God's in his heaven,
All's right with the world.

—(BROWNING.)

If you trust in God and yourself
you can surmount every obstacle. Do
not yield to restless anxiety. One
must not always be asking what may
happen to one in life, but one must
advance fearlessly and bravely.
—(PRINCE BISMARCK.)

London, Saturday, Sept. 27.

—Only those communications to which
the writers are willing to have their names ap-
peared in print will be published in these
columns. "Citizen," "Old Resident," "Aged
Physician," and "Constant Reader" will
kindly take notice.

—It is expected that Sir Oliver Mowat
will be at the Leamington picnic on the
12th inst. in company with Mr. Laurier.

—For a charming bouquet of rhetorical
flowers from its scented garden, our es-
teemed contemporary will accept the Ad-
vertiser's best thanks.

—The Pall Mall Gazette discusses Cana-
da's immigration failure, but without
shedding much light on the problem.
Lowered taxation and freedom of trading
would help. But Canada can never do its
best as a Colony.

—In its apology to Mr. J. W. Little,
our contemporary states that Mr. Little's
version is corroborated by its own reporter,
who was present. Why, then, did our con-
temporary publish the letter when it had
the witness to its falsity on its own staff?

—The Montreal Trades and Labor Coun-
cil have been voting on Canada's future
with the following result:

Imperial Federation..... 0
Annexation..... 4
Continued Colonialism..... 7
Independence (final vote)..... ALL

—The campaign in favor of prohibition
will soon begin in real earnest, and it is to
be hoped that Presbyterian ministers who take
part will avoid the vulgar and unjust
practice of heaping indiscriminate abuse
upon the class of public men generally
called politicians. That abominable prac-
tice has been carried much too far, and it
is often indulged in by ministers who have
nothing to say in the matter of standing
themselves. A large proportion of the men
in public life in Canada are elders or other
office-bearers or members of the Presby-
terian Church. To abuse men one day and
sit with them in the church courts or at
the Lord's table the next is not high-class
work for a Presbyterian minister. It is
not any higher work for the Methodist
brother who would perhaps tell you in
private that the stationing committee of his
own conference could give points to any
politician. —(Canada Presbyterian.)

HOW TO SEVER PASTORAL TIES.

Recent church troubles in this neighbor-
hood and elsewhere direct attention to the
need of some better method of severing the
pastoral relationship than exists in most of
the religious denominations. In the Roman
Catholic Church, where, as in Ontario,
canonical government does not prevail, the
bishop is absolute. This kind of rule
works well or ill in proportion to the wis-
dom of the bishop, but it is not popular
either with priest or people, and is out of
accord with that self-government which
should be the rule both in Church and
State. In all the denominations of
Protestantism, except the Methodist, there
seems to be no method of severing the
pastoral relation except by starving the
minister out or fostering discontent until
it becomes too formidable to be resisted.
This is hardly a desirable state of affairs
for either pastor or people. The Metho-
dist system of a settlement for one
year, with an utmost limit
of three years, is not universally
satisfactory, either. It is all very well
when the congregation is anxious the
minister should go, but hardly so when
the congregation is envious the minister
should stay. On the whole, the Methodist
system of itineration has worked pretty
well—though many are advocating a longer
possible time limit. What the other de-
nominations might do would be to adopt a
five-year limit as to engagement—allowing
the engagement, however, to be renewed
from period to period if pastor and people
mutually desire it. Such a system would

be in accordance with the spirit of the age;
it would not shorten any desirable pasto-
rate; while it would afford a dignified op-
portunity for the termination of pastoral re-
lations.

ELECTRICITY FOR THE FARM.

One of the great attractions at the
World's Fair is the Ferris Wheel. The
ingenuity and skill of its inventor have
been recognized throughout the world.
Carl Snyder in the Review of Reviews
sketches the effects of such an invention as
that of George Washington Gale Ferris,
and argues that the inspiration of a moment
which brought into existence a structure
absolutely perfect in design and massive in
strength, though slender and apparently
frail in contour, is but the herald of an era
of still greater progress in electrical inven-
tions.

Isis the opinion of Mr. Ferris, as well as
of all the leading electricians of the day,
that modern life will be absolutely revol-
utionized, so far as its practical everyday
work is concerned, within a period of ten
years, through means of electricity, and
that every available piece of water power
will soon be claimed and converted into
electric force. Along the highways leading
from the country into all the leading
towns and cities electric lines will
be built on which will run
passenger and freight trains. These will
gather up the produce of the farm and
dump them at the offices of the great
trunk railways. The farmer will convey his
produce only to the nearest highway, and
have it forwarded to the place of shipment
or to the local market. The electric car
will bring his mail daily almost to his own
door, and instead of the sometimes cheer-
less and lonesome life of to-day on the
farm, those who reside in the country will
in future find themselves in close touch
with the people in the towns and cities, the
telephone as well as the electric railway
aiding to bring about this most desirable
condition. Water-power means the min-
imum of cheapness in the generation of
electric power, and the favored localities
of the future will be those in the vicinity
of waterfalls. What has been regarded,
therefore, as comparatively valueless in
many localities will in the near future
be regarded as fixed factors for
municipal growth and agricultural prosper-
ity.

