Technical and Bibliographic Notes/Notes techniques et bibliographiques

The Institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming, are checked below.

L'institut a microfilmé le meilleur exemplaire qu'il lui a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifier une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de filmage sont indiqués ci-dessous.

The copy filmed here has been reproduced thanks to the generosity of:

Seminary of Quebec  
Library

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol  $\rightarrow$  (meaning "CONTINUED"), or the symbol  $\nabla$  (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

Séminaire de Québec  
Bibliothèque

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole  $\rightarrow$  signifie "A SUIVRE", le symbole  $\nabla$  signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

## THE FURNISHING OF BED-ROOMS.

HEAL and SON have observed for some time that it would be advantageous to their Customers to see a much larger selection of Bed-room Furniture than is usually displayed, and that to judge properly of the style and effect of the different descriptions of Furniture it is necessary that each description should be placed in a separate room. They have, therefore, erected large and additional Show Rooms, by which they are enabled not only to extend their show of Iron, Brass, and Wood Bedsteads, and Bed-room Furniture beyond what they believe has ever been attempted, but also to provide several Small Rooms for the purpose of keeping complete suites of Bed-room Furniture in the different styles.

Japanned Deal Goods may be seen in complete suites of five or six different colours, some of them light and ornamental, and others of a plainer description. Suites of Stained Deal Gothic Furniture, Polished Deal, Oak, and Walnut, are also set apart in separate rooms, so that Customers are able to see the effect as it would appear in their own rooms. A Suite of very superior Gothic Oak Furniture will generally be kept in stock, and from time to time new and select Furniture in various woods will be added.

Bed Furnitures are fitted to the Bedsteads in large numbers, so that a complete assortment may be seen, and the effect of any particular pattern ascertained as it would appear on the Bedstead.

A very large stock of Bedding (HEAL and SON'S original trade) is placed on the BEDSTEADS.

The stock of Mahogany Goods for the better Bed-rooms, and Japanned Goods for plain and Servants' use, is very greatly increased. The entire Stock is arranged in eight rooms, six galleries, each 120 feet long, and two large ground floors, the whole forming as complete an assortment of Bed-room Furniture as they think can possibly be desired.

Every attention is paid to the Manufacture of the Cabinet work, and they have just erected large Workshops on the premises for this purpose, that the manufacture may be under their own immediate care.

Their Bedding trade receives their constant and personal attention, every article being made on the premises.

They particularly call attention to their Patent Spring Mattress, the Sommier Elasticque Portatif. It is portable, durable, and elastic, and lower in price than the old Spring Mattress.

REPORT  
OF THE  
EXECUTIVE COMMITTEE,

PRESENTED TO

His R. H. the Prince of Wales,

ON THE

OCCASION OF THE OPENING OF THE EXHIBITION

On the 9th MAY, 1865.

THE building in which we are now assembled owes its origin to the desire to supply a want which long existed in this City, that is, of a structure where the Citizens might enjoy rational recreation combined with the elevating influence of the Arts.

A Company was formed for the purpose of providing an Exhibition Palace and Winter Garden, after the model of the Crystal Palace of Sydenham; but on a scale suitable to the population of the City, and yet not discreditable to the capital of Ireland.

A tract of about seventeen acres in extent, formerly known as the "Coburg Gardens," lying within a few minutes' walk from the busiest centre of the City, having passed into the possession of Mr. Benjamin Lee Guinness, that gentleman, with his characteristic liberality in the promotion of all that can add to the comfort and happiness of his fellow-citizens, placed the land at the disposal of the newly-formed Company, at the price for which he had purchased it; and it was chosen as the site for the proposed Buildings and Garden.

The design of Mr. Alfred Jones was selected as the one best calculated to meet the requirements of the Company. The first stone of the Building was laid in March, 1863, by the then Viceroy, the lamented Earl of Carlisle, whose zeal in the encouragement of every undertaking for the benefit of Ireland, can never be too gratefully remembered by the people of this country. As the Buildings advanced, their suitability for the purpose soon suggested the idea of inaugurating the new institution by holding an International Exhibition. And as nothing of that kind, on a large scale, had been attempted in Ireland since the Exhibition of 1853, the origin of which was due to the noble public spirit of William Dargan, and which had been honoured by the august presence of Her Majesty, the project of an Exhibition in the present year was favourably received; but it soon became apparent that difficulties would be encountered by a Company in accomplishing an enterprise, the success of which must so largely depend on the spontaneous support of those whose sole aim is the advancement of the people in skill, knowledge, and refinement.

A new organization was therefore resolved on, and the Company leased their premises, at a fixed rent, for the period of the Exhibition, to an independent Committee, composed of many of the nobility and of other influential personages, who came forward with alacrity to lend their co-operation to so useful a project. A portion of this large Committee constituted the Executive Committee, in whose hands was placed the management of the details.

The precedents of former Exhibitions, and especially that of 1862, have been followed as far as circumstances admitted. The objects for exhibition have been divided into six great classes—five containing the Industrial Products, and the sixth comprehending every branch of the Fine Arts. A Committee of Advice, composed of gentlemen selected for their special knowledge and fitness, took charge of each Class, sought out the best specimens, so that each department should be represented in a complete and effective manner. Many members of these Committees have given their time and most valuable services with a zeal and devotion to the interests of the Exhibition which we gladly take this opportunity to acknowledge.

In London, the Society of Arts, so honourably associated with the history of Exhibitions, gave us their most timely and cordial support. Under the auspices of the Society the London Committee was formed, who have heartily co-operated with us, and, on many important occasions, have guided us by their counsel.

In the capital of Scotland also, and in many of the cities and towns of the United Kingdom, Committees were formed to further the objects and extend the interests of the Exhibition.

It is needless to state that for the favour with which the undertaking has been so generally received throughout the Empire we are largely indebted to the patronage of the Queen, and to the approval which Her Majesty has been pleased to manifest to the Exhibition, not only by many valuable Contributions from the Royal Collections, but also by the special recommendations with which the Exhibition has been officially introduced to the attention of the authorities of the British Colonies and of foreign Governments by Her Majesty's Secretaries of State. A large proportion of the Colonies have responded to the appeal. And most of the Sovereigns of Europe, emulating the example of Her Majesty, have honoured the Exhibition by their countenance, by becoming contributors, and recommending their subjects to avail themselves of its advantages. It is but just to acknowledge that the Exhibition owes much of its attraction and its success to the cordial spirit in which Earl Russell advocated its claims to the enlightened support of foreign Governments.

