . . Soviet education . . . system is producing a surplus of engineers and technicians who will be assigned to carry out technical assistance in every uncommitted country of the world.

It goes on to say:

> The Soviets are now challenging us frontally at what have historically been two of our strongest points, technology and mass education. The present rate of Russian educational advance is faster than our own, just as their growth rate in industrial production surpasses ours. The gap in total performance is closing. It is closing rapidly.

[Mr. Argue.]

If that is the case, Canada should lose no time in stepping up the appropriation to be used for making atomic energy available for peaceful uses in underdeveloped nations. I am very glad that $8 million is now being used to provide for part of the cost of an atomic plant for India. I think that is a good thing and I should like to see the government do more along that line. This same article goes on to say:

> In two speeches late last year, Admiral Lewis L. Strauss, chairman of the atomic energy commission, sounded an equally grave alarm. He said it was evident the United States was rapidly falling behind Soviet Russia in the training of scientists and technicians with the "certainty that we are turning out less than one-half the number of scientists and engineers we require—an alarming statistic by itself".

If the government is to play a full role in the field of non-military research, then I suggest that very large grants should be made available to assist students to go through our universities so that our supply of scientists and technicians may be ample to meet our own needs and to assist us in playing our full part in making atomic energy available to underdeveloped nations. We are pleased, as I have said, that the national research council is doing a good job. We believe that in many respects the government, through the national research council, should be undertaking more research and placing greater emphasis on this field. I suggest that when the national research council sets its energies to the production of some invention that may be of real benefit to the nation and that invention is achieved, not only is such an invention likely to be of much greater use to Canadians generally than if it is controlled by a private corporation but also the cost of producing such an invention is likely to be very much less than if it is produced in the competitive field.

A few weeks ago I had brought to my attention very forcibly an invention of two scientists of the national research council, Dr. A. Frederick Sirianni and Dr. Ira E. Puddington. The thing that they developed is not a large or heavy gadget. It is something that looks rather insignificant but I suggest that in the future it is likely to be of tremendous value to this nation and other nations in the world. It is a little thing they call a sodium plug. The sodium plug can be placed in the crankcase of an automobile or any ordinary piston engine. After this very cheap and economical plug has been placed in the crankcase of the motor the oil does not have to be changed nearly as frequently as would otherwise be the case.

As a matter of fact, two such plugs were placed in automobiles in September, 1953, and since that time they have been driven

17,000 and 20,000 miles respectively without changing the oil. Was this invention something that cost the country a great deal? I do not think so because these two scientists on the staff of the national research council are not paid large sums of money by way of salary, as we consider large sums of money in these days. According to the public accounts, Dr. Puddington is paid a salary of $11,000 and Dr. Sirianni a salary of $6,600.

Ordinarily one has to change the oil in an automobile every thousand miles or so. If the plug does what these scientists expect it will do, make it possible for the automobile owner to change the oil only once every 20,000 miles, it means that the oil in an average automobile will only have to be changed once a year.

Mr. Byrne: I never change mine.

Mr. Argue: The plug keeps down the development of an acid which results in damage to the automobile. We have about 4 million automobiles in Canada at the present time and also large numbers of tractors and stationary engines. If a person has to change the oil in his automobile only once a year instead of every thousand miles he will probably save $25 to $50 a year. Here is the plug. It sells for a small price. I was able to purchase one for $3.

Mr. Byrne: You are not selling them?

Mr. Argue: I am not selling them.

Mr. Byrne: You should go in the business.

Mr. Argue: No, I have enough trouble in the business of farming without trying to branch out. The plug developed by the national research council is being produced under licence by a private corporation, and in my opinion if it performs as it would appear to perform it will probably save the nation $100 million a year in oil consumption, certainly tens of millions of dollars a year.

I have referred to this, Mr. Speaker, to demonstrate that there is a place for the national research council, that our investment in the national research council has been sound and that should be increased. If the national research council had done nothing else but produce this plug all the money spent for that organization in recent years would probably have been fully justified in an economic sense. If this had been developed by a private corporation, I am very much afraid that the big oil companies in this country would have made certain that such a plug never reached commercial production and would never be placed in the hands of the automobile owners in this country.

I am sure that the deliberations of this committee will be useful indeed, and I want to express the hope that their recommendations will be to increase the role of government both in atomic research and with regard to the national research council.

Mr. Murphy (Lambton West): I wonder if I could ask the hon. member who has just taken his seat a question, Mr. Speaker? Would he tell the house whether he has used that particular plug or does he know anyone who has used it successfully?

Mr. Argue: To answer directly, I have not used the plug myself. However, I intend to do so.

Mr. McCann: On a question of privilege, Mr. Speaker, according to the rule should not the hon. member table this exhibit?

Mr. Speaker: At the moment I rose I was going to point out that the displaying of an exhibit is not in order. This one that the hon. member held in his hand while he was making his remarks is a very small one, but there have been larger exhibits shown in this house. On September 18, 1945—see *Hansard*, volume I, second session of 1945, page 289—Mr. Speaker Fauteux made a statement to the house that the displaying of exhibits was not to be allowed. I have had no opportunity to apply the ruling or to make a similar statement, except perhaps once in the case of an item submitted by the hon. member for York West (Mr. Hamilton) which was a thermos jug, if I recall correctly. I did not make any remarks then, and that case having gone without my saying anything, we are now faced with this one. I think the position should be protected by the remarks I am making now. In the future, we do not wish hon. members to come into the house with small or large exhibits.

Mr. McCann: I submit that the hon. member having used the exhibit to corroborate his statement, it ought to be tabled and become the property of the house.

Mr. Speaker: I do not think we ought to apply to exhibits, which are not supposed to be shown, the same rule which is applied to documents quoted in a debate. As the minister knows, there is a distinction. Official documents must be tabled, and they can be tabled when the Speaker is in the chair during routine proceedings. But when it comes to private documents—

Mr. Knowles: Now Your Honour has it.

Mr. Speaker: It may be worth while to look at it if it does bring the economies the hon. member has predicted. To come back to the point that has been submitted by the Minister of National Revenue, I would say that if his point had to be agreed to this instrument

would go to the Clerk and remain in his possession. He would be the one who would benefit from the exhibit. It turns out that the purchase made by the hon. member for Assiniboia is greatly appreciated, and I now give this exhibit to the Clerk.

Mr. Knowles: I move he try it out in his car.

Mr. W. B. Nesbitt (Oxford): When this committee on research is set up, I think one of the very important problems it will have to consider is the implication of Russia's new industrial offensive. I think all members are quite familiar with the fact that, apparently because of nuclear stalemate, Russia is, to all intents and purposes, embarking on a new development program to further her ultimate aim of world domination. This has come to the attention of editorial writers and prominent people throughout the world. I should like, very briefly, to refer to an article in a prominent periodical known as *Newsweek*. It is the issue of February 6, 1956. There is a special business section in this magazine which relates to this problem. The article is entitled "Industrial War, Can Russia Win?" It reads:

> The clash of giants resounds around the world. Moscow has declared industrial war.
>
> At a time when the U.S. prospers as no nation has before, the soviet union is launching a massive economic offensive. The objective: To destroy capitalism by outproducing its U.S. base, capturing its markets and potential friends in under-developed lands.

Then it goes on:

> Close to one billion people in Asia, the Middle East and Africa are likely to throw their weight to the stronger side. On their decision largely depends the outcome of the cold war.

In that same article there are numerous other references showing how Russia has the ability to carry out this offensive to its ultimate conclusion. I think all hon. members realize the vast resources of raw materials available to the Soviet union, the vast resources of people, and also, a most important thing with which I am going to deal at some little length, the fact that the Soviet union has embarked on a program to produce scientists and engineers such as no other country has ever attempted before.

I should like to make a brief reference to this economic offensive and in doing so to quote briefly from this article in *Newsweek* to which I have referred. It points out, and I will not quote it but merely paraphrase it, that since the second world war, 600 million Asians and Arabs have won political independence from old world colonialism. Now, these same people who have secured their political independence are looking forward to the day of economic independence. These people in the east and in Africa are sick of never having enough to eat; they are sick of never having enough of what we consider to be the simple essentials of life and what to them are the luxuries. I do not think it is just a question of whether or not these people in the east and in Africa are going to get these things; it is more a question of how they are going to get them. Russia is making an allout attempt to outbid us.

At the present time, in roughly 38 short years from the revolution, Russia has transformed a defeated, semi-feudal society into the world's second mightiest power. Since 1913, shortly before the revolution, Russia's gross national product has increased by more than 10 times. I believe it now amounts to almost that of Germany and Britain put together. This is something we are going to have to face. In order to increase this great potential that Russia has, and in order to make proper use of their resources in both materials and people, she has to have more scientists and engineers. In a broadcast towards the end of last January, Matthew Halton reporting on the well-known radio program on Sunday afternoons, "Capital Report", presented some very disquieting figures. He pointed out that this year the Soviet union will graduate 60,000 engineering students, whereas the United States will graduate 22,000 and Great Britain 3,000. There was no figure available for Canada, but after making some inquiries I understand there would probably be only a few hundred.

Now, the Soviet union undoubtedly is attempting to become the master of the world through science and technology. What is more, apparently last fall a group of very prominent British scientists visited the Soviet union and had an opportunity of talking to their graduates in engineering and examining their education system. According to Mr. Halton, it was their opinion that when you compared these groups in Russia, Britain and the United States, the Russian scientists and engineers were superior to those in the United States and Great Britain. Apparently Sir Winston Churchill referred to this situation as an emergency, and something had to be done about it. It is bad enough to have superiority in the number of engineers and scientists, but much worse when that superiority is in quality as well. Apparently, 1,200,000 students of science generally, including engineers, will graduate in Russia this year, and approximately 900,000 in the United States. These figures are very disturbing, Mr. Speaker. They should be disturbing to all hon. members. It is something that I hope this committee will look into.

The resolution to set up this committee refers particularly to non-military research.

In the modern world of science and technology military and non-military research cannot be basically dissociated. It is also apparent that Russia leads in military research in some fields as well as in non-military. I am going to refer hon. members to an article which appeared in the New York *Times* of January 29 of this year, by Hanson W. Baldwin. I am not going to read it. If hon. members are interested they may look it up. Mr. Baldwin is a well-known and well respected commentator. He points out that in the field of intercontinental missiles Russia is apparently ahead of the United States and Great Britain.

This business of Russia continuing to develop scientists had a parallel in the past. Hon. members know that before 1914 the government of imperial Germany set up a very extensive plan to make Germany the leading country in the world in science and technology. This was done by the government subsidizing the universities and in other ways. This worked very well, as hon. members know. The calibre of German scientists became a byword. Russia is doing the same thing today, but on a much larger scale. In addition, they have at their disposal not only their own scientific brains but the scientific brains of the Germans taken from East Germany at the end of world war II. They also have the advantage of the scientific brains of a few traitors of the western countries who have gone over to the Soviet.

It is quite apparent that Canada's great resources cannot be developed to the fullest extent without adequate scientists and engineers, and apparently there is a considerable shortage at the present time. I refer briefly to comments by a very noted Canadian which appeared in the Montreal *Gazette*, of Wednesday, March 7 last. They are the comments of Dr. O. M. Solandt, former chairman of the national research council. I quote briefly from the article:

> Scientist Shortage Critical Problem
> The shortage of scientists and engineers will be the dominant factor and a critical problem in Canadian scientific and economic development.

In addition to that, Mr. Speaker, Dr. Sidney Smith, president of the University of Toronto, a person whose opinion cannot be brushed lightly aside, has this to say, according to the Montreal *Gazette* of Wednesday, March 7, 1956:

> Industry was warned by a university president today that by continuing to draw off top-notch university professors through high salaries, it may kill the goose that laid the golden eggs.
> Dr. Sidney Smith, head of the University of Toronto, said his institution—and others, too—are facing a serious problem in getting sufficient high-calibre instructors to train the increasing number of students required in Canada's economic expansion.

In this same regard there was an article by Henry Eyring, of the University of Utah in the United States, regarding federal support of basic research at a state university. I do not wish to take up the time of the house to read the article. I just wish to point out that Professor Eyring said that universities in the United States are up against the same problem. They have insufficient funds to pay professors, and the professors are going into more lucrative jobs, and there is no one to train the students. Let me quote briefly from this article:

> Since the top 10 to 15 per cent of the faculty make the difference between distinction and mediocrity much of a university's quality depends on how long it has been since it last went through the wringer.

There is a great deal more in this article, but I shall not take up the time of the house to read it.

On Thursday, March 8 last, the engineering institute of Canada, a well-known and highly respected organization in this country, and again an organization whose opinions cannot be casually brushed aside, appeared before the Gordon commission and pointed out the serious shortage of engineers in Canada. They also pointed out, as I have done this afternoon, that Russia was training vast numbers. I think that is also very important.

To win the industrial war with the Soviet union we have to develop fully our resources, and we cannot do that without technicians. The Russian economic offensive depends on efforts to build up the economies of the underdeveloped countries of Asia and Africa. They intend to do that by means of technical assistance. This means sending scientists and engineers to those countries, plus outright gifts and loans of material.

I should like to refer briefly to an article which appeared in a newspaper of the capital of Indonesia. As hon. members know, the capital of Indonesia is Djakarta. The name of the newspaper is *Pedoman*. The quotation reads:

> Heavy industry is a magic word to underdeveloped nations. Compared with what Russia has planned to undertake, all FAO and Colombo plan aid fades into insignificance.

That is the opinion of the press of Indonesia. Indonesia is a country which has not decided for either the east or the west. It is in the balance. Apparently the action that Russia is taking is just the thing that is going to make those countries, with vast millions, fall into the Russian orbit. Canada and other western countries—I am referring, of course, only to Canada—must find ways of encouraging and training scientists and

engineers, first of all to develop our own great resources, and second, to counteract the Russian economic offensive in the rest of the world.

The British government is aware of this situation. I refer to a news item that appeared in the London *Free Press* of March 1, 1956, as follows:

> Prime Minister Eden said today Britain must produce more technicians and technologists to keep her place in the world.
>
> Eden outlined the government's 5-year, £100 million plan to build up scientific and technical manpower for the challenges of that nuclear age.

Based on that news item, an editorial appeared in the London *Free Press* of March 5, 1956, along the same line. It dealt with the same problem. I will not take up the time of the house to read it. If hon. members are interested they can read it themselves. This is something that this committee must look into. It is an urgent and important problem, because our own lives and those of our families and the future of this country may depend on it. The committee is inadequate to cope with the problems that it has been set up to deal with. What positive, accurate and reliable recommendations can this committee make unless it has the power to call for prominent witnesses in the scientific and educational world to express opinions? This is a highly technical subject. While there are many amateur scientists in this house, nevertheless in dealing with problems of this importance, if this committee merely ends up with a group of hon. members sitting around discussing what should be done on the basis of hearsay, very little will be accomplished. If that is the basis of the committee's work, its recommendations will read something like a pulp magazine, like amazing stories.

Apparently, this committee has been set up to study research in general. I refer to the remarks made by the senior hon. member for Halifax (Mr. Dickey), as reported on page 1697 of *Hansard*:

> In making this study the committee is expected to review the operations of Atomic Energy of Canada Limited and of the national research council and to consider also research in its general aspects.

How this committee can consider research in its general aspects, if it has not the power to call experts in various fields, is beyond me. I again mention university professors, and the submission of the engineering institute. I also refer to the amendment proposed by the hon. member for Vancouver-Quadra (Mr. Green), who said that certain unclassified information should be given to the committee. If that is not done, if this committee does not have the ability to call witnesses to give evidence before it on highly technical subjects, if it has not the power to call for unclassified material it will hardly be worth bothering with at all. How can a committee recommend ways of encouraging and training scientists and engineers without the advice of senior men from universities and the profession? The way in which the committee is constituted at the present time, it is like the old song: "Mother, may I go out to swim? Yes, my darling daughter. Hang your clothes on a hickory limb, but don't go near the water."

Unless the amendment proposed by the hon. member for Vancouver-Quadra is accepted, you might just as well forget about any constructive recommendations coming from this committee.

Mr. W. M. Howe (Wellington-Huron): Mr. Speaker, I would like to say a few words on this resolution that a special committee be appointed to examine into the role of government in the field of non-military research in Canada.

I would like to congratulate the hon. member for Lambton West (Mr. Murphy) on being more or less finally successful in achieving his goal, in that year after year he has been bringing to the attention of the government the need for the setting up of such a committee. However, I simply cannot understand why the government, after considering this question for so many years, will not accept the amendment as we have brought it forward, with the power of sending for persons and papers to ensure that everything possible will be done to make this committee workable, successful and of great value to our economy in all its phases.

The hon. member for Broadview (Mr. Hees) has pretty well described the situation with regard to industry and has pointed out the necessity for research in industrial fields in order that Canada may keep pace with the other countries in the world that are producing and manufacturing the same goods we are. In that respect we might just consider for a moment an editorial which appeared recently in the London *Free Press*. I do not intend to read the editorial but I wish to put the heading on the record:

> Production Race—Russia vs. the West

The hon. member for Oxford (Mr. Nesbitt) indicated what is being done with regard to the training of scientists in other parts of the world. An article also recently appeared in the London *Free Press* with regard to the subject he spoke of. I should like to read the heading of the article:

> Britain Tries to Remedy Scarcity of Scientists

It says in part:

> Prime Minister Sir Anthony has announced a plan to spend £100,000,000 over a five-year period to train scientific and technical workers.

It might be of interest to comment on the fact that this morning I received one of the Soviet news bulletins which come to our desks and which we sometimes feel should not have the benefit of our mails. I should like to read the heading of the article and to quote briefly from it:

Young Soviet Technical Specialists—
Great headway has been made in technical and agricultural education in the U.S.S.R. At present the number of students at technical higher schools makes up 650,000 and at agricultural higher schools, about 200,000.

This is an indication, as the hon. member for Oxford said, that we should probably follow the suggestions made in the Massey report and give more consideration to the setting up of scholarships and of providing extra assistance to students at all levels so that we may have the advantage of the best brains that are available in this country. This question has been brought to our attention many times during the present session.

Looking at the economy of Canada, which is so buoyant at the present time, it would appear that our total economy is in a very healthy condition. In the last two days, however, we have had a debate in this house on the value of parity prices for agriculture. After listening to all the speeches that were made, after reading various newspaper articles that were written and after talking to the farmers personally, we realize that the agricultural phase of our economy is not in the same healthy condition. In the last few days we tried to bring some assistance to the farmers through the medium of parity prices. There may be a possibility of bringing assistance to the farmers through the medium of research in the field of agriculture. I hope that considerable time will be spent by the committee in going into the question of agricultural research because it is of tremendous importance in relation to our economy.

When we realize that the farmers' share of the net national income dropped from a high of 13·6 in 1948 to 6·8 in 1954 it gives us ample reason to believe that something should be done. We do realize, however, that great steps have been taken in the last 20 years in relation to agricultural techniques, the type of machinery that is used and the agricultural methods that are practised. We have practically had an agricultural revolution.

Figures were quoted here in the last two days to indicate that, in spite of the fact that the farming population has dropped to a great extent in recent years, farm production has increased over what it was before the war. There is little or no question about the farmers being efficient. Probably they are just as efficient as any other members of our economy. The farmers have been assisted in the last two years by agricultural colleges, sub-stations, and experimental farms. This knowledge has been taken to the farmers through the medium of agricultural representatives, federations, farmers' unions, crop improvement organizations and seed fairs. All these mediums have been used to bring the new and improved technological knowledge to the attention of the farmers in order that they may have the value of this research. I feel that the field of agricultural research is practically unlimited, as in so many other fields.

Sometimes we feel that there could be more co-ordination in the different institutions involved in this question, as was suggested in 1946 and 1947 by W. H. Cook, who made a comprehensive study of agricultural research in Canada and recommended an agricultural council which would serve agriculture, much as a national research council serves industry.

Dr. G. S. H. Barton, who was deputy minister of agriculture from 1932 to 1949, recommended that an agricultural research foundation should be set up to fulfil somewhat similar functions.

Professor C. G. E. Downing, of the Ontario Agricultural College in Guelph, in a recent article points out, and I quote:

At six federal institutions, in 1954, there were only three fundamental research projects under way, and at six colleges and universities only ten fundamental research projects. He points out that lack of organization and co-ordination between federal institutions and colleges has resulted in duplication of considerable research. No leadership has been given in the research undertaken.

Further, Professor Downing states:

Fundamental research must be undertaken on a nationally co-ordinated scale if any real progress is to be made in engineering research for agriculture in any or all of its aspects. This can best be accomplished through one central co-ordinating research centre with regional research units, staffed by highly trained personnel capable of planning and directing research with broad implications. These units should provide the data for the development of equipment, methods and practices which may be adapted to regional conditions.

There are many phases of this great field of agriculture in which research could be most important. I think we can take a lesson when we consider what crops might be produced. A few years ago it was thought that soybeans would not be a profitable crop in this country, but that has been proved a fallacy because in 1954 there were 254,000 acres sown with a production value of $11,887,000. Many years ago the growing of fibre flax was an important phase of our agricultural industry, and I sometimes wonder whether research of the right kind

would not bring about a resumption of the growing of this crop and the development of a linen industry in this country.

Another phase of industrial research was brought to my attention a few days ago by a question asked in connection with the use of stilbestrol in cattle and poultry feeds. When I heard the answer given by the Minister of National Health and Welfare I gathered that the minister was not too sure about the matter himself. We are told that this is a very powerful drug which has to be used with care, and I wonder whether it should be put on the market before additional research is carried out to prove that it is not detrimental to the health of the people of Canada.

We can find many instances where research would be of great benefit. When we think about this question of research we cannot help but wonder what is going on in the rest of the world. I have often wondered why Danish butter was always in first demand on the British market, and the same with Danish hogs. But then I read that in Denmark, a country much smaller than Canada with a population of approximately 5 million people, there are 28 agricultural colleges. No doubt the boys and girls going through these colleges are able to carry on some research activity at home and are better able to interpret the policies developed by their agricultural colleges.

There are many other matters in connection with which additional research could be carried on, such as the handling of fresh vegetables and fruit, the refrigeration of vegetables, meats and perishable products and the packaging of all types of agricultural products to make them more palatable and attractive to the consuming public. Even in the face of our apparent surpluses, I think the main question is the possibility of developing means of increasing our production as our population increases in order to prevent the situation which has been mentioned by so many of our learned men, that before too long we will be short of food supplies.

To the urban dweller research is usually associated with atomic energy, medical drugs, vitamins, television and so forth, but to a farmer research means hybrid corn, disease resistant crops, better control of insects, diseases of weeds, animals that grow faster and cows that give more milk. It means more efficient ways of pricing and marketing his product. It adds up to a higher standard of living for the entire community.

Mr. John B. Hamilton (York West): Mr. Speaker, I doubt very much whether under the terms of reference mentioned by the hon. member for Oxford (Mr. Nesbitt) I could

[Mr. Howe (Wellington-Huron).]

qualify as even an amateur scientist in so far as my ability to take part in this debate is concerned. I have not even read the pulp magazines to which the hon. member referred. But I do feel that I have considerable responsibility in presuming to speak on a subject of this kind. It seems to me that the terms of reference under which this special committee will operate cover a most important field of activity, one which will affect not only our economic life but perhaps the moral and spiritual values throughout the whole world for hundreds of years to come. In that respect it may plot a course for us which will have far-reaching effects.

I only hope that as a result of setting up this committee we may have a continuing flow of information made available not only to the committee but to the public at large, on the widest possible basis. I hope I will be forgiven if I read briefly from the preface of a book which was sent to me by Dr. R. L. Hearn, an outstanding engineer and head of the Hydro Electric Power Commission of Ontario. This preface is by Roger H. Evans, director general of UNESCO and the book is entitled "Nuclear Energy and Its Uses in Peace". The preface reads:

> Almost any new discovery in science may be used for good or for evil. It is men who decide, according to their needs of the moment, and according to their moral and philosophical conceptions. With peace now prevailing, with the peoples of every nation eager for the good life, and with ample knowledge now available from 15 years of research, the time is certainly ripe for developing the beneficent and constructive uses of the atom for peace.

And later:

> Thus a new era opens. The science of atomic materials and the engineering uses of atomic energy will be shared by all the world. It becomes as important for the public to learn the new facts as it has been to understand the use of coal and steam. The new power will be widely used long before school textbooks can be rewritten and before the children who study them can become adults. An introduction to the new knowledge and to its use in ordinary peaceful living is needed at once.

There is little doubt that this knowledge is needed at once. As I listened to General Gruenther this morning I began to wonder whether we could accomplish all that we would hope to accomplish in this committee if we attempted to keep separate the fields of military and non-military research. In this respect I agree with the opinion expressed by the hon. member for Oxford that it is going to constitute a most serious question. No one here wants to urge that the committee be given classified material, but it is going to be very difficult to make the best use of this committee; it is going to be very difficult to produce the best results in atomic research, if we are going to have it developed on two parallel lines, developed with two separate and distinct groups of scientists,

developed with two separate and distinct votes of government funds, and developed for two separate and distinct purposes.

I think I might be forgiven if I refer again to the problem of development and research in the field of aviation as a typical example of the problem that faces us here. No one can deny that the progress we have made in the commercial aviation field has been tied very definitely to the development of aviation as a means of waging war. The aircraft industry in this country is concerned, I believe it is distressed, because it feels that the government is not prepared to take that one additional step which is required to integrate the benefits that are being produced in military research, by bringing them forward and producing the results that can be produced right within this country in connection with commercial aircraft development.

Now I should like to refer, in connection with this phase of the matter, to the submission made by Avro at Malton to the Gordon commission on economic prospects. I shall read only a few words from this submission:

> At the outset, it should be stated that military aviation requirements provide the impetus for practically all aeronautical advances. It is a historical fact that, except for one or two cases, every commercial airliner flying today is a direct offshoot of a military aircraft. The reason for this is that the research and development needed to bring about a major advance are so costly that seldom can they be justified from a purely commercial point of view. This limitation does not apply to the military. When it becomes a matter of survival, economics are secondary.

Further on the submission says:

> The use of atomic power in military aircraft also probably is not far off. Its introduction will make a difference mainly in economy of operation and almost unlimited range, rather than in speed and altitude, since atomic energy will be, in effect, a substitute for fuel in already existing power plants. However, until a shielding process can be found which does not involve the tremendous weight of material needed at present, atomic power will be used only in the largest aircraft.
>
> The application of all these advances to civil aviation undoubtedly will depend, as in the past, on how quickly they can be proved reliable enough and economical enough for use in transporting passengers and freight. The nature of the advances will be governed by advances in military aviation.

Mr. Byrne: Mr. Speaker, I rise on a point of order. I perhaps am not as charitable in my forgiveness as most hon. members. I think we have heard sufficient of these quotations in this debate. These matters, and certainly opinions of experts, could be much better brought before the committee and not before the house as a whole. We have 265 members here whose own opinions I am very anxious to hear, but I think the place we should hear these technical opinions is in the committee. For that reason I believe the hon. member is out of order.

Mr. Hamilton (York West): I think the committee in question would be delighted if it had the power to call Mr. Crawford Gordon, junior, of Avro Aircraft at Malton, and ask him exactly how he felt about this particular phase of investigation and research.

Mr. Dickey: Would the hon. member permit a question? Does he suggest for a moment that the committee has not the power to invite Mr. Crawford Gordon to come here and give evidence, if he is willing to come here, for as long as he wants to give evidence?

Mr. Hamilton (York West): Instead of the parliamentary assistant phrasing that in the form of a question—

Mr. Dickey: Just answer the question.

Mr. Hamilton (York West): —if he will inform the house that the committee will definitely have men such as Mr. Crawford Gordon here, I assure you I will not need to quote all the remarks to which I have been referring.

Mr. Dickey: It is not up to the parliamentary assistant. It is up to the committee.

Mr. Green: Then give it power to send for witnesses. Why hamstring it?

An hon. Member: What will the committee do?

An hon. Member: What it is told.

Mr. Hamilton (York West): This has certainly been an interesting aside. At least it has brought some of these things to the attention of the members of the house, and perhaps I may be allowed to continue.

Mr. Byrne: I think I am perfectly right—

An hon. Member: Sit down.

Mr. Byrne: —in raising this point of order as to the reading of excerpts from too many technical opinions.

Mr. Deputy Speaker: Order. The hon. member for Kootenay East has raised this point of order with regard to the reading of extracts. The extracts to which the hon. member for York West was making reference did not in my opinion, offend the rule with regard to commenting on proceedings within the house or the remarks of members within the house. Hon. members, I think, are well aware of that rule.

I presume that the point of order raised by the hon. member for Kootenay East is with regard to the reading of long extracts, which in effect introduces another member into the House of Commons and which at times has the effect of expressing not the opinions of the member who has the floor

but the opinions of some other person. I believe Speakers have invariably ruled that the reading of such long extracts is not in order. I am not aware of any rule against the reading of short extracts as long as they do not offend against the citation I mentioned earlier. Therefore I can only ask the hon. member to take care that he does not offend any custom of the house against the reading of such lengthy extracts that he is in effect expressing not the opinions of himself, but the opinions of another.

Mr. Hamilton (York West): Perhaps I should have used a procedure I have found necessary to use in court from time to time, adopting the words of the expert and using them as my own. I am quite sure that I shall be within the rules of order of the house. However, I do not have to quote these things. I thought that in doing so I was bringing before the house the opinions of experts in this field.

When I began to speak I said I thought that anyone who took part in this debate was presuming a great deal if he did not qualify as even an amateur scientist, as set out by the hon. member for Oxford. However, the extracts I have quoted indicate that the nature of the technical advances in the industry will be governed by advances in military aviation. This opinion is confirmed by the submission to the same commission by Canadair Limited of Montreal, which sets out very clearly that in all phases of commercial aircraft development the background has been based very firmly on the lessons learned from research done in the military field. As a matter of fact, in that submission Geoffrey Notman referred very definitely to the setting up of a nuclear products division of the company on which a considerable amount of money, two or three million dollars, was being spent for the purpose of continuing research on a very definite basis as to the use of atomic materials in so far as aircraft are concerned.