Referring to the possibilities of elec-
tricity, Mr. Ferris said in a recent inter-
view that there is absolutely no reason at
this moment why cities like Buffalo, Min-
neapolis and St. Paul should consume a
single pound of coal within their entire
limits, and that even with present ap-
pliances, electricity in those cities can do the
work of coal not only far cheaper, but also
without dust, smoke or soot. Farm work
also at no distant day, says Mr. Ferris, will
be performed by electricity very largely
instead of by the use of horses. The ex-
tent to which electricity may be used is
practically limitless, and it is pleasing to
know that every section of the community
may share in the blessings introduced by
the skill of the inventor.

REVERENCE FOR CHRIST'S TEACH-

—(Toronto Globe.)

In the course of an eloquent sermon on
the law of love, Rev. D. J. Macdonnell
made a passing reference on Sunday night
to the now settled controversy regarding
Sunday cars. Jesus Christ, he said, all
down the ages, has been occupying a
greater share in the thoughts of men. In
the recent controversy both sides had made
appeal largely and honestly, he believed,
to the teachings and example of Jesus Christ.
Both parties had quoted his words. "Do
ye unto others as ye would that they
should do unto you," said one. "If you
would not like to work on Sunday, do not
make others do so." On the other side
were quoted the words, "Mercy is better
than sacrifice," and the welfare of man is
better than the observance of days. The
difference between the parties was in the
application of these principles. Harsh
things have been said of ministers and
churches, but in not one instance, so far
as he had observed, had the name of Jesus
been mentioned, save with reverence, or
his teachings spoken of, save as binding and
authoritative. The appeal had been to the
law of love, as laid down by Christ.

CHICAGO'S MAYOR'S BRIDE.

—(New York Sun.)

It is a rare bit of gossip for Chicago that
the venerable mayor of that place, Carter
Harrison, is to take to himself a young bride,
a Louisiana heiress, a native of Biloxi, the
loveliest spot on the Gulf. The venerable
mayor has already had happy experiences
as a husband, and all who know him will
wish that he may enjoy unalloyed bliss
with the lady to whom he is now to give his
heart and hand. We are sure she will
find him to be the very best of husbands,
both amiable and gallant. When he is
spoken of as venerable, it must not be
understood that he is too old for matrimony;
and indeed, at what age is any man
or woman ever too old for it? Many of the
old chaps are fuller of romance than the
young fellows, and know better how to
treat a wife. The mere disparity of age
between a bridegroom and his bride is not
worth taking into account compared with
harmony of spirit, mutual devotion, and
depth of affection. Let the gossips of
Chicago shut up while we exclaim, Happy
Harrison.

A LATELY INVENTED AIR BAG HAS BEEN GIVEN

a practical test in the deep anthracite coal
mines of Pennsylvania and has proved a
success. The apparatus consists of an air
bag, an appliance to hold the neck shut and
a battery and small incandescent lamp. The
air bag is made of stout canvas, worn on the
back and fastened under the arm. From
the top of the bag a rubber hose runs to
the wearer's mouth. The air is inhaled
from the bag and expelled through the no-
strils. The battery is strapped across the
chest and the lamp is pinned to the coat.
After a big explosion, when it is dangerous
to enter a mine owing to the rapid collection
of fire-damp, rescuers can be fitted out with
the air bags and enter the pit without any
ill effects.

HERE, THERE AND EVERYWHERE.

It is reported that the Chezirah palace,
situated on the banks of the Nile, is to be
converted into a hotel, that a line of steam
ferries is to ply across from Cairo, and that
the Nile is to be tunneled.

It is one of the duties of the prime min-
ister of Madagascar to marry the queen of
the country for the time being. The present
premier has been married to three
queens, one after another.

The religious census of Australia, just
completed, shows 1,435,066 members of the
Church of England, 84,118 Catholics, 493,
369 Presbyterians and 394,564 Methodists.
These are the four most numerous denom-
inations.

Theropneustes Cochiti, in Tonquin
and the extreme east there is a very ven-
omous snake called the "peja" whose
venom causes death in from two to three
hours. Every year this snake has been the
cause of death to 15,000 persons.

A CAMEL has twice the carrying power of
an ox. With an ordinary load of 1,000
pounds he can travel twelve or fourteen
days without water, going 40 miles a day.
They are fit to work at 4 years old, but
their strength begins to decline at 25.

LEMON JUICE is very similar to lemon juice
in its nature, and is sold in the market by
the bottle. It is generally acknowledged
to be an antidote to scurvy, and by English
law it is rendered compulsory for every ship
to take on board lime or lemon juice.

In the West Indies the fireflies are very
large and are frequently caught and con-
fined in netting for personal ornaments. A
lady will sometimes appear in a ballroom
with red, green, yellow and blue lights on
head and shoulders, the tiny illuminations
being caused by captured insects.

URANUS has four little moons—Ariel,
Umbriel, Titania and Oberon—which,
faintly enough, rise in the north and set
in the south. A single diminutive one, be-
longing to Neptune, traverses the sky from
southwest to southeast. Neither Mercury
nor Venus has any satellites.

The "devil's plant," which clings close
to the earth and bears beautiful red bloss-
oms, is said to be abundant around Carth-
age, Tunisia. It is so poisonous that bees,
tasting of a liquid drop always found in the
calyx of the flower, drop dead almost in-
stantly, and thus, it is said, nearly every
hive in the country has been depopulated.
It causes all other plants around it to
wither away, and it is death on cattle.

