

THE DELUGE IN INDIA.

A Storm Wave in the Bay of Bengal.

Between the Indian coast and the Siam peninsula, the Bay of Bengal lies open to the Indian ocean for a thousand miles. Drawing nearer and nearer for seven hundred miles, the two coast lines, tend northward and meet at the mouth of the Ganges. The vast waves pressed into this angle by southerly winds, aided by the spring tides occasion the phenomenon known as the great bore of the Ganges. An immense volume of water is driven from the sea into the river; gradually a watery ridge is formed, stretching across the estuary and rushing up toward the river with great violence. In the Hoogly branch of the Ganges, the bore travels seventy miles in four hours, and sometimes appears suddenly as a liquid wall five feet high.

The Hoogly is one of eight mouths of the Ganges, and is best known because it is the usual avenue from the sea to Calcutta. The eastern outlet is the estuary also of the river Megna, which is to the Brahmaputra what the Mississippi to the Missouri. Between Hoogly and the Megna lies the delta of the Ganges, 200 miles of mudbanks, covered with wood, and known as the Sunderbunds. From the head of the delta to the Bay of Bengal, for 283 miles, the descent of the Ganges is only three inches to the mile. The dreary flats through which it reaches the sea, have been brought down from the mountains and deposited there by the river, and the islands in the estuary of the Megna have been formed in the same way. The district on the west of the estuary is called Backergunge, that on the Chittagong, and the islands belong partly to one district and partly to the other.

This is the scene of the unexampled disaster on the night of the 31st of October. The islands, like the Sunderbunds, are perfectly flat. The villages are built on mounds to secure them against the annual inundations from the river in the rainy season, when the delta, for hundreds of miles, is completely submerged. The river begins to subside in August, and by the end of October has returned to its channels.

The largest of the islands is 800 sq. miles extent. Sunleep, which was occupied by the Portuguese in the seventeenth century, is sixteen miles long and six miles wide. The three principal islands had a population of 360,000.

On the 31st October a cyclone swept over the Indian ocean. On the 13th of November, a despatch from Calcutta announced that at least 20,000 persons had been drowned by the storm, and some accounts had even said 40,000. The larger number was multiplied by three, and the loss of life was set at 120,000. Tuesday's appalling figures must be doubled.

SCIENCE IN AMERICA.

Professor John W. Draper delivered an inaugural address, as President of the newly formed Chemical Society, on the above subject, at Chickering Hall, this city, on the evening of the 15th of November. He began by stating that the progress of Science depends on two elements, the educational establishments and our scientific societies. Briefly sketching the scientific and industrial progress of the century, he said that in 1840 it had become apparent that there was provision in the existing educational establishments for instruction in accordance with the world's advance in substantial knowledge. The colleges clung to the medieval as long as they could, and only accepted the modern when they were compelled; and generally, the lecturer considered that the superior colleges emancipated themselves from the medieval confines of the classics, and assumed thoroughly and sincerely the modern cast of study, the more the cause of scientific progress would be promoted.

SPONTANEOUS COMBUSTION IN COAL.

At this season it is advisable to test the temperature of all piles of coal, whether in sheds or out of doors, in order to detect any tendency to heating. The usual method of raising down tubes (ordinary inch pipes, sharpened at lower end) from the top of the pile to the bottom; at frequent intervals, will repay for all trouble. Whenever in shed or out of doors, coal is apt to heat, and more particularly so after being stored about three months. In many places, piles are always kept in the piles, and the temperature taken daily, by lowering a thermometer into them; in this way any accumulation of heat can be easily detected, and the remedy applied before loss is incurred. When undue heat is detected, turning over that portion of the pile is the surest remedy. In several cases of heating that have occurred recently, only the watchful and promptitude of those in charge have prevented serious losses.—*American Gaslight Journal.*

Col. T. W. Higginson says that, dwelling as he does just at the edge of what claims to be the summer at least, the most fastidious of American social circles, he is constantly struck with the limitation of its influence, and with the little power exerted by its members as compared with that which may easily be wielded by tongue and pen. He adds: "To be at the head of a Normal school or to be a professor in a college where co-education prevails, is to have a sway over the destinies of America which reduces all mere 'social position' to a matter of cards and compliments and pages' buttons."