Here are two plants engaged at the present time primarily in the production of military aircraft whose executives plainly see that there is a tie-in with respect to the research required in the one type of endeavour and the progress which may be made in the peaceful uses of aircraft in this country. Yes, Mr. Speaker, in reply to the question raised by the parliamentary assistant I say that the committee very definitely should call such men as Crawford Gordon, jr., of Avro and Geoffrey Notman of Canadair and have them outline in full their programs of research to see if it is not possible to take those programs one further step in order to enable us to take such terrific commercial advantage of the many millions of dollars being spent on military research in this field.

If we did that, perhaps we would not have the Minister of Defence Production losing so much sleep because he has invested $65 million or some such amount in a plant and is worried because we have not had a single plane in some time off the production line. If it were possible to ensure that the money being spent for that purpose, with the little additional help that might be required, would result in commercial planes for peaceful purposes coming off the same production lines, I think there would be a lot less concern in the country about the amount of money being spent in these activities.

I am wondering whether the Massey commission did not have something like this in mind in its recommendation under the heading, "Scientific Research Under the Federal Government". In that regard it had this to say:

> That under the direction of the privy council committee on scientific and industrial research, a study be made as soon as possible of all research activities of the federal government, with a view to their adequate co-ordination, the avoidance of any wasteful duplication, and the maximum co-operation that may be possible.

These words certainly fit the terms of reference that are required for this particular committee.

I should like to speak about one or two other phases of the problems that will confront the committee. The other day I received a letter from a constituent of mine who had heard a radio address by the hon. member for Rosetown-Biggar (Mr. Coldwell). She wrote me a letter in which she suggested that we should increase our gifts under the Colombo plan. I guess it was a pretty appealing radio address and had an effect. I had to write back and say that I was not exactly sure I could criticize the government in connection with the amount of money it was spending under the plan because after all I knew that whatever help was given had to come out of the taxpayers' pockets, and to a great extent I thought we were near the breaking point in that connection.

But I am wondering whether there is not another answer to such problems, another answer that may be produced before the committee. You know, scientists are able to equate the prosperity of a country or the standard of living of a country with the amount of energy, the amount of fuel that is available in that country. They talk about coal, petroleum, natural gas and even water power, but they lump them all together and talk about energy. They say that using this

formula you can determine just how far a country can go in raising its standard of living. They point out that on an annual basis the United States, which most people agree has the highest standard of living in the world, uses 8 tons of coal or energy, whatever you want to call it, per person; that Britain and Norway use 4·5 tons per person per annum, Japan 1 ton and India ·01 ton.

Then they say, compare this with the annual income per person in these countries. The United States figure is $2,000 as against 8 tons, the United Kingdom or Norway $1,000 as against 4·5 tons, Japan maybe $100 and India maybe $50. Their complete standard of living is determined by their ability to produce the energy required for the production of goods used in everyday life.

We are entering an entirely new field now. If we wanted to raise the standard of living of all people throughout the free world to our own living standard we would probably have enough energy of the coal-petroleum type to last us 25 or 30 years, but with the use of new materials, with the use of uranium and thorium as sources of energy, it would be possible for us to raise the standard of living of the peoples of the free world to our own basic standard and keep it there for a thousand years.

Perhaps this is the answer to the problems that face us in a period between peace and war. I do not think anyone believes that merely to complete the building of massive defence forces is going to be the ultimate answer. It seems to me that the one sure way of maintaining peace is to see that there is an exchange of this information, an exchange of the material which creates energy, and the raising of the living standards of substandard nations to our own level.

If we do that we will write the best insurance policy so far as peace is concerned that we can get anywhere. How are we going to do it? First of all we in this house have to get the information, and later we have got to do our part as parliamentarians to see that the information is distributed to the right people and ensure that the basic commercial quantities of the goods we have that will do this job are also made available to them.

I do not see why we cannot have the type of parliamentary and scientific committee they have at Westminster. The committee there can meet regularly. It can call before it scientists of all types. It can bring them from other lands as well. These scientists give lectures on this type of topic, so that every bit of information that is of commercial value is placed right on their doorstep.

If we could get such information perhaps we could help to solve some of the problems to which the hon. member for Oxford referred, when he mentioned the fact that we were losing out in the educational race. He pointed out that we are not producing the engineers we require to carry on this job. If we did that perhaps we could get away from such headlines as that which appeared in the Toronto *Telegram* last year, namely, "Lack of Engineers Surprising to Howe." If it is surprising to him, let us get the committee going and find out all about it. Maybe the Minister of Defence Production will be able to learn the answer as to why we do not have the engineers. In the article he is reported as saying:

> "This is hard for me to understand", Mr. Howe told the annual dinner of the association of consulting engineers here.

I had a letter from a friend in the United States the other day, and he said it was not very hard for him to understand. In the last three or four years we have had $395 million of engineering work done in this country, and all but approximately $33 million of it was done in the United States and shipped here. Perhaps that is one reason we do not have people with engineering skill remain in this country.

All in all, here is one opportunity. Let us not allow it to slip through our fingers. Surely the amendment which has been proposed by the hon. member for Vancouver-Quadra places with the committee the power to get the answers, the power to see that the information made available to it is given to the proper people in this country and the proper people in other countries to ensure that we all go forward, as freedom-loving nations, in the development of atomic energy for the use of all mankind and not just for the use of a few.

Mr. J. M. Forgie (Renfrew North): In my constituency lies the atomic energy plant at Chalk River. I am very happy indeed to note that this committee will be formed and an opportunity probably will be given to the members of that committee to visit the plant at Deep River. I very well remember that this atomic energy plant was begun when I was in the army at Petawawa in 1942. Today, carved out of the forest, we have one of the finest towns in Canada with a population between 4,000 and 5,000 people. It is composed mostly of brilliant scientists, people who are making a great contribution to the life of our country and to the scientific research which is being conducted at the present time. I deeply regret the passing the other day of Dr. Cipriani at Deep River. He was one of the leading scientists in Canada, perhaps in the world.

As I say, no doubt the committee will have an opportunity of visiting the place where these great developments have occurred during the last four years. As we all know, of course, one of the outstanding developments has been the cobalt bomb, which has been distributed throughout Canada and to many other nations in the world. It has been of great value in the treatment of cancer. These scientists at Deep River are quiet, modest and industrious people who are working away without receiving what I consider to be adequate compensation. I am sure when this committee go to Deep River during the coming months they will be greatly impressed by the devotion to duty of these people and the work that is being carried out there.

Later on in the year there will be developed by the government, in co-operation with Ontario hydro and Atomic Energy of Canada, a plant lying farther to the west at Des Joachims, which will make a substantial contribution to the use of atomic energy for industrial purposes. I think I am right in saying that the Minister of Trade and Commerce has stated that this will be a pilot plant and not a profit-producing plant. However, it will go a long way toward establishing the various uses to which atomic energy can be put in peacetime pursuits.

We are looking forward therefore, Mr. Speaker, to the visit of this committee to Deep River. I am quite satisfied that the personnel of the atomic energy plant there are looking forward to the visit of this committee as well.

Mr. F. G. Robertson (Parliamentary Assistant to the Minister of National Health and Welfare): It gives me great pleasure, Mr. Speaker, to support this resolution at this time because I believe the work of this committee will be a valuable contribution to the development of Canada. We are specifically to inquire into two sections, namely the operations in the field of atomic energy for peacetime purposes and the operations of the national research council. The national research council is an important government body in Canada, and I believe it will be very valuable to examine the operations of that council because I think we will be struck by its accomplishments. The national research council is responsible for co-ordinating all federal government research, I speak particularly of medical research as the Department of National Health and Welfare is very much interested in the development of such research.

I think it is quite evident to all of us that in many fields Canada is taking a lead in research. I propose to discuss at some length research in the field of health and welfare,

in which field I believe hon. members will agree that progress has been rapid and accomplishments great.

Mr. Trainor: In Canada?

Mr. Robertson: Very definitely, and I will prove that point as I go along. The need for research in health and welfare matters has been long recognized. The Minister of National Health and Welfare has laid great stress on the need for research in these fields. He has always felt that only by extensive research can we provide the foundation necessary for success in all aspects of health and welfare planning. Research in health matters has been enormously extended in the post war years, and it was during this period that welfare research first began to command serious attention.

Health and welfare research in Canada is now limited by several factors. The first and most important of these is the shortage of trained personnel. There can be no doubt that the most important need is to have well trained and eager scientists who are prepared to give their life to research. I should like also to join with the hon. member who has just taken his seat in paying tribute to Dr. Cipriani, who died a few weeks ago. We in our department know what a splendid contribution he made to medical research in this country. The second limiting factor is financial resources, although when we consider the vast sums which are presently being spent on health and welfare research in Canada this is not of primary importance at the moment. The need for additional financial assistance is probably limited by the lack of trained personnel.

Perhaps our greatest need at the present time is in the professional co-ordination and planning of research so that, as far as possible in this complex field, we direct our work to the most productive field and prevent needless duplication and overlapping. In so far as health research is concerned, all projects supported by the federal government are considered by a co-ordinating committee of technically competent experts before being recommended for approval or rejection to the research advisory committee. The general policy covering all medical research is under constant examination by the privy council committee on scientific and industrial research policy. In welfare research there is close liaison among the Department of National Health and Welfare, the provincial welfare agencies, the Canadian welfare council and other voluntary organizations and the schools of social work.

Let us examine the expenditure on medical research in Canada. Over $7 million is now being spent in Canada in health research. Of

this amount, $4 million comes from federal government sources and the remainder is contributed by universities, charitable organizations, the provinces and commercial organizations.

The federal budget for health research is eight times as large as in 1938, and four times as large as in 1948. In addition to the national health and welfare department, three other federal agencies sponsor programs of medical research; a division of medical research of the national research council, the medical section of the defence research board, and the Department of Veterans Affairs. These four agencies contribute more than half of today's annual expenditures in health research.

Through the national health program, $1·8 million was made available for research in 1954-55. Nearly $8 million has been provided under this program since its commencement in 1948. The percentage of the amount available which has actually been spent has risen from 59 per cent in that year to 88 per cent last year, the average expenditure during the life of the program being 85 per cent of the funds available.

In addition to these funds for specific research projects, $1 million has been provided under this program for technical equipment for research performance. Only a few weeks ago the Minister of National Health and Welfare approved a grant of some $24,000 to the University of Toronto for the purchase of special equipment for the extension of research work on heart disease in the province of Ontario. This grant brought to more than $125,000 the amount of federal assistance for heart research in this province during the current fiscal year. This equipment will be established in the Toronto General hospital under the supervision of the department of medicine and surgery at the university. It is part of a province-wide program for the extension of research and the development of new diagnostic and treatment techniques.

Similar assistance is being provided in the province of Quebec to the institute of cardiology and to other agencies, and similar grants have been made available for research work at the University of Saskatchewan and—

Mr. Green: On a point of order—

Mr. Robertson: —the Royal Jubilee hospital, Victoria, British Columbia.

Mr. Green: I submit this is a speech on health estimates, not on this resolution at all. Furthermore, the hon. member is reading every word of his speech.

Mr. Howe (Port Arthur): Mr. Speaker, I call your attention to the nature of the speeches that have been made throughout the afternoon by a series of Conservative speakers. If any of them spoke on the resolution before us I have not been able to follow them.

The Acting Speaker (Mr. Applewhaite): In view of the speeches to which I have listened all day and previously in this debate, I certainly would hesitate—in fact, I would decline—to rule the hon. member out of order on the grounds of irrelevancy. He is discussing an aspect of non-military research and the government role in connection therewith. This debate has been so general that it would be grossly unfair for me to rule the hon. member who now has the floor, or any other hon. member on either side of the house, out of order for discussing some particular aspect of research in this country.

On the other question raised by the hon. member for Vancouver-Quadra, of course I think the house and I are in complete agreement on two points; first, that the house and all members thereof always disapprove of the reading of speeches except when we do it ourselves. Second, I think the feeling of the house, as has been pointed out by Mr. Speaker in the lengthy statement which will be found on page 100 of the *Votes and Proceedings* of this session, is that there is apparently no procedure of which I am aware at the moment which will enable the occupant of the Speaker's chair to say that a certain member is reading his speech and must desist. I think Mr. Speaker made it clear at the time he made his lengthy statement that until such time as the representatives of the parties get together and agree on a procedure which perhaps will have to be included in our standing orders, the hands of the Speaker are pretty well tied, and whether speeches shall be read or delivered without reading must be left entirely to the good judgment, good sense and good debating ability of the members delivering these speeches and of those, as Mr. Speaker said, particularly who sit around him. The hon. member for Northumberland, Ontario.

Mr. Robertson: Thank you very much, Mr. Speaker. I might first of all tell the hon. member for Vancouver-Quadra that in the first place I am not reading my speech. It is true I have extensive notes.

Mr. Green: Somebody else's notes.

Mr. Robertson: I have also very extensive indentations here. I am sure if the hon. member came over and looked at my notes he would make a very poor speech indeed

if he attempted to read them. Furthermore, I have listened to speeches made by hon. members of the opposition and I maintain, Mr. Speaker, that I am in order whereas many of them were completely out of order.

If medical research is not an important division of the national research council, then I am completely uninformed on the work of the national research council. I venture to say that members of the opposition themselves will ask what is being done in medical research when this committee meets. I would not be surprised if the hon. member for Vancouver-Quadra himself were interested in the medical implications of this committee.

Under the public health research grant $500,000 is now made available each year for research in public health. More than $2,400,000 has been allocated under this grant in the past seven years. In addition, contributions are made from six other grants to research. These are the medical health grant, the general public health grant, the cancer control grant, the tuberculosis control grant, the crippled children grant, and the child and maternal health grant. Allocations made under these grants have increased from over $100,000 in 1948 to more than $1·25 million in 1954-55.

Under the mental health grant, $2·2 million has been made available; and when we look into the records for the year 1948-49 we find that only two projects were under investigation at that time. We find that in 1954-55 some 43 projects were being investigated. The sum of $1·5 million has been made available under the general public health grant; $600,000 under the tuberculosis control grant; $700,000 under the cancer control grant.

In this connection I would like to make reference to what the hon. member for Renfrew North said regarding the cobalt bomb. As hon. members know, this bomb was developed at Chalk River and has proven of great value in the treatment of cancer. In fact Canada is recognized as a world leader in this field. Not only have we installed many of these units in various cities in Canada, in Vancouver, Winnipeg, Windsor, London, Saskatoon and Port Arthur, but arrangements are being proceeded with to instal them in Ottawa, Kingston, St. Boniface, Saint John, New Brunswick, and St. John's, Newfoundland.

Last year I had the pleasure of going to the home town of the Minister of Trade and Commerce to represent the government at the official ceremonies marking the presentation of the cobalt bomb. While there I had the pleasure of sitting beside a very lovely lady at dinner.

Mr. McIvor: They are all lovely.

[Mr. Robertson.]

Mr. Robertson: But the thing that struck me was this. I have been in this house now for some six years, and I have listened to considerable abuse heaped upon the minister by members of the opposition parties. I talked to this lady at dinner and she said to me, "I have always been a lifelong Conservative, but I always vote for Right Honourable C. D. Howe."

Mr. Hees: Was she good looking?

Mr. Robertson: She said, "If I did not, remembering his great contribution to Canada, I could not sleep at night".

Mr. Bell: Are you trying to out-bid Bennett for the cabinet job?

Mr. Robertson: I say that is the high regard in which the right hon. minister is held by the majority of the Canadian people; and further, in their hearts I know that is the feeling of the hon. members of the opposition.

Mr. Charlton: Go on with research now.

Mr. Hamilton (York West): This is political research.

Mr. Robertson: Further, we have contributed $70,000 under the child and maternal health grant and $130,000 under the crippled children's grant.

Mr. Trainor: Mr. Speaker, is all this information available elsewhere; in the estimates, for example?

An hon. Member: This is political research.

Mr. Robertson: I believe the hon. member who has just risen questioned whether there was much we could tell him about medical research in Canada. I think what I have put on the record is possibly a little more than he knew about. In addition, substantial sums have been allocated for the training of health workers—

An hon. Member: Oh, tell us about the lady you had dinner with.

Mr. Robertson: —so that 9,350 additional health workers have been trained, among whom are a large number of research workers thus helping to overcome one of the serious bottlenecks in health research.

I think it is quite evident, therefore, that the federal government has taken the lead in providing financial assistance toward research projects of all types. Evidence of the value of such financial assistance is not hard to find. All members of the house are well aware of the important role played by Canadian research in the production of Salk poliomyelitis vaccine.

An hon. Member: They did not discover it.

Mr. Robertson: At one stage it was found that in order to grow the poliomyelitis virus, live tissue cells in a culture medium were required. While numerous investigators were engaged in the search for such a medium, a synthetic solution developed in Canada in connection with cancer research, medium 199, proved to be the answer and this combination was used by Salk in the production of poliomyelitis virus.

This not only permitted the original developmental work to progress at a greatly accelerated pace but also paved the way for the production of massive quantities of the vaccine. Further, the research investment at the Connaught laboratories has resulted in the cost of the final product there being much lower, in actual figures about one-third of the cost of the commercially produced vaccine.

Research on the production of ACTH and cortisone at the Connaught medical research laboratories made possible improved and more economical methods for the production of these drugs, so that the cost of the 25 milligram vial, which in 1950 cost $5, was reduced to $1.75 a few years later.

Mr. Trainor: Mr. Speaker, would the hon. gentleman say who owns and operates the Connaught laboratories?

Mr. Robertson: Mr. Speaker, I believe the University of Toronto controls it.

Mr. Trainor: It is the province of Ontario, is it not?

Mr. Robertson: I can also tell the hon. member that the large grants provided specifically for this purpose made possible the development of ACTH and cortisone.

Mr. Trainor: What proportion?

An hon. Member: But this government should not take the credit for it.

Mr. Robertson: Mr. Speaker, hon. members opposite are very prone to give credit to certain provincial governments, but I think the facts I have placed on the record show that the federal government is taking the lead in medical research. I give you another instance, Mr. Speaker. Research on the influenza virus at the institute of microbiology and hygiene in Montreal has produced a vaccine which is now undergoing field trials in three areas in Quebec, and the results made will pave the way for the ultimate production of a dependable preventive agent for influenza. Other studies at this and other centres are being performed on recently discovered viruses responsible for acute respiratory diseases similar to influenza, and interesting developments may also be anticipated here.

Mr. Trainor: Another provincial government achievement.

Mr. Robertson: In the study of heart disease and related afflictions remarkable progress has been made, particularly in experimental surgery. In centres in both Quebec and Ontario to which I have already referred, clinical research workers are conducting extensive studies on such conditions as valvular disease of the heart, coronary thrombosis and congenital heart disease, hypertension, the peripheral blood vessels, and the development of instruments used in the determination of cardiac function. Techniques have been evolved and put to practical use which have meant relief from suffering and prolongation of life for increasing numbers of people.

Only about a month ago I had the pleasure of talking to a lady who lives here in the city of Ottawa. She told me of the great distress she had for many years before she went to the surgical clinic in Toronto. She had been unable to climb stairs or carry out any of the ordinary activities of daily living. However, following an operation at the heart clinic of the Toronto General hospital she was restored to almost perfect health and is now able to manage the ordinary affairs of her home life. That is a very concrete example, Mr. Speaker, of what has been accomplished by medical research in Canada.

An hon. Member: In the province of Ontario.

Mr. Robertson: I am not suggesting at any time that all the credit belongs to the federal government. I think I have paid compliments to the work of the provincial governments. Our department has always been willing to give credit where credit is due, but I for one will not take the narrow approach which hon. members of the official opposition are taking in this matter.

An hon. Member: You are constantly quoting the achievements of provincial governments.

Mr. Robertson: A few months ago the Minister of National Health and Welfare convened a meeting of leading heart authorities from all parts of Canada, and as a result the Canadian heart foundation was formed. This foundation will have affiliated provincial associations, and its main purpose will be to raise money to carry out basic and clinical research on all heart disease. I am sure it will make the same splendid contribution to research which is being made by the national cancer institute, the Canadian arthritis and rheumatism association, and other similar bodies in Canada.

There are numerous studies being carried out in Canada on arthritis and rheumatism. These studies should contribute materially to the finding of some satisfactory cure for these

crippling diseases, which affect some 225,000 Canadians of which number 115,000 are severely or totally disabled.

Time does not allow me to dwell longer on the various research projects being carried on through the federal health grants. Over 400 individual projects have been approved by the minister and are in various stages of completion. Many of these will produce results of profound importance.

Mention should be made, however, of the Canadian sickness survey which was carried out between 1950 and 1951 and involved the study of some 50,000 persons in all age groups and social classes throughout Canada. This survey indicated the nature and extent of sickness among Canadian people, the effect of illness and disability on the population and the health care they received. This survey has been published in detail and has received world-wide recognition for its successful prosecution and productive outcome.

The national health survey was carried out early in the national health program in order to assist the provinces to take an inventory of their health resources. The research and statistics division of the department will shortly publish a comprehensive half-million word report on this survey. Both these reports have been of great value in laying the basis for the health insurance studies which have been going on in the department for some years.

Comprehensive bulletins have been produced on health insurance systems in force in the principle countries of the world, and on our own public non-profit and commercial schemes in Canada.

Extensive analysis of costs and utilization of data have been carried out both by the provinces and the federal government, and this analysis proved of immense value at the recent federal-provincial conference on health insurance. Without them a scientific and responsible approach to the problem of health insurance would have been impossible, and the proposal made by the federal government at this conference for the introduction of health insurance in Canada would have been impossible.

Welfare research has not made the advances that health research has, but a number of important studies have been carried out by the Department of National Health and Welfare. The research done for the old age security committee of this house made possible an intelligent approach to and solution of the old age security problem.

Studies carried out by this department made possible the commencement of the disability allowance program. A survey of welfare positions in Canada a few years ago indicated the need for increased members of welfare personnel. We have also made studies of the various welfare services in Canada and these have been published in bulletin form for the assistance of welfare planners. Studies have been made for the United Nations and its specialized agencies on various aspects of welfare services in Canada.

I believe this brief outline of the various research activities in the health and welfare field which I have presented proves very definitely that medical research workers are quite well aware of their responsibility and are taking every possible means to improve the quality and quantity of medical research. We can, I think, look forward to gradually unlocking the doors behind which are the secrets of many of the most formidable diseases now afflicting the human race.

I believe that the establishment of this committee and the work it will do will make a further important contribution to medical research in this country.

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, on this occasion it is possible for me to commence my remarks with the well-worn phrase that I did not intend to take part in this debate. The remarks I shall make will make the truth of that well-worn statement obvious. I have been prompted to take part in this discussion by the very interesting speech which has just been made by the hon. member for Northumberland (Mr. Robertson). I am also delighted that a point of order was raised during the course of the hon. member's speech on which Your Honour ruled, making it clear that we are permitted to discuss any phase of non-military research.

I agree with the hon. member for Northumberland as to the important part which has been played in this country by research of the type made possible by the Department of National Health and Welfare. I welcome, as do all hon. members, the medical research which has been carried on by the department or which has been facilitated by federal grants made under the direction of the Department of National Health and Welfare.

I agree also with the hon. member that the research which has been carried on by the research division of the Department of National Health and Welfare with regard to health insurance has been extremely valuable. It is still my view that after 37 years of talking about bringing in health insurance the Liberals ought to have plenty of material of their own on which to base such a program. However, it is a fact that the research into this important problem which has been carried on by the department has provided the

basis upon which a national program of health insurance can now be established.

As a matter of fact I am satisfied that the extent of the research which has been carried on would make possible a much bolder step in the field of national health insurance than is envisaged in the proposals made by the federal government to the provinces at the conference held recently in the city of Ottawa. If we are not moving ahead as fast as we should it is not the fault of those who have done the research, it is the fault of the government which is still dragging its feet in this important field.

Likewise I join with the hon. member for Northumberland in expressing thanks to the research division of the Department of National Health and Welfare for the excellent work they did for our committee on old age security which met in 1950. I am sure that the Minister of Northern Affairs and National Resources (Mr. Lesage), who was a joint chairman of that committee, will agree with me that the research done by the department provided the basis on which we were able to make intelligent decisions in the important field of old age security.

It is precisely because of the importance of the groundwork which is done by those who do research that I feel further research should be done into the whole question of how our older people are getting along. There were a few twitters in the house this afternoon when a starred question of mine was called. I refer to the one that asked about civil servants' breakfast habits. There were further twitters when the parliamentary assistant to the Minister of National Health and Welfare made his reply.

I want to say that I was quite serious in putting that set of questions on the order paper. I was serious with respect to both parts of it. I approve of what the nutrition branch of the Department of National Health and Welfare is doing by way of conducting research into the eating habits of some sections of the Canadian population. I feel that by continuing such research, information can be obtained on the basis of which education can be made available in an effort to improve the health of our people through better nutrition.

I was not only quite serious in my interest in what the nutrition branch of the Department of National Health and Welfare is doing among the Ottawa civil servants, I was also extremely serious in my suggestion that similar surveys might be made among groups of old age pensioners in this country. In fact my question suggested that research might be made not only into the question of whether or not old age pensioners are eating adequate breakfasts, but as to whether or not they are getting adequate meals at any time of the day. Therefore I urge most strongly that the research envisaged in the motion now on the order paper be extended into this whole field of how people of 65 and 70 years of age and over are faring in this wonderful country at this time.

Some days ago I suggested to the Minister of National Health and Welfare that a special committee might be appointed to review all our old age legislation. The Minister of National Health and Welfare in one of those typical responses of his chose to present a question to me rather than to answer my question.

I remind the house now that my request for research into how our older citizens are faring was based on the fact that the welfare council of greater Winnipeg has carried on research into this matter and has produced an interesting report entitled "Age and Opportunity". When I referred to it on February 29 the Minister of National Health and Welfare indicated that he had seen a copy of this report, and I hope that in the meantime he has had an opportunity to study it.

I remind the minister and others that in this report are included a number of recommendations. One of them is to the effect that the whole policy of our old age legislation should be reviewed every four or five years. The welfare council points out that this was the recommendation of the Canadian Welfare Council when it appeared before our old age security committee in 1950. A number of years have gone by since then, and it seems to me that the position of the welfare council of greater Winnipeg and of the Canadian Welfare Council is well taken, that the time has come for a review of this matter and for research into this whole question.

That was the point of the questions to which I have already referred, namely that in my view research into whether or not old age pensioners are eating adequately is just as important as some of the other fields of research which it is suggested should be undertaken. This indeed would be research into how old people are able to keep alive on $40 a month. I am satisfied that if such research were carried on it would be ascertained that it is impossible to live on that amount of money. I am sure that any objective group carrying on such research would come back with the recommendation that there should be an increase in the amount of the old age pension.

I have already referred to this excellent report prepared by the welfare council of

greater Winnipeg. I have indicated that on page 41 is the suggestion that the government's $40 per month program should be reviewed. I should like hon. members also to look at page 26 of the report, where it is stated that so far as Winnipeg is concerned, this body of researchers has discovered that for couples and single persons over 70, median incomes are only slightly greater than the old age pension. The report states:

> This means that half of the aged—at 70 or over—depend almost entirely on the pension for cash income. It is also clear that the pension in itself is not sufficient for purchase of the necessities of life in an urban community.

I am not going to read further except to indicate that the very next paragraph on page 26 is entitled "'Life On Forty' Is No Pleasure." The paragraph goes on to make it crystal clear that trying to live on $1.31 per day is an utterly impossible task. This report, I might point out, is based on research into all the activities of older people in the Winnipeg area, how they manage to eat, their medical problems, the kind of housing conditions under which they live, and so on. There is a mass of information but it is, of course, related only to older people in the city of Winnipeg. If research like that could be made into the lives of old age pensioners in various cities across Canada there would be amassed evidence that even the Minister of National Health and Welfare could not resist, in fact, evidence I believe he would be glad to use in a campaign within the cabinet for an increase in the amount of pension to at least $60 or $65 a month.

Mr. Speaker, I realize that Your Honour was not in the chair when I took the floor, and you may wonder just what is before the house. When you left the chair you thought we were discussing a motion having to do with research into atomic energy and matters of that kind but, as no doubt your assistant deputy has pointed out to you, the debate has taken a rather wide turn while you have been out of the chamber.

I do not object to the wide turn it has taken. In fact I welcome it; that is obvious. It was made particularly wide by the very interesting speech made by the hon. member for Northumberland, who expressed pride, in which we all share, in what has been done in this country in the way of research that has been carried on under the Department of National Health and Welfare, or by means of grants made under the direction of that department. I do not wish to detract by one iota from what the hon. member for Northumberland said. Rather I suggest we go further. The Department of National Health and Welfare, which is so proud of the research that has been done and the progress that has been made on the basis of that research, should initiate further research into the question of how old people are getting along on $40 a month.

Mr. Martin: The hon. member knows that is being done right now.

Mr. Knowles: The minister says I know that is being done right now. I know no such thing. As a matter of fact this afternoon, when I asked him for some information on the basis of alleged surveys in this field, he said he was the best example of the results of that kind of research. Obviously he got a little mixed up, but the fact of the matter is that we have had no indication that any serious attempt is being made by the department to find out whether $40 is sufficient for our old age pensioners.

I read with interest the report of the Department of National Health and Welfare, which was published just a short time ago. It refers to the research mentioned by the hon. member for Northumberland. It refers to the breakfast survey, about which I questioned the minister earlier today. It has a page or two about the old age security pension. It gives the statistics as to how many people are drawing the pension, how much money is being paid out in pensions, the age at which pensions are paid and so on, but there is no suggestion that anybody in the department has inquired as to whether or not this is an adequate pension.

I tell the minister, I tell the government and I tell this house that a long time has passed since the figure of $40 was set. It was set in 1949. In the meantime there have been increases in many other fields. In the meantime there has been an increase in the cost of living. In the meantime there has been a tremendous increase, 65 per cent or more, in the gross national production of the country. I tell the minister that there is a case building up in this country for an increase in the old age pension which he cannot resist and which he dare not resist. If he does, he will find that before long he will be on some form of relief or public assistance himself. This is just as important an issue for this country today as it was when it was first advocated before and during the first war. It is just as important as when it was first accomplished, largely through the efforts of Mr. J. S. Woodsworth in the middle twenties. It is just as important as it was in 1950, when we—

Mr. Martin: Mr. Speaker, I rise on a point of order.