THERE ARE OVER 80,000 STUTTERING CHILDREN
in the schools of Germany. The increase
has been so great during the past four years
that the defect is considered contagious.
The famous Dr. Guttmann is authority for
the statement that the increase is due to
stuttering—what the young mimics who imi-
tate stutterers soon become involuntary
stutterers. The schools of the city of
Breslau have a total of 2,400 stuttering
children.

An interesting experiment will be made
by the Washington signal force. It is pro-
posed to establish a signal station at one of
the highest points on Round Hill, Snickers
Gap, Va., and another on the top of the
Washington monument. Communication
will be maintained by means of a heliograph
in the daytime, and at night by one of
the new signal lanterns recently
adopted by the signal corps. The officials
of the signal corps have little doubt of their
ability to read signals successfully between
the two points named.

LADIES will be interested as to the sub-
ject of mirrors, and the first record con-
cerning them dates back to the days of the
venerable Moses and they were made of
brass. When the Spaniards landed in
South America they found mirrors of
polished black stone in use among the
natives. In the fifteenth century the first
glass mirrors were made in Germany by a
blowpipe and were convex. The first manu-
factory of glass mirrors for sale was estab-
lished in Venice early in the sixteenth
century. In the reign of James I. men,
women and children were looking-glasses
publicly, the men as brooches or ornaments
in their hats and the women at their girdles
or on their bosoms.

ITCHING HUMORS.

Torturing, disfiguring eczema,
and every species of itching,
burning, scaly, crusted, and
simply skin and scalp diseases,
with dry, thin, and falling hair,
relieved by a simple application
and speedily and economically
cured by the CUTICURA REMEDIES,
which the best physicians
and remedies fail.

ITCHING SKIN FOR YEARS

My disease (psoriasis) com-
menced on my head. Spread rap-
idly all over my body, got under
my nails. Scales would drop all
the time, suffering endless, and
without relief. I cannot praise
the CUTICURA REMEDIES too
much. Have made my skin as clear from
scabs as a baby's. All I used was \$5 worth.
—DENNIS DOWLING, Waterbury, Vt.

SKIN DISEASE 9 YEARS

Had over nine years a dreadful
skin disease. First appeared a
few small red spots on my breast
which soon spreading slowly to
my back. The spots turned gray,
and began itching. Small scales
would fall out, and it continued
all over my body. I tried all medicines, con-
sulted doctors, no use. Then I gave it all up.
Tried the CUTICURA REMEDIES, they cured
me entirely. My skin now pure and white as
that of a baby. —JOHN E. PEARSON, Whitcomb, Wash.

ITCHED SCRATCHED BLEED

Suffered three years with pimples
which I scratched until I would
bleed. After scratching three years,
tried CUTICURA REMEDIES. After
using two sets am entirely cured.
—A. F. GLAMM,
Photographer, 1000 March, Wis.

LARGE SORES ON FACE

Was greatly troubled with blood
poisoning. Large sores appeared
on my face. Hands were in such
a condition that I could not use
them. Tried numerous physicians
and remedies, no benefit, tried
CUTICURA REMEDIES, and am now
free from all skin trouble.
—SAMUEL J. KELLER,
222 Fairmount Ave., Baltimore.

Sold throughout the world. Price, CUTICURA,
Box, 50c; Resolvent, \$1.00. POTTER DUGG
AND CHEST. CO., Sole Proprietors, Boston.

Saturday has always been, and always will
be, a popular day to buy CLOTHING—Clothing
for children, boys and men—Ties, Braces, Collars
and Cuffs. The best place, from a money point
of view, is what you want. We can help you.
We can direct you if you have not found out
this popular shopping center. Come to-day.

Children's Tweed Suits \$1.95 and upwards.
Boys' Three Piece Suits, \$3.25; the wear and
appearance will please you, young men; and suits
for men, \$5, \$7.50 and \$10, popular prices; the
quality is the best the money can buy.

Stock well assorted in Gents' Furnishings.
Every young man, every man that wears a hat
should examine our stock. The finest hats we
ever carried. Hats in all the new and fashion-
able shapes, soft and hard. New colors, Cuba,
seal, navy and black. For \$1 you get a really
good article. Better, of course, at \$1.50 and \$2.
Ties, Braces, Collars, Cuffs, White Shirts, Under-
shirts, Socks and Unlaundered Shirts. Could fill
this space telling you about the excellent quali-
ties of any one of these lines. We ask only a
comparison of values. See our window for styles.

Ordered Clothing a specialty. Fine work,
good fit, splendid selection of cloths. Suits to
order as low as \$13. Better quality at \$15,
\$18 and \$20.

Tweed for boys' wear. We can show a good
assortment and cut free of charge.

One and all are invited to visit our stores.
Obliging attendants in every department who
will be pleased to show you through.

We draw your attention to our Mantle De-
partment. Jackets, Wraps and Capes for ladies'
and children. Fifteen cases of new styles al-
ready opened up. See our window.

Terms Cash. Phone 791.

CHAPMAN'S

126 and 128 Dundas Street,
LONDON.

