The copy filmed here has been reproduced thanks to the generosity of:

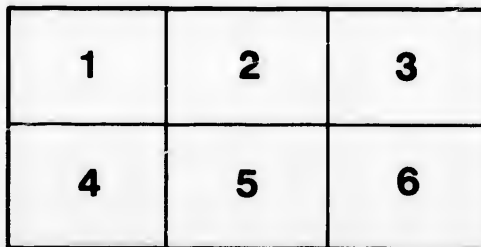

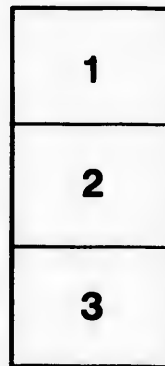

Library of the Public
Archives of Canada

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol \rightarrow (meaning "CONTINUED"), or the symbol ∇ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

La bibliothèque des Archives
publiques du Canada

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole \rightarrow signifie "A SUIVRE", le symbole ∇ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

manager, and everything will be in trlm for commencing the manufacture as soon in the spring as there is milk enough. The Paradise Union Cheese Manufacturing Company has a capital stock of fifteen hundred dollars, with power of increase, in shares of ten dollars each, and may hold real estate not exceeding \$2000 in value. No member is liable for the Company's debts beyond double the amount of his share. The Nictaux and Wilnot Cheese Factory has a similar constitution. The Onslow Cheese Factory may hold real estate to the extent of \$6000; the capital stock is \$2000, and may be increased to \$20,000, in shares of twenty dollars each. In order to save labour in estimating the qualities of milk received at the factory, it is weighed, not measured, 10 lbs weight being reckoned as equal to one gallon. In the English factories 10½ lbs represent a gallon.

It is the special duty of Agricultural Societies throughout the Province to introduce to their respective districts, improved breeds of domestic animals. The annual sales of imported animals are usually held in October, but as the purchase of animals at that time involves considerable trouble and expense in keeping them over winter, it often happens that societies do not provide themselves till spring. Now in springtime, the demand for Bulls is so great that it is next to impossible to procure really good animals without paying a very high price. We

would therefore recommend all those who wish to obtain the benefit of good stock not to stay their selection beyond the present month. At this time societies are often willing to make exchanges, or to sell the animals they have in order to obtain a change of blood. In the fertile marsh land districts the short horn Durham breed is preferred before all others; but in dairy districts preference is usually given to Ayrshires or Devons. The white faced Herefords are not liked here. Alderneys are great favorites as family cows, as they are docile, easily fed, stay at home, and produce richer milk, and more cream in proportion to its quantity, than any other kind.

Abdominal Supporters, Trusses, &c., at EAGAR'S.

In some parts of the United States and Western Canada great efforts are being made to replace the forests that have been so ruthlessly cut down. Of trees that are planted the sugar maple is perhaps the most popular. The following is the method of sugar making, by a Lower Canadian farmer :

In the spring as soon as the sap will run we collect the sap by tapping the tree with the axe, and setting troughs, which we make out of bass-wood to catch the sap; we also make buckets for the same purpose.

We then rig our camp and kettles, and having got our wood together, and the shanty fixed, we get the team and go round to the trees and collect the sap, which is brought to the camp, and we then fill all the kettles. The sap is carefully strained through woolen cloths, and soon boils. We keep the fire down as soon as the sap boils, and as it boils away we fill up the kettles until the syrup gets pretty strong, we then put all the contents of the kettles into one, to come first into sugar, and fill the others with fresh sap, the one with the syrup is kept well off the fire; the others are made to boil as fast as they can, so that they do not boil over.

This is the busy month of seed time, and of preparation of the soil for May sowing and planting. In land prepared last summer or fall wheat may now be sown, if the land is not thoroughly prepared do not sow it, for it is now clearly established that the bad character hitherto attributed to Nova Scotia as a wheat country is entirely due to the carelessness of our farmers in not properly preparing the land, and not selecting good seed. Every year the acreage of wheat is increasing, the

natural result of better farming. The Canada fyfe wheat is the best for
our Province. Barley is also grown more extensively than formerly,
and is found to be a very profitable crop, when grown even for feeding
the farm.

It is too early to plant potatoes until the very end of the month, and
in most seasons, May will be found preferable; but such crops as carrots
parsnips, onions, broad beans, peas, mangels, may all be put in as soon
as the ground is dry enough to receive them.

Peruvian Bitters give tone and appetite. See page 237.