Most of these Governments have deputed special representatives to attend the exhibition, to oversee the interests of the exhibitors from their respective countries, and to aid in the selection of the jurors, who will, it is hoped, proceed, early in the month of June, to adjudicate upon the merits of the productions which compete for the distinction of honorary medals.

From these gentlemen we have derived most valuable assistance, and we trust that the efforts we have made to provide suitable accommodation in the building for their respective exhibitors will be found satisfactory.

The space is about equally divided between the foreign exhibitors, on the one hand, and those of the United Kingdom and the Colonies on the other.

The demands made upon us for space in the home sections were five-fold in excess of the quantity at our disposal. Hence the task of selection was difficult and embarrassing. We have remembered, however, that the Exhibition is international; and we have endeavoured, therefore, to secure what would best illustrate and represent the excellence of each country's productions. Accordingly the preference has been given to the inventor, the producer, and manufacturer, over the agent or retailer. Under these circumstances it is gratifying to note how numerous are the Irish exhibitors in very many branches of industry.

No department is of greater interest in Ireland than that of machines and implements used in the cultivation of the soil. We gladly availed ourselves, therefore, of the liberality of the Royal Dublin Society, which placed at our disposal their extensive premises in Kildare-street, whereby we have been enabled to give to this important section a fuller development than to any other class of machinery.

In concluding this report, we may express the hope that the Exhibition, whose preparation has cost so much labour and anxious thought, may be as prosperous in its results as it is fortunate in its commencement under the auspices of your Royal Highness.

Signed, on behalf of the Executive Committee,

GILBERT SANDERS, *Chairman.*

## GUIDE FOR THE VISITOR.

---

As it will be impossible for the Visitor to thoroughly inspect or find the objects enumerated in the Catalogue without some little instruction as to arrangement and position, it may be well to sketch out a line of route which can be followed or not at will, and which will gradually lead through the various sections into which the building and its annexes are divided. The plans given in the Catalogue should first be carefully studied, and then some such circuit as the following may be pursued:—

Entering the building from the main entrance in Earlsfort-terrace, facing the Sculpture Hall, the best course is first to take a survey of the extensive Fine Arts Departments. In the principal or main avenue of the Sculpture Hall the visitor will find ranged right and left of him certainly one of the finest collections of statuary that has been gathered together at any International Exhibition, the best works of art from the principal British and Foreign studios having been freely contributed. The best course to pursue is to inspect the statues on the right hand of the main avenue, and, after reaching the end, turn round and inspect those ranged on the opposite side. To enumerate these would be impossible, but they are all numbered, and the name of the country from which they come is lettered on the back, so that reference to the Catalogue, under "Rome," "Italy," &c., will give the title and the artist.

After the main avenue has been carefully inspected, the visitor should turn into the inner walk, and notice those on his left hand, proceeding towards the Transept; then into the opposite inner avenue, which will be on his left hand, proceeding towards the entrance of the building. He should then ascend the staircase, and make a tour of the Central Picture Gallery, which is immediately over the Sculpture Court. The pictures hung on the walls over the staircase recess are of the Scandinavian and Spanish schools. Proceeding towards the centre of the building, on the walls to the right are Italian pictures. On a screen facing to the east are some choice Norwegian pictures. The German, French, and other Foreign pictures, occupy the walls to the west and south. Having made the circuit of this Central Picture Gallery, we enter, by a door on the east, a small room, containing pictures of the Belgian school.

The walls of the long passage running north and south are hung with fine specimens of Axminster tapestry, Persian, Brussels, Kidderminster, and other carpets, and oil cloths, &c. In a window recess is a collection of oil paintings, mostly by Irish artists. Turning now to the right, on the walls of the passage running east and west, we find seven of Leech's coloured sketches, shown by V. Brooks, and some good chromo-lithographs. The first door on the left hand leads to the Victoria Cross collection, illustrating the deeds of valour which have secured the coveted distinction of the Victoria Cross. The next long room on the left is devoted to water-colour drawings and a few cartoons. Leaving this the visitor may enter the Eastern Gallery of the Transept, and take a superficial survey of the Transept, and main building, and opposite galleries. He may also look down into the Music Hall, where he will see the large organ by Hill, a smaller organ, orchestra, pianofortes, and cases of brass instruments, &c. Hung round the upper part of the walls are several fine cartoons from Munich, and beneath some very effective foreign oil paintings. The architectural effect of this fine room should here be noticed, the admirable manner in which it is lighted by windows above, and sun gas-lights for illumination at night.

Proceeding along the gallery towards the north, and entering the Central Picture Gallery, we may pass by a door on the left into the Mediaeval Court, where church furniture, antiquities, stained glass, and metal work, claim attention. We pass through, and enter by a door on the right hand of the corridor the Great Picture Gallery. This is a fine lofty room, with sofas, and is devoted to pictures of the British School. Round the walls will be recognised, by those conversant with good pictures, many gems of art from the National Gallery, the Vernon Collection, the Kensington Museum, and other public and private collections.

After making the circuit of this room the visitor may pass through the east door on to the passage, where, in a window recess, are some fine specimens of chromo-lithographs by various exhibitors, and, opposite, specimens of woodcuts. Then proceed due west down a passage, the walls of which are lined with maps, school-books, panoramic views, &c., to a door on the right hand, which admits to the Small Picture Gallery, a long room devoted to the works of the Ancient Masters. This completes the tour of the Fine Arts Collection, with the exception of the three Photographic rooms which are situated in the basement, on the extreme south, near the First Class Refreshment Room, and must be reserved for a future visit.

Leaving the room of Ancient Masters by the east door we may enter upon an inspection of the British Industrial Department, commencing with the collection in the galleries. Entering the inner passage on your left and proceeding due west we pass cases of linens, hats, clothing, basket work, ropes and fish nets, cottons and thread, blankets, kerseymeres and broad cloths, printed felts, woollen shirtings and flannels, Paisley shawls and tartans, laces, fancy hair work, silks, gold embroidery, silk scarfs, sewed and embroidered muslins, &c. Turning round to the right, for the outer passage, we may pause for a few moments to take a general glance of the nave and transept and opposite galleries devoted to India and the Colonies. Then we come in succession, on the right hand, upon cases of cotton and thread, down quilts, feathers, furs, and other applications of feathers, down, &c., to dress, upholsterers' and coachmakers' trimmings, hosiery, boots and shoes, buttons, court costumes and liveries. Proceeding round the cross gallery we next come upon handsome show cases of minerals, chemicals, colours, products of seaweed, perfumery, confectionery, starches, candles, and soap, fresh preserved provisions, isinglass, cigars, whiskey, wax flowers, stationery, book-binding and printing, paper making, guns and fishing tackle, toys, croquet, racquet, archery, and other games, bog oak ornaments, brushes, tortoise-shell work, India-rubber and gutta percha. This completes the gallery display of British Industries.