In Southern Utah, from a silver mine of considerable depth, petrified wood is

taken in which there is chloride of silver worth nearly \$1,000 a ton. The formation is sandstone, out of which horn-silver is taken. This shows that the deposit of the silver was made subsequent to the rounding of the wood by the sand that afterward became the sandstone.

The Standard.

SALIST ANDREWS, NOV. 29, 1876.

LATEST NEWS.

The Allan Steamships are to land and receive mails to and from Great Britain, at Halifax, during the winter months, by order of the Dominion Government.

The Eastern Question is still unsettled, and the hopes of peace are disappearing. It is rumored that Russia is collecting troops to advance on Afghanistan notwithstanding the Czar's recent surprise that England should imagine he had any design upon either India or the occupation of Turkey.

The Minister of Finance is on his return to Canada, having accomplished the object of his visit to the mother country.

A schooner from Montreal arrived at Carapet on Sunday night, with cases of small pox. The captain and one of the men died on the passage.

The question who is to be President is still unsettled.

A snow storm occurred in Washington on Monday last.

Gold 108 1/2.

The United States journals state that excitement over the Presidential vote, has operated in such a way as to check the current of trade to some extent. Still business is carried on, with a degree of caution. The lumber market is rather inactive, as there is but light demand—the market however is firm.

From reports in our Maine exchanges, we are sorry to notice a disposition on the part of the Directors of the Shore Line to cease their efforts to construct the line; this it is said arises from a determined opposition on the part of the citizens of some towns to grant aid. They are of opinion that there are too many men who wish to handle the money.

Should the work not be proceeded with, what effect will it have on the construction of the Grand Southern, which is being built so rapidly and which was to have connected with the Shore Line, which would have given a large opening for exports and imports. We trust the citizens of the towns in Maine will grant aid to the construction of the Shore Line.

RETIRED.—Some year and a half ago, we alluded to young men, natives of St. Andrews, who left here for California, to seek employment, which they did with varying success. It now becomes a pleasure to record the return of one of them, Mr. Reuben Algar, who arrived by train on Saturday last, not alone, however, having brought with him a greater treasure than even the fine gold of the Pacific Slope, viz.—a partner for life. It is hardly necessary to state, that his reception, on arrival was hearty, and that during the evening, the Cornet Band of which he was formerly a leading member serenaded the bride and bridegroom, at his father's house. The youths of the town did not forget to give the happy pair an old fashioned "charivari" which was kept up until a late hour. We understand that they will spend the winter.

SELLING.—A movement among the United States philologists, for the simplification of spelling by writing only such letters as are necessary to express the sound of the word. The spelling of words in the English language is as widely and firmly established as the Roman alphabet, and has been arrived at after severe study by the most eminent scholars and educators. Who would exchange the present classic and euphonious method of spelling? They never would consent to spell the following sentence as given a specimen of the new style:—

"Among the many good things brot us his this sentential year is a definit promise that children or the next jeneraishon will be relieved from the drudgery or learning our present unreasonable orthography."

Can anyone conceive a more barbarous innovation than the sentence quoted.

China has its big tree as well as California. About 30 miles from Nikko, an avenue of sugi, or cedar trees begins, and, with an occasional break where there is a village, it reaches a whole distance to the shrine of Iyeyza—the longest avenue of the shade in the world. These great trees are from five to seven feet in diameter at the base, and tower without a branch for 50 or 80 feet, and then lift their head 40 or 50 feet higher. They resemble the giants of the Yosemite. The trunks are faultlessly straight, and the bark is deeply veined. There are about 30,000 trees on this avenue, and all of them were planted after the foundation of the shrine, about 250 years ago.

NEW HISTORY OF THE DOMINION.

