© 1993

Technical and Bibliographic Notes / Notes techniques et bibliographiques

The Institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming, are checked below.

L'Institut a microfilmé le meilleur exemplaire qu'il lui a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifier une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de filmage sont indiqués ci-dessous.

Additional comments:/
Commentaires supplémentaires:

Pages wholly obscured by tissues have been refilmed to ensure the best possible image. Pagination is as follows: p. [573]-604, 604 1/4, 604 1/2, 605-890, 890 1/4, 890 1/2, 891-958, 958 1/4, 958 1/2, 959-1116.

This item is filmed at the reduction ratio checked below/

Ce document est filmé au taux de réduction indiqué ci-dessous.

10X	12X	14X	16X	18X	20X	22X	24X	26X	28X	30X	32X
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

The copy filmed here has been reproduced thanks to the generosity of:

D.B. Weldon Library
University of Western Ontario

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol \rightarrow (meaning "CONTINUED"), or the symbol ∇ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

D.B. Weldon Library
University of Western Ontario

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole \rightarrow signifie "A SUIVRE", le symbole ∇ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

DOUBLE POINTED STEEL CARPET TACKS

No. 9	Per Box, \$0 10	Per Case, \$14 40	No. 11	Per Box, \$0 10	Per Case, \$14 40
No. 10	Per Box, 0 10	Per Case, 14 40	No. 12	Per Box, 0 12	Per Case, 17 28
No. 14	Per Box, \$0 15	Per Case, \$21 00			

These tacks being made of Tempered Steel Wire, can be used several times, as they can be easily taken up without damage. There is less danger of tearing the carpets and a less number required than with the old tack. Put up in cases containing 12 packages, each package containing 12 boxes.

STEEL WIRE STAPLES

BARBED BLIND STAPLES.

$\frac{3}{8}$	$\frac{1}{2}$	$\frac{5}{8}$	$\frac{3}{4}$ inch long.
24	20	20	20 cents per pound.

The superiority of these Staples consists in their uniformity in regard to length, shape, points and barbs and for use in Blind Wiring Machines cannot be excelled. Put up in 10 pound boxes.

BARBED BED STAPLES.

$\frac{3}{8}$	$\frac{1}{2}$	$\frac{5}{8}$	1 inch long.
15	15	15	15 cents per pound.

Made of the best Coppered Steel Wire. Put up in 10, 50 and 100 pound boxes.

FLAT COPPERED STEEL STAPLES.

BARREL AND BOX STAPLES.

$\frac{3}{4}$ inch long, made of No. 14 Coppered Steel Wire, 12 cents per pound. Put up in 50 and 100 pound boxes.

$1\frac{1}{4}$ to 2 inches long, made of Nos. 8 and 9 Wire, 8 cents per pound. 1 and $1\frac{1}{4}$ inches long, made of No. 12 Wire, 12 $\frac{1}{2}$ cents per pound. Put up in 50 and 100 pound boxes.

1 to $1\frac{1}{4}$ inches long, 20 cents per pound. Put up in 1 pound packages or 10 pound boxes.

Improved Windmill Standard,
Underground Pump.

FIG. 7.

Heavy Revolving Open Top
Set-Length Pump.

FIG. 8.

Windmill Top Set-Length
Pump.

FIG. 10.

FIG. 7, with Three-Way Cock.

This cut represents our underground Pump. The air-chamber connects just below the base, and the cut-off at bottom below air-chamber. Base and cap is connected with two-inch pipe. The wheel above the spout is used to change the direction of water, which connects with a valve by a rod passing through the stuffing box. The three-way cock is three feet below the platform; as also is the working parts of this Pump.

FIG. 8

Fig. 8 represents a heavy Set-length Pump, generally used for shallow wells, drive wells and out-door cisterns. It may be used in wells from 30 to 50 feet deep by lowering cylinder within 20 feet of the water. Furnished with three feet of $1\frac{1}{4}$ inch wrought iron pipe below base as in cut. Tapped to receive pipe at spout. Longer than ordinary set-lengths, charged extra for pipe and labor. The standard here shown is same as Fig. 18 on page 625. We use the best American leather obtainable in all our valves.

FIG. 10

Fig. 10 represents a Set-length Pump for hand and windmill use. Has three feet of wrought iron pipe below base. Pipe screws into standard at spout. This Pump is fitted with our special friction slides in cap and guide, which are loose and can be replaced when worn through. For longer than the usual set-length an extra charge will be made for pipe and labor in fitting up.

Hand and Windmill Pump.

Windmill and Hand Pump.

Set-length Force Pump.

THIS IS NOT A FORCE PUMP.

EXTRA HEAVY.

NEW.

FIG. 9.

FIG. 11.

FIG. 12.

FIG. 9 represents a Hand and Windmill Standard; has close revolving top, allowing lever or handle to be placed in any required position; it is made strong and well finished; tapped at spout for 1 1/4 inch pipe. This Pump is fitted with our loose friction slides, which can be replaced when worn through.

PRICE.

With Brace, as in cut

\$7 50

FIG. 11.

FIG. 11 represents a medium and deep well Standard for hand and windmill use, with close revolving top, being heavy and strongly made; and when used in deep wells we can furnish long handles and balls, if wanted, at a small additional cost. The pipe screws in Standard at spout, and tapped for 1 1/4 inch pipe, unless specially ordered, same as all our Standards. It is furnished with brace, and is in every way complete. Fitted with friction pieces in Cap and Guide, thus preventing wear of these parts. The handles in all our Pumps are hung with turned pins, instead of common bolts, as in other makes.

Cylinders listed on page 631.

PRICE.

With Brace, as in cut

\$7 50

FIG. 12.

FIG. 12 represents a Windmill Set-length Force Pump, furnished with brace and hose clevis, as shown in cut, and also furnished with three feet of pipe below base. The air chamber is combined in the Standard instead of being placed on the discharge. This Pump can be used for wells of any depth up to 100 feet. It combines the principles of atmospheric pressure or suction with the Force Pump. Hose can be easily connected, and it is readily converted into a very efficient fire engine, or adapted to any of the many uses for which a first-class Force Pump is usually designed. It is tapped to receive the gas pipe just below the spout.

SIZES AND PRICES

Engine, Windmill and Hand Force Pump.

Force Pump Standard.

FIG. 13.

FIG. 30.
Iron Cock, with Brass
Plug, \$3 extra.A.
Hose Clevis.

FIG. 14.

FIG. 13.

FIG. 13 represents our Engine, Windmill and Hand Force Pump. It is intended for wells not exceeding 30 feet in depth, but its strength is amply sufficient for service in wells of twice that depth. It will force water in any desired direction, while as an efficient engine for extinguishing fires, watering lawns, washing windows, carriages, etc., it is without an equal. It is equally serviceable as a Lift Well Pump. By means of a bolt or pin, the lever or handle is readily disconnected.

PRICE

With Goose Neck (as in Cut)

With Straight Coupling for Hose,

For Iron Cock (Fig. 30) with Brass Plug, add \$3.00 to List.

\$12 00

12 00

All our Force Pumps are fitted with Friction Slides for Bar.

FIG. 14.

Fig. 14 represents a Force Pump Standard fitted for hand and windmill use, furnished with brace and hose clevis, as shown in Cut. Can furnish long handle and ball at small additional cost, if desired.

The manner of attaching hose is simple and effective, and does away with corks and other extras, which only add to the cost; in addition, there are no threads to fill with dirt and grit, strip or wear out. By use of our Hose Clevis, marked "A" in Cut, hose can be attached without the use of a wrench, directly to the spout of the pump, and the full size of the opening preserved.

PRICE.

With brace as in Cut

Cylinders listed on page 631.

EXTRA HEAVY FORCE PUMP STANDARD

FIG. 30.

Goose Neck.

FIG. 31.

FIG. 49.

FIG. 30.

FIG. 30 represents an Iron Cock with brass plug, of which we make two sizes, as follows:

SIZES AND PRICES.

No. 1 Cock, for the smaller sizes of House and Force Pumps, with thread cut for 1 inch hose coupling \$2 50
 No. 2 Cock, made with threads for 1 1/4 inch hose coupling, and designed for larger sized Pumps 3 00

FIG. 31.

No. 1—1 inch \$0 50
 No. 2—1 1/4 inch 0 75

FIG. 49.

FIG. 49 represents a Force Pump Standard fitted for Hand and Windmill use. It may be used in any depth well; has long handle and ball; tapped in rear for back attachment, if at any time desired; has a high spout—about 3 1/2 inches higher than any Force Pump shown in our Catalogue. This Pump is largely used in tubular wells, and when so used is tapped for 2 inch pipe and arranged for 10 inch stroke. Tapped to receive pipe at spout for 1 1/4 inch pipe, unless otherwise ordered.

PRICE.

With Brace, as in cut \$13 00
 With 10 inch stroke 14 50

Cylinders listed on page 631.

Force Pump on Base, Air Chamber with Two Outlets.

COCK ON SIDE OUTLET.

FIG. 20.

Force Pump, on Base, with Air-Chamber.

WITH TWO OUTLETS.

FIG. 21.

HOBBE

Fig. 20.

FIG. 20 shows our No. 3 Force Pump with a cock attached to the side outlet—a very useful addition to Fig. 21, which see for full description. These Pumps can be adapted for attaching to power as well as for hand, if desired. They are rendered anti-freezing by raising the lever to its full height, thereby tripping all the valves below the check-valve under the air-chamber, and by opening the cock all water remaining in the air-chamber or pipes above it will be drawn off. Handle has duplex movement, same as all our Force Pumps. All our threads are cut to exact gauges, so that repairs always fit.

WATERWORKS CO.

SIZES, CAPACITY AND PRICES.

IRON.

No. 1—2½ inch Cylinder, capacity per stroke ¼ gallon for 1¼ inch pipe	\$12 50
No. 2—3 inch Cylinder, capacity per stroke ½ gallon for 1¼ or 1½ inch pipe	14 50

BRASS LINED CYLINDERS.

No. 1—2½ inch Cylinder, capacity per stroke ¼ gallon for 1¼ inch pipe	\$17 50
No. 2—3 inch Cylinder, capacity per stroke ½ gallon for 1¼ or 1½ inch pipe	18 50
For 3 feet of Hose and Discharge Pipe add \$3.00.	

Fig. 21.

FIG. 21 shows our House Force Pump with air-chamber. It will be seen that with this arrangement water can be forced in two, or either of two directions, and to any reasonable distance. By the addition of a cock attached to the horizontal discharge its usefulness can be greatly increased, as it can then be used as a Tank Pump for filling bath tubs, wash basins, etc., in upper rooms, as well as for the ordinary Cistern Pump in the kitchen. The Pumps of this class are built in the most careful and substantial manner and of the best materials. These Pumps are easily adapted to any location. The lever can be revolved to any desired position and held firmly in place. It can also be left loose without danger of injury, and swung out of the way when not in use. Handle has duplex movement. All our threads are cut to exact gauges, so that repairs always fit.

SIZES, CAPACITY AND PRICES.

No. 2—3 inch Bore, capacity per stroke ½ gallon for 1¼ or 1½ inch pipe	17 00
For 3 feet of Hose and Discharge Pipe add \$3.00.	