Then we arrive at the beautiful Indian collection, contributed by the India Board, and arranged by Dr. J. Forbes Watson, which occupies a large space, and is most attractive, embracing most of the choicest articles of the India Museum, London, many rare and valuable articles lent by the Queen, by Lord Gough and other exhibitors. There are, first, three very large cases extending across the gallery filled with rich articles of gold and silver work, jewellery, embroidery and fabrics. There are two smaller cases of silver and bidri, or inlaid metal work, and further on two cases neatly arranged and labelled of agricultural produce and raw materials generally, including substances used in manufactures. A cabinet containing seventeen bound volumes of specimens illustrative of the textile fabrics of India, with coloured photographs, showing the costumes of the people of India, should not be overlooked. Then there are three wall cases of arms and armour, and ornamented, carved, and other work in metal, jade, papier mache, sandal wood, horn, and ivory. Rich carpets and mats of Oriental design decorate the walls, and a raised map of India, showing the mountain ranges, rivers, railways, &c., hangs on the stairs, where there also stand some state umbrellas. There are also suspended on screens twenty or more frames, with photographs of the tribes and castes into which the native population of India and the adjacent countries is divided.

The next tour of inspection may be taken as follows:—After entering the building turn down the passage on the right hand, past the post office, and the ordnance exhibited, and enter the Carriage Court, which is a temporary annexe to the main building. Here the visitor passes in the corridor, Perfumery Stalls, and illustrations of Naval Architecture, with some Plaster Statues and other objects. Passing round the Carriage Court we come upon a row of allotments in the east, devoted to Sewing Machines in operation, with attendants; and several manufacturing processes in operation are seen on the north side, including pearl button making, steel pen making, pipe making, lithographic printing, &c. We then enter the Machinery-at-rest Court, and from thence the Machinery-in-motion Court. Here are spinning mules, looms, atmospheric hammers, cask-washing machines, and others in active operation.

At the end of this Court we leave this noisy region, and ascend by steps once more to the quiet of the main building, and find ourselves in the most attractive British department of the north transept, looking directly down the transept towards the south. After inspecting the stands of beautiful glass and porcelain, the visitor should enter the inner line of Furniture Courts, and proceeding towards the east, inspect at leisure the many elegant objects exposed here by the principal London and Provincial manufacturers. He may then return and inspect the large central show cases on each side of the main promenade, consisting chiefly of shawls, poplins, minerals, jewellery, perfumery, candles, &c., and Benson's great clock.

To complete the circuit of the products of the British Empire, the visitor should ascend the staircase on the right, and inspect the various Colonial Courts, running from India along the western gallery to the central apes. The fine trophy of horns, skins, and objects of the chase, &c., from Natal, over the stair-head and adjoining wall, will first command attention. There the visitor enters Canada, which fills three courts with its various productions, mineral, agricultural, and manufacturing. Then Nova Scotia, another North American province, fills a large court with attractive objects, especially an ingot of gold worth £2,000. Returning from this, and proceeding due south along the gallery, the visitor passes, in succession, Mauritius, the West India Colonies, and a fine model in various woods of the west front of the Royal Exchange, London. Here he may pause and going out by a door on the balconies, take a glance at the gardens, and the Harcourt-street entrance, Mr. Guinness's house and grounds, &c. Proceeding in this circuit we pass the collections contributed by Malta, South Australia, New South Wales, Queensland, New Zealand, and Victoria. The latter colony, which is the only Australian province which has contributed officially, occupies a very large space with most attractive objects; and its gold produce is especially interesting. Then the curious native products and manufactures of Lagos, the Gold Coast, and Sierra Leone, are shown, and a collection from the Bahamas completes the Colonial collections. Here are some attractive objects from China and Japan, especially porcelains, bronzes, enamels, and a curious Chinese state bedstead, with a group of female Japanese figures, life size, at the toilet. The visitor may now commence here his inspection of the Foreign exhibits, although it is an unfavourable point to begin from, but it will complete his tour of the galleries, and save fatigue. Proceeding along the gallery we reach a number of French works in bronze, and other articles of vertu, with various industrial products. We then pass the Austrian collection, that of Prussia, and other states of the Zollverein; then on the opposite gallery we pass in succession collections from Belgium, Holland, Russia, and Italy.

The best course now to pursue is to descend by the staircase, leading from the Central Picture Gallery to the Sculpture Hall, and entering the central transept complete the inspection of the Foreign collections. Turning to the left, we may first enter the Music Hall, and take a survey of pictures and instruments; then pass to the Belgian Court, and bearing round on the opposite side, we reach the products of the German Confederation and Austria.

The dais, with its canopy, intended for the Pasha of Egypt, and under which

the royal circle were grouped on the opening day, should be noticed. The magnificent Sevres China and Gobelins tapestry of the Imperial manufactories of France, and the fine bronzes and other works of French industry.

Some French show cases, filled with rich dresses, shawls, silks, laces, &c., will command attention; and on the opposite or Eastern side of the transept the collections of Italy and Rome, rich in sculpture, mosaics, cameos, and other objects of fine art, complete the tour of the building.

The First-class Refreshment Room and Ladies' Retiring Rooms, it will be seen, are situated at the extreme left, with entrances from the transept. The Second-class Refreshment Room is near the Sculpture Court, in the transept, and the Third-class Refreshment Rooms lead out of the Machinery-in-motion annexe. There are refreshment counters about the galleries in different parts of the building, and a Reading Room, Post Office, and Telegraph Office, in the building. Visitors are not permitted to take sticks, parasols, &c., into the Sculpture Courts and Picture Galleries, but these must be left with the female attendants at the umbrella stands, who charge 1d. for the custody. Catalogues are sold in the building by the liveried attendants.

