I believe it would have been a more reasonable idea—and perhaps this was in the minds of the dairy products board when the price of butter was pegged—to make some effort to prevent undue increases in the production of butter, and a corresponding reduction in the production of cheese. Since that time the government has seen fit to add additional powers to those already enjoyed by the dairy products board. I refer to the power to set minimum prices for butter. It seems to me that this is an important prerogative to give to any board, particularly when it has among its number no representative from the producers.

I should like to know whether, when the price of butter was pegged a short time ago, the war-time prices and trade board consulted the national dairy council. I should like to know whether it consulted any of the dairy associations throughout Canada, or whether it took it upon itself to make the price at the suggestion of the minister. If it was not done in that way, then how was it done? When they do set a minimum price, as they no doubt intend to do, I should like to know on what basis such action would be taken.

Will they, as I suggest they should, meet any of the dairy organizations in Canada? Will they take into their counsel representatives of the national dairy council, the eastern dairymen's association, the western dairymen's association or other like associations I could name? I suggest to the government here and now that before minimum prices are set by the board, its personnel should be increased, and that a representative of some of the producer organizations should be placed upon

the board, so that producers might have at least some reasonable hope that they would receive a fair deal.

I would say a further word about the agricultural supplies board, the main body. I believe that board is, to a great extent, composed of men in the Department of Agriculture. They are men for whom I have a high regard, men who are well posted in agricultural matters. I believe, however, they have failed in one aspect more than in any other. The farmers themselves are unable to forecast the demands and needs of any particular market. This is particularly true in war-time. The average farmer on the back concessions has no way of knowing what demand there will be for the production of butter or cheese or bacon or any other farm product. The only people who can form a just estimate of the needs of the market are in the Department of Agriculture itself. I believe the government and this board have failed in not guiding the farmers in the type of production which should be carried on, particularly having regard to the needs of British and Canadian markets.

For many years past—in fact, ever since I can remember—the prevailing idea in the marketing of farm products has been that that marketing must be governed by the law of supply and demand. I am afraid to-day that is an inefficient method of fixing a price structure for agricultural products. It simply means that in all lines of farm production we have cycles of plenty and cycles of shortage. Unfortunately the farmer loses at both ends. When there is plenty, or when there is a surplus on the market, prices fall below the price of production. When there is a shortage, unfortunately the farmer usually has little to sell, because that is the very condition which creates the shortage.

Agriculture is the only industry in Canada I know of which does not enjoy some sort of price-maintenance scheme. Labour unions have their union scale of wages; they have their eight-hour day, and their hours of labour regulations. The price paid for manufactured goods bears some relationship to the cost of production plus profit. Civil servants and salaried people know at the beginning of the year what their incomes will be during that year. Retailers, wholesalers and others in distribution businesses make mark-ups from time to time. Doctors, lawyers and other professional men have schedules of fees to which they adhere more or less closely. Rates for all types of public services—freight rates, passenger rates, telephone rates, water rates, gas rates—are set by government bodies, such as the board of transport commissioners. The farmer is the only one who is at a disadvantage because he still employs an outmoded and antiquated method of setting the price structure which from time to time he enjoys.

There are one or two further factors which enter into the determination of the price structure of farm products. One of those factors is this: The price received for the exportable surplus to a very great extent determines the domestic price of farm products. I have in my hand a circular sent out by the bureau of statistics showing the percentages of farm products which from time to time have been exported. For the information of the house I shall place on record the figures for 1939, the last year for which information is available:

Product	Percentage exported (per cent)
Live stock	17·8
Field crops	19·7
Total dairy products	8·4
Poultry products	1·1
Total live stock and animal products	11·2

Yet it was the 11 per cent of live stock and animal products exported which set the domestic prices paid for those products throughout Canada. It seems to me that this is clearly a case of the tail wagging the dog. Until some other method is devised to determine the farm price structure, the farmer will never enjoy the prosperity to which he is entitled.

Another factor which affects the farm price structure is the competition of imported goods of different kinds in the home market. This is particularly apparent in the case of fruits and vegetables. I shall not, however, deal with this matter in detail because it will be referred to later on.

I should like to mention one other matter which I think is important, namely, the importation of vegetable oils. For the past few years we have been importing immense quantities of vegetable oils which come into direct competition with animal fats produced in Canada. You cannot turn on the radio during the day without hearing these imported oil products such as crisco and so on, being advertised. On more than one occasion I have suggested to the present administration that a similar advertising campaign should be carried on for animal fats such as lard. The United States has undertaken such a campaign and has put out a circular, a copy of which I have in my office, advocating the use of lard instead of oleomargarine and vegetable oils of different kinds. To-day lard is selling in carload lots for as low as four and a half cents a pound when it is being bought in the carcas from the farmer at nine to nine and a half cents a pound. Whatever the price may be, the price of the whole hog is lowered because the packer must take a loss

on the lard produced from the particular animal. If I had the time I could quote the prices paid for tallow, grease and so on, but I will leave this for other hon. members who will follow.

One of the greatest difficulties faced by the farmer in connection with his price structure is the rapid and violent fluctuations which take place from time to time. Throughout the years there has been a constantly widening margin between producer and consumer prices. I do not know who can be blamed for that, but it is undoubtedly true. The farmer must plan for some time ahead if he is to produce wheat, dairy products, beef, pork, fruits, vegetables or any other product. If prices change in the meantime, he finds that when his product goes on the market he must accept a price which is much lower than he expected and at which he cannot make a profit. I believe, if farm prices could be stabilized—and I am not asking that they be stabilized at excessive figures—the farmer would be in a much better position and could make his plans ahead with confidence.

The other day the Minister of Agriculture (Mr. Gardiner) and the Minister of Trade and Commerce (Mr. MacKinnon) outlined the wheat policy of this government. I realize that this is an important matter, but I do not intend to deal with it at any length. The hon. member who will second the amendment which I propose to move in a few minutes, the hon. member for Qu'Appelle (Mr. Perley), is, I believe, one of the best authorities on wheat problems in this house. From time to time the suggestions which he has made have been accepted by this and former governments. I am going to leave it to him to deal with this question of wheat.

There is, however, one thing I wish to say, and I shall try to condense it into one or two sentences. I believe the farmers of eastern Canada will resent most bitterly the proposal of the government to pay the western producers of coarse grains a bonus of $2 an acre when those grains will be fed to live stock which will compete with stock from eastern Canada where no bonus is being paid. How my Liberal friends from rural ridings in eastern Canada will be able to sit quietly by without making any protest is beyond my imagination. I have talked to several of them, and I know they appreciate the disadvantages under which the eastern producers of grain will be placed by this move on the part of the government. Already the western hog producer is feeding grain which he cannot sell at prices sufficient to pay him his cost of production. If he is to be bonused, I am afraid it will result in the total demoralization and ultimate ruin of agriculture throughout the Dominion of Canada.

I do not believe that this particular programme is popular in all parts of the west. If I am correctly informed, delegations have arrived in Ottawa since the programme was announced to protest against it. I have here a report which appeared in the Regina *Leader-Post* of March 20, headed, "Motion against wheat programme at Abernethy." I believe Abernethy is either in the constituency of the Minister of Agriculture or very close to it.

Mr. GARDINER: It is my second closest home town.

Mr. SENN: Here is the report:

A resolution protesting against the recently announced federal wheat marketing policy was passed at a public meeting held under the auspices of the local wheat pool committee here Saturday.

With Elton Dick presiding, discussion was lengthy, those present, comprising some thirty farmers of the district who struggled through the worst blizzard of the season to attend, opposing the dominion government programme and expressing approval of the policy endorsed by the Saskatchewan legislature.

After considering a number of resolutions, the following was finally adopted as the consensus of opinion of the gathering:

"Be it resolved that we, the villagers and farmers of the Abernethy district, recommend that the worm turn now on the prairie, as it did about two months ago in London, Toronto and Ottawa, all in old Ontario, by requesting the Saskatchewan cooperative conference recommend to president Hannam that an emergency assemblage of all the agricultural confederated clans of Canada be called forthwith to march on Ottawa and present our views, not only on this latest evidence on how much our present federal government really does love the wheat growers of the west, but also the still hangover problem of bacon and butter and allied questions, some of which call for immediate elucidation and possible remedial action."

I am going to leave it as it stands. I think it demonstrates most clearly that the announced wheat policy is not popular throughout the west, and it certainly is unpopular here.

Another difficulty which faces Canadian agriculture is the shortage of farm labour. Farmers have never been able to compete with industry in the labour market. The hours of labour on the farm must of necessity be longer than in the factory. With the present levels of farm prices the farmer cannot possibly pay wages equal to those enjoyed by workers in the city. This condition is aggravated by the necessities of war. Referring again to the Sirois report, and taking the year 1940 as a basis, I find that the estimated cash expenditure of the average farm is $453 for the year. Included in those cash expendi-

tures are wages, municipal taxes, threshing bills, blacksmith bills, bills for repairs and a number of other items. It will be seen that the farmer cannot pay much for labour.

All during the past year there has been a constant exodus of farm labour and sons of farmers to the cities where employment can be obtained at wages far above anything the farmer can pay. Only the day before yesterday I heard a radio broadcast comment upon the large number of farm sales being advertised in our weekly press. This is an indication of what is taking place on the farms of Ontario where owners are finding it impossible to carry on because of a lack of farm help. In my opinion such a condition of affairs must ultimately result in a shortage of production on the farms and in a lack of proper cultivation. After all, it is the production and marketing of primary products which to a very large extent determines the buying power of any nation. Of the four great primary industries in Canada, agriculture, mining, fishing and lumbering, agriculture is the only one which produces without depleting our resources. Each year vast quantities of agricultural products are produced from the soil; and if proper methods of fertilization, crop rotation and cultivation are practised, the soil will not be depleted. Considerable cost is incurred in seeding, harvesting, processing and marketing our farm products, and unless and until they can be marketed at prices which will pay the cost of production and provide a reasonable profit, neither agriculture nor any other industry in the country can obtain its maximum prosperity nor can Canada exert its maximum war effort. Recently Mr. David Lloyd George made in the House of Commons in England a speech in which he said:

> We must see that the farmer gets a reasonable return. It is no use thinking you can compel him to cultivate his ground to the utmost; you must make it worth his while. You must bring him along as a willing helper. There are four arms of war services—the army, the navy and the air force, and the fourth is equally important, namely, agriculture. Foodstuffs are necessary. The very life and security of the empire depends upon it. If it fails, the other three cannot succeed.

There is no more loyal person in Canada than the farmer. His surroundings and environment promote love of country and lead him to cherish the soil from which he sprang and from which he wrests his living by the sweat of his brow. No people are more anxious to do their full share in our war effort, and our farmers feel most keenly their inability to subscribe to war charities and to purchase government securities at this critical time. I cannot urge upon the government too strongly the imperative duty that confronts our government to take measures to provide conditions in agriculture which will enable this important element in our national life to do their share in the great effort in which we are engaged.

I therefore beg to move, seconded by the hon. member for Qu'Appelle (Mr. Perley):

> That all the words after "that" in the motion be struck out, and that the following be substituted therefor:
>
> it be resolved that the government should take immediate steps to create a parity of prices as between agricultural and other products in order to improve the condition of Canadian agriculture and in order that it may receive a just and fair return, and thus be enabled to make that contribution to Canada's war effort which is so desirable, and which our agricultural population so greatly desire to make.

Mr. E. E. PERLEY (Qu'Appelle): Mr. Speaker, I am pleased to associate myself with the mover of this amendment, the hon. member for Haldimand (Mr. Senn), who, I think, has covered very well the whole field of agriculture and more particularly that branch which affects eastern Canada—the dairy industry, butter and cheese; live stock, bacon and hog prices. He also dealt with the agricultural boards that have been set up by the government, and showed the results of their actions.

I think it is apparent to all of us, after listening to the hon. member and after what we have heard in the house and seen in the press in the last few days, that the plight of agriculture is a problem second in importance only to that of the war. I could substantiate that by quoting from the western press and showing what happened in the legislature of Saskatchewan, which on a motion to adjourn to discuss a matter of urgent public importance, as it was designated, took a whole day to discuss the problem of agriculture. I could cite other quotations from newspapers all over the country to show that the whole of Canada is agitated over this problem and realizes that it is second in importance only to that of the war.

Practically 50 per cent of the population of Canada depends upon agriculture, and 75 per cent of the farmers of western Canada are directly dependent upon wheat. During the last ten years the farmers of western Canada have had some difficulty in carrying on; but let me assure you, Mr. Speaker, that the farmers of the west are just as anxious and willing as any other class of people in Canada to-day to sacrifice and do their part in winning this war. In support of that statement I want to put on record a report from the director of public information which came to hand last Friday. Under the heading of "Gifts from far and near to

Canada's cause," it says that three contributions of $1,000 each have been received, and it names as one of these contributors Mr. E. C. Skinner of Indian Head, a pioneer farmer of that district and a resident of my constituency. I am pleased indeed to put that on record. He is a farmer who is anxious and willing to do his part in this war.

If we had time to review agriculture over a number of years, say the last thirty-five years, we would find that there have been periods of prosperity among agriculturists in Canada, but I regret to say that we would also find that there have been times of depression, and these depression periods have taken a heavy toll. If we look at the situation to-day, we may well become alarmed, for the problem of agriculture to-day is so acute that it is now a direct responsibility of this government—and they are not doing very much to adjust and square it away. Whatever policy is adopted by the government must be of a permanent nature, based on a long-range view.

In the period from 1930 to 1935 the Bennett government, when agriculture was in similar circumstances to those prevailing to-day, tried to do much for the farmer. It will be recalled that the Bennett government introduced many measures for the benefit of the farmers which were not supported by the Liberals who then were sitting on this side of the house. Since 1935, when there was a change of government, conditions have gradually grown worse until to-day we have a situation where the purchasing power of a bushel of wheat is only 50 per cent of what it was in 1926.

Mr. GOLDING: What was it in 1932?

Mr. PERLEY: The lowest in the history of the world, and it is very nearly there now.

Mr. GOLDING: The hon. member said that this was the worst period.

Mr. PERLEY: The worst condition in which agriculture has found itself, and I trust that the hon. member who is interrupting will stay glued to his seat until I get through, because he will have his chance to speak later on.

Since 1939, less than two years ago, we find from the index price of materials that there has been an increase of 8 per cent on the average in the prices of commodities the farmer has to buy. I will mention a few items. The cost of machinery and equipment has increased 26 points over 1939; the cost of transportation has increased several points; building materials have gone up 29 points. Clothing, hosiery and women's apparel have gone up 16 points, and drugs 35 points. I could quote many similar increases if I had the time.

The hon. member who has just taken his seat referred to the increase in wages paid to labour, and the index shows that, compared with 1926, there is an advance of 91 per cent. The farmer sees no reason why an approximate balance should not be maintained between the wages obtained by factory workers and the prices he receives for his goods. If that principle were applied, on the basis of the increases received by labour, a bushel of wheat should now be worth $1.39 instead of 70 cents at Fort William; bacon should be $10.50 per 100 pounds, instead of $8.30; butter should be 49 cents a pound instead of about 37 cents. Apparently the government has lagged during all the last two or three years, instead of bringing into operation some method of reducing this disparity. Prices of the commodities the farmer has to buy have advanced, and prices of the commodities he sells have been declining. A parity of prices should be reached. I am sure that the farmers of western Canada would not care if wheat went down to 25 cents a bushel so long as the prices of the commodities which they have to buy, and which go into their costs of production, went down to an equivalent extent.

The Minister of Agriculture (Mr. Gardiner) knows the situation. The agriculturists of Canada, and particularly the people of the west, are looking to him more than to any other member of the government to correct the present state of affairs. Why does he not take the action which he knows is necessary and which he has the power to take? I appeal to his supporters to put pressure on him in that regard. I recall, as the house will recall, some of the statements and promises he has made in this chamber and when speaking in western Canada. We remember a speech which he made in this house warning the implement companies of what would happen if they did not reduce prices of implements. What happened? We have to-day a condition whereby it takes 650 bushels of wheat to buy a binder.

An hon. MEMBER: Shame!

Mr. PERLEY: The minister knows that grain prices should be higher. I can here quote from a newspaper of January 30, in which it is stated that the Minister of Agriculture said that prices should be higher all along the line: he spoke to that effect when a delegation representative of the Canadian federation of agriculture met the entire cabinet

in Ottawa. I have other quotations here to show that he knows that prices should be higher all along the line.

The hon. member who spoke before me dealt, as I have said, with that branch of agriculture which is more or less diversified and is of particular interest to the east. I come now to this question of wheat. What about it?

This afternoon I am going to offer the house something new. I do not hesitate to do so, because on many occasions I have made original suggestions which, although described by some hon. members opposite as moonshine, have been put on the statute books, even by the present government, and within the last two years.

Before presenting the suggestion, however, I wish briefly to review the situation since 1939. I recall the statement made by the Minister of Trade and Commerce (Mr. MacKinnon) in which he outlined the situation with respect to wheat. Let me say this, that no matter what we adopt as a national policy, every branch of agriculture must be considered and the whole problem dealt with from the long-range point of view. I would encourage the cooperation of every branch of agriculture.

But I wish first to protest against what has been going on in this city and outside this house during the last two or three weeks. The other day, when I asked that the house should have an opportunity on a certain day of discussing this all-important question of wheat, the Prime Minister (Mr. Mackenzie King) replied that the ministers were too busy, and that they had had to be in their seats while the discussion was going on upon the resolution preceding the bill which is before us to-day. Well, we know the more important ministers have not been in their seats. I refer particularly to the Minister of Agriculture and the Minister of Trade and Commerce. We know they have been meeting groups from western Canada. They have conferred with western Liberals, representatives of the western governments, representatives of municipal organizations, and others. We know that what I would call a hole-and-corner business has been going on. That is evident from the reports in the press. To show the house what a dictatorship this is, may I quote from the Ottawa *Journal*, which, in its issue of March 26, has this to say:

Start Wheat Policy.

Regina, March 25.—Machinery for preliminary operation of the federal wheat policy aimed at reducing acreage seeded to wheat this year was set in motion to-day immediately upon return of J. J. McGurran, secretary of the Saskatchewan association of rural municipalities, from Ottawa.

Why is this announcement made out there? The machinery is all set up, and we as a parliament have to swallow it, to agree to it when the minister has already started it in the west. The announcement could have been made here long ago. This problem did not arise overnight; it has been with us for months, and the announcement should have been made in this house; for we, as members representing western constituencies, know the situation as well as many of these men who have been in these hole-and-corner meetings.

The situation caused by the accumulation of wheat, this surplus of which we hear so much, is pretty well known, and it is not necessary for me to comment on it. I would, however, say this, that at the present time the farmer is not in a position immediately to adjust his system of operation to the extent of 35 per cent reduction in the seeded acreage. I contend that this is too drastic a step to ask them to take in one year. If the process had been spread over a number of years, it might have been effective and the farmers would the more readily have fallen into line.

Since last fall many and various suggestions have been made to the government by various organizations—provincial governments, municipalities, pools, and others. I am in accord with quite a number of the suggestions and recommendations which have been made, for the simple reason that I, two or three years ago, proposed most of them. I am in accord, first of all, with the quota system or permit system as recommended by the western pools and the provincial governments. Why? I have here a statement taken from *Hansard*, 1934, pages 375-6, which reports the suggestion I then made of a permit system in order to curtail the production of wheat. I said at that time that my plan was (a) to determine the requirements by adding to the export quota the domestic requirements, and (b) to determine the acreage seed required to produce wheat in one year; and, dividing (a) by (b), to arrive at the number of bushels to be delivered under the permit. We were in difficulties in 1935, as hon. members will remember; and when I tried to sell the idea to my leader, he thought that it might be a little drastic, and that the farmers were not prepared to submit to any enforced restriction of production. However, had that scheme been brought into force at that time, our situation to-day would have been much better.

An increase in the price to 85 cents per bushel has been suggested by the government of Saskatchewan. I certainly will support that. I have always said that the price should be around 90 cents; that 70 cents was not sufficient. Had the government set it at 85 cents and carried out the processing tax of 50

cents a bushel, they would have arrived at a price of more than 90 cents a bushel, and the result would have been much more satisfactory than what they propose to do.

It has been suggested that storage on the farm should be continued. I suggested that two years ago. Financing the farmers to build bins on their farms to earn the storage is something that should be carried to the limit, because they would have the grain where it should be stored. I shall have something to say again with respect to the processing tax. It is my baby, so to speak, and I am going to boost it on every occasion that offers.

I wish to come for a moment or two to a statement made by the Minister of Agriculture, who is smiling. I may say something that will change his smile. The other evening he outlined the policy. May I say to him, with regard to his suggestion of a system for bonusing summer-fallowing of wheat land that is not seeded, that he is suggesting something which a great many farmers, and good ones too, because there are many good farmers out there, have already undertaken on their own initiative. They have already adjusted their operations. Seeing what was happening to the market, prices of the surplus—and we know that when the surplus increases the price goes down, because that is simply a part of the law of supply and demand—many farmers have already adjusted themselves to the changed situation, and they made the adjustment long before the minister thought about it.

I might cite my own case. I am going to summer-fallow 725 acres; I have a contract in my office to have it done. Last year we sowed only 540 acres of wheat on that farm. This simply shows that many farmers have already begun to adjust themselves to conditions.

The minister speaks about farm income remaining around $325,000,000. He provides for taking only 230,000,000 bushels this year at a net price to the farmer of 50 cents. That brings the income to $115,000,000, but he compensates by summer-fallowing to the extent of $36,000,000, and it is estimated that from coarse grain there may be another $19,000,000, making $170,000,000. This is with reference to the western farmers. He is short $155,000,000, which must be made up from some other source, but in doing this his objective is to reduce the seeded acreage by 9,000,000 acres which, at an average of fifteen bushels, which is quite possible, would give 135,000,000 bushels less. At 50 cents a bushel, this would be $67,000,000. He compensates $36,000,000, so that there is a difference of $31,000,000.

[Mr. Perley.]

As a matter of fact, what the 290,000 farmers in the west are being asked to do is to live on the proceeds of 65 per cent of last year's seeded wheat acreage. That cannot be done. The minimum income on which the western farmers can live would be the revenue from the sale of wheat alone amounting to $150,000,000. They did not get by very well last year when practically all their wheat was delivered, netting them over $250,000,000. What should be done therefore, if it is desired to maintain the income of the farmers and enable them to get by, would be to take 230,000,000 bushels of wheat and make the price 85 cents, as the province of Saskatchewan and the pools have asked. A price of 85 cents would net a little more than $150,000,000.

I am not worrying very much about surplus wheat. It may be a blessing in disguise, because we know that wars have not been lost in consequence of having a great surplus of wheat or of other foodstuffs. The danger lies the other way. A little later, perhaps to-morrow, we may have occasion to review the minister's proposal in greater detail—that is, the bonusing of a part of the wheat acreage of last year for summer-fallowing. I would, however, say this in passing. The minister certainly discriminates against the small farmer, the man with a half section. The farmer with 300 acres under cultivation last year cropped 120 acres; he had coarse grains to the extent of 60 acres and he summer-fallowed 120 acres. This year he will crop 80 acres; coarse grain will account for 60 acres; and he will summer-fallow 160 acres. Taking an average of 10 bushels to the acre—and I am being kind to the minister because they will get more than that—he will have 40 acres less, which at 10 bushels to the acre would mean 400 bushels, and at 50 cents a bushel this would represent $200 to the small farmer. It would cost him at least $2 an acre to summer-fallow the 40 acres, which would be $80. He has to do most of it by horsepower. His compensation, 40 acres at $4 an acre, amounts to $160, so that his net return is less by $120. If I had time to review the figures for the farmer with 1,000 acres, I could show that on a similar basis, reducing his return by 30 per cent, he is only out $240 when he gets his compensation. That is, taking 1,000 acres as against 300 acres, he is only out double, which is not proportionate.

The minister for many years has been getting a vote on account of the Prairie Farm Rehabilitation Act. He has been given $3,000,000 in some years, the purpose being to bring a part of the province of Saskatchewan out of the dust-bowl. Now he asks the

farmers out there to reduce their seeded acreage by 9,000,000 acres, and at one swoop he is going to bring back into the dust-bowl 9,000,000 acres more on the 1st of July. God help the people out there if winds prevail as they have been doing for some years, with 9,000,000 acres more of blackened land turned to the sun. The money he has been spending will go for naught if he pursues the policy he is following. Two years ago, in discussing the act, he said that the whole problem was to save the small farmer, and now he is discriminating against the small farmer. I understand from reports in the press that he is going to argue that this new proposal means 86 cents for wheat. I suggest that he will have quite a time persuading some of the farmers out there that this is so, because they will proceed along their own lines more or less, although they are willing to cooperate if anything reasonable is brought forward. Many will receive the bonus who are not entitled to it. The minister did not tell us, but I suppose he will give us some idea to-morrow regarding the cost of administration.

I have read a quotation showing that he will employ the municipalities. The municipalities are pretty well loaded up now with work. I do not know what he will do. That policy should have been announced here instead of in Regina. I should like to know what it will cost to have inspectors and supervisors, and he is even asking the municipalities to do that work. He is going to set up a machine such as we have never known before. We have already had experience with the Prairie Farm Assistance Act and the Prairie Farm Rehabilitation Act. There are 290,000 farmers to be inspected and the inspectors will have a nice job.

Let me now come to the statement of the Minister of Trade and Commerce. He gave a realistic picture of the situation. First, dealing with the surplus and deliveries of the last crop, he said that the quota system had been generally satisfactory. I was pleased to hear that.

The farm storage is working out satisfactorily; he said the farmers were holding their grain to get the storage. I was pleased to hear that. He referred to the increased acreage following the last war. That increase came about from a patriotic point of view; an appeal was made to the farmers to increase their seeded acreage of wheat as a contribution to the war effort. He referred to the possible disappearance next year of 307 million bushels, dealing with it from the point of view of domestic seed and feed and possible export. Then he dealt with the carryover of 550 million bushels. The total storage he figured out at around 582 million bushels. Then he made the statement that the government's investment was now $400,000,000 which required between $50,000,000 and $60,000,000—nearer $60,000,000—a year to carry it.

He stated that they are going to take only 230 million in order to encourage a reduction in the seeded acreage. The 70-cent price remains; it is not enough. The storage on the farm is paid only on the balance of the 230 million which they propose to take that is not delivered. I regret this. I think the farmer should be paid storage on all he has on his farm.

There is no change in the processing tax. I regret that. That processing tax should have been increased to 50 cents, as western provincial governments wanted. Why? Because the price of the loaf of bread should not be increased at all by reason of a 50-cent processing tax, making wheat come to $1.20 or $1.25 a bushel. The price of a loaf of bread should not be more than seven cents. There is the greatest racket going on that one can imagine in the big mill-controlled bakeries throughout Canada. There should be an investigation of them by this government. Yesterday I talked with the Canada Bread Company in this city; they make forty-six loaves of bread out of a bushel of wheat. At ten cents a loaf this comes to $4.60, whereas the farmer gets fifty cents. There is something wrong. I have talked with the mills, and they have admitted to me that the price of bread was away out of line with the price of wheat. If the processing tax were fifty cents, the price of bread should not go up at all, so we should have it because it means that at least $25,000,000 would be added to the price of the 230 million bushels. There should be an investigation into this bread business.

There are two methods by which to control production; first, by the power of the government; second, by voluntary action on the part of the producer. I believe the producers themselves will adjust their operations to meet the market and price conditions; there is no need for this action on the part of the government. Never has a question of such importance had so little discussion in this house as this all-important question of the production and marketing of grain. I refer to the pool statement when the announcement was made, that they were surprised and dismayed in the west, and they go on and state why.

In the few minutes remaining at my disposal I wish to offer something constructive.

I am going to offer now what I think is the first step in the solution of this problem, and I should like the house to listen.

The problem divides itself into two branches: first, production, and second, marketing. By the first the farmer cultivates his fields, seeds and harvests the grain, and delivers it to the elevator. By the second the elevator takes in the grain, weighs, stores, ships and sells it. The farmer works at less than cost of production; and under the second, huge profits accrue to those all along the way. There are many injustices being practised. Under the present system there has prevailed a desire on the part of the elevator companies to hold the grain back in the country in order to gain the storage payment. We now have an order in council, P.C. 1225, passed on February 29 I believe, authorizing the building of 50 million bushels additional storage capacity at Fort William. Elevator men say it will cost about $5,000,000 to build. At prevailing rates of storage, about $4,000,000 a year will accrue to those who are building them and the capital is written off in two years. That is an outrage, and should not be permitted. I have always claimed that storage rates on grain are too high. I have here a statement made by the hon. member for Wood Mountain (Mr. Donnelly) last year, which goes into that fully. This storage space should be built on the farms; the farmer should be encouraged to add to his storage the 50 million bushels. That would earn him, if storage rates are what they should be, one cent a bushel a month on the farm, or $120 a year for one thousand bushels. Then this $6,000,000 would be earned by the farmers instead of by the interests at Fort William. I make this statement, that under present storage charges the whole elevator system in that western country will be paid for in less than five years.

Here is my proposal. We have a war on. The other day we had two ministers of this government opening the war services campaign in front of the national war memorial, urging women and children to save their nickels for the war. Yet here we have the government permitting a system under which certain interests are getting huge profits beyond all reason. I suggest that this government proceed to take over, commandeer if you like, all the elevators and storage space in western Canada from Fort William to the coast. They should operate it by a board; I could name forty men in western Canada who could do it. Let the prevailing storage rates be paid, paying the capital out in five years. If I had time I could give figures showing how it would pay for itself at present storage rates in three and a half years, as well as pay for the operation of the scheme. This proposal comes to me from a late president of the grain exchange—I am permitted to use his name if I desire—and many others who are interested in the grain business. They see what has happened; they know the solution. This is nothing new; it came to me not only this year, but in 1935 when we tried to persuade Mr. Bennett to do the same thing.

What is going on? Under the annexes that are being built in western Canada we have a system under which a 30,000 bushel capacity annex is permitted to earn $2,400 a year. It costs to build not more than $2,000; it pays 120 per cent on the initial cost. Then we have the statement I have just referred to as to fifty million bushels capacity to be built in Fort William, costing not more than $5,000,000, with an earning capacity of $4,000,000 a year. That is an outrage.

I have here a statement that I should like to be permitted to read or place on *Hansard* because I think it is valuable information. What does this all mean? I said we should take over the whole system. These are the figures issued by the bureau of statistics recently and in the "Canada Year Book". We have 5,678 elevators in western Canada west of Fort William with a capacity of 191,000,000 bushels, and at an estimated value of $62,000,000. We have thirty-four terminals in Fort William and in the west—twenty-nine at Fort William and Port Arthur, four at the coast and one at Churchill. Those elevators have a capacity of 127,500,000 bushels, and are valued at $42,000,000. We have 3,000 annexes built, with an estimated space of around 80,000,000 bushels, and at a cost of $5,000,000. We now have provision for a further 50,000,000 bushels at Fort William at a cost of not more than $5,000,000.

In this computation I am not including the mills or eastern terminals at Halifax, Saint John or along the St. Lawrence river. We find that we now have in western Canada a total elevator capacity of 411,500,000 bushels, plus 50,000,000 bushels at Fort William, making a total of around 460,000,000 bushels in western Canada, at a capitalization of $120,000,000.

I have here a statement of earnings. If taken over, that system will earn $40,000,000 a year. I have it all figured out—8,678 country elevators and annexes with a space of 266,000,000 bushels, at a rate of eight cents, making a total earning of $21,280,000. Then, there are thirty-four terminal elevators with a capacity of 127,500,000 bushels, earning $7,650,000; there are interior terminals with a space for 18,000,000 bushels, at eight cents, making a figure earned of $1,460,000; and then there is

the 50,000,000 bushels added at Fort William, at eight cents, making $4,000,000, or a total earning of $40,000,000.

That is, in five years the estimated earnings would be over $220,000,000. I have here allowed for $17,460,000 for operating expenses. That makes so much a unit. The whole set-up will pay for itself in three and a half years, running expenses included. The Minister of Trade and Commerce has stated that we have an investment of $400,000,000, and that it is costing about $60,000,000 to carry it. In the way I have indicated the whole thing can be taken over as a war measure, and would accrue to the interests of the producers. Had I the time I could show where these elevators have paid for themselves, five, six and seven times over. I can tell the minister where elevators in western Canada have paid the capital investment back in one year by storage charges, elevator fees, and profits on grain, and where money has been made on those investments. They have paid for themselves in one year. The Minister of Mines and Resources (Mr. Crerar) knows many of them. Some of those elevators are from thirty to forty years old.

This is a war measure. If this government does not do what I have suggested, if it permits a condition to prevail where it has a capital investment of $400,000,000 and a carrying charge of $60,000,000 which, at the present rate of borrowing, is equal to a debt of $1,800,000,000, and if it does not take over as I have suggested, and place this organization in operation, it will not have done its duty.

I have a statement before me setting out how I would operate it. I would operate it by a board of seven or eight members, to which the government would name the majority and the chairman. The producers in western Canada would name the remainder. It would be subdivided into three groups, one of which would manage the country elevators; the second, the terminal elevators, and the third, the export and financial end of the business. I would commandeer the pool organization in western Canada if necessary. They have an organization already set up which would run it, and run it well. This $60,000,000 now paid to carry the wheat would accrue as an asset of the people of Canada, and to the producers in western Canada. It is theirs. They have paid for it five or six times over, and I could bring figures to prove this.

I say that any government which has a capital investment in wheat of $400,000,000, costing $60,000,000 to carry, and which has an opportunity to take this great asset that really belongs to western Canada, and does nothing, is remiss in its duty and will go down in history as being so. I shall not say more on that point at this time, because I shall have an opportunity to speak later on, and to place on record figures to show what could be done.

The other day the Minister of National Defence (Mr. Ralston) stated that the government was organizing every industry and all man-power for war purposes. Why not organize this industry? Why not put it under control? This matter should go to a committee of the house of from thirteen to fifteen members—and not to the committee on agriculture. I suggest that the government set up a committee of thirteen and send this matter to that committee. Let the Minister of Agriculture and others appear before that committee. Let those people from western Canada who have been sitting around here in Ottawa for two weeks have a chance to appear before that committee and give us any information they may have. In that way we would get valuable information. I would take the same position as was taken in 1935 by the Liberal party when the present Minister of National Defence then sitting right here said, "We will not allow this measure to pass if we cannot have it before a committee, and get information." When it came back from committee the members had received valuable information. They did not think for one minute that such a condition had prevailed. The committee I propose would get valuable information and could report back to the house. If we could set up that committee we, as representatives of the people of the west, who have a responsibility in this House of Commons, would do something worth while.

Hon. J. G. GARDINER (Minister of Agriculture): Mr. Speaker, the hon. member for Qu'Appelle (Mr. Perley) in the last part of his speech reminded me of two experiences, one of which I had almost forgotten. About a year ago the Minister of Justice (Mr. Lapointe) was speaking in Vancouver. A man sitting in the gallery insisted upon heckling him. Finally the Minister of Justice said to him, "My friend, I used to be a good debater; at one time I won a medal in a debate in a university. I should like to have a debate with you, but really I have not the time to have it to-night." That ended the heckling.

The other incident of which I was reminded was the first time I had had the privilege of speaking to an audience of any considerable size, when I spoke on the question which has just been discussed by the hon. member for Qu'Appelle. It was at Winnipeg in 1910, when the livest issue in western Canada was that

of government ownership and control of elevators. Well, I am not going to say this afternoon that as a result of delivering that speech they did get government ownership and control of elevators in Manitoba. But those who come from that province will remember that in 1910 the government of Manitoba took over the elevators in that province.

Mr. CRERAR: Political friends.

Mr. GARDINER: My colleague says that they were political friends of the hon. member for Qu'Appelle.

Mr. HOMUTH: That was not necessary, was it?

Mr. GARDINER: They operated those elevators for a time, and they stand to-day as one of the outstanding—I was going to say business failures, but probably I should say political failures—in the history of business in Canada. So that there is nothing new in the proposal that the government should take over the elevators. There is nothing new in the suggestion that so much per bushel should be paid for storage capacity in an elevator. Governments have done it before; governments have tested the principle and have proven that it is difficult for governments to operate a system of business houses such as elevators and do it any more successfully than private individuals have been able to do it.

But I did not rise to discuss the wheat question. On three occasions I have attempted to get the agriculture estimates before this house. Hon. members on the other side of the house who have been intimating that the discussion of agricultural matters has been delayed by the government forget the fact that the only estimates that have been placed before the house, other than war estimates, are the agriculture estimates, and that these were brought down at the very beginning of the session. When I brought them into the house some weeks ago I was asked by the hon. member for Souris (Mr. Ross) to outline the government policy with regard to agricultural matters. That was about half past ten o'clock at night and for half an hour I proceeded to outline the policy of this government in relation to agriculture.

On a subsequent occasion, when an effort was made to bring these estimates back before the house, objection was raised on certain grounds. On a still later occasion an effort was made to place these estimates before the house, and three weeks ago the hon. member for Haldimand (Mr. Senn) rose in his place to move a vote of want of confidence in the government by way of amendment to the motion that the Speaker do now leave the chair. My hon. friends on the other side of the house twit the members of this government and me as Minister of Agriculture with not having given them an earlier opportunity to discuss agricultural matters. I submit that the only reason we have not been discussing matters in relation to every branch of the Department of Agriculture is that there has been an effort on the part of the official opposition to see that the agriculture estimates did not properly get before the house up to the present time.

If any objection is taken to this remark, I need only recall the threat which was made the other night by the leader of the opposition (Mr. Hanson) when it was suggested that unless we did certain things, certain votes would not be permitted to pass this house. The question whether we were to have agriculture estimates was under discussion at the time that threat was made. Again I suggest that ever since the house opened the government has been persistent and insistent in its effort to get before this house a discussion of agricultural matters.

To-day we have been listening to discussion of an amendment couched in terms intended to put every hon. member of this house in a difficult position when voting upon it. The amendment reads:

> That all the words after "that" in the motion be struck out and that the following be substituted therefor:
>
> "it be resolved that the government should take immediate steps to create a parity of prices as between agricultural and other products in order to improve the condition of Canadian agriculture and in order that it may receive a just and fair return, and thus be enabled to make that contribution to Canada's war effort which is so desirable, and which our agricultural population so greatly desire to make."

Apart altogether from the fact that this amendment, in the form and at the time it has been submitted to the house, is a vote of want of confidence in this government, it must be clear to all hon. members that every single suggestion contained in the amendment has been in effect ever since war was declared, indeed was in effect for at least four years before. The only reason they were not in effect during the whole of the fifteen years before war was declared is that for five years of that time our friends opposite were in power. But the suggestion in the motion that an attempt be made to bring about a parity of prices as between what the farmer has to sell and what he has to buy has in fact been consistently put forward ever since this government came into office, and more consistently since war was declared. There is no reason to pass a motion of this kind at this stage.

An hon. MEMBER: Why weren't better results obtained?

Mr. GARDINER: An hon. member asks why we did not get better results. I shall deal with the results in a few moments, but before doing so I should like to point out that this motion is an effort to block still further free discussion of the agricultural problems of Canada. It places every hon. member who sits on this side of the house and in the corner over there in the position of having to decide between voting want of confidence in the government and freely discussing agricultural matters as brought before the house in estimates. Thus there is an obstruction of free discussion of agricultural problems at this time.

If this motion were carried every hon. member of the house knows that as a vote of want of confidence it would require the government of this country to resign, it would require the holding of an election in Canada, it would require the reorganization of the government and the resetting up of policies, not only in connection with agriculture but in connection with every present-day war activity. I venture to say that there is not an hon. member of this house who, knowing that we are facing difficulties which may be increased within the next few weeks, even within the next few days, would wish to call upon the ministry to resign and thus bring about the disorganized condition which a resignation of the government under these circumstances would create.

In other words, the placing of a motion of this kind before the house at the present time makes impossible the free discussion of the problems which confront the agricultural population of Canada. Such a thing is unthinkable. I am prepared to discuss the whole agricultural problem if my hon. friends desire to have it done. It can be done quite simply by having this motion withdrawn and allowing the estimates of the Department of Agriculture to be placed before the house. Then we could discuss consistently and persistently every problem which is confronting the farmers of Canada, and every hon. member would be free to express his opinion, apart altogether from the attitude of this government toward the affairs of Canada and the empire.

I do not intend to place hon. members in a position to be able to say that I introduced into the discussion of a want of confidence motion the new policy of the government in relation to wheat. No doubt that would be the simplest way for me as Minister of Agriculture to have the principles of the policy which has been enunciated by the Minister of Trade and Commerce and by myself as Minister of Agriculture adopted by this house without any opportunity being afforded to hon. members to discuss it freely, without any opportunity being given to anyone to express himself by vote except under the hampering restraint of a want of confidence motion. I am not going to do that, Mr. Speaker. It is not my intention to discuss the wheat policy to-day. I shall choose an occasion when every member of this house will be free to discuss the wheat policy on its merits and not be hampered in any vote he may wish to cast by the fact that he has to vote on a motion of want of confidence in the government of Canada.

But there are a few other matters I should like to discuss, in view of the suggestions that have been made by the mover of the amendment. He stated this afternoon that organized agriculture came to Ottawa to see the Prime Minister and members of the government. Is the hon. member, who has been following agricultural matters in Canada very closely for many years, not aware of the fact that in every single year since the federation of agriculture was set up as the chamber of agriculture, later reorganized as the Canadian Federation of Agriculture, the executive committee of that organization has come to Ottawa immediately after the federation held its annual meeting and passed its resolutions? I repeat, they have called on the government every year since they have been an organization. It is true that this year for the first time they saw the whole cabinet, but it was not the first time they have asked to see the whole cabinet. They have asked to see the whole cabinet every year since they have been organized, and in each of the years since they have been organized some members of the government have met delegates from that organization. On some occasions members of the government were giving attention to other business when the delegation was here and not all the members of the government were able to meet the federation or the Canadian Chamber of Agriculture. But on each occasion since this government was formed I met them as Minister of Agriculture; on most occasions some other members of the government were with me, and we considered the point of view which the organization presented to the government.

I may say to the house, if it will please the leader of the opposition, who suggested the other night that he did not know just why I went to England last fall, that it was the federation of agriculture that first suggested I should go. They passed a resolution to that effect. Not only that, but they came to

Ottawa and presented the resolution. Not only did they suggest that I should go to England but they suggested that the chairman of the bacon board should also go to England. And the hon. member for Haldimand now tells the house that there is not a man on the bacon board who represents the opinion of the farm organizations of Canada. The federation of agriculture itself, at their annual meeting prior to the one just past, suggested that the Minister of Agriculture and the chairman of the bacon board should go to Great Britain and discuss with the British government the possibilities of having Canadian bacon disposed of in the British market. We acted on their suggestion and went to Great Britain and studied this question among many others.

There were other things which the federation suggested on that occasion, many of which have since been brought into effect in Canada. There were other suggestions made which we have not seen fit to bring into effect. For example, the suggestion was made on one occasion that we should have all agriculture in Canada organized under boards and that these boards should have power to legislate and to tax the farmers across Canada. We did not adopt that suggestion but we discussed it with them and gave them our opinion with regard to it. Again when they returned a year ago they suggested the same thing, and my reply to them, which was given to the press at that time, was to this effect, that at least so long as the war lasted any boards that might be contemplated in Canada to handle the marketing or disposal of farm products to the British government would be set up and controlled by the dominion government itself. Why? For the twofold reason that it is a sound principle to establish in any country that there shall be only one kind of authority with power to tax the people, and that that authority shall be a body elected by all the people within a given area. And there is only one authority that should be allowed to legislate in connection with matters having to do with the control of certain industries, and that body again should be the administration set up as a result of the votes either of the whole people or of the people of a province or municipality. For these reasons we said that we would retain this authority within the federal government rather than pass it over to them.

There is another reason. The British government to-day has a food ministry, a food board, a cereals board, boards controlling the shipment of food products to that country. All these matters are under government control. On a number of occasions since the war started it has been suggested to the government of Canada that we should set up a similar authority on this side to deal, in respect to the particular product, with the corresponding British authority on the other side, in order to see to it that our foodstuffs are shipped from this country to Great Britain. That is the policy, Mr. Speaker, which we have been following, and many other proposals which were put up to us by the representatives of agriculture who came to us have been either embodied in legislation or acted upon by this government either before or since the representations were made to us.

This brings me to another remark made by the hon. member for Haldimand. He said that there was no representative of agriculture on the boards set up under the agricultural supplies board. I have here a copy of *Hansard* of May 23, 1940, and at page 169 I find a page and a half of the names of representatives of agriculture from every province who have been placed upon boards or advisory committees, set up after advisement with farm organizations and with the provincial governments, in order to advise the agricultural supplies committee of the Department of Agriculture in matters pertaining to agricultural policy. I shall not take the time to read the names; they will all be found in *Hansard* of last session. The representatives of agriculture there named are still acting on the various boards and carrying on their activities in relation to agricultural problems.

I can quite understand that someone in a particular province might be able to say that he belongs to a farm organization which is not represented on these boards. But when one realizes that there are agricultural organizations from one end of Canada to the other, in connection with every form of live stock undertaking, fruit growing, grain growing, every branch of agriculture; that there are organizations in each of the nine provinces, as well as organizations representing agriculture right across Canada, it will readily be seen how impossible it is to constitute a board in connection with any one branch of agriculture which would have on it a representative of all farm organizations in this dominion. But the men who are on are men who are representative of agriculture, in their capacities as officials of either the dominion Department of Agriculture, the provincial agricultural departments, organizations associated with agriculture, or organizations formed by agriculturists from one end of Canada to the other. As a matter of fact, at each of the different meetings which have been referred to by speakers, I have been confronted with this same question. London was not the only place in Canada where we had a meeting; we had meetings in Saskatoon,

Regina, Calgary, and Montreal. Meetings were also organized or arranged for in the maritime provinces, but it was not possible to hold them because of the fact that the house was called in session when it was. They will, however, still take place. At each meeting I was confronted with the same question and answered it indicating that while some might disagree we believed we had agriculture represented.

When my hon. friend asks me whether we consulted with the farm organizations when we were appointing boards, or when the price of butter was being pegged, or when agreements were made with Great Britain, I answer that he does not know the farm organizations of Canada or he would not ask that question. They do not wait to be consulted, Mr. Speaker; they advise this government and make their views known to us. They are active organizations, on the job. The head of the dairy organization about which the hon. member for Haldimand (Mr. Senn) asked a question comes to Ottawa, not once a year but a number of times every year.

When I look about this chamber I do not know of any group of men in Canada who more completely represent all the agricultural interests of this dominion than do hon. members who represent agricultural constituencies. It is all very well to say that we are going to set up an organization across Canada. I agree with setting up farm organizations. Any hon. member who has the interests of agriculture at heart and who lives in the rural area of his constituency will belong to the farm organizations of that constituency, and I take no exception to that. I believe in the farmers having organizations. In spite of some of the criticisms which are made of agriculture, and statements to the effect that farmers cannot stick together, I believe that there are no organizations in Canada which work more persistently at their jobs and keep closer contact with governments, both dominion and provincial, than do the farm organizations of the dominion. One does not have to invite them to Ottawa, or coax them to come to Ottawa.

As a matter of fact, the hon. member for Qu'Appelle (Mr. Perley) rather chided us over here because of the fact that, at this time, three or four most important farm organizations are represented by delegates now in this city, who have been here discussing questions which, he said, the members of this house had not had an opportunity to discuss, questions which, he said, as did the hon. member for Haldimand, should have been announced to the house. The hon. member for Qu'Appelle referred in this connection to a dispatch reporting the return from Ottawa of J. J. McGurran, secretary-treasurer of the Saskatchewan association of rural municipalities, which association, by the way, represents more farmers than any other organization in that province. The rural municipalities of Saskatchewan cover the entire municipal area; every councillor that is elected is elected by the farmers of his division, and every secretary-treasurer is the hired official of the farmers of a municipality. That organization did have its representatives here discussing the wheat policy with us, as did organizations from Alberta and Manitoba. They have gone home, and after they had gone home they said what they had to say to their people. But I want to tell the hon. member for Qu'Appelle that the only reason he did not hear about it before was, as I mentioned a few moments ago, that we had tried on two or three occasions to get before this house with discussions on agricultural matters, that we had been threatened with this and that and the other delay if we did certain things in relation to the activities of this house, and that is the only circumstance which made it impossible for the matter to be discussed before in this house.

Because of what the hon. member placed on *Hansard*, a reference to my having met the members who are the real representatives of the people of Canada, and for that reason only, I wish to make this statement. I have discussed the wheat policy of this government with Liberal members of the house and with leading men in every one of the other groups in the house. Each of them will agree that I have expressed myself as being willing to meet other members of their group and to discuss with them the policy which the government was placing before the people and the methods under which they desired to have it administered. I had very helpful discussions with each one of the men with whom I raised the question. Their help in this matter has been of assistance; and I am sure that, after we have agreed to agree or disagree on the matter of policy, we shall have the assistance of hon. members in every part of this house in seeing to it that the policy is carried out in the spirit which is indicated by that great American who was with us the other day in the city of Toronto, when he said, before a committee of the house in Washington, "I did all I could to defeat the present President of the United States, but now he is my president." In that same spirit, after hon. members have said all they have to say against the policy of the government, when they have done—if you like—everything they can to defeat it, once we have decided what the policy is to be, we shall have the support of all

hon. members, in view of the conditions prevailing to-day, to have that policy put into operation as effectively as possible, for the time being.

It does not make any difference what branch of agriculture we are dealing with, whether it be wheat, or live stock, or dairy products: no great national long-term policy can be decided upon under conditions such as the world is passing through to-day. The policy which is decided upon must be one which will be put into effect for the season through which we are passing, and probably it will have to be varied even before the season is over to meet situations which develop from the fact that we are at war. I suggest again that when we have discussed the policy on its merits, under conditions enabling hon. members to express themselves freely, we shall have the unanimous support of all parties in this house in trying to do the best we can with whatever policy is evolved.

Another statement which was made was to the effect that there has been no control over farm prices, that we have not attempted to maintain farm prices in Canada which would be of assistance to our farming population. It was said that we should be able to plan for the stabilization of farm prices. All I wish to say with regard to that is to refer again to what I said at the beginning of my address, namely that this government, ever since the war started, and before, has been attempting to stabilize the prices of farm products to a point where farmers can exist under the very difficult conditions which prevail.

I only wish to emphasize what has been said by the two previous speakers when they contend that agriculture is having a very difficult time. I am not going to disagree with that. I do not think that anyone in this house will disagree with it. I think we all admit and admit quite freely that agriculture has been having a very difficult time since this war started and that it was having a very difficult time for ten years before the war started.

Mr. ROWE: It is getting worse.

Mr. GARDINER: Someone says, "getting worse." Probably we should examine into that statement—it would not have been necessary to do so had the suggestion not been made. I have before me the receipts from the sale of farm products from 1926 to 1940 in the different provinces. I am not going to weary the house by reading the table which gives the figures for each province, but I should like to give the returns from agriculture in the gross, in millions of dollars, in each of the years and then let the house judge whether conditions are getting worse or better.

[Mr. Gardiner.]

The year 1926 is the year we are asked to go back to. In that year the returns from agriculture amounted to $952,000,000, in round figures. In the next year they amounted to $929,000,000. The year after that the amount was $1,058,000,000 and the year following that $922,000,000. The house will note that these figures compare very favourably throughout the four years. Then in 1930 conditions throughout the world took a difficult turn, and they did take a difficult turn in Canada. Here are the figures for the years from 1930 on:

Year	Returns from agriculture
1930	$630,000,000
1931	442,000,000
1932	377,000,000
1933	390,000,000
1934	481,000,000
1935	509,000,000
1936	569,000,000
1937	640,000,000
1938	647,000,000
1939	702,000,000
1940	714,000,000

I ask my hon. friends, is it correct to say that conditions are getting worse? They did get worse beginning in 1930 and going to 1933; but from 1933 up to the present, and more particularly during the last four years, they have been getting materially better so far as the returns are concerned. There are other figures here which I shall probably use when dealing with the wheat situation later, but I only want to give these figures to-day in order to indicate that it is not correct to say that conditions have been getting gradually worse. Conditions, so far as the returns are concerned, have been getting a little better from year to year, though not sufficiently better for the farmer to realize that there is any great improvement in his position.

I want to agree again with the two hon. members who spoke previously when they say that conditions in relation to agriculture in Canada at the present time are not good. But this government has not contributed towards making conditions worse from year to year since it came into office. We have contributed towards making them better and better.

Something was said by the hon. member for Haldimand about prices, and it has been repeated from one end of Canada to the other. I corrected it in his hearing in London but perhaps he went home earlier than I thought he did. Nevertheless he repeated it to-day. I had corrected it in each one of the meetings I referred to a few moments ago, and I say to my hon. friend that if he does not know it, if he will come to my office to-morrow morning I will show him correspondence from every section of the dominion where these

meetings were held. I will show him correspondence up to the day the meeting was held and correspondence after the meeting was over, and if he does not agree with me, after he has read the correspondence, that people did change their minds slightly after these meetings, then I will take back what I am going to say to you now, Mr. Speaker.

The statement which the hon. member made and which was corrected was to the effect that there was $2.19 a hundredweight of a difference between the price which was arranged for this year with the British government for hogs and the price which was arranged for last year. He went on to say to-day, as he has repeated time after time, that that difference in the price for bacon was carried right back to the hog itself and that there was a similar reduction in the price of hogs to farmers.

Mr. SENN: I did not say that.

Mr. GARDINER: I have the figures here, and the average price for hogs for 1940, which was the year in which the other agreement was in effect, was $8.57 a hundred—average price at Toronto. Now, what has the average price been per month since this agreement came into effect? The average price in November was $8.31 a hundred; in December, $8.17 a hundred; in January, $8.31 a hundred; in February, $8.45 a hundred. That is just 12 cents a hundred lower for February of this year than the average throughout last year. And then the highest price that the farmers received in any month last year for hogs was received in the month of September. The price was $9.16 a hundred, on an average, throughout September; the price was $8.45 a hundred in February of this year as against $9.00 a hundred in February of last year. In other words, there is only 55 cents as between the price of February last year and the price of February this year, and only 12 cents between the price of February this year and the average price of last year.

That brings me back to what I stated in this house when I returned from Britain. I said that if the packers in Canada did what it was possible for them to do in the interests of agriculture in this country under that agreement the farmer would not be asked to take more than fifty cents a hundred less for his live hogs this year than he took on an average throughout last year. I say that prophecy made at that time has been more than borne out by the prices which farmers have received for hogs up to date. That situation prevailed with regard to hogs. May I say also that this war is no different from other wars in its effects upon farmers. Every war ever fought in any period of history in any place was detrimental to the farming population both in the area in which it was fought and in the area from which their food supplies were to be secured. This war has been no exception to that. And the last war was no exception in the long run. Down to the present time the position of the farmer in relation to prices and other matters as associated with the first few months of this war has been at a level which compares fairly favourably with that of the first eighteen months of the last war. In so far as bacon and hogs are concerned, it is considerably better over the long period, because at the beginning of the last war, if I remember correctly—I am speaking from memory—hogs started at somewhere close to nine cents a pound, went down to close to six cents and then came back to nine cents again in the first fifteen months. But what has happened in this war?

Mr. HARRIS (Danforth): Where did they go from nine cents?

Mr. GARDINER: And I will ask my hon. friend where are they going from nine cents this time. No one can tell. There is only one thing that is going to make them go up, and that is to keep enough of this labour of which the hon. member for Haldimand spoke, in the factories of Canada producing munitions, aeroplanes, machines of war and supplying every man that can be put in the front line with the most efficient equipment that this war demands; that is the only thing that is going to put the price up. So I say that putting men in the factories, even if it does to a certain extent take them away from other industries for the time being, is not going to injure agriculture; it is not going to injure Canada, but is going to be one of the main factors in helping to win this war.

I was pointing out that there is a reason why prices remained at a level. Why have prices been stabilized at from $8.31 to $9.16 a hundredweight in this war? The reason is that immediately this war was declared, we entered into an agreement with the British government. We did not wait until farm organizations compelled us to do it; we did not wait until delegations came to Ottawa; we went immediately to Britain. The Minister of Mines and Resources (Mr. Crerar) was the delegate of this government to the British isles in the first few weeks of the war; and as a result of the mission he carried on then, a certain price arrangement and quantity arrangement was made with the British government. It was that arrangement which held the price of hogs and bacon up throughout that year and stabilized the price.

The hon. member for Haldimand said that last year the farmers did not know what to

do because they did not know what the price was or was going to be. The farmers of Canada knew so well what the government had done that they increased the production of hogs in this country to a point which it had never reached before, and more hogs are coming on the market than ever before. I know that in reply to that he would say, Why did you let it go down twelve cents a hundredweight as against the average of last year, a little less than a dollar a hundredweight or a little less as against the highest price of last year? Why did you let it go down when you were making the second agreement?

There is only one answer I can give to that. The answer is that when we made the first agreement we did not know that Denmark was going to fall, or that Norway or Holland or Belgium or France were going to fall. If we had known, we would not have made an agreement for as high a price as we did for 1940, because we would have known that under the circumstances it would be most difficult for the British government to carry out such an agreement. Britain did not know. Because neither of us knew, one of the best agreements with the best possible price was made. If one questions that, Britain could have bought her pork supplies in the United States all last year on an average of three cents a pound less live weight than she paid for them in Canada. But when Britain had signed on the dotted line, she carried out the agreement. In spite of the fact that we cabled Britain last June, and cabled again in July, offering to send over additional supplies without suggesting an increased price, even suggesting a decreased price, Britain cabled back that she was going right through with the agreement. And she went through.

When we went back after a year, all the facts being taken into consideration, Britain again entered into an agreement with us, not as good as the one before as to price it is true, but an agreement which took a much greater quantity; and if she had not done so, I do not know what the price of hogs would be in Canada at the present time. If we had had an agreement for only 290 million pounds of bacon for Britain this year and Britain had not taken any more than that, we would not be getting five cents a pound for hogs in Canada now, and everyone who knows anything about the hog trade knows it. But because we have an agreement with Britain, because she realizes the condition of our agriculture, realizing at the same time that neither she nor ourselves can do all for agriculture that ought to be done for it, she has done the best she can, and we have accepted it as the best she can do.

[Mr. Gardiner.]

I want to say for the farm population of Canada that, in spite of propaganda put out by some persons who are not farmers and spread across this country, the old gentleman who got up in London, whom the hon. member for Haldimand heard, expressed their viewpoint. I am not going to use his language; probably it would not be parliamentary, but the effect was: "I am going to produce all the hogs I can produce, no matter what the price, so long as Britain needs them". That has been the sentiment of the farmers throughout Canada ever since this war started: "We are going to produce hogs; we are going to make them available". In so far as this government is concerned all one has to do in order to know what our position is in relation to hogs, wheat, munitions of war and everything else needed is to read the statement that the Prime Minister put on *Hansard* yesterday relating to the needs confronting us at the present time in connection with financing this war. Reading that, we shall realize why it is difficult, even for governments, to do the things they wish to do in order to help people over hard places.

I see it is six o'clock and I cannot finish at this time. May I say before moving the adjournment of the debate that I believe, with my friends who have spoken, that farmers are in a difficult position. Prices are not as high as they ought to be in the interests of agriculture. The best the government can do under the circumstances is to look agriculture over from month to month and to search out the branches of agriculture to which the condition I am about to set out relates.

The position taken since the beginning of the war is to the effect that before any branch of agriculture receives assistance because we are at war it must be shown (1) that the market which existed for the product of that branch of agriculture has been seriously curtailed by the war; (2) that those engaged in that branch of the industry cannot readily change to any other without lapse of time and unreasonable expense, and (3) that those engaged in that branch of agriculture cannot maintain themselves in agriculture without government assistance. Whenever any branch of agriculture has been found to fit in with that condition, we have attempted to do something about it.

On a later date I hope to have the opportunity of continuing the debate.

On motion of Mr. Gardiner the debate was adjourned.

At six o'clock the house adjourned, without question put, pursuant to standing order.

Thursday, March 27, 1941.

The house met at three o'clock.

DEFENCE OF CANADA REGULATIONS

CONCURRENCE IN FIRST REPORT OF SPECIAL COMMITTEE

Hon. J. E. MICHAUD (Minister of Fisheries) presented the first report of the special committee on the defence of Canada regulations, as follows:

Your committee recommends that an official stenographic report of the proceedings be taken and transcribed from day to day as the committee may decide, for the confidential use of the committee, and that seventeen copies thereof be made.

Mr. MICHAUD moved that the report be concurred in.

Motion agreed to.

RAILWAYS AND SHIPPING

TABLING OF ANNUAL REPORTS—APPOINTMENT OF COMMITTEE ON ACCOUNTS AND ESTIMATES OF GOVERNMENT OWNED TRANSPORTATION LINES

Hon. P. J. A. CARDIN (Minister of Transport): Mr. Speaker, I desire to lay on the table the following annual reports in English and French for the year ended December 31, 1940: The annual report of the Canadian National Railways; the annual report of the Canadian National (West Indies) Steamships Limited; and the annual report to parliament of George A. Touche and Company, auditors, of the accounts of the Canadian National Railway system.

Right Hon. W. L. MACKENZIE KING (Prime Minister) moved:

That standing order 63 of the House of Commons, relating to the appointment of standing committees of the house, be amended by adding to the standing committees of the house for the present session a standing committee on railways and shipping owned, operated and controlled by the government, to which will be referred accounts and estimates and bills relating thereto of the Canadian National Railways, the Canadian National (West Indies) Steamships, and Trans-Canada Air Lines for the present session, for consideration and report to the house; provided however that nothing in the resolution shall be construed to curtail in any way the full right of discussion in committee of supply; and that the said committee consist of Messrs. Bercovitch, Black (Cumberland), Bradette, Diefenbaker, Donnelly, Dubuc, Emmerson, Ferland, Gray, Hansell, Hanson (Skeena), Harris (Danforth), Howden, Howe, Lockhart, MacInnis, McCulloch, Maybank, Parent, Pouliot, Ross (Middlesex East), Sanderson, Sissons.

Hon. R. B. HANSON (Leader of the Opposition): Is the personnel of this committee the same as last year?

Mr. MACKENZIE KING: I am informed that it is.

Mr. HANSON (York-Sunbury): I have no objection to the passage of this motion, but I should like to observe that we have not been consulted about this. It is a very good rule that has grown up, and I think it ought to be observed.

Mr. HARRIS (Danforth): I should like to see the name of the hon. member for Rosedale (Mr. Jackman), who was on the committee last year, included in its membership again this year.

Mr. MACKENZIE KING: If it is desired by the leader of the opposition to change the personnel, that might be arranged at the convenience of hon. gentlemen opposite.

Motion agreed to.

THE WAR

POSITION IN THE BALKANS—ANNOUNCEMENT OF COUP D'ETAT IN YUGOSLAVIA

On the orders of the day:

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, with respect to the situation in Yugoslavia, the government has received official word that a successful *coup d'état* took place in that country early this morning. While we are at the moment without further official report, the news received from abroad is to the effect that the government which signed the axis agreement at Vienna has been overthrown, the regency dissolved, and a new government formed under the young King, Peter II. The new government is reported to include representatives of all parties in the kingdom, and to have the support of the army.

According to the news reports from overseas, Mr. Churchill stated in London to-day that it is reasonable to expect that the new government will repudiate the pact signed with the axis powers. Mr. Churchill has undertaken, if the pact is repudiated, that Britain will recognize the new government, and if Yugoslavia is attacked, that the British will give all the aid possible.

DEFENCE OF NEWFOUNDLAND

GREAT BRITAIN-UNITED STATES AGREEMENT AND SUPPLEMENTARY CANADIAN PROTOCOL RESPECTING CERTAIN LEASED AREAS

On the orders of the day:

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, I have referred from time to time to the fact that since the outbreak of the war Canada has been contributing to the defence of Newfoundland. This has been done in consultation and cooperation with the United Kingdom and Newfoundland. Its purpose has been that of assistance in the common cause, and our own immediate and direct protection.

The defence of Newfoundland has also been a subject of consideration by the permanent joint board on defence, which has made certain specific recommendations to the governments of Canada and the United States following meetings in which representatives of the government of Newfoundland participated.

It will be recalled that under the terms of the agreement reached between the United Kingdom and the United States, and announced on September 3 last, the United States was given the right to establish defence facilities in Newfoundland.

During recent weeks, representatives of these two governments have been meeting in London for the purpose of preparing a formal agreement setting forth the conditions upon which the United States is to enjoy possession for ninety-nine years of certain leased areas in Newfoundland and in certain British colonial possessions in this hemisphere. Except as they affect the situation in Newfoundland, the Canadian government has not a direct interest in the terms of this agreement. In view, however, of the responsibilities which Canada has accepted in Newfoundland, we have kept closely in touch with the London discussions. At Canada's suggestion the general agreement between the United Kingdom and the United States has been supplemented by a protocol of which Canada is also a signatory, and which clarifies the rather complicated situation in Newfoundland.

The general agreement between the United Kingdom and the United States was made public to-day. In the supplementary protocol to which I have referred the signatories recognize that the defence of Newfoundland is an integral feature of the Canadian scheme of defence, and as such is a matter of special concern to the Canadian government, which has, in fact, already assumed certain responsibilities for such defence.

In view of this fact it has been agreed that in all powers which may be exercised and in such actions as may be taken under the leased bases agreement in respect of Newfoundland, Canadian interests in regard to defence will be fully respected.

The protocol also provides that nothing in the agreement shall affect arrangements relative to the defence of Newfoundland already made by the governments of Canada and the United States in pursuance of recommendations submitted to those governments by the Canada-United States permanent joint board on defence; and that in all consultations concerning Newfoundland arising out of the agreement, the Canadian government as well as the government of Newfoundland will have the right to participate.

At a later stage I shall be in a position to table copies of the agreement and also of the protocol.

INDIAN ACT AMENDMENT

REGULATIONS CONTROLLING THE BUYING OF WILD ANIMALS AND SKINS FROM INDIANS

Hon. T. A. CRERAR (Minister of Mines and Resources) moved for leave to introduce Bill No. 24, to amend the Indian Act

Mr. HANSON (York-Sunbury): Explain.

Mr. CRERAR: The house may be interested to know that probably one-third of the Indians at present in Canada live in the northern parts of the various provinces and in the northwest territories. They live mainly by the chase. This bill is to enable the Indian administration to give them further protection in the sale of their fur catch. It has become the practice—indeed it might almost be described as an evil—of irresponsible traders to go back into the more remote regions, by aeroplane or by other means of transport, and offer absurdly low prices to the Indians for their furs, thus reaping from the transaction a very large profit for themselves. As the Indians are thereby deprived of the full revenue which they should receive, they tend to become more and more a charge upon public funds. The purpose of the bill is to authorize the Indian administration to require, where necessary, permits or licences

on the part of traders so that their responsibility may be fixed and their operations kept under control.

Mr. NEILL: Might I ask the minister if it is his intention to open up a general revision of the act?

Mr. CRERAR: That is not the intention at the present time. Considerable work has been done on a general revision of the act, but it is not intended to introduce that revision at this session.

Mr. NEILL: I think the minister will recognize that that revision is badly needed.

Mr. CRERAR: I agree with my hon. friend that probably there are some places where the act could be strengthened.

Motion agreed to and bill read the first time.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

EXPROPRIATION OF ST. PAUL L'ERMITE, QUE. LANDS FOR WAR INDUSTRIES

Mr. FERLAND:

1. How many farmers of St. Paul l'Ermite, Quebec, had their lands expropriated by the government in 1940 for war industrial purposes?

2. Upon what date were these farmers dispossessed of their lands?

3. How many of them have still to be paid by the government for the lands so expropriated?

Mr. HOWE:

1. The number of proprietors whose lands have been expropriated for this project is 23.

2. The date of the expropriation of the main plant site was June 10, 1940. A small lot was subsequently expropriated on November 2, 1940, for a pump house.

3. 19.

OIL CONTROL—CLARKSON, ONT., REFINERY

Mr. HOBLITZELL:

Has the oil controller given permission for the erection of a refinery at Clarkson, Ontario? If so, why has such permission been given?

Mr. HOWE: The oil controller approved the British American Oil Company Limited building a lubricating refinery. No mention was made as to location. The location of the refinery is a matter for municipal authorities who may grant or refuse a building permit and whose duty it is to protect any rights or interests which may be prejudicially affected.

*SOLDIERS HITCH-HIKING ON HIGHWAYS

Mr. CHURCH:

1. How many soldiers were arrested at Camp Borden, and tried on the 21st instant at Barrie police court, by Magistrate Jeffs, for using forged railway tickets while on furlough from camp?

2. (a) Who laid the complaints; (b) what was the sentence; (c) how many witnesses were called?

3. Were the soldiers charged represented by counsel? If so, by whom?

4. (a) Did the attorney general's department of Ontario or (b) the Department of National Defence or camp authorities refuse to provide counsel for these men?

5. Who authorized an edict on hitch-hiking at Camp Borden?

6. What right or authority have the authorities at Camp Borden to declare this a military offence?

7. Did the Minister of Highways for Ontario announce that on no occasion before this trial had they prohibited hitch-hiking by soldiers?

8. Will executive clemency be immediately considered in these and other cases?

9. Was the order from the government to stop hitch-hiking issued after a request by the Canadian Passenger Association or the two railways?

Mr. RALSTON: Mr. Speaker, I will make a verbal answer to these questions, or some of them.

1. Three.

2. (a) C.P.R. police; (b) Three months determinate and three indeterminate; (c) One.

3. No. Their company commander attended and gave evidence as to character.

4. (a) No information; (b) No request was made to Department of National Defence or camp authorities to provide counsel. It is not the practice for counsel to be provided at public expense in such cases.

5. Camp orders, Borden, issued by Brigadier-General McCuaig, which recited sub-section (2) of section 44 of the Highway Traffic Act as it appeared in chapter 288, Revised Statutes of Ontario, 1937, reading as follows:—

> "No person shall, while on the travelled portion of a highway, solicit a ride from the driver or operator of a motor vehicle other than a public vehicle."

The order then proceeded to state as follows:—

> "In accordance with the above, the practice of personnel of Camp Borden soliciting rides will cease immediately."

6. This is a question of law, on which it is not the practice to express opinions in answer to questions.

7. I know of no such announcement. The hon. member sent me a copy of a letter which he personally had received from the minister of highways which was generally to this effect, but I did not feel that that letter had taken full account of the provisions of the Ontario statute to which I have referred. I wrote the minister of highways, and have as yet received no reply.

8. This is a matter for the appropriate authorities.

9. The order referred to is presumably the one mentioned in answer to question No. 5. No request therefor was made to the Department of National Defence by the Canadian Passenger Association or the railways.

Mr. CHURCH: Would the minister please look at paragraph 8 of my question, and would he be willing to aid executive clemency to these three men, since all of them are first offenders? The whole of the tickets were not worth more than $20. Their commanding officer said at their trial that they were good men and that he wanted them back. Why not let them out?

Mr. RALSTON: I have replied to that in answer to No. 8.

Mr. CHURCH: Thank you.

TRADE COMMISSIONERS IN EIRE

Mr. CHURCH:

What trade commissioners or other Canadian officials are in Eire, where are they located, at what cost, and is there duplication of services?

Mr. MacKINNON (Edmonton West): James Cormack, 66 Upper O'Connell Street, Dublin, is the trade commissioner. The cost of the office during the eleven months ending February 28, was $9,808.60. There is no duplication of services.

AMOUNT OF BRITISH AND CANADIAN ADVANCES ALLOCATED TO FRENCH-CANADIAN INDUSTRIES

Mr. LaCROIX (Quebec-Montmorency):

Of the amount totalling $268,499,894, advanced for industrial purposes by the Canadian and British governments, why was only $15,337,520, equivalent to 5·7 per cent, allocated to French Canadian industries?

Mr. HOWE: Mr. Speaker, this question refers to "French-Canadian industries". It first makes a statement which I believe is incorrect, but I may say that I do not know which industries are French-Canadian and which are Canadian. I am afraid that the question cannot be answered.

[Mr. Ralston.]

UNEMPLOYMENT INSURANCE COMMISSION—FRENCH-CANADIAN REPRESENTATION

Mr. LaCROIX (Quebec-Montmorency):

1. Is the unemployment insurance commission actually engaged in appointing its staff and completing its organization?

2. If so, has a representative French-Canadian been appointed a member of the commission?

Mr. McLARTY:

1. Organization work is being carried on by the unemployment insurance commission, and appointments to the staff are being made by the civil service commission.

2. Dr. Joseph Sirois was appointed chief commissioner in October, 1940, and, due to illness, was unable to carry on the organization work; accordingly, Mr. Arthur MacNamara, associate deputy minister of labour, was appointed acting chief commissioner. Regretfully Dr. Joseph Sirois died on January 17, 1941. The orderly continuation of the organization work can best be carried on by continuing existing arrangement for the present.

H. W. NICOLL

Mr. HOMUTH:

1. Is H. W. Nicoll employed by any department of the government?

2. If so, in what capacity, and what salary does he receive?

Mr. HOWE:

1. Mr. Hermes William Nicoll was appointed to the Department of Munitions and Supply on the 13th of February, 1941.

2. Resident technical officer for munitions division of Department of Munitions and Supply at plant of Electric Steels Limited, Cap de la Madeleine, P.Q. Salary, $3,600 per annum.

*EDMUNDSTON, N.B., AIRPORT

Mr. HATFIELD:

1. Has an appropriation been made to build an airport at or near Edmundston, New Brunswick?

2. If so, what site or sites have been or are being considered?

3. Who was or is the owner of the land?

4. When will the project get under way?

5. What is the acreage?

Mr. POWER: I will answer this verbally. The answer to No. 1 is, no. The other questions are therefore not applicable.

ST. LAWRENCE WATERWAY—QUEBEC PROVINCE TRADE AND INDUSTRY

Mr. LACOMBE:

1. Why does the St. Lawrence waterways agreement make no provision for a reduction in the rates for electric current sold to the private consumer and to Quebec industries?

2. Why does this agreement make no provision for the protection of the maritime trade which the port of Montreal enjoys, and also for the protection of existing industries?

Mr. MACKENZIE KING: As regards the first part of the question, I am afraid that if I were to attempt to answer it, my hon. friend might be the first to say that I was invading provincial rights. Certainly the matter is not one which comes within the purview of this parliament.

As regards the latter part of the question, I am not aware that there is anything in the agreement which interferes in any way with the maritime trade of the port of Montreal, or with existing industries.

QUESTION PASSED AS ORDER FOR RETURN

CIVIL PROTECTION COMMITTEES

Mr. COLDWELL:

1. Under whose authority are civil protection committees established?

2. Under whose authority did the Verdun civil protection committee, on Saturday afternoon, March 1, 1941, stop cars and demand registration certificates or licences?

3. Is it the policy of the department to allow local organizations to arrange check-ups of this nature?

Mr. CASGRAIN: Return tabled.

ST. LAWRENCE WATERWAY

QUESTION AS TO AGREEMENT FOR EXPORT OF POWER TO BE DEVELOPED

On the orders of the day:

Hon. R. B. HANSON (Leader of the Opposition): May I direct a question to the Prime Minister (Mr. Mackenzie King) with respect to the St. Lawrence waterway project, and specifically on the subject of the export of power to the United States?

It will be recalled that the Canadian national advisory committee reported on January 11th, 1928: "that we are in complete accord with the feeling throughout Canada that export of power should not be permitted."

In neither the Canada-United States agreement entered into on the 19th of March, 1941, nor in the Dominion-Ontario agreement of the same date—both tabled on the 21st instant—is there any reference to this vital question of the export of power. I do not think anyone expected that there would be any specific clause covering this important phase. But the question is of such paramount importance that I am impelled to ask the Prime Minister if there is any agreement, undertaking, or understanding, express or implied, that the province of Ontario or the Hydro-Electric Power Commission of Ontario, or any other governing body, shall have any right, licence or authority to export to the United States any portion of the power to be generated at the Canadian power development, and if so, how much, and for what period. Generally, I would ask what the whole position is with respect to the export of power to be developed from this project.

Right Hon. W. L. MACKENZIE KING (Prime Minister): The agreements as tabled cover everything in the nature of undertakings given by the government. I cannot say what requests may be made of the government under the general laws of the country, but if any such requests are made they will be considered in the light of the remarks which I made to this house in speaking on the waterways question on a previous occasion.

USE OF IRISH PORTS AND BASES

REQUEST FOR TABLING OF CORRESPONDENCE WITH EIRE OR BRITAIN

On the orders of the day:

Mr. T. L. CHURCH (Broadview): I would like to ask the Prime Minister (Mr. Mackenzie King) a question, of which I have given him a copy. Would he care to clarify further to-day his answer to the question which I asked yesterday? I do not want him to utter one word which would injure the cause of the empire, but I believe that I represent a large body of public opinion which is alarmed, and I am merely seeking information.

I gladly gave up the other night my right to speak on the third reading of the war appropriation bill so as not to delay it one minute further, and let it pass on Tuesday night; and I desire now to ask the Prime Minister if he will kindly table all correspondence, so far as may be possible, with the government of southern Ireland or of Britain, with regard to the use of these ports. The country has a right to this information, which has already been given in the British House of Commons by Mr. Churchill in reply to a similar question asked by Sir William Davison, a prominent supporter of the government.

As I said a year ago, these ports belong to the empire, and Canada should take a stand on the matter before it is too late to protect our trade and commerce, our shipping and food and aid to Britain of all kinds.

The only reason I am asking is that I believe the fate of the battle of Britain, and of freedom and civilization, depends on the free use of these inlets, ports and bays, as

in the last war; and I do not want to see Canada or its government wrongly charged—as she is by some—with being a party to seeing Britain's hands being tied behind her back by failure to give the empire proper shipping protection.

Some hon. MEMBERS: Order.

Mr. CHURCH: The list of tonnage sunk, as already announced by the admiralty, is appalling, and in my opinion calls for some further announcement by the government by way of clarification.

Some hon. MEMBERS: Order.

Mr. CHURCH: I believe I am quite in order, Mr. Speaker.

Mr. SPEAKER: As I understand it, the hon. gentleman is asking a question which he is entitled to ask. On account of the noise in the house I cannot hear clearly.

Right Hon. W. L. MACKENZIE KING (Prime Minister): As I understood my hon. friend's question—he was good enough to give me a copy of it in advance—it is more than a question; it is considerable of a speech as well.

The hon. member says that the country has a right to certain information which has already been given in the British House of Commons by Mr. Churchill, in answer to Sir William Davison, a prominent government member there. I have not the information which Mr. Churchill gave to Sir William Davison in the British house but I shall be glad to have it looked up and, if possible, given to my hon. friend. What he asks for is information which has already been given elsewhere. He goes a step further, however, and asks whether I would table any of the correspondence that might relate to the subject matter of his question. Such correspondence as there has been is wholly confidential and could not be given without the agreement of the governments concerned, and I am therefore afraid I cannot table any correspondence in the matter.

Mr. CHURCH: May I take it from the Prime Minister's statement that he assures the house that he has taken all adequate steps with the other two governments to look after our interests?

Mr. MACKENZIE KING: I can say quite positively to the house that in this matter, which the hon. member recognizes is a very delicate and difficult one, the government has taken the action which it believes to have been the most prudent to take in all the circumstances.

[Mr. Church.]

WAR CHARITIES

RELATIONSHIP OF RED CROSS TO CURRENT UNITED APPEAL FOR AUXILIARY SERVICES

On the orders of the day:

Hon. J. G. GARDINER (Minister of National War Services): In view of the fact that an answer which I gave to a question asked by the leader of the opposition (Mr. Hanson) a few days ago has raised some discussion, I wish to make a further comment upon that answer.

When I was dealing with the estimates of the war services department in the house on March 7 last, as recorded at page 1331 of *Hansard,* the leader of the opposition questioned me regarding the relationship of the Red Cross to the united drive put on for funds for auxiliary services on March 24.

The hon. member asked:

Has it been found that the Red Cross object to this collective drive? There was a good deal of discussion in the press about this at the time it was started. I understand that some officials of the Red Cross have taken the view that they cannot be bound within the limitations or circumscription of one drive because of the peculiar necessities that may arise in connection with their work. Are they in agreement with the principle or are they standing out? I think in justice to them that ought to be made clear.

I replied as follows:

Three or four conferences were held and the discussions that took place were similar to those that take place at any conference of the kind. In the earlier stages you will find some persons putting forth certain arguments and taking a certain position very strongly, and you will find these same persons later on, in a subsequent conference, turning around and taking a position which perhaps those opposed to them at the earlier stage had adopted. It is true that certain arguments were advanced to the effect stated, but I may say that as a result of the conferences held all of the organizations that are going into the drive on March 24 are going in under an agreement finally reached among themselves, and in entering into that agreement they have one hundred per cent support and cooperation of the Red Cross. As the house knows, the Red Cross is an organization that has been built up right across Canada, having a very good reputation and a long period of service, and it is thought wise to allow that organization at least to consider the matter in their own national meetings before making any announcement as to what they think, or anyone else thinks, with respect to what they ought to do. It is considered better to leave it that way. There has been the greatest degree of cooperation among these people in meeting from time to time and discussing one another's problems and trying to come to a common conclusion.

Mr. Hanson (York-Sunbury): Will this drive on March 24 cover a definite period of time?

Mr. Gardiner: It is the only drive to be made in 1941.

Mr. Hanson (York-Sunbury): That answers the question.

Mr. Gardiner: The Red Cross have agreed that they will not put on another drive in 1941, so that there will be no further drive by that society or any one of the other organizations during the year 1941. The question what is to happen in 1942 will be finally settled among them before the end of the year.

The statement I wish to make with regard to that answer is this.

Some controversy has arisen as to whether this was a correct statement of the facts. I had reason to believe it was a correct statement at the time it was made but it has been brought to my attention that the Red Cross when they held their executive meeting did not agree that another appeal would not be necessary in 1941 but were referring the matter to the annual meeting of the central council.

The government however has thought it wise to arrange that national drives for auxiliary war services be put on in the spring of the year and that any drive put on in the fall months be for home services and that the remainder of the year be reserved for governmental financial appeals for funds necessary to the direct prosecution of the war.

We are sorry that Mr. W. M. Marshall, Saskatchewan provincial commissioner of the Canadian Red Cross, according to a Canadian press report dated Winnipeg, March 26, 1941, has stated that notification had been sent 900 local secretaries in Saskatchewan that although no date is set it is expected that the 1941 Red Cross campaign will be held in the fall. The decision of the government that no permit for a further national drive for auxiliary services would be issued during 1941 outside of the present drive was conveyed to the central executive of the Red Cross with the suggestion that if they required more funds they should join in the drive now under way and ask the public for the amount which they required.

If there is a shortage of funds to do necessary work of the Red Cross it will require to be raised in some way other than in a national appeal to the people. The only national appeal for which a permit will be issued in 1941 is now under way.

I am sorry if I was mistaken in saying that the Red Cross had agreed.

Hon. R. B. HANSON (Leader of the Opposition): The statement which the Minister of National War Services has just made, and the reason therefor, have caused me some perturbation. I have always had a high opinion of the Red Cross society and have at intervals contributed of my substance to its support.

When I first heard of the united drive it was a matter of regret to me that the officials of the Red Cross could not see their way clear to go into the combined appeal, but I quite understood the reasons for it.

As the minister has correctly stated, I did interrogate him with regard to this matter earlier this month, and I concluded that he had made a correct statement of the position, namely, that the Red Cross had agreed that they would not put on another drive in 1941. It was therefore a matter of considerable surprise to me when I heard it announced in the Canadian press from Winnipeg that notification had been sent to the Red Cross organizations in Saskatchewan that a 1941 Red Cross campaign would be held in the fall.

In view of what is taking place this week, the efforts that are being made in the united drive, I suggest that this announcement was entirely out of place at the moment, especially when so many of our best citizens are contributing of their time and substance to the present drive.

I agree that the position that has arisen is unfortunate. If the Red Cross requires funds, it should be done in some other way than by a national appeal to the people. The government, if necessary, must supply such additional funds as may be required.

Mr. KARL K. HOMUTH (Waterloo South): In this connection, I also had spoken to the Minister of National War Services, and I trust the house will bear with me for a moment, though I may be out of order in discussing the matter. In our district, in the town of Preston and in the city of Galt, we put on united drives. Perhaps we were the first town to put on a drive for all the services, and out of the funds raised we paid our contributions that were allotted to the various organizations—the Red Cross and so on. The present drive is on and we are not putting on a drive in my riding because all our municipalities have already put on their drive and made their contribution. We put on one drive a year, which is made in the fall, and our employees and others who contribute pay so much per month over the year.

The minister has stated that the drive should be put on in the spring. It will cause considerable trouble if there is a drive in the spring, when certain municipalities put it on in the fall. We should be very careful; people are willing to contribute, but if we have two or three drives there will be difficulty in raising funds. When another drive is put on it should be done in such a national way that there will be only one appeal for all the purposes for which funds are required.

ROYAL CANADIAN NAVY

STATEMENT CONCERNING LOSS OF H.M.C.S. *Otter* WHILE ON PATROL

On the orders of the day:

Hon. ANGUS L. MACDONALD (Minister of National Defence for Naval Services): Hon. members may expect from me some statement as to the loss of one of the ships of the Canadian naval force yesterday with the loss of some nineteen men serving on board that ship.

The ship, as hon. members know from the newspapers, is the *Otter*. His Majesty's Canadian Ship *Otter*, was one of fourteen yachts purchased from private owners for conversion into anti-submarine patrol vessels. The conversion of these vessels was an emergency policy designed to provide some measure of protection against submarine raids on the Canadian coast, and to serve as a substitute while Canadian-built corvettes were being completed.

The *Otter* was built in 1921 as a twin-screw diesel steel yacht. She was 160 feet long, 25 feet beam, with a draft of ten feet. She was built in the United States. Subsequently she was acquired by Mr. P. S. Ross, a Canadian citizen. In June 1940 she was requisitioned by the Royal Canadian Navy. She was converted into a patrol vessel in a Canadian shipyard. The work of conversion included alteration to her accommodation, general overhaul of engines, and installation of armament.

Since October 10, 1940, she has been in service as a patrol vessel on the eastern Canadian coast. In this function she has given entire satisfaction. She has from time to time developed minor defects, as any ship is apt to do, but these have been dealt with as they occurred, and there has never been any suggestion at any time that there were any serious defects in the vessel or in her machinery.

Her complement was 4 officers and 37 ratings. Her commanding officer was Lieutenant Denis A. Mossman, R.C.N.R., a native of Lunenburg, Nova Scotia. Lieutenant Mossman is forty-three years of age, and his experience at sea has been extensive. He holds a master's foreign-going certificate of competency. He was employed by the Canadian National Steamships prior to the war and served in their passenger and cargo steamers in various capacities, from third officer to first officer. His service in the Royal Canadian Navy since entry on January 19, 1940, includes time spent at the Royal Canadian naval barracks in training, and time spent on the Canadina ships *Venosta* and *Arleux* (mine-sweepers). He was appointed to H.M.C.S. *Otter* in June, 1940, and given command of that ship, standing by the ship during her conversion and from the date of her commissioning in the service.

Coming to the tragedy itself, the ship left Halifax on March 21 on patrol work. There was no indication of any defect in the ship or her machinery at that time. At eight o'clock on March 26 when off Sambro near the mouth of Halifax harbour the ship caught fire. Apparently this fire started in the engine room, and spread so rapidly that there never was at any time a chance of effectively fighting it. The ship had to be abandoned, and this was successfully carried out into boats and rafts. The casualties, nineteen in number, are understood to have been chiefly caused by exposure and also by the capsizing of one of the boats alongside one of the rescue vessels. The weather at the time was very rough and cold.

A full inquiry into the causes of this accident would have been undertaken to-day except for the fact that some of the survivors are not yet sufficiently recovered to give evidence. None of the survivors it is hoped will suffer any permanent ill effects from their experience. It is hoped that the inquiry will get under way to-morrow, certainly it will be undertaken at the earliest possible day. Until the report of the board of inquiry is in hand it will not be possible for me to make a more explicit statement than this regarding the cause of the fire and the subsequent loss of life.

There remains for me, Mr. Speaker, the melancholy duty of expressing to the relatives of the deceased officers and men the heartfelt sympathy of the Prime Minister, my colleagues in the government, and myself and, I am sure, as well the very deep and real regret of every hon. member of this house.

DECENNIAL CENSUS

INQUIRY AS TO APPOINTMENT OF COMMISSIONER FOR PARKDALE

On the orders of the day:

Hon. H. A. BRUCE (Parkdale): In view of the statement of the Minister of Trade and Commerce yesterday that the census would be conducted on a non-partisan basis, will the minister tell the house who is the commissioner for Parkdale; is he the defeated candidate; if not, was the commissioner appointed on the recommendation of the defeated candidate?

Hon. J. A. MacKINNON (Minister of Trade and Commerce): The hon. member sent over to me since I came to the chamber a copy of this question. Ordinarily I would have no idea who the census commissioner is for

any constituency in Canada outside of my own constituency of Edmonton West. It so happens however, that I have some information which I can give to the hon. member; it comes from a letter received from the hon. member himself, in which he asked me that the president of the Conservative association of his own riding be appointed as assistant census commissioner. In that letter the hon. member stated that the man named as census commissioner was a Mr. Travers. Whether he was the Liberal candidate in that constituency or not I do not know.

Mr. BRUCE: Would the minister read my letter?

Mr. MacKINNON (Edmonton West): I haven't it here, but I shall be glad to bring it into the house.

Mr. BRUCE: Will the minister then table it?

Mr. MacKINNON (Edmonton West): Yes. The hon. member asks whether the commissioner was appointed on the recommendation of the defeated candidate. As I said yesterday, the commissioner has been appointed in exactly the same way as have the commissioners at the taking of every census since 1871. I believe that in all the years since 1871 only once at the time of the decennial census has a Liberal government been in office, and that on every other occasion all appointments in connection with the census have been on a strictly partisan basis.

Mr. HOMUTH: And what did the Liberals say about it?

Mr. MacKINNON (Edmonton West): In this war year the government intends to see that partisanship is not indulged in in the appointment of the enumerators taking the census.

Mr. BRUCE: Does the minister not recollect that in my letter I asked if this census could not be conducted on the same basis as the national registration was conducted?

Mr. MacKINNON (Edmonton West): My recollection is that it was on that point that the hon. member asked for the appointment of the president of the association.

Mr. BRUCE: Yes.

Mr. HOMUTH: That is different.

Mr. BRADETTE: Little shadows of 1931.

Mr. GRAYDON: Yes, but there is a war on.

RADIO BROADCASTING

REGULATIONS WITH RESPECT TO USE OF PUBLIC OR PRIVATE FACILITIES FOR POLITICAL BROADCASTS

On the orders of the day:

Mr. M. J. EDWARDS (Calgary West): Mr. Speaker, I should like to ask the Minister of Munitions and Supply what regulations or restrictions, if any, are in effect with respect to the use of national, provincial or private radio stations for political broadcasting purposes at the present time. Are there any regulations or restrictions?

Mr. HOMUTH: Just restrictions.

Hon. C. D. HOWE (Minister of Munitions and Supply): Mr. Speaker, this question has come to me without notice. I do not like to quote regulations from memory; but I shall be glad to obtain the information. Of course any regulations in existence are made by the governors of the Canadian Broadcasting Corporation. I shall be glad to get the information and answer the hon. member to-morrow.

Hon. R. B. HANSON (Leader of the Opposition): This is an important matter, and I think we might take two or three minutes to discuss it. Would the minister be good enough to state when he will bring these regulations down, and will the government facilitate an opportunity for discussion? The present position is wholly unsatisfactory. It is to us, and I am quite sure it would be to hon. members opposite.

Mr. HOWE: In turning over the responsibility for broadcasting to the Canadian Broadcasting Corporation the government divested itself of any authority to interfere in the matter of regulations for broadcasting. I see no purpose therefore in debating here what is being done by the broadcasting corporation.

Mr. GRAYDON: Is it—

Mr. SPEAKER: May I point out that these questions, in the form in which they are being asked, are most provocative. They raise discussions, whereas they might well be put on the order paper. I suggest that hon. members look into that rule of procedure.

Mr. HOMUTH: The answers are just as provocative.

Mr. GORDON GRAYDON (Peel): May I suggest, along the lines suggested by your honour that—

Some hon. MEMBERS: Order.

Mr. GRAYDON: I am only bringing this to the attention of the minister. There is a question standing on the order paper in my name with reference to this very matter. I believe if the minister would answer that question he would clear up the whole matter.

PRECIOUS METALS MARKING ACT

AMENDMENTS WITH RESPECT TO GOLD WATCHES AND SPECTACLE AND EYEGLASS FRAMES

Hon. J. A. MacKINNON (Minister of Trade and Commerce) moved the second reading of Bill No. 12, to amend the Precious Metals Marking Act.

Hon. R. B. HANSON (Leader of the Opposition): This is a somewhat technical bill; in fact the Precious Metals Marking Act is a technical act from first to last. I do not recall any explanation having been made heretofore by the minister. We ought to have something beyond the explanatory note on the page opposite 1 of the bill. In particular we should know the reason for introducing the bill. Who has asked for it, and what would be the effect of this legislation? If the minister gave the house that information on first reading, I could not have been present, because I did not hear it.