Large as a Dollar

There are some boys on my poor little boy, who are not so big as he is. They are especially so on his legs. He is four years old, and his legs are so big that he can walk on his hands. His legs are so big that he can walk on his hands. His legs are so big that he can walk on his hands.

HIGHLAND MARY'S GRAVE.

Where Rests the Remains of the Sweetheart of Burns.

A Touchingly Pathetic Shrine Amid Noisy Streets, Sealed by a Wall and a Gate.

The pilgrims of Burnsland will find no shrine more touching, pathetically impressive than those associated with the most famous hero of modern poetry, the "Highland Mary of Burns" sweetest and truest. Fifteen miles up the coast from "Auld Ayr" is Ardrossan and her birthplace in the heart of common life. Mary, says the Ladies' Home Journal, "From the narrow street we look across the heights of the west highlands, where she grew to young womanhood. In the port of Canine, behind 'Ardrossan's' moor, we find the site of the poor abode where she spent the last summer of her life in preparation for her expected wedding with Burns. As Colquhoun we see the great rambling, white pillared mansion where she was employed when the poet first saw and loved her, and about it we wander by wood and stream amid the scenes where she lived with her lover, and where after 'one day of parting love' the pair 'fore themselves sauntered' never to meet more.

Alloway's 'haunted kirk' we find a monument of the parting—the little Burns gave her last day, and upon which the vows were said, and the tears of her shining hair which she gave to him. Here also her spinning wheel. Near the Church of the Holy Fair at Mauchline is the tomb of the old house of Hamilton, of which she was some time an inmate, where she and the bard often met and where, according to her niece, Miss Pegg, his mother described and noted the pleasing had heard the mother repeat. The humble dwelling of Mary's paternal aunt—where Mary, a ship carpenter—where of service, found her brother struck with a contagious fever, bravely nursed him to convalescence, and then accompanied to his making—mercifully saved by the fever from a life of a broken heart.

Not far away in the spot where the heroic girl is laid in death. It is in the burial plot of her uncle, in the west kirkyard, near Crawford street. A pathway leads to the turf by the feet of many visitors from the farthest north and south, about it is so pitifully different from the scenes she loved in life—the heathered slopes of her highland home, the woodland dells and brooks where she lingered in dalliance with her lover. Scant foliage is about her, few birds may warble above her here. She lies by the wall, narrow and noisy streets closely invest the inclosure; the air is sullied by smoke from factories and from steamers passing within a stone's throw on the crowded river; soot from 100 chimneys blackens grass and leaf; the clangor and din of hammers and steam whistles, of machinery and traffic, resound through the sacred place above the ashes of the "fair-haired lassie."

Two or three faded wreaths rest upon the grave one of them (placed by the loving hands of an American) has lain here since the last anniversary of Mary's death and of a composition of the exquisite and impassioned lines, "To Mary in Heaven." The devoted girl has been "incubated in dust" for more than a century. During half a period her grave was unsought and neglected; now it is found necessary to protect it from the depredations of tourists by an iron railing. Fifty years ago residents of Burnsland proposed by subscription the erection of a monument over the mound. It is of marble, twelve feet in height. It bears a sculptured medallion representing in relief Burns and Mary with their hands clasped, and the inscription: "To Mary, the Sweetheart of Burns, who died at Mauchline, Scotland, on the 16th of June, 1796, at the age of 26 years. Erected over the Grave of HIGHLAND MARY, 1842.

"My Mary, dear departed shade, Where is thy place of blissful rest?"

ALLEGED CATTLE STEALING.

H. Ball & Sons, of Ayrton, Arraigned—The Drayton, Ont., Sept. 1.—Last night H. Ball & Sons, of Ayrton, Ont., were arraigned by Constable Flath for alleged cattle stealing, cattle belonging to Jas. Walsh, near Durham having strayed from his farm. The prisoners were charged with stealing the cattle yesterday, and offered the sum of \$100 to be paid for the cattle. The prisoners were charged with stealing the cattle yesterday, and offered the sum of \$100 to be paid for the cattle. The prisoners were charged with stealing the cattle yesterday, and offered the sum of \$100 to be paid for the cattle.

Child-Love. He—And are you kind and affectionate to your mother? She—Indeed I am. Why, the only dresses she ever gave me are my old ones.

The Zealot. Toodles—Papa, which are the bestest, ladies or men? Father—Ladies, my boy. Toodles—Then, don't you think you are? Mamma ought to be patient with us boys, 'cause we got a wrong start—don't you see?

The Famed for a Reply. He—I had called to-night to ask—to ask for your hand. She—Well (silence while the clock ticks) why don't you ask?

South American Nervine cures indigestion and dyspepsia by acting directly on the nerve centers at the base of the brain, which communicate with and control the stomach.

John Friend, People's Confectioner.—Remodeled store and lunch room; business on more extensive scale. Everything best quality. Cakes, hams, always on hand, 171 Dundas street.

Gentlemen—Send your clothes to the London Cleaning and Spinning works. We have them renovated by first-class tailors. Goods called for and delivered. Office at Sharkey's barber shop, Richmond street; phone 281. F. W. Nozaro, proprietor.

Parents Must Have Roots. A president of one of our colleges says: "We spend many sleepless nights in consequence of our children suffering from colds, but this never occurs now. We use Scott's Emulsion and it quickly relieves pulmonary troubles."