We are in receipt of the first part of the new Illustrated History of the Dominion of Canada, by Professor Charles R. Tuttle of Nova Scotia. The work when complete will consist of two large quarto volumes of over 800 pages each, and embracing together over 200 full page steel, wood and stone engravings. It is a magnificent work. The author has already established a high reputation as an historical writer. His many works already published in the United States are classed among the standard literary productions of that country. With his excellent qualifications for the task, and his loyal determination of producing a work that shall give the inhabitants of the Dominion the much needed intelligence regarding the general progress of the nation, as also to present to the United States and the mother country such a record of Canadian advancement in all the industries, arts and science of civilization, we expect at his hands a work of great public value. The work is extensively illustrated with steel, stone and wood engravings, which embrace Dominion cities and scenery and the portraits of the distinguished men of the past and present. It is preeminently a work of high art and great literary excellence, and will be a monument of honor to the author and his country. The publishers have gone to great expense, and their efforts will no doubt meet with general encouragement. The work is a necessity to every family and at the rate of fifty cents a month, at which price it is delivered by agents, no one can afford to be without it. In fact the price is too low.

HARPER'S MAGAZINE for December, beginning the Fifty-fourth Volume, is not only an especially attractive Number, from the beauty of its numerous illustrations, but is also distinguished by the unusual variety and interest of its contents. The Number is embellished with more than eighty exquisite engravings, and contains, besides the five editorial departments, twenty-four contributions, covering every possible variety in the field of magazine literature.

The descriptive illustrated papers treat of Genoa and its celebrities, living and dead; the Philippine Islands; recent important ethnological discoveries in Tennessee; and the social life of the Knickerbockers of New York two hundred years ago. Porte Crayon's illustrated paper on "Boys and Girls" is in his characteristic style.

Two of the illustrated contributors are poets. "The Book of Gold," by J. T. Trowbridge, is a powerful and dramatic Christmas story in verse. "At Two Scores" by T. B. Aldrich, while it is sufficiently personal to be welcome to the poet's many friends, is not egotistical, and will be read with delight by all lovers of poetry. The other poetical contributions to the Number are of unusual excellence—notably PART HAYNE'S "Muselines," which reminds one of some of the happiest efforts of the older English poets.

The most important feature of the Number is Mr. GLADSTONE'S many letter, explaining his attitude toward this country during the late war. There is a very large audience in America that will regard with the greatest interest, this communication from England's wisest statesman. Mr. GLADSTONE'S letter is very happily followed by a timely poem from Bishop Cox on "England and America."

In fiction this Number is brilliant. R. D. BLACKMORE, the author of "Lorna Doone," "Alice Lorraine," and "The Maid of Sker," begins a new novel, entitled "Erema; or, My Father's Sin." In the current Number a "Woman-Iliter" there is an exceedingly entertaining chapter touching upon the subject of woman's higher education. Miss THACKERAY'S exciting story, "Peat Fields," is concluded. There are also in this Number four excellent short stories.

The Editor's Easy Chair discusses Political Mass-Meetings, Newspapers and Orators, Our transatlantic Critics, and the Kitchen Question, concluding with some suggestive hints as to beefsteak and apple-pie. The other editorial departments are well sustained.

A FORTUNE TOLD.—The Montreal Star says:—We have the pleasure of stating that our fellow-citizen, Mr. John R. Middlemiss, has had the good fortune to be one of fifteen heirs to an estate in England that will give to each £7,000,000. The estate has been accumulating since early in the 17th century, and the real and personal property will amount to £101,000,000. The money is in the Bank of England, and legal steps have been taken by the heirs to establish their claim. The highest legal talent in England has been employed and the solicitors of the Bank have been retained to conduct the case. Mr. Middlemiss claims as a direct descendant of the intestate. We congratulate him on the good prospect that is before him, and trust all his best hopes will soon be realized.

"Our Home Companion and Canadian Teacher" is the title of a Monthly Magazine, published at London, Ontario. It is designed to instruct, and at the same time amuse, and conducted with ability; the several departments are well arranged. Each number contains 32 pages. School Teachers will be benefited by a perusal of the work, which costs only 50 cents per annum.

The Daily News has some amusing paragraphs headed "Journalistic." There is much truth in the epitomy, not excepting the reference to our humble sheet. There is one omission which we trust the writer will supply a good notice of the News.