Mr. Knowles: You are too late.

Mr. Martin: My estimates are going to be discussed in the committee, I understand, on Friday.

Mr. Knowles: Tomorrow morning.

Mr. Martin: My hon. friend will have an ample opportunity to make his speech and I will have an equal opportunity of pointing out how unfair and inaccurate his statements in the past 15 minutes have been. In any event, I say this is wholly out of order.

Mr. Knowles: Perhaps the Minister of National Health and Welfare was not here either, as I know he was not, when his parliamentary assistant made an excellent speech. The point of order was raised that it was the kind of speech that should be made on the minister's estimates. That point of order was raised by one of my Conservative friends. The Speaker in the chair at the time said that this debate had become quite wide and that it was possible to discuss anything that came under the heading of non-military research. It was from the parliamentary assistant that I took my cue.

Mr. Robertson: I think the hon. members who were here this afternoon will definitely agree that I confined my remarks entirely to medical research in Canada. I did not discuss what we should do about old age security.

Mr. Knowles: I am afraid the hon. member forgets what was in the speech he read to this house. He definitely made references to research regarding health insurance. He definitely made statements regarding research into old age security. In fact he took credit for that research as being the basis for the legislation regarding old age pensions that we now have. I do not object. I just want it to continue. I want research to be carried on so that we can deal with this matter intelligently. Thus far we have just had a figure out of the air on which our old people are asked to live. I want basic scientific research on what is needed to provide for our older people of 65, 70 and over. I want basic scientific research as to what this country can afford to pay its old age pensioners. I am satisfied that out of our present gross national production we can increase the amount tremendously, and on the basis of that research I call upon the government to meet this country's demand for a really substantial increase in our old age pensions so that our older people can enjoy a decent life, to which we believe they are entitled.

The house divided on the amendment (Mr. Green) which was negatived on the following division:

Mr. Speaker: I declare the amendment lost. Is it the pleasure of the house to adopt the main motion?

Mr. Ellis: May I move the adjournment of the debate?

Mr. Speaker: The hon. member for Regina City (Mr. Ellis) moves, seconded by the hon. member for Nanaimo (Mr. Cameron), that this debate—

Mr. Harris: On a point of order, Mr. Speaker, if I may say so, I assumed—I did not take my hon. friend into my confidence, but I did say the other night that I thought we had an understanding that we would wind up this debate during this afternoon. I agree that there was no particular undertaking given, but I understood privately that would be what would take place.

Mr. Ellis: I had no knowledge of this understanding, Mr. Speaker. I had intended to speak on the amendment but since it was five minutes to six I thought it might be advantageous to have the vote taken and I would make my remarks on the main motion.

Mr. Speaker: Then the hon. member for Regina City moves, seconded by the hon. member for Nanaimo (Mr. Cameron), that this debate be adjourned. Is it the pleasure of the house to adopt this motion?

Some hon. Members: No.

Mr. Speaker: If hon. members do not accept the motion moved by the hon. member for Regina City, I shall have to remind them that it is now 10 minutes past six and therefore the proceedings are interrupted. Whether or not an hon. member moves the adjournment of the debate at this moment does not make any difference. If they want to carry the main motion, we do that by unanimous consent. If they do not want to carry the main motion, then because it is after six o'clock the proceedings are interrupted and I must leave the chair.

Mr. Harris: May I speak to the point of order again? I appreciate that the hon. member for Regina City would undoubtedly contribute to the knowledge of the house in what he wishes to say, but I am wondering if there could be another occasion on which he could make this speech, either in the committee if he is a member or perhaps on the report when it comes forward later.

Mr. Coldwell: I knew nothing of the arrangement, but I would suggest that it would be well to let this motion go through now so the committee could be set up and get down to work.

Mr. Speaker: Is it agreeable to hon. members to adopt the motion moved by the hon. member?

Motion agreed to.

Mr. Speaker: This debate is adjourned.

Some hon. Members: No.

Mr. Speaker: Shall I call it six o'clock?

Mr. Harris: My understanding is, sir—I may be wrong—that we are in agreement now that the motion will carry.

Some hon. Members: No.

Mr. Ellis: No.

Mr. Speaker: The hon. member for Regina City says no.

Mr. Harris: All right.

Mr. Speaker: Inasmuch as the debate is to be continued, perhaps I should tell hon. members immediately that I think I have allowed a great deal of latitude during the course of this debate. The next time we resume the debate I shall have to ask for strict adherence to the rule. I think we are getting away from the regular practice, especially after an amendment has been moved,

that speeches should be strictly confined to the subject matter of the amendment. We have done away with that in amendments to the speech from the throne—see citation 336 of Beauchesne, third edition—but I do not think the house would want to depart from the practice as far as other debates are concerned. Therefore I would like the house to know what are my feelings in this regard.

It being fifteen minutes past six o'clock the house adjourned, without question put, pursuant to standing order.

Questions

ANSWERS TO QUESTIONS

The following answers, deposited with the Clerk of the house, are printed in the official report of debates pursuant to standing order 39:

ATOMIC IRRADIATION

Question No. 186—**Mr. Argue:**

1. Is atomic irradiation being used by Canadian agricultural scientists in the development of new varieties of crops?
2. If so, what is the type of equipment and the approximate cost of its use by federal employees?
3. What improvements in various kinds of crops have been obtained by this method?
4. To what extent, if any, does atomic irradiation increase the number of mutations that plant breeders can obtain in a given period of time?

Answer by: **Mr. Gardiner:**

1. No, but X-ray irradiation is being used by the experimental farms service in co-operation with the national research council. Some work is also being done at the University of Saskatchewan.

2. The experimental farms service has, up to the present time, not purchased any special equipment for either X-ray or atomic radiation work.

The X-ray irradiation equipment at the national research council has been made available for our work. The approximate cost of this equipment is $25,000.

3. No productions of economic value have been developed in Canada. However, this program of work has not been active for a sufficient time to evaluate this method from the standpoint of the production of useful mutations in various species and varieties of farm crops.

4. Genes in a given plant species mutate at a very low rate under natural conditions. Irradiation greatly speeds up mutation rates. Thus, in barley the mutant gene influencing strength of stems occurs with a frequency of two per 1,000 spike progenies, following an irradiation of 10,000 r-units. The rate of mutations here has increased manyfold over that occurring under natural conditions.

In the case of genes controlling rust resistance in oats, a tenfold increase in the mutation rate of irradiated material over natural rate has been brought about with the proper dosage of irradiation.

BUTTER IN STORAGE

Question No. 240—**Mr. Proudfoot:**

How many pounds of butter were held in storage by the agricultural prices support board as of March 1, 1956?

Answer by: **Mr. Gardiner:**

On March 3 the accounts of the agricultural prices support board showed stocks on hand of 62,829,323 pounds.

BUREAU OF STATISTICS BUILDING, OTTAWA

Question No. 261—**Mr. Diefenbaker:**

1. Since what date has the dominion bureau of statistics building located in Tunney's pasture been occupied?
2. When was the said building completed?
3. Have complaints been received from the office occupants of said building regarding lack of heat? If so, how many such complaints were received?
4. Are additional or storm windows now being provided for the said building? If so, what is the estimated total cost of such new windows and the work and services of installation?
5. To whom was the contract let for supplies and labour or services in respect of such new windows?
6. What was the total of such contract or contracts, and what was the date thereof?
7. When did work for installation of new windows commence?
8. When is it expected such work will be completed?
9. Have any additional contracts been let, or are any contemplated, for any modifications of the heating or ventilating system? If so, what are the particulars thereof?

Answer by: **Mr. Winters:**

1. June, 1952.
2. Building was accepted by the department on January 14, 1953.
3. Yes, several.
4. Yes—$82,900.
5. McIntyre Aluminum Products Limited, Niagara Falls, Ont.
6. $82,900—Contract was awarded on September 13, 1955.
7. February 16, 1956.
8. April 15, 1956.
9. No.

FEED GRAIN ASSISTANCE GRANTS, ATLANTIC PROVINCES

Question No. 264—**Mr. Balcom:**

What subsidy was paid the farmers of the provinces of Nova Scotia, New Brunswick, Prince Edward Island and Newfoundland, through implementation of the feed grain assistance grants, during 1955?

Answer by: **Mr. Gardiner:**

Freight assistance was paid during the calendar year 1955 on shipments of western feed grain into Nova Scotia, New Brunswick, Prince Edward Island and Newfoundland in the following amounts:

New Brunswick	$ 1,074,893
Nova Scotia	1,749,575
Prince Edward Island	398,495
Newfoundland	409,279
	$ 3,632,242

POSTAL EMPLOYEES—NEW WESTMINSTER, SASKATOON, TORONTO

Question No. 271—**Mr. Knight:**

1. What is the present number of postal employees in New Westminster, Saskatoon, Toronto?

2. How many of these individuals were employees of the Post Office Department one year ago, in the case of each city?
3. How many were taken on as employees during 1955, in the case of each city?

Answer by: **Mr. Lapointe:**

1. New Westminster, 105; Saskatoon, 282; Toronto, 3,707.
2. New Westminster, 97; Saskatoon, 267; Toronto, 3,387.
3. New Westminster, 10; Saskatoon, 16; Toronto, 442.

ENGRAVINGS FOR STAMPS

Question No. 277—**Mr. Hamilton (Notre Dame de Grace):**

1. What is the procedure by which the design of individual postage stamps is approved?
2. Are proofs of the printing plates as prepared by the engraver subject to approval by the department?
3. If so, for what purpose?

Answer by: **Mr. Lapointe:**

1. The designs are approved by departmental officers after consultation with officers of the national gallery as to artistic quality and after review by people qualified technically to say that the subject is portrayed accurately.

Questions

2. Yes.
3. To give formal approval prior to printing.

TELEVISION CAMERAS—PETERBOROUGH POST OFFICE

Question No. 278—**Mr. Fraser (Peterborough):**

1. What is the estimated cost of the instalment of the five television cameras in the Peterborough post office?
2. Were tenders called for this installation?
3. If not, how was the contract placed?
4. What has it cost to date for wiring, drilling holes in the new building, and generally getting ready for the installation of the cameras?
5. What is the estimated cost per year for the upkeep of these television cameras?
6. Is payment for this installation being paid for out of (a) post office funds; (b) by the public works department?

Answer by: **Mr. Lapointe:**

1. $50,092.50.
2. Yes.
3. See answer to No. 2.
4. Included in contract price.
5. First year's maintenance included in the contract price, and this trial period will enable future cost to be estimated.
6. Post office funds.

HOUSE OF COMMONS

Thursday, March 15, 1956

The house met at 2.30 p.m.

PRIVILEGE

MR. FULTON—ELIZABETH FAY SPALDING—REFERENCE TO ANSWER OF MINISTER OF CITIZENSHIP AND IMMIGRATION

Mr. E. D. Fulton (Kamloops): Yesterday, I asked the Minister of Citizenship and Immigration a question which is reported on page 2125 of *Hansard* as follows:

> May I ask the Minister of Citizenship and Immigration a question arising out of the answer he gave to a starred question a few minutes ago? Has the minister just recently issued instructions for the removal of this lady from Canada—where I might say she is now legally married and a resident—under section 7 of the Immigration Act, which would have the effect of circumventing the decision of the court?

To which the minister replied:

> The answer, sir, is no. If the hon. gentleman has any information about the alleged marriage of the woman in question I would be glad to have it.

To which I suggested he refer to the departmental counsel. Sir, the minister said no, he had not issued instructions. I hold in my hand a copy of a letter which reproduces a letter from the legal adviser to the Department of Citizenship and Immigration, dated March 8, which reads in part as follows. After advising the solicitor of the lady in question of certain developments in the case, it contains this paragraph:

> The minister has now directed that action be taken for Miss Spalding's removal under the provisions of subsections (4) and (5) of section 7 of the Immigration Act.

So that, sir, the information contained in a letter from the departmental legal counsel to the effect that the minister has issued those instructions is directly at variance with the answer given by the minister yesterday when I asked him whether he had issued those instructions, and he said the answer was no.

My question of privilege is this, sir: In view of the fact that we in this house are required to rely upon statements of ministers made with respect to matters under their jurisdiction, this house is entitled to an explanation as to whether the minister was in possession of the facts or not; and if so, why he gave the answer that he did. If he was not in possession of the facts, how is it that action is being taken by his department under his name, or under an order of the minister without his knowledge?

Mr. Speaker: I will allow the minister to answer the question, but before he does may I be allowed to inform the hon. member for Kamloops that his point is not one of privilege.

Some hon. Members: It is.

Mr. Speaker: No, it is not. It is one which may be further clarified before the orders of the day, but if the hon. member looks at citation 307 he will find that it reads as follows:

> A minister may decline to answer a question without stating the reason for his refusal, and insistence on an answer is out of order, no debate being allowed. A refusal to answer cannot be raised as a question of privilege, nor is it regular to comment upon such refusal. A member can put a question, but has no right to insist upon an answer.

Further to that I will comment that both here and in the United Kingdom a minister is at liberty to answer what he pleases and to refuse to answer if he pleases, and the matter can be pursued in a different way in a debate which may arise later, perhaps on the estimates of the department of the minister, but not as a question of privilege.

I will further refer the hon. member to citation 137 of Beauchesne which says:

> When the orders of the day are called—

—not at the opening of the sittings, as the hon. member does now, but—

> When the orders of the day are called by the Speaker and before they are read by the clerk assistant, it is the practice sanctioned by usage but not by any positive rule for members to make personal explanations or ask questions of the government—

And I pass over a few lines—

> . . . in respect to delay in obtaining returns or to the incompleteness of certain returns brought down under the order of the house.

I would say that complaint about the incompleteness or inexactitude of an answer could be dealt with when the orders of the day are called but not as a distinct question of privilege. The question raised today is in the same class as that which was raised yesterday by the hon. member for Eglinton (Mr. Fleming) and I think we must make a distinction here that instead of rising on a distinct question of privilege for the purpose the hon. member has put forward, it should be done when the orders of the day are called.

Immigration

Hon. J. W. Pickersgill (Minister of Citizenship and Immigration): I feel there can be no question whatsoever, Mr. Speaker, that I have a question of privilege. The hon. member has suggested that the answer I gave yesterday to his question was not accurate and I should like to explain to the house precisely what did happen in this case.

At the time the reasons for judgment were given in the Brent case I consulted the legal adviser of the department and, after consultation with him, came to the conclusion that there would be no point whatsoever in proceeding with the appeal to the Supreme Court in the Spalding case. I asked at that time, "What should be done next?" because the decision of the court of appeal of British Columbia quashed an order for deportation but left this woman in the country without any status of any kind either as a visitor or as an immigrant. That situation could not be allowed to continue indefinitely.

As hon. members know, unlike the hon. member who asked the question, I am not a member of the learned profession of which he is a member and I have to get legal advice. After some consideration of possible courses, I suggested to the legal adviser that we give consideration to the possibility of the minister acting under section 7 of the Immigration Act. If the hon. gentleman will look at section 7 he will see that it would be impossible for anyone to act under that section except the minister himself so there would be no possibility of anyone else in the department doing anything unless the minister acted.

In order to make a complete disclosure I have to say this, and I am sorry to have to do so, but it appears that the legal adviser, being very busy, asked one of the junior officers in his office to advise the agent of the crown in Vancouver. Somehow or other a misunderstanding arose about this matter and this junior officer wrote a letter saying that the minister had directed that action should be taken, when all the minister had done was to direct that consideration be given to the possibility of action under this section. And that, sir, is the whole and complete story.

Mr. Speaker: In order to complete the point I was trying to make a moment ago, I would also refer hon. members to citations 191 and 192 of Beauchesne's third edition, and especially to citation 192, which says in the third paragraph:

> A dispute arising between two honourable members as to allegations of facts hardly fulfils the conditions of a privilege question—

Mr. Fulton: Mr. Speaker, on the point of order which you yourself have raised—not to pursue the question of privilege to which the hon. minister has now replied, but surely on the point of order—I raised it as a question of privilege, not because I was complaining that I had not received an answer, which I know is not a question of privilege under the rules, or because the answer was not complete, which is similarly not a question of privilege, but because the answer conveyed to the house information which according to the letter I now have in my hand is completely at variance with the facts which are within the knowledge of the minister. The minister has now explained that the letter from his departmental legal adviser does not correctly convey the decision which he had reached, so I think my question of privilege has been met.

But because the point of order is important, I submit that to raise a question of privilege as to the complete inaccuracy and misleading effect of an answer is valid. It is a question of privilege as distinct from raising a complaint that an answer had not been given or was not complete and I would hope that you would appreciate that distinction. I raise the point of order now only because it seems to me important not to let the matter pass by.

Mr. Speaker: I was seized of the point raised by the hon. member in which he complained, not of having an incomplete answer but of having what he considered to be a wrong answer. Is not that the point?

Mr. Fulton: The answer was directly at variance with the facts—

Mr. Speaker: I perceive that the—

Mr. Fulton: —on a subject peculiarly within the knowledge of the minister. We are told that the house has to rely upon ministerial statements and therefore it seems to me that it is a matter of privilege affecting the rights of hon. members of the house when such an answer is given under the circumstances which appear here.

Mr. Speaker: That is exactly the point. The hon. member contends that the reply given by the minister is at variance with the facts as he knows them and he immediately rose on a question of privilege and asked for an explanation. But that is not the type of question of privilege which is allowed at this moment at the beginning of the session immediately after prayers. I referred the hon. member to citations 191 and 192. The third paragraph of citation 192 reads:

> A dispute arising between two honourable members as to allegations of facts hardly fulfils the conditions of a privilege question—

I think that hits the point raised by the hon. member right on the head.

[*Later:*]

On the orders of the day:

Mr. Pickersgill: Mr. Speaker, I think I am in order at this time to point out that yesterday the hon. member for Kamloops (Mr. Fulton) asserted that if I wanted to find out about the alleged marriage of this Spalding woman I might ask the departmental counsel. I have asked the departmental counsel and he has never heard about any such marriage.

Mr. Fulton: Mr. Speaker, the minister raises a question of privilege but I hope he has the information that his department retained counsel in Vancouver who lost the case in the supreme court and in the appeal court. They have been in touch with the solicitors for this lady and, as I am informed, are in possession of the facts. It was in that sense that I referred to the departmental counsel, the same counsel who wrote the letters to which I referred earlier today.

Mr. Pickersgill: May I say, also on a question of privilege, that if the lady's solicitors did not provide material information to the department that was of interest to her case, I think perhaps she ought to get some new solicitors.

Mr. Fleming: Or the government should get a new minister.

Mr. Speaker: Order. May I rise on a question of privilege? I think that hon. members should remind themselves that a question of privilege is one that ought rarely to come up in parliament. It is depreciating what is meant by a question of privilege if, under the guise of a question of privilege, there occurs a debate at this juncture of our proceedings. I think that hon. members could pursue the point when the estimates of the Department of Citizenship and Immigration are before the house.

Mr. Fulton: Is a slur, not only on the name of the lady but on her solicitors, to be allowed —an entirely unwarranted slur? I submit that that sort of thing should not be allowed to happen. When the minister is guilty of that sort of conduct, it calls for a reply under the rules. The fact of the matter is that the marriage took place after the application was made—

Mr. Speaker: Does the hon. member contend that if a member, using his immunity in debate in this house, makes a slur on a company or person outside, someone must give him the rebuttal? If we were to have a question of privilege accepted for that purpose, we would have many in this house.

Mr. Fulton: I suggest to you, sir, that the minister should not abuse his immunity.

An hon. Member: Sit down.

COMMITTEE ON ESTIMATES

CONCURRENCE IN FIRST REPORT OF SPECIAL COMMITTEE

Mr. W. A. Tucker (Rosthern) presented the first report of the special committee on estimates, and moved that the report be concurred in.

Motion agreed to.

UNEMPLOYMENT INSURANCE

REFERRAL OF BUSHWORKERS TO EMPLOYMENT IN LOGGING CAMPS

On the orders of the day:

Hon. Milton F. Gregg (Minister of Labour): A few days ago I stated in this house that I had asked the unemployment insurance commission to look into complaints concerning the referral of Quebec and New Brunswick bushworkers to employment in logging camps. This survey has now been carried out, and I have received a statement from the unemployment insurance commission, which I should like to summarize as follows.

Under the Unemployment Insurance Act the commission has an obligation to refer workers to suitable employment when such is available and, when no suitable employment is available, to pay benefits to those workers who are eligible. It also has an obligation to find suitable workers for employers.

The commission's offices in the provinces of Quebec and New Brunswick received orders for a substantial number of bushworkers and had a considerable number of unplaced applicants on their files who were qualified to fill the orders. Accordingly, these jobs were offered to those applicants. Where the employment was considered as appearing to be suitable, and when it was refused by an applicant who was a claimant, benefit was suspended pending decision by an insurance officer.

Adjudication by insurance officers is being made and suitability of the employment determined on the following bases:

(1) The rate of wages offered must be that prevailing in the area in which the employment is to be performed and not less than that offered by good employers in that area.

(2) When a job away from home is offered to a bushworker who is a claimant, the minimum duration of the employment must

be such as would enable him to earn at least ten times the amount of transportation expenses involved.

The pattern of employment followed by these persons is such that they habitually work away from home in the lumbering and logging industry. This is taken into consideration by the insurance officer, as also is the length of time he has been unemployed, special domestic circumstances, and the opportunities for employment in his home area.

Although the rates of pay offered would appear to conform to the requirements I have mentioned, nevertheless all of the suspensions of benefit already imposed will be reviewed in the light of these principles and, if the employment is found to be unsuitable, benefit will be restored in full.

[*Later:*]

On the orders of the day:

Mr. T. S. Barnett (Comox-Alberni): I should like to direct a question to the Minister of Labour in connection with the statement he has just made. What steps does the unemployment insurance commission take to ensure that the employment offered is going to be ten times the amount of the fare, if I heard the minister correctly, and what jurisdiction has the commission to see that that condition is carried out?

Hon. Milton F. Gregg (Minister of Labour): The unemployment insurance commission has complete and full jurisdiction over the local employment offices. Moreover, if a claimant is not satisfied with an insurance officer's decision he may appeal to a board of referees which is a body independent of the commission and comprising a chairman, a representative of labour and a representative of employers. Should the claimant still be dissatisfied he may, under certain circumstances, appeal further to the umpire who is the final authority under the Unemployment Insurance Act.

Mr. Balcer: I should like to ask the minister a question. Have any refunds been made to any of these claimants since the question was brought up in the house?

Mr. Gregg: I covered that in my statement. If these principles that I have mentioned have not been fulfilled, then payments of benefit will be made in full.

Mr. Balcer: Can the minister tell us if any actual refunds were made? The minister says this is going to be the policy, but have any refunds been made?

[Mr. Gregg.]

Mr. Gregg: I cannot say at the moment whether or not they have been made.

Mrs. Fairclough: Did the minister's statement assert that the rate of wages paid was that prevailing in the locality of employment or that prevailing in the locality in which the man was domiciled and was registered with the unemployment insurance commission?

Mr. Gregg: Perhaps I had better read that again so there will be no mistake. That was No. 1 of the two points. The rate of wages offered must be that prevailing in the area in which the employment is to be performed and not less than that offered by good employers in that area.

REPORTED TIE-UP IN CAMPBELLTON AND EDMUNDSTON OFFICES

On the orders of the day:

Mr. J. C. Van Horne (Restigouche-Madawaska): Will the Minister of Labour please inform the house why information is not available to show how many of the 7,106 cases referred to the Moncton regional office by the Campbellton and Edmundston offices were delayed for more than two weeks?

Hon. Milton F. Gregg (Minister of Labour): Mr. Speaker, I will read my hon. friend's question and if possible bring forward a reply.

CANADIAN BROADCASTING CORPORATION

REFERENCE TO FORTHCOMING RADIO PROGRAM ON LIFE OF JOSEPH HOWE

On the orders of the day:

Mr. G. T. Purdy (Colchester-Hants): Mr. Speaker, I have a question of privilege. At confederation Hants county, Nova Scotia, now part of Colchester-Hants, was a separate constituency. The first member elected was Joseph Howe. On Wednesday, March 21, at eight p.m., and again on the 28th at the same hour, the C.B.C. will carry over its trans-Canada network a two-hour program—

Mr. Speaker: Order.

Mr. Purdy: —on the life and times of this great Nova Scotian.

Mr. Speaker: This is not a question of privilege.

FINANCE

INQUIRY AS TO REMOVAL OF SALES TAX ON SEMEN

On the orders of the day:

Mr. L. E. Cardiff (Huron): I should like to direct a question to the Minister of Finance

or the Minister of Agriculture. Is any consideration being given to the removal of the sales tax on semen which is extensively used by farmers and breeding associations for the improvement of stock?

Hon. W. E. Harris (Minister of Finance): Mr. Speaker, may I say with all respect that this is the type of question the Minister of Finance would prefer not to answer until after the budget.

EXTERNAL AFFAIRS

INQUIRY AS TO OPERATIONS OF CANADIAN BREWERY IN UNITED STATES

On the orders of the day:

Mr. H. A. Hosking (Wellington South): I wish to address a question to the Secretary of State for External Affairs. As a result of reports that have appeared in the press stating that a certain brewery owned by Canadian capital is not being permitted to operate in four separate states of the United States, has the minister made representations to the United States government complaining about this practice? Would he tell the house whether it is the nature of the industry that makes it objectionable or whether it is because it is a Canadian-owned company?

Hon. L. B. Pearson (Secretary of State for External Affairs): The hon. member was good enough to give me notice of his question before I came into the house. I can say to him and to the house that information was received some days ago that efforts were being made in certain states of the United States to enact legislation which would discriminate against and, indeed, would put out of business, if the legislation were in operation, brewing companies in which the controlling interest was held by persons not citizens of the United States of America. In this case, in effect, that meant Canadians.

As soon as we heard of this proposed action on the part of certain legislatures in the United States we conveyed our concern to the United States government over the undesirable consequences that would follow legislation of this kind if it were put into effect. That concern, Mr. Speaker, is based wholly on the principle involved and not merely on the situation of any particular industry. The United States authorities have already informed us that they share this concern and I understand they have been in touch with the states involved. It is therefore hoped that no further and formal action on our part will be required.

INVITATION TO PRIME MINISTER NEHRU TO VISIT CANADA

On the orders of the day:

Mr. W. B. Nesbitt (Oxford): I should like to address a question to the Secretary of State for External Affairs. In view of the report on the Canadian Broadcasting Corporation news this morning that the government of the United States has invited Prime Minister Nehru of India to visit that country, does the government of Canada also intend to invite Prime Minister Nehru to visit Canada at the same time?

Hon. L. B. Pearson (Secretary of State for External Affairs): At the request of the Prime Minister (Mr. St. Laurent) some time ago when I was in New Delhi I conveyed to Mr. Nehru a very warm invitation on behalf of the government for the Prime Minister of India to include Canada in any visit he would be making to the United States. Mr. Nehru at that time said he hoped to visit Canada before long but he was unable to give us any definite reply at that time.

MEETING OF PRIME MINISTER WITH PRESIDENT EISENHOWER—SUBJECTS TO BE DISCUSSED

On the orders of the day:

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, may I direct a question to the Prime Minister. Is the Prime Minister now in a position to tell the house what subjects will be discussed when he and President Cortines meet with President Eisenhower at White Sulphur Springs on March 26?

Right Hon. L. S. St. Laurent (Prime Minister): No, Mr. Speaker, I am not in a position to do that. I have been informed by the Department of the Secretary of State that there would be no predetermined agenda for our meeting.

Mr. Knowles: May I ask a supplementary question? Can the Prime Minister say whether any of his cabinet colleagues will accompany him on this trip?

Mr. St. Laurent (Quebec East): The Secretary of State for External Affairs will be with me on that occasion.

PRAIRIE FARM ASSISTANCE

INQUIRY AS TO AMENDMENTS TO ACT THIS SESSION

On the orders of the day:

Mr. William Bryce (Selkirk): Mr. Speaker, I should like to direct a question to the Minister of Agriculture. Can the minister inform the house when he expects to bring

before the house the amendments to the Prairie Farm Assistance Act and what they will cover?

Right Hon. J. G. Gardiner (Minister of Agriculture): Mr. Speaker, hon. members will recall that we made rather material amendments to the Prairie Farm Assistance Act last session. When we were preparing legislation for this session or the items upon which legislation might be required, we were having considerable difficulty in the administration of the amendments which were made last year. We therefore made provision for the possibility of bringing in amending legislation. However, I am now informed that, with greater experience in the administration, the difficulties have become less and less, and I am not sure that it will be necessary to bring down legislation.

FLOODS

THAMES RIVER—FEDERAL ASSISTANCE IN CONTROL AND CONSERVATION PROJECTS

On the orders of the day:

Mr. W. B. Nesbitt (Oxford): I should like to address a question to the Minister of Northern Affairs and National Resources. Because of the recent severe flooding in the area of the Thames river in southern Ontario, would the minister consider including in his supplementary estimates a provision for the federal government's share of the amount required to complete the works projected for flood control and water conservation of the upper Thames river conservation authority?

Hon. Jean Lesage (Minister of Northern Affairs and National Resources): The matter is still under consideration, Mr. Speaker.

TRADE

CANADA-UNITED STATES—SUGGESTED DEVALUATION OF CANADIAN DOLLAR

On the orders of the day:

Mr. W. Ross Thatcher (Moose Jaw-Lake Centre): Mr. Speaker, I should like to direct a question to the Minister of Finance. I apologize for not having given him notice. In view of our increasing trade deficit with the United States, has the government given any consideration recently to the advisability, or otherwise, of devaluating the Canadian dollar in an effort to alleviate the situation?

Hon. W. E. Harris (Minister of Finance): Quite obviously, Mr. Speaker, if any such action were contemplated I would not announce it until such action were taken. But I think, sir, we ought to believe that at all times the government is giving careful consideration to any action that would be of assistance in maintaining good trade relations and good balance of payments.

My recollection is that the balance of gold and dollars now in our hands is not any more than slightly different from what it has been for some time; therefore, I do not share the apparent alarm of my hon. friend.

Mr. Macdonnell: Mr. Speaker, may I ask a supplementary question? Is the implication of the minister's answer just given that the government is fixing the value of the Canadian dollar from day to day on the market?