**Force Pump, on Base or Plank,
WITH FIRE ENGINE ATTACHMENTS.**

FIG. 22.

Fig. 22 represents substantially the same Pump as Fig. 20, with additions increasing its usefulness, making it at will an efficient Fire Engine, or very serviceable in all cases requiring water to be thrown with force to a greater or less distance. For use in livery stables, carriage houses, warehouses and private dwellings. An excellent Cistern Pump, hose can be attached very quickly, and a constant stream thrown to a distance of 50 feet horizontally by the power of one man. When used as a common Lift Pump, the vent-nut should be unscrewed two or three turns. If required as a Force Pump, screw the nut down tightly. The piston-rod, stuffing box and valve seat are all of brass.

- No. 1.—2½ inch Cylinder, capacity per stroke ¼ gallon, for 1¼ inch pipe \$12 50
- No. 2.—2½ inch Cylinder, capacity per stroke ⅓ gallon, for 1¼ or 1½ inch pipe 14 50

BRASS LINED CYLINDERS.

- No. 1.—2½ inch Cylinder, capacity per stroke ⅓ gallon, for 1¼ inch pipe \$17 50
- No. 2.—3 inch Cylinder, capacity per stroke ½ gallon, for 1¼ or 1½ inch pipe 19 00

For three feet of Hose and Discharge Pipe, add \$3 to list price.

Fig. 24

Fig. 24 represents a Set-length Pump. The pipe screws into the Standard at the spout, and furnished with three feet of wrought iron pipe below base. Can be used in wells from 30 to 40 feet deep.

SIZES AND PRICES.

(AS SHOWN IN CUT).

- No. 2.—With 2½ x 10 Cylinder \$8 50
- No. 4.—With 3 x 10 Cylinder 9 00
- No. 6.—With 3½ x 10 Cylinder 9 50

VALVES AND DRIVE WELL POINTS

FIG. 32.

FOOT VALVE.

Fig. 32 shows our improved Foot Valve and strainer, designed for attaching to the lower end of suction pipes, to relieve the upper working valves of the weight of the column of water when the pump is not in use. This Valve being at the bottom, not only prevents the water from passing back, but forms a support for that in the suction pipe, keeping it constantly so near the piston that the pump cannot fail in perfect operation under ordinary circumstances.

SIZES AND PRICES.

	Calibre.	Price.
No. 1.—Fitted for Wrought Iron Pipe	1 in.	\$2 00
No. 2.—Fitted for Wrought Iron Pipe	1 1/4 in.	2 25
No. 3.—Fitted for Wrought Iron Pipe	1 1/2 in.	2 50

FIG. 33.

FIG. 34.

STRAINERS.

Fig. 33 represents a Strainer threaded for the ordinary sizes of Gas pipe.

SIZES AND PRICES

1, 1 1/4 and 1 1/2 inch \$0 35

Fig. 34 represents a Strainer made large at the end to slip on over the pipe, and is held in place by a set screw, as shown in cut.

SIZES AND PRICES.

1, 1 1/4 and 1 1/2 inch \$0 50

CHECK VALVES.

FIG. 36

Fig. 36 represents a Check Valve for placing at any point in the suction pipe for relieving the upper working valves of the columns of water in the suction pipe. All furnished with brass Valve Seats

SIZES AND PRICES.

No. 1.—Fitted for 1 1/4 inch pipe, each \$1 50
 No. 2.—Fitted for 1 1/2 inch pipe, each 1 75

DRIVE WELL POINTS

FIG. 43.

This Cut shows the Malleable Radial Centre.

This Cut shows the Radial Centre, wound with heavy galvanized wire, ready for putting on the wire gauze and brass jacket. A two-foot point of this kind will supply more water than any three-foot point made of pipe.

This Cut shows the finished point.

In these points there is no possible chance for the wire gauze to be clogged up on the under side with clay or with any other substance. While it costs a little more to make Radial Centre Points than same size pipe points, you get a point with more than four times as much water surface under the gauze than you can get in any pipe point made, and this fact makes Radial Centre Points the cheapest to buy of any point in the market.

PRICES.

1 1/4 INCH POINTS.

- No. 1.—2 feet long, 18 inch jacket, No. 60 gauge
- No. 2.—2 feet long, 18 inch jacket, No. 80 gauge

IMPROVED MICHIGAN AUTOMATIC INJECTOR

PRICE LIST.

These Injectors are particularly adapted for Traction Engines, Marine Engines, and all other Engines subject to severe jarring. For EXAMPLE—The Traction Engine on the road is subject to severe jars, and the hose or suction pipe is often drawn out of the water, thereby stopping Injector from delivering. When replaced, the Injector starts without the help of the Engineer. This is accomplished by the automatic action of this Injector.

Number of Injector.	Price.	SIZE OF CONNECTION.			Gallon per hour 60 lbs. pressure, with 4 ft. lift.	Horse Power.
		Suction.	Feed.	Steam.		
No. 1	\$16	3/8	3/8	3/8	60	7 1/2 gallons of water required per hour per nominal horse power.

35 pounds of steam will lift water 4 to 10 feet, and deliver to boiler at temperature 140° Fahrenheit.

40 pounds of steam will lift water 10 to 17 feet, and deliver to boiler at temperature 165° Fahrenheit.

50 pounds of steam will lift water 17 to 20 feet, and deliver to boiler at temperature 170° Fahrenheit.

60 pounds of steam will lift water 20 to 25 feet, and deliver to boiler at temperature 180° Fahrenheit.

THE UNION INJECTOR

It differs materially in its construction from many other Injectors, inasmuch as it has one set of tubes for lifting and another set of tubes for forcing water—a combination entirely new, reliable and efficient.

There being no moveable parts in internal construction, it is not liable to get out of order; requires no oiling or adjusting to the varying steam pressures or lifts—and is always ready to start at a moment's notice.

Water can be delivered at a high or low temperature, as may be desired. No adjustment is required for varying steam pressures; ALL SIZES will lift water 25 feet, working as well on a 25 feet lift as on a low lift.

Each Injector is carefully tested before leaving the manufactory, and is guaranteed to perform all that is claimed for it here, it being attached and operated according to the printed directions that accompany each machine.

PRICE LIST.

No. of Injector.	Suction and Feed.	Steam.	Gallons per hour 60 lbs. pressure.	Horse Power.	Price.
No. 7 1/2	3/8 in.	3/8 in.	60	8	\$ 18

" 10	1/2 "	3/8 "	120	16	24
" 12 1/2	3/4 "	1/2 "	220	30	30
" 15	3/4 "	1/2 "	300	40	35
" 17 1/2	1 "	3/4 "	420	56	45
" 20	1 "	3/4 "	540	72	50
" 22 1/2	1 1/4 "	1 "	720	96	55
" 25	1 1/4 "	1 "	900	120	60
" 30	1 1/2 "	1 1/4 "	1260	168	75
" 35	1 1/2 "	1 1/4 "	1740	230	90
" 40	2 "	1 1/2 "	2230	298	110
" 45	2 "	1 1/2 "	2820	376	125
" 50	2 1/2 "	2 "	3480	464	150
" 55	2 1/2 "	2 "	3600	600	175

The capacity of these machines is estimated with a four-foot lift and 60 lbs. steam. With a greater lift the capacity will be proportionately reduced.

EMERY WHEELS

711

THE BRASS WIRE WEB.

ORDINARY PATTERNS OF EMERY WHEELS.

In ordering Emery Wheels of any of the above patterns the number only need be mentioned.

IN ORDERING EMERY WHEELS PLEASE NOTE PARTICULARLY THE FOLLOWING ITEMS:

1. Diameter and thickness of Wheel and size of Mandrel Hole.
2. Whether Wheel is to grind surfaces or edges.
3. The metal to be ground—wrought or cast iron, steel or brass, etc.
4. Description of work to be done by the Wheel, coarse or fine.
5. Speed of Mandrel.
6. Is work held in hand or held mechanically and fed up to the Wheel?

REVISED PRICE LIST OF EMERY WHEELS.

IMPROVED DRAW CUT MEAT CHOPPERS

CROOKED SHAFTS OF FORGED STEEL ON ALL MACHINES

IRON PITMANS WITH IMPROVED BOXES TO TAKE UP WEAR.

HAND CHOPPERS.

ALL THESE CHOPPERS HAVE FORGED STEEL SHAFTS, IRON PITMANS AND NEW STYLE BOXES.

No. 5 Weight, 300 Lbs. Price, \$45 00.

The No. 5 Hand Chopper is made exactly like the No. 2, but smaller. Its block is 20 inches across; length of knife, 9 inches. It will cut 16 to 26 pounds of meat in twelve minutes.

No. 6 Weight, 465 Lbs. Price, \$75 00

This Chopper has four knives, each 11½ inches long; block 28 inches. It will chop 30 pounds of meat in 12 minutes as well as the best butcher can with a rocker; is easy and light for one man to run, or can be run by small boys. But one knife touches the block at one time, and this with the drawing cut, makes it run so light.

No. 2 Weight, 430 Lbs Price, \$65 00.

The No. 2 Chopper has three knives; has same size tank and block as the No. 6 (28 inches); its knives are longer, (13 inches); it cuts nearly as much meat, and runs easier; we recommend it as being the best Chopper for the price that we manufacture.

There never was a Hand Chopper made, before the invention of the "Draw Cut," that was not either a "man killer," or else it would not cut the meat fit for sausage. It was thought at one time that no Hand Chopper could be made that would work as easy and cut the meat as well as a rocker.

We guarantee that the "Draw Cut Hand Choppers" will cut the meat as well as the best butcher can do it with a Rocker; and women and boys can run them because the movement of the knives is such that there is no pounding and cutting into the block. You cut meat only, and not wood, with these Choppers.

Made in three sizes of Hand Choppers, as shown.

"No. 5," the smallest size, can be run by a boy ten years old.

"No. 6," the largest size, is provided with two cranks, so that it can be run by two boys, but is easy work for one man to run it alone; in which case the other crank can be taken off, or if left on will make no difference.

"No. 2" is an intermediate size, but does a great deal more work than the No. 5, and very nearly as much as the No. 6. It runs easier than the No. 6, and at the present reduced price is cheaper than the No. 5.

N. B.—A special feature of the above Choppers is the Plow, which turns the meat under the knives, and mixes it thoroughly, while the Chopper is running.

All slots run across the sheet, except No. 38½, in which case they run lengthways of sheet. We keep in stock in sheets 3 feet x 8 feet, all sizes as above, and also carry a stock of Zinc, varying every two inches, from 2 feet to 4 feet in width by 8 feet long.

Owing to the expense of changing the dies, we can only furnish special widths when quantity is required. Our prices are in all cases net for less quantity than a sheet, and the trade must protect themselves by making the necessary advance when asked to order small pieces by their customers.

When called upon to cut a sheet it is our custom to cut across, charging for the full width (3 feet) by the length ordered, as we make no provision for waste in our prices.

GALVANIZED TWISTED WIRE NETTING

Galvanized Wire Netting is now used for a great variety of purposes, and the increased demand has induced us to give it special attention. We now stock all the principal sizes and widths, as will be seen by the accompanying price list.

