### CALENDAR FOR 1884.

All the calculations are reduced to the nearest minute of Local mean time at Charlottetown, with the exception of the Data required for Solar observations for Time and Latitude, namely:—The Equation of Time ("Sun fast or slow of clock) which is given for the instant of apparent Noon and the Sun's Declination for Mean Noon, both Greenwich Time.

If required, the Sun's Declination at Greenwich apparent Noon can be obtained by multiplying the hourly variation of Declination by the Equation of Time reduced to the decimal of an hour and adding or subtracting the result according to the conditions as given below.

DECLINATION INCREASING		DECLINATION DECREASING.	
Sun slow of clock	Sun fast of clock	Sun slow of clock	Sun fast of clock
Add	Subtract	Subtract	Add

*Example.—To find the Sun's Declination at Greenwich Apparent Noon, February 11th, 1884.*

These data may be reduced if required to Charlottetown time by multiplying the hourly variation by the constant 4.208 and adding or subtracting the product according as the data are increasing or decreasing. Example: To find how much is the Sun slow of clock at Charlottetown, Aug. 9.

Hourly variation of Equation, Time	358
Constant multiplier	4.208
	2864
	7160
Equation Increasing add	1432
	1.506464
Sun slow at Greenwich	4.59.26
Sun slow Charlottetown	5 0.77

From the Sun's apparent Semi-diameter which is given for each day of the year, may be found the Sun's horizontal Parallax, (which equal to the earth's apparent Semi-diameter as seen from the Sun's distance) by dividing the Semi-diameter by 107.44 which is the ratio of the Sun's actual diameter to that of the earth. Thus on July 1st when the Sun is at his greatest distance, Semi-diameter  $15' 46'' = \frac{918}{107.44} = 8.805$  horizontal Parallax on December 31st, the Sun being in perigee  $16 18.2 = \frac{978.2}{107.44} = 9.106$ .

To find the Sun's Parallax in altitude, multiply the horizontal Parallax as found above by the cosine of the altitude.

Example:—What correction for Parallax is to be applied when Sun's altitude is  $20^{\circ} 30' 30''$  on the 31st December.

Sun's horizontal Parallax December 31st,	9.106
Cosine of Altitude $20^{\circ} 30' 30''$	.9336
	56196
	93660
	8.4294
Sun's Parallax in altitude	8.5286796 = $8''.53$

To find the day's length subtract the time of sunrise from 12 hours and add the time of sunset. Thus for February 11th, Sun rises,

	12
	7.14
Sun sets,	4.46
	5.16
	10.2

It is only when the Equation of time equals 0 that when Sun changes from fast to slow or the reverse that the forenoon hours equal the afternoon. Then the days length

may be found by multiplying the time of sunset by 2. This is the case on April 14th, June 14th, August 31st and December 24th.

On the Right hand page of each month are the changes of the moon, its Rising, Southing, and Setting, with the time of High Water at Charlottetown. The bearing of the Moon at the time of the changes, the time of Perigee and Apogee, crossing the Equinoctial and of reaching its greatest North and South Declination, are given for the purpose of assisting and testing weather. It being generally found that the Lunar Equinoctials are marked by atmospheric disturbances, the stronger the more nearly the times agree with the moon's changes or Perigee. x x and x x x are added to mark when two or three of these influences concur within 48 hours space.

### ECLIPSES.

During the year 1884 there will be five Eclipses, three of the Sun and two of the Moon. Only one of the latter will be visible at Charlottetown.

I. A Partial Eclipse of the Sun, March 26th. Greenwich mean time of conjunction 18h. 15m. 33.4 sec. Duration 1h. 40 m.

II. A Total Eclipse of the Moon, Greenwich mean time of opposition April 9th, 23h. 53m. 51.5 sec.

III. A Partial Eclipse of the Sun, April 25th. Greenwich mean time of conjunction, 2h. 17m. 17.8 sec., visible at Patagonia and South Africa.

IV. A Total Eclipse of the Moon, October 4th. Greenwich mean time of opposition, 10h. 8m. 5.1 sec., partially visible at Charlottetown.

### OCCULTATIONS.

In the course of every lunation the Moon passes each of the Planets in succession, the Planet being sometimes hidden by the moon. There will be eleven such occultations during the year, Mercury, August 22nd, Venus, February 29th and August 17th, Mars, August 24th, Saturn, January 8th, Neptune, January 7th, February 3rd, March 2nd 29th, June 20th and July 17th, but none of these will be observable here as they will all occur either in the day time or when the Moon is below the horizon.

**THE PHILOSOPHY OF ADVERTISING.**

ADVERTISERS SHOULD KEEP THEIR WARES PUBLISHED.

