The copy filmed here has been reproduced thanks to the generosity of:

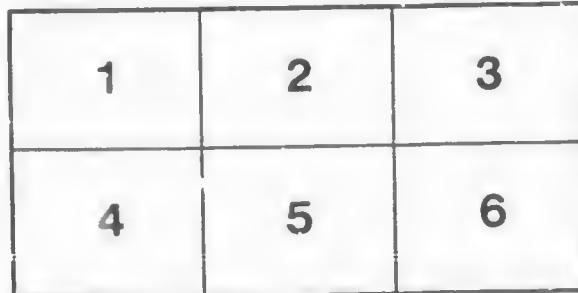

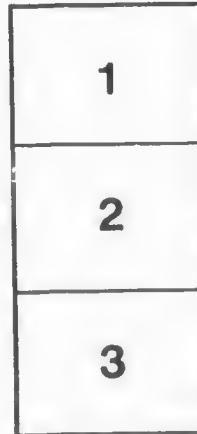

Metropolitan Toronto Library  
Canadian History Department

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol → (meaning "CONTINUED"), or the symbol ▽ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

Metropolitan Toronto Library  
Canadian History Department

Les images suivantes ont été reproduites avec la plus grande soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une ampreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole → signifie "A SUIVRE", le symbole ▽ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit sur un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant la nombre d'images nécessaires. Les diagrammes suivants illustrent la méthode.

## General Statement of, and Remarks upon the Railroad Interests of Western Canada

DEC 12 1879

THAT a judiciously chosen line of Railroad from East to West across the Canadian Peninsula must be a profitable investment, has been shewn in the Prospectus of this Company, dated Toronto, August 4th, 1845. The amount of traffic passing round it may be gathered from the number of Steam and Sailing Vessels plying not or from Buffalo, but from Montreal, Ogdensburg, Kingston, Oswego, and Toronto; conveying the surplus population of Europe and the New England States of America, together with their manufactures and the tea, sugars, spices, tobacco, and other productions of the warmer climates, through these waters, to the countries bordering on the Upper Lakes. The tract of country thus supplied, extends from the new British settlement of Owen's Sound on the East, and the Mining and Fishing establishments on Lake Superior on the North, to the American State bordering on Lake Michigan and its tributaries, even to the waters of the Mississippi, on the West and South; and its population, which in 1840 was 762,500, now amounts to about 1,509,600. The productions of these fertile regions, which include the richest mineral Districts of Northern America, are conveyed through the same route by the returning vessels, forming a stream of traffic, the commerce of which is estimated at above £25,000,000 Sterling; and employs above 100 steam and 500 sailing vessels, and above 6000 men.—(Appendix 1.) By far the larger portion of this traffic is now carried through the St. Clair past Detroit into Lake Huron, (Appendix 2), and would necessarily be thrown upon a Rail road carried across the Peninsula, by the tediousness of the Welland Canal, the uncertainty and dangers attending the navigation of Lake Erie, (Appendix 3); and the difficulties of the St. Clair, over the Shallows of which the larger vessels can only pass during daylight, being obliged to lighten their cargoes except when the waters are unusually high. The continued increase of this traffic is insured by the immense extent and fertility of the country to be supplied by it.

In the Prospectus mentioned above, and published nearly a year ago, this Board gave a decided opinion in favor of Sarnia, on the Southern extremity of Lake Huron, as the best Western terminus. Since then, material changes respecting both Foreign and Domestic traffic have taken place, and the question of a Union with the Great Western Railroad Company in Canada has arisen, for the easy accomplishment of which, the Act which has just received the Royal Assent, provides. It therefore becomes necessary to reconsider this opinion.

The Foreign traffic, which is now carried by the one route through Lake Erie, consists nevertheless of two distinct branches; the objects and interests of which are perfectly distinct. The one points to the connexion of the Eastern American Railroad, terminating at Buffalo, with the Western one commencing at Detroit; and necessarily seeking a more Southern route. The other points to the connexion of the navigation of Lake Ontario with that of Lake Huron, requiring a more Northern route, with good harbours at either termination.