It is made of best quality wire, galvanized after being made, thus preventing any danger of rust, and making it very durable.

Its principal uses are for garden and ornamental purposes, lawn tennis nets, poultry runs, bird and small animal cages, chicken coops, pigeon houses, rabbit hutches, aviaries, drying glue, fruit, etc.

PRICE LIST.

CRIMPED WIRE GUARDS, FOR STORE WINDOWS

Wire Guards of our manufacture are made of $\frac{3}{8}$ inch diameter round iron, covered with $1\frac{1}{4}$ inch diamond mesh, made of No. 10 best iron wire, very strongly put together and well made in every particular. We annex two sketches, which will be found useful when ordering:

No. 1 shows top view, and is to be used when guards are to be made to protect side lights without gates. Fill in the dotted lines.

GROUND LINE.

No. 2 is a front view. When measuring for guards with gates, fill in all the dotted lines. The principal sizes required are: First, the entire length of front; second, length of each window to outside of moulding; third, distance between moulding; fourth, height of sill; fifth, length of the rods for the gates; for the fifth, see sketch No. 1.

Window Guards	per square foot, 18 cents
Window Guards and Returns	per square foot, 20 cents
Window Guards and Gates	per square foot, 22 cents
Gates only	per square foot, 30 cents

When measurement does not exceed 9 square feet, the work is charged as per List.

These Mats are wear and waterproof.

The greatest thing in the way of a Mat ever devised.

These Mats are self-cleaning, and require no shaking.

Snow, ice, mud, clay and water are wiped out of sight by the slightest scrape.

Made from Galvanized Steel Wire with Japanned, Galvanized or Nickel Plated Frame.

Especially adapted for Churches, Schools, Hotels, Offices, Stores, Private Residences, Elevators,

Railways, Street Cars, Steamboats, etc.

They cost one-third to one-half less than the Corrugated Rubber Mat of equal thickness, and are

adapted for any and every place where a mat or matting is needed.

These Mats were formerly made of Iron Wire. We are now using best quality of Bessemer Steel,

thereby giving a very superior article.

Special sizes made to order at 65 cents per square foot. Mats with curves, or special forms made to order.

GALVANIZED

WIRE ROPE

We supply Ropes of all degrees of pliability, from the one containing 42 wires, with hemp centre, to one containing 798 wires to the Rope. The latter is very flexible, and is only required when large ropes have to work over small pulleys. Parties not having experience in the use of Wire Rope should always state the purpose it is to be used for.

CAST IRON WHEELS

Sketch of Wheel.

Section of Rim of 6 foot Wheel.

Wheels made of Cast Iron are decidedly the best and cheapest, as they are the most durable, and will remain always true. By referring to the sketch of Section of Rim it will be perceived that the bottom of the Groove is made a little wider, thus preventing the filling from coming out. The Wheels made by us have a filling of leather or rubber; but a variety of materials may be used for the purpose. The diameter of the Wheel is reckoned from the outside of the filling, and not from the outside of the rim.

PRICE OF WHEELS.

BORED TO FIT SHAFT, AND LINED WITH LEATHER FILLING.

Diameter in Feet, Each.	² \$8 00	³ 20 00	⁴ 29 50	⁵ 40 00	⁶ 53 00	⁷ 73 00	⁸ 90 00	⁹ 175 00
----------------------------	-------------------------------	------------------------------	------------------------------	------------------------------	------------------------------	------------------------------	------------------------------	-------------------------------

Special price for larger sizes.

INCLINED PLANE.

For the benefit of those desiring to use Wire Rope on slopes, inclined planes, etc., we subjoin a table by which the strain produced by any load can easily be calculated. The table gives the strain produced on a rope by a load of one ton of two thousand pounds, an allowance for rolling friction being made. An additional allowance for the weight of the rope will have to be made.

EXAMPLE: For an inclination of 25 feet in 100 feet, corresponding to an angle of 14 1/2 degrees, a load of 2,000 pounds will produce a strain on the rope of 497 pounds, and for a load of 8,007 pounds, the strain on the rope will be:

$$\frac{497 \times 800}{2000} = 1,188 \text{ pounds.}$$

Elevation in 100 Feet.	Corresponding Angle of Inclination.	Strain in lbs. on Rope from a Load of 2,000 lbs.	Elevation in 100 Feet.	Corresponding Angle of Inclination.	Strain in lbs. on Rope from a Load of 2,000 lbs.

90	42 "	1347			

A factor of safety of five to seven times should be taken—that is, the working load on the rope should only be one-fifth to one-seventh of its breaking strength. As a rule, ropes for shafts should have a factor of safety of five; and on inclined planes, where the wear is much greater, the factor of safety should be seven.

The above table is from a pamphlet published by a high authority on Wire Rope, and we think can be relied on.

CLOSE TOP SPARK GUARD.

SPARK GUARDS

- | | | |
|-------|----------------|--------------|
| No. 1 | 18 inches wide | each, \$1 25 |
| No. 2 | 20 inches wide | each, 1 35 |
| No. 3 | 22 inches wide | each, 1 87 |
| No. 4 | 24 inches wide | each, 2 10 |

Our Spark Guards are made of $\frac{1}{4}$ inch Mesh Crimped Wire, and will fit the grate closely. They are colored blue, and form a safe protection against sparks.

BRASS SPARK GUARDS.

Prices are the same as above, with 50 per cent. added.

Boiler Tube Cleaner, Greening's Patent.

The Cut represents a first-class Boiler Tube Cleaner. Its adaptability both as a scraper and cleaner renders it greatly superior to any yet offered, while its strength and durability constitutes it both an efficient and economical article.

Price to 3 inches in diameter

\$2 00

Larger sizes at the rate of \$1.00 per inch advance.

Extra Heavy Steel Wire Coal Screens.

These Screens are made with a heavy wood frame, strongly put together, and filled with extra heavy Crimped Steel Wire, same as our No. 11 Grade Wire Cloth. The wire cloth is firmly attached to the frame and secured with flat iron top and bottom. Iron shoveling fenders are placed at the bottom, as shown in Cut, and cross rods at the back of screen to prevent sagging when screening large, heavy coal.

- | | |
|---|--|
| For Chestnut Coal, $\frac{3}{4}$ inch Mesh, size 7 ft. x 34 in. each, \$8 50 | For Nut Coal, $\frac{1}{2}$ and $\frac{3}{4}$ inch Mesh, size 7 ft. x 34 in. each, \$8 50 |
| For Stove Coal, $\frac{1}{4}$ inch Mesh, size 7 ft. x 34 in. each, 8 50 | For Soft Coal, $\frac{1}{4}$ and 1 inch Mesh, size 7 ft. x 34 in. each, 8 50 |

The above sizes are in the opening or between the wires. We make a smaller size, useful as a Portable Screen, 5 ft. x 27 in., price \$6.50 each.

Masons' Screens.

EXTRA HEAVY SAND SCREENS.

- | | |
|---|--|
| No. 1 Locket, size 7 ft. x 34 in. each, \$8 00 | No. 3 Crimped, size 7 ft. x 34 in. each, \$6 00 |
| No. 2 Locket, size 5 ft. x 26 in. each, 6 00 | No. 4 Crimped, size 5 ft. x 26 in. each, 4 00 |

The usual size is $\frac{1}{4}$ Mesh in the clear, but any size made to order.

These Screens are made with a heavy wood frame, the top and bottom pieces being of dry hard wood. In the Locket Screen the upright wires are firmly wrapped around the heavy supporting rods. The Crimped Screen is made of Crimped Wire, and so constructed as to give the largest possible amount of screening surface. As in the Locket Screen there are no fine wires to cut, hence the screen cannot get out of order until completely worn out. We guarantee these Screens the best and cheapest in the market.

CORN PLANTER.

THE TRIUMPH.

For a cheap and durable Planter this excels all other two-hand ones for ease of working and correct dropping. The points are good steel plates, the slide or dropper being malleable iron. The seed passes down through a sheet iron tube. They work equally well on sod or old ground.

DIAMETER OF DRIVING WHEELS 7 INCHES.

These are the Machines for general purposes. They have a three-bladed solid wiper; all blades secured by bolts; patent, self-locking pawls that cannot slip; the adjusting screws of both the stationary knife and wiper boxes are exposed; the knives sharpen themselves while cutting; the cut grass is all discharged in the rear of the machine, and as they will cut close up to trees, etc., the grass hook is seldom wanted. We warrant them to run easier, to be as durable, and to be capable of cutting as high grass as any lawn mower made, no matter how big wheels it has, or how heavy it may be or run.

THE PHILADELPHIA JR IMPROVED LAWN MOWER

With Light Open Cylinder. Easy Running.

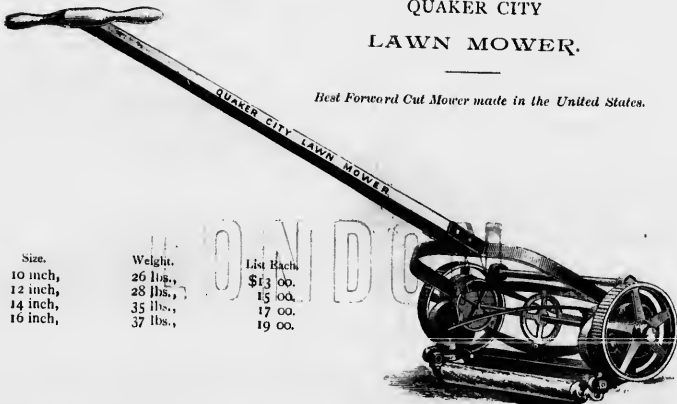

Being made from the finest quality of Cast Steel and Malleable Iron, it is from 11 to 13 lbs. lighter than other Mowers of the same size. It is well finished, and, without exception, the strongest and easiest running Machine in the market.

THE KILBOURNE & JACOBS

811

"COLUMBUS" SOLID STEEL SCRAPERS

HOBBS

WITHOUT RUNNERS.

THE "COLUMBUS" SOLID STEEL SCRAPER

IMPROVED.

The perfect Scraper, made of a single sheet of steel, pressed into the best and most practicable shape for working. It is made with one continuous curve from the centre up the sides and back, giving it greater strength and capacity than can be obtained in any other way. It is without joint or seam, and there is not a sharp corner, bolt, brace or stay-rod about the Scraper. It will work in any kind of soil, whether plowed or not, and enters the ground as readily as a plow. We guarantee it to fill easier and clean better than any other Scraper, and it will scour where no other scraper will. Is not injured by exposure to the weather, and there is nothing about it to get out of order.

The Handles will commend themselves to everyone, as they can, if broken, be easily replaced anywhere. Bails of steel, and of improved pattern, with strong and perfect-working swivels. The best bails ever put on Scrapers. The entire bowl of the Scraper is made of one sheet of heavy steel, and is the only one so made. It is the lightest, strongest and most durable, and will displace all others wherever it is known. Improved in that we now make the Scraper longer and deeper, so that, while it carries more earth, at the same time it runs much easier and has more wearing surface.

We ship always without Runners unless otherwise directed.