The first time a man looks at an advertisement he does not see it.

The second time he does not notice it.

The third time he is dimly conscious of it.

The fourth time he faintly remembers something of the kind before.

The fifth time he half reads it.

The sixth time he turns his nose up at it.

The seventh time he throws the paper down impatiently.

The eighth time he ejaculates: "There's the confounded thing again."

The ninth time he wonders if there's anything in it.

The tenth time he thinks it might possibly suit somebody else's case.

The eleventh time he thinks he will ask his neighbor if he has tried it, or knows anything about it.

The twelfth time he wonders if the advertiser can make it pay.

The thirteenth time he rather thinks it must be a good thing.

The fourteenth time he happens to think it is just what he wanted.

The fifteenth time he for a long time resolves to try it as soon as he can afford it.

The sixteenth time he examines the address carefully and makes a memorandum of it.

The seventeenth time he is tantalized to think he is hardly able to afford it.

The eighteenth time he sees painfully how much he is in need of that particular article.

The nineteenth time he counts his money to see how much he would have left if he bought it.

The twentieth time he rushes frantically forth and buys it, especially if his advertisement appears in CHAPPELLE'S RELIABLE ALMANAC, the best advertising medium extant.

REMARKS.—1. The nearer the Moon's changes to midnight the fairer the weather will be during the next seven days; the nearer to mid-day the rougher and more stormy. The former time occupies from 10 p. m. to 2 a. m., the latter from 10 a. m. to 2 p. m.

2. The phases happening from 4 to 10 p. m. may be followed by fair weather, but this chiefly depends upon the direction of the wind.

3. If a storm arises from the East, on or immediately preceding the Spring Equinox, or a week after, the following Spring or Summer will be wet four times out of five; if from the West, North or South-west, the Spring and Summer will be dry five times out of six.

Letters addressed to initials or to fictitious names cannot be delivered, but will be returned to the writers through the Dead Letter Office, unless the address contains a designated place of delivery; thus, a letter addressed to A. B., Post Office, Charlottetown, would be returned to the writer, but a letter addressed A. B., care of John Jones, box No. 781, would be delivered at the address designated.

In sending money by mail it is always best to transmit by Money Order, if possible. If sent by letter, it should always be registered.

No single Money Order, payable in the Dominion of Canada, can be issued for more than \$100; but as many of \$100 each may be given as the remitter requires.

Money Orders on the United Kingdom, Newfoundland, the United States, British India, Italy, Germany, Switzerland, Jamaica, New South Wales, Victoria and Tasmania, are drawn in Canada Currency, and may be had for any sum not in excess of \$50; but Postmasters are at liberty to issue several orders of \$50 each, if required by the remitter.

This caution will appear the more necessary when it is understood that any defect in these respects will throw difficulties in the way of payment.

## B. Laurance's Spectacles

### TESTIMONIALS:

DEAR SIR,—The Eye-Glasses and Spectacles purchased from you in December last have given me comfort and satisfaction, and I never experience any strain upon my eyes after using them.

T. HEATH HAVILAND,  
Lieutenant Governor.

MR. B. LAURANCE.

I have been wearing a pair of Eye-Glasses purchased of Mr. Laurance four months since, and I can remark with truth that I can see perfectly the smallest print, with ease and comfort, by artificial light.

DAVID STERLING.

This to certify that I have purchased from Mr. B. Laurance two pairs of Eye-Glasses, one for my wife and the other for myself, and we are both very much pleased with our purchase.

OWEN CONNOLLY.

I purchased, in December last, a pair of Mr. B. Laurance's Eye-Glasses, and have much pleasure in stating that I have never had Glasses that suited my eyes so well—in reading the smallest print without any strain on the eye.

W. E. DAWSON.

We call special attention of Ship Owners and Builders to our IMPROVED IRON WINDLASS, surpassing anything of the kind in the Dominion, and highly approved of by all who have used them.

Agents for the LEFFEL & VULCAN WATER WHEELS, the original design, combining the latest improvements of Leffel's Patent, manufactured by Paxton, Tate & Co., Ontario, which we can furnish at lowest prices and most reasonable terms.

We also furnish BURR STONES, Improved EUREKA SMUTTERS, BOLTING CLOTH, cut to order and ready to put on Reel, and all MILL FURNISHINGS, cheaper than ever.

We would ask the attention of Millers to our SILVER STEEL MILL PICKS, for Burrs—Carbon edged, and warranted.

Parties contemplating the erection of STARCH FACTORIES, would do well to give us a call, as we are in a position to supply all necessary Machinery for that purpose as well as give estimates.