Hon. J. A. MacKINNON (Minister of Trade and Commerce): Mr. Speaker, in presenting the bill I explained that it contained some technical amendments to the act, and that they had been suggested for the protection of the consuming public. I believe it is safe to say that generally speaking the buying public knows less about articles over which the Precious Metals Marking Act has jurisdiction than it does about anything else purchased. Hence there is necessity for protection and guidance. These amendments offer that protection.

The first amendment affects bracelet watch cases, and only to the extent that the necessity for soldering a sheet of gold on the inside of the back of a gold-filled bracelet watch case is removed. I do not think there is any necessity of going further into that amendment.

The second amendment deals with the establishment of a new standard for gold-filled eyeglass wares, and protection for the public as to the quality of the content of the article.

Mr. HANSON (York-Sunbury): Is it only in respect to gold-filled articles?

Mr. MacKINNON (Edmonton West): Yes, gold-filled articles.

Mr. HANSON (York-Sunbury): Probably we should discuss the bill in committee.

Motion agreed to, bill read the second time and the house went into committee thereon, Mr. Vien in the chair.

On section 1—Watches.

[Mr. Graydon.]

Mr. HANSON (York-Sunbury): Specifically, what is the extension in the provisions of the act over the present section 7 (a)?

Mr. MacKINNON (Edmonton West): The present subsection lays down some specifications as to thickness and quality of gold, also the manner of application of this gold in a gold-filled watch case. I believe the explanation given on this page is quite complete. In the proposed amendment these remain the same, and are not disturbed, except that it is not necessary to solder a sheet of gold on the inside of the back of a gold-filled bracelet watch case. In this style of case the movement fits in the back of the case and the inside of the back is not seen nor is it subject to any wear.

This amendment also provides that if "gold filled" or "G.F." is stamped on the outer surface of that part of a bracelet watch case that is of that quality, then "base metal" shall be applied to that part of this case that is not gold-filled quality.

Mr. DOUGLAS (Weyburn): The explanatory notes explain the object of the amendments. What is the purpose? Are they for the purpose of protecting the public?

Mr. MacKINNON (Edmonton West): Yes, the amendments are wholly for the purpose of protecting the buying public. I believe they have been brought to our attention by the Canadian Jewellers' association, an association with a membership of approximately one thousand jewellers across Canada. Eighty-two per cent of the wholesalers and manufacturers in Canada are members of the association.

Mr. DOUGLAS (Weyburn): And they approve these changes?

Mr. MacKINNON (Edmonton West): Yes, these are their suggestions.

Mr. STIRLING: Do these provisions apply only to goods of Canadian manufacture?

Mr. MacKINNON (Edmonton West): My understanding is that they apply to all articles offered for sale in Canada.

Mr. STIRLING: So that there must be some jurisdiction of the department over imports.

Mr. MacKINNON (Edmonton West): The department would do that through its inspection staff.

Mr. STIRLING: At the border?

Mr. MacKINNON (Edmonton West): No, where the merchandise is offered for sale.

Mr. HANSON (York-Sunbury): Do the provisions of section 7(a) apply to imported watches as well as to watches of Canadian manufacture?

Mr. MacKINNON (Edmonton West): Yes.

Mr. STIRLING: Where is the supervision undertaken? Is it done when the goods are displayed in retail stores, at the wholesalers or at the importers?

Mr. MacKINNON (Edmonton West): In connection with imported goods it is done at the customs, at the port of entry.

Mr. STIRLING: Does that mean that the customs officer must be an expert in connection with these things?

Mr. MacKINNON (Edmonton West): The department has inspectors at the larger ports of entry and instructions are given to the customs officials.

Mr. STIRLING: They are not admitted until they have the acquiescence of the minister's department?

Mr. MacKINNON (Edmonton West): That is correct.

Mr. HANSON (York-Sunbury): The customs supervise the importations for the department?

Mr. MacKINNON (Edmonton West): Yes, with the assistance of our inspectors. It is our responsibility.

Section agreed to.

On section 2—Gold-filled articles other than watch cases.

Mr. HANSON (York-Sunbury): This is an extension, is it not, of the principle that applies now to spectacles or eyeglasses manufactured in or imported into Canada. Does this apply to anything else but eyeglasses?

Mr. MacKINNON (Edmonton West): I am informed that this applies only to spectacles and eyeglasses.

Mr. HANSON (York-Sunbury): Then the marginal note would seem to be misleading. It refers to "gold filled articles other than watch cases," but this is confined to spectacles and eyeglasses.

Mr. MacKINNON (Edmonton West): Yes.

Mr. HANSON (York-Sunbury): If the principle is good why should it not be extended to other gold-filled articles?

Mr. MacKINNON (Edmonton West): That protection is given by another section, 6 (*a*).

Section agreed to.

Bill reported.

SUPPLY

The house in committee of supply, Mr. Sanderson in the chair.

DEPARTMENT OF AGRICULTURE

422. Special. To provide for payments on reductions in wheat acreages, under conditions prescribed by the governor in council, for administration expenses in connection therewith, and for temporary appointments that may be required notwithstanding anything contained in the Civil Service Act, $35,000,000.

Hon. J. G. GARDINER (Minister of Agriculture): Mr. Chairman, when this item was brought before the committee some days ago a question was raised as to why it should be brought down in this form, rather than by means of a bill. I think at this time the committee will expect me to state the reason for adopting the method we have in introducing this matter to the house.

I think it will be admitted by members of the committee that the details of this vote set out in general terms what would be required to be placed in any bill that might be introduced for a similar purpose. Legislation in the form of a bill could contain only general sections providing, first, for acreage payments on the reduced wheat acreage; second, for the power to pass regulations by order in council to regulate the expenditure of the moneys, and, third, for the employment of those necessary to administer the plan.

Mr. HANSON (York-Sunbury): Does the minister suggest that that is as far as the legislation could go?

Mr. GARDINER: That is about as far as legislation providing for similar things in the past has gone. Legislation in relation to matters of this kind in the past has been very similar. But that is not the reason I want to give to the committee for maintaining this principle in connection with the bringing down of this particular vote. Two objections of considerable strength might be advanced to the procedure being followed, and there are also objections which might be raised to the bringing down of legislation.

One of the objections is the time element. It is now thirteen days since the policy for which this vote is to provide the money was first announced to the house. It is regrettable that we were required to discuss other matters, probably of more importance, during the intervening time, but the fact remains that thirteen days have gone by. Those thirteen days were most important in relation to the question which has to be discussed, in that crops must be sown within the next two months.

Seeding would be well under way before we could have passed the necessary legislation and the regulations to be based thereon.

In the second place, legislation would have a tendency to perpetuate what is only intended to be a temporary expedient. It has never been contended by the government that the proposals making necessary the expenditure of this amount of money represent a permanent policy. It has never been suggested by those who advocate dealing with the matter as we are that what is necessary is something in the nature of a permanent policy. While it might be possible to stipulate a time limit in any legislation that might be brought down, it would be difficult to estimate how long the legislation would be required. Even with a time limit, the legislation itself would give a greater degree of permanency to the policy than an item in the estimates, with a further vote a year hence if it should be proposed to take the same action again.

The main reasons for proceeding as we are can be stated as follows:

Immediately the funds are voted and the method of administration explained to and accepted by the house, we can proceed to set up the administrative organization which will be necessary to putting the proposal into effect. This is essential to getting the proposal before the farmers in time to permit of their planning their summer's work.

Immediately this vote is passed it will be accompanied by the usual bill accompanying votes which are put through by way of estimates, and later it will be submitted to the senate and be passed and made effective. In addition to that, the regulations to be made under the vote can be drafted by the government.

I noted that the hon. member for Qu'Appelle yesterday suggested that before anything was done in connection with this matter it should first be considered by a special committee of the house. It is not impossible, if the house desires that that should be done, that the regulations, which after all embody the greater part, practically all of what will be done, could be dealt with by a committee. But whether dealt with by a committee or as proposed in this vote, the greater part of the procedure that is to be followed will in any case be set out in the regulations, and the regulations could be fully discussed either in the manner proposed or in committee of the whole house. A discussion of the regulations themselves in a committee would ensure the widest possible dissemination of the information which the farmers desire to have at this time when they are preparing for seeding operations. But I suggest that because of time limitations, and the fact that this is not a permanent policy but only a temporary measure to see us through this present year in view of the difficulties confronting us, we should proceed in the manner in which we are now proceeding, and just as soon as possible we should make known to the public just what the regulations are, and then have the administration set up for the purpose of putting them into effect.

Mr. PERLEY: It has been announced that Mr. J. J. McGurran has already set up the machinery. Will he not know what the regulations are likely to be? What is he doing in that regard?

Mr. GARDINER: I was just proceeding to give the committee that very information. I believe that before assenting to this procedure the house will desire to know the form of administration we intend to establish.

It is our intention to set up a central office at Regina which will take charge of the administration both of prairie farm assistance and wheat acreage reduction activities. It is our intention also to open suboffices at both Winnipeg and Edmonton. The administration in Saskatchewan will be directed from the Regina office, the administration in Manitoba from the Winnipeg office, and the administration in Alberta from the Edmonton office.

It is also our intention to ask the provincial municipal associations to take charge of the actual work of receiving applications from farmers before June 1, on forms indicating their 1939 and 1940 acreage of each crop and of summer fallow, and indicating their plans for bringing about a reduction in wheat acreage in 1941 by otherwise cropping or summer fallowing acreage which grew wheat in 1940.

We have already been in conference with the presidents and secretaries of the three provincial municipal organizations, and it is planned that they will use the municipal secretaries where there are organized municipalities, and the provincial officials in unorganized areas, to do the actual work of receiving applications and certifying the statements of applicants. It is our intention to make payments for these services, to the association for central services, and to the municipal councils for local services or to the provincial governments with respect to unorganized areas.

We have already consulted with the different organizations concerned, including representatives of the provincial governments, and have been assured that every service possible will be rendered by them in working out the administration. We intend to provide for the necessary inspection by municipal secretary-treasurers where that is thought necessary. By that type of inspection I mean that if a

secretary-treasurer finds it necessary, for instance, to make a check on certain information that he has received, provision will be made for that being done.

We intend to provide that the information secured and the applications made shall be turned over to the offices at Regina, Winnipeg and Edmonton and be checked with the acreage returns made to the prairie farm assistance offices over the past two years. Where there is any reason for a check being made upon the information received, that check will be made under the direction of our office. That, I may say, is being done at the request of the municipal associations.

The finance department will set up the necessary organization to audit and make payments at the earliest date possible following proof of claim. When and if the vote and proposal with regard to administration is accepted by the house, it is our intention to have the regulations drafted and they will be made available for consideration in some method which will be satisfactory to the house. A general discussion can take place freely on this estimate; a general discussion can take place freely on the regulations themselves, and from such discussion it is hoped that the farmers who are interested in the putting into effect of the policy will gain considerable information upon which to proceed with their seeding operations.

I think members of the committee will agree that it is most important that the matter be proceeded with as rapidly as possible in order that the information may be made available as soon as possible and the farmers enabled to plan their work accordingly. In saying that, I have no desire unduly to speed up any discussion which the members may wish to carry on in the house. I only wish to suggest that the more rapidly we can get to the point where we are discussing the actual regulations, the sooner it will be possible for the farmers to get, as they will desire to get, the information on which they will base their programme for the coming year.

Last evening in discussing the amendment which is before the house I concluded my remarks by saying:

> The position taken since the beginning of the war is to the effect that before any branch of agriculture receives assistance because we are at war it must be shown (1) that the market which existed for the product of that branch of agriculture has been seriously curtailed by the war; (2) that those engaged in that branch of the industry cannot readily change to any other without lapse of time and unreasonable expense, and (3) that those engaged in that branch of agriculture cannot maintain themselves in agriculture without government assistance.

Earlier in the session, I think it was when my estimates were under discussion previously, the suggestion was made in regard to dealing with certain farm products that the provinces could deal with them to better advantage than the federal government. The question was asked—I believe by the hon. member for Qu'Appelle—whether that statement applied to wheat. On that occasion I indicated that to my mind it did not. I should like to explain to the committee the meaning of the statement which I made at that time. It is associated with the reasons which I put forward last night for giving assistance to agriculture in various parts of Canada.

For example, it cannot be said that the market for Canadian bacon has been reduced by the war. As a matter of fact, we are now shipping more than twice as much bacon weekly to Britain as we shipped before the war began. We cannot, therefore, give a reduction of the market for bacon as a result of the war as a reason for the federal government giving assistance in connection with the marketing of bacon.

So far as the second requirement is concerned, that those engaged in that branch of the industry cannot readily change to any other, of course under the circumstances there would be no necessity for change. Since more than twice the volume of bacon is required that was required at the beginning of the war, there is reason for farmers going into that production rather than going out of it, and farmers have been going in rather than going out.

Then, that those engaged in that branch of agriculture cannot maintain themselves in agriculture without government assistance. There may be some question whether farmers who are producing bacon in certain parts of Canada are able to produce it at a profit. There may be some question whether in any part of Canada farmers are obtaining sufficient at the present time for their hogs to be able to purchase some of the commodities which they have to buy at the prices they have to pay for them. But it seems to me that some proof would have to be shown with regard to this third matter before the federal government would be justified in giving blanket assistance to the bacon industry across Canada.

With regard to dairy products a somewhat similar condition prevails. So far as cheese is concerned, we sent more cheese last year to the British market than we have sent in many years. This year we have contracted to send to Britain double the amount of cheese we were sending five years ago. It cannot be said, therefore, that the coming

of the war has reduced the market for cheese outside Canada, nor can it be said that the coming of the war has reduced the market for cheese inside Canada.

There are two reasons why we have seen fit to give some assistance to cheese production in spite of the fact that the market has not been restricted. Britain herself desires to have a much greater volume of the product than we are able to give her at the present time. Also, if we are to keep cheese in its proper price relationship to butter without calling on Britain to help, some assistance has to be given to cheese, which is marketed outside of Canada in large volume, whereas butter for the most part is consumed within the country. We have therefore given assistance in connection with cheese to the extent of three-fifths of a cent a pound. In the coming year practically the whole market for butter will be within Canada. When the market for butter ceases to be a domestic one, we have difficulties in marketing it at a price which will cover the cost of production to our farmers. It is only when butter can be marketed within Canada itself in practically the whole volume of its production that we have been able to obtain a price which makes it possible for our farmers to produce it, and in many districts even under those circumstances they are not able to do so.

So far as tobacco is concerned, perhaps it meets the first condition which is laid down. There is not in Britain to-day as great a market for tobacco as there was when the war started, but it would probably be more difficult to meet the other conditions which were laid down as to when products should obtain government assistance.

Coming to apples, which is the last product I wish to compare with wheat, and which compares more nearly with wheat, I draw attention to this fact, that before the war fifty per cent of Canadian apples were going to Great Britain. Of these exports Nova Scotia produced eighty per cent, British Columbia about fifty per cent, and Ontario only a small percentage. It became very evident early in the war that the growers would experience difficulties as regards both their costs of production and their markets. Britain stated immediately she went into the war that she did not desire to take apples. This announcement at once put the problem before producers all across Canada. I wish only to say in this regard that the government of Canada grappled with the problem in September, the very first month of the war. They met the apple growers of Nova Scotia and entered into an agreement with them; they did the same as regards the growers of British Columbia, and they set up conditions across Canada which made it difficult for apple growers from other parts of the dominion to compete in certain seasons with the producers in central Canada.

In view of these facts I believe there will be no question in the minds of hon. members, when they take into consideration what I have just said with regard to wheat and other products, as to whether wheat falls into the category outlined by the conditions set last evening.

In the first place, has the market been reduced? The market which existed for the product of that branch of agriculture has been seriously curtailed by the war. I need do no more than state the facts in order to convince this committee that so far as wheat is concerned the market has been greatly curtailed since the coming of the war, and that there is not much possibility, during the next twelve months at least, of a greater market being found for wheat than we have had since the beginning of the war.

The second condition is that those engaged in one branch of the industry cannot readily change to any other without lapse of time and unreasonable expense. I doubt if anyone in the committee would even question that wheat complies with that condition. It is not only difficult for farmers in the wheat-growing area of Canada to change from wheat growing to any other occupation, but in many of those areas it is almost impossible for them to do anything else to advantage but grow wheat. That being so, I do not believe anyone will question that as regards the greatest section of the three western provinces it is most difficult for the farmers to change from the form of agriculture which they have been following to any other form of agriculture.

Then there is the question whether those engaged in that branch of agriculture can maintain themselves in it without government assistance. It might be a little more difficult to establish the case under that condition; but it is not so difficult as it might seem, when one has before him all the statistics with regard to the matter and at the same time has been listening to the discussions which have been taking place in this house and outside it, relating to agriculture. I believe there is general agreement right across Canada that agriculture is the one national industry which, more than any other, has suffered because of the fact that we are at war.

That goes for every branch of agriculture and not merely for the wheat growing section. It is admitted, as was stated last evening in the house, by publications put out by an organization known as the manufacturers association which, apart from the fact that

they can do business with agriculturists across Canada, has no reason for taking up the case at the present time. I believe that every organization, every governmental body, everyone in Canada is agreed that agriculture as an industry has been suffering as greatly as any other industry in Canada as a result of the war.

Mr. HOMUTH: More so.

Mr. GARDINER: More so, my hon. friend says. I will not give the figures again but I would ask hon. members to review those which I put on *Hansard* last evening with reference to the gross agricultural cash income of farmers right across Canada.

An hon. MEMBER: They were not comparative.

Mr. GARDINER: They were not comparative as to provinces but I will make them comparative as between wheat and other commodities. The last year which was given prior to the time that there was a very rapid reduction in the amount of cash obtained from farm products throughout Canada was 1929, and the gross returns were $922,000,000.

Mr. CASTLEDEN: Are those figures the cash returns to the farmers or to those who sold the commodities?

Mr. GARDINER: Those are gross cash returns for the commodities, to the farmers. The next year, 1930, the amount was $630,000,000. I will not read all the figures, but in 1932 it was $377,000,000. I would point out that nearly all, and certainly by far the greater proportion, of that reduction was due to the fall in the price of wheat. It was due at the same time to the decrease in the volume of wheat which was produced. Practically the whole reduction in the returns to agriculture across Canada can be accounted for by reduction in wheat and in the price of wheat, and where there is a variation from that it is comparatively small. In 1933 the return was a little better, $390,000,000; in 1934 it was $481,000,000 and in 1935 it was $509,000,000. If hon. members will examine the records they will find that again by far the greater part, almost all, of the increase in return to farmers in Canada was due to increases in the production of wheat or to improved prices in wheat. In 1936 the return was $569,000,000; in 1937, $640,000,000; in 1938, $647,000,000; in 1939, $702,000,000 and in 1940, $714,000,000.

While not such a great proportion of the difference in income is due to wheat and wheat prices, yet the greater part of the increased income, more particularly in the years 1936 and 1938, is due to wheat and wheat prices, when prices were comparatively better and when crops were not as poor as they had been in some of the preceding years. All I wish to establish at the moment is this—

Mr. TUSTIN: Has the minister the comparative figures of increases and decreases for wheat and other commodities?

Mr. GARDINER: It would take so long to give them that I cannot indicate them at this stage, but later if they are required I will put them on *Hansard*. This statement has been obtained from the statistics branch of the Department of Trade and Commerce and I have comparisons with regard to all the provinces. All I need to do to convince hon. members that the wheat growing areas have suffered to a greater degree than other agricultural areas is to read the index price for receipts from sale of farm products for 1940 as compared with the returns from 1926 to 1929, taking the average over the period 1926-29 as 100. What were the figures for 1940 in the different provinces? The index return for each of the provinces was:

Prince Edward Island	64·8
Nova Scotia	98·6
New Brunswick	86·3
Quebec	99·8
Ontario	85·8
Manitoba	74·9
Saskatchewan	50·9
Alberta	69·7
British Columbia	112·9

I only need to call attention to the fact that outside the province of Prince Edward Island the three lowest provinces are Manitoba, Saskatchewan and Alberta. The index figure for Saskatchewan for receipts from farm products is lower than that of any other province, and Saskatchewan depends more upon wheat for its returns from agriculture than any other province.

Mr. NICHOLSON: Has the minister the average for the last ten year period?

Mr. GARDINER: I have it from 1926 to the present time. I do not wish to give the figures with regard to the index all through, but I will deal with enough of them to illustrate the point. The point in the hon. member's mind is, what it has been in recent years and what it might have been in the years from 1926 to 1929 in some of the provinces. In Nova Scotia in 1928, which is the middle year of that period, it was 107·9, and for the last three years it has been 114·9, 114 and 110·4. This last year it was 98·6, the obvious reason being that apples have been greatly affected by the war.

In New Brunswick in the middle year 1928 it was 96·1, and for the last few years it has been 81, 71, 81, and 86. There has been an improvement over any other year in 1940.

In Quebec, in the middle year 1928, it was 107, and during the last four years it has been 84, 84·5, 88·4 and 99·8. There has been a very marked increase in the last year.

In Ontario in the middle year 1928 it was 103·5, and for the last four years it has been 82·6, 83, 81·4 and 85·8. While there has been an increase in Ontario it has not been as great as in the last three provinces for which I read the figures. But it is still approximately the same as New Brunswick's return.

The figures for other provinces are as follows:

Province	1928	1937	1938	1939	1940
Man.	101·8	91·7	77·9	80·5	74·9
Sask.	114·0	29·6	32·2	55·0	50·9
Alta.	118·8	68·3	74·5	66·3	69·7
B.C.	109·1	104·1	107·2	113·7	112·9

The average across Canada, or the total for all provinces for 1940 is 74.

I think those figures will emphasize to the committee the fact that the wheat-growing areas are suffering more as a result of the coming of the war than any other agricultural section in Canada. In fact I do not think it was necessary to quote figures to prove that statement.

Mr. NICHOLSON: Would the minister place the whole table on the record?

Mr. GARDINER: I have no objection if the committee would like to have it on the record. The table is as follows:

RECEIPTS FROM SALE OF FARM PRODUCTS BY PROVINCES* 1926–1940

(Gross Agricultural Cash Income)

—	P.E.I.	N.S.	N.B.	Que.	Ont.	Man.	Sask.	Alta.	B.C.	Total
					(million dollars)					
1926	9·84	13·86	16·13	96·80	253·90	89·4	289·2	161·0	22·1	952·2
1927	10·41	14·99	14·08	96·70	252·10	78·3	269·8	168·7	24·3	929·6
1928	9·89	16·51	13·98	108·60	269·00	82·1	319·5	210·8	28·5	1,058·8
1929	9·56	15·84	14·00	103·70	264·90	72·5	242·9	169·5	29·6	922·3
1930	8·47	16·50	13·45	83·70	216·80	47·6	123·7	93·5	27·0	630·8
1931	5·16	12·91	9·53	62·80	163·40	30·7	70·0	69·7	18·5	442·8
1932	3·50	10·52	7·12	48·40	123·20	28·4	73·4	67·2	15·5	377·4
1933	4·02	12·92	7·49	48·50	129·40	32·2	73·4	66·4	16·0	390·4
1934	5·02	13·44	9·51	61·30	145·30	44·1	91·8	92·8	18·3	481·7
1935	4·85	14·20	9·54	65·70	155·00	36·1	108·2	96·6	19·1	509·2
1936	6·29	14·73	11·32	73·50	186·30	45·9	119·0	91·5	21·1	569·7
1937	5·96	17·58	11·82	85·24	214·84	73·95	82·85	121·26	27·2	640·7
1938	5·10	17·44	10·45	85·77	215·68	62·82	90·24	132·26	28·0	647·8
1939	6·30	16·89	11·79	89·66	211·65	64·95	154·21	117·70	29·7	702·8
1940	6·43	15·09	12·55	101·27	223·09	60·38	142·67	123·74	29·5	714·7
	Index Numbers Receipts from Sale of Farm Products 1926–29 =100									
1926	99·1	90·6	110·9	95·4	97·7	110·8	103·2	90·7	84·6	98·6
1927	104·9	98·0	96·8	95·3	96·6	97·4	96·2	95·0	93·0	97·3
1928	99·6	107·9	96·1	107·0	103·5	101·8	114·0	118·8	109·1	109·6
1929	96·3	103·5	96·2	102·2	101·9	90·0	86·6	95·5	113·3	95·5

* Source: Report of the Royal Commission on Dominion-Provincial Relations. Date Supplied by Dominion Bureau of Statistics, Agricultural Branch.

Mr. ROWE: How could the minister say it was due to the war when 1937 and 1938 were still lower?

Mr. GARDINER: What I say is that when you take it across the country, in 1940, starting in Prince Edward Island and going all the way across, you find Saskatchewan is at the very bottom and had a decrease in 1940 as compared with the previous year. In order to prove the point I have been making with these figures, the statement which is borne out by 1937 and 1938 would have to be true. As a matter of fact, only 35 million bushels of wheat were grown in Saskatchewan in 1937, which accounts for the fact that the figure is down to 29·6, and that accounts for a considerable part of the low return in 1937 for agricultural products. To go back to other years, in 1932 the figure was lower than any of these. It was 26·2, the reason being that the crop was very small and, at the same time, prices were very low.

Mr. ROWE: The wheat problem existed before the war.

Mr. GARDINER: If we take it either way, the people growing wheat are, because of low returns, suffering to a greater extent at the present time than farmers in any other part of Canada.

Mr. KINLEY: In the minister's computation by provinces, does he take into account the wheat on hand in the west that has been practically sold to the government at seventy cents a bushel?

Mr. GARDINER: Yes; that has all been transferred to the government and the money has gone to the farmers.

Mr. STIRLING: Will the minister repeat the figures with regard to 1940, which I understand to be percentages of the average of 1926-29.

Mr. GARDINER: They are the index figures as compared with 100 for 1926-29.

Mr. STIRLING: Returns to the farmers?

Mr. GARDINER: Yes; index number of receipts from farm products. It is the gross return from agricultural products. It does not all remain with the farmer; it is what his economy area is based on, and it is the economy area with which we are at present concerned. All I am trying to place before the committee is this: We all agree that agriculture is in a difficult position at the present time; we can, by taking the actual figures, prove that by the test I suggested yesterday for different branches of the agricultural industry if they are asking for assistance from the government, the wheat-growing area can make at least as good a case as any other part of Canada, and to my mind a better case than any other part of Canada or of the agricultural industry.

Mr. HANSON (York-Sunbury): What the minister is telling us is that they have suffered more than any other part of Canada by reason of drought and low prices. But I protest against the matter being put on the basis of the war. It began long before the war came.

Mr. GARDINER: If the leader of the opposition insists upon it, it may interest him to know that the largest two consecutive crops western Canada ever raised were grown in 1939 and 1940, the year the war started and last year. Practically all that wheat is still in Canada. In other words, the war has made it impossible to market more than about half of the amount of wheat which we previously sold in the world's market through Great Britain and the shipping that went to Great Britain.

Mr. HANSON (York-Sunbury): That was not the beginning.

Mr. GARDINER: Well, that is one of the reasons for our present difficulty. I think it is fairly well known to the committee and to the people of Canada generally that wheat growing is a peculiar part of the agricultural industry. Wheat is a cereal crop which can be successfully grown in its best form only in dry areas. Wheat is the staple food of hundreds of millions of people in the world because of the fact that it can be stored for long periods of time without any great expense. The hon. member for Qu'Appelle thinks the expense of storing it in this country is too high, and I may agree with him in that. But it can be stored more cheaply than any other commodity produced on the farm and for a longer period of time. For that reason it is one of the most useful and serviceable food products in the world, and one that, in war time, can be used to better advantage than any other. Therefore, all other things being equal, war should help it in the long run. In the early stages of this war, however, as in the early stages of the last, wheat is suffering under some handicap on account of the manner in which the war has been conducted and has developed. If France had not been overcome in 1940, it is agreed by all statisticians that anywhere from 100 million to 150 million bushels of wheat would have gone into France.

Mr. STIRLING: Not necessarily Canadian wheat.

Mr. GARDINER: Not necessarily all Canadian wheat, but a very considerable part would

have been Canadian, by reason of our nearness to western Europe and the shortage of shipping.

Mr. HANSON (York-Sunbury): We will agree that it would have helped at any rate.

Mr. GARDINER: Yes, by far the greater part. But only a very small amount of wheat has gone to Europe since the fall of France; through the assistance of Great Britain, some went to Spain. Communications were immediately carried on with Canada in order to secure that wheat. It is natural that the wheat required in Europe during time of war will be obtained from the closest possible sources of supply, other things being equal.

Mr. STIRLING: The minister will agree that the wheat problem would have been confronting Canada, had the war never taken place?

Mr. GARDINER: Mr. Chairman, I will agree that with a large production of wheat such as we have had during the last two years, and had we been faced with ten years of preparation for the war, had there not been a war last year the wheat problem would have confronted us. If, however, there had been no ten years of preparation for the war, I am just as certain there would not have been any wheat problem last year. There was no wheat problem in this country in 1937 and 1938.

Mr. HANSON (York-Sunbury): Will the minister not agree with me that the problem dates back to the failure to sell the 1938-39 crop, upon which this country lost $61,000,000, before there was any war?

Mr. GARDINER: Mr. Chairman, I will say that it dates back much farther than that.

Mr. HANSON (York-Sunbury): That was the beginning of it.

Mr. GARDINER: I do not wish to begin a discussion respecting years, because there are some inferences I do not desire to introduce into this discussion, at least at this particular stage. There are, however, some years to which I could refer which were much more difficult than 1937 and 1938.

Mr. ROWE: What about 1929 and 1930?

Mr. GARDINER: As a matter of fact, on July 31, 1938, we had 23,000,000 bushels of wheat in Canada.

Mr. HANSON (York-Sunbury): Very little.

Mr. GARDINER: And we had all this discussion as to the wheat problem being one not capable of solution, years before that. Yet the wheat disappeared. Wheat went up to $1.36 a bushel—even up to $1.50 at one time during that year. Therefore, to say that the problem began in 1938-39 is scarcely going back far enough. We have gone over that problem time and again. I will admit this, that so long as we are growing wheat in Canada, or so long as it is being grown anywhere else in the world, in those dry areas suited to the production of high quality wheat there will always be a problem in connection with it. There will always be difficulties associated with the growing and marketing of wheat in those particular areas, in the first place because of the difficulty of growing it when there is not enough moisture, and the further problem which confronts us when there is a little too much moisture. Then there is the further difficulty of marketing the wheat when there are excessively large crops. But the possibility of storing wheat is what makes it an important food product and an important farm product, in spite of the difficulties I have named.

Mr. ROWE: Has the minister any estimate as to the possibility of increased output or increased markets in the event of the war ending in a year or two?

Mr. GARDINER: I am not going to attempt to discuss that question at this time, because it is far away from the problem with which we are now confronted. We are confronted at this time only with the problem of 1941, and we are attempting to deal only with that problem of 1941. We are attempting to deal with it in a manner which will provide not quite so much wheat to be marketed when the time comes, or when the market will be available for any wheat we may have to offer. We are attempting to create a situation where the difficulties will not be quite so great as they might be if something were not done in the matter.

Mr. DONNELLY: Was it not because of the collapse of France that our wheat price dropped down to about 70 cents, thereby showing that it was a war condition?

Mr. GARDINER: Yes. It was with the collapse of France that the wheat price dropped to a very low figure, and then we pegged wheat at 72 cents in order to prevent it from going still lower.

Mr. PERLEY: But that peg was long before the collapse of France.

Mr. GARDINER: No; it was after wheat had gone down to 68 cents, and that was after the collapse of the countries through which the German troops were passing.

Mr. SENN: I hesitate to interrupt the minister, but there is a question I should like to ask. He is basing his comparison of

revenues from agricultural production on the different prices obtained between the years 1926 and 1929. Is it not true that in those years the wheat growing areas in the west enjoyed large crops and high prices, and that their revenues at that time were greater than in other places throughout the dominion? Is it not true that although their revenues have dropped by a greater percentage than the revenues in other provinces, the comparison is still hardly justifiable?

Mr. GARDINER: The index prices for Saskatchewan for those five years were 103, 96, 114, 86 and 44. The figures for Ontario are 97, 96, 103, 102 and 83—a considerably higher average. The figures for Quebec are 95, 95, 107, 102 and 82; and for Nova Scotia, 90, 98, 107, 103, 107. It is clear, therefore, that they are not so different. In fact, they are somewhat close.

Mr. DONNELLY: Has this been the second largest wheat production year we ever had?

Mr. GARDINER: Not only is it the second largest, but in the last two years we have had the two largest consecutive crops we have ever grown in western Canada. Therefore the whole problem at the present time is not one arising from the fact that we have had low yields. The average yields in the last four years I would say would compare favourably with those of any four years in the history of western Canada.

I gave those figures to indicate to the committee the reasons for coming to the conclusion to which I believe we have all come, no matter on which side of the house we may sit or to which group we may belong, namely, that the wheat growing areas have suffered greatly, both before the war and since the war began. The war itself has had a great deal to do with the present position of the wheat grower in western Canada, and for that reason we have considered it wise to do something concerning his position. There is the further reason that I wanted to indicate to the committee, namely, the fact that farmers who have gone through the conditions indicated by these index figures must require some assistance—if we are to consider the representations which have been made from other parts of Canada concerning agriculture in those areas.

Having done that, if the committee would permit me I should like for a few minutes to deal with the wheat policy itself. I would place on record some of the requests which have been made, particularly from farm organizations and those who are presumed to be representative of farmers in all sections of Canada. As a matter of fact, two of them are representative of farmers right across Canada.

It will be recalled that two years ago one of the questions before the house was as to whether or not we should appoint an advisory committee to advise the wheat board. After discussion in the house, an advisory committee was set up. I believe I ought to give the committee the advice which was given the government and the wheat board by that advisory committee. They advise:

1. That the stocks of wheat owned by the Canadian wheat board as at July 31, 1941 (and which will amount to approximately 500 million bushels) be viewed as a war-time reserve.

2. That the dominion government continue a price guarantee for 1941-42 but that this guarantee be limited to the volume of wheat which can be marketed within the 1941-42 crop year. Marketable quantities are estimated as follows:

Domestic consumption.. 50 million bushels
Sold to export.....180 million bushels

Total.....230 million bushels

The advisory committee recommends that such a fixed price for 1941-42 be established by the dominion government as it may deem advisable, having in mind the restricted deliveries, and that it is in the national interest to maintain an adequate farm income.

3. That the fixing of minimum prices for wheat futures on the Winnipeg grain exchange be continued during the crop year 1941-42.

4. That the powers of the Canadian wheat board be enlarged to enable the board to control all sales of wheat by producers and others, having in mind that any excess production in 1941 must, of necessity, be retained on farms for an indefinite period.

5. That the processing levy now in effect be increased as from July 31, 1941, or sooner, to such an amount as when added to minimum prices above-mentioned shall equal a figure deemed to give the producer a remunerative return on that portion of his production as is:

(a) Consumed as flour in Canada for any purpose whatsoever;

(b) Utilized in all other wheat products used in Canada for any purpose whatsoever except for the feeding of live stock and poultry.

6. That the net proceeds of the increased processing levy be paid to producers in the form of a "domestic premium" on a per bushel basis on deliveries of 230 million bushels in 1941-42. The "domestic premium" will be in addition to the fixed price provided for under the Canadian Wheat Board Act.

I should like to say, by way of note, that the Canadian Wheat Board Act does not provide a fixed price for wheat; it provides for an advance to farmers.

Mr. DOUGLAS (Weyburn): From what is the minister quoting?

Mr. GARDINER: From a copy of the recommendations made by the advisory committee.

Mr. DOUGLAS (Weyburn): Will that memorandum be tabled?

Mr. GARDINER: It will all be in *Hansard* when I get through reading it. I am reading every word as I go along.

Mr. DOUGLAS (Weyburn): All the recommendations?

Mr. GARDINER: Yes. The recommendations continue:

7. That quotas be established upon the equitable distribution among producers of the amount of wheat which will be sold in the domestic and export markets during 1941-42.

8. That agriculture join with all other industries in Canada in effecting savings wherever possible as a war-time measure. In the case of agriculture, this can best be done by diversifying production and making the farm home as self-supporting as possible in respect to such commodities as eggs, milk, butter, vegetables, etc.

9. That the dominion government be requested to enlarge its research facilities in respect to finding edible and inedible uses for wheat and other farm products.

10. That an effort be made by the dominion government and the provincial departments of agriculture to fully explain the facts of the present wheat situation to the farmers of the prairie provinces.

The farmers of the prairie provinces know the wheat problem about as well as anyone in Canada, and I doubt if they need it explained to them. Those are the ten recommendations which have been made. It is not my intention to discuss these recommendations, except in so far as they affect the policy or the proposals which I am now outlining. Before proceeding to discuss these proposals in the light of these recommendations, I should like to place on *Hansard* a recommendation which was published in the press in December, 1940; I think it appeared in issues of different newspapers about December 12 or 13. This gave expression to the views of the wheat pool board which had met in Regina in the week of December 9, 1940. The one recommendation which refers to the matters I am going to discuss is in these terms:

Amendment by the federal government of the Canadian Wheat Board Act to raise substantially the minimum price guaranteed for wheat produced in the current crop year and for 1941.

I should like to call attention, in passing, to the fact that in neither the recommendations of the wheat board committee nor in this particular recommendation is any price for wheat mentioned. I have before me the recommendations of the Canadian federation of agriculture. May I say that the recommendation which I have just read is part of a set of recommendations which were passed, I think first in Regina, reconsidered in Winnipeg and then finally considered in Toronto. The recommendations which I am about to read are, I believe, the final expression of opinion of agriculture in Canada upon the wheat question.

[Mr. T. C. Douglas.]

Following the Toronto meeting, a delegation came to Ottawa, reported to the government of Canada and placed its recommendations before them.

Mr. DOUGLAS (Weyburn): Has the minister the date?

Mr. GARDINER: No; but I can get it later.

Mr. DOUGLAS (Weyburn): I think it was January 27.

Mr. GARDINER: Some time in January. The recommendations read:

Wheat. In the days that lie ahead, it may be that a measure of adjustment of agricultural production may be found necessary in the great wheat growing areas of the prairie provinces, which may involve the re-appraisal of western agricultural resources so that a balance in agricultural production may be established.

In the meantime, the problem created by heavy surpluses is a very real one for the western wheat grower.

The Canadian federation of agriculture recommends:

(1) That while an adjustment programme may be found necessary in the future, it is not advisable at the present time to introduce compulsory restriction of acreage seeded to wheat.

(2) For the coming crop year, we believe that the dominion government, through the wheat board, should undertake to announce the total amount of wheat of which it is prepared to accept delivery. We believe that the amount of wheat which may be delivered by the grower in the crop season of 1941-42 should be based on the estimated amount which the wheat board may be reasonably expected to market during the 1941-42 crop year, including both export and domestic sales. Having established the maximum amount which may be delivered, we recommend that the individual grower's delivery quota should be based on a policy which will preserve to each farm unit an equitable share of such maximum amount in proportion to the past production of the crop district in which it is located.

That is as near as one can get to a word description of what was read into the policy the other day by the Minister of Trade and Commerce (Mr. MacKinnon).

(3) That because of the restricted deliveries and in order to maintain the income of the western farm home, steps should be taken to increase the initial payment for wheat delivered in the crop year of 1941.

Again, there is no definite amount stated; it is an increase in the initial payment and not an increase in price which is asked for.

(4) That until such time as the price of wheat reaches and is maintained at a level commensurate with the price of those things that enter into the cost of producing wheat, a processing tax of not less than 50 cents per bushel be placed on all wheat milled for domestic consumption. The revenue from such

tax to be added to the aggregate price received for the wheat marketed and be available for the purpose of increasing the initial payment to the farmer.

I would point out that while the other recommendation did not state the amount to which the processing tax should be increased, this recommends that it be not less than 50 cents a bushel.

(5) It is anticipated that at the end of the current crop year, all existing grain storage facilities will be filled. We believe that these surpluses of bread grains may become an important factor in our war effort and that in the meantime they should be regarded as a reserve which will ensure a constant supply of wheat to Great Britain in the event of possible crop failure in the course of the war, and also be available to meet the needs of the people of Europe when the war is won.

(6) In view of the foregoing, and because we believe that the maintenance of reserve stocks of grain on the farm provides an effective form of crop insurance under existing conditions, we recommend that the dominion government be asked to provide financial assistance to farmers for the construction of adequate farm storage facilities to enable the farmer to adjust his deliveries in accordance with the system outlined above.

I would say now, so that I may not have to say it later, that in our opinion the time has not yet arrived when we should come to a final conclusion as to whether this proposal should be adopted. The suggestion is that we should encourage the storage of grain upon farms by financing the creation of adequate farm storage. Hon. members will agree with me that if we had a crop like that of 1937, or possibly 1934 or 1933 or 1932 or 1931, we would not be very much concerned about farm storage in western Canada, and particularly if we had a crop like that of 1937. Again, there would be certain areas in which we would not be concerned about farm storage if we had in those areas a crop failure like some of the failures we have had in the last two years, even with a big crop for the whole of Canada. We feel the time has not yet come to give a final decision on the question whether there should be farm storage; that it can better be left until later in the crop year.

Then (7):

It is recommended that the practice inaugurated during the present crop year, of paying farm storage, be continued through the coming crop season, and that the amount of the farm storage accruing due to individual farmers be used to repay any advances made to them which may be made for the purpose of providing additional storage facilities.

The Minister of Trade and Commerce announced the other day that there would be a continuance of the policy of payment for storage upon the farms.

Mr. CASTLEDEN: Within the quota?

Mr. GARDINER: Within the quota.

Then (8):

Since it is anticipated that practically no elevator storage space will be available at the time of the 1941 harvest, we recommend that the dominion government authorize the Canadian wheat board to make cash advances against that portion of the 1941 crop which the farmer can deliver under the arrangement outlined above during the crop year 1941-42.

Those are the recommendations which were made by the organization which represents farmers across Canada. Alongside those recommendations I have placed the recommendations which were made by the official body which was set up to advise the wheat board and the government on matters of this kind.

I think that with the exception of the definite suggestion that a processing tax be levied and that the initial payment be increased—with nothing definite as to the amount—and with the possible exception of the proposal made in one other section of these recommendations, we have already embodied in the policy which is before the house the greater part of what has been asked for in the resolutions of both bodies.

Mr. DOUGLAS (Weyburn): There is not much left.

Mr. GARDINER: There is a good deal left, perhaps much more than the hon. member thinks there is at the moment.

The fact that neither the Saskatchewan pool in its recommendations, nor the advisory committee in its recommendations, nor the Canadian agricultural federation in its recommendations, was able to insert a price, I think clearly indicates that, while there may have been some sentiment in these organizations in favour of changing the advance provided for in the wheat board act, there was considerable sentiment against it. I venture to say that if we had been able to take delivery of all the wheat, there would have been little, if any, sentiment in favour of a change in the advance payment. I think that applies to western farmers as well as to other people throughout Canada, namely, that if it had been possible to take delivery of all the wheat this coming year there would have been very little agitation anywhere in Canada in favour of an increase in the advance payment.

I should like to point out to the committee, before going on to discuss further the proposals which we have to make in relation to this question, just two things. One of them is that the government's policy has set a maximum delivery of 230 million bushels of wheat for all Canada. That means approximately 222 million bushels of wheat for the three prairie provinces, and at 70 cents a bushel Fort William it means 52 cents a bushel for the average farmer in western

Canada for No. 1 northern wheat. The amount of wheat which is to be delivered, multiplied by the sum which can be obtained out of the advance per bushel, gives approximately $115,000,000 for wheat.

Mr. JOHNSTON (Bow River): But No. 1 northern would not be the average grade, would it?

Mr. GARDINER: No. I am saying that is the top amount which could be secured by the delivery of 230 million bushels of wheat.

Mr. PERLEY: No. 3 would be the average grade.

Mr. GARDINER: Last year I think it was between No. 2 and No. 1. Sometimes it is very high and sometimes very low.

Mr. HANSON (York-Sunbury): Is the minister saying that $115,000,000 is the most that can be looked for by the farmers from the sale of wheat?

Mr. GARDINER: That is the maximum, it would appear, which the farmers will be able to get out of wheat in western Canada in the coming season.

Mr. NICHOLSON: Has the minister the average price for 1939?

Mr. GARDINER: The average would be the same. The advance in 1939 was 70 cents, and the average for the whole year was 49 cents, which is a little below grade 2.

I have stated the position to the committee in order to indicate that as compared even with last year the farmers are asked to make a cut from a gross return of $176,000,000 to a net return to the farmers of not more than $115,000,000.

Mr. BENCE: Where does the minister get the $176,000,000?

Mr. GARDINER: That is the figure in the reports of the statistics branch.

Mr. BENCE: The Minister of Trade and Commerce in his statement indicated that 472,000,000 bushels of wheat would be sold by the end of the crop year.

Mr. GARDINER: Sold?

Mr. BENCE: Delivered to the elevator at the end of the crop year ending July 31, 1941. If the minister is going to make a comparison, he should take that figure.

Mr. GARDINER: I find on consulting the report that I am out by $2,000,000, because the report shows that the receipts for the prairie provinces from the sale of "farm products, wheat", was $178,900,000.

[Mr. Gardiner.]

Mr. BENCE: I do not want to interrupt the minister, but the Minister of Trade and Commerce on March 12, 1941, stated in the house that approximately 472,000,000 bushels would be delivered this crop year; and if the Minister of Agriculture is going to take the figure of 230 million bushels of wheat as the maximum delivery during the crop year ending July 31, 1942, he should take comparative figures based on the 472 million bushels, which would bring in well over $200,000,000.

Mr. GARDINER: The figure I am taking is the figure of the statistics branch, and I do not want to change that figure. The situation is this, that we are asking this year that the farmer be satisfied with $115,000,000 from wheat, and we are providing him with sufficient money to make up at least some of the difference between what he would have obtained had he marketed all his wheat and what he is asked to take now.

Mr. JOHNSTON (Bow River): What percentage would that be?

Mr. GARDINER: I stated the other day, $36,000,000 from wheat.

Mr. JOHNSTON (Bow River): That is the amount you would have to make up?

Mr. GARDINER: No; that is the amount we estimate will probably be made up under the proposals I have placed before the house. There are other ways, which do not come under this policy, in which the money can be made up.

Mr. PERLEY: The maximum?

Mr. GARDINER: Yes, the maximum.

At page 1464 of *Hansard* of March 12, I placed before the house the agricultural part of the programme which the government desires to have put into effect this year, and associated with that, four proposals for the distribution of funds in the western provinces; and I wish this afternoon to deal with those four sections in order to indicate to the committee some of the things which may be done on the western farms as a result of the proposals made.

Mr. PERLEY: Would the minister mind putting on record all the proposals or recommendations which have been made? I believe he has gone as far as the pool. Did the Saskatchewan government not make recommendations? It would be well to have them on the record.

Mr. GARDINER: I will probably put them on, a little later. That introduces some other questions which we may all want to discuss. But they are approximately the same —with this difference, that they do set a price of 85 cents.

Mr. PERLEY: I think it would be a good thing to have it on *Hansard* right at this point.

Mr. GARDINER: I think it will get on *Hansard*. Just at the moment, however, I should like to get along.

The first proposal made was this:

It is our intention, therefore, to make payments of certain sums per acre on all reductions made in wheat sowings in the prairie provinces in 1941 as compared with 1940, provided the farmer does certain specified things with the land.

Since making that proposal to the house, as well as before making it, we have naturally been giving the widest possible study to the whole matter. But since those proposals were made we have had in Ottawa representatives of the three western governments and of the organized municipalities, and I have received from farmers in western Canada a great many letters citing their own situation and asking what effect these regulations would have upon their own farm operations.

Mr. HANSON (York-Sunbury): Has the minister had any from Abernethy?

Mr. GARDINER: Yes, a resolution from Abernethy and one from Balcarres. As a result of the information gathered, certain facts have been found to exist; probably the farmer members of this house knew before this proposal was made that they existed. There are some instances where farmers last year came to the conclusion, "We are in a war; therefore we should seed very large acreages"; and they did so. Other farmers came to the conclusion, "We are in a war, and therefore we should not seed large acreages"; and so they seeded last year lower acreages than usual. It just so happens that we have on record acreages of about 85 per cent, 75 per cent complete for two years, and about 85 per cent, 10 per cent of which is not quite complete for the two years, of the farms in the three western provinces. Those records were made up in connection with the administration of the Prairie Farm Assistance Act; so we are proposing that, when regulations are drafted, they include a provision that the forms which are sent out shall provide for the farmer making a statement as to what he did in both years, 1939 and 1940. I am sure that some hon. members will have proposals to make which will bear upon the same matter. We feel that this will have a tendency to average the two sets of individuals, one of whom increased his acreage in 1940 and the other of whom decreased it in 1940.

Then there is another group of individuals who started farming this year for the first time.

Mr. ROWE: I don't know why!

Mr. GARDINER: They have broken up new land, and some provision will have to be made for that type of individual. I will not take the time of the committee in reciting other categories; no doubt hon. members will refer to some of them as we go along.

Then we say this:

1. If he summer-fallows the reduced wheat acreage or part of it, the government will pay him $4 an acre for the reduced wheat acreage which is black July 1, 1941; payments to be made as soon as possible after July 1, 1941.

Now, "black" is a term which we in western Canada have been accustomed to use from very early days in relation to summer-fallow, but probably it is not a technical way to describe summer-fallow as we know it over a considerable part of western Canada to-day. The proposals and the regulations will be to the effect that the land is being summer-fallowed in a manner which is acknowledged by our various experimental farms in the different sections as being a reasonable kind of agriculture to pursue.

Mr. PERLEY: Will inspectors have latitude to say what is summer-fallow and what is not?

Mr. GARDINER: No; I do not think the inspectors will determine much of that. I think it will be according to the way the regulations are drafted.

Mr. PERLEY: They had a lot of latitude last year.

Mr. DIEFENBAKER: Suppose that this year there is a reduction of ten million acres by way of summer-fallow over and above the normal summer-fallow, what arrangements will be made in that event for payments on such reduction?

Mr. GARDINER: In that event we would have to make arrangements for payments in the same way we always do under such circumstances. Probably we would have to get a warrant. The matter would be provided for; the payments would be made under the regulations, and if additional amounts were required, we would have to get a warrant and bring the matter back to the house.

Mr. DIEFENBAKER: Have the regulations been drawn yet?

Mr. GARDINER: They are in process of being drawn.

Mr. DIEFENBAKER: Will they be placed before this house?

Mr. GARDINER: I said in the early part of the discussion that it was my intention to place them before this house in some form which would be satisfactory to the house.

. . . payments to be made as soon as possible after July 1, 1941.

This morning I had a recommendation from the government of Alberta to the effect that that date should be August 1 instead of July 1. Consideration will be given, of course, to the recommendation.

2. If he sows the reduced wheat acreage or part of it to coarse grains in the spring or, in the case of rye, in the fall of 1941 on lands not summer-fallowed, the government will pay him $2 an acre in 1941 as soon as possible after proof of sowing is established.

Mr. WRIGHT: Will flax and peas be considered as "coarse grains" within the meaning of the act?

Mr. GARDINER: We have not yet determined what will be included. We are examining into the position of flax at the present time, and will give an opinion on that later. I believe that, technically speaking, flax is not a "coarse grain." Peas, I think, would be.

Mr. DOUGLAS (Weyburn): Would alfalfa be considered a legume or a coarse grain?

Mr. GARDINER: No. Provision is made for sowing alfalfa, though, later. But the explanation I wish to make is to this effect:

If he sows the reduced wheat acreage or part of it to coarse grains in the spring or, in the case of rye, in the fall of 1941 on lands not summer-fallowed. . . .

It will be known by those who farm on lands in western Cnaada that there are some who sow their rye on summer-fallow and there are others who sow their rye on stubble land. There are some who do not believe in summer-fallowing in certain areas, and they let their land lie fallow without cultivation during the early part of the summer. They may sow that land to rye in the fall and collect $2 as a result. That, I think, covers pretty well the explanation in connection with that section.

The next, No. 3, provides:

If he sows a reduced wheat acreage or part of it to grass or clover during 1941, provided the land has not also been sown to coarse grain, or summer-fallowed, the government will pay him $2 an acre as soon as possible after proof of sowing has been established, and an additional $2 an acre if the same land is still seeded down to grass on July 1, 1942.

The intention of that section is to get land seeded to grass in the first place and, in the second place, to keep it seeded to grass for the second year, which is the only reason for seeding it to begin with. This would tend to prevent it from being ploughed up again and put back into wheat the second year.

Mr. LEADER: Suppose a farmer had a volunteer crop of sweet clover. Many of us in Manitoba have been sowing sweet clover for years and the land is practically full of that seed. Suppose a farmer should wish to let that land produce a sweet clover crop this summer; would that be classed as falling within that section?

Mr. GARDINER: I am afraid not, although I should not like to express a definite opinion on the point at this stage. It would not come under this particular section or any section that I have read so far.

Mr. LEADER: A good deal of it will be done in Manitoba. It is done to a certain extent every year.

Mr. WRIGHT: Why is a distinction made between the man who seeds down with a coarse grain crop and the man who seeds down without? In our section we seed down to clover along with a coarse grain crop, according to the regulation. We do not receive $2 an acre if we seed down with the use of coarse grain.

Mr. GARDINER: There is no difference in the position so far as this year is concerned. That is to say, the man will get $2 if he seeds coarse grain in the spring, and he will get $2 if he seeds grass on stubble in the spring. In certain sections of the west where it is dry, it would be wise to put it in with a nurse crop. In the section in which my hon. friend farms it would not be wise to put it in the nurse crop, so that we do not desire to provide for seed in the nurse crop in that case, because we consider that a good deal would be wasted in certain sections. But in a section where it is the proper thing to seed in the nurse crop, $2 is paid for the nurse and $2 the following year for the grass.

Mr. ROWE: If he sows two crops he gets two returns, provided he has summer-fallowed?

Mr. GARDINER: Through the two years, yes. By July, 1942, he would be almost ready to cut a wheat crop on the other land.

The next section, No. 4, provides:

If he sows a reduced wheat acreage or part of it, which is also sown to coarse grain or which is summer-fallowed in 1941 to grass or and clover, or to rye in 1941, the government will pay $2 an acre as soon as possible after July 1, 1942, provided the same land is in grass or and clover or rye on that date.

It will be noted that under that a man can take a summer-fallow on which he drew $4 an acre in the spring and sow it to grass in the fall, as many farmers do. They sow crested wheat grass in the fall. On the other hand, he can sow it to rye, as many farmers do. He will get nothing for sowing rye or crested wheat grass on summer-fallow in the fall of 1941; but if he leaves the rye or crested wheat grass on the land until July 1, 1942, he will

receive $2 an acre for having sown it. This means that if it were summer-fallowed this year, and there were still grass or rye crop on it on July 1 next, in the two years he would have collected by that method, $6.

Mr. ROWE: If he summer-fallowed one year and got $4 and seeded it in the spring as a nurse crop, he would get $4 more; and if he summer-fallowed the next year, would he still get more?

Mr. GARDINER: There is no provision for seeding anything in the second year. That is why I said that I did not wish to place these regulations on the statute books in the form of legislation. It is simply a provision for this season for the carryover of grass or rye into the succeeding year.

Mr. CASTLEDEN: Is that only on reduced wheat acreage?

Mr. GARDINER: Yes, only on reduced wheat acreage. If a man had 100 acres of wheat and reduced his wheat acreage by 40 acres, that is, if he had 100 acres in wheat last year and this year seeded only sixty acres of wheat, and summer-fallowed twenty acres, sowing the other twenty acres to grass or coarse grains, then he would receive $4 an acre on twenty acres and $2 an acre on the other twenty. I think that is all it is necessary for me to say to explain the intentions of the government in making payments to farmers.

Mr. LEADER: Suppose a man did not have any wheat in, last year—and there are several —would he come into the picture at all?

Mr. GARDINER: If he had wheat in 1939. We intend to take the two years.

Mr. LEADER: But he loses 1940.

Mr. GARDINER: We intend to take two years and average them, and he would probably have some recognition because of what he had done in 1939. I should not say that we intend to take two years and average them; we are getting information now on which to base the regulations so that they will be fair to all farmers throughout the west. We may decide to take 1939 instead of 1940 because of the fact that the war had not entered into the picture in 1939 when the crop was sown, but we wish to look into all the facts before deciding finally what should be done. Something will be done to take care of such cases.

Mr. WEIR: Has the point been considered with reference to grass that may have been seeded last fall? On certain lands in Manitoba grass is seeded the fall before, which ordinarily would be seeded in the spring of 1941. That is one class of farmers I have in mind. There is another class of farmers who are to a large extent using corn as a summer-fallow substitute. They are using larger acreages for summer-fallowing, sowing corn wider apart. They regard it as a method of summer-fallowing rather than as the production of a corn crop. Is consideration being given to that?

Mr. GARDINER: I would rather wait until we have the regulations in front of us before discussing too many details. So far as the first case is concerned, the person who farms in that way is taken care of in the proposals. If the proper method of sowing grass seed in that particular area is to sow it in the fall, the farmer will get the advantage of the provision which states that if he does sow it in the fall of this year he will receive $2. We are not paying anything for anything done last year.

Mr. ROSS (Souris): In view of the statement the minister has made, taking into account the years 1939 and 1940, the basis would have reference to acreage rather than to the operator? That would be based on the acreage, irrespective of the operator? For instance, there are many tenants who change each year.

Mr. GARDINER: Yes, it would have to be based on the land and what was done with the land the year before, taken into consideration. There will be a great many variations; that is the reason we have to do it by regulation. There might be a father whose son gets married this year and who divides his farm; or a man who sells part of his farm, and it may be found that all the wheat was on the part now in possession of another. There are scores of cases, and the matter must be dealt with by regulation.

Mr. GERSHAW: Will alfalfa be classed as grass?

Mr. GARDINER: There is no doubt about that. It says "grass or clover."

Mr. HANSELL: Would ths minister amplify what is likely to be the regulation concerning tenants on land? Will the amount be paid to the tenant or the owner?

Mr. GARDINER: The present intention, and I think it will be carried into the regulations, is that this proposal will follow a different principle from that of the Prairie Farm Assistance Act. Under that act the purpose is to give assistance to people who, because they have a poor crop in a particular year, require help. That is for the purpose of maintaining on the land the people who are on the land. This legislation is for the purpose of giving a larger return to people who are being denied the right to sell their wheat this year.

Therefore the view held is that the division of the money should follow the contract; that is, where there is a crop payment contract which provides for a two and one division of the money, two-thirds to the renter and one-third, it may be to the mortgagor, or to some other person who is merely renting, the payment will be made on the basis of the contract.

Mr. QUELCH: Will there be provision for dealing with new land, taken in 1939, broken in 1940?

Mr. GARDINER: Yes; there will have to be provision made for that land. It will have to be taken on an average basis or some other such basis.

Mr. HANSON (York-Sunbury): I desire to say a few words, not on the principle of the proposal but on the procedure proposed to be adopted. I had intended to make my protest with regard to this matter before the minister made his general statement. I shall, however, do so now.

I suggest to the minister that the reason which he gave for bringing down the wheat policy as an estimate is totally inadequate and is not in accordance with the precedents heretofore followed in this house. It is a denial of the principle of responsible government. We are asked to vote money but are not to have any say at all with respect to the manner in which it is to be expended. This house is not a mere debating society. It is the supreme legislative body of the nation, and it is the right and the duty of this house and of parliament to pass in legislative form the policy to be followed and to prescribe the conditions under which that policy shall be placed in effect; not merely to order the issue of a blank cheque to the Department of Agriculture.

Apart from the situation in this chamber, the proposed procedure of merely tacking a policy on to a supplementary estimate or money bill will, under our rules and practice in parliament, preclude the other chamber from dealing with this matter, one of the most important, if not the most important of our domestic problems.

I do not understand why the Prime Minister, who throughout his public life has so frequently declared his belief in the supremacy of parliament, should insist upon this procedure. With all the emphasis and sincerity at my command I appeal to him to turn back to our established and time-tried procedure and to allow this parliament, not the governor in council, to take the necessary legislative action.

What is proposed to be done is not sound policy and procedure. I have said on many occasions that, since the war began, we in this house have abdicated our function. This course should not be pursued any further. In a domestic problem like this, parliament should regain some of its supremacy and authority. On a purely domestic issue such as wheat, surely the minister will not deal with it by a mere vote in the estimates.

May I remind the minister and the committee that in 1931 when the crop yield was low, prices low and farm income low, the then government undertook to help the wheat producers by a bonus of five cents a bushel. This was done by way of a bill, not an estimate. Such a course as the latter was not even suggested. The bill as introduced was passed and became chapter 60 of 21-22 George V, 1931. The principle was embodied in the bill, and the supremacy of parliament was recognized.

I turn now to that legislation. It was temporary in its nature, just as this is. It was not a policy that was to continue. This is what it provided for, after the preamble:

1. The governor in council may authorize the payment, out of the consolidated revenue fund, of the sum of five cents for every bushel of wheat grown in the provinces of Alberta, Saskatchewan and Manitoba in the year 1931, and delivered to any licenced elevator in the western inspection division, commission merchant, track buyer or grain dealer, as defined by the Canada Grain Act.

The governor in council did take authority to make regulations, but I call attention to this very important fact, especially from a legal point of view, that those regulations were confined to regulations of certain specific character. They were to make regulations for:

(a) the kind, form and terms of the document to be issued on the delivery of wheat to any elevator or over a loading platform;

(b) determining the person to whom the said sum of five cents per bushel shall be paid and the method of the payment thereof;

(c) making such arrangements as may be necessary with the Board of Grain Commissioners for Canada or other statutory body for payment of the said sum;

(d) the keeping of proper books and records by the operator or manager of any country elevator or other person receiving such grain, and the examination and audit of the same;

(e) preventing fraud, misrepresentation or illegal or improper conduct on the part of any person or persons in any way concerned in the carrying out of the provisions of this act or any regulations made thereunder;

(f) prescribing penalties to be imposed for breach of the provisions of this act or the regulations made thereunder.

Finally, the act was to expire on July 31, 1932, namely, the end of the then crop year.

To say that this is a temporary measure and, therefore, should be given effect to by a supplementary estimate is, I submit, an absolute *non sequitur* and is against the pro-

cedure heretofore adopted in temporary measures of this kind in this house. I suggest to the minister that if he is determined to persist in the policy or procedure now before the committee, this estimate should not be passed until the regulations are brought down and we may know what they are.

I appeal to the private members of this house to insist that this be done, because they are giving to the minister—to this minister—a blank cheque to say how $35,000,000 may be distributed among the farmers of the three western provinces; and from what we have heard to-day, let me say it is not limited to $35,000,000; it may be double that sum. And it will be paid under a governor general's warrant. If hon. gentlemen did not understand the implication of the minister's language, I suggest that they read it carefully. That $35,000,000, the amount mentioned in the estimate itself, is not the limit of the final bill which the taxpayers of Canada will have to pay, whether or not one approves the principle of this resolution.

Finally, I suggest to the minister that the whole matter should be sent to a special committee, where every party and interest may have an opportunity to be heard and to present their views. There is a wide division of opinion in this country as to the adequacy or otherwise of this policy. Why is it that opportunity is given to only a few to present their views to the government of the day concerning the policy to be adopted? Many others who have not access to the ministry do not have that opportunity.

I remember the time when the principle of setting up a wheat board was discussed—and I shall have something to say about that at a later stage in these proceedings. A new principle was being adopted, a principle which might or might not become permanent government policy. Time has shown that it was the only correct policy; it has come down from that day to this, and is operative to-day. Hon. gentlemen opposite, who were then sitting on this side of the house demanded that the principle of the bill be submitted to a special committee, and that was done. They were opposed to the principle of the bill, but they were afraid to strike. The bill went to a committee, and when it emerged it was greatly improved because it had been so submitted. The principle was sustained, and the democratic method of legislating in respect of the people's money was also sustained.

I say to the minister, to hon. members and to the people of Canada that the method here suggested is wrong. This method is wrong.

Mr. McNEVIN: What about the committee on agriculture?

Mr. HANSON (York-Sunbury): There may be some difference of opinion. I never sat on the committee on agriculture, and I do not know whether it would be the proper body.

Mr. McNEVIN: It is a much larger committee.

Mr. HANSON (York-Sunbury): Probably it is too large; that would probably be an argument against it. I suggest there ought to be a special committee, carefully selected from among the membership in this house, and consisting of hon. members who know most about wheat. They would be the best judges of what should be done in the circumstances, and what policy should be followed. They would have power to deal particularly with the details of such a policy, and especially they would have information respecting methods of procedure and methods of payment.

What have we here? Just read the estimate:

To provide for payments on reductions in wheat acreages, under conditions prescribed by the governor in council—

And then it continues:

—for administration expenses in connection therewith, and for temporary appointments that may be required notwithstanding anything contained in the Civil Service Act.

In other words, on a purely domestic problem we are being asked to delegate to the governor in council the whole task of legislating on this important proposition. All we are asked to do is to supply the money. That is a direct negation of the principle of responsible government. I appeal to the minister, if he is bound to proceed in this way, that the whole question be submitted to a special, select committee of the house. I make the further appeal that the procedure he is adopting is not the right one. It is not the way in which parliament has handled this sort of thing before.

I suggest that the method adopted in 1931 was the correct one, and that both branches of parliament should have something to say about this. This is a clever method of preventing hon. gentlemen in the other chamber, gentlemen who know as much about the wheat problem as hon. members in this house know, and who have had a long experience in the business, from having anything to say about how this money shall be expended.

I suggest to the minister that it is not too late to reverse his position. This matter should come to us in the form of a bill; it should be placed in a statute, and the framing of regulations which may be changed at will should not be left to the governor in council. Those regulations may be changed, not once or twice, but from time to time, to

suit the situation as the minister thinks it may arise. That, I suggest, is a terrible principle. Such procedure may be necessary under the War Measures Act; but with respect to a purely domestic problem such as this, in my opinion it is indefensible in principle, and should not be considered by hon. members. I appeal to private members, to members supporting the government—to the farmer members from Ontario who will be adversely affected by this bill—whose constituents will be adversely affected by this bill—

An hon. MEMBER: How will they be adversely affected?

Mr. HANSON (York-Sunbury): I propose to prove that later on, when I am dealing with the whole problem. I am now dealing only with the question of procedure. However, just to answer my hon. friend, in a word; if the whole of agriculture of the western farmers is turned toward the raising of coarse grains and feeds, and toward a development of the hog raising business, how can it help but affect the farmers of eastern Canada? That is the answer.

An hon. MEMBER: It will come.

Mr. HANSON (York-Sunbury): It will come, but do not let it come in this form. That is the principle for which I am contending at this time. I am contending for the method which should be adopted. The one which has been suggested is arbitrary, and is a negation of the principles of responsible government. And we, whose duty it is to sit in this chamber and to judge and pass upon matters placed before us are not to have anything to say about it—except to vote the money for it. I protest against that procedure.

Mr. GARDINER: On the point raised as to there being no precedent, I would refer the leader of the opposition to vote *174* in this year's estimates—and a similar vote will be found in the estimates for other years:

Payments in connection with the movements of coal under conditions prescribed by the governor in council, $4,500,000.

The estimates are full of items like that, and they have been ever since confederation. This item is not anything new in the estimates, so far as that point is concerned.

Mr. HANSON (York-Sunbury): It certainly is in the matter of magnitude.

Mr. GARDINER: With respect to the bill passed in 1931, may I point out that it was passed for the purpose of making terms with respect to wheat which was to be delivered in the fall of 1931. At the present time we are preparing for what has to be done within the next month—not in the fall of this year. The matters to be dealt with will have to be dealt with much more expeditiously than could be done by any other method.

On Tuesday, while the war appropriation bill was in committee, on an item for some $7,000,000 the leader of the opposition rose in his place and asked me to put in that item a minor provision respecting an expenditure on potatoes. That item contained provision for expenditures on apples, and on coarse grains in eastern Canada.

Mr. HANSON (York-Sunbury): That is a war measure.

Mr. GARDINER: "That is a war measure," my hon. friend says. The regulations under this will have to be under the War Measures Act, as well as the regulations with regard to that vote.

Mr. HANSON (York-Sunbury): This vote will give the authority.

Mr. GARDINER: It will give the authority to spend the money, but it will not give the authority to do other things which have to be done. Regulations will have to be set up under both the War Measures Act and under this vote.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. McNEVIN: Mr. Chairman, in rising to make a few remarks in connection with the wheat policy, I desire to refer briefly to some of the statements made yesterday by the Minister of Agriculture (Mr. Gardiner) when he suggested that there would be full opportunity on the discussion of this vote to deal with the agricultural problem of the west. It is not my intention to deal at any length with what might be termed the general agricultural problem. I feel quite confident that in connection with the government's record and agricultural policy I can find much for which to commend them and also some things for which they could be criticized. The minister made a further statement with reference to the matter under discussion and left the inference that the matter had not been closed entirely, that after full discussion had been had, the government might decide to make any adjustments or changes which were deemed advisable. I noticed a statement in the press to the effect that the municipal representatives from western Canada had left for their homes yesterday or the day before to prepare

to put this policy into operation. I was much concerned when I read that statement, but I was pleased to note the remarks made yesterday by the minister.

There are two or three matters which came up in the general discussion and which, I believe, have a direct bearing upon this question. It has been said that the production of munitions in Canada has been centred largely in the central provinces. Of course, that is a matter for the Minister of Munitions and Supply (Mr. Howe), and I think it is in good hands. I do not know which province has the largest per capita expenditure on munitions, but the point I wish to make is that this vastly increased programme for the production of munitions has to a certain extent assisted the farmers from one end of Canada to the other. It has created larger markets for beef, pork, butter and poultry products, and all farmers have benefited similarly from this production. In Ontario, however, I do not think we can say that the production of munitions is of great advantage to the farming population, particularly in the areas where the production is taking place. In some instances this production has increased rather than decreased farm problems. It has taken much labour away from the farm and has increased the cost of what labour is still available for that type of work.

A further statement was made with respect to the pay and allowances of our troops being centred in certain portions of Canada. It would be a foolish question to ask, but we could inquire the extent of the pay and allowances being paid to our forces in England. I contend that our forces must be centred where they can do the most effective work, and the matter of pay and allowances is an unimportant item. The country is at war, and our forces are not protecting just the wheat grower or the hog producer; they are protecting the vital interests of all the people in all the provinces across Canada.

During the discussion this afternoon it was said that the wheat question was a war casualty. I do not contend that the wheat problem has not been affected by the war, that is up to a certain point, but it has been affected to a far greater extent by the weather. It is a weather casualty rather than a war casualty. I think I can prove this statement by giving the wheat production for the three-year periods 1935 to 1937 and 1938 to 1940. The production figures are as follows:

Year	Bushels
1935	264,096,000
1936	202,000,000
1937	156,800,000
1938	336,000,000
1939	494,000,000
1940	525,000,000

14873—122½

The total production for the first three-year period was 622,896,000 bushels, and for the second three-year period 1,355,000,000 bushels. If we want to get a true picture of the situation, we should reverse these production figures, putting the production in the latter period into the first. Dealing with this matter, the Minister of Trade and Commerce (Mr. MacKinnon) said recently that as of July 31, 1941, he expected that we would have a wheat carryover of 575,000,000 bushels. If the production figures were reversed, instead or having a carryover of 23,000,000 bushels on July 31, 1938, we would have had a carryover of 758,000,000 bushels, or 175,000,000 bushels more than we expect to have as of July 31, 1941. I think I am within the bounds of reason when I say that our wheat problem is to a far greater extent affected by weather than it is by war.

I believe that the new wheat policy can be divided into three main divisions. First, there is the proposal to pay $4 an acre for summer-fallow; second, $2 an acre is to be paid for seeding for grass or clover; and, third, $2 an acre is to be paid as a bonus for the production of coarse grains. I shall deal with these in the order in which I have listed them. I do not think I can be accused of ever having been unsympathetic to the problems or needs of western Canada. During the discussions which have occurred previously in this chamber with regard to wheat policies, I contended as vigorously as I could that a limit of 5,000 bushels should be placed upon the amount of grain that any one farmer could deliver to the government at a set price. I have had no reason to retract from that stand. Had we adopted that policy, even as late as the spring of 1940, I contend that our problem to-day would not be as great as it is.

This brings me to the summer-fallow question. I believe that this principle should be applied here. If that is done, then I think we can reach a compromise in which I would agree fully. In order further to illustrate this point, I would refer to the fact that in connection with old age pensions we have placed a limit upon the amount of money that may be taken out of the treasury. An old age pensioner, with a wife to support, can draw the full amount of $20 a month and still have an earning capacity of $250 a year. But the minute his earning capacity increases beyond that $250 the pension is reduced by the amount of that increase. We have adopted here a principle that there must be a limit to the amount of money which can be taken out of the treasury by a single individual. I might enlarge upon that and say that the same principle is applied to those people in receipt of blind pensions.

I go further and state that the same principle is followed in the payment of dependent's allowance. I know of a woman whose husband is an old age pensioner getting $20 a month, and who had an earning capacity of $1 a day in the summer time. She had a son in the army who turned over his assigned pay and dependent's allowance to her, and immediately the pension of the husband was cut to $5 a month.

The point I want to make is this, that if we apply this principle to our aged and unfortunate people, and still more to the blind, and apply it to the dependents of the men in our armed forces, of restricting the amount that can be taken from the treasury, am I going too far in suggesting that the same principle should be applied where large sums of money are paid from the public treasury for other specific purposes? I have not the time in this debate to develop what I think would be a fair limit on the number of acres of summer-fallow on which a bonus is to be paid under the government's proposals, but there will be time for that later on.

I pass on to deal with the bonus of $2 an acre for seeding wheat acreage to grass. I am happy to say that I am in full accord with that proposal. I think the members of the committee will agree with me that a vast number of acres, hundreds of thousands, yes, millions of acres in western Canada which should have been left in grass have been put under the plough. I realize also that, because of the wide acreage to be sown, the cost is great and, in addition, there is a greater weather hazard there than in other parts of Canada. Therefore we can afford to pay something out of the public treasury in an endeavour to get large areas of that country back into grass, and if we succeeded in doing that, the best thing to do would be to leave it in grass for the future.

This brings me to the third item, the proposal to pay a bonus of $2 an acre on wheat acreage that is sown to coarse grains. Of course the principle is this. It is estimated that under these proposals there will be a reduction of 9,000,000 acres in the acreage sown to wheat this year. Perhaps it is only fair that there should be some recompense for that reduction in acreage, and the bonuses that are to be paid for summer-fallowing, for sowing to grass and for sowing coarse grains, are all closely related to the 35 per cent reduction in wheat acreage.

Before I go further into that, in order to emphasize one point in connection with the wheat situation, I should like to refer briefly to two or three phases of the wheat marketing business in western Canada. I wish to take hon. gentlemen back to the time when there were two joint-stock companies efficiently marketing large quantities of western grain. Those companies were in a strong financial position and accumulated large reserves, one of them, the Saskatchewan Cooperative Elevator company, building up a reserve of $11,000,000. Then some men, I am sure with an honest purpose, went through the prairies and said to the farmers, "Look at that $11,000,000 of reserves! That money should not belong to the company; it is yours, and you should have received a higher price for your wheat." Rightly or wrongly, very large numbers of farmers believed in that theory, and in that way the pool idea developed. Along with that, the idea developed that it was not necessary to have very much money to market wheat, that all one had to do was to have the wheat, pay an initial payment, and borrow money from the bank, and then when they sold the entire crop of wheat later on, they could repay any instalments still due. That was a false idea, and I am sure that western Canada has paid dearly for its experiences in that connection.

Then we come to the pool period, to the time when this organization developed a world-wide crop intelligence service which furnished not only crop reports but carefully tabulated statements of the possibilities of wheat consumption in various countries of the world. That developed in western Canada in one year the attitude of mind that wheat was worth $1.75 to $2 a bushel. Buyers came along; and when the pool and grain trade had the chance to sell large quantities of wheat at $1.40 to $1.50 a bushel, they let the opportunity pass and these world buyers went elsewhere and bought their wheat requirements at a lower price. I do not say that this was the fault of the pool or of the companies in the grain trade. Perhaps they were all equally to blame. The market in western Canada went down steadily until it fell below the initial price paid, and the banks asked, "Whose wheat is this? We have advanced more money upon it than it can be sold for", and so they stepped in and took over the wheat. That was when the wheat business began to be a real problem for the people of Canada at large.

We emerged from that period with a wheat board; and if there is any question that has been largely discussed in this chamber on previous occasions, it is the operations of the Canadian wheat board. I might recall to the committee many figures, running into $60,000,000 one year, $57,000,000 another year, and so many millions another year, but I think the committee has heard enough of that. I wish to make just this one remark. I do not

like to utter any word of criticism of those who were engaged in the various phases of marketing grain in western Canada. I am serious when I say this, that I believe their efforts were only those of honest men seeking for something better which they did not always find. I go one step further and say that when the Saskatchewan Elevator company was sold out to the pool, the guardian angel of western Canada must have been sound asleep.

Mr. CASTLEDEN: There never was one.

Mr. McNEVIN: I now come to discuss what, to my mind, is by all odds the most far-reaching item in this wheat policy. I refer to the proposal to pay a bonus of $2 an acre for the production of coarse grains. We all know that production costs of coarse grains in western Canada are less than they are in eastern Canada and other parts of the dominion. In the west they farm larger areas and produce grain cheaper; their taxes are lower, and therefore they can produce these grains for less money.

An hon. MEMBER: And mortgages are heavier.

Mr. McNEVIN: What would be the inevitable result if we adopted this policy of bonusing the production of coarse grains in the west at $2 an acre? Under present conditions there is only one possible result. You can refer coarse grains to any category you like; but, as understood by the ordinary farmer, "coarse grains" is hog feed and cattle feed, nothing more and nothing less, although one might send a few bushels of barley to a brewery, or something like that.

I am strongly opposed to this idea of bonusing production of coarse grains in western Canada, thus cheapening production in the west and by that method driving the Ontario farmer out of the hog business. It is quite possible that under ordinary conditions as they now exist without state assistance, the farmers of western Canada could make it most difficult for the hog producers of the east, particularly in Ontario. But, Mr. Chairman, if we have to go out of business, let it be on a fair basis; I as a farmer am prepared to take my medicine, because we are in a democratic country and fighting to defend democracy, and I do not want any advantage over my fellow farmer in the west or the maritimes or anywhere else. I do, however, object to a policy whereby we take from the state money to cheapen the production of hog feed in a particular area, and thereby drive the farmers of my own and other provinces out of business, and I will go further, drive some farmers in western Canada out of business.

I should like to demonstrate what is the trend of hog production at the present time:

Year	No. of hogs
Ontario	
1939	1,667,991
1940	2,191,456
Increase	523,465
Quebec	
1939	336,575
1940	524,498
Increase	187,923
Total increase in two central provinces in 1940 over 1939	711,388
Alberta	
1939	979,898
1940	1,485,382
Increase	505,484
Manitoba	
1939	327,202
1940	510,789
Increase	183,587
Saskatchewan	
1939	212,188
1940	648,938
Increase	436,750
Total increase in three western provinces in 1940 over 1939	1,125,821

From these figures it is not hard to establish what is the trend of hog production in Canada.

I deal now with the first two months and three weeks of the present year, or up to March 20, 1941:

	Hogs delivered
Saskatchewan	112,901
Alberta	317,442
Manitoba	267,709
Total deliveries in western Canada	698,052

During the corresponding period of last year these three provinces produced only 407,905 hogs, so the increase this year is apparent, and very large, amounting to 290,147.

What is the situation in Ontario and Quebec? They delivered in the same period of 1940, 506,907 hogs, and in 1941, 593,052, or an increase of 86,145. Therefore the trend at present is that hog production in western Canada is increasing by leaps and bounds, much faster than in eastern Canada.

I have spoken of the 9,000,000 acres; I will now go back and subdivide this figure in a manner which, although I do not claim that it is exact, is some indication of what may happen if this policy were put in operation. I estimate that, of the 9,000,000 acres, 5,800,000 will go to summer-fallow, 1,000,000 to grass seed, and 2,200,000 into coarse grains and,

therefore, be eligible for the $2 an acre bonus. That will give a total of $4,400,000 in payments for the production of hog feed in western Canada.

During his remarks this afternoon the Minister of Agriculture emphasized that we are now sending to Great Britain twice as much bacon as we sent before the war. In the light of that statement are we justified in paying $2 an acre on the production of 2,200,000 acres in order to encourage a vast increase of hog production on that basis?

In 1940, we produced in Ontario 2,191,456 carcasses, or let us say in round figures 2,200,000; under this legislation we are providing a bonus to pay western Canada producers of hog feed $4,400,000, or $2 per carcass for as many hogs as were produced in Ontario in 1940. That represents $1 per hundred pounds. Therefore in western Canada they would receive from the treasury at least $1 a hundred on all hogs now produced in Ontario. I maintain that a proposal of that kind is absolutely unfair to the farmers of the rest of Canada, principally those of Ontario and Quebec, and also some in the maritimes; and I could not, as representing the people in the part of the province from which I come, subscribe to any such policy. It would simply mean this, that we as Canadian taxpayers would be requested to place so much money into a jackpot out of which we could hope to get no return, but the entire proceeds of which would go to hog producers in another part of the dominion who already operate at an advantage over ourselves. In that event there could be only two alternatives: either the Ontario hog producer would be forced out of production, or he would be driven further into poverty than he is at the present time.

This is not to say that I believe the incomes of farmers in any part of Canada are too large. Do not misunderstand me; none of the farmers of this country are receiving enough to maintain what is their rightful and proper standard of living under present circumstances. I know that those charged with the responsibility of devising policies to increase that income in the present disturbed conditions of the world are facing a great problem. But I go a little further. I would say that if the policy of bonusing coarse grains were enlarged and persisted in, it would challenge the very existence of this great branch of agriculture in Ontario.

I will deal with that a little more extensively from another point of view and review the figures. Take 2,200,000 acres of grain; what would be the average production per acre? How many bushels per acre would you have? The question was discussed in a meeting at which I was present the other day, and the suggestion was, fifty bushels to the acre. That may be too high or too low. Suppose, however, we take that figure. How much grain would you get from 2,200,000 acres at fifty bushels to the acre? You would get 110,000,000 bushels of grain. How many pounds of grain would that represent? We will take barley and oats together. They have fairly good grain out west, I may observe. I have fed western oats that weighed between thirty-eight and forty pounds to the bushel. Therefore, balancing barley and oats, we might say that forty pounds would be a fair average, so that on the basis of forty pounds to the bushel you would get 4,400,000,000 pounds of grain.

I inquired of the live stock branch of the Department of Agriculture to find out what they regarded as a sufficient amount of grain to produce one pound of pork. The specialist in that division said that it would take 351 pounds for 100 pounds of pork. I inquired at the experimental farm and they said between 4 and 4½ pounds to produce one pound of pork. To suggest a fairer basis, let us say that it takes five pounds of grain to produce one pound of pork. Divide that five pounds into 4,400,000,000 pounds of grain, and you have a production of 880,000,000 pounds of pork. The average hog weighs 200 pounds; that would be 4,400,000 hogs. On the basis of that number of hogs it would be $2 per carcass on every hog produced in Ontario of advantage for the western farmer. That, I think, is sufficient evidence.

Some one might say, "We are paying freight on feed to Ontario to help you to produce hogs more cheaply." Let me say this. Perhaps in some limited areas where feed is scarce that policy would bring some benefit; but if we adopted it under present conditions, with the vast surplus of grain we have in the elevators in western Canada, and if we adopted a policy of bonusing the production of larger quantities of oats and barley, following that out by paying freight to bring the feed to other parts of Canada, such a policy, if extended, would land us, so far as the hog business is concerned, exactly where we now are with regard to wheat, and there would be absolutely no method of dealing with the situation. After all, the average farmer in Ontario grows the largest percentage of his own hog feed, and he turns that into pork, carrying on in that way.

Mr. JOHNSTON (Bow River): What about the bonus he is getting for cheese?

Mr. McNEVIN: I had forgotten all about that; I am glad the hon. member mentioned it. I say to hon. members: You are suggesting giving the cheese producer perhaps two, or two and a half or even three millions, if you like; I do not care. But what I want to

point out is that the cheese producers are among the largest hog producers in Ontario. If, therefore, you carry out that policy, you would put one hand in the treasury, take out money and give it to him, and then put the other hand in his pocket and take the money out again. The question of the western farmer has been brought up, and, as I said at the outset, I have great sympathy for the western Canadian farmer. Let me add that when the Minister of Trade and Commerce brings down his wheat legislation, if he will increase the 70 cents a bushel to 75 cents—

Mr. LEADER: Eighty-five.

Mr. McNEVIN: We will discuss that suggestion later, but for the purposes of this illustration I will say 75 cents. I say, if he increases the 70 cents to 75 cents, I will rise in my place and back him up and vote for it. I say that because I think the western farmer has a problem and he must have assistance in solving it. But I do not think the solution should be to drive the farmers of Ontario and Quebec and of other parts of the dominion out of one of their strong lines of business. Most fair-minded men, I believe, will agree with me in that regard.

I may be asked, "What will the Ontario farmer do under these circumstances?" I will tell you. He will do just as he did in the last war. This nation is at war. The farmers of Ontario are as loyal as the farmers in any other part of Canada; the farmers are all loyal citizens. The farmers of Ontario, therefore, no matter what the conditions may be, will go ahead and try to the best of their ability to feed our armies at the front, the armies of our allies, and our munitions workers, and to feed all the rest of the people, they will not lie down on the job.

My time is up and I must conclude. I maintain that if we are going to include in the agricultural policy of Canada the principle of bonusing the production of hog feed in Canada, then it must not be limited to any single area in Canada. It must be made applicable universally throughout the country. It must apply in like degree to the little farmer in the maritime provinces. The other day we saw a picture showing him ploughing the ground with a pair of horses. It must apply in like degree to the farmers in Quebec, the compatriots of the Minister of Justice (Mr. Lapointe). In that province there are farmers with large hearts and larger families, and they must have a chance to live. It must apply in like degree to the farmers in Ontario, and in British Columbia where hog production is limited; and I would say to the rest of the farmers that this legislation, as it is at present, will not help in western Canada.

Mr. DOUGLAS (Weyburn): No person can discuss this $35,000,000 vote to bonus wheat acreage reduction without discussing the 1941 wheat policy announced by the government on March 12, because in the final analysis this vote of $35,000,000 is compensation to make up for what the minister himself termed this afternoon the denial to the farmer of the right to sell a certain amount of his wheat.

I want first of all to commend the Minister of Trade and Commerce (Mr. MacKinnon) for the statement he gave to the house on March 12. It was a realistic statement. It compares favourably with the statement given to the house on November 14 last by the Minister of Agriculture (Mr. Gardiner) when he spoke of a five-year programme in which we will dispose of two billion bushels of wheat and find ourselves at the end of that time fifty million bushels short of actual demand. I think the statement made by the Minister of Trade and Commerce the other day brought most of the people interested in the wheat problem down to earth. The statement was to the effect that on July 31 of this year we shall have a visible surplus of 575 million bushels; and if all the storage facilities which are planned are finally built, we shall have only 582 million bushels of storage capacity in Canada. In other words, by the time the wheat board has taken delivery of the 1940 crop, we shall be able this year to take into storage or take delivery of scarcely any of the 1941 wheat crop.

Any person who suggests to the government that this is an easy problem to solve is not fair either to himself or to the government. It is a tremendous problem, and we must all approach it with sympathy for the men who are charged with the responsibility of finding a solution. We must all realize that the government cannot continue to take unlimited quantities of wheat. We should realize that there must be restricted deliveries. We all realize that the farmer should not be encouraged to continue to increase his wheat acreage, but rather encouraged to curtail it. The farmers themselves have realized that; the different producers' organizations have made representations to the government. I need not review them; they were reviewed this afternoon by the Minister of Agriculture. Representations were made by the advisory committee to the wheat board, and are now on the record. Representations were made

to the dominion cabinet on January 27, and are now on the record. In Saskatchewan a six-point wheat policy was drawn up by the wheat pools and the United Farmers of Canada, Saskatchewan section. It finally found expression in a motion brought into the Saskatchewan legislature on February 28, moved by Hon. Mr. Patterson, premier of that province, seconded by Hon. Mr. Taggart, minister of agriculture of that province. The motion read:

That this assembly request the federal government to adopt the following policy in respect to the 1941 wheat crop:

1. That the minimum price for the 1941 wheat crop be set at 85 cents per bushel, basis No. 1 at Fort William;

2. That a processing tax of 50 cents a bushel be levied on all wheat processed for consumption in Canada, the proceeds of such tax to be added to the minimum price of 85 cents a bushel;

3. That the delivery of the 1941 crop be made on an acreage quota, such quota to be determined by the storage space available during the crop year of 1941;

4. That the government of Canada make advances to farmers for the purpose of providing funds with which to build essential farm storage;

5. That the government of Canada make provision for advances to farmers on the credit of the quota to be delivered;

6. That the government of Canada maintain and carry the wheat surplus as an essential part of its war policy.

This was finally passed unanimously by the entire Saskatchewan legislature. I do not for a moment suggest that this six-point wheat policy is all that I should like to see in a wheat policy, nor do I think it is all that a government could do in formulating a wheat policy. I suggest, however, that it is the irreducible minimum which western Canada can accept if western agriculture is not to receive irreparable damage.

It seems to me passing strange that, representations having been made by these different organizations, including the government of Saskatchewan, there should be brought down by this government a policy which scarcely resembles in the slightest detail the policies that have been suggested by producers' organizations. The best proof of that is that on March 14, Mr. H. H. Hannam, president for Ontario of the federation of agriculture, whose representation to the government was made on January 27, labeled it a two-barrel shotgun which would destroy both eastern and western agriculture. The wheat pools of the three prairie provinces on March 13 registered their strong disapproval of the wheat policy as announced.

What does this policy which the government has outlined mean? First of all, it does both the things which the Minister of Agriculture suggested it did not intend to do. It brings about compulsory wheat acreage reduction. It is all very well to say that the farmer is not compelled to reduce his acreage; but, to use the minister's own words this afternoon, the farmer is denied the right to sell, and if the farmer is denied the right to sell his product, that is the most effective kind of compulsory acreage reduction. A policy of drastic acreage reduction is entirely incompatible with the rosy and optimistic picture given by the Minister of Agriculture to this house on November 14 last.

The second thing this policy does is, it pays the farmer not to grow wheat, because it does not pay him to summer-fallow, or to grow coarse grain unless the land on which he grows it is land on which he used to grow wheat. In other words, he is being paid not to grow wheat but to do something else with his land.

As I said, we realize that curtailment is necessary, that restricted delivery is necessary. But we say that the means by which the government is seeking to attain its ends are unsound and inequitable. I propose on behalf of the group with which I am associated to outline in skeleton form the six outstanding weaknesses of the government's wheat proposals, and to suggest six alternative proposals.

Our first objection is that reduction in wheat acreage is only of value if it is done in conjunction with other wheat-growing countries. Individual reduction by Canada can only help other wheat-growing countries to our detriment. If there must be acreage reduction, there should be an attempt to have the other wheat-growing nations of the world join in a concerted effort along this line. Otherwise, if this war lasts long enough, we are simply going to push ourselves out of the wheat-growing business to the benefit of Argentina and the United States.

Our second objection is that this reduction is too drastic. While curtailment may be necessary, reduction by one-third will entail dislocation of the entire western agricultural economy. There are thousands of farmers with large investments in wheat-producing equipment which cannot overnight be adapted to other types of farming. I think every hon. member will realize that not only will there be dislocation of western agriculture but that, of necessity, there must be a dislocation of eastern agriculture. If the western farmer is to be forced to turn at least three million acres of land into the growing of coarse grains, what will happen to prices of coarse grains? Western members in this house will remember 1932, when we were selling barley

for as little as nine cents a bushel; yes, and someone says even seven cents. If prices of coarse grains drop, farmers will not sell coarse grains; they will feed them. Then next year we shall have a steady stream of hogs coming from western Canada. Previous speakers have shown already, I think, that in the last few years the hog production of Canada has trebled, and I understand that at the present moment we are shipping to Great Britain one million pounds a week over and above what is called for under our bacon agreement with the United Kingdom.

No person in this house is going to get me into a quarrel between eastern and western agriculture. I do not propose to indulge in that sort of thing. Although I represent a western constituency I, together with every other member of this house, want to look at this picture from the point of view of Canada and Canadian agricultural economy as a whole. The balance is so fine that unless we try to solve our western problems in a sane way, we may be only robbing Peter to pay Paul, without paying Paul very much at that. The drastic nature of this acreage reduction is shown by what will happen to the western agricultural income. I was surprised this afternoon to hear the minister speak of the wheat income for western Canada as being $178,000,000, I think he said.

Mr. GARDINER: That was for the calendar year.

Mr. DOUGLAS (Weyburn): Quite so. I find that according to the figures of the bureau of statistics, issued by the Department of Trade and Commerce, the total amount of wheat produced in western Canada last year was 525,000,000 bushels, valued at $283,269,000. Of course some of that wheat is kept for seed, but I notice that the Searle Grain company's estimate of the cash value of last year's wheat crop to the farmers was $260,000,000. The Searle company goes on to point out, in its bulletin of March 19, that under this proposed legislation the farmers will sell 242,000,000 bushels less than they were allowed to market last year, which will mean a decrease of $133,000,000 in their income. If we set off against that the $35,000,000 provided by this bonus, there is left a deficit of $98,000,000. But of course all that land will not go into summer-fallow. Let us assume, as the Minister of Agriculture suggested the other day, that summer-fallow will account for 6,000,000 acres and that of the remaining 3,000,000 acres, half will go to barley and half to oats.