Of these two objects, the connexion of Lakes Ontario and Huron is not only the most important now; but with all its vast increase, the trade runs no probable risk of being ever diverted to other channels. But with respect to the connexion of the two American Railroads no such increase can be expected, since the more Southern part of the trade now passing through Buffalo will necessarily be more and more diverted from Detroit, as the improvements now in progress are completed. A terminus at Windsor has for its object solely the connexion of these two lines. To include the other and more important object, the Western Terminus must be North of the St. Clair. The choice lying between Sarnia and Goderich.

Goderich possesses a tolerably good harbour, particularly for Steamers and Propellers; is situated higher up than Sarnia on Lake Huron, and at a shorter distance from Toronto—and for all purposes of Summer trade is most valuable. But it has the disadvantage of being situated on the Lee shore of the Lake, and all Foreign traffic must cease for above five months of the year.

Sarnia is situated at the commencement of Lake Huron, so that every vessel entering that Lake must pass through its harbour; and in consequence of the difficulty of the navigation of the St. Clair, it possesses many advantages similar to those of Buffalo on Lake Erie. Its harbour is both exceedingly good and easy of access, the Lake is always open to it, and it lies under the weather shore of Lake Huron—advantages as a Port for the Lake trade which more than compensate for the longer navigation, and its greater distance from Toronto. (Appendix 4.) At the same time the object of establishing a communication with the Detroit Railroad is not relinquished, as a road from that place to Port Huron, immediately opposite may be considered the certain consequence of one made to Sarnia, a Charter for which was obtained from the Michigan Legislature last year.

The present want of roads on the American side to this point, (Port Huron opposite Sarnia), has been urged as an objection to Sarnia as a terminus, as if it proved not only a want of business but of settlement thereto. This is no more the case in that part of the country, than in any other part of Western America. (Appendix 5.) Indeed the history of the "Central Railroad" (that West from Detroit) proves the importance of the tract of country, of which Port Huron would naturally become the outlet. When Railroads were first commenced in the State of Michigan, they were undertaken by the State Government; and three lines running parallel to one another were brought forward, and intended to be carried on at the same time. These were the Southern line from Monroe, on the Western extremity of Lake Erie to the bottom of Lake Michigan, which has been completed as far as Hillsdale, a distance of 68 miles. The "Central" from Detroit to St. Joseph on Lake Michigan opposite to Chicago, which has been completed about 130 miles; and the "Northern," from Port Huron to Grand Haven, the only good harbour on Lake Michigan opposite to Milwaukee on the Western shore.

The "Central" line commencing at the seat of Government was of course considered the most important and was begun first. A successful political intrigue enabled those interested in the Southern line to com-

mence that work before the Northern one; and State difficulties in money matters soon after interfered to stop it altogether. Still however the line was considered of sufficient importance to induce the State in the Session of 1845 to grant a sum of money for the purpose of constructing a "turnpiked" or graded road, and building the necessary bridges along the line.—A Railroad to Sarnia would necessarily secure all the business to be derived from the immense tract of which Port Huron must then become the outlet—a country of far greater extent and importance than that through which the "Gatineau" Road passes.

We have now to enquire into the local, or way traffic likely to be obtained; and by what route the most profit to be derived from it can be combined with that arising from the Foreign business.

In considering the local advantages of any line of Railroad through so new a country, it is much more necessary to look forward to the probable changes which time and circumstances may effect than to dwell upon what has already been done. In the whole tract under consideration there is no Town west of Toronto upon which business is so established as to prevent its relative importance being entirely changed within a few years—neither is there any road, or artificial means of communication sufficiently effective to interfere with a well chosen Railroad. The navigation of Lake Erie, even should its harbours be ever so much improved, can never compete with a railroad in the important article of the export of grain. The harvest ending in August, it is impossible for the Farmers to get their wheat to market, in any amount, for shipment on this lake until the middle of October, after which time the navigation becomes so unsafe that the rate of Insurance is trebled; and after the 1st November some Companies refuse altogether to insure. Thus, the greater part of the Western wheat of one harvest does not find its way down the St. Lawrence till the following year, to the great detriment of the Farmers, who, were the means of sensible export afforded, would probably each successive year, for some years to come, double the amount of their produce.