If the weather is fine, a circuit of the gardens should be made, where there are many objects exhibited for which room could not be found in the interior, such as in the north avenue a column of coal from Nova Scotia, thirty-six feet high, showing the great depth of the seam of pure coals; a peal of bells, iron gates, Barbezat's French fountains, tents, conservatories, &c., besides the rockeries and flower beds, rosary, maze, cascade, &c.

Those interested in agricultural implements and machinery, seeds, and vegetable substances, should pay a visit to the premises of the Royal Dublin Society in Kildare-street, which are only about five minutes walk from the Exhibition Building, where are shown many domestic machines, metal work, farm implements, manures, building materials, stable fittings, draining pipes, kitchen ranges, and other objects for which room could not be found in the building.

CLASS I.—SECTION I.

MAPS AND PLANS.

Topographical Model of India, constructed by R. Montgomery Martin, Esq. Distinctive colouring indicates the varied fluvial drainage; each shade of colour shows the extent of country drained by the main river, which flows through it and discharges its waters into the sea. Horizontal scale 1 inch to 15 miles. Vertical scale about 1 inch to 3,000 feet. For the lesser heights of the Himalaya range the horizontal scale slightly differs. The white ridge on the culminating parts of the Himalaya represents the line of perpetual snow. The sandy tract near the Indus shows the great desert, the limits of which are very imperfectly known. The lines of railways are coloured red.

The name of the artist is in capital letters; the name of the proprietor, when other than the artist, is appended in *italics*. The prices of works for sale are annexed to the titles in the Catalogue. The Art Superintendent, HENRY E. DOYLE, Esq., or PHILIP W. KENNEDY, Esq., Superintendent of Sales, will afford all necessary information to persons desiring to purchase. Fifteen per cent. of the price must be deposited; and the Executive Committee do not recognize any sales unless made through these gentlemen. No work can be delivered to the purchaser until after the close of the Exhibition.

Works for sale are distinguished by bearing numbers on red cards.

It has been found unavoidable to place all works in sculpture in one continuous list, irrespective of their nationality; but to the name of the artist is attached the name of the school or of the country to which he belongs.

This Machine claims its superiority over all others from its range of work, beauty of finish, nicety and ease of operation, inability to get out of order, simplicity of construction, and durability of work when done; sewing exquisitely the Finest Book or Swiss Muslin, Silk, Linen, Calico, Flannel, or the Thickest Cloth. Besides ordinary Sewing, it will Hem (turning its own hem as it stitches), Fell, Quilt Tuck, Bind, Gather, Cord, Braid &c. The Work of a Day can be accomplished in One or Two Hours.

It makes the LOCK STITCH by means of a rotating hook, which is the perfection of stitches made by machinery. The stitching has the same appearance on both sides of the material, and will not "run or ravel;" the stitching is also sufficiently drawn into the work, so that it will not be easily worn off or cut in ironing. It also makes the stitch with economy of thread or silk, the saving being immense when the machines are much used. When required, the stitch can readily be adjusted so that the work can be easily undone. The success and popularity of this Machine are without a parallel in the history of inventions, nearly 200,000 having been made and sold. It is **WARRANTED** to be the best Sewing Machine made for Families and all ordinary purposes; and such is the testimony of the public. **Price from £9.**

N.B.—The London Times of September 19th says:—"The Wheeler and Wilson Machine is the one best calculated for household work; it makes the lock-stitch by means of a rotating hook, which interlaces the thread on the under side, and does away with the necessity of the shuttle, which is unnecessarily noisy in the drawing-room or the boudoir."

**BROWN & GREEN'S PATENT RANGE**

Has long been pre-eminent as the most perfect Cooking Apparatus, combining as it does a **LARGE SAVING OF FUEL**, with the greatest efficiency, **VENTILATION OF THE KITCHEN**, great cleanliness, **ROASTING IN FRONT** of the fire, or in the **OVENS**, and a **CERTAIN CURE** for smoky chimneys.

These Ranges, which obtained such high commendations from the Jurors, the Press, and the Public, at the London International Exhibition, 1862, have since then been rendered still more valuable by various **IMPORTANT** improvements, some of which have been Patented.

**BROWN & GREEN'S NEW PATENT CLOSE FIRE SELF-ACTING KITCHEN RANGE** requires **NO FLUES** round the Ovens, which roast and bake admirably. It will cure Smoky Chimney, which may be left **PERFECTLY** open, it can therefore be used in the smallest kitchen without over heating it, or causing the least annoyance in any respect. It is the most compact Range hitherto introduced, and capable of doing a large amount of work in a small space with **LESS THAN ONE-HALF** the usual quantity of fuel—although the **FRONT** of the **FIRE** is very narrow, the **RADIATION** of **HEAT** from it is **VERY CONSIDERABLE**, quite sufficient to roast a good sized joint before it.

**BROWN & GREEN'S IMPROVED COTTAGE RANGE** is a valuable little Range for the Cottager, it is useful, economical, and warranted to bake well.

**BROWN & GREEN'S PATENT VENTILATING STOVE** is simple in construction, powerful in action, highly economical, free from explosive gases, ventilates the apartment, burns with great regularity, is very durable (being lined with fire-brick), perfectly safe, and affords every facility for lighting and supplying the fire with fresh fuel.

The above Articles may be seen at the **ROYAL DUBLIN SOCIETY'S PREMISES, KILDARE-STREET**, where Illustrated Prospectuses and Prices may be obtained.

## KEEN'S INDIGO BLUE.

**M**ADE from the finest Bengal Indigo and Pure Starch, is the best blue that can be made for laundry purposes. Keen's Indigo Blue being free from any chemical or mineral admixture, will impart, without staining, a beautiful and lasting colour to linen, for which latter quality the Manufacturers claim for it a superiority over the many cheap substitutes for Indigo Blue now sold.

## Kingsford's OSWEGO PREPARED CORN,

For Puddings, Custards, Blanc-mange, &c.,

MANUFACTURED AT OSWEGO, STATE OF NEW YORK, U.S.

**T**HIS is the original preparation of Maize for human food: it closely resembles arrowroot, in comparison with which it is more nutritious, and is more suitable as an article of daily diet.

The Oswego is stronger than many of the imitations which its great success and moderate price has brought before the public. It has also a natural golden tinge, and not the white artificial appearance produced by chemical process.