Mr. Harris: I do not know what implication may be read into the question, Mr. Speaker, but no implication can be taken from my statement.

CITIZENSHIP AND IMMIGRATION

INDIAN AFFAIRS—SUGGESTED EDUCATION OF INDIANS BY PROVINCE OF ONTARIO

On the orders of the day:

Mr. J. E. Brown (Brantford): Mr. Speaker, I should like to address a question to the Minister of Citizenship and Immigration. Would the minister care to comment on a question raised in the legislature of Ontario regarding the education of Indians being assumed by the province, and the answer given there by the minister of education?

Hon. J. W. Pickersgill (Minister of Citizenship and Immigration): Mr. Speaker, I noticed the report that a question had been asked or raised in the Ontario legislature by Mr. Nixon, and the reply by the minister of education. The implication of the reply was that Ontario might be prepared to take over the education of Indians in that province on the basis of reimbursement by the federal authorities. Because that is precisely in line with the policy we have been working toward in the Indian affairs branch for some considerable time, I did get the authority of my colleagues today to send the following telegram to the minister of education of Ontario, and perhaps I might be permitted to read it.

Mr. Speaker: The minister in reply said the implication of the statement was so and so, but we do not know what the statement was. He is about to read a telegram which is in direct relation to the statement. I think in fairness we ought to have first the statement made.

Mr. Pickersgill: I was attempting to avoid repetition. If I read the telegram it will be seen that the statement is in it. The telegram reads:

Hon. W. J. Dunlop, M.L.A.,
Minister of Education,
Toronto, Ontario

I have seen the report of the statement you made in the legislature yesterday to the effect that the provincial government would be ready to assume responsibility for the education of Indians on the basis of reimbursement by the federal government. I am authorized by my colleagues to communicate with you with the view to discussing this suggestion at an early date. Could you let me know if you would be prepared to discuss it and what might be a convenient date.

The telegram is signed by me.

Mr. Fulton: May I ask the minister a supplementary question? Would the implementation of such a proposal, if agreement were to be arrived at, necessitate an amendment to the Indian Act?

Mr. Pickersgill: No, sir, I understand not.

[*Later:*]

On the orders of the day:

Mr. H. A. Bryson (Humboldt-Melfort): Mr. Speaker, I would like to direct a supplementary question to the Minister of Citizenship and Immigration arising out of his answer to the question asked by the hon. member for Brantford (Mr. Brown). I take it that the same offer would apply to any other province that so requested?

Mr. Pickersgill: Mr. Speaker, I do not think there is any question of any offer. I am sure the government would be prepared to enter into discussion with the government of any province which wished to consider taking over the education of Indians on some reasonable basis conforming to the Indian Act and the rights of Indians under the act.

ADMINISTRATION OF JUSTICE

CLIFFORD WILLIAMS—REQUEST FOR INTERVENTION BY PRIME MINISTER

On the orders of the day:

Mr. J. G. Diefenbaker (Prince Albert): Mr. Speaker, I should like to address a question to the Prime Minister in the form of an appeal in connection with the Williams case to which reference was made yesterday. Would the Prime Minister, in his capacity as Prime Minister, be prepared to look into that case in order to assure that if an injustice has been done—and that seems apparent—equity should not be denied because of the decision of the—

Mr. Speaker: Would the hon. member for Prince Albert contend that his question is one which is trying to get information? He is asking the Prime Minister to take a certain action; he is not asking for information.

Mr. Diefenbaker: Mr. Speaker, I cannot ask for information without putting it before the Prime Minister. I cannot ask a hypothetical question about a non-existent state of affairs.

Mr. Speaker: I quite realize that the hon. member cannot ask the Prime Minister to take a certain action unless he tells him what action he would like him to take. That is not the purpose of a question before the orders of the day. The hon. member for Comox-Alberni.

Mr. Diefenbaker: The purpose of the question is to ask the Prime Minister whether he will look into the case.

Mr. Speaker: This can be dealt with later on when the estimates of the Department of Justice are before the committee.

Mr. Diefenbaker: The man is in jail for 28 years.

Mr. Speaker: The hon. member for Comox-Alberni.

Mr. Diefenbaker: On a question of privilege—and there have been several today—does Your Honour rule that a member of this house, on a matter concerning justice and equity, shall not be permitted to ask the attitude of the Prime Minister? That is all I want to know.

Mr. Speaker: I am not here to decide questions of equity; I am here to decide questions of order. May I make a request of hon. members, and my request applies to members of all parties. Whenever I intervene on a point of order would hon. members please refrain from applauding whether what I say pleases them or not?

The matter was raised in the first place by a starred question put on the order paper by the hon. member for Kamloops—it is the Clifford Williams case, is it not?

Mr. Fulton: That is right.

Mr. Diefenbaker: That is what we are talking about.

Mr. Speaker: It appears at pages 2120 and 2121 of *Hansard*. The Minister of Justice answered at considerable length the question put by the hon. member for Kamloops. Later on, before the orders of the day were called, questions were asked on the very same subject with the intention of clarifying the answer. Replies were given by the Minister of Justice, and the question the hon. member is asking today was asked of the Minister of Justice yesterday.

Mr. Diefenbaker: Oh, no.

Mr. Speaker: The hon. member says no. They even went so far as to ask him whether the government would be prepared to do the same thing in this case as was done in the Coffin case. Today the hon. member comes back to the same point and asks the Prime Minister whether he will look into this case again and take the action which he himself suggests now. The purpose of a question is to ask for information and not to give some. The hon. member is asking whether the Prime Minister will look into this case and take action, and then he goes on to suggest the action.

Mr. Diefenbaker: No.

Mr. Speaker: Yes. Of course, we are in this position at the moment. Whenever a dispute arises between an hon. member and the Speaker we do not have a copy of *Hansard* until the next day. Would the hon. member be good enough to wait until tomorrow in order to check *Hansard*, and then we can pursue the point? If he is right, I will allow him to do whatever he wishes within the rules, and if I am wrong I shall gladly apologize, and we can carry on from there.

BRITISH COLUMBIA

REQUEST FOR COMMEMORATIVE DOLLAR ON OCCASION OF CENTENARY CELEBRATION

On the orders of the day:

Mr. T. S. Barnett (Comox-Alberni): Mr. Speaker, I have a question for the Minister of Finance. I have not given him notice either, but I hope he will find it a little easier than some of the other questions that were asked recently.

Has the minister given consideration to the minting of a special commemorative silver dollar in connection with the 1958 centenary celebration in the province of British Columbia?

Hon. W. E. Harris (Minister of Finance): Mr. Speaker, representations have been made by various organizations in British Columbia, and by my colleagues the Minister of National Defence and the Minister of Fisheries, and other members on this side of the house, asking for the striking of a commemorative silver dollar with respect to the occasion on which gold was found in British Columbia, I think, in 1858. Consideration has been given to the representations but no decision has been reached yet by the government.

[*Later:*]

Mr. Roland Michener (St. Paul's): Mr. Speaker, I should like to direct a question to the Minister of Finance supplementary to the silver dollar question. Would the minister take into consideration the advisability of striking a gold coin as being more appropriate to celebrate the discovery of gold 100 years ago?

Mr. Martin: That is the $64 question.

HEALTH INSURANCE

INQUIRY AS TO MAINTENANCE OF GOVERNMENT POLICY

On the orders of the day:

Mr. F. G. J. Hahn (New Westminster): Mr. Speaker, I would like to direct a question to the Prime Minister. Is it the intention of the government to continue its determined stand that no national health program will be put into effect until such time as six provinces, representing over one-half of Canada's population, have approved the agreement, or would it consider modification of this plan to set it in operation upon the approval of any one province?

Right Hon. L. S. St. Laurent (Prime Minister): No, Mr. Speaker. The policy that was expressed to the conference with provincial ministers was that if and when a majority of the provinces, representing a majority of the population of Canada, wished to put into effect some scheme of hospital and diagnostic services insurance the federal government would be prepared to extend technical and financial assistance in implementing the policy.

HEALTH AND WELFARE

DR. JAMIESON—STATEMENT RESPECTING TRANSFER TO PRINCE ALBERT

On the orders of the day:

Hon. Paul Martin (Minister of National Health and Welfare): Mr. Speaker, the hon. member for Selkirk (Mr. Bryce) asked me a question three days ago with regard to the decision to transfer the services of the director of the hospital at Norway House. I have already discussed this matter with the hon. gentleman and in addition I would say that his services are needed at another hospital.

NORTHERN ONTARIO PIPE LINE CORPORATION

CONSTITUTION OF CROWN COMPANY TO CONSTRUCT PIPE LINE

Right Hon. C. D. Howe (Minister of Trade and Commerce) moved that the house go into committee to consider the following resolution:

That it is expedient to introduce a measure to provide for the constitution of the corporation to

be known as the Northern Ontario Pipe Line Crown Corporation for the purposes, *inter alia*, of constructing, maintaining and operating a natural gas pipe line between the Ontario-Manitoba border and Kapuskasing, Ontario and of leasing, with an option to purchase, the said natural gas pipe line to the Trans-Canada Pipe Lines Limited and carrying out such leases, including the disposal by the corporation of the said pipe line in connection with such purchase option;

To provide also that the corporation may do such things as are conducive to the attainment of these purposes, that it may borrow money, the aggregate of the amounts borrowed by the corporation and outstanding at any time and the aggregate of the amounts loaned by the Minister of Finance and outstanding at any time not to exceed one hundred and thirty million dollars;

To provide further for the appointment and remuneration of directors, officers and employees incidental to the administration of the act.

Mr. Speaker: Is it the pleasure of the house to adopt the motion? Those in favour of the motion will please say yea.

Some hon. Members: Yea.

Mr. Speaker: Those opposed will please say nay.

Some hon. Members: Nay.

Mr. Speaker: In my opinion the yeas have it. Call in the members.

The house divided on the motion (Mr. Howe, Port Arthur) which was agreed to on the following division:

Northern Ontario Pipe Line Corporation

Knowles	Noseworthy
McCullough (Moose Mountain)	Regier
Nicholson	Zaplitny—20.

The house went into committee, Mr. Robinson (Simcoe East) in the chair.

Mr. Howe (Port Arthur): Mr. Chairman, this bill provides for the formation of a crown corporation to build the northern Ontario section of an all-Canadian natural gas pipe line. Its purpose is to hasten the day when Alberta will have an adequate outlet for its surplus gas, and the day when the cities, towns and industries of Saskatchewan, Manitoba, Ontario and Quebec within economic range will have access to this highly efficient fuel.

Many hon. members may hold the view that this pipe-line project involves only the procuring and laying in place of a large diameter pipe extending from a point in Alberta to a point near Montreal. Such a project is in itself no small undertaking, since it involves an estimated cost of $375 million. However, this is but part of the pipe-line project. In the province of Alberta, gas wells must be drilled to reservoirs of gas already proven in order to make that gas deliverable; chemical plants must be built to remove from the gas sulphur and wet components, such as butane and propane, for gas entering the pipe line must be dry gas; gathering lines must be laid in Alberta to collect the gas from the various fields and convey it to the western end of the trans-Canada pipe. Premier Manning has estimated that expenditures in Alberta, necessary to initiate the pipe-line project, will total $250 million. These are problems for private enterprise and for the provincial government of Alberta, for which this parliament need take no responsibility.

Then, customers for the gas must be found, which involves expensive distribution systems in a large number of cities, and a sales program to induce private domestic users and private industries to change over to natural gas. The build-up of customer loads must inevitably involve a considerable time element, which is being shortened by a temporary purchase of gas from the United States, that is enabling load building to begin without delay. Involved in the customer build-up is the manufacture and sale of apparatus for using gas. Altogether, this is a project involving expenditures in Canada totalling over one billion dollars.

Some hon. members may say that if the main pipe were to be built, the producers would eventually develop their properties and connect them to the pipe line. The same hon. members may say that the consumer load will eventually grow to a level that will make the pipe-line operation cover current expenses. However, the fact remains that until a certain quantity of deliverable gas can be assured and until the required quantity of consumption can be guaranteed it is impossible to finance the main pipe in a manner satisfactory either to private enterprise or to this parliament.

Hon. members may question why it is desirable to market certain quantities of gas from the pipe line into the United States. The reasons are twofold: first, that markets are required for more Alberta gas than eastern Canada is ever likely to consume, and second, there is available in the United States an immediate consumer load. Sales to the United States would therefore encourage exploration and development in Alberta and spread the cost of the transmission system over a larger volume of gas. Apart from these two considerations, United States markets are not essential to the project. I would, however, point out that when Premier Manning first brought the project to our Prime Minister he made it a condition that a market in the United States be arranged, in addition to markets in eastern Canada. Producers in Alberta desire to have this additional market as a means of taking care of the growth of the gas industry in Alberta, and this government can have no objection to a limited market in that country for gas in excess of the foreseeable needs of Canada.

Hon. members will recall that in 1951 parliament enacted the original statute incorporating Trans-Canada Pipe Lines Limited. The original sponsors of this project believed that a pipe line designed to serve the Canadian market only was economically feasible and the statute of incorporation restricted the company to activity within Canada. Through the merger of the original Trans-Canada Pipe Lines Limited with Western Pipe Lines Limited in early 1954, the plan was broadened to include a substantial export of gas at Emerson, Manitoba, which was possible under the Western Pipe Lines charter. Such export has been approved by this government with the proviso that Ontario and Quebec must be served as nearly as possible concurrently with any such export, and the company proceeded to try to arrange gas purchase and sales contracts and financing for its construction program on this basis.

In early 1955 Trans-Canada advised the government that, due to the lack of progress in obtaining gas purchase and sales contracts in Canada, construction of the first stage of the line in 1955 could not be financed unless a temporary guarantee of annual debt service on the first mortgage bonds could be arranged. The assistance requested was a deficiency

agreement under which the government would undertake to meet any payments due on the first mortgage bonds that the company was unable to provide out of its depreciation and earnings.

After negotiations with the government of Canada and the industrial development bank, the company announced on March 17, 1955, that it had been unable to negotiate a type of financial assistance which did not result in an agency of the government of Canada being in a position to control the company, and that such an arrangement made it impossible for the company to purchase its gas requirements.

Following these negotiations Trans-Canada applied to the natural gas conservation board of Alberta and to the Board of Transport Commissioners for Canada for extensions of the permits from each body until April 30, 1956. Both extensions were granted.

Over the following months the company worked out a series of arrangements with Tennessee Gas Transmission Company which provide for the export of 200 million cubic feet of gas daily at Emerson for 25 years, the export of a further 100 million cubic feet daily near Niagara Falls, reducible to no export at Trans-Canada's option, and the import near Niagara Falls of up to 90 million cubic feet daily for the period until Alberta gas is available in central Canada. These arrangements, which are of course subject to the approval of the United States federal power commission, at once greatly improve the market position for Trans-Canada from the outset, and permit a more rapid build-up of the central Canadian market than might otherwise be possible. The company has also pressed forward with other sales contracts, notably for the Montreal and Toronto areas but also in the other areas within reach of the proposed pipe line.

Recently Trans-Canada has completed gas purchase contracts with the Canadian Gulf Oil Company and other suppliers for approximately the full amount of the 4·35 trillion cubic feet presently authorized for removal by Trans-Canada from Alberta.

On February 15 Trans-Canada announced that two of western Canada's largest oil and gas producing companies had bought substantial sponsoring interests in Trans-Canada. These companies, Canadian Gulf Oil and Hudson's Bay Oil and Gas, have increased their holdings to 17 per cent each of the founders' shares of the company. Tennessee Gas Transmission Company, which came into the project last November, now also holds 17 per cent of the founders' shares. To make these arrangements possible, the original sponsors, Canadian Delhi Oil Limited and the Western Pipe Lines group, have each reduced their share holdings to 24½ per cent of the total outstanding. Representatives of Tennessee, Canadian Gulf and Hudson's Bay were at the same time added to the board of directors and the management committee of Trans-Canada.

For the purpose of overcoming the difficulties of establishing this longest pipe line in the world, this new management group is a very strong one indeed. The Canadian Delhi group, which first envisaged the all-Canadian line as a practicable project, has been a leading company in proving up the necessary gas reserves. The Western Pipe Lines group brings to the project experience in the development under Canadian conditions of gas utilities and related enterprises. Canadian Gulf and Hudson's Bay bring to it a continent-wide experience in the development of petroleum resources. Tennessee, one of the largest gas transmission organizations in the world, brings resources of personnel, experience and financial strength which are almost unparallelled in this industry.

These sponsors are further strengthened by a board of directors widely representative of Canadian experience in development ventures. Of the 18 directors 11 are Canadians. Their names will be known to most hon. members: Hon. Edouard Asselin, Q.C., Montreal; E. W. Bickle, Toronto; Hon. G. Peter Campbell, Toronto; J. K. McCausland, Toronto; M. A. MacPherson, Q.C., Regina; H. R. Milner, Q.C., Edmonton; A. Deane Nesbitt, Montreal; Gordon P. Osler, Winnipeg; N. E. Tanner, Calgary; Jules R. Timmins, Montreal; J. Ross Tolmie, Q.C., Ottawa. The president is Mr. Tanner, whom of course you know as a former minister of mines in the government of Alberta; Ray Milner is a vice-president and Deane Nesbitt is secretary-treasurer.

The strength of this management group is self-evident. What apparently is not evident, to judge by press comment, is that control of the company is open to Canadians. I wish to put an end to misunderstanding on this point.

I have been in pretty close touch with those who have sponsored this project for the last six years. They have never had any reason to expect any sympathy from this government unless they were prepared to meet the national policy of serving the Canadian market first and unless they were prepared to share ownership and management with Canadians. From the outset the sponsors of Trans-Canada have agreed with that point of view. All the present participants have reconfirmed, in the shareholders' agreement dated February 13 which I tabled on February 20, their agreement that at the time of public financing, the Canadian public will be offered not

less than 51 per cent of the total number of voting shares to be outstanding after public financing.

The group of sponsoring companies I have described has, under this latest agreement, rights to something less than two million common shares. It is to this total that the percentage distribution I have given applies. When public financing is undertaken, two things will follow from this agreement. First, under option arrangements which form part of the agreement, Canadian Delhi and the western group can increase their holdings from 24½ per cent each to 27½ per cent each of the founders' shares, while Tennessee, Canadian Gulf and Hudson's Bay reduce their holdings of such shares from 17 per cent to 15 per cent each. Second, an additional issue of something over four million shares is to be sold on the open market, under conditions which will make available to Canadians not less than 51 per cent of the total of about six million common shares.

This offer has, to my surprise, been met with criticism, even derision, on the ground that it provides no guarantee that Canadians will buy the stock. Of course there is no such guarantee. Short of public ownership which, for reasons I shall discuss later, appears to be a second best approach to this matter, I know of no means by which control by Canadians could be guaranteed.

We have always welcomed United States capital to share in the development of the resources of this country. It may be, as some of our leading bankers have suggested in recent weeks, that Canadians shy away from venturing their own capital in the development of their own resources. One can think of cases in which, having supplied a large share of the initial capital for a resource development project, Canadians have sold their equities at the first opportunity of profit, with the result that those equities have moved into the hands of United States citizens.

If there is some uneasiness in this country about the extent and nature of United States investment in Canada, this is the wrong place to focus it. Trans-Canada is no doubt imperfect, as are we all, but its willingness to share its venture with Canadians is not in question. Considering that the inspiration has come, and much of the technical knowledge and skill must come, and much of the loan capital probably will come from the United States, the extent of participation to be offered to Canadians requires no apology from Trans-Canada. Rather it offers to other industries which have equally strong connections beyond our borders, and which for some reason have not been subjected to this same criticism, a model which they might well study.

I return now to the position of the government in relation to the pipe-line project. Most of the pipe-line construction proposals put forward from time to time were based on the premise that the natural market for Alberta gas is in the nearby United States. The requirement that Canadian markets so far as possible be first provided for is a requirement of national policy. If any disability were placed upon the development of the gas industry by this national policy, it would be proper that this disability be if possible counterbalanced. The developments which I have outlined made it clear that private enterprise alone faced serious difficulty in financing a pipe line stretching across the sparsely populated areas of northern Ontario, a line from which relatively low returns on investment must be expected during the period of building up the central Canadian market. Some kind and degree of public intervention appeared necessary and proper.

Once again, as in the days of railway building, the difficult and sparsely populated pre-Cambrian shield appeared to present an almost insuperable barrier to economic transportation between western and central Canada. Once again, this special problem of Canadian geography has called forth a unique solution. The government is convinced that the solution now offered has a better chance of working than has any alternative solution that has yet been suggested.

First, let me comment on these other proposed solutions. The one about which I have heard most is generally called the exchange plan. Its essential argument is that Canadian gas should flow into United States markets where it can best compete, and Canadian markets be served by United States gas. This has the attraction of appearing to be the most economical arrangement. What it lacks is precisely one fundamental point on which Canadian gas policy must be based. Gas and electricity, unlike oil, are committed permanently, once they are committed at all. No Canadian government can properly commit gas to export until Canadian requirements are provided for. No government of the United States can properly commit United States gas to a Canadian market until the needs of United States citizens within economic range of that gas have been provided for. So long as Canada remains a sovereign nation, these are the facts of life for every energy resource of which a continuous supply is essential to the nation's well-being.

Our friends to the south are no more anxious to infringe on our sovereignty than

we are to infringe upon any aspect of their sovereignty, even for an apparent economic advantage. This is a further weakness in the so-called exchange plan. Its proponents seem to take it for granted that our good friends to the south would enter readily upon such a plan, which in the nature of gas transportation would have to be firmly committed on both sides for at least 20 years. All the evidence suggests that the responsible United States authorities feel as we do, that dependence upon foreign supplies can be accepted only cautiously and to a limited extent, and that commitments of gas to foreign markets can be entered into only in so far as the gas is clearly surplus to domestic requirements. In these circumstances, to assume that an unlimited gas market is available in the United States to Canadian producers, or that if it exists it can be made available more quickly than a comparable Canadian market, is no better than wishful thinking.

Public ownership of the whole all-Canadian line was, of course, advocated by some, and still is. I am not opposed to public ownership as a matter of principle. Neither is this government. There are circumstances in which public ownership is right and proper. But this government does not believe—as do some of our socialist friends—that public ownership is, as a general rule, preferable to private enterprise.

As far as a transcontinental gas pipe line is concerned, I believe that the arguments are all in favour of private ownership. Gas is only one among several competing fuels and sources of energy. It is not a monopoly. Nor do I think that it would be in the public interest for any government to subsidize the transmission of gas, providing unfair competition to coal and oil producers.

To me, therefore, public ownership of the all-Canadian line is definitely a second best. It is a second best rendered even less attractive by the difficulty which would be faced by any government operating a gas transmission and sales system: the difficulty of arbitrating between the competing claims of the producer for maximum field price and the consumer for minimum retail price. These are the reasons why the government has sought some reasonable proposal to lay before parliament which would bring about the early building of a privately operated and privately owned transcontinental gas transmission system, and which would contain the necessary safeguards to the public interest and the public treasury.

Such a reasonable proposal has now been brought forward by Trans-Canada Pipe Lines Limited. This government is sufficiently impressed by its merits and prospects of success that it is prepared, subject to the approval of parliament, to enter into the construction and temporary ownership of a portion of the proposed pipe line.

This government and the government of Ontario have kept in close touch about developments respecting gas for several years. When Trans-Canada brought forward the proposal which has resulted in this legislation being placed before you, we proposed to the government of Ontario that the two governments join in carrying the proposal forward.

At the opening of this session of parliament I tabled a copy of the agreement between the government of Canada and Trans-Canada Pipe Lines Limited dated November 21, 1955, and of the concurrent exchange of letters between the governments of Canada and Ontario. These documents embody the arrangements that the government is now seeking to implement by the present bill.

As hon. members are no doubt aware, the Ontario government has already placed before the legislature of Ontario the bill to enable it to participate. This bill is entitled:

> An act to facilitate the introduction into Ontario of natural gas from Alberta by means of an all-Canada pipe line.

The bill is a short one. It reads:

> Whereas the transportation of natural gas from Alberta to central Canada is a vital necessity to supplement the energy resources available for the continued industrial growth of Ontario;
>
> And whereas the carriage of such gas through a pipe line situated entirely within the jurisdiction of Canada and running across northern Ontario is in the public interest of Ontario;
>
> Therefore, Her Majesty, by and with the advice and consent of the legislative assembly of the province of Ontario, enacts as follows:
>
> 1. For the purpose of implementing the arrangements made or to be made between the government of Canada and the government of Ontario to facilitate the construction of a connecting link through northern Ontario of a pipe line to transport natural gas from Alberta into central Ontario, the treasurer of Ontario is hereby authorized to loan from time to time out of the consolidated revenue fund any sum of money, but not more than $35,000,000, to a corporation constituted or to be constituted on behalf of Her Majesty in right of Canada and having as a purpose the construction aforesaid.
>
> 2. This act comes into force on the day it receives royal assent.
>
> 3. This act may be cited as the northern Ontario pipe line act, 1956.

Those of you who have read the statements of Mr. Frost and Mr. Porter in presenting this bill will know that the government of Ontario has studied this matter independently, and with the benefit of disinterested professional advice. They will know that the government of Ontario has considered the same alternative courses of action that occurred to us, and has rejected them for substantially the

same reasons. They will know, and this I draw to the particular attention of all hon. members, that the legislature of Ontario approved this bill, not merely by a majority, but unanimously.

In the agreement between this government and Trans-Canada, the government undertook to recommend to parliament the formation of a crown company to build and own a 675 mile section of the all-Canadian line between the Manitoba-Ontario boundary and Kapuskasing. The legislation now before you carries out that undertaking. The northern Ontario section, when built, will be leased to Trans-Canada for a maximum term of 25 years.

Under the terms of the lease, Trans-Canada will pay all operating and maintenance expenses, including repairs, replacement, insurance, damage claims, and so forth, of the northern Ontario section, plus rental payments on a monthly and annual basis.

Trans-Canada will undertake to purchase the northern Ontario section as soon as it can arrange the necessary finances. The agreement gives a strong incentive to Trans-Canada to do so in a relatively short time.

The crown corporation undertakes to make additions of integral parts of the northern Ontario section, such as increased compression facilities to meet additional gas requirements, but is not required to build any additional pipe line or any sales laterals. The northern Ontario section will be designed for an initial capacity of 300 million cubic feet of gas per day and an ultimate capacity of 530 million cubic feet per day without looping.

The rental formula included in the agreement between the Canadian government and the Trans-Canada is designed to achieve the following results:

(1) to enable the crown corporation to recover not less than its full costs and investment during the term of the lease;

(2) to enable Trans-Canada to defer part of its rental payments on the northern Ontario section during the market buildup period in eastern Canada;

(3) to give the crown corporation a claim on net earnings of Trans-Canada if required to meet operating expenses, interest cost, and accumulated amortization, of the northern Ontario section;

(4) to give Trans-Canada a strong incentive to exercise its option to purchase the northern Ontario section within a relatively short period;

(5) to give the crown corporation a profit over and above expenses, interest costs, and amortization in the event that gas demand increases as expected and Trans-Canada does not exercise its option to purchase.

[Mr. Howe (Port Arthur).]

The rental payment to be made by Trans-Canada is in two parts. First is a monthly transportation charge on gas transmitted by the northern Ontario section. This transportation charge will be an amount which, if the line were operating at two-thirds of initial capacity, would return the crown corporation 4½ per cent per annum on its initial investment.

Once established, the throughput charge will remain fixed during the term of the lease regardless of subsequent increases in capacity. Since increases in capacity up to the physical maximum of 530 million cubic feet daily can be achieved by additional investments, small in relation to the initial investment, the throughput charge will result in returns substantially higher than 4½ per cent on invested capital, as the market for gas in eastern Canada expands.

From the outset, operating costs and interest charges will probably be covered by the basic rental, but there may be deficiencies in the revenue available for amortization in the early years of market buildup. To make up any deficiencies, the agreement provides that, commencing in the fourth year of the lease, and to the extent that the net revenues are available from the whole Trans-Canada operation, Trans-Canada will pay an additional annual rental of up to 1 per cent of the original cost of the northern Ontario section until total rental payments from the beginning of the lease equal 7 per cent per annum of the total capital cost plus interest at 3½ per cent per annum compounded annually on any deficiencies below 7 per cent carried forward.

The Chairman: Order. I am extremely sorry to interrupt the minister, but I am obliged to advise him that his time has expired.

Some hon. Members: Let him go on.

The Chairman: Has the minister unanimous consent to continue?

Some hon. Members: Agreed.

Mr. Howe (Port Arthur): I must say I always thought a minister on introducing a bill was given sufficient time to make a statement.

Mr. Fulton: Your party insisted on putting in the rule.

Mr. Howe (Port Arthur): I was never very strong on rules.

Mr. Knowles: How well we know that!

Mr. Rowe: We have observed that already.

Mr. Howe (Port Arthur): This average return of 7 per cent is the amount necessary

to cover the crown corporation's operating and interest cost, and amortization of its investment in about 21 years.

Trans-Canada undertakes to purchase the northern Ontario section as soon as it can arrange the necessary finances, and has an option to purchase the section at any time, provided the crown corporation has received an annual return of 3½ per cent on its capital during the term of the lease. The purchase price is to be the total capital cost to the crown corporation, minus credits to depreciation arising from rental payments, but the purchase price is not to be less than the higher of either (a) total capital cost less amortization at 3½ per cent per annum plus interest thereon compounded at 3½ per cent annually; or (b) 70 per cent of the original capital cost. The rental payments described previously will result, as throughput grows, in payments which in due course will total more than interest plus the amortization at 3½ per cent to be credited to Trans-Canada in the purchase price. Any such excess payments will represent a profit to the crown corporation or an accelerated amortization of its assets. Apart from the undertaking to purchase, it will in these circumstances become in the interest of Trans-Canada to purchase the northern Ontario section, since it cannot otherwise receive any benefit from these excess payments. The 70 per cent floor will give a further incentive to Trans-Canada to purchase the northern Ontario section.

This, in the government's opinion, is a prudent arrangement. It bridges the gap in distance and time that has been at the root of one of the main difficulties in getting an all-Canadian gas pipe line financed and launched. It does so in a way that enables the governments concerned to recover all their investment plus interest without imposing any unnecessary charges that would reduce the return to the producer or raise the price to the consumer. It enables governments to avoid the problems inherent in ownership and operation of a pipe line, and offers the prospect of getting governments completely out of the business at any early stage.