From Toronto two routes present themselves leading to Sarnia which has been already pointed out as the best Western terminus. The Northern, which is also the shorter line by 29 miles, through Guelph and Stratford, traversing, in proportion to its extent, a more fertile, though less populous country, and having the advantage of being able to communicate with both London and Goderich by comparatively short branches—the line originally recommended by this Board for the purpose of connecting the navigation of Lake Ontario with that of Lake Huron, and shewn by the preliminary survey to be most favorable (Mr. McDonald's report dated 5th August, 1845). The Southern, passing through Hamilton and an older settled country, including the towns of Brantford, Woodstock and London—and being, so far, the line of the Great Western Company.

Of this latter line, the distance from Toronto to Hamilton is 45 miles. Lying along the shores of Lake Ontario, its traffic most necessarily be confined to the conveyance of passengers, for which the Steamers will prove formidable competitors during the summer months; the receipts therefore can be but small. From Hamilton Westward, the local profits of the line will depend on such business as that Town may be enabled to establish, liable however to be materially lessened the moment a road is constructed from Toronto to Guelph—an undertaking of too profitable a nature to be long delayed.

The foreign traffic from Hamilton to the Westward, will, if the line be carried to Birnia, consist, of the same description as that calculated on for the Northern line, with the disadvantage of commencing at a very inferior harbour and less important Town than Toronto. Should the line be continued from London to Windsor, as proposed by the Great Western Company, that part of its Foreign traffic which arises from Lake Ontario, would be much interfered with by the line from Port Huron to Detroit, which would open the same trade to Toronto. While that part arising from a connexion with Buffalo (and which can only be obtained by a long and otherwise unproductive Branch from Hamilton) must be materially diminished on the completion of the Railroad now constructing from New York to Dunkirk on Lake Erie; and be completely diverted should the one proposed from Port Erie to Windsor ever take place.

The Road from Toronto to Guelph 43½ miles would pass, with the exception of a few miles in the hilly parts of Esquesing and Nassagaweya, through one of the most fertile and thriving parts of Canada—if not the most so—the line to Guelph were it even to census there must prove most profitable. Traffic of every description, whether for exportation, or the supply of Toronto, from the immense and uncommonly fine tract of which Guelph is the centre, as well as the intermediate country, must pour down it. In a circle round Guelph, embracing a population of above 22,000 inhabitants, exclusive of Galt and Dumfries on the South, there are 18 rising villages or small towns, besides a number of trading establishments. (Appendix 6.) Besides the more valuable descriptions of produce, the supply of Wood alone to this City, it is estimated would yield a yearly sum of £15,000. And from the higher ground where pine timber abounds, sawn lumber may be most profitably sent to the Albany and New York markets—for which trade there are a number of Saw Mills West of Toronto exclusively employed, and which is already a business of great importance.

From around Guelph and from thence on to Stratford, (which place 20 miles is laden with flour and wheat for the markets depicted in one day for consumption), through a country of unsurpassed, if not unequalled fertility in proportion to its extent, provisions whether Grain, Flour, or Meat, would be sent in quantities beyond my present enlargement—with this further advantage to this line that the traffic cannot be diverted to any other route. To this section of the Province the population of which increased from 1629 in the month of December, 1840, to 7587 in August, 1845, (Appendix 7,) and the adjoining Huron Tract, the greater number of Emigrants direct their steps; forming by their numbers (the amount of which is shewn by the Canada Company's returns) the largest item of local traffic of Western Canada.

From Stratford, the road may be carried either direct to Sarnia, or by the village of St. Mary in the township of Blanchard through the more settled parts of Adelaide and Warwick to Sarnia. If this route is adopted, a branch of 19 miles from St. Mary will connect the line with the Town of London. From Stratford also, a branch to Goderich, 45 miles, will receive the local traffic of the older settled parts of the Huron Tract, and the fine country North of it. It will also make available the great water power of Goderich

for the manufacture of Western Wheat for the Eastern Markets; as well as give greater facilities to the Summer trade of Lake Huron.

These are the views which were adopted by this Board eighteen months ago. It may be well to consider how far their correctness has been borne out by the various occurrences, more or less affecting the trade in question, which have taken place during the period.

The Free Trade measures of England, now coming into practical operation; and the bonded system of the United States, have a general effect, either by stimulating the trade or throwing it into new channels. The opening of a direct line of road from New York must necessarily change the direction of the existing trade on the South; and the commencement of Mining operations on Lake Superior have opened up new interests on the North.