DURING the month of May most farmers are too busy to do any reading; this arises from their work not having been sufficiently advanced during the previous Fall. If you find that some of your crops are not likely to be sown in good time, it will be better to sow a smaller breadth this year, and keep your ploughed land in fallow during the summer. It will thus be ready for a crop as early as the frost is out of the ground next spring. It is a great mistake to look upon a fallow field as idle and unproductive. We plough up an old sod, and sow

Essence of Smoke, at M. F. EAGAR'S. See page 237

THIS should be our most "flowery" month; but in Nova Scotian gardens there is a great want of early summer flowers. This arises from the fashionable habit of trusting to fall-flowering bedding plants, which do very well in England, but with us just begin to show their full beauty when frosty nights come to tantalize the luckless florist. Such hardy herbaceous plants as the Dielytra, Globeflower, Daisies, Primroses, Cowslip, Pæonies, and flowering shrubs, are well adapted

but in Nova Scotian flowers. This arises from bedding plants begin to show their heads the luckless florist Globeflower, Daisies, &c. are well adapted

for giving cheerfulness and beauty at this season of the year. Some kinds of Fuchsias can be kept in the cellar all winter, and put out into the open garden in spring; thus treated they grow to great size, and form very beautiful bushes, flowering all summer. This month a late sowing of garden peas should be made to keep up the supply for table in the Fall. Juicy green peas in October are a delicacy not to be despised; but most people go without simply from forgetting to make a small sowing at this season, when so many other things have to be attended to.

EXOTIC EXTRACT removes Tan, Sun Burn and Freckles, and makes the Sktn beautiful. Sold by M. F. Eagar, Halifax.

This month more work is neglected on our farms than during any other month of the year. Crops and weeds begin to grow so rapidly that a slow farmer is sure to be overtaken before half his hoeing is done. Potatoes, Turnips, Carrots, Parsnips, all these have to be diligently attended to. The Horse Hoe, Cultivator, and other horse implements are a great saving of human muscle, and should always be employed. The difficulty is that some of our farmers grow such little patches of root crops that a horse has

not room to turn round in them. If all hoeing is not well advanced before
hay time begins, the crops will necessarily suffer severely, because hay-
ing once begun brings on a sort of hay fever among masters and men, and
everything else on the farm is in danger of being neglected. The health of
the farmer's family is also to be looked to this month. What with early
vegetables and fruit, and sultry weather, there are plenty of causes for sud-
den attacks that are only dangerous when neglected. Be very particular
about draining, see that there are no offensive pools or drains near the house,
let the drain from the sink be underground, and cart mud and everything of
decaying nature away to the fields; then your family will breathe a
sweet atmosphere, there will be no danger of typhoid fever, and no annoy-
ance from house flies.

EAGAR'S CHOLERA MIXTURE cures Diarrhœa, Cramps, Dysentery, and all Summer complaints.

In August the domestic puzzle is to keep things sweet. In the cities where food is purchasable often and in small quantities, and where it is at hand, there is not so much trouble, but in farmer's houses, all conceivable methods have to be resorted to. The following notes of Economy of Ice are from the American Agriculturist:—Refrigerators are made upon one general principle—that is to keep the ice from melting, except by means of the heat it abstracts from the articles that w

ish to cool. The walls of refrigerators are made double, and the space between them is filled with sawdust, charcoal, or other substance that will serve as a non-conductor of heat. There must be a metallic lining to prevent the filling material from becoming wet. There must also be a pipe to convey off the water resulting from the melting of the ice. The simplest refrigerator is the common grocer's box, which is a plain chest of convenient size lined and filled as above indicated. A lump of ice is placed in the box, and the articles to be cooled are set around it. Patent refrigerators may be purchased of any style of elegance or convenience; but the one described can be made at home, with the aid of a tinsmith for the zinc lining.

Odontine Essence never fails to cure Toothache.

THERE is no class of animals in which more interest is taken by our people generally than pigs. The increase of potatoe and grain culture of late years has afforded our farmers the means of raising more pork than formerly, and with many this article yields them a large proportion of their income. This is the fattening season for those who look forward to making sales in November or December, when enormous quantities of pork are brought into the city to the pork butchers, who are always ready in the cool time of year to give good prices. The Board of Agriculture has imported largely of the Chester breed, and also of other kinds. Mr. Bustie

who is well versed in agricultural matters both in Scotland and Nova Scotia, writes to the Agricultural Journal that the cross between the Berkshire's and White Chester's is most suitable for this country, as regards fattening properties, weight of carcass and profit. This cannot be had without the pure breeds. His experience goes to show that, in general, crossing the common breeds of the country with any of the improved breeds, ends in a disappointment. However, half a loaf is better than no bread, and we feel assured that half bred pork is better than no bacon, and would therefore recommend those farmers who can have access to a thorough bred animal of either kind to embrace the opportunity to improve their common stock. The long-nosed runners of the roadsides cannot be fattened with profit.