# TAYLOR PRIZES

FOR THE PROMOTION OF THE

## FINE ARTS IN IRELAND.

THE Sum of £2,000, bequeathed by the late George Archibald Taylor, Esq., of Dublin, for the Promotion of Art in Ireland, has been applied to the Establishment of a perpetual endowment for the encouragement of Art Students. The management is entrusted to the Royal Dublin Society, in conjunction with the Trustees of the Will.

Out of the dividends are paid the Prizes, which are open to all Students of Art who shall have attended for two years at least a school of Art in Ireland, or who, being of Irish birth, shall have attended for a like period a school of Art elsewhere, and who shall produce Works of Art displaying conspicuous merit or high promise of future excellence, at an Exhibition to be held annually in Dublin.

The Endowment has been in operation five years, and Prizes have been awarded amounting to £133.

Communications may be addressed to RALPH B. BRUNKER, Esq., Solicitor to the Executors, 31, YORK-STREET, DUBLIN; or to WILLIAM EDWARD STEELE, Esq., M.D., Assistant Secretary to the Royal Dublin Society.

### FOR THE YEAR 1865.

The Trustees offer the following Prizes, open to Art Students of Irish birth, or attending a School of Art in Ireland, to be awarded at an Exhibition to be held on the 13th November, 1865, at the house of the Royal Dublin Society.

1. For the best composition of Figures in Outline, in size not less than 36×28, . . . . . £10  
     [The Subject to be selected by the Student.]
2. For the best finished Drawing from the Nude Figure, in Chalk, the same size. The subjects: "Narcissus at the Fountain;" "Venus Rising from the Sea," each . £10
3. For the best study from Nature of a Group of Trees, in Oils, size 24×20, . . . . . £10
4. For the best study from Nature, of a Group of Trees, in Water Colours, same size, . . . . . £10

To be increased or lowered in amount, or wholly withheld, according to the merit of the works.

All works must be delivered before two o'clock on Saturday, 11th November, 1865, at the house of the Royal Dublin Society, Kildare-street, Dublin, where the conditions and other particulars may be ascertained.

On behalf of the Trustees,

WILLIAM EDWARD STEELE, M.D.,

2nd January, 1865.

*Assist. Sec. Royal Dublin Society*

## IRISH BELL FOUNDRY AND COPPER WORKS, 14, THOMAS-STREET, DUBLIN.

The great Bells for Maynooth College and Catholic Church.

His great Bell at the London Exhibition, was selected by Mr. Dent, her Majesty's Clock Maker, to strike the hours of his great clock in the grand hall during the Exhibition. It was afterwards purchased by the Great Northern Railway Company of England, for their terminus clock at King's Cross, London.

J. M. begs leave to say that any order received by him always has his own practical attention, both in the moulding and the amalgam of the metals, as he is the only practical employer in the Bell Founding Trade in Ireland.

He has now exhibiting at the north side of the Exhibition Gardens, a Peal of eight Joy Bells, weighing over 5 tons weight, in the Key of D. They are the largest and most perfect Peal in Ireland. He has restored the Joy Bells of St. Patrick's Cathedral, for Benjamin Lee Guinness, Esq., by casting three new Bells in place of defective ones, what is technically termed Splicing a Peal; he did the same in Christ Church Cathedral, and also in Limerick Cathedral, all to their proper musical notes. He had the honour of receiving the following letter from the late Bishop of Kildare.

“ Glasnevin House, near Dublin, Dec. 20th, 1845.

“ SIR—The Dean and Chapter of Christ's Church Cathedral, in this City, were not aware, when they employed you at different times to re-cast two of their Church Bells, and to adapt them to the tones of Eight in the Diatonic Scale, that such an attempt had ever before been made in Ireland. I am happy to say that in both cases, you have thoroughly succeeded; and I remain your obedient servant,

“ CHARLES KILDARE.

“ Dean of the Cathedral, Christ Church, Dublin.

“ Mr. John Murphy, Bell-Founder.

#### EXHIBITION OF THE WORKS OF INDUSTRY OF ALL NATIONS, 1851:

“ I hereby certify that HER MAJESTY'S COMMISSIONERS, upon the award of the Jurors, have presented the PRIZE MEDAL to JOHN MURPHY, for BELLS shown in the Exhibition.

(signed) “ ALBERT.

“ President of the Royal Commission.

“ Hyde Park, London, 15th Oct., 1851.”

“ The Large Bell of very fine tone.

“ The Large Bell in East Nave, connected with the Great Clock, of very fine tone.”

P.S.—This Bell was purchased by the Great Northern Railway Company of King's Cross, London, 27 cwt.

He had also the honour of receiving the first-class Prize at the Exhibition of Paris for Bells exhibited there.

### THE IRISH METER MANUFACTORY, Hanover-street, Dublin,

W. W. ANDREWS, MANAGER.

THE Proprietors of the above Establishment invite particular attention to their exhibition of **Gas Meters and Apparatus**, especially to **The Unvarying Water Line Gas Meter**, invented and patented by Messrs. **Sanders and Donovan**, of Dublin; it affords the greatest security for accurate measurement to both Consumers and Gas Company. The Directors of the present Dublin International Exhibition selected **this Meter** for the purpose of ascertaining the quantity of Gas consumed by them. There are **Four Meters of 600 Lights** each, now in use in the Exhibition Buildings. They also call attention to

**THE DRY GAS METER**, Patented and Improved by

**A. ANGUS CROLL, Esq., C.E.**

The establishment of this manufactory in Dublin offers great advantages to Ireland in the employment of labour, and affords peculiar facilities for the repair of Gas Meters, by avoiding the expense and risk of carriage to and from England or Scotland.

**OPINIONS OF THE PRESS.**

**THE NEW ALEXANDRA PATENT SELF-EXPANDING DRESS BASKET.**—This very unique and commodious companion, *en voyage*, for either a lady or a gentleman's wardrobe, invented by Mr. M. Myers, of Wigmore-street, Cavendish-square, possesses an entirely novel, and, at the same time, useful characteristic, as yet unattempted in any class of portmanteau or travelling-box inventions. The basket itself supplies all the purposes of a chest of drawers, without the risk of crease or mishap to the shape of ladies' dresses by too compact a pressure. The upper portion, being self-acting, expands or collapses according to the exigency of space required. If the trousseau to accompany the traveler or visitor be on rather an extensive scale, want of room will be the last cause of complaint in the Alexandra Basket; if the allotment of dress be simply sufficient for a short visit, the basket collapses of itself, and, therefore, presents no gigantic representation of a luggage accompaniment. As many as a dozen or more dresses can be packed without the slightest inconvenience. In addition to all other articles of costume which are indispensable to comfort abroad as well as at home. A separate partition for parasols, umbrellas, hat or bonnet, jewellery, writing materials, and such like paraphernalia makes the Alexandra Basket a perfect receptacle for articles of dress as the present fashion could suggest, and modern convenience require; whilst for lightness and durability it excels all other trunks. The Alexandra Basket is, therefore, to be recommended as one of those novel and convenient necessities which all travellers should avail themselves of.—*Morning Post*, June 17th.