Improvements.—"Morrison's Hotel" has recently undergone several improvements internally and externally. The inside has been newly painted and papered, and the magic touches of Mr. Charles Kennedy's brush has given the shop and rooms a cheerful look; his imitating of the pretty paper—an excellent matching of oak and bird's eye maple—has a pleasing effect. New heating apparatus has been placed in the house, where flowers are in bloom in the rooms during the winter season. The large and commodious stables are well fitted up and comfortable, and the approaches are such that the horses and vehicles can be driven under cover, where an abundance of hay and grain are ready for use.

The front of the Baptist Church has had a coat of paint put on during the past week, by Mr. F. Stoop; the contrast of colour on the linings and main building have a pleasing effect.

The large new stables of Mr. Mallory which we referred to last week, have since been inspected; the interior arrangements are good—a large space is left for vehicles which can be driven under cover, the stalls are well arranged, and the stable office is close to the main entrance; careful hostlers are in attendance, and the stables are quite near the railway and steamboat wharf.

A REMARKABLE NEGRO.—Memphis (Tenn.), Nov. 24.—Francis Thompson, a vile-mouthed, darky, who worked 100 days on the chain gang here last summer for wearing female apparel while he belonged wholly to the male gender, died last night at the City Hospital. Thompson passed for a woman here for fifteen years, and was often seen in public decked in gorgeous plumage. Before the Congressional investigating Committee, of which E. B. Washburne was Chairman, that sat here in 1867 to inquire into the cause and conduct of negro riots, Thompson swore his person had been violated thirteen times by the mob. The evidence of Thompson and his associates formed the bulk of the report upon that occasion. He was a native of Virginia, born and lived a slave, but became unmanageable, and for years past has led a vicious life. Upon his true sex being proven by medical experts here last summer, a profound public sensation was created. Thompson collected about the streets wherever he was conveyed for weeks after his arrest.

The Queen of Madagascar gives her subjects several excellent reasons against the sale of rum. "Because," she says, "the rum does harm to your persons, spends your possessions in vain, hampers your wives and children, makes foolish the wise, and makes the foolish more foolish." (Gongl never delivered a better temperance lecture.)

PERU.—It is stated that the population of Peru is decreasing, and at present is less than three millions. This decrease is attributable to various causes, among which are mentioned, besides disease, earthquakes, civil wars, and alas, bandy.

The Montreal Witness remarks, with just admiration, that Lord Dufferin, in his recent visit to Salt Lake City, reflected honour upon the country and Queen he represented, by refusing to call upon Brigham Young.

A boa constrictor eight feet long was captured a fortnight ago in the hold of a ship that arrived at Greenock, Scotland, from the West Indies.

The new forts around Paris are almost completed, and will be occupied by the troops at the end of the year.

The long-projected marriage between King Alfonso and the daughter of the Duke de Montpensier is reported to be definitely arranged.

An Italian kidnapper, whose business was confined to stealing girls for exportation, mainly to England, died recently, leaving a fortune of \$100,000.

The mildest attempt at aristocratic manners costs something in England. A civil engineer there has been fined £3 for using on a letter armorial bearings for which he had not taken out a license.

WINTER GOODS.—The "Manchester House" has now open and for sale, a large and varied assortment of fashionable Winter Goods, just received direct from the English and other markets.—See advertisement.

MARRIED.—At Boston on the 23rd inst., by the Rev. Dr. Sill, Mr. REUBEN ALGAR, to Mrs. MARY STANHOPE, of New Bedford, Mass.

OYSTERS! OYSTERS!

SERVED UP IN ALL STYLES AT THE "MEGANTIC HOTEL."

FOR SALE BY PINT, QUART OR GALLON.

Private families supplied at short notice.

Fresh from St. John & P. E. I. every boat.

WHAT PAYS?

IT PAYS every Manufacturer, Merchant, Mechanic, Inventor, Farmer, or Professional man, to keep informed on all the improvements and discoveries of the age.

IT PAYS THE HEAD OF EVERY FAMILY to introduce into his household a newspaper that is instructive, one that furors a taste for investigation, and promotes thought and encourages discussion among the members.

The Scientific American

which has been published weekly for the last thirty-one years, does this to an extent beyond that of any other publication in the field. It is the only weekly paper published in the United States, devoted to MANUFACTURES, MECHANICS, INVENTIONS and NEW DISCOVERIES in the Arts and Sciences.