Mr. GARDINER: Perhaps I might correct a figure which was mentioned this afternoon. There is about $87,000,000 represented in wheat which will come in between January 1 and July 31, which should be added to that figure.

Mr. DOUGLAS (Weyburn): I believe that is correct. If we assume 6,000,000 acres in summer-fallow and the other 3,000,000 acres divided between oats and barley, we have a bonus of $30,000,000 and an income of $22,000,000 from oats and barley, assuming that these prices remain where they were last year, which is doubtful. That gives a total of $52,000,000, which means that the income of western agriculture will still be $81,000,000 less than it was last year.

The minister suggested that we must plan so that the agricultural income for western Canada will not drop below $325,000,000, but the same Searle report points out that the agricultural income of western Canada last year was $408,000,000. Therefore, even if we are able to keep the agricultural income of the west at $325,000,000, there will still be $83,000,000 less in the pockets of the prairie farmers this year as compared with last year. I wish to point out that it has been estimated by the Minister of Finance (Mr. Ilsley) that this year the national income of Canada will amount to about five and a half billion dollars. If the agricultural economy of western Canada is to receive only $325,000,000 out of that total, then western Canada is faced with some of the blackest days in its history.

The third objection to this scheme is that the price of 70 cents, basis Fort William, is altogether too low. Last year in this house the Minister of Agriculture said that 70 cents was most certainly below cost of production because, as he said this afternoon, it means only about 51 or 52 cents to the farmer, perhaps only about 49 cents on an average grade. If 70 cents was too low last year, it is much too low this year; and when we take into consideration the fact that in all probability the farmers will be selling this wheat in the spring of 1942, if the cost of living continues to rise the price will be even more inadequate next year than this year. I have before me an article from the magazine Canadian Business, which is hardly likely to be biased in favour of the farmer. In the issue of March, 1941, I find this statement:

> Official records compiled in the Searle index reveal that the hourly rates of wages averaged 91 per cent higher in 1939 than in 1913-14. Thus if agriculture is to be treated the same as industry with cost of living bonuses—and the farmer sees no reason why an approximate balance should not be maintained between these two factors in regard to income and sacrifice—the current price of wheat would be $1.39 per bushel instead of around 75 cents, bacon hogs should be around $10.50 per hundred pounds instead of $8.30, and butter would be 49 cents instead of the pegged price of 37 cents a pound.

The Minister of Agriculture has pointed out frequently in this house that wheat can be produced most economically by farmers with two section farms, with high-powered machinery. They can produce more economically because they are on a mass-production basis; but if we reduce their acreage by one-third, their overhead will not be reduced proportionately, and their cost per unit will be proportionately higher. If these farmers could not produce wheat for 70 cents a bushel previously, certainly they cannot produce it now, with their overhead remaining stationary and the per-bushel cost increasing.

Our fourth objection to this policy is that, as it now stands, it will spell the doom of the small farmer, since the reduced acreage will increase the per-bushel cost; and no provision has been made in the proposed legislation for a maximum delivery on the first quarter-section.

Our fifth objection is that there is no provision for a cash advance even on the quota the farmer is to be allowed to deliver. According to the statement of the Minister of Trade and Commerce, the 1940 wheat crop will fill practically all the available storage space. The farmers are not likely to be able to sell any wheat until next spring or early summer. How are they going to finance from the time they take off their crops in September until they are able to sell next April or May? How are they to pay their harvesting operations? How are they to pay their store bills? How are they to keep their families throughout the winter? This committee should keep in mind the fact that the federal government has announced already to the provincial government that the federal contribution to relief is to be discontinued on March 31. What is the outlook for the farmers west of the great lakes? If no provision is made to help the farmer finance between the time he takes off his crop and the time he is allowed to deliver it, we shall see hardship in western Canada such as we have never seen before.

Our sixth objection is that the storage to be paid is only on that part of the farmer's crop which he is ultimately to be allowed to deliver. If he grows more than the quota, the government accepts no responsibility for assisting him in carrying that wheat. He is not to be allowed to sell it, but he is to be charged with the sole responsibility of carrying it. We believe that that wheat is an asset and that the government has some responsibility in connection with it, and ought to accept that responsibility by providing assistance for the farmers to enable them to carry that part of the wheat which they grow over and above what they are being permitted to sell.

[Mr. T. C. Douglas.]

I wish to place before this committee six proposals which we think ought to be accepted and incorporated into the government's wheat policy for the handling and marketing of the 1941 wheat crop. The first is that the initial price ought to be raised. It was suggested by the Saskatchewan legislature and by producers' organizations that the price be 85 cents per bushel, and that there be added to that 85 cents the proceeds from an increased processing levy. The other day the hon. member for Haldimand (Mr. Senn) quoted certain statistics which had been collected by the Sirois commission on agricultural income per farm up to 1937. We have worked out the figures from the same source from 1937 to the present, and we find that during the last four years the average cash income of the farms of Canada was $472 per annum. If living in kind is added and depreciation on buildings and equipment deducted, it amounts to $632 per farm unit. In the prairie provinces the average cash income was $496, and if living in kind is added it amounts to $559. It was found that Saskatchewan had the lowest average cash income from 1937 to 1940; the average income per farm unit was $102 per annum, and when living in kind was added, it amounted to $291. These figures prove beyond any possible contradiction that an initial price of 70 cents will not meet the situation when the wheat farmer is to be allowed to deliver only 65 per cent of the wheat which he was allowed to deliver last year and the year before.

Our second proposal is that there ought to be a maximum delivery for the first quarter-section, and the quota for the remainder should be on a graduated basis. We would suggest that 1,000 or 750 bushels should be accepted for the first quarter-section and a lesser amount for each succeeding quarter-section. This would take care of the very man the minister was talking about this afternoon, the man with 100 acres in wheat, who will now have only sixty acres. He is the one who is going to feel the pinch of this most. He has no way to reduce his overhead. He is the man who ought to be allowed to make a maximum delivery from the first quarter-section.

Our third suggestion is that the government should assist the farmer to build storage facilities on his farm in order to store the surplus wheat. In the final analysis the farm is where wheat should be stored. When we realize that in 1937 this government spent $18,000,000 in buying seed grain and delivering it to the drought areas of Saskatchewan, we shall realize how important it is to have at least 200,000,000 bushels of wheat

stored on the farms of western Canada. There could be no better crop insurance against future contingencies.

The fourth suggestion we make is that there should be a cash advance of 75 per cent of the initial price on the basis of the quota to be delivered. If a farmer knows how much wheat he is going to be allowed to deliver and the government is not in position to take delivery until next May, then the farmer should be able to get a cash advance in order to meet his outstanding obligations and carry on until such time as the government has the storage facilities to take delivery of the farmer's wheat.

Our fifth suggestion is that storage charges should be paid on wheat stored on the farm. We believe that the government has a responsibility to the farmers to assist them in carrying that part of their crops which they are not going to be permitted to sell. It will seem strange to a farmer if he is storing 2,000 bushels of wheat on his farm and can collect no storage, and a few miles down the road is an elevator full of wheat being stored for the federal government and drawing two-thirds of a cent per bushel per month for every month and every year it is there. It will be difficult to explain to a farmer why an elevator should draw storage charges and he should receive none for the wheat he is carrying against the time when this country and other parts of the world will need it.

The sixth proposal which we wish to place before this committee for its consideration is that the government should increase the processing levy on wheat milled in Canada for domestic purposes and that the proceeds of such levy should be used in assisting in financing the maximum deliveries which are to be made from the first quarter-sections.

A 50-cent processing tax would net the government about $25,000,000, which would enable the government to pay ten cents a bushel on the first 1,000 bushels to be delivered from each quarter-section. In other words, without any extra cost to the treasury the government would be enabled to pay 95 cents a bushel, if we add the 10 cents to the 85 cents proposed earlier, on the first 1,000 bushels delivered by the farmer.

I know the suggestion will be made by some hon. members that this will raise the price of bread, but I think the hon. member for Qu'Appelle (Mr. Perley) dealt with that quite adequately yesterday. The royal commission appointed in 1934 to study mass buying and price spreads found that there was no justification for raising the price of bread until the price of wheat went past $1.60 a bushel. All western members will remember that in 1938 the price of wheat reached $1.47 a bushel, but the price of bread did not rise. There is no reason why a 50-cent processing levy could not be placed on wheat milled for domestic consumption.

Mr. HOWDEN: How about the small farmer who bakes his own flour?

An hon. MEMBER: He should be exempted.

Mr. DOUGLAS (Weyburn): Even if he were not exempted, I would point out to the hon. member for St. Boniface (Mr. Howden) that over a period of years the price of wheat has fluctuated. When the price of wheat went down to 37 cents a bushel, the price of flour did not drop proportionately. As a matter of fact, we have in this country a milling combine which have absorbed and benefited by any drop in the price of wheat. They could afford to pay $1.35 a bushel for wheat.

Mr. HOWDEN: That would not help out the small farmer who makes his own flour, if he has to pay a processing tax on every bushel.

Mr. DOUGLAS (Weyburn): It would mean at the very most one cent on one loaf, or two or three cents a day for the average family, and the average farmer would pay that gladly if he were going to get 95 cents a bushel for the first 1,000 bushels he produced.

Mr. HOWDEN: The hon. member was talking of farmers with $100 a year. They depend on their own flour for bread.

Mr. DOUGLAS (Weyburn): They would have a great deal more than $100 a year if they got 95 cents a bushel for the first 1,000 bushels they produced.

I suggest, in closing, that it seems to me that the government is halting between two opinions. The Minister of Agriculture on November 14 assured the house, and I am inclined to agree with him, that in the normal course of events world demand will absorb the huge surplus of wheat which we are likely to accumulate during the war. On the other hand the Minister of Trade and Commerce seems to be alarmed and dismayed at this growing mountain of wheat. The government seeks to alter the agricultural economy overnight and to turn one-third of the wheat-producing lands in western Canada into the production of coarse grains or into summer-fallow, which in the final analysis will produce still more wheat.

While we realize that the expansion of wheat acreage at this time is most undesirable and that a certain amount of curtailment may be necessary, we deprecate most vigorously so drastic a reduction in wheat acreage. The prairie provinces in general, and Saskatchewan

in particular, by reason of their climate and topography, are ideally situated for the growing of wheat. Large areas of the prairies are ill suited for any other kind of farming. We still grow the finest wheat in the world, and when this war is over there will be starving millions to be fed, not only in Europe but in Asia, where a unified and victorious China may open up markets larger than any of which we have ever dreamed. We must not lose our vision at this time. We must not allow the temporary problems contingent upon the war to distort the long-term view. What guarantee have we that nature will continue to give us the great wheat crops that we have had in the past two years? A few years ago certain people of western Canada said, "If only we had a crop, all would be well." Now they say, "If only we did not have a crop, all would be well." What is 500 million bushels of wheat? Two or three complete crop failures would find the grain bins of western Canada empty again. The Saskatchewan members of this house will remember as I do a time, not very long ago, when some of the prairie farmers were burning their straw stacks, and within two years those same farmers were scouring the prairies looking for straw to keep their stock alive.

Have we forgotten the lesson of Joseph, who during the bountiful years in Egypt built vast granaries and stored huge quantities of wheat and corn? He was wise in his day and generation, and the monument to his memory is contained in those simple words, that when the famine came, "there was corn in Egypt." Let it not be said of us that we had less foresight than Joseph.

Therefore it seems to me, Mr. Chairman, that the task of this government is twofold: first, to prevent any increase in wheat acreage, and, if necessary, to encourage curtailment; and, second, in the manner in which I have outlined, to make it possible for wheat producers to get a fair price for a part of their crop and to be given assistance in carrying the remainder of their crop against that day when returning peace and the free exchange of world commodities will declare to the world once again that "wheat is king."

Mr. GARDINER: I just want to put on the record a table which will clear up some figures that have been used in connection with estimating the probable returns for western farmers. I will place on *Hansard* the figures which were used by officials who were working on this policy in its early stages.

The suggestion is that in making up the cash returns to the farmers for the present year, old wheat from the 1940 crop will be marketed to a volume of 167 million bushels, which at 52 cents makes $87,000,000, and that new wheat from the 1941 crop will be marketed to a volume of 150 million bushels, which at 52 cents a bushel makes $78,000,000, or a total, from the old wheat and the new, of $165,000,000.

The non-wheat returns would be $163,000,000. Adding together those two figures, $165,000,000 and $163,000,000, gives a total of $328,000,000.

The figure of $163,000,000, representing the non-wheat returns, is made up of $148,000,000 of actual returns for 1940, plus an increase of $15,000,000, which is the same increase that took place between 1939 and 1940.

It will be noted that the first figure of $87,000,000 includes no returns to the farmer from storage earnings on wheat grown during 1940 and delivered between January 1 and July 31 of 1941. That would account for a little more.

There may be some question whether there will be an increase of $15,000,000 in the non-wheat returns to the farmer.

Mr. DOUGLAS (Weyburn): Is it fair to add that $87,000,000 from the sale of the 1940 crop in calculating the income of 1941? Most of it is already owing.

Mr. GARDINER: The same would be true as between 1941 and 1942. This is figured for the calendar year beginning with January 1 and ending with December 31. There would be very little difference if we took the year as beginning August 1 and ending July 31.

Mr. NICHOLSON: Was the same method used in calculating the 1940 income?

Mr. GARDINER: Yes. There is only one other thing I wish to say in reply to the last few remarks of the hon. member for Weyburn (Mr. Douglas). There is no division of opinion in the government with regard to this policy. The government brings it down as a matter of government policy, with no division of opinion at all on the matter. I should not like the suggestion to go out from this committee that the government in introducing this particular policy expect that the policy as such will be changed as it passes through the house. There are some details that might be a matter for consideration as we go along, but the policy itself is one which has been unanimously accepted by the government and it is introduced into the house as the government's policy.

On the other point, as to whether there is a difference between what was stated last fall and what is stated now, that is not a matter under consideration at all in connection with this policy. This deals only with this year, and the figures which were given to the house last fall were exactly the same in relation to

the present position as the figures that are given to the house now. There has been no change. In other words, the government was in agreement last fall; they are in agreement now, and I imagine they will be in agreement when we have to consider the wheat situation two or three years hence.

Mr. PERLEY: Is this the policy, then, that the Minister of Agriculture and the Minister of Trade and Commerce proposed to the cabinet?

Mr. GARDINER: I would put it the other way around; this is the policy which the cabinet proposed—

Mr. HANSON (York-Sunbury): To you?

Mr. GARDINER: —to the country.

Mr. ROSS (Souris): Will any regulations be brought down for our discussion?

Mr. GARDINER: I stated in the house this afternoon that some provision would be made for having the regulations discussed either by a committee or by the house. Of course, if they are discussed by a committee, they will come to the house for discussion.

Mr. RICKARD: In rising to take part in this debate to-night, I am going to take a rather different attitude from that of some previous speakers, in that I intend to give this government some praise for what they have done for agriculture. I believe that the government are to be commended for the legislation which they have brought down to benefit the farmers, not only of the west but of all Canada. The name of the Minister of Agriculture (Mr. Gardiner) has been prominently before the people of late, and I believe that we have in the present minister as fine a Minister of Agriculture as Canada ever had. He knows the problems of the farmers of Canada as well as, and perhaps better than, any other man we could get. We may not all agree with what he says and what he does, but we appreciate the position which he is in to-day, and we know that, in the main, he is doing a really good job.

Since I came to the house six years ago, I have tried on several occasions to place before parliament the condition of the farmer in Canada, and perhaps more particularly the position of the farmer of Ontario. I have tried to show the difference between his costs of production and what he really receives for his product, which, after all, is the main problem as far as the farmer is concerned. It is not so important to consider what the farmer receives for his produce as what it costs him to produce it. I believe I am safe in saying that 75 per cent of the farmers of Ontario would be satisfied with the prevailing prices for their products if costs of production correspond with what they receive. But the history of agriculture shows that always in time of war when the agriculturist produces a surplus of goods, he experiences great difficulty in selling them, particularly in the early stages of the war. That was true of the last war and it is true of the present one. As the last war progressed, prices rose, perhaps to a height which they should not have reached. I hope the same thing does not happen again, because I believe it was one of the worst things that ever occurred so far as agriculture was concerned.

To-day all industrial activity in Canada continues to increase with the expansion of war demand. There is an increase of employment and of non-agricultural income. According to the Minister of Finance (Mr. Ilsley), our expenditure on the prosecution of the war for the year commencing April 1, 1941, will amount to approximately $1,460,000,000, the largest sum which was ever voted by any parliament in Canada. Included in this sum is an item of $177,928,000 for the expansion of industry, which indicates that the productive capacity of Canadian industry will be substantially increased, and therefore should lead to an enlargement of domestic demand.

Since June, 1940, the continuous rise of wholesale prices has been inevitable. All commodities have risen to some extent, and for the month of February averaged 84·6 of 1926 as compared with 82·8 the previous year. Prices of farm produce have also risen slightly but have not yet made up the loss sustained in the early part of 1940. This may be due in large measure to the low price of wheat. All live stock registered some strength in February, and should continue to show gains as the domestic demand increases.

I have here an index of living costs on the 1935-39 basis; they rose from 108·0 in the month of December to 108·3 in January, 1941, but the general index in the year from January to January was 108·3 this year, compared with 103·8 in January, 1940, showing that the cost of living increased by 5 per cent.

At the present time exportation of agricultural products is difficult because of the uncertainty in the supply of shipping. To-day the bulk of Canada's exports goes either to the United Kingdom or to the United States. We have heard a great deal of discussion of late from some hon. members of the opposition about what this government has or has not done for the relief of the farmer. I believe that the hon. member for Huron North stated last November, referring to the farmers, "We never did get a fair deal from any government, least of all from this one." The hon.

member for Haldimand, of course, brought in a want of confidence motion in the government with which motion, I wish to say, I do not agree. I believe I am safe in saying that this government since 1935 has done more for the Canadian farmer than any government since confederation. I took the trouble to look up some of the prices of farm products from 1930 to 1935, and then from 1935 to 1940. Here are the figures of the prices of bacon hogs, live weight; beef cattle, and lambs, on the Toronto market:

Year	Hogs	Beef cattle	Lambs
1930.....	$12.32	$8.79	$11.01
1931.....	7.51	6.29	8.96
1932.....	4.70	5.51	6.77
1933.....	5.54	4.63	6.92
1934.....	8.60	5.50	7.62
1935.....	8.90	6.40	7.70
1936.....	8.46	5.50	9.00
1937.....	9.00	7.60	9.60
1938.....	9.50	6.26	9.00
1939.....	8.80	6.90	9.50
1940.....	8.70	7.85	10.50

We all know that the price of cattle in 1941 on the Toronto market has been anywhere from $8.50 to $9.50 and as high as $10. In the case of lamb, prices are somewhat lower. We might go back to 1926, as some have done, and take it on the basis of 1926-29. I could give prices of cheese, milk and eggs and of many other farm products, but those three are enough to allow a comparison of prices as between 1930-35 and 1935-40. We owe a great deal to this government and particularly to the Prime Minister (Mr. Mackenzie King) for the agreement he made with the United States whereby we sell our cattle in that market. We are getting the best price for beef cattle that we have had in many years. We are selling all our surplus cattle to the United States, and I believe that up to date it has not been necessary to send any cattle to Great Britain as part of the war effort. The United States is taking all our cattle and will take more if it can get them.

We have heard the suggestion that the price of farm products should be put on the basis of 1926-29, but so far as cattle are concerned I believe we have had, in 1941, a price well above that figure. Of course, in the dairy industry, cheese constitutes one of the chief products, and we are selling to Great Britain at a price of 14·4 cents all the cheese we can produce. This government is adding another 3/5ths of a cent, making it fifteen cents, with a bonus of $2 on 94 score cheese and $1 on 93, and the province of Ontario is giving a bonus of two cents, making the cheese price in Ontario to-day nineteen cents, f.o.b. Montreal on best grade. In my opinion the producer of cheese can produce at that price. We have a contract with Great Britain for 112,000,000 pounds, and I think we should be able to supply that quantity at the price offering.

Then there is the butter situation. We have heard a good deal of discussion of price pegging, the setting of a minimum price. Perhaps the butter situation did give rise to a lot of discussion and may have started the whole story, but I do not think the government made any great mistake in setting the price. I could never see why speculators should buy 60,000,000 pounds from the farmers at twenty-one cents a pound and be allowed to sell it to the consumer at forty and forty-two cents. But that is what was taking place. I believe that if the price board would set a minimum price which would be reasonable to the farmer for the summer, the producer of butter would be much better off than if he took the market price of twenty or twenty-one cents, such as obtained last summer, and obtained forty-two cents in the winter.

Then there is the hog situation, about which there has been considerable discussion. We have an agreement with Great Britain. Someone has suggested that we should send bacon to Great Britain free. Others think that we are not getting enough and should take the price Great Britain is paying us and the government subsidize to the 1926-29 level. We have promised to supply Great Britain with 420,000,000 pounds of bacon, and since that contract was entered into, we have been producing an average of 3,000,000 pounds of bacon a week in excess of the contract. Great Britain has agreed to take 1,000,000 pounds a week more than the contract, which means that to-day we are storing in our cold storage plants 2,000,000 pounds a week. I wonder sometimes, if the price of bacon were raised to the 1926-29 level, what we would do. I imagine we would have more hogs ten times over than we could sell. History proves that the minute you make anything really profitable for the grower, you get too much of it.

A word about the apple situation. I am interested in apples, and I believe that the apple growers of Canada are more than satisfied with the assistance given them by this government. I do not think any member of the house will contradict that statement. We have sold our apples at a reasonable price because we have received protection from this government.

I come now to one of the most important items of legislation, namely, the wheat problem. Some days ago the Minister of Agriculture gave a summary of the situation.

He announced the policy with regard to wheat, whereby wheat deliveries are to be taken up to 230,000,000 bushels at a price of 70 cents, basis Fort William No. 1 northern. This will mean considerably less income for the western farmer; there is no doubt about that. But to offset the acreage being taken out of wheat, it is proposed that $4 an acre be paid for summer-fallow, $2 an acre for sowing to grass seed, and $2 an acre for coarse grain. The idea is to reduce wheat acreage by 9,000,000 acres. We in Ontario have been and still are willing to help the western farmer, and for a period of years we have paid our share of the many millions of dollars contributed towards the assistance of the west. We are still willing to do that; but we do feel that the bonusing of coarse grain, particularly bonusing, to the extent of $2 an acre, the western farmer to grow coarse grain, is going a step too far.

I am not so much opposed to summer-fallow, although I do not believe that is the right thing to do either. I think, as far as grass seeding is concerned, that is something which should be encouraged. We have broken up too much land in the west for the growing of wheat, and it would be a good idea to get it seeded back. I would be more willing to pay $4 an acre to seed down than $4 an acre for summer-fallow or $2 an acre for coarse grain. I am afraid we shall be establishing a precedent of fixing a price on coarse grains just as we have on wheat. As the hon. member for Victoria, Ontario, said, I would rather pay a little higher price for wheat, perhaps 72 or 75 cents, and stick to wheat, than bonus the growing of coarse grains to come into competition with the eastern farmers, which to my mind must happen; I cannot see anything else for it. The amount itself may not be so great but the principle of the thing seems to me absolutely wrong.

As far as this proposal is concerned I as an Ontario farmer do not feel that I can support it, especially if this coarse grain clause is left in. I hope the government will consider this seriously and for the sake of the hog producer and the grain grower in Ontario leave this clause out. If that were taken out, I believe we could explain to our people the reason why it is of advantage to bonus summer-fallow and grass seeding. We realize fully that we have too much wheat. Some land must be taken out of wheat and put into something else. We expect in 1941 a surplus of wheat of between eight and nine hundred million bushels, although the world surplus of wheat is expected to be 1,500 million bushels. Someone said wheat is a war casualty, but I do not agree with that; we had too much wheat before the war started, and if in the years from 1935 on we had had big crops, we would have had ten times more wheat than we can sell.

As I said, labour to-day has a guarantee of the scale of wages of 1926-29 plus an increase for the rise in the cost of living. I am not complaining about that, but surely what is good for one is good for another. The cost of production of the farmer has risen considerably; that is one of the reasons why I have to take this attitude. Take our farm implements; the price of a six-foot binder to-day is $240; when I started farming I bought a six-foot binder complete for $120. About three companies control the price of farm implements. It does not seem to make any difference how much the duty is reduced, the price continues to rise. The duty was 25 per cent; it was reduced to 7½ per cent, and the price went up.

Then there is the scarcity of help, especially as far as the dairy farmer is concerned. Some argue that taking men from the farms does not make any difference to the farmer, that the farming industry will remain intact. But anyone who is in the dairy business to-day depends absolutely on hired help, and if his man goes to the city and gets a job at anywhere from $100 to $125 for two weeks' work, as they have done, the industry is bound to suffer.

Over a period of years Canadian manufacturing industry has been protected by all governments, perhaps beyond what it should be. I am not a free trader; I believe in a certain amount of protection, but I believe that by protecting industry with a high tariff we are doing a great injustice to the farmers. I have noticed, since coming to this house, several hon. members of the opposition have made many pleas for the farmer, but every time protection for industry comes up they are right on the job. We must be consistent; we must be reasonable.

We have to-day in Canada what is known as the federation of agriculture. We have in organizations of one kind and another 350,000 farmers, or practically half the farmers of this dominion. We have 340 farm organizations selling to the farmer, and over 320 farm organizations that buy from the farmer. I am all in sympathy with farm organizations; farmers have a right to make their requests known to any government. Farmers have not enough representation in this House of Commons. I took the trouble the other day to go over the book and I found that there are about thirty-five farmers in the house. We have some others who are classed as farmers, gentlemen farmers; we are glad to have them; they are an asset to our industry, but of

real honest-to-goodness farmers who know what it means to do a real day's work on a farm, we have about thirty-five.

Farm organizations and federations of agriculture can do a great job for the farmers if they are reasonable in their requests. But if they are going to demand the impossible, the organizations will not be of much help. It is all very well to be critical, but we must offer something constructive if we are going to get anywhere. Representations have been made to this government by farm organizations, and as the Minister of Agriculture said their ideas in many instances have been accepted and put into effect by the government. If they continue to do this in a business-like way, I believe the farmers of this country will eventually get a better deal.

Mr. BLAIR: Like the previous speaker, I hesitate to criticize this government too much. I passed through the trying times we had under different governments, and it gives me a cold chill to think I might do anything to injure the government we have now. That resolution, and a vote of lack of confidence in this government from an hon. member who sat under the Right Hon. R. B. Bennett when we as farmers were hiring help and paying our men from pigs at three cents a pound—in fact, I sold the last batch at 2.90—from cattle at three cents a pound, while the honoured present leader of the opposition sat smiling at the pleasant times the farmers were having! I was in extreme distress at that time; I had five hundred acres; I went home in cold sweat and sold every acre of land I had and got out of it. I put my sheep, cattle and horses out on shares. I waited and I bought the land back later at half the price. I sold these farms to organizers who believed what the Conservatives were telling them about butter. They got in their cows; butter was thirty cents, and they were told by the Conservative party, "No more butter at thirty cents." And there was not until the Liberals came into power. These men came and asked me to take back the farms off their hands. I said I was sorry, but I had made other arrangements; I had other ideas.

Mr. FRASER (Northumberland): Doctor, you are a financier.

Mr. BLAIR: I have again five hundred acres, and I am going to hold them until this government is defeated. I am going to hold out; but if ever this government is defeated, I will part with that land just as quickly as I can get rid of it.

I hope the government will not pay too much attention to the far corner or to the western members. We hear a great deal of nonsense in this chamber. We have a member who comes from Qu'Appelle, who rises in his place and shadow-boxes with the Liberals on the other side. They are all planning together how to get a little bite out of the government, how to get a little donation. I have watched that go on time and again, and I have said to myself, "More shadow-boxing." Here the hon. member rises in his place and speaks as though he is opposed to this scheme, but really he is tickled to death to see the amount of money that is going to the west. But let us not give the west everything they ask. I can see the difficulty the minister has; no matter what you give them you can never satisfy them.

Mr. DOUGLAS (Weyburn): Is this Canadian unity?

Mr. BLAIR: Say, listen, down in that corner; we have people from the west appealing to the ministers to build chimneys on schoolhouses, to clean children's heads and all such nonsense as that. Now we are beginning to bonus them. This is against the fundamental principles of the Liberal party. I believe if the Right Hon. R. B. Bennett were here to-day, he would blush to see some of the things we are putting through. We have gone further than the Tories would go. We are destroying the Liberal party. We are giving away too much. We are beginning to give bonuses and subsidies, and we are finding white elephants left on our hands.

Look at the wheat problem; it is our own fault. The western farmers pleaded and pleaded, and now they have a baby elephant on their hands and do not know what to do with it. Neither does the minister know what to do with it. Now they want a bonus on coarse grains, and we have to pay the farmer for storing his grain. Why, if I were a western farmer and were paid eight cents for storing my wheat, I would build a great big barn and keep wheat for centuries. They are getting eleven per cent and more on their money, and now that you are going to give bonuses and subsidies you should cut that down. Why, if they got two or three cents, that would be plenty. I never let a tramp ask for a dinner in vain, but I never gave him a very fat dinner. Charity should be fairly well circumscribed, and when the west comes to the minister asking for donations to this and that, he should give them very little. The hon. member for Qu'Appelle and the other members from the west fight against this or that, and ask for the other thing, but they all agree when they get to their offices upstairs.

We have done so much for the west. There is the Prairie Farm Rehabilitation Act. That act was to be in force only until the farmers got on their feet again; but we find that even this year, when they have so much grain they do not know what to do with it, they still have this act. When are they going to be rehabilitated? If they are not rehabilitated now, when will they be? Then we have the Prairie Farm Assistance Act; the reestablishment of settlers; direct relief; material aid; feed and fodder; shipment of live stock, and so on, each costing millions of dollars. Saskatchewan seems to get the biggest share of the boodle, $56,772,000 altogether. Alberta gets only $7,565,000 and Manitoba only $2,438,000.

There may be something in it when they appeal to us to bonus them in the name of charity. When they cannot sell their wheat they have a right to some consideration, and I think they should get it, but I am afraid the minister will go too far if he does what he has suggested. According to the Sirois report—which is strongly condemned in Ontario but appears to be all right nationally—we find that the individual income in Prince Edward Island was $221. In Alberta it was $360, which meant that in Alberta the individual had an advantage of $139 over the individual in Prince Edward Island; and still the people of the west are asking for more. The individual in Saskatchewan had an advantage of $40, and the individual in Manitoba an advantage of $166 over the individual in Prince Edward Island; still they are asking for more. I suppose these herrings down on the coast can live for less, but in any event they are not here asking for donations.

Some hon. MEMBERS: What about Ontario?

Mr. BLAIR: I think it is a great mistake to loosen the purse-strings too much in giving these subsidies. I do not believe there is a western farmer here who will not boast that the west can run Ontario off the map in growing pigs. I could name dozens of hon. members who have made that statement. I say to them, grow your grain and feed your pigs. We will take a chance on being run off the map, but do not ask Ontario farmers to pay you to grow the grain. We do not object to meeting you on an equal basis, but I am sure our farmers will object if you ask them to pay you $2 an acre to grow coarse grains to feed pigs which you will sell in competition with those raised in Ontario. Remember, the Ontario farmer must pay a good part of that $2. I think you are overdoing it, and I hope there will be some modification, especially in connection with coarse grains. The rate for summer-fallow is too high, also. It does not take $4 an acre to summer-fallow in the west; you can do it for a good deal less than that. The people of the west are getting much more than the people of the maritimes; yet they are asking for charity. I believe they should be given a certain amount, but I hope the minister will keep that amount within strict limits so that our Ontario farmers will not object too seriously.

I must say that the minister and the government have done splendid work; I think the butter question was handled particularly well. It was all right to put a reasonable peg on the top price of butter, but I hope the minister will also put a peg on the bottom price. The distance between the floor and the ceiling is the measure of what the speculators and the packers get in profits. If the minister wants to compensate Ontario to some extent for this subsidy on coarse grains, which will mean that the farmers of Ontario will pay the farmers of the west to raise pigs in competition with them, that might be done by pegging the minimum price of butter at a reasonable level. In passing, may I say that I hope the minister will limit the amount of land on which the bonus may be paid. A man who has five or six thousand acres is not a subject of charity. If the government is to pay for storing grain in granaries there should be some limit upon the amount to be stored. If we keep a thousand bushels from one winter to the next, that is our business. We generally do it because we think it will be profitable.

Some western farmers operate farms of from five to six thousand acres. Are we going to bonus all these men? If I had a farm that size, I would summer-fallow the whole thing. There should be some limitation. I know the acreage in wheat in the previous year will guide to a certain extent the amount of bonus to be paid, but at the same time I would modify the payments. I would keep them down in order that we might appease our eastern farmers.

Mr. ROWE: The hon. member for Durham (Mr. Rickard) referred to the fact that when the tariff on farm implements was lowered, the price went up. My hon. friends will recall quite readily the time when the statements from the Liberal side were entirely different from what we are hearing to-day. The Minister of Agriculture (Mr. Gardiner) said that the members of the government were whole-heartedly in accord with this movement, and it must be alarming for him to hear two of his followers be critical of it.

I believe, however, that no one can view the agricultural situation of this country without being greatly alarmed.

For many years the agriculturist of this country has received much less than his just share of the national income. From 1926 to 1930 over 30 per cent of our people were engaged directly in agriculture. The farmer's income was only eighteen per cent of the national income, even though thirty per cent of our people were engaged in agriculture. For the last seven years over thirty per cent of our people have been engaged in agriculture, but they have received only eight per cent of the national income. The average income of 730,000 farmers of Canada has been $8 a week per family. The father, mother, and the boys and girls labour from early morning until late at night to make an income equal to the minimum price provided by statute for the office girl in the city.

Our industrialists are given cost plus ten per cent contracts. The labouring men of this country have, by statute, been guaranteed a reasonable wage. The farmer, however, is operating on a cost-minus basis. The dairyman is given a maximum price for his butter. The hon. member for Wellington North (Mr. Blair) said that he would support it if the price was put on the other end, although I believe he said he would support it anyway. He thought there should be a floor as well as a ceiling. The hog producer has been given the special privilege of producing more for less. It is not much wonder that the farmer feels that he is a "loss leader" in this new modern society in which only those who organize and demand, receive a just reward for their individual efforts. The federation of agriculture, which met in Toronto not long ago, put this pretty well in the words of Mr. Hannam when he said:

> In the seventeenth month of the war we are so sincerely worried and alarmed about the detrimental effect which the present trend of national policies is inflicting upon agriculture that we deem it our duty to so advise our people and our national leaders in the hope that adjustments may be made before the unity of our people is affected and before our war effort suffers a setback.

This problem affects a great mass of our people. It has been my privilege to observe the general tendency of agricultural development in this country over many years. I have been a member of this house for some time, and there are hon. members that have been here longer than I, but it is in no spirit of "I told you so" that I remind the committee that in 1926, 1927, and especially in 1928, I stated that we were developing a lop-sided agriculture. The hon. member from the other province nods his head. He was here at that time.

Mr. MARTIN: He said 1932.

Mr. ROWE: Nineteen thirty-two as well. But that statement had no influence upon many people. It was only a few of us from the old provinces of Quebec and Ontario who felt that way. The hon. member for Weyburn (Mr. Douglas) made an excellent speech this evening, and like him I do not for one moment want to raise an issue as between the east and the west, or refer to the advantages which the east may have and which the west has not, or which the west may have and the east has not. However, coming from Ontario, I think it is only fair to state that the old provinces of Quebec and Ontario produced more gross agricultural wealth in 1938 than all the rest of the provinces combined. This is the information contained in the year book, and I think it will be found in almost every year since that time. I make this statement with all due respect to that great granary and bread-basket, the province of Saskatchewan.

I have been impressed with the grasp which hon. members have of this problem, and I have been pleased with their reference to the need of diversification of production. I well recall having stated in this house in 1928 that we would soon find the great west filled with unsold wheat. An hon. member who then sat to my left met me afterwards in the lobby and told me that while I might know about conditions in Ontario, I knew nothing about conditions in the west. He told me they would never sell wheat for less than $1 a bushel, that they would grow wheat and wheat alone as long as they were in agriculture. I only wish to point out what I have urged before—

An hon. MEMBER: Oh, oh.

Mr. ROWE: My hon. friend laughs, but he is still of the same mind. He is a member of the same order. I would remind him of what one of his colleagues said to-night. We were told that if the duty on farm implements were reduced, we would be able to buy them cheaper, but we had to pay more. I can well recall that in 1932, as the hon. member has said, I contended, as I contend to-night, that if in an effort to find a sound solution for this problem, it was thought wise to maintain a board of grain commissioners, we should also establish a board of live stock commissioners. This is necessary if we are going to have a properly diversified agriculture. In 1932 I

urged upon the government of the day, which I was supporting, the establishment of an export marketing board which would administer the bonusing of live stock exports of a high quality and study the markets of the world.

Let me recall to the committee that in 1921 the value of our live stock production was greater than our grain production, yet we lost those markets. By 1930 we imported 40,000,000 pounds of meat and 55,000,000 pounds of butter to feed our people. Some are fearful that we are going to have too much animal fats. If the government is going to turn some of this wheat into the production of animal fats and if it is fearful there will be too much, why should they object to tariff board reference No. 99? Why not impose a tax of three cents a pound on vegetable shortening and two cents a pound on the vegetable oil content of soap? That would bring four or five million dollars into the treasury—and heaven knows it needs it—and it would mean seven or eight million dollars for the farmers of this country. This suggestion is in keeping with what I have advocated on many occasions.

We have witnessed the government going into the wheat business, and to-night we see a monument to their clumsy mismanagement of this business down through the years. We have on hand millions of bushels of wheat which we cannot sell and which we might have used in the production of other products, and now to-night the government proposes a restriction of the wheat acreage. All through the years this government has been in power we have been passing estimates for scientific research, experimental work, and other means of increasing agricultural production. In other words, we have had one arm of the Department of Agriculture spending huge sums on experiment and research to increase production, and now it is proposed at greater expense to create another arm to restrict production.

Bonuses have been considered in the past, Mr. Chairman, by hon. members to your right and by many to your left. Bonuses and subsidies have been termed vicious. I urged bonuses ten years ago to encourage the development of mixed farming products in order that we might diversify our agricultural production. Since that time we have seen the government bonus products of which there were huge unsold surpluses. Now we have this government bonusing men to do nothing, to restrict the acreage of wheat. We have now a government policy of not to grow wheat, a policy that is going to cost this country $35,000,000, after we have witnessed this government going into the wheat business, and at a cost of $100,000,000 bonusing producers and building storage capacity for unsold surpluses. If a bonus policy ever was vicious, surely it is vicious now to bonus men to do nothing when Great Britain is fighting with her back to the wall. As someone has neatly said to-night—and I thought it was a good joke—in fifteen years the boys will come back from overseas, and we can picture one of them asking his father in Canada, "What were you doing while I was fighting?" and his daddy farmer replies, "Well, son, I was summer-fallowing."

In the days to come it will be infinitely better that we should have too much of foodstuffs on hand than not enough. It is bad psychology to restrict the production of wheat at a time when the government is urging everyone else to produce. It seems to me an unwise and unsound policy, and certainly it is not doing what the government of Great Britain is urging us to do.

I shall be glad to support anything that will help the western grain growers because I realize they are faced with a serious problem, and I know the Minister of Agriculture is struggling with it desperately at the present time. He is generally recognized, I think, as one of the most skilful political pilots we have seen in this house for a long time, but may I suggest that so far as agriculture is concerned he has clumsily driven it into the most hazardous tailspin it has experienced in the last fifteen years.

Not long ago in the British House of Commons that greatest of modern statesmen, the Prime Minister, the Right Hon. Winston Churchill, said:

> We shall do our best to encourage the building up of reserves of food all over the world, so that there will always be held before the eyes of the people of Europe, including—I say this deliberately—the German and Austrian peoples, the certainty that the shattering of nazi power will bring them all immediate food, freedom and peace.

In view of that ringing challenge for our assistance in building up reserves of food, I am not surprised that the Minister of Agriculture and the Minister of Trade and Commerce should bring down this policy to restrict production as a joint measure of the two ministers, because I do not think there is a member of the government who would have the courage to bring down this fantastic proposal and father such a child alone. The policy proposed here is the very opposite of what we are being urged to do by the British government. The United States of America are going to export $450,000,000 worth of agricultural products, and yet only a short time ago they were destroying their hogs and

burning their cotton in the south. Now it is in demand for the manufacture of cordite and other explosives.

The Minister of Agriculture said this afternoon that a few years ago we had only 28 million bushels of wheat in this country. If we have another drought year, and if this war should be over in a comparatively short period, is it not better for us to build up reserves of food which will surely be required after the war is over? What is 500 million bushels of wheat distributed throughout the world?

Swiftly changing and tragic events have created new problems. To-day while we grimly face a dark and difficult future, we have faith in our strength to restore peace through victory. The restoration of the agricultural industry is vital to Canada's economic fabric, to enable us to withstand the financial obligations which the war imposes; but if we are to justify our place in the life of the empire, we must answer the call of Britain and have available large stores of food for a hungry and starving world if peace should happily come sooner than we expect. When that day comes—and we all pray to God it may be soon—when peace dawns once again and world rehabilitation stands as the next gigantic Anglo-American task, we shall surely find more opportunity to give our bonused surpluses to the poverty and hunger-stricken peoples throughout the world than to boast of higher temporary prices established by this fantastic plan to curtail production. I say this in all sincerity. I do not wish to embarrass the government, at all, not so much as some hon. members may wish to do before this issue is closed, but I do urge the government to reconsider bonusing any industry in Canada for doing nothing. I appeal to the minister to consider the matter again. I would rather spend $100,000,000 or even $200,000,000 to send foodstuffs to Great Britain than pay half that amount to men in this country to do nothing.

Why not encourage agriculture to produce more? Why not put a bonus on cheese and bacon? I may be asked: "Where would you sell it?" I reply that there are thousands of women and children crying for these products to-day, and if this war is over in two years, all the foodstuffs we can produce will be required. But this policy of restricting production, as the hon. member for Weyburn said to-night, is a long way from the policy which Joseph followed in Egypt of accumulating stores of food against the day of famine when they would be needed.

Are hon. gentlemen opposite prepared to say to Mr. Churchill, "We did not do what you asked us to do. We did not build up reserves of our No. 1 hard wheat, but, instead, we paid our farmers for doing nothing, and we are going to get their votes because we shall get higher prices for their products when they are needed so badly after the war is over."

I say again, Mr. Chairman, I shall be glad to support any policy that will really help to solve the great problem of agriculture, but I maintain that this policy will not solve it. This solution will only create another agriculture problem in eastern Canada. I have much regard for the wheat producers, and by the way I produce quite a bit myself, but wheat is not our only agricultural product. The live stock industry has produced great wealth for Canada, and you do not have to produce much live stock before you add to the richness of the soil; but when you produce wheat, you deplete the fertility of the soil. So far as cash returns are concerned, the provinces of Ontario and Quebec have, in the last ten years, produced more agricultural wealth than the rest of Canada combined.

May I remind hon. gentlemen that after the last war we shipped 77 million pounds of live stock products to Great Britain before 1921. This is a different war, it is true, but after this war the people will be just as hungry as they were after the first great war. and where are they going to find the foodstuffs they will need? I urge the minister to reconsider whether this policy of restriction of production is sound or unsound in the interests of the empire. We must win the victory, and I have never known any country to lose victory because it had too large a surplus of food.

Mr. FAIR:

Hush, wheat baby, don't you cry—
You may be kneaded by and by.

We have had quite a variety of speeches during the past weeks and months. We have discussed battleships, Bren guns, all sorts of things under the sun; and now, in order that these things may continue to be produced, we are going to discuss certain foodstuffs. Since the dinner recess the hon. member for Victoria (Mr. McNevin) has given us Ontario's side of the question. For his benefit and for the benefit of the committee, might I suggest to him that he should get his facts straight in order that he may not mislead the committee or the country.

The hon. member for Durham (Mr. Rickard) gave us a pretty good address—in spots. One thing with which I can agree is his statement that we have not enough farm representation in this house; and some of its representatives, even when they are farmers, sit still and keep their chairs warm rather than rise in their places and speak for those who sent them here.

A little later we heard that gentleman-farmer, the hon. member for Wellington North (Mr. Blair). I knew from speeches he made in the past that he was not a practical farmer. He is, apparently, one of those who have farmed the farmer. I had that suspicion; to-night he has justified it, because he told us that he sold farms at good prices and, later, on, bought them back at half price from the farmers. I only wish that he had remained in the house, because I do not like to say anything about him behind his back. I like to see men have back-bone and not be lined up with those "spineless yaps" of whom he spoke in this chamber not very long ago and who are now overseas fighting his battles, while he sits in ease, keeps his chair warm, and supports this government even though their policy does not suit him.

We are told that man is the only animal that can be skinned more than once, and I believe that the farmer must be a superman, because we find that at every move he makes he is skinned. I believe that this government have been pretty good on the skinning since they got into office, and I will try to indicate what I mean.

I am going to deal for a while with wheat, and a little later in the debate I intend to touch on other matters. I do not wish the remarks I have to make to be applied only to the farmers of western Canada. Like other hon. members who have spoken here this evening, I believe that farmers all over Canada should have consideration, and I desire fair treatment for the farmers of the maritimes and the central provinces just as strongly as I want the western farmers to have it. But because I have been sent here by western agriculture, I feel that it is my duty to place, to the best of my ability, their case before the committee.

In 1935, under the wheat board set-up, we had an initial price from the board of 87½ cents a bushel, and also received participation certificates which entitled us to any profit which accrued later on. In the fall of 1935, as we all remember, this government came into office. Knowing the fight which they had put up against the wheat board in 1935, we expected something which we got; in fact we got a little more than we expected. In 1936 the price continued at 87½ cents; but during that year, although the house had enacted legislation placing the wheat board in operation, order in council P.C. 2202 was passed, taking away from the wheat board certain rights which had been conferred upon it by law. I do not know whether that was within the powers of the government, but anyway it was done.

In 1937 the price continued at 87½ cents, but because of a scarcity of wheat very little was put through the board. The order in council to which I have referred deprived the farmer of the use of the board unless the price of wheat went below 90 cents a bushel.

In 1938 we find that farmers were getting along, perhaps, a little too well, and the government, in order to make things easier to figure, sliced off the 7½ cents, which made the initial payment 80 cents. In other words, they were getting us accustomed to what was to come a little later on.

Certain sections of certain provinces were not getting, apparently, all they should have got, and on February 16, 1939, the government's agricultural policy was outlined by the Minister of Agriculture (Mr. Gardiner). Because this has quite a lot to do with the present programme, I am going to read a part of his speech in which, I believe, hon. members will be interested. It is to be found in *Hansard* of February 16, page 1036; the Minister of Agriculture is speaking:

> May I say at this point that as far as the government is concerned we do not feel that the most important thing to be done as a government is to try to see how much wheat we can have produced in Canada. Nor do we think it is important in itself that we should try to have all the cattle produced that can possibly be produced in Canada. Nor do we feel that it is important in itself that we should have all of the dairy products or all the fruit produced in Canada that it is possible to produce. What we think is most important is to put the greatest possible number of families in comfortable circumstances upon the farm lands of this dominion. Believing that, we think that any policy for the marketing of farm products should be based upon the idea that sufficient returns should come to the individual families to make it possible for them to maintain themselves with the ordinary comforts and give proper education to their families. The objective of this government has been and will continue to be to set up as many homes as can possibly be maintained on farms in the prairie section of western Canada. We believe that to do so will assist in solving our labour problem, our railway problem and every other national problem.
>
> May I enlarge on that to say that I am not at all interested in encouraging the production of wheat at thirty-five cents a bushel by putting into operation as many tractors as can possibly be operated on the farm lands of western Canada. Even if it costs forty cents a bushel or if it costs forty-five cents a bushel to grow the same amount of wheat, or a lesser amount, while other products are being produced on the same land, with five families upon, say two and a half sections of land instead of having one family and three tractors and two hired men, then I am in favour of the five families. The encouragement of the placing of more and more families upon our land rather than the production of more and more wheat from our land will assist in solving the labour problem of this country. It will assist also in solving our railway problem to have as many families as possible maintained in comfort upon these lands. It will assist in solving

every other national problem which is confronting the people of Canada at the present time. For that reason I believe that any policy which we follow should be based upon the idea that we want to put families upon the land. To that end we have already greatly extended and established on a continuing basis the attempt to reestablish farmers in the area where wheat is grown for export. That is, our whole rehabilitation programme, which will again receive consideration when our estimates for that purpose come before the house, is directed to the end that more families may be maintained in the area that has been known as the drought area during recent years.

In the putting of that policy into effect the price of wheat was reduced to 70 cents and an acreage bonus provided for. That was the 1939 programme. And the 1940 programme continues the same. Because we have succeeded in growing too much wheat, we have the new policy announced by the Minister of Trade and Commerce and the Minister of Agriculture.

Knowing agriculture as I do, having lived on the land in western Canada for a number of years, I am bound to agree with one of the ministers of the Ontario government when he said that the Minister of Agriculture has betrayed the farmer. I quote:

> Without fear of contradiction, I say Mr. Gardiner betrayed the agricultural classes of Canada and left them to work out their own problems against insurmountable odds without any assistance from the Department of Agriculture at Ottawa.

That is what the Hon. William L. Houck, minister without portfolio in the Ontario cabinet, said.

I believe we can find remarks of that kind on the part of different people throughout the country. If you go among the farming communities and in the towns or in our cities you will hear exactly the same expressions on all hands. Over in Europe the strong nations are squeezing the blood out of the weaker ones and drinking it to make them stronger so that they can conquer still more weak nations. At present in this country we find organized industry and finance, which are interlocking and apparently controlling the government and using unorganized humanity and money as commodities in order to gain their selfish ends. They can well be compared to the strong nations of Europe. I say this because the strong are encouraged to become stronger, while the weak are being suppressed in practically every move that is made.

Governments in other countries are doing something worth while for their farmers. In England, with Winston Churchill at the head, the farmers are taken care of, just as they are in the United States. In order to throw some light on that question, I might read from a part of an address given by the secretary of agriculture quite recently:

> With regard to wheat, Mr. Wallace pointed out that world prices are expected to continue low. If the wheat producers of the U.S.A. had been compelled to accept the prices obtainable abroad they would have received less than 50 cents a bushel net for the 1939 crop. Actually they received 71 cents. The difference was largely the result of United States government loans, export subsidies and acreage allotments. Yet the 71 cent average was still far below the parity price, the objective under the Agricultural Adjustment Act. The parity price for the 1939 crop was $1.13.

So far as Canada is concerned, I have the following from Searle index:

> The Searle index of the cost of things farmers buy (147 items) now stands at 143, 1913 equals 100. This means that these things cost farmers of the west at the present time 43 per cent more than did similar items of the same quality in 1913-14.
>
> The price of wheat, No. 1 northern, on March 18 on the open market prices was 14 per cent lower than it was in 1913-14. This means therefore that a bushel of wheat in western Canada now has a purchasing power of 60 per cent only in comparison with the purchasing power of a bushel of wheat in 1913-14 of 100 per cent.

A few days ago I had a letter from one of my constituents, and he gives me these local price increases in the stores. Sugar had jumped from $6 to $7.95, an increase of 33⅓ per cent. Tea had increased from 40 to 59 cents, an increase of about 50 per cent. Twine had increased from $10 to $12 a hundred, or an increase of 20 per cent. Wages were up 25 per cent; hardware was up 25 per cent; cotton clothing was up 12½ per cent; woollen clothing was up 50 to 70 per cent; lumber was up 33⅓ per cent, and taxes were up 15½ per cent.

That is how the farmer is affected when he has to buy things. But we find, further, that prices of machinery, which has a good deal to do with the production of wheat and other products, have risen. I have intentionally chosen a few of the implements used on small farms. The company from which I got these figures explained that because these implements are now obsolete and more up-to-date machinery can be purchased at a lower price, the small farmer is not relieved in any way because he is still compelled, through circumstances over which he has no control, to use the implements I am about to mention. The following are prices for the different implements indicated:

Year	2-furrow 14″ gang plough	20-marker double disc drill	8′ Gr. binder w/B.C. and T.T.
1914....	$ 92.00	$145.00	$175.00
1926....	160.00	258.00	292.00
1933....	138.00	245.00	272.00
1940....	160.50	281.50	349 50

We have discussed farm implements a good deal in this house. We had an investigation here in 1936-37, at which time the committee brought in recommendations, and the present Minister of Agriculture declared that something drastic was going to happen to the companies if they did not cut their prices. I regarded that as a threat from the government through the Minister of Agriculture, but we find that the machine companies have continued to increase their prices. Nothing has happened. The Saskatchewan legislature also had an investigation, and nothing came of that. The result is that the machine companies are still running high, wide and handsome as far as profits are concerned.

Then we hear of certain provinces paying all of the taxes. The present Minister of Trade and Commerce has, perhaps, not yet realized the amount of tariff we are paying on implements and other commodities. For his information I will give the figures in connection with the four western provinces, and I hope he will use the strong arm on his colleagues to have something done about the matter. In 1931, which seems to be the only year for which statistics are available, Manitoba paid $29,185,740, which is equivalent to $13.25 per capita; Saskatchewan paid $29,228,285, or $28.16 per capita; Alberta paid $27,909,396, or $26.93 per capita; British Columbia paid $37,737,247, or $22.33 per capita. That is a total, for the four western provinces, of $124,060,668. If we were all paying equally, it would not be so bad, but taking the central provinces, Ontario and Quebec, we find that Quebec had, not a loss, but a gain, on account of tariff, of $31,685,885, equal to $11.03 per capita. For Ontario there was a gain of $51,989,761, equal to $15.15 per capita. Surely there is something wrong there and something should be done. These two provinces gained that year $83,675,646, and I think all hon. members will remember that that year we had very low prices for grain, and therefore, very low purchasing power.

In order to illustrate something of our present system, I shall read a parable from Count Leo Tolstoi relating to the present profit system. He said:

> I see mankind as a herd of cattle inside a fence enclosure. Outside the fence are green pastures and plenty for the cattle to eat, while inside the fence there is not quite enough grass for the cattle.
>
> Consequently the cattle are trampling underfoot what little grass there is and goring each other to death in their struggle for existence.
>
> I saw the owner of the herd come to them and when he saw their pitiable condition he was filled with compassion for them and thought of all he could do to improve their condition. So he called his friends together and asked them to assist him in cutting grass from outside the fence and throwing it over the fence to the cattle. And that they called charity.
>
> Then because the calves were dying off and not growing up into serviceable cattle he arranged that they should each have a pint of milk every morning for breakfast. Because they were dying off in the cold nights he put up well-drained and beautiful sheds for the cattle. Because they were goring each other in the struggle for existence he put corks on the horns of the cattle, so that the wounds they gave each other might not be serious.
>
> Then he reserved a park in the enclosure for the old bulls and the old cows over seventy years of age.
>
> In fact he did everything he could think of to improve the condition of the cattle, and when I asked him why he did not do the obvious thing, break down the fence and let the cattle out, he answered:
>
> "If I let the cattle out I should no longer be able to milk them."

I contend that this programme of milking has gone on far too long. I contend that the policy of milking is to-day one of the great causes of war. We have been told that you cannot have a contented nation half free and half slave. At the present time a very much larger proportion than half is slave in Canada, and we find that the stronger ones are still, as I said at the start, squeezing the blood out of the weaker ones and drinking it to make them stronger and to conquer still more. It is time that stopped.

The Right Hon. Winston Churchill, speaking in London last December, had this to say:

> When the war is won, as it surely will be, it must be one of our aims to establish a state of society where the advantages and privileges which hitherto have been enjoyed by only the few shall be far more widely shared by the men and youth of the nation as a whole.

That should also apply to Canada.

Then we have another man, Jesse F. Jones, a wealthy United States gentleman who was formerly chairman of the Reconstruction Finance Corporation and is now Secretary of Commerce in the Roosevelt cabinet. He was given a complimentary dinner by friends in the ranks of big business. Their enjoyment of the occasion must have been somewhat tempered by his remarks, of which the following extracts reveal a social philosophy until now entirely foreign to the devotees of the private profit system. Mr. Jones said:

> These United States have been good to us. We have made money, we have nice homes, wear good clothes, have fine cars and can afford banquets like this one. We can look back fifty years when most of us started and chart the courses that followed. But we can't look ahead that far and see where we are going.
>
> But there are some things we know about the future. One of them is that the days of making great fortunes are over. That is finished. Another is that the upper third, you and I, have got to have a more public-minded viewpoint. We must realize that the welfare

and well-being of the lower third is our problem. We are not living in a world by ourselves. We are as much of society as the fellow on the other side of the tracks. His problems are our problems, and unless something is done about them the world we know and want to preserve won't last long.

I would ask the government to take serious notice of that. He continued:

We businessmen can't afford to be blind or obstructive or stupid. You can't turn the clock back. Remember that.

We have been waiting quite a long time for an announcement of farm policy for 1941. I should like to have had a good deal more time to go into that in detail. But that is not possible now. We find, however, that some other parties did not have to wait so long. The government had a serious storage problem on its hands and apparently went to Winnipeg to get some advice and assistance. We find that on February 19, order in council P.C. 1225 was passed whereby provision was made for certain storage to be erected; fifty million bushels of temporary storage was arranged for. This particular part of the order in council which I shall read perhaps had quite a little to do with it:

Now, therefore, His Excellency the Governor General in Council, on the recommendation of the Minister of Trade and Commerce, concurred in by the subcommittee of the cabinet aforesaid, under the authority of the War Measures Act and notwithstanding anything contained in the Canada Grain Act, is pleased to order and doth hereby order that in the case of elevator companies entering into the agreements hereinafter referred to for the construction of temporary terminal storage facilities as aforesaid, no reduction shall be made before the 31st day of July 1943 in the prevailing tariff charges now authorized to be made by elevator companies for the elevation, storage and handling of grain by terminal or country elevators.

His excellency in council, on the same recommendation, under the authority above cited, and notwithstanding anything contained in the Income War Tax Act, is further pleased to order and doth hereby order that the allowance on account of depreciation for income tax purposes to be made by the Minister of National Revenue in case of any elevator operating company which constructs temporary terminal storage facilities as aforesaid, in respect of such facilities, shall be fifty per centum (50 per cent) of the cost thereof in the company's fiscal year ending in the year 1942 and fifty per centum (50 per cent) in the company's fiscal year ending in the year 1943, provided that where the fiscal year of any of the companies ends with the calendar year the Minister of National Revenue may give special directions as to the period of the write-off, provided, however, that no depreciation shall be allowed on account of these temporary terminal storage facilities in respect of any subsequent year and provided further that the Minister of National Revenue shall hereafter allow elevator operating companies constructing temporary terminal storage facilities as herein provided, to make deductions on account of depreciation for income tax purposes in the case of their present permanent terminal storage facilities at the same rate or rates as shall be applied by the Minister of National Revenue in the case of permanent terminal facilities hereafter constructed, and further that if at any later time the said the Minister of National Revenue permits the cost of temporary terminal storage facilities otherwise constructed to be written off on a more favourable basis, the same permission will be extended to each of the said companies.

[Mr. Fair.]

I realize, of course, that it is necessary to construct temporary storage, but I think it is well understood that the entire cost of construction can be paid by one year's storage charges, which amount to eight cents a bushel. I am quite sure that the policies advocated by the government guarantee that these facilities will be kept filled, and that the companies will receive storage right along I do not see why similar treatment is not given the farmers. I understand that to-day labour is being paid wages similar to those paid during the period from 1926 to 1929, and that if the cost of living goes up very quickly, a bonus is guaranteed as well. Industry is taken care of in a similar manner. In August, 1939, in spite of legislation passed by this parliament, an order in council was passed removing the profit limitation, and now these industries are living in what might be termed clover. But what do we find in connection with agriculture? The average price of No. 1 northern wheat at Fort William from 1926 to 1929 was as follows:

1926	$1.46·3
1927	1.46·3
1928	1.24·0
1929	1.24·0

The average price during those four years was $1.35 a bushel. Then we find that next year, "in order to keep small farmers on the land" the government is going to pay 70 cents a bushel on approximately 65 per cent of last year's yield. Perhaps this is one of the best ways that could be found to chase these people off the land and create another relief problem greater than any we have had in years gone by.

Coming back to the question of the price of wheat, we find that over a period of some sixty-four years the average price of No. 1 northern wheat at Fort William was $1.17. In spite of that fact it was found necessary to pass legislation setting up boards under the Farmers' Creditors Arrangement Act in order to reduce the farmers' debts. I believe those boards will have to do their work all over again, because under present conditions the farmers simply cannot pay their debts, I care not how honest they may be. In addition, we find poverty and malnutrition on the farms and in the towns depending on the farms. We find that millions of dollars have been paid in relief; that the health of

the nation has been broken, and that, according to the figures given by the Minister of National Defence for Air (Mr. Power), only one out of six of our young men is healthy enough or sufficiently well educated to enter the air force. These things should make us think, and thinking is not enough; we should do something about them.

To-night we were told that the west received a great deal of help from the east. Perhaps the east does not know that on the 1940 wheat crop alone the farmers of western Canada have sustained a loss of approximately $250,000,000 based upon that average figure of $1.17 for No. 1 northern wheat at Fort William. To-day the very best wheat that can be grown in the world is being delivered at 70 cents a bushel at Fort William. Then it seems that prices paid for our hogs, cattle, poultry and so on are based upon the price of grain. I almost said the cost of grain, but apparently the cost is not taken into consideration.

We from the west are not asking for charity. We have a living coming to us. We are producing the food of the nation, and food which we believe will be needed later on in Europe. We are content to go on producing it, but we believe that some of the present inequalities must be wiped out. We feel that we must have a square deal, but it should not be called charity or a hand-out; we do not want that. We want treatment similar to that given the rest of Canada, and the day is coming when we shall have that treatment.

Mr. Chairman, I suggest that it is eleven o'clock.

The CHAIRMAN: Shall the item carry?

Mr. NICHOLSON: Before you call it eleven o'clock, Mr. Chairman, would the minister clear up the statement he made a few minutes ago with regard to the income from wheat this year? I understood that he included about 25 per cent of the income from the 1940 crop. I wonder whether he included the entire income from the 1941 crop.

Mr. GARDINER: No. I took the bushelage which the officials of the department estimated was still in the hands of the farmers and which would come out between January 1 and July 31, together with the amount they estimated would come from this year's crop between August 1 and December 31, which figure they set at 150,000,000 bushels.

Mr. NICHOLSON: I thought this afternoon the income was estimated at $115,000,000.

Mr GARDINER: That was from 230,000,000 bushels of wheat, at the price mentioned.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Friday, March 28, 1941.

The house met at three o'clock.

UNEMPLOYMENT RELIEF

DISCONTINUANCE OF DOMINION CONTRIBUTIONS—NORTHERN SASKATCHEWAN SETTLERS

On the orders of the day:

Mr. A. M. NICHOLSON (Mackenzie): Mr. Speaker, I had intended to ask a question of the Minister of Labour, but in his absence perhaps the Minister of Agriculture might answer.

In view of the fact that dominion contributions for relief to the provinces are being discontinued on March 31, what responsibility will the federal government take for supplying food to the northern settlers in Saskatchewan who are being reestablished under a joint dominion-provincial arrangement, in the event that the province cannot care for these settlers? What announcement, if any, has been made by the Saskatchewan government in connection with supplying relief after March 31?

Hon. J. G. GARDINER (Minister of Agriculture): In the absence of the Minister of Labour I have been asked by him to reply as follows:—

It has always been the responsibility of the provincial or local authorities, acting under provincial regulation, to determine to whom, to what extent and under what conditions assistance is granted. The dominion responsibility was largely that of assisting the provinces financially. It is assumed that the provincial authorities will arrange to take care of those in need after March 31 without dominion assistance. I have no information as to the intention of the Saskatchewan government.

DECENNIAL CENSUS

INQUIRY AS TO APPOINTMENT OF COMMISSIONER FOR PARKDALE

On the orders of the day:

Hon. J. A. MacKINNON (Minister of Trade and Commerce): Yesterday the hon. member for Parkdale (Mr. Bruce) suggested that I lay on the table of the house the letter

to which I referred as having been received from him in connection with taking the census, and I do so now.

Some hon. MEMBERS: Read it.

Mr. MacKINNON (Edmonton West): It reads:

522 University Avenue,
Toronto, January 24, 1941.

The Hon. James A. MacKinnon,
Minister of Trade and Commerce,
Ottawa, Ontario.

Dear Mr. MacKinnon,—

I am informed that you have appointed Mr. Travers, my opponent in the last election, as chief census officer for Parkdale.

When the national registration was taken you will recollect that the members were asked to nominate the registrar for their ridings and after I nominated the president of my association, Mr. Wm. McKeown, I asked him to appoint Mr. Travers as assistant registrar and also to give Mr. Travers the opportunity of naming fifty per cent of those to be employed on this work.

Would it not be fair, therefore, to ask Mr. Travers, the chief census officer, to appoint Mr. McKeown as his assistant and to allow the latter to designate fifty per cent of those who will be engaged in this work?

Some hon. MEMBERS: Oh, oh!

Mr. MacNICOL: That is fair.

Mr. HANSON (York-Sunbury): There is nothing wrong with that; it is reciprocity.

SUPPLY

The house in committee of supply, Mr. Vien in the chair.

DEPARTMENT OF AGRICULTURE

422. Special. To provide for payments on reductions in wheat acreages, under conditions prescribed by the governor in council, for administration expenses in connection therewith, and for temporary appointments that may be required notwithstanding anything contained in the Civil Service Act, $35,000,000.

Mr. HANSON (York-Sunbury): Mr. Chairman, I made a few remarks yesterday concerning the matter of procedure with respect to this item. I do not propose to repeat anything I said then. In my remarks to-day I shall review the criticisms of the government's proposals, and I hope to make a few constructive suggestions.

The wheat problem is not of recent origin; indeed it goes back to the years succeeding the last war, when the wheat-importing nations of Europe adopted the policy of attempting to become self-supporting communities.

If you will examine the record you will find that beginning with the year 1922, and in succeeding years down to at least 1934, the importing European countries, such as Germany and France, began by a succession of tariff increases, quota systems and other limitations, to cut down their imports of wheat until finally some of them, notably France, actually became exporters of wheat.

What was the reason for this? Frankly I think it was that they were afraid of war. They were afraid of the difficulties of transportation in time of war, but over and above all these reasons they were afraid of the price they had to pay for wheat during the great war. They determined that never again would they pay ransom to America for their bread.

Upon whom did this policy fall most heavily? Without doubt upon Canada, the United States and the Argentine, and upon Canada most of all. What did Canada do? Did she take cognizance of the growth of economic nationalism in Europe with respect to wheat? She did not—most emphatically she did not. During the time the right hon. gentleman and his party were in power and in control of government policy, this country increased its wheat acreage from 18 million acres in 1921 to over 25 million acres in 1930. Production in terms of bushels grew from 300 million bushels in 1921 to 479 million bushels in 1927, to 566 million bushels in 1929 and to 420 million bushels in 1930. In terms of dollars and cents the value of exports of wheat and wheat flour for the crop year 1925-26—the first year for which the figures have been made available to me—was $475 million, but in 1930-31 this had fallen to $188 million.

May I pause here to say that the problem first became acute at about this time, early in 1930. I really have never been able to make up my mind whether the then government, the then minister of agriculture, the then minister of finance, were aware of the situation rapidly coming to a head. But the evidence is that the government of my right hon. friend had not at the beginning of 1930 the slightest appreciation or understanding of the wheat problem then rapidly approaching. On February 20, 1930, the right hon. gentleman put these words into the mouth of his excellency in the speech from the throne:

> The dominion is already recovering from the seasonal slackness evident at the end of the year and it is not to be forgotten that the bulk of the 1929 wheat crop still remains in Canadian hands for final disposition.

Mr. Chairman, mark well that sentence! We, in common with the rest of the world, were then in the fourth month of the greatest economic depression the world had ever seen, and the right hon. gentleman called it a "seasonal slackness"! What vision! How characteristic of him! Trying the old game of lulling the Canadian people into a sense of false security. And then how naive the

statement that "the bulk of the 1929 wheat crop still remains in Canadian hands for final disposition"!

That was the position with respect to wheat which the Bennett government inherited in 1930. The crop of 1929 still remained unsold in the hands of the farmers. The problem continued down through the years to 1935, and then the Bennett government had to take over the whole burden and establish a new policy.

In the meantime marketing prices went from bad to worse. Wheat went down in price in 1933 on the world's markets to the lowest price in 400 years. The selling agency of the pools had called in John I. McFarland in 1930 to take over the problem. The government in the course of time had to put the credit of the country behind the agency, and it did so. This action carried the situation through to 1935, and no matter what the criticism was, the fact is that the operations of John I. McFarland never cost Canada one cent. On the contrary in the final accounting the McFarland operations resulted in a substantial profit to the treasury, and it should have been far more than it was.

I want to pause here to pay a tribute to Mr. McFarland. He was not employed by the government. He was employed by the pools, and he undertook, without salary, to serve Canada, and particularly western Canada, to the best of his ability—an ability, I believe, without a peer in that particular field. He gave himself so unremittingly to the task that I believe his health was permanently impaired. But what he did, he did for Canada, and I am sure the farmers of western Canada, irrespective of party politics, respect him and look upon him to-day as one of the greatest friends western agriculture ever had.

Then in the session of 1935 the government took, in the face of the sternest opposition from gentlemen opposite and from the trade, the only possible constructive position that was open to it. It decided on the establishment of the wheat board.

Hon. gentlemen who are interested in the position at that time may read with a good deal of profit Mr. Bennett's speech on the second reading of the bill on June 12, 1935, in which he traced the history of the production and sale of wheat in the whole world and its relation to Canada, and in which he made a most reasoned argument in support of the measure.

The terms of the 1935 bill were simple. It provided for the marketing of Canada's wheat crop through a government board, not through private enterprise. Why? In the circumstances private enterprise had failed, and it has failed ever since. That was the fundamental reason. Nobody wanted to put the government into the wheat business, but because there was no other method, no other agency that would function, the wheat board was established. Another reason was that a wheat board would ensure against the destruction of that measure of economic stability which had been built up in the most trying years of the history of wheat production in Canada. The bill was offered on the further theory that Canada had an obligation not only to herself, as the chief exporter and the third greatest producer of wheat, but also to the other wheat exporting countries, to give such help and assistance as we were able, to prevent wheat from being sold at prices ruinous to the producers. Generally speaking, these were the principles upon which that legislation was based.

The advent of another great world war has accentuated the position. It has not changed, except in degree, the underlying position.

May I pause here now to examine the position of hon. gentlemen opposite, who were then sitting on this side. I well remember it. They were hostile to the principle. Who was their spokesman? He was the same gentleman who is now Minister of National Defence (Mr. Ralston). At page 3581 of *Hansard* of 1935 he made this statement:

> I do not believe that the people of the Dominion of Canada are favourable to a compulsory wheat board—

Well, we have it; we have it to-day.

> —to a board the constitution of which will mean that every wheat grower, every elevator man and everybody engaged in the business must deal with the government agency and no one else.

That was the attitude of my hon. friend in 1935. But while he gave expression to that view, he did not venture to challenge the measure. He was afraid to strike. Discretion was the better part of valour with him and his colleagues. He left us with the impression that while he would like to kill the bill he dared not do so. No wonder that at the conclusion of his speech one hon. gentleman asked him if he was for or against the bill. No one knew.

The board was set up in 1935. The election came. The Bennett government was defeated. The members of the board were dismissed and new men were appointed in their place. Was the personnel improved? That is a question which I leave to the people of Canada to answer. The essential point is that the principle of government control of the wheat business was maintained, and for definite and good reasons.

I shall not follow the operations of the board from 1935 down to 1938, but I do assert that the marketing of the 1938 crop gave the Canadian Wheat Board Act its first real chance to function. Canada faced the crop year 1938-39 with empty granaries. The world carryover was 40 per cent below the previous five-year average. Early in that crop year, in August, 1938, cash wheat was around 85 cents at Winnipeg and October futures, 75 cents. That year the world acreage sown to wheat was exceptionally large and a heavy crop resulted.

The exporting countries had available for export around 1,200,000,000 bushels, including the small carryover, and we in Canada had available for export approximately 50 per cent of the needs of the importing countries, including Britain. This was not an inviting marketing condition; on the contrary, it was a most uninviting condition.

The initial price of No. 1 northern was fixed at 80 cents by the federal cabinet under the authority of the Canadian Wheat Board Act, and this formed the basis for fixed prices for other grades of wheat. This minimum price was accepted by the cabinet upon the recommendation of the wheat board. The price was announced by the Prime Minister on the evening of August 4, 1938, and on that occasion he made the following general statement:

> The policy of the Canadian wheat board will not be to hoard wheat, nor to speculate upon it, nor to seek to establish a monopoly. Canadian wheat will be moved promptly to market.

The announcement went on to state that the minimum price had been accepted by the cabinet upon the recommendation of the Canadian wheat board, and therefore both the cabinet and the wheat board were responsible for the position.

It was evident from the Prime Minister's remarks that the fixing of the 80-cent price was a form of compensating adjustment for the western farmer, who had suffered greatly in recent years because of drought and crop failures. At the same time, the Prime Minister released an announcement from the Hon. W. D. Euler, then Minister of Trade and Commerce, to the effect that Canadian wheat would be competing in world markets; and the milling and grain trades of the world were advised that, notwithstanding the internal initial price of 80 cents a bushel, the Canadian wheat board would continue its work of encouraging the use of Canadian wheat—and now, Mr. Chairman, mark these words—"which will at all times be competitive on the world's markets."

[Mr. R. B. Hanson.]

Then things began to happen. There were immediate reactions to the statement of the Prime Minister and the announcement of the Minister of Trade and Commerce. In the United States it was announced that 100 million bushels would be dumped on the world's markets. The Argentine gave its president discretionary powers to fix a margin between domestic and export prices. Australia and other exporting countries acted in response; and all the importing countries except Britain tightened up restrictions, some to the point of exclusion.

Now mark this! In less than one month after Canada's official announcement of the price was made and after the announcement attributed to the Minister of Trade and Commerce that, notwithstanding the initial price of 80 cents a bushel, Canadian wheat would be competing in world markets and that the wheat board would continue its work of encouraging the use of Canadian wheat, which would at all times be competitive on the world markets, the cash prices and price of futures at Winnipeg went down to below 60 cents a bushel.

The government's announcement resulted in severe damage to Canadian wheat prices. There was an immediate cash loss of $52,000,000 to the treasury. That $52,000,000 was a contribution which had been advanced by the treasury to the wheat board. An ultimate total deficit of $61,282,329.55 on the wheat crop of 1938-39 resulted. There is no question about this ultimate loss. It is admitted in exhibit B attached to the Canadian wheat board report of the crop year 1939-40, dated January 11, 1941, which recently came into our hands.

These are the facts. These results are not to be dismissed as a mere error of judgment. They are the natural result flowing from the policy announced by the government that Canadian wheat would at all times be competitive on the world markets. The fixing of the minimum price at 80 cents was government policy, not a mere leap in the dark; the fall in price in the world markets was a direct result of the announcement of the then Minister of Trade and Commerce. It meant that, while the price had been fixed at 80 cents, yet the wheat would be sold at world prices, to whatever level they might fall. What a situation in a buyers' market!

This considered policy of the government is not to be regarded as a mere error of judgment, or ineptitude in the transaction of public business. The invitation was made to world buyers not to take the 80-cent price as a minimum; it was an invitation to world buyers, in a buyers' market, to hammer the

price downward, and this invitation was accepted with alacrity and with the results already noted.

As a result of the fall in prices invited by this government, the wheat board failed to sell the 1938-39 crop, and the failure to sell that crop was the primary cause of the debacle in the wheat situation in Canada—not the declaration of war in September, 1939.

It has been said by a cynic that, "as wheat marketers, governments and parliaments have more money than brains, and they are poor substitutes for private trading." Be that as it may, the government and the wheat board proceeded on the theory of a double market, that is to say, government regimentation on the one hand and competitive marketing on the other, at a time when the world wheat market was a buyers' market. That theory was a defiance of the law of supply and demand and of the principles of mathematics.

Notwithstanding the tremendous loss to the treasury of Canada which ensued from this policy, one lesson ought to have emerged, and that is—and I state this very plainly and succinctly—that the treasury of Canada cannot be placed behind unlimited production of wheat. To do so is to invite disaster for all concerned.

After this debacle of 1938-39 came the war. It served to intensify the problem.

Last year, 1940, we had not a policy but an improvisation—the quota system of deliveries —and the levy of the processing tax on domestic consumption. The quota system has probably worked out better than was anticipated, because the quota was enlarged. One thing, however, has emerged. It has transferred to the Canadian people the ownership of the greatest volume of wheat in the history of the country, involving an investment in unsaleable wheat of between $400 and $500 millions, at a time when the Canadian people are being asked to raise, by way of taxation and loan, a sum which will fall not far short of $3,000 million. What a staggering load for twelve million people!

Early in the present session of parliament, on November 14 last, to be exact, the Minister of Agriculture, following his return from Britain, made a speech in this house by way of a report on his visit, in which speech he dealt with wheat and during the course of which he did some prophesying—a very dangerous procedure. If his prophecy was correct, then there is no cause for agony or alarm on the part of either the producers or the taxpayers. If he was right, there is nothing to worry about.

Mr. GARDINER: Five years is a long time.

Mr. HANSON (York-Sunbury): I know it is, but to prophesy is dangerous, especially with a world war on. The minister will pardon me and many others in this country, including many who know much more about the wheat business than I do, if we take his forecast with a large measure of reserve.

The minister in his statement, as reported at page 101 of *Hansard*, said, as to the demand side, based on a two-year blockade, that Canada expected to dispose of 160 million bushels annually to Britain and to raise consumption in Canada from 130 to 160 million bushels. So in two years we should dispose of 640 million bushels at home and to the United Kingdom.

Still on the demand side he prophesied that in addition, after the suggested two-year blockade, it would be possible to dispose of 160 million bushels to countries now blockaded, or 480 million bushels in three years to those countries.

Over the five-year period he predicted that we should dispose of the following amounts:

	Million bushels
1. To the United Kingdom, 5 years at 160 million	800
2. By internal consumption, 5 years at 160 million	800
3. To countries now under blockade, 3 years at 160 million	480
	2,080

On the supply side, we in Canada will produce, he said or prophesied, an average of 380 million bushels, or a total, for the five years, of 1,900 million bushels. To this he added the carryover from 1940-41 and previous years of 280 million bushels, making a total of 2,180 million bushels to be disposed of in the five-year period, which would leave a carryover of only 100 million bushels.

Mr. SLAGHT: Does the hon. gentleman say it cannot be done?

Mr. HANSON (York-Sunbury): As I said before, I take it with great reserve.

Mr. GARDINER: You will be prophesying too.

Mr. HANSON (York-Sunbury): If everyone in Europe buys wheat it can be done, but are the Canadian people to be lulled to sleep by a theory like that with the world at war and this country not able to move wheat?

Mr. SLAGHT: Does the hon. gentleman say it cannot be done?

Mr. HANSON (York-Sunbury): I do not know, neither does the hon. member for Parry Sound.

Mr. SLAGHT: Have a little faith.

Mr. HANSON (York-Sunbury): Faith without works is not much good. Not only that, but the minister visualized the sale of 30 million bushels yearly to those countries outside the blockaded areas, or a total of 150 million bushels; and presto chango! with the celerity of a sleight-of-hand artist, our surpluses are gone and we are actually short of wheat. Houdini had nothing on our Minister of Agriculture.

Mr. TUCKER: It may happen, notwithstanding.

Mr. HANSON (York-Sunbury): It may, but who is to say? That is high-powered propaganda to sustain the Canadian people. It is not realistic.

Mr. GARDINER: By this policy we are helping to make it realistic.

Mr. HANSON (York-Sunbury): I suggest that this is not the kind of stuff that the Canadian people should be fed with by a responsible minister of the crown. I do not think anyone will be deceived by it, least of all the producers. Certainly it will not deceive the taxpayers of Canada. It is on a par with the propaganda we heard all last summer and autumn with regard to Canada's war effort, which propaganda happily is to be abandoned, so at least says my hon. friend the Minister of Munitions and Supply. He said he was not going to make any more prophecies, which I think is wise.

The Minister of Agriculture even ventured into the field of finance. He told us his plan would mean that the government would require to foot a total of $620,000,000. I suggest to him—it is a matter of opinion—that he is not very realistic. In less than a year we are involved to the tune of $400 million or more invested in wheat. We have not the amount that must be added in respect of bank loans and carrying charges, but we are being invited to go much further in the bonusing programme, in wheat storage, in subsidies under the two-year depreciation plan, and in the actual investment in wheat. If this goes on the Canadian people with respect to wheat may well visualize through treasury commitments, interest, carrying charges, loss of income taxation through the depreciation allowance and so on, a total of well up to a billion dollars. It may actually come to that. My guess is as good as the minister's.

Mr. GARDINER: Not in two years.

Mr. HANSON (York-Sunbury): I did not say so; at the end of the period. I did not limit it to two years.

[Mr. R. B. Hanson.]

Mr. TUCKER: Do you suggest that this will be the loss?

Mr. HANSON (York-Sunbury): No, I do not say it will be all lost, but I suggest it is too much to ask the Canadian treasury to provide at a time when we are being asked to put up 3,000 million dollars to carry on our war effort.

Mr. TUCKER: So you are against it?

Mr. HANSON (York-Sunbury): I am against going the whole length. We must limit the amount of wheat we take. I have not tried to disguise that fact.

It may be of some interest to the Canadian people to know our cash position with respect to the operations of this government in wheat since 1930. I have a table here which I think will show accurately the net amount that has been paid out by the treasury on account of government wheat operations over the ten year period ending July 31, 1940, as follows:

1930 wheat crop equalization payments	$ 6,521,175 89
Total payments under five-cent bonus, 1931-32 crop	12,719,900 73
Board of Grain Commissioners administrative expenses in connection with five-cent bonus	186,509 82
Loss on Canadian Wheat Board operations, 1935 crop	11,858,104 18
Loss on Canadian Wheat Board operations, 1936 crop	49,574 88
Loss on Canadian Wheat Board operations, 1938 crop as at July 31, 1940	61,282,329 55
Loss on Canadian Wheat Board operations, 1939 crop as at July 31, 1940	6,119,656 78
Total payments	$98,737,251 83

The figure of $6,119,656.78 represents the loss which the wheat board would have sustained on July 31, 1940, had all the 1939 wheat crop then held been marketed on that day at the then prevailing market price. However, most of this wheat, that is, the 1939-40 wheat crop, is still held.

Against this in all fairness there should be set off, as I think the wheat board has done, the net profit as of July 31, 1938, on wheat taken over by the wheat board from Canadian Cooperative Wheat Producers Limited, as of December 2, 1935, amounting to $8,953,343.07. That figure should have been $15,000,000 if the wheat had not been dumped on the markets of the world.

Mr. GARDINER: We still have most of the wheat.

Mr. HANSON (York-Sunbury): Not that wheat; it was all gone long ago.

Mr. GARDINER: But it is all put into one.

Mr. HANSON (York-Sunbury): Oh, that is all right. The minister can wave his hands,

but the McFarland operations yielded this country a profit, and that profit should have been twice what it finally turned out to be.

Mr. GARDINER: After Mr. Murray sold the wheat there was a profit.

Mr. HANSON (York-Sunbury): Yes, he had a fire sale.

Mr. GARDINER: McFarland had a loss of $50,000,000 on the basis suggested by my hon. friend.

Mr. HANSON (York-Sunbury): Well, it did not turn out that way, and the proof of the pudding is in the eating.

Mr. GARDINER: It was called a fire sale afterwards.

Mr. HANSON (York-Sunbury): The minister can make all the speeches he likes later on. At the moment I have the floor, and I would ask him not to intervene unless it is to ask questions. I know he has a habit of doing that when others are speaking, and I would ask him to be good enough to contain himself.

Mr. GARDINER: If the hon. gentleman will not speak at me I will not answer him.

Mr. HANSON (York-Sunbury): That is a very disarming statement.

The CHAIRMAN: It is a well known rule of the house that when an hon. gentleman has the floor no one can interrupt him without his leave; but this rule has been honoured more in the breach than in the observance, and a good deal of latitude has been given by the Chair even to the present speaker. I would point out, however, that this may once more exemplify the desirability of always observing the rule, and perhaps the leader of the opposition, who now has the floor and who has experienced what interruptions by other speakers mean, will give an example to the whole house. My task in the committee of the whole has been difficult. I have tried to apply the rules, but in a human way, allowing some latitude. I shall continue to do so, but I would observe to all hon. members that it is best to follow the rules at all times, because they are based upon experience and wisdom.

Mr. HANSON (York-Sunbury): Thank you very much, Mr. Chairman. I have no great objection to interruptions. What I really do object to is the chatter that of course is intended to throw one off one's train of thought. I do not think that is quite cricket. The minister says he cannot help interrupting me because I am looking at him. That is the most natural thing in the world; he is directly in front of me, and in a measure I am really talking to him as well as to the government. However, this little interlude will do no harm to any of us.

Now I turn to another topic. The government's policy for the current year was announced on March 12 by the Minister of Trade and Commerce and the Minister of Agriculture, after many delays and much hesitation, and I think I am safe in saying that it does not please anyone. However, it is just another improvised policy, not intended to be permanent, for which I think most of us are grateful.

I rather compliment the Minister of Trade and Commerce on having made a factual statement comparatively free from propaganda and containing a good deal of information. He dealt with the quota system, the plan of payment for farm storage, deliveries, disposition of the carryover, the storage situation and allied questions.

With respect to the crop situation for 1941-42 he gave us an authoritative statement that the carryover will amount to 575 million bushels. Then he added a prophecy based on an average of say 425,000,000 bushels for the new crop, which would produce a total of 1,000 million bushels. I suggest that this is a supply never before reached in the history of Canada, or even contemplated. It is a situation calculated to make the bravest among us pause and reflect. It is a supply away beyond the storage capacity of this country.

In addition to this, hon. gentlemen must visualize a further difficulty, namely, the carryover of 400 million bushels in the United States. In the present world position that is a factor we cannot leave out of consideration. On the basis of expectation only, we are to consume in Canada for domestic and other purposes 127 million bushels, and we may export 180 million, or a total expected disappearance of 307 million bushels. I suggest that this outlook is optimistic; it is not likely to be reached, though it may be. Therefore we will have a carryover of more than 700,000,000 bushels, an all-time high.

The Minister of Trade and Commerce stressed lightly the financial position, though he admitted that it called for anxiety. A loss of $67,000,000 on 1938-39 and 1939-40 operations is a staggering sum, but as I pointed out before this figure does not include interest on bank balances on the 1938 crop, or carrying charges on the 1939 crop since July 31 last, both of which must be substantial and should have been included to get a correct appreciation of the position.

The government will own 575,000,000 bushels of wheat on July 31 next, with an investment of between 400 and 500 millions of dollars.

What are the minister's proposals?

1. To take action to ensure that the visible supply shall not increase:

(a) By limiting the amount for which deliveries will be taken and payment made to 230 million bushels, or an estimated two-thirds of a normal crop;

(b) The quota system will be maintained, but based on 65 per cent of the 1940 acreage;

(c) The price will be continued at 70 cents. I do not know why it is called an initial price, because, under present conditions, it is the only price. Theoretically it may be the initial price, but everyone realizes there will be no further distribution.

Then we have these further proposals:

(d) Producers will be paid storage on the same basis as last year, but only on the undelivered portion of the 230 million bushels, and—

(e) The processing tax remains unchanged.

Coupled with that is the statement of the Minister of Agriculture (Mr. Gardiner): The one is complementary to the other; the two, read together, constitute the policy.

What is his proposal? In brief it is that the wheat farmer is to be bonused—for the first time in Canadian history—not to produce. That is the outstanding feature of the minister's policy. The minister, through his staff of inspectors, and what not, is to have up to $35 million to play with—and probably more. I wonder if hon. members understand the implications of the minister's words yesterday when he talked about warrants. I have just looked up the Consolidated Revenue and Audit Act. I can visualize that if this is not enough the minister is going back to council —to the treasury board first, and then to council—with a recommendation. This may go to $75 million, or more. In any event I suggest the whole proposition is objectionable. An army of inspectors will be appointed, and the whole position may degenerate into a racket.

Its immediate reaction on me is that it is a clumsy and belated effort to imitate one of the earlier policies of Mr. Henry A. Wallace as part of the new deal in the United States. The reaction to the entire proposal is disappointing, alike to the producers themselves, who will suffer from insufficient farm income, and to the taxpayers, who will have to foot the bills.

As to certain considerations and features which stand out prominently, we will all be in agreement:—

1. It is known that the government cannot dispose of all the wheat grown, and therefore cannot be expected to buy it. I think we all agree on that.

2. Since the government is in the wheat business, and since the quota system is recognized, I ask myself this question: Why should not the price be a fair price? That is to say, why should it not be a price comparable with that of cheese, bacon and other farm products?

3. The wheat business is the most controlled business in Canada and the law of supply and demand is entirely suspended. Therefore why not pay a price at least equivalent to the cost of production?

Mr. GARDINER: What would you make it?

Mr. HANSON (York-Sunbury): I do not know; but I would have it investigated by those who do know. Why should I set myself up as an expert and say that 75 cents, 85 cents, 80 cents, or 90 cents, is the cost of production? It would be foolish for me to attempt to do that. But there are those who do know and, as a matter of fact, the cost of production can be established. I am contending for a principle, that is all. I suggest the price should not be above the levels of other farm products, but since its marketing and disposition is in the absolute control of the federal government there is no real reason why the price paid for the wheat taken should not be a fair one.

4. I believe it would be a much better policy—at least it would be better for the producers themselves—if the government were to pay what it would consider fair for such wheat as it can take and dispose of, and leave to the farmer the task and responsibility of doing his own planning. Now he is regimented both going and coming, and, to make the dose more palatable, he is to be paid for non-producing.

Recently I read the opinion of the president of the Canadian Federation of Agriculture. He said at Hamilton on March 15, as reported by the Canadian Press, that the federal government's wheat policy will work hardships on both western and eastern Canadian farmers. He described the policy as "one of those double-barrelled shot-gun affairs, which soaked the western farmer by leaving the minimum price for a limited quota at the

depression figure of 70 cents a bushel" and "soaked the eastern farmer by paying western farmers to intensify competition in the staple products of eastern agriculture." Mr. Hannam went on to say:

> The new programme is a good example of the folly of trying to carry on without a national agricultural marketing and production programme.

He argued further—and consideration ought to be given by the government to this suggestion—that:

> . . . the swing of nine million acres out of wheat into other products in one sudden swoop is something which should have been accomplished by a crop adjustment programme spread over at least a three-year period.

It should have been started a year ago. Any thoughtful person will, I suggest, agree with him. Finally he condemned the whole scheme and threw it out of the window by saying:

> The lack of an adequate farm policy for the dominion means that agriculture becomes the victim of a series of ill-advised last-minute emergency measures which cannot be regarded in even our most generous moments as the product of competent leadership or good statesmanship.

That is an indictment. I believe it will be the considered opinion of all those who study this problem that the government's proposals are ill-advised last-minute emergency measures which are the product of incompetent leadership and lack of statesmanship.

Already the minister has heard mumblings of discontent. It will not be surprising if before this debate ends the whole scheme will be changed. I believe the minister has already given some indication that he has heard from both the east and the west.

I had intended to examine what was asked by the Canadian Federation of Agriculture through its delegation which met the government as long ago as January 27, 1941. I shall not, however, take time to go into this matter in detail. They made a very patriotic declaration with respect to agriculture in Canada, stating that—

> Canadian agriculture's first task and paramount duty is to place its whole strength and unite its resources from sea to sea behind Canada's war effort.

I believe that is the attitude of our farmers; I have no doubt about it. They said further:

> The war must be won, and the greatest possible degree of national unity is essential if our war effort is to reach maximum efficiency.

To state that is to state the truth.

Then they proceeded to declare that victory cannot be achieved without sacrifice—a point I have emphasized on many occasions. "All classes of our people," they say, "will be called upon to make sacrifices, and the agricultural industry is ready and willing to bear its full share of the heavy load which Canada has shouldered."

The federation went on to declare:

> It is vital, from considerations of national unity, that no one class shall be called upon to carry an undue share of the burden, and that there should be equality of sacrifice by all classes.

I stand four-square behind that declaration. There must be equality of sacrifice. Who is making the greatest sacrifice in Canada to-day? The producer of primary products. I have always noted to my dismay that in time of depression the first prices to fall and the last to rise are the prices of primary products. This is a striking indictment of our present system, of the capitalist system, if you will. I have no panacea to offer at the moment, but I do say that this problem is a challenge to the best brains and the best statesmanship in the world, which ought to be brought to bear upon it to find, if at all possible, a solution.