The free-trade policy of England has not only given a great impetus to the provision trade generally, but has opened it to the American trader equally with the Canadian. This must drive the Quebec and Montreal merchants, especially, to seek not only a cheap, but the most rapid means of transit, for the produce of Western Canada, as well as of the Western States, to the St. Lawrence. Every reasonable facility that the British Government can give, may be confidently reckoned upon below, particularly as regards the safer navigation of the Gulf in the late autumnal months. The railroads must do the rest above. By affording an early means of transit, the harbour of Toronto will prove invaluable, as it is from that port that the first shipments can be made in spring, and the last in autumn. Could the produce of last harvest have been gotten to Toronto, instead of having to pass through the Welland Canal, or from the port of Hamilton, a far larger amount would have been sent down the St. Lawrence last autumn. All these circumstances must concur in stimulating traffic, and throwing it more and more on the Northern route.

Again, with respect to the Bonded system of the United States, by which unbroken packages are passed through duty-free, one effect of this measure has already been, to throw the entire grocery trade of Canada and the North-western States into the hands of the merchants of New-York; from whence all East and West India produce, as well as the tobacco and other products of the Southern States, must be necessarily forwarded by two routes,—the Hudson River and Erie Canal or Railroad, communicating with Ontario; and the Railroad already mentioned, from New-York to Dunkirk, on Lake Erie.

Another effect of this measure has also been, to transfer the whole business of that part of the trade connected with the country round Toronto and west of it from the hands of the Montreal merchants to those of the merchants of Toronto. (Appendix 2.) If this change the Hamilton merchants have also, to a certain degree, participated; but should the contemplated road be accomplished, there will be thus decided difference, that whereas the Toronto merchant will have a competitor, either north of him or along the whole line of his railway, the Hamilton merchant will have to contend, not only with the Toronto railroad on the north, but with the Buffalo and Dunkirk merchants on the south; who, receiving their goods by the cheapest and shortest routes, will compete for the supply of all places connected with Lake Erie, including not only London and Woodstock, but even Brantford, the nearest town to Hamilton, connected as it is with Lake Erie by its Canal.

With respect to the mining operations which have been commenced on Lake Superior and the upper waters of Lake Huron, the mineral wealth of this region has been proved to be very great—and the public attention has been so far drawn towards it as to secure their being earned on—thus increasing the importance, and therefore the profit of the more Northern line of Railroad.

Having thus set forth the general nature of the railroad traffic and interests of Western Canada, and the peculiar nature and interests of the line proposed by this Company, it now becomes necessary to consider how far, or in what manner a union with the Great Western Company may be beneficial—and if a union is found to be necessary, on what plan it may be based.

As far as regards the true interests of this Company, the foregoing statement clearly shows that a union, however it might benefit the Great Western Company, is of but little importance to this one; and any departure from the line first recommended by this Board must be deprecated. Still, however, as the London Board, representing the largest interest in the United Company, will have, under the terms of the union, to decide on the whole question, should it, either from taking another view of the subject arrive at a different conclusion, or from finding that the British capitalists, under the dread of the evils arising from the existence of two rival lines, refuse to subscribe the required amount of stock, decide differently, then this Board, rather than endanger the speedy commencement of the undertaking, will acquiesce in any arrangement that may be made, and to the utmost of its power carry it through, with reference alone to the general interests of the Company.