Every number is profusely illustrated, and its contents embrace the latest and most interesting information pertaining to the Industries, Mechanical, and Scientific Progress of the world; Descriptions, with beautiful Engravings of New Inventions, New Implements, New Processes, and Improved Industries of all kinds; Useful Notes, Recipes, Suggestions and Advice by Practical Writers, for Workmen and Employers, in all the various arts, forming a complete repository of New Inventions and Discoveries; containing a weekly record, not only of the progress of the Industrial Art in our own country, but of all New Discoveries and Inventions in every branch of Engineering, Mechanics, and Science abroad.

THE SCIENTIFIC AMERICAN has been the foremost of all industrial public leaders for the past thirty-one years. It is the oldest, largest, cheapest and the best weekly illustrated paper devoted to engineering, mechanics, chemistry, new inventions, science and industrial progress, published in the world.

The practical Recipes are well worth the subscription price, and for the shop and house will save many times the cost of substitution.

MECHANICAL, FARMER, MECHANIC, ENGINEER, INVENTOR, MANUFACTURER, CHEMIST, LOVER OF SCIENCE, and PEOPLE OF ALL PROFESSIONS, will find the SCIENTIFIC AMERICAN a guide to them. It should have a place in Family, Library, Study, Office, Counting Room; in every Reading Room, College and School. A new volume commences January 1st, 1877.

A year's number costs \$3.25 and several

Illustrated Engravings. Thousands of volumes are preserved in binding and reference. Terms: \$3.25 a year by mail, including postage, discount to clubs. Special discounts, giving Club rates, sent free. Single copies mailed on receipt of 10 cents. May be had of all News Dealers.

IN CONNECTION with the SCIENTIFIC AMERICAN, PATENTS, AMERICAN, FOREIGN, and SOLICITORS OF AMERICAN and FOREIGN PATENTS, and have the largest establishment in the world. More than fifty thousand applications have been made for patents through their agency.

Patents are obtained on the best terms. Models of New Inventions and Sketches examined, and advice free. A special notice is made in the Scientific American of all Inventions Patented through the Agency, with the name and residence of the Patented. Patents are often sold in part or whole, to persons attracted to the invention by such notice. A pamphlet containing full directions for obtaining Patents sent free. THE SCIENTIFIC AMERICAN Reference Book, a volume bound in cloth and gilt, containing the Patent Laws, Claims of the U.S., and 142 Engravings of mechanical inventions. Price 25 Cents.

Address for the Paper, or concerning Patents, MUNN & CO., 37 Park Row, New York.

Branch Office, Cor. F. and 7th Sts., Washington, D. C.

NOTICE!

THE Copartnership existing between the Subscribers and W. H. WHITLOCK, on the 21st day of October, 1876.

L. P. BECKETTON, D. F. CAMPBELL.

The Subscriber is authorized to settle all debts due to and by the late company. Those indebted are requested to pay within one month from date and save expense.

L. P. BECKETTON.

St. Andrews, Nov. 20, 1876—no. 47.

Livery Stable.

THANKFUL for the patronage extended to late term of LUGUES & WHITELOCK, the subscriber begs to inform the public that he will continue the Livery Stable business, at the old stand, Megantic Hotel, previous, and hopes by strict attention and efforts to please, to meet a continuance of patronage.

W. H. WHITLOCK.

St. Andrews, Nov. 22, 1876.

Dissolution of Copartnership

THE Copartnership existing between Hughes and Whitlock was dissolved this day by mutual consent. All debts due the firm must be paid to W. H. Whitlock, who will adjust any claims against it.

JOHN E. HUGHES, W. H. WHITLOCK.

St. Andrews, Nov. 17, 1876.

NOTICE!

ALL persons having claims against the Estate of the late JAMES BOYD, are requested to present the same duly attested to the Subscribers within three months from date; and all persons indebted to the said estate, are required to pay the same immediately to Mr. C. E. O. Hatheway, Dated St. Andrews, November 9, 1876.

C. E. O. HATHEWAY, Executors.

G. S. GRIMMEY, Executors.
