

Miscellaneous.

Methodist Nuns. Methodist nuns are a novelty in female experience. They are credited by the American general conference, after a careful consideration of the subject by the committee on missions. The idea came from the Rev. D. M. Thoburn to whom it was suggested by an ex-Catholic priest, who had become a Methodist, and who strongly advocated it.

They are to be called deaconesses, and they will be very similar to the nuns of the Roman Catholic Church, except that they are not to take vows of life service or of celibacy. Every annual conference, in which these deaconesses are established, will have a board of nine members to control this kind of work. Nothing more definite than that was done by the conference, but Dr. Thoburn tells your correspondent that the Methodist board will be very likely to meet in distant countries, and live in houses by themselves.

They can be sent to any part of the world, and they will be at least twenty-five years of age. It has long been a hobby of the Rev. Dr. Dix, of the Trinity Episcopal Church, to have such duties performed by regular orders of women, and he succeeded, several years ago, in forming an organization of Episcopalian nuns, but they have not been formally consecrated by the denomination, and so the Methodist are the first Protestant church in America to attempt the recruiting and uniforming of religious sisters. Dr. Thoburn says that the first of these deaconesses will be very likely to be seen in Chicago where there is already an informal organization of a somewhat similar character, but he believes that in all the large cities, within a year, there will be established probationary classes. As two years' service will be required before any woman may become a deaconess, there must come that amount of delay, but the work and costuming of the deaconesses may begin in one.

'And what costumes will the deaconesses wear?' was asked of nearly every member of the committee responsible for their creation. No definite answer could be obtained. Indeed the reverend gentleman did not seem to have considered that question particularly although it will be quick to come to the front when the matter becomes really existent. Naturally, a sober garb will be chosen, but how nearly it will approach the disfigurement deemed essential in the Catholic order, remains to be seen. -New York Era.

Damp Cellars. THE CAUSES OF THE EVIL AND HOW TO REMOVE THEM. The most prominent causes of damp cellars are: 1. Dampness permeating the walls. 2. Dampness from saturated soil appearing below the walls. 3. Dampness from imperfect plumbing. 4. Moist ground air permeating cellar bottom, forced in by air pressure.

The first is an evidence of either poor workmanship or faulty construction. Small, flat stones make the best work when carefully banded and fitted. Look out for walls showing nothing but large, flat stones on the outer face, as these are often but dry concrete in the center. If the work has progressed too far to allow the wall to be taken down, the remedy is a thorough coating of cement on the outside, from grade to footing, backed by a careful drainage of the immediate vicinity. Great care is necessary to keep the surface water from the building on all sides. It will not suffice to keep it free, ten or twenty feet away, and then allow it to cool, as the ground will absorb it, and if the strata should happen to incline in the direction of the cellar, conduct the moisture to the wall, where, although perhaps not appearing in droplets on the surface, still keeping the joints damp enough to affect the atmosphere and cause the mortar to decay.

Saint Malo at the foot of the cliffs of Saint Etienne and Saint Etienne. The forest is supposed to have once extended from Saint Malo to beyond Mont Saint-Michel. This discovery is considered of great scientific interest, as it affords a remarkable illustration of the gradual sinking of the French shore. The progress of this sinking during the last 2,000 years is clearly found in an old map found at the Abbey of Mont Saint-Michel. Within no more than seven centuries back as many as seven parishes are said to have disappeared by the subsidence of the region. And in the Bay of Douarance there is known to have existed in the thirteenth century quite a flourishing town called, in the scene of a famous tragedy legend. Even now, at low water may be seen the old walls of it, which are called by the inhabitants of Mogber Gresh (the town of the Greeks). The people of the country pretend that they can sometimes hear the old bells of the submerged city ringing with the motion of the current.

French geologists estimate that the gradual sinking of the soil of Brittany, Normandy, Artois, Belgium and Holland is not less than seven feet a century. At this rate it is calculated that in about ten centuries the ocean will have destroyed and Paris itself will have become a marine city. In another ten centuries it is predicted that the French capital itself will have become entirely submerged, excepting, perhaps, that the top of the Pantheon, of the Arc de Triomphe and other such monuments may be discernible at low water by the people who will then be living. -London Globe.

The first is an evidence of either poor workmanship or faulty construction. Small, flat stones make the best work when carefully banded and fitted. Look out for walls showing nothing but large, flat stones on the outer face, as these are often but dry concrete in the center. If the work has progressed too far to allow the wall to be taken down, the remedy is a thorough coating of cement on the outside, from grade to footing, backed by a careful drainage of the immediate vicinity. Great care is necessary to keep the surface water from the building on all sides. It will not suffice to keep it free, ten or twenty feet away, and then allow it to cool, as the ground will absorb it, and if the strata should happen to incline in the direction of the cellar, conduct the moisture to the wall, where, although perhaps not appearing in droplets on the surface, still keeping the joints damp enough to affect the atmosphere and cause the mortar to decay.