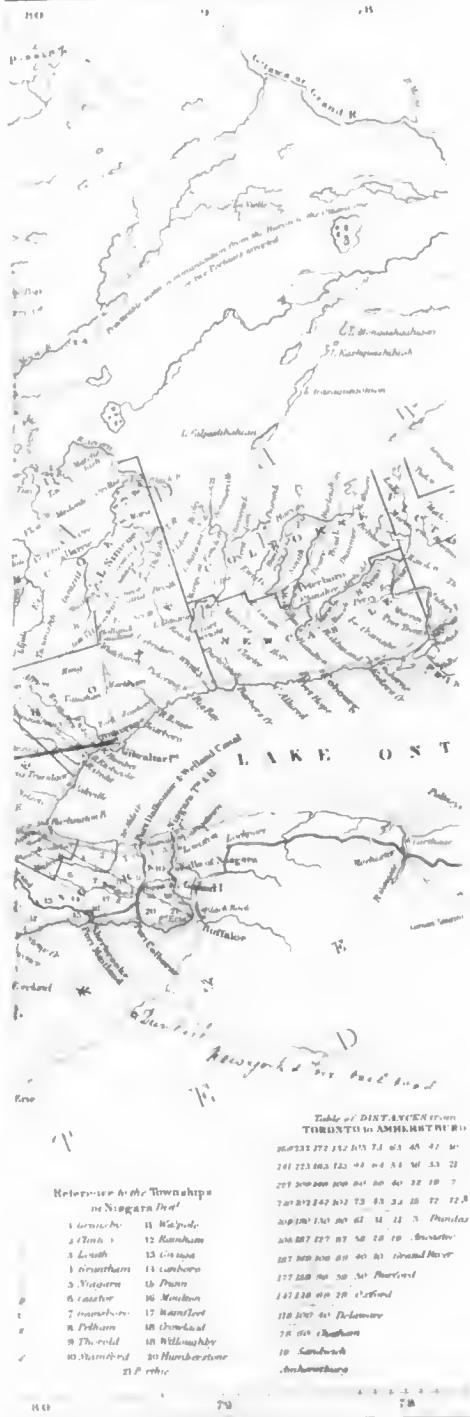

The views of this Board respecting the Western terminus, are confirmed by the opinion of the Board of Directors of the Great Western Company, expressed in their resolution dated, Hamilton, 6th January, 1847. "That one trunk line of railway, connecting the waters of Ontario with those of Huron, would confer the greatest benefit on the Province, and the largest advantage on the stockholders." There can therefore be no difficulty in settling the Western terminus of the United Company. It will be probably far otherwise, however, with respect to the first stage out of Toronto.

The road from Toronto to Guelph has been shown to be the most profitable part of the whole line, but the construction of such a road will have the effect of depriving Hamilton of a large amount of its most profitable business; and must therefore be viewed with jealousy, by a board composed entirely of people of that place. But what have they to offer, to induce this Company to sacrifice its best interests to those of a single town?

By consulting the map alone, the situation of Hamilton would appear to be the best for mercantile purposes, without any exception, in Western Canada. Situated at the head of the navigation of Lake Ontario, it is apparently the outlet of a larger and more populous tract of country than any other port West of Montreal. More than eighteen years ago it was a place of rising importance, and had the advantage of the Dundas Canal to Dundas. Since then the country West and North of it has risen more rapidly than any other

part of Canada. Hamilton has also the advantage of the following planked or macadamized roads, made by

The small map which the Canada Geographic has published here gives perspective and in which up to date information has been collected from the provinces and territories of Canada. The map shows the location of all major cities in our country and the distribution of population. In Canada during the last ten years in British Columbia the increase has been among the greatest in the country. The following map of the province shows the locations of all towns which have been incorporated or established during the last ten years.

TORONTO to MONTREAL.*

## 2. Issues in class

part of Canada. Hamilton has also the advantage of the following planked or macadamized roads, Government:

From Hamilton to Dover, on Lake Erie, 39 miles,  
Hamilton to Brantford, 23½ miles,  
Brantford to Woodstock, 27 miles,  
Woodstock to London, 32½ miles,  
Hamilton to Galt, 26 miles.

Yet, its population now only amounts to little more than 7000 inhabitants.

Toronto is the outlet of a tract of country less extensive and populous, and in a large portion of lately settled. Macadamized or planked roads extend no more than nineteen miles to the West, the North, and sixteen to the East; to which may be added a planked road lately made, extending eight to the North-west, made as a private speculation, at the risk and expense of a private company, of which, the Board is rejoiced to find, prove very great. But the population of Toronto was but 20,000 inhabitants—the increase alone in seven years being more than the entire population of 17,000. It may be said that Toronto had, for many years, the advantage of being the Seat of Government; but of Government has been removed six years, and the material increase in the mercantile wealth of the taken place since then.