In a sense the arrangement benefits the Trans-Canada Pipe Line Company. This is inescapable. But it does so only to the extent that it enables construction to get under way earlier than would otherwise have been the case. Once the pipe line is operating and the eastern Canadian market has been built up to the initial capacity of the eastern part of the line, the Trans-Canada Company must take over the northern Ontario section at a price which returns full cost and interest to the government, or pay the government a profit. There is no element of subsidy or hand-out to the private company.

It might be asked: Why doesn't the government just wait until private enterprise can build the whole line without any intervention by government? This was one of the alternatives. But the governments of Canada and Ontario believe that there is general support throughout the country and in this house for limited and prudent intervention by government if, as a result, the construction of this all-Canadian pipe line can be speeded up.

Under its contract with the government, Trans-Canada has until May 1 next to demonstrate to the satisfaction of government that it has arranged for finances and commitments to carry through its entire construction program. That date was of course related to the time limits of the permits held by Trans-Canada at the time the agreement was completed from the petroleum and natural gas conservation board of Alberta and the Board of Transport Commissioners for Canada. At that date also many of Trans-Canada's supply and sales contracts are to be reviewed. It is therefore an appropriate time for government to examine Trans-Canada's situation afresh.

It has now become clearly improbable that Trans-Canada will be able to complete its financing arrangements by May 1. Officers of the company expect, however, to arrange and carry out a substantial amount of construction this year under interim financing. I am hopeful that they will be successful in this. Their prospects in this regard will become clear by May 1.

Hon. members will have noted from the press that on February 24 the Alberta petroleum and natural gas conservation board granted an extension of the various dates on which its permit to Trans-Canada is conditioned. The date for completion of finances is extended from April 30, 1956, to November 1, 1956. The time limit for commencement of construction is extended from June 30, 1956, to June 30, 1957. The limit for commencing removal of gas from Alberta is extended from December 31, 1956, to December 31, 1957.

If the board of transport commissioners should also see fit to extend the time limits on its permit to Trans-Canada—a matter which is entirely the board's affair—then this government would feel justified in considering favourably a request by Trans-Canada for an appropriate amendment of the time limit on its agreement with Trans-Canada. Any such extension would depend upon the progress Trans-Canada could demonstrate towards construction and firm financing of the proposed system.

Northern Ontario Pipe Line Corporation

Naturally neither this government nor the government of Ontario would be prepared to enable the proposed crown corporation to proceed with any actual construction of the northern Ontario section until the requisite financing for the balance of the Trans-Canada system was assured and its construction program established.

I turn now to the bill itself. It is intended to enable the government to carry out the agreement with Trans-Canada Pipe Lines Limited dated November 21, 1955, and the agreement with the government of Ontario set forth in the exchange of letters between Mr. Porter and myself dated November 21 and 22, 1955. There is no exact precedent for such a crown corporation financed jointly by this government and the government of a province, and it has proven difficult if not impossible to set forth in legislation the respective responsibilities and prerogatives of the respective governments. I wish therefore to state clearly at the outset that, although the language of the bill is more general than the language of the agreements, the purpose of the legislation is to enable the intent and purpose of these specific agreements to be carried out.

As an example, the bill provides for the establishment of a corporation consisting of a president and four other directors to be appointed by the governor in council upon the recommendation of the minister. The agreement with Ontario provides that the government of Canada would be entitled to nominate one more director than the government of Ontario and also, from among these, to appoint the chairman or president. What would happen in fact is that the Minister of Trade and Commerce would recommend to the governor in council the appointment of five directors, of whom two would have been nominated by the government of Ontario.

Similarly, the borrowing powers of the corporation have been phrased broadly, but the intent is to enable the corporation to borrow not only from Her Majesty in right of Canada but also from Ontario in accordance with the agreement with Ontario.

Aside from this one feature of being phrased broadly enough to encompass joint action with a province, and aside of course from the fact that it establishes the first crown corporation to construct and own a pipe line, the bill follows familiar paths and breaks no new ground. It makes the usual provisions for by-laws and related procedural matters for staff, including staff borrowed from the civil service, for the legal position of the corporation as an agent of Her Majesty and for payments in lieu of local taxes. Its powers are the normal general powers of a company, together with those specific powers required to enable it to construct, lease, and sell the northern Ontario section, which is defined in the schedule to the bill. It is brought under the Pipe Lines Act, as if it were a private pipe line company, with the exception of two sections which would have imposed upon the corporation certain procedures which would have consumed time without conferring any benefit upon the public or the interested parties.

As regards financing, the borrowing powers are, as I have said, a little unusual in one necessary respect. The ceiling on the amount the corporation is authorized to borrow is established to cover the presently estimated cost of the initial pipe line facilities, together with an amount to permit an increase of compression facilities in case these should be required early in the corporation's operations, making allowance for some increase in cost in case the present estimates prove low in relation to costs prevailing at the time of construction. The corporation is brought under those parts of the Financial Administration Act which are appropriate to such a corporation; it must submit an annual budget and its accounts are subject to audit by the Auditor General.

In short, the bill proceeds by tested methods, drawn largely from existing legislation and we believe wholly reconciled with existing legislation, to achieve a somewhat unusual purpose, the joint participation by this government and that of Ontario in the construction and temporary ownership of a vital section of a natural gas pipe line system. What we are here proposing meets the requirements of our established policy. It is a vital link in a plan which would give central Canada the benefit of a secure source of additional energy, and would give Alberta gas producers the benefits both of the central Canadian market and of a market for surplus gas in the United States. We believe this temporary help to private enterprise will benefit both producers and consumers, and will contribute to the continued increase of Canadian productivity. In particular it will make a new and needed fuel source available to a vast area in northern Ontario which could not otherwise have enjoyed its benefits.

Let us not forget that this natural gas transportation and distribution system is by far the largest ever undertaken as a single project anywhere in the world. It is to be expected that time will be consumed and problems will be encountered in bringing the project to completion. Already a great deal of effort and large sums of money have been devoted to it. Passage of this bill will speed up final

arrangements. My own estimate of the time element is that Alberta gas will be delivered in Montreal not later than the autumn of 1958. I believe that this is a conservative estimate of the construction period, having regard to all possible delays.

Mr. Drew: Mr. Chairman, we supported the motion that the Speaker leave the chair, not because we approve of the motion now before the committee but because we wanted an opportunity before this committee to indicate why we think this resolution should be opposed.

Some hon. Members: Oh, oh.

Mr. Drew: In view of the comments from hon. members to my left I would point out that nothing is gained by the silly gesture they made this afternoon. After all, we have had very important debates here before—

Mr. Coldwell: I rise on a point of order; I do not think that any action which is proper under the rules of this house should be described by another member of the house as a silly gesture.

Mr. Knowles: Furthermore, it is out of order to reflect on a vote which has already been taken.

Mr. Drew: We have had important debates before and we will have other important debates.

Mr. Coldwell: May I ask the chairman for his ruling?

Mr. Drew: Mr. Chairman, I am quite ready to withdraw the word "silly" and say wholly ineffective.

Mr. Coldwell: That is a matter of opinion.

Mr. Drew: The procedure is one which permits us to place before this committee the reasons which we hope will commend themselves to hon. members to our left as well as to others, more than my comment just did. May I say that the reason I made the comment was the derisive laughter which came from that source which I think was out of keeping with the procedure of this house just as much as any suggestion as to the intervention that was made by way of motion.

I hope that we shall discuss this as one of the most important issues that has come before this house. I trust that as a result of the discussion which will take place here we may conceivably have some reconsideration of the government's position.

There has been no reason at any time for any uncertainty as to the position of the Conservative party in regard to a measure of this kind. In this house and outside of the house we have been repeating over and over again that Canadians should recognize the unique opportunity that presents itself to us at this time to make use of the vast resources that have become available to us. We have emphasized the fact that it is the duty of Canadians to develop those resources for the benefit of Canadians themselves. We deferred comment in regard to this particular matter because we had expected that there would be some statement by the government in regard to the new agreement in view of the fact that it is perfectly obvious that the agreement which is now tabled in relation to the crown corporation that is projected cannot possibly be fulfilled and carried out. That has been made clear this afternoon by the minister. It is unfortunate that at this stage we are asked to discuss a subject when the nature of the agreement, in so far as the time factors are concerned and the way in which financing will be carried out, is left entirely uncertain.

The remarks of the right hon. minister have dealt generally with the question of the pipe line and its purpose. He has indicated that the purpose of this motion and the measure that would follow, if it is adopted, is to hasten the day when Alberta will have an outlet for its natural gas. This proposal would do the very opposite. This proposal is going to delay the delivery of gas by adopting a method that makes us dependent upon the whims of the federal power commission in Washington.

This government has placed itself in the humiliating and improper position where it is bound to wait until an agency of the government of the United States reaches a decision. We pride ourselves on our sovereignty and yet this sovereign parliament is asked to accept a proposal which does not leave us in the position where we can say when this will go ahead. We believe that the time has come to assert without any reservation that we want an all-Canadian pipe line under Canadian control which can be proceeded with right away to deliver Alberta gas to Ontario and Quebec and wherever else in the east it may be available.

What is now proposed will not achieve that result. What is now proposed makes this government dependent upon the decision of the federal power commission in Washington. That is not a position which this government now or at any other time should be prepared to accept.

The minister referred to hon. members possibly questioning why it is necessary to market gas in the United States. He said that there is in the United States an immediate customer load. There will not be a customer load unless and until the federal

power commission say that gas can be delivered. Estimates are given by those close to the federal power commission in Washington which are very definite, that it will be a long time before that permission is granted. In fact, this has shaped up into one of the biggest fights between conflicting interests in the United States that has occurred in years, and we are left by this proposal in a helpless position, unable to guide the course of events. If the sale of gas in the United States is necessary, then why put ourselves in this position? Why not deal with that as one problem and deal with the supply of gas into Canada as another?

The minister in his remarks repeated a statement to which reference has been made on other occasions. He said that control of this company is open to Canadians. That statement is a shallow pretence. That statement has no meaning and is not borne out by the facts. That statement, no matter what the intention may be, will have the effect of deceiving people unless it is pointed out that the very opposite is the situation. The minister repeated today that there is an agreement that the Canadian public will be offered 51 per cent of the voting stock. That is not so. He said on earlier occasions that Canadians would be offered 51 per cent of the voting stock. That is not so. What is provided in the agreement is that there will be an offering in Canada of 51 per cent of the total amount that will be outstanding, including what is now issued.

Mr. Rowe: Quite a difference.

Mr. Drew: That is a single issue. It does not mean at all 51 per cent of the control. It means simply that, in order to comply with that provision in the agreement, it is only necessary for the company to take the amount now issued, which is just under two million shares, and then issue an amount which would bear the relationship of 51 per cent to 49 per cent, which would be an amount slightly over two million shares, and they would have complied with the provision in the agreement.

Mr. Howe (Port Arthur): That is not true.

Mr. Drew: That is true, and section 6 of that agreement makes that clear. The minister is in the habit of making such inaccurate statements that this is not surprising coming from the same minister. That is, however, the correct interpretation of that section, no matter what was intended—

Mr. Howe (Port Arthur): You think.

[Mr. Drew.]

Mr. Drew: If the minister will just forbear; after having made so many inaccurate remarks here, he might remain silent for a while and listen to a discussion of this subject. I repeat that this agreement does not assure any opportunity to Canadians to have control, and there is not the slightest chance in this world that these powerful United States interests who have control today are going to let that control pass out of their hands; none whatever. This venture is controlled by powerful United States interests, and they will hold that control—we cannot blame them for doing so—if they are permitted to proceed with an arrangement of this kind. But do not let the minister pretend to the Canadian public that he has any undertaking of any kind. He has no undertaking at all, that is, if he was correct in his answer in this house a few days ago when I asked him if there was an undertaking, and he said there was not. All that exists is an agreement between the parties interested. Section 6 of that agreement to which I have referred contains the reference to 51 per cent, but this is not 51 per cent of the voting control.

I am just dealing now with statements made by the minister which have some relation to the motion before us. The minister said, and these are the words he used:

> If there is some uneasiness in this country about the extent and nature of United States investment in Canada, this is the wrong place to focus it.

This is the place to focus our concern about United States control of our great resources. This is the opportunity right now—

Mr. Rowe: And the only one.

Mr. Drew: —and the only opportunity we have to express that concern. It is appropriate that we should express it, particularly in view of the fact that the minister held directly opposite views, until last year at any rate. We do not know when his opinion changed.

He spoke about the fact that there had not been criticism in other cases where there was control by United States financial interests of certain developments. Well, there is no public money being put up in those cases to assist them in their finance. There is, for instance, the case of the Westcoast Transmission Company, which is to carry gas from the Peace river through the mountains to the Pacific coast and to that part of the United States. They are doing that by private financing. Does the minister suggest that the Rocky mountains constitute an easy and populous area between the Peace river and the Pacific coast? I am inclined to think that the Rocky mountains are a more formidable barrier than the section of northern Ontario through

which this pipe line is to pass. It is not passing through a populous area where there will be many offshoots along the line. That company is financing that privately. For that very reason the considerations in that case are very different from the considerations that we should bear in mind in discussing the subject now before us.

The minister has said that it has now become improbable that financial arrangements can be carried out by May 1. That, of course, is perfectly obvious and is recognized. The result is that we are being asked to give this minister another blank cheque—

An hon. Member: Hear, hear.

Mr. Drew: I hear one of the hon. members opposite say "Hear, hear". The hon. members opposite are quite ready to give a blank cheque to a minister who has shown how improper it is to give him uncontrolled powers.

An hon. Member: They do what they are told.

Mr. Drew: They, of course, have been told by the same minister at a meeting here in Ottawa that it is appropriate for them to follow instructions whenever they are given. They have been told it is proper to toe the party line, and I regret that there is some indication they are going to follow those instructions on this occasion.

Mr. Knowles: And now they must toe the party pipe line.

Mr. Drew: It is perfectly clear that, when the government talks about hastening this development, it has no idea when it can go ahead. We want action, and we want to make it perfectly clear what is before this house. This is one of the most remarkable proposals ever made to the Canadian House of Commons. We are asked to declare by this motion:

> That it is expedient to introduce a measure to provide for the constitution of the corporation to be known as the Northern Ontario Pipe Line Crown Corporation . . .

It is then proposed in the resolution that this crown corporation be set up for the purposes of:

> . . . constructing, maintaining and operating a natural gas pipe line between the Ontario-Manitoba border and Kapuskasing . . .

It is further to have the power to lease this pipe line to Trans-Canada Pipe Lines Limited, with an option to purchase. All this means in simple terms—and I address these remarks particularly to the members opposite—that we are being asked to set up a crown corporation which will use public funds to assist financial interests in the United States in establishing effective control over one of our major resources. I doubt if there is any precedent for such a proposal. Can anyone recall any case where any other government actually put up money to help financial interests control their own resources in this way? I ask hon. members opposite if any one of them thinks that the congress of the United States would for a moment give serious consideration to a proposal that they use money of the American taxpayers to complete financial arrangements for some Canadian company to take control over resources of the United States. There is not an hon. member of this house who does not know that they would be laughed out of congress if they made any such suggestion. I submit, Mr. Chairman, that a proposal of this kind should be laughed out of the house. Unless any hon. member is prepared to say that he thinks the government of the United States would do this in the case of a Canadian company, then let him examine his conscience before he is prepared to say that it is expedient that we should do this here.

Mr. Pickersgill: What about the Grand Trunk Western?

An hon. Member: What about the Alaska highway?

Mr. Drew: Let us keep in mind exactly what is before us and certainly not pay any attention to the interpolations that have just been made.

An hon. Member: You asked a question.

Mr. Drew: This is a project to assure government ownership of part and only part of the gas pipe line. When the minister talks about preferring this to government ownership he seems to forget that he is asking us to approve of government ownership. That is what this motion is, but it is government ownership of a hybrid form and with a strange purpose.

All Canadians want this pipe line built. I am not in any doubt about that. Alberta has natural gas to sell, vast quantities of it, and Ontario and Quebec want that gas. A line should have been built long ago and would have been built if it had not been for the fumbling, bumbling and confusion of this government. This company was incorporated by a bill in this house in 1951, five years ago. Hon. members who were here at that time will remember the impatience of the minister when there was some delay in passing the bill. The government wanted action right away. Their chosen instrument must be assisted and allowed to go ahead five years

ago and yet they do not even know now when the proposal they have put before us could be completed.

If there has been any delay it has been the delay of this government in failing to deal with a proposal that was before the house five years ago. We want to see this Canadian gas moving and we want to see it moving at prices that will be fair to the producer in Alberta and fair to the consumer in Ontario and Quebec. It is particularly important that gas be made available to communities in northern Ontario, that great central arch which joins eastern and western Canada. It is not merely a part of Ontario. It is the central area of this continent and that area does need this natural gas.

It does not follow, however, that this is the plan which should be adopted to fulfil that purpose. In fact, and I should like hon. members opposite to bear this in mind particularly, the government disliked this plan very much only eight months ago. They said so. Let me read what the Prime Minister said on July 8 last year, as found at page 5862 of *Hansard*. This is what the Prime Minister said:

> There are three alternatives that are being carefully investigated and about which, of course, the commitments of many different interests are required. There is one that we prefer to the other two. There is a third that we do not like as well even as the second. The officials of the Canadian company are endeavouring to get the commitments that would provide for the implementing of No. 1. They are also ascertaining whether, in the event that is not possible, they could get the commitments that would be necessary for the implementation of No. 2. That is the situation. I hope we shall not have to fall back on No. 3.

The government, Mr. Chairman, is falling back on No. 3. I hope the Prime Minister will explain to us at the earliest possible opportunity exactly why the government is falling back on a plan which he disliked eight months ago. I think we should know from the Prime Minister what the other plans were and why they could not be carried out. We have not yet had that explained. We have sought over and over again to obtain information in the house in regard to what the government was doing. We have not been able to obtain information from the Minister of Trade and Commerce at any time. In fact, it was only a few days after the Prime Minister's statement that the Minister of Trade and Commerce left the impression that he did not know about any such three plans. The Prime Minister's statement was made on July 8. On July 14 of last year, as recorded at page 6156 of *Hansard*, the Minister of Trade and Commerce said:

> Mr. Chairman, I am unable to throw any light on the pipe line situation other than to say that every possibility is being studied, and studied intensively. I hope a solution can be announced before long, but I cannot announce it today. My hon. friend has the advantage of me if he knows what propositions one, two and three are; I do not.

That was six days after the Prime Minister had said: We have three propositions; we like the first best, we like the second not quite so well and we do not like the third. Yet the Minister of Trade and Commerce, who sits beside him in cabinet as well as in the house, had not even heard about it or at least he said so. Does any hon. member of this house wonder why we accept every statement from the Minister of Trade and Commerce with a very large grain of salt? In view of the fact that we have not been able to get the information from the Minister of Trade and Commerce as to what the three plans were and what happened to the first two plans, we have a right to know from the Prime Minister why he is now supporting the third plan which he did not like eight months ago and told us so. We certainly should have that information. It cannot be because the minister had not heard of the other two that the government is falling back on the third plan which the Prime Minister hoped they would not be called upon to do.

It is generally stated that plan No. 1 called for the guaranteeing of bonds, and plan No. 2 called for advances by the industrial development bank. Those two proposals fell through. The house will wait with interest to find out what the reasons were. If there were no other ground, Mr. Chairman, for opposing this motion that the government commit public funds for this purpose, there would be the strongest reasons for opposing it when we have no evidence before us that the pipe line cannot be financed privately. On the contrary, the basis upon which Trans-Canada was given permission to proceed was that it could finance an all-Canadian pipe line. Trans-Canada did not get permission to proceed because the board of transport commissioners, the government or anyone else liked the colour of their eyes or the way they looked when they appeared. They got that permission because they gave an undertaking that they could finance an all-Canadian line without any subsidiary lines. That was the basis. That was asserted at the time of incorporation. It was asserted on many different occasions after that.

If the members of this house are to act with some measure of responsibility in regard to this motion, then surely they must review the facts which lead us up to this present situation. Let us recall what the sponsor of the bill of incorporation said when it was presented to the House of Commons. I refer to the bill of incorporation of Trans-Canada

Pipe Lines Limited. The hon. member for Vegreville, who introduced the measure, as reported at page 736 of *Hansard* for February 27, 1951, just over five years ago, said this:

. . . it is an all-Canadian route and, with the total volume of gas consumed in Canada, complete control will be ensured in this country.

That was the basis upon which that bill was voted on in this house in February of 1951. Then the bill went before the standing committee on railways, canals and telegraph lines. Mr. Frank A. Schultz, representing the company, appeared before that committee on March 6, 1951. At page 10 of the minutes and proceedings of that committee for that day we find the following words of Mr. Schultz:

The second consideration was that it should be an all-Canadian project, that it would be Canadian gas transported over an all-Canadian line, and that 100 per cent of the consumption would be in Canadian cities.

Those are not the words of any hon. member on this side of the house. Those are the words of the man who was asking for approval of their application. That statement was clear enough. That statement was the basis upon which they asked for consideration. It was to be an all-Canadian project carrying Canadian gas over an all-Canadian line with 100 per cent of the gas consumed in Canadian cities.

Then later in the same day Mr. Schultz said this, as appears in the same report:

You may be interested to know about the marketing situation. We are satisfied at this stage that adequate markets exist in the eastern part of Canada to consume all the gas that we can produce and move through this line.

Mr. Chairman, if that statement was made in good faith, what has happened in the meantime? One thing that has happened in the meantime is that Ontario has enormously expanded her industrial production, as has the province of Quebec. The population of Ontario and Quebec has grown at a tremendous rate. The market is very much greater now than it was at the time this statement was made as the basis upon which they sought consideration.

On the same day that Mr. Schultz made that statement, the counsel for the company said this to the committee, and I quote his words from the report:

. . . it is inconceivable that a company that has gone to the lengths this company has, both in telling parliament and in telling the public, and in spending money in the investigations it has made of markets across the country, and on engaging engineers to survey routes, would with a straight face go to the transport board and say: 'Notwithstanding all we have said, we now want to apply for a route different than we said we were going to apply for'.

Mr. Chairman, is the company coming with a straight face and now saying it cannot finance an all-Canadian pipe line when the opportunities for financing are far greater than they were five years ago? I want to read the next words used by the counsel, and I quote from the report:

Even if they did that, the transport board, I think, would refuse the application because the company would have showed bad faith.

Those are the words of their counsel, not ours; if the company changed from the assertion they made at that time, they would have showed bad faith. That assertion was used to assist the company in obtaining consideration for the application it was making. What of the situation where the company obtained its permission almost entirely on the ground that it could build an all-Canadian pipe line and finance that whole line to supply gas to eastern Canada? If it was not good faith, in the words of the counsel for the company, to change the route, it was certainly not good faith to change their position with regard to financing.

Just when did the company come to the conclusion that it could not finance this northern Ontario pipe line? We have not been told. It was not in the mind of Mr. Clint W. Murchison, the moving spirit behind this company in its early stages, when he wrote a letter addressed to the Minister of Trade and Commerce on March 7 of last year. This is what Mr. Murchison, who has been shown such great consideration by the Minister of Trade and Commerce at all stages in these proceedings, said in the letter he wrote to the minister on March 7 of last year:

We first came into western Canada about five years ago, and at that time we heard of pipe lines to Chicago, Minneapolis and other points south of the Canadian border. We immediately conceived the idea of an all-Canadian pipe line, knowing in the beginning that anyone would take the routes into Minneapolis and Chicago as being much more remunerative and easier to finance, but feeling that the Canadian citizens were of such patriotism that they wanted a fuel system within the confines of their own boundaries to the extent that they would not be subjected to the vicissitudes of American politics. We frankly gave no serious thought to anything but the Trans-Canada Pipe Line and tossed the other routes out as impractical in so far as it concerned the people of eastern Canada.

Mr. Murchison then went on to explain certain other details of what had taken place and he said this. I am quoting from that same letter:

To this end Trans-Canada Pipe Lines has asked the industrial development bank to commit for $70 million of securities. We are willing for them to couch their terms so stringently that if we are not able to repay them for all the moneys they have advanced by the next five years, we will allow them to foreclose their position and take us out of the picture altogether.

Northern Ontario Pipe Line Corporation

That was the confident statement of Mr. Murchison on March 7 of last year. When did he change his mind? We have not been told. When did he change his mind? We should know, because he was the moving spirit in the days when this company was given permission to proceed.

Nor was it only Trans-Canada Pipe Lines Limited that was so definite about what could be done. On March 13, 1953, as recorded at page 2929 of *Hansard*, the Minister of Trade and Commerce said this:

> Therefore the policy that has governed the export of electrical energy since 1907 must apply, within reason, to the export of natural gas. Canada has consistently refused to authorize firm contracts for the export of electrical energy, and this in spite of great pressure at times from producers of electrical energy. That consistent policy has paid large dividends to the Canadian economy, in that our sources of electrical energy have been preserved to our own economy.
>
> Therefore the policy of the government of Canada is to refuse permits for moving natural gas by pipe line across an international boundary until such time as we are convinced that there can be no economic use, present or future, for that natural gas within Canada.

That same day, as reported at page 2930 of *Hansard*, the Minister of Trade and Commerce told the members of the House of Commons that the government had, and I quote his words:—

> . . . reason to believe that it is economically feasible to build a gas pipe line from southern Alberta to Toronto and Montreal, serving the intervening Canadian cities, and government policy will require that Canadian gas be used in Canada accordingly.

Now, Mr. Chairman, it was upon that basis, and upon the confident expression of the minister that this was an economic possibility, that this whole matter proceeded. Early in 1954 the picture changed. Western Pipe Lines were seeking permission to carry gas south through Manitoba to the Minneapolis-St. Paul market. The Minister of Trade and Commerce at that time performed a shot-gun marriage and those two companies were brought together, the minister officiating at this strange ceremony. The result of this alliance was that Trans-Canada was no longer an all-Canadian line, but a line which divided in Manitoba and would carry gas east in one pipe line and south into the United States by another.

There was no suggestion at that time that Trans-Canada Pipe Lines, in its expanded form, could not finance the whole operation privately. In fact, having regard to what we are told about the value of the market in the United States, it should have been that much easier to finance the Canadian part of the line. On the contrary, they submitted evidence to the board of transport commissioners which convinced that very responsible body that Trans-Canada Pipe Lines could finance it. In a judgment dated July 24, 1954, Mr. Justice Kearney said, as reported at page 190:

> While bearing in mind that we are dealing with estimates, nevertheless, the board is convinced that such estimates have made reasonable allowance for foreseeable contingencies and have been prepared by skilled and reliable estimators.

Mr. Justice Kearney referred to evidence submitted to the board that the line was economically feasible and could be successfully financed. It was upon this, and other similar evidence, that the chief commissioner and other members of the board agreed that the permit could be granted. In 1954 Mr. Shultz again appeared before the House of Commons committee on railways, canals and telegraph lines. As quoted at page 45 of their report, in 1954 these were his words:

> Our experts have never claimed that we needed any help in doing this job.

The Minister of Trade and Commerce assured the nation that this line could be financed privately, and he so assured this nation a year ago now, because he wrote a letter on March 8, 1955, in which these words appear. The letter was tabled in this house in answer to an order for return. I quote the words of the minister:

> All studies indicate that the line is capable of being financed privately and it has been decided to defer construction for one year and let matters take their normal course.

When did this picture change, Mr. Chairman? When did the minister decide that the normal course could not be followed? When did this whole proposal suddenly take on new form? It did not take on new form because the financial situation was more difficult. We have been told over and over again of our improving national income; we have been told of booming business in the areas to which this pipe line was to go. If the minister was so confident on March 8 of last year that this could be financed privately, why does he now come before us and leave the impression that it cannot? What evidence have we that this line cannot be fully financed privately, as the Minister of Trade and Commerce thought it could less than a year ago? There is no evidence; none at all. The evidence is all to the contrary. Nor has any evidence to that effect been given to the board of transport commissioners.

The company have appeared before the board of transport commissioners on different occasions. They appeared there on July 24, 1954, and again on April 28, 1955, on September 21, 1955, and on September 15,

1955. On no single occasion did they make the statement that this could not be financed privately.

At the beginning of this session I asked that this whole question be submitted to a committee, as it had been in 1951. On January 12 I asked that it go before a committee. I asked again, on January 13. I pointed out that it would be helpful if we could obtain the facts in regard to this case, facts which are not yet available to us. It was refused. Had that request been granted we would now have information upon which we could act. As it is, the only definite statements we have are the statements of the sponsor of the bill in 1951, the statements made before the standing committee on railways, canals and telegraph lines in 1951 and in 1954, and the statements in the judgment of the board of transport commissioners in July, 1954, indicating their belief that this could be financed privately.

All the evidence before us is that this can be financed privately. We believe it can be. We believe this can be financed privately if there was ever any good faith at all in the statements of those who appeared in support of the application of this company. This company now has financial interests behind it far greater than those who supported it at the time the application was made. This company has financial interests behind it far greater than those who were behind it last March, when the Minister of Trade and Commerce was so confident that it could be financed privately. The present distribution of the ownership of this enterprise shows also that the control is in the hands of financial interests in the United States; that it is definitely under the control of these immensely powerful financial interests: Canadian Gulf, Hudson Bay Oil and Gas and Tennessee Gas Transmission, controlled in the United States, which have been added to the original applicants. The distribution of ownership at present is as follows: Canadian Delhi, which is Mr. Murchison's company, 24½ per cent; Western Pipe Lines, 24½ per cent; Canadian Gulf, 17 per cent; Hudson Bay Oil and Gas, 17 per cent; Tennessee Gas Transmission, 17 per cent.

When we are left with the impression that this financial venture is so large that the government must step in, just let us see what some of these financial interests are like. Tennessee Gas Transmission alone has assets in the neighbourhood of $870 million.

Mr. Rowe: They could build it themselves.