"She's as pretty as a picture." "But no" as her photograph. "They never are." "When money grows timid it makes the rest of us shy."

S. & J.

We are safe in saying that never before in our history have we had such a large stock of new goods to hand so early in the season. If this suggests anything it is that we have lost no time in making our purchases and having them forwarded with all possible dispatch. Our aim has ever been to keep up with the times, but this year we are away ahead of them and everybody else. Our European buyer had the pick of the market. He was the first to arrive from this locality.

68 CASES NEW GOODS

Already opened out.

As spacious as we consider our store, it will not be one bit too large when the contents of all the cases are properly arranged. This is done just as they come in, and oh!—but you must see for yourself, as seeing is believing.

WE HAVE A LOT OF CUSTOMERS.

WE HAVE A LOT OF GOODS.

We draw special attention to our Dressmaking Department, because with us it is a special one. We make it a point, or rather our head Dressmaker does, to secure the best and latest ideas from the marts of fashion, so that those desiring stylish and well-made dresses should avail themselves of her research.

SMALLMAN

& INGRAM,

147 & 149 Dundas St.

LONDON, CANADA.

London and suburbs have a population of 35,000 persons. London is situated in the garden of Canada, midway between the Niagara and the Detroit Rivers.

London is the center of nine different lines of railway, giving easy access to the whole continent, and to the lakes and seaboard.

London has direct connection with the three great Canadian lines of railway—the Grand Trunk, the Canadian Pacific, and the Michigan Central.

London controls a line of railway from the city to Port Stanley, on Lake Erie. Each day more trains arrive at and depart from London than arrive at and depart from any other Canadian city in the same time.

London has two public parks. London has six charitable institutions, two hospitals and seven public buildings.

London has a good street railway, which will be much extended during the year. London's rate of taxation is 18 mills, which includes all school rates, etc.

London's public water supply is obtained from never failing pure springs four miles from the city. Their yield is practically unlimited. London has the best drinking water on the continent.

London is an excellent health resort, as it has a lower death rate than any city of its size on the continent, and it has magnificent white sulphur baths within its limits.

London has 1 opera house and 4 public halls. London has 13 public schools (and a number are under contract), not including kindergarten; 3 Roman Catholic separate schools, 2 ladies' colleges, and 1 collegiate institute.

London has 1 university and 1 medical school. London has a Conservatory of Music and a School of Education.

London has two daily newspapers (morning and evening editions). London has 2 public libraries.

London is an excellent center for manufacturing and commercial enterprises. There are already established wholesale houses for groceries, hardware, drygoods, small wares, boots and shoes, crockery, etc. There are one or more manufacturers of furniture, engines, boilers, toys, turnouts, iron and brass foundries, carriages, burial caskets, agricultural implements, stamped tinware, railway car oil refining, leather, barrels, machine tools, clothing, cigars, office and school furniture, biscuits and confectionery, mirrors and beveled plate-glass, corsets, furs, beer, washing compounds, acids, woodwork of every description, etc.

London's civic assets are \$2,547,798.34 and the balance of assets over all liabilities is \$422,861.19. The total assessment is \$15,343,097.

London has 44 churches, every religious denomination of any importance being represented.

London has an excellent Entomological Society and exhibition, and some of the ablest entomologists to be found in Canada.

London has markets three times weekly, the best in the west. The Great Western Fair is held for ten days in September.

Further particulars about the city may be obtained by applying to the mayor, the city clerk, the secretary of the Board of Trade, or the ADVERTISER.

London has six banks and eight loan and investment associations.

The unsuccessful speculator is among those who find it particularly hard either to make down or settle up.

Just at the present time the most desirable immigrant is the yellow boy.

LIVE STOCK

SOME HANDSOME SHEEP.

Good Specimens of Three of the Most Popular Breeds.

If you want lambs to market in mid-winter, the Dorset is your best breed. If you want a large, hardy sheep, the Cotswold is considered best. For lambs and animals that fatten easily and quickly, also for early production, the Shropshire shares the honors with the Dorset.

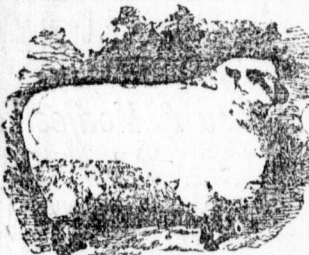

COTSWOLD YEARLING EWES.

Our first illustration shows a yearling ewe of the ever popular old Cotswold family.

The Cotswold is a white faced sheep, especially valued in the northwest. It belongs to the long woolled family. The rams are hornless. A full grown Cotswold wether sometimes weighs when dressed for market 344 pounds, while the ewes shear 11 pounds of wool to a fleece occasionally.

Fig. 2 shows a yearling Shropshire ram. This is almost a perfect specimen of the young Shropshire ram. At a year old this animal weighed 300 pounds. Shropshires have black or dark faces and legs, sometimes spotted with gray. They have wool of medium weight, length and fineness. Prize Shropshire rams in England have sometimes sold for as high as \$550.

YEARLING SHROPSHIRE RAM.

We have shown here illustrations of white and black faced sheep. We finish with a brown faced one, the handsome and docile Southdown.