Hamilton, then, although it has risen to be a place of considerable extent, has not risen so rapidly as must have done had it really possessed the advantages which its situation would seem to indicate, and instances are at this moment arising round it, which still further threaten its future relative importance. It has been said that if a railroad were carried through Hamilton, to Toronto, it would have the effect of exciting the traffic from the former to the latter place: to grant this would be to affirm that the harbour of Hamilton is utterly worthless. In truth, carrying the line from Toronto through Hamilton, would have the effect of fitting the latter town alone, at the expense of the Railroad company, *as in that case NO PART OF THE LINE FROM THE MAGNIFICENT AGRICULTURAL COUNTRY ROUND GUELPH WOULD TOUCH ON THE RAILROAD AT ALL, EAST OR WEST.*

HAMILTON,—but would be carried through Galt, and Flamborough West to Dundas, and from thence through Desjardins Canal, which it is now determined shall be made a ship canal past Hamilton, through Burlington Bay, until some wiser and more enterprising parties constructed a railroad from that district to the harbour of Toronto. (Appendix 9.) At this moment, the Gore District Council is negotiating with the Guelph and Hamilton District Council for the construction of a macadamized or plank road from Guelph to Hamilton.

Following the Great Western line westward, from Hamilton, it does not appear to offer any advantage over a road carried westward from Guelph.

For these reasons, this Board should resist any departure from the line to Guelph, in its negotiations with the Great Western Company. As, however, it is desirable to avoid rivalry, this Board is prepared to recommend a junction or union based upon such a plan as without sacrificing the interests of either Company, will retain the more valuable portions of each, and which may probably be done by connecting Woodstock as the place of junction.

The Toronto main line would then be—from Toronto to Guelph, 43½ miles, and from Guelph to Woodstock, direct, 39 miles. The Great Western line would be,—from Hamilton to Brantford, 23½ miles, from Brantford to Woodstock 23 miles, or as there appears to be great difficulty in crossing the Grand River at Brantford, the Great Western line will probably be carried from that place to Paris, 6 miles, and from Paris to the junction at Woodstock, 21 miles. The United line to be carried from Woodstock to London, 51 miles, and from London to Sarnia, 61 miles, each Company reserving to itself its own branches. Those of the Great Western would be, from Hamilton to Fort Erie, and from London to Windsor,—should that Company make them. The first branch from the Toronto line would be from Guelph to Stratford, 39½ miles, thence to Goderich, 45 miles. Or, by a trifling divergence from the direct line between Guelph and Woodstock, so as to cross the south-east part of the Township of Wilmot, which would place the road on a more level line, a point may be gained, from whence the branch to Stratford would be only 25 miles.

The different lines on this plan would be as follows:

The Toronto line—Toronto to Guelph.....	43½ miles	{
Guelph to Woodstock.....	40	
Branches—Wilmot to Stratford.....	25	{
Stratford to Goderich.....	45	
Great Western—Hamilton to Brantford.....	23½ miles	{
Brantford to Paris.....	6	
Paris to Woodstock.....	21	{
Branches—Hamilton to Fort Erie.....	53	
London to Windsor.....	112	{
United Line—Woodstock to London.....	32 miles	
London to Sarnia.....	61	{ 93 miles.

Or, should it be considered more advisable to carry the United line from London to Windsor, the Great Western Company would have the power of running a branch to Sarnia. The act now gives this almost unlimited time—twenty years—to complete its branches.

Or, a complete union of the two companies may be arranged, for the purpose of carrying out the above plan, as may be considered most advisable, completing the most profitable portions of it, carrying out or modifying the remainder, as circumstances may hereafter point out.

## TOWN OF GUELPH—YEAR 1845.

Goods (exclusive of Iron) imported to the Town of Guelph alone,      475 tons.  
Iron—wrought and cast,      100 "

Flour Exported,      8,000 barrels.  
Port,      60,200 lbs.

Deposited in Immigrant's Saving Bank,      £3577 0 0  
Remitted to assist friends in emigrating from the Mother Country,      438 14 0

Table of Statistics of the three Townships, West of Toronto, to be immediately supplied and benefited by the line to Guelph—Showing the increase in two years, from 1844 to 1846.

