### A DEEPER PAVING BRICK.

Paving brick are now four inches deep. At a recent meeting of the Board of Public Works, of Cleveland, Ohio, it was decided that the brick as at present made is not deep enough, and about five inches would be the proper depth. Another inches in the standard of the proper depth. other inch, it is said would add nearly 50 per cent to the life of the brick. At the meeting of the Board of Works held last Monday, the secretary was directed to notify all brick makers that beginning next spring a greater depth of brick will be expected. The size will be 2½x8½x5 inches deep. This action was taken in order to avoid the "cornering" of brick by makers who would gain knowledge of the change to the disadvantage of others.

# THE CREMATION OF GARBAGE.

The Inventive Age notes that there are now fifty five towns and cities in England which destroy their garbage and solid refuse by burning, using an average of ten furnaces each for that purpose. The combustion of the material is used for the generation of steam, by which the streets are electrically illuminated, and other cities are reported to be considering the propriety of reducing their municipal expenses by this means. The Livet, the latest introduced method, is stated to burn on an average three hundred and thirtyon an average three hundred and thirty-one pounds of rubbish per hour for each square foot of grate surface, with an eva-poration of 4.08 pounds of water for each pound of rubbish consumed. In this way science is showing what profit there is in what has been regarded as waste and filth, to be used in contaminating public drinking-water or getting rid of it some