**THE NEW ALEXANDRA PATENT SELF-COLLAPSING AND EXPANDING DRESS BASKET**, invented by Mr. M. Myers, of Cavendish House, Wigmore-street, Cavendish-square, has entirely superseded the use of those cumbersome and old-fashioned boxes, skin-covered trunks, leather portmanteaus, and other rude luggage receptacles with which travellers in the old coaching days were providentially well furnished. This basket comprises every convenience which the requirements of modern travellers can suggest. It is made to expand or collapse as occasion may demand, and is, therefore, suited for the purposes of a short visit, a periodical tour, or a lengthened voyage, and is, in consequence, most especially patronized by ladies as the *no plus ultra* of perfection for their wants. Although portentious in size, the frame of the basket being constructed of wicker, it is as durable in wear as it is light in material. A black strong waterproof case envelops the whole, and renders the appearance as *distinguishable* as a portable wardrobe can be made. The interior is fitted with light movable wicker trays, literally constituting chambers of room for bridal robes, for morning costume, or ball, concert, dinner, and evening dresses, with convenient drawers for jewellery, umbrellas, writing materials, and all the thousand and one articles which ladies must and will have with them when they travel. The popularity, therefore, of this new basket is no matter of surprise, and the extensive patronage with which its inventor is favoured is allowed to be no more than he deserves.—*Courier Journal*, May 28th.

## HUDSON'S

### Improved Safety Stirrup for Ladies' Saddles

**H**AS been pronounced superior to all others for instantly disengaging the lady's foot in case of being thrown from her horse; this Safety Stirrup was the *only one* that obtained an award of merit at the Great London Exhibition. It affords perfect security from such a dreadful casualty as that of a lady being dragged along the ground with her foot sticking fast in the stirrup, which renders this highly useful article an indispensable adjunct to a side-saddle, while its comparatively moderate price places it within the reach of all.

#### GAS WORKS FOR COUNTRY RESIDENCES.

Dublin has now become famous for the production of these Machines; this is chiefly owing to the great attention bestowed by J. EDMUNDSON and CO. upon the Manufacture of their Improved, Compact, and Easily Managed GAS WORKS, for Noblemen's and Gentlemen's Country Residences, Public Institutions, &c., &c.

J. EDMUNDSON and CO. have rendered their Establishment in this city a recognised market for this description of Gas Works, and would call particular attention to the Apparatus which they have in use on their premises in CAPEL-STREET and in the numerous places already lighted; also to their small Gas Works in the Exhibition. Their Apparatus is cheap and Simple, and the Gas made is of the purest quality. The light produced is much cheaper than that made from oil or candles. J. E. and CO. have lighted by means of their Gas Apparatus the residences of very many of the Nobility and Gentry of this country, and also a number of colleges, mills, country towns, &c.

They are prepared to furnish a Prospectus and all particulars on application, and to give estimates for all parts of the United Kingdom, Free of Expense.

# COLOMB'S PATENT FLASHING SIGNALS.

## NUNN'S CASE,

*No. 204, Near Artillery Court, Exhibition.*

This system is equally applicable to signalling under all circumstances in daylight, darkness, or fogs; and, notwithstanding this extraordinary peculiarity, its simplicity is so great that even an uneducated man can both read and make signals by its means after an hour's instruction, whilst to those conversant with signalling, a glance at the system is sufficient. One White Light only is used; colour having hitherto retarded the progress of signalling.

The Night Signal Apparatus is only here displayed as illustrating most fully the principles of the whole system. Simplicity, independence of individual skill, and increased range.

The system is in course of adoption by Her Majesty's Navy, the Inventor, a Commander in that service, being at present attached to the Channel Fleet, to complete the necessary arrangements. It is in use by the Governments of France, Russia, Austria, Prussia, Italy, Sweden, Denmark, Turkey, and America.

It is, in conjunction with the similar system of Captain Bolton, adopted as the Signal System of the British Army. Messages have been exchanged between a vessel at sea, and a Station on shore, 80 miles apart, in a few minutes, by this system; whilst no signals were ever exchanged more than 7 miles with any other system under similar circumstances.

Further information can be obtained from Mr. NUNN of 179, St. George's-street, East, London, Sole Agent and Manufacturer, who is himself the Inventor and Patentee of the Portable Signal Lamp, peculiarly adapted for Yachts, Boats, or small Steamers; and at whose case can also be seen Dr. EDMONDS' Patent Safety Paraffin Lamp Feeder; and Lieutenant Key's Signal Fog Bellows.

INSTANT RELIEF AND A RAPID CURE OF  
Asthma, Consumption, Coughs, Colds, and all Disorders of the Breathy,  
Throat, and Lungs,

ARE INSURED BY

The extraordinary powers of this invaluable medicine are now proved by a mass of evidence and testimonials, which must convince the most sceptical that for all disorders of the breath and lungs it is the most effectual remedy ever discovered.

The following Testimonial has just been received by the Proprietors; small Books containing many hundreds of well attested cures may be had from every Agent in the Kingdom.

CURE OF COUGHS AND COLDS.

The following is from Mr. R. Richardson, 21, Corn-market, Dublin:

"Amongst the many most surprising statements of the good results of DR. LOCOCK'S WAFERS which I have heard, one person stated that 17 years they have kept her alive; and she would not feel safe to go to bed without taking them. I need hardly say that I recommend the Wafers, and invariably observe a beneficial result."

They give instant relief and a rapid cure of asthma, consumption, coughs, and all disorders of the breath and lungs.

All these affections are immediately relieved by allowing a Wafer to dissolve in the mouth.

To Stomachs and Children's Cakes they are invaluable for cleaning and strengthening the voice.

