Try oven with a piece of white paper. If too hot the paper will become black or blaze up. If the paper becomes a light brown, oven is fit for pastry. If it becomes dark yellow, oven is fit for bread and heavier kinds of cake. If

it is light yellow, oven is ready for sponge cake and lighter kinds of desserts.

The Pandora Range

No matter how good the recipe is, the most essential part of the success of the cake is the baking.

A poor stove is not cheap at any price.

The first cost of a coal stove does not make it cheap or expensive; it is the fuel it afterwards consumes and the repair bills that really make the difference.

You may save \$5 or \$10 when buying a stove, by taking one which looks all right or very nice, but you cannot judge a stove entirely by appearance with any greater certainty than you can an individual. The grates, fire box, and flues are the heart and lungs of a range, and no matter how many excellent external features are embodied in its construction, satisfactory action and economy cannot be obtained if these vital parts are not scientifically correct. If they are not, the first saving of \$5 or \$10 will be eaten up in a season or two. These features in the "Pandora" are the results of nearly 60 years' experience. They are fully explained on Pages 3, 4, and 6 of the "Pandora" catalogue, which we will mail to you for the asking.

An elegant external appearance and completeness of labor-saving devices combined with its successful working and durable internal parts places the "Pandora" without a rival as a cooking and baking range.

STOVE AND RANGE TALK

"Baking Bread on the Canada B."

IT is quite possible to possess a cooking range, bright with nicke plating, fitted with all sorts of improvements, and yet be practically useless because of its unsatisfactory working qualities—an every day annoyance. Such ranges exist. But did you ever hear of

Moffat's National STOVES or RANGES

being unsatisfactory? Ever hear anything but praise of their baking performance, of their economy in fuel, of their fire being easily kept going? In short, did you ever hear a disparaging word against them in any shape or form? They have been on the market for years and today stand (as always) without an equal in Canadian stovedom. Thousands are in daily use, a source of pleasure in the kitchen.

There is no other stove nor range quite as good or as satisfactory.

TEMISKAMING & NORTHERN ONTARIO RAILWAY

The People's Line

The Settler, the Lumberman, the Prospector and the Tourist find their Mecca on this route, now completed as far north as Cochrane.

THE Temiskaming and Northern Ontario Railway starts from North Bay, a junction point with the Grand Trunk and Canadian Pacific Rys., 227 miles from Toronto, and 360 miles by Canadian Pacific from Montreal, and running north passes through New Ontario's great belts of forest, mineral and clay. It is a provincial-owned and operated road, and was built for colonizing purposes. The Commission that controls its management has kept this original intention plainly in view, and month after month, the steel of the T. & N. O. opens new township after new township of good agricultural lands, new deposit upon deposit of the richest of mineral, and stretch after stretch of valuable timber. The intending settler, miner or lumberman can now get entrance to this wonderland of Ontario's wealth as far north as Mat'eson, formerly McDougall's Chutes, on the Black River, in the township of Carr, 205 miles north of North Bay. Beyond this the construction is being rapidly pushed forward to the junction with the Grand Trunk Pacific north of and beyond the lakes of Abitibi.
