Halifax Visiting Dispensary.

DIRECTORS' REPORT

FOR THE YEAR ENDED NOVEMBER 30, 1880.

The supporters of this institution, and others who are interested in its welfare, are doubtless waiting the issue of the customary yearly statement of its work and progress. In presenting herewith the more interesting reports of the Medical staff, with that of Dr. Dodge, and the financial exhibit of the Treasurer for the past year, the Directors beg to submit a few practical observations relating to the present aspects and future prospects of affairs affecting the Dispensary. They are hopeful that this combination of facts, figures and sentiment may result in eliciting an increase of sympathy and more extended support on the part of the general public.

Though gradually augmenting, the claims upon the Dispensary, by its beneficiaries, have hitherto been met, but the corresponding drain upon its financial resources is likely to become, ere long, too great for the ordinary limited revenue to supply. At the close of 1879 a few bills had to remain unpaid, the outlay for that year, notwithstanding strict economy and careful oversight, being greater than the income. The Directors were unable to discover in what way further retrenchment could be practiced in order to make both ends meet. Needful improvements were deferred, and as the bill for medicines has continuously increased, it was deemed advisable to discontinue the supply of prescriptions to such other charitable institutions in the city as were self-sustaining, and more of a private than public nature. Reluctant to adopt this course, they curtailed the list no further than absolute necessity demanded.

The limited income of the Dispensary for the past three years left no margin for carrying into effect the plans originally proposed for the treatment of some classes of patients at the institution itself. These intentions are still in abeyance, whilst a considerable portion of the building is incomplete and unfurnished for lack of funds.

For the same reason another desirable result has not yet been realized. A mortgage of \$2,000 remains on the building, entailing the payment of yearly interest, which would nearly pay two of the salaries. To relieve the Dispensary of such an incumbrance, the Directors have made several appeals, and in making the annual request for collections on Hospital Sunday, have hoped to be able to obtain a sinking fund toward this object, but thus far without success. Some additions and improved appliances are also required in the surgical and dispensing departments, and occasionally renovation and repairs are needed in and about the premises. In order to render the lower rooms more comfortable, and improve the sanitary requirements, it was necessary this year to repair the furnace, renew and change the water arrangements, and place a partition at the head of the stairway leading from the main reception or patients' waiting-room. The whole was done at very moderate cost, and proves of great advantage to all parties. With reference to income, the only regular supply is the grant from the Local Government and that from the city. The Directors observed that the latter had been placed in the estimate passed by the City Council at \$600 instead of \$750, as arranged when the apartment, fittings, and maintenance of a morgue were provided by the Dispensary in 1876. After conferring with the Council, and going over former correspondence and explanations, the Directors are happy to state that the larger sum was named, and is to be continued.

The membership and other private subscriptions obtained by a Committee of the Board, appointed for that duty, were generously and freely given—the amount being also greater than in 1879. Very few declined to contribute, and

they, doubtless, do their duty in the nation of from a part the Dispensary that sum that his n

Instan may prom constitute from, non of annua satisfacto Hospital churches Dartmout establishe and some will be being \$1 Christian tunity of sick poor, Saviour H were dou help in t themselve While dec ing gran the Dir and liber promote i liberality whose val been, and the clergy to the arc

they, doubtless regretting present inability, will in future do their part. In this connection must be mentioned a donation of \$25 by a gentleman from England, who, learning from a paragraph in one of our newspapers the existence of the Dispensary here, and its special work, voluntarily offered that sum through J. S. Maclean, Esq., with the injunction that his name be not mentioned.

Instances like these, while praiseworthy in themselves, may prompt others to do likewise. Four dollars per annum constitutes membership, and ladies are not precluded therefrom, nor will smaller donations be refused. The last source of annual aid (tried as an experiment in 1875 with most satisfactory returns) is the collection in all the churches on Hospital Sunday. Circulars were forwarded to thirty-three churches and chapels in the city and vicinity, and in Dartmouth, where a branch of the Dispensary is established. Twenty-five of these contributed, some a larger, and some a smaller amount than in the previous year, as will be seen by the Treasurer's abstract, the aggregate being \$1,090.14. This mode of appealing to the Christian public has been retained as affording opportunity of helping to alleviate the distress and affliction of the sick poor, a class for whose relief and restoration the divine Saviour Himself was most solicitous. Some congregations were doubtless unable—but, it is hoped, not unwilling—to help in this way their disabled brethren, and may avail themselves of this privilege on a similar occasion hereafter. While deeply grateful to Divine Providence for all the blessings granted to this charity and its special undertakings, the Directors thankfully acknowledge the kindness and liberality of those who in anywise help to sustain and promote its special work. They again mention the kindly liberality of the Press, the gratuitous services of Dr. Dodge, whose valuable and practical report shows what these have been, and the co-operation of the consulting physicians and the clergy. The special attention of the public is directed to the arduous and successful labors of the medical staff, set

forth, with other valuable matter, in their report now published. Before closing, the Directors are sorrowfully reminded that in the obituary list of the year stands recorded the names of several long-trying friends and liberal supporters, such as Rev. J. C. Cochran, D.D., Hon. Judge Marshall, Jas. B. Morrow, P. Walsh, A. H. Crowe, and others. The Rev. Dr. Cochran was, from its first inception, the fast friend and most zealous advocate of the Dispensary, and was for twenty years, and at the time of his decease, its worthy President. Knowing from his constant visitations among them the special needs and privations of the poor, and ever desirous of befriending and aiding them, he saw that there was a special necessity for this charity. Laboring continuously and earnestly in its behalf, he at length rejoiced to see in the completion and equipment of the present substantial building a satisfactory assurance that the Dispensary would be one of our prominent institutions for the special relief of the poor of the city.