The brief went on to declare the importance of the agricultural industry in terms of the numbers engaged in it, and then dealt with the question of the distribution of the national income. Everyone has read this. To me it is appalling that with the national income rising as rapidly as our friends say it is—I know it is rising very rapidly but I doubt whether it is rising as rapidly as it is said to be by the statisticians—the share of the national income accruing to the average primary producer should be so pitifully small.

The brief went on to speak of the whole agricultural picture. That I shall not repeat here. But I do want to refer to the brief's recommendations with respect to wheat, with some of which I agree and with some of which I disagree.

First of all it recommended that a compulsory restriction of the acreage seeded to wheat would be undesirable at the present time. I agree with that, provided the restriction was confined to Canada. An attempt was made in the last decade to limit world wheat acreage, and if that could have been undertaken as an international activity it would have been the very best thing that could have been done. But it failed. I am not going to place the responsibility on anyone, although we all know what happened in 1933. The attempt failed because you could not get international action. It is of no use to ask the Canadian agriculturist to reduce his acreage while extending an invitation to the Argentine and other wheat producing countries to increase their acreage. That is not the right way to go about it, nor could it be productive of any beneficial results.

But I do say this: upon giving the farmers fair notice that the government can take delivery of only so much wheat, you could have trusted the farmers themselves to do their own planning over a period of time and adjust their acreage sown to wheat. They would be likely to do it. The intelligent ones would do it, and the others would follow suit. If farmers know they are not likely to market their wheat they will not sow so much.

The second recommendation was that the wheat board should undertake to announce the total amount of wheat of which it is prepared to accept delivery.

That has been done, and I think it was the proper thing for the board to make that announcement. Certainly it could not accept the whole production of our Canadian wheat fields, because the public treasury, other things considered, could not stand it. I think therefore the government has been wise in announcing the total amount of wheat that it will take. Some people believe that the amount is not large enough, but I leave that question to those who are better informed than I am. The underlying principle is sound, and I commend the minister for that.

Another recommendation called for an increase in the initial payment for wheat delivered in the crop year 1941. That has been refused.

I draw attention to the next recommendation, and I face fairly and squarely the question raised thereby. They asked for a processing tax of not less than 50 cents a bushel. The recommendation reads:

> That a processing tax of not less than 50 cents per bushel should be placed on all wheat milled for domestic consumption, the tax to be added to the aggregate price received for the wheat marketed and be available for the purpose of increasing the initial payment to the farmer.

That has been refused, in my judgment properly so; because to grant it would furnish an added incentive to farmers not to cut down the acreage sown to wheat but to go on and produce in the hope that through pressure the government would ultimately take the wheat, thereby adding to the burdens of the country. Notwithstanding what the member for Qu'Appelle has said about the price of bread, I have no doubt that a processing tax of 50 cents a bushel would add to the price of bread.

Mr. REID: Why should it?

Mr. HANSON (York-Sunbury): I am sure it would.

Mr. REID: There is no reason for it.

Mr. HANSON (York-Sunbury): I am not going to work out the mathematics of it now, but I believe that it would increase the price of bread just as surely as I believe that I am standing on my two feet.

The fifth recommendation related to grain storage facilities, and in this regard stress was laid on the need of a reserve for a constant supply of wheat to Great Britain in the event of possible crop failure during the war and for the needs of the people of Europe when the war was won. The specific recommendation was that the dominion government be asked to provide financial assistance to farmers for the construction of adequate farm storage facilities to enable the farmer to adjust his deliveries.

That recommendation was ignored. I believe that it is perfectly feasible, at least from the standpoint of legality. I know there is fear that you could not police this wheat on the farm, but that difficulty could be overcome. Personally I think, as the hon. member for Weyburn (Mr. Douglas) argued last night, that the farmer should be encouraged to establish and maintain on his farm adequate storage facilities so that he might reap the benefit of the charges that accrue from that class of storage. I ask the minister to reconsider that part of his proposals.

Mr. GARDINER: I was the first to suggest it.

Mr. HANSON (York-Sunbury): Perhaps that is so, and if so I give the minister credit for it. I have never condemned the proposal. Last year I reverted to the problem and said that I understood the difficulty. It might be like Duncan Marshall's bulls—when they went to look for the bulls they were not there. That is an old story in the west. I ask the minister to reconsider this proposal, because I believe the difficulty could be overcome.

Mr. GARDINER: If I might be permitted, I said in my speech yesterday that this was one of the questions that could not properly be determined until about July of this year.

Mr. HANSON (York-Sunbury): I quite appreciate that the minister said that, and if he is looking for a pat on the back he is getting it right now. My friend from the west behind me says that there may not be any wheat to be carried over. I hope he is right.

Mr. TUCKER: I hope he is wrong. I hope we have a crop.

Mr. HANSON (York-Sunbury): Perhaps I did not understand the implication of his interjection. I certainly hope there will be a crop and that storage facilities will be provided so that not one kernel of wheat will be destroyed. It is all going to be needed some time, and the only problem is how to carry it in the meantime.

May I direct the attention of the house and the country to the manner in which the government has dealt with the question of providing new storage facilities.

This problem was discussed at great length at the last session, when the amendments to the wheat board act were before the house in late July and early August. At that time the government intimated that discussions were being carried on with the elevator companies with respect to increased storage. They were at that time I think opposed to the giving of financial aid to increase farm storage. We were unable to get any information at the close of the session.

After the house rose in August, arrangements were made with the elevator companies to provide for what is termed temporary storage at the elevators in the country. These new erections, being additions to country elevators, were built by these companies without any order in council having been passed, so far as I can ascertain, but, as I understand it, upon a ruling by the income tax branch that the costs could be written off in two years and absorbed in depreciation account. I tried to look into the legality of this position, and apparently it is based upon paragraph (n) of section 6 of the Income War Tax Act, which leaves the power to determine depreciation allowance in the uncontrolled discretion of the minister:

6. In computing the amount of the profits or gains to be assessed, a deduction shall not be allowed in respect of

(n) depreciation, except such amount as the minister in his discretion may allow, including such extra depreciation as the minister in his discretion may allow in the case of plant and equipment built or acquired to fulfil orders for war purposes.

A ruling was given by the commissioner of income tax on August 6, 1940, covering the so-called balloon annexes, from which ruling I quote in part:

It has been determined that the capital expenditures to erect temporary or "balloon" annexes will be written off out of gross revenue in two years, namely, 1940 and 1941.

This would appear to me to have been a most liberal arrangement. I have been advised—this is hearsay evidence, not the best evidence by any means—that in many instances these structures will be good for from five to ten years. At all events they will be good for the probable duration of the war. The benefit of the allowance will enure entirely to the elevator companies who, notwithstanding the limited turnover and the slight reduction in storage charges, are enjoying capacity business and probably, in their capacity as warehousemen, making more money than at any time in their history. In fact, it may be stated that our elevator companies are the only people who are benefiting by the present situation. A perusal of the balance sheets of those companies which publish balance sheets will indicate this. Why should the government not review this position? Is it not the consensus of opinion that under present circumstances the storage charges are too high, having regard to the capacity business being done?

Then on February 15, 1941, order in council P.C. 1225 was passed providing for assistance by way of depreciation allowance for income tax purposes to any elevator operating company which constructs temporary terminal storage at the head of the lakes. That is a most generous gesture to the elevator trade. No part of the benefit accruing to these companies by this assistance accrues to the producer or to the grain trade, unless it be that the grain trade and elevator companies are intermingled by ownership and that sort of thing. Recently the plight of the members of the grain trade was brought to my attention. The plight of those who are not interested in the elevator business is a sad one. The Winnipeg grain exchange was kept open by the government it is said at the request of the British authorities. I am informed, however, that the Liverpool exchange and the British market are closed to-day. I have not been able to verify this, but that is the information which comes to me from the grain trade. I ask the minister: why has the Winnipeg grain exchange been kept open? what useful function can it perform when there is only one buyer and only one seller?

Mr. GARDINER: The reason was given to the house last year, namely, that the British cereals board asked us to keep it open.

Mr. HANSON (York-Sunbury): That is the government's stock answer.

Mr. PERLEY: Who represents that board in Winnipeg?

Mr. GARDINER: I do not know that anyone represents it in Winnipeg.

Mr. CRERAR: I might offer another reason. Wheat is the only article controlled by the wheat board under any legislation, but we have considerable quantities of other cereals such as rye, oats and barley, which are sold. It is necessary to have a market for them.

Mr. HANSON (York-Sunbury): It may be that that is a satisfactory reason. At the moment I am viewing the matter only from the point of view of wheat.

Facilities good for a much longer period are to be paid for out of depreciation allowance in two years, and this for companies already

doing well financially out of the grain trade. The effect of this is a substantial bonus to the terminal elevator companies, and I have heard that they are taking advantage of this with great alacrity.

I wish to deal briefly with the bonus question. What of the policy of the bonus? Is this the minister's own policy? He told us last night that it was the joint policy of the government. We have all heard the principle of cabinet solidarity, but I am just wondering whether if the minister were left on his own resources, he would have brought in this bonus policy. I have the idea that it is the joint product of the government's brain trust. I should like to be informed if that is true, because it smacks of the new deal in the United States, a throw-back to the discarded policies of Mr. Wallace, a clumsy and belated imitation.

The whole wheat policy was received in the west with surprise and dismay, or so say the pools, and they claim to represent the producers. The producer knows his own land. He knows it is useless to produce if he cannot sell; that is, provided he has a level head upon his shoulders. He naturally will plan his own economy. The large producer will do his own planning, because he knows. But what of the small producer on a half-section or less? How will it affect him? What hope has he under this policy? The relatively small amount which each small farmer will be able to market, the increased cost of operation, production and living, and the fact that seventy cents is less than to-day's production cost, make the proposed plan wholly inadequate.

Stated concisely in a nutshell, the western wheat farmer is being asked, because of limited deliveries, without any increase in price, to accept a sharp reduction in farm income from wheat. Deducting freight rates and handling charges the seventy cent basic price for No. 1 northern at Fort William is equivalent to less than fifty cents on the average prairie farm. I am told that it is equivalent to only forty-eight cents. The sale of 230 million bushels will net these farmers $115,000,000, the lowest income from this source since 1933. This is just about half the value of wheat marketings during the present crop year. It will be really less than that, because that price is the maximum that may be hoped for. How can the western wheat farmer live on an income which is less than two-thirds of last year's income. By this bonus of $36,000,000? Assuredly not.

What are the alternatives? They appear to me to be two:

[Mr. R. B. Hanson.]

1. An increase in taxation passed along to the consumer by way of a processing or some allied tax.

2. An increase in the basic price of wheat.

I have said before that in my opinion an increase in the processing tax cannot be justified. At best, it was only a makeshift, designed to reduce the loss to the treasury. It was never designed to aid the farmer in the initial price he was to get. It was to reduce the deficit. To increase it to 50 cents would mean a tax on bread, and in the interests of the consumer that should be definitely barred. Its retention at 15 cents is an expedient, it is true, but refusal to increase it is a declaration of policy on the part of the government not to expand further this form of taxation. Definitely it is a tax which falls with unequal weight upon the lower income groups. It is in the class of regressive taxation of a particularly undesirable kind. We should get rid of it just as quickly as possible. To raise it would increase the cost of living, upon which would be based a justifiable demand for higher wages, thus setting in motion all the inflationary forces so difficult to control in time of war—forces which, I fear, are already in operation.

What is the only other alternative? The only alternative I can see is this—and I offer this to the committee and the country for what it is worth. I hope that hon. gentlemen in discussing it will not deprecate the source from which it comes, because it is an honest expression of opinion based upon the best information I can get from my friends in the western country, who at least know something about wheat. The only alternative is to raise the basic price to the farmer to a point which would at least approach cost of production, and approach parity with prices of other farm products and prices which the farmer has to pay for the implements of production and maintenance of a decent standard of living.

Such a policy is justifiable if the farmer is to keep body and soul together and remain on the land. That is something that we have all been trying to do down through the years of development of this country. In all parts of Canada we have sought at great cost to keep the farmer on the land. We are not abandoning that policy, I hope, and I advocate this even if such higher price involves some additional taxation; and if additional taxation is necessary for that purpose, there are more equitable ways of raising it than by an increase in the processing tax.

The bonus in theory is a compensating measure which will fail in its objective. It is negative in all its attributes and will please

no one. The big farmer in existing circumstances will, I am told, summer-fallow anyway. He is to be paid now for doing that which his judgment tells him he should do under present circumstances. I have heard of a farmer in the west who had definitely decided to summer-fallow 750 acres of land this year which was in wheat last year. He will still do it and will be paid $3,000 for doing it.

An hon. MEMBER: Who was that?

Mr. HANSON (York-Sunbury): That is my secret. The small farmer of a half-section or less—how can he exist on the theory of this bonus? Most of them will turn to coarse grain and a $2 bonus, and go into hogs. We heard about that last night from Ontario members, and we shall hear more about it before the item passes. Then with his cheaper feed, think of the competition of these people with the farmers of eastern Canada. The latter will have no bonus. In the maritimes we have a good many hog raisers, and we are finding it exceedingly difficult to compete with the Ontario farmer because of the high cost of mill feed. I am bound to say this, that the Minister of Agriculture offered to cooperate with the provincial governments of New Brunswick and Nova Scotia, paying half the freight from Fort William, and he could not get his friends down there to accept his offer. I do not understand why, if they were giving consideration to the hog raisers of New Brunswick, Nova Scotia and Prince Edward Island, the minister's offer was not accepted. At least, it was a half-way measure. But they did not accept it and there the matter stands. So far as I know, they have never given publicly any reason why they refused that offer. I suppose the idea is that if they waited and pressed long enough, the dominion government would go the whole way. That is the theory in the minds of some people. They forget entirely that while there are nine or ten public treasuries in Canada, there is only one set of taxpayers.

There are just one or two other aspects upon which I should like to touch. I apologize for keeping the committee so long, but this is my contribution to this debate, and perhaps it may add something to the sum total of the knowledge of the house and of the country.

We are all exceedingly grateful for the lease-lend bill recently passed by the congress of the United States. It may well be that the aid and support to Britain given under that measure will be the turning point in the war. Indeed, I think it will be and I am extremely grateful for it. But I wonder whether—and I am not saying this in any attempt to throw any doubt on the validity of their desire to help—as a matter of economic fact, the government and hon. gentlemen in this house have considered that the aid to be given and given freely by the United States is not to be confined to war material and to equipment. It may and undoubtedly will in time take the form of gifts of supplies —food supplies. Indeed, already they are planning to send wheat and wheat flour to unoccupied France. Undoubtedly they will be giving wheat and wheat flour to the mother country. Has the government visualized that? I wonder what our reaction will be to that. We cannot say nay. My immediate reaction is that it will just add to our troubles. I do not see any other way out of it. You cannot ask the British government to refuse it. The offer would indicate a very fine disposition on the part of the people of the United States.

May I recall to the minds of hon. gentlemen that on July 10 last I asked this government to give consideration to the idea of an outright gift of 100,000,000 bushels of wheat to the mother country. It would not help the price; it would not help the storage position much, but it would be a great gesture to the hard-pressed people of Britain. Any one who cares to look it up can see what I said. I am bound to say, however, that it brought not a ripple of response from this government and I have often wondered why. Is it that we are doing so much otherwise? We are, of course; but I have always thought that Canada, out of her great abundance, not as an expedient but as a gesture of good will and of admiration, could give to the people of the mother country some of our superabundance of wheat. The people of the United States are contributing to-day, as a trial shipment, a million dollars' worth of flour to the people of unoccupied France. It is a trial shipment, and if it goes through and does not get into the hands of Germany, others will follow. Canada undoubtedly will in time be asked to make some contribution in food to the starving peoples of Europe. How much the more should we do that for the hard-pressed people of Britain who find it so hard to get Canadian dollars? I here and now renew my suggestion to the Canadian government and ask them out of the billion and a half dollars which they are asking the Canadian people to raise under the war appropriation bill to give some of our abundance to our kith and kin across the ocean.

On Tuesday last, the Prime Minister took occasion to point with pride to the contribution of the Canadian people—not the government, he laid emphasis on that, but the Canadian people—to Britain's war effort in terms of our armed forces, equipment and,

above all, dollars and cents. I do not pause here to analyse his statement or his figures, but I suggest that he might very well have included a free gift of food to the beleaguered people of Britain.

Mr. ROSS (Moose Jaw): I do not intend to follow the leader of the opposition (Mr. Hanson) through all his arguments both for and against himself on this question, but I shall touch on one or two things that he said.

In the first place he spoke of the amount of wheat Canada had on hand on account of the operations of John I. McFarland. We did have a great deal of wheat on hand when this government first came into office, and the main reason for that immense stock was that we would not sell. After Mr. Murray took over the chairmanship of the wheat board the policy put into effect was to sell wheat on the British market and other markets. At that time, when that policy was put into effect, the mix of Canadian wheat in the mills of Great Britain was only about seven per cent of the total. As a result of this policy Canadian wheat was sold, and that mix has gone up to seventy per cent in British flour, and that figure holds there to-day.

I agree with some of the things my hon. friend said. He did not make much reference to the last war, but wheat, and especially Canadian wheat, was a very important factor in the winning of that war. We in the west who were wheat farmers at that time were asked by the government of this country to extend greatly our acreage in order that Great Britain and our allies might have sufficient food. Wheat was badly needed before that war was over, it will be badly needed again before this war is over. Never in the world's history has there been a war in which foodstuffs, of which wheat is the most important, were not badly needed before the finish and immediately thereafter.

But, as my hon. friend has said, preparations for the present conflict began long before September, 1939, and it was because of this war economy that the world business of growing and selling wheat was disrupted. It was the war economy which was developing for years prior to September, 1939, that dislocated the whole wheat business of the world, and our people suffered on that account. In September, 1939, actual hostilities started, and thereafter wheat began to rise in price. Many people have asked me why the western farmer sowed more wheat acreage last spring when he knew the initial price of wheat was only seventy cents. Last spring when the western farmer was sowing wheat the price was ninety cents a bushel and over. That was before the low countries were invaded and before France was overrun. Everyone who knew anything about wheat at that time knew that if France were able to stay as an ally of Great Britain and to keep her country largely intact, at least 100 million bushels of wheat would have to be forwarded to France immediately. Italy was not in the war when we were sowing wheat last year, and it was reasonable to expect last spring that the price would rise, not fall.

Some hon. members have said that wheat is not a casualty of the war. It is. The price did not fall until after the low countries were invaded, until after France was being overrun and Italy stabbed her in the back. No one knew exactly at that time what was going to happen. No one knows now exactly what will happen within the next year.

Many people say that we should reduce our wheat acreage in this country. I do not altogether agree with that. I believe all the wheat we can produce from now until the end of this war will be needed, and needed badly. Nobody knows what devastation there will be this coming summer, both in Great Britain and in Europe, when crops are about to be harvested. Does anyone seriously think that both Great Britain and Germany, who are trying to carry out against each other a blockade of all foodstuffs, are going to stand by and let crops be harvested this summer and fall? I do not believe it. I believe the greatest devastation will occur in Europe this year. Incendiaries will be dropped in the fields where they cannot be fired at by anti-aircraft guns, and great areas of farm crops will be burnt in all the countries affected. Wheat may be very badly needed by Great Britain and by our other allies before very long.

When the war started, and even last year, we did not have the allies fighting with us that we have to-day. Greece has come in since, and it looks very much as if Turkey will also come in. Yugoslavia has made a move—and remember that they are Serbs; it is springtime in Europe and the bear comes out in the spring. I will not be surprised if "the bear that walks like a man" is an ally of ours before very long, and also badly in need of wheat. No one can tell just what the situation will be; no one can tell how much wheat we shall be able to sell, even within the next year.

At the present time we as western members are asked to vote for a policy which, on its face, on the basis of last year's crop and last year's return, would seem to mean that our

wheat growers may have to take a reduction of some thirty per cent in their gross return. I have heard arguments in this house from all sides in regard to the small farmer and how this policy will affect him, and in regard to the large farmer and how it will affect him. No one can tell how this policy will affect anyone. It is not the gross return to the farmer that must be taken into consideration. He is the same as any business man; it is the net return that you have to consider. If there should be an abundant crop in western Canada next year then I would say that under this policy the net return to the farmer would be smaller. But if there should be a small average yield in western Canada next year I believe the net return to the farmer, large or small, would be better than if this policy were not in effect.

This government very properly called in experts in regard to wheat and the growing of grain, in order to obtain their advice as to what should be done. Then, naturally, they took what they thought to be the best advice of those experts. Well, Mr. Chairman, it is a little more than thirty years ago since I started growing wheat on my own farm in western Canada. During that time I have followed the wheat market pretty closely. I have known a good many of the grain men and grain experts; and if those experts have told the Minister of Trade and Commerce and the wheat committee of the cabinet that a long range policy should be one under which the acreage of wheat would be reduced; if they have told the committee that in the long run we can sell only so much wheat, I would tell the government that of one thing I am sure, and that is that the experts are one hundred per cent wrong. In all my experience I have never seen them right when they unanimously agreed on anything.

I want to warn the government against another wheat expert, the hon. member for Qu'Appelle.

Mr. PERLEY: You need not warn them.

Mr. ROSS (Moose Jaw): The hon. gentleman sets himself up as a wheat expert in this country. I know he has had a good deal of experience; probably he has lost as much money as anyone still in the wheat business. Then we have the hon. member for Weyburn, to whom I listened very carefully yesterday in what I thought was a very moderate speech. The hon. gentleman made some suggestions which I considered were not too well thought out. For instance, he suggested that a farmer should be allowed to deliver from 750 to 1,000 bushels, at an increased price, on each quarter section of land.

Mr. DOUGLAS (Weyburn): On the first quarter section, not each quarter section.

Mr. ROSS (Moose Jaw): All right. There are 290,000 farmers—

Mr. DOUGLAS (Weyburn): Not wheat farmers. There are 250,000 wheat farmers.

Mr. ROSS (Moose Jaw): They would all be wheat farmers if they could get a good price. If we allowed each of the 290,000 farmers in western Canada to deliver 1,000 bushels, that would mean an increased price on 290,000,000 bushels. On many occasions in this house I have listened with a good deal of interest to the hon. member speak about farming, wheat growing, wheat policies and so on; and the more he talks the more I am convinced that the shepherd should stay with his flock.

Mr. DOUGLAS (Weyburn): The shepherd is trying to keep the wolves away from the flock.

Mr. ROSS (Moose Jaw): And you are doing a pretty good job. I have heard hon. members of this chamber, the leader of the opposition and others, speak of the effect of this policy on the live stock industry of eastern Canada. They claim that by what they call bonusing, though I do not call it that, in connection with coarse grains in western Canada, the farmers of Manitoba, Saskatchewan and Alberta will go more largely into the feeding of live stock and the raising of hogs, and that for this purpose they will take advantage of the so-called bonus to grow more coarse grains. After hearing these statements made yesterday I took the trouble to obtain the figures from the bureau of statistics. I find that last year there was a decrease of some 360,000 acres, as compared with the year before, in an acreage sown to oats in western Canada, while the acreage devoted to barley remained at practically the 1939 level. During the same period, however, the production of hogs in western Canada increased tremendously. As a matter of fact these gentlemen who fear greater competition between western Canada and Quebec and Ontario have not been watching things very closely, because now the competition is the other way. Next year we in the three western provinces will produce more hogs than will be produced in Ontario and Quebec, without any help that may come from this new policy.

I have here the figures with regard to the expected spring pig crop for 1941. Sows bred to farrow in both Ontario and Quebec for this spring number 321,700. Those bred in Manitoba, Saskatchewan and Alberta number

361,600. In other words 40,000 more sows were bred in the three western provinces than in Ontario and Quebec; and with an average litter of eight that will mean about 320,000 more hogs in the three western provinces this spring than in Ontario and Quebec. So why worry about this policy? That result has been brought about without any increase in the acreage devoted to oats and barley in the west. Of course our farmers fed a good deal of wheat.

Let me point to the figures with regard to dairying. My hon. friends are afraid that we are going to take their place in that industry. Well, we are taking it already. The production of factory butter in the west during January and February of this year was as follows: Manitoba, 2,739,000 pounds; Saskatchewan, 2,843,000 pounds; Alberta, 3,071,000 pounds.

That gives a total of almost 9,000,000 pounds; and during the same two months the province of Ontario produced just 9,000,000 pounds. The increase in production over the same two months of 1940 is 20 per cent for Manitoba, 42 per cent for Saskatchewan, and 17 per cent for Alberta. These figures I place on record, because they are the figures which obtained before the policy went into effect. Do not try to blame the policy for any assistance it has given to the western farmers, or to hold it responsible for any increase in the production of dairy products and live stock. That has already taken place, and for this good reason: the price of wheat has been too low, and the farmer in western Canada has had to turn to something else.

For many years I have been told by people in this part of Canada that we farmers from the west have been wheat miners, that we did not want to work, that we would not milk cows, and that we would not feed hogs. Well, Mr. Chairman, we are doing it to-day. No matter why we did not do it before, the fact is that we have been forced to do it. I would add that we did not do it before because we felt that our business was more the growing of wheat than the production of dairy products and live stock. But it has not been the policy of a government which has brought about the change; it has been an economic condition. We have had to produce these things.

My hon. friends have described this policy as that of bonusing. I say this is not a bonus. To-day we have many millions of bushels of wheat in storage in Canada. Does any one suggest seriously that it could not be sold? Of course it could be sold. A large amount of it could be sold—and to neutral countries. But the sale of that wheat would not work to the benefit of the democracies which are fighting the war. It would not be to the benefit of the British empire, or to the people of Canada or, to be more specific, to the people of western Canada. We cannot allow that grain, through any channel, to get to our enemies. Therefore to-day our government quite properly states that our wheat shall not be sold in those places, where it could be sold. Will anyone seriously say that because this action is for the benefit of the democracies throughout the world, for the benefit of the British empire and of Canada, the western farmers should carry the whole load? Of course that is not a reasonable proposition.

This is not a bonus; it is a compensating payment to farmers for two things: (1) for not piling up any greater surplus of wheat in the bins across our country, and (2) for preparing our land in such a way that when more wheat is needed we shall be able to produce it.

Mr. DUPUIS: There are hundreds of thousands of bags of potatoes we cannot dispose of to-day, too.

Mr. ROSS (Moose Jaw): And probably for the same reason. I would not for one moment say the government should not help the hon. member with those potatoes.

Mr. DUPUIS: Good.

Mr. ROSS (Moose Jaw): We can store wheat in Canada in more ways than one. As a practical farmer I believe I know that about which I speak. We summer-fallow in western Canada for three purposes: for the killing of weeds, for the storing of moisture, and for making available certain plant foods, through the break-down of the soil from the operation of the sun's rays, the wind and other weather conditions. If at this time we cannot handle a larger amount of wheat stored in bins, and if we feel that we will need more wheat in 1942 or 1943, the best policy we could follow would be that of having our land properly prepared. By giving the land an opportunity to store moisture and by making plant foods available for the crop, potentially we are storing wheat in the ground, because when the fallow land is put into crops it will give a higher yield. That should be the condition when it becomes necessary to ship grain to those who are now and who probably will continue to be our allies.

An hon. MEMBER: Would it not be better to have it in the bin?

Mr. ROSS (Moose Jaw): No.

Mr. QUELCH: It may be preparing a dust storm.

Mr. ROSS (Moose Jaw): My hon. friends have been talking about bonuses. I will tell the committee about one bonus which to my

knowledge has been paid for forty years, a bonus which has been paid to the people in Ontario from whom we have been forced to purchase the products we buy.

An hon. MEMBER: Quite right.

Mr. ROSS (Moose Jaw): I am a farmer. Last fall my truck, which I had purchased nine years ago, secondhand, needed replacing, and I decided to buy a new one. The new truck cost me $500 more than it would have cost my competing neighbour across the boundary in the state of Montana. Was that a bonus to somebody? I'll say it was! It was a bonus of at least $500 to the province of Ontario, where that truck was made.

Mr. DOUGLAS (Weyburn): Surely not, under a free trade Liberal government!

Mr. ROSS (Moose Jaw): Under any government—and my hon. friend knows it.

Mr. JOHNSTON (Bow River): That still does not make it right.

Mr. ROSS (Moose Jaw): I agree, absolutely—and I started to talk about that long before you did.

Mr. DOUGLAS (Weyburn): You did not get many results, though.

Mr. ROSS (Moose Jaw): Oh, some.

Mr. JOHNSTON (Bow River): You should change parties.

Mr. ROSS (Moose Jaw): That bonus has been paid for many years, and I suppose it will continue to be paid. But surely, after telling us, the western farmers, for so many years, that we must buy in this market, these gentlemen are not going to come to us and say, "Oh now, you must not go into the live stock business; you must not go into the dairy business, and you must not sell feed, because that is our business." Surely they will not say that.

Mr. FURNISS: Does not the hon. member think that the Ontario farmer pays just as much through tariff protection as does the western farmer, per farmer?

Mr. JOHNSTON (Bow River): No, not nearly.

Mr. ROSS (Moose Jaw): Proportionately, probably, yes. And I am in favour of getting all the Ontario farmers to agree with me in what I am saying. Instead of farmers of Ontario fighting the farmers of the west, I would have them all get together and have something done about it.

Mr. REID: That would not apply to British Columbia, because we pay more for our machinery there.

Mr. ROSS (Moose Jaw): Last night I listened to some humorous observations from one of my colleagues, the hon. member for Wellington North. He is a farmer, a doctor and a politician.

Mr. DOUGLAS (Weyburn): "And the greatest of these is—"

Mr. ROSS (Moose Jaw): He may be a very good farmer, but he is much more agile than most of us. He can get out from under when the going is tough. He told us so last night. As a politician I would say that the local view obscured the national, with him. As a doctor, I believe he is one of the better general practitioners in Ontario. He is a good humorist, because I know he was speaking humorously last night.

Mr. JOHNSTON (Bow River): A lot of truth in it, though.

Mr. ROSS (Moose Jaw): Had he been speaking seriously, and had he been a brilliant psychiatrist instead of a general practitioner, I would have said to him, "Physician, heal thyself."

Mr. MacNICOL: Pretty good on the bible to-day, Gordon.

An hon. MEMBER: "Go thou and do likewise."

Mr. ROSS (Moose Jaw): The value of this policy cannot be gauged at this time because no one can tell just what the position of the farmer is going to be until we know what this year's crop is. His net returns under this policy may be greater than if he grew wheat on all his land, even at an increased price. Hon. gentlemen opposite talk about the cost of production of wheat, but in thirty years of farming I have never been able to figure it out. I can figure the cost per acre.

Mr. NICHOLSON: Is a price of 70 cents enough?

Mr. ROSS (Moose Jaw): I would not think so. In speaking of costs hon. gentlemen opposite say that a small farmer cannot make money with wheat at 70 cents, and many of them say he cannot make any money at 85 cents. If that is so—I do not say it is—then the farmer will be better off if he turns to doing something else which will bring him a net return.

Mr. QUELCH: His overhead is the same.

Mr. ROSS (Moose Jaw): His overhead may be the same, but that is only a small part of it.

Mr. QUELCH: A big part of it.

Mr. ROSS (Moose Jaw): The big farmer is in the same position. If he has a fair crop this policy may not fit him as well, but if he has a poor crop it will fit him better. I have not yet been able to find a man who can tell me what the crop in western Canada will be this fall—never in any year—and therefore I cannot say at this moment whether or not this policy will be good for western Canada. It may be. Time alone can tell. But I do know this, that it will put western Canada in a position to produce more wheat at a later date when wheat may be needed much more badly than it is now.

I will say this for the farmer, whether he be in eastern Canada or western Canada, that no matter what any government does he is still going to produce, whether it is wheat or something else, because he believes that that is his part in this war. He did it in the last war, and he will do it in this one.

If the present policy of this government will not properly look after the farmers of eastern or western Canada, then I say it is up to this government and this house and the people of this country to see that a policy is established that will look after both. The farmer has a right to expect that, just as much as any other industry in Canada, and, Mr. Chairman, I do not believe that the people of Canada are going to let the agriculturists down at this time.

Mr. MacKENZIE (Lambton-Kent): Mr. Chairman, I had not, until a short time ago, intended to speak in this debate, so I crave the indulgence of the committee. I speak in this charmber very little, and in my remarks to-day I shall endeavour to be brief.

The greatest task before the Canadian people and before this House of Commons is to-day the winning of the war. Everything else pales into insignificance in comparison with that, and we should make sure that this parliament gives a lead to the Canadian people in doing everything possible towards the winning of the war.

A few days ago we passed the war appropriation bill, and I must confess that it was disappointing to me that such a vital war measure took so long to pass this House of Commons. Many of the questions that were asked when that bill was before the house and many of the addresses that were made upon it had little or nothing to do with furthering Canada's war effort, and sometimes I could not help thinking that if some of the dictators could have looked into this House of Commons while we were discussing this vital war measure, they would have said: "Surely there is nothing to fear from an organization like that".

This afternoon we have listened to great orations on the wheat problem, but really, Mr. Chairman, I do not believe that the people of Canada are very much concerned to-day with the question whether McIvor or McFarland had the best wheat policy years ago. All that is water under the bridge. The question for us to consider to-day is, what are we going to do from now on? Where do we go from here? So I suggest to my hon. friends who insist on injecting politics and bickering into our discussions, why not lay your cudgels aside until you can fight it out on the hustings? You will have plenty of time to do that three or four years from now, and then you will be doing it on your own time, and probably will have a bigger audience that you have in this House of Commons.

The great questions that confront us to-day are naturally economic ones—war economy, economy among the Canadian people, agricultural economy, our farm problem. Agriculture is the very basis of our social and economic life, and we should make the farm so attractive that our rural youth and the older people who live on the farm will be glad to stay there and make their contribution toward the life of the community. Until we have a policy that will do that, we shall never have solved our economic problems or have a happy and prosperous Canadian people.

The Ontario farmer—and I speak of Ontario because I know it better than other parts of Canada—is far from prosperous. In November, 1938, if I recollect aright, 790,000 people in Canada were on relief, and of that number less than two per cent were from Ontario farms. In Ontario itself, 220,000 people were getting relief, and less than four per cent of that number came from Ontario farms. Therefore, in spite of low returns and high operating costs, our farmers have been able to look the Canadian taxpayer in the eye and say: At least we have been no burden to you.

Let me say, too, that the farmers of Canada take second place to no one in their loyalty and devotion to the mother country. We are willing to contribute to the limit of our ability, to produce to help Great Britain in its all-out effort to win this war. For twelve years, yes, considerably longer, the farmers have been in a bad way. Nearly 40 per cent of the population of Canada lives on the farm, and during the last few years the farm population has been getting less than 10 per cent of the national income, and, in a great many instances, even less than that.

Conditions on the farm in Ontario do not differ very much from farm conditions in other parts of Canada. Everybody realizes that a prosperous farmer means a prosperous Canada, and our policy should be designed

to bring about a balanced economy, so that with parity prices for the products the Canadian farmer has to sell and the commodities he has to buy, he will be in a much better position than he is in to-day. It is admitted that to-day he is in as bad a position as he has been in for a long time. It is not that farm prices in some lines have not been better in recent months, but he has used up his reserves until he has nothing to fall back on. His present condition is very bad. The hon. member for Haldimand (Mr. Senn) is not in his seat at the moment, but I would remind him that in 1930, 1931 and 1932 farm prices were much lower than they are to-day. Here is the peculiar part which politics play. When prices are low and conditions bad, they are blamed on the greatest depression we have ever known. If the other side is in power, the blame is placed upon their policies. They are blamed for conditions being as bad as they are.

Mr. MacNICOL: That is all water under the bridge.

Mr. MacKENZIE (Lambton-Kent): That is what is going on. The Minister of Agriculture has a most difficult task on his hands. Last fall he paid a visit to Great Britain and, in order that a lead might be given to the Canadian people, attempted to get information as to what products that country required. I should like to quote briefly from page 346 of *Hansard* of November 22, 1940. The hon. member for Parkdale (Mr. Bruce) was speaking as follows:

I have twice been deeply shocked during this session. Last Thursday a minister of the crown, back after about four weeks in heroic Britain, rose in his place and boasted to this house that he had made millions for Canadians by his shrewd bargaining with the defenders of everything we hold dear. I could scarcely believe that the time could ever come when anyone would be triumphant over bargains arising out of the motherland's necessity in her hour of direst need. Surely if there ever was a time—

Mr. Gardiner: Mr. Speaker, on a question of privilege. I did not boast that we made millions as a matter of bargaining with Great Britain. We accepted, with no bargaining, the prices that Great Britain offered us.

And I quote the hon. member for Parkdale again:

I refer to *Hansard* of November 14, which contains the report of the speech of the Minister of Agriculture. On page 115 is given a statement of the value of exports of certain Canadian agricultural products and fish to the United Kingdom for the years 1935 to 1940, with estimated figures for 1941. The value of those exports in 1935 was $34,133,394: the value for 1941 it is estimated will be $105,741,000. For nine months of this year the value was $63,343,411.

And again:

I was going to say that surely if there ever were a time when we should make a thank-offering, it is now. Let us open our bursting granaries to Britain and give her our wheat. Now is not the time to drive bargains or seek higher prices than are prevailing right at home.

I should like to quote from an article which appeared in the Toronto *Globe and Mail* on May 25, 1940, as follows:

Honourable Doctor Bruce undoubtedly made articulate what is in the minds and hearts of the people when, in the House of Commons on Friday, he discussed Honourable James G. Gardiner's food sales to the mother country during his recent visit. Few, if any, but would say, "For God's sake, let us give freely of the bounty with which nature has supplied us so abundantly and of which the gallant defenders of our liberty are in need." There is no excuse for dickering over quotas and prices when we have so much to spare.

Doctor Bruce expressed the sound and human point of view in proposing that we make our land products available to the heroic Britishers without thought of profits but as an expression of our admiration and gratitude. Such an attitude on Canada's part would be an encouragement and inspiration, going far to help the people of the besieged little island.

I am quite in accord with that. I feel that in the final analysis foodstuffs will play an important part in this war. At the moment, however, this is not Britain's dire need. What she needs more than anything else at this time is ships, bombs, planes, and munitions of war. So I say, let us give them to her. If Britain loses this war, if we lose this war, all will be lost. Munitions of war are supplied and manufactured on a profit basis, on a cost-plus basis. I say, let us give freely of all the things that we have.

All that agriculture asks is that it be placed on a parity with the munitions manufacturing industry. What a change took place. It will be remembered that shortly after that butter was pegged. It will be remembered that this same periodical accused the Minister of Agriculture of going over to Britain, bartering with them and selling us down the river. The Minister of Agriculture was being accused of being lax in his duties when he consented to such a bargain as that. As I say, the Minister of Agriculture has a most thankless job. I ask that agriculture be considered a national problem and dealt with as such.

I do not agree with the wheat policy of the government as it has been announced and as it is to be carried on by the item we are now discussing. I have the highest regard for the Minister of Agriculture. I do not believe there is a man in Canada to-day who has a better knowledge of agricultural problems. I cannot, however, follow him in this policy which he is asking the people to accept. As the leader of the opposition has said, wheat is not a war casualty. It will be remembered that wheat was bonused away back in 1932 or 1933, under the Bennett regime.

Mr. HANSON (York-Sunbury): A bonus of five cents a bushel was provided in 1931 when there was a short crop.

Mr. MacKENZIE (Lambton-Kent): That was the start of wheat bonusing in western Canada. Apparently the old law of supply and demand worked no longer and it was necessary to bolster up wheat. In 1935 the wheat board act was passed just prior to the general election. That act gave authority to the government to set the price of wheat at Fort William. In 1935, 1936 and 1937 there were partial crop failures; in those years the west did not produce its usual good crops. If the west had continued to produce its usual crops, the wheat problem would be much greater to-day than it is.

In 1938 the wheat crop of western Canada was approximately 340,000,000 bushels, and in that year the price was pegged at eighty cents a bushel in an endeavour to market the wheat. It has been said that this cost the Canadian people $62,000,000. I thought it was nearer to $60,000,000, but when one is dealing with millions, one or two do not mean much. In 1939 the provisions of the wheat board act were enlarged to take in the eastern provinces, with which move I was in favour. This did not, however, work out so well from the point of view of Ontario. I object to the way in which the Ontario wheat crop has been handled through the wheat board. I think the main reason for this is the fact that this board is governed mainly by the Winnipeg board. Mr. McIvor does not understand Ontario problems or Ontario wheat or marketing. I will admit that the Ontario crop is only a small item, running from 22,000,000 to 25,000,000 bushels. During August, 1939, they took delivery of wheat through the wheat board and paid 53½ cents a bushel. They sold almost half of that wheat directly to the millers at a loss. If they had put it in storage, had storage been available, we would have had a much better price for Ontario wheat than we got. The same thing happenned in 1940. The wheat board act as it applies to Ontario is far from satisfactory.

Mr. GARDINER: It has been the opinion of those who are most familiar with the wheat question that it is a mistake to have eastern Canadian wheat under the wheat board, but the government at the time was asked to include it in the hope that something good might come out of it. I should like to know if eastern agricultural members particularly are still of the opinion that Ontario wheat should be left under the act.

Mr. MacKENZIE (Lambton-Kent): I am speaking only for myself, but I say that if the eastern provinces are going to stay under the wheat board act, they should have a wheat selling organization of their own and it should be directed from Ontario as an Ontario problem. It might be worked in conjunction with the wheat board act.

Mr. MARTIN: Why not a separate board altogether?

Mr. MacKENZIE (Lambton-Kent): There should be a separate board altogether to handle wheat, because under the present system it has been badly handled. It is not satisfactory to the wheat grower.

Mr. MacNICOL: What about taking it from under the wheat board altogether?

Mr. MacKENZIE (Lambton-Kent): Either take it out altogether, or have a separate selling agency in conjunction with the wheat board. It should be operated as an Ontario problem. In 1939 the wheat crop was approximately 450,000,000 bushels, and the farmers in western Canada were then asked to reduce their wheat acreage. There was a wheat problem. There were evidently no sales for the product. Instead of reducing the wheat acreage, however, they increased it by approximately 2,000,000 acres. In 1940 we find that we had a crop of approximately 560,000,000 bushels of wheat, so that in July of this year we shall have a carryover of approximately 580,000,000 bushels of wheat; and, according to the Minister of Trade and Commerce, in the statement he gave, if we have a normal crop of wheat we shall have around 1,000,000,000 bushels of wheat to deal with from a Canadian point of view.

The great bulk of the wheat has been marketed this year to the wheat board. My good friend the hon. member for Moose Jaw (Mr. Ross) remarked that the west had a good many other lines of industry besides wheat, and I quite agree with him. In the bulletins issued by the department, marketing division, a statement was given a short time ago with regard to the hogs that were delivered from January 1 to March 20. We find that from January to March, taking the dates stated, the number in Alberta was 317,000; in Saskatchewan 112,000, and in Manitoba, 267,000. In other words, we had a total from western Canada of about 698,000; and in Ontario, Quebec and the maritime provinces, 607,000. Therefore, at the moment the west is marketing almost 60 per cent of the hogs in the dominion.

In the cattle sections we find almost the same situation. During the same period, from January 1 to March 20, cattle marketed in Winnipeg, Calgary, Edmonton and Regina totalled 70,068, and from Toronto and Montreal there were marketed 70,029; so that in

the cattle division they certainly have a large income in the western provinces apart from what is derived from wheat.

According to the records we have, hogs and other live stock shipped direct to the plants were approximately in the same proportion as those sold in the open market, and the shipments in the fall were much higher. It is quite evident, therefore, that wheat is not the only source of income of the western provinces. According to the figures we have, they grew last year about 27,000,000 acres of wheat. If I am wrong I wish to be corrected, but I believe that is approximately right. Under the proposed reduction of wheat acreage it is the intention to take out of wheat approximately 9,000,000 acres, either by summer-fallow or seeding to grasses or to coarse grains. If 9,000,000 acres are put under summer-fallow, that will mean approximately $36,000,000; and if 3,000,000 acres go to coarse grains, that will mean that coarse grains will be bonused to the tune of $6,000,000. When, therefore, the hon. member for Moose Jaw says that this really does not mean anything at all, I say that if it does not mean anything to grow hogs and cattle, and to be in the dairy industry to the extent that he claims—and I have the figures—then they certainly do not need the subsidy to enable them to grow coarse grains.

They are already producing a good many hogs and, if they have a subsidy of $6,000,000 to help in connection with coarse grains, it will undoubtedly give them a greater advantage to that extent in the hog market. Last year, under the agreement with Great Britain, we sold 290,000,000 pounds of bacon. This year, according to the agreement, we have approximately 425,000,000 pounds of bacon to go to Britain. At the present rate there will be an increase of around 35 per cent in hog marketing over the same period last year, and if that continues throughout the year we shall have an exportable surplus of bacon of around 550,000,000 pounds.

The result is that we shall have on our hands a problem that will be greater than that which faces us in connection with wheat I am opposed to it on general principles. I do not think it is fair to the rest of Canada. I go further than some of my friends and say that I am opposed to summer-fallowing. I do not believe that the farmers should be bonused not to grow wheat, or to grow coarse grains. Personally I would consent to grass seeding because there is some virtue in that, and if more land went into grass it would relieve the situation to a considerable extent. More than that, in my own province of Ontario, some of the very best land we have is seeded down to grass for the simple reason that it does not pay to cultivate it. I am speaking for Ontario when I say that we have approximately about 200,000 farmers. According to the bureau of statistics, forty per cent of the farms in Ontario are mortgaged, the approximate value of each mortgage being $3,000.

Mr. CASTLEDEN: What is the percentage in Saskatchewan?

Mr. MacKENZIE (Lambton-Kent): The percentage in Saskatchewan, according to the bureau of statistics, is approximately the same, and the amount of mortgage on each farm is also about the same; it is very little more. The only difference is that a unit which in Ontario would be regarded as average would be 100 acres, whereas a unit in the west would be 320 acres, and on that basis the mortgages per unit are not much different. Saskatchewan might be a little higher.

Mr. EVANS: Has the hon. member any idea of the difference in farm value per acre between Ontario and Saskatchewan farms?

Mr. MacKENZIE (Lambton-Kent): I do not know about the difference in value, but taxes are higher per acre in Ontario than in the west.

Mr. CRUICKSHANK: Will the hon. member compare taxes in British Columbia with those in Ontario?

Mr. MacKENZIE (Lambton-Kent): I do not know about British Columbia. According to the set-up we have this year, the carrying charges set by the Minister of Trade and Commerce to carry in store the wheat that they have taken over, will amount to approximately $57,000,000. The amount of money under this vote would be approximately $36,000,000; it may be a great deal more. The amount spent the last two or three years, last year particularly, under the Prairie Farm Assistance Act and the Prairie Farm Rehabilitation Act is approximately $22,000,000. Therefore we have a grand total going into western Canada—I do not care whether you call it subsidy or what—of from $115,000,000 to $125,000,000. If you divide that by the 250,000 wheat farmers there are in the west—I do not think there are any more than that although, according to the 1936 census, there were 290,000, but I think it is fair to say 250,000—you have approximately $500 as a bonus for each farmer in western Canada.

Approximately fifty per cent of that tax is paid by Ontario. So how can I go back to my farmers in Ontario whom I represent and say to them, "You are carrying, forty per cent of you, a mortgage averaging $3,000 each, and you have to contribute to a bonus of $500 to each wheat farmer in western Canada." I cannot do that. I do not think it is fair.

The hon. member for Moose Jaw said this was just part of a national policy, that the

east owes it to the west as part of the price that we draw from the tariff. But the 200,000 farmers in Ontario are living under the very same tariff as western Canada; the only difference is the cost of freight.

It has been said many times that there are many war industries in Ontario which employ a great deal of labour, and this means much money in circulation. That is probably true. The hon. leader of the opposition suggested that they are not getting enough war industries in the maritimes. All I can say from the farmer's point of view is that he has his work planned out, his dairy routine, his crop rotation, and instead of an asset the war industry situation is a definite and positive handicap, because he has to compete with these high wages for labour and is finding it a very hard struggle.

Mr. FAIR: Then where is his problem?

Mr. MacKENZIE (Lambton-Kent): The problem is this, and I am going to talk on this at some time in the near future. Let me tell our western friends that in Canada we produce approximately 210 million pounds of sugar, and of that at least half was produced in western Canada. They have the home market there due to the protection of the freight haul, and they get approximately $1 a ton more for beets than we in eastern Canada. We have many crops in Ontario that might be called specialized lines of farming; we have tobacco, corn, beans, sugar beets and many more. But they are only small, although in the aggregate they mean a great deal. If they are strictly speaking Ontario's concern, then by the same line of reasoning wheat must surely be a western concern. The west, however, has many problems. This matter should be looked upon as an agricultural problem as a whole and worked out as a whole.

I would not hazard even a guess as to what the future of wheat will be; nobody knows. Do not forget that, so far as wheat is concerned, continental Europe was self-supporting prior to the war, and may be self-supporting after the war. I believe we should maintain a big wheat supply and have it available, but we cannot continue to pile up wheat at the expense of the dominion government. The whole question of agriculture should be considered as a whole. Therefore I naturally oppose this item. I believe the whole problem should be submitted to the agriculture committee for further suggestions.

Mr. GARDINER: This debate has been going on since some time yesterday, and a certain amount of information has been placed on the record. There is a little more which I should like to add to what I gave yesterday, more in the way of completing figures given or correcting some in order that hon. members may have the information provided this estimate does not go through this afternoon.

In the first place I should like to place on the record the figures regarding the export of wheat and wheat flour from Canada over a period of years dating back to 1925-26. I will read a sufficient number of figures to indicate the argument involved, and the table can be placed on *Hansard*.

In the period from 1925-26 to 1930-31, six years, the average exports of wheat from Canada were 300 million bushels a year.

For the next five-year period, from 1931-32 to 1935-36 the average export was 217 million bushels.

For the past four years for which we have the record—that is, leaving out the year we are now in—the average export has been 166 million bushels.

I give these figures to indicate that there has been a marked change in the situation from 1925-26 to the present, and to strengthen the argument which I presented yesterday to the effect that the approach of the war, the preparation for it and the final coming of it had a definite effect on the export of wheat from Canada to other countries.

The complete figures are as follows:

Exports of Canadian Wheat
Crop Years 1925-26 to 1939-40

Crop years	Wheat and flour exports (thousand bushels)
1925-26	324,592
1926-27	292,881
1927-28	332,963
1928-29	407,564
1929-30	186,267
1930-31	258,694
1931-32	207,030
1932-33	264,304
1933-34	194,780
1934-35	165,751
1935-36	254,425
1936-37	195,224
1937-38	92,957
1938-39	166,959
1939-40	207,897

Average exports—
1925-26–1930-31, 300 million bushels.
1931-32–1935-36, 217 million bushels.
1937-38–1939-40, 166 million bushels.

Two points of view have been expressed in opposition to the vote proposed, one of them coming largely from western members—more by way of suggestion than of direct opposition—and the other coming from members from the eastern part of Canada. The discussion which has taken place is only further proof of the fact that it is most difficult, in a country so far-flung as ours, to legislate with regard to an industry which is to be found in every

province and have that legislation entirely satisfactory to every province. It is almost impossible to deal with any phase of agriculture in Canada by legislation or by a vote of this house and make it apply to all the provinces and have them all satisfied.

Mr. HANSON (York-Sunbury): May I interrupt to say that that shows how difficult it is to govern Canada.

Mr. GARDINER: Yes; it is one indication that Canada is difficult to govern. It is the reason, I think, why the only system under which Canada could remain a united country or under which the United States of America have been able to remain a united country is a federated system, that makes it possible in connection with certain matters to take slightly different action in one part of the country from what is done in another. For that reason quite a number of the problems which have been referred to during this discussion properly should be dealt with, in part at least, by the provincial governments. They have been giving assistance in certain directions in connection with agriculture; and what we do here alone cannot settle the problems which confront the people of Canada in relation to these different matters. It is difficult to do even those things we feel compelled to do, in a national way, in a manner that will give help to people in one section of the country without injuring those in other sections.

The western point of view, in so far as it has been critical, has been that this provision does not give the farmer of the west the same return he obtained last year, or even the year before, as a result of being able to sell his product, particularly wheat, even at the comparatively low advance the government found it possible to make. For example, the figures I have here indicate that in 1939 the return to the farmers of the three provinces particularly concerned with this legislation was approximately $336,000,000, while last year it was about $326,000,000, and over the last fifteen years it has been about $325,000,000 on the average. During quite a number of those years we were far below a return which made it possible for people to maintain themselves without receiving a great deal of relief.

Therefore, looking at the picture from that point of view, I do not think we are asking the committee or the people of Canada to do anything unreasonable under this policy which, so far as it has been enunciated up to the present, makes possible a return to the western farmers of only $300,000,000. It is our hope that by having the policy varied in one way or another in the matter of administration, in connection with either the part under my department or the part under the Department of Trade and Commerce, we may be able to bring that figure up to $325,000,000. At present, however, the figure is only $300,000,000, unless provision is made for an increase of $15,000,000 in farm produce other than wheat, which would be equal to the increase between 1939 and 1940 in connection with such produce. In other words, if this year there happens to be as great an increase in the returns from products other than wheat as there was last year, the total amount made available under the policy as it exists at present will be $315,000,000, leaving still another $10,000,000 to be found somewhere in order to bring the total return up to the average during the last fifteen years. That does not make any allowance for the fact that the cost of living is higher in western Canada, as in all Canada, than it was during the period of time for which that average is taken. Therefore I think it can be agreed that the amount of money which will be made available is not more than the house would be prepared to vote, by one method or another, in order to take care of that section of agriculture which has been injured by the position of the wheat market.

The objection from eastern Canada, as it has been expressed in this house up to the present, I think is to the effect that the greater production of coarse grains under the proposed policy will interfere with the sale of live stock and live stock products in eastern Canada; or, in other words, that, as a result of this policy, western farmers will come into competition with eastern farmers. A few moments ago the hon. member for Moose Jaw dealt with that situation and brought out the point that there had been a marked increase in the production of live stock and live stock products in western Canada before this policy was even discussed.

In that connection I have some figures which I think I should mention, particularly for the consideration of my hon. friends from Ontario. The number of hogs marketed in Saskatchewan in 1936 was 570,000; in 1940 it was 648,000. That represents an increase of only 13·7 per cent over our previous high year; and the only reason why the figures were lower in the interval was that one year we did not grow any grain, and we had to dispose of practically all our live stock. As a matter of fact, the Department of Agriculture went into Saskatchewan, bought the live stock, shipped it out and sold it. In the natural course of events that branch of agriculture had to come back; and if the number of hogs marketed last year was increased, that was not because of any policy put in force by this or any other government; it was because we grew grain in 1938

and 1939, and we did not grow grain in 1937. Our total increase would have been much greater than 13·7 per cent, even in the natural course of events, if it had not been for the crop failures which intervened.

When we come to Manitoba we find that their highest year previously was 1939, when they had 327,000 hogs delivered. In 1940 that number increased to 510,000. That represents an increase of 56 per cent. In Alberta the previous high year was 1936, when they marketed 1,039,000 hogs. Last year that increased to 1,485,000, or an increase of 42·9 per cent. When we come to Ontario we find that the highest previous year was 1937, with 1,785,000 hogs delivered. In 1940 that number increased to 2,191,000, or an increase of 24·6 per cent. In the province of Quebec the previous high year also was 1937, when 342,000 hogs were delivered. Last year deliveries amounted to 524,000, representing an increase of 53 per cent. I could go right across the country and give the figures, but I think I have indicated the point I am trying to stress, which is that there was an increase before this policy was ever announced, when we were growing more wheat and less coarse grains. The figures are as follows:

Hog Marketings by Provinces
(Number of head)

	P.E.I.	N.S.	N.B.	Que.	Ont.	Man.	Sask.	Alta.	B.C.	Canada
1936.....	38,195	2,501	14,269	251,490	1,613,162	267,856	570,013	1,039,466	....	3,796,952

Source: Annual Live Stock Market Review, Department of Agriculture.

The point as to whether you feed hogs coarse grain or wheat does not enter into the question. The grain is there; wheat is there; rye is there. There is a shortage of barley and of oats, but the hogs can be fed wheat and rye, as far as the market is concerned, just as effectively as they can be fed coarse grains, although whether or not the bacon is quite as good I would not care to say. In other words, the fact that the production of coarse grains in western Canada will be increased will not bring about an increase in the number of hogs, any more than the fact that wheat is being stored in the west to-day would increase that number.

There is, however, one point that has been entirely left out of consideration. The leader of the opposition made reference to the fact that the governments of the eastern provinces had asked the federal government to ship or assist in shipping grain from west to east. The request that was made was not for the shipment of coarse grains, but for the shipment of wheat. The double argument was used that the wheat would be useful in producing live stock in the east, and relieve the storage of wheat in western Canada. The proposal made by those governments was that the federal government should deliver that wheat at a cost of fifty cents a bushel, paying half the freight, in addition to delivering it at fifty cents a bushel from Fort William into eastern Canada. That meant that the dominion government was asked to take twenty cents a bushel or, if you like, to bonus the shipment of wheat to eastern Canada at twenty cents a bushel.

Mr. HANSON (York-Sunbury): Did it mean that?—because that is the No. 1 price.

Mr. GARDINER: That is what it averaged up to. I have all the figures, but at this time I do not wish to take the time to put them on record. That, however, was the request.

Mr. HANSON (York-Sunbury): I do not think that is quite correct.

Mr. GARDINER: We substituted the suggestion that we were prepared to pay half the freight, provided the provincial governments would do likewise, on feed grains, whether it was on feed wheat or other grains.

As a matter of fact, in answer to what was said, there is very little feed wheat. That is the real reason why we could not have got 10,000,000 bushels. There is very little feed wheat to be found in the elevators at Fort William. That is the reason why it would be approximately twenty cents a bushel, when you figure it out on an average.

But the coarse grains are there, and it was thought that with feed wheat, barley, rye and oats, there could be secured approximately 6,000,000 bushels, and that by adding in some high-grade wheat it could be brought up to 8,000,000 bushels, and be shipped to Ontario, the two governments paying half the freight. Only one province has taken that up.

Mr. HANSON (York-Sunbury): Which one?

Mr. GARDINER: Ontario. We are paying to Ontario now half the freight on the feed grain which is being shipped from Fort William to feed the live stock in Ontario. That amounts to almost exactly the same per bushel as we are proposing to pay on the amount of coarse grain which is taken out of wheat—presuming that a farmer grows fifty bushels to the acre—and sown into coarse grains.

A point I would suggest to hon. members is that this policy will not, so far as we can see at the present time, influence one way or the other the production of live stock in western Canada. The thing that surprises me is that members from eastern Canada have not opposed the grass more strenuously than the grain. In western Canada we do not produce milk to any extent from feeding grain. It is too cold at the time we feed grain. In western Canada we produce milk from feeding grass. One has to have a fairly complete knowledge of farming conditions right across Canada in order to be concerned about some of the things which may happen as a result of putting into effect a certain policy.

I would therefore suggest to hon. members that from the beginning of the war we have been approaching this question from this point of view: We have been watching the development in connection with different branches of agriculture and in different sections of Canada. Up to date I think it will be agreed that when a real problem confronted the apple people, we dealt with it. An hon. member has said that a real problem confronts the potato growers, and that we have not dealt with it. One of the reasons why we have not dealt with it is that it has not been demonstrated to us that the war has made any difference in connection with the potato marketing problem. If it can be demonstrated to us that it has made a difference, I am sure the government will meet that problem in just the same manner as it has dealt with the problem connected with the apple crop.

Only the other day we had a delegation from the bean people. They were able to show that about one-third of their production had been marketed in Great Britain, and that to-day they are not able to market that one-third. All we ask in cases of that kind is that the individuals or areas concerned, large or small, will take the problem first—if it is all within one province—to the provincial government concerned, and lay the problem before that government, suggesting the methods by which they would like to have the matter considered. In that way the provincial government would take the responsibility for passing on to this government suggestions as to what ought to be done. I do not believe this government ought to go into Ontario and develop the production of beans by increasing the prices. We should not do that, thereby leaving a problem on the doorstep of the Ontario government.

But I do say this, that if by carrying out this policy the fears of eastern members are realized, in that we have produced too much coarse grain in western Canada, we should see to it that at least an equal advantage is given to the eastern farmer to get the use of that coarse grain—just as we have been doing this fall. If we give him an equal advantage to get the use of it, and if, as it has been said, by bonusing the farmer at so much an acre to produce so many bushels of coarse grains per acre we have made that grain available, then the grain ought to be made available to eastern farmers at a price correspondingly favourable to that at which it is made available to western farmers. We agree to that.

All I ask hon. members to do is to take for granted that what we have done in other cases will be done in this instance. When the problem arises, it will be dealt with on its merits, and it will be dealt with in a manner which will be satisfactory to the farmers in the different sections of Canada.

Mr. MacKENZIE (Lambton-Kent): If I understand the minister correctly, this arrangement of paying half the freight is only a temporary arrangement to take care of scarcity due to adverse conditions—conditions which, under normal circumstances, would not occur in Ontario.

Mr. GARDINER: No; there is not a shortage of grain in Ontario, as compared with some other years. In Ontario there is grain which has developed growths half an inch long because it was wet last fall, and could not be shipped out of the area. Shipments being made at the present time indicate that there is no great shortage of grain in Ontario. The fact that no grain has gone down into other sections is also an indication that there is no great shortage of it.

But the fact of the matter is this, that, as indicated by the figures put on record, there has been a great increase in the amount of live

stock not only in eastern Canada but in western Canada. The feeding of that live stock requires more coarse grains. If it is going to be properly fed next year, many farmers in Ontario will have to buy coarse grains, if they are going to increase their live stock production to the extent to which they indicate they are going to increase it. If we are going to be able to purchase coarse grains at prices which make possible the production of cheese, hogs, and so on, at a price which Great Britain and Canada combined can afford to pay for them —because the two governments will have to combine their financial ability to pay—we shall have to see to it that the feed is placed at the disposal of those who wish to consume it. For that reason we ought to assure ourselves that the feed is available. When we assure ourselves of that, let us see to it that the people who have live stock to feed, and have not the feed to feed them, get it at the lowest possible cost. This is what the policy has made possible.

Progress reported.

On motion of Mr. Crerar the house adjourned at 6 o'clock.

Monday, March 31, 1941.

The house met at three o'clock.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

POLICY WITH RESPECT TO CONTROVERSIAL BROADCASTING

Mr. GRAYDON:

1. What changes, if any, have been made in the policy of the Canadian Broadcasting Corporation with respect to controversial broadcasting since the statement of policy issued by the board of governors on July 8, 1939?

2. Has any further statement of policy been issued by the said board of governors since the aforesaid date?

3. If so, when was said statement of policy issued and by what means was it published?

Mr. HOWE: The following information furnished by the Canadian Broadcasting Corporation:

1. There has been one modification of the policy of the CBC with respect to controversial broadcasting since the statement of policy was issued by the board of governors on July 8, 1939. This modification, made at a meeting of the board on January 22, 1940, suspended paid political and controversial broadcasting on CBC stations and networks of CBC or private stations except during elections, for the duration of the war. It should be noted, however, that time for paid political and controversial broadcasting could still be purchased on single privately owned stations.

2. See answer to No. 1.

3. Political parties were informed of this change at meetings held in Ottawa during the month of January, 1940, and in Toronto during February, 1940, at which were present representatives of the Liberal, Conservative, C.C.F. and Social Credit parties together with representatives of the Canadian Association of Broadcasters and of the Canadian Broadcasting Corporation. It was also communicated to all correspondents enquiring about the matter.

HAMPTON, ONT., POST OFFICE

Mr. MacKINNON (Kootenay East):

What was the annual revenue received from the post office at Hampton, Ontario, for the years 1935 to 1940, inclusive?

Mr. MULOCK:

Fiscal year	Revenue
1934-35	$548 51
1935-36	608 46
1936-37	585 93
1937-38	632 01
1938-39	649 96
1939-40	617 75

CHEESE EXPORTS

Mr. SENN:

1. What quantity of cheese was exported from Canada during the years, (a) 1937, (b) 1938, (c) 1939 and (d) 1940?

2. What persons or what firms were exporters of cheese during each of said years?

3. Was authority given to said persons or firms to export cheese during each of these years?

4. Were applications made by any other individuals or firms for authority to export cheese?

5. Were persons or firms refused the right to export cheese during said years?

6. If so, what persons or firms, and for what reason?

Mr. GARDINER:

1. In 1937, 88,955,300 lbs.; 1938, 80,989,100 lbs.; 1939, 90,944,800 lbs.; 1940, 106,631,100 lbs.

2. In 1937, not known; 1938, not known; 1939, not known; 1940, not known previous to July 12, 1940. Since that date as follows:

A. A. Ayer Company Limited, Montreal Quebec; J. C. Edwards & Company, Montreal, Cooperative Federee de Quebec, Montreal; United Dairymen Limited, Montreal; Hodgson, Rowson & Company, Limited, Montreal; Geo. Hodge & Son Limited, Montreal; Lovell

& Christmas (Canada) Ltd., Montreal; P. W. McLagan Limited, Montreal; Olive & Dorion Limited, Montreal; W. S. Cook & Son, Belleville, Ontario; Ingersoll Cream Cheese Co. Ltd., Ingersoll; Swift Canadian Company Limited, Toronto; Belleville Cheddar Cheese Limited, Belleville; Canada Packers Limited, Toronto; Jas. A. Sanderson, Oxford Station; Whyte Packing Company Limited, Stratford; Burns & Company, Winnipeg, Manitoba; Canadian Red Cross Society, Montreal; Joseph Perry, Kemptville, Corvell Bros. Limited, Charlottetown, P.E.I.; Chateau Cheese Company Ltd., Ottawa; R. B. Coldwell Limited, Halifax, Nova Scotia; Hugh G. Cooke, Kingston, Ontario; Davis & Fraser, Halifax, Nova Scotia; Fowler's Canadian Company Ltd., Hamilton, Ontario; Fraser Valley Milk Producers Assn., Vancouver, B.C.; Fromagerie de la Trappe, Oka, Quebec, G. H. Hammond Company (Canada) Ltd., Toronto; Island Cold Storage Co. Ltd., Charlottetown, P.E.I., Kraft Cheese Limited, Montreal, Quebec; Lambert Cheese Limited, Montreal; Leonard Wood, Charlottetown, P.E.I.; London Cheese Products Ltd., London, Ontario; G. P. Mitchell & Son Ltd., Halifax, Nova Scotia; New Brunswick Cheese Board, Saint John, N.B.; Rowling's Limited, Halifax, Nova Scotia; J. M. Schneider Limited, Kitchener, Ontario; A. Shevell Company Reg'd, Montreal; Slawson Cheese Company Ltd., Ingersoll, Ontario; Wilsil's Limited, Montreal; Joshia Shapray Inc., Montreal; Wellington McNeill, Charlottetown, P.E.I.; Canadian Manufacturers Sales Company, Montreal, Hudson's Bay Company Ltd., Winnipeg, Manitoba; Associated Shippers Inc., Charlottetown, P.E.I.; Pietro Collarini, Loretta, Manitoba.

3. In 1937, authority not required; 1938, authority not required; 1939, authority not required; 1940, since July 12, 1940, yes.

4. In 1937, answered in question No. 3; 1938, answered in question No. 3; 1939, answered in question No. 3; 1940, yes.

5. In 1937, answered in question No. 3; 1938, answered in question No. 3; 1939, answered in question No. 3; 1940, yes.

6. Rabbi E. Kirzner, Toronto, Ontario; O. B. Richardson, Ste Agathe des Monts, Quebec; Hunters Manufacturing Company Ltd., Winnipeg; John Schretlen, Vancouver, British Columbia; MacFeeters Creamery Ltd., Toronto, Ontario; Lambert Cheese Co., Montreal, Quebec; London Cheese Products, London, Ontario; Perreault Cheese Products Ltd., Levis, Quebec; Lucerne Food Products Ltd., Hull, Quebec.

Reasons: In order to conserve the supply of cheese in Canada for export to the United Kingdom, it was necessary to control the expansion of exports, in the form of new business, to other countries.

*VOLUNTEERS FOR OVERSEAS SERVICE

Mr. FRASER (Peterborough West):

1. What are the numbers from each miiltary district in Canada of (a) officers; (b) non-commissioned officers; (c) privates, now on duty overseas?

2. What are the numbers and in what military district were they recruited, of (a) officers; (b) non-commissioned officers; (c) privates, now on duty in Canada who have volunteered for service overseas?

3. What are the numbers and in what military district were they recruited, of (a) officers; (b) non-commissioned officers; (c) privates, now on duty in Canada who have not volunteered for service overseas?

4. What are the numbers and in what military district were they recruited, of (a) officers; (b) non-commissioned officers; (c) privates, now on duty in Canada who are medically unfit for service overseas?

5. What are the numbers and in what military district were they recruited, of (a) officers; (b) non-commissioned officers; (c) privates, now on duty in Canada who are medically fit and who have not volunteered for service overseas?

Mr. HANSON (York-Sunbury): I said that this question could be dropped.

Mr. RALSTON: I was going to refer my hon. friend, on a portion of the question, to a return to order of the house No. 87, tabled March 26, moved by Mr. Cockeram. I believe that that will give the hon. gentleman about all the information which, in the public interest, can be given now, or which otherwise would require a great deal of research and the examination of a large number of attestations.

ST. LAWRENCE WATERWAY

Mr. LACOMBE:

Does the sum of $14,011,000, mentioned under item 15 of the St. Lawrence waterways estimates, cover the acquisition of lands now under cultivation or industrial districts?

Mr. MACKENZIE KING: The sum of $14,011,000 mentioned under item 15, St. Lawrence waterway estimates, provides for the acquisition of all lands, improvements, etc., required for the St. Lawrence waterway project on the Canadian side of the international boundary in the international rapids section, exclusive of the villages of Morrisburg and Iroquois which are provided for separately under items 12 and 13 of the estimates.

*EXPORTS TO JAPAN

Mr. STOKES:

1. What commodities are represented by the figure $572,000 exports sent to Japan, during the two months ending February, 1941?

2. What is the value of each such commodity?

Mr. MacKINNON (Edmonton West): I wish to advise that at the present time it is regarded as not in the public interest to give this information.

Mr. SPEAKER: Dropped.

Mr. HOMUTH: Oh, no.

Mr. HANSON (York-Sunbury): I protest against the minister's statement, Mr. Speaker. We shall have to have a little more reason for the refusal.

Mr. MacKINNON (Edmonton West): The policy of the department has been, since shortly after the commencement of the war, not to give answers to anybody in connection with these shipments, because information would thus be given to people who are not entitled to it.

Mr. HANSON (York-Sunbury): But what about the Canadian people?

Mr. MacKINNON (Edmonton West): If it could be given to the Canadian people without being known elsewhere, we should be very happy to do it.

Mr. HANSON (York-Sunbury): You think that the others don't know?

Question dropped.

FEED GRAIN FOR ONTARIO FARMERS

Mr. AYLESWORTH:

1. How much feed grain has been brought into Ontario pursuant to order in council P.C. 497?

2. Have Ontario farmers been required to pay a higher price for feed grain than the current market price at the head of the lakes?

3. If so, for what reason?

Mr. GARDINER:

1. Complete report not received from Ontario.

2 and 3. Answered by No. 1.

INVERNESS COUNTY, N.S., MAIL SERVICE

Mr. BLACK (Cumberland):

1. When were tenders last called for carrying the mail between Upper South West Marlow and Glencoe station, Inverness county, Nova Scotia?

2. What are the names of those who tendered and the amount of their respective tenders?

3. To whom was the contract let and at what price?

4. On whose recommendation was the contract let?

5. Is the contractor sixty years of age or over?

6. Were there any complaints with respect to service rendered by previous contractor?

[Mr. Stokes.]

Mr. MULOCK:

1. October, 1940.

2. Alex. John Beaton—$275 per annum. As this rate was considered high the tenderer was given an opportunity to modify his tender but refused. Later, an offer was received from Duncan Gillis of Upper South West Mabou at $240.

3. Duncan Gillis at $240 per annum—contract dating from 1st January, 1941.

4. No recommendation received. Contract was awarded at the lowest rate available.

5. Yes.

6. No. Public tenders were invited, as the then existing contract was due to expire 31st December, 1940.

QUESTIONS PASSED AS ORDERS FOR RETURNS

BOUNDARY BAY, B.C., AIR FIELD

Mr. MacINNIS:

1. Were tenders called for the construction work at the airfield at Boundary Bay, British Columbia?

2. If not, how was the work done?

3. If the work was done by contract, (a) who was the successful tenderer; (b) what was the total cost of the work?

4. If more than one contract, (a) who was the contractor in each case; (b) what was the total price of each contract?

CANADIAN ARMY PAY AND ALLOWANCES

Mr. LaCROIX (Quebec-Montmorency):

1. What is the regular pay of officers of various ranks in the army, the navy and the air force?

2. What is the total family allowance, the allowance for lodgings and other supplementary allowances to the various ranks, and what other subsidiary allowances are there, if any?

3. What is the total number of commissioned officers in the army, and what is the total number of soldiers in (a) active service; (b) reserve army?

4. Is pay of soldiers on active service and in the reserve subject to the income tax?

5. Do officers on special duty receive allowances or supplementary pay in addition to their regular pay?

MOTIONS FOR PAPERS

PLACE OF BIRTH OF CIVIL SERVANTS

Mr. BLACKMORE:

For a return showing the number of civil servants whose place of birth was Saskatchewan, Alberta, British Columbia, Nova Scotia, New Brunswick and Prince Edward Island, as shown by a census of civil servants taken between 1931 and 1938.

Mr. MICHAUD: On behalf of the Secretary of State I am requested to inform the hon. member that he is assuming facts which are

not as he thinks they are. For example, he is assuming that a certain census of the civil service gives some information, and so states in his question. I am informed that the census referred to does not give the place of birth of civil servants by provinces. The motion, therefore, will have to be either amended or dropped.

Mr. SPEAKER: Dropped.

Mr. MACKENZIE KING: May I add just a word in regard to motions of this kind? While the government should be expected to give information on matters which are not readily ascertainable from public records and public documents, it is hardly reasonable to expect that the government should provide the means of collecting information for private members out of available documents. I hope that hon. members will not feel that their full rights and privileges are being in any way infringed if, where a return is requested for information which is already in public documents, the government refers hon. members to the documents themselves.

Mr. HANSON (York-Sunbury): Is the Prime Minister not carrying that principle just a little too far? Private members come into the house for the first time, say, after an election and they do not know where to turn for these things. The first thing they think of is putting a question on the order paper, and we have civil servants in the country who know where they can place their hands on the information required. I do suggest that it would be taking away from private members the privilege they now have of getting information in this way. I should like to know what the rule is with regard to it—not the interpretation of the rule. Some rule should be laid down which everyone could understand. At the present time, so far as I know, there is no definite rule.

Mr. MACKENZIE KING: I am certain the rule is that the government must be the judge of what it gives and what it withholds.

Mr. HANSON (York-Sunbury): That is a question of public interest, not of convenience.

Mr. MACKENZIE KING: It is an important matter. The government has the responsibility, among other things, of protecting the treasury, and to have the government ask civil servants to go through a lot of documents and collect information for individual members just because the members are unwilling to take the necessary time to look up the information for themselves is something which I do not think the public would consider justifiable. There could not be a better illustration than the request before us. It is equivalent to saying "Will some one or more civil servants go through some census returns in order to make certain calculations and deductions for an individual member who wishes to have them." Civil servants are fully engaged at the present time with extra duties and to have them taken off their regular or special work simply to do some calculating for an individual member is something which should not, I think, be expected either of them or of the government.

Mr. SPEAKER: Dropped.

HOEY, SASK., POSTMASTERSHIP

Mr. COLDWELL:

For a copy of all correspondence and other documents in possession of the department relating to the dismissal of the postmaster at Hoey, Saskatchewan, in 1939, and the appointment of his successor.

KUROKI-SUB ROSA, SASK., MAIL SERVICE

Mr. NICHOLSON:

For a copy of all correspondence, reports and other documents in the possession of the Post Office Department, relative to the transferring of the mail route from Kuroki, to Sub Rosa, Saskatchewan, and from Margo to Sub Rosa, Saskatchewan, during the years 1938, 1939 and 1940.

Mr. MULOCK: Provided the hon. member does not want the reports of the officials of the department, it is quite satisfactory that this motion should carry. It may be amended to that extent.

Mr. SPEAKER: Carried as amended.

TORONTO—TAX COLLECTIONS AND POSTAL RECEIPTS

Mr. CHURCH:

For a statement, for the last year of record, showing the amount collected at the Toronto customs house or the port of West Toronto from, (a) customs receipts; (b) excise duties and taxes; (c) sales tax; (d) other taxes imposed under the Special War Revenue Act; (e) other federal levies, if any. Also a statement for the same period of the amount collected at the district income tax office, Toronto, and the amount of postal receipts in the city of Toronto.

DAFOE, SASK., AIRPORT

Mr. DIEFENBAKER:

For a copy of all correspondence, reports, telegrams, memoranda and other documents in possession of the government in connection with the establishment of an airport at Dafoe, Saskatchewan, and in particular with regard to the supply of water for said airport.

POLICY WITH RESPECT TO CONTROVERSIAL BROADCASTS

Mr. GRAYDON:

For a copy of any rulings, orders, regulations, or statements of policy made to the government by the board of governors of the Canadian Broadcasting Corporation, or the general manager or other official thereof, since January 1, 1939, with respect to political or controversial broadcasting.

MUNITIONS AND SUPPLY—OIL CONTROL

Mr. CASTLEDEN:

For a return showing:

1. The names and addresses of all persons employed in the oil controller's branch of the Department of Munitions and Supply.
2. The qualifications and experience of each of these persons.
3. The salary and allowances paid to each of these employees.

Mr. HOWE: This information was tabled on March 10, in answer to a question of the hon. member for Eglinton (Mr. Hoblitzell), passed as an order for return.

Mr. SPEAKER: Dropped.

UNEMPLOYMENT

Mr. CASTLEDEN:

For a return showing:

1. The latest figures on unemployed.
2. The names of places in Canada where there is a shortage of labour.
3. The extent of that shortage for, (a) skilled labour; (b) unskilled labour; (c) farm labour.

LOANS TO PROVINCES—BRITISH COLUMBIA

Mr. BENCE:

For a copy of all letters, telegrams, memoranda, or other documents exchanged between the Prime Minister or the Minister of Finance and the premier or Minister of Finance of British Columbia since March 17, 1941, with reference to the request of the dominion government that steps be taken to pay off or reduce the outstanding obligations to the dominion of the province of British Columbia.

SUGAR

INCREASE IN PRICE AT REFINERY BY ONE CENT A POUND

On the orders of the day:

Hon. R. B. HANSON (Leader of the Opposition): I desire to direct a question to the Minister of Finance. The newspapers this morning carried the definite announcement that the price of sugar had been advanced at the refineries by one cent per pound, making the standard price to retailers $7.15 per hundredweight, or approximately $8 to the consumer. There were two previous increases—one half cent in October 1939, and ·35 of one cent in May 1940, the three together making a total of 1·85 cents per pound since the war began. I understand that none of these increases go to the refiners; therefore they all must go either to the government or to government agencies.

I desire to ask the minister what is the justification for this increase. The position should be given more clarification. Specifically, has the cost of raw sugars increased since the war started? If so, how much? Have freight and war insurance rates increased since the war started? If so, how much? What was the total amount received by the sugar controller from the ·35 cent increase in May last, and did the amount inure to the benefit of the treasury? Or, if not, to what government agency; and if to some agency, for what purpose?

Finally, how much of the total increase of 1·85 cents per pound is tax, having regard to the fact that there is already in existence an excise tax of one cent per pound? It would appear to me that the total tax will now approximate 2½ cents per pound, or over $25,000,000 annually. I think the minister should give to the house, not to the newspapers, a clarification of the whole position.

Hon. J. L. ILSLEY (Minister of Finance): I received notice of this question just as I was coming into the chamber, and I am not in a position to answer the numerous points that are raised by the leader of the opposition. However, I will bring them to the attention of my colleague the Minister of Labour (Mr. McLarty), in whose department the war-time prices and trade board functions.

The part that I might be expected to answer is the part relating to the price rise this morning. That price rise had to be announced publicly yesterday by notice to the newspapers. It could not wait for the meeting of the house, because there are certain announcements the timing of which is extremely important from the point of view of how much will be charged for commodities, and so forth.

The reason I requested the war-time prices and trade board to see that the price of sugar was increased one dollar and that that increase accrued to the benefit of the government was that large buying of sugar was taking place in anticipation of the budget, and that buying was gathering momentum. In the event of action being taken at the time of the budget it would mean that large fortuitous profits would come to speculators in sugar unless something of this kind was done.

Mr. HANSON (York-Sunbury): If there was no new tax it would not help them.

Mr. ILSLEY: The hon. gentleman is correct about that.

Mr. HANSON (York-Sunbury): There must have been a leak.

Mr. ILSLEY: This agency existed, and the power existed for doing it in this way—I am very glad it did—so that this action was taken.

Hon. N. A. McLARTY (Minister of Labour): I had no notice whatever of the question asked by the leader of the opposition. But, speaking purely from recollection, I would say there have been two increases in the price of sugar, one on October 3, 1939, and the other on May 21, 1940. I should like to have definite information as to the exact amount of the increases, although I think that in the first instance it amounted to half a cent a pound and in the second to one-third of a cent. I can tell my hon. friend that the increase of one-third of a cent was on account of the increased price the British sugar controller was required to pay under the terms of the sugar agreement with the various dominions and colonies of the British empire.

Had I had a few minutes' notice I should have been able to answer more specifically. I have given the best answer I can from recollection, and shall be glad later to answer further.

Mr. HANSON (York-Sunbury): What became of the one-third cent per pound, and how much did it amount to?

Mr. McLARTY: I can answer that now. I am glad the hon. leader of the opposition raised that question, because it is one with which I am familiar. The reason for the rise in price of raw sugar was the advice received from the British sugar controller that he was required to pay more for the sugar he purchased from the various dominions and colonies of the British empire. It was realized that as soon as this became known it would become public property and there would necessarily be a rise in the price of sugar; the additional cost would be anticipated and it would mean a tremendous inventory profit to the sugar refiners of Canada. I think the hon. member for Rosetown-Biggar (Mr. Coldwell) referred to that. In order that this condition might be avoided, at five or six o'clock on the night of May 20, 1940, the sugar administrator bought the sugar from the refineries and the next morning at ten o'clock sold it back to them at the increased price. The difference between the purchase price and the price at which it was resold will go into the sugar stabilization fund and eventually into the treasury of Canada.

Mr. HANSON (York-Sunbury): Just another tax on the people.

Mr. McLARTY: I suppose this is not the place to debate it, but would not the tax have been greater if instead of taking that action the refiners themselves had obtained the inventory profit which would otherwise be involved?

Mr. HANSON (York-Sunbury): What is the war-time prices and trade board for? Is there not authority to hold the price down until it has to be revised?

Mr. McLARTY: Oh, yes; but if they had not taken that action the refineries would have received a profit on the inventories held by them which they had purchased and which we repurchased from them at the old price and resold to them at the additional price. It would be a tax on sugar the benefit of which would go to the refiners of Canada if the action which was taken had not been taken.

Mr. HANSON (York-Sunbury): But the board could keep the price down. It is not a tax on sugar; it is a tax on the people.

Mr. KARL K. HOMUTH (Waterloo South): In view of the statement of the Minister of Finance that there were large purchases of sugar, and, of an article I saw in the press the other day to the effect that there had been exceptionally large purchases of sugar by the wholesalers; and in view of what the Minister of Labour has said, and also the Minister of Finance, that this decision had to be taken so suddenly—

Some hon. MEMBERS: Order.

Mr. HOMUTH: I am quite in order. I know as much about the procedure in this house as hon. members opposite. I want to ask the Minister of Labour what provision has been made to protect the people of Canada against an increase in the price of sugar now being held by wholesalers and others in Canada.

Mr. ROWE: And retailers.

Mr. ILSLEY: The extent of abnormal buying perhaps is not as great as the hon. member has in mind.

Mr. HANSON (York-Sunbury): I suppose it was only threatened.

Mr. HOMUTH: It was more than a threat.

Mr. ILSLEY: Yes, there was some. But the possibility of recapturing for the treasury any profit which might be made on the abnormal amount has been very carefully canvassed at considerable length, and it appears to be administratively impossible.

Some few persons, perhaps more than a few, will get some benefit as a result of this. That happens, unfortunately, prior to some budgets.

Mr. J. H. BLACKMORE (Lethbridge): I should like to ask one or two questions of the Minister of Labour (Mr. McLarty) to make sure that I gathered an accurate impression with regard to the control of sugar prices in Canada. Am I to understand that from now on the price of sugar to consumers in Canada is to be governed by the British sugar controller?

Mr. McLARTY: Necessarily it will be influenced by the price we pay the British sugar controller for raw sugar imported into Canada. It will be controlled to that extent, yes.

Mr. BLACKMORE: What is mystifying me, Mr. Speaker, is who tells the British controller what he has to pay.

Mr. McLARTY: Perhaps this is not an opportune time to discuss the whole sugar situation, but the price the British sugar controller pays is based on the agreements he arrives at with all the sugar producing dominions and colonies in the British empire.

Mr. BLACKMORE: And is Canada numbered among those producers?

Mr. McLARTY: I do not want to curtail discussion in any way, but I must say that all these answers are being given in a very impromptu manner, without any notice whatever. I think perhaps an opportunity will be afforded of discussing the whole matter at a more appropriate time than on the orders of the day.

Mr. BLACKMORE: Will the minister be prepared to make a statement in the house with regard to this matter within a short time? I must observe, if I am in order in doing so, that there is nothing of greater interest to the Canadian people at the present time than this very matter of sugar.

Mr. McLARTY: I shall be glad to make a statement at any appropriate time the hon. gentleman wishes to ask for it.

WHEAT

REDUCTION OF FREIGHT RATES WESTWARD ON MIXED GRAIN FOR FEEDING PURPOSES

On the orders of the day:

Mr. A. W. NEILL (Comox-Alberni): I should like to ask a couple of questions of the Minister of Agriculture, and I assure you, Mr. Speaker, that they are entirely non-provocative in character—in fact will have a rather soothing effect.

[Mr. Ilsley.]

A statement has appeared in the Vancouver press within the last few days that reduced freight rates have been arranged for on the higher grades of wheat from the prairies to the coast, but it was somewhat indefinitely worded. As it is a matter of very considerable importance to British Columbia, could the minister state whether this has been arranged, and if so what the new rate is, and if, as asserted in the press, it is conditional on the wheat being mixed with coarse grains, how is the purchaser to be protected? Suppose for example a farmer or dealer buys a carload of grain guaranteed to contain only twenty-five per cent coarse grains, how is he protected against having sent him a carload containing forty per cent coarse grains?

While I am on my feet I would ask whether the word "wheat" in this connection will include, as it did in the original rate on which this is apparently based, the by-products of bran and shorts? Because dairy men and farmers do not want to feed their cows a mixture of wheat, barley and oats either ground or raw, and I do not think this reduction will be of much use to the dairymen unless they can get it on bran and shorts. It will benefit the poultrymen, of course.

Hon. J. G. GARDINER (Minister of Agriculture): The hon. member was kind enough to give me a copy of his question, and I give the following answer:

Representations were made to the department that the farmers in British Columbia were finding difficulty in obtaining sufficient quantities of the lower grades of wheat to meet their needs. Under CFA tariff 145 CTC 154, grains for feeding purposes may be carried at freight rates more or less intermediate between the regular export and domestic rates on grain from the prairies to British Columbia. This rate does not include wheat of grades higher than No. 4.

Representations were made to the railways to carry, during the present emergency, the higher grades of wheat for feeding purposes at the feed grain rates. They finally agreed to carry the higher grades provided they were mixed with other grain to make it difficult to use the grain for other than feeding purposes. In addition each shipment is accompanied by a certificate from the deputy minister of agriculture for British Columbia that the grain is to be used for feeding purposes. In other words the railways will not accept the grain at the lower rates without the certificate from the deputy minister, who is supposed to satisfy himself that it will be used for feeding purposes. Under this arrangement it now will be possible for feeders in British Columbia to obtain any grade of wheat desired on the prairies, have it mixed with cereal

grains other than wheat before shipment, so that the resulting mixture when inspected will be graded by the inspector of the board of grain commissioners as mixed grain, and have it accepted and shipped by the railways at the feed grain rate.

The last question was whether bran and shorts could be included. Obviously it would be impossible to have bran and shorts included in these mixed grains; therefore it probably would be rather difficult to have bran and shorts come under these rates. But I would point out that all the ingredients of bran and shorts will be contained in the ground wheat, so that there should not be any serious difficulty about the matter so far as the general feeding of live stock is concerned. Of course where a farmer requires bran and shorts separate from the other grain, I understand that the regulation would not apply.

Mr. NEILL: The point is, of course, that bran is cheaper than wheat, and the dairyman does not want to buy an expensive feed like No. 4 wheat, when bran is a better milk producer.

Mr. BLACK (Cumberland): May I ask if these reduced freight rates will apply to feed grain shipped to the maritime provinces?

Mr. GARDINER: Already offers have been made to the maritime provinces and the eastern provinces generally, under which the government agreed to pay half the freight, which I think would have amounted to an even greater contribution than in the present case. That offer has not been accepted by the eastern provinces, and the offer to British Columbia is in substitution for what was offered to the eastern provinces.

Mr. BLACK (Cumberland): Have the maritime provinces been made the same offer that is now being applied to British Columbia?

Mr. GARDINER: No. A better offer was made to the eastern provinces, an offer which would have given them more assistance in connection with the shipping of grain.

Mr. BLACK (Cumberland): But it was not accepted?

Mr. GARDINER: It was not accepted.

Mr. CRUICKSHANK: What percentage of coarse grains must be included in the wheat to have it classified as mixed grain?

Mr. GARDINER: In the memorandum to which I have been referring the percentage is not given; but in the question put by the hon. member it was placed at 25 per cent. There was a further question as to how that was determined. The only method by which it could be determined would be by weighing the grain and determining the different proportions that would make up the weight of a bushel of grain.

RECOMMENDATIONS OF ADVISORY COMMITTEE TO THE WHEAT BOARD

On the orders of the day:

Mr. T. C. DOUGLAS (Weyburn): Last Thursday the Minister of Agriculture quoted certain recommendations from a memorandum submitted by the advisory committee of the wheat board. Under the rules of the house I wonder if that memorandum should not be tabled.

Hon. J. G. GARDINER (Minister of Agriculture): I did not quote from the memorandum; I placed on *Hansard* all the recommendations.

Mr. DOUGLAS (Weyburn): But they were contained in a memorandum, which I submit should be tabled under standing order 41.

Mr. GARDINER: The recommendations were made to a committee of council, and those recommendations were placed on *Hansard*.

Mr. DOUGLAS (Weyburn): But the memorandum was not.

STATUS OF FLAX IN CONNECTION WITH POLICY RESPECTING COARSE GRAINS

On the orders of the day:

Mr. M. J. COLDWELL (Rosetown-Biggar): As a result of several inquiries which I have received from people in western Canada I should like to ask the Minister of Agriculture if a decision has been made as to whether flax will be considered as a coarse grain under the proposals which the minister now has before the house.

Hon. J. G. GARDINER (Minister of Agriculture): The regulations dealing with the matter are not ready for publication as yet, since they have not been before council. I hope to have them ready to submit to council to-morrow.

CONDENSED MILK

REPORT AS TO TRANSFER TO THE UNITED STATES OF BRITISH ORDER FOR A MILLION CASES

On the orders of the day:

Mr. J. A. BLANCHETTE (Compton): Under date of Friday, March 28, the Ottawa *Evening Journal* published an editorial entitled "Farmers of the East also have their Problems," in which the following statement is made:

So great are the demands on the available supply of milk that there is a very grave danger of some form of rationing this coming summer if Britain's needs for cheese and condensed milk are to be met. Already there is talk of transferring an order for a million cases of condensed milk to the United States.

Is the Minister of Agriculture, or the department, aware of any such proposal for the transfer to the United States of an order for a million cases of condensed milk?

Hon. J. G. GARDINER (Minister of Agriculture): I have not the information readily available. I should prefer to have the question stand and answer it to-morrow.

WAR SAVINGS STAMPS

REPORTED SOLICITATIONS FOR SALES TO SOLDIERS IN CAMPS

On the orders of the day:

Mr. NORMAN J. M. LOCKHART (Lincoln): As a matter of information I should like to ask the Minister of National Defence whether instructions were issued by the department or by staff headquarters to the officers commanding the several military camps to seek to have men receiving $1.30 a day purchase war savings stamps. There is considerable dissension in regard to the matter, as to whether the officers commanding were doing this on instructions sent out from the department to the different camps, two of which I visited over the week-end.

Hon. J. L. RALSTON (Minister of National Defence): I can say to my hon. friend that I know of no such instructions having been given. But I shall inquire further.

Mr. LOCKHART: Does the minister know that such solicitations have been made among these men?

Mr. RALSTON: I do not.

Mr. LOCKHART: Then I can tell him that this statement was made to me.

[Mr. Gardiner.]