POTATOE culture is more profitable now than it has been for sometime, and is largely on the increase all over the Province. This has been rendered possible by the employment of labour-saving implements; the horse now does more of the work, and men less. One of the most useful implements is the potatoe digger. With a pair of small horses, this implement will easily dig potatoes as fast as twenty men can pick up, and will turn them out so cleanly that scarcely one bushel in fifty, whether small or large, is left uncovered. The standard is high so as to allow of its working freely with-

clogging with weeds or potatoe vines, but in early harvesting, when
rank vines are green, it is better to cut and remove them before setting
digger to work. One of the best potatoes introduced to the Province is
London Flour Ball, an English sort, which is the great favorite on Lon-
donding tables, it is said indeed that no body but the vulgar will have
another potatoe served at dinner. It is likely therefore to prove a valu-
market potatoe. It is of good size, a round as a ball, red-skinned, and
the peculiar strong potatoe-flavour of English potatoes, which is want-
in our American sorts.

THIS month the farmer brings into his barn and cellar the last of his crops. It will be well for everyone to go over the results of the season, and find out what are his profits and losses, what he lost by bad cultivation, by sowing poor seed, and by want of management, what he gained by heavy manuring, extra labour in cultivation, and careful selection of crops and live stock. ALL the success and progress of our agriculture depends upon the active working of our Agricultural Societies. The objects of these Societies are to promote the introduction of improved stock, seeds, fruits, roots, implements, methods of culture, drainage, orchard cultivation, and improvement in farm buildings and domestic manufactures, to hold shows and exhibitions, award premiums for excellence, and to diffuse information concerning agriculture and horticulture. All these Societies are under the general control of the Central Board of Agriculture, from which they receive annual grants to the extent of double the amount of subscriptions raised and paid in the local

Respirators & Elastic Stockings at Eagar's, Halifax.

such grants being limited, however, to \$240 to each County, and to \$200 here there is only one Society in the County. In consequence of the large number of Societies, these limited sums are not sufficient to ensure to each Society a grant double the amount of subscriptions, and therefore the money is apportioned among the Societies in rateable proportion to the subscriptions. These Societies have been of great benefit, and it is very desirable that one should be established in every thriving agricultural district. In some Societies quarterly or monthly meetings are held for the discussion of agricultural subjects. Some hold ploughing matches in the Fall. Others contribute themselves entirely to purchase and maintenance of thorough bred stock for the use of members of the Society. Some Societies own Mowing Machines, Threshing Machines and other expensive appliances beyond the reach of individual farmers of the poorer class.

Forfeited Policies revived within thirteen months under certain conditions.

Elastic Stockings, Knee Caps and Anklets, at BROWN BROTHERS & Co.

The Canada Life Assurance Company.

Established 1847. Capital, \$1,000,000.

Incorporated by Special Act of Parliament.

HEAD OFFICE, HAMILTON, ONTARIO.

DIVISION OF PROFITS, 1870.

Comparative Table, showing the Profits to Policy-holders, on Policies 5 years in force, payable either in Cash or in diminution of premiums for the next five years as compared with the annual premium.

AGE.	PREMIUM.	PROFITS.	
	Annual Rate.	Cash.	Annual Reduction.
21	\$16.80	\$25.44	\$5.99
25	19.00	27.95	6.60
30	22.30	31.41	7.47
35	25.70	34.05	8.22
40	30.50	39.34	9.45
45	35.90	43.78	10.54

EXAMPLES.

"CASH" PROFITS.

I.—The holder of a Policy for \$4000 of five years' standing, commencing at age 30, will receive as his share, \$125.60. This will not only pay his annual premium, amounting to \$89.20, but leave him a surplus in cash of \$36.40, or more than 40 per cent., in addition to a full year's payment.

REDUCTION OF PREMIUMS.

II.—The holder of a Policy for \$5000 of five years' standing, commencing at age 30, is entitled during the next five years to an annual diminution of his premium to the extent of \$37.35

Thus.—From his annual premium.....\$111.50
Deduct as above.....37.35

Which reduces his payment to.....74.15
or two-thirds his original premium. The next division will take place in 1875, when another allotment of profits will be made in like manner.

BONUS ADDITION.

III.—Whole Life Policies, whose holders take their profits in this way, are now increased in value at the rate of 2 1/2 per cent. for each year they have run. Thus the addition to policies dated prior to 30th April,

1866,	} is,—for each \$1000, {	\$125.00
1867,		100.00
1868,		75.00
1869,		50.00
1870,		25.00

N. B.—These results have been accomplished, after making ample provision for all the liabilities of the Company, notwithstanding the economical rates of premiums charged by the Canada Life, giving a present and continued assurance larger in amount for a given premium than other offices.

Attention is called to the fact that the Cash Bonus returnable to policy-holders of 5 years' standing, is equal to from 20 to 50 per cent. IN EXCESS OF A YEAR'S PREMIUM; in other words, these policy-holders will not only have NOTHING TO PAY THIS YEAR, but will be MONEY IN HAND BESIDES.