Concurring in this view, the Directors can only express the sincere hope that the vitality and success of the Dispensary may ever be maintained by a continued succession of benefactors, animated by the same liberal spirit as those who have passed away.

REPORT OF THE MEDICAL BOARD.

HALIFAX, Dec. 1, 1880.

The Medical Board beg to submit for the information of the Directors the following report of their work for the year ending November 30th, 1880:—

Number of Patients Treated by Dispensary Physicians.....	3,485
“ “ Visits and Consultations.....	10,158
“ “ Deaths.....	45
“ “ Patients Treated by Out-door Physicians.....	2,116
“ “ “ “ In-door “ “.....	2,024
“ “ Visits and Consultations by Out-door Physicians.....	5,821
“ “ “ “ In-door “ “.....	4,327

DARTMOUTH BRANCH.

Applications.....	245
Visits and Consultations.....	1,061
Deaths.....	7

PRESCRIPTION AND DENTAL DEPARTMENT.

Prescriptions Dispensed.....	15,088
“ for in and out door Departments.....	12,396
“ for Dartmouth.....	1,480
“ for other Charities.....	611
Teeth Extracted.....	976

Accompanying is a classification of the diseases treated by the Dispensary Physicians during the past year. The general health will be found much the same as last year, there being a decrease of 67 patients in favor of the year just ended.

The want of really first-class health inspectors instead of the—at present fully employed—police officials has been felt, and many cases of diphtheria have certainly been aggravated by the filthy surroundings of the locality in which the disease existed. In last year's report the Medical Board directed attention to the prevalence of preventable diseases, and in this connection it is safe to say that a careful and

judicious inspection semi-annually of all the houses and yards in the city would prevent a great amount of sickness which is now the result of filth.

Among the poorer classes the Dispensary Physicians often have to contend with malnutrition as an accompaniment to disease, and if provision was made for a reasonable amount of nourishing food to be given at the discretion of the attending physician there is no doubt but the saving in medicine would make up the difference in the expenses of the Dispensary.

Another question that has been causing considerable interest to be manifested is the procuring of suitable means to convey pauper patients to the Hospital and Poor House. A suitable ambulance could be arranged at a small expense, and patients could be carried in a reasonable and humane manner.

The Medical Board beg to suggest that some change be made in the years allotted for Dispensary work—either to take in the calendar year or the year for which the Board is appointed.

Mr. Puttner still continues to discharge his duties faithfully and to the satisfaction of the Medical Board, and no small share of the success of the institution attaches itself to Mr. Puttner's management.

Mrs. Webber, the janitress, deserves honorable mention for the manner in which she performs her duties.

All of which is respectfully submitted.

DISEASES OF THE EYE AND EAR.

DR. DODGE'S REPORT TO THE DIRECTORS OF THE DISPENSARY.

GENTLEMEN,—The report annexed shows the amount of work done in this department during the past year, as well as the various diseases treated. There have been under treatment 185 cases—142 of the eye, and 43 of the ear.

Since I assumed the charge of this department, in March, 1874, there have been under treatment up to November 30th, of the year 1880, 1,040 patients—814 of the eye, and 226 of the ear. In the treatment of so many, extending over such a period, a large amount of time has necessarily been employed in attendance at the Dispensary, in addition to the strictly professional work. Yet there has been much to please, as well as to encourage. The relations between your Board and myself have been of the most harmonious kind. Having nothing to do with the management, but simply to attend to the professional work in my own department, I have been left free to do whatever I thought was necessary for the patients under my care. And it is to be hoped that in the future management of this institution, as in the past, the Executive Board will be selected from the citizens who pay the money for its support, and that the strictly professional work alone shall belong to the medical men connected with it. Whether we consider the amount of work done in the several departments, the sufferings relieved, or the benefits conferred, this institution is emphatically the cheapest charity in the city.

I now desire to say a few words more particularly of my own department. It has been a rule with me ever since I became connected with the Dispensary to impress upon all who applied to me for treatment the importance of seeking relief early in their diseases; and to attend punctually until well. It is to be borne in mind that the patients are not only poor, but, as a rule, uneducated, knowing little of the laws of health and caring less for them, devoid of habits

of thrift, and with little forethought. Under such circumstances, it will be readily understood that any attempt to teach provident measures to this class is an arduous task. Yet I am bound to say, as an act of simple justice, and have much pleasure in making the fact known, that each successive year shows a decided improvement in these two particulars. In proof of this, let me cite the following instance, though many others might be given, if necessary. During the past year there were presented for treatment several cases of a disease of the eye which rapidly destroys the sight unless prompt and judicious treatment is employed. These all were seen sufficiently early in the attack to result in complete preservation of sight. In the year before two cases of the same disease were brought; one after total loss of sight in one eye, and the other after complete destruction of both eyes. In the last case, the unfortunate result was to be attributed, not so much to simple neglect as to ignorance and meddling neighbours, each of whom had a famous remedy. As I have said in a previous report, it is very seldom that I have to complain of want of punctuality in attendance. Moreover, the gratitude and thankfulness which characterized many of the patients go far to offset much that is more or less disagreeable in Dispensary work.

The number of cases of ear disease bears a larger proportion than is usual elsewhere to those of eye disease. The treatment of many of the ear patients is less satisfactory than I could wish, and for the same reason that exists in private practice. The great majority of such cases, especially in children, arise from disease of the throat and nose. Under treatment, the hearing is generally soon improved, but unless the throat and nose are properly attended to, and for a sufficient length of time, this improvement is in many instances only temporary. The result is, a state of chronic thickening of the lining membrane of the nostrils and adjoining cavities ensues that can be overcome only by a prolonged course of treatment.