WAR APPROPRIATION

SUPPLEMENTARY PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

Hon. J. L. ILSLEY (Minister of Finance) moved that the house go into committee to consider the following resolution:

Resolved, that it is expedient to introduce a measure to be called The Supplementary 1940 War Appropriation Act to provide inter alia,

1. That sums not exceeding $135,000,000 be granted to his majesty in addition to the sums granted by The War Appropriation Act, 1940, towards defraying any expenses or making any advances or loans that may be incurred or granted by or under the authority of the governor in council during the year ending March 31, 1941, for:—

(a) the security, defence, peace, order and welfare of Canada;

(b) the conduct of naval, military and air operations in or beyond Canada;

(c) promoting the continuance of trade, industry and business communications, whether by means of insurance or indemnity against war risk or in any other manner whatsoever; and

(d) the carrying out of any measure deemed necessary or advisable by the governor in council in consequence of the existence of a state of war.

2. That the governor in council be empowered to reexpend, advance or loan moneys that may be received by way of refund or repayment of advances, loans or expenditures under The War Appropriation Act, 1939, The War Appropriation Act, 1940, and The Supplementary 1940 War Appropriation Act.

Hon. R. B. HANSON (Leader of the Opposition): Mr. Speaker, with the exception of what might be described as the refunding clauses, this measure is in the same terms as ordinary war appropriation resolutions. I am not sure that we have had spread on the record a break-down of this item, and probably we should have it at this time. I notice the government has adopted a very good practice, because the other day the leader of the government in the other place first of all spread a total break-down on the record. Had that practice been followed when the previous resolution was first brought to this house I believe it would have been greatly advantageous not only to hon. members on this side but to the ministers concerned. However, at the moment I am not going to thresh old straw.

Would the minister be good enough to give the house that information between now and the committee stage of the resolution, so that we may have the information for discussion to-morrow—if in fact discussion is not completed to-day? I should like to have that

break-down. I have no intention of debating the resolution, because I believe all hon. members thoroughly understand the position, and why the amount is required. As a matter of fact the amount is less than I thought it might be, judging from statements made earlier in the session. For that, of course, we are truly thankful.

When we come to the resolution stage I would ask the Minister of Agriculture (Mr. Gardiner), or the same gentleman in his capacity as Minister of National War Services, to clarify the position with respect to the production, disposition and marketing of natural products—products which are not termed "war casualties". I notice he included potatoes in that category. Yet the position with respect to potatoes is exceedingly difficult and I did not exaggerate it when speaking the other day. The minister was about to reply but a discussion respecting rules intervened and he did not have the opportunity. I should like him to make it clear whether the government intends to do anything for the potato farmers comparable with that which has been done for the producers of wheat and cheese, and is about to be done for the producers of butter and other dairy products. Our people just cannot go on marketing choice Prince Edward Island potatoes at twenty cents a bushel if production costs continue to rise. That is the position to-day. Both fertilizer and transportation costs have increased. The marketing condition in the Argentine for seed potatoes has been very bad. That is a matter at present the subject of discussion among association members in New Brunswick. What is needed in connection with the potato export trade is some marketing authority which would see to it that the export of seed potatoes is not slaughtered by consignment shipments in the markets still open. That is the great evil which obtained last fall.

Motion agreed to and the house went into committee, Mr. Fournier (Hull) in the chair.

Hon. J. L. ILSLEY (Minister of Finance): I have in my hand an analysis of the figures. The leader of the opposition is correct when he states that the amount is not as much as was first anticipated. Ever since July last I have been making estimates as to the amounts which would be spent for war purposes during the fiscal year ending to-day. Developments have shown that all those estimates have been slightly incorrect. In either July or August last I was asked to estimate the total expenditures under the war appropriation measure, and my estimate was $940,000,000, although the measure itself authorized an expenditure of only $700,000,000. At that time I expected that before the end of the fiscal year which ends to-day it would be necessary to come to the house with a supplementary bill authorizing an expenditure of $240,000,000. Later in the year I believe the amount was modified to some extent—although at the moment I cannot just recall what my next estimate was, if in fact I made one. At the time of the conference held to consider the report of the commission on dominion-provincial relations it appeared that the amount required for the whole year would be $850,000,000. That was the figure I gave to the conference. Had that turned out to be correct, this measure would ask for $150,000,000, not $135,000,000.

After parliament met the estimates were revised, and it appeared that the whole amount required for the year would be $875,000,000. Had that been correct I would be asking to-day for $175,000,000. As we have drawn nearer to the end of the fiscal year our estimates have of course become more accurate, and it now appears that the actual amount required will be about $135,000,000. That includes the provision of $15,820,700 for unforeseen contingencies. I cannot give the committee at this time particulars of the amount for contingencies, but the figures would show that that amount has been carefully worked out.

Mr. HANSON (York-Sunbury): It is based on a calculation, not on a mere percentage?

Mr. ILSLEY: It is not a percentage of anything, so far as I can see. I am quite sure that it is not worked out on a percentage basis. I have in my hand a list, by departments, of expenditures to February 28, 1941, and amounts required for March, 1941. These two when totalled give the estimated expenditures to March 31, 1941. I should be pleased to place a copy of this document on *Hansard*.

Mr. HANSON (York-Sunbury): That would be satisfactory. I would ask that the minister let us have a copy of it.

Mr. ILSLEY: The table is as follows:

War Appropriation 1940-41

Expenditures to February 28, 1941, and additional amounts required to the end of the fiscal year

	Expenditure to Feb. 28/41	Amount required for March	Estimated expenditure to Mar. 31/41
Agriculture	$ 3,958,000	$ 1,310,000	$ 5,268,000
Auditor General	47,000	13,500	60,500
Chief Electoral Officer	5,500	....	5,500
Civil Service Commission	91,000	29,300	120,300
External Affairs	260,700	108,600	369,300
Finance	1,442,000	270,800	1,712,800
Fisheries	170,000	4,000	174,000
Justice	25,000	21,700	46,700
Labour	734,000	968,300	1,702,300
Mines and Resources	273,000	81,000	354,000
Munitions and Supply	78,789,000	16,211,000	95,000,000
National Defence—			
Army	312,272,000	92,442,000	404,714,000
Navy	65,122,000	20,071,000	85,193,000
Air	142,795,000	42,205,000	185,000,000
Sundry	4,808,000	1,424,200	6,232,200
National Harbours Board	201,000	64,000	265,000
National Research Council	381,000	160,600	541,600
National Revenue	4,600	400	5,000
National War Services	1,637,000	906,500	2,543,500
Pensions and National Health	2,594,000	926,500	3,520,500
Post Office	180,000	78,000	258,000
Prime Minister's Office	7,300	2,000	9,300
Privy Council Office	4,000	2,000	6,000
Public Works	4,406,000	1,133,000	5,539,000
Royal Canadian Mounted Police	2,234,000	266,000	2,500,000
Secretary of State	138,000	39,500	177,500
Trade and Commerce	19,000	3,000	22,000
Transport	841,000	510,000	1,351,000
	$623,439,100	$179,251,900	$802,691,000
Loans and investments	16,488,300	....	16,488,300
	$639,927,400	$179,251,900	$819,179,300
Provision for unforeseen contingencies			$ 15,820,700
			$835,000,000

Mr. GREEN: What is the present situation respecting restrictions placed on the travel of Canadians to the United States? The tourist season is opening shortly and I believe that in some of our cities fairly close to the boundary there is a feeling that the restrictions placed upon Canadians entering the United States are creating in the minds of the people of that country the impression that border crossing is extremely difficult. The result has been a great falling off in the influx of United States tourists into Canada. As the Minister of Finance knows, we have counted heavily upon the United States tourist trade for our United States exchange. I suggest that perhaps the time has come when the restrictions upon Canadians entering the United States should be modified to some extent. The residents of the United States can travel only in the western hemisphere and we should make every effort to attract them to Canada. I am afraid that our tourist trade will be severely hit this season. Could the minister explain the situation at this time?

Mr. ILSLEY: Without having the regulations before me I can do so only in the most general terms. After giving the matter some

thought I have come to the conclusion that there is no evidence whatever that so far our pleasure travel restrictions have had a prejudicial effect upon United States tourist business.

Mr. HANSON (York-Sunbury): The minister means our restrictions?

Mr. ILSLEY: I mean exactly what I said—our pleasure travel restrictions. Last year the tourist business from the United States fell off quite seriously during the months of June, July and August.

Mr. GREEN: Those are the big months.

Mr. ILSLEY: Our pleasure travel restrictions, if my memory serves me correctly, came into effect on July 1. The main reason for the falling off of tourist traffic from the United States to Canada was the passport regulations put into effect by that country.

Mr. HANSON (York-Sunbury): That is quite unexplainable because that is the reverse position. I should like to know upon what the minister bases his argument. He is making an assertion, but of course that is not proof.

Mr. ILSLEY: That is not proof, but the falling off of tourist business took place about the time the passport regulations came into force. Of course, that is not a conclusive indication that the drop in tourist travel was the result of those passport regulations, but it is well known that as soon as the passport regulations were announced the feeling became general in the United States that if one came to Canada he would have difficulty in getting back to the United States. The passport regulations were not understood and the people simply stayed home; for some reason or other they did not dare to come to Canada. It took the dissemination of considerable information to disabuse the minds of United States residents of that apprehension. In September and October there was a considerable increase in tourist business as compared with the previous months and the business came back practically to normal. It was comparable with the previous year.

Mr. LOCKHART: Does the minister mean it was normal as compared with the previous year?

Mr. ILSLEY: Yes, nearly normal.

Mr. LOCKHART: No.

Mr. ILSLEY: It was much nearer to normal, anyway.

Mr. CASSELMAN: There was some travel during those months but for the previous two months there was practically none.

Mr. ILSLEY: It was nearer to normal than it was in the earlier part of the summer. That in itself is an indication that the pleasure travel restrictions here in Canada were not the cause of what dropping off in tourist business there was. It must be remembered that while we are not in a desperate position in connection with United States exchange, we are in a serious position.

Mr. HANSON (York-Sunbury): Did the minister say "desperate"?

Mr. ILSLEY: I said that it would not be fair to say that we were in a desperate position, but we are in a serious position so far as our stock of United States exchange is concerned. It should also be remembered that our pleasure travel restrictions conserve for us somewhere between sixty and seventy-five million United States dollars per year.

Mr. GREEN: To what extent did our tourist trade fall below what was expected?

Mr. ILSLEY: It fell off a lot.

Mr. GREEN: Did it fall off $60,000,000?

Mr. ILSLEY: That is the very point, and I see I shall have to go over this quite patiently. I have not the figures before me, but what I was pointing out is that the drop in tourist traffic occurred before the pleasure travel regulations came into effect. Later in the year there was a trend the other way. It is impossible to trace the cause and effect as between the pleasure travel regulations and the tourist business, but it is possible to see the cause and effect as between the passport regulations and the tourist business. Apparently the feeling held by some people is that if we were to abolish these regulations—

Mr. GREEN: I did not say that.

Mr. HANSON (York-Sunbury): Let him finish his argument.

Mr. ILSLEY: Let me finish the sentence—if we were to do away with the pleasure travel restrictions and allow this $60,000,000 or $75,000,000 to go to the United States, we would get that much or more than that through increased tourist travel to Canada. That might be so if there was a large disproportion between the amount which United States tourists spend in Canada and that which Canadian tourists spend in the United States. Canadians generally are under the impression that there is a great disproportion in these amounts. One very eminent gentleman who was concerned about this matter came to see me and told me he understood that the United States tourist spends about ten times as much in Canada as the Canadian spends in the United States when

travelling for pleasure. I told him that I thought the figure was more like three to one, and when I got the exact figure I found it was nearer to two to one. The proportion of our travel to theirs is surprisingly large. It is quite improbable that if we were to take down the bars and allow our people to visit the Florida beaches and the New York night clubs and other places where some Canadians in the past have liked to go, and let this $60,000,000 or $75,000,000 go to the United States, there would be a similar increase in United States tourist expenditure in Canada.

I do not like to be talking about the matter in this way. I do not know that one can sit down and put it on a purely dollar basis. I do not like to say that we should not spend a dollar unless we are sure we will get a dollar back. I should like to see no restrictions whatever upon travel between the United States and this country; I should like to see no passport regulations and no pleasure travel regulations or anything of the kind. But it must be remembered that we are buying such huge quantities of goods from the United States that there are some things which we must cease buying from that country. We cannot buy everything. We cannot buy all kinds of articles which were shut out under the War Exchange Conservation Act, allow our people to go on pleasure travel to the United States in a free and unrestricted manner, and at the same time pay hundreds of millions of dollars for munitions. The people of the United States understand that pretty well. If we were trying to keep our money here and get theirs, it would be a different thing, but as they well understand, we are not trying to do that. We are buying and buying and buying from the United States of America, and we are earnestly seeking ways in which we can keep ourselves in a position to continue to buy.

I do not believe it would be acceptable to the people of Canada if we were to ask those in the low income classes to deny themselves and to sacrifice, as we are asking them to do, making it impossible for them to import certain things which many of them regard as important, injuring seriously some importing businesses, as we have done by our War Exchange Conservation Act, and at the same time say to our people, "Go freely to the United States." It would look unfair on the face of it; it would be pretty hard to face down or to argue for. The only argument we could advance for such a proceeding would be that it would be good business for us to do that. But when, as I have said, normally the number of Canadian dollars spent in the United States is something like half the number of American dollars spent in Canada, it is very improbable, if we were again to take down those bars and let our people go freely on pleasure travel in the United States, thereby depleting our stocks of exchange to the extent of sixty to seventy-five million dollars a year—which is a lot of money—that we would gain anything like that much from United States tourists who would come to Canada. All over the United States people are, progressively, realizing our situation. They understand that this country is at war, that it is putting forth a tremendous effort, and must conserve every dollar of United States exchange, not to keep it away from the Americans, but to spend it with them for things which will advance the prosecution of the war.

That is my conviction regarding this pleasure travel relaxation issue. I know that certain newspapers and individuals sincerely believe the contrary. They hold that we should try the effects of relaxation, but the risk is far too great for a government which has as one of its primary responsibilities the safeguarding of adequate stores of foreign exchange for a considerable period into the future.

Mr. GREEN: My suggestion was, not that the restrictions should be abolished, but that the government should review them to see whether they might be relaxed to a certain extent. For example, it is almost impossible for Canadians to visit relatives in the United States. There are other factors to be considered. Railway companies, hotels, tourist agencies and bus companies have arrangements whereby they route tourists from one place to the other, and I doubt very much whether we can expect United States companies to route their citizens through Canada when there are no Canadians going down there. I should like to see something done in this direction. I hope for the sake of Canada that the government's policy is the correct one, but I suggest that further consideration be given to the advisability of relaxing these restrictions to some extent in the hope that a larger tourist trade from the United States will follow. They are only too anxious to help us in every way, but it is asking a lot for them to come up here when Canadians are unable to cross the border to see their friends. I doubt whether it is wise so to restrict the intercourse between the two countries.

Mr. QUELCH: Can the minister say whether as a result of the passing of the lease-lend bill it is intended to borrow from the United States?

Mr. ILSLEY: I cannot say. I do not know whether Canada will take advantage of the provisions of the lease-lend bill.

Mr. HANSON (York-Sunbury): I should like to intervene briefly in this discussion on tourist traffic. The minister says the proportion is about two to one. That is far different from what we have been told over a period of years, when tourist agencies and boards of trade and similar bodies were agitating for increased grants from parliament and the provinces. It corresponds much more nearly to what my own view has always been, namely that so far as Canada is concerned this is a very ephemeral business—due in a large measure of course, to the shortness of our season, as well as to our failure adequately to advertise the attractions we have in this country for foreign visitors. I am astonished that the minister contends that it is only two to one.

Mr. REID: There is a lack of roads.

Mr. HANSON (York-Sunbury): I think the road situation has been taken care of reasonably well, having regard to our ability to foot the bill. In New Brunswick we have spent forty to fifty million dollars, which we could very ill afford, on the construction of roads to attract tourists. In the result we have not got back from the increased tourist traffic enough to take care of the carrying charges; we have had to resort to new taxation to build those highways. However, that was not the purpose for which I rose.

I think there is a lot in what the minister says. The imposition of the passport requirements on travellers going into the United States and the beginning of the falling off of the tourist trade into Canada more or less synchronized in point of time. I should not like to think that they represented cause and effect, although one might be driven to that conclusion. What I wanted to suggest to the government—now that such friendly relations have been established between the two countries, now that we are out to do all that we can for them, now that we are even going to let them build the waterway for us at their expense—was to ask the United States to withdraw the passport restriction upon the entry of Canadian nationals bona fide guaranteed and accounted for. That would do away with a lot of restrictions. If I want to go home by car to-day, it is almost an impossibility, even though I had the United States funds with which to pay my way through the United States; there is so much red tape about getting through. Now arrangements have been made for travel by rail. I come and go by train freely through Maine, to and from New Brunswick, but if I want to go to New Brunswick by automobile I have a lot of difficulty. The result is that both of us—they and I—lose something which might be avoided if the passport restriction conditions were, at least, ameliorated. A much more friendly intercourse back and forth would be the result.

It occurs to me that the government could explore a number of other avenues for the saving of exchange. I am going to mention a case which came to my attention the other day. One of the contractors on an airport in the maritime provinces had as part of his contract—and an additional contract—a tremendous amount of trenching to do, and he got a good price for it. The prices for building these airports are good; I do not say they are too high or anything of the sort. The work had to be done in a hurry; we are told that speed is the first requisite. I realize that there is a great deal of truth in that. This contractor sublet the trenching to a man who did that class of work. It was profitable to the subcontractor, so much so that when the additional contract meant some miles of additional trenching the contractor would not give the man the new subcontract but sent $10,000 across to the United States to buy a new 10B Bucyrus-Erie trenching machine. He bought that machine to do the work himself.

This matter was brought to my attention by the subcontractor, who was out of a job and whose machine was idle. I brought it first to the attention of the foreign exchange control board and they said they had no jurisdiction; they were not policing importations. Then I brought it to the attention of the Minister of National Defence and he would have nothing to do with it; he said, "I have no authority". I will tell the minister that there is a tremendous amount of importations from the United States just in that category which should never be allowed, and one of the worst offenders is the building of the Canadian National railway terminal in Montreal. How much steel was imported into Canada during the last fiscal year to build the terminal of the Canadian National railway in the city of Montreal, using up important foreign exchange? The government is not a bit consistent. It will put the clamps on in one place but leave it wide open in another place.

Mr. ROWE: Fruits and vegetables.

Mr. HANSON (York-Sunbury): The other day a return was brought down showing importations of $22,000,000 worth of fruit and vegetables, which, with express and freight charges, would bring the bill up to $42,000,000 a year. It seems to me that the proper thing for the government to do is to review the whole position. Take my contractor friend: he should never have been allowed to import

that new machine, which was not made in Canada. The machine paid for itself in the one job—to him—but we lost $10,000 worth of exchange. I can give the minister the name of the contractor, the name of the sub-contractor and the name of the machine he bought. These things have to be tightened up. I am not saying this in a complaining spirit. I am trying to help the minister on the question of foreign exchange, because I realize that while the situation with respect to United States exchange is not desperate—the minister did retract that word—it is very serious, and just what is the best way to meet it I do not know. I am not an expert and I would not undertake to advise the minister, but every day, every week and month sees a situation cropping up which, if it could have been foreseen—and it should be foreseen—would have materially altered the position.

I hope the minister will review the whole thing. American tourist traffic is important. If you can get that passport requirement lifted by the United States government it will go a long way to help the position. The difficulty is that a large number of tourists from the United States are former Canadians who are afraid to come over for fear that they will not be able to get back, although they may have been over there for thirty years. I know of a young lady who wanted to visit her sister. She came to Calais, Maine, and they sat and talked together on the doorstep of the customs house. She was afraid to come across for fear of the restrictions; she was afraid she could not get back. That is not a good position between the two countries to-day. We have a great ally in this matter in the person of our distinguished visitor here of a week or two ago, Senator Pepper of Florida. I am sure he will do everything he can to help the position. He knows the value of the Canadian tourist in his own state of Florida and he will help the government if they go after the thing man-fashion. Let us see if we cannot get some of these restrictions lifted.

Mr. LOCKHART: With regard to the difficulties arising at border points, I concur entirely in what the leader of the opposition has said with reference to people who have been residents of the United States for fifteen or twenty years or more. They are afraid to come over here on account of the restrictions. Canadians may go over and take $5 in Canadian money to be used for emergencies and transportation, but this privilege serves only a limited purpose. I would urge the minister to give some further latitude. There are thousands of people in Canada and in nearby places in the United States, and even in places further inland across the border, who by reason of intermarriage desire to visit back and forth. Canadian visitors by signing a card can take $5 in Canadian money for emergencies and transportation only, but this is not satisfactory. While I was home in St. Catharines this week-end I learned of a number of people who wanted to go over for urgent reasons—illness among relatives, for example. I believe a definite extension of the privileges granted would greatly facilitate intercourse between Canada and the United States.

There is another matter I wish to mention particularly. The summer season is approaching and there will be a considerable movement of people to the Canadian west, crossing at Windsor and Sarnia, where they have to go through United States territory in their motor cars, in order to get to Saskatchewan and other parts of western Canada. I urge upon the minister the importance of facilitating communication, making things a little bit freer and easier for these people.

There is one other important point I wish to bring to the attention of the minister; it came to my notice over the week-end. In Camp Borden there is one hut with forty-two men including three Canadians; the rest are all Americans. They jocularly refer to the three Canadians as foreigners. One man from Massachusetts, who rode with me on the way to Ottawa, said that his wife was having to pay 18 per cent exchange in Massachusetts in order to get his money changed into American dollars. If there is any large percentage of such men in the air force and the army, as has been suggested to me on many occasions, every possible precaution should be taken to protect the interests of these boys who are serving their country for $1.30 a day. I ask the minister to see whether something can be done in cooperation with the Minister of National Defence or whoever is the proper authority to ensure that the pay of these soldiers shall be transferred on the ten per cent basis established between the two countries. I can give the name of the man who told me about the eighteen per cent. He said they had pleaded with their commanding officer asking if something could not be done to make sure that their wives did not suffer this hardship. Thousands of Americans are serving in our Canadian army and air force, and they should be protected in connection with exchange.

Mr. ILSLEY: I will look into these various suggestions and see what can be done.

The leader of the opposition made one or two suggestions about imports which he regards

as unnecessary. Possibly there are unnecessary imports. But the difficulties of administration are tremendous. If, for example, we add machinery to part II of the War Exchange Conservation Act so that it can be imported only under licence or permit, the staff of the Department of National Revenue would have even more grief than they have at present.

Mr. HANSON (York-Sunbury): I think you will have to come to it.

Mr. ILSLEY: At the present time they find it almost impossible to know when to issue permits and when not to issue them to persons wishing to import articles listed in part II of the War Exchange Conservation Act. I receive representations from indignant would-be importers, although it does not come under my department, and I know that the Minister of National Revenue receives ten or perhaps one hundred for every one I receive. I assure the committee it is no easy matter to pick and choose as between importers and to say to A that he may import and to B that he may not.

Mr. HANSON (York-Sunbury): You have to know the facts in every case.

Mr. ILSLEY: Yes, the facts have to be investigated fully; and then, after that is done the disappointed applicant will go away with a serious sense of grievance. I do not want to provoke discussion but I do not think the committee or the country has any idea of the number of protests we have received because of the prohibition of imports under the War Exchange Conservation Act. Some day I may make a list of the articles that have been represented as necessary to the people of this country. They include everything that the mind of man can conceive. If I were to undertake now to name them from memory I might be suspected of making sarcastic reflections on certain businesses, but certainly a great many of the articles did not appear necessary to me.

Mr. HANSON (York-Sunbury): We are a nation of individualists.

Mr. LOCKHART: Could the minister say a word on fruit and vegetable imports generally?

Mr. ILSLEY: The matter of importation of fruits and vegetables was dealt with carefully at the time the war exchange conservation bill was introduced in this house. That was a class of imports as to which the United States government made very strong representations, and we just had to consider whether we should endanger the Canada-United States trade agreement, which we would be doing if we restricted in any broad way the importation of fruits and vegetables. Now we export a great deal to the United States, a great deal more than we would if it were not for the existence of that trade agreement. We decided that we would not be justified in prohibiting those imports.

Mr. LOCKHART: Why were fruits and vegetables singled out with such definiteness while many other things were excluded?

Mr. ILSLEY: I believe the hon. gentleman would appreciate the reason if he gave it a little thought. Perhaps his is purely a city constituency—

Mr. LOCKHART: No.

Mr. ILSLEY: Then he doubtless has a healthy respect for the fruit and vegetable growers in his constituency, their power when they begin making representations, and the great importance of meeting their wishes if he can. Does he not know that all over the United States there are powerful agricultural interests which the United States government would not like to antagonize any more than we do ours in Canada?

Mr. LOCKHART: I have followed closely what the minister said, yet I fail to understand how these interests in the United States could offset the very strong influence exerted, and rightly so, by Canadian producers on their own government. I do not understand why these United States interests should have greater influence here than our own Canadian producers.

Mr. ILSLEY: It is not a question at all of influence exerted on this government by the agricultural interests of the United States. The position was that the United States government made very definite and emphatic requests in regard to this class of commodities.

Mr. LOCKHART: At the instigation of the producers there.

Mr. ILSLEY: I am not in a position to say. The hon. gentleman talks about $22,000,000, I do not know how much could be shut out. A great many would have to be admitted; it would be absurd to shut out all. But some could have been shut out without endangering the health of our citizens and without any bad effects, so far as I could see, if we did not have the trade agreement to consider as a whole. But it would not do to endanger our cattle market—

Mr. LOCKHART: Oh, that was never in danger.

Mr. ILSLEY: It was. There would have come a point where the agricultural clauses of the agreement would have gone just like that if we went too far, and we did not want to go that far.

Mr. HANSON (York-Sunbury): What the minister is saying in relation to this position amounts to this, that our fiscal policy is being dictated by Washington. This government are so fearful of offending the United States that they will not protect our own nationals. There is the position in a nutshell. You sacrifice the market gardeners and fruit and vegetable growers of this country to appease the United States government, whose own nationals put pressure upon them. If that is not dictation I do not know what is. We had the same position in the last Dunning budget prior to the 1930 change. Hon. gentlemen opposite know what happened because of that very position, and it will happen again if the Canadian public begin to understand. We ought to assert our fiscal independence and point out to the United States government—surely they are amenable to reason—that never before in the history of this nation have we spent so much money with them. True, it is for goods of a different class or kind, but we are buying more from the United States than we ever did, and how we are going to pay for it in the days to come is a puzzle to me. The minister will find, and the United States government will find, before we are through that there will have to be further restrictions; unnecessary luxuries from the southern states, such as Florida strawberries, will have to be shut out. They do not amount to much after all.

There is a principle at stake as well as a question of expediency. Surely the United States authorities are not so obtuse, shall I say, as not to know that their trade with Canada has always been one of the bulwarks of their export trade. How this little country has paid the millions of dollars of adverse balances that have grown up in connection with our trade with the United States has been almost beyond me. We never would have been able to do it if we had not had the greatest customer in the world on the other side of the Atlantic, which enabled us to settle our accounts on a three-cornered basis. I heard my late chief, Mr. Bennett, make a speech on this subject. From 1867 to 1930 the adverse balances of trade against this country, as between imports and exports between Canada and the United States, came to an astonishing figure, not millions but billions. We paid that adverse balance by exporting to the mother country, though a good deal of it was paid by exporting our estate, our raw materials which should have been manufactured in this country.

Mr. BLAIR: What about the tourist trade?

[Mr. Ilsley.]

Mr. HANSON (York-Sunbury): After what the minister has told us this afternoon I am afraid that the tourist trade is more or less a snare and a delusion. We only get two dollars for one. The estimate is away below what we have been told by this government, by other governments, by the travel bureau and others. In my own mind I have always regarded the tourist trade with some reserve; it can never assume great dimensions, for reasons, climatic and otherwise, which are obvious. According to the minister to-day the tourist trade is worth only about two dollars to one, though I thought the quints alone were worth that.

Mr. ILSLEY: I would not like to be held too strictly to that, but it is nearer two than three.

Mr. HANSON (York-Sunbury): Quite so. No one knows accurately the measure of the tourist traffic. It is and always will be a guess, unless you make people register what they bring in and what they take out, or something of the kind. It has always been grossly overestimated.

I appeal again to the minister. The United States government must know that to-day this country is spending tremendous sums there for war purposes, some of them essential and some not so essential. Surely they will take a broad view and a long view of this question. It is due to us, as well to to them, that they should do so. I should like to know who is getting the best end of this game, if you want to put it on the very lowest possible basis. Certainly we are not.

Mr. ILSLEY: The hon. gentleman must not be unfair to the government or people of the United States in this matter. He must remember that we have a trade agreement with that country, and that we have used the war clause of that agreement to vary a great many of its provisions. Though the United States exporters considered that they were really guaranteed the Canadian market for their goods, in connection with hundreds of items we have imposed an embargo and the government of the United States has not offered any objection. They have permitted us to take advantage of the war escape clause in the agreement, because they understood the extremely difficult position that we were in with regard to our need of foreign exchange. But as to fruits and vegetables the United States government felt compelled to point out that prohibition of their importations would gravely prejudice the position of the Canada-United States trade agreement and, under it, the tariff concessions assured to certain Canadian agricultural ex-

ports. I have heard the hon. gentleman talk about the lack of affirmative, positive measures to increase our foreign exchange. There is no more positive measure than selling our goods in the United States.

Mr. HANSON (York-Sunbury): Is it not the balance that has to be settled that constitutes the measure of your trouble?

Mr. ILSLEY: No. You do not balance your trade evenly with any country. With some countries your balance is favourable and with others it is unfavourable, but I would not consider that we had been treated unfairly at all by the United States in regard to the trade agreement.

Mr. GRAYDON: That may be so, but as one of the hon. members who represent constituencies having certain specialized types of agriculture I feel that something further should be brought to the attention of the minister at this time with regard to the orchard men and the growers of vegetables. There is a little more to this whole problem than the minister has stated. It may be true that representations on behalf of our own growers have been given consideration, but there is another angle to this matter that I think should be kept in mind. There are other influences, in this country as well as in the United States, which somewhat conflict with the interests of the growers themselves. After the foreign exchange conservation act had been passed in this house I was amazed at some of the comments that were made in the United States with regard to this industry. I should be the first to admit that nothing should be said in this house that would reflect in any way upon the United States government or people. We are all in this thing together, and perhaps it is very largely a question of conflicting interests within both countries rather than of any conflict between the countries or the governments themselves.

In the New York *Packer* of December 7 last there appeared a very interesting and enlightening article—later reprinted by the Canadian food distribution council—which I think is rather important. Mr. William Garfitt, the executive vice-president of the United Fresh Fruit and Vegetable Association in the United States, was discussing the failure of the Canadian government to impose any embargo, as he termed it, upon the importation into this country of fresh fruits and vegetables under that act. As most hon. members will recall, there was a good deal of rumour and gossip to the effect that the importation of fresh fruits and vegetables was to be in some way restricted, and evidently this article was written with that idea in mind, because it comments on the good fortune of the United States growers in not having to face this problem. Addressing himself to the growers of the United States, Mr. Garfitt had this to say:

> Last week I was able to tell you that, partly through the efforts of your association, the Canadian government had decided to modify an almost total embargo on fresh fruit and vegetable imports from the United States, and to exclude only a limited number of perishable commodities. This week I am happy to be able to report that the embargo has been lifted entirely, and that any American fruit or vegetable can enter the dominion without restriction.
>
> This will be good news, not only to American growers, but to wholesalers and commission merchants, who were confronted with what seemed the necessity of finding home markets for close to $20,000,000 worth of products. . . .

That is about the value of our yearly importations from the United States, without including freight and so on.

> . . . that would otherwise have been exported to Canada. Other industries were not so fortunate, as entire classes of goods, such as automobiles, radios, canned fruits and wearing apparel, are on the list of prohibited "non-essentials".

This is something which concerns all of us. The minister will understand that I am not in any way critical of him, but I believe this should be placed on the record so that we may know what influences other people believe are brought to bear on the situation. He goes on to say:

> Just what caused the Canadian Minister of Finance, Mr. J. L. Ilsley, to make such an abrupt aboutface will probably never be known. But I believe your association can take some credit for it. When the threat of embargo became known some two or three weeks ago, I conferred with the Canadian jobbers in Toronto—

In ordinary farm parlance, this looks like the nigger in the woodpile. In any event he says:

> —I conferred with the Canadian jobbers in Toronto, suggesting to them that they send a delegation to Ottawa to protest that fresh fruits and vegetables should be admitted as a public health measure.

He goes on to say:

> Immediately following the Toronto conference, the United—

That is, United Fresh Fruit and Vegetable Association of the United States—

> —started a stream of protest flowing through the United States Department of Agriculture, the Treasury department and the Department of State to the Canadian ministry of finance, pointing out that any such restriction on the movement of American agricultural goods would jeopardize the reciprocal trade treaties in effect between the United States and Canada. This seemed to have considerable bearing in the minister's decision.

This incident seems to be a good example of what an alert trade organization can do if given aggressive backing by its members and by others in the industry it serves.

In response to our telegrams to shippers and important handlers of fruits and vegetables in all parts of the country, the industry began at once to make its voice heard in official Washington—and official Washington had no choice but to lay the facts of the matter before the Canadian authorities.

Perhaps this is pertinent in view of the fact that the budget is coming down. The minister should be well advised so that he may say to this organization that he is independent of it. The article continues:

This does not mean however that all danger of future embargoes has been disposed of. In its anxiety to conserve every dollar of its liquid resources for war material purchases, the dominion is likely to revive this so-called economy measure. In that event, we shall be ready to go to bat again, but in the meantime it would seem to be only the part of wisdom for American shippers and receivers to do everything in their power to stimulate consumption in their home markets.

In other words, they are getting ready for changes which the minister may make in his budget.

It will be understood that I do not place this on record for the purpose of criticizing the minister. I realize the position in which he finds himself, and I would be the first to sympathize with him. It must be remembered that here in Canada two different and sometimes conflicting influences are being brought to bear, one by those whose business it is to make money from the importation of fresh fruits and vegetables, and the other by those who are connected with the growing of fresh fruits and vegetables for our own consumption.

The placing of this article on the record may serve to bring to the attention of the minister the type of influence being brought to bear in the trade in the United States.

The view seems to be held that the Canada-United States trade agreement might be jeopardized in some respects through the placing of restrictions on importations of fresh fruits and vegetables. I have not been greatly influenced by that bogy of altering trade agreements. It has always been said to the other farmers, "If you people want restrictions on fresh fruits and vegetables, then you must be prepared to lose some of your cattle quota or your cattle market in the United States." Of course that has had some effect on the public mind. No one wants our cattle market curtailed but I have never been convinced that that would be the result, because, as the minister very properly pointed out—and I was glad he did so—we are not attempting to curtail our purchases in the United States. The fact is we are trying to expand them. In order to expand them we ask simply that we be given by means of these restrictions more money with which to make such expansion. In my opinion no interests in the United States can properly take exception to what I am saying, because, after all, the money is being used for one purpose only, that of keeping industry in the United States moving so that it may provide war materials for us.

I would ask the minister when preparing his budget again to give consideration to this matter of the importation of fresh fruits and vegetables. It is a serious matter, because it is double-barrelled so far as we are concerned. The growers are having a tough time of it—and when I use those words I believe I am speaking as fairly as possible. Their difficulties are increasing because of the increased costs of production. In addition they are experiencing labour scarcity, and to the gardeners particularly that is a great difficulty. On top of that, the influx of United States products has seriously decreased their market. I make a sincere and urgent plea to the minister to give further consideration to this one method of conserving foreign exchange.

I do not believe any of us would ask for a complete restriction or a complete embargo. I do not believe the fresh fruits and vegetable growers themselves would want any hon. member to make that suggestion. But there are certain restrictions which might properly be made. I ask the minister to give careful study to the whole question of the importation of fresh fruits and vegetables, basing his conclusions entirely, if he wishes, on the question of conservation of foreign exchange, and leaving out consideration of the growers. We have here a chance to save at least something of the $43,000,000 exchange position which we are trying in so many other ways to guard and protect. While our imports into Canada of fruits and vegetables are valued at something like $21,500,000, we must double that amount when we add freight and other charges which the Canadian consumer has to pay.

I make this earnest plea to the minister. Our great agricultural industry needs help. Here is a chance to help it, and at the same time to help our foreign exchange position. The Minister of Finance has an opportunity in this instance to do both, with the same stroke of the pen.

Mr. NICHOLSON: I should like to ask a question regarding the amount of foreign exchange used in connection with the automobile industry in Canada. I have before me returns from the bureau of statistics which

indicate that we are spending a large sum of money in that industry. I understand one of the objectives of the war exchange conservation measure of last year was to decrease the amount of money involved in that industry. The figures I have indicate that we bought 101,789 new passenger cars in 1940 compared with 90,054 in 1939. After the passing of the act there was a decrease, it is true. No doubt many people anticipated that prices would go up, and there was an increase in June. In August and September, however, there was a decrease in the number of automobiles purchased. The total number of automobiles and trucks purchased in 1940 was 130,552 as compared with 114,747 in the previous year. What is the amount of foreign exchange used in maintaining these industries, and has the government considered the fact that these industries are using a great many highly trained men and a lot of material which might well be used in connection with our more direct war effort? What percentage of these figures will be used for foreign exchange?

Mr. ILSLEY: I have been a little concerned about the progress of the debate and have been looking for an item under which all this discussion would be in order. Unfortunately I cannot find one. I thought there was a finance item under which all this discussion could take place, but I do not think there is. With regard to the question asked by the hon. gentleman I may say that in order to present the situation adequately it would be necessary for me to get figures and to go into a number of matters. I suggest that we defer this until something else is up under which it can be discussed. There is nothing here under which this could be discussed properly, or under which the preceding matters would come.

Mr. RALSTON: The other evening the hon. member for Yale (Mr. Stirling) asked that I give as much information as I could with regard to the equipment situation, particularly for the army.

Mr. STIRLING: Training in Canada.

Mr. RALSTON: I am really going further than that, because I have gone into the matter in some detail. I think my hon. friend realizes, and I believe the committee will realize, that this is probably the most difficult task which could fall to one. I do not think I am unduly secretive, but at the same time there are in connection with equipment a great number of matters regarding which the staff are positive that information should not be given. I am between the upper and the nether millstones. On the one hand, the committee wants all the information possible, as do the public. On the other, the staff very properly points out to me that I am the head of a department which has an intelligence service part of whose work is to see that subversive activities are not carried on, and part of these subversive activities is to endeavour to get information with regard to types and production of equipment being produced in this country. The staff at headquarters find it hard to see why the minister, simply because he desires to be as frank as possible, should be giving information which spies would give their lives to get and for which other countries would pay a great many hundreds of thousands, perhaps millions of dollars.

I am going to give the best information I can, and I am afraid I shall be erring on the side of giving more than I should. The tabling of the MacMillan report by my colleague the Minister of Munitions and Supply was not regarded with equanimity by the staff at national defence headquarters. It was, however, deemed necessary to table that report in view of a situation which had arisen. That is water over the dam. I do not wish to go further in that direction by way of forecasts, predictions and the giving of figures. Let me say this further, because I think it is time that we had a frank discussion and a frank study of the situation. You do not find the Prime Minister of Great Britain making any statements with regard to the number of aeroplanes or the number of ships or the number of anything else. You do not find Mr. Eden or Mr. Margesson rising in his place in the British House of Commons and outlining the situation in connection with various items of equipment which are being produced for the army. You do not find Lord Beaverbrook giving the number of aeroplanes. Those gentlemen are said to have been extremely frank, and they have been frank in stating that there have been discouragements, delays and so on—these have occurred in Canada as well—but they have not given any figures.

Mr. DOUGLAS (Weyburn): They have had closed sessions.

Mr. RALSTON: If my hon. friend can tell me what went on in those closed sessions, then I shall know whether or not they gave figures. Nevertheless, I am going to go just as near the line as I can in an endeavour to give all the information I think it is possible to give, and I am going to deal also with some definite items of equipment and the situation in which we find ourselves, having regard to formations and to training necessities in Canada.

I am going to begin with what is perhaps one of the most difficult items, at least so far as the army is concerned. I refer to the

matter of field guns, anti-tank guns and anti-aircraft guns. The making of these guns is in the hands of four of the most reputable, efficient and best known Canadian firms. The fact is that so far the army has not received delivery of any of these guns. The committee will be glad to know that anti-aircraft gun barrels have, as has already been stated by my colleague the Minister of Munitions and Supply, been delivered and been found to be eminently suitable for the purposes of substitution for barrels in guns which have been used already. I may say also that we expect very shortly to have some anti-tank guns for training purposes.

The situation with regard to 25-pounder guns has been particularly scrutinized by my colleague the Minister of Munitions and Supply. I told the house some days ago that we had a definite understanding with our friends in Great Britain with regard to field guns. The committee will realize that 25-pounders are being produced in the same plant in Canada for both British and Canadian account. There is no lack of recognition of their importance by us or by the Department of Munitions and Supply. My colleague the Minister of Munitions and Supply, and his staff know how much we should like to have these guns just as soon as possible. I feel that it is due to both the minister and his staff to say that they certainly have put their backs into trying to get these weapons for us.

There is nothing to be discouraged about. We have approximate target dates for the delivery of these weapons, and I am sure that Canadian industry will strain every nerve to see that we get them. While I am speaking of this matter of target dates, perhaps I may say something else—my colleague the Minister of Munitions and Supply referred to this the other night—with reference to the matter of forecasts. My officers go to the Minister of Munitions and Supply from day to day to ask him when they may get this, that and the other article, and I think my colleague is getting just a little weary of that sort of thing. He tells them, "If I do tell you, you will hold me to it, and when the time comes, you will say that you are getting it two or three weeks late." Here is what he says now, "I will tell you that we will get them just as soon as Canadian industry can fill the order, and we have placed it in reliable hands."

I have to say to my colleague that this is really not good enough for me, although I appreciate his position. I should like to have some sort of target date so that I can make plans to equip certain formations with certain types of weapons. I tell him that if a target date is set, it will assist us in making our plans and will encourage industry to live up to that date. I think we should all realize that this is not a matter which concerns only the Department of Munitions and Supply. It is a matter particularly for Canadian industry. That department passes on to us what it gets from the particular industry which is engaged in making the particular piece of equipment. We ought to realize, and we in national defence have to realize, as does munitions and supply, that industry is engaged—I am speaking particularly of weapons—in the manufacture of something which has never been manufactured in Canada before. They are trying to do their very best with plans and specifications, drawings and tools, and dies and jigs, getting machine tools from everywhere, and adapting their plant facilities accordingly. Probably there is a tendency on the part of industry to make us a little happier by saying that they will make their deliveries at a certain date—finding afterwards that unexpected difficulties have arisen. At the same time I do not wish to discourage industry or munitions and supply from giving us the best forecasts they can in order to help us make our plans. If they do their level best to live up to those forecasts, that is all we can ask of them.

In the meantime, we of the service departments to whom these particular weapons are coming are not going to lie down and say that because equipment does not come faster, we cannot do anything. We try to help by agreeing on a different priority, so that this particular thing may receive more attention and something else may get less, in order to obtain the particular weapon we desire. We endeavour also to do our best to use what we have, or get along with some sort of substitute, until we receive the particular weapon we want.

In connection with anti-tank weapons, we have been training right along with 18-pounders. They are not the ideal thing, but our artillerymen are used to them, and training for anti-tank work is extremely desirable and has had good results.

Speaking of anti-aircraft guns, we are using for training purposes such equipment as there is in this country. We are not groaning about the fact that we cannot get more anti-aircraft weapons immediately. They will come. We are sending personnel overseas in order that they may be familiar with this weapon when the units go over, and also to enable some of the men to return and give instruction on this side in the use of these weapons.

I emphasize this—and it goes back to the question which the hon. member for Yale was asking—that our Canadian production of these articles must be used to the very best

advantage. A small number are utilized for training here, but the bulk of the production goes to the United Kingdom, because we believe that to be the sound distribution; after all, we expect them to be used by our men overseas.

With regard to anti-tank rifles, as the committee knows, engineering and production of these rifles were put in the hands of the Inglis company by the new contract which was made late last fall, and my assurance is that every effort is being made to manufacture them as quickly as possible.

As regards the 2-inch and 3-inch mortars, deliveries of 3-inch mortars have actually been made; and manufacture of 2-inch mortars is under way, but it will be a considerable time, I believe, before deliveries are received.

I am advised that we have sufficient Lee-Enfield rifles for operational purposes in Canada. For training requirements and for the reserve army we are depending mainly on the rifles which we got from the United States, plus sufficient Lee-Enfields for firing practice.

In November I said something to the committee about the steps which were being taken to increase our stock of rifles. My colleague the Minister of Munitions and Supply has been successful in that respect, and there are now additional rifles on the way to add to our stocks from the United States. These, I am advised, will suffice for our requirements until Canadian production begins. The committee will understand, of course, that these United States rifles could be used, if necessary, for operational purposes as well.

My hon. friend mentioned the Bren gun situation which existed some time ago, when, he said, infantry units had only enough Bren guns to look at. I can assure him that that is not the situation to-day. Bren guns are now being issued on what we consider to be an adequate training scale to the formations of the active army and also the training centres in this country. What is, perhaps, more important to the committee, all active units proceeding overseas will be equipped to full establishment, I believe, with Bren guns before they leave.

My hon. friend asked about Bren guns for training centres. I expect that at the present rate of production and on the present scale of distribution, all training centres will be adequately equipped by the end of May.

My hon. friend asked for information regarding the rate of output for Bren guns. As I have intimated, I am not going to give the figures, but I can come very close, because of the fact that the figures are mentioned in the contract. I can say, what I am sure will be satisfactory to him and the committee, that, as this month ends, there will have been delivered three times the number of completed guns which the contract called for up to this date. Further than that, in order to help in the front line until our additional formations get there, Canada is shipping directly overseas about one-third of the guns she is getting. That is, of course, in addition to the British allotment under the contract, which is also going overseas.

Mr. STIRLING: Meaning that two-thirds are going for training purposes?

Mr. RALSTON: Meaning that two-thirds of the Canadian allotment are going for training purposes and also to equipping formations which are still in Canada and which are going overseas.

The item of machine guns is not a major one at the moment. As I explained to the committee in November, we have machine guns to equip every machine gun battalion in the field on the basis of the present establishment. The committee will remember that I indicated that the establishment of machine gun units had been substantially lowered, and therefore as many guns were not required. We consider that we have sufficient for our coast defence units and for the advanced training centres. I believe that I mentioned last November that we had machine gun units which were surplus to this new establishment; that is to say, the new establishment which had come into force required less machine gun units, and therefore we had some surplus. Since that time we have converted two of them into other types of units. There may be further changes along that line.

There are some reserve machine gun units; whether they will be retained as such is a problem. If they are, we could do with more machine guns; but as matters stand, we consider that we have sufficient on hand to enable training to be carried on effectively for such units as are required.

Regarding field guns, I spoke a moment ago of the 25-pounders, and I wish to repeat what I said in November, that we have sufficient at least to equip the third and fourth divisions. Our plans are that only a portion of the field guns of the third division will be sent to England, and the remainder of this equipment will be supplied from United Kingdom sources. The committee will remember that our supply of field guns was augmented last summer. I will not mention the number, but it was substantial. Practically all of those, that is about six-sevenths of them, have already been high-speeded, as have all the 18-pounders. The field guns which we have

are, in the opinion of our staff, quite sufficient for training and for Canadian defence until 25-pounders are available. I do not think there is anything more I can say about the 25-pounders. As I stated last November, the Minister of Munitions and Supply has indicated and still indicates that a substantial number will be forthcoming this year. I had a full discussion about them with the war office. I have just mentioned our understanding with regard to the scale of equipment of field guns for the third division.

In the earlier stages of the production of 25-pounders it is likely that the bulk will be sent overseas to equip empire forces including our own. I should think that probably we would retain in this country only the minimum until production gets into its stride—that is, the minimum essential for training purposes. As a matter of fact, we have that arrangement now with the British.

With regard to universal carriers, this weapon is new to the war, but at the same time it is a most interesting one. Here again I am not going to give the committee the numbers of deliveries. Deliveries have commenced at a good rate, and our purpose is to make the best use of these carriers as they come off the line. What we are doing, to take full advantage of them, is to divide them up between Canada and overseas. For Canadian requirements, we have in mind training the units which are earmarked for formations planned for this year. To be more specific, I can say that at the present rate of production—even if there were no increase—our requirements on the training scale for the training centres in Canada and for active formations in this country will be filled, according to present calculations, in three months.

Let me say this in the same connection. We have made a schedule of deliveries for all the units and training centres which we think need these carriers, and we have allotted the exact number to be given to each, the order in which they are to be given, according to what our officers regard as priority. We have every unit's requirements planned out and have provided for the number which each unit should have in turn in the earlier stages. That includes not only units in Canada but those in the outposts as well, particularly in Newfoundland and Iceland. That is so far as Canada is concerned.

As I have said, we are making the allotment in two parts, part for Canada and part for Britain. The allotments for the United Kingdom will give us a large volume over there to complete the equipment of the corps, including the third division. To give the committee a general idea, perhaps I shall be going further than I ought to. I can say, however, that at the present rate of production, without any increase—and my colleague the Minister of Munitions and Supply will say that we are really just getting into our stride now—we shall have received in six months enough carriers to provide the initial war establishment equipment for every unit and formation of the Canadian army both overseas and here—that is, the Canadian active army. That is not taking into consideration the carriers which have already been issued to the units of the corps overseas through British sources.

Regarding signal equipment, my hon. friend the member for Yale discussed this question, mentioning the difficulty with the technical units and the trouble they are having in training without sufficient up-to-date equipment. These difficulties have been realized from the beginning. As I have explained on more than one occasion, we were advised, and we felt that there seemed to be no alternative, to get the British pattern equipment so as to have it interchangeable, and we put two of the outstanding firms in electrical apparatus to work on that job. I had a talk with the manager of one of them only last Saturday. There had been a setback in the target date he had given originally. That setback is over now because deliveries are being made in this particular type of equipment. I said to him, "How is it that you have had to set your date back?" He replied, "I must confess that there were 2,000 items, different bits and pieces in that particular piece of mechanism. We had to plan for tools, dies and jigs to deal with each one of these parts, and to be quite frank, we underestimated by a considerable percentage the number of machine tools that would be required." That is understandable, when they are working under pressure One cannot find fault. I am glad, however, that we had a target date to shoot at, even if there were delay, because I am sure it helped to some extent in making the delivery as prompt as it has been.

There have been disappointments and delays in the production of wireless sets—I believe wireless sets are what my hon. friend referred to particularly—but I am pleased to say that deliveries of sets of one pattern will begin, not in a few months or in a few weeks, but in a very few days, and the rate of delivery is expected to be such that our requirements will be complete within a month. The other wireless set will be rather slower, beginning in May, but this will not interfere with

training, although we want them as quickly as possible. In the meantime, we have had a certain amount of wireless equipment in the training centre, and such equipment has been augmented by commercial line telephone sets adapted to army use. We have received these in large numbers. We are now also receiving satisfactory deliveries of standard field telephones in very large quantities.

With reference to signals lights and so on, I might mention that orders have been placed. Some deliveries have been coming in and we anticipate no delay.

My hon. friend mentioned motorcycles. I would remind him that the motorcycle unit as such is no more, so far as the Canadian active army is concerned. All of them have been converted into units of the Canadian armoured corps. Of course, some motorcycles are needed for units that are not actually motorcycle units, but we have been able to procure all motorcycles which we considered were required. My hon. friend may have had in mind some particular case in which they have been short, but we have been able to procure all the motorcycles which in our opinion were required for training up to the present, and we do not anticipate any difficulty in meeting the needs for the future for such motorcycles as may be required for army purposes. Motorcycles are not manufactured in Canada, or have not been up to date, and we have procured requirements from England and, later, from the United States. Probably the Minister of Munitions and Supply would tell the committee that for the future such requirements as we have will likely be filled from the United States, because the type we use in the army is practically standard production there.

Mr. STIRLING: If a motorcycle unit does not still exist, the individuals who composed it must exist and must need motorcycles, or what have they become? Are they not a unit?

Mr. RALSTON: They are in the Canadian armoured corps. Some form the reconnaissance squadron of the Canadian armoured corps, but the same establishment is not required.

Mr. STIRLING: Not so many are required?

Mr. RALSTON: No. My hon. friend will understand that in the reconnaissance squadron there is a reconnaissance side car which is used and which will probably be of the pattern which was adapted overseas on General McNaughton's suggestion—a side car that carries a machine gun.

Regarding tanks, I will not deal with these since the matter has had the fullest discussion by the Minister of Munitions and Supply. The MacMillan report was laid on the table, and it gave the committee the benefit of Mr. MacMillan's views as to the probabilities with regard to production. I do not think I can usefully add anything to the statement except to repeat what I said a moment ago when the main resolution was before the committee, namely, that we have arrangements with the British which are considered mutually satisfactory, whereby armoured formations, for which we have pledged ourselves and for which we have planned, will be equipped between British and Canadian production.

Mr. STIRLING: I excluded that.

Mr. RALSTON: Yes. In that connection the committee might be interested to know this.

In connection with the production of tanks I think I can say that there is as good coordination between the Department of National Defence, the Department of Munitions and Supply and the manufacturers as there could possibly be. We have a tank committee presided over by the director of munitions in the ministry of munitions and supply, and the Department of National Defence is represented there by men from the ordnance department and the general staff who are particularly interested in the requirements for tanks and in the general design and types of tanks and the needs of the various formations. On the committee, too, there are representatives of the Department of Munitions and Supply in touch with the manufacturers and are able to say whether or not the thing which is wanted is possible of production here having regard to the materials and workmen and plant facilities available. I have been pleased with the way in which the tank committee has got together in connection with modifications which have to be made and matters which come up constantly with regard to the manufacture of tanks. The committee may be interested to know that there are some ten thousand individual drawings for the manufacture of tanks.

With regard to mechanical transport I do not think the committee will expect me to take much time. We regard the situation as good. As the committee know, we have been supplying large quantities not only to the Canadian forces but to empire forces overseas, and I think Canadian transport played a substantial part in the Libyan campaign a few weeks ago. The only limitation placed on the issue of mechanical transport to troops in Canada has been due to the fact that one hundred per cent establishment is not needed for training. We could have supplied more if needed; there is in fact a surplus available above our present requirements. The committee will be particularly interested to know that the formations proceeding overseas, for instance, will be fully equipped from Canadian production. I should perhaps except a few—only a few—special type vehicles which are not manufactured in this country and which it would be economically unsound to procure here, a few of which are needed for each division. I think the committee listened to Mr. Wallace Campbell's statement when he spoke a few weeks ago with regard to the production of mechanical transport for army service purposes.

With regard to munitions, provision has been made for all small arms artillery ammunition required for operational purposes and training in this country. In addition, small arms ammunition is being produced in enormous quantities for British account. Our policy in connection with this production is to ship overseas everything we possibly can; what our forces require there will be met from that supply. On account of the urgency of the situation abroad, we deliberately planned to retain in this country only a sufficient amount for operational necessities and for the training of the troops here.

In connection with gas respirators, I spent an interesting Saturday afternoon at the gas respirator assembly plant here. I think hon. members would be interested in visiting it. Respirators are being assembled at our own plant at the research building; they are being delivered in large quantities and within a month or so, all the active formations will be fully equipped. Production is in excellent shape. Production has been such that if we had used them all for the Canadian fighting forces, we would have met the full requirements of the active army, the navy and the air force. Production, however, was diverted a bit to promote increased deliveries on a big order from south Africa. The army already has had enough to provide initial equipment for all the active army both here and overseas and for one-third of the reserve ranks as well. We anticipate that there will be no trouble in filling all requirements on time, as they are needed.

That is a brief résumé of the equipment situation. I happen to be the customer; my colleague the Minister of Munitions and Supply is to some extent the supplier—at least he is the procurer; the real supplier is Canadian industry. I have faith that Canadian industry will do the job that is before them. They have had disappointments and discouragements; those have been translated into some setbacks and discouragements to us. As I have indicated, however, we are not lying down; we are going ahead full blast endeavouring to make the best use of what we have, seeing that the cardinal policy is observed, that is, to send overseas all we possibly can, also doing everything we can to speed up production by regulating our priorities. We in the Department of National Defence will not rest until we have everything to equip our troops. We are not boasting but we do feel that substantial progress has been made and that the serious shortage of equipment which I mentioned both in July and November is being gradually but, I think, surely overcome.

May I ask my friend the leader of the opposition what he would desire with regard to some other information which was asked for, namely, the matter of the cost of training camps. There is a long table which he wanted, and there were some questions put to me by other hon. members with regard to financial matters, training centres, et cetera. It is a long statement—

Mr. HANSON (York-Sunbury): If it is tabulated, that will serve my purpose; I have no wish to discuss it.

Mr. RALSTON: If I could put it on *Hansard*—

Mr. HANSON (York-Sunbury): That will serve the purpose.

Mr. RALSTON: Then, with the consent of the committee, I place on *Hansard* the following statement:

39 Training Centres (N.R.M.A.)

Estimated cost of construction, including roads, sewers, power and water supply and installed equipment, etc., in connection therewith

Military district and place	Actual payments made (at Ottawa to March 15 in Districts to February 28)	Estimated outstanding claims	Total actual and estimated
(A) Centres constructed by private contract (materials generally purchased by Department of Munitions and Supply).			
M.D. 2—Brantford, Ont.	$ 200,374	$ 43,405	$ 243,779
Long Branch, Ont.	308,345	20,443	328,788

Mr. STIRLING: The statement the minister has put on the record will be of considerable service. He made it in response to a request of my own. I knew that I was asking a question which many people in Canada were asking, as to the situation with regard to equipment for units in training. The success that has been attained in producing this equipment must, of course, be measured by the difficulties which have been surmounted, and neither I nor anyone else outside government departmental circles can measure those difficulties. The minister cannot be satisfied himself that all the difficulties have been surmounted, all the equipment has been provided; he must observe with regret that units are not yet able to carry on their training as they will be able when they are fully equipped. I have, however, no doubt that the difficulties have been considerable, and I fancy the progress made has also been considerable. If active service units in training in Canada are not adequately supplied with equipment, it follows that the training camps cannot have what they need and certainly the reserve units must be very short indeed. But I realize that so many changes of plan have taken place after the slow start that was made, that now that equipment is being produced in Canada in so many places it is greatly to be hoped that the progress attained will be but a measure of the progress which will be attained, and that the training will be able to go forward without this aggravating use having to be made of something which is not the equipment with which the troops will have to fight.

Mr. RALSTON: Not aggravating. Sometimes it is a good thing.

Mr. STIRLING: I know from my correspondence and contacts that there are men in units who have been, shall I say, losing heart because for too long they have been looking on at attempts at training with equipment which is not the equipment with which they will have to do their work. Let us leave it at that. I think the information the minister has given will be of considerable assistance. The amount of information given is the responsibility of the government; and we on this side of the house have never urged that the minister should go further than he sees fit to go in giving information. That amount of information which has been given is what we pass on to the public who ask us.

There is another matter on which I should like to ask the minister whether he would care to make a statement for the information of hon. members, again in order that they may pass it on to those who ask them questions. The position of the Canadian army overseas in reference to the British army is not at all clear. To what extent is it an entity whose organization, administration and operations are entirely in the hands of the Canadian general staff and, behind the general staff, the minister and the government? Is the minister able to clear up this difficulty? Is the decision with regard to where the Canadian forces may be used entirely at the discretion of this government? Is it worked out in collaboration with either the imperial general staff or the British government? To what extent is (a) the organization, (b) the administration and (c) the operations, which are the three main factors of military direction, solely in the hands of Canada? May we say that Canada and Great Britain are partners, directing the course of these operations, and that, therefore, Canada has a voice, an equal voice, a predominating voice, in the decision with regard to the organization, administration and operations of the Canadian forces?

Mr. RALSTON: I hesitate to make a statement in that connection, particularly with regard to the last point, without bringing down the Visiting Forces Act.

Mr. HANSON (York-Sunbury): What is the effect of it? It is a very obscure statute, is it not?

Mr. RALSTON: My hon. friend is quite right. I am afraid the only one who understood it, if I may say so, was my friend the late Minister of National Defence, who seemed to have a clear appreciation of it.

Mr. HANSON (York-Sunbury): And I think Mr. Bennett understood it.

Mr. RALSTON: Speaking generally, the Canadian forces, for administration, organization and operations, are responsible to the commander of the Canadian corps in so far as the corps is concerned, and the senior officer at Canadian military headquarters, in so far as troops are not in the corps; and through them to the government of Canada. I would say the commander of the Canadian corps has a perfect right to refer to the government of Canada at any time he is asked to carry on an operation, if it should be thought fit—

Mr. HANSON (York-Sunbury): Would it be saying too much to say that he is obliged to do that?

Mr. RALSTON: No, I do not think that would be going too far. He is responsible to the Canadian government if he carries on an operation without consulting the government; let us put it that way. I may say that reference was made to the Canadian government in connection with the Norwegian campaign

and also in connection with sending troops to France. Reference was made before action was actually taken.

Mr. HANSON (York-Sunbury): Was it not really ratified by the Canadian government afterwards?

Mr. RALSTON: Hon. members can realize that, on the ground, plans would be made in the expectation that the Canadian government would ratify the judgment of the officer commanding the Canadian corps, if he saw fit to commit his troops; but in connection with one of these matters I have a distinct recollection of communications indicating most clearly that the Canadian government must be consulted with regard to matters of this kind. It is not a case of ratification; it is a case of approval.

Mr. HANSON (York-Sunbury): Beforehand?

Mr. RALSTON: Beforehand. I am talking particularly about moving out of England.

Mr. CASSELMAN: Would that be so if the governor in council had passed the order in council which is provided for in either section 6 or section 8 of the Visiting Forces Act?

Mr. RALSTON: Yes, in my opinion. My view was mentioned at the time, if I know what my hon. friend is referring to; it was that section 6 or 8 applied only to the operation of troops in the United Kingdom, not outside.

Mr. MARTIN: The question raised by the hon. member for Yale is extremely important. It may be the minister feels that at this time the committee should not be fully informed as to the situation; but when one recalls the criticisms of the direction by Canada of military strategy in the last war, I think it is open to hon. members to consider the question seriously at this time. From what the minister has said, I suspect that he proposes later to bring down the act and perhaps discuss the matter more intimately, but I should like to put a question now perhaps for reply later. To what extent, for instance, does General McNaughton sit down and assist in the initiation of a particular programme? From the reply of the Minister I gather that there is consultation. Does that mean consultation after a decision has been reached, or is the decision arrived at with the participation of officers of the Canadian forces?

Mr. RALSTON: Without getting more intimate information, to use my hon. friend's adjective, I can only say that I have talked with the present chief of the general staff, who was in England at the time of the two operations to which I referred, and I have been in England myself and know the collaboration that exists there. I think I can say without hesitation, and even without checking up, that never has there been a proposal by the war office to utilize Canadian forces without the officer commanding the Canadian forces being present and taking part in the discussions.

Mr. HANSON (York-Sunbury): In other words, if I appreciate what the minister is saying, there has been full collaboration between the commander in chief of the Canadian forces in England and the war office. Is it fair to say that there is still, as there used to be, full collaboration and discussion between the two staffs as to proposed dispositions and operations in England, or do those discussions have to come through some other government agency such as the high commissioner, or to the government here and then to the general staff? It seems to me the minister would be doing a service by clearing up this situation if it would be permissible to do so. I do not wish to ask him to make statements that might be contrary to public policy or prejudicial to the safety of the state, but perhaps he would give a factual statement as to just what is the position with relation to our forces over there and their collaboration with the British forces.

I realize that there is a principle at stake, that at all times the civil authority must be paramount except perhaps in case of a great national emergency when action may have to be taken. That, however, is not the position to-day. After all, I suppose it is a sound principle to assert that the civil authorities still must be above the military, naval or air authority in connection with operations and dispositions. I should like to know what is the modus operandi. There is some discussion going on with regard to this matter, and I have received communications. I am not a military man, and I had to ascertain as best I could what was the true position. I believe it would be helpful if the minister would give a statement as to the exact position. I know that the Visiting Forces Act was set up for a purpose. I have not refreshed my memory respecting the debate which took place when Mr. Bennett introduced the bill, but with all due respect to the Minister of National Defence I do not believe anyone understood the implications in that measure better than did the former Prime Minister. As I understand it, the measure was passed after a definite arrangement with the British authorities. It was felt that a policy would have to be embodied in a statute.

I would ask that the minister make an explanation at a later time, because this is a matter which may have some practical importance. If he would make a statement respecting the true position as to the matters raised by the hon. member for Yale, we would be greatly obliged.

Mr. RALSTON: I shall endeavour to have a statement after eight o'clock.

Mr. GREEN: Has there been any reduction in the age limit for recruits for the active army? A press dispatch appeared in the Vancouver papers last Tuesday stating that the limit had been reduced from nineteen to eighteen years. Is that correct, and, if so, why was the change made?

Mr. RALSTON: If it has been made, it was without the minister's knowledge. I shall, however, find out.

Mr. GREEN: The press dispatch states:

> Reduction of the age limit for recruits from nineteen to eighteen was announced to-day in Victoria by Lieutenant-Colonel H. E. Goodman, district recruiting officer. Youths of eighteen will now be accepted for training, but not for service overseas. Previously none below the age of nineteen was taken on here.

The minister has no information on that?

Mr. RALSTON: No, none.

Mr. HANSON (York-Sunbury): I would call the attention of the minister to a statement which has been handed to me by one of my colleagues. I believe the minister has given a restricted interpretation of the application of this section. Perhaps he would include that in his statement this evening.

Mr. RALSTON: Yes. I was thinking of an order in council which we passed by which we can place some limitation on the employment of Canadian forces overseas. I have it in mind that an order in council was passed which outlined the extent of the powers of the senior combatant officer of the Canadian forces.

Mr. HANSON (York-Sunbury): Was that as a result of the Norway incident?

Mr. RALSTON: No; it was before that.

Mr. HANSON (York-Sunbury): Before the resolution carries, there is a matter of some importance which I believe might properly be mentioned at this time. On March 27 the leader of the government group in the other chamber made what seems to me an astonishing and, may I say, ill-considered and ill-timed statement.

The CHAIRMAN: It is not permissible in this house to refer to the debates of the other house.

Mr. HANSON (York-Sunbury): I shall not go into those debates, but I wish to base my question upon that preliminary statement. Will the government bring down the papers referred to in the debate in the other house wherein it was suggested that certain things were refused to be done by either British nationals or the British government? The minister will know exactly what I am referring to.

The CHAIRMAN: I would draw the attention of the leader of the opposition to the point that his question should not have any reference to the debate in the upper house.

Mr. HANSON (York-Sunbury): Then I shall say "in another place."

The CHAIRMAN: Even that would not be satisfactory. No reference to a debate in the other place can become part of the debate in this house.

Mr. RALSTON: Perhaps my hon. friend would—

The CHAIRMAN: The leader of the opposition can put a direct question to the minister, without making reference to the other house, at all. If we were to begin breaking that rule, we would fall into a chaotic condition.

Mr. HANSON (York-Sunbury): Mr. Chairman, I understand the technicalities of the ruling you have given—

The CHAIRMAN: I am sorry, but it is not a technicality.

Mr. HANSON (York-Sunbury): That is my interpretation of your remarks, and I do not think you are entitled to face me down on that.

The CHAIRMAN: Order. It is not permissible for any hon. member in the house to address the chair as the hon. member has just done.

Mr. HANSON (York-Sunbury): Oh, well, I am not—

The CHAIRMAN: Order. Furthermore, it is not open to any hon. member to question the ruling of the chair, except by appeal to the house.

Mr. HANSON (York-Sunbury): I was not questioning the ruling of the chair.

The CHAIRMAN: The ruling of the chair was not a technical question, but a fundamental rule of debate. Therefore my ruling is given, not as a technical point but as a fundamental rule of debate, namely, that in a debate in this chamber no reference can be made to a debate which has occurred in another place. Therefore, if the leader of

the opposition desires to appeal, he may do so; but he cannot discuss, in a way which I shall refrain from qualifying, the ruling of the chair—except by appeal.

Mr. HANSON (York-Sunbury): Well, Mr. Chairman, a member of the government has made a certain statement with respect to the failure of the British government, and with respect to British industries refusing to produce certain blue-prints so that we might have production in Canada. I now ask the government to bring down a statement indicating what blue-prints were refused, by whom, for how long, and to what extent the British government was in any way in complicity with such refusal. The statement having been made by a member of the government, we are entitled to production of the papers.

Mr. RALSTON: I shall take note of my hon. friend's question.

Mr. GILLIS: Canadian infantry units now being trained for service overseas are not supplied with a slicker or raincoat of any description. I have had letters from several members of the infantry forces training throughout Canada asking that the matter be brought to the attention of the government. This is only a small matter, of course, but it may be of some importance to a sentry on a wet night. Has the minister any information on the point, and, if so, will any effort be made to improve matters?

Mr. RALSTON: Probably the hon. member knows that such equipment is now being issued to certain units—and I believe to all units—for the purpose of protection against gas. I shall, however, look into the matter.

Mr. HANSON (York-Sunbury): I am sorry the Minister of National Defence for Air (Mr. Power) is not in his seat—

Mr. RALSTON: He is in Nova Scotia.

Mr. HANSON (York-Sunbury): I have no desire to hold him to his seat, of course. There has come to my attention over the week-end a matter in connection with which he would have special information. When recruiting for the air force began, it will be recalled that the educational requirements were exceedingly high. My recollection is that a man had to have university training and, I believe, a degree.

Mr. MARTIN: That has been changed.

Mr. HANSON (York-Sunbury): I know it has, but I thank the hon. member for the information. Because our young men were keenly air-minded, and desired to get into the air force, the major portion of those who enlisted did not have university degrees and, therefore, had to enlist in other branches of the service. They could not enlist to become pilots—the natural ambition of any high-spirited, red-blooded young man in Canada. Then, for some reason or another, which I am not going to investigate, the educational requirement was reduced, and these young men had to have only the equivalent of matriculation to one of our universities. That was quite all right, but in the meantime hundreds of young men had enlisted in other branches of the service, particularly in the mechanical branch. Some of them were probably just as well qualified, except for the educational requirement, as many of those who went in to become, finally, pilots and observers. Perhaps a good many of them were better qualified.

What has happened? Many of these young men have applied for transfers from the mechanical branch to the other branch of the service which they originally desired to join but which they were prevented from joining by the educational requirements which they could not meet. Will someone in the government look into this matter and see if at least some of these young men cannot be transferred to the other branch of the service? It is quite apparent that all those in the mechanical branch cannot be transferred, because the force needs mechanics. I quite realize that these men have been given training and that they cannot all become pilots or observers. Would it not be possible, however, to have some of them transferred so that they might fulfil their ambition and serve in this important capacity? Provided they possess the necessary alertness and so forth required by pilots or observers, I believe with their mechanical training they will probably make better pilots and observers.

At the present time these men are entitled to apply for transfer. I am told that when they do they receive a courteous reception, but no action is taken, and practically none have been transferred. The reason may be that mechanics are needed, I do not know. I would not assume that all these young men are required as mechanics. The best that they can hope for now is to become non-commissioned officers. Willy-nilly they are being forced to remain in the branch in which they enlisted, and they find that they cannot become officers. The principle has been adopted in the infantry to train as officers only men from the ranks, and this is a fine democratic principle to adopt. I ask the minister or someone in the administration to be good enough to look into the position to which I have referred and tell us whether it can be remedied. If it cannot be remedied, perhaps

we can be told why. There is great dissatisfaction among many of these young men who enlisted immediately after the war broke out.

I have in mind the case of a young man who enlisted in September, 1939. He did not have a university degree, as was required at that time, so he went into the mechanical branch. For months now, all he has been doing is to put oil and gas into aeroplanes, and he is just as well qualified as anyone to be a pilot or an observer. There seems to be discrimination here, and I should like to have the position clarified. If it is possible, having regard to the change in policy in connection with the educational requirements, to have some of these men transferred in order that they may become pilots or observers, I think it should be done.

Mr. RALSTON: I shall be glad to make inquiry. The point that interests me, the point which my hon. friend has anticipated, is that these men may be needed in the ground service. Otherwise, one would think that they would have been transferred because obviously the purpose of the change is to get more men in the air. In the army, men ask for transfers from one branch to another, or sometimes from one service to another. It is sometimes found that much time and money has been spent on training a man, that he has become qualified for a certain job and it is not considered to be in the public interest that he should be transferred to another branch for personal reasons, and have to be trained all over again in the new job. I assume it is desired to go on with this. I was just looking for the best way to make the statement which has been referred to without delaying the passage of the resolution.

Mr. HANSON (York-Sunbury): Suppose we call it six o'clock and have it understood that the minister will make the statement after eight o'clock. As far as we are concerned, it could be done when the bill is in committee.

Mr. ILSLEY: Shall we pass the resolution now?

Mr. JOHNSTON (Bow River): I have been informed that men from as far west as Calgary, or even as far as British Columbia, have been required to go to Toronto to get their uniforms. They spend two or three days there and all they do is to get uniforms. This seems to me to be a tremendous waste, and I should like to know if the minister can enlighten us in this regard.

Mr. RALSTON: All I know is that the manning depot is at Toronto. I suppose that is similar to the army depots where men are examined, documented, issued with uniforms and so on. I think something more is done than just simply issuing a uniform to a man. Whether or not it is more convenient to do it in other places, or whether it is desirable to have it done in one central place, I do not know. As I remember, the only manning depot is in Toronto.

Mr. HANSON (York-Sunbury): There is one in Brandon.

Mr. RALSTON: Then my hon. friend's question is more in order if they come past Brandon to Toronto. I shall be glad to look into the matter and give my hon. friend an answer. I think there must be an answer.

Resolution reported, read the second time and concurred in. Mr. Ilsley thereupon moved for leave to introduce Bill No. 25, for granting to his majesty aid for national defence and security.

Motion agreed to and bill read the first time.

At six o'clock the house took recess.

After Recess

The house resumed at eight o'clock.

TRANS-CANADA AIR LINES

EXTENSION OF INITIAL SUBSIDY PERIOD—CHANGING OF FIXATION-OF-RATES PERIOD

The house resumed from Thursday, March 20, consideration in committee of the following resolution—Mr. Howe—Mr. Vien in the chair:

Resolved, that it is expedient to amend the Trans-Canada Air Lines Act, 1937, changing the period for the fixation of rates for the current year, as defined in the act, and extending the initial period during which a subsidy may be payable to Trans-Canada Air Lines.

Mr. MacNICOL: What is the background of the proposal?

Mr. HOWE: This proposal was discussed at great length about a week ago; and at that time, although we had to report progress in order to let another item of business go through, I believe the discussion had about ended. This is a proposal which changes the act to the extent that compensation for the carriage of mail is not fixed automatically but is fixed arbitrarily. Owing to the fact that the expansion of the line is quite rapid, the arbitrary figure set out in the act is, under present circumstances, hardly fair to the post office. In other words, this permits us to change the rate per mile for carrying mail from an automatic rate of 53 cents to a negotiated rate of 40 cents. Also it changes

the period in which the new rate shall apply so that it runs from the first of April to the first of April, instead of from the first of January to the first of January.

Mr. MacNICOL: Will the rate be automatically set by the Post Office Department?

Mr. HOWE: After April, 1942, the automatic feature will apply; that is, the rate will then be fixed automatically.

Resolution reported, read the second time and concurred in. Mr. Howe thereupon moved for leave to introduce Bill No. 26, to amend the Trans-Canada Air Lines Act, 1937.

Motion agreed to and bill read the first time.

PRECIOUS METALS MARKING ACT

AMENDMENTS WITH RESPECT TO GOLD WATCHES AND SPECTACLE AND EYEGLASS FRAMES

Hon. J. A. MacKINNON (Minister of Trade and Commerce) moved the third reading of Bill No. 12, to amend the Precious Metals Marking Act.

Motion agreed to and bill read the third time and passed.

CANADIAN NATIONAL RAILWAYS

APPOINTMENT OF GEORGE A. TOUCHE AND COMPANY AS AUDITORS

Hon. C. D. HOWE (for the Minister of Transport) moved the second reading of Bill No. 13, respecting the appointment of auditors for National Railways.

Motion agreed to, bill read the second time, and the house went into committee thereon, Mr. Vien in the chair.

On section 1—Appointment of auditors.

Mr. MacNICOL: Are they the same auditors as last year?

Mr. HOWE: Yes, the same auditors, and the same compensation. This bill, I believe, is exactly the same as the bill last year.

Mr. HANSON (York-Sunbury): What is the compensation? I am not sure whether I know.

Mr. HOWE: It is $50,000, and I believe that a small fee was added to cover subsidiary companies such as the Canadian National Steamships and the Trans-Canada Air Lines.

Mr. HANSON (York-Sunbury): They are not subsidiaries of the Canadian National itself.

Mr. HOWE: They are, I might say, wholly independent companies.

Section agreed to.

Bill reported.

NATIONAL PARKS

PRINCE ALBERT—PROVISION FOR WITHDRAWING CERTAIN AREAS OF LAND AND ESTABLISHING NEW BOUNDARIES

Hon. T. A. CRERAR (Minister of Mines and Resources) moved the second reading of Bill No. 20, to amend the National Parks Act.

Motion agreed to, bill read the second time, and the house went into committee thereon, Mr. Vien in the chair.

Section 1 agreed to.

On section 2—Prince Albert national park lands.

Mr. DIEFENBAKER: Mr. Chairman, all of us realize the great benefits of parks in providing an opportunity for healthy relaxation and also for the conservation of game. This committee should have an explanation from the minister why the Prince Albert national park is to be reduced in area, as is set out in the bill. The reduction in area will be approximately one-fifth. This is the only national park in Saskatchewan. If my memory is correct, it was established in 1927, following the election of the Prime Minister in the constituency of Prince Albert.

The reasons given by the minister when the bill was introduced were, as I understood them: first, that the area which is being removed from the park boundaries is to be so removed because it is swampy. May I point out that, in so far as the eastern portion of the park is concerned, that area is covered in the main with timber, and that this timber is valuable and, I think, necessary to the preservation of the water courses within that park.

The main reason given for cutting down the area of this park is that it will reduce the cost of fire ranging; but when we look at the estimates for the year 1941-42, it is apparent that that cannot be the reason for reducing the area of the park. At page 116 of the estimates for 1941-42, under the heading of "temporary assistance," there is an amount of $95,789, a reduction of some $8,000 as compared with the preceding year; but under the head of "wages" there is an increase of $30,000 among the various parks throughout the dominion.

The stand of timber in the eastern portion of this park is a valuable one, and it is being sought by certain interests in northern Saskatchewan who are endeavouring, I understand, to obtain an opportunity to take over this area of timber. For that reason I protest against the reduction in the size of the

park. Lumber is needed now, yes; but there are other places in northern Saskatchewan where timber is available. As regards the argument that a part can be set aside for settlement, there is a great deal of land there for settlement without reducing the area of a park which up to the present time has been generally accepted as being of the proper size.

The minister has stated that there has been no request from the government of Saskatchewan to reduce the area of the park. The explanation is that there is a saving in the cost of fire ranging. That, however, is scarcely tenable having regard to the estimates that have already been given, and I should like the minister to give a further explanation, showing the committee in detail what that saving will be. I point out to him, as he already knows, that no other areas are available in the future that will allow for any addition to the park. I should like to have a full explanation from him.

Mr. CRERAR: There is little to add to the explanation I gave when the bill was in the resolution stage. The hon. member for Lake Centre rather hints that there is something dark and mysterious behind the suggestion that the area of the park be reduced. There is nothing to that, further than the degree to which it exists in the hon. member's imagination. As a matter of fact, as I stated when the bill was in the resolution stage, the recommendation came to me from the officials of the department. It did not come from any member of the Saskatchewan government or from anyone who might be interested in timber. It is true that there is some timber in this area which is being taken out on the eastern boundary of the park. As I stated previously when the matter was before the committee, there are three separate blocks being removed from the park. One of them, the largest one, is the eastern portion of the park now and consists, as I stated before, of swampy land and timber. I never said that there was not a certain amount of timber being taken out of the park. I stated before that the area was timber and swampy land, and I stand by that. That is the area on the eastern boundary. The added economy may not be very great, but it will amount to something.

An hon. MEMBER: How much?

Mr. CRERAR: I could not say—perhaps the expense of a couple of timber rangers. In addition to that, there is the maintenance of a portion of the road that runs through the park to Montreal lake which, when this area is removed, will become the burden of the Saskatchewan government.

[Mr. Diefenbaker.]

Mr. MacNICOL: We shall have to pay it anyway.

Mr. CRERAR: At any rate, I can tell the hon. member that it will not be paid by the parks branch, and that is what I am mainly interested in. Then there is a small area of eleven square miles which is to be added to an Indian reserve. I was in error the other evening when the leader of the opposition asked me if that provision would be in the bill. The arangement is that these areas are transferred to the province, and by agreement with the province certain lands are transferred back to the federal government for Indian reserve purposes.

Mr. HANSON (York-Sunbury): Why is that method followed?

Mr. CRERAR: It is the simplest method of dealing with the matter, and I always believe in pursuing simple rather than complex methods.

Mr. HANSON (York-Sunbury): It would not appear to me to be so. Title is now vested in the crown in the right of the dominion; all you have to do is by proper order in council, or, if necessary, by this bill, to transfer it to the Indian Affairs branch, and the title never changes.

Mr. CRERAR: Except for this—and I speak subject to correction—that in the transfer agreement under which the resources were returned to the province, any land set aside for park purposes that ceased to be used for this purpose would be returned to the province. This, at any rate, is the simplest method of dealing with the matter. The reduction is not nearly so serious as the hon. member for Lake Centre supposes. The area of the park at the present time is 1,870 square miles. What is taken out is 376 square miles, and of that a block of eleven square miles comes back to the government to increase the area of the Indian reserve, which we need rather badly.

Mr. MacNICOL: Is it the swamp that goes to the Indian reserve?

Mr. CRERAR: The timber in the muskeg area does not go to the Indians. The land that is being added to the Indian reserve is fair agricultural land. That is the description given me, and I have no reason to doubt it.

Mr. HANSON (York-Sunbury): How much timber is in the part that is going to the Saskatchewan government?

Mr. CRERAR: I am afraid I cannot tell the leader of the opposition.

Mr. HANSON (York-Sunbury): It seems to me we ought to know what we are giving away; we ought to know the value. I understand that certain interests in northern Saskatchewan are lumbering on the fringe of this reserve, and that they have cast their eye—I will not say evil eye; perhaps "covetous" is a good word—on this stand of timber and will get it much easier one way than another. They probably could not get it as long as it is part of the park. The minister ought to be able to tell us what stand of timber this is.

Mr. CRERAR: We have not had any occasion to cruise the timber.

Mr. HANSON (York-Sunbury): Surely the department has some data on it.

Mr. CRERAR: As far as my knowledge goes, no lumbering operations are being conducted there.

Mr. CASSELMAN: Is that a definite statement of the minister's own knowledge?

Mr. CRERAR: The recommendation comes from the officials of the parks branch.

Mr. HANSON (York-Sunbury): Well, you could get a recommendation to hang a man.

Mr. CRERAR: Does my hon. friend wish to insinuate that some influence is brought to bear on the departmental officials?

Mr. HANSON (York-Sunbury): I do not know anything about the matter but I am trying to elucidate the truth.

Mr. CRERAR: The parks officials recommend that this area be taken out because it is not needed for park purposes.

Mr. HANSON (York-Sunbury): Has the minister the recommendation there?

Mr. CRERAR: There is still left almost 1,500 square miles; that is a pretty good sized park. I am sure if the leader of the opposition had a park even a fifth of that size for New Brunswick, he would get up and cheer for it.

Mr. HANSON (York-Sunbury): I would not give any of it away.

Mr. CRERAR: We are not giving this away. The procedure for handling this is the usual one. On more than one occasion changes in park boundaries have been made. If we do not need an area for park purposes, it goes back to the provincial government.

Mr. MacNICOL: The minister said, "We are not giving it away." Then what are we getting for it?

Mr. CRERAR: We are giving it back to the province.

Mr. HOMUTH: Who will get it from the province?

Mr. CRERAR: I have not the remotest idea; I have enough on my hands to run my department without attempting to tell the Saskatchewan government what they should do.

Mr. HOMUTH: But the minister ought to know the value of this property and the timber and what we are giving away. We do not give it away in Ontario.

Mr. CRERAR: We have not had occasion to cruise this timber; why should we?

Mr. HOMUTH: That should be one of the jobs of the park rangers and the park superintendent, to know the value of the park lands and the timber on them.

The CHAIRMAN: The minister has the floor. If any hon. member desires to question him, I would ask him to do it in an orderly way.

Mr. PERLEY: In the explanatory note, the last paragraph reads:

> The department has been in communication with the government of Saskatchewan—

Would the minister table this communication, or say what it is?

Mr. CRERAR: When we decided to reduce the area we took up with the Saskatchewan government the question of securing the additional eleven square miles to which I have already referred. As far as I am aware, the communications cover only that point. The Saskatchewan government has agreed, and the Indian reserve will be increased accordingly.

Mr. HANSON (York-Sunbury): Has the minister the communications with him and the recommendation of the parks branch? We have had this big national park there for years. Does the minister mean to tell us that he does not know anything about the resources on it? That is astonishing. They must know in the parks branch how much timber is on this area. What are the fire rangers and the other officials doing there? There should be some information as to the stand of timber on that part which we are now giving away.

Mr. CRERAR: There may be an estimate in the branch as to the amount of timber, but I do not see that that comes into the question at all. We are not operating the national parks as timber limits. We do not wish to give an area in a national park to some timber operator to cut timber on.

Mr. HANSON (York-Sunbury): The minister misses the whole point of the inquiry. We wish to know, if an asset of the dominion is being handed over to a province for nothing.

how much that asset is worth. If it has valuable timber on it, it will soon be on the market. Indirectly we are giving a subsidy to the province of Saskatchewan; we should have all the information the department has. Surely that is a reasonable request.

Mr. ROWE: It may be summer-fallowed.

Mr. CRERAR: I do not think there is any summer-fallow in connection with that. The National Parks Act provides for the setting up of national parks for specific purposes, and the matter of going into the lumber manufacturing business is not one of these.

Mr. HANSON (York-Sunbury): The minister's lack of information about natural resources which are owned by the dominion, and which he proposes to give away for nothing, is extraordinary.

Mr. CRERAR: If my hon. friend will let me continue, I will tell the committee that it was not the purpose, in establishing national parks, to gather in timber and resources of that kind in order to operate them for the benefit of the federal government. The parks were created as national playgrounds. This area does not contribute to that purpose; therefore, it is being dropped and, under the agreement by which we are governed, the resources go back to the province and they administer them.

Mr. PERLEY: The third paragraph of the explanatory note reads:

> The cost of patrolling these areas in the interest of fire and game protection has been out of proportion to the value of the land for park purposes.

Would the minister give the figures as to the cost?

Mr. CRERAR: I have not that information here. I could give it when the estimates of the parks branch are before the committee later on, if my hon. friends wish information about the number of park wardens, the colour of their hair and eyes, and that sort of thing.

Mr. HOMUTH: I am not treating this matter in a jocular way, and I do not think the minister should try to be facetious about it. Here we have a few hundred square miles of land, on which the hon. member for Lake Centre states there is considerable timber. I know something of what we have done in Ontario with regard to our parks. A group of men in our own district saw a stand of virgin timber in our county going to the sawyer. We refused to let that pass; we took it over and made a public park of it. As a result of careful administration, we have had that timber harvested as the trees came to the proper age, and by handling it in that way we were able to pay the total cost of that park and the administration and upkeep of it.

I do not know what mistakes have been made in the past in the handling of our national parks, but it is time we introduced some real business methods into the administration of those parks. Instead of reducing our playgrounds in Canada, let us expand them. We have been talking about the tourist traffic. Let us try to increase it. Here is a definite asset, a stand of timber which, if properly handled by the department, might not only pay the cost of maintaining that park but help to pay the cost of maintaining other parks. Let us do this in a businesslike way instead of giving that timber back to the province. When the province gets it, as the minister and everyone else knows, some operator is going to go in there and cut that timber. I object to that. I think we will require far more and better information than we have had as yet; otherwise it might be as well for the minister to move that the committee rise until he can give the committee the information to which it is entitled.

Mr. MACDONALD (Kingston City): May I ask if it is not true that the land which constitutes the Prince Albert national park belonged originally to the province of Saskatchewan?

Mr. HOMUTH: What does that matter?

Mr. MACDONALD (Kingston City): The hon. member for Waterloo South has had his say. If he wants to carry on this discussion, he may do so when I have finished, but he is not going to interrupt me. I am asking the minister if it is not true that in the beginning Saskatchewan gave this land to the dominion government and that now the dominion government, finding some of this land not needed for park purposes, simply intends to restore to the province that which the province gave in the beginning, as I understand it without charge. Is this not merely a return of the land to the original owner?

Mr. ROWE: That does not add much light. We knew that before.

Mr. MACDONALD (Kingston City): I do not think you did.

Mr. CRERAR: That is not quite the position.

Some hon. MEMBERS: Oh, oh.

Mr. CRERAR: Now that my hon. friends of the opposition have had their laugh, perhaps they will let me state the position. What has been said by the Minister of National Defence for Naval Services is, in effect, the situation,

but when the park was created, the dominion government controlled all the resources in western Canada.

Mr. HANSON (York-Sunbury): Then this park never belonged to the province of Saskatchewan.

Mr. CRERAR: The dominion government owned the resources; but in the transfer agreement—I am sure I am right in this, although I speak subject to correction—it was provided that any lands which the federal government did not require would be transferred to the province. That, in effect, is what is happening here, and we have it happening almost every day. Consequently, when the area of this park is reduced, under the terms of that agreement the land goes back to the province, where it should go, where it belongs. So the Minister of National Defence for Naval Servires was quite right.

Mr. MacNICOL: He may know about boats but not about timber.

Mr. NICHOLSON: As a resident of Saskatchewan I would not think of opposing any legislation likely to benefit my province, but I have had some difficulty in trying to secure land there for provincial parks. I think hon. members will agree that it is much more difficult to secure land for inclusion in a park than it is to give the land away after it has been placed in the park. The minister should give a more satisfactory answer to the question asked by the hon. member for Qu'Appelle, as to the cost of patrolling these areas in the interest of fire and game protection, as compared with the benefits derived from the area.

As has been pointed out, we are proposing to give away about one-fifth of the area of this national park, which is one of the great natural assets of the province of Saskatchewan. Hon. members who have visited this natural park will agree that it is a very great tourist attraction, and I think we would be ill-advised to give away this land, even though the minister says it is not of any great value as part of the park area. It has been pointed out, however, that there is a sizeable stand of timber on this land, so the minister should give us more information as to the value of that timber and the cost of patrolling it before we are asked to pass this bill.

Mr. CRERAR: As I have said, I do not think the value of the timber is the consideration in point at all. The fact of the matter is that the parks officials, whose business it is to advise on these matters, have said that this area is not necessary for the purposes of Prince Albert national park. They have given me that advice. I do not think any member of the government of Saskatchewan, or any person having an eye on this timber, influenced the park officials in coming to that decision. In carrying out their duty and doing their job they make a recommendation to the government that this area can be reduced. This reduction will effect some saving in administration and will not detract at all from the park as such.

I point out once more than there will still remain 1,495 square miles of lakes, streams and timber for park purposes, which would appear to be all that is necessary. If this land goes back to the province, it then becomes the business of the province to administer it. I do not think it is the affair of the federal government or of the parks branch to attach any conditions as to how the province shall administer its resources. That is their business; it is not our business at all. For instance, if we attempted to interfere in Quebec or Nova Scotia or any other province as to how they handled their natural resources, we would be subjected to criticism, and properly so. The same thing holds true as far as Saskatchewan is concerned. There is the added advantage to the federal government that in this rearrangement we get an additional area for an Indian reserve, which we need rather badly. I think the Saskatchewan government have been generous in that respect. They could have said, "No, we do not want to give you back any land; we want to keep it all."

Mr. NICHOLSON: You are getting back eleven square miles, I understand.

Mr. CRERAR: Yes, and getting it back without charge.

Mr. HOMUTH: Well, Mr. Chairman, the 300 square miles must be in terrible shape if we are to get back eleven square miles as an even trade. In spite of the assistance of the Minister of National Defence for Naval Services, I still think we ought to be given quite a good deal more information on this matter. It seems to me this bill could very well stand over for another year. Let us have the timber cruised; let us know what is the value of it. Let us understand the whole situation and see what saving we may make by giving away this land. At a time like this, when we are concerned with much more important matters, a controversial bill of this kind might be very well left over until another session, in order that the minister may know more about the parks which he is administering.

Mr. DIEFENBAKER: I have listened with interest to the explanation given by the minister, particularly in reference to the circumstances under which the park was set up. I remember those circumstances very well.

When the Prime Minister was first elected in Prince Albert, in 1926, he pointed out the needs of northern Saskatchewan with regard to parks, and this park was duly constituted. The minister will remember that at that time the provincial government had nothing whatever to do with the natural resources of Saskatchewan.

