Technical and Bibliographic Notes / Notes techniques et bibliographiques

The Institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming are checked below.

- Coloured covers / Couverture de couleur
- Covers damaged / Couverture endommagée
- Covers restored and/or laminated / Couverture restaurée et/ou pelliculée
- Cover title missing / Le titre de couverture manque
- Coloured maps / Cartes géographiques en couleur
- Coloured ink (i.e. other than blue or black) / Encre de couleur (i.e. autre que bleue ou noire)
- Coloured plates and/or illustrations / Planches et/ou illustrations en couleur
- Bound with other material / Relié avec d'autres documents
- Only edition available / Seule édition disponible
- Tight binding may cause shadows or distortion along interior margin / La reliure serrée peut causer de l'ombre ou de la distorsion le long de la marge intérieure.
- Blank leaves added during restorations may appear within the text. Whenever possible, these have been omitted from filming / Il se peut que certaines pages blanches ajoutées lors d'une restauration apparaissent dans le texte, mais, lorsque cela était possible, ces pages n'ont pas été filmées.
- Additional comments / Commentaires supplémentaires:

L'Institut a microfilmé le meilleur exemplaire qu'il lui a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifier une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de filmage sont indiqués ci-dessous.

- Coloured pages / Pages de couleur
- Pages damaged / Pages endommagées
- Pages restored and/or laminated / Pages restaurées et/ou pelliculées
- Pages discoloured, stained or foxed / Pages décolorées, tachetées ou pliquées
- Pages detached / Pages détachées
- Showthrough / Transparence
- Quality of print varies / Qualité inégale de l'impression
- Includes supplementary material / Comprend du matériel supplémentaire
- Pages wholly or partially obscured by errata slips, tissues, etc., have been refilmed to ensure the best possible image / Les pages totalement ou partiellement obscurcies par un feuillet d'errata, une pelure, etc., ont été filmées à nouveau de façon à obtenir la meilleure image possible.
- Opposing pages with varying colouration or discolourations are filmed twice to ensure the best possible image / Les pages s'opposant ayant des colorations variables ou des décolorations sont filmées deux fois afin d'obtenir la meilleure image possible.

This item is filmed at the reduction ratio checked below / Ce document est filmé au taux de réduction indiqué ci-dessous.

10x	14x	18x	22x	26x	30x
12x	16x	20x	24x	28x	32x

The copy filmed here has been reproduced thanks to the generosity of:

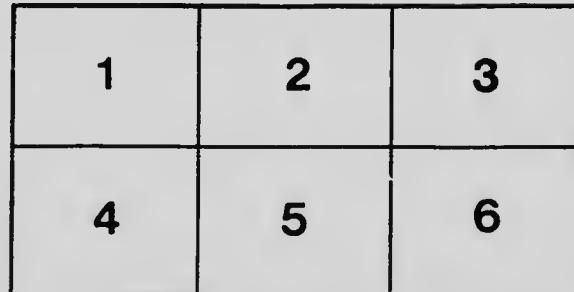

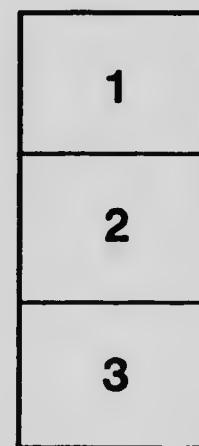

Library
Agriculture Canada

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol → (meaning "CONTINUED"), or the symbol ▽ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

Bibliothèque
Agriculture Canada

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole → signifie "À SUIVRE", le symbole ▽ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustreront la méthode.

HOUSEHOLD SCIENCE DEPARTMENT

Published by Authority of Hon. Geo. Lawrence, Minister of Agriculture, Manitoba

HINTS ON HOME NURSING

THE NURSE

An amateur nurse may possess or cultivate many of the qualifications of the professional. A competent nurse should be quiet, self-possessed, kind, firm, sympathetic. She should have a low, well-modulated voice, a gentle hand, a pleasant face and a reposeful manner.

She should be scrupulously neat and clean. She should not wear stiffly starched garments to annoy the patient. She should wear a plain washable dress, one that can be easily disinfected. She should have regular, rational habits; she should have exercise out of doors every day; she should eat regularly, nourishing, easily digested food. She should have from six to eight hours undisturbed sleep out of each 24. No one can be a good nurse who is not in good health, and no one can retain good health who does not obey Nature's laws.

THE SICK ROOM

The Sick Room should be light and airy. There should be good ventilation at all times. This implies maintaining a fresh current of air by means of windows and doors. If there are two windows in the room open one at bottom and the other at the top. If only one window in the room, open it from both top and bottom. Prevent a direct draught on the patient by using screens or changing the position of the bed. Allow fresh air to enter the room even in zero weather.