	Acrea Cultivated.	Four Miles Run of Stones.	Merchant Shops and Stores.	Rateable Property.
Etobicoke—1844	12,516	12	6	£38,339
1846	13,224	16	9	42,046
Increase	708	4	3	3,667
Toronto—1844	28,468	10	23	79,585
1846	31,587	14	27	85,226
Increase	3,119	4	4	5,641
Chinguacousy—1844	26,680	2	9	50,952
1846	29,990	2	16	68,766
Increase	3,330	0	7	8,814
Total increase	7,157	8	14	£18,122*

\*Note.—The "Rateable Property" is that part of the various descriptions of Property subject to direct taxation, according to the rate, ad valorem, established by Act of Parliament—he amounts therefore included under this head, represent only a part of the existing property, and include cultivated lands and buildings, real estate, as well as chattel property—but as the property is stated far below its real value, the figures in this column do not represent even the value of the chattel goods. Still as the rate is fixed, the ratio of increase is fairly shewn—and gives an increase of Ten per cent. in two years.

Blankets, pairs, "	10,750			
Sheep's Felts, number, "	£2,000			
Furs and Peltries, value about "	500			

Total value of Exports,      £301,000

Increased value of Exports over preceding year (1845), £72,908, or 23 per cent.

\* Exported to United States.

7

Appendix No. 9.

mount of Goods imported to, and passing through,  
Galt to places immediately round it exclusive of  
Guelph--in the year ending 1st January, 1845.

FROM BURLINGTON BAY.

Bonds, Wares, and Merchandise	1298 tons
Salt	1533 bbls

EXPORTS--TO BURLINGTON BAY.

Flour manufactured in Galt from harvest of 1845	22,182 bbls.
" " in country North and West of Galt passing through that place for exportation	57,305 bbls.
Butter	16 tons.
Whiskey	741 bbls.
Pork and Beef	6,02 bbls.
Pot and Pearl Ashes	41 bbls.

Present cost of transportation to and from Burlington Bay to Galt.

1298 tons of Goods at	2s. per ton	£1,622 10 0
46 tons Butter at	2s. per ton.	97 1 0
1533 bbls Salt at	1s. 3d. per bbl.	95 12 6
1532 bbls Whiskey, Pork & Ashes, 6d. per bbl.	107 8 0	
78,871 bbls Flour	1s. 3d. per bbl.	4,929 12 6
Supplied Imports of Salt, Goods and Merchandise to supply the Northern part of Dumfries, Waterloo, Wilmot, towns of Stratford and immediate neighbourhood; and Exports of Produce therefrom, about 14,420 to 5,600 bbls.		
Flour, at 1s. 3d.		3125 0 0
		£2,937 13 0

The Town of Brantford was laid out by Government on land surrendered by the Indians in 1830. The population in 1845 amounted to about 2000 inhabitants. in 1845.

The navigation of the Grand River is completed to within three miles of Brantford and when complete will carry three and a half feet of water all through. The Canal gives a fall of thirty feet in the vicinity of the town. Steamers ply daily to and from Brantford to the entrance of the canal.

Quantity and Description of certain Goods, part of those passing through the Welland Canal and Grand River Navigation from and to Brantford, in the year 1845, taken from Official Report, dated.

BRANTFORD, 28th April, 1846.

Flour	12,000 bbls	Wheat	bus	91163
Pork	1,600 bbls	Cig. Iron	tons	82
W. Sasey, Beer, &c. bbls	287	Plaster Paris	tons	534
Salt	2,110 bbls	Merchandise	tons	196

The Tolls collected by the Grand River Navigation Company in 1845 show an increase in the trade of Brantford of 25 per cent. in the year ending December 1845, above that of 1845 and a much larger increase must prevail on the completion of the Canal two and a half miles farther to Brantford.

Tolls collected in 1845, £1231 16s. 8d. in 1846, £156.

Tolls from Brantford to St. Catharines, clearing the Welland Canal per bbl. Flour

Freight per bbl. Flour, (present) £ 21, including 4d. carriage past unfinished part of the Canal on Canal being finished

Tolls on Desjardins Canal from Dundas, bbl. Flour - 1 d.

Tolls on Burlington Bay, entrance Canal bbl. Flour - 2d.

Tolls on Burlington Bay entrance Canal bbl. Flour - 2d.

Tolls and Freight from Brantford to Buffalo, nearly the same as to St. Catharines, but the return freight is necessarily low, indeed, almost nominal, in consequence of the vessels carrying down bulky produce on which their freight is made, and returning comparatively empty.