Mr. GARDINER: They did in 1930, though, and that was when the park was set up.

Mr. CRERAR: The park was established in 1927, opened in 1929, and the resources of Saskatchewan were returned to that province some time in 1930.

Mr. GARDINER: The bill was 1930.

Mr. ROWE: You are wrong again, both ministers have gone wrong, now.

Mr. DIEFENBAKER: I am only trying to get information, because the people in northern Saskatchewan want to know why it is that the national park set up by the government now in power, and under the leadership of the Prime Minister, should find it necessary at this time to remove from the confines of the park the eastern portion of it. They want to know that, particularly in view of the fact that the merchantable timber is to a great degree reduced in northern Saskatchewan.

The minister has stated that no lumbering is done in this vicinity. But he must know that to-day on the northern side of the park, in the Montreal lake area, considerable lumbering is being done, and that within the confines of the eastern portion of the park that timber would be available for those who might wish to exploit it. I can understand very well his desire to get eleven square miles for an Indian reserve. No one would have any objection to the removal of eleven square miles from this park for that purpose. Our objection, however, is this: At a time when the timber resources of Saskatchewan are being more and more depleted, what justification is there, in order to save the cost of the services of two timber men for a matter of four or five months in a year to remove one-fifth from a national park which has been set up and which for many years has functioned so well? Would the minister be willing to table recommendations from the government officials? If we had those recommendations, we would be able to see whether or not the committee ought favourably to consider the bill before it.

Mr. CRERAR: It is not the practice to table reports from one officer in a department to another officer in a department.

Mr. HANSON (York-Sunbury): I object to that statement. If the minister makes reference to a public document in this matter, that document must be tabled.

[Mr. Diefenbaker.]

Mr. CRERAR: I did not say there was a public document.

Mr. HANSON (York-Sunbury): It is a public document. The principle is wrong, and the minister should not take refuge in refusal.

Mr. CRERAR: I do not think it is a public document.

Mr. ROWE: What is it, then?

Mr. CRERAR: As a matter of fact, the officials of the parks branch came to my office and discussed the matter with me. We had maps; they gave me their reasons, and this bill is the result.

Mr. ROWE: Give us the reasons.

Mr. CRERAR: I have given them.

Mr. ROWE: The minister has not given any yet.

Mr. CRERAR: It will mean some reduction in the patrolling of the area.

Mr. HANSON (York-Sunbury): A saving of two fire rangers.

Mr. CRERAR: I think my hon. friends opposite are under a misapprehension. It is not the business or the function of the parks branch to be disposing of timber limits, or to be supervising timber limits, and all that sort of thing. The national parks were set up as national playgrounds. Does anyone say that because there may be a few million feet of timber in this area—and I do not know how much there is—that that is necessary for a national playground. Not at all. What is the sensible thing to do? Is it sensible to let the timber rot and fall down?

Mr. HOMUTH: No; that is ridiculous.

Mr. CRERAR: The hon. member for Waterloo South makes frequent interruptions; he may have his say, after I have finished. It is not the purpose of the parks administration to do that sort of thing, and my hon. friends know it as well as I do. Some person, however, has carried a story to them to the effect that there may be a bit of jobbery behind this transaction, and they are exercising their right—and it is unquestionably their right—

Mr. ROWE: That is only suspicion on the minister's part.

Mr. CRERAR: —in the manner in which they choose to exercise it. I repeat that it was never intended that the national parks should deal in timber. They were never created for that purpose. On the contrary they were created as playgrounds. Incidentally there is this timber in this park. It is a swampy area, with timber on it. So the

sensible thing to do is to give it back to Saskatchewan, to administer as part of the public domain in that province. I see nothing strange about that. I do not see anything wrong in it.

Mr. ROWE: What is meant by this explanatory note:

On the other hand such lands have a distinct value for development and settlement.

Mr. CRERAR: Probably they have.

Mr. ROWE: In marsh land, does the minister mean? Who wants to settle in muskeg?

Mr. CRERAR: As I explained when the bill was in the resolution stage part of the land on the southern boundary is fairly good agricultural land, and probably will be settled.

Mr. ROWE: How much timber is on it?

Mr. CRERAR: There is very little on that. I cannot just say how much is on this other area. But I repeat, we can leave the timber there. It is not needed now for park purposes, and never will be. Is it not sensible to give it back to the province and let them deal with it, the same as they deal with any other part of the public domain?

Mr. HAZEN: The minister says that these parks are created as playgrounds; surely they are created for more than that. Are they not created as a place where game can be preserved and conserved? Are they not, in some instances, provided as protections for watersheds? Are there not a number of other reasons for their establishment? To say that they are created merely for purposes of playgrounds is surely limiting their use to an extent to which it was never intended they should be limited. Even for playground purposes, it is important that we have these vast stands of timber, if we can. They add much to the attractions of any park. How much money has been spent by the dominion government in developing this area since it was declared a park?

Mr. CRERAR: I have not the information at hand as to how much money has been spent in the development of this or any other park.

Mr. HANSON (York-Sunbury): What about the road through the Montreal lake area?

Mr. CRERAR: That information will be available to the committee when the estimates of the department are before it.

Mr. HANSON (York-Sunbury): This is where it should be available.

Mr. CRERAR: I do not think so.

Mr. HANSON (York-Sunbury): Well, I think so.

Mr. CRERAR: I do not think it is germane to a discussion of this bill to have all the details of expenditures in connection with the park. I am advised by my officials that there will be a decrease in the cost of fire ranging and fire fighting in that particular area. In these times, when there is difficulty in obtaining money, I believe this is a sensible procedure to take.

Mr. ROSS (St. Paul's): This sort of thing has been happening in northern Ontario. One of the finest provincial parks is that of the Timagami timber reserve. Some people know about a fine timber stand, and decide they want that timber. Before the timber is taken off, they give the government the excuse that the timber is ripe. I do not know when timber is ripe, but I do know that about 1900 I visited Timagami, as a boy. Then about two years ago I went through the same country and saw the same forest. I saw the forest, and the reforesting that had been done by nature. It was said that the timber was ripe, and it was cut to a distance of so many hundred yards back from the lake, ruining the tourist resort. The excuse was given that the timber was ripe. As I say, I went back into other parts of the country and it looked just the same to me as it had before. You could see the seedlings in the ground; you could see the timber growing up; you could see how nature was taking her every day course; you could see where the trees had fallen down and rotted, and where others were coming in. But where there had been forest fires, you could find nothing but birch and poplar coming up. That is what we may expect.

As a member from Ontario, I am speaking for the people of Saskatchewan. To my mind, an effort is being made here to be allowed to cut good timber. We have our national park at the present time and the timber is safe. Let us look at this matter from another point of view. We have the conservation of water; we have the organization known as Ducks Unlimited who, as lovers of wild life, have gone into the north country and reclaimed thousands of acres for the breeding of ducks. We have this place here which is preserved at the present time and which does not cost us anything to speak of, as far as the federal government is concerned. It is providing conservation of trees, conservation of water, and conservation of game for tourists. The people of Saskatchewan really do not want this bill. It is a crime that we should try to put this into the hands of someone who will cut all the timber and just make so much more poor land in that country. Why is summer-fallow

being attempted, because of the small amount of care that is required? The minister has not told us anything yet which will justify his position in connection with this bill.

Mr. ROSS (Souris): It seems to me that we are not very consistent in this matter. On the one hand, we have the Department of Agriculture spending millions of dollars upon prairie farm rehabilitation, chiefly in Saskachewan, upon reforestation work, the seeding of grasses, soil, water conservation and such matters; and, on the other hand, we have another department giving away the very asset we are trying to create in other parts of the province. The minister has said that the province has not asked for this, that the only idea in giving it away is to save the cost of administration. That being the situation, surely he can tell us at this time what the saving will be. As a previous speaker has said, the minister has not said anything which would convince this committee that this is good business.

Mr. FRASER (Peterborough West): On March 20, as reported on page 1741 of *Hansard*, I asked the minister to get the figures with regard to the administration costs of the park and what would be saved. The minister then replied:

> I think I would be in a position to give the hon. gentleman the information he has requested with regard to savings when the estimates of the parks branch are before the committee at a later stage.

That is the stage we are in at the present time.

Mr. DOUGLAS (Weyburn): To every request for information the minister's reply has been that this step is taken upon the advice of the officials of the parks branch. Like most hon. members, I am not familiar with all the facts; I do not know the real value of this land or what effect this move will have. We have to judge the case upon its merits. No group of officials, even the parks branch officials, are infallible. As a matter of fact, there must have been parks branch officials who at one time thought this was valuable land or they would not have had it included in this national park. There must have been some parks branch officials who thought this land was sufficiently good as a play ground to warrant its being brought within the boundaries of the park. Then apparently another group of officials, or perhaps the same group, now advise the minister that it is no longer wise to continue to include this land within the boundaries of the park. They may be right, but I do not think the minister can expect this committee to take so serious a step merely upon the advice of officials who may have changed their opinion as to the advisability of keeping this land within the boundaries of the park. It seems to me the whole thing is summed up in the following paragraph in the explanatory notes:

> The cost of patrolling these areas in the interests of fire and game protection has been out of proportion to the value of the land for park purposes;

If the value of the land is such that it is not worth patrolling, and the minister can demonstrate that, then I am quite prepared to support the bill. But to do that I must know the value of the land and what it has cost to patrol it. I must know what it will cost to keep this land within the boundaries of the park. If it is too much, then the minister is justified in taking it out. This, however, is a serious step unless the cost is fairly high. As the minister has said, a road runs through this land to Montreal lake, and this park has become one of the beauty spots of western Canada. We have not had the cost of patrolling this park, nor have we had any indication as to the value of this piece of land. We should know whether it is worth the expense of keeping it within the boundaries of the park, and until we have further information I cannot see how the minister can ask us to support this bill.

Mr. CRERAR: The cost of patrolling this land against fire probably would not be more than the expense associated with two or three fire rangers, and I cannot at the moment give the details. If fire broke out, however, we would be at the expense of endeavouring to put out the fire and control it. In these days of pressure for economy in administration, I imagine that this is one of the considerations which induced the parks branch officials to bring the matter to my attention. We went over the matter in detail, and I was satisfied that while the area had some timber of value, in a considerable measure it was swampy land not suitable for park purposes. I cannot imagine a tourist or a visitor to the park going out into the woods on the edge of a swamp where the black flies and mosquitoes are in myriads. It was thought this land was not necessary for park purposes and it was believed we could save a few thousand dollars by allowing it to revert to the province.

Some hon. members have referred to the timber and have asked why we do not keep control of the timber and realize on it. That is not the purpose for which these parks were created. It is true that when trees become overripe in some of the parks, we sell some cordwood, but that is because the

land is required for park purposes. Here we do not require it for park purposes, and when the National Parks Act was passed, it was not the intention that the national parks would be developed for the purpose of obtaining a profit from the timber resources in the parks. What has been done here is a sensible thing. We have dropped a part of the park which is not needed for park purposes. We are letting this land go back to the province for administration, thereby saving the federal government something in cost of administration.

Mr. ROWE: What is the cost for the whole park?

Mr. CRERAR: There was one other point raised. My hon. friend referred to the fact that when the area was first set up for park purposes, the officials of the branch must have considered that this particular park was necessary for park purposes. When it was decided to establish a park area there, full surveys had not been made in detail of the area which was included within the boundaries of the park. It was known in a general way that it had lakes—beautiful lakes—forests, little valleys, and streams, and enough was taken in to ensure that a sufficiently large area would be secured for park purposes. In the passing of time it was found that all this was not necessary, and I think the sensible thing to do is to exclude a portion of it. As I have pointed out several times, if we were to take it as a squared area, it would be almost forty miles square, which is a considerable size for a park.

Mr. ROWE: The hon. member for Souris has said, and I think it is very true, that we have had the spectacle of inconsistency demonstrated to-night more clearly than ever before with reference to the administration of a plan in the great province of Saskatchewan. Millions of dollars have been spent in that province to dig water-holes for supporters of the government, to reforest areas which have been very dry—

Mr. GARDINER: Started by the government when you were in it.

Mr. ROWE: Yes, and played with for political purposes by the government when you were in it. We have seen water-holes dug here and there, up and down throughout that province. To-night it is proposed to set aside an area involving enough ground, after it is summer-fallowed by this new, spectacular, fantastic policy of the Minister of Agriculture, to cost the Dominion of Canada $962,000 in order to keep it out of wheat. It is being taken out of the park in order to put it into wheat or some other development. If you do not wish it to be summer-fallowed, if you put it in grass, as the Minister of Agriculture has curtly told us, to help to retain moisture and prevent the soil from being blown away in certain districts where there is overcropping, it will take over $480,000 to pay $2 an acre on it. Here we have an area with God-given facilities to retain moisture, including muskeg, rivers and lakes, which are all too few in that great province, and tall trees which, no doubt, timber exploiters are looking at with anxious acquisitiveness. Yet, on the one hand, the Minister of Natural Resources presumes to tell us that his department is going to save the expense of three or four timber cruisers in this area, for the benefit of the hard-pressed treasury of Canada, while on the other hand, the Minister of Agriculture says, "Hand it over to me, and I will give them $4 an acre to summer-fallow it or $2 an acre to grow grass on it". That is how this muskeg is to lend itself to development.

I agree with hon. members on this side that we have heard very little sound reason why this section of the park should be taken back. Even in Ontario, where perhaps we are more in need of land, it would be wise policy for any government to retain an area such as that to conserve moisture through its trees, and its lakes and streams, which without doubt would dry up with such a development as the minister suggests. It seems to me a penny-wise and pound-foolish policy to take part of that great province of Saskatchewan, which needs muskeg, which has not too many trees, or lakes, or streams, and hand back 240,000 acres which are ideally adapted to retain moisture. I suggest that the minister reconsider this recommendation of his parks branch, and I advise him to be very careful in approving any such recommendation from them.

I recall the time when this park was inaugurated, and I also remember some reasons for its inauguration. Back in 1926 the Prime Minister, who should be here to-night to tell us what he thinks about it, informed us that a great playground was to be established in the province; it was to have an area of 1,500 square miles. As one hon. member has mentioned to-night, if it is too large now it must certainly have been too large then. The Prime Minister, however, during his first election campaign in that riding, promised the people ample room for a playground. I do not suppose he had in mind, when he suggested that he would establish a 1,500-mile square playground, that people would use the entire area as a playground. He must have had in mind the conservation of moisture and the preservation of the

timber, because 1,500 square miles is, I submit, too large an area for a park; I do not believe we need in any province an area of that size except for the purpose of conserving moisture, preserving game, and effecting the other objects for which we maintain trees and muskeg. I earnestly and sincerely urge the minister to reconsider this suggestion of handing the land back to the province for development.

When we have so many acres which it is proposed to summer-fallow or to utilize for the development of moisture, why should we dry up what moisture there is in an area which is naturally adapted for the purpose of conserving moisture?

Mr. CRERAR: I was much interested in the eloquent plea of the hon. member for Dufferin-Simcoe. Does my hon. friend mean to say that to his own knowledge there is behind this move to reduce the area of the park any exploitation scheme so that somebody may get timber cheaply? Has any hon. member on the other side any information of that kind? Has the hon. member for Lake Centre any such information? It has been hinted.

Mr. ROWE: That is beside the issue.

Mr. CRERAR: It is not. It has been hinted at by at least half a dozen hon. members who have spoken in this discussion. If any hon. member of the opposition will assert that behind this thing, to his knowledge, is an effort to exploit this timber in the interest of any individual or group of individuals, this bill will be withdrawn immediately.

Mr. ROWE: I would suggest that the minister's observations are a little beside the point, whether anyone has made insinuations, or not. The issue is, whether the area is better left as it is, or is to be allowed to be dried up for the sake of a summer-fallowing policy? Has it not some value for the preservation of game, for the conservation of moisture, for its scenic beauty? Surely there is some other question involved than an exploitation by friends of the government. I do not for a moment charge that the minister or any other hon. member opposite has friends who want to get some trees for nothing. I have no knowledge on the matter. That is only a side issue—perhaps, a side danger. No doubt the government of Saskatchewan is as capable as, although not more capable than, the government of any other province to administer its natural resources.

This issue is one of national concern. The federal treasury has been asked to provide thirty-five to fifty million dollars to conserve moisture, to diversify production, almost to change the landscape, in the province of Saskatchewan. Year after year we in this house have voted large sums from the dominion treasury, and we are required to vote more, hard up as we are, trying to save every nickel for the common purpose of winning the war; we have spent millions of dollars—and I do not say this jocularly—to dig water holes in Saskatchewan, to dig canals, to divert streams, to establish lakes and bushes, to encourage the growth of trees, and now we are asked to save the treasury of Canada the cost of five or six timber cruisers so that we can cut down what nature has planted better than this government could.

Mr. CRERAR: I take it, then, that my hon. friends opposite can produce no evidence that there is any proposal of exploitation—

Mr. ROWE: I am not speaking for them all. That is not our responsibility.

Mr. CRERAR: May I say it is not the responsibility of the hon. member to throw out the suspicion that such is the situation, which is what he did when he spoke a moment ago.

Mr. ROWE: I did not throw out the suspicion that such is the situation, and I rise to a point of order.

Mr. CRERAR: Let my hon. friend keep his seat; I did not interrupt him.

Mr. ROWE: The minister said that I threw out a suspicion, and I rise to a point of order.

Mr. CRERAR: The suggestion has been made to-night that behind this was the idea of exploitation.

Mr. ROWE: I made no such suggestion.

Mr. CRERAR: Surely the hon. member did suggest exploitation. But let that pass.

Mr. ROWE: Exploitation of natural resources. The government of the country is exploiting them in this type of policy.

Mr. CRERAR: Exploiting by whom?

Mr. ROWE: By your government.

Mr. CRERAR: Let that pass. My hon. friend tries to make the argument that it is necessary for the federal government to maintain this area in the park for the conservation of moisture.

Mr. ROWE: The minister cannot put words into my mouth. I did not say it was necessary; I said it was conducive to the preservation of moisture and would help.

Mr. CRERAR: Then I will agree with my hon. friend and say it is conducive. Does he mean to tell me for a moment that if a block of 350 square miles is taken out of the park, the rain will not fall on that block in the same way—

Mr. ROWE: Surely the minister knows better than that.

Mr. CRERAR: —and that the conditions making for moisture will not be there?

Mr. ROWE: The minister knows better than that.

Mr. CRERAR: Then why does my hon. friend suggest that we should not take it out because, if we do so, it will tend to lessen moisture.

Mr. ROWE: So it will. The minister knows that.

Mr. CRERAR: I cannot see the force of that argument at all. The hon. member for Dufferin-Simcoe speaks about expenditures under the Prairie Farm Rehabilitation Act. Those expenditures have taken place several hundred miles, in the main, from where the park is located.

Mr. ROWE: We did not want another dry area established in the same province.

Mr. CRERAR: Well, my hon. friend—it is not his fault—is not familiar with this particular area.

Mr. ROWE: The minister is not very familiar with it himself.

Mr. CRERAR: I am fairly familiar with it. I may tell the committee that I have flown by aeroplane over the greater part of northern Manitoba and Saskatchewan.

Mr. ROWE: I, too, have flown over a lot of land with which I am not familiar.

Mr. CRERAR: I do not think there is force in the argument that we should keep this particular area within the park boundaries in order that we might the better protect the water supply.

Mr. ROWE: I do not wish to hold up the committee, but I am more surprised than ever that the minister should rise in his place to-night and say that he sees no relationship between the conservation of moisture in Canada and the preservation of muskeg and timber stands. I would ask him to pause and reflect upon what he has said. Why, every hon. member knows that throughout the dominion we have been studying policies whereby we can develop areas. We have been studying the conservation of moisture and the reforestation of various areas.

Twenty years ago or more, as the member of a county council, I was interested in this very question. We started reforestation and to-day we can see the results. Experiments were carried out on patches of twenty, thirty, fifty and a hundred acres, and there were areas in some districts covering from eight to ten square miles. Here we have an area that is twenty square miles. There is not an hon. member who does not know that, especially in the old province of Ontario, there has been a constant study of schemes that would cost millions for the purpose of damming water so as to avoid floods down through the Belleville district and the Guelph and Galt districts. Reforestation has been taken up more or less as a provincial policy, and every county council in Ontario has interested itself in the subject.

In Saskatchewan, we are told, the proposal under consideration will not affect the area in question. Millions are being spent to conserve moisture in seeding down, because after all, next to trees, there is nothing that will preserve moisture more than grass, and next to muskeg there is nothing that will better serve that purpose than trees. All you have to do is to ride along the highways when the snow disappears and you will see trees, large and small, if they are thick enough, with snow still under them. If one flies over northern Ontario one will see snow up there a month after it has disappeared in the open. Surely no one knows better than the Minister of Agriculture that trees, lakes and rivers are of enormous advantage. I know that what the minister has said is to some extent true, that the rain will fall just the same if these few trees are cut down. Surely he does not think, however, that they can be taken over to the other part of Saskatchewan. I would suggest to the minister that he read that book prepared by an able industrialist, Mr. Aubrey Davis, and endorsed by every forest ranger, and he will change his mind. He will agree that when trees are cut down, streams and springs dry up.

I can show the minister areas in my own county to illustrate the point I am making. I have one area particularly in mind, and there were a number of small areas of two or three acres. Twenty-five years ago, I understand, there were five or six bubbling springs on that area and the trees were cut off. In later years, when the springs dried up, the agricultural society reforested the area and recently three of the springs have appeared again.

This country needs a national reforestation policy. Years ago I said, both in this house and elsewhere, that if we went on exploiting we would some day regret it—and I do not say that as a reflection on the friends of the

minister. I am speaking of exploitation generally such as we have had through the years, because we have been a nation of exploiters.

We have robbed the forests; we have cleared the ground, rolled back the map until the ground has almost blown away beneath our feet. I am amazed that the minister should suggest that, in a province as dry as Saskatchewan, an area involving almost a quarter of a million acres with all the moisture, and the trees necessary to retain that moisture, is not a permanent asset of that province.

Mr. NICHOLSON: We are spending a great deal of time on this bill. When the resolution was before the committee I asked the minister how much the saving would be. He did not have the information that night, but my understanding was that he was to have it when the bill came before us. I think we should have that information before this bill is passed. As I recall, the minister said it would mean saving the services of two rangers during the fire-fighting season, which is usually three or four months. The minister should have some information as to the amount spent on fire fighting during the last five or six years. Ten years is a very short time in the life of a park. This park was set aside just a few years ago; I think the first proposal was made in 1926, and the boundaries were defined in 1928. Since then we have had ten years of depression, and the federal government were cautious about appropriations for the development of playgrounds. The minister said this area has not been found necessary for the park, but we should keep in mind the needs of the future, and I can think of no finer asset to this park than a large area of good timber. While there may be a lack of roads through this part of the park, I hope that hon. members sitting here to-night will live long enough to see scenic drives through this Prince Albert national park.

I suggest that the minister let this matter stand until he can give us more information as to the saving to be effected. The last clause of the third paragraph of the explanatory notes reads:

> . . . such lands have a distinct value for development and settlement.

I agree with the hon. member for Dufferin-Simcoe as to the need for preservation of forests. For the last ten years we have seen our governments, federal and provincial, and of both parties, setting aside for settlement lands which should have been preserved for park or forest. I know there is a conflict of opinion in the administrative work. Those particularly concerned about forestry have objected to these areas being set aside one after another for land settlement when in their opinion those areas were much better suited for forests. I have seen Conservative and Liberal governments making appropriations year after year for the settlement of lands, in some instances heavily timbered, to produce more wheat. In 1932 I think it was, when wheat prices were at the lowest levels ever known in the last four hundred years, we still found federal and provincial governments providing money to bring more of these bush lands under cultivation. The federal government has had some responsibility for encouraging the settlement of such lands.

The minister advances, as a reason for taking this area out of the national park, the suggestion that it might have some value for agriculture. With the largest supply of wheat ever on hand in Canada, this government should not be giving away land to be devoted to the production of more wheat and cereals. This park is one of the greatest assets in Saskatchewan. My information is that it is costing very little to retain this area in the park. It should be retained until the minister gives us much more detailed information as to what it is costing the federal treasury. I would ask the minister to consent to have the committee rise and report progress, and to give us further information at a later date.

Mr. CRERAR: As I have stated at least half a dozen times, the direct saving will be the expense of two or three fire wardens. The hon. member says I should bring detailed estimates of the savings. It is impossible to do that; I do not know, no one in the parks branch knows, what the cost of fighting fires in this area may be this year.

Mr. NICHOLSON: But the minister should be able to tell us what it has been in the last five years.

Mr. CRERAR: If we retain this area in the park, we have to build trails and roads through it so that the fire rangers can reach any fire that might break out. It should be protected against fire by the provincial government which has the equipment to do it. They have their fire-fighting services and can do it more effectively than we can.

Mr. NICHOLSON: We have more money than they have.

Mr. CRERAR: I do not think anything would be gained by acting on the suggestion of the hon. member.

Mr. HOMUTH: To my mind the minister's arguments are getting weaker and weaker as the hours go by. First he talks about the saving in fire rangers. The other day he said it would open land for settlement. If this timber is of the right sort, and judging

from this pamphlet put out by the department there is good timber there, there will be men going in to cut the timber; there will be slash and undergrowth, and the fire danger will be greater than it is to-day. If the land is opened for settlement, the fire danger will be greater. The minister says, "we do not know what the cost of fire protection will be in coming years." They did not know it ten years ago when they took it over. We do not know what our wheat bill is going to be for western Canada next year. Ministers have said they will do no more prophesying. This pamphlet shows the stand of timber there, the animals and wild life and flowers, all those things that we have wasted in the older provinces, the very thing that the hon. member for Dufferin-Simcoe has said is scarce enough in Saskatchewan.

Unless the minister is prepared to give some better reason and more detailed information as to why his officials recommend this thing—I know ministers who have had different courses recommended to them by their officials in the past not so long ago and who did not follow those recommendations—I think I am justified in moving that the committee rise and report progress.

Mr. CARDIFF: Will the minister assure the committee that if this timber land is given to the province, it will remain as it is and not be exploited by any private enterprise?

Mr. CRERAR: I am afraid I could not give any such assurance. If the Minister of Mines and Resources of the federal government attempted to tell any provincial government how they should administer their resources and to whom they should give licences to cut timber, I am afraid we should be in serious difficulty. I am sure no one would object more than the hon. member who has just spoken.

Mr. JACKMAN: There was one other point which at first blush I did not believe worthy of the consideration of this committee, but I have since learned that this is the only national park owned by the federal government in Saskatchewan. I would recall to the minister that within the last year, if my memory serves me aright, the government of the United States has added to a number of its national parks. In the first place a large area was added to a park at Fort Bragg in the Carolinas, which, I believe, is the largest artillery encampment in the world. That area has been added in order to make available land which will be safe for target practice. Another large park recently acquired by the United States government is in connection with the Hearst estate in California, which embraces a very large area and which is now used for military purposes. If this is the only national park in Saskatchewan which could be used for military purposes, it might be advisable for the Department of Mines and Resources to consult with the Department of National Defence before any action is taken in this regard.

Mr. MACDONALD (Kingston City): I should like to say one word in connection with a matter raised earlier in the evening. At another stage of this discussion I suggested that this land originally belonged to the province and that it was only fair it should revert to the province. To support that view, I have before me chapter 41 of the statutes of 1930, which is the Saskatchewan Natural Resources Act. In the schedule to that act there is set forth the memorandum of agreement entered into by the Dominion of Canada and the province of Saskatchewan with regard to the natural resources of that province, in which agreement I find these words:

> . . . whereas the government of Canada desires that the province should be placed in a position of equality with the other provinces of confederation with respect to the administration and control of its natural resources as from its entry into confederation in 1905 . . .

Then I omit some lines which are not relevant, and the agreement goes on:

> In order that the province may be in the same position as the original provinces of confederation are in virtue of section one hundred and nine of the British North America Act, 1867, the interest of the crown in all crown lands, mines, minerals (precious and base) and royalties derived therefrom within the province . . . shall . . . belong to the province . . . and be administered by the province for the purposes thereof . . .

Later, it speaks of national parks, and provides that the Prince Albert national park:

> . . . shall continue to be vested in and administered by the government of Canada as a national park, but in the event of the parliament of Canada at any time declaring that the said land or any part thereof is no longer required for park purposes, the lands, mines, minerals (precious and base) and the royalties incident thereto, specified in any such declaration, shall forthwith upon the making thereof belong to the province . . .

That makes it quite clear that the intention of this agreement was to put the province of Saskatchewan back to the year 1905 so far as the administration of these natural resources was concerned. Therefore I think it is absolutely correct to say that this land belonged to the province by virtue of this agreement, which was ratified both by this parliament and by the legislature of Saskatchewan. The intent was to put the province of Saskatchewan back to 1905 and to treat these natural resources as though they had belonged to Saskatchewan from that year,

when the province was constituted. I think that is abundantly clear, and this statute, with its particular reference to national parks, bears out that obvious intention.

There is one other point to which I should like to refer. From this discussion the impression might be gathered that it is an abnormal thing to change the boundaries of a park. I do not know what happens elsewhere, but I know that in Nova Scotia, when I had something to do with public affairs there, we took some of our own crown land, bought some other land and gave it all to the dominion for national park purposes. That land was accepted by this government. After a year or two it was found that some of the land had better be taken from the park. I believe on one section there were some fifteen or twenty families, and it was the opinion of the park authorities that this section had better be left out. The boundaries were changed and that land was given back to the province. Then I find in the statutes of 1938 that no less than five separate parcels of land were withdrawn from the Prince Edward Island national park and vested in the crown in the right of the province.

Mr. HAZEN: What was the acreage of those parcels?

Mr. MACDONALD (Kingston City): I am not sure of the acreage, nor am I sure of the acreage of the Prince Edward Island national park, except that it is quite a small park. I am informed that it has a length of twenty-seven miles, and that the width varies. Here were five separate parcels of land withdrawn from that park. I have already instanced the case of the Nova Scotia park, and I understand that in connection with national parks it is not uncommon to find after a time that certain land formerly included should be excluded, and perhaps, in some instances, certain other land taken in. As I understand it, the boundaries of parks are never like the laws of the Medes and Persians, inexorable and unchangeable for all time.

Mr. HANSON (York-Sunbury): Where does that agreement lead the minister? It simply leads to this, that in a few isolated instances and with regard to comparatively small areas the boundaries of parks have been changed. But here is an area of some forty square miles being taken right out of a great national park which has been set up for only ten years. When the park was constituted and the boundaries defined, there must have been a long term view taken as to what was going to happen over a period of, say fifty years.

The point is that the minister has not yet made a convincing statement as to why this is being done, except on the theory that it will save the wages of two or three fire wardens. We ought to know exactly what is the value of the asset. This land never was the property of the province of Saskatchewan, notwithstanding the declaratory statute to which my hon. friend has referred; but if effect is given to this bill it will become vested in the province, and the natural resources go back as of 1905. That is all the agreement means. A legal position was created there, and the dominion government gave the province of Saskatchewan a grant, after arbitration, in consideration of the alienation of certain of these natural resources.

Mr. MACDONALD (Kingston City): We gave them back the natural resources.

Mr. HANSON (York-Sunbury): Yes, and placed them on an equality with the other provinces. We treated them very generously, too. They were given a large grant in 1905, in lieu of their natural resources, and they retain that to this day. In addition to that, parliament voted a sum of money in lieu of the resources which had been alienated by the dominion. All that is, of course, beside the point.

The minister has come to the house asking for the passage of a bill about which, if he will pardon my saying so, he knows very little. That is the truth of the matter, and I suggest he ought to withdraw it until he can give the committee the information it seeks.

Mr. MacNICOL: Where is the Indian reserve, in relation to the park?

Mr. CRERAR: It is off the southeast corner of the park.

Mr. MacNICOL: And from the park, as now constituted, I understand eleven square miles are to go back to the Indian reservation. Is that correct?

Mr. MACKENZIE (Vancover Centre): Carried.

Mr. HOMUTH: Oh, that is all right; but there is a certain principle about this that we are definitely against. I am definitely against it.

Mr. ROSS (Moose Jaw): Why?

Mr. HOMUTH: The Minister of National Defence for Naval Services tried to substantiate the stand he took. He was just as far wrong when he finished as he was when he started. Undoubtedly the clause which deals with giving back natural resources to Saskatchewan was put in the statute so that in the event of the federal government not wanting the land for park purposes it could give

it back only to Saskatchewan. That is plain. They could not give the natural resources away to a private individual. They could not give them to British Columbia or Alberta. They could be given back only to Saskatchewan, and the act would have been ridiculous had not that clause been in it.

I maintain our arguments are sound. Members from Saskatchewan may think what they like, but there is one broad principle which obtains in connection with this whole matter, and which should be observed. In my district we spend nearly $2,000,000 every year to stop the ravages of floods. The federal government contributes hundreds of thousands of dollars toward that scheme. Those contributions must be made because we have denuded the land; we have cut down the trees. Hence the large expenditures.

Mr. GARDINER: Why does the hon. member talk so much about our water-holes, then?

Mr. HOMUTH: I do not. I want to keep some of them for you, and I wish you had a lot more. I have been out in that country when it was very difficult to find a water-hole. The only reason I left was that there were so many Liberals out there.

I am definitely opposed to the passage of the bill. I do not wish, in a discussion of this kind, to move a vote of want of confidence, but in fairness to hon. members I say the minister should decide either to give us better reasons or allow the matter to stand until the war is over, when we will reorganize our whole economy. That will have to be done, when the men in the army come back, and when other people will be coming into the country. In fairness, I suggest that the minister ought to move that the committee rise, and that to-morrow he ought to ask leave to have the bill withdrawn from the order paper.

Mr. CASTLEDEN: I have one further objection to the passage of the bill. As I understand the situation, the land to be taken away from this national park runs along the east side of the reserve. The minister has said there is a road—I believe it is just a trail—which comes up from Montreal lake, and he has said that for a long time that area has been a preserve where natural animal and bird life has been permitted to multiply in peace. If this portion of the reserve is opened up and shooting is permitted, hunters will come up from the south, and the animals which in the past have been trusting and to a certain extent have become domesticated will be thrown open to the ravages of those hunters. In the interests of the natural life, which in the last few years has been depleted by drought, I suggest that this land ought not to be turned back to the province, making a condition possible whereby adequate protection might not be given those animals requiring it.

Some hon. MEMBERS: Carried.

Mr. HOMUTH: Mr. Chairman, I move:

That the committee rise, report progress and ask leave to sit again.

Mr. CRERAR: We cannot accept that motion, and the hon. member knows it very well. I would say in reply to the hon. member for Yorkton, who spoke a moment ago, that he is probably aware that about two years ago by legislation the government of Saskatchewan took definite steps toward setting aside by far the greater part of the northern part of the province—almost from the northern boundary of the park to the northern boundary of the province—for the express purpose to which the hon. member referred, namely the preservation of wild life and the restoration of fur-bearing animals. I think he need have no apprehension that the turning back to the province of a little less than 400 square miles will have any detrimental effect upon the wild life.

Mr. HANSON (York-Sunbury): It is apparent, I suggest, that the minister—

The CHAIRMAN: Order; there is a motion before the committee. It is moved by Mr. Homuth that the committee rise, report progress and ask leave to sit again. This motion is equivalent to a motion for the adjournment of the debate, and under standing order 38, subsection 2, it is not debatable. Is the committee ready for the question?

Some hon. MEMBERS: Question.

The CHAIRMAN: The question is on the motion to adjourn the debate by the committee rising and reporting progress. Is it the pleasure of the committee to adopt the motion? All in favour say "aye."

Some hon. MEMBERS: Aye.

The CHAIRMAN: In my opinion the "noes" have it. I declare the motion lost.

Mr. HANSON (York-Sunbury): I rise to a point of order. The question was not properly put. The chairman asked for the "ayes," and in the exuberance of the occasion he forgot to ask for the "noes." The only members who voted were those who voted "aye."

The CHAIRMAN: The point of order is badly taken—I was going to say "poorly taken", but I think "wrongly taken" would be

more appropriate. The question is on the motion that the committee rise. All those in favour say "aye".

Some hon. MEMBERS: Aye.

The CHAIRMAN: All those opposed say "no".

Some hon. MEMBERS: No.

The CHAIRMAN: I declare the motion lost. The question now is: Shall section 2 carry?

Mr. HANSON (York-Sunbury): The minister has shown that he has a certain amount of information with respect to this question, but the information asked for by the committee in the early part of the debate has not yet been given. I think we are entitled to it. I think we are entitled to know the value of the asset we are handing over to the province of Saskatchewan, and the minister has not attempted to give us that information. I think we are entitled to it, and he ought not, as a matter of public policy, to ask that this bill be passed without that information being placed before parliament.

The CHAIRMAN: The question is: Shall section 2 carry?

Mr. HOMUTH: Mr. Chairman, in view of the fact that after you declared the motion lost, a point of order was raised, I ask that a standing vote be taken.

The CHAIRMAN: The hon. member is out of order because five members should have risen in their places. Standing order 9 applies to procedure in committee as well as in the house. It is too late now. The motion was declared lost, and the question now is: Shall section 2 carry?

Mr. HOMUTH: I rise to a point of order.

The CHAIRMAN: State your point of order.

Mr. HOMUTH: I am going to stick to my point of order. My point of order is that immediately after you declared the motion lost, the leader of the opposition rose in his place before we could ask for a standing vote and raised a point of order.

The CHAIRMAN: There is no point of order.

Mr. HANSON (York-Sunbury): He has not stated it.

The CHAIRMAN: Shall section 2 carry?

Mr. DIEFENBAKER: Are we in this committee going to get the information to which we believe we are entitled? We have asked for certain information which it is not difficult for the minister to procure. First, we asked what the saving will be in consequence of the removal of this portion of the park and handing it over to the province; and, second, we asked the value of the asset which was being alienated to the province. Surely we are entitled to that information. The very fact we have been denied it for a period of an hour and a half or two hours is bound to raise a suggestion in our minds.

The information is available. The estimates show that there will be an increase rather than a decrease so far as the patrolling of these parks is concerned. If the recommendation which the minister has received from his officials is reasonable and cogent, if he will answer the questions we have asked, there is no reason why the information should be withheld. These questions were asked on March 20, and at that time the minister said he could not answer, but that the information would be available. Now, some ten days later when the matter comes up again and we ask for the same information, we are told we will get it when the estimates are before the committee. By that time one-fifth of Prince Albert national park will be gone. Surely the minister should give us this information.

The CHAIRMAN: I would remind the committee that it is within the discretion of a minister of the crown to give whatever information he desires. The question as to whether the information should be forthcoming lies in the hands of the committee which can vote for or against the particular matter before the committee. Standing order 40, subsection 2, refers to the repetition of a question ad nauseam. That is prohibited by the rule. The remedy lies in the hands of the committee by way of vote. The question now is: Shall section 2 carry?

Some hon. MEMBERS: No.

Mr. ROSS (Souris): Hon. members have asked for certain information which the minister has not given.

The CHAIRMAN: The minister has said that he will not give the information now.

Mr. HANSON (York-Sunbury): He never went that far.

The CHAIRMAN: He said he would give the information when the estimates of the park branch were under consideration.

Mr. HOMUTH: After the bill is passed.

Mr. ROSS (Souris): I have not received an answer to the question I asked. I asked the minister to give us approximately what the financial saving in administration would be when this portion of the park was eliminated.

I have not received an answer, and I protest against handing over our resources in this manner.

Mr. CRERAR: May I say to the hon. member for Souris that I have answered that question at least three times this evening.

Mr. ROSS (Souris): In dollars and cents?

Mr. CRERAR: Excuse me; I have the floor. The saving will be probably about two rangers, but I cannot say definitely.

Mr. ROWE: What would they cost?

Mr. CRERAR: I should think each around $1,500 a year. In addition to that, there are the expenses which may be incurred in connection with this particular area and which are impossible to estimate. If we retain the area and a fire breaks out, say next June, we may have to hire one hundred men to put out the fire. Who can give an estimate at this time as to what that will cost?

Mr. STIRLING: Nobody has asked for that.

Mr. CRERAR: If we remove this area from the park, we shall not have that expense. The hon. member for Souris is a reasonable man, and I think if he will reflect for a moment he will see the cogency of the point I make. I answered a question asked by the hon. member for Mackenzie (Mr. Nicholson) on the same point. It is impossible to give it down to a dollar and cent, notwithstanding the eloquence of the hon. member for Lake Centre (Mr. Diefenbaker). It is impossible to give anywhere near a dollar just what the saving in expense will be. I do not really think there is any more information on this point that I can give the committee.

Mr. ROWE: Surely the minister will say that we are entitled to more information when we are asked to give away a quarter of a million acres in order to avoid employing two fire rangers.

Mr. CRERAR: My hon. friend is not fair in making that statement.

Mr. ROWE: That is what the minister said.

Mr. CRERAR: It is not only the saving of the cost of fire ranging; there is the potential saving of fighting fires for years possibly. Why should the parks branch or the federal treasury be put to the expense of protecting whatever timber there may be against fire, and I do not know just how much there is. I do not think it is a large quantity. The information I have is that the country is mainly swampy in character. I am speaking now of the timber in the area which is to be taken out of the park. I have said at least three or four times that it is not part of the business of the national parks branch to operate timber licences and that sort of thing. Therefore we are handing this land back to the province whose business it is to administer the public domain in that regard. As I have said, of the other small areas, one goes into an Indian reserve and the other will be returned to the province. I presume some day they may open it up for settlement.

Mr. HOMUTH: I feel certain the minister is getting more mixed up all the time. If there is no timber there, and it is only swampy land, there is no fire hazard with which the department has to bother. If there is timber there, it is a fire hazard; it has been there all along, and if it is to be the policy of the government to take from the Canadian people this large area of timbered land and give it back to the province because there is a fire hazard, we might as well adopt the policy of giving all our timbered parks back to the provinces.

An hon. MEMBER: Why not?

Mr. HOMUTH: I still think the minister is unfair to this committee and unfair to the people of this country in not giving us more information.

The CHAIRMAN: It is not in order to say that an hon. member is "unfair".

Mr. HOMUTH: I never was in order!

The CHAIRMAN: The hon. member will withdraw this expression, which is unparliamentary.

Mr. HOMUTH: I withdraw.

Mr. MacNICOL: May I ask the minister a question? I listened with interest to his remarks about the probability of a fire in the area which is to be given away, and how much it would cost the federal government if we owned the land at the time of the fire. If there is an Indian reserve on one side of the park, and a large park remains, supposing a fire should occur of the magnitude which the minister leads us to believe might take place, are we to assume for a moment that the federal government would not send men to fight against the fire spreading into the Indian reservation or into the park area? Or would they leave both the park area and the Indian reserve to the mercies of the provincial government so far as fire-fighting is concerned?

Mr. CRERAR: Ordinarily we would protect the park area against fire. We would have to do that. But our risk in that regard is lessened, in my judgment and in the judgment of the park officers, if this area is taken out.

Mr. NICHOLSON: I regret we are spending so much time on this, but we are asking for information which the minister should supply before we give away one-fifth of one of the greatest assets of the tourist traffic in western Canada. On March 20 I asked the minister what saving would be effected by this measure, and the minister replied, "I have no definite figures that I can give my hon. friend as to the saving". But I for one took it for granted that when this measure came before us as a committee, we would have the information.

The minister says that possibly his department will save the services of two rangers. These rangers would be engaged, I understand, no longer than from May to August, when the fire hazard is at its greatest. Fire rangers in Saskatchewan do not receive high wages, and the wages of two rangers for this period would not be a large sum. The minister cannot tell us, he says, what will be the fire hazard next summer. But that applies to the part of the park which we are going to retain just as truly as it does to the one-fifth which we propose to give away. It would be a great mistake for this government, when funds are needed for so many purposes, to embark on the policy of giving away—

The CHAIRMAN: Order. I draw the attention of the hon. member to the fact that he is repeating the remarks he has already made, and under standing order 40, that is not permissible. It is my duty to draw to the hon. member's attention that the tedious repetition of the same arguments is prohibited by the rules of the house.

Mr. NICHOLSON: I would remind the committee that the minister promised that he would have certain information for us. He should give us that information before we are asked to pass this bill.

The CHAIRMAN: This request has already been made at least ten times in this debate to-night.

Mr. ROWE: And refused.

The CHAIRMAN: And the remarks of the hon. member are simply a repetition of what has already taken place.

Mr. COLDWELL: I believe it has always been the practice in this house that, if a minister is asked for information which is available, he will bring it down at some subsequent date. It is true that it has been asked for a number of times to-night, but it was asked for some days ago. I take it that hon. members who are inquiring into the subject to-night want this information, and I suggest that as a matter of courtesy it should be given when there is an insistent demand for it.

I do not think that the minister is deliberately unfair in not giving that information to-night, although his conduct was so characterized just now. I have, however, looked through the rules of this house, and I cannot find that "unfair" is a word which has ever been deemed unparliamentary under our rules. It seems to me that we are getting some very strange rulings from the chair.

The CHAIRMAN: A point of order is not before the chair now. Shall section 2 carry?

Mr. COLDWELL: May I use the term "unfair"?

The CHAIRMAN: No, because it would be an offence—

Mr. COLDWELL: Will the chairman tell me where I can find the word described as unparliamentary?

The CHAIRMAN: Any term which is offensive to an hon. member is unparliamentary.

Some hon. MEMBERS: Oh, oh.

The CHAIRMAN: Order.

Mr. MARTIN: For instance, if you call me a "Tory," that would be very offensive.

Mr. ROWE: To both sides.

The CHAIRMAN: I refer the hon. member to citations 295, 299 and 300 of Beauchesne's Parliamentary Rules and Forms. Citation 295 states:

> The House of Commons will insist upon all offensive words being withdrawn, and upon an ample apology being made which shall satisfy both the house and the member to whom offence has been given.

And so on. The expressions which are mentioned as having been ruled out of order are only examples of offensive language, and by no means an exhaustive list.

Mr. COLDWELL: May I ask, Mr. Chairman, what is the meaning of the word "unfair"?

The CHAIRMAN: Be that as it may, the hon. member is out of order, because the question has been dealt with and it is no longer before the committee.

Mr. COLDWELL: Surely, Mr. Chairman, an hon. member may rise at any time and discuss a point of order when it is under consideration.

The CHAIRMAN: There is no point of order before the chair.

Mr. COLDWELL: The point of order is this, that you ruled that the word "unfair" is unparliamentary.

The CHAIRMAN: Order, please. The hon. member cannot discuss a ruling of the chair except by an appeal to the house. Therefore the hon. member is out of order in discussing a ruling which has been given in the debate.

Some hon. MEMBERS: Oh, oh.

The CHAIRMAN: Order.

Mr. COLDWELL: I am not discussing a ruling of the chair. I am discussing a point of order.

The CHAIRMAN: Order, please. The point of order was decided long ago, and it is no longer open for discussion. There is no point of order before the chair. Shall section 2 carry?

Some hon. MEMBERS: No, no.

Section agreed to: yeas, 73; nays, 38.

Section 3 agreed to.

Bill reported.

EXPORT OF GAME

PROHIBITION OF SHIPMENTS OUT OF PROVINCE WITHOUT PROPER PROVINCIAL AUTHORIZATION

On the order for the second reading of Bill No. 16, to control the export of game—the Minister of Mines and Resources:

Mr. HANSON (York-Sunbury): Before this order is called, may I politely ask the minister if, on the third reading of the bill, he will provide the information which the committee asked for in the committee stage on Bill No. 20?

Mr. CRERAR: Yes. I was going to suggest that I will take the matter up again with the officials of the department to see if it is possible to give the information. I have not the slightest desire to withhold information from the committee.

Mr. HANSON (York-Sunbury): I did not think the minister had. He did not have the information with him, but he was not frank enough to tell us.

Hon. T. A. CRERAR (Minister of Mines and Resources) moved the second reading of Bill No. 16, to control the export of game.

Motion agreed to, bill read the second time, and the house went into committee thereon, Mr. Vien in the chair.

On section 1—Short title.

Mr. HANSON (York-Sunbury): The minister gave a rather inadequate explanation of this bill. I do not wish to waste the time of the committee unduly, but we were striving for a principle on the last occasion.

The CHAIRMAN: I suggest that on section 3—

Mr. HANSON (York-Sunbury): We can do it on the short title. I would ask the chairman to exercise some liberality.

The CHAIRMAN: The point I bring to the attention of the committee is simply that when we have a discussion on the proper section of the bill, it avoids repetition. There is no objection to a discussion on the short title or on the section with reference to definitions, but the principle to which the leader of the opposition refers comes under section 3. We are now on the short title.

Mr. HANSON (York-Sunbury): With all due respect, may I ask the minister, through you, Mr. Chairman, if under this section he will give a general explanation of the bill.

Mr. CRERAR: Yes. I am glad indeed to meet the request of the leader of the opposition, which is a reasonable one. As hon. members are aware, the control of game, the licensing of hunters, permits to trap, and everything relating to the taking of fur-bearing or other wild animals are wholly in the jurisdiction of the provinces within their respective boundaries. A province can take necessary steps to conserve fur-bearing animals within its own boundaries; that is, it can require a trapper to take out a licence to trap, to make a return of his take, and to give any other particulars that the provincial authorities may require of him. The same thing holds true with regard to the shooting of big game, in fact, the taking of any sort of wild animal for any purpose whatsoever.

A rather serious difficulty has, however, arisen in this respect. Frequently wild animals are illegally taken within a province. A province may declare a closed season for a period of time against the trapping or taking of beaver, for example; because, while beaver in large areas have almost disappeared, in our western provinces particularly, and also in the eastern provinces, there was a time in the history of this country when skins taken from beaver constituted a very large part of the total commerce in furs. A province may declare a closed season on beaver, and under those conditions it is illegal for any one to trap or take beaver within that province. As frequently happens, however, some trapper who does not take out a licence, illegally and against the laws of the province traps beaver within the province and has the pelts or skins

for sale. He cannot sell them within the province because, if he attempts to sell within the province, he must produce his licence or permit, and since none was issued to him he is in difficulties. But he will take these pelts or skins across the boundary into another province, and there is nothing in the laws of the second province that prohibits him from making a sale and putting the proceeds in his pocket. The purpose of this bill is to overcome that defect, and it is sought to overcome it by means of proclamation in provinces where it is necessary—and eight out of the nine provinces have asked for it. Then it will be necessary, before the trapper who has taken skins illegally in Saskatchewan, for instance, can sell them in Manitoba, to produce a licence or permit to take them in Saskatchewan. If he is unable to produce a licence or permit showing that he has taken them legally, he is in difficulties in the province in which he tries to sell them. The furs can be seized and he can be charged and fined or, if he fails to pay the fine, imprisoned. That, as simply as I can state it, is the purpose of the legislation.

Mr. STIRLING: Who issues that licence?

Mr. CRERAR: The province issues the licence where licences are being issued. If the trapper takes beaver illegally in Saskatchewan where there is a closed season, he knows that he cannot sell them there because he has to produce some government permit or licence, which he is unable to do. If, in that case, he takes these pelts across to Manitoba and attempts to sell them to a dealer there, the dealer would require him to produce a permit.

Mr. MacNICOL: What kind of a permit would he produce, provincial or federal?

Mr. CRERAR: It would be a provincial permit.

Mr. MacNICOL: So if he crosses the line he has to produce a permit, no matter where he goes?

Mr. CRERAR: Yes, before he can effect a sale he must produce evidence that he has taken the furs legally.

Mr. ROWE: In this matter I think the minister has given an excellent explanation, and I think this measure should pass. It deals with a difficulty that has arisen for many years and is something which will be of great assistance.

Mr. EMMERSON: The minister speaks of "game," and by section 2(b) "game" is defined as meaning the carcass or any part of the carcass, including the skin, of any wild animal, domestically raised fur-bearing animal, wild fowl or wild bird. I have heard no explanation whether this affects farmers who raise fur-bearing animals such as foxes. It appears that it would be an extra tax put on those farmers.

Mr. CRERAR: No, I think not. This would not apply unless there was a provincial law that applies.

Mr. HANSON (York-Sunbury): That is, if the provinces did not require a permit for raising fur-bearing animals domestically, then there would not have to be an export permit; is that what the minister is saying?

Mr. CRERAR: Take this illustration: Say the province of New Brunswick has a closed season on the taking of beaver. But some individual is operating a beaver farm. The provincial laws will control, either preventing him from making the sale or providing for sales. He can have a simple document showing that he is entitled to traffic in these skins, and if he took them outside the province—which he would not do, because if he were doing a legal business he would sell them within the province—

Mr. HANSON (York-Sunbury): The hon. member for Westmorland has in mind a case of the fur farmer in New Brunswick who raises foxes and exports them nearly altogether to the Montreal market. In that case will the fur farmer be obliged to take out an export licence in order to ship those furs to Montreal, and will there be an additional expense or tax on him? I think that is the point of the hon. member's question.

Mr. CRERAR: I think to-day he requires a licence to send them out of the province. In any event this legislation is intended to supplement the provincial legislation against illegal trafficking in furs. If a person who has a fox farm desires to sell his furs, he has the right to do it under the laws of the province, consequently this legislation would not touch him.

Mr. HANSON (York-Sunbury): In other words, it is confirmatory of provincial laws; if the provincial laws require it, he has to have an export licence; if there is no provincial law requiring him to have a licence to raise and sell, he need not have an export licence.

Mr. REID: I realize the desirability of such legislation as this, but will this enable one province to prosecute a man for not having a licence in another province?

Mr. CRERAR: As we proceed further with the bill it will be noted that penalties are provided for illegal practices. Reverting again

to the illustration I mentioned, if a trapper took beaver furs in Saskatchewan illegally and attempted to sell them in Manitoba, he could not produce his permit and under this legislation he could be charged and would be prosecuted.

Mr. HANSON (York-Sunbury): He would probably be prosecuted in both provinces.

Mr. CRUICKSHANK: In British Columbia we produce considerable furs. It is not quite clear to me whether if a man producing furs in British Columbia takes them, say to Saskatchewan, he has to get a licence to sell them there. Is that right? If he cannot sell them there and goes on to Manitoba, does he have to have another licence? I am speaking of domestically produced pelts.

Mr. CRERAR: No; the permits would not be issued for sale in any particular province. The permit is evidence that he has taken the animals legally.

Section agreed to.

On section 2—Definitions.

Mr. HANSON (York-Sunbury): Is it the intention to set up a series of game officers to enforce this legislation? If so, how many will there be, what will they be paid and how will they be appointed?

Mr. CRERAR: That is dealt with in a subsequent section.

Mr. JOHNSTON (Bow River): Would this legislation cover, under game or fur-bearing animals, the chinchilla which were introduced from Los Angeles, California, originally from south America, and which are now being raised on a ranch at Cardston? Can the minister inform me whether that Chapman ranch in California has obtained a charter to form a sales organization in Canada for the purpose of selling chinchilla pelts in Canada?

Mr. CRERAR: I have no information on that matter.

Mr. JOHNSTON (Bow River): But this legislation would cover that chinchilla organization, would it?

Mr. CRERAR: No; I should think that would be covered under the general customs tariff or laws of the country. The federal government has control over imports into Canada and exports from Canada.

Mr. JOHNSTON (Bow River): This legislation would empower them to exercise authority over the export of those pelts from one province to another, would it not? There are quite a number of these being sold now from Alberta, coming down to Ontario, I understand.

Mr. CRERAR: But they originate outside Canada?

Mr. JOHNSTON (Bow River): No; there is a ranch at Cardston, something like three of four hundred animals are there now, I understand, and I believe the intention is to start ranches in different parts of Canada. Therefore that would definitely come under this legislation?

Mr. CRERAR: No; this legislation would not touch that unless the Alberta government declared a closed season on chinchilla rabbits.

Mr. JOHNSTON (Bow River): This is not a chinchilla rabbit; it is the regular south American chinchilla.

Mr. CRERAR: This legislation would not touch that.

Mr. HANSON (York-Sunbury): Section 6 hardly covers the question I asked, under which, and having regard to section 2 (c), certain officials are made ex officio game officers. What I asked was whether it was the intention to appoint anyone other than those covered by section 6.

Mr. CRERAR: No.

Mr. HANSON (York-Sunbury): But still there would be power to do so?

Mr. CRERAR: Yes.

Mr. HANSON (York-Sunbury): This section just designates these as ex officio officers, but there is no reason why the government could not appoint other game officers under this clause if they so desired.

Mr. MacNICOL: Perhaps this matter does not properly come under this section, but last summer when I was at Churchill with a large party a number of the party purchased white fox furs from the Hudson's Bay company there. The furs were not finished; I do not know what had to be done to them after they were brought back, but when some of those people arrived in Ontario they had some difficulty over the purchase of those furs. Were they violating any law by buying unfinished furs and bringing them from Manitoba to Ontario?

Mr. CRERAR: On this point once again I must speak subject to correction, but my recollection is that a permit of some kind is required by an individual to purchase furs taken in the northwest territories.

Mr. MacNICOL: But Churchill is in Manitoba.

Mr. CRERAR: The furs were taken in the northwest territories.

Mr. MacNICOL: Well, I do not know that, but they were hanging in the store—

Mr. CRERAR: The hon. gentleman spoke of white foxes, which really only come from the arctic country.

Mr. MacNICOL: These furs were hanging in the store; the price was reasonable—I have forgotten just what it was—and several of the party purchased them. I know that some who brought them back to Ontario had trouble when they attempted to have the furs finished. I have forgotten just what the trouble was, but they certainly did not have any permits when they went into the store to buy the furs, nor were they told that they required permits. The furs were simply sold to them and brought back to Ontario. The furs had to be given treatment of some kind, and it was then that they found they had violated some regulation.

Mr. CRERAR: I am sorry I cannot give my hon. friend that information at the moment, but I shall be glad to have the matter looked into and communicate with him.

Section agreed to.

On section 3—Provincial export permit.

Mr. HANSON (York-Sunbury): This, of course, is the jurisdictional clause. My colleague has called my attention to the phraseology. Perhaps he would say what he has in mind.

Mr. STIRLING: As I read paragraph (a), it appears to me to say that a sale shall not take place in another province unless an export permit has been issued by the province in which the fur was taken, and I understood the minister to say that this became operative only if the province issued an export permit. If the province in which the fur was taken did not issue an export permit, this bill says that the fur shall not be sold.

Mr. CRERAR: If an attempt is made to sell it, the vendor comes under the provisions of the legislation.

Mr. HANSON (York-Sunbury): The last line of paragraph (a) looks to the issue of an export permit by the province, which permit may not exist. That point might bear a little more study. I should not like to express an opinion offhand, without looking into the matter more carefully. Perhaps this section might be left over for further consideration.

Mr. CRERAR: I might be able to clear it up. Let me read paragraph (a):

3. No person shall knowingly,

(a) take, carry, send, ship, or have in possession for the purpose of taking, carrying, sending or shipping or receive for shipment or transmission beyond the limits of the province within which such game was killed any game except under the authority of an export permit duly issued under the laws of such province.

Mr. HANSON (York-Sunbury): Is there not a constitutional question right there?

Mr. CRERAR: This requires any person who desires to send out of the province anything of this kind, including skins, to get an export permit.

Mr. HANSON (York-Sunbury): From the province?

Mr. CRERAR: Yes.

Mr. HANSON (York-Sunbury): What authority has the province to issue export licences?

Mr. REID: I do not think it has any power.

Mr. CRERAR: Yes, I think so.

Mr. HANSON (York-Sunbury): The province has authority to control these skins while they are within its territorial jurisdiction, in any way it likes, even to the extent of prohibition; but to say that the province shall issue export licences—well, I should like to think that over, to tell you the honest truth. I have a doubt in my mind as to whether that is within the power of the province.

Mr. CRUICKSHANK: R. B. Bennett said the province had the power.

Mr. HANSON (York-Sunbury): That is high authority, I admit, but I should like to think the matter over. The federal jurisdiction has the right to issue permits governing interprovincial trade; a province has not. I have not at hand the section of the British North America Act which governs, but my recollection is that the act itself prohibits that sort of interference with interprovincial trade. For instance, it is not beyond the realm of imagination that the province might say, "Well, you may not ship your silver foxes to Montreal. You will have to sell them here."

Mr. REID: Would the principle not be the same if they were potatoes?

Mr. HANSON (York-Sunbury): Yes.

Mr. HOWDEN: I do not wish to presume to instruct the minister, but I would suggest that this bill has more to do with game than with furs. Let me explain briefly what I mean. It is customary for fishermen to come from Winnipeg to the lakes of Ontario to fish for lake trout, of which we have none in our province. They come here and catch quite a number of trout, and they are allowed to take so many out of this province. But if they take more than a certain number out of Ontario, there is no way to punish them once

they get over the border. If they take back to Manitoba many more trout than they are permitted to take, under this legislation they can be followed to Manitoba and taken to court for a breach of the game law. The same situation appertains with regard to game in the western provinces. Hunters from Manitoba can go into Saskatchewan and shoot large numbers of chickens. Then they can come back to Manitoba and say, "Well, we can prove that we shot these in Saskatchewan," and heretofore Manitoba has had no power to deal with such cases. As I understand it, this bill is to give control in such cases no matter what province may be concerned. I think really that is the application of this law.

Mr. CRUICKSHANK: They take lobsters from New Brunswick all over the world.

Mr. ROSS (Moose Jaw): I agree with the hon. member for St. Boniface. Shooting parties go into the different western provinces, and when they want to take out their game they must get a permit from the province before they are permitted to do so.

Mr. HOWDEN: But once they get away they cannot be caught, and under this legislation they will still be liable.

Mr. ROSS (Moose Jaw): Absolutely. The question came up as to whether the provinces had a right to give export licences. They are giving them every fall, by the hundreds.

Mr. HANSON (York-Sunbury): Authority to take them out.

Mr. ROSS (Moose Jaw): Yes, to take them out of the province. But under the law they are allowed to shoot so many, and they must get a permit to ship those birds or game out.

Mr. HANSON (York-Sunbury): That is the exercise of jurisdiction within a province.

Mr. ROSS (Moose Jaw): Yes, but if they take that game across the boundary, into another province, under the law there is no way of going after them.

Mr. HANSON (York-Sunbury): It would be a nusiance in respect of a hunter from Ottawa going to the province of Quebec, and returning with a bag of partridge, a deer or something like that. He would have to have a permit.

Mr. ROSS (Moose Jaw): They have to have permits now, in western Canada, to go from one province to another.

Mr. CRERAR: The point was raised by the leader of the opposition as to the power of provincial authorities to regulate movement. The power of those authorities to regulate movement from one province to another by permit was considered by the Department of Justice. Indeed, this whole legislation was considered, and was approved by the law officers of the crown.

Mr. HANSON (York-Sunbury): I have no doubt about our jurisdiction in interprovincial trade; there is no doubt about that.

Mr. STIRLING: Does the minister imagine that the provinces will take this up, and institute export permits? They do not all have them now, do they?

Mr. CRERAR: I believe most of them have. The question of dealing with abuses which have grown up has been under consideration at conferences between the officials of the provinces and of the federal government. Eight of the provinces have asked that legislation of this kind be passed, so that they may effectively control the illegal taking of fur-bearing animals.

Mr. HANSON (York-Sunbury): It is an aid in that respect, and good legislation.

Mr. CRERAR: The only province which did not express an opinion in favour was Prince Edward Island. They said they had no objection to it, and stated that the condition did not arise in their province.

Mr. HANSON (York-Sunbury): They do not have wild game, anyway.

Mr. McNIVEN: The game laws of the provinces are premised upon the fact that the game in the province is owned by the province.

Mr. HANSON (York-Sunbury): By the crown.

Mr. McNIVEN: Yes; and licences are issued subject to certain terms, namely, that one may shoot so many in a day and so many in a season. If one has an outside licence, such licence contains a permit to export so many. The province has the right to give such privilege, because the crown owns the game. I concede that point, so far as wild game is concerned.

Another point, however, arises when one considers the domesticated fur-bearing animals. I am thinking particularly of Mr. McNeill who runs a fox farm at Fort Qu'Appelle. He has hundreds of foxes which he raises and subsequently kills. He markets their pelts in Montreal and New York, and at one time sold them in London, England. Saskatchewan cannot issue an export licence or forbid anyone so situated from exporting that domesticated fur-bearing animal, because it does not belong to the crown.

The same question arose in 1920, 1921 and 1922 when there were interprovincial export liquor houses in all the different provinces. Those provinces sought in one way or another to prohibit the export of liquor from one province to another, and were unable so to do. I understand that some years ago in Ontario they either imposed an export duty or forbade the export of pulp logs from the province. That was based on the principle that Ontario or the crown owned the natural resources and timber limits, and that they could authorize the cutting of timber on the understanding that it would not be exported or, if exported, subject only to payment of a certain charge.

Where the definition in section 2, paragraph (b) extends and applies to domestically raised fur-bearing animals, I suggest that the requiring of a licence for an export permit to be issued by the province, as provided in section 3, would be wholly ultra vires.

Mr. HANSON (York-Sunbury): I think the hon. member is right.

Mr. McNIVEN: I would suggest that the section be given further consideration.

Mr. CASTLEDEN: I understand that in a province a person must obtain a permit from the province to export game. Would that province not be responsible for the punishment of any person breaking the regulation? If this measure passes, would such punishment be placed under the jurisdiction of the dominion, and would punishment of the offender be a federal responsibility?

Mr. CRERAR: As I said earlier, the provinces have complete control over the taking of game and fur-bearing animals within their own boundaries. They do that now, I believe, in every case by the issue of permits or licences to trappers and hunters. But cases have arisen where individuals have taken game and fur-bearing animals illegally, and in the case of the fur-bearing animals have removed the skins from one province to another for purposes of sale. Had they attempted sale within the province where the animals were taken, they would have been apprehended, because they could not have produced the necessary permit or licence from provincial game authorities to show that the game had been taken legally.

The purpose of this legislation is not to add to or detract from the powers of provincial governments, but simply to provide machinery to check an abuse.

Mr. HANSON (York-Sunbury): A system of enforcing provincial law.

Mr. CRERAR: It is the principle of using the added authority of the federal government, so that the provinces may be in a position to enforce their own provincial laws.

[Mr. McNevin.]

Mr. CASTLEDEN: Outside their own provinces. Could they then go outside their own provinces?

Mr. HANSON (York-Sunbury): No.

Mr. CRERAR: It may be that the province from which the hon. member comes has a law declaring a closed season for the taking of beaver. No permits would be issued to trap beaver, and any beaver taken would under those circumstances be taken illegally. I know he would not do it, but if the hon. member did trap beaver illegally, and attempted to sell them within the province of Saskatchewan, he would not be able to produce a permit or licence stating that he had a right so to do. But he might slip across to the neighbouring province of Alberta, or into Manitoba. He could show that he was a resident of Saskatchewan and that the beaver skins had not been taken in Manitoba or Alberta. Consequently there would be no machinery to deal with him. This legislation provides the machinery to deal effectively with him.

Mr. BLACK (Yukon): What about domestically raised fur-bearing animals which are in an entirely different class from wild animals or birds? Has the province or the dominion the right to regulate the export of such animals between provinces?

Mr. CRERAR: I shall have to walk warily here because I do not belong to the learned profession of the law and must speak as a layman. The province has wide powers in connection with property and civil rights, and I think it would be within the right of a province to go quite far in legislating in connection with matters affecting those rights.

Mr. HANSON (York-Sunbury): But they cannot say that I shall not export my private property, my horse, for example.

Mr. CRERAR: Let me use an illustration, more to seek knowledge than to impart information. Assume that a farmer has some very fine silver foxes and that he is the only person in the province who has such foxes. The provincial authorities might take note of it and say that for a certain time the progeny of those foxes shall be retained in the province and refuse him the right to export.

Mr. HANSON (York-Sunbury): They could not do it.

Mr. CRERAR: I shall not attempt to discuss that with my hon. friend. I fall back upon what I said a moment ago, that this legislation has been approved by the law officers of the crown. I assume that if there

is anything in the bill along the lines referred to by the hon. member for Regina, it will be made manifest in due course.

Mr. DOUGLAS (Weyburn): I think most of us are confused. We can understand the minister's argument with reference to wild game; we realize that it is perfectly logical, but what we cannot understand is how the argument applies to domestic fur-bearing animals. Such animals are in the same position as live stock. They are a farm product, a totally different thing from wild game. Will the minister explain why this wild game legislation is being applied to domestic fur-bearing animals?

Mr. HANSON (York-Sunbury): I think I can help out the committee. There have been cases of theft of domestically raised fur-bearing animals and it is to keep down that sort of thing.

Mr. ROSS (Moose Jaw): Section 3 (a) states that no person shall knowingly take, carry, and so on, except under the authority of an export permit duly issued under the laws of such province. The province has no right to give a permit in connection with domestically raised fur-bearing animals. Therefore any person who would carry such animals across the border would be in immediate contravention of the law if this bill is passed. The bill says "permit duly issued," but they cannot issue a permit when they have not the right to do so.

Mr. EMMERSON: Have the provinces asked to have domestically raised animals included?

Mr. CRERAR: I cannot answer that at the moment. It is almost eleven o'clock, and since we are not likely to get through to-night, I shall move that the committee rise and report progress.

Mr. HANSON (York-Sunbury): Will the minister give consideration to subsection 2 of section 5? It may be all right for a game officer to have jurisdiction anywhere in Canada, but these game officers should not have the powers of a justice of the peace. They are to be the complainant, the prosecutor, the judge, the one who levies the fine and the one who carries it right on. That is very bad legislating. I would refer also to section 10 of the bill. All lawyers know that the criminal code provides that there shall be only one matter of complaint in any one specific charge. This section provides that section 710 of the criminal code shall not apply to any proceedings in respect of any offence under this bill. That is not good practice because that section is in the criminal code for good and important reasons. I am not going to elaborate upon it, but one offence under one charge is the principle which has been applied in our criminal law. If there are other offences, they are brought forward under separate charges so that the accused is not called upon to meet a dozen cases in one charge. I bring that to the minister's attention.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

14873—129

Tuesday, April 1, 1941.

The house met at three o'clock.

CONDENSED MILK

REPORT AS TO TRANSFER TO THE UNITED STATES OF BRITISH ORDER FOR A MILLION CASES

On the orders of the day:

Hon. J. G. GARDINER (Minister of Agriculture): The hon. member for Compton (Mr. Blanchette) yesterday asked a question with regard to the report that there had been transferred to the United States an order for a million cases of condensed milk. I wish to answer as follows:

The dairy products board has no information of the transfer referred to. The ministry of food inquired about the purchases of a million cases of unsweetened condensed milk from Canada during the present fiscal year. However, they have stated that under no condition was there to be any large increase in unsweetened condensed milk sales to them if it would affect our available cheese supplies. Indications are that Canada will be in a position to supply approximately the same amount of unsweetened condensed milk to the ministry of food as was supplied last year and still take care of domestic and other export requirements. In 1940 the ministry of food purchased approximately 1,500,000 cases of such milk in the United States in addition to supplies from Canada and there is every reason to believe that the same will be done again this year.

PRAYER FOR VICTORY AND PEACE

REVOLUTION IN YUGOSLAVIA AND SUCCESSES IN AFRICA, ALBANIA AND THE MEDITERRANEAN

On the orders of the day:

Mr. DANIEL McIVOR (Fort William): I should like to rise to a question of national and empire importance. March 23 was set apart as a day of prayer for victory. I took part in that day of prayer. Jew and Gentile, Protestant and Roman Catholic took part in

the observance of the day, bringing home to the people of the nation the seriousness of the hour. What was the result? To me it was a direct answer to that supplication that Yugoslavia rebelled, that we have had such successes in Africa and Albania, and that the Italian fleet has been demolished. I repeat, these achievements are to me a direct answer to our prayer. I do not think that we should ask the Divine Giver for any gift unless we expect an answer and are ready to cooperate to the utmost. As one who took part in that day of prayer I express my gratitude publicly to the Almighty.

SUGAR AND COFFEE

QUESTION OF RETROACTIVE APPLICATION OF TAXES AND PEGGING OF PRICE

On the orders of the day:

Mr. G. A. CRUICKSHANK (Fraser Valley): I wish to ask a question of the Minister of Labour (Mr. McLarty). Would the government agree to make the tax on sugar retroactive as was done in regard to butter, in order to get the parasites of Montreal, the wholesalers? Will he also agree to peg the price of coffee exactly as was done in the case of the farmer's butter?

Hon. J. L. ILSLEY (Minister of Finance): If the hon. gentleman is directing his question to me I would say that I dealt with the first part of the question, in regard to sugar, yesterday. With regard to coffee I will make inquiry into the situation. I am not aware of anything that requires action there.

Mr. CRUICKSHANK: I understood the Minister of Finance to say yesterday that this tax was being put on because there was certain heavy buying. During the regime of the last government they imposed a two per cent tax on sugar, and the firm of W. H. Malkin, in British Columbia, and others, apparently got advance information and purchased heavily.

TRANSPORT COMMISSION

REPORTED IMMEDIATE DISCONTINUANCE OF BEISEKER-LANGDON, ALTA., RAILWAY LINE

On the orders of the day:

Mr. C. E. JOHNSTON (Bow River): I should like to direct a question to the Minister of Trade and Commerce. I mentioned the other day that the railway line which runs between Langdon and Beiseker in Alberta is to be discontinued. The minister assured us that he had no information as to that, but thought it would not be done for some little time. My information now is that the railway employees working on that line have been informed by the railway officials that their services will not be required after to-day. Has the minister anything to say in that regard?

Hon. J. A. MacKINNON (Minister of Trade and Commerce): I know nothing about the facts just stated by the hon. member, but I shall make inquiry and let him know.

CANADIAN NATIONAL RAILWAYS

APPOINTMENT OF GEORGE A. TOUCHE AND COMPANY AS AUDITORS

Hon. C. D. HOWE (for the Minister of Transport) moved the third reading of Bill No. 13, respecting the appointment of auditors for national railways.

Motion agreed to and bill read the third time and passed.

TRANS-CANADA AIR LINES

EXTENSION OF INITIAL SUBSIDY PERIOD—CHANGING OF FIXATION-OF-RATES PERIOD

Hon. C. D. HOWE (Minister of Munitions and Supply) moved the second reading of Bill No. 26 to amend the Trans-Canada Air Lines Act, 1937.

Motion agreed to, bill read the second time, considered in committee, reported, read the third time and passed.

EXPORT OF GAME

PROHIBITION OF SHIPMENTS OUT OF PROVINCE WITHOUT PROPER PROVINCIAL AUTHORIZATION

The house resumed from Monday, March 31, consideration in committee of Bill No. 16, to control the export of game—Mr. Crerar—Mr. Vien in the chair.

Sections 1 and 2 agreed to.

On section 3—Provincial export permit.

Mr. HANSON (York-Sunbury): I have no objection to this procedure, but following the remarks made by the minister last evening we did expect that the war appropriation bill would be given the right of way.

Mr. MACKENZIE KING: The reason we have proceeded with this measure is that the appropriation bill, while it has been printed, is on its way to the house for distribution. I expect it will be here in a minute.

Mr. HANSON (York-Sunbury): I suggest to the Chairman, "more haste, less speed". We have no desire whatever to hold up any of these measures, but the minister was to take into consideration certain parts of this bill

[Mr. McIvor.]

before it was proceeded with and was to make some statement with regard to section 3 and other provisions that were under discussion last evening. It seems to me that this would be the appropriate time to have that statement.

Mr. CRERAR: The points raised by the leader of the opposition will be reached in subsequent sections, and it might be better to deal with them then.

Mr. HANSON (York-Sunbury): The minister will recall that there was considerable discussion over the clause in section 2, "domestically raised fur-bearing animal" and its application in this bill. Section 2 I understand has been passed.

Mr. CRERAR: I was not under the impression that section 2 had been passed, but probably it has been. Domestically raised fur-bearing animals are included because some of the provinces impose a royalty fee on the production of what are termed domestic fur-bearing animals.

Mr. HANSON (York-Sunbury): What provinces?

Mr. CRERAR: I cannot say at the moment, but I am advised that some do, if not all. This is to guard against the possibility of evasion of the provincial law with regard to the payment of the royalty. If under the laws of the province a fur farmer is required to pay a royalty on each pelt he produces he may take his pelts out of the province and sell them, and thus escape payment of the royalty. This is to meet evasions of the law of this kind.

Mr. HANSON (York-Sunbury): In other words the government is helping the provinces to collect their revenues. Notwithstanding this explanation, which may be a very good reason for the inclusion of this provision in the section, there is grave question in my mind as to whether this is constitutional.

Mr. CRERAR: Of course the committee will not expect me to give any opinion upon the constitutionality of any of the provisions of this bill. All I can say is that the bill has been approved, and I am advised that the wording of this section is in the form prescribed by the law officers of the crown. It also has passed the scrutiny of the attorneys general of all the provinces, who have signified their approval of this measure as it stands, with the exception of Prince Edward Island, who do not oppose it but who say they are not interested.

The purpose of this bill, in brief, is to assist the provinces to make effective the legislation on their statute books covering the taking of fur-bearing animals or wild animals of any kind. Some of the provinces require the trapper or the person who has fur pelts to take out a permit before he can ship them out of the province. The purpose of this provision is to ensure that the royalties are paid. If such pelts are shipped out of the province for sale without such a permit having been secured, the person shipping them will be liable under the provisions of this bill.

Mr. HANSON (York-Sunbury): What does the minister think of the definition of game to include a fur-bearing animal? It seems to me that is stretching the thing a long way, not for any dominion object but simply to help the provinces collect their revenues. Personally I think this provision should be dropped from the bill.

Mr. CRERAR: That would be against the wishes of the various provinces.

Mr. HANSON (York-Sunbury): No doubt; they want it to help collect their revenues.

Mr. CRERAR: The definition states:

(b) "game" means the carcass or any part of the carcass, including the skin, of any wild animal, domestically raised fur-bearing animal, wild fowl or wild bird.

I think it is quite within the competence of this act to define a domestically raised fur-bearing animal as game.

Mr. HANSON (York-Sunbury): I suppose you could include oysters under that definition, if you put that word in the statute.

Mr. CRERAR: I dare say you could.

Section agreed to.

Section 4 agreed to.

On section 5—Oath of game officer.

Mr. HANSON (York-Sunbury): I suggest to the minister that subsection 2 is altogether too wide and that all but the first clause should be dropped. This section reads:

(1) Every game officer shall, before entering upon the duties of his office, take and subscribe an oath . . .

(2) Every game officer shall for all the purposes of this act have anywhere in Canada all the powers of a peace officer or a police constable . . .

I have not the slightest objection to that; I think it is quite proper. But then you go on and clothe these game officers with all the power and authority of a justice of the peace anywhere in Canada. This is what will happen. A game officer comes across an alleged

violation of this statute. He lays the charge, tries the culprit and collects the fine right on the spot. If hon. gentlemen have ever been caught in a violation of a traffic law in certain portions of the north American continent—

Mr. RALSTON: Speak for yourself.

Mr. HANSON (York-Sunbury): As a matter of fact it did not happen to me, but it did happen to a friend of mine. I was not guilty this time, though I suppose I have transgressed the traffic laws on many occasions. A traffic officer stops a man for a violation of a traffic law and tells him that if he will give him $10 or $25, whatever it may be, it will be all right; apparently in some jurisdictions he has authority to do that. If a man is in a desperate hurry very often he will fall for that sort of thing and pay the ten dollars rather than stay over for a day and go to the police court, even though he may think he has a fair defence.

I do object to the principle underlying this section, that an officer charged with the enforcement of the law should be judge and jury and impose the penalty. It is bad principle and a very dangerous one, and I object to it. I shall not elaborate the reasons which underlie that statement, but I do appeal to the minister not to put through this provision. Let the ordinary operation of the law apply. We have plenty of laws to cover this sort of thing. Do not let the traffic officer or the game officer, as the case may be, act as judge on the facts and have complete jurisdiction to impose the penalty, so that perhaps an innocent person may suffer. The whole principle is wrong. I am not suggesting that the game officer may pocket the fees; that, of course would depend on the individual, though I have often wondered in the case of traffic violations whether moneys paid to these officers found their way into the public treasury.

This is an exceedingly bad principle; I do not think I ever saw it before in a federal statute. We have plenty of machinery for adjudicating upon these offences. Let them go through the ordinary process of law; let them be heard by a magistrate or a judicial officer who is not himself promoting the charge.

Mr. REID: Has the dominion power to confer this right on officers?

Mr. HANSON (York-Sunbury): The hon. member raises a question of much greater academic importance, but I am trying to treat this matter realistically and press it home on a point which I am sure will appeal to the minister as a layman. I have never looked into the question whether or not the dominion has power to appoint justices of the peace. In rare cases we do appoint king's counsel, but ordinarily the appointment of justices of the peace is done by the provinces. I think the dominion has authority to make these men peace officers, or rather to give them all the powers of peace officers, making them analogous to peace officers appointed by a province. But to say that this same man shall be the judge, when he is promoting the charge, is contrary to our sense of British justice. It is wrong. I hope the minister will reconsider this provision in the light of what I have said.

Mr. CRERAR: In regard to the question raised by the hon. member for New Westminster it will be observed that the officers endowed with powers under this measure can exercise such power only in so far as the enforcement of the measure is concerned.

I too raised the point which has been raised by the leader of the opposition because to me, a layman, it appeared an unusual procedure. The purpose of including this power, one which is somewhat out of the ordinary, is to meet conditions which may arise in the more remote parts of the country.

Mr. HANSON (York-Sunbury): That is just a matter of expediency.

Mr. CRERAR: Permit me to give an illustration. There may be a violation of the law in a remote part of northern Saskatchewan or Alberta. Any officer of the province, whether he be a mounted police officer or a game officer, is authorized under the measure, as I read it, to act as a magistrate in hearing a case which comes before him. In his capacity as law enforcement officer I believe it would not be possible for him to bring a case before himself as justice of the peace. In other words as justice of the peace he could not take evidence from himself in his capacity as law enforcement officer. But if there were two police officers in the circumstances I have mentioned, one could act as law enforcement officer and the other as justice of the peace.

Mr. HANSON (York-Sunbury): From the point of view of justice I do not think that has improved the situation very much.

Mr. CRERAR: I am advised that the purpose of the provision is to meet certain circumstances which may arise in remote parts of the country. Of course it would never be put into effect in a more thickly populated community.

Mr. HANSON (York-Sunbury): That is just the point: it will be put into effect in more thickly populated communities. I would say in the neighbouring country that is done every day, somewhere, in connection with breaches of traffic laws. That is an analogous position. I realize that there is some force in the minister's argument in respect of breaches of the law in more remote parts of the country. It is more difficult to have the machinery of the law operative in those parts. Per contra, however, it is much more difficult for an accused to defend himself under those circumstances. He would not have the benefit of the advice, to which he would be entitled, of any member of my profession. An innocent man could be at the mercy of an over-zealous or too officious law officer. It is of the protection and liberty of the subject, and his pocketbook, that I am thinking. There is a principle at stake, and the exceptional case to which the minister has referred should not be taken as governing the general rule.

Mr. GRAY: It is not often I rise to agree with the leader of the opposition. The minister states that this is no ordinary section; I say it is extraordinary. I can recall an attempt of a somewhat similar nature when I sat in opposition, and I recall, too, that I condemned it at that time. For any police officer to be permitted to act also as judge and jury of an accused man is certainly a principle this house should not establish.

Mr. McNEVIN: Is it not true that a number of provinces have provincial game wardens clothed with similar authority?

Mr. HANSON (York-Sunbury): That does not make it right.

Mr. McNEVIN: A visiting tourist may be accused of some infraction of the law in one of our northern communities. He may not wish to have the publicity of a trial. As the minister has said, two officers can do the work, and it is assumed to be more satisfactory to permit them to do so. I do not say that it is either right or wrong, but I do say that a number of provincial game wardens have been clothed with that authority for a number of years.

Mr. HANSON (York-Sunbury): That is only an argument in favour of expediency. I am obliged for the support which has been given by the hon. member for Lambton West.

Mr. MacNICOL: He is right once in a while.

Mr. HANSON (York-Sunbury): Frankly, Mr. Chairman, I have no doubt as to the position I have taken. The minister should not carry this through. I have stated my position as to the proposal embodied in this provision; it is indefensible, and with that statement I shall be content. I appeal to the minister's sense of justice. His desire to do the expedient thing should not overcome his sense of what is just and proper.

Mr. CRERAR: Does my hon. friend think it possible that under this section an officer may lay a charge against an accused person, gather evidence with respect to it and then sit in judgment on it?

Mr. HANSON (York-Sunbury): I certainly think he would try to.

Mr. CRERAR: I do not think it is possible.

Mr. TUCKER: As I understand it, a game warden would investigate a charge. Then he would go to a person and say, "This is the evidence I am prepared to give. I have a right to take your plea of guilty, and I think it would be wise for you to plead guilty". In that way he could persuade the accused to plead guilty. Then he could fine him or impose a penalty. In such a case he would be acting as investigator, accuser, and judge, in his latter capacity imposing a penalty. It would be a terrible state of affairs.

Mr. HANSON (York-Sunbury): It would.

Mr. DOUGLAS (Weyburn): I can well understand the desire of the minister to clothe officers with extraordinary powers in isolated districts, but the power given a game warden under section 5, subsection 2, should be read in the light of sections 7, 8 and 9. In section 7 the game officer is given power to bring any person who has contravened the act before a justice of the peace. By section 8 we give any justice of the peace power to issue a search warrant, under the authority of which a game officer may enter a home or building at any hour of the day or night. By section 9 we give a justice of the peace power to issue a summons. Looking at it purely from the layman's point of view it seems to me that one game officer could clothe the other with authority to carry on a most extraordinary procedure. One game officer could issue a search warrant to another to search a home.

An hon. MEMBER: Or to himself.

Mr. DOUGLAS (Weyburn): Yes, or to himself. Then, in turn, the evidence of one officer could be heard before the other—or an officer could even hear a case before himself, in which event the game officer would become the enforcement officer, the issuer of the search warrant, the magistrate and the executioner, all in one. If that is not intended, I suggest the intention should be made clear and the legislation made more specific.

Mr. CRERAR: I do not think that that could possibly arise under the section. Certainly it is not intended. But in view of the discussion on this section I will ask that it stand, and—

Mr. HANSON (York-Sunbury): Review it.

Mr. CRERAR: I will have it reviewed by the law officers of the crown, to see whether the difficulties exist which have been alluded to this afternoon.

Section stands.

On section 6—Other officers ex-officio game officers.

Mr. NICHOLSON: Should not the remaining sections stand until we get further information on the previous section?

Mr. CRERAR: No, I do not think that is necessary.

Section agreed to.

On section 7—Seizures.

Mr. STIRLING: It is not plain to me what follows the actions of the game officer. He meets this person away up in the far north, and the minister desires to clothe him with sufficient authority. What happens next? Under section 7 he seizes the pelt, does he not, and he brings the matter before a justice of the peace. He lays a complaint and the case is brought before the justice of the peace, who decides what other penalty shall result from the misdemeanour if the person is convicted. Is that the course which it takes?

Mr. CRERAR: That, I take it, would be the effect of section 7.

Mr. HANSON (York-Sunbury): Section 9 covers it.

Mr. CRERAR: The hon. member for Yale, I take it, is objecting to the rather extraordinary power which, he claims, is given in the section, which provides that where a game officer has reason to suspect that the provisions of the act have been contravened in respect of any game or package, shipment or consignment, he may seize it. About three years ago—I believe, at the session of 1938—a bill was introduced and passed by the house controlling the export or the movement of furs from the northwest territories to Alberta and Saskatchewan. As I recall, the precise power was given there which is conveyed here, because of the possibility of pelts being transferred illegally from one province to another. A trapper came to Alberta with over 300 beaver skins which he had taken illegally in British Columbia. Having so large a number of skins, he could hire an aeroplane and come with his freight of pelts to the airport near Edmonton. Under such circumstances, if a police officer at that point has reason to suspect that the pelts have been taken illegally, he can seize them immediately and hold them until the matter is settled by due process of law before a magistrate. If he has not the power to do that; if he has to go somewhere to get a search warrant before he can appropriate the skins, they may be half way to Calgary by the time he gets the search warrant, and thus the law is evaded.

Mr. HANSON (York-Sunbury): The same provision is to be found in all the liquor laws of the country. If an officer sees something which he has reason to believe is illegal, he has the power of seizure. If he has not, it would be just like folding up so far as the enforcement of the law is concerned. I see no objection to this power being conferred if the law is to be made effective.

Mr. NICHOLSON: I realize the difficulty in connection with the administration of justice in the far northern parts of Canada, and I think it is important that game officers should have the right of seizure. But section 7 provides that a game officer shall have the right to seize and to bring the case before a justice of the peace, which is himself, and decide.

Mr. CRERAR: No, no.

Mr. NICHOLSON: Section 7 reads:

> Any game officer having reason to suspect that the provisions of this act have been contravened in respect of any game or package, shipment or consignment may seize the same and bring it before a justice of the peace having jurisdiction in the matter.

He himself is to be the justice of the peace, and he will have jurisdiction. He will have not only the right to seize but the power to determine the penalty. We should not pass legislation which will give any game guardian these extraordinary powers. The clause should stand until section 5 is clarified.

Mr. CRERAR: We want to make progress with the bill. I should like to oblige the hon. member for Mackenzie, but subsection 2 of section 5 is to stand, and I do not think it is necessary that section 7 be held over as well.

Mr. NICHOLSON: I cannot see the point of passing section 7 if the minister is going to reconsider section 5. These other sections should stand until the minister gives us definite information.

Mr. HANSON (York-Sunbury): On the point raised by the hon. member for New Westminster, about the appointing of justices of the peace by the dominion, I suggest to the minister that he had better look at paragraph 14 of section 92 of the British North America Act, which, I think, conclusively proves that only the provinces can appoint justices of the peace.

Mr. CRERAR: Well, I shall look into that.

Mr. HANSON (York-Sunbury): On page 439 of Beauchesne's Parliamentary Rules and Forms the matter is dealt with from the point of view of constitutionality. Perhaps the minister will review that.

Mr. CRERAR: That relates to subsection 2 of section 5?

Mr. HANSON (York-Sunbury): Yes.

Mr. CRERAR: Under subsection 2 of section 5 justices of the peace are not appointed; but officers are given the power of justices of the peace for the purposes of this act only. Whether that makes any difference or not I do not know.

Mr. HANSON (York-Sunbury): So that if a man is not a justice of the peace in a province you can make him a justice of the peace ex-officio, or attempt to do so? I do not think you can.

Section agreed to.

On section 8—Search warrant.

Mr. HANSON (York-Sunbury): Apparently this section has been drafted with a good deal of care. It reads:

(1) Any justice of the peace who is satisfied upon oath that there is reasonable ground for believing that there is in any store, shop, warehouse, outhouse, dwelling house, garden, yard, vessel, railway, vehicle, aircraft or other place game kept or concealed contrary to the provisions of this act may issue a warrant under his hand authorizing some constable or other person named therein to search such place by day or night for such game and to seize and bring it before the justice—

In circumstances such as the minister has suggested—in remote parts of the country a justice of the peace is not apt to be a highly trained man—I have often been bothered about the jurisdiction to issue a search warrant. I have heard of a justice of the peace issuing a search warrant on a mere verbal statement under oath. My own view is that the proper practice is that the statement shall be not only under oath but in writing, so that the writing may be available, in case of conviction, for review under writ of certiorari. Would the minister care to put the words "in writing"—in the section, to indicate clearly the form in which the deposition must be made? That is what the trained magistrate always does or ought to do, but some who are not trained well swear the witness, take oral statements under oath, and then proceed to issue a search warrant. The minister's colleague (Mr. Ralston), a well-trained lawyer who must have had much experience along this line in his younger days, knows that the deposition is the basis of the jurisdiction for issuing a search warrant. If the deposition is bad, the whole thing goes by the board. The same is true of an information in a criminal case; if the information is bad, nothing afterwards can cure the proceeding. If it is defective *ab initio* it cannot be cured by a hearing later on. It is a long time since I have looked into the matter, but I think that is sound law. You get it so ingrained in your mind that you never forget it. I suggest that the evidence upon which the magistrate issues a search warrant shall be given not only under oath but in writing. I am trying to help the minister improve his bill, not trying to block it at all.

Mr. CRERAR: We will let this stand, as the other subsection is standing.

Section stands.

On section 9—Justice of peace to issue summons, etc.

Mr. HANSON (York-Sunbury): I do not see any objection to that.

Section agreed to.

On section 10—Information and complaint.

Mr. HANSON (York-Sunbury): This is a reversal of what was the old common law and is now the law by statute. It means that you may have a multiplicity of charges in one information. I object to it on principle. It has been established over a long period of years, based on sound reasoning, that there shall be only one offence in an information. But here is a sort of omnibus clause which may mean that of a dozen charges one may stick. That is bad in principle. I suggest that the ordinary rule long-established in our criminal law and subsequently carried into the criminal code be adhered to. The present subsection 3 of section 710 of the criminal code, proposed to be amended by section 10 of the bill, provides as follows:

Every complaint shall be for one matter of complaint only, and not for two or more matters of complaint, and every information shall be for one offence only, and not for two or more offences.

The books are full of cases in support of that principle, which should not lightly be

departed from. We are being asked to legislate on an exception, and it is bad law. I ask that the section stand so that it can be looked into.