- | | | |
|-------|---|----------|
| No. 1 | Carries 7 feet of earth, used for long haul or on down grade | each, \$ |
| No. 2 | Carries 5 feet of earth, for all ordinary grading, farm, or road work | each, |

THE K. & J. PRESSED BOWL WHEEL SCRAPERS

CARRIVING.

THE BEST, STRONGEST AND EASIEST WORKING WHEEL SCRAPER

EVER PUT ON THE MARKET.

The Bowl is stamped from one solid plate of $\frac{3}{16}$ inch steel, without joint, seam or rivet; and, owing to the fact that they are pressed hot, we are able to use much harder and stiffer steel than is possible in the old style Square Box Scrapers, which are cut and bent up cold.

The bottoms of all Pressed Bowl Wheel Scrapers are oil tempered. The largest size of this Scraper, capacity 17 cubic feet, can be easily operated by one man, and is also much easier upon the team in filling owing to the rounded shape of the Bowl. They cannot dump while filling. No strain on horses' neck.

They have "Sarven Patent" Wheels, and are constructed throughout of the best selected material, and will outwear any other Wheelers manufactured.

We furnish these Wheelers, when so desired, with simple Automatic Front End Gate, warranted not to get out of order, that will carry the entire load over the roughest roads or down hill without loss. Quickly attached or detached.

THE K. & J. PLOWS

813

"MAMMOTH" HARD-PAN RAILROAD PLOW

HOBBS
FOR USE WITH HORSE OR STEAM POWER FOR

HEAVY WORK, HARD-PAN AND ROCK.

Beam very long, heavy in proportion, and ironed on top and sides. Draft-rod 2 x 3/8 inches. Handles of oak, ironed on top and bottom, with bars 1 1/4 x 1/2 inch, also plated with iron on sides. Handhold solid iron and well plated. Standard, Mould, Landside and Point of cast steel. Plow cuts a 9 inch furrow, 6 to 12 inches deep, and will plow anything.

One Size only, Left Hand, weight 325 pounds

each, \$

ROAD OR GRADING PLOWS

This plow is of great strength and remarkable lightness of draft. The standard is of wrought iron, V shaped; is secured to the beam by two strong bolts, and will not twist or break; the strongest Standard known. The Share, Landside and Mould Board are of the very best steel. The plow is made to cut a deep rather than a wide furrow, and can be regulated to any depth required. It does not turn the soil over, but loosens it, leaving the trash on top, so that it will not interfere with the Scraper when filling. It has a gauge wheel, steel coulter, heavily ironed beam and extra long handles, which give the holder perfect control. Owing to the peculiar shape of the Mould Board—our own patent—these plows can be drawn easily by two horses, but are strong enough for six, and they will scour where no other plows will.

No. 8 Left Hand, weight 200 pounds
No. 13 Right Hand, weight 200 pounds

each, \$
each,

TOWNSHIP OR BREAKING PLOW

The above cut represents our new Township Plow, which is made with special reference to township road work.

It has our Wrought Iron V Shaped Standard, which is the best made, and cannot be broken. The Mould Board, Share and Landside are made from the very best steel, thoroughly hardened, and will scour in any soil. The Standard is secured to beam with two strong bolts, and cannot be twisted or broken off. There is a heavy iron strap the entire length of beam. This Plow has great strength, but is lighter than our well known Grading Plows, Nos. 3 and 13, and weighs about 100 pounds. It will run perfectly steady in all kinds of ground, and is very light draft for two horses. It cuts a furrow eleven inches wide, and from six to twelve inches deep, as desired. All Plows furnished with Cutter, as shown in cut.

No. 5 Left Hand, cuts 11 inches wide, 12 inches deep, weight 100 pounds each, \$
 No. 15 Right Hand, cuts 11 inches wide, 12 inches deep, weight 100 pounds each,

Jacobs' Patent Wheels.

THE
 STRONGEST
 AND
 LIGHTEST RUNNING
 WHEEL
 KNOWN.

IN ANY CLIMATE
 IT
 WILL NOT SHRINK.
 THE
 TIRE
 CANNOT COME OFF.

It has ten spokes of thoroughly seasoned wood, and each spoke is supplied with a separate felloe. The hub is of chill cast iron, and riveted firmly to the spokes, which are so cut as to counterbrace each other. The spokes are keyed from the centre after the tire is shrunk on. This wheel will not shrink or give in any weather or climate, and the tire cannot become loosened. An oil hole is drilled into the hollow washer of the hub, and the oil distributes itself along the bearings while the wheel is in motion. The wheel revolves on a fixed shaft or axle, which passes through the end of the handle, and is a brace to the barrow. This wheel cannot be broken or weakened by ordinary usage, and will last for a life time. It is well painted. We guarantee it superior to any other wood wheel.

Jacobs' Patent Steel Spoke Wheels.

Wheel Complete.

WROUGHT IRON TIRE. STEEL SPOKES.

These wheels are so constructed—having spokes tightened from centre—that the tire cannot come off or the spokes become loosened. Hubs hardened on inside. Oil hole in hub. Diameter of wheel 17 inches. Wrought Iron tire $1\frac{1}{2}$ inch wide. Steel spokes. The best Barrow Wheel manufactured.

RAILROAD OR CANAL BARROW

815

WITH JACOBS' PATENT WOOD WHEEL.

Full sized, bent tray, planed, and well finished, bolted securely to frame. The legs extend upward, serving as a brace to the bowl, to which they are bolted; they are also bolted to handles. This Barrow has all the merits of other bolted barrows, and, in addition, has the Jacobs' Patent Wheel superadded in every way to any wood wheel manufactured. The wheel revolves on a fixed axle bolt, similar to a buggy wheel, and runs true and evenly. The axle bolt holds the Barrow firmly together. The Barrow for railroad contractors. Will outwear any other made, and displaces all others wherever introduced. Knocks down completely for shipping, and is easily set up.

Price _____ per dozen, \$

Railroad or Canal Barrow.

WITH JACOBS' PATENT STEEL SPOKE WHEEL.

Same as above, but with Jacobs' Patent Iron and Steel Wheel.

Diameter of wheel, 17 inches; wrought iron tire, 1 1/2 inches wide; steel spokes, 5/8 x 1/4.

Price _____ per dozen, \$

The best Railroad Barrow manufactured.

HARDWARE CO.

Straight Handle Stone Barrow.

WITH JACOBS' PATENT WHEEL.

For Stone or Pig Metal. This is a strong, well made Barrow, iron strapped over the bottom, and well bolted together. It has the Jacobs' Patent Wheel, with 1 and 3/4 inch tire, and hub in proportion. Strong and cheap. Painted. Furnished with Steel Spoke Wheel when specially ordered.

Price _____ per dozen, \$

Bent Handle Stone Barrow.

WITH JACOBS' PATENT WHEEL.

Well ironed, thoroughly bolted, bent handles, Jacobs' Patent Wheel, with 1 3/4 inch tire, and extra strong hub. We guarantee it to give satisfaction. Painted. Furnished with Steel Spoke Wheel when specially ordered.

Price _____ per dozen, \$

STEEL BOTTOM STONE BARROW.

WITH JACOBS' PATENT STEEL SPOKE WHEEL.

For Stone or Pig Metal. Bottom and dash formed of one plate of steel, $\frac{1}{4}$ inch thick. Steel Spoke Wheel. Diameter of wheel, 17 inches; tire, $1\frac{1}{4}$ x $\frac{3}{8}$ inches; steel spokes, $\frac{3}{8}$ x $\frac{1}{4}$ inch. The strongest and best Stone Barrow manufactured.

Price

per dozen, \$

"Jumbo" Corn Barrow.

Capacity, 9 cubic feet. Jacobs' Patent Wheel, 17 inches in diameter; wrought iron tire, $1\frac{1}{2}$ inches wide. For Corr. Coal, Manure, Sawdust and Ashes. Furnished with Steel Spoke Wheel when specially ordered.

Price

per dozen, \$

Ore or Mortar Barrow.

WITH JACOBS' PATENT WHEEL.

For Ore, Coal, Mortar, Sand, or Dirt. All hard wood. The sides and end pieces of bowl, being dovetailed together and firmly nailed, cannot come apart. The legs extend upward as a brace to the bowl, and are bolted to bowl and to handles. The best General Purpose Barrow made. Painted. Furnished with Steel Spoke Wheel when specially ordered.

Wharf or Oyster Barrow.

WITH JACOBS' PATENT WHEEL.

Similar to our well-known Ore Barrow, with bowl of much greater capacity. All hard wood. Sides and end pieces of bowl dovetailed together and nailed. Length of bowl—top, 36 inches; bottom, 20 inches. Width—top, 34 inches; bottom, 18 inches. Depth, 14 inches. General purpose Wharf Barrow; also suited for carrying ashes, shavings, etc., and strong enough for coal or stone. Painted. Furnished with Steel Spoke Wheel when specially ordered.

GARDEN OR FARM BARROW.

WITH JACOBS' PATENT WHEEL.

These barrows are made of thoroughly seasoned wood, with double frames, firmly bolted together, iron braced, and so constructed that, by simply removing one bolt (the axle) and two nuts, they can be folded flat down (see cut) and shipped at lowest rate of freight. But a moment's time is required to set up for use.

SET UP FOR USE.

Endless Belts are made to order. Three extra feet will be charged for the splice, and ten per cent. additional on the net price of the whole.

DIRECTIONS FOR LACING RUBBER BELTING.

The belt to be adjusted to the pulley (depending on the thickness of the Belt), should be cut shorter than the distance around the pulleys by ¼ to ½ of an inch for every foot, when measured with a tape or string drawn tight. For narrow Belts, make two rows of holes in each end, (thus obtaining a double hold.) Butt the two ends together, and lace with lacing leather. For wide Belts, in addition, put a piece of leather or rubber belting on the back to strengthen the joint, equal in length to about 1½ times the width of the Belt, and sew or rivet it to the Belt.

RUBBER HOSE.

CONDUCTING, HYDRANT AND ENGINE.

TWO-PLY CONDUCTING HOSE, IN FIFTY-FOOT LENGTHS.

Inside Diameter, inches,	$\frac{1}{2}$	$\frac{3}{4}$	1	$1\frac{1}{4}$	$1\frac{1}{2}$	$1\frac{3}{4}$	2	$2\frac{1}{4}$	$2\frac{1}{2}$	$2\frac{3}{4}$	3	4	5	6

BELMONT INTERCHANGEABLE
DOUBLE BARREL SHOT GUN

GRADE A.
BAR ACTION

Double barrelled, central fire, top lever Gun. Triple bolted action, with roll shoulders and handsome double roll fence. London wire twist barrels, with steel extension rib; both barrels choked; extra quality, fancy pattern hammers out of the line of sight; sunk tumbler pins; solid block strikers; Deeley & Edge's patent fore-end fastener; best quality wrought furniture, beautifully figured oil finished walnut stock; fancy pattern on pistol hand and fore-end. Tag attached to each Gun when sent out, giving full particulars of the quality of shooting. This Gun has been specially built to meet the general want of the sporting community for a sound gun of good design and excellent shooting qualities at a reasonable cost.