Mr. Drew: They could build it themselves. They would not have any difficulty whatever in putting up the entire equity to carry out this venture. They are doing it all the time in the United States. Those big organizations over there have built networks of pipe lines that look like the veins in the human body when you look at a map showing pipe lines in the United States. They could have undertaken this if there was the slightest suggestion of good faith in the assertion of the original applicants that they believed they could finance this project. There can be no question but that the combined financial interests represented by these five organizations could finance this whole venture today.

On the grounds of the evidence before us, Mr. Chairman, I submit that every hon. member who accepts any measure of responsibility should declare that it is not expedient that public money be put into a crown corporation to assist those financial interests in the United States to obtain control over these great Canadian resources. That is what we are being asked to do by this motion. We are not being asked to deal with any aspect of the bill that will come before us. We are being asked to declare that it is expedient that this be done. I suggest, Mr. Chairman, that all the evidence that has been furnished demonstrates that it is not expedient, but that it is most improper.

If these people cannot finance this venture, then they are in default. If they cannot finance the venture, then they have lost the right they obtained on the basis of that claim. If they cannot finance it, then some other arrangement should be made. If they cannot finance it, then this government long ago should have entered into negotiations which would have sought to provide Canadian control and Canadian financing of this great venture.

In any event this whole question should have been submitted at the beginning of this session to a select committee or to the standing committee on railways, canals and telegraph lines, so we could obtain the facts and find out how a pipe line can be built to carry gas from Alberta to eastern Canada with the greatest possible speed. That is what we want. It was not done at that time.

I hope, Mr. Chairman, that the government will reconsider its position. I hope that it will postpone the debate on this motion and refer this matter now to the committee. Nothing is going to be delayed by so doing. The government has assured delay by the proposal it has entered into. It has granted delay after delay since 1951, and now it has assured delay by making us dependent upon the decision of the federal power commission in Washington.

Northern Ontario Pipe Line Corporation

At this time I urgently place my first proposition before the government and particularly before the Prime Minister, who told this house last year that he did not like this third method. My earnest request to the government and to the Prime Minister is that they expedite this matter by referring it to a committee where we can get the evidence and learn what the facts are, and then from that evidence we can find out how Alberta gas can best be brought as quickly as possible to the east for delivery in Ontario, Quebec and the intervening markets across the country. All the evidence that has been furnished and all the evidence on record denies the right of this government to declare that it is expedient to adopt this course. I suggest that hon. members would be acting in an utterly irresponsible manner if, in the face of this evidence which is a matter of record, they declared it was expedient that we proceed in this manner.

However, Mr. Chairman, this matter goes far beyond the question of whether there is evidence that the project cannot be financed. Are we in any event going to approve of the plan that is now before us? We are asked to give our support to a proposal which places the handling of Canadian gas under the control of powerful United States interests, where it will remain. We are being asked to help with public money to place control in the hands of United States financial interests whose main concern is the delivery of gas to the United States. That is the market in which they are interested. The Canadian market is only a secondary consideration to them. It is true that they want Canadian gas and as much of it as they can get, but they are not showing nearly the same interest in developing the Canadian market.

The things we have been speaking of must of necessity be done by some other agreement than that which is now before us. We should not be asked to give this minister or this government a blank cheque. We should consider the situation only when we know we are going to have a definite agreement before us. We know now that the agreement we will be called upon to consider is not a real agreement at all. It makes a farce of these proceedings. That is all the more reason the government should withdraw this motion, let it stand and refer the whole matter to a committee.

What of the declared policy of the government in regard to the control of our natural resources? Do not let the government try to ask us to interpret its policy. It has already stated its policy. It has declared the similarity between natural gas and electricity. In view of the fact that the government itself has declared that we must conserve those resources and that as far as possible the same principles should apply to gas that apply in the case of electricity, then we might ask when did the government change its mind.

We have a right to know that. We have a right to ask that question before a committee which will ascertain all the facts. We know perfectly well that on a number of occasions this government has refused the export of electricity although there might have been an immediate profit gained by the export of that electricity to markets in the United States. We know that this government has refused to permit water to flow from Canada into the United States for the purpose of producing electricity there. The government has drawn a similarity between electricity and gas. Let the government follow that policy or, if it declares it does not intend to, then the government should let us know when it changed that policy and what the present policy is.

Certainly nothing that has happened would explain the situation which the government presents to us. It was suggested today that this is not a monopoly. This method will provide a real and complete monopoly over one of our economic lifelines. This would be set up under the control of United States interests with the assistance of large sums of Canadian taxpayers' money.

We come now to the next stage. Because of its interest in the 675 miles of government-owned pipe line from Manitoba to Kapuskasing, this government would be bound to assure that it was a monopoly. There could be no doubt about it. The government, by its course, is assuring that it is creating a monopoly, and it is placing that monopoly in hands outside of Canada. It is assuring a long-term monopoly. If it is sound to follow this course, I hope we will then have an explanation from the Prime Minister as to why the government did not follow one of the two other courses which the government said it preferred. The Prime Minister has told us that either of the other courses would have been better than this. If the reports we receive are correct I am sure that most hon. members, including most hon. members opposite, will agree in their own minds that that is true.

The government recognizes that Canadians are concerned about the matter of control. The government has left no doubt in our minds that it recognizes that the people of Canada are greatly concerned. That is why the government keeps talking about this 51 per cent interest. The reason the Minister of Trade and Commerce raised that myth about the 51 per cent interest being assured

to Canadians is that he and the government recognize that the people of Canada are concerned about where the control of this company lies. It is just one of those changes in wording which shows how difficult it sometimes is to follow the statements of the Minister of Trade and Commerce.

Speaking to the Canadian club in Toronto on January 30, 1956, the Minister of Trade and Commerce used these words, and I quote from the text of the speech handed out from his office:

> Trans-Canada Pipe Lines have, in addition, undertaken that when public financing takes place, at least 51 per cent of the total issue of voting stock will be offered to Canadians.

There is no agreement of any kind which suggests any such thing. The government could not make it enforceable if it wanted to. In any event the government has no undertaking; at least that is what the Minister of Trade and Commerce has told us.

Mr. Rowe: It is a political hope.

Mr. Drew: This is nothing more than an attempt to beguile the Canadian people into believing that their concern is without ground. The government knows that the people want something done, and it wishes to create the impression that it is taking steps to do it. Surely, Mr. Chairman, we are not going to be called upon to wait until the federal power commission in the United States makes up its mind. Surely we are not going to change our whole course and go in for public ownership without an explanation as to why this government has abandoned private ownership. Do not let the government tell us that this is not public ownership. It is just as much public ownership for 675 miles as it is for the whole line.

The Minister of Trade and Commerce referred to the desires of the socialists in this case.

Mr. Howe (Port Arthur): I was including you.

Mr. Drew: I should think that is the kind of remark we would expect from the Minister of Trade and Commerce. If in this particular case the Minister of Trade and Commerce is seeking to demonstrate that there is socialism in public ownership, then this government has declared for socialism because it is asking us now to approve of a publicly owned pipe line which would extend 675 miles from Manitoba to Kapuskasing.

I do not agree at all that this is socialism. I do not agree that public ownership under appropriate conditions is socialism. It would be rather difficult for me to contend that it was in view of my fairly extended association with the largest example of public ownership in Canada, the Hydro Electric Power Commission of the province of Ontario.

We believe this can be done by private enterprise as was recommended. We believe it is the duty of the government to promote that opportunity. We believe the government should now take steps to reorganize Trans-Canada Pipe Lines. We believe there should be an all-Canadian line which would be entirely independent of any decision made at Washington. We believe that Trans-Canada Pipe Lines as an all-Canadian pipe line should be called upon to carry out its promises made to this parliament in 1951, 1953, 1954 and again in 1955. Furthermore we believe that this company can do it on the basis of the present financial interests, but we do demand that this government assures Canadian control of that enterprise.

The Minister of Trade and Commerce talks about Canadians being reluctant to invest, but it is no wonder they are reluctant to invest when they are denied control as is being denied in so many cases. The Minister of Trade and Commerce has read to us the list of directors of this company. They are all highly respected Canadian businessmen, they are men who would make admirable directors of an all-Canadian company operating within Canada. I would hope it would be possible for them to operate an all-Canadian company, Canadian-financed, in ways this government has already considered, in ways the Prime Minister referred to only eight months ago as being the ways in which he preferred that this should be done.

The Minister of Trade and Commerce spent some time speaking about the position of Ontario. It is well known that Ontario made another recommendation to this government. It is well known that Ontario prefers another method. It is well known that Ontario only adopted the course they have adopted because they want gas in Ontario. They have no control over this. Any talk of this being a joint crown corporation is nonsense. It is a crown corporation set up by this government. There is no legal structure under which a joint crown corporation can be set up. That is eyewash, that is an attempt to deceive the people of this country. It is a crown company set up by this government. They decided, and then they told the Ontario government what they were going to do. The recommendations of that government were not regarded. The Prime Minister knows perfectly well that this is not the course that was recommended by the government of Ontario. The premier of Ontario made that

perfectly clear when this subject was under debate in the Ontario legislature only a short time ago.

This proposal is bad in every respect. It is a bad compromise between public ownership and private ownership. It is neither flesh nor fowl nor good red herring. It is public ownership without any assurance that it will ever be private ownership unless it suits the people who are favoured. It could be a segment all by itself, and for that reason we have to consider the stage beyond. It is a segment of this great financial empire that has been conceived by Mr. Clint Murchison, who expressed such confidence only a year ago in his letter to the Minister of Trade and Commerce.

This segment might be left as an ineffective unit in the pipe-line system. What would the government do then? Would they leave it idle? They could not; no government could. Therefore if it comes to the stage where this government forces through an unnecessary venture of this kind, then there is only one thing to do and that is build the whole pipe line and not just part of it, and have control over the whole line. I repeat, though, that I do not believe that is necessary.

Mr. Knowles: That is where you are wrong.

Mr. Drew: I know I am not wrong. I believe this can be financed. I repeat that if this cannot be financed in this prosperous country with the amount of money that is being earned in this country today, then the statements which the minister put before this house misrepresented the facts to the house, and the statements upon which this company got permission to proceed were gross misrepresentations of their expectations. I hope we do not have to come to any such conclusion.

The Canadian government must accept full responsibility for the situation with which we are confronted. This is not the first time the Canadian government has been called upon to consider the problems of that northern stretch. The Minister of Trade and Commerce referred to the problems created by the northern Ontario arch which joins eastern and western Canada. That problem was faced by a Conservative government many years ago when this country had a small population and very limited financial resources.

There is a very real parallel between the construction of the Canadian Pacific Railway and the construction of a carrier of this type through that same area and across Canada. They did not have any financial group of this kind, but they insisted that it be Canadian controlled. They refused to go to Chicago for their finances at that time. As early as 1871, when applications were being made to build the Canadian Pacific Railway, Sir John Macdonald wrote these words:

> You may depend upon it, we will see that Canadian interests are fully protected and that no American ring will be allowed to get control over it.

He stuck by that principle and today we know the result. It made Canada one nation. Two courses were open. The Liberals of those days talked about the insanity of nationalism, they talked about the fact that there should not be nationalism that sought to have Canadian control of this kind; nevertheless the government insisted upon it. There is not an hon. member here who can have any doubt that under the immense economic pressures that would have been exerted by the colossus to the south it would have been doubtful whether western Canada could have remained an economic part of Canada as a whole if Sir John Macdonald had not had the courage he showed at that time. Commercial union was being proposed by Liberal members of parliament of those days, members of the then opposition. In spite of the opposition of Liberal members at that time steps were taken that made this country one nation.

I would remind hon. members, and also recall to the Prime Minister, that it was not necessary to have a publicly owned segment of the Canadian Pacific Railway. The government did get behind the railway. The government did show its confidence in the railway at a very difficult time. But times are not nearly so difficult now. A country with a $26 billion annual income is in a much better position to take the steps that are necessary to assure this as an all-Canadian development today.

Two courses are open to this government. One is to take full advantage of the Canadian market and follow a method that will carry out the original intention of this government. The other is to let the sale of gas be dictated by United States interests, who will in turn tell us what we can do. Make no mistake about it; in a very real measure we are being called upon to sell our birthright by this proposal. It is perfectly clear that Canadian enterprises are going to pay more for the gas than their corresponding competitors in the United States. The agreements already filed in Washington in support of the application for the right to export Canadian gas show perfectly clearly that prices there will be well below prices available to Canadian competitors in the same field. That is something that certainly should be borne in mind.

When the Minister of Trade and Commerce tells us about the arrangements that have

been made and says that we are being asked only to approve of a method that will avoid public ownership, let us remember that that is not the proposal. It is to put up Canadian money to assure the financing of this operation in the hands of foreign interests. Then let us see what happens, as disclosed by the applications at Washington. It is shown that of the 200 million cubic feet a day that they propose to export at Emerson, 152 million cubic feet will be taken up by three companies or will be alternated in supply for other gas used by those companies.

These are the three companies, and they are extremely interesting companies in view of the broad situation that has developed. The first is United States Steel in Chicago. Its contract is filed, showing it will take 70 million cubic feet a day. The second is Inland Steel at Chicago, which will take 45 million cubic feet a day. The third is Iron Ranges Natural Gas of Minnesota, which supplies iron developments in the Mesabi area and whose contract is for 37 million cubic feet a day. This makes a total of 152 million cubic feet.

Do not let anyone suggest that this is not the use that is to be made of this gas, because those contracts are filed in support of this application for export. Whether those contracts would be filled directly by Canadian gas or whether there would be an alternation through the use of Canadian gas is unimportant. What is going to happen if that gas goes there? Let us see what an interesting thing this is.

What an interesting combination of events. We have seen what comes from the west. Let us look to the east. Canada is spending large sums of money in building the St. Lawrence seaway. A few days ago the president of the Canadian seaway authority, Hon. Lionel Chevrier, explained that the reason we now have the seaway is that the United States wants iron ore. He explained that the main cargo shipments through the seaway will be iron ore. This is very interesting. This great seaway that we are helping to build is going to carry iron ore through the lakes to mills where it will be processed with Canadian gas.

Mr. Fulton: Where is the iron ore coming from?

Mr. Drew: The iron ore will be carried to United States companies, which in turn will be using Canadian gas at less than the price for which our steel companies can get gas.

Mr. Rowe: Canadian ore, too.

Mr. Drew: Of course, that is Canadian ore from eastern Canada that I am speaking about. It may be easier to export natural gas, but we should make sure that we have our own supply of natural gas in the future. We should remember that gas pipe lines in the United States are hardly able to keep pace with demand there. Even our enormous resources will not keep up with our demand if we get too deeply involved in that network in the United States, which is now being pressed forward at such a rate. New discoveries, in fact, are not keeping pace with demand in some areas; some contracts are actually in default because of the shortage of gas in some parts of the United States today.

Past history shows that once United States interests get control of these resources, they will protect their own consumers. That is their legitimate right. I suggest we make sure, as representatives of the people of Canada, that we protect our own consumers by the course we follow in the House of Commons. There may be difficulties, as I have said before and as the Minister of Trade and Commerce has emphasized. However, those difficulties are insignificant when compared with the difficulties faced by Sir John A. Macdonald and Sir George Etienne Cartier as they stood shoulder to shoulder at the time they brought this country together by means of another common carrier.

Had Canadians not been prepared to make great efforts and to make equally great sacrifices in the early days of Canada, we would not have survived as a nation. There can be no doubt about that fact. Today the demand is just as great, because we are at an hour of decision in this country. We have to decide not only a policy for this particular pipe line but we have to decide whether or not the time has come to follow a definite plan of conserving and developing Canadian resources for the advantage of Canadians here in Canada. Contrary to what the Minister of Trade and Commerce has said, this is the occasion to focus attention on our resources. This is the only place to do so, and this is an opportunity to declare our economic independence of the United States. This is the time to plan to make full use of the resources that God has given us.

The day may seem long past when there was any uncertainty about Canada's future as a sovereign nation, but the principle is the same. No matter how friendly any other nation may be, I submit that it is our duty as the representatives of the people of Canada to follow a course that will assure Canada's economic, as well as political, independence. That cause is not served by the resolution now presented to us.

I submit that it is not expedient that we support this plan to assist in the handing over

of these resources. I urge the government once again to refer this matter to the appropriate standing committee of this house, or to a select committee. Let us get at the facts. Let us also find out when the government's position changed. Let us find out when there was any change in the position of the company. We have no evidence from them that there has been any change.

Let it also be declared by the government what steps they will take to proceed with an all-Canadian pipe line without delay, to bring natural gas from Alberta to the markets of eastern Canada. When the Minister of Trade and Commerce speaks about the desirability of markets in the United States, may I emphasize the fact that we have at no time suggested there should be no export. What we do say is, let us end this humiliating position where the government is dependent upon the whims of the commission in Washington. Let this government decide on the development of an all-Canadian line. It will then be in a position to lead from strength and not from weakness. If the United States is ready to accept gas from Canada, then let that gas be exported under proper terms of conservation and proper terms of control. Let us not await their desires. Let us act as Canadians on this occasion in dealing with our own resources.

When it is suggested that this is such a vast enterprise, have Canadians forgotten that we have already built many pipe lines? We have constructed in Canada many oil and gas pipe lines since the war. In fact, in the last eight years alone $600 million has been spent on oil and gas pipe lines in Canada, and on the lines in the United States which are tied in with these pipe lines another $200 million. The whole of that $800 million has been private investment. Why should we be so alarmed, why should we be so concerned about this prospect now before us?

I should like to emphasize one point. There is a distinction between the handling of electricity and the handling of gas. You can go and measure with the greatest accuracy the potential power of a great waterfall. You harness that waterfall, tie it into the transmission line and the water continues to flow. Gas is not the same. It is a wasting asset. In order to keep up a gas supply, new wells must be discovered, new fields must be found. The evidence is very strong to support the belief that private initiative and the enterprise of individuals are needed to go and find these new sources of gas. Therefore I would hope that we would be able to keep this as a privately financed enterprise with the sources being found in the way they are now.

I would also point out that we would be getting involved in a system that presents many difficulties if it should be found necessary to enter into a publicly owned system, because many of the collecting points would be drawing gas from privately owned fields. It will be almost impossible to divide the interests in that way. Therefore it seems obvious that private enterprise, in developing sources of supply and arranging contracts for distribution, is desirable.

Before I close I want to put certain suggestions before the house and for the consideration of the government, in the hope that they may be prepared to listen to the words of the Prime Minister when he told the house last year that he did not like this method. First, refer the whole question immediately to a committee of this house to obtain the facts and make appropriate recommendations. Second, insist upon the reorganization of Trans-Canada Pipe Lines as an all-Canadian company which can proceed immediately and under Canadian control. Third, if Trans-Canada cannot carry out its undertaking, then open the whole matter and permit new interests to make their proposals for an all-Canadian line, Canadian controlled. Fourth, if it can be shown, and I doubt that it is so, that part of the pipe line must be built as the government asserts on this occasion, then instead of building a part which could become an orphan under certain circumstances in the future, let them build the whole pipe line and lease it for operation under Canadian control.

By one of these methods, Mr. Chairman, Canada's main gas pipe line can be returned to the control of Canadians as it should be. This is our chance here in the House of Commons to mark a turning point in the greater control by Canadians of their own resources. Let this be a declaration not only in relation to natural gas but in relation to our great resources generally, not in any spirit of selfishness, not in any narrow approach but rather with the idea that as trustees for future generations of Canadians, along with any export that may be carried out under wise and appropriate conservation and control, our main purpose will be the future welfare of Canadians themselves.

We have been asserting this proposition for a long time. I find it difficult to understand how there could have been any doubt about that position. But, Mr. Chairman, on this occasion the greatest responsibility is on the opposite side of the house.

An hon. Member: I will take it.

Mr. Drew: I hear one hon. member amongst the Liberals to my right saying "I will take it." I hope that for once we will see some

of the Liberal members of the house stating in the house the beliefs they state outside. I hope that for once they will not follow the instructions of the Minister of Trade and Commerce that they must toe the party line. I hope that for once, on a great issue of this kind, a voice will be raised from the other side which is consistent with the point of view being expressed across Canada at this time.

Some hon. Members: Oh, oh.

Mr. Drew: Instead of the kind of laughter that I hear from some of the vacuous faces at which I am called upon to gaze at this time may I suggest—

Mr. McCann: Look in the mirror.

An hon. Member: Look at your own people.

Mr. Drew: Oh, Mr. Chairman, that certainly is fully in order and perfectly accurate.

An hon. Member: Just keep on talking. We are here.

Mr. Drew: Mr. Chairman, instead of interpolations of the kind we have just heard I would have hoped that we might have heard one of the Liberals opposite speaking up for Canada.

Mr. Coldwell: Mr. Chairman, this afternoon the Leader of the Opposition has covered a great deal of ground. Indeed, he covered a great deal of the ground that, if I had had the time this afternoon, I would have covered myself, because I believe with him that this is one of the most important matters to come before the house since I have been a member of it. I believe this problem must be faced by parliament, and that this proposal to hand over one of the greatest of our Canadian resources to United States interests is against the future welfare of Canada.

This afternoon the Minister of Trade and Commerce said that this was an all-Canadian national gas pipe line. Well, earlier this afternoon the Leader of the Opposition put on the record the companies that are behind this proposition. We have only to look at them to see the giant United States interests that are behind this particular proposal, Tennessee Gas Transmission Company, Gulf Oil Company through Canadian Gulf, Continental Oil Company through Hudson's Bay Oil and Gas Company.

The only surprise I had was when we rose and asked for a recorded vote on the resolution then before us, and the official opposition voted with the government. Time and again this afternoon the Leader of the Opposition in his remarks stated that it was not expedient to do this thing. Yet what did they vote for? "That it is expedient to introduce a measure to provide for the constitution of the corporation", etc. That is why we opposed it.

Mr. Drew: Mr. Chairman, on a question of privilege—

Mr. Coldwell: No, no.

Mr. Drew: Let me make the record clear.

Some hon. Members: Order.

Mr. Drew: I want to make the record clear.

Some hon. Members: Sit down.

Mr. Drew: We voted for the motion that the Speaker leave the chair.

The Chairman: Order.

Mr. Coldwell: Mr. Chairman, when the Leader of the Opposition was speaking—and he was good enough to withdraw the remark—he characterized what we did this afternoon as silly. I want to say that, as I listened to his subsequent remarks this afternoon, while I am not going to apply the same term—

Mr. Rowe: You could not do so.

Mr. Coldwell: —it certainly flitted through my mind on many occasions during that address. However, be that as it may, I am in agreement with him in the criticism he has made of these proposals. Like him, I look back on our history in this country and I realize how, through the years since confederation, the people of this country have struggled for their independence, political, social and to a degree economic. I believe the people of Canada are with us when we say that we oppose this proposal. I believe that opinion is shared by people from one end of this country to the other.

I want to say this to the minister, to the opposition and to the members of the house generally. This afternoon we are not approaching this problem from any doctrinaire position. We approach it rather in the tradition of men and women of Canada who have safeguarded the interests of this country in the past. We have before us today a proposition not for supplying natural gas to Canadian homes and industry, but a proposition which will send the bulk of the gas to the United States via Emerson and transport the rest through a spur line to eastern Canada; via a spur line, let it be said, which Canada and Ontario are to build with public funds for a company under foreign domination.

Like the Leader of the Opposition, I recall the words of Sir John A. Macdonald. He quoted them this afternoon. I am not going to quote them again, although I intended to do so. However, I am going to quote another

statement of Sir John A. Macdonald which he did not quote and which I think this house should bear in mind in discussing this problem. At the conclusion of his remarkable speech when he was urging the building of a Canadian transcontinental railway he said this, as reported at page 494 of volume 1 of the debates of 1880-81:

> I can trust to the intelligence of this house, and the patriotism of this country, I can trust not only to the patriotism but to the common sense of this country to carry out an arrangement which will give us all we want, which will satisfy all the loyal, legitimate aspirations, which will give us a great, an united, a rich, an improving, a developing Canada, instead of making us tributary to American laws, to American "gas companies," to American bondage, to American tolls, to American freights, to all the little tricks and big tricks that American "gas companies" are addicted to . . .

I have changed two words. In two places I have changed "railways" to "gas companies". Otherwise that is the verbatim statement of Sir John A. Macdonald in this house in discussing the building of the Canadian Pacific Railway.

I say that no one reading the history of our country can fail to appreciate the many times and ways in which the independence of this country has been jeopardized. I say to my hon friends from the province of Quebec that every time the economic independence of this country is jeopardized or handed over to foreign domination, to that extent the political and cultural independence of this country is jeopardized.

I say that to them particularly for this reason. Looking back over our history, I believe they have been in the forefront in maintaining Canadian integrity and Canadian independence. One of the reasons I am opposed to this measure is that I believe the domination of our economic life by these foreign corporations is threatening the independence of this country, and that this is almost an immeasurable step in that direction, a step which this country will regret in the days to come. In so many ways we are dominated, through the radio, magazines, television, our defence arrangements made necessary by the international situation, perhaps; nonetheless our independence is gradually being whittled away.

I say that in this proposal there is a new danger, a new threat to our economic welfare, our independence and our development. I ask this house where among us today are the patriotic instincts that caused the fathers of confederation and the people who lived before us to build this country the hard way, if you will, but until quite recently successfully as an independent, sovereign nation?

Mr. Chairman, I believe it is six o'clock.

At six o'clock the committee took recess.

AFTER RECESS

The committee resumed at eight o'clock.

Mr. Coldwell: Mr. Chairman, in his remarks this afternoon the Minister of Trade and Commerce made a statement which I found very interesting and new. That was that the premier of Alberta would only agree to the export of gas to eastern Canada provided that gas was also exported to the United States. I did not know that proviso had been made by the premier of Alberta, but it seems to me that is selling Canada's birthright for a mess of pottage.

Mr. Hansell: I doubt whether he said that.

Mr. Coldwell: I was very surprised that that should have been included because, after all, the provincial governments hold the resources of the provinces in trust not only for the people of their own provinces but for the people of all Canada.

Now may I also say something about the remark the minister made this afternoon regarding the attitude of Ontario. In an order for return, which was tabled a few days ago on my motion, I find the revised report to Premier Frost from Mr. Grant Glassco, of the firm of Clarkson and Gordon, which indicated very clearly, and I quote the exact words—

> That an all government-owned pipe line would be economically feasible even though no sales were made in the United States.

That, of course, is an opinion which should receive the careful consideration of the house, since it confirms the position we have taken from the outset and intend to take throughout this debate. It is true that Mr. Glassco's report does outline some difficulties which, in his opinion, might be inherent in government ownership of a pipe line, particularly the length of time required for the several governments interested in the project to reach agreement on the terms of a joint government undertaking.

This afternoon the Leader of the Opposition said that Premier Frost and his government had preferred another plan, and I believe that plan was indeed a plan of public ownership, a project directly undertaken by the Dominion of Canada and the provinces together.

Mr. Glassco further recommended that before advancing any money we should be satisfied that conclusive proof is available that the company is able to carry out its commitments. What we are doing is in effect considering the advancing of money in the form of a spur line across northern Ontario, and we have no assurance that the company will be able to carry out its commitments, since the carrying out of those commitments depends in large

measure upon the attitude of a foreign commission, namely the federal power commission of the United States.

It has been obvious for some time that the company would be unable to carry out its commitments before May 1, 1956, and that was confirmed by the minister this afternoon. I agree with the Leader of the Opposition that we are placed in a most undignified position when we have to depend on the result of an application before a commission in another country in order to get approval for this line.

I think this should be noted, that in the Ontario legislature the approval of the province's bill was secured because the bill was couched, as Mr. Porter said, in flexible terms. This afternoon the minister drew the attention of the committee to the fact—and it is a fact—that the bill was carried unanimously. "Flexible terms", said Mr. Porter. If I may again quote indirectly from the *Hansard* of the province of Ontario, this is what he said:

> If for any reason the present plan does not go through in its present form, or it fails entirely, the bill will permit the government to consider alternatives and advance moneys within the stated limits to further any other arrangement that may be adopted.

Because of that undertaking the bill did go through unanimously. I certainly would advise hon. members to read the debate in the Ontario house, and particularly Mr. Porter's speech on February 21 last, because I think it would be interesting and instructive.

Apparently the Progressive Conservative party in this house is not now in favour of a publicly-owned project. I noted, however, that in his introduction of the bill relating to the Trans-Canada gas project in the legislature of Ontario, Mr. Porter made very clear that the decision was entirely a federal decision. Ontario went along with it because it was a federal decision and responsibility. Again he used these words:

> This government is not opposed to public ownership where it may be suitably applied. I think our record substantiates that statement. Our view toward public ownership is not a doctrinaire attitude.

And I may say, Mr. Chairman, that neither is my view a doctrinaire attitude in the sense in which that word is sometimes used.

It has been rather interesting and somewhat surprising to me of late that the Progressive Conservative party is so determinedly opposed to public ownership, and indeed has been opposed to crown corporations established by this country. I would remind them that this is in complete disagreement with the attitude of the leaders of their party in former days. When the building of a new transcontinental railway was under discussion in the House of Commons on April 5, 1904, across very much the same territory as it is proposed to build the gas spur line by the two governments concerned, Sir Robert Borden said of that project:

> I say that the government itself should build this road; it should build it promptly.

And in the very first clause of the amendment to be made in connection with the proposal of the government of the day he placed his party on record. His amendment first outlined, of course, the aims of the new transcontinental railway, and then he said:

> In order to accomplish these results the following objects and considerations should be kept constantly in view:
>
> (a) To develop and extend the government system of railways, and to free the management thereof from party political control or interference.

In other words he wanted to see that line, which eventually did come to us, publicly-owned. Because of the circumstances in later years, this part of the line which was really the national transcontinental throughout was incorporated into the Canadian National Railway system. I say that in these words Sir Robert Borden placed the party on record in favour of a crown company to build and operate the proposed transcontinental railway.

May I remind hon. members of the Progressive Conservative party that when radio broadcasting was under discussion in the House of Commons on May 18, 1932, the former leader of the Conservative party, the late Right Hon. R. B. Bennett, who was then the prime minister of Canada, said this at page 3035 of *Hansard*:

> No other scheme than that of public ownership can ensure to the people of this country, without regard to class or place, equal enjoyment of the benefits and pleasures of radio broadcasting.