The Southdown is a short woolled breed, its fleece being not so heavy as that of either the Cotswold or Shropshire; neither is its carcass so large. But a thrifty farmer of our acquaintance pays his taxes annually from the proceeds of a small but first class flock of Southdowns, and the taxes are heavy too. Southdown wool is very fine and soft, and in America the breed sustains its English reputation of producing the best mutton sheep in the world. In the case of the thrifty farmer already mentioned, there is only one trouble with his beautiful South-

SOUTHDOWN SHEEP.

downs. He becomes attached to the lambs, and when it comes time to send them to the butcher it hurts his feelings so that he threatens every year to go out of the sheep business or get some breed less gentle and intelligent.

Cost of a Chicken.

Under ordinary conditions chicks ought to be hatched, making a fair allowance for value of eggs and food for sitting hens, at a cost of less than five cents apiece. The highest cost per pound gain during any week, while growing chicks to 3½ pounds average weight, was less than seven cents, and the cost averaged much less than six cents. At the prices generally obtained for chicks of this and lesser weights the growth was certainly a profitable one. With chicks having the liberty of the fields, it seems reasonable to expect a still cheaper production of meat, and it would appear that a profitable use for some of the skim milk of the farm would be in the growing of chicks for home use or for the market.

An unlimited supply of sweet skim milk can apparently be given to chickens with advantage, but sour milk must be fed with caution. Where sour milk only is available it is best to coagulate thoroughly by moderate heating and feed only the curd, straining out as much of the whey as possible.—New York Agricultural Experiment Station Bulletin.

One is glad to observe there are still several studs of that fine old breed, the Vermont Morgan horse, in existence. Tennessee and Kentucky have never given the Morgan up altogether. But breeders of these horses ought to advertise more extensively.

An uptown association announces a "chalk talk by a reformed milkman."

Minard's Liniment for sale everywhere.

FOR HOG FATTENING TIME.

Begin Early, as Soon as the Hot Weather Is Over.

The fattening process of hogs begins generally in the fall, so that the carcasses can be sent to market in the winter. This is due largely to the fact that the weather is a bad time to fatten hogs, but it does not follow that the work must be left too late in the fall. As soon as cold weather is really here early fattening should begin. In the fall there are many things which can contribute toward fattening hogs which will be lost through lack of use. When the fattening is begun late in the fall, the work is carried well into winter, at a time when very often all kinds of feed are high. The cold weather of winter is almost as bad a time for fattening hogs as the hot period of summer. The animals have to eat to make heat to resist the cold.

The best time for the work is early in autumn—as soon after hot weather has gone as possible. Spring litters that have passed successfully through the summer season are in excellent condition for the fall fattening. They are of the right age, and if they have been fed properly through the heated term they have formed bone and muscular frames that are perfectly adapted to fattening. The keeping through the summer should not be expensive. Plenty of milk, grass and clover are the essentials—articles that are never so cheap as during the months from June to September. Such feed keeps the hogs healthy, and their appetite for corn and meal is strong in the fall.

Experiments prove that hogs to be the most profitable should be placed on the market in a fat condition in from eight to nine months. This means that March and April pigs should be ready for the butcher in November or December, or even earlier. Give them red clover for the first five or six months and then fatten them on Indian corn along with their clover. The result is that they should weigh from 250 to 300 pounds by late fall—a good growth profitably made.

The change from clover to corn should begin gradually in the early fall. First give them corn along with their clover, a little at a time. Gradually increase the amount until they are fed without the clover at all. To increase the amount of food for fattening it is also essential that the process should be gradual. Any haste or great change might cause sickness and retard growth for several weeks.

Pigs raised on corn all summer will not take kindly to corn at once. It often makes their appetite poor, and this means poor health and unprofitableness. Constipation often follows the change, and this can be avoided by giving them more of loosening food until their systems have become accustomed to the corn feed. Pumpkins are great things for feeding the hogs when inclined to constipation, and in the fall these are plentiful. Boiled apples or steamed grass or clover are also excellent bowel regulators. When it is remembered that four-fifths of diseases of swine are due to constipation, this point will be generally heeded.—E. P. Smith in American Cultivator.

The Horses to Raise For Profit.
There are but two kinds of horses for farmers and small breeders to profitably raise now, and these are the highest types of light harness horse and the heaviest draft horse that can be produced, with quality, high finish, action and good bone. These kinds may be raised at a good profit if the business is conducted with proper care and the right kind of breeding stock is procured to start with. To commence right the best material is very important for a breeder.

If farmers want to raise light harness stock, let them aim to raise coach or carriage horses, found their principles of breeding on individuality, knee action, good color, with high finish, quality and above all size, this being a leading feature in a light harness animal, and on which its value depends, everything else being equal. No animal should be less than 15½ hands, and a stallion should be 16 hands and weigh not less than 1,350 pounds, always, if possible, dark bay or brown. Strive to breed a fixed type of horse, so that any two would match. Never cross or mix the breeds. This means retrogression.

A fixed type is what the public wants. Every animal should be bred for a fixed purpose, improving the stock all the time by weeding out the culls and keeping the very best for breeding purposes. Occasionally, buy a good one, when the opportunity occurs, with both breeding and individuality to strengthen the breed. The very best stock to produce this class of horses is the Hambletonians, the Wilkeses preferred. All animals purchased for breeding should be as near as possible the standard wished to be produced and should be selected from the most producing line of blood and the highest type of the American trotter that the purchaser can afford, all being selected from the most fashionable lines of blood within the breeders' reach; but do not sacrifice size, quality, color or action for the standard.—Spirit of the Turf.