They have a pleasant taste. Price—1s. 1d., 2s. 9d., 4s. 6d., and 11s. per Box. Sold by all Medicine Vendors.

CAUTION—Every Box of the GENUINE medicine has the words "DR. LOCOCK'S WAFERS" in *five letters on a red ground* in the Government Stamp, without which words ALL ARE COUNTERFEITS.

Under Royal Patent.

DR. LOCOCK'S POWDERS

FOR ALL DISORDERS OF CHILDREN,

FROM BIRTH TO TWELVE YEARS OF AGE.

CHILDREN CUTTING THEIR TEETH are speedily relieved by these Powders.

FULL DIRECTIONS for all the Disorders of Children are given with every packet, also Rule for Management and Diet in SICKNESS and in HEALTH.

No Family should be without them in case of sudden illness at night or day.

Sold by all Druggists at 1s. 1d., 2s. 9d., and 4s. 6d. per packet.

Or sent free by post for 1s. 3d., 3s., or 4s. 10d., by the Proprietors' Agents, DA SILVA & Co., 26, Bride-lane, Fleet-street, London, E.C.

## OLDRIDGE'S BALM OF COLUMBIA.

ESTABLISHED UPWARDS OF FORTY YEARS.

22, WELLINGTON-STREET, STRAND, W.C

Among the many luxuries of the present age none can be obtained possessing the manifold virtues of OLDREDGE'S BALM OF COLUMBIA. If applied to the roots and body of the hair it imparts the most delightful coolness, with an agreeable fragrance of perfume. It also at this period of the season prevents the hair from falling off, or if already too thin, or turning grey, will prevent its further progress, and soon restore it again. Those who really desire to have beautiful hair, either with wave or curl, should use it daily. It is also celebrated for strengthening the hair, freeing it from scurf, and producing new hair, whiskers, and moustache. For the Nursery it is invaluable.

Price 3s. 6d., 6s., and 11s. only.—C. and A. OLDREDGE, 22, Wellington-street, Strand, W.C.

To Builders, Carpenters, and Blindmakers.

J. AUSTIN, Manufacturer of the above Articles, particularly wishes to direct the attention of the trade to his

**Imperial Patent Flax Sash Lines,**

Of which he is now making four qualities; and he strongly recommends that in all cases they should be purchased in preference to the Patent Lines, made from Jute, which article has neither the strength nor the durability of Flax, consequently cannot give so much satisfaction to the Consumer. He also particularly invites the attention of Upholsterers and Blindmakers to his Improved Patent Linen Blind Lines, which are very much superior to anything yet offered to the trade. They can be obtained of all Rope-makers, Ironmongers, Merchants, Factors, and Wholesale Houses, in town or country.

## GROVER AND BAKER'S

CELEBRATED

ELASTIC-STITCH

## SEWING MACHINES

ARE OFFERED TO THE PUBLIC

AS PREFERABLE TO ALL OTHERS,

For the following Reasons:—

1. They are more simple and durable, and less liable to derangement.
2. They sew from ordinary reels, and no rewinding of thread is necessary.
3. They sew with equal facility all fabrics, the most delicate and the heaviest, and with all kinds of thread, silk, cotton, or linen.
4. They stitch, hem, fell, cord, bind, tuck, gather, quilt, braid, and embroider with equal facility.
5. They fasten *both* ends of the seam by their own operation, and the seam is so strong and elastic that it never breaks, even on the bias.
6. The seam is more plump and beautiful, retaining its plumpness and beauty after washing better than any other; and though cut at every sixth stitch remains firm, and neither runs nor ravel in wear.
7. The seam can be removed in altering garments **AFTER PROPER INSTRUCTIONS** without picking or cutting them.
8. These Machines are more easily kept in order than any other, and need not be taken apart to be oiled.
9. Watching and varying the tensions upon the thread, necessary in other machines, is unnecessary in these. The tension being once adjusted on the GROVER and BAKER MACHINE, any amount of sewing may be done without change.
10. They make **BEAUTIFUL EMBROIDERY** without any change of arrangement, simply by inserting threads of suitable sizes and colours for this purpose. They are the only Machines that both embroider and sew perfectly.
11. The work done by these Machines cannot possibly be equalled by any other, and it has always received the first premium over all competitors wherever exhibited.
12. Every Machine guaranteed, and instruction to purchasers gratis.

**250,000** Upwards of 100,000 of these Machines are now in use in all parts of the world,  
*Illustrated Prospectus and Samples of Work sent post free on application.*

The Grover and Baker Sewing Machine Company are the only makers of Machines in the world which have been patronised by Royal Families. Besides supplying them to the Empress of Russia and the Queen of Bavaria, they hold appointments to the reigning Sovereigns of France, Spain, and Brazil, copies of which may be seen at any of their own Establishments and Agencies.

IMPORTANT ANNOUNCEMENT.

# JOSEPH GILLOTT,

METALLIC PEN MAKER TO THE QUEEN,

VICTORIA WORKS, BIRMINGHAM,

**B**EGS to inform the Commercial World, Scholastic Institutions, and the Public generally, that, by a novel application of his unrivalled Machinery for making Steel Pens, he has introduced a NEW SERIES of his useful productions, which, for EXCELLENCE OF TEMPER, QUALITY OF MATERIAL, and, above all CHEAPNESS IN PRICE, must ensure universal approbation, and defy competition.

Each Pen bears the impress of his name as a guarantee of quality; they are put up in boxes containing one gross each, with label outside, and the fac-simile of his signature.

At the request of numerous persons engaged in tuition, J. G. has introduced his WARRANTED SCHOOL and PUBLIC PENS, which are especially adapted to their use, being of different degrees of flexibility, and with fine, medium, and broad points, suitable for the various kinds of Writing taught in Schools.

Sold Retail by all Stationers and Booksellers. Merchants and Wholesale Dealers can be supplied at the Works, Graham-street, Birmingham; at 91, John-street, New York; and at 37, Gracechurch-street, London.

# CHATWOOD'S

**Treble Patent "Gunpowder Escapement" Intersected Steel  
Fire and Burglar Proof Bankers' Safes**

*Should alone be trusted with the custody of valuables.*

ESTABLISHED 1855.

PATENTS DATED 1860 AND 1862.