The manufacturer claims for this Gun a superiority over any gun yet offered to the sporting public at anything like the price. No skill or expense has been spared in order to produce a truly circular-jointed, machine-made gun, combining all the good points to be found in the most expensive guns of modern build, together with thorough interchangeability, each part being made to gauge, and therefore easily duplicated by sending number on guard. The barrels are fitted together by a patent process far ahead of any system at present yet in vogue. Each gun passes the most rigid scrutiny before leaving the factory, and nothing but the very best material is used in the construction. Special attention is paid to the shooting qualities, and the manufacturer is enabled, by means of a recently invented method of choke-boring, to produce a high class standard of excellence.

Price \$52 25

BELMONT INTERCHANGEABLE GUN

GRADE B.

This Gun is beautifully engraved by hand. In all other respects is exactly the same as Grade A.

DICKERMAN'S PATENT HAMMERLESS SINGLE BARREL SHOT GUN

A GENUINE HAMMERLESS

EACH GUN COMPLETE WITH THE FOLLOWING IMPROVEMENTS :

Rubber butt plate, pistol grip, top snap, patent fore-end, automatic safety, choke bored, blued frame, interchangeable parts. The top snap is utilized as a lever for cocking the hammer as well as breaking up the gun. The leverage is so adjusted that the gun is broken up and the hammer cocked as easily as an ordinary gun with simple top snap is broken up. By the same movement of the top snap the safety bolt is forced under the forward part of the trigger, locking the latter firmly into the bent of the hammer. The safety button is located just in front of the trigger and is fully protected by the guard, as shown in cut. This combination consists of breech-loading shot barrel No. 12 bore and rifle barrels which fires 44 cal. Winchester cartridges, oiled checkered, walnut stock with pistol grip. The whole is placed at the price of an ordinary single barrel breech loading gun or rifle, and is undoubtedly the cheapest firearm in the market.

Price each, **\$37 50**

COLT'S NEW · LIGHTNING · MAGAZINE · RIFLE

DIRECTIONS FOR USING

TO LOAD AND FIRE.—When the hammer is at full or half cock, the action is released by lowering the hammer. Bring the piece to the shoulder in the usual way. Grasp the handle or slide A with the left hand and draw it to the rear. The first part of this rear movement raises the locking brace B from the about the firing pin lever D, withdraws the firing-pin E, and releases the magazine gate F, causing it to hold back the cartridge in the magazine, and as the bolt G moves to the rear, etc.; the cartridge shell, cocks the hammer H, and raises the carrier I, so that when the movement is finished, the cartridge is in proper position to enter the chamber, as shown in the upper drawing. Then push the slide A forward. This movement carries the bolt G forward, drives the cartridge into the chamber, throws down the carrier I into position to receive, and withdraws the magazine gate F to release another cartridge, throws the brace B against the abutment C, and the rifle is then ready for firing. In the position to be fired, or when the breech is closed, the handle and slide may be locked by half cocking the hammer. This action causes a projection on the magazine gate lever (shown just behind the letter F in the cut), to engage a corresponding recess in the under side of the slide, thus locking it, and preventing it and the breech bolt from moving. As may be seen from the lower drawing, the handle and slide can only be released by bringing the hammer to the down position. In the other positions of the hammer, viz.: full and half cock, the slide handle, and the breech bolt are positively locked. A feature peculiar to this rifle is, the breech bolt is brought clear forward and the extractor is hooked over the cartridge in the barrel before the magazine gate will allow another cartridge to be fed to the carrier, and the magazine gate is positively locked, only allowing one cartridge at a time to pass from the magazine, thus preventing blocking of the breech action, and the escape of cartridge under the carrier. The firing pin is held back positively until the cartridge has entered the chamber, when the bolt is locked so that the premature explosion is impossible. The hammer is automatically locked and unlocked by the hook near the end of the magazine lever I. By this arrangement the rifle may be loaded and discharged by the reciprocating motion of the slide, keeping the trigger constantly pressed back during the motion by the trigger finger. The magazine can only be charged when the slide is drawn to the rear.

TO TAKE APART THE RIFLE.—Take out the tang screw. Draw off the butt stock. Take out the magazine screw at the front end and remove the magazine. Take out the two side screws, cock the piece, draw the slide about half way to the rear and withdraw the trigger plate. Slide the bolt clear back, insert a punch in the small hole on the left hand side, and push out the locking-brace pin, and slide out the bolt. The other parts can be removed without special directions.

TO ASSEMBLE THE RIFLE.—Replace the parts in the reverse order from that given for taking the rifle apart.

The .50-95 Express Rifle will only be made with a 26 inch barrel

Octagon Barrel	price, \$24 00
Round Barrel	price, 22 50

THIS MODEL IS MADE IN THE FOLLOWING CALIBRES:

.38 inch Calibre, 56 grains powder,	256 grains bullet.	.45 inch Calibre, 60 grains powder,	300 grains bullet.
.40 inch Calibre, 60 grains powder,	260 grains bullet.	.45 inch Calibre, 85 grains powder,	285 grains bullet.
		.50 inch Calibre, 95 grains powder,	300 grains bullet.

Carbines will if desired be furnished with Swivels for Straps.

This Rifle possesses peculiar advantages in weight and calibre for sporting purposes, particularly for large game. The materials are the best, and the workmanship of the highest order. The cuts and description of this Rifle show that the breech action is simpler and more perfect than any in the market, making the Rifle absolutely safe against accidental explosion, by a positive automatic lock; and the left-hand method of handling ensures the easiest manipulation of the gun. Care should be taken in the selection of cartridges that the .40-60 260 cartridges should be obtained, for although the Rifle will take the cartridges with a bullet weighing 210 grains, the shell will be distorted, as the Rifle is chambered for that in which the bullet weighs 260 grains, will give the best results. Attention is called to the fact that by holding the trigger back, and using the reciprocating motion with the left hand, the Rifle can be fired with great rapidity and without further use of the trigger. In addition to the above styles, we are now making in this model an EXPRESS RIFLE to use the .50 inch calibre cartridge containing 95 grains of powder and 300 grains hollow express bullet. A solid bullet can be used if desired, but to obtain the flattest possible trajectory only the regular hollow express bullet should be used. This arm is especially adapted to those sportsmen who hunt large game, and as an Express Rifle is unexcelled. We guarantee all of our Rifles and their accuracy, which is unsurpassed, only with the U. M. C. make of cartridge, made expressly for our Rifles and bearing *fac simile* of our signature on each box.

This Rifle possesses peculiar advantages in weight and calibre for small game and target practice. The materials are the best, and the workmanship of the highest order. The cuts and description of this Rifle show that the breech action is simpler and more perfect than any other in the market making the Rifle absolutely safe against accidental explosion; and the left-hand method of handling ensures the easiest manipulation of the gun. Care should be taken in the selection of cartridges. The Rifle will take all long or all short .22 calibre cartridges, or a part long and a part short. Attention is called to the fact that by holding the trigger back, and using the reciprocating motion with the left hand, the rifle can be fired with great rapidity and without further use of the trigger. The handle and slide are locked in their forward position except when the hammer is down.

WINCHESTER REPEATING SHOT GUN

837

TO DISMOUNT THE ARM:

Take out the main spring. To do this it will be necessary to use a pair of pliers. Compress the main spring, and draw it backwards through the hammer slot in the breech block. Remove the right and left carrier screws. Lift the carrier out through the top of the gun. Push out the breech block pin, and remove breech block and hammer. To take out the extractor, push the extractor against the lower side of its slot. Push back the extractor spring pin with the point of a knife, and push the extractor hook towards the breech block stud. The firing pin is removed by taking out the firing pin stop screw. To remove the sear, unscrew the sear spring screw. Drive out the sear pin.

THE WINCHESTER REPEATING SHOT GUN. 12 GAUGE, 8 SHOT.

Sportsmen will find this a strong, serviceable arm. The system contains but sixteen parts in all, and can be readily understood from the sectional cuts. The breech block and finger lever form one piece, and move together in opening and closing. The hammer, placed in the breech block, is automatically cocked during the closing motion, but can also be cocked or set at half cock by hand. The trigger and finger lever are so adjusted that the trigger cannot be pulled prematurely, and the gun cannot be discharged until closed. The barrel can be examined and cleaned from the breech. The magazine and carrier hold five cartridges, which, with one in chamber, make six at the command of the shooter. Anyone accustomed to shooting can readily shoot double birds with this gun. The gun will only be made in 12 gauge, and will handle shells 2½ inches long, or less. To fill the magazine, throw down the lever and push four cartridges through the carrier into the magazine, placing the fifth in the carrier; the forward and backward motion of the finger lever, which can be executed while the gun is at the shoulder, throws out the empty shell, raises a new cartridge from the magazine and puts it into the barrel; the gun is then ready to be fired. The standard gun will be made up with rolled steel barrel, case-hardened trimmings, and pistol grip stock of plain wood, not checked. All guns will be full choked, and no gun will be sent out which will not make a good target. The standard length of barrel will be 30 or 32 inches, as may be desired; but unless otherwise ordered, guns with 30 inch barrel will in all cases be sent. Two kinds of Damascus barrels will be furnished when desired at prices given below. The standard gun will have a stock 12¾ inches in length and 2½ inches drop, and any variation from standard length or drop, will be charged for extra.

THE WINCHESTER REPEATING RIFLE

SECTIONAL CUT OF WINCHESTER RIFLE.

Fig. 1.

POSITION AFTER FIRING.

CUT OF WINCHESTER RIFLE WITH BREECH-PIN WITHDRAWN.

Fig. 2.

THE WINCHESTER.

The system and operation of the Winchester is easily understood from the sectional cuts of the arm shown above. The magazine is charged while the system is closed, in the position shown in Fig. 1, by pressing down the spring cover, found on the right-hand side of the receiver, with the point of the cartridge, and inserting the latter through the opening thus made. This last

is closed by the spring cover as soon as the cartridge is inserted. The operation is repeated until the magazine is filled. When it is desired to load, the finger-lever, B, is thrown forward to the position shown in Fig. 2, and then returned to that shown in Fig. 1. This motion throws out the shell or cartridge in the chamber, transfers a cartridge from the magazine to the chamber, cocks the hammer, and leaves the arm ready to fire by pulling the trigger. This motion may be executed while the gun is at the hip, or at the shoulder without taking the eye from the sights, thus enabling the firer to discharge two or more shots without removing the gun from the shoulder or losing sight of the object which it is desired to hit.

Weight	8½ lbs.	8¾ lbs.	9 lbs.
Calibre	32, 38 or 44.		

WINCHESTER'S NEW REPEATING RIFLE

MODEL 1886.

This gun is adapted to the 45-70 Government Cartridges with 405 or 500 grain bullet, and to 45-90-300 or 40-82-260 Cartridges made especially for it. The system is a new one, as shown in the cuts. It is manipulated, like the Winchester, by a finger lever. This part has a short movement, enabling easy and rapid firing of the gun from the shoulder. The gun is locked by two bolts, having a motion like the old Sharp's breech-block, which show on the top of the gun when it is closed. In this position the locking bolts lie one on each side of the breech-bolt, each fitting into its slot in the frame on the one side, and into a similar slot in the breech-block on the other. A glance at the gun will convince any one that this is a most simple and solid locking device.