Good, clean, yellow clay, puddled and rammed around the walls, it is an excellent protection, and one that should never be admitted. Frequently, in neighborhoods thinly settled, where the sewerage system is imperfect, or, rather, not completed, the ground becomes waterlogged, or so saturated with moisture as to cause any shallow excavation to collect water, and it will be noticed in such ground that after a rain all these depressions hold the water with great tenacity. In fact, the soil seems unable to absorb any more.

Collars sunk in such ground will be damp at the foot of the wall, the moisture extending out on the cellar floor while any small knoll, caused by uneven excavation, may be perfectly dry on top, and even, as has occurred in my practice, the clay opening in seems from contraction is drying, while but a few feet away the mud was three to six inches deep. This has been noticed even in a house situated on a small plateau, with right drainage to all sides. -Building Trades Journal.

Paine's Celery Compound

For The Nervous The Debilitated The Aged. Paine's Celery Compound is a powerful and reliable remedy for all cases of nervous debility, general weakness, and all affections of the kidneys. It is a purely vegetable preparation, and is perfectly safe and reliable in all cases.

AS AN ALTERNATIVE, it Purifies and Cleanses the Blood. AS A DIURETIC, it Regulates the Kidneys and Cures their Diseases. It is a powerful and reliable remedy for all cases of nervous debility, general weakness, and all affections of the kidneys.

GATES' SYRUP Should be in Every House. GATES' SYRUP is a powerful and reliable remedy for all cases of nervous debility, general weakness, and all affections of the kidneys. It is a purely vegetable preparation, and is perfectly safe and reliable in all cases.

Threshing Machines. The New Model, 33 and 36 inch cylinder, will thresh more grain of any kind, and cleaner, with less wear, than any other in the market. The NEW MODEL is the best machine to have for the farm, and is perfectly safe and reliable in all cases.

The Backus Water Motor. The Backus Water Motor is a powerful and reliable remedy for all cases of nervous debility, general weakness, and all affections of the kidneys. It is a purely vegetable preparation, and is perfectly safe and reliable in all cases.

Driving Light Machinery. It takes but little room. It never gets out of repair. It is simple and easy to use. It is a powerful and reliable remedy for all cases of nervous debility, general weakness, and all affections of the kidneys.

Foremost Life Insurance in the World. The Mutual Life Insurance Company of New York. Established in 1853. Assets, over \$115,000,000.

Children Cry for Pitcher's Castoria. Pitcher's Castoria is a powerful and reliable remedy for all cases of nervous debility, general weakness, and all affections of the kidneys. It is a purely vegetable preparation, and is perfectly safe and reliable in all cases.

Jobber's Corner. Short Paragraphs. Wife: You say you shot that duck yourself, John? I can find no marks on it. Husband (who had a thought of that): Well, my dear, the bird was very high up, you know, and perhaps the fall killed it.

Unnecessary Emotion - Mother (to daughter): I was surprised and shocked to find that you had been so silly as to get into a quarrel with your Uncle James. And he leaves you ten thousand dollars, you know. Daughter: Yes, mamma, but when the funeral took place I had no idea that dear Uncle James had remembered me so generously.

Changing the subject - Knobby: I saw you on Fourteenth street a few minutes ago. Mrs. Knobby: Yes; you were going into a hair salon. She: Ah, yes; I was consulting a little beautician for a wig. Mrs. Knobby: And she beautified you? She: Yes, she did. Mrs. Knobby: How do you like it? She: I like it very much. Mrs. Knobby: But she said you were not engaged, were you? She: No, I am not engaged, were you? Mrs. Knobby: Disappointed, that was all? She: Yes, I think you must agree with me that that hour of the day was well justified in being even in expecting that your father would be wearing cloth slippers.

An Answer by Composition. Harry is one of those favored children for whom we are permitted to scribble with their parents, and being of an inquiring turn of mind he is quite ready to ask questions on all subjects. He is now inquiring into the mystery of the toothbrush. He has just learned that a toothbrush is made of bristles and a handle. He is now inquiring into the mystery of the toothbrush. He has just learned that a toothbrush is made of bristles and a handle. He is now inquiring into the mystery of the toothbrush. He has just learned that a toothbrush is made of bristles and a handle.

Where did you get that lovely Japanese fan? asked one young woman of another in an uptown hall. I made it, was the reply. I first visited several stores where they keep wall paper and asked the salesman for samples and small pieces they had on hand. They refused to take pay for them. I took all kinds to make it a book of choice. I am now in the process of making it. I am now in the process of making it. I am now in the process of making it.