### TESTIMONIAL.

"WHEREAS CHATWOOD'S PATENT SAFE AND LOCK COMPANY, Limited, of the LANCASHIRE SAFE AND LOCK WORKS, BOLTON, having, on the 13th February, 1865, submitted to be publicly tested with gunpowder, or any kind of burglars' tools, including 'steel wedges,' and the 'ratchet lever drill,' one of CHATWOOD'S double patent 'gunpowder escapement' safes, fitted with his patent 'hematite intersected' door and invincible lock, the same being a safe made for the Bank of Bolton, it was unanimously resolved by those present to witness the test, that his Worship the Mayor of Bolton, and John Hick, Esq., Engineer, be desired to act as referees. Now we, the undersigned, Richard Stockdale, Esq., Mayor of Bolton, and John Hick, Esq., of Bolton, Engineer, do hereby certify that every facility was offered by the patentee to all persons present to have the above-mentioned safe tested in any way they might deem fit, and that such safe was thereupon fairly tested in our presence, the result proving perfectly satisfactory. And we further hereby certify that, in our opinion, no burglar can open Chatwood's double patent 'gunpowder escapement,' 'hematite intersected' safe with the facilities and time that can be at his command: and also that the same, as we believe, is the best safe in the market, and we would strongly urge its adoption by all persons desiring immunity from the depredations of scientific burglars.

"14th February, 1865.      "RICHARD STOCKDALE, Mayor.

**THE "ALEXANDRA,"**  
PILBEAM'S PATENT.

Simple,  
Noiseless,  
Compact,  
Effective.

In The "ALEXANDRA" the leather pad or brush is dispensed with, which is always a *fruitful source of annoyance and trouble*; there is no friction upon the thread, consequently, *the oiler is not necessary*.

The work done by the "Alexandra," is exactly alike on both sides. It has neither cord nor ridge, and will not unravel.

Its construction is extremely simple. Hence it is not likely to get out of order. Its use is easily learned, and it is very durable.

It will perform all varieties of sewing—such as stitching, gathering, hemming, binding, &c. An experienced operator can finish an entire garment by the Machine, such as a shirt or coat, using hand labour only to work the button-holes and sew on the buttons.

Its price is so very low, that every family of moderate means in Great Britain can afford to buy one. Its neatness, compactness, and elegance of model and finish render it an ornamental article of household furniture. No family can buy for the same amount of money and a field so interesting and so useful. It makes sewing a pleasant pastime, instead of being a wearisome task. Its introduction will confer a great boon upon women, and especially upon those who are now engaged in the drudgery of hand sewing. It gives increased employment to Tailors, Dress-makers, Shirt-makers, Cap-makers, Stay-makers, &c. By its use they will save, in a few weeks, more than double the price of a Machine.

The "Alexandra" excels any Family Machine at present in the market.

The "Alexandra," as applied to the "Victoria Folding Cabinet" (Pilbeam's Patent), forms the only complete Portable Sewing Machine, size, 18 in. X 13 in.

**"FIRST GRAND PRIZE"**

FOR THE

**BEST AND MOST POWERFUL STEAM FIRE-ENGINE,**

At the Great International Competition of Steam Fire Engines, Crystal Palace, July, 1864. The Celebrated "Sutherland" Engine raising steam quicker and discharging 75 per cent. more water than any other Engine, and was the only Engine that completed the most severe trial, and styled by the Committee, of which His Grace the Duke of Sutherland was chairman, "worked satisfactorily in every respect."

Merryweather & Sons' Steam Fire-Engines are the most simple and durable, work at half the speed of all other Steam Fire-Engines and with much less steam-pressure, and indicate a considerably more horse-power per cwt.

At the last competitive trial held at Rotterdam their Engine was decided to be the best, and consequently purchased by the city.

*Practical Mechanics' Journal, September, 1863.—No. 186, Vol. XVI.*

**STEAM FIRE ENGINE COMPETITION.**

"We ourselves who profess to have had some special experience in this department of Mechanical Engineering, hesitate not to give our full adhesion to the award of £250, the First Prize in the large class of Engines, to that of MESSRS. MERRYWEATHER; and to affirm that the very best Engine exhibited, in either large class or small, was that of MESSRS. MERRYWEATHER above alluded to. It combines several of the very first requisites of a perfect Steam Fire Engine."

# Colman's No. 1 Indigo Blue.

WARRANTED PURE.

---

*Special attention is invited to the Specimens in their Case.*

---

J. & J. COLMAN beg to call the special attention of Irish Families and Laundresses to the quality of their No. 1 INDIGO BLUE. It contains a greater amount of colour, and will be found purer and more lasting than any other Blue, and one fair trial will always secure the preference. Ultramarine and other Blues, however attractive they may seem in appearance, will be found to waste very speedily, and when in use on linen the colour flies more quickly than the beautiful tint imparted by the Indigo Blue, which retains its freshness much longer. Laundresses who have been induced to try Ultramarine, in consequence of its lowness of price, have found it to waste so much that in many instances they have *been* glad to return to the use of the Indigo Blue, which experience teaches them is in reality the cheapest and best.

\* These sums are greater or less, according as the age at entry may be above or under 30 years.

Important Financial Advantages like the following are frequently overlooked.

1. Surrender Values are payable at any time, *there being no interval of years, as in most other Offices, during which discontinuance of the Policy involves forfeiture of all the Premiums paid.* 2. Lapsed Policies.—A sum equal to the full Surrender Value is allowed. 3. Loans (*not less than £50*) are granted on security of Policies to any amount covered by their "Surrender Value."

### Society's Policies viewed as Investments.

The following is an exact Statement of the present amounts of Policies effected for £1,000, at age 30, and of the Premiums paid thereon.

*No other mode of investment yields such security to families during the lifetime of the assured, and so large a return at death.*

### Grounds of the Society's Claim to Public Preference.

The Magnitude and high Character of the Society's Business, its Financial Position and Mutual Principle, secure to the Assured such advantages as Life Assurance conducted under the most favourable conditions alone can yield.

*Package.*

The increased demand for J. & J. COLMAN'S Mustard has induced  
many imitations of their labels. The Manufacturers, therefore, call  
special attention to the fact that all tins and packets bear their Trade  
Mark, the Bull's Head, the Great Exhibition (1862) Prize Medal, and  
the autograph of the Firm—

*J. & J. Colman*

The qualities marked "Double Superfine" and "Genuine"  
are recommended for Family use and for Medicinal purposes, and may  
be obtained in all parts of Ireland, and in every town of the United  
Kingdom.