Mr. CRERAR: I think that section 10 requires to be read in conjunction with section 12.

Mr. HANSON (York-Sunbury): Section 11, perhaps.

Mr. CRERAR: No. Section 12 provides:

> Any fine imposed upon a conviction of an offence involving more than a single article of gain shall be computed in respect of each such article as though each such article had been the subject of a separate complaint.

That means that if a person brought in say twenty skins which it was illegal for him to take he could be charged with twenty separate offences, but under subsection 3 of section 710 of the criminal code he could be charged with only one offence. Section 10 is introduced in the light of the provisions of section 12, so that subsection 3 of section 710 of the criminal code which I have just quoted shall not apply.

Mr. BOUCHER: Does not section 10 go much further than that?

Mr. CRERAR: That principle is already in effect in some of the provinces. In Ontario, for instance, a person may be charged in respect of each article illegally taken. Each constitutes a separate complaint. It is a nice question whether such a provision is too severe to apply to the cases that will arise under this legislation. All I can plead in its behalf is that the representatives of the provincial governments who have met with the federal authorities on more than one occasion consider that the wrongful practices which have grown up call for a stringent penalty, so I am advised, in order to get rid of these abuses.

Mr. HANSON (York-Sunbury): I am not impressed by the minister's argument about what the provincial officers have advocated. I am reminded of the legislation that was put on the provincial statute books in the days of prohibition with respect to infractions of the intoxicating liquor laws. While I supported the principle of prohibition, the New Brunswick intoxicating liquor act, which was put on the statute book by my friends down there, simply shocked one's sense of justice. A man was guilty before he came into court. The whole onus was put on him to show that he was not guilty.

Mr. MARTIN: You should have seen our act.

Mr. HANSON (York-Sunbury): Yes, and it is all wrong. Does not my hon. friend agree with me?

Mr. MARTIN: Hear, hear.

Mr. HANSON (York-Sunbury): The provincial officers administer the criminal law; they are not charged with the duty of framing the laws. Their duties, except with respect to infractions of their own prohibitive acts, are almost wholly administrative, not legislative, and I do not think they should have very much to say about this legislation. But should we not have something to say about the person who is charged? Who is going to defend him if we in parliament do not raise a voice on behalf of perhaps an innocent accused?

Mr. REID: The public are losing their rights day by day.

Mr. HANSON (York-Sunbury): Absolutely, and not only losing them—they have lost them. The government year in and year out by order in council are setting aside the statutes passed by parliament while parliament is in session, and doing it under the guise of the War Measures Act and of the War Appropriation Act. It comes to me as a great shock to learn that the government of Canada, under a Liberal administration, is legislating by order in council under the apparent authority of the War Measures Act and the War Appropriation Act to set aside important sections of the Consolidated Revenue and Audit Act. It will be a great shock I think to the people to learn that under the guise of war necessity the government is setting aside, when parliament is actually in session, the considered laws of this country. Talk about parliament being thrown into the discard! Well, I am going to have something to say about this subject a little later. Perhaps it is not quite germane to this discussion but I feel strongly on the point, and I am giving notice that at a more appropriate time I intend to review the whole position. In the circumstances and the stress of war, if the government were advised that it was legally sound, it might do this when the house was not in session, but I am really shocked that a house led by the present Prime Minister, champion of liberty, should set aside a statute of the parliament of Canada when the house is in session.

However, to come back to game, which is more mundane, I do suggest to the minister that there was sound reason for the subsection 3 of section 710 of the criminal code, and this parliament ought not lightly to depart from the principle therein embodied. It is another instance of doing the expedient thing, not the just thing, in a given case, and I think the minister ought to review the matter. It is

done purely as a matter of expediency. The minister referred to fines being accumulated under section 12. I see no difficulty about making the punishment stringent enough. Take the case of a wholesale bootlegger or smuggler; that can be taken care of by appropriate language.

Let us not depart from the sound, well-established principle of our criminal law—one offence, one charge, one hearing. The minister would be well advised to reconsider the point. I would ask that the section be allowed to stand.

Mr. BOUCHER: While the interpretation given by the minister in relation to section 12 has some weight, section 10, particularly if coupled with section 5, subsection 2 as it now stands, permits a game warden to go back into some remote section of the country, find an accused, lay a charge, adjourn the case from time to time as justice of the peace, and conduct it where he will. He can lay what charges he likes, accumulate as many charges as he likes, and leave the accused no opportunity whatever to defend himself or to know the charge he is facing until he appears before his prosecutor, who also acts as judge. I think the committee will agree that the penalty itself should be severe in cases of this kind, but penalty is one thing and guilt another. The utmost care should be taken, especially in view of the nature of the offence, to give the accused every possible chance to justify his own acts before a fair tribunal, with every opportunity to understand the charge made against him, and to put in his proper defence.

We should not lose sight of the necessity of maintaining the old principle of British justice under which a man is deemed to be innocent until he is proved guilty by an adequate court. We should not depart from this principle by putting too much authority into the hands of a game warden and leaving the accused without any protection whatever. In Ontario particularly, I believe, the principle has generally been observed of keeping the local magistrate in charge of nearly all offences within his jurisdiction and keeping justices of the peace from every judicial position if the magistrate is accessible. If you have every game warden a justice of the peace you will upset the equilibrium of the whole administration of justice under the Game and Fisheries Act, and it would be grossly unfair to the person asked to defend himself before a prosecutor who is also judge.

Mr. CRERAR: I admit that under the act very heavy penalties could be imposed.

Mr. HANSON (York-Sunbury): I am not raising any objection to that. If it is wholesale they should be punished.

Mr. CRERAR: How one can measure properly the weight of the penalty that should be imposed is of course a matter of opinion.

Mr. HANSON (York-Sunbury): No; it is a matter of judicial discretion.

Mr. CRERAR: It is a matter of opinion when we are considering it in this house.

Mr. HANSON (York-Sunbury): Fix a maximum and minimum.

Mr. CRERAR: Clearly the intent of this legislation was that the violator of the law would be separately charged on each pelt he had.

Mr. HANSON (York-Sunbury): Not separately—that is the point—but collectively.

Mr. CRERAR: Well, he would be collectively charged but he would be fined on each. Each one would be regarded as a different offence.

Mr. HANSON (York-Sunbury): That does not necessarily follow.

Mr. CRERAR: I mentioned a moment ago the case of a trapper who had taken into Alberta over 300 beaver skins that he had illegally taken in British Columbia. The contention of the leader of the opposition, as I understand it, is that under the law that should constitute only one offence.

Mr. HANSON (York-Sunbury): No.

Mr. CRERAR: The intention of the bill is that if the minimum fine of $10 were applied it could be applied on each beaver skin, which would be a separate complaint, and the total fine would be over $3,000.

Mr. HANSON (York-Sunbury): Does not the minister think that the draftsman had in mind something of what I am suggesting when he made the maximum fine $1,000 and the gaol term a year? That would be a pretty severe sentence for one skin, and yet it could be imposed. The two things seem to me to be incompatible; two ideas have got mixed in the drafting.

Mr. CRERAR: I do not think my hon. friend is quite right there. Suppose a man takes one beaver skin illegally in Saskatchewan and takes it into Manitoba and is charged under the act.

Mr. HANSON (York-Sunbury): He could be fined $1,000.

Mr. CRERAR: Yes, or he could be fined $10. If he took 300 beaver skins in Saskatchewan and brought them into Manitoba he

could be charged and fined $1,000 as a maximum or $10 as a minimum, if this provision is dropped.

Mr. HANSON (York-Sunbury): He might be fined $1,000 on each skin; I am not sure. I should like to think it over.

Mr. CRERAR: Rightly or wrongly it is not considered a sufficient penalty, with a lenient magistrate, for an offence of the kind.

Mr. HANSON (York-Sunbury): The magistrate may, under those circumstances, impose a fine, upon conviction for an offence involving more than a single article, that is, more than one skin, "computed in respect of each such article". Each such article has been the subject of a separate complaint and he may be fined $1,000 for each article. That is my hurried construction of it.

Mr. CRERAR: I may be wrong, but if we dropped section 10 that could not be done, because the section from the criminal code quoted on the opposite page would apply. The purpose of section 10 is to enable the magistrate to do just what the leader of the opposition says.

Mr. BLACK (Yukon): As I see it, section 10 is in no way dependent on section 12, nor is section 12 dependent on section 10. They deal with altogether different matters. By section 10, section 710 of the criminal code, which limits the complaint to one offence, is done away with. If section 10 is passed, prosecution under this measure could include any number of offences in one complaint, which as I see it is highly improper.

The minister mentioned the case of 300 beaver skins found illegally in a man's possession. There is no reason in such a case why there should be more than one complaint. If the accused is found guilty in regard to 300 the penalty can be appropriate. This has nothing to do with section 10. He could be and probably would be fined much more for having 300 skins in his possession illegally than for having one.

Mr. HOMUTH: And the government gets the skins.

Mr. BLACK (Yukon): Section 12 does not leave it in the judgment of the magistrate to say how he shall compute the penalty. It says the penalty "shall be computed in respect of each such article". The fair way to word it would be "may be computed in respect of each such article". As it is now, the magistrate has no option; if there are ten articles he must impose ten penalties.

Mr. CRERAR: Let section 10 stand also, and we will look at it.

Section stands.

On section 11—Offence. Penalty.

[Mr. Crerar.]

Mr. NICHOLSON: In view of the fact that the law officers of the crown express the opinion that the game officer as defined by this bill can be the same person as the justice of the peace, would it not follow that if we passed section 11 the one individual would be permitted to sentence a man to pay a fine not exceeding $1,000 or to a term not exceeding one year in gaol? I suggest that this section also stand until the minister has advice from the law officers of the crown.

Mr. CRERAR: I am agreeable to that.

Mr. ROEBUCK: I should like to say a word on this matter of justices of the peace generally, since the matter is standing for consideration.

In 1934 there was a very considerable reorganization of the entire arrangements concerning justices of the peace and magistrates —and incidentally constables—in Ontario. It is most important that any dealing with justices of the peace be in line with what Ontario is now doing; and I think other provinces followed the example.

Prior to 1934 in Ontario there was a very large number of local magistrates, men who had their little principalities, with an office in the courthouse, as a rule, in the county town and all the large towns of the province. The number of justices of the peace in Ontario was estimated at 10,000.

Mr. HANSON (York-Sunbury): It used to be an honour.

Mr. ROEBUCK: I had the pleasure, shall I say, of recommending to council the discharge or cancellation at one fell swoop of the commissions of 10,000 justices of the peace.

Mr. HANSON (York-Sunbury): Lord High Executioner!

Mr. ROEBUCK: Well I swung the axe with a good deal of satisfaction. Then we proceeded on another basis, that of selecting men of high class in the various communities, the best that could be found, often the clerk of the municipality—men of that type—and making them justices of the peace with authority and a job to be done. Instead of the magistrate hearing first the complaint from the policeman and later the evidence and finally giving the decision, we divided the functions: first, the policeman laying the charge; next, the justice of the peace issuing the warrant or summons, preparing the case for trial. Then we divided the province into seventeen great districts, each district having two or three magistrates who travelled around, so that we had itinerant

magistrates instead of local resident magistrates. The effect was tremendous; there was a great improvement in the junior criminal courts of our province. It would be a serious mistake if the dominion government should constitute policemen justices of the peace and reduce the status of the justice of the peace, which during the last six or seven years has been raised to one of real responsibility in the community. That would be a major error.

Three distinct functions are involved here. First there is the function which attaches to the policeman. He is full of suspicion. He has the police mind—and that is the proper mind for a policeman. The justice of the peace is a judicial officer. He decides whether a warrant should or should not issue, whether it should be a summons, or whether any charge at all should be laid. He must know something of the law. It is a mistake to allow the official who prepares the case and does the interlocutory work in the case to make the final decision. You may have a man capable of doing all three, but the public never credit him with the ability. If you are to have justice which is respected by the community you must reserve final decisions to a magistrate who has nothing else to do with the case and is therefore impartial.

I hope this matter will be thoroughly discussed and considered in the light of the experience in my province, supplemented I have no doubt by experience in other provinces, before we take any such step as is suggested.

Section stands.

On section 12—Fines cumulative.

Mr. HANSON (York-Sunbury): This is mandatory. The convicting magistrate will have no option but to compute the fine imposed upon conviction "in respect of each such article as though each such article had been the subject of a separate complaint and the fine imposed shall be the sum payable in the aggregate as a result of such computation." I suggest that the word "shall" should be changed to "may," leaving it permissive with the convicting magistrate.

Mr. CRERAR: If my hon. friend will permit me, I have an amendment proposing that very thing.

Section stands.

On section 13—Bringing into force by proclamation.

Mr. HANSON (York-Sunbury): This is a case of "off again, on again, gone again, Finnegan." The section provides:

> The governor in council may as often as occasion requires declare by proclamation that upon and after a day therein named this act shall be in force in any province—

The governor in council can undo that and then do it again. I never saw such legislation as this; it is unique. Why is this power required? To-day it is the law, to-morrow it is not, in a given territorial jurisdiction. This kind of legislation is utterly indefensible. The discussion has shown, I think, that this is what I would term ancillary legislation to help the provinces enforce their game laws and collect their revenues. Well, I may be preaching heterodoxy at the moment, but we have never had very much respect for the game laws as such. After all the violation of a game law is not a crime. Those from the province of Quebec who are students of the civil code will recall—and I am in your hands now, Mr. Chairman—things which are called *mala in se* as distinguished from *mala prohibita*. In the first case the act is ethically wrong; in the second it is a prohibited act, and some prohibited acts are fantastic. The game laws are enacted on the theory of conservation, of course. The smuggling of game, and smuggling generally to defeat the customs, is merely a prohibited act, and legislation with regard to that is legislation with regard to prohibited acts. How far should this parliament use its power and authority to assist the provinces to enforce the game laws?

There is a principle involved in this legislation. I am not going to oppose the principle; the minister has been satisfied by representations of eight of the nine provinces that they desire this legislation, and so far as I am concerned it is not going to fall on me. I am not going to smuggle any game, and I am not in very great sympathy with those who may do so; but after all there is a principle here in this section. You proclaim it the law to-day and it is not the law to-morrow, by a second proclamation. Think it over; that is all I ask.

Mr. CRERAR: This is brought into effect with regard to a particular province by proclamation. If that province entirely washed out all licensing in connection with the trapping and selling of furs, the need for this legislation would disappear. In that case I presume the intention of those who drafted the legislation was that it could be made of no effect in that province. Then if the province reimposed licensing conditions in connection with the taking of game or the payment of royalties, the act could be again proclaimed so far as that province was concerned. I know this lends itself to the humorous description given by the leader of

the opposition a moment ago, but last night I understood the hon. gentleman to say that he was in favour of the principle of this legislation.

Mr. HANSON (York-Sunbury): That is, not to smuggle game.

Mr. CRERAR: I rather gathered from the hon. gentleman's remarks a few moments ago that he had altered his opinion.

Mr. HANSON (York-Sunbury): Oh, no; I did not say that. That is the minister's interpretation.

Mr. CRERAR: Of course it is quite open to any of us to change our opinions, but usually that is not done within the course of twenty-four hours. However, perhaps this section may be allowed to stand and we will review it also.

Mr. HANSON (York-Sunbury): You had better review the whole bill.

Mr. TUCKER: Anyone who attempts to practise law is always faced with the problem of knowing what the law is, and the situation is getting worse all the time in this regard. There should be some certainty about the law. If someone comes in and asks, "Well, what is the law in that regard," you should be able, at least in regard to law other than that concerning the war, to look up your revised statutes and the annual revisions of the province and the dominion—and of course if there is any municipal law involved you should get in touch with your municipality—and give a definite answer. But suppose five or six years from now some action is taken under this section. There is a provision here that by proclamation, at any time, this law may be repealed or brought into force again. It may be even repealed and brought into force two or three times in ten years. How in the world is anybody to know what the law is? If you are to have respect for law in this country; if you are to be able to place upon any citizen the onus of being charged with knowledge of the law—because ignorance of the law excuses no one; a man is assumed to know the law—then we must be reasonable with our people and must have the law in such a state that they can be expected to know it. If the law is to be changed by order in council or by proclamation; if it can be brought into force, taken out of force and then brought into force again, how in the world is the citizen or anyone advising the citizen to know what is the law?

The answer may be that you should write Ottawa and find out the law. Is it not getting very far away from the certainty of law and the administration of the law as passed by parliament, if in order to advise a man you have to get in touch with the government to find out what is the law? I would very strongly advise the minister to eliminate any such provision as this. If people are to obey the law they must know what it is. If we are not to have the law brought into contempt; if we are to have some certainty about it and some respect for it, the people must know what the law is. Otherwise they are going to break it; that cannot be helped. I urge the minister very strongly not to have a provision of this kind in this section. It is bad enough to provide that a section may come into force upon proclamation; then you have to find out if a proclamation has ever been issued. But if you are going to say that a law can be taken out of force by proclamation and then brought back into force in the same way, it seems to me you make it impossible for people to know what is going on.

Mr. BRADETTE: I should like to mention just one or two points which perhaps apply particularly to northern Ontario. Several hon. members have severely criticized the matter of a cumulative fine, but there is something worse so far as the game laws of Ontario are concerned. I do not know that the matter is particularly dealt with in this bill, but in northern Ontario some white poachers have practically mined the game preserves that the Indians have had for so many centuries. Many people suffer in the police magistrates' courts of northern Ontario in this way. A father and son may be caught with twenty beaver pelts and both may be fined in connection with the same pelts. I do not know whether that matter is well defined in the federal law, but certainly it is not in the provincial law. Again you may have two or three people penalized for the same offence. The game warden may bring in the trapper, the buyer and the person in possession of the furs at the time they were seized. I should like the federal department to be thoroughly familiar with this very unfair situation, under which a magistrate may fine three or four persons for the same offence.

The CHAIRMAN: I understand that section 13 is to stand, together with sections 5, 8, 11 and 12.

Mr. ROEBUCK: When section 5 is being reconsidered I suggest that the law officers be asked to see whether this legislation is intra vires of this parliament. I do not know whether that matter has been discussed—

Mr. HANSON (York-Sunbury): Very lightly.

Mr. ROEBUCK: Obviously the administration of justice is in the hands of the provinces. This government has the appointment of judges, but justices of the peace are not

judges. I should not like to pass an opinion offhand, without looking into the matter, but I seriously doubt the constitutionality of this part of the measure.

Section stands.

Progress reported.

WAR APPROPRIATION

SUPPLEMENTARY PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

Hon. J. L. ILSLEY (Minister of Finance) moved the second reading of Bill No. 25, for granting to his majesty aid for national defence and security.

Hon. R. B. HANSON (Leader of the Opposition): Mr. Speaker, I have no intention of opposing the second reading of this bill. During the course of an earlier debate I made a suggestion to the government with respect to a gift of wheat to our kith and kin across the seas. The suggestion did not meet with very much response from the government, but there have been repercussions from the country with regard to it, and I desire to make a few observations as to an alternative proposal.

My original proposal was the gift of 100,000,000 bushels of wheat out of our great wealth of that commodity. One hundred million bushels of wheat based on an extraction of flour of approximately 80 per cent would result in 80,000,000 bushels of flour, which, at 60 pounds to the bushel, equals 2,400,000 tons of flour. This would leave approximately 20,000,000 bushels, of mill feeds, bran, shorts and middlings, or approximately 600,000 tons. I am suggesting to the government as an alternative that instead of giving wheat we give flour milled in this country. One hundred million bushels of wheat in the form of flour would represent the domestic requirements of the British isles for approximately six months. Would that be too generous a gesture for Canada?

There may be complications in connection with a donation of this kind with regard to the question of maintaining an equity in the matter of sterling exchange. At present prices 100,000,000 bushels of wheat delivered to the Canadian seaboard would represent a donation of approximately $100,000,000. I think that estimate is high, but it would approach that sum of money. The cost of transportation from the Canadian Atlantic seaboard to the United Kingdom would be paid perhaps by the British ministry of shipping. This 100,000,000 bushels of wheat would have to be ground into flour and by-products. It has been estimated that the capacity of United Kingdom flour mills has been reduced by over thirty per cent, due to actual damage from bombs, and a further decrease of twenty per cent, making the total efficiency of United Kingdom mills approximately fifty per cent of peace-time capacity, due to intermittent air raids wherein it is necessary to shut down the existing mills.

On the other hand Canadian flour mills, which at the present time are running to not more than sixty per cent capacity, could quite easily take up this grind, particularly since any donation of wheat to Great Britain would result in present flour shipments to Great Britain being displaced to the extent of the wheat donation.

One of the major problems in Canada since the war began has been to provide a supply of feeding stuffs for live stock and dairy interests. The situation is particularly acute in connection with the raising of hogs for bacon. It has been the subject of governmental action in the form of subsidizing the movement of feed grain from western Canada to points in Ontario and, it was suggested, to other points in the eastern provinces. Owing to the lack of ocean space available it does not seem desirable at the present time to ship approximately 600,000 tons of feeding stuffs in the form of wheat to Great Britain. Every effort is being made in that country to produce its own supply of cattle feeds. During the last few months there has been a tendency to decrease the quantity of live stock and its resultant dairy products and import manufactured or semi-processed commodities.

The whole scheme of making a donation to Great Britain, while it may be complicated, in my view has substantial merit. There is a tremendous surplus of Canadian grain in Canada at the present time and with anything like a normal crop in 1941 there certainly will not be sufficient space in the grain elevators and other storage capacities to take care of the crop. A large quantity will have to stay on the farms, and there is bound to be deterioration in quality. A donation of 100,000,000 bushels to Great Britain will not change the picture very much; it will only replace what Great Britain would normally purchase. Unfortunately there is no other large consuming market available for Canadian wheat, as wheat, at the present time.

There is a tremendous possibility behind the whole proposition in the introduction of Canadian spring wheat flour on the United Kingdom market. The domestic consumer in Great Britain is accustomed to blended wheat flour for household use. Canadian spring wheat flour has largely gone to the bakeshops and commercial consumers for the purposes of strengthening soft wheat flours, either grown

locally in Great Britain or imported from other countries. If Canadian flour made from spring wheat could be milled in Canada and shipped in the original containers direct to the householder in Great Britain a very useful purpose would be served in educating the householder to the use of spring wheat flour.

The unit of measure in the milling industry in Canada for flour is the barrel of 196 pounds or multiples thereof. In Great Britain the unit is a sack of 280 pounds or multiples thereof. The normal container shipped from Canada to the United Kingdom is the sack of 140 pounds, or what might be termed a half sack on the British basis of measure. It has been suggested to me that Canadian flour could be shipped in 14-pound cotton bags of which ten are baled in a jute bag. This bag would carry a suitable crest designed and controlled by the dominion government and conveyed by licence to the various mills in Canada which would participate in the movement. The standard would have to be controlled and arrangements would have to be made with the cereals import committee or some British government agency to take delivery at seaboard.

The wheat could be sold to the mills by the Canadian wheat board at a certain price and the flour purchased from the mills f.o.b. seaboard at a price which would make allowance for the conversion costs, plus containers, and deducting an allowance for feedstuffs produced from this wheat. This method would keep the Canadian wheat board balance in shape and the amount paid for the flour at seaboard would represent the actual donation which the Canadian government would make to the British isles.

It is very doubtful if the total amount of the contribution would reach 100,000,000 bushels of wheat. However, there is no apparent reason why many cargoes of Canadian wheat flour should not be moved to Great Britain in the manner I have described, with permanent beneficial results in the reputation which Canadian spring wheat flour would gain in the United Kingdom.

The average ship can carry approximately, as a full cargo, 7,500 tons of flour. It will be realized, therefore, that 100,000,000 bushels of wheat in the form of flour would require in excess of 300 full cargoes, and shipment might be spread over a long period of time. On the other hand, a cargo of 7,500 tons bagged in fourteen pound containers would mean that there would be approximately 1,125,000 bags to be distributed to the consumer; and, as already stated, if this fourteen pound bag were properly labelled as being Canada's contribution to the consumers of Great Britain, the effect can hardly be estimated. It would not take more than forty cargoes to give full coverage to the entire United Kingdom.

There are many ways in which shipments of this kind could be financed. It could be done by a treasury vote for a full cargo, if the government were disposed, under the War Measures Act or under the war appropriation bill. It might be more desirable to have the flour moving forward in parcel lots along with shipments of munitions and supplies. It might be possible that it could be handled through popular subscription. But this is doubtful with the pressure now on the taxpayer to pay taxes, subscribe for war loans and contribute to different war organizations.

In any event it seems most desirable that, should any movement of this kind be organized, Canada should now ship flour rather than wheat, retain the mill feeds in Canada for domestic consumption, ensure that Canadian spring wheat flour is introduced direct to the householder in Great Britain, arrange for the purchase of containers in Canada much cheaper than now available in Great Britain, retain control of the standard of quality of the flour in Canada, and see that the British consumer realizes that, when a bag of this flour is delivered to him, it is part of Canada's contribution.

There will be other problems in connection with such a distribution in Great Britain. No doubt the flour would have to be shipped to the importers in Great Britain, but the control of the distribution in the United Kingdom would have to be supervised by some representative of the Canadian government to ensure that it would go direct to the consumer.

I offer this in absolute good faith as an alternative, and I hope that the government will give it consideration. I know that the Prime Minister (Mr. Mackenzie King) made a very important statement the other day with respect to Canada's war contribution, and, measured in terms of dollars and cents, it was immense; I have never attempted to analyse the figures. But it will be recollected that in the last war we did make contributions: provincial governments made donations to the mother country in the form of foodstuffs; and, if I can get the sympathetic ear of the Minister of Finance (Mr. Ilsley) and the gentlemen who are leading the government on this occasion, I would urge upon them the advisability of giving consideration to a gift of flour to the beleaguered people of Great Britain.

Motion agreed to, bill read the second time, and the house went into committee thereon, Mr. Vien in the chair.

Section 1 agreed to.

On section 2—Appropriation.

Mr. RALSTON: Perhaps this would be the proper place for me to say a word in answer to what my hon. friend the member for Yale (Mr. Stirling) referred to yesterday afternoon with respect to the relations between the Canadian and British forces and the Canadian and British commands in the United Kingdom.

Let me say that, while stating perhaps the cold legal position, I want it clearly understood that it is the legal position, and that there is no necessity nor do I anticipate that there will be any necessity of our having to invoke it. There has not been the slightest difference of opinion with respect to matters of operations in which the Canadian corps or Canadian forces overseas are or may be engaged. The relationship between the Canadian and British forces and the Canadian staffs and the British staffs could not be more cordial than they have been, and the confidence which exists between them could not, I think, be greater.

Coming to the legal position, as was intimated yesterday afternoon, the Canadian troops are in the United Kingdom under the terms of what is known as the Visiting Forces (British Commonwealth) Act, 1933. That act so far as Canada is concerned is contained in chapter 21 of the statutes of 1933; and the same act, I understand, practically word for word, is on the statute book of the United Kingdom, although the sections are numbered differently.

As hon. members know, the intention of the act is to provide for the relationships existing betwen the so-called home forces, which in the case we are referring to are the United Kingdom forces, and visiting forces, which are the Canadian forces. Two different situations are visualized under the visiting forces act. That is to say, there is one status for the visiting forces, in which they are held to be, as the statute states, serving together with the home forces—that is, the Canadian forces are serving together with the British forces. There is another status in which the Canadian forces are said to be acting in combination with the United Kingdom forces.

Section 6, subsection 4 (a) of that statute provides for the terms of the status when they are serving together. Section 6, subsection 4 (b) provides for the status when they are serving in combination. To make it very brief, the serving together status is more properly adaptable and applicable to the situation where visiting troops are training in the United Kingdom; the status of acting in combination is more adaptable and applicable to the situation where a visiting force may be called upon to engage in operations along with the United Kingdom forces. The difference in status is this, so far as command is concerned, that when troops are serving together, that is to say more or less on a training basis, they are under separate commands—that is, the home forces are under one command, the Canadian forces are under another command, and there is no common command over them; each is, if I may put it that way, autonomous in connection with its own particular organization and command. When troops are acting in combination, then, as the statute provides, his majesty may provide one officer to act in command of the combined forces.

That is the background of the relationship which exists in the United Kingdom with respect to the Canadian forces. We now come to what has been done in that respect.

The statute provides that the government by order in council may declare that the Canadian forces—I use that term interchangeably with "visiting forces"—shall be deemed to be serving together with the home forces, or the governor in council may declare that the visiting forces shall be acting in combination with the home forces. We have done both. We have passed an order in council, dated April 3, 1940—as a matter of fact it bears the significant and rather intriguing number, 1066—under the War Measures Act. It will be found in volume 2, page 47, of the volume of proclamations and orders in council passed under the War Measures Act. This order in council provides three things: first, that Canadian forces, military and air, in the United Kingdom or the continent of Europe or proceeding from one to the other, serve together with the United Kingdom forces; second, that Canadian forces serving on the continent act in combination upon their embarkation in the United Kingdom for the purpose of proceeding to the continent of Europe.

Third—and this is the important point before us now because we have no forces on the continent of Europe—the order in council provides that those parts of the Canadian forces, military and air, serving in the United Kingdom—those are our forces which are there at the present time—as may from time to time be detailed for that purpose by the appropriate service authorities as may from time to time be designated by the Minister of National Defence shall act in combination with the United Kingdom forces.

The forces in the United Kingdom are serving together. The Canadian forces are, under the general provision, serving together with the United Kingdom forces and are therefore under separate command.

That third provision of the order in council provides, in effect, that an officer designated by the Minister of National Defence may detail for the purpose of serving in the United Kingdom any portion of those forces to act in combination with the British forces in which case, as I stated a minute ago, by acting in combination they come under a combined command.

Following that through, the Minister of National Defence designated General McNaughton in respect of the Canadian corps; the senior combatant officer at Canadian military headquarters in respect of the troops under his command, and the senior combatant officer in command of any remaining troops in the United Kingdom in respect of forces under his command, to detail the forces or parts of the forces as they might think fit to act in combination with the British forces.

That gave authority to General McNaughton, if he so desired, to detail the Canadian corps, or, as it was then, the first Canadian division, to act in combination with the British forces. He did that. He has detailed the troops of the Canadian corps to act in combination with the troops of the United Kingdom. That is the situation at the present time.

Mr. HANSON (York-Sunbury): That is restricted to serving in Britain?

Mr. RALSTON: That detail is restricted to serving in the United Kingdom.

The senior combatant officer at Canadian military headquarters has not, I understand, detailed the troops under his command to act in combination, because the troops under his command are, generally speaking troops in training, troops at base units, and so forth. There are no other troops in Great Britain except those in the Canadian corps under General McNaughton and those under Canadian military headquarters. That brings the Canadian corps under the command of Sir Allan Brooke, commander in chief of the home forces, by reason of the fact that the Canadian corps has been detailed by General McNaughton to act in combination with the forces of the United Kingdom.

Parallel with that goes this, that under General McNaughton's instructions when he went there, he is directly responsible to the Minister of National Defence and, through the minister, to the Canadian government for the control of the forces under his command. I mention that so that I may indicate what the situation would be with regard to the troops when under Sir Allan Brooke.

[Mr. Ralston.]

The situation, if one were to visualize operations in the United Kingdom, is that Sir Allan Brooke would—I have not any doubt of this—consult with General McNaughton, who is the commander of the Canadian corps and whose troops are acting in combination with the United Kingdom forces under Sir Allan Brooke, in connection with any operation in which the Canadian corps would be committed. I can say that that is done in practice. I can say that it is done on grounds of policy. I can say that it is done also because of the obvious military desirability of a commanding officer in chief consulting with the senior commanding officers of large bodies of troops under his command in connection with any tactical plans which are being made. That is the situation so far as the United Kingdom is concerned.

With regard to the troops going out of England, may I read a paragraph which I have under my hand and which sets out the situation more briefly and succinctly than perhaps I could state it.

As respects any question concerning the employment of the Canadian forces on the continent of Europe or elsewhere, the position is clear, namely, that the decision would rest entirely with the Canadian government. It was in accordance with this principle that the decision was reached last spring to employ Canadian troops in France. Since the change in the situation resulting from the German invasion of France and the low countries, no suggestion of any kind has been made to Canadian military authorities or to the Canadian government that its forces should serve beyond the United Kingdom, except in one instance when the British government requested and the Canadian government approved the dispatch of small detachments of Canadian troops to carry out special work at Gibraltar, of which the house has general information.

Mr. STIRLING: Does Norway come before that?

Mr. RALSTON: Norway came much before that. I said "since the change in the situation." Norway was before the change in the situation resulting from the invasion of France.

Mr. STIRLING: If I might interrupt, was that decision of the Canadian government arrived at before the question of Canadian troops serving in France came up?

Mr. RALSTON: The question of Canadian troops in France was provided for in the order in council of April.

Mr. STIRLING: Yes, and the minister said that a decision was arrived at by the Canadian government with regard to Canadian troops being dispatched to France.

Mr. RALSTON: That is correct.

Mr. STIRLING: And the Norway incident came before that?

Mr. RALSTON: I am trying to remember.

Mr. STIRLING: And presumably the Canadian government in that case also arrived at that decision.

Mr. RALSTON: Yes, but I am trying to remember at the moment the element of time. There is no doubt whatever that the Canadian government was consulted about the Norway expedition, and it gave its express approval. I wish to say, just to clinch that, that the decision as to the employment of troops outside the United Kingdom is a matter for the Canadian government.

I do not know that there is anything I can add, except that I might put on record a couple of paragraphs which will sum up what I have said.

The Canadian forces in the United Kingdom serve together but not in combination unless there has been a special detailing by the appropriate Canadian service authority.

Mr. STIRLING: Which there has been in this case.

Mr. RALSTON: The appropriate Canadian service authority has detailed the Canadian corps to serve in combination with the troops of the United Kingdom.

Second, the appropriate Canadian service authority can detail for service within the United Kingdom, but not for service outside, Canadian forces to act in combination. As I have said, General McNaughton has done that in respect of the corps, and General Montague, senior combatant officer at Canadian military headquarters, would have power to detail troops under his command.

Third, the appropriate Canadian service authority cannot authorize the embarkation of Canadian forces from the United Kingdom without the authority of the Minister of National Defence.

Fourth—and this comes by reason of the third clause in the order in council, P.C. 1066—embarkation for the purpose of proceeding to the continent of Europe automatically brings about serving in combination because the order in council contains an express provision. In that case the question as to whether the Canadian troops are serving in combination is not left to the discretion of the general officer commanding, Canadian corps, but assuming that embarkation has taken place by reason of the approval and authorization of the Canadian government, then automatically upon that embarkation Canadian troops serve in combination with the troops of the United Kingdom on the continent.

Mr. GREEN: What is the situation with regard to sending Canadian troops to Northern Ireland or Iceland?

Mr. RALSTON: The approval of the Canadian government is required.

Mr. STIRLING: I thank the minister for that statement, which I think will clear the minds of a great many people with regard to the coordination of military forces. He said at the beginning of his statement that the order in council applied to army and air. Is the navy under a separate arrangement altogether, or did that order in council deliberately exclude the navy from the arrangement?

Mr. RALSTON: As a matter of fact, I got a chance to look at it only just before I entered the chamber, and I cannot tell my hon. friend exactly what the situation is with regard to it.

Mr. STIRLING: Perhaps the Minister of National Defence for Naval Services can elucidate the point.

Mr. MACDONALD (Kingston City): Will the hon. member give me a moment to look at the act?

Mr. RALSTON: In the meantime there are two or three questions asked me by different members, and I might as well put the answers on the record now. The hon. member for Vancouver South asked whether the age regulation had been changed. The information is that routine order No. 138, dated November 18, 1939, provides that men who have not attained the age of nineteen will not be enlisted into any unit of the mobile force, and these instructions have never been altered. As a matter of fact, the adjutant-general is finding out from the district what the newspaper article referred to.

Mr. GREEN: I quoted last night from one newspaper article, and there is a longer one in the Vancouver *Sun* of March 25, headed "Army Calling for B.C. Youths of 18; Seeking 1200 men", and that dispatch states, in part:

> Recruiting officers here to-day were ordered to reduce the lower age limit of acceptance for army recruits from 19 to 18 as an urgent call for 1,200 men came from headquarters of military district No. 11. No recruits have previously been accepted under the age of 19.

Other extracts are:

> Youths of less than 19 will be enlisted at once, but will not be sent overseas until they are 19.

That would make it look as if some orders had been sent out from Ottawa.

However, every physically fit man between 18 and 45 that offers himself will be accepted at once, all recruiting offices have been instructed.

The 18-year-olds will be classified according to the date on which they will attain the age of 19. Those who will be 19 in the near future will be assigned to units which may go overseas shortly. Younger 18-year-olds will be placed with units which are at present being retained in Canada.

Another interesting paragraph is:

All recruits under the age of 19 are required to present their birth certificates when applying for enlistment.

That is a definite stand taken by the officers in military district No. 11.

Mr. RALSTON: My hon. friend heard me say that the adjutant-general is finding out from the district what the newspaper article refers to. I have told him that there is a routine order and that my information is that it has never been altered. It cannot do any good to emphasize the fact that somebody in the district is publishing these statements. I have given the answer I get from headquarters; we are trying to find out what the newspaper article refers to, and I will give the information as soon as I get it.

Mr. GREEN: Is there any difficulty about getting in the numbers required? It would look as if there were trouble raising the number.

Mr. RALSTON: I said to my hon. friend the other day that they were somewhat short of the previous quota, and the present quota has, therefore, an additional number in it. It has to make up the shortage on the previous quota and the present quota as well.

Mr. HANSON (York-Sunbury): May I ask the minister a question about air men. I understood him to say that the order in council was the same with respect to air men as to men in the army—that is, with reference to transfers from one branch to the other.

Mr. RALSTON: May I give what information I have.

Mr. HANSON (York-Sunbury): Perhaps I misunderstood what had passed.

Mr. RALSTON: I think my hon. friend was wrong in one respect. I will read a long statement which I have before me with regard to the question:

Prior to the outbreak of the war, candidates for appointment to commission, in the general list, permanent active air force were required to have a university degree. Shortly after the declaration of the war, this requirement was reduced to senior matriculation, or equivalent, which scheme was in effect until the commencement of the joint air training plan. Candidates selected under this scheme were appointed to commissions as pilot officers in the special reserve, subject, of course, to their qualifying as pilots.

It should be noted that prior to the outbreak of war short service appointments for 4 years service in the general list of the auxiliary active air force could be given to candidates with junior matriculation and senior matriculation in mathematics, provided that they were qualified pilots.

When the joint air training plan began, candidates for flying training no longer were commissioned, but were enlisted as A.C. 2's. The educational requirements were also reduced to junior matriculation, or the equivalent.

In August, 1940, educational requirements for wireless operators (air gunners) were further reduced to two years of high school, but no change was made respecting pilots or observers, the qualifications for which still being junior matriculation.

Therefore the change to which my hon. friend refers has no reference to pilots and observers, but applies only to wireless operators—air gunners—and therefore applies to a limited number. I have here the following note:

Your statement regarding mechanics wishing to be remustered to air crew is exactly correct and might be emphasized. Skilled mechanics to keep aircraft in condition are as necessary as pilots to fly them are.

I take it from that note that the field having trained men as ground men, they are too valuable now to be allowed to go as air crew, with that training having to be begun all over again.

Mr. HANSON (York-Sunbury): The effect of that is that they cannot expect to get in as air crew, if that is the technical term. They have to stay where they are.

Mr. RALSTON: Yes.

Mr. HANSON (York-Sunbury): Perhaps there should be a little more flexibility in a given case where a man is exceedingly promising, having enlisted under the circumstances which I endeavoured to detail. If he is forever barred from becoming an observer, that is too inflexible.

Mr. RALSTON: I do not know enough about air administration to make any reply to that except this, that I doubt very much whether they would refuse to consider the case of a man who was exceedingly promising, to use my hon. friend's own term, and would make an excellent, or perhaps an unusually good pilot. I know, however, that in the army each of those cases of transfer is considered on its merits; there is no absolutely hard and fast rule that a man cannot transfer; but we have to look to the good of

the service and decide whether or not in the new job, having regard to the additional training which has to be given, it would still be better for the service for him to transfer than remain in the job in which he has been trained.

Mr. HANSON (York-Sunbury): Generally speaking, I think the principle the minister has laid down is a good one. Where a large sum of money has been spent in training an individual in one branch of the service, the state has a right to expect a return from that investment. I would hope, however, the rule is not so inflexible that it would definitely bar a young man who is exceedingly promising from ever expecting to be a pilot or an observer. That would be too rigid.

Mr. HANSELL: I wish to bring to the attention of the Minister of National Defence a certain matter and ask if he can throw any light upon it. It relates to the recruiting that went on to a considerable extent throughout Canada for the reserve militia, or what is sometimes known as the non-permanent active militia. These young men who enlisted in the reserve army did so, I think, in all sincerity. Some of them were quite young; some were mere high school students. I think I can say that they enlisted under certain impressions. A good many enlisted with the thought that they were enlisting in a non-permanent force to be used for home defence. Some of them were going to school; some of them had nominal jobs. Their training for the most part took place in the evenings. I refer now to some of the smaller centres where officers were sent down two or three times a week. The young men enjoyed their training and were quite sincere about it.

It appears that a few weeks ago, perhaps a couple of months ago, a circular letter was sent out to these men, I do not know how extensively, whether throughout the entire country or in one section of it, reminding them of their responsibilities and their duties, and the tenor of the letter was to the effect that they might be called up very soon for active militia work. I think one phrase in the letter was that "very short notice may be given," indicating that they should hold themselves in readiness.

Mr. RALSTON: These were men who had enlisted and were members of the reserve?

Mr. HANSELL: Yes. The point I wish to make particularly is this, that in the circular letter reference was made to the Militia Act. I believe two or three sections were quoted? Section 64, the one to which I wish to refer especially, reads:

> The governor in council may place the militia, or any part thereof, on active service anywhere in Canada, and also beyond Canada, for the defence thereof, at any time when it appears advisable so to do by reason of emergency.

I have received one or two letters from my constituents, parents of some of these young men, who are amazed that their boys might be sent outside Canada.

Mr. RALSTON: They may not be, I can tell my hon. friend, without enlisting for overseas service.

Mr. HANSELL: Are we to understand that before they are sent outside Canada they reenlist?

Mr. RALSTON: Right.

Mr. HANSELL: I am glad to have the minister say that, because it will put at rest the minds of some of these people. One complaint, shall I say, that I had was from a mother whose boy was not anxious to get out of the army but wished to stay in; he thought it was a great life and so on, but his mother felt that he should complete his education before he went away. There are some very young lads in this force, some who have not yet completed their education. What would be the procedure required should some of these young chaps want to complete their high school before being called?

Mr. RALSTON: Before what?

Mr. HANSELL: Before answering this circular letter. The letter indicates that they may be called up quickly, and some of the young men are under the impression that they were fooled just a little. They were under the impression that they were joining to serve within Canada should an emergency arise.

Mr. RALSTON: They were.

Mr. HANSELL: Now they get this letter quoting this section which leads them to fancy that they may be taken outside Canada. There is nothing in the letter indicating that they will have to reenlist in some other force. That is what is troubling them a little, although my question was not just along that line. The minister has satisfied the committee that they will have to reenlist. Some of them are or have been taking this training in the evening; they are attending school in the day time. This letter is worrying them. What procedure should these young men take if they are called and if they desire to stay at home and complete their studies even though they remain in the militia?

Mr. RALSTON: Is my hon. friend asking, if their battalion or unit were called out to serve for the defence of Canada within Canada or the territorial waters thereof, what procedure they should take to avoid that service?

Mr. HANSELL: Yes. I have in mind particularly these young men who are still in high school.

Mr. RALSTON: I know of no procedure. The men have enlisted in the reserve militia. The country is not investing money in armouries and training and all that, and simply saying to a man, when he wants to go to school or has some other personal reason, that he is discharged. Surely that cannot be in time of war, and surely my hon. friend is not advocating that. They enlisted in the reserve militia. The Militia Act provides that they may be called out for the defence of Canada. It has been expressly declared that as far as sending troops beyond Canada is concerned, that will not be done unless men are given an opportunity to enlist for that purpose, but as far as the defence of Canada is concerned, the only ground upon which they could apply for discharge would be some very serious compassionate ground. There are instances of men being discharged even from overseas service, but such cases are certainly very few, and are very carefully scrutinized. If men could for personal reasons ask to be relieved of the obligations they have taken, we would not have an army, even a reserve army.

I am sorry if anyone has been misled, and I am particularly interested in my hon. friend's calling attention to this letter. Naturally I do not want to see any letters sent out which are in the slightest degree misleading. Was it sent by the commanding officer of a unit or a district, or by whom?

Mr. HANSELL: It was sent by the commanding officer. I should be glad to let the minister have a copy of the letter.

Mr. RALSTON: I should be very glad to have it.

Mr. HANSELL: I think I can get it.

Mr. RALSTON: I should be sorry to see it, but glad to have it.

Mr. HANSELL: There is one other question. Does the recruiting officer take notice of the age of an applicant? Is any minimum age fixed?

Mr. RALSTON: I am afraid I cannot give the definite age limit, but I can assure my hon. friend that, under the Militia Act, the age must be stated. I have some recollection that in the last war a good many statements made as to age were open to question, both ways as a matter of fact.

[Mr. Ralston.]

Mr. HANSELL: I realize that. I should like to say, not in serious criticism, that recruiting officers might pay just a little more attention to instructing a recruit as to his responsibility when he once joins. The minister knows how it is in a small town. All the young chaps are joining; it is great to be doing training at night, and they get a certain amount of physical exercise. They enjoy it, but they do not all recognize the responsibilities that are placed upon them when they sign the attestation form. I think recruiting officers might take upon themselves a little more responsibility to instruct these young chaps as to what they are really doing when they sign up. I have no desire to discourage recruiting in any way, but I do want the mothers and fathers to be perfectly satisfied that the young men know what they are doing, in order that complications may not arise later.

Mr. HANSON (York-Sunbury): I should like to ask the minister a question about a position which is new to me, to which my attention has been directed. I am rising only in order to obtain information. With regard to the medical examination, is any provision made with respect to social diseases and tests in connection therewith? I have been informed that there are no tests made and no precautions taken. If that be the situation—I do not assert it at all—that matter should be looked into and rectified.

Mr. RALSTON: I should think that what my hon. friend says would be fundamental.

Mr. HANSON (York-Sunbury): Yes, I think it is fundamental. I was told by a gentleman who is connected with a voluntary association having to do with hygiene and the like, that the Wassermann test is not made in connection with any of the men. I do not know much about this topic, but it seems to me that some precaution ought to be taken.

Mr. RALSTON: I do not think the Wassermann test is made. I should be very much surprised to learn that it was given generally, but there are other examinations made.

Mr. HANSON (York-Sunbury): I am told that this test is made in the United States army, and I know it is made in the British navy. I was at Hastings in Barbadoes, and there I had the thrill of my life one morning when I looked out at the bathing beach and saw half the north Atlantic squadron in the harbour, headed by the *Nelson*. I made a tour of the *Nelson*, from which a large number of sailors were ashore that day. The

gentleman who conducted us over the battleship was a surgeon. This question arose, and he told me that every man was tested before and after going on shore leave, which I thought was a wise precaution, especially in a seaport town.

Mr. RALSTON: My hon. friend is talking about men on service?

Mr. HANSON (York-Sunbury): Yes.

Mr. RALSTON: I thought he was talking about the medical examination prior to enlistment.

Mr. HANSON (York-Sunbury): It is analogous to that. Is any precaution taken to see that a prospective recruit or trainee is not an infected person? It seems to me that this is an elementary precaution that ought to be, and if it is not done, I direct attention to it.

Mr. RALSTON: I should have thought it would be as elementary as an examination of the feet.

Mr. HANSON (York-Sunbury): So should I, but I am told it is not done.

Mr. ROSS (Moose Jaw): On at least two occasions in connection with this bill the leader of the opposition has suggested a gift to Great Britain of a hundred million bushels of wheat, or of that quantity of wheat milled into flour. I have nothing to say against that suggestion.

Mr. HANSON (York-Sunbury): Will the hon. member not support it?

Mr. ROSS (Moose Jaw): I would support it, but first of all I want one point made clear. The wheat we have in Canada to-day is being held by the Department of Trade and Commerce in trust for the wheat growers.

Mr. HANSON (York-Sunbury): That may be a theory.

Mr. ROSS (Moose Jaw): There is a point that comes in here. It is all right to give away something that belongs to somebody else; but if we are to make such a gift, it should come from the Dominion of Canada as a whole, and there should be established and paid for that wheat by the dominion a price which would ensure that the western farmer would not give perhaps ten, fifteen or twenty cents a bushel more than the other people of this dominion would give. There are still in existence participation certificates in connection with that wheat, which at some future time may be sold at such a price that the farmers may participate further in the amount realized. Therefore, if my hon. friend would be willing to say "Well, we will charge that wheat up to the people of Canada at a dollar a bushel and give a hundred million bushels to Great Britain," I would be in entire agreement with what he suggests.

Mr. HANSON (York-Sunbury): I am delighted to hear this, the first response from the government benches to the suggestion I have made. As to the modus operandi and the price, I have not mentioned anything except by way of illustration. Theoretically what the hon. member has said about participation certificates is correct, but practically the position is that the government owns the wheat and that the initial payment is the final payment. The hon. member knows that as well as I do. Perhaps he will come to my support in the suggestion that the price named shall be comparable with the cost of production; perhaps he will help me in that. That would be of some benefit to his friends and, incidentally, to himself; at all events he would not be doing himself any harm. I would certainly give sympathetic consideration to the theory that the gift should be from the people of Canada and not at the expense of one particular class in Canada. I am certainly in agreement with that principle and theory.

Mr. ROSS (Souris): Some time ago we had some discussion with regard to the number of men already discharged from the army, which number is, I think, almost twenty thousand. Later, there was some discussion as to the method of medical inspection, and so on. I believe many men have been brought back from the old country suffering from such ailments as gastric ulcers, which, I understand medical men contend is much more prevalent now than during the last war. Following that up, I wonder whether it would be too much to ask that X-rays be taken of each applicant before he joins the army. There are many defects which cannot be detected in the ordinary medical examination.

Mr. RALSTON: I do not think they are X-rayed for gastric ulcers; they are X-rayed for chest conditions.

Mr. ROSS (Souris): Would the condition not be found with the one X-ray?

Mr. RALSTON: I should think it would depend upon the size of the photograph. I do not think it would be found.

Mr. MACDONALD (Kingston City): There has been a question respecting naval service outside Canadian waters. That matter seems to be governed by the Naval Service Act, chapter 139 of the revised statutes of Canada, and the Visiting Forces Act.

An order in council was passed on September 14, 1939, instructing certain ships of the Royal Canadian Navy to act in cooperation

with the Royal Navy. I believe it is the practice for the senior officer of the Canadian ships to place himself under the command of the senior British officer—the commander in chief of the western approaches, the commander in chief of the southern approaches, or whoever he may be. That seniority is regulated in the actual flotillas according to date of appointment. If a Canadian happens to be the senior officer in a group of six or seven ships, part of which are British and part Canadian, that Canadian officer would assume command of the whole lot, or vice versa.

Mr. HANSON (York-Sunbury): It is entirely a matter of seniority.

Mr. MACDONALD (Kingston City): Yes.

Mr. RALSTON: The hon. member for Souris referred to tests for gastric ulcers. My colleague the Minister of Pensions and National Health tells me—and I am sure medical members will corroborate this—that the X-ray is not a certain test for gastric ulcers. It may be in the incipient stage.

Mr. HOWDEN: If it shows the ulcer, all right; but it does not show it very often.

Mr. RALSTON: I have heard of barium meals; I believe I have been given them once or twice.

Mr. GREEN: The Minister of National Defence did not explain clearly the policy of the government respecting the recruiting of men under the age of nineteen years for the active army. If he did give an explanation, I did not thoroughly understand it. What is the government's policy in that regard? Are young men under the age of nineteen to be recruited for the active army?

Mr. RALSTON: I have told my hon. friend that the rule places the age at nineteen for mobile units. I had word from the adjutant-general to-day to the effect that no change had been made in that rule. All I can say is that I know of no change. Since my hon. friend spoke, I have sent a note to my secretary asking that the adjutant-general be telephoned at once with regard to the other newspaper article to which my hon. friend referred. I want to have the fullest possible information, and to know what is going on with regard to recruiting.

So far as I know, however, the policy is exactly as set out in the routine order to which I refer. I am referring, of course, to recruiting for mobile forces. Generally speaking, the mobile force is the active service force of Canada. It may be that this is recruiting for coastal defence, or something of that kind. I can tell my hon. friend only that I am not aware of any policy other than the one set out in the routine order. The adjutant-general is making an inquiry with regard to the situation in district No. 11.

Mr. GREEN: Over the week-end an announcement was made that no goods could be exported from Canada to any country outside the western hemisphere, other than to parts of the British empire, or to territories under British occupation or control, without a permit first having been obtained. Would some member of the ministry explain why that provision was made?

Mr. ILSLEY: Is the hon. member speaking about a permit for export?

Mr. HANSON (York-Sunbury): Beyond certain limitations.

Mr. ILSLEY: Is the hon. member speaking about exports under section 290 of the Customs Act?

Mr. GREEN: It has been announced that on and after April 1, 1941, no goods can be exported from Canada to any country outside the western hemisphere, other than to parts of the British empire or to territories under British occupation or control, without a permit first having been obtained. Such permit is issued by or on behalf of the Minister of National Revenue. What was the purpose of enacting such provision?

Mr. ILSLEY: Perhaps I should have been aware of it, but the fact is that I did not know an order in council of that kind had been passed. Although I do not like to take the time of the committee, I could give a general review of the history respecting export permits. I believe they were first given after section 290 of the Customs Act was amended in 1937, and they were designed to give the government control over the export of munitions, or of raw materials which might enter into the manufacture of munitions. If I remember correctly, under that section exports to Spain were placed under permit.

Then there was a gradual extension of the list of articles subject to permit, and a gradual extension of the countries, exports to which would be subject to permit. That was particularly so after this war broke out. Since I left the Department of National Revenue, which has control over the granting of permits, and which has, in fact, an export permits branch, I have lost track of the development of the export permits system. I believe it has been highly developed, and that some orders in council have been passed, not under section 290 of the Customs Act but under the

War Measures Act. I believe, too, that permits have been required for commodities other than munitions and the raw materials therefor.

Mr. GREEN: This covers any goods.

Mr. ILSLEY: I believe it has been extended to foods and, if there is an order in council such as that to which the hon. member has referred, apparently the provision is now extended to include all articles and all countries other than those within the British empire.

The object of the order in council would be to give the government control of shipments of goods to countries from which they might reach the hands of the enemy. I should imagine that would be the main object of an order in council of that kind, because it is the main object of the export permits system. That system is a factor in economic warfare, and is used not only in this country but in the United Kingdom. It has been extremely useful from time to time. It would work in this way: An order may be received from some neutral country in Europe—I shall not name any particular country—by an importer in that country who is known to be friendly to Germany. Export to that firm would be denied; no permit would be granted for that particular transaction. That is one of the reasons for the permit system.

Then, they are denied in other instances. There is denial when we need the goods ourselves. Even these two examples do not exhaust the list. There are numerous occasions when it is in the public interest not to permit the export of goods to take place. The general principle of restriction is, however, the one I have enunciated.

Mr. GREEN: For example, this would mean that goods could not be exported to China or Greece—

Mr. HANSON (York-Sunbury): Or Japan.

Mr. ILSLEY: Without a permit.

Mr. GREEN: —without a permit being obtained from the government?

Mr. ILSLEY: That is correct, basing it entirely upon my hon. friend's assurance that there was such an order. I must say that I did not know there was.

Mr. GREEN: I am reading from a memorandum of the Department of National Revenue.

Mr. ILSLEY: Well, there must have been.

Mr. GREEN: Can the minister say what action the government has taken to prohibit the export of hemlock logs to Japan? These logs have been going out from the Pacific coast from time to time, and can be converted into cellulose, which again can be used for explosives, and there has been considerable question about the wisdom of allowing that export to continue. I realize that actually the matter does not come under the minister's department. Perhaps some member of the ministry can tell us whether or not the export of these logs has now been prohibited.

Mr. ILSLEY: I am afraid that I myself cannot give the hon. member any information, and I am wondering whether it should not be sought under some other measure than this section 2, which relates to the voting of money for the defraying of expenses. I do not see any connection between the subject matter of this interchange, and this section.

Mr. HANSON (York-Sunbury): It is very remote.

Mr. RALSTON: I should like to put on record a couple of other answers, because the matter will come up some time and I may as well do it now. The hon. member for Cape Breton South asked me with regard to the supply of slickers for the troops. The master-general of the ordnance reports that all troops are issued with a ground-sheet which is designed to be worn as a waterproof cape, with or without greatcoat, or used as a ground-sheet.

Also units performing certain duties where sentries are posted continually are supplied with a percentage of waterproof jackets and trousers in order to meet climatic conditions.

Capes, anti-gas, which are the capes I mentioned last night, are issued to each man for use as a protection against gas. They are not to be used as a waterproof garment.

Mr. GILLIS: The letter I received came from the Cape Breton Highlanders, who at the present time are stationed at an east coast port.

Before this clause passes, there are a few remarks I wish to make. First, the Minister of National Defence is to be complimented upon the way in which he has handled his department. I notice that the minister takes a note of practically every question, and anything, having to do with his department, which appears to be bothering the mind of any hon. member, he answers to the satisfaction of—at least—the government. At any rate, he brings back an answer, and a member knows exactly where he stands with respect to his question.

My object in rising at this time—and I am sorry that the Minister of Labour and the Minister of Munitions and Supply are not at present in their seats—is this. During the last debate on the main appropriation bill I brought to the attention of the committee

two questions which had to do with both the Department of Labour and the Department of Munitions and Supply, and which, in my opinion, are important to the people for whom I attempt to speak.

In the first place, I questioned the minister as to the intentions of the government or the people who claim at the present time ownership of a plate mill located in Sydney, Nova Scotia. To operate that mill would serve two purposes. First, it would relieve unemployment. I know that within the last week the steel plant have on file 1,600 applications for employment. Also it would serve the purpose of augmenting our war effort. I pointed out at that time to the committee that if the government had no intention of doing something about using that mill, and if the people who claim it do not intend to use it, there are others who are seeking to purchase the plant. I received another letter from them. I have not, however, heard anything from the Department of Munitions and Supply as to what they have done about this matter, or whether they have done anything.

It seems to me that it is a waste of time for any hon. member to rise in his place and occupy time in bringing to the attention of the government matters which require to be attended to, if his inquiries are to be relegated to the archives and nothing done about them. The least that any hon. member who brings something to the attention of the government is entitled to is an answer, whether any action is contemplated or not; and the reason why I bring this matter again to the attention of the committee is to inform them that upon this matter, which is of considerable importance, I have not received any answer. The people who were negotiating for the purchase of that plant at Sydney have written me again. The Anglo-French Development Corporation of Montreal, who, on behalf of some clients from overseas, are probing the possibility of that plant being put into production, have written to H. J. Kelly, general manager of Dominion Iron and Steel, of Sydney, on March 13, and they inform me that up to date they have not received the courtesy of a reply from the head of that corporation.

That plant was created during the last war in exactly the same way as industries are being subsidized and financed in this war. The government of this country put four and a half million dollars into that plant. It never went into production; and I understand that, when the war was over, the federal government was sued for breach of contract and considerably more money was extracted from the Canadian taxpayer. If that plant has been damaged to a point where it will cost a substantial sum of money to put it back into production, it is the responsibility of the federal government to find out exactly what the situation is. In my opinion, the people who claim the plant do not own it. If others seek to purchase it, and it will serve the purpose of augmenting our war effort as well as reducing unemployment in that section, it is the responsibility of the Minister of Munitions and Supply at least to tell the committee what he has done about a matter of that importance. The people in our locality are interested in the question; I know that this Montreal corporation is also interested in it; and if H. J. Kelly is not concerned about answering correspondence from that corporation, it seems to me that some one should do something about it.

Another matter, which I brought to the attention of the Minister of Labour, and with regard to which I have received no answer, is the situation which exists at Hamilton, Ontario, where some forty ex-service men who were employed as shell inspectors by the Canada Car company, which is engaged in war production at the present time, were replaced by girls at a lower rate of wages and, as far as my information goes, are still unemployed.

Mr. HANSON (York-Sunbury): Is that the Canada Car or the National?

Mr. GILLIS: The Canada Steel Car.

Mr. MARTIN: That was in reference to a British order, was it not?

Mr. GILLIS: That is right. The operation is under the British technical mission. I asked the Minister of Labour if the laws of Canada, as embodied in certain orders in council, and explained to this house, apply to employees engaged in that plant. He said that they did, and that there may be responsibility for taking care of Canadian citizens who are employed in this British production organization. This was some time ago. I have not received any reply from the minister as to what has been done. Is it the intention of the government or of the Department of Labour to ensure that some employment is obtained for the men who are on the street? Is it the policy of the government to create more unemployment as far as the males of this country are concerned, with particular reference to the men who went through the last war, by replacing them with girls, because their labour can be got cheaper? If that is the policy, then we should know it.

Had either of the ministers written me a note, I would know at least where I stand. When I bring up a matter here in this chamber, it is not for fun. I like to have an answer. I ask for replies to both these questions: What is the intention of the Minister of Labour with respect to this situation at Hamilton? What is the intention of the Minister of Munitions and Supply with respect to that plate mill at Sydney, Nova Scotia? It can be used. People are trying to purchase it. The government have an equity in it. The taxpayers of Canada have practically paid for it. The people who claim it at the present time and who, according to my information, have denuded it, stripped it of its inner workings and transferred them elsewhere, are making no use of it, and I can understand why. There is no intention on the part of the people engaged in the manufacture of steel in Canada to-day to set up competition among themselves; there is no intention of expanding that industry beyond what it is at the present time. If this is a demonstration to the Canadian people of how an industry created by the taxpayers is to be handled in the aftermath of this war, then drastic changes must take place; and the attitude of this government, if they are going to allow a plant of this kind to lie idle when it might be made use of, must be taken as an indication of what their attitude will be with respect to government-assisted industries after the war.

Mr. MACDONALD (Kingston City): I think the Minister of Munitions and Supply when he is here will reply to my hon. friend and give him the information for which he has asked. While I am not acquainted with the whole story, I can say quite definitely to my hon. friend and to the committee that I do not think anybody could have pressed harder for the erection of a plate mill or for the reconditioning of the old plate mill than the officials of the Sydney steel company. I know that since last summer they have been pressing for the very thing my hon. friend mentioned. Therefore it is not through any lack of effort on their part that the plant has not been established.

Mr. HANSON (York-Sunbury): Whose fault is it?

Mr. MACDONALD (Kingston City): It is not a matter of fault at all. I think the question first of all is this: Is this mill necessary? It may or may not be. I do not think we can expect the government to assist any man who wants to establish a plant in this country. There may be enough plants already, but on that point I cannot speak. We should not speak of fault at this time.

Mr. GILLIS: That is why I am seeking information.

Mr. McNIVEN: I should like to join with the hon. member for Cape Breton South (Mr. Gillis) in paying tribute to the consistent courtesy with which the Minister of National Defence has answered the various questions brought before the committee.

On two occasions I have referred to the minimum use which is being made of facilities in Saskatchewan for military establishments, and while sitting here during the progress of this debate I thumbed the pages of *Hansrd*. I find at page 1493, an appropriation of $3,799,000, and not one public building for a military establishment and not one dollar of that amount are provided for Saskatchewan.

At page 1626 of *Hansard* I find enumerated the pay and allowances for the several military districts in Canada. I find that military district No. 12, situated in Saskatchewan, has the lowest payroll and the lowest total of allowances of any province—$1,843,000 out of a total of some $22,000,000 or $23,000,000.

Then, turning to the table which the minister put on *Hansard* last night at page 2003, I notice an expenditure of $9,500,000 for training centres at one point or another throughout Canada, and the total of that sum to be expended in Saskatchewan is less than $200,000.

The other day the Minister of National Defence announced the formation of an armoured car division and a tank corps, and as I listened to his recital of the various companies comprising each of these corps I waited in vain for the announcement of any corps originating in Saskatchewan. One after another it was always some place outside Saskatchewan.

Then he came to what was described as the intelligence corps, and I said to myself: Here is where we come in; this must have been reserved for us. But it was not to be. The minister or the department had decided otherwise. I do not blame the minister. What I really think is needed is a lesson in geography for the brass hats who comprise the military council. The map of Canada should be displayed and the position of Saskatchewan within Canada pointed out to them, together with the facilities that are there, and it should be emphasized over and over again that there are in that province one million people who desire to take a more prominent and more active part in Canada's military effort than they have been permitted

to do thus far. The military council should be told in the most emphatic terms that Saskatchewan is still a part of Canada.

I know that the minister, with his consistent courtesy and kindliness of heart, can approach those who are his technical advisers and indicate these matters to them; and if, when he is issuing his instructions to them, he will just add something of that metallic ring to his voice which he uses when he really wants a thing done, I am certain that a greater use will be made of the facilities and resources of Saskatchewan and that the people of that province will be relieved of that sense of frustration which now they resent so much.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. NICHOLSON: I had a question which I wished to direct to the Minister of Mines and Resources or to the Secretary of State. Possibly, since they are not at present in the chamber, the Minister of Finance can give me the information I require. I understand that last summer, after the fall of France and Belgium, about 4,000 aliens were transferred from Great Britain to Canada, and that, while many of these people were enemies of Hitler, the fact that they were aliens was a sufficient reason for moving them from Great Britain. I understand that some have been sent to the United States and others have been returned to Great Britain. There are in Canada quite a number of them who, I believe, are as bitterly opposed to Hitler and Mussolini as we are. I wonder whether some of those who are trained technicians might not find some employment in some of our war industries in Canada. I understand there are a number of university graduates and undergraduates who are interned, and as matters now stand, it is next to impossible, I believe, for these interned persons to be given permission to stay in Canada, even if it is proved that they are very much opposed to Hitler and our enemies. What is the possibility of some of these people being permitted to make a contribution in Canada towards the defeat of our common enemy?

Mr. ILSLEY: This matter is not in my department and I have not very definite knowledge about it, but my understanding of the situation is that the Canadian government acts in accordance with the wishes of the British government in reference to the detention or the release or disposition of these internees. I do not think the Canadian government takes any responsibility whatever for releasing them on its own initiative. I believe that is left entirely to the British government.

Mr. NICHOLSON: I see the Minister of Mines and Resources has entered the chamber. Could he make a statement about the policy of the Canadian government as it affects enemy aliens who were transferred to Canada last summer and who are still interned here, should it be established that they are opposed to Germany and to our enemies? Many of them, because of their opposition to Hitler, left the countries which have now been overrun by Germany and took refuge in Great Britain. I realize that it is difficult to decide in every case whether these persons are genuine anti-nazis or whether they might be spies. There is a real difficulty there, but in the event of its being established that they are anti-nazis, what are the possibilities of our immigration authorities in Canada granting them, especially in the case of highly-trained mechanics, the right of employment in this country? Or what is the possibility of undergraduates continuing the university work which they were doing in Great Britain at the time they were transferred to Canada?

Mr. MacNICOL: Had you not better give Canadians a chance first?

Mr. CRERAR: The matter just raised does not come under the direction of the Department of Mines and Resources, but is under the Department of the Secretary of State. My recollection at the moment is this. When many of these individuals whom the British government wished to send to Canada for internment during the war were brought here, it was discovered in Great Britain, I believe, that a number of them were professedly anti-nazi. I am not going to pass any opinion on the procedure which the British government adopted in selecting the aliens whom they wished to send to Canada, but in any event these aliens came under the direction of the British government, and we could not very easily admit them to residence in Canada without a proper examination. I speak subject to correction when I say that a number of them have been returned to Great Britain, where I have no doubt they are rendering useful service in civilian life. As I stated, however, the matter is not one that comes under the control or direction of the department of which I have charge.

Mr. NICHOLSON: Would it not come under the direction of the immigration branch to decide whether these people might be permitted to remain in Canada? The point I am making is that some of them are as anxious as we are to see Hitler defeated, and they feel they are not making a valuable contribution behind barbed wires. If it can be established that they are anti-nazi, can the immigration branch make it possible for them to remain here? Some have returned to Great Britain and some have been transferred to the United States, but unless they can produce evidence that they have relatives in Canada, I do not think it is possible for them to remain here, although some of them are highly trained technicians and might make a valuable contribution in some fields in which we have a shortage. Have we in the immigration branch the machinery that could make it possible for them to remain?

Mr. CRERAR: I believe there have been a few internees who have first-degree relatives here and who have been released under a measure of probation; that is, they have not been given permanent landing, as we term it. There are however, other considerations that enter into the question of admission to Canada beyond the fact that a person may be an anti-nazi, and these are matters that we have to supervise carefully. I believe that several hundred of these people were returned to Great Britain at the request of the British government, and if they had not been taken up accidentally or in error when they were sent to Canada they would not have reached this country but would have remained in Great Britain. When, therefore, they returned to Great Britain their position was the same as it was before they were taken up.

Mr. MacINNIS: It is too bad that the Secretary of State is not in the house at the moment, because this is an important question, and there is not much sense in continuing the discussion as long as there is not a minister present who is able to give the government's policy with regard to it. I have been following the matter fairly closely and have had several communications with the Secretary of State.

I understand that the British government sent a special representative to Canada to look into cases of persons who were taken up in Great Britain after the fall of the low countries and France last year. I understand, as the director of immigration has said, that a number of them have been returned to Great Britain. I remember seeing recently an editorial comment in the *New Statesman and Nation* congratulating the British government on their work in that regard; it has turned out to be very satisfactory. I understand that this representative, Colonel Patterson, if my memory serves me aright, was complimentary as to the assistance received from the Canadian government in trying to sort out these people. But my understanding of what the Secretary of State has told me is that even if they are found to be anti-nazi and people who should be and would be released on their return to Great Britain, the policy of the Canadian government so far has been not to release any of them in Canada, that when they are certified as persons who can be released, they have to be returned to Great Britain. I think it is desirable, if some of these wanted to stay here and it was found convenient, that they should be allowed to stay; they would be an asset to our country as I am sure they are to Great Britain.

Mr. RALSTON: On this or some other section I wanted to give the committee information in reply to some questions. The hon. member for St. John-Albert (Mr. Hazen) asked some questions with regard to fires which had occurred and the safeguards observed in connection with the building and use of military establishments. I think it is due to the officers of the department that this should be on record, and I give my hon. friend and the committee the information I have from the quartermaster-general.

One question was whether instructions were given to officers to observe the by-laws of municipalities for preventing fires. The answer is that no recent instructions have been issued in the exact terms the hon. member used; but under standing instructions for engineer services in Canada, district engineer officers follow local and fire underwriters' requirements as far as practicable. Municipal, provincial and dominion fire marshals are encouraged to inspect the properties and report. Definite instructions are issued regarding precautionary measures for preventing fires.

The hon. member spoke of certain fires at Fredericton, Saint John and Yarmouth. The cause of the Fredericton fire has not yet been established. There is suspicion of incendiarism. The O'Regan fire was caused by carelessness of an individual, and was not due to the heating and lighting system. It was apparently started by a cigarette thrown into floor-sweepings. A report of the proceedings at the court of inquiry has not yet been received. The Yarmouth fire was apparently caused by the explosion of a heating stove while the building was unoccupied.

The hon. member brought to my attention a report of January 16 by Colonel E. J. Mooney, building inspector, made to the Saint John city council, stating that the defence department were doing work without building permits. He said, I think, that Colonel Mooney spoke to Major Blake, district engineer officer, who informed him that the engineers could design and build to their own ideas and that the local civic authorities had no jurisdiction. Major Blake, district engineer officer at military district No. 7, states definitely that he never was approached by Colonel Mooney, and that Colonel Mooney has never spoken to him regarding building permits or inspection of military buildings.

The hon. member said also that there were infractions with regard to fire prevention safeguards; he spoke of furnaces in the exhibition building being placed on thin concrete slabs on top of wood floors. He spoke of stovepipes being run through wood partitions without proper insulation, and said the fire department had to be called to extinguish fires in these buildings. He said that in the exhibition buildings there were five stoves with chimneys all connected with seven-inch jointed stovepipe running through fibre board false ceiling and floor, and then to the roof, the chimney without any sort of insulation; that it must have been red-hot at times, and that this would set fire to the dust.

The information I got from the quartermaster-general is that as far as the furnaces are concerned, they were placed on four-inch hollow tile and under that there is, not what I would call a thin concrete slab, but a four-inch concrete slab. The pipes from these furnaces were carried to brick chimneys which were specially built; there were, at various points in the building, seven or eight small stoves from which stovepipes had to be carried up through the roof. All pipes had protective arrangements and all were inspected by the fire underwriters' association representative.

The hon. member said also that the fire underwriters had looked into the situation and made two reports, the first showing that there were great fire hazards, which had been corrected. The second report said that not only had the former hazards been replaced but greatly increased. He spoke of the exhibition building being destroyed and one man having lost his life.

The reply is that the exhibition buildings at Saint John were inspected by a representative of the fire underwriters' association in company with Major Blake in the early winter of 1939-40, and that all suggestions made by the representative were carried out. The buildings were again inspected by the same representative later, and he expressed himself as completely satisfied that all reasonable precautions were taken. No report has ever been made to military district No. 7 by the fire underwriters' association. It is not known how the unfortunate man who lost his life came to be in the building.

Then my hon. friend spoke of the temporary huts, stating his information was that they were constructed of light inflammable wood with pitch roof, false fibreboard ceilings, with jointed stovepipes running up through to peak, with no insulation whatever.

As my hon. friend knows, the war-time hutments must necessarily be of wood and of the cheapest possible construction. Efforts have been directed against the occurrence of fires. All buildings are given a plentiful supply of fire-extinguishers, fire-buckets and so on, and in addition a good system of outside hydrants is provided in all camps. All stovepipes are protected by standard equipment where they pass through ceilings to the roof. We have had several thousand similar huts in Canada, and not had one of these destroyed by fire from the stovepipes, indicating that the stovepipe protection is adequate.

Then the hon. member asked whether the fires had been investigated and who investigated them. All fires, including those referred to by the hon. member, are investigated by a court of inquiry. The proceedings of the courts of inquiry are sent to national defence headquarters for review. Proceedings in connection with the exhibition fire at Saint John have not yet been received, and consequently no action has yet been taken. In any event where evidence indicates that disciplinary action should be taken, this action is taken by the adjutant-general.

Mr. HAZEN: I wish to thank the Minister of National Defence for his reply to the questions I asked him the other evening.

Some days ago I asked the Minister of National Defence for Naval Services in connection with the pay of officers and men in the army as compared with the pay of officers and men in the navy. The minister told me he would be glad to make a complete statement the following day. I know the minister had no opportunity the next day to make a statement, but I would appreciate it if he would make a statement on the subject as soon as it is convenient to him.

Mr. MACDONALD (Kingston City): I shall get the statement and give it in a few minutes.

Mr. HANSON (York-Sunbury): The statement made by the Minister of National Defence with respect to the fire position in

Fredericton is, I think, correct. I believe the huts are amply protected; I looked at them myself. There is, however, a question with respect to compensation for the exhibition buildings that were burnt. Does that come under the hon. minister's jurisdiction, or is that another branch? Some question is still open there. I got the question of free rent settled satisfactorily to everyone, I think, but it was without predudice to the claim of the association for compensation. I am wondering whether that is still open. Perhaps it does not come under the minister's jurisdiction, or he does not know.

Mr. RALSTON: No, that matter has not come up to me.

Mr. CHURCH: This bill is simply a post mortem. A great deal of this money was spent under orders in council passed by the cabinet, sometimes when parliament was in session. We have the ordinary budget, the gigantic main war budget, and now this one. These supplementaries would not be so large but for the fact that this House of Commons was Geneva-minded and depended on Kellogg pacts, collective security, Locarno agreements, the League of Nations, and all that sort of thing, with the result that we threw away our defences. Why, three years before the war we were spending twice as much on postage stamps as we were spending on the defence of the country.

Coming to this particular bill, I say to the government that in the Toronto district there is a great deal of dissatisfaction over present arrangements with regard to the foreign exchange rules for travel across the border. We are altogether too Washington-minded in connection with our fiscal and business affairs. The people of the United States would respect us much more if in our business deals we were able to take care of ourselves instead of doing anything they asked and seeming to try on every occasion to appease them. Yesterday the minister referred to the trade agreement between this country and the United States. That agreement was for three years and was to expire in 1940, but it has been continued indefinitely. It never was in the interests of the people of this country. There is altogether too much red tape with regard to the operations of the foreign exchange control board, and their rules and regulations are too rigid. Our imports from the United States are much larger than they were a year ago, and are $40,000,000 more than in 1939-40, and almost all these goods could be manufactured right here in Canada. Our imports from the United States require large amounts of United States exchange, but we find that under the foreign exchange control board the tourist trade has been practically ruined. It has been carried to an absurdity, and is a restraint of trade. I have here bulletin No. 4 of this board, which is issued to all the banks, railways and so on, dealing with travel by residents of Canada. It is a direct prohibition over parliament's head when the parity of the dollar could be had.

I claim that long ago the government should have had a policy in connection with these matters. To-day, as I see it, this government has no foreign policy at all. For the last five years I have been trying to find out what our foreign policy has been, and as far as I can make out we have none. This question of foreign exchange has given a great deal of trouble along the border among retail and wholesale men. People who want to go to the United States for a week-end trip are not allowed to do so, yet our United States cousins can come to Canada in their luxurious cars, travel throughout the country and visit our summer resorts with practically no restraint at all. Why, the other night, fifteen hundred of them got on an excursion train at Buffalo to come to some special function in Canada. I wonder what kind of control we have at the border. I know it is impossible for a business man to get permission to go to the United States on business matters without going to a great deal of petty annoyance and trouble. In my opinion the government of the day, under the lease-lend legislation which applies to this dominion as well as to other countries, should negotiate with Washington for the parity of the Canadian dollar, notwithstanding any law, statute, custom, usage or agreement to the contrary, and make a treaty from the lease-lend bill. The other night I said the government has power to enter into agreements such as the one between Canada and the United States. Well, the United States has a form of sub-lease-lend parity by treaty or contract with some of the central American countries, and I think that could also be done as far as Canada is concerned, if we are to continue to buy so much of their imports. Canada is being discriminated against.

I believe there has been too great a use of the big stick, and too much scarecrow, idle talk, telling what taxes you are going to make the public pay next fall, and all that sort of thing, which has had a serious effect on industry and business. This always catering to Washington's way of thinking, and doing as they do, is another appeasement measure. Our whole policy seems to be one of appeasement, and Canada is getting the worst of it all along the line in connection with exchange matters and treaties on agriculture and tariff matters, and no give and take.

There is one other point to which I should like to refer in connection with this vote. I understand the government have had before them for over a year requests from various boards of education throughout the country for assistance in connection with technical education for trainees for war industry. I believe a request was forwarded for a grant, bonus, subvention or subsidy to the central technical school in Toronto for a new building or wing, in connection with this programme for the extension of war technical education. For many years the huge cost of training people in technical schools has been paid by the cities, although this work has been to the advantage of industries of all kinds in peace and war alike, and at this time it is particularly to the advantage of the various war industries. These classes go on day and night, for almost the whole twenty-four hours. If the government of the day want to extend that training, I believe the time has come when provision should be made for helping these schools. An immediate survey should be made with a view to adopting a national scheme of aid, on a standard plan, applicable to all technical and vocational schools, so that industrial war plants may not be starved for trained men. I believe further that our economic system would thus be reorganized to increase the agencies of employment, provide additional work and increase the purchasing power of the Canadian people by such a national system of aid to our technical and vocational schools by direct federal and immediate aid.

The minister has spoken of the luxuries that the people may have to cut out. I believe this amount of $135,000,000 might be cut in half if the government would eliminate some of the luxuries this country is enjoying at the present time. For instance, we have the luxury of a duplicate railway system. I have never urged that they should be amalgamated, but I believe something should be done to bring about greater co-ordination and cooperation between the railway systems, particularly in these times of war. That would save a great deal of money. A survey should be made of our transportation systems, covering all common carriers. The last time such a study was made, transportation by air was only in its infancy and was not a factor in connection with passenger and freight traffic in Canada. A board should be set up to investigate the question of the common carriers, by water, road, rail and air; the functions each can perform, and what can be done to bring about greater coordination and cooperation in war effort by eliminating duplication and bringing about greater efficiency. In my opinion such a study should be conducted by an independent board of three members, and their inquiry should deal with the whole question of transportation on a long-range plan and so aid the war and employment and agriculture and industry.

In conclusion, Mr. Chairman, I believe the government should do something more for the soldiers who are going to fight our battles. I do not believe they were given proper consideration in either the main budget or the supplementary budget. I believe that for the period of the war and eighteen months after all foreclosures on homes owned by men serving in his majesty's forces overseas or elsewhere should be forbidden, and that the government should pay the interest due, charging it to the account of the mortgagor for the aforesaid period. A national system of soldier insurance should be started at once.

A return has been brought down in the house indicating that out of this supplementary budget, from September, 1939, to February, 1941, the Canadian Pacific Railway company was paid $2,628,832.90 for the transportation of navy, army and air personnel, while the Canadian National was paid $2,573,-226.28 for the same purpose during the same period.

The two railway companies are making a great deal of money. The gross earnings of the Canadian Pacific Railway were $151,280,-699 in 1939, and $170,964,897 in 1940, or an increase of 13 per cent. The net earnings leaped from $7,115,619 to $35,639,438, an increase of about 300 per cent. The other railway company has just as good a statement. I believe these companies could well afford to give free transportation to the soldiers, in view of the huge increased revenues and the federal aid they get, and not prosecute half a dozen soldiers. I can see no reason why food on the train should not be sold for 25 cents or 35 cents, the same as here in the parliamentary cafeteria. Why should the soldiers not receive the same treatment? I would ask the minister to make a statement before this measure is adopted, and to tell us about the hitch-hiking order, which is an intolerable nuisance, and illegal. Parliament has not yet made hitch-hiking a military offence. That order is a nuisance because, so far as I can see, nobody has asked for it, certainly not the Ontario government. It is said that the railways did not ask for it, although I was told by a railway official that they did. It would be well to give that matter further consideration, and rescind the hitch-hiking order.

Then there are one or two other things I should like to see done. An appeal has been made by Marshal Petain to the United States government with respect to the blockade against food shipments. As we know, this country is planning the expenditure of a large sum of money for shipbuilding and transportation facilities. I hope our government will have nothing to do with the appeal of Marshal Petain to break the blockade because, if it does, it will injure one of the most important factors in winning the war. It has been shown that a great deal of the food which is supposed to go to France does not reach there. An article of March 8 in a leading French paper states that 265 food trains came to Paris, and 241 of them were drawn out of the country in one month, during the night, to Germany.

I wish to refer to the work of the Canadian Broadcasting Corporation and the British Broadcasting Corporation. I believe that work should be coordinated, and that the government of the day should have some control over the class of talk, and censor anti-British talk.

I would hope that the minister would give consideration to soldier fares, and to those six soldiers who have been sent to prison as a result of some misuse of tickets. They were first offenders. After all is said and done, this involves only a small amount of money, a few dollars, and their officers want them back and spoke well of them. This is the last chance we will have, probably, to bring grievances respecting soldiers before the house.

I cannot see why the government does not negotiate with Washington an agreement by which there would be some parity of the dollar. That agreement could be made, I suggest, the same as ordinary trade agreements are made, or we could cut out half the imports altogether. If that were done, some amendments could be made to the present absurd exchange control legislation. The whole thing is an intolerable nuisance. When we go into department stores, on almost every counter we see imports from the United States on which exchange has to be paid. Almost all those articles could be manufactured in Canada. Yet nothing is being done about the matter.

Mr. MACDONALD (Kingston City): I have here a statement showing the comparative rates of pay in the three service forces. I am sorry that it does not go beyond the pay of captains in the army and lieutenants in the navy, but I believe it will give the hon. member for St. John-Albert the information he wished to have. If satisfactory, I should be pleased to have it placed on *Hansard*.

The table is as follows:

Comparative Rates of Pay

		Maximum per diem
Lieutenant (army)	$5 + M.A. $45 + $12 for each of 2 children. If not in quarters, allowance in lieu of quarters, rations, etc.—$1.70 per diem.	$9.00
Sub-lt. (navy)	$4 + M.A. $1 + 25 cents per child to maximum of 4. If not in quarters, allowance in lieu of quarters, rations, etc.—$2.10 per diem.	$8.10 Eligible for hard lying money of 25 cents per diem in destroyer and 50 cents per diem in smaller vessels.
Flying officer (air force)	$5 + M.A. $45 + $12 for each of 2 children. If not in quarters, allowance in lieu of quarters, rations, etc.—$1.70 per diem.	Plus $2 per diem flying pay for general list. $9.00 + $2.00
Captain (army)	$6.50 + M.A. $50 + $12 per child to maximum of 2. If not in quarters, allowance in lieu of quarters, rations, etc.—$1.70 per diem.	$10.65
Lieutenant (navy)	$5 (up to $6 by triennial increments of 50 cents) + M.A. $1 + 25 cents per child to maximum of 4. If not in quarters, allowance in lieu of quarters, rations, etc.—$2.35 per diem.	Specialist pay of 60 cents per diem if a qualified specialist officer. Eligible hard lying money of 43 cents per diem in destroyers and 75 cents per diem in small vessels. $10.95

Comparative Rates of Pay—*Concluded*

		Maximum per diem
Flight lieut. (air force)..	$6.50 + M.A. $50 + $12 per child up to 2..... If not in quarters, allowance in lieu of quarters, rations, etc.—$1.70 per diem.	Plus $2 per diem flying pay if on general list. $10.65 + $2.00
Sergeant (army)	$2.20 + M.A. $35 + $12 per child up to 2 ..... If not in quarters, allowance in lieu of quarters, rations, etc.—85c. per diem.	$5.00
Petty officer (navy).....	$2.40 (up to $2.60 by triennial increments of 10c.) + M.A. 75c. + 25c. per child up to 4..... If not in quarters, allowance in lieu of quarters, rations, etc.—$1.45 per diem.	Eligible for hard lying money of 15c. per diem in destroyers and 30c. per diem in smaller vessels. $5.80
Sergeant (air force)....	$2.20 + M.A. $35 + $12 per child up to 2 ..... If not in quarters, allowance in lieu of quarters, rations, etc.—85c. per diem.	$5.00
Corporal (army).....	$1.70 + M.A. $35 + $12 per child up to 2 ..... If not in quarters, allowance in lieu of quarters, rations, etc.—85c. per diem.	$4.50
Leading seaman (navy)..	$2.10 + M.A. 75c. + 25c. for each child up to 4..... If not in quarters, allowance in lieu of quarters, rations, etc.—$1.45 per diem.	Eligible for hard lying money of 13c. per diem in destroyers and 25c. per diem in smaller vessels. $5.30
Corporal (air force)....	$1.70 + M.A. $35 + $12 per child up to 2 ..... If not in quarters, allowance in lieu of quarters, rations, etc.—85c. per diem.	$4.50
Lance corporal (army)..	$1.50 + M.A. $35 + $12 per child up to 2 ..... If not in quarters, allowance in lieu of quarters, rations, etc.—85c. per diem.	$4.30
Able seaman (navy)....	$1.85 + M.A. 75c. + 25c. for each child up to 4..... If not in quarters, allowance in lieu of quarters, rations, etc.—$1.45 per diem.	Eligible for hard lying money of 13c. per diem in destroyers and 25c. per diem in smaller vessels. $5.05
Lance corporal (air force)	$1.50 + M.A. $35 + $12 per child up to 2 ..... If not in quarters, allowance in lieu of quarters, rations, etc.—85c. per diem.	$4.30
Private (army)	$1.30 + M.A. $35 + $12 per child up to 2 ..... If not in quarters, allowance in lieu of quarters, rations, etc.—85c. per diem.	$4.10
Ord. seaman (navy)....	$1.50 + M.A. 75c. + 25c. for each child up to 4..... If not in quarters, allowance in lieu of quarters, rations, etc.—$1.45 per diem.	Eligible for hard lying money of 10c. per diem in destroyers and 20c. per diem in smaller vessels. $4.70
A.C. 2 (air force).....	$1.30 + M.A. $35 + $12 per child up to 2 ..... If not in quarters, allowance in lieu of quarters, rations, etc.—85c. per diem.	$4.10

Mr. FRASER (Peterborough West): At present the non-permanent active militia units have to buy their own duplicating machines and the paper for those machines. They have also to pay the service charge on telephones. That money is taken from the pay of the men, non-commissioned officers and officers. I believe all these different non-permanent active militia units have bought duplicating machines and typewriters. It means that a dollar has to come out of the pay of the men. Could there not be some provision to take care of that. I know the government pays for some of the stationery. It also pays for long-distance telephone calls, if all details are sent in. But Ottawa expects that there will be a telephone in connection with these non-permanent active militia units, although Ottawa does not pay for those telephones.

Mr. RALSTON: I shall look into the matter to which the hon. member has referred. I wish to say, however, that it is certainly not deducted compulsorily from the pay of the men. It may be that the men pool their pay, and that it is paid out of a fund. There is certainly no compulsion about taking it out of the pay of the men. As a matter of fact, there have been complaints that we were paying too much in connection with these non-permanent active militia units, and particularly to officers. If, as I say, any expenses are paid out of the pay of the men, it is because the men pay it voluntarily into a regimental fund.

Mr. FRASER (Peterborough West): I did not say that the government took it out of their pay.

Mr. RALSTON: I thought that impression was given.

Mr. FRASER (Peterborough West): The different units take it out themselves, in order to pay those expenses.

Mr. HANSON (York-Sunbury): What is meant by "hard lying money"?

Mr. MACDONALD (Kingston City): In the naval service there are men whose accommodation is not what it might be on shore; consequently they are given a little extra allowance. This would refer to persons serving on destroyers, or other small ships.

Mr. HANSON (York-Sunbury): He has a flock mattress instead of a hair mattress; is that correct?

Mr. MACDONALD (Kingston City): He has not even that.

Mr. RALSTON: One or two questions were asked which I might answer at this time. In the first place the hon. member for Vancouver South, who, unfortunately, is not in the chamber at the moment, asked a question respecting age limits. I should like to give the committee the information I got in connection with the matter about which he spoke this afternoon, namely, the enlistment in Vancouver of men under nineteen years of age. I believe the facts are as I suggested to him, namely, that the enlistments are being made, not in mobile units, which were the units mentioned in the order to which I referred this afternoon, but, as I suggested, in coast defence units. The information I have is that we telephoned military district No. 11 this afternoon to ascertain the reason for the press announcement by Colonel Goodman, and were informed that recruits between the ages of eighteen and nineteen were being enlisted, but only for coast defence units such as artillery, signals, and so on, and not for units of the mobile force, referred to in routine order 138-39.

Military district No. 11 also stated that these young men between eighteen and nineteen were definitely recruited for home service in coast defence units, although on reaching the age of nineteen they would be given an opportunity of volunteering as reinforcements for overseas service. In the meantime they are replacing, in the coast defence units, personnel of nineteen years and over who have volunteered for service overseas.

Another question was asked by the hon. member for Bow River with regard to airmen who, I understood him to say, were sent from the far west to Toronto, simply to get their uniforms, and were then sent back again. My memorandum states that there are three manning depots in the service: No. 1 at Toronto; No. 2 at Brandon, and No. 4 at Quebec. When recruits are enlisted, they are sent to manning depots for a period of four weeks. During this period they are outfitted with uniforms, inoculated and given the usual instructions. They are then posted to schools throughout the country. In some instances, on account of the overcrowded condition of the depot at Brandon, it has been necessary to post recruits from the far west to the manning depot at Toronto, but this practice is not general.

Mr. JOHNSTON (Bow River): I was informed about this by some of the air force men who were coming down here. I particularly asked them why they came all this way just for uniforms, and they assured me solemnly that that was all they came for.

That was why I was so astonished that people would come practically 2,000 miles for no other purpose than to get uniforms. It seemed to me strange.

Mr. RALSTON: If my hon. friend had that information, although it seems incorrect, I can quite understand why he asked the question.

The hon. member for Lincoln asked a question with regard to a canvass of army personnel for the war savings campaign. I told my hon. friend at the time that I had no knowledge of any instructions having been issued. I now learn that a circular letter was issued, the effect of which I will give.

On February 27, 1941, a circular letter was sent to all district officers commanding, general officers commanding in chief, Pacific command, Atlantic command, commandant Royal Military College, et cetera, over the signature of the adjutant-general, advising that it had been decided that, rather than have civilian committees conduct a canvass of army personnel, the men should be approached by their own officers with a view to stimulating interest in the war savings campaign.

Request was made that commanding officers be instructed accordingly, they in turn to impress upon officers that every effort should be made to encourage soldiers to purchase war savings certificates.

It was suggested that best results would be obtained by junior officers explaining the subject to the men, and stressing advantages of such an investment and the necessity for all citizens, civilians or soldiers, contributing to Canada's war effort.

The letter goes on to say:

> To this end all officers should be called upon to approach this subject with enthusiasm and do all in their power to encourage the purchase of war savings certificates by serving personnel.

As I say, I had no knowledge of that letter having been sent, and I hasten to give the committee the information.