Live Stock Points.
If you want lambs in September, they will be able to get fall pasture and take a whack at caring for themselves before cold weather.

Don't neglect to cull out the chickens in August. Weed out the roosters, the old hens and the feeble ones and leave only strong, prime birds for winter laying.

Cudahy, the great meat man, failed partly because of the drought in Europe. Lack of rain destroyed the fodder crops there, and farmers were obliged to throw their live stock upon the market to keep it from starving to death. That brought down the price of meat across the Atlantic. Shippers and dealers here who had invested heavily in the chance of continued high prices for pork and meats lost accordingly. The rest of the story is, however, that with the scarcity of stock animals in Europe next year prices there will go soaring. Then American producers and shippers can get their innings.

Carters' Little Liver Pills must not be confused with common Cathartic or Purgative Pills as they are extremely unlike them in every respect. One trial will prove their superiority.

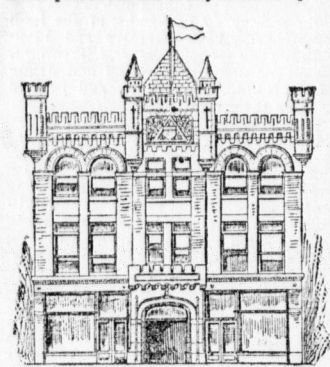

SECRET SOCIETY BUILDING.

Arranged With a View to Business as Well as Social Requirements.

(Copyright, 1893, by American Press Association.)

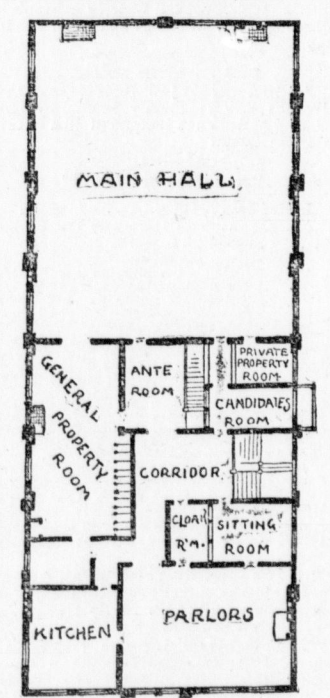

This is a building planned for a Knights of Pythias society. With some modifications it would be suited to the requirements of other secret organizations. With this thought in view, the arrangement and building may be of interest to others than those particularly acquainted with the society named. It could also be used in any small town which needs a hall and the social conveniences, which are now regarded as a necessity in all communities.

Those having in charge the construction of this building have placed it on a business basis, so that its earning capacity will meet all its charges and leave a surplus to go into a sinking fund. The plan given is of the third floor. This floor is shown because it is of more interest than would be the others. The first floor contains two stores, and the two front basements are so arranged and finished that they will afford a moderate earning capacity. The second floor has a number of offices in the front of the building, and the rear part is arranged for general social purposes, but with no direct connection with the secret organization which built the rooms above. In connection with this room on the second floor there is an anteroom in the center and two rooms on each side in front of the hall. One is a smoking room and the other a reception room. These are intended for the general social uses which are a legitimate part of the life of any community.

FRONT ELEVATION.

The third floor is in a measure self explanatory. The main hall has an open timber roof and is high enough to admit of a gallery. The floor space is 48 by 58 feet, and altogether it will make a very beautiful room. On one side, in front of and connecting with the hall, is a general property room in which are provided proper closets and necessities. In the middle is an anteroom. Closely connected therewith is the candidates' room, and immediately next to the hall is a private property room. It is to be noticed that the general property room and all other rooms named have a direct and at the same time an independent connection with the hall. From the property room, on the left as one enters the hall, there is a connection with the water closet, which latter room also has connection with the corridor of the main floor. In the front part of this plan are shown a parlor, kitchen, ladies' room and a general cloakroom. The stairway from the second to the third floor is broad and provided with an ample landing. Underneath the stairway is a water closet. The stairway from the ground floor to the second floor is 5½ feet wide and has a landing half way up. This makes the ascent less tiresome. The stairs to basement are made as open as possible, so as to intercept light into the basement rooms in as slight a degree as possible. A feature in the lighting of these front basement rooms may be noticed. Immediately under the platform of the front windows there is a line of windows coming above the sidewalk which throw light into these low rooms. On the side the windows come

THIRD STORY.

above the floor line, and in order to allow the light to pass below small bulkheads are built into the building. This, together with the open area in front and the areas around the side windows at the side of the building, will make these basement rooms more than ordinarily attractive and for that reason more than ordinarily profitable. All details which contribute to the convenience of business property add to its earning capacity. A great many items of convenience are more matters of thought than expense. Abundance of light pays better than anything else in connection with commercial buildings.

The external appearance of this structure is effected by the character of its distinguishing use. It is the castle hall of the Knights of Pythias order. For that reason certain details of its decoration possess a certain character. The general style of the architecture where it can be adapted without affecting the commercial uses is borrowed from the French of the fifteenth century. There is the elliptical arch at the entrance, the crenellations above and the machicolation and the little towers which are a part of the decoration of the corners. This building is designed to be built in brick and stone. The central decorative feature in the service will be an enlarged Knights of Pythias badge surrounded by decorative work. This embellishment will be in terra cotta. LUCIS H. GIBSON.