Temperature of the room should be 68-70° F. during the day and 65° F. at night.

Have plain washable furnishings that can be kept free from dust and infection.

Bed should be provided with good comfortable mattress, neither soft nor hard; no feather ticks; warm, light covers and white cotton sheets.

THE PATIENT

Requires daily attention to his skin, hair, teeth, nails. In sickness all organs are sub-normal; they are unable to perform their functions naturally, and as poisons and waste matter are formed in the body they should be removed as thoroughly as possible. The skin carries off poisonous matters through its pores. Daily sponge baths are necessary to assist the skin in its duty.

Careful attention must be given to the patient's diet. Follow the physician's directions as to what the diet may include. Never give a sick person fried food of any kind, nor foods difficult of digestion; as beans, cheese, bananas, hard boiled eggs, pies, rich cakes, cabbage, pork and hot breads. Serve patient's meals regularly and carefully. Do not feed him too often nor too much. Give medicines and treatment regularly.

MEDICINES

Do not give to others or take yourself medicine when it is not absolutely required. Do not form the habit of "dosing." Give Nature a chance. Obey her laws.

RULES FOR GIVING MEDICINES :—

1. Always read the label on the bottle, before and after pouring out the medicine. Sickness and death have resulted from neglect to do this because it is easy to make mistakes..
2. Pour medicine from the side of the bottle not labelled. This prevents blurring.
3. Observe regular time of giving medicines if possible. Generally sleep is more efficacious than medicine, so do not waken patient unless physician orders it, but have medicine ready to give when he awakens.
4. Always shake the bottle before pouring out medicine.
5. Always use proper medicine glass or dropper. Do not guess at amounts.
6. Medicines and liniments should never be kept together.
7. Always keep medicine bottles tightly corked. Old medicine is useless.
8. Allow patient to moisten mouth with fresh water before taking a nauseous medicine.
9. Do not "pass on" prescriptions.

10. Follow directions as to "before and after meals." Certain medicines are to be taken before meals because absorption is rapid. Certain others, including iron and acids, after meals because they are irritating to the stomach lining.

11. Do not give narcotics and stimulants unless ordered by your family physician.

EMERGENCIES

Poisons taken into the body either burn lining of alimentary canal, preventing its functions, destroy tissues, or act on the heart and nervous system, producing collapse.

FIRST TREATMENT in all cases except poisoning resulting from strong acids and alkalis, stomach must be emptied of its contents by use of emetics or stomach pump.

SIMPLE EMETICS. Large tablespoonful of mustard in cup of luke-warm water, or solution of salt and warm water. After vomiting, give large quantities of milk or water and a quick acting laxative.

For irritant poisons such as carbolic acid give flax seed tea, white of eggs, glycerine, sweet oil, thin boiled starch, warm milk. These soothe the inflamed membranes.

Counteract effect of acid poison by giving a mild alkali such as chalk, magnesia, washing soda, flour and water.

Counteract effect of alkali poison by giving vinegar, lemon juice or olive oil.

Narcotics such as opium, morphine, belladonna, strychnine, act on parts of nervous system and heart. Give emetics and prevent stupor and collapse. To prevent stupor, keep patient walking. When collapse is indicated give strong hot coffee, aromatic ammonia, strong beef tea, etc.

Fainting is caused by disturbed condition of health, shock or impure air. Give plenty of fresh air. Do not crowd. Loosen tight garments, apply cold cloths to head.

Convulsions frequently occur when children are teething. Give hot bath, about 100° F. Add tablespoonful of mustard to each gallon of water. Apply cold cloths to head. Leave in bath 5 minutes, then wrap in blankets.

DISINFECTION

DISINFECTION BY FORMALDEHYDE. Measure the room, and for each 1000 cubic feet use two pints of formaldehyde and thirteen ounces of commercial permanganate of potassium. Procedure:—Place a large washbowl, crock, tin dishpan or galvanized iron pan or tub in the centre of the room. Put in the required amount of permanganate of potassium and lastly pour in the required amount of formaldehyde. Permanganate must go in first. Retire immediately after pouring on the formaldehyde, for the formaldehyde gas is promptly released and is injurious if breathed in any quantity. Keep the room closed for at least six hours, then open, air thoroughly, and clean in the usual way.

A STANDARD DISINFECTANT. Dissolve chloride of lime of the best quality in pure water, in the proportion of six ounces to the gallon. Keep in a stone jar or jug. Use one quart of this solution for each discharge from patient suffering with any contagious or infectious disease.

EDITH CHARLTON SALISBURY