Then he went on to use words that are directly applicable to the present project. He said:

> Private ownership must necessarily discriminate between densely and sparsely populated areas. This is not a correctible fault in private ownership; it is an inescapable and inherent demerit of that system. It does not seem right that in Canada the towns should be preferred to the countryside or the prosperous communities to those less fortunate. In fact, if no other course were possible, it might be fair to suggest that it should be the other way about. Happily, however, under this system, there is no need for discrimination; all may be served alike.

This is truly an irrefutable argument for the public ownership of a project of this description; because of necessity the private corporation will serve the profitable areas first, and will in all probability neglect the smaller areas in between those larger centres and more profitable areas. I say that what we need is a gas pipe-line system that will do justice to those who live in rural areas as well as those who live in cities.

I know city people expect that they may be able to get gas at a lower rate than people in the adjacent rural areas. Only under a publicly-owned system can you do justice to the people in the smaller communities. If I may quote further from Mr. Bennett on the next page of *Hansard*:

I believe that there is no government in Canada that does not regret today that it has parted with some of these natural resources for considerations wholly inadequate and on terms that do not reflect the principle under which the crown holds the natural resources in trust for all the people.

The crown holds the natural resources in trust for all the people, not for a few people, not for powerful corporations that may make agreements with governments that pass away. They should be held in trust for the people of Canada, and we should not betray that trust. This is precisely the position we now take in regard to this great project. We are determined that as far as we can secure it, no government in Canada shall have need to regret in future years that it parted with those great resources on terms that do not reflect the principle under which the crown holds the resources in trust for all the people.

The Leader of the Opposition discussed the attitude of the house in 1951 when Bill No. 75, I think it was, was introduced by the hon. member for Vegreville. This was a bill to incorporate Trans-Canada Pipe Lines Limited and the mover, I believe in good faith, gave certain assurances to the house at that time. He said that it would follow an all-Canadian route. He outlined the cities that would be served both in the west and in Ontario. He assured the house that it was proposed to serve the communities along the Canadian National route from Coteau Junction to greater Montreal and ultimately along the north shore of the St. Lawrence as far as Quebec city. He went on to say that there was no need to discuss the federal act which assures control over the exportation of electricity and fluids. He said, if I may quote his own words:

It is my opinion that this act—

He was referring to the Electricity and Fluids Exportation Act.

—would have no application because all consumers will be in Canada and no gas will be exported out of Canada.

The effect which these assurances had on the house, which had been concerned about numerous proposals for pipe lines in or through the United States, was indicated very clearly by the hon. member for Vancouver-Quadra, of the Progressive Conservative party, who is here tonight, when he said at page 736 of *Hansard* of February 27, 1951:

In view of the fact that the pipe line is to serve Canada first, and in fact in this case it will serve Canada only, I for one am very glad to support it.

[Mr. Coldwell.]

He had been opposing other pipe-line proposals. The hon. member for Winnipeg North Centre, speaking on our behalf said, as reported at page 737 of the same issue of *Hansard*:

Mr. Speaker, the assurance that has been given by the hon. member for Vegreville (Mr. Decore) that the route followed by the pipe line to be built by the company covered by this bill will be an all-Canadian route makes it clear that there will not be an extended debate on this bill ....

He added, however:

. . . there are some of us in this house who regret that the government is not going into the construction of pipe lines for the distribution of gas and oil on a public ownership basis. When I say "some of us" I am happy to include the hon. member for Comox-Alberni (Mr. Gibson).

At that time he sat as an independent Liberal in this house.

While he does not belong to this socialist group, nevertheless he has taken the same position on former occasions.

Other hon. members of the house spoke along the same lines in support of the bill, because we understood it to be an all-Canadian pipe-line project entirely in Canada and under the control of Canadians. I bring this to the attention of the house, because at that time the principle of the bill was clearly believed to be that of an all-Canadian project with an assurance that the gas available would be utilized at all points across Canada including Montreal and the city of Quebec.

As the Leader of the Opposition noted this afternoon, when the bill was in committee Mr. Frank A. Schultz, vice president of the parent company, reiterated this assurance before the House of Commons committee on railways, canals and telegraph lines. On March 6, 1951, at page 10 of the minutes of proceedings and evidence of that committee, he said:

The second consideration was that it should be an all-Canadian project, that it would be Canadian gas transported over an all-Canadian line, and that 100 per cent of the consumption would be in Canadian cities.

We now have before us a proposition which is largely dependent on the verdict of the federal power commission of the United States of America, which is in effect a line to Emerson, with a spur line across northern Ontario to serve eastern Canada and having a smaller volume than the line which will go to the border of the United States.

When the bill came back to the house on March 9, 1951, there was a short debate because hon. members had heard witnesses testify with all confidence before the committee that the pipe line would be constructed as an all-Canadian project serving Canadian cities and with no export of gas to the United States, at least until Canada's own cities,

communities and needs had been fully served. No mention was made at that time of any need of financial aid from the government of Canada.

Today we have a resolution before us which differs in its entirety from the original considerations upon which parliament approved the Trans-Canada pipe-line proposal on March 9, 1951. Today the company demands substantial public funds and the export of gas for United States companies at which I believe, when investigated, will prove to be distress prices. Contrary to the expert opinions supporting the company's proposals in 1951, we are told that the project cannot be undertaken unless substantial quantities of natural gas are exported to the United States and unless the Canadian and Ontario governments finance the 675 miles of the spur line, for such it is, across northern Ontario.

I say to hon. members of this house that we should not approve this proposal at this time, that the government should reconsider the proposition in its entirety and should build this line as a public utility. The provinces should distribute the gas throughout the provinces by any means they might suggest. I take it that most of them would do so through a public corporation, just as is done with electric power in the provinces of Ontario, Manitoba, Saskatchewan and Quebec to a large extent at the present time.

We want to see a public utility. If the federal government does not feel inclined to undertake it by itself, then let it do what was suggested by the premier of Ontario on one occasion. That is to say, let a joint undertaking be established between the governments which are interested in this project, including the federal government. Let us not think it would be wise or sound to allow this to slip through our hands today and fall under the control of these powerful interests which have been under fire in the United States for years, and one of whose latest attempts was vetoed by the President of the United States in recent weeks.

I believe we have no right as a parliament to alienate this great resource to the control of a corporation over which we have no real control. The minister said this afternoon that 51 per cent of the stock would be sold in Canada. We have no guarantee that Canadians would own it, and he admitted this today. We have no guarantee that the Canadian people will own that stock. When it is placed on the market it might be bought by anyone. In any event the real control, the real power, is in the hands of these three great United States gas and oil companies which somehow or other have persuaded our government to bring into this house what I believe to be an improvident deal.

Last year we had before the external affairs committee and before parliament a suggestion from the province of British Columbia for the alienation of a great water resource, the Kaiser deal, which proposal was turned down because it was believed to be improvident and that the government of British Columbia was making a deal not in the best interests of all Canada. If that was true of the Kaiser project on the Columbia river, and I believe it was, it is equally true in connection with this great resource which can be used in another country to a large extent to process the raw materials which I think we are sending there in too great quantities at the present time.

Mr. Hansell: Mr. Chairman, while I am going to be somewhat critical of government policy in respect to this bill and related matters, I want to state at the outset that we in this corner of the house will support the resolution. We may be critical of some parts of the bill, but I cannot say in what way until the bill comes down.

I listened with interest to the policy speeches by the representatives of the other two opposition groups who have preceded me. When the Leader of the Opposition spoke this afternoon I picked up my pen to take some notes, thus indicating that I intended to comment upon what he was saying, perhaps at times critically and at other times in commendation. However, I found that I could not quite focus my attention in order to make my criticisms or commendations logical in form, because it seemed to me that the Leader of the Opposition, like a jack rabbit, jumped from one corner to the other and I could not quite keep up with him. I felt that I wanted to sing that old familiar chorus, "Around and around and around she goes, and where she stops nobody knows."

However, I do want to say that with respect to his view and that of the leader of the C.C.F. party as to foreign investment, I find myself in at least some agreement with them in their criticism of government policy. Before entering into that, if I might refer to my scratched notes, I do not think we should let go by the statement made by the leader of the C.C.F., when referring to what the right hon. Minister of Trade and Commerce said this afternoon, that Mr. Manning indicated that they would not agree to the setting up of an all-Canadian pipe line except with a proviso. The leader of the C.C.F. seemed to seize upon that. He said he was quite surprised that any proviso should have been insisted upon by the premier of the

province of Alberta, because to him that was surely selling out Canada to some other country.

If you took that statement alone it might be damaging, but you cannot do that because no premier of any province is going to make a proviso without some explanation. The Minister of Trade and Commerce did not give it; the leader of the C.C.F. did not give it, for perhaps the good reason that he did not know what conditions might be involved in that proviso, and I cannot give it because I do not know. I do not believe that statement should be left hanging in the air. If Mr. Manning did make any proviso at all I am quite confident that he had some reason for doing so, and it was not that he intended to sell out Canada to any other country. I say to you that Mr. Manning ranks at the top as a loyal Canadian, loyal to Canadians and to Canadian interests.

In respect to foreign investment, I think we will all admit that one of the best things that could happen would be to have the money invested in this all-Canadian pipe line be in the form of Canadian capital. I think we all agree with that; but if we cannot get Canadian capital to construct and develop this pipe line there is only one reason why. I lay the blame for that at the door of the present government of Canada, which has pursued a financial policy which does not encourage Canadians to invest their money in ventures of which they cannot altogether see the result.

I picked up the *Financial Post* for March 17, and on the front page I find this headline, "Dependence on U.S. Goes on Growing." I did not have time to read the whole article as I picked up the paper only a few minutes ago, but in the second section I find this headline, "How We Are Paying for Our Prosperity." Then there was this subheading spread across a couple of columns, "We Are Selling Off Assets to Foreign Investors." If that is so then it must be because the government have pursued certain financial policies which have not encouraged large scale investment of Canadian capital.

When the royal commission on Canada's economic prospects was sitting in Alberta the government of Alberta presented a brief. After Mr. Manning had presented this brief on behalf of the province a question arose as to the amount of United States capital that had come into Alberta to develop the oil and gas industry. The total was an astounding amount. I must trust to my memory for this and also to newspaper reports, because we have not had the printed evidence as yet. Mr. Manning said the same thing I am saying now, that the reason United States capital came into this country to help develop the oil and gas resources of Alberta was that the financial policies of this government did not encourage enough large scale capital investment of Canadian funds.

A recent copy of the proceedings of the committee on railways, canals and telegraph lines contains an astonishing piece of evidence. This was not in connection with a pipe line, it was in connection with another bill then before the committee under which a Quebec concern wishes to build a railroad in that province. They had wanted to get money from various investment sources to build the railroad, and during the course of the proceedings the hon. member for Edmonton East asked the witness this question:

> How do you intend to finance your line? Can you tell us?

I shall read only part of the answer, breaking in at the middle:

> I regret to say that Canadian insurance companies were offered the first "crack" at it but unfortunately we only had four who would participate. They felt that the development of the north country was not properly justified so the bulk of our money came from American insurance companies. Canadian companies were offered the first chance. That was a blow to me. I am a Canadian.

Listen to that. Are we going to sit here and say that United States insurance companies and Americans generally are more willing to gamble on the future of Canada than Canadian investors? Something must be wrong, and I will say that one thing that is wrong is the taxation policies that are imposed upon companies by this present government. Further on in this evidence before the standing committee on railways, canals and telegraph lines the following questions were asked by the hon. member for Lambton West:

> Q. To what extent did the Canadian insurance companies participate?
> A. $2 million.
> Q. Out of how much?
> A. Out of $145 million.

Now just imagine that. Who is to blame for this picture? The only answer I can give to that is the financial policies of the present government. But let us not let it rest at that. Let us ask this question. What would happen to the development of industry and our natural resources in Canada if it were not for United States capital coming in here to develop them? My hon. friend from New Westminster has said that this government does not accept Social Credit methods, because we have been urging for 20 years that they accept them. If they did, perhaps there would be more Canadian capital to be invested in the future of Canada. United States capital has come in to this country and has taken a chance on the future development of this country. We talk about a pipe line. What is the use of having a pipe line if there is

no gas to put in at one end and come out at the other? The investment of United States capital in Canada has been very largely responsible for the development of the gas and oil industry in Canada. Furthermore, I think the same thing can be said of the oil and gas development, as far as it has gone, in the province of Saskatchewan.

An hon. Member: The provincial Saskatchewan government—

Mr. Hansell: That is true. My friend admits that it is true.

Mr. Coldwell: I shall give the reason, if you like.

Mr. Hansell: I know the reason. It is because you cannot get the capital in Canada. Another reason is that the Saskatchewan government, though a socialist government, will not socialize the oil and petroleum industry. Of course they will not do that. Why? Because they know that private capital is the one source that will develop that industry; because they believe there is a future in Canada and, I will say, a future in the oil and petroleum industry of the province of Saskatchewan. I am not blaming the premier of Saskatchewan for taking the tack he has taken. I believe he has taken the right step in that respect.

Let private industry develop our natural resources. There is no reason why private industry should not also be allowed to develop the transmission system for carrying these natural resources throughout Canada. I am quite certain of this. We can talk all we like about United States capital coming into Canada, but you cannot have it both ways. Do we believe Canadian capital should be invested abroad? I am quite certain people would not say negatively that we should not invest Canadian capital abroad. What is sauce for the goose is sauce for the gander. You cannot have it both ways.

Furthermore, I am quite certain that the province of Saskatchewan would not place any embargo on the capital investment of United States dollars for the development of their natural resources in that province. We must be consistent all the way. Otherwise our gas and oil industry would not have been developed to what it is today, a real going concern. Wherever I go in Canada I begin talking in a sort of exalted fashion about our Social Credit government in Alberta, and what do I hear? "It is not the Social Credit government; you see, they have so much money out there."

An hon. Member: So much oil.

Mr. Hansell: Sure we do.

Mr. Ellis: Who put the oil in the ground?

Mr. Hansell: This is what I am trying to tell you. What makes the province wealthy? It is because United States capital has come in there to develop it. The picture would have been a much rosier one if the financial policies of this government had been of such a nature that that wealth could have been the result of the investment of Canadian capital. I shall go so far with my hon. friend from Rosetown-Biggar and the Leader of the Opposition.

There is another matter to which I should like to refer. We deplore perhaps the fact that 51 per cent of the shares are going to be offered to Canadian investors and that 49 per cent of the shares will perhaps go to the United States. That really is no criterion at all, because there is no way of controlling the shares after they are sold on the market. You could sell the whole of them to Canadian investors if Canadian investors would take them. The next day or a few days after, or at some subsequent time, United States interests could buy those shares, because we have enough freedom in Canada to permit a person to sell his shares to whomsoever he wishes. So that is no particular criterion.

Those are my criticisms. Now I do want to lay down something of the policy of this group in respect to the present measure.

Providence was very kind to the province of Alberta. She placed vast stores of natural gas beneath Alberta soil in widely scattered fields. The presence of these stores of gaseous fuel has been known for many years, and for quite a long time a number of Alberta cities and towns have been making use of natural gas for domestic and industrial purposes.

The city of Medicine Hat, for instance, was one of the earliest users of the gas supplies to be found at rather shallow depths right within the limits of the city itself. Many industries were built as a result of this, because all those industries had to do was dig a pothole and the gas would come forth almost from the surface of the earth and supply those industries with light, heat and power.

I recall that in the early days in my own constituency—I happen to have the Turner valley oil fields in my territory—what was known as the discovery well blew its top and, in order to get the gasoline from that well, they had to shoot huge flares into the river. It was astounding; it was staggering. People came from all over to see that gas being burned in the air, billions and billions of cubic feet of it. They used to call it hell's half acre. The flares used to go up day and night, 24 hours of the day. Why, at midnight the skies would be just like sunset

from the reflection of these flares. What was it? Gas burning and going to waste in the air; that is what it was.

I tell you it was cruel to think that our natural resources should be wasted like that. Why, there was enough gas going to waste in those days to have provided power and heat for all the cities of Canada for generations to come—yes, sir; just in a few years. It was only after the adoption and implementation of very wise policies of development and conservation by the present government of Alberta—

Mr. Blackmore: Social Credit.

Mr. Hansell: —that systematic exploration took place which led to the discovery of huge reserves of natural gas in practically all parts of the province. These reserves have grown with the development of the whole industry until they are far and away beyond the present and future needs of the people of Alberta, perhaps for 50 to 75 years to come. The best scientific brains that have been applied to the problem say that if wise policies governing marketing, conservation and further exploration and development are continued it would not be unreasonable to expect the reserves to increase by a trillion feet a year for the next 10 years.

However, if this addition to the now known gas reserves is to take place, a satisfactory market for gas surplus to the needs of the people and industry in Alberta must be found. When I say a satisfactory market, I mean one that will return to the producer at the wellhead a price sufficiently attractive to stimulate continued exploration and development. I am sure hon. members realize that oil and gas exploration is a costly business as well as a risky one, and unless expected returns for the risk and the work are fair then further exploration and development will not take place and Canada will be the poorer as a result.

Another point that should be kept in mind as we approach consideration of this measure, which will provide authority for the government of Canada and the government of Ontario to build a pipe line from the Manitoba border to Kapuskasing, Ontario, a line to be leased to Trans-Canada Pipe Lines, is that in Alberta natural gas is often the lifting power by which crude oil is brought to the surface. Consequently, as oil is produced gas is brought with it from the depths. Some of that gas can be turned into the pipe lines of the province to supply domestic and industrial needs in the towns and cities, or some of it can be pumped back into the earth in what is known as repressuring to bring further supplies of oil to the surface. Repressuring of many fields has been going on in Alberta for many years. However, not all of the gas which is surplus to the needs of the Alberta people can be used for repressuring. Therefore it is urgently important that the proper market be found for it.

The Social Credit government of Alberta realized five or six years ago that export markets would have to be found for the surplus gas of this province if colossal waste were to be avoided. That same government set up the Alberta petroleum and natural gas conservation board and charged it with the responsibility of applying strict conservation methods so as to reduce gas wastage to the absolute minimum. Any student of the situation knows that the board and its methods have been eminently successful; but in the process oil production has been severely restricted compared with what it could be if a satisfactory market were available for the gas produced in bringing oil to the surface.

We all know that Canada is not yet self-sufficient in oil. We are dependent upon foreign countries, mainly the United States, for a large part of what we use in Canada. To buy those needed imports requires precious foreign exchange that is often in short supply. Our trade deficits with the United States are getting larger year by year. Everything ought to be done to bring Canada as soon as possible to a position of self-sufficiency in oil production. Experts say that is possible within a few years. I say it is highly desirable and urgently necessary if we are to achieve national security and the maximum of strength in times of international strife and dislocation.

But, Mr. Chairman, if we are to become self-sufficient in the world we must get good markets for our natural gas, and that without delay. Already there has been too much delay. It is obvious to us at least that precious time has been frittered away by useless bickering for political advantage. What is desperately needed now is action and wisdom, and a sincere desire by all parties to get down to brass tacks in the matter of finding and applying the very best way of providing a market for our surplus natural gas, one that will best serve the people of Canada as a whole and at the same time return to the producers a fair price for their labours and the risks involved in finding and developing the gas resources.

Now, what is our Social Credit position on this resolution? We think no time should be lost in getting before the house the bill which the resolution precedes. No useful purpose

can possibly be served by prolonging debate at this stage, especially academic or politically slanted debate. On the contrary, extensive debate could only result in unduly prolonging the gas waste which is now going on incidental to oil production, a waste calculated to be in the neighbourhood of a billion cubic feet per week. Some of that, of course, cannot be avoided. Much of it could be if we had a pipe line to carry the gas to an export market either in other parts of Canada or in the United States. We in this corner would not like to have on our shoulders the responsibility for causing valuable fuel to be burned in the air as flares because there was no place to put it to good use. I want hon. members to realize that this is one of the important things at stake at the present time.

We in this group, I might say particularly we who represent Alberta constituencies but we as a whole, would like to have seen Canadian and northwestern United States markets made available for our surplus gas. That, together with Montana territory and adjacent places, because these places are immediately to the south of us, and the midwestern United States, are the natural geographical market for Alberta gas. However, this government decreed that there would be no export permits granted until the eastern Canadian needs were first served.

The government of Alberta and the Social Credit group in the house have always supported a Canada first policy. We think that is wise; we think it is only right. In fact, I might say that Mr. Manning of Alberta issued a statement some time before this government made its natural gas policy public, in which he declared that any gas exported from the province of Alberta should first go to serve the people in other parts of Canada if they want it and if it is economically feasible to get it to them.

The Chairman: Order. I am sorry to interrupt the hon. member, but I am obliged to advise him that his time has expired.

Mr. Hansell: Mr. Chairman, I wonder if I might—

Some hon. Members: Carry on.

The Chairman: Has the hon. member unanimous consent to proceed?

Some hon. Members: Agreed.

Mr. Hansell: Thank you, Mr. Chairman and gentlemen. When the present government declared its policy, we were ready to go beyond regional desires and look at the whole problem of gas export from the broader national point of view. I refer to the export of gas from Alberta. It should be pointed out that when this federal government declared there would be no export permits issued until eastern Canadian markets were first served, it severely complicated the financing of a pipe line from western Canada. The most careful and detailed studies of the whole situation had convinced most economic investigators that no pipe line could pay off unless the visible eastern Canadian market could be supplemented by substantial markets in the United States, especially during the first seven to ten years of the life of the pipe line.

In a sense it can be said that the government ignored the economics of the pipe line in order to give priority to the Canada first policy. It is therefore true to say that the whole of the present situation arises out of this Liberal government's policy. The government having created the difficulties, we think it is the responsibility of this present government to provide some help to the constructing company in order to ensure successful financing of the huge undertaking. It would be most unfair and unjust to make the producers of natural gas pay the cost of the government's economic blunder. We believe that the bill which will follow this resolution will provide the necessary assistance to ensure successful financing of the pipe line.

We support the Canada first policy, although our producers could have found a much more lucrative market in the United States. We are ready to accept this government's natural gas policy although not without criticism. At the same time, however, we are earnestly seeking a way to get fair returns for our gas producers in the provinces. We are convinced that the government's policy can be successful for all concerned only if the eastern Canadian market supplied by an all-Canadian pipe line is supplemented by some markets in the United States served by the same pipe line. Otherwise it would appear that there is bound to be a big loss on the all-Canadian line, and either the producers or the people of Canada generally may be called upon to foot the bill.

I have only one short paragraph left to conclude my speech. Before reading it might I say that under some circumstances, perhaps we would not be altogether unfavourably disposed to the all-Canadian pipe line being under some government supervision—a crown company or something of that kind—if private enterprise failed to accomplish it. In that respect I should like to read from our national manifesto just one paragraph of a section which we have captioned "Public Utilities and Monopolies":

> The Social Credit association of Canada believes:
> 1. The government should be prepared to establish a public utility only where individual enterprise has

failed to provide, or from the circumstances cannot provide, adequate services at reasonable cost, the utility or service to remain a government enterprise only until the changed situation warrants private development.

What does that mean? It means simply this. As a Social Credit principle we believe in individual enterprise. We believe in private enterprise. We believe in the private enterprise system. But if in the national interest private enterprise cannot do the job, we believe there can be some reason for a government-owned pipe line until such time as private enterprise can take over.

In conclusion, Mr. Chairman, may I say that I think I will let the matter rest at that point for the present. We may have something further to say at a later stage. I suppose that some of my colleagues will want to enter into the debate, perhaps at the moment. We will support the resolution in the hope that it will facilitate getting the bill before the house.

I believe the minister should send the bill to the appropriate committee—and no doubt he will do so—where witnesses of one kind and another can be brought to give evidence in respect of finance, Canadian investment or foreign investment, costs, procedures and what not. I believe the government should send the bill to the committee where a complete investigation can be made of it, so that interested parties can come and lay their case before the committee. Those in the opposition as well as on the government side will have their chance there to question those witnesses. I hope the minister will give us the assurance that the bill will be sent to the appropriate committee.

In the meantime I would appeal to all hon. members not to delay the passing of this resolution. If anything is to be done by way of starting the construction of a trans-Canada pipe line this year, a bill providing some assistance to the building company will have to be through this parliament within the next few weeks.

Mr. Coldwell: Mr. Chairman, I rise on a point of order. It is extremely awkward for a member to rise and object to an extension of time, but there are some of us in this house who keep our eye on the clock and try to end at the appropriate moment. In fairness, I think the rules should be enforced. I am not criticizing my hon. friend. He asked for the extra time. It was given to him. That is all right. But if we are going to have rules in this house, I think they should be enforced. Because we do not like to deny a colleague the opportunity of extending his remarks for another ten minutes, those who try to keep within the limit are in reality discriminated against.

I suggest, Mr. Chairman, that you do not ask whether the house will give permission. The situation was different with the minister this afternoon. If I may just intrude for one moment, may I say that I think it is an extremely anomalous position in connection with this rule that the minister introducing some measure in the committee is limited to 30 minutes, whereas the Leader of the Opposition—and I am not making any criticism of him—has unlimited time. The rest of us are limited to 30 minutes. I think the rule needs changing in respect of the minister introducing a resolution. However, I believe that the chair should not ask the house for an extension of time.

Mr. Hansell: Mr. Chairman—

Mr. Coldwell: I am not critical of you.

The Chairman: Order. I am somewhat glad that the hon. member for Rosetown-Biggar raised this point of order, in view of remarks which several hon. members made to me following my action this afternoon in interrupting the Minister of Trade and Commerce at the expiration of 30 minutes and, at the same time, allowing the Leader of the Opposition unlimited time. It became apparent to me that some hon. members did not apprehend the change which had taken place in the rules by which the members of the house and myself are bound. The present rule in committee is the following, standing order 59, paragraph 3:

No member, except the Prime Minister and the Leader of the Opposition, shall speak for more than 30 minutes at a time in any committee of the whole house.

By unanimous consent the Minister of Trade and Commerce was extended permission to exceed that time this afternoon. The Leader of the Opposition, by right, exceeded 30 minutes this afternoon. This evening the hon. member for Macleod was interrupted by myself at the exact expiration of 30 minutes. Some hon. members then said, as I thought I heard, "Let him go on", and in accordance with past custom, I then asked hon. members if the hon. member for Macleod had unanimous consent, and I understood that that consent was freely granted. I hope these few remarks will clear up that situation.

I again draw the attention of hon. members, as the hon. member for Rosetown-Biggar has done, to the provisions of the new rule as set forth in standing order 59, paragraph 3.

Mr. Hansell: May I offer one comment only. Since we do not debate the resolution when the Speaker is in the chair, perhaps some leeway could be given to leaders of the other groups.

Mr. Coldwell: No.

Mr. Hansell: The hon. member for Rosetown-Biggar says he does not think so. I will remind him, and I do not think I am wrong, that he took as much time as I did.

Mr. Ellis: Absolutely not.

Mr. Coldwell: I was one minute under my time. I took 29 minutes.

Mr. Hansell: I think my hon. friend was through at twenty-nine minutes past six and he started at—

Mr. Coldwell: Twenty minutes past eight.

Mr. Green: Mr. Chairman, taking part again in a first class pipe-line debate brings back many happy memories of the filibusters of a few years ago. I am sure it would be much more exciting if we had the former member for Fraser Valley, Mr. George Cruickshank, here to participate.

As hon. members know, the main objective of our filibustering at that time was to sell the idea to the house and to the Canadian people that there should be a Canada first policy adopted in regard to these pipe lines, both for oil and natural gas. I suggest that the public have now been sold, but I am not so sure that the Minister of Trade and Commerce and his colleagues have yet seen the light; hence the need for further debate on this particular measure.

This resolution stage with the house in committee is the time to consider the government's general proposal and to have a clarification of that proposal by way of question and answer. I point out, Mr. Chairman, that this particular measure before us tonight is important, far-reaching and very unusual. It calls for an exceptionally thorough examination.

The proposal in brief is to set up a crown company, to be known as Northern Ontario Pipe Line Crown Corporation, whose duties are listed as being to construct, maintain and operate a natural gas pipe line from the Manitoba boundary to Kapuskasing in the province of Ontario, a distance of 675 miles. This pipe line is to be of 30-inch diameter; it is to cost approximately $117,633,000, and there is power to borrow given to the corporation up to a total of $130 million. In addition, power is given to this crown corporation to lease the line for 25 years to one certain company, Trans-Canada Pipe Lines Limited, who plan to build from Alberta to Winnipeg a pipe line 34 inches in diameter; and from Winnipeg to Emerson on the United States boundary a pipe line again of 34 inches which, I point out, is 4 inches larger than the pipe line to eastern Canada. They also propose to build a pipe line from Winnipeg to connect with the government line at the Manitoba boundary, and then from the end of the government line to the vicinity of Toronto, and a smaller line 20 inches in diameter from Toronto to Montreal. The cost to this private company is supposed to be approximately $257,367,000, making the total cost for the whole pipe line, government owned and privately owned, $375 million.

I point out that the government is building the most expensive and the least remunerative portion of that line. One of the significant features of the resolution is that the crown corporation can lease only to Trans-Canada. That means that Trans-Canada is in a very preferred position. I suggest it can properly be described as the chosen instrument of the government in this development.

The first question I would like to place before the minister for answer when he replies is why general power is not being taken to lease rather than the power to lease to one company only. If the general power were taken, then an agreement could be made with any other group, and it may very well be that in the final analysis Trans-Canada Pipe Lines Limited will not be able to complete their part of this pipe line.

The next feature to which I wish to refer this evening is the agreement between the government and its chosen instrument, dated November 21, 1955. Under that agreement there is an obligation on the government to build the 675 miles of pipe line, but only if and when the company proves financial ability to construct its portion of the line. That is contained in paragraph 3 of the agreement, which reads:

> If evidence satisfactory to the government of Canada is presented by Trans-Canada before May 1, 1956 that it has arranged for financing of all the costs and commitments in connection with the said program of construction, the government of Canada will cause the said crown corporation to acquire the said right of way and construct—

—this 675-mile pipe line. After listening to the minister's speech this afternoon I take it that this provision still stands, in other words that the company must prove financial ability. It is understood—it has been understood throughout—that this financial ability hinges on a permit from the federal power commission of the United States to import 200 million cubic feet per day at Emerson—

Mr. Howe (Port Arthur): That is not true.