Give Holloway's Corn Cure a trial. It removed ten corns from one pair of feet without any pain. What it has done once it will do again.

HOT WEATHER BUSINESS.

(Copyright, 1893, by The Trade Company, Boston.)

Preliminary Publicity in Business Pushing—Making the Public Pocket-Book Swing Your Way.

(By Nath'l C. Fowler, jun., Doctor of Publicity.)

Some fools say that folks don't read when it's hot, that newspaper circulations are dormant, that publishers take vacations, that most people let down the bars of business by barring up business.

Here's the Ananias of business lies. Judge the world by yourself.

When do you do the most reading? During the long winter nights, when business is rushing, and hard work at the store fosters evening indisposition? No. In Christmas time, when everybody is tired out, and every night means a scolding, a party, the theater, or something else? Of course not. During the fall, when business is picking up, and trade is flushed with success? By no means. In the spring when you are getting ready for a good time in the summer, and are working nights to make up for your vacation days? Certainly not.

You, and the rest of folks, everywhere, do the bulk of your reading in the summer, and the bulk of that bulk in August and September.

You relax (you have got to, or die)—go down to the store or office late in the morning, and come home early at night. You have a cottage by the sea, or a farmhouse in the mountains, and if you don't have any other, you make a summer resort of your own home. You have little to do, and therefore you read.

Did you ever go aboard ship, or on an excursion? You look at the bounding billows for a while, study the passengers, watch the shore, then a reading frenzy comes upon you. You will read. Your morning paper is absorbed from beginning to end, advertisements and all; then you skimp round for something else. How you reach for an old copy of an old paper, all crumpled and torn, and how religiously you read it!

Did you ever go into a village postoffice, where city folks stay in summer, and see the whole town on the sidewalk, waiting for the morning mail?

Three-fourths of the mail is made up of papers—home papers, and these papers are

read by those who receive them, and by all the neighbors, guests and friends.

A woman visiting Brownstown will read all the local items in a Smithville paper, when the only person she knows in Smithville is the picked-up acquaintance who loaned her the paper.

Folks will read in summer what they won't read in winter. Real literature is at a discount. Learning has crawled into a cave.

We all read light stories, funnigraphs, news and general newspaper miscellany, and the advertisements.

Experience teaches every man, whether he lives in the country, city or metropolis, that he himself reads more advertisements and more local newspapers in the summer than he reads at any other time of the year, and women—they read the papers all the time.

There are few articles which a purchaser purchases immediately upon the conception of his desire. No matter how trivial a thing may be, unless it be of absolute immediate necessity, he postpones the buying.

The man who wants a furnace thinks it over for a month or two months before he buys it.

A suit of clothes is worthy of four weeks' consideration, and the same with furniture, and everything of necessity and luxury, except food.

The advertiser should begin to advertise before people are ready to buy. He should teach the doctrine of buying when folks are ready to learn it. He is the man who will bring new trade, and increase old trade.

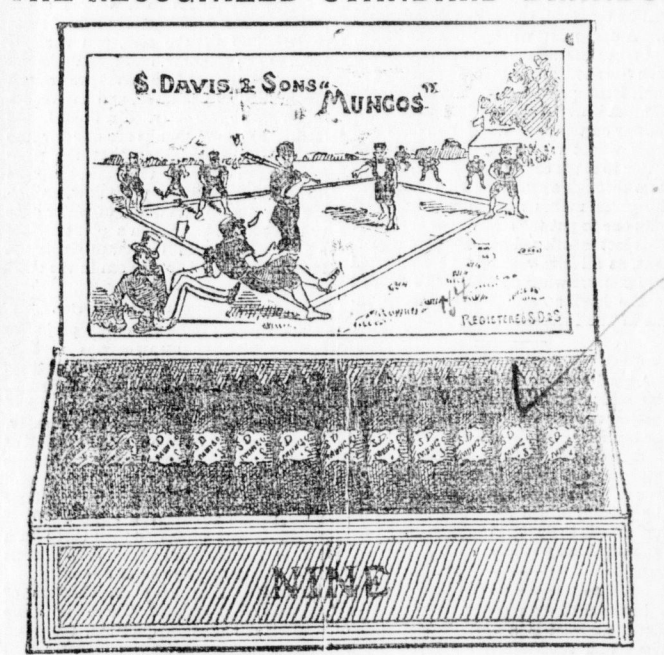

Most folks don't realize they want something until somebody tells them.

It is the business of an advertisement to create demand, and to go further, to produce desire in those people who ought to have something, but don't realize it.

During the summer months, and especially in the last of August and the first of September, people are beginning to think about something, and the advertiser who presents that something through the columns of the local paper is the advertiser who will do the business, not only in the early fall but throughout the year.

While advertising should never be discontinued during season, and while good judgment says it should go a little beyond season, the best part of advertising comes before season—in that time when people have time to think, and are most easily influenced, with climatic and other influences adjusted for the benefit of the shrewd merchant who knows enough to create general trade, and to direct part of that trade to himself.