The magazine is filled, while the gun is closed, through a spring cover at the side, and is provided with a stop which permits the use of cartridges having the same shell of varying lengths less than the standard. Thus a gun chambered for the 45-70 cartridges will carry that cartridge with either the 405 or 500 grain bullet. Guns, however, chambered for the 45-90 or 40-82 cartridges will carry those cartridges only, and no others.

PRICE LIST OF WINCHESTER REPEATING RIFLE, MODEL 1886.

Octagon Barrel, 26 inches long or under, weight about 9½ lbs.	price, \$21 00
Half Octagon Barrel, 26 inches long or under, weight about 9¼ lbs.	price, 21 00
Round Barrel, 26 inches long or under, weight about 9 lbs.	price, 19 50

The standard length of barrel will be 26 inches. Guns taking the 45-70 Cartridge will have the Sporting Leaf Sight, and all others the Sporting Rear Sight.

A rifle with 26 inch barrel and full magazine will carry nine 45-70-405 Cartridges, or eight of the other three cartridges. Half Magazine Rifles will carry three cartridges in the magazine and one in the barrel.

Cleaning Rods will not be put in butt-stock, but each gun will be accompanied by a Slotted Hickory Rod without charge.

EXTRAS ON RIFLES.

All deviations from standard styles and sizes involve a large proportional outlay for hand labor, and, when ordered, will be subject to the following charges:

For additional length of barrel and magazine on Repeating Rifles, add to price \$1 per inch over the regular lengths, as quoted in. Barrels cannot be furnished longer than 36 inches.

Extra heavy barrels on Repeating Rifles, round or octagon, increasing the weight of the gun from one to two pounds, can be furnished at an additional cost of \$4.

Butt-stocks of special shape, involving change in either length or drop from standard, \$10.
Engraving from \$5 to \$100 additional, according to style and quality.

WINCHESTER SINGLE SHOT RIFLE

THE WINCHESTER SINGLE SHOT RIFLE.

This gun has the old Sharp's breech-block and lever, and is as safe and solid as that arm. The firing pin is automatically withdrawn at the first opening movement of the gun, and held back until the gun is closed. The hammer is centrally hung, but drops down with the breech-block when the gun is opened, and is cocked by the closing movement. It can also be cocked by hand. This arrangement allows the barrel to be wiped and examined from the breech. In outline everything has been done to make the gun pleasing to the eye. It can be furnished with or without set trigger, with barrels of all ordinary lengths and weights, and for all standard cartridges; also with rifle and shot gun butt, plain or fancy wood, or with pistol grip. All 22 Calibre Rim Fire Rifles are fitted with a kicking extractor, which throws the shell clear of the gun.

TO DISMOUNT THE ARM.

Take off the forearm. Take out the main-spring. Take out the ejector spring. Loosen the stop screw and take out the finger lever pin. Draw out the breech-block by the finger lever with the hammer attached. The extractor will drop out. If it is desired to remove the trigger or sear, take off the stock. Remove the side tang screws and tang. The pieces attached to the tang can then be removed by pushing out the pins that hold them. Remove the sear spring screw and spring.

TO ASSEMBLE THE GUN.

Replace the sear spring and screw. Mount the trigger and other parts of the lock on the tang and slide it into place. Replace the side tang screws. Assemble together the hammer, breech-block and finger lever, and hold them in the same relation to each other as shown in cut; that is, the firing pin protruded and the hammer against the breech-block. In this position push them from the under side of the gun partly into position. Put in the extractor and push the whole into place, holding back the trigger that the sear may not catch on the hammer. Put back the main-spring, ejector spring and forearm. Replace the stock.

SINGLE SHOT RIFLES

PRICE LIST OF SINGLE SHOT RIFLES

Octagon or Half Octagon Barrel	\$15 00
Round Barrel	14 50
Musket	16 00

The regular length of barrels for guns using 22 calibre cartridges will be 24 inches, and for 22 Centre Fire, and 32 or 38 Rim Fire, will be 26 inches; and all guns taking other Rim Fire Cartridges, or pistol sizes of Centre Fire Cartridges, will be made with 28 inch barrel. All guns taking Military or Sporting Cartridges, will have a standard length of barrel of 30 inches. To accommodate all tastes as to weights, we shall make five sizes of barrels, numbered from 1 to 5, and varying in weight.

No. 1 Barrel is the smallest, and will be adapted to small calibres of Rim and Centre Fire Cartridges, and will also take 22, 32, 38 and 44 W. C. F. Cartridges. Guns with this size will weigh from 7 to 8 lbs., varying according to calibre.

No. 2 Barrel is intended for small sizes of Centre Fire Cartridges, and will weigh about 8½ lbs. If light guns are desired for the larger sizes of Centre Fire Cartridges this barrel can be furnished for them.

No. 3 Barrel is intended for large sizes of Military and Sporting Cartridges, and will weigh from 9 to 10 lbs., varying according to calibre. With the same length and outside size, a 38 calibre will weigh about half a pound more than a 45 calibre.

All of the above Barrels will be listed at the same price, viz.: \$15.00 for the Octagon Barrel of standard length.

All 22 Calibre Single Shot Rifles will be accompanied by a Brass Cleaning Rod, other calibres by a Slotted Hickory Rod, without charge.

Set Triggers, additional	\$2 00
Jointed Rod in Butt Stock	50

When special barrel without slot for rear sight is wanted, an additional charge of \$2 will be made, and no allowance for rear sight. For extra lengths over those given above, \$1 for every two inches.

POWDER COMPANY POWDER

In all the following sizes, both Blasting and Sporting, the grain is liable to slight variations in process of separation, but the diagrams are sufficiently correct for all practical purposes.

SIZES OF ROYAL RIFLE POWDER.

FFFG.

FFG.

FG.

CG.

The popular Powder for every-day shooting. HARD, CLEAN, STRONG AND RELIABLE. Excelled by no common sporting powder, and equal to many high-priced brands.

SIZES OF "QUICK SHOT" POWDER.

No. 1.

No. 2.

No. 3.

FOR TRAP AND MINE SHOOTING.

This Powder, introduced the past season, has already gained a foremost place, both at the trap and for field service.

SIZES OF "FAR KILLING" POWDER.

No. 3.

No. 4.

No. 5.

The purest and most expensive materials are used in its composition, and the most scientific and exacting attention given to every detail in its production. It is fitted for the very finest of shooting. This is put up only in pound and half-pound canisters, and quarter and half kegs. Takes place of all high grade English Powders, such as Curtis & Harvey's Pique, and Wilkes & Lawrence.

SIZES OF MINING AND BLASTING POWDER.

WELL KNOWN AND POPULAR AMONG MINERS AND CONTRACTORS THROUGHOUT THE UNITED STATES AND CANADA.

FFF.

For Mining very Soft or Seamy Coal.

FF.

For Mining Soft Coal and Breaking Stone.

F.

For Mining Hard Coal and General Blasting.

C.

For Railroad Excavations, Iron Mining and Quarrying Hard Stone.

CC.

For Granite and Heavy Blasting.

CCC.

For Copper Mining and very Heavy Blasting.

ENGLISH AND BELGIAN

WINDOW, PICTURE, COACH, CAR, ENAMELLED, STAINED ENAMELLED AND COLORED

SHEET GLASS

ALSO ROLLED, ROUGH CAST, BRITISH POLISHED PLATE, FLUTED, ROLLED CATHEDRAL TINTS, AND EVERY DESCRIPTION OF FANCY GLASS.

In presenting this third edition of our Glass Tariff, would direct your notice to some of the points deserving special attention. We are the largest importers and dealers in Glass in the Dominion, and, as we carry large quantities, both of Sheet, Plate and Fancy Glass in stock, we are able to execute our orders with promptitude and despatch. We claim for our Glass that it is more brilliant in surface, lighter in color, has fewer defects, and is of more even thickness than most that is imported into the country.

Our Cases are the best made, and those containing Double, Treble-thick and Fancy Glass have wider Batons on them, consequently the percentage of broken lights is far less in our packages than those sold by other houses.

In explanation of terms used by the trade, we would say that "United Inches" means the length and width of lights added together, for instance: 8 x 10 (18 united inches), and all sizes not exceeding 25 united inches up to 10 x 15, are priced and come under the break of 25 united inches; size, say 12 x 24 (36 united inches), come under 25 to 40; size 20 x 30 (50 united inches) come under 40 to 50, etc.

Breaks, or Brackets, are the divisions the manufacturers make in sizes of sheet glass, and are as follows:

1st Break embraces all sizes up to 25 United Inches				10th Break embraces all sizes from 96 to 100 United Inches			
2	"	"	from 26 to 40 United Inches	11	"	"	" 101 to 105 " "
3	"	"	" 41 to 50 " "	12	"	"	" 106 to 110 " "
4	"	"	" 51 to 60 " "	13	"	"	" 111 to 115 " "
5	"	"	" 61 to 70 " "	14	"	"	" 116 to 120 " "
6	"	"	" 71 to 80 " "	15	"	"	" 121 to 125 " "
7	"	"	" 81 to 85 " "	16	"	"	" 126 to 130 " "
8	"	"	" 86 to 90 " "	17	"	"	" 131 to 135 " "
9	"	"	" 91 to 95 " "	18	"	"	" 136 to 140 " "

Sheet Glass is made of six different thicknesses, three of which are in general demand, and for which we quote prices. The demand for 32, 36 and 42 oz. is always for special purposes, and we can only quote prices on receipt of particulars of sizes, qualities and thicknesses required.

16 oz.,	averaging 16 oz. to the foot and 1-13 inch thick, known as single thick.
21 oz.,	" 21 oz. " " 1-10 " " " double "
28 oz.,	" 28 oz. " " 1-8 " " " treble "
32 oz.,	" 32 oz. " " 2-13 " " " "
36 oz.,	" 36 oz. " " 1-6 " " " "
42 oz.,	" 42 oz. " " 1-5 " " " "

RAILROAD, CAR COACH, CASKET AND SHOW CASE GLASS.

We have very fine double and treble-thick for above purposes, which we are furnishing the largest railroads and manufacturers in the country with.

to 2 1/2 x 9 1/2
LIST FOR THIRD QUALITY, 21 oz., DOUBLE DIAMOND STAR.

9	91 to 95	22 00 " "	18	136 to 140	63 00 " "

When asking for quotations of Polished Plate Glass be sure and state number of plates required, as well as thickness and sizes, as price depends largely on quantity, thickness and size.

Polished Plate is made in four thicknesses: 3/16, 1/4, 5/16 and 3/8. The last named size is rarely called for, unless for extra large plates for store fronts.

Fractional parts of inches will be charged at the price of the next highest even inches, thus 3 1/4 x 4 1/2 inches is 32 x 42.

9 1/2 inches.
 38.
 TED BOTTOM.

ches.
 OM.

case, \$7 55

IRREGULAR SHAPES.—Panels which are of irregular shape are charged as the full size of the squares required to cut them.

An additional 10 per cent. will be charged for all sheet glass more than 40 inches wide. All sizes above 52 inches in length, and not making with width more than 80 United Inches, will be charged in the 85 inch Break.