Mr. Green: —and to export at Niagara 90 million cubic feet per day. The minister says that is not true. I have here a copy of the

minister's letter to the company dated September 28, 1955. The last paragraph of that letter reads as follows:

> For the Emerson export, Tennessee must obtain an import permit from the United States government. When this has been issued, action will be taken by the Canadian government under the Exportation of Power and Fluids and Importation of Gas Act to authorize the export at Emerson, Manitoba of 200,000 mcf of gas daily for a period of twenty-five years from the date of the first delivery of gas.

That would appear to indicate that the company cannot get their permit for export from the minister until they have received a permit from the federal power commission.

Mr. Howe (Port Arthur): That is right.

Mr. Green: I have here reported statements of Mr. Tanner, the president of the company, to the effect that the financing of the company depended on this permit from the federal power commission.

Mr. Howe (Port Arthur): Read one or two of those statements.

Mr. Green: I have here a press report of February 25, 1956, quoting Mr. Tanner.

> Mr. Tanner said there was no possibility of getting FPC approval of the application before April 30, the date the company was to satisfy the conservation board of its ability to finance the project.

The following words are in quotations:

> "If we can get FPC approval of the application, that's all we need to complete our finances".

I also have a report of the speech made by the minister himself in Toronto, as reported in the *Globe and Mail* of January 31, 1956. The statements are not in quotation marks and may not have been taken word for word from the minister's speech:

> Financing of Trans-Canada's portion of the all-Canadian line hinges on success of the application—

That is the application before the federal power commission.

Mr. Howe (Port Arthur): My hon. friend has a copy of my speech. Did he find that in it?

Mr. Green: I did not claim that; I am merely saying it is in this report.

Mr. Howe (Port Arthur): That was not in the speech. What difference does it make what is in the report?

Mr. Green: I am obviously going to be limited to 30 minutes and I do not want all these interruptions. Let me get on with my remarks. The report continues:

> —and the agreement of the Canadian and Ontario governments to build the northwestern Ontario section stipulates that Trans-Canada must arrange finances for its entire construction program by May 1.

In any event it is perfectly obvious that there is to be no federal power commission permit granted by May 1. Today the minister intimated that he would now give an extension of time to this company. He did not say how long the extension would be, but he indicated he would give an extension of time beyond May 1. He did not say whether the federal government proposed to start with the 675-mile portion of the pipe line right away without waiting for Trans-Canada to show financial ability.

I think that is one point the minister should clear up. He should also make clear whether this company can finance without obtaining a permit from the federal power commission. No indication has yet been given that the company can do so. If it can not, and if the minister is going to start out with the line regardless of whether or not the company proves financial ability, that will be in effect putting up the taxpayers' money in partnership with Trans-Canada in a gamble that the federal power commission will issue a permit. I point out that if that gamble is lost Trans-Canada is unlikely to take over that 675-mile portion from the crown corporation, and probably the taxpayers will have to put up more money because the government will have been committed and will have to bail Trans-Canada out of trouble.

I point out, too, that basing the plan on a permit from the federal power commission is extremely dangerous and risky, for we know there has been strong opposition before that commission. We read that there has never been a more bitterly contested application before the federal power commission. There is bound to be a long delay. We on the west coast know that because Westcoast Transmission Limited had a delay of several years. Also the federal power commission will in effect have a veto down through the years. Despite the fact that the commission may grant a permit, United States law is such that they could interfere at any time in the future.

I would like to repeat the words spoken by my leader this afternoon that there should be no depending on the federal power commission which is a board in a foreign country set up to protect the interests of that country. The minister himself indicated what should be the proper attitude of the house toward the board when two days ago, in reply to a question referring to the proceedings before the federal power commission, he said, as reported at page 2073 of *Hansard* of March 13:

> I would not care to comment upon judicial proceedings in another country.

Mr. Howe (Port Arthur): Then why do you do it?

Mr. Green: That is just how much we should depend on permits granted by the federal power commission. Canada is not so small and weak that she must put herself in that position. Also I suggest that going to the United States, hat in hand, as it is in this case—

Mr. Howe (Port Arthur): We do not go to the United States. The government of Canada has no application before the United States.

Mr. Green: Trans-Canada Pipe Lines has.

Mr. Howe (Port Arthur): No, it has not.

Mr. Green: Mr. Chairman, I must ask you to ask the minister to keep still while I am speaking.

Mr. Howe (Port Arthur): I am spoiling his speech.

Mr. Green: Canada is going to the United States hat in hand. Canada has been put in a poor bargaining position in this matter. The matter should have been handled in such a way that the United States would come to us for our surplus gas. When Canada gets in that position, then she will be able to sell her gas and sell it at a proper price.

What is the plan of action if the federal power commission does not grant the permit, or if the Trans-Canada plans fail? The minister made no announcement about that this afternoon, and the house is entitled to know what alternative plans there are. The minister was asked about it in Toronto at the time he made the famous speech I referred to a few moments ago.

Mr. Howe (Port Arthur): Why don't you read from the speech?

Mr. Green: Oh, it isn't worth reading.

Mr. Howe (Port Arthur): The hon. member likes to read the *Globe and Mail.*

Mrs. Shipley: The hon. member appears to have studied it.

Mr. Green: The report says:

> The provincial government is aware, however, that Trans-Canada might not be able to carry through its part.

The minister adopted this as his own explanation.

> In this event new ways of attaining the same end will have to be investigated.

Well, it is long past the time when new plans should have been investigated and this house should have been told about them today, instead of being left completely in the dark.

The minister said this afternoon that this is a great new Canadian scheme. Actually it is only part of a much larger scheme designed primarily for the United States by Tennessee Gas. Piping gas to eastern Ontario is a side line. Originally Trans-Canada Pipe Lines Limited did have an all-Canadian policy, and as has been explained earlier they had no intention of building any side lines to the United States. Then this enforced amalgamation by the minister occurred between Trans-Canada Pipe Lines and Western Pipe Lines, and after that had been done the plan in reality was still a Canada first plan, although provision was made for a similar pipe line leading off to the United States to pipe 150 million cubic feet a day.

Now, of course, the figure for Tennessee Transmission is 200 million cubic feet a day with a possible additional 200 million cubic feet. The price was to be 34 cents at 100 per cent load factor at the United States boundary, and that price should be borne in mind.

Mr. Howe (Port Arthur): Nonsense.

Mr. Green: Last year other variations were mentioned, but a few weeks ago this drastic change was announced. We now have a Tennessee Gas Transmission plan. It is no longer a Trans-Canada plan or a Canada first plan. We now have a Tennessee Gas plan. That company got into the picture back in 1955. Now Gulf Oil, which raised so much trouble last year with the minister, which vetoed one of his plans, are in the picture, as are Continental Oil. Those three large United States companies now control Trans-Canada.

The minister has said that shares are to be offered to the Canadian public. He might have gone on to point out that even though several thousand individual Canadian shareholders bought up to 51 per cent of the shares, which is most unlikely, there would be no possible chance that they could overrule these three great United States companies—the Delhi company is also a United States company—working together as a closely knit unit. It is absolutely fantastic to suggest that private Canadian shareholders would have the slightest chance of controlling the company. Control rests with these United States companies and it is going to remain there unless the government makes some change in its policy.

Gas entering the United States at Emerson will be carried by a 34-inch line, larger than the line to the east.

Mr. Howe (Port Arthur): That is not true; my hon. friend makes fantastic statements.

Mr. Green: The price is to be approximately 25 cents, whereas earlier it was to be 34 cents. These three United States companies

are not in Trans-Canada Pipe Lines for their health; they are not in it for the benefit of Canada; their major interests are in the United States. They have not the same incentive that a Canadian group would have to develop and expand in Canada, and they are being relieved of the real pioneering job in this development, the construction of the worst part of the line through northern Ontario.

There is grave danger that the plan will mean that Canadian gas will be sold at such a price in the United States as to enable United States users to undercut Canadians. I would point out that the St. Lawrence seaway will be completed shortly, and Toronto will be in direct competition with Chicago in many fields. Is Chicago to have the benefit of Canadian gas being sent to the United States at lower prices than it can be obtained for in Toronto?

It is bad enough without the government being involved. We had an example in the west when permission was given to pipe gas down into Montana to the Anaconda copper mining company. Mr. Wilson, the then United States secretary of defence, put on the pressure to have this permission granted in a hurry. A bill incorporating the company was rushed through this house and provision was made for the United States to get this gas. Then the federal power commission would not let it come in until over a year had passed, but eventually this smelter was able to get its gas at about one-third what it had been paying for fuel before. That company is in direct competition with the smelter at Trail whose production of lead and zinc is subject to a tariff when entering the United States. The Anaconda people are trying to get that tariff increased even more. This situation is much worse with the government financing this scheme.

In conclusion, Mr. Chairman—

An hon. Member: You have nine minutes.

Mr. Green: Apparently I have gone too fast. It is a terrible mistake to waste time like that.

The government's proposal is just one more step forward toward an integrated North American economy sought by many of our Liberal friends, particularly by the Minister of Trade and Commerce. The minister is a great advocate of an integrated North American economy. I sometimes wonder whether he knows that there is such a thing as a boundary line between Canada and the United States.

This is only one example. We had the same thing with iron. We were told in a committee the other day that this year between 8 and 9 million tons of iron ore were to be dug out of the mines in northern Quebec and Labrador to be shipped to the United States without being processed in any way, and the total production is to be something like 12 million tons.

Mr. Lesage: You had better complain to your friend Mr. Duplessis.

Mr. Green: We will deal with the minister at a later stage.

Mr. Lesage: I am dealing with you now.

Mr. Green: There was just one more example, iron ore being shipped down to the United States and then brought back to Canada in finished form after it had been processed by United States industry and United States workmen. It is the same with our trade under the Minister of Trade and Commerce. Last year 60 per cent of Canadian exports went to the United States, while 73 per cent of our imports came from the United States. The end result of an integrated North American economy policy might very well be to make Canada economically a vassal state.

Conservatives believe that the nation must be controlled in Canada by Canadians. We do not believe that the destiny of this nation should be decided in head offices in New York, Cleveland, Texas and California, yet under this plan being brought forward today by the Minister of Trade and Commerce the biggest step that has ever been taken is being taken in that very direction.

Mr. Zaplitny: Mr. Chairman, as the leader of our party stated in his address this afternoon, we consider this debate to be one of the most important during the present session of parliament. The resolution introduced by the right hon. Minister of Trade and Commerce and now before the committee purports to be for the purpose of assisting in the bringing of gas to eastern Canada. What we have heard this afternoon so far makes one wonder just what effect it is going to have.

I have seen where some United States publications have referred to the Minister of Trade and Commerce as America's gift to Canada. When we consider what they are getting under this legislation I am inclined to think that it is the better deal. After what we have heard this afternoon it is quite clear that if this legislation goes through it will have the effect of setting up a monopoly for the transportation of gas which will not even be owned by the Canadian people. It would be bad enough for the government to be assisting private monopoly in this country under any circumstances, but when the

government is taking steps to assist in the setting up of a privately owned monopoly which is going to be controlled by finances outside the country it is that much worse.

I am glad that at least the leader of this party has set before this committee and this country a constructive and clear-cut proposal as an alternative to what the government is proposing. I have no desire to get into any dispute with the Leader of the Opposition about his remarks this afternoon. They were very lengthy remarks, which of course was quite proper when he was discussing the longest pipe line in the world, but I must confess that when he was through I was not quite sure what his party was proposing as an alternative to what is now before the committee. He did review two or three different projects or plans which he thought might be considered, and he did say that under certain circumstances, if I interpreted his remarks correctly, as a sort of last resort he might be inclined to agree with the proposition of a publicly owned pipe line across Canada. But certainly he surrounded it with enough qualifications and escape clauses so that at the present moment it is hard to visualize exactly what he would propose.

The closest I could come to it would be something like this, that if this pipe line, this gas monopoly, were owned by private concerns in Canada exclusively or to a greater extent than by United States interests, then he would have no objection to it. Of course that makes the situation rather clear-cut as far as we are concerned, because I shall admit that if we have a choice as between a Canadian owned monopoly and a United States owned or controlled monopoly, we would be inclined to accept the Canadian because we are Canadians. Certainly, however, if we have to choose between a private monopoly and a publicly owned utility, we will go for the publicly owned utility. I shall give my reasons for that in a moment.

I have said that this legislation sets up a monopoly. The Minister of Trade and Commerce, in introducing the resolution today, went to some pains to point out that there is an undertaking—so far as I can see it is only a verbal undertaking, and certainly it is not part of the agreement that is attached to this legislation—that this company is going to offer 51 per cent of its outstanding stock to the Canadian public, and by that means tried to leave the impression that this would assure Canadian control of this company. I think the Leader of the Opposition demolished that argument rather effectively, in his speech today.

I might add that there is no guarantee whatsoever that even if there were 51 per cent of the outstanding stock of this company offered to the Canadian public, it would be in fact owned by the Canadian public. In the first place, if it were offered as a public issue there would be nothing to prevent United States capital from coming across the line and buying up the stock, or using Canadian subsidiaries or stooges to buy it up on behalf of United States interests. Eventually, so long as the issue of stock remains in private hands, there is absolutely no guarantee whatever, and there cannot be any guarantee, that the ownership of the pipe line will remain in Canadian hands. On that we can be perfectly clear.

We can ensure that this public utility, which in fact is going to be a monopoly, can be retained in Canadian ownership only if it remains in public ownership in the right of Canada. That is why we are particularly concerned that the government should give consideration, even at this late date, to building the pipe line as a public utility to be built either by the federal government or in co-operation with the provinces.

My own view is that we would have an ideal situation for the future if the federal government were to finance, build and own the trunk pipe line from the Alberta gas fields to eastern Canada and if the provincial governments concerned were to undertake to build lateral lines north and south in order to serve the various communities within the province, as a public undertaking. That would give an opportunity to the municipalities, the cities and towns within the provinces, to set up publicly owned utilities on a municipal basis to serve their local needs, and to be the distributors.

In that way we would have an integrated publicly owned utility which would be able to protect the public interests at every step. As it stands now, the proposed legislation favours the private interests. It fails to protect the public interest. It fails to protect the interests of the provinces and municipalities through which it will pass, and can only result in providing an advantage to United States industry over Canadian industry.

There is another reason why we believe that a publicly owned utility in this field would be in the best interests of the future of Canada. It has been mentioned in this debate that natural gas, although it is a very important source of fuel and power, is only one of the sources of fuel and power in this country. There are also oil and coal, and there will be in the future atomic energy and perhaps new forms of energy about which at the present time we do not even know. In those circumstances, surely it would be wise to have some sort of national fuel policy, some sort of integrated planning, in order that all these various forms of energy,

fuel and power could be used to the best advantage in every part of the country.

Fears have been expressed from time to time on this subject. I remember that on many occasions the hon. member for Cape Breton South has pleaded in this house for a national fuel policy because of the fact that, when different forms of fuel and energy come into competition with one another, it can only result in inefficiency and confusion so far as the fuel policy in this country is concerned. With a publicly owned utility on the basis I have described, with the trunk line owned by the federal government and provincial lateral lines and municipal distribution systems, it would be possible to set up a national fuel policy that would result in the best possible utilization, in the most efficient manner and in the best public interest, of all the various fuels that we have in this country. Unless that is done, unless some intelligent planning and foresight is forthcoming at this time, then I predict that we are going to head into the most chaotic condition possible with regard to the various fuels in this country.

In introducing his legislation today the minister gave some of the facts with regard to the agreement that has been drawn up between Trans-Canada Pipe Lines and the federal government, with the co-operation of the Ontario government. The impression might be left that the proposals upon which the agreement is based were proposals made by the company, which the government accepted because it felt that was the only way out. As a matter of fact they appear to be a set of proposals based on the proposals of the minister himself, which I refer to in a letter dated August 30, 1955, from the executive vice president of Trans-Canada Pipe Lines, Mr. Charles S. Coates, to the minister. I shall read the first paragraph of the letter. It says:

> Dear Sir:
>
> On August 2, 1955, you spoke to Trans-Canada Pipe Lines Limited on behalf of the government of Canada and after consultation with the province of Ontario to the effect that, in the interest of an early completion of the all-Canadian pipe line, the two governments concerned would be vitally interested in receiving from us a proposal, the essence of which would provide that—

Then it goes on to set out in about 11 paragraphs what would be contained in those proposals as suggested by the minister. I find a very strong similarity, almost an identity, between those 11 paragraphs and the final agreement as it was signed between the company and the government, which means that actually the government went out of its way to approach a private company to offer an agreement that, whichever way you look at it, can only be described as being favourable to the company, with all the risk being taken by the government.

The situation is simply this. As between the government and Trans-Canada Pipe Lines, it is a case of heads you win, and tails I lose. What does the agreement provide for? It provides that the company shall take a lease on this section to be built by the crown company for a period not exceeding 25 years, and pay for it as they use it. There is no guarantee whatever that the government is going to receive anything more than they put into the construction of the pipe line. In other words there is no guarantee of a profit or a surplus to the government. There is no undertaking in the agreement under which Trans-Canada Pipe Lines must buy this pipe line at a particular time. Section 7 of the agreement, which is the clause referring to the purchase of the pipe line, is in these terms:

> It is understood and agreed by the parties hereto that Trans-Canada shall purchase the northern Ontario section from the crown corporation as soon as it can arrange the necessary finances.

I should like hon. members to note the last few words, "as soon as it can arrange the necessary finances." That leaves it wide open as far as the company are concerned. It does not commit them to anything. If the pipe line turns out to be an unprofitable undertaking the company can simply say that they have not been able to arrange the necessary finances. They have been quite successful in getting away with that claim for the last four or five years, and they could certainly make that claim again. They have no commitment whatever. On the other hand, the next sentence reads:

> Trans-Canada may elect to purchase the northern Ontario section from the crown corporation at any time during the term of the lease by giving written notice to the crown corporation at least three months prior to the date when the sale is to be completed.

Here is the next sentence:

> The crown corporation will, following receipt of such notice, sell to Trans-Canada all facilities and assets comprised in the northern Ontario section of pipe line . . .

Then follow various details and terms upon which the sale will be made. That means that while the company makes no commitment to buy the pipe line should it turn out to be unprofitable the government, on the other hand, has a firm commitment to sell on the basis of three months' notice at any time. At any time, in the first year, second year or third year, whenever the company feels like it, it can purchase this section of the line in Ontario on three

months' notice and the crown company will sell to Trans-Canada Pipe Lines.

That is the most astonishing kind of deal. Here we have the government of Canada tying the hands of the crown corporation even before it has been formed, even before the legislation has been passed to bring about its formation, and saying in an agreement with a private company that the private company can serve three months' notice on the crown corporation and say that it is going to buy this section of the line and the crown corporation has nothing to say about it. Apparently the parliament of Canada will have nothing to say about it. Neither will the government of the day, unless they want to go to court and repudiate their agreement. That is tying the hands of the government of Canada, the parliament of Canada and the crown corporation set up by the parliament of Canada in advance in the interests of a private company.

That in itself would be enough to condemn this kind of legislation, because I feel that if the public treasury is being asked to advance moneys to construct a section of the pipe line, and if parliament is being asked to set up a crown corporation to own that part of the pipe line, then certainly the government has no business entering into an agreement and making a commitment with a private company whereby on 90 days' notice it can buy out the assets of the crown corporation, while on the other hand, if the pipe line is not to the liking of the company it is under no obligation whatever to buy it at any particular time. That is why I say that this is a case of heads they win and tails we lose.

There is another reason why I feel disquieted about this type of legislation and agreement, and the effect they will have on the municipalities. Several times in the debate this afternoon mention was made of the difficulties that Trans-Canada Pipe Lines seem to have had and apparently are still having with respect to raising sufficient private capital to build the pipe line. It would appear that because of that fact they had to approach the government to ask for public moneys to help them build the line. When this matter was being kicked around in the newspapers last year I took the trouble to write a few letters to the heads of some of the municipalities in my province. As a matter of fact I also wrote to the provincial leaders of the various parties in my province with respect to the question and asked what their views were on it. I will not have time to go through all the correspondence, but I have one letter to which I wish to refer because I think it sets out rather clearly what the danger is.

I mentioned that the company claims it is having difficulty finding sufficient private capital to build the pipe line. I have a letter here from the mayor of the city of Portage la Prairie, Manitoba, dated March 7, 1955, in reply to a letter of mine setting out the proposal as it then was with respect to Trans-Canada Pipe Lines and asking how in his opinion this would affect the cities and towns in our province on a municipal level. He gave me some interesting information which I think the committee would like to hear. After referring to the way in which Trans-Canada Pipe Lines was set up he went on to say:

> A large proportion of the stock of this company is either owned or controlled by Osler, Hammond and Nanton.

This afternoon the minister named Mr. Osler as one of the directors of the company. Osler, Hammond and Nanton are a well known financial firm in the city of Winnipeg. The letter goes on:

> Recently this same firm has made application for the incorporation of a gas distributing holding company under the name of Inter City Gas and so far as I know they have a Manitoba charter or they have at least applied for same. The general idea is that this holding company would back or underwrite local distributors in such places as Neepawa, Brandon, Portage, etc., who in turn would form a company to be known as the Portage Gas Distribution Company or the Neepawa Gas Distributing Company. The parent organization, Inter City Gas, would hold stock in each of the local distribution companies. This appears to be leading into a type of monopoly by a financial concern.
>
> In consultation with Osler, Hammond, and Nanton through their own Mr. Osler we have been informed that there is no lack of funds for these local projects estimated to cost in Portage, for example, $750,000.

Then he goes on to say:

> I have begun to wonder just why there is such an abundance of money for the local projects and such a scarcity for the trans-Canada pipe line.

What does that indicate? It indicates that the same financial interest which has a substantial holding in Trans-Canada Pipe Lines, instead of putting its capital into the building of the main pipe line, is prepared to put a large amount of capital into a holding company in Winnipeg for the purpose of acquiring an interest in the various local distribution companies throughout the province of Manitoba. In other words, instead of using their capital, their financial structure and strength to build the proposed trans-Canada pipe line, which they claim they are having so much difficulty financing, they are already going out and making sure they will have tied up not only the main pipe line but the distribution system within the province of Manitoba. They are already in the process of forming a local monopoly before they have even completed their national monopoly.

Northern Ontario Pipe Line Corporation

It only goes to indicate that there is not a lack of funds as such for the construction of the pipe line itself, but that these companies who are interested in tying up the distribution of gas entirely are prepared to use the funds they have in order to go into the local cities, towns and communities to be served by the pipe line and make sure they have every city and town completely tied up through a system of subsidiaries or holding companies in order that they will have complete control of the distribution system.

That is a direct threat to the municipalities and to the provinces, because they go out to these various cities and towns, through their dummy companies, and offer them long-term contracts. They ask for franchises which in some cases might mean 20, 30 or even 50 years. They tie them up on a certain basis. They own the trans-Canada pipe line. They own the lateral lines. They own the local distribution systems through their dummy companies and they have then a complete stranglehold, a complete monopoly, on a public utility from the gas fields right to the kitchen range.

Is that the kind of thing that should have the assistance of this parliament, which is supposed to be here to guard the public interest and to see to it that the consumer of Canada gets a fair break with respect to the distribution of gas? Is that the kind of thing that this parliament should be assisting in promoting? It would be bad enough if this company were going out and doing this thing on its own hook, on its own capital, through its own financial structure. But it is twice as bad to have the Minister of Trade and Commerce get to his feet in this house and say that the public treasury of Canada is going to kick in anywhere up to $130 million in order to assist this monopoly to get a stranglehold upon the distribution of natural gas right across the four provinces that it is going to traverse.

That is the kind of thing the people of Canada should know about. They should realize that the public purse is being asked to aid and abet the setting up of a public monopoly not only in the transportation of gas from the Alberta gas fields to eastern Canada but also, through the interaction of these various financial interests that are part and parcel of Trans-Canada Pipe Lines Limited, assist them to obtain a monopolistic position in relation to the consumers in the various cities and towns in the prairie provinces. Of course the same thing would hold true in the province of Ontario. That is the serious thing we are opposing in this parliament. That is the reason we feel this legislation should be opposed and stopped, if it is at all possible.

The other day I asked a question of the Minister of Trade and Commerce with respect to the control of prices. I based my question on a statement that had been made by the attorney general of the province of Ontario to the effect that the province has no authority to control the price of gas except that which goes to the consumer; that so far as gas from the pipe line to the utility is concerned, it comes under federal control. On March 12 last I addressed a question to the Minister of Trade and Commerce. I will not bother reading the question or the whole answer. I shall just read the paragraph which has to do with the price. As reported at page 2019 of *Hansard* he said this:

> I notice in the press that the chairman of the board of transport commissioners was reported to have said that the board has no authority to regulate the price of gas in the pipe line even though the pipe line is interprovincial in character.

If what the minister says in that answer is correct, we have this situation. Neither the federal government, apparently, nor the provincial government have any power at the present time to regulate the price of gas from the pipe line to the distributors. That leaves the distributors—and of course, as a consequence, the consumers—completely at the mercy of this pipe-line monopoly. We are therefore opposing this legislation, because we feel that it is aiding and abetting the setting up of a gas monopoly in this country. We feel that it is a sort of trans-Canada give away. If this company requires a coat of arms, Mr. Chairman, to use as a trademark, I suggest it should give consideration to an octopus on a maple leaf shield with a background of stars and stripes.

The Chairman: Shall the resolution carry?

Mr. Johnston (Bow River): Mr. Chairman, may we call it ten o'clock?

Some hon. Members: No.

The Chairman: Has the hon. member unanimous consent to call it ten o'clock?

Some hon. Members: Agreed.

Progress reported.

BUSINESS OF THE HOUSE

Mr. Harris: Tomorrow we shall take the estimates of the Department of Transport. I understand that Monday is private members' day.

At ten o'clock the house adjourned, without question put, pursuant to standing order.

ANSWERS TO QUESTIONS

The following answers, deposited with the Clerk of the house, are printed in the official report of debates pursuant to standing order 39:

TRANS-CANADA PIPE LINES LIMITED

Question No. 213—**Mr. Diefenbaker:**

1. What companies or groups hold substantial sponsoring interests in Trans-Canada Pipe Lines Limited?
2. What are the respective interests in Trans-Canada Pipe Lines Limited held by (a) Hudson Bay Oil & Gas Company Limited; (b) Canadian Gulf Oil Company; (c) Canadian Delhi Oil Limited; (d) Tennessee Gas Transmission Company; (e) the Western Pipe Lines group?
3. What is the parent company or corporation of each of said companies?
4. Who are the member companies or individuals in said group?
5. What proportion of shares in each of said companies is held by a non-Canadian parent company, and what proportion by the Canadian public?

Answer by: **Mr. Howe (Port Arthur):**

The answers to questions 1, 2 and 4 are contained in the agreements among the sponsors of Trans-Canada Pipe Lines Limited, which were tabled on February 20.

Questions 3 and 5 relate to the distribution of the shares of the various participating companies. Information relating to these matters is not available from government records.

POST OFFICES, MONTREAL—BURGLARY ALARM AUTHORIZATION

Question No. 222—**Mr. Hamilton (Notre Dame de Grace):**

1. Has the federal government requested and received authorization from the police department of the city of Montreal for the installation in 10 postal stations in that city of burglar alarms which will be linked directly to the nearest police station?
2. If so, on what date was the request made, and on what date was the authorization received?

Answer by: **Mr. Lapointe:**

1 and 2. On December 27, 1955, the federal government requested authorization from the police department to connect a certain number of burglar alarms from postal stations directly to the nearest police station. On January 30, 1956, the requested authority was received.

IMPORTS OF U.S. AUTOMOBILES

Question No. 258—**Mr. Noseworthy:**

1. What is the total number and value of United States automobiles imported into Canada for the years, 1950 to 1955, inclusive?
2. By what firms were such automobiles manufactured, how many and of what value by each firm?

Questions

3. What makes and how many of each make of car were imported?
4. What series and how many of each series of each make were imported during the above period?
5. What makes and series of cars imported were also manufactured in Canada during the above years?

Answer by: **Mr. Howe (Port Arthur):**

1. The total number and value of passenger automobiles (statistical classifications 5642, 5643 and 5644) imported into Canada from the United States during the years 1950 to 1955 were as follows:

Year	No.	Value
1950	3,154	$ 6,038,482
1951	14,050	29,142,623
1952	13,828	27,409,123
1953	23,501	47,754,941
1954	17,954	39,098,837
1955	27,392	58,886,587

2, 3, 4 and 5. Section 15 of the Statistics Act precludes the disclosure of information relating to private business.

NATIONAL REVENUE SURVEY—PURCHASE OF SHARES

Question No. 280—**Mr. Knowles:**

1. Has the Department of National Revenue made any survey or any investigation to determine to what extent taxpayers in Canada realize a monetary gain as a result of purchasing shares of various companies at a price below that prevailing on the stock market?
2. If not, will the department make such an investigation or survey?
3. Are such gains taxable?

Answer by: **Mr. McCann:**

1. No.

2. Such a survey is not presently being contemplated by the department.

3. The purchase of shares at a price below fair market value may give rise to taxable income under certain circumstances, e.g. where the purchaser is in the business of buying and selling shares or where he is a shareholder or employee of the vendor. Employees receiving benefits of this nature are entitled to special treatment under section 85A of the Income Tax Act.

DUMPING DUTIES

Question No. 284—**Mr. Lennard:**

1. What was the total amount applied as dumping duties on goods entering Canada, during the calendar year of 1955?
2. How much of this amount was applied against textile products: (a) hosiery and half hose; (b) underwear; (c) outerwear?

Answer by: **Mr. McCann:**

1. $1,180,513.

2. No records are kept of the amount of dumping duties collected by commodity.

Questions

POST OFFICE REVENUE—HOUSEHOLDER MAIL

Question No. 302—**Mr. Rea:**

What revenue was obtained by the post office for householder mail (a) for the three years prior to April 2, 1951; (b) for the three years subsequent to April 2, 1951?

Answer by: **Mr. Lapointe:**

(a) 1948-49, $950,413.91; 1949-50, $1,310,-924.98; 1950-51, $1,615,472.39.

(b) 1951-52, $2,027,903.55; 1952-53, $2,143,-751.78; 1953-54, $2,576,259.24.

END OF VOLUME II