When ordering Fancy Glass, please use the number marked on samples, and avoid risk of breakage and save expense of mailing samples, showing patterns required.

To suit the convenience of some of our friends who do not wish to buy full cases of each kind of Colored Glass, we can ship 100 feet cases containing a good assortment of the colors that are in almost every day demand.

PLATE GLASS MIRRORS SILVERED AND BEVELLED ON THE PREMISES. Any size or design supplied to order with promptness and despatch, and at the lowest prices. Don't purchase Plate Mirrors without applying to us; we are headquarters for glass of every description.

WE HAVE ENTERED LARGELY INTO THE MANUFACTURE OF CHURCH WINDOWS. Estimates given on special designs. Shall be pleased to furnish designs of Memorial and Chancel Windows at prices to suit purchasers. The approval of our patrons has been so marked in the other departments of our immense glass business that we have entered into this department. By so doing we can furnish everything needed in glass for dwellings and public buildings. We illustrate on pages Nos. 908 and 909 a few designs of Leaded Glass Work in Door Panels and Fanlights, also for Store Fronts (910), and on pages Nos. 911, 912 and 913 we show some new designs for churches, both plain and decorative. Purchasers can rely on the work in this department being first-class in every particular. Special designs made to order on short notice.

As we have our glass put up by experienced packers we make no allowance for breakage. Bills of lading being guarantee of good order when shipped, and all sheet glass shipped at customer's risk.

Commencing on next page is a complete list of sizes, showing the breaks of United Inches they are in, the number of lights in case, also RETAIL PRICES by the light of **Star, Diamond Star, Double Diamond Star, and 28-oz. Glass.**

For orders cut to sizes we allow a trade discount off these prices.

SUGGESTIONS AND EXPLANATIONS OF PAGES 902 TO 907 INCLUSIVE.

Do not cut the patterns from book. Order by number of pattern only, and thus keep the book in good order for your next customer.

Give full size of Glass and depth of Rabbet.

If the Rabbet is not the same on the sides as it is on top and bottom, state how much it is in each place.

If no Rabbet is given we will allow for one-half inch Rabbet all around.

If the openings to be filled with glass have any **peculiar shape** it is better to send a **full size diagram** of such shape, showing both the edge of the glass and the edge of the moulding

If no shape is given we will assume the glass to be square at all corners.

If any initial or other lettering is shown on the pattern selected, be sure to state what initial or lettering is wanted, and also say which measure is the height of glass.

When glass is wanted to match a former order it is necessary to give the name and date of former order, and if this cannot be had it is necessary for us to have a "rub" or a tracing of the pattern. We will be pleased to send instructions as to how to make "rubs" at any time.

These designs can be adapted to any reasonable size or shape.

Special designs and estimates for same furnished on application.

Monograms, initials or any desired lettering can be inserted in almost any of these patterns.

We can and will make any other pattern you may want, either from our old pattern sheets, or from any pattern sheet, but we prefer to fill orders from this sheet, because we can ship more promptly.

Almost any of these patterns can be made the reverse of the engravings (that is, clear glass where the cut shows ground glass, or vice versa) when so ordered, without extra charge.

When ordering be sure to state which way you wish your glass made, that is whether you want ground glass where ground glass is shown on the engravings, or the reverse.

Any of these designs can be made on Plate Glass.

Any of these designs can be made on Ruby, Blue, Yellow, Green or Purple Glass when so wanted, and unless otherwise ordered we leave the body of the glass colored in such cases.

SEND SHIPPING DIRECTIONS WITH THE ORDER.

PLATE GLASS

WE carry the largest stock of British Plate Glass in Ontario. As we purchase for cash in large quantities we at all times get the lowest market prices, and thus are enabled to quote bottom figures for any specification submitted to us. The delivery and Insurance of Plate Glass are special features with us, we can deliver Plate Glass at the store front anywhere within 100 miles of London by our Plate Glass Wagon (cut of which is given above) and if so desired will furnish prices for Glass placed in position, thus relieving the purchaser of expense of unloading from car, cost of teaming, and risk in transit from cars to building, and placing the same in store front. We will also insure Plate Glass supplied by us against breakages for from one to three years at special rates. A practical man is at the head of this department and satisfaction is guaranteed. Do not purchase Plate Glass before applying to us, we can supply any and all sizes in ¼, 5-16 and ¾ inch thick from stock.

MIRROR PLATES

OUR OWN SILVERING.

BRITISH PLATE, BEST GERMAN PLATE, AND SHOCKS.

Our stock of Glass for silvering is carefully selected from the best makers. This department is in charge of a skilled "Silverer," and we will spare no expense to finish our goods fully equal to any of imported silvering. Parties using bevelled Glass will find our prices much lower than elsewhere. We bevel all our own Glass, thus are not restricted to certain stock sizes, but can furnish any size glass, with bevel to suit purchaser.

HOBBS HARDWARE COMPANY, LONDON.

THE "PERFECTION" GLASS BOARD

Glaziers, retailers of Window Glass, and all those who are cutting constantly odd sizes, will at once appreciate the advantages of the "Perfection" Glass Board for this purpose.

It FILLS A LONG FELT WANT—A PERFECT GLASS CUTTER'S BOARD.

It insures accuracy, saves time, and prevents breakage.

It is a well known fact that there is a large percentage of breakage in cutting glass to size. Why? Because you find it so awkward with the old style of home-made board, holding the straight edge with one hand while you use the diamond with the other. You are sure to let it slip before you make a full cut. It is almost impossible to cut large glass without the assistance of a second person. The "Perfection" holds the rule firmly at both ends for any length of cut. It is quickly adjusted, easily understood, and perfectly accurate. It not only holds the rule for even inches, but also for any fraction of an inch. It will save you money. YOU CANNOT AFFORD TO BE WITHOUT IT.

A DESCRIPTION OF THE "PERFECTION" GLASS BOARD.

The board is made of well seasoned hard wood, made up of narrow strips, each piece having a longitudinal channel cut in the back to prevent warping and will always remain true. It is ruled from side to side both ways, dividing the board into

LOWER SIDE OF RULE.

UPPER SIDE OF RULE.

even inches. At the top is a series of perpendicular pins, one for each inch, at the bottom a corresponding series of horizontal pins. The rule is provided at each end with a laterally adjustable gauge, connected with and moved simultaneously by a connecting rod. This device is an improvement on our old method of moving each gauge independently, as it is impossible with this connecting rod to move one gauge more than the other. When even inches are to be cut these gauges are brought even with the right hand side of the rule. The wedge shaped point is inserted between the perpendicular pins and the plug at the other end of the rule is dropped between the horizontal pins at the desired inch. This holds the rule firmly on the line, allowing for the width of the diamond. It is done in much less time than it takes to tell. We will illustrate how the fractions of an inch are obtained by giving an example. Supposing we have a light of glass to cut $35\frac{3}{8}$ inches in length. We insert the point of the rule between the pins at the 35th inch. When we release the connecting rod by loosening the set screw, then by turning the thumb nut on the end of connecting rod we move the rule forward to the proper place by which to cut the glass exactly $35\frac{3}{8}$ inches in length. These points will be readily understood by referring to the cut.

"BUFFALO" LIQUID COLORS

THE BEST IN THE WORLD.

NO CHEMICAL COMBINATION, BENZINE OR SOAP MIXTURE.

WARRANTED PURE LINSEED OIL PAINTS.

Ready for application without other manipulation than simply stirring with a stick to render the mass of like consistency.

We present the shades of our "Buffalo" Liquid Colors on pages 919 and 921, representing 32 of the latest artistic shades. These colors are put up in packages of various sizes from a barrel of 45 gallons down to as small a quantity as one pound at the following prices.

PRICES.

	Ordinary Colors.	French Green, Blue and Bright Red.
Barrels	per imperial gallon, \$1 80	\$2 60
Kegs and 5-gallon Buckets	" " 1 90	2 65
1 Gallon Cans, packed 6 in a case	" " 2 00	2 75
1/2 " " " 12 "	" " 2 10	2 85
1/4 " " " 24 "	" " 2 20	3 00
1 and 2 lb. Tins, 100 lbs. in a case	per lb., 18	25

To estimate the covering capacity: One imperial gallon will give two coats on 265 square feet of wood surface. Allow for gable ends, if any.

To estimate the amount of paint required: add the number of feet in width of front and rear to the number of feet in length of building (both sides), multiply by the average height, and divide by 265 for two coats:

[Example]	
Front,	28 feet.
Rear,	28 "
Side,	36 "
Side,	36 "

Multiply by height, 128 "

265).2944 (11 1/10 gallons for 2 coats.

DIRECTIONS.

- Stir the paint thoroughly from the bottom before using.
- For priming, use the paint of medium thickness; size all knots or sappy portions with shellac.
- Putty all nail holes, etc., after first coat.
- Let first coat get thoroughly hard before applying second.
- Do not apply paint when the work is wet or damp.
- Do not spread or brush paint too much; it only requires to be spread evenly.
- Use full brush and light hand.
- If too thick, thin with boiled oil.
- If no gloss is desired use turpentine.

The best made Paint and Varnish Brushes are liable to shrink more or less if kept in very warm or dry places. All good workmen know how to remedy this, and a word by dealers to consumers will often prevent annoyance to themselves and loss to manufacturers.

PAINT AND VARNISH BRUSHES SHOULD NEVER BE USED AS DUSTERS NOR USED DRY.

B EX. FRENCH BADGER, 80 cents per inch.

For Red Sable, Camel Hair, Fitch or Bear Hair and Badger Hair Brushes in our list will be found what is desired.

All Brushes that have wrappers on, should be kept so as much as possible, as the Bristles keep cleaner, and the brush retains its proper shape and is more salable.

Painters' Brushes should never be kept in a warm, dry place.

Never put a brush in newly slacked lime, it will destroy the bristles.

Paint and Varnish Brushes should never be used as dusters, and it is unnecessary to soak them in water before using.

We stock a full line of Neck, Back and Body Sleigh Bells on strap, also a full assortment of Gongs and Chimes. We do not illustrate our full line, as the goods are continually changing in design. We therefore think it advisable for our agents to carry a full line of samples in season as heretofore.

Tables,
LADD

If the an

Regu
Doub

Ladd's Discount Book
 Is indispensable to every one using per-
 centage, as it is a practical means for
 rapidly reaching absolutely accurate results
 without the mental wear of computing,
 avoiding any possibility of error.
 A few days' use will verify the claim
 that the book is accurate, rapid, convenient
 and practical.

The Old Way
 Net of — \$73.00 at
 discount 60, 10, 10, 7 1/2 + 2 1/2 per cent.

60% — 73.00
 10% — 43.80
 10% — 29.20
 7 1/2% — 2.92
 2 1/2% — 2.628
 23.652
 1.77.39
 21.87.85
 21.33.11475

118.26
 59.12
 177.39

And you cannot feel sure of this till
 you prove it, after all your figuring, be-
 cause it is so easy to make a mistake in
 figuring or misplace the figures, as I did
 in working out the above example. The
 new way is Accurate, Rapid and Practical.

The New Way.
 Put Your Finger Right on It.

No. 25	Polished, with Japanned Malleable Handle	per dozen, \$
No. 30	Extra Polished and Nickel Plated, with Cherrywood Handle	per dozen,

MERRILL'S ROTARY LAWN SPRINKLER

IS ESPECIALLY DESIGNED FOR

SPRINKLING GARDENS, GRASS, PLATS,
PARKS, ETC., ETC.

It can be attached to the nozzle of any hose in an instant, and being supported by a standard, will distribute more water, do it more uniformly and thoroughly, and cover a larger area of surface than any other lawn sprinkler in the world.

IT WILL SAVE NINE-TENTHS OF THE LABOR USUALLY REQUIRED, AND IS SOLD SO CHEAP THAT NOBODY CAN AFFORD TO BE WITHOUT ONE.

The distinctive feature of this sprinkler is the method of converting the solid stream of water, after it leaves the nozzle, into a **FINE SPRAY**, which is thrown to a great distance in every direction by the rotary action of the Sprinkler. With our ordinary city water pressure the spray will be **EVENLY DISTRIBUTED OVER AN AREA OF FROM 1,200 TO 1,600 SQUARE FEET OF GROUND.**

With this Sprinkler a very material change from the usual mode of sprinkling lawns and gardens is practicable, it being as far in advance of the capacity of the spray nozzle or perforated sprinkler as they are of the old hand watering pot; for, instead of continual handling and manipulation, the great range and extraordinary scattering capacity of the Merrill Sprinkler admits of its remaining for a considerable time in one position, fixed upon a standard, and requiring only occasional attention to move it from one place to another when it has sufficiently watered the field within its scope, thereby saving more than **NINE-TENTHS** of the personal attention and labor.

This is the only Sprinkler manufactured which will not clog with leaves or grass.

Merrill's Rotary Lawn Sprinkler

per dozen, \$

CALF WEANERS.

1095

"THE SETTLER."

HOBBS

- No. 10 For calves four months to one year old
 No. 12 For animals one to two years old

per dozen, \$
 per dozen,

WHY IT IS THE SETTLER.

- FIRST. Because for sucking calves it is a "SETTLER."
 SECOND. Because Farmers suffering with sucking calves must have a "SETTLER."
 THIRD. Because it has settled the Weaner question, and the "SETTLER" leads.

FULLER'S CALF WEANERS. HARDWARE CO.

- No. 1 From four to eight months old
 No. 2 Yearling and two-year-old
 No. 3 Cow Weaners, without Bit

per dozen, \$
 per dozen,
 per dozen,

DIRECTIONS.

- FIRST. See that the proper sized Weaner is used. See number and size above.
 SECOND. Don't be afraid to use the wire or anti-sucking bit when it is necessary. It is the best part of the Weaner, as it destroys the vacuum and makes it impossible for the calves to draw any milk. The bit being flexible, allows the calf to eat and drink without the least inconvenience or trouble to the calf whatever.
 THIRD. Hook the wire frame into the eyes of nose piece, as represented in the above cut; take out the split-pin at the joint, and pull the nose piece open; then push the spiral bit into the calf's mouth far enough so that the ball-shaped ends of the nose piece can be put into the nose; then close the nose piece and put back the split pin, and spread the pins at the ends to prevent it coming out.

LONDON

STANLEY'S PATENT BIT AND SQUARE LEVEL

The frame of this Level has three pairs of V slots on its back edges. A thumb-screw secures the Level to the Bit, and boring can be done with perfect accuracy as to the perpendicular, horizontal, or angle of 45 degrees by observing the bubble-glass while turning the Bit.

The frame can also be attached to a carpenters' square. Two shoulders rest on the top of the horizontal leg to the square, thus making it an accurate spirit-level, and the upright leg of the square will then indicate an exact plumb-line.

No. 44 Bit and Square Level, Brass Frame each, \$0 80

No. 8	Height, 24 inches; closed, 29 $\frac{1}{2}$ inches; open, 35 inches	per dozen, 8 00

The frames of these Screens are made of hardwood, finished with hard oil on the natural wood, and will be found to be the best finished, most complete and strongest Screen in the market.

The numbers 1 and 2 are not adjustable, but are provided with heavily scored ends, which can be easily cut down with a pocket knife to suit any size window.

The numbers 7 and 8 have adjustable sliding ends.

THE "RELIABLE"
SURFACE SPRING HINGE.
COVERED SPRING.

HOLDS THE DOOR EITHER OPEN
OR SHUT.

The weight of the door is supported by the knuckles
of the hinge. In no other hold-back
hinge is this so.

No. 20 Black Japanned, per dozen pairs, \$
Packed 6 pairs in box.

Has the good points of all other hinges, and none
of the weak ones.

Has a flat steel, oil tempered spring, that will
never "set" or wear out

HARVEY
COMBINATION IRON SOAP HOLDER.

CHEAP, USEFUL, AND ECONOMICAL.

It can be used in a variety of ways. It will either hang on the wall, round or square wash tubs, scrubbing pails, or
stand anywhere, and always ready for use.

Capacity, 1 lb. soap.

MANNY'S
LEMON JUICE EXTRACTOR.

EXTRACTS THE PURE JUICE ONLY,

AND DELIVERS IT INTO THE TUMBLER FREE FROM THE BITTER
OIL OF SKIN OR SEEDS.

TRY IT ONCE AND YOU WILL NEVER WANT TO USE AN
OLD-FASHIONED SQUEEZER AGAIN.

DIRECTIONS.

Set the Squeezer upon a tumbler (as shown in the engraving), place a half lemon upon the points, press downward and oscillate the lemon slightly. The ribs easily enter the pulp; the juice as it is liberated passes down through the openings into the tumbler. These openings are too small to allow the seeds to pass through. The pulp will not be detached from the skin if the work of expressing the juice is not overdone. By this process we obtain the clear juice from the PULP with none of the bitter oil from the skin. A lemonade thus made is doubtless a more wholesome beverage, and is certainly more agreeable to the taste. Try it once and you will never want to use an old-fashioned squeezer again. They are made of glass, and as easily kept clean as a tumbler; are an ornament to the table when placed around a fruit dish, and each member of the family, young or old, can easily make a lemonade with any desired amount of the acid without soiling the hands, and each can sweeten as they like it best.

When this squeezer is used, the old custom of making lemonade in quantities, and wasting what is not used will be discontinued.

Please order samples for trial, and you will doubtless have a lively demand as soon as their merits become known. At least, that has been the experience of all dealers who have handled them.

ONE DOZEN IN A BOX.

THE
"SCHULTZ" LANTERN.

Patent Tilting Guard and Patent Locked Burner.

COMPACT, SIMPLE, DURABLE.

Per dozen \$

PUT UP IN BOXES OF HALF AND ONE DOZEN.

The new "Schultz" Lantern is compact, simple, durable and cheap. Its illuminating powers are unexcelled. The automatic opening in the Disc is the most simple device yet produced for lighting lanterns. These Lanterns have ROUND TUBES, being stronger in every respect than the Square Tube Lanterns now in the market.

WE CLAIM FOR THIS LANTERN THE FOLLOWING:

- The most perfect device for locking the Burners in Lanterns.
- The easiest method for securing and removing the Globe.
- They do not smoke the Globe when burning.

[Owing to a mistake on the part of the engraver, the above cut does not show the Automatic Closing Plate for the hole in the Perforated Disc.]

SLOTTED PLATE TUBULAR LANTERN.

WITH GUARD.

No. 1 Burner, $\frac{3}{8}$ inch Wick, 12 oz. Globe.

The Lantern represented in the cut is furnished with a new Slotted Plate, through which the wick can be reached at any point with a match and instantly lighted.

It is made of the same material as the No. O Genuine Safety Tubular Lantern; is furnished with the same Burner, Globe and Outside Filler.

THIS LANTERN CANNOT BE EXTINGUISHED BY THE WIND.

Can be filled, lighted, regulated and extinguished without removing the globe.

No. O Slotted Plate Tubular Lanterns per dozen, \$

PACKED IN CASES OF DOZEN AND HALF DOZEN EACH.

BRASS GENUINE SAFETY TUBULAR LANTERN.

WITHOUT GUARD.

No. O Burner, $\frac{3}{8}$ inch Wick, No. OO Globe.

This Lantern is eleven inches in height, is constructed on the true tubular principle, is made in brass and finished in old gold.

It is small and unique in design, and will be found much more convenient for some purposes than the larger lanterns.

This Lantern is particularly adapted to the use of ladies and children, the feeder cap being furnished with a leather washer to prevent the oil from coming in contact with the clothing.

CANNOT BE EXTINGUISHED BY THE WIND.

Can be filled, lighted, regulated and extinguished without removing the globe.

No. OO Brass per dozen, \$

PATENT DASH BOARD ATTACHMENT.

MADE FOR TUBULAR LANTERNS.

WITH REFLECTOR.

This is an ingenious arrangement of wire, which at once forms a guard to your lantern, holds the reflector in position, and can be instantly attached to or detached from the lantern and dash board.

It holds the lantern securely to the dash board, and does not require the removal of the globe in lighting, in fact is durable and complete.

NEW SIDE AND DASH LAMP AND LANTERN COMBINED.

1113

No. 1 Burner, 6-8 Inch Wick, No. O Globe.

We wish to call particular attention to the new No. 15 Combination Lamp and Lantern, which although so recently introduced to the trade, has become a general favorite.

It is constructed on the Genuine Tubular Principle, has an extra large oil pot with a capacity for burning twenty-four hours, and by means of our SAFETY ATTACHMENT, the burner is locked securely in the lantern when the globe is removed or broken.

It has the new corrugated reflector with Dash Board Spring, hence can be used as a Dash Board Lamp, hung on a nail for use as a side Lamp, or carried by the bail as an ordinary Lantern, in fact can be used in a greater variety of ways than any other Lamp or Lantern yet offered the trade.

Can be extinguished by the wind.

Can be filled, lighted, regulated and extinguished without removing the globe.

No. 15 Per dozen,

\$

Packed in cases of one dozen and half dozen each.

GLOBE TUBULAR STREET LAMP.

WITH AUTOMATIC EXTINGUISHER.

Showing Globe raised and held in position.

No. 3 Burner, 1½ Inch Wick, Height of Lamp 25-Inches.

We invite your special attention to the No. 3 Globe Tubular Street Lamp, constructed on the Genuine Tubular Principle, which renders perfect combustion, hence a MORE brilliant light than the ordinary Street Gas Light, emits no smoke, and cannot be blown out by the strongest wind. Every Lamp has an Automatic Extinguisher that can be set to extinguish the flame in 4 or 12, twelve, or sixteen hours, thereby effecting a great saving. To ensure a perfect light, it is necessary to keep the sieve of your Burner thoroughly clean, and at least twice a month employ the bullet contained beneath the brass cap in running the entire length of the air tubes, freeing them from cobwebs or any other obstructions to draught. From the peculiar construction of these Lamps, having outside cold air injectors at the top of the tubes, they are not affected by temperature, and will burn equally as well in cold as in warm weather. They have a fourteen inch enameled reflector at the top of the globe, which throws the light downward, greatly increasing its brilliancy. We furnish duplicates to any parts as ordered. Can be filled, lighted, regulated and extinguished without removing the Globe. Packed one in a box.