Mr. MacNICOL: I should like to get some information from the minister as to the future plans, if any, which will be followed in constructing huts of one kind and another in any camps which are to be set up for the department. I have in mind some huts along the esplanade at Toronto, east of Yonge street. Those who go to Toronto by train arriving in the morning will have noticed, on the south side of the tracks, about forty or fifty huts used in connection with the air service training plan.

I want to present to the minister an example of what seems to me to be indecision somewhere in the planning for construction of such camps as that. Those buildings were erected last summer, and for quite a long time there was no decision as to how they were to be heated. Talk among the trade in Toronto was that either hot-air furnaces or stoves would be used, but no one seemed to know. A general feeling arose that it would be entirely impracticable to use either hot-air furnaces or stoves, because either of those systems might cause fires. After considerable delay, Melvin Thomas, a competent engineer, perhaps one of the best in Canada, was engaged, and he planned what in my judgment is, under the circumstances, as good a steam-heating plant as could be installed. I wondered at the time why it took so long to make a decision. By the time the steam-heating plant was installed, the season was well advanced, and the cost must have been a great deal more than would have been incurred had a decision been made earlier in the year, and had the plant been installed when the weather was less severe. I hope that in the future the department, when constructing buildings of that kind, will decide at the beginning how the engineering is to be done, so that construction can be carried out at the least possible cost to the country.

I notice that large quantities of good material are piled round those buildings. In view of the fact that the salvage department is asking everyone to save paper and items of that sort which are of comparatively little value, it would be worth while investigating what use could be made of these large quantities of material, which appear to have some value.

Mr. RALSTON: Would this be the camp where the Norwegian airmen are?

Mr. MacNICOL: No; it is the airport east of Yonge street, along the esplanade.

Another evidence of indecision may be seen in connection with the heating of the buildings in exhibition park which were taken over by the government. A strange thing occurred in that connection, although I do not suggest that there is anything wrong. As the Minister of National Defence for Air said the other evening, much has had to be done so rapidly that everything was not done in, perhaps, as businesslike a way as it would have been had the urgency been less. What I am now going to refer to may be another example of that indecision which I hope is past. It has to do with the heating of the government building in the exhibition grounds in Toronto. Tenders were called for, and several firms tendered.

Mr. RALSTON: Pardon me; is my hon. friend referring to the exhibition buildings?

Mr. MacNICOL: At the exhibition buildings. One contractor got the job, but to my amazement he had to buy the boilers from a contractor against whom he had competed.

Mr. HANSON (York-Sunbury): That is team-work.

Mr. MacNICOL: And the boilers themselves came from Brantford. I admit that they make exceptionally good boilers at Brantford, but quite close to the exhibition grounds is the John Inglis company plant, which also make good boilers, and have made them for the past forty years. It struck me as most peculiar that the successful contractor had to buy the boilers from an unsuccessful tenderer, and that the boilers themselves came from a town well up to one hundred miles west of Toronto.

If you go to Camp Borden you will see—again—ample evidence of lack of preparation in buying supplies. I am not finding fault with the buying, but it is the fact that there are large quantities of stock which will not be used in Camp Borden for many years to come. Take, for example, iron soil pipe. Unless it has been recently moved away, there are large piles of soil pipe which, it was explained to me, are not needed and will probably not be used for a long time.

In bringing these three examples—

Mr. RALSTON: Four.

Mr. MacNICOL: —to the attention of the minister, I am not finding fault; I am not saying that everything is not all right. All I hope is, that from now on, if the departments of national defence are going to undertake, with their own architectural and engineering staffs, the erection of buildings, before tenders are called for, or before construction commences, the plan will be thoroughly decided upon, so that it will be completed with the utmost expedition and at the least cost to the country.

All that I have recorded is water under the mill; nothing can be done about it; but I hope that the recital of these instances will result in such measures as will ensure that future plans will inure to the benefit of the country, as regards efficient construction and low costs.

Mr. RALSTON: I appreciate the spirit in which my hon. friend has presented these matters. He understands, of course, that I am not familiar with the circumstances with regard to the heating of the huts for the air force, to which he has referred. I know that heating equipment and materials were very difficult to get last fall and early winter, and that, in connection with the army huts, the Department of Munitions and Supply was pressed to the limit to get heating apparatus. I know also that the air force had a different system of heating from that of the army huts. I understand that this is an equipment depot—something was said to indicate that—and it may be that the system of heating for the equipment depots was different from that for the ordinary huts. I shall certainly call the attention of my colleague the Minister of National Defence for Air to the matter. I know a little of the engineering capabilities particularly of the man who was the construction scout, as it were, in connection with these matters. He may be the gentleman to whom my hon. friend has referred. Mr. Goldie is the man to whom I refer. He was out on all these air force construction jobs. I am not sure whether he is from Toronto, but I understand he is an excellent man and a contractor himself, and I am sure that he would endeavour to have the plans made to the very best advantage.

I have also made a note about the salvage matter, but perhaps "salvage" is not the right word. My hon. friend was speaking of new materials, was he not?

Mr. MacNICOL: Yes.

Mr. RALSTON: So far as the army is concerned, we have arranged to ship such material to other jobs where it was not needed for the particular huts for which it was intended.

So far as the heating of the exhibition building is concerned, I am not as shocked as my hon. friend is—perhaps I should be—at the fact that the successful tenderer purchased boilers from an unsuccessful tenderer.

Mr. HANSON (York-Sunbury): That is not the way he put it.

Mr. MacNICOL: Yes, boilers controlled by a competing tenderer.

Mr. RALSTON: I do not know just what he means by that. I do not think he meant that anybody forced this transaction. Perhaps he thought that a man who was able to sell boilers to the lower tenderer might have been given the contract himself, but I can well imagine that a man might be in a position to sell boilers cheaply and at the same time be higher in his tender than the successful tenderer so far as fittings, labour and installation were concerned. I would take it that it was an over-all contract let by the Department of Munitions and Supply at competitive prices and that the lowest tenderer got the contract. If he was able to purchase boilers from another tenderer, and happened to pay more for them, that is just too bad for him.

My hon. friend does not suggest that there was any compulsion, that he had to purchase the boilers from his competitor.

With regard to the plans for buildings, my hon. friend knows—he would have known if he had been in any of the service departments last fall—that there were times when buildings had to be commenced on sketch plans. I know that in many instances—and this must have been the situation in connection with air force buildings as well—the plans had to be completed as the work went along, because there was tremendous pressure to get the work done both for the army and for the air force. I do not believe that even yet I can give my hon. friend an undertaking that buildings will not be started before the plans have been completed. My hon. friend may know that many of the buildings which were let on contract were let on a fee basis, and the plans were completed as the work proceeded. The district or local engineer had to site the building as the work proceeded in order that there might be no delay and to avoid the charge that men were busy on drawing-boards when the timber and other materials were there ready to be put in place. My hon. friend realizes that if we possibly could we should be very happy indeed to have all the plans completed before a tap was struck, but that was impossible in the emergency that prevailed during last fall and the early winter. I shall draw my hon. friend's remarks to the attention of the Minister of National Defence for Air and take to heart myself what my hon. friend says so far as the army service is concerned.

Mr. EDWARDS: Mr. Chairman, I think I should be remiss in my duty to my constituency if I did not say something with regard to this bill and pay my respects and the regard of my constituency to the ministers in charge of our respective war services for the splendid job they have done in carrying on Canada's war effort. I have the honour to hold the seat formerly represented in this house by none other than the Right Hon. R. B. Bennett, that distinguished Canadian who holds a warm place in the hearts of the people of Calgary West. I am not unmindful of the fact that at this moment he is doing a worth-while job on behalf of Canada in Great Britain.

I am also reminded of the feeling that exists not only in Calgary but in other parts of this fair dominion of ours, a feeling of pride and satisfaction at the manner in which our war effort is being conducted in this war in comparison with what took place in the last war some twenty years ago.

I particularly wish to pay a tribute, a belated tribute so far as I am concerned, but one which has been expressed in better words than I can choose, to our former Minister of National Defence and to our present Prime Minister with respect to the policy which they laid down as to how Canada's war effort should be conducted so far as the three services were concerned, namely, that it should be free from partisanship or political favouritism. That is something of which the people of my constituency at least have had ample evidence. To such an extent has this policy enunciated over a year ago been implemented and carried out in spirit and to the letter that for a gentleman to be recommended for promotion or appointment to a high post in any of his majesty's forces by any politician or member of parliament is almost tantamount to a blackball.

That observation applies with equal force to the awarding of contracts for munitions and supplies for his majesty's forces so far as Calgary West is concerned, and the extent to which this policy has been carried out is best illustrated by these examples. Let us start at the top. Only a few days ago the Hon. Doctor Manion was appointed by this government to an army post. Surely there could be no clearer evidence of lack of partisanship in appointments to the war services.

I would also remind the committee that the inspector-general of the army in western Canada is none other than that justly celebrated soldier, Senator Griesbach, than whom no better Conservative ever sat in this house or in the other place.

Mr. ROWE: And no better soldier.

Mr. EDWARDS: I am also proud to say, if I may be permitted so to do, that my opponent in the last general election was none other than Colonel D. G. L. Cunnington, who is now G.S.O. II in military district No. 13.

Mr. HANSON (York-Sunbury): He must be a good man.

Mr. EDWARDS: He was a good soldier; there is no question about it. The official organizer for that candidate now holds a very high office in military district No. 13. In fact, to such an extent has this policy been carried out by the present officers that my supporters are beginning to wonder whether or not any Liberal can possibly qualify for an office in his majesty's service at the present time.

I think the government is to be commended for this policy. I am sure that it has been carried out in spirit and to the letter sa far as Calgary West is concerned; indeed, so far as the city of Calgary is concerned.

What may be the experience elsewhere I do not know, but I am quite frank and sincere when I make these statements with respect to my own constituency, and I believe that if we stick to the facts in that regard, we can speak with firmness and conviction.

As I say, the government is to be commended for its policy. In my opinion the officers in charge of these departments are to be commended. My criticism, if any, and criticism on the part of the public, is that in those very departments some of the high officers, most of whom received their appointments, but not in the same way twenty years ago, may yet be mindful of their party affiliations, and there may be some justification for that criticism. I do not know. I should dislike very much to believe it. At least so far as Calgary West and other parts of the west are concerned, we are now told, "Don't go and see your representative in the House of Commons because he cannot do anything for you, but consult rather the officers in charge of the various departments."

It was not, however, with respect to that matter that I wished particularly to speak at this time. This government has announced from time to time that it is its policy to rely as far as possible on technically trained men, and so far as the army is concerned, it has enunciated, and, I believe, has carried out in practice, the policy of relying upon career militarists, men who have made a life study of military matters, rather than upon those who happen to wear a political badge as the credential entitling them to preferment in his majesty's services. I think the government is to be commended for adopting that policy, which, so far as I am aware, has been carried out. With regard to the services in connection with the furnishing of munitions and supplies, I believe the government is to be commended, too, in that it has gone out and obtained the services of men who are skilled, trained, and experienced in the production of those commodities which are required.

I now come to a matter which is surely a perplexing one, perplexing to any government and particularly to the present administration. It is the question of how to distribute in a satisfactory manner the various endeavours contributing to the war; I mean from a geographical point of view. Coming as I do from Alberta where industrial plants, machinery, equipment and trained mechanics are comparatively few and far between, I may say that we in the west are quite reconciled to the fact that, so far as any manufacturing or industrial endeavour is concerned, our contribution can be but very small if this government is to adhere to the principle which I believe they have tried and, I hope, will continue to try to follow, namely, that commodities should be made and produced, and that soldiers, sailors and airmen should be trained, as efficiently and expeditiously as is humanly possible.

This brings me to the one subject that appeals to me as a layman who has had some little experience in flying, one who was raised in Ontario as a boy, who knows something about the geography and the lay of the land and who has spent the last thirty years of his life in western Canada. It so happens that I come from the city where the chinooks blow. The chinook wind may have little or no significance to the members of this house, but it is a wind that comes over the mountains and is most perceptible in the winter time when it makes itself manifest by the rapid disappearance of any snow which may have fallen the night before. It accounts in part, for the droughts that occur in the southern and eastern portion of Alberta and extend into Saskatchewan as far as Moose Jaw and Regina, with their devastating effects, of which hon. members have heard some evidence in this house, in the repeated annual discussions with respect to the dried-out areas.

Mr. HANSON (York-Sunbury): So that is the cause of all your troubles.

Mr. EDWARDS: It is not the cause of all. In that so-called dried-out area, east of the city of Calgary and extending as far as Medicine Hat, there is produced wheat of the highest protein content grown anywhere in the world.

I wish, for a few moments, to direct the minds and thoughts of hon. members to our empire air training scheme. Some days ago, when the other vote was before the house, I asked the Minister of National Defence for Air what the determining factor was so far as the geographical location of our air training schools was concerned, because I had in mind the fact that both Great Britain and Canada realize perforce that possibly the greatest determining factor in the successful outcome of the war would be the rapid training of competent, skilled airmen. That seemed to be the crying need.

Mr. HANSON (York-Sunbury): That was the crime of 1938.

Mr. EDWARDS: I do not propose to discuss that question with the leader of the opposition. That is another matter.

Mr. HANSON (York-Sunbury): It is part and parcel of the same thing.

Mr. EDWARDS: I was not here at that time and frankly I was not vitally interested in it then. But an air training scheme having been decided upon, the thought that would occur to the mind of any normal citizen is this: Where will they train their airmen in order to train them most speedily, economically and efficiently and with the minimum of hazards? From my knowledge of Ontario, the maritime provinces, western Canada and the Pacific coast, I thought, and I believe properly, that that air training scheme would find its heart and centre in a place where airmen could be trained the year round with a minimum of hazards and a minimum of expense. But in answer to my question of a few weeks ago, the Minister of National Defence for Air referred me to page 736 of last year's debates, and I find that this was the policy laid down:

Emergency landing grounds on the Trans-Canada airway owned by the crown, controlled by the Department of Transport, developed as unemployment relief projects, mostly to an extent usable for emergency purposes only.

Naturally there was a general impression that advantage should be taken of these existing facilities. However, most of them were found unsuitable for the training plan because of, inter alia—

And these presumably are the features which were to be avoided:

(a) location in rough or mountainous country unsuitable for flying training.

If we apply that test to southern Alberta, any hon. members who know that section know it is a foothill and prairie country, relatively smooth, with absence of mountains, trees, buildings and, fences, stones, stumps and water.

(b) impracticability of economical development to the size and clearance necessary for a flying training school.

I find that this condition does not apply to southern Alberta, because there one finds ample clearances. Any hon. members who have flown over that country or even travelled over it by automobile or rail must have been impressed with the fact that those difficulties do not apply there.

(c) location remote from centres of population.

Any part of southern Alberta is readily accessible to centres of population.

(d) location in areas of heavy snowfall.

I think I can truthfully say I have seen more snow in the last six weeks in Ottawa than I have seen in the last fifteen years in Calgary or anywhere else in southern Alberta. This afternoon a man who has just come to Ottawa told me that at the present time the farmers at Claresholm are preparing their soil for seeding.

[Mr. R. B. Hanson.]

In the concluding paragraph the minister says that he relies on his technical officers for surveys and so on, and he continues:

From a study of the preliminary survey reports by representatives of the Department of Transport and of the Royal Canadian Air Force, sites were tentatively selected for specific types of schools, distributed geographically throughout Canada as evenly as possible considering reasonable economic development and flying requirements.

I suggest that some criticism may be justly founded on the fact that these air fields are found distributed not only across the prairies but down through Ontario and Quebec and the maritimes. I have tried for the last two and a half weeks to get definite statistical information to support the argument I am now making. I have been unable to get sufficient to cover all the ground, but I think most of what I shall say is a matter of common observation. Land in western Canada is cheaper than similar land in Ontario and Quebec, adjacent to centres of population. Second, lands adjacent to cities in eastern Canada offer more hazards to aviation, and they must be cleared of the natural growth thereon in the form of trees. Farms in Ontario are for the most part one hundred acre farms divided into three or four fields; so it is not an unfair assumption, but one which I think will be borne out by the statistics when they are produced, that the cost of levelling and clearing airfields in eastern Canada is higher than in western Canada. Having cleared the field, let us assume that the cost of runways, erection of buildings and housing for the men is the same. There is, however, still the necessity of keeping the runways clear, which entails, I am sure, enormously greater expense in eastern Canada, where there is such a tremendous snowfall as has been the case this winter, as compared with the insignificant snowfall in southern Alberta this winter or in any and every winter, because of the weather conditions and the beneficient influence of the chinook wind.

I now come to what I consider an even more forcible argument, namely, the atmospheric flying conditions. The term "sunny" is not just a meaningless adjective tacked on to the name of the province of Alberta. In that province the day the sun does not shine is a rare day. And you do not have the rainfall; if you did, there would be no wheat problem so far as Alberta is concerned. Nor do you have sleet and snow in abundance such as you have here in eastern Canada. The falling of each and all those elements must necessarily constitute a real hazard to flying, at least to the training of the young and unskilled pilot, and must, as a result of grounded flying machines, militate against the expeditious training of these men.

The crying need of Britain has been and is at this time for trained pilots. Such statistics as I have been able to get from the department reveal that the number of hours that a plane is grounded by reason of weather is much greater in other parts of Canada than it is in southern Alberta, or that area which stretches shall I say, to Moose Jaw. Yet we find airports and training fields established in the woods in these eastern provinces.

I can readily understand that the department will have in mind the use of these various air fields after the war. Quite properly they might have in mind selecting fields in proximtiy to cities in consideration of the use that may be made of them afterwards as airports. But having in mind the paramount consideration, namely, the expeditious training of air pilots with the minimum of hazard to the pilot and the machine and of expense to the government, there should be a wider development and concentration of flying in southern Alberta.

Mr. McNIVEN: And southern Saskatchewan.

Mr. EDWARDS: And southern Saskatchewan. Remember this, that I do not say this having in mind my own home city of Calgary, which probably has, with one or two exceptions, a greater air development than any other city in Canada. I was frank enough to confess, much to the amazement of some of my political friends, that as far as the selection of some of the air fields there was concerned, I had nothing whatever to do with it. My constituents were astonished when I confessed that they knew these sites had been selected before I did, because I read about it in the Calgary newspaper which I received here three days after the news was made known in that city. But if the policy of the government is to distribute these air schools evenly across Canada, I believe that is a mistaken policy, involving needless expenditures of money in the purchase, clearing and upkeep of fields for training purposes, and creating additional hazards and delays in connection with the training of pilots; for it must be remembered that when a plane is grounded, the pilot perforce cannot fly. It is not that I have asked for any field in the Calgary district, or that I hope any training school will come to Calgary because of any representation I might make, which were not based on sound reason and logic, that I have spoken this evening. So far as I am concerned, I will never raise my finger to get anything for Calgary or for western Canada which I do not believe can be justified on sound economic grounds and will contribute the maximum of efficiency to our war effort. But if this is the policy that has been laid down, and it has been correctly stated, then in all conscience and in all seriousness I urge that the government should revise same and give consideration to the possibility of training our pilots in that part of Canada where the training can be carried on most economically and with the minimum of hazards to the pilots themselves.

Mr. RALSTON: The Minister of National Defence for Air is not here, but I think the principal matter on which my hon. friend has laid emphasis is the selection of sites for air schools. I can only say what I know to be a fact that in connection with the selection of these sites the minister had the benefit of the assistance of a board of technical officers who understood the requirements in connection with flying training. I think there was also on the board an officer from the transport department with long experience in connection with the construction of aerodromes, who knew the sort of soil and location best adapted to that work. I have no hesitation in saying to the committee that I am satisfied that not a single site for an air training school was selected except on the recommendation of this board, who were regarded as better qualified than anyone else to decide where these schools should be located; and that they worked without interference of any kind by the minister or anyone else. I know my hon. friend has not suggested that there was any interference, but I say to him that the choices were made deliberately by people who were supposed to know, and who, I believe, did know, better than anyone else in this country what was necessary for these schools, what ground facilities were required in order that the best possible job might be done in the shortest possible time.

Mr. HANSON (York-Sunbury): I hope the ministry will give heed to the plea just made by their supporter. He almost made me weep at the injustice that had been done to southern Alberta. With regard to the selection of air training schools, I know definitely that one site was turned down by that board and that now nearly half a million dollars has been spent in building an air training school at that very location. Therefore I am not so much impressed by the statement of the minister that the joint board selected all these sites. I know it to be a fact that the Pennfield site was absolutely turned down by this board. The hon. member for Charlotte made a plea for the establishment of a school at that point, and half a million dollars has been spent on that school. So something

happened in regard to Pennfield. Just what it was I do not know, and I am not very particular about it, because I was also anxious to see that school developed. It is not in my constituency, but it is adjoining, and it is in my old home county.

I was not so much impressed with the statement of high policy to which the minister gave expression. There have been changes made. The objection to the Pennfield site was fog. Well, the fog from the bay of Fundy is still there and always will be there. I have lived along the bay of Fundy for some sixty odd years now, and the fog is still there. I nearly wept when I heard the hon. member for Calgary West tell us about what had happened in his community and certainly his statement requires a reply by the minister with regard to this apparent discrimination against beautiful, sunny Alberta about which the hon. member orated a few moments ago with such telling effect. With respect, however, to the appointment of these Tories to high offices in the army, let me tell the hon. member for Calgary West that among the most patriotic men in this Canada of ours he will find leading Conservatives in every walk of life, prepared to do their duty by the empire and by Canada, to-day and always.

Mr. RALSTON: I cannot reply to the reference to the Pennfield airport; I do not know the circumstances. But I repeat with all the emphasis at my command that the Pennfield airport, and every other airport where training is being carried on, were selected by this board. The board may have changed its mind, or the tactical situation may have changed. As I speak, I have some recollection that the Pennfield airport was established for tactical reasons after the break through, because of the possible threat on the Atlantic coast, when the Atlantic command was established, in order to have a reserve base for planes back from the seaboard. I think my hon. friend will find this to be the reason.

Mr. HANSON (York-Sunbury): I know I was trying to help with regard to the matter, and the location was condemned by the board because of fog. For some reason a change was made, and I was happy to have the change and never inquired as to the reason for it.

Mr. RALSTON: I think my hon. friend will find the reason to be as I have stated it. I wish I had known the matter was coming up but I am quite certain now that Pennfield was selected as a reserve base back from the seaboard.

[Mr. R. B. Hanson.]

Mr. HANSON (York-Sunbury): I have no doubt that there were good reasons for the change.

Mr. HAZEN: In the absence of the Minister of National Defence for Air, I should like to direct a few questions to the Minister of National Defence with regard to the training of squadron leaders under the commonwealth air training scheme. I am not in a position to discuss this matter in any detail; as a matter of fact, I know nothing about it, but one hears rumours and reports. If the minister is not in a position to answer these questions now, perhaps he will do so at his convenience. The questions are these: Under the commonwealth air training plan are airmen trained in Canada as squadron leaders? Has any difficulty been experienced in training squadron leaders in Canada for service overseas? Have airmen been trained in Canada as squadron leaders who are now in charge of squadrons overseas; and, if so, how many? Is it proposed to make any change in the commonwealth air training plan in connection with the training of squadron leaders?

Mr. RALSTON: I can only say to my hon. friend that I shall try to get the information for him. Just offhand, however, I think he is mixing up the air training plan and the home war establishment. Of course squadron leaders are being trained in the home war establishment; that is to say, officers who serve in the air defences of Canada and those who go overseas to man our own squadrons over there. Probably there also will be some of these officers in some of the squadrons which will be formed as a result of the commonwealth air training plan. There is no doubt in the world that squadron leaders are being trained in Canada. Whether squadron leaders are being trained under the commonwealth air training scheme, I cannot say, but I have the idea they are not.

Mr. HAZEN: How are squadron leaders being trained, and where?

Mr. RALSTON: That is not under the air training plan, but rather, I believe, under the home war establishment.

Mr. ROSS (St. Paul's): I have one or two questions in connection with rumours which I suggest ought to be straightened out. Would the Minister of National Defence for Air or the Minister of Munitions and Supply give a comparison with regard to the hours necessary to ground planes of various classes for purposes of overhaul. I understand there is some dissatisfaction with some of the planes being made. Some are very satisfactory, and

others are not. If a large percentage of one class of planes is being grounded for a considerable length of time, I should like to know why some change has not been made.

Mr. RALSTON: Is the hon. member asking as to the regulations concerning the number of flying hours before an overhaul is ordered?

Mr. ROSS (St. Paul's): No; there are various classes of planes used in connection with the air training plan. There is dissatisfaction, or at least it is rumoured that there is dissatisfaction with certain makes. How many hours are granted for the overhaul of these different classes of planes?

Mr. RALSTON: Is the hon. member referring to elementary trainers, such as Ansons, and so on?

Mr. ROSS (St. Paul's): In the whole air-training scheme. We might as well have it for all of them.

Then, I have one further question, I notice the Minister of Justice (Mr. Lapointe) is not at present in his seat. I wanted to ask him if any of the money we are now asked to vote will be used to increase the pay of the Royal Canadian Mounted Police. We know the pay they receive is not sufficient. Is it intended to do anything for those men who are working at such high pressure?

Mr. RALSTON: I shall make a note of the question, and call it to the attention of the Minister of Justice.

Mr. BLACK (Cumberland): Would the Minister of National Defence for Naval Services make a supplementary statement respecting the construction of ships in Nova Scotia? I am referring more particularly to the construction of wooden ships. The statement he made in the house a few weeks ago with regard to this matter was a great disappointment to the people of Nova Scotia. The people in that province feel that the capacity of the shipyards of Nova Scotia has not been used even to a fraction of their possible use in the building of wooden ships, ships which could carry cargo, powered with diesel engines and capable of keeping up with the average convoy. They could do coastal work and thereby release steel ships to be used in the transatlantic service.

The minister's statement was supported and confirmed by the premier of Nova Scotia who took credit for obtaining large shipbuilding orders for Nova Scotia. It was stated by the premier that the Nova Scotia yards had been given an opportunity to build ships, but that they refused. These statements are not satisfactory to the people of Nova Scotia, and are a disappointment to Canadians as a whole. I do not believe we are doing justice to Lord Beaverbrook and to the British people who have made an appeal to people the world over for ships. The minister said that the demand for ships was first in war necessities, even coming ahead of the building of aeroplanes. I feel that much more could and should be done by the government in assisting, encouraging and, if necessary, compelling the people of Nova Scotia to build ships. This is a supplementary appropriation, and I should like to have a supplementary statement from the minister.

Mr. MACDONALD (Kingston City): I am not just sure what information the hon. member for Cumberland requires. In the first place the business of building cargo ships or, in fact, the building of ships of war, is not one administered by the Department of National Defence for Naval Services. All these matters are dealt with by the Department of Munitions and Supply.

I would, however, say to the hon. member that, so far as I know, up to the present time no assistance has been given to any shipyard in this country. In my view that point ought to be cleared up at once. There are some people in certain parts of the country who seem to think that because the government is assisting certain manufacturers to set up industries, which are essentially and only war industries, therefore the government should assist any industry. For example, let us consider the building of corvettes. To the extent to which we were asked to build them in this country, the building of corvettes could be taken care of without any difficulty whatever in existing Canadian shipyards. I ask the hon. member, and any other member in the committee, if it would be reasonable to expect the government of Canada to establish new shipyards for the building of corvettes when there were in Canada plenty of yards which could handle all the corvettes we want. It would be utterly unreasonable, I suggest, to establish such yards. The fact that a man who is asked to manufacture munitions or something of that kind—commodities the use of which will vanish at the end of the war—is given some assistance by the government is, I suggest, no reason whatever why we should believe that everything manufactured for war should be subsidized by the government. We had some twenty yards in Canada capable of building corvettes, and capable of building certain other ships required for war purposes.

The question which I suggest people ought to ask themselves before they begin saying that the government should force Nova Scotia shipbuilders or any other shipbuilders into a

programme of plant expansion is whether existing plants have been taxed beyond their capacity. Until that time arrives, I do not think it is the function of government—this or any other government—to begin to subsidize or to bonus shipyards and shipbuilding.

The other night, in the absence of the Minister of Munitions and Supply, I made a statement respecting the building of wooden cargo ships. My hon. friend now asks me to amplify that statement. I can say to him that the opinion of certain British shipping experts is that a ship of even 4,700 tons, the size of ship the building of which was considered in this country a short time ago, is practically too small to-day for convoy work. I do not say there are not some ships of a tonnage less than 4,700 plying the seas; as a matter of fact, there are a few. But these men are thinking of building ships, and their advice to this country is, if you are going to build ships, do not build a ship as small as 4,700 tons. That ship has to go in convoy; it has to be cared for in the same way as if it were a ship of 10,000 tons. It is not so economical, ton for ton, as a 10,000 tonner, and all in all it is not wise to undertake the building of ships of this size.

My hon. friend knows very well that when you speak of wooden ships and when you speak of 4,700 ton ships, you are referring to two totally different things. You cannot build a wooden ship of that size. While it has been suggested, I believe, that there are in Nova Scotia fifty yards which can undertake the building of cargo ships, in my opinion a statement of that kind is in need of the most drastic revision.

Mr. HANSON (York-Sunbury): It all depends upon what the minister means by "cargo ships."

Mr. MACDONALD (Kingston City): I am saying to my hon. friend that the advice of the British authorities who have come to this country—and I would suppose that theirs is the best advice in the world when it comes to shipping of any sort, mercantile ships or warships—is, that it is unwise to talk of convoys across the Atlantic composed of ships even of 4,700 tons; and I say that when you get to that tonnage, you are entirely out of the wooden ship class.

What other yards are there in Nova Scotia capable of building steel ships? The shipyards at Halifax can do so, but they are engaged at the moment in other duties which are regarded as of even greater importance. They have been asked to undertake and are undertaking repair work. I do not know of any other shipyards equipped to build steel ships. There is no question that such shipyards could be established.

Mr. HANSON (York-Sunbury): Were not ships of substantial tonnage built there on a large scale during the last war? I do not remember how big the ships were, but I know they did construct steel ships.

Mr. MACDONALD (Kingston City): During the last war they built steel ships at New Glasgow; they built them also at Halifax, and of as great a tonnage as 9,500. That could be done again; but the question is, is this government called upon now to establish a shipyard at, we will say, New Glasgow, where there is no yard at the present time, while there are yards at British Columbia, on the river St. Lawrence and on the great lakes which are capable of building these ships? That is the whole question. If this country desires this government to go into the business of establishing yards in competition with those existing yards, which so far as I know are capable of taking care of all the business which offers at the present time—if the people want the government to subsidize yards in competition with these existing yards, that is another story. But if my hon. friend can tell me of any yard in Nova Scotia which is capable to-day of building steel ships for cargo purposes—and that is the only type which can be considered for transatlantic purposes—I would be glad to have the name of that yard. If my hon. friend can name me any yard in Nova Scotia which is capable of building ships for war purposes and has not been given an opportunity of bidding on these ships, I should like to have its name. I can tell him that, when it came to the construction of wooden ships, I hoped that a great number of them would be built in Nova Scotia. I knew that British Columbia and other provinces had been building steel ships, because they had yards equipped for the purpose. Steel ships have been built on the great lakes and the St. Lawrence, but none had been built in Nova Scotia. As I have said, the only yard in that province which is capable of doing that work was assigned to other essential war work. I had hoped, however, that a great many wooden ships would be built in Nova Scotia, as some measure of compensation for the contracts for steel ships which had gone elsewhere.

There were twenty-four Fairmiles to be built. They were wooden ships, 112 feet long, costing not more than $100,000 each for the hull. I believe that last fall the Department of Munitions and Supply was prepared to give contracts for eighteen or twenty of these ships

to Nova Scotia if the builders in that province were prepared to take them. The department sent down the director of shipbuilding to examine the yards and see whether they were capable of undertaking this work. He returned and made a report in which he listed, I believe, some six, or perhaps it was as many as ten, Nova Scotia yards which could do the work. Bids were asked for, but only three Nova Scotia yards bid on these ships; and this is the province which is the home of wooden shipbuilding in Canada. Of these three bidders, only one was at all within the range of the bids offered by builders in Ontario, on the St. Lawrence and in British Columbia.

So amazed was I at the discrepancy in prices that I suggested to the Minister of Munitions and Supply and to the director of shipbuilding that Nova Scotia builders must have made some mistake, that presumably they had misunderstood the specifications, and that they should be given another opportunity. That opportunity was given them; they bid a second time, and again, only one man was at all within the range. There were bidders in British Columbia whose bids were $25,000 below the second and third Nova Scotia bids on a job which was worth something less than $100,000. Does my hon. friend or does any sane person in this country contend that we should accept those bids from Nova Scotia and award contracts on that basis? As a matter of fact, we had to ask the one bidder at Weymouth to undertake two ships instead of one. The result is that, of the twenty-four Fairmiles, two only are being built in Nova Scotia.

Mr. ROSS (St. Paul's): The minister is talking a good deal about bids on these boats. Could he let us know whether the Department of Munitions and Supply have always been so meticulous in calling for bids in other classes of work as they have been in connection with ships?

Mr. MACDONALD (Kingston City): All I can say is that, so far as my knowledge of the action of the Department of Munitions and Supply is concerned, they have called for bids for all ships; and I believe the policy of that department is to call for bids not only on ships but also in respect of every other undertaking in which they engage. There may have been some instances where the urgency of the matter prevented calling for tenders, but I should say that in 99 per cent of contracts of all kinds, bids were called for. Certainly they were in the case of all ships.

I pass from the Fairmile boats, which were the first large type of warship required, to the next type.

Mr. CASSELMAN: The minister has been talking about 10,000 ton ships. For my own information, would he mind giving an estimate with respect to the specification affecting the length and beam of a 10,000 ton ship?

Mr. MACDONALD (Kingston City): Oh, I could not give that offhand to my hon. friend. I can get it for him.

Mr. MacNICOL: Probably 500 feet long; width about sixty feet.

Mr. CASTLEDEN: Would the minister think it wise to make use of the mobilization act under these circumstances? Ships are of such vital importance that the Canadian and the British people are not very much interested in contracts or competition or prices. It seems to me that every yard in Canada which is capable of building ships of the kind required should be at work to-day building ships. If they have not the men, the men should be trained. If they have not the steel, something should be done about it. But at this time every shipyard in the country which can be used should be working. If the private owners are not going to work them because they cannot get the price they want, the government should take these yards over and build the ships under the mobilization act. Is the minister going to consider taking this action?

Mr. MACDONALD (Kingston City): What is the question my hon. friend wanted to ask me? So far as I could judge, he was making a speech.

Mr. CASTLEDEN: Does the minister not think it advisable in certain instances to take over the shipyards under the mobilization act and get them working?

Mr. MACDONALD (Kingston City): My only answer to that is that, so far as I know, the shipyards of this country are not yet taxed to the full capacity. They are capable of taking care of all the business that is being offered, and until the time comes when there are not enough shipyards in this country to handle the business offering, I do not think there is any need to talk of the application of any act to conscript or take over or confiscate these yards.

Mr. DOUGLAS (Weyburn): The minister just said that only three of twenty-five firms in Nova Scotia had bid to build ships.

Mr. MACDONALD (Kingston City): I think my hon. friend had better stick to something he knows a little about—wheat or something like that. Six builders were given an opportunity to bid, and only three of them

bid. If my hon. friend thinks we should take people by the throat and gestapo them into building ships when they do not want to build them, that is another story.

I was going on to speak of the next type of wooden ship asked for by the naval service, namely, wooden mine-sweepers. What is the story about the wooden mine-sweepers?

Mr. HANSON (York-Sunbury): What are the Fairmile sweepers?

Mr. MACDONALD (Kingston City): They are patrol vessels. We asked for bids for wooden mine-sweepers, and again I may say that I hoped that most of them might be built in Nova Scotia. They were perhaps a little simpler to build than the Fairmiles. Tenders were called for. I am not definitely sure on this point, but I think I am correct in saying that only Nova Scotia bidders were asked to bid on these mine-sweepers. Ten boats were ordered from Nova Scotia bidders, two from each of five shipbuilders in that province. What happened? These five builders accepted a contract and undertook to build two mine-sweepers each, but they had scarcely undertaken the work when two of these Nova Scotia builders threw up the work and said they could not go on with it.

Mr. HANSON (York-Sunbury): For what reason?

Mr. MACDONALD (Kingston City): For one reason or another. One had difficulty in getting capital. Another said that the specifications were too difficult. The result is that only six of these ten boats are being built in Nova Scotia, and the other four are being built on the St. Lawrence or on the lakes. That is the story with regard to the mine-sweepers.

What more could be done than was done by this government so far as the building of wooden ships is concerned? I stated the other night that the government of Nova Scotia had called a meeting of all the shipbuilders in that province. I think two meetings were held, and they got a delegation of shipbuilders to come to Ottawa. They got the best naval architect in Nova Scotia, Mr. Rowe, the designer of the great ship *Bluenose,* to accompany them as a technical expert and had with them also a minister of the Nova Scotia government. They interviewed representatives of the Department of Munitions and Supply and they interviewed me, and everything was done that could possibly be done to stimulate the development of the wooden shipbuilding industry in Nova Scotia. But for one reason or another the situation is as I have stated. What the full reasons are I do not know. It may be as the hon. member for Queens-Lunenburg (Mr. Kinley) suggested, that it was lack of capital. There may have been difficulty in understanding the specifications. It may have been that the wood which they had to use in these ships was foreign wood that had to be imported.

Mr. HANSON (York-Sunbury): Was that not the real reason?

Mr. MACDONALD (Kingston City): If that was the real reason, that the ships required mahogany and teak which had to be imported, the very same reason applied to the shipbuilders in British Columbia, Ontario and on the St. Lawrence. No mahogany or teak is grown in this country. These woods would have to be imported by the Ontario builder and the British Columbia builder as well as by the Nova Scotia builder, so that cannot be or ought not to be the real reason.

It is all right to make a general statement about the desirability of having every yard in Nova Scotia humming, but I think it is better to see the persons in charge of these yards doing some humming themselves, making every effort to get business. They have been coaxed again and again to take the work, and the result of it all is as I have indicated. Some have refused to bid, and others accepted bids and failed to go on with the work. If my hon. friend can suggest any other definite thing that can be done, I shall be glad to discuss it with my colleague the Minister of Munitions and Supply to see what can be done, but I do not think it is of any use to make general observations like "every shipyard should be busy and all Nova Scotia shipyards should be working," when in some respects the yards themselves have not taken full advantage of the opportunities that offered.

Mr. ROSS (St. Paul's): The minister said that it was difficult to get teak and mahogany. Is it not a fact that in some instances teak and mahogany have been specified and substitutes allowed? I wonder whether these Nova Scotia men who have been asked to tender know all about that.

Mr. MACDONALD (Kingston City): I do not know about that. I am speaking for a department that is not mine, but I am sure that if any changes in the specifications were made for one shipbuilder, other shipbuilders would have been given an opportunity to make a change in their bids.

Mr. BLACK (Cumberland): I for one am not satisfied with the statement of the minister, nor do I believe the people of Nova Scotia will be satisfied. The statement he made the other night and the statement he has made to-night are the statements of a defeatist. That is a word I have never

used before, but I have to apply it in this instance. If shipbuilding is as urgent as we believe it to be, the number of ships being built in Nova Scotia should be many-fold the number being built to-day. The minister says that the shipyards of Nova Scotia should be humming. Why are they not humming? Because there is no humming on the part of the minister and the government and those associated with them. If they did their part, many ships would be building in Nova Scotia to-day. I have a statement here from Mr. D. B. Carswell, controller of ship construction in Canada. His statement should be as authoriative as anybody's in Canada. We have had a statement from Lord Beaverbrook, the most authoritative in the world, that the building of ships was urgent, and now Mr. Carswell is quoted as saying:

> Principal problem facing an "all out" cargo and warship construction programme in Canada, which would involve establishment of new shipyards throughout the dominion, is the problem of finding the money for both ships and yards.

The CHAIRMAN: What is the hon. gentleman reading from?

Mr. HANSON (York-Sunbury): What difference does it make? The chairman has no right to interrupt the speaker in that way and ask him what he is reading from. He announced it anyway. This interference by the chairman must stop.

The CHAIRMAN: Order. There is a well-known rule of the house that no hon. member may read from a private document or a public document without stating what he is reading from.

Mr. HANSON (York-Sunbury): He stated it.

The CHAIRMAN: My question was, what the hon. gentleman was reading from, and I missed his reply. If any one desires to speak to the point of order—

Mr. HANSON (York-Sunbury): It was not on any point of order.

The CHAIRMAN: Yes. The leader of the opposition rose in his place and stated that he was raising a point of order.

Mr. HANSON (York-Sunbury): No, I did not say anything of the sort. What happened was that the chairman himself intervened to interrupt this speaker, and he had no right to do so because the hon. member was quite within the rules. We might as well have this question of order settled.

The CHAIRMAN: Order, please. The hon. gentleman cannot rise in his place when another hon. member is speaking, except on a point of order. I, as chairman, said that I understood him to rise to a point of order, and I say the point of order is wrongly taken. The chairman has a right to ask what document the hon. gentleman is reading from and I am asking that question.

Mr. BLACK (Cumberland): I was reading from the Vancouver *Sun* of March 11, a statement purporting to have been made by Mr. D. B. Carswell, controller of ship construction and repairs in the Department of Munitions and Supply. I am going to read now what he is quoted as having said:

> Principal problem facing an "all-out" cargo and warship construction programme in Canada, which would involve establishment of new shipyards throughout the dominion, is the problem of finding the money for both ships and yards.

If that is the requirement, Mr. Chairman, and the building of ships is as urgent as we know it is—there is no question about that—I say that the government has not put forth a full effort in obtaining ships from Nova Scotia. The Minister of National Defence for Naval Services has criticized the people of Nova Scotia and the shipyards of that province because they have not built ships of foreign wood. There is a feeling among the shipbuilders of Nova Scotia, in the shipyards, that this government does not want them to build ships; otherwise specifications would be drawn up calling for materials that are native to Nova Scotia, such materials as Nova Scotians have been using in years long gone by in the building of ships that were able to weather the storms of every ocean. The shipbuilders of Nova Scotia, however, are now being asked to build ships from foreign woods, southern woods such as mahogany and teak, and even from British Columbia, rather than from woods native to the province. If the government were doing its full part in encouraging the people of Nova Scotia to build ships such as they are capable of building, and as I believe they wish to build in their desire to discharge their patriotic duty, then the government, in justice to Nova Scotia, would draw up specifications calling for materials which are available in that province and out of which the shipbuilders have been constructing ships for a century or more.

I believe that this is due the province of Nova Scotia. Money has been available without stint for many other forms of war work, and war materials. There is no question about money, so far as the members of this house are concerned, if that money is to be used for supplying the necessities of war. There is no question in the minds of members of this house about the supplying of money if the government asks for it for the purpose

of building ships in Nova Scotia or anywhere else. As one hon. member has already said, it is not so much a question of money as it is a question of ships. This parliament and the people of Canada will provide the money if the government will do their part and get every shipyard busy which is capable of building ships, whether in Nova Scotia or in any other part of Canada. I say to the government: Listen to the call of Beaverbrook; listen to the call of every one who is familiar with the needs of our empire at this time and get ships built.

In my opinion, we should go further in Nova Scotia. A special appropriation should be made in order that steel plates might be rolled in that province. The capacity of the steel mills should be increased to enable us to produce materials out of which steel ships can be built, not only for the war but for use after the war, when the need will be great. The difficulty in Nova Scotia in much of its war work—and there is only a limited amount compared with what is being done in other parts of Canada—is that most of it will cease on the termination of the war and we shall have no new industries. I contend that a steel shipbuilding yard should be established in Nova Scotia. It should be started without a day's delay, and plates should be rolled in that province to enable us to do our part in the war and after. We should be put in the position of building ships after the war to replace the enormous tonnage that is being sunk every week.

I for one, coming from Nova Scotia, and speaking, I believe, for the people of that province, am not satisfied with the efforts of the government and the results they have obtained with respect to shipbuilding in that province.

Mr. HANSON (York-Sunbury): The fact of the matter is that the government has no national shipbuilding policy. I urged this on a previous occasion at great length. The government should take a long-term view of the question of establishing in Canada a national shipbuilding policy, so that we might, in a degree at least, recover our position as a great shipping country. I received no response from the Minister of Munitions and Supply except a detail later on of what had been done with respect to the building of these small war vessels. That is not the point of view the Canadian people are asking this government to take at the moment. It is all right to buy yachts in a hurry, to build corvettes for patrol purposes; it is all right to build mine-sweepers. But what we on this side of the house are urging, and what the people of Nova Scotia are urging, is a little vision on the part of the government on the question of a great national policy; that is to say, the establishment of a steel shipbuilding industry in Canada on the Atlantic coast.

Talk about the St. Lawrence yards! There are two yards in the lower stretches of the St. Lawrence for the building of 10,000-ton ships, but you could not bring 10,000-ton ships down from lake ports. Why in the world this government, with all the money that we have voted to them so freely, cannot have a little vision and establish a national shipbuilding programme in this country, I cannot understand. We can find money for everything else.

We can bonus wheat and summer-fallowing and all that. But here is something that would be a post-war industry in Nova Scotia. Why should it not be established at Sydney? Why should it not be established at New Glasgow? The minister says there is no yard there now. I tell him, the yard was there in the last war and could be reassembled at not very great cost. The people of Nova Scotia demonstrated in the last war that they could build steel ships of very large capacity. This can be done again, and I ask the minister to review the whole position in the interests of Nova Scotia and of the maritime provinces. Let us get back something of the position we once occupied in this country in relation to the sea. To take the attitude that the minister has taken with respect to Nova Scotia shipbuilding is to admit defeat before you start. I do not think the minister is a defeatist, but at the moment he is concentrating his mind especially on the immediate necessities of the occasion. I visualize something a great deal bigger than that. I wish the minister had the vision of the late William Pugsley who started the whole idea of building steel ships in Canada.

Mr. GARDINER: And the Tory government killed it.

Mr. HANSON (York-Sunbury): Well, he took a long time dying.

Mr. GARDINER: They killed the policy.

Mr. HANSON (York-Sunbury): No, the Tory government did not kill the policy. If there was any criticism of the policy, it was that it started a little too late. The Tory government did not kill it as quickly as this government killed the Canadian government merchant marine, which they sold after 1935 for a song. What an asset it would be to-day if we had some of those big transatlantic vessels.

Mr. KINLEY: I think the bargain was made before that.

Mr. HANSON (York-Sunbury): No, the bargain was not made before 1935; the offer was made before and was refused. I know what I am talking about because I was connected with the whole matter in 1935.

I ask the government to review this whole position. Let the minister see if he cannot take a little longer view with regard to this national shipbuilding policy. Some day, if we have vision and energy enough, we shall have in the maritimes again a great shipbuilding industry such as that which put Nova Scotia on the map. It can be done. It takes money; it takes imagination; it takes brains. I should not like to think that Nova Scotians have lost all these attributes that made them famous in days gone by. It is true that Nova Scotia has exported a good deal of its brain power, some of it to Ontario, but there is plenty left in Nova Scotia yet.

I had the honour of addressing the Commercial club in Halifax last summer, and I adverted to this very matter. The people of the maritime provinces are being given by time and circumstance one last opportunity to come back. And they can do it. We have not exported all the mentality for which we were famous in days gone by. It is true we supplied the banks and the prominent pulpits in Canada, and many other high positions, with the best men they ever had in those positions, but we still have a good many left. We can build up a national shipbuilding policy and thereby we will regain the position which we once occupied and which we should never have lost.

Mr. RYAN: Up to the present time we have been discussing this bill in terms of money and aeroplanes and shipbuilding and so on. In the few minutes I am going to take up I am going to refer to the human element. In my constituency of Three Rivers is located a machine gun training centre. The men who compose that company or regiment came from different parts of Canada. I understand that quite a number of them came from Ontario, some from the maritime provinces and some from my own province. When men misconduct themselves or do not behave properly, we are always ready to find fault; but when men conduct themselves as men should, we pass it by and do not refer to it. I wish to commend the conduct of those men in that machine gun training centre in my county and say that they are an honour to their fathers and mothers and to the government, and, I should say, a source of great satisfaction to the Minister of National Defence. During the time those men have been in our city I am happy to say there has not been a single complaint by the police department or any citizen with regard to their conduct when they come down to visit the city. I think we should refer to the men and their conduct more often than we do. There are men located all through this country giving their time for very little money, and when we have anything good to say about them we should say it. It is my pleasure to-night to be able to say this about these men.

I wish also to give credit to the commanding officer, Colonel D. S. Forbes, late of McGill university, Montreal. Much of the credit is due to Colonel Forbes. According to my judgment he is a human being, one whom the uniform has not spoiled. He understands his men and does everything he can to set them a good example.

While I am on this subject I wish to refer to another matter. That machine gun training centre is located, I believe, at one of the best locations that can be found anywhere in Canada. It is a splendid site on a hill above the city; the soil is sandy, and in 1938 there was built in these exhibition grounds new buildings at a cost of a million dollars. There is a splendid swimming pool there; I do not think there is the like of it in Canada, or any better. There is a splendid baseball field and excellent grounds. The city of Three Rivers has rented that property to the defence department for a dollar a year for the duration of the war.

In conclusion, the city of Three Rivers will always be ready to receive men from different parts of Canada who will conduct themselves like the men who are there to-day.

Mr. ADAMSON: May I ask the hon. member a question? It was a Highland light infantry unit, a Scottish regiment, of which he was speaking?

Mr. RYAN: I believe so, yes.

Mr. KINLEY: I was interested in the speech of the hon. member for Cumberland and also the remarks of the leader of the opposition who intimated what Nova Scotia would like to be industrially. There is something in what he said about our Vision and Energy. For generations we have been putting our best men into the intellectual professions and neglecting the material development of our country. We must get back to material things and be practical if we want to succeed in industry.

It has been my privilege during the last few weeks to talk several times with the Minister of Munitions and Supply about shipbuilding in Nova Scotia and on Canada's eastern coast. I believe he is alive to the situation; in fact, I think at this moment his technical men are

on the eastern coast reviewing that situation in the interests of Nova Scotia and of the national war effort. I have no doubt there was difficulty, due to some extent to the red tape that always prevails in some measure in connection with government business. We must also not forget that most of these boats were for the British Admiralty; it is not easy to induce them to change their plans, and it may be that they decided too late to change, after the orders had been refused by certain shipbuilders, but I think that has all been overcome.

Hon. members must remember that the shipyard in Lunenburg had at the time plenty of private marine contracts; that is, contracts for the fisheries and mercantile marine, not directly connected with the war effort, but of national importance. That is true also of the Shelburne shipyards, which were busy with vessels for the coastal trade. It must be remembered also that some yards were held up because their financial position did not justify giving them contracts under existing conditions. It seems to me these yards could and should have been helped. I understand efforts have been made to get the banks to help, and I believe progress has been made in that regard. I understand that in my hon. friend's county of Cumberland, a couple of mine-sweepers are being built. Perhaps with a review of the situation, with a settling of the difficulties as between the ideas of the shipbuilders and those of the technical men, who are not always right, we may arrive at some common understanding which will permit of the construction of wooden ships of a size which will allow them to be used for certain war activities, as well as ships for the usual trade of the country.

We have heard much about these Fairmile boats. We were told they were more expensive to build in Nova Scotia than in other parts of Canada. The Fairmile boat is of two-ply mahogany with canvas in between, and that type of construction was an innovation in Nova Scotia. These are high-powered boats formerly built on the great lakes for sportsmen, and when one undertakes the construction of new types of boats, it is pretty hard to get men into such a hazardous business, where there is a great deal of depreciation in connection with the installation of equipment which, after the war will be a total loss. These men must consider the matter very carefully. However, one builder, and he is a good one, gave a tender in line with other parts of Canada.

I do not think we should make shipbuilding in any part of this country a matter of political preferment, but shipbuilding is natural to Nova Scotia. So far as I am concerned, I am here to do what I can to promote shipbuilding on the coast. I know that the ministers and officers of this government have gone a long way in trying to meet the situation that now exists, but if we are going to have shipbuilding carried on in Nova Scotia, somebody must wake up. I hope this discussion may help to bring that about.

Mr. DOUGLAS (Weyburn): To-night we have heard a strange principle enunciated by a minister of the crown. When he is asked why we do not mobilize an industry in order that it may produce, he says we do not intend to gestapo people into producing something if they do not want to produce it.

Mr. MACDONALD (Kingston City): When the production is sufficient already.

Mr. DOUGLAS (Weyburn): Perhaps the minister will just remain seated; he is not in another place now. Last year this parliament passed the National Resources Mobilization Act, which this house was told gave the government power not only to mobilize the man-power of Canada for the defence of Canada but to mobilize labour and industry if industry was not doing the job it was supposed to do. This government was given power to mobilize and organize the instruments of production by which this country might make its maximum war effort. What do we find to-night? The minister says we ought to stick to something we know something about.

Some hon. MEMBERS: Hear, hear.

Mr. DOUGLAS (Weyburn): I was born and raised on the Clydeside, the greatest shipbuilding area in the world, and I know something about it.

Mr. REID: But did you work at it?

Mr. DOUGLAS (Weyburn): I know a little about shipbuilding, and I wish to say that this country has a right to something better than ministers rising in their places in the house and saying they do not know why certain things are not being produced. A few weeks ago the Minister of Munitions and Supply was questioned with regard to the Malton aircraft plant and the fact that it had a very large labour turn-over. He replied that there was something wrong, but he did not know what it was. To-night the Minister of National Defence for Naval Services tells this committee that the government wants ships, but that of twenty-five contractors in Nova Scotia only three submitted bids. When the question is quite properly put to him, "What is wrong," he shrugs his shoulders and says it might be this or it might be something else; he does not know just what is wrong. Then, when he is asked, "Why not mobilize

this industry so that if it is not functioning efficiently now, it may function efficiently in the future," his only answer is that he does not propose to gestapo people into production.

I am going to tell the minister that the people of Canada will demand that any industry not functioning at one hundred per cent efficiency shall be taken over and organized to overcome that difficulty. The minister's statement to-night is that of a defeatist. To-day in the United Kingdom people are rationed to an extent that when one reads what they are allowed to eat, it is enough to make one shudder. In Canada we have an abundance of every type of foodstuff; bacon, live stock products, dairy products, wheat and so on. There are our cousins across the sea needing food in order that they may live. Here we have an abundance of it, and the only thing lacking is that bridge of ships for which Beaverbrook is calling, for which Churchill has been calling and for which even the President of the United States has been making a heroic plea. When the members of this committee ask the government, "What about ships?" all we get in reply is the statement that for some reason or another these shipyards will not produce, that they will not even bid. If they will not produce, it is the minister's business to know why that condition exists, and to see to it that they do produce. If they will not produce under their own steam, it is the business of this government to mobilize them and put them to work. Any minister who comes into this house with a set of excuses as lame as that ought either to give somebody else the job or to get to work at it himself.

Mr. MACDONALD (Kingston City): I should like to ask the hon. member for Weyburn, first, whether when he refers to the shipyards of Nova Scotia and those of Canada generally, he is speaking of cargo ships or ships of war. I did not follow him with sufficient accuracy to know whether he was speaking of warships of one kind or another or of cargo ships.

Mr. DOUGLAS (Weyburn): The minister is not going to inveigle me into a technical argument. I am speaking of producing bottoms to the maximum capacity of these yards. The minister himself said they were capable of producing bottoms; otherwise they would not have been asked to bid. They must be capable of producing bottoms either to carry cargo or for patrol purposes; and when the government gave them an opportunity to put in bids and they did not do so, then it was the duty of the government to find out why they were not bidding for the work they could do.

Mr. MACDONALD (Kingston City): I gather, then, that the hon. member for Weyburn is referring to both classes of ships, to ships to be used for fighting purposes, ships for the Royal Canadian Navy or the British navy, as well as ships for cargo purposes. That, I take it, is the sense of the last remark by the hon. member. That being the situation, I should like to ask my hon. friend another question, and it is this: Does he, with his experience gained on the Clyde, know of any shipyard in Nova Scotia to-day that is capable of turning out a cargo ship?

Mr. DOUGLAS (Weyburn): The minister is a much better lawyer than he is a minister of the crown. He does not have me on the witness stand.

Mr. HANSON (York-Sunbury): You are right.

Mr. DOUGLAS (Weyburn): I do not claim to be an authority on Nova Scotia shipyards. I take the minister's own statement that there were in that province twenty-five contractors who were capable of producing ships.

Mr. POTTIER: He did not say that.

Mr. DOUGLAS (Weyburn): Why does he refer to it, then?

Mr. KINLEY: A certain kind of ships, not iron ships.

Mr. DOUGLAS (Weyburn): If they could not produce ships, then there is no point in the minister's blaming them for not putting in bids. If they were capable of putting in bids, then they were capable of producing ships.

Mr. MACDONALD (Kingston City): My hon. friend's knowledge of this subject is extremely vague and hazy. In the first place, as I said before, there is to-day in Nova Scotia no yard that is capable of turning out an Atlantic cargo ship—except one, and that yard is fully engaged in repair work. That settles the question of cargo ships.

Mr. HANSON (York-Sunbury): No, no.

Mr. MACDONALD (Kingston City): When I was dealing with shipbuilders in Nova Scotia I was referring to builders who had been asked to build vessels for the Royal Canadian Navy or for the Royal Navy. Some of those builders failed to build, and the work was given out elsewhere. I may say to my hon. friend that we are not ordering 10,000 ships, or anything of that sort for the navy. We had what is, after all, a limited number of the naval type of ship. When some of the Nova Scotia builders either failed to put in bids or failed to fulfil their contracts after contracts were entered into, the work was assigned elsewhere.

There are ample yards in Canada to handle all the ships of war that we want to build at this time. That is the answer to my hon. friend.

Mr. HANSON (York-Sunbury): And it was a limited programme, was it not?

Mr. MACDONALD (Kingston City): It was a relatively limited programme. There is no question in the world of any hold-up because the builders in Nova Scotia did not undertake the building of these Fairmile ships or the wooden mine-sweepers. There were yards on the St. Lawrence, in British Columbia and elsewhere which were only too delighted—more than delighted—to take up the work which some of those people in Nova Scotia refused to do.

I do not think I need say any more to the hon. member for Weyburn. They cannot build cargo ships in that province to-day. They do not have the yards. They have been given an opportunity to build warships of one kind or another—the smaller types. When some of them failed to take advantage of that opportunity, the work was put elsewhere, in other parts of Canada, with very little delay of any sort. I do not think there is any more need to answer my hon. friend who comes in here and talks about conscripting yards, and about my statement as to driving these people into the building of ships. Why should we drive the builders of Nova Scotia into building ships when there are dozens of other yards in Canada waiting to undertake the job? Is there any reason why we should say to the builders of Nova Scotia, "You must build that ship, whether you like it or not", and perhaps lose money on it—or at any rate they probably thought they would lose money on it—when there is another builder in another part of Canada ready, waiting and eager to undertake the work? And I would say, furthermore, to my hon. friend—

Mr. DOUGLAS (Weyburn): May I answer the minister? The point is this, that if those Nova Scotia shipyards could build corvettes, they could be used for that purpose, and the other shipyards to which the minister referred could be used for cargo ships, which are so much needed.

Mr. MACDONALD (Kingston City): I am saying again to my hon. friend that there is not a steel shipbuilding yard in Nova Scotia—with one exception, and that one yard is engaged in the repairing of ships of all kinds. That is the Halifax shipyard. The corvette is a steel ship. There is in that province at this time no other yard capable of building steel ships, without at any rate some expansion in that yard. There are in other parts of Canada yards capable of taking on that work to the full extent of our requirements. Nothing has been lost by the policy of Nova Scotians with respect to the building of ships. It is not a case of our having to have ships, and, if a Nova Scotia builder did not take on the work, of our having to suffer. There are builders in the constituency of the hon. member for New Westminster. There are builders in the city of Vancouver. There are builders at Prince Rupert.

Mr. HANSON (Skeena): We have a modern dry dock, government-owned, at Prince Rupert, working only half time.

Mr. MACDONALD (Kingston City): There are builders in dozens of places in Ontario and all along the St. Lawrence river ready and anxious to take on the work that these Nova Scotia people did not undertake.

Mr. DOUGLAS (Weyburn): We want them all used; that is all. We are not saying that other yards are not to be used. The point is that we want all of them used. If Nova Scotia can be used for one type of ship, namely, large wooden ships, it would release steel shipyards for the production of other types, particularly cargo ships.

Mr. REID: They had their choice of two types of ships.

Mr. MACDONALD (Kingston City): So far as ships of war of any kind are concerned, there is at this time no shortage in Canada of building facilities. The great problem in this country so far as the Royal Canadian Navy is concerned, within the year, will be to train men rapidly enough to keep up with the ships of war. That will be the problem. As I said the other day, the training of officers in the navy is not a matter of a day or two, or a month or two; it is a matter of years. A navy as we had it at the beginning of the war—a navy, I may tell the hon. member for Weyburn, that was kept down to that strength partly as a result of representations which he and his associates made—you cannot take an organization of that sort, a navy of 1,700 men, and build it up to 25,000, as it will be in early 1942, without doing some very stiff and hard work. The problem is going to be to get the trained personnel to man the ships of the Royal Canadian Navy—not to get the ships. The shipyards of Canada have not failed in one instance. They are on the job,—and ahead of the job. The programme of shipbuilding which was destined to last until the late months of 1942 is going to be finished in the late months of 1941, thanks to the efficiency, skill, loyalty and patriotism of the shipbuilders of this country.

Mr. DOUGLAS (Weyburn): Does the minister know of a single military or naval vote brought down by this government which was reduced by the house?

Mr. MACDONALD (Kingston City): I say that my hon. friend and his associates were foremost in this country, and have been for many years, in opposing defence estimates of one kind or another. If my hon. friend had had his way, we would not have a Canadian ship on the sea to-day. His party sat in this house in 1939 and said that we should not send a single man overseas. That was their idea of loyalty. I am telling him now that if he had had his way, there would not be a single man in the Canadian navy, and there would not be a single ship on the sea, because when a man enters the Royal Canadian Navy he volunteers to do service in any part of the world where duty calls him. This is the hon. gentleman who now comes to this house and attempts to say that I would be better as a lawyer than as a minister of the navy. I will tell my hon. friend that if he cannot make a better show in his argument than he made to-night, then he had better turn to some other pursuit, and stay there.

It has been suggested by the leader of the opposition and by the hon. member for Cumberland that the attitude I have adopted with regard to Nova Scotia shipbuilding is a defeatist attitude. That phrase was coined or used, I believe, by a newspaper in Halifax whose editorials lately on the question of shipbuilding have been remarkable for what they did not contain. They have been referring to the attitude of people who faced the facts and told the facts to the people of Nova Scotia, and have described that attitude as defeatist. I have done as much for Nova Scotia as most men who have spent a similar number of years in public life. There has never been a time in the years I sat in the legislature of Nova Scotia when I did not devote every energy I had to the development of the industry of that province. But I never told the people of Nova Scotia at any time, and I am not going to tell them to-day from this chamber, things which are not so. I am not going to tell the people of Nova Scotia that the blame is with the Department of Munitions and Supply, or that it is due to some specification or to some kind of wood which is used in the ships, when I know that is not the real reason.

The leader of the opposition referred to the spirit of the people of the maritimes, and expressed the hope that it might be revived. I have wondered whether the spirit of Nova Scotian builders and shipping interests is what it was three quarters of a century ago. I doubt very much whether the grandfathers of these men, the old fellows who were building ships in the fifties and sixties and seventies of the last century, would have taken second place to any province or any country in the world when it came to building ships cheaply, efficiently and speedily. Nova Scotia in the middle of the last century had a greater tonnage on the seas of the world, per capita, than any other country. Its ships were on every sea; its captains and its sailors were known in every port. But I doubt whether some of the shipbuilders of to-day have the spirit of their fathers; and when people, in this chamber or in the press of this country, lay the blame for the non-existence of shipbuilding in that province on factors which have very little to do with the situation, I think it is time that somebody spoke out and gave the real facts.

Mr. NICHOLSON: What is wrong with the builders?

Mr. MACDONALD (Kingston City): The hon. member for Queens-Lunenburg mentioned that the specifications for the Fairmile boats and the mine-sweepers were British specifications. That is absolutely true. Some of these boats were destined for the Royal Navy, and we had no other course than to comply with those specifications. If they wanted us to build boats of silver we should have to try to do it, or throw up the sponge. They wanted mahogany; they wanted teak, and there is no country in the world which can build warships of any kind as well as the people of Britain can do it. When they asked us for Fairmiles with mahogany decks or planks and with teakwood here or there, there was nothing for us to do but to accept their specifications and build ships in accordance with those specifications.

I do not know whether the leader of the opposition is suggesting the establishment in this country of a government mercantile marine. If he is, that is a suggestion which perhaps is worth considering.

But I say again, so far as ships for the Royal Canadian Navy are concerned, ships of war, there is no lack of capacity in Canadian yards.

So far as cargo ships are concerned, although I should prefer the Minister of Munitions and Supply to make this statement, because I am altogether out of my own department, I know of no shortage in that regard; I know of no shipyard in Canada which is turning away work; I know of no danger of having our existing yards overburdened. Under these circumstances the point upon which I should like the leader of the opposition to elaborate is whether he believes that the government should now undertake, in addition to all the work which is being given to the shipyards of this country, the establishment of

a Canadian mercantile marine, and whether, for that purpose, it should establish government shipyards. If that is what he means, it is, as I say, a suggestion perhaps worthy of some consideration. But up to the moment, whether in respect of cargo ships or ships of war, I am aware of no lack of capacity in Canadian yards, and certainly there is no lack of willingness or zeal on the part of Canadian builders to undertake any task which the government, or, indeed, any private individual, sets before them in furtherance of this country's war effort.

Mr. HANSON (York-Sunbury): I accept without reserve the statement of the minister that, so far as the limited programme of shipbuilding which the Department of Munitions and Supply have instituted, is concerned, there is no lack of capacity in Canada. But the Minister of Munitions and Supply, when we discussed this matter on an earlier occasion, and he was pressed to expand the programme of shipbuilding in Canada, put the position on an entirely different basis. What he said was that there were no skilled workmen in Canada. It was not a question of capacity but a question of ability to perform upon which he made his defence for not doing more than we were asking him to do. I suggest that the two stories do not jibe: I am going to leave it there.

There is involved in this a larger question to which the minister adverted just before he resumed his seat. I want the ministry to explore all possible avenues of building up in Canada a commercial shipbuilding industry. It has started on the Pacific coast; it has not flourished on the Atlantic coast. Now, when ships are needed, is the opportunity to get this programme going on a commercial basis. Whether it shall be done as a government-owned, a government-operated or a privately initiated enterprise, is a matter for grave consideration. I do not mind telling the minister that, so far as I am concerned, I would prefer, after the matter is gone into thoroughly and given the best consideration that the authorities and the technical men can give it, as to ways and means, that the decision should be that it should not be a government-owned or a government-operated project. What I visualize is a commercial enterprise which may be assisted by the government, in the establishment of yards, and in the construction of a plate mill on the Atlantic coast. It is not beyond our powers to do this, and it should be started now if we as a nation are to reap any of the benefits of it and to give Great Britain the assistance which an all-out war effort on the part of this country requires, and for which our people are calling in accents louder than I can use. That is what I am asking the ministry to visualize and to consider. We will support them in any well-thought-out enterprise.

What can be done on the Pacific coast with respect to steel shipbuilding surely can be done in Nova Scotia and New Brunswick. I do not believe that all the initiative has as yet gone out of Nova Scotia. I learn that some of our friends in Nova Scotia find it difficult to get this government interested in Nova Scotia enterprise, and I can tell the minister of a specific case. It took months to convince the Department of Munitions and Supply that munitions could be made at Trenton, in the county of Pictou. I know that the manager of the Trenton plant was in Ottawa and spent days and weeks in trying to get an order. He never did get an order from this government, but he got one from the department for the account of the British government. He had infinite trouble in getting it. I do not know the reason, and I am not going to allocate any blame. There may have been a very good reason why he could not get an order for munitions for the plants in Pictou county, but he himself told me of the difficulties and discouragements which he had encountered. Finally he did get an order, for the account of the British government, made, of course, through the single purchasing channel. I approve that principle, because I do not think it would be wise to have two competing agencies in Canada for this type of work; the principle which has been set up by the Minister of Munitions and Supply and his advisers is a sound one; but there has been some difficulty—I will not say resistance—in the working out of the principle.

The only reason why I rose again was that the minister rather invited me to give my opinions with respect to the question of commercial shipbuilding. That is the one I am interested in. I do not think for one minute that with the lack of technical men in Canada we can hope during this war—and I do not think we shall want to do it after this war—to build naval vessels of any size and power that cannot be far better built in Britain than we could do it here even in times of peace.

Somebody may say: They can build cargo ships over there better than we can build them in Canada in times of peace. That may be true. The first cost of establishing a shipbuilding enterprise in Canada will be heavy. It will cost us more here, I have no doubt; but I do not think it will be 100 per cent more, as the Minister of Munitions and Supply suggested the other day. I believe that, as time goes on, and we understand things better,

the costs will be reduced. There is an opportunity, if we have the vision as a people, as a government, and as a parliament, and if we make an appeal to the commercial enterprise of our citizenship, to establish in the provinces by the sea a commercial shipbuilding enterprise. That is what I invite the minister and his colleagues to give their attention to from now on so far as it is possible for them to do so. I want to see it started now in order that we may have a post-war industry that may be a continuing industry, so that Canada will get back on the map once more as a seafaring country as we were in days gone by. It is not beyond the realm of possibility at all. It is, on the contrary, well within the range of possibility. All we need is vision and energy and the spirit to go ahead and do it. Once we get going, we can build ships as cheaply as they can build them in the United States. Let me say to the minister that "without vision the people perish." We must have a little more vision in the maritime provinces.

Mr. MACDONALD (Kingston City): And private enterprise.

Mr. HANSON (York-Sunbury): I agree that we must have private business enterprise. I do not believe that everything should be left to the government. As a matter of fact, one of the great evils in Canada to-day, and for many a day past, has been this spirit of: Oh, let the government do it. We must snap out of that sort of thing. We must get down to encouraging private initiative. That is one of the things that appeals to me under the capitalist system. If you destroy—and now I am looking at my hon. friends to my left—the principle of private initiative in Canada and come to leaning and depending upon paternalism, God help this country.

Mr. BLACK (Cumberland): Mr. Chairman, one statement just made by the Minister of National Defence for Naval Services I cannot agree with. He said that the men of to-day in Nova Scotia are not the equal of their grandfathers. They may not have the experience in shipbuilding, but I believe that if the responsibility is placed upon them, they will prove worthy of their forebears.

It is agreed that the need to-day for ships is greater than in the last war, and the effort being put forth at the present time in building ships in Nova Scotia does not compare with what was done there in the last war when there were in that province scores of shipyards building wooden ships. There has been a tremendous development in the use of diesel engines, so that the wooden ship is to-day far more serviceable than it was in the last war.

Nor is Nova Scotia doing to-day what she did in the last war in building steel ships. A new shipyard was established in Pictou county and several large steel ships were built in the last war. Plates and frames were rolled there to build these ships. During the last war several million dollars were expended in Sydney to roll plates in order that ships might be built in Nova Scotia, but that plate mill is not operating at this time. There is no comparison between the need for ships to-day and in the last war, nor is there any comparison between what has been done to enable Nova Scotia to build ships to-day and what was done in the last war.

Mr. POTTIER: My constituency is a wooden shipbuilding constituency, and I would hate the impression to go out that we have not been building some ships. We have built seine boats and speed boats of various kinds and scows for the government.

I cannot agree with the hon. member for Weyburn when he says: Mobilize those shipbuilders and tell them what to do. If that is the spirit of the west, it is not the spirit of the maritimes. Our shipbuilders do not need to be told what to do.

Mr. DOUGLAS (Weyburn): Apparently they do, according to the minister.

Mr. POTTIER: The difficulty with regard to mine-sweepers has been largely one of finance or occupation on other projects. As I stated in the house the other day, in my constituency or in the constituency adjoining we have an order for two Fairmiles and four mine-sweepers, and we would have undertaken to build more mine-sweepers but for the fact that some of these family shipyards have not the financial resources to go ahead and take a chance on losing from $50,000 to $75,000 or are busy on other work. Their financial build-up is, I think, being remedied. I personally have been working for months trying to get people interested financially and endeavouring to work up enthusiasm, but until sufficient enthusiasm and finances have been developed, we are going to have the situation we have at the present time.

Section stands.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Wednesday, April 2, 1941.

The house met at three o'clock.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

TREASURY BOARD

Mr. DESMOND:

1. What ministers of the crown are members of the treasury board?

2. Who is the secretary of the treasury board?

Mr. ILSLEY:

1. Minister of Finance, Chairman; Minister of Justice; Minister of Mines and Resources; Minister of Agriculture; Minister of Trade and Commerce; Minister of National Revenue.

2. W. C. Clark, Deputy Minister of Finance.

PURCHASE OF VESSEL "WINCHESTER"

Mr. ROY:

1. Has the government purchased, directly or indirectly, a vessel named *Winchester*?

2. If so, (a) from whom; (b) upon whose recommendation; (c) at what price; (d) where was delivery made?

Mr. HOWE: The vessel *Winchester* is one of the fifteen ships referred to by the minister, page 1621, *Hansard*. It is not in the public interest to give details of this purchase.

WHEAT SHIPMENTS VIA HUDSON BAY ROUTE

Mr. DESMOND:

1. How many bushels of wheat have been shipped by the port of Churchill in each year since the completion of the Hudson bay railway?

2. What is the total tonnage shipped via the port of Churchill in each year since the completion of the Hudson bay railway?

Mr. MacKINNON (Edmonton West):

1.

Period August to October	Bushels
1931	544,770
1932	2,735,939
1933	2,707,879
1934	4,049,871
1935	2,407,000
1936	4,293,501
1937	603,982
1938	916,913
1939	1,772,460

2.

Period August to October	Long tons
1931	nil
1932	81,566
1933	72,825
1934	132,876
1935	72,220
1936	114,998
1937	16,177
1938	245,560
1939	47,474

TAX COLLECTIONS BY PROVINCES

Mr. RAYMOND:

1. What is the total sum collected during 1939 in each of the provinces from the following sources, (a) income tax; (b) sales tax; (c) customs; (d) special excise tax on importations?

2. How many persons in each province paid income tax in 1940 for the year 1939?

3. What is the total sum collected in each province from July 1, 1940, to February 1, 1941, from the national defence tax?

Mr. GIBSON.

1. Provinces	(a) Income tax	(b) Sales tax	(c) Customs import duty	(d) Special excise tax on importations
		Calendar year 1940		
Nova Scotia	$ 3,517,357 48	$ 2,912,329 97	$ 3,408,135 92	$ 42,014 84
Prince Edward Island	822,577 57	101,131 57	111,198 36	301 08
New Brunswick	2,116,658 15	2,019,817 42	3,345,936 57	19,108 72

Totals	293,097	17,618	310,715

3. Provinces	National defence tax
Nova Scotia	$ 582,076 66
Prince Edward Island	22,757 26
New Brunswick	385,953 43
Quebec	4,688,995 51
Ontario	10,274,808 22
Manitoba	1,062,273 74
Saskatchewan	346,180 26
Alberta	731,067 63
British Columbia	1,969,274 85
Yukon	34,054 68
Total	$20,097,442 24

Note—The deductions of national defence tax made by public debtors during one month are not remitted until on or before the 15th of the following month. Consequently these figures, which indicate the collections received up to, and including, the month of January, 1941, represent the deductions made by public debtors in the months of July, August, September, October, November and December, 1940, i.e. six months.

SALES TAX

Mr. BOUCHER:

1. When was the sales tax first imposed?

2. What was the amount of the tax imposed at that time?

3. On what dates have changes been made in the amount of the sales tax, and to what amount was the tax changed in each instance?

4. What revenue has been produced by the sales tax in each fiscal year since it was imposed?

Mr. GIBSON:

1. May 19, 1920.

2. One per cent.

3 and 4. Statement attached:

Rates of Sales Tax from 1920 to Date

May 19, 1920, to June 16, 1920—1 per cent on sales by manufacturers, on sales by wholesalers, and on imports.

June 17, 1920, to May 9, 1921—Domestic Sales: 1 per cent on sales by manufacturers to wholesalers, and on sales by wholesalers; 2 per cent on sales by manufacturers to retailers or consumers. Imports: 1 per cent on imports by manufacturers and wholesalers; 2 per cent on imports by retailers or consumers. Tax payable by purchaser to manufacturer or wholesaler.

May 10, 1921, to May 23, 1922—Domestic Sales: 1½ per cent on sales by manufacturers to wholesalers, and on sales by wholesalers; 3 per cent on sales by manufacturers to retailers and consumers. Imports: 2½ per cent on imports by manufacturers and by wholesalers; 4 per cent on imports by retailers and consumers. Lumber: 2 per cent on domestic sales and 3 per cent on importations. Tax payable by purchaser to manufacturer or wholesaler.

May 24, 1922, to December 31, 1923—Domestic Sales: 2¼ per cent on sales by manufacturers to wholesalers, and on sales by wholesalers; 4½ per cent on sales by manufacturers to retailers and consumers. Imports: 3¾ per cent on importations by manufacturers and by wholesalers; 6 per cent on importations by retailers and consumers. Lumber: 3 per cent on domestic sales and 4½ per cent on importations.

January 1, 1924, to April 10, 1924—6 per cent on sales by manufacturers or producers and 6 per cent on importations; 3 per cent on a restricted list, both on domestic sales and on importations.

April 11, 1924, to February 17, 1927—5 per cent on sales by manufacturers and on importations; 2½ per cent on a restricted list of commodities, both on domestic sales and importations.

February 18, 1927, to February 16, 1928—4 per cent on sales by manufacturers and on importations; 2 per cent on a restricted list, both on domestic sales and on importations.

February 17, 1928, to March 1, 1929—3 per cent on sales by manufacturers and on importations; 1½ per cent on a restricted list, both on domestic sales and on importations.

March 2, 1929, to May 1, 1930—2 per cent on sales by manufacturers and on importations; 1 per cent on a restricted list, both on domestic sales and on importations.

May 2, 1930, to June 1, 1931—1 per cent on sales by manufacturers and on importations; ½ of 1 per cent on a restricted list, both on domestic sales and on importations.

June 2, 1931, to April 6, 1932—4 per cent on sales by manufacturers and on importations; 2 per cent on a restricted list, both on

domestic sales and on importations; 2 per cent on a restricted list when produced or manufactured in Canada.

April 7, 1932 to March 21, 1933—6 per cent on sales by manufacturers and on importations; 3 per cent on a restricted list, both on domestic sales and on importations; 3 per cent on a restricted list when produced or manufactured in Canada.

March 22, 1933 to March 22, 1935—6 per cent on sales by manufacturers and on importations; 3 per cent on articles manufactured by the labour of the blind in institutions in Canada.

March 23, 1935 to May 1, 1936—6 per cent on sales by manufacturers and on importations; 3 per cent on articles manufactured by the labour of the blind, or the deaf and dumb, in institutions in Canada.

May 2, 1936 to date—8 per cent on sales by manufacturers and on importations; 4 per cent on articles manufactured by the labour of the blind, or the deaf and dumb, in institutions in Canada.

The yield from the sales tax by fiscal years since its inception, May 19, 1920, is as follows:

1920-21	$ 38,126,063 94
1921-22	61,518,751 13
1922-23	91,262,254 13
1923-24	100,990,076 90
1924-25	66,707,369 96
1925-26	74,025,093 31
1926-27	82,305,670 60
1927-28	72,100,224 12
1928-29	63,646,671 22
1929-30	44,858,701 20
1930-31	20,783,944 15
1931-32	42,392,610 31
1932-33	57,977,571 00
1933-34	63,223,607 40
1934-35	74,443,904 09
1935-36	81,178,184 44
1936-37	116,138,801 44
1937-38	141,863,248 24
1938-39	125,926,430 90
1939-40	141,121,363 91

NATIONAL REVENUE—WAR EXCHANGE TAX

Mr. BENCE:

What revenue has been produced by the war exchange tax since its imposition?

Mr. GIBSON: The revenue produced by the war exchange tax since its imposition to the end of February, 1941, amounts to $53,307,503.03. The returns for March are not in yet.

[Mr. Boucher.]

WAR EXCHANGE CONSERVATION ACT—SPECIAL TAX CREDITS AND ALLOWANCES FOR DEPRECIATION

Mr. DIEFENBAKER:

1. Have any agreements been entered into under the War Exchange Conservation Act, 1940, by the governor in council, with individuals, partnerships or corporations granting assistance by way of special tax credits and/or special allowances for depreciation or depletion under the Income War Tax Act and the Excise Profits Tax Act?

2. If so, what are the names of such individuals, partnerships or corporations?

Mr. ILSLEY:

1. None to date. Several agreements are now in various stages of negotiation. The War Exchange Conservation Act, Chapter 2 of the statutes of 1940-41, section 8 (2), provides for the tabling of all agreements in parliament within fifteen days of entering into such agreements, or, if parliament is not sitting, within fifteen days after the opening of the next session of parliament.

2. Answered by No. 1.

QUESTIONS PASSED AS ORDERS FOR RETURNS

TRENTON, ONT., AIRPORT

Mr. STOKES:

1. Who has the contract for supplying bacon to Trenton airport?

2. Has the contractor to date supplied only Canadian bacon? If not, why not?

SALISBURY, N.B., AIRPORT SITES

Mr. HATFIELD:

1. What property or properties have been purchased in the parish of Salisbury, Westmorland county, New Brunswick, for airport sites?

2. What is the acreage of each such property so purchased?

3. From what person or persons was each such property purchased?

4. What amount was paid by the government for each such property?

5. What development has been made on each such property and to what use is such property now being devoted?

PUBLIC SERVICE EMPLOYEES

Mr. BLACKMORE:

1. How many persons receiving $1,650 or more per annum has the dominion government employed since the outbreak of war who were not domiciled in the Dominion of Canada at least one year before September 1, 1939?

2. What is the position of each?

3. What special qualification in each case justified his employment in preference to a Canadian?

4. What income is paid to each, whether as salary, living allowance, expenses or other form of payment?

5. What are the names of all employees in Canada on the government payroll who receive in excess of $6,500 per annum?

6. What is the amount each receives, the duties he performs, the qualifications he possesses and the length of service he has rendered?

MOTIONS FOR PAPERS

LETTERS PATENT TO GOVERNORS GENERAL

Mr. MacKINNON (Kootenay East):

For a copy of the letters patent, instructions and commissions issued to each governor general appointed since January 1, 1931.

CANADIAN NATIONAL ADVISORY COMMITTEE

Mr. MacKINNON (Kootenay East):

For a copy of the order in council of May 7, 1924, appointing the Canadian national advisory committee, together with any subsequent orders in council relating to such committee.

CANADIAN TEMPORARY GREAT LAKES-ST. LAWRENCE COMMITTEE

Mr. CARDIFF:

For a copy of the order in council appointing the Canadian temporary Great Lakes-St. Lawrence committee, together with any subsequent orders in council relating to such committee and any instructions issued to the members of such committee.

ACREAGE BONUS CLAIM OF W. S. HAWKES

Mr. FAIR:

For a copy of all correspondence, reports, letters, telegrams and other documents, dated during the year 1940 with respect to the acreage bonus claim of Mr. W. S. Hawkes, S.E. ¼ section 1-52-6-4.

Mr. FAIR: I should like to have this motion amended by inserting the words "and 1941 to date" after the figures "1940" in the third line.

Mr. SPEAKER: Carried as amended.

DARTMOUTH, N.S., AIRPORT

INQUIRY AS TO TILLEY REPORT

On the orders of the day:

Hon. R. B. HANSON (Leader of the Opposition): May I express the pleasure we all have in seeing the Minister of National Defence for Air (Mr. Power) safely back in his seat after his tour of eastern Canada. As he has no doubt seen the Dartmouth airport, may I ask him if he has received the Tilley report thereon, and if so when we may expect to have it?

Hon. C. G. POWER (Minister of National Defence for Air): I have not yet received the report. The only answer I can make to the second part of the question is, I hope soon.

WHEAT

STATUS OF FLAX IN CONNECTION WITH POLICY RESPECTING COARSE GRAINS

On the orders of the day:

Mr. M. J. COLDWELL (Rosetown-Biggar): On Monday I asked about the status of flax under the agricultural proposals presented to the house the other day. The Minister of Agriculture replied that he hoped to have the regulations before council the next day. I should like to know whether an understanding has been reached, and, if the regulations have been approved, whether they can be tabled so that we may have an opportunity of looking them over.

Hon. J. G. GARDINER (Minister of Agriculture): The regulations have been before council and are in form to be brought before the house. I hope to be able to table them before the house closes this afternoon, and in order that the information may be available to hon. members I am arranging to have mimeographed copies placed in the post office boxes this afternoon.

INQUIRY AS TO POSSIBLE LEGISLATION RESPECTING POLICY FOR 1941

On the orders of the day:

Mr. E. E. PERLEY (Qu'Appelle): I wish to direct a question to the Minister of Trade and Commerce. Does he propose to introduce any new or amending legislation to implement the announced wheat policy for 1941? If so, when may we expect it?

Hon. J. A. MacKINNON (Minister of Trade and Commerce): I am not just sure whether any new legislation will be necessary at the present time or not. The question is under consideration.

SHELL INSPECTORS

STATUS OF CERTAIN EX-SERVICE MEN FORMERLY EMPLOYED AT NATIONAL STEEL CAR PLANT

On the orders of the day:

Hon. N. A. McLARTY (Minister of Labour): I wish to make a very brief statement in connection with the suggestion made by the hon. member for Cape Breton South (Mr. Gillis) that I had been somewhat discourteous in not supplying him with information. I should like to advise of the circumstances that gave rise to the hon. gentleman's complaint.

Last evening the hon. member for Cape Breton stated that no answer had been given with regard to the situation of certain inspectors trained in the National Steel Car Corporation at Hamilton.

I had thought, Mr. Speaker, that the answer given in the course of debate completely covered the questions raised and had no indication from the hon. member that a further statement was required from me.

Reference to *Hansard* of March 19 last will show that after the hon. member had spoken the Minister of National Defence (Mr. Ralston) explained the reasons for setting up the intergovernmental inspection board and he said that while he was not familiar with the facts mentioned, and that the board conducts its own operations, he would bring the hon. member's representations to the attention of the board.

The Minister of National Revenue (Mr. Gibson) was familiar with the situation and dealt with it on page 1698 of *Hansard,* pointing out that the inspection board required to use more numerous inspectors and for this reason had opened a training school at the National Steel Car Corporation plant. It was understood that these men would not necessarily be employed in that plant and they had given an undertaking, on completion of their training, that they would go to any plant in the United States or Canada, to which they might be directed.

The question of jurisdiction was also raised but I considered that an answer had been given in connection with the question of the leader of the opposition (Mr. Hanson) as reported on page 1699 of *Hansard.*

Any statement I can make would be almost entirely repetition. However, any additional facts might be briefly these:

1. Twenty-one of those trained refused to leave Hamilton and rather than do so decided to be released.

2. Positions were offered them in a plant situated near Montreal and the board agreed to pay transportation expenses and allowance, both for the inspector and for his family and effects.

3. Later on an offer was made to transfer some of the inspectors to Lindsay but these refused to leave Hamilton, preferring to take chances of securing employment there.

4. No female help is called on to replace male inspectors. Women employed by the inspection board are not employed as inspectors but as examiners, whose duties are of a routine character.

I do not think there is anything I can usefully add to this statement.

[Mr. McLarty.]

WAR APPROPRIATION

SUPPLEMENTARY PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Tuesday, April 1, consideration in committee of bill No. 25, for granting to his majesty aid for national defence and security—Mr. Ilsley—Mr. Vien in the chair.

The CHAIRMAN: We are considering clause 2. Shall clause 2 carry?

Mr. MacNICOL: I should like to add a little to the question of shipbuilding, which took up the time of the committee for some time last evening. Four types of ships were mentioned during the debate, but I got rather mixed up on account of the way in which the debate jumped from one type of ship to another and some of the evidence that came out.

The first of the four types mentioned was the Fairmile. I will not discuss that type except to say that, as most people know, it is a fast motor boat, developed, I believe, mostly on the Muskoka lakes, on Georgian bay and perhaps along the east and west coasts. It is not a large boat. As the minister said, teak and mahogany enter into their construction. I am not going to discuss that type of boat, but I do wish to say something about the other three types mentioned—the corvettes, the mine-sweepers and the cargo ships. Corvettes are now built, I believe, on both coasts and principally on the great lakes. I know they are at Toronto. I have seen them at Fort William, Midland, Collingwood and Kingston.

Mr. MACDONALD (Kingston City): On the river.

Mr. MacNICOL: At Kingston, at the foot of lake Ontario. The question was raised as to whether they could be made in Nova Scotia. In my judgment, they can be. As to whether the steel can be purchased down there, I am not sure, and it is about the production of steel, having in view a long range shipbuilding policy, that I wish to say a few words to-day.

There is at New Glasgow a mill that rolled steel. I have not been able to find out the thickness of the steel rolled there. I have been told it is a quarter of an inch, but that might not be thick enough for either corvettes or mine-sweepers. There is no reason, however, why the capacity of the mill cannot be increased in order to roll heavier steel if the government so desires. I have been informed that they roll only up to 50-inch plates, and that would not be wide enough even if it were thick enough for corvette

hulls. The plate rolled there will do for various parts of the ships—stays, keel base, and so on. The hull plates themselves used in corvettes are made out of 54-inch plates reduced to 51-inches. I believe that largely 60-inch plates are used in the construction of mine-sweepers; and, as regards the cargo boats, anything in smaller size would be used for stays, and all the other inside steel work. But the plate itself on the outside of the ship is usually anywhere up to 84 inches. I endorse what my leader, the minister and others have said in this matter. If it is possible to establish a long-range plan of operation in Nova Scotia for the construction of cargo boats, I would be in accord with that plan one hundred per cent.

For the next few minutes I shall confine what I have to say to Nova Scotia. I know there is a large steel plant at Sydney in that province. I used to know its capacity in earlier days, but I have forgotten what it was. I believe that at the time of the first great war the mill was satisfactory for the production of steel plate. It is my understanding that plate is not now being made at the Sydney mill. I have never heard of any reason why it could not be manufactured there. Of course we realize that climatic conditions enter into the construction of steel plate. Whether steel plate is not being made at Sydney because of climatic conditions I do not know, but if the government could further a long-range plan to reequip the mills at Sydney and New Glasgow to build plate of the size required for corvettes and mine-sweepers, and particularly for cargo boats, I am sure the house would be in accord.

Why is this not being done? Although I am not familiar with the set-up I do know the company making steel at Sydney either controls or is able to get all the iron it requires from Bell island, not far from St. Johns, Newfoundland. I have been there, and I know the situation. The iron available at that point is good, and the deposits are among the largest in the world. I believe they have in sight about three and one-half billion tons of iron ore. That ore can be easily taken out and shipped.

Mr. MACDONALD (Kingston City): All under water.

Mr. MacNICOL: Yes, all under water, but easily taken out and easily shipped. The facilities are excellent for loading the iron into cargo boats. The distance from Bell island to Sydney is not far, and it is a water route.

Then around Sydney I presume there are ample supplies of limestone, a factor essential to the production of steel. There are ample supplies of coal—again among the largest in the world. Nova Scotia, therefore, with its coal, its limestone easily obtainable and its iron ore easily transported, would be a natural place for the production of steel. So that if we are compelled, as we may be, to go into the building of cargo boats in a large way, it would seem that Nova Scotia would be a proper place in which to do it. Cargo ships can be built only on either coast and along the lower St. Lawrence in the provinces of Quebec, Nova Scotia and New Brunswick. Thousands of these ships will be required after the war, if indeed they are not required before that time. When we see our enemies scuttling their ships in the United States harbours we are led to the conclusion that they have at last determined that the only way they can beat the British empire is to prevent ships from arriving at the ports of the United Kingdom. It is for this reason no doubt that they are so anxious to destroy the ships of their own nationals in United States harbours.

It would seem therefore that the government must meet this problem and must decide with respect to a long-range production of shipping. In the event of its deciding on such a programme Nova Scotia and New Brunswick would be excellent places in which to build those ships. We know that in the Glasgow area the ships are all constructed along the river Clyde. There must be many equally excellent berths in the maritime provinces for the building of ships, and plants could be erected near those berths for the fabrication of necessary parts.

Then the question of equipment arises. In the constituency of St. John-Albert there is one of the finest brass manufacturing plants in Canada. I refer to the McAvity plant, one I have known for twenty-five or thirty years, and one which within my knowledge makes first-class equipment. So that in the maritimes they have at least one great plant, and there may be more, capable of supplying large quantities of the valve and fitting materials necessary to complete the building of the ships.

Of course Ontario is the great manufacturing province of Canada—and likely always will be, in spite of what anybody else may say. It is a province of which I am very proud. I am proud, too, of the business men in Ontario, and I am certain they would be able and willing to supply large quantities of the necessary equipment. They do now, in fact. They will be in a position to supply steel too when it is necessary to have it fabricated in sizes thicker and wider than those turned out in Nova Scotia. We ship steel from Ontario to all parts of Canada.

Then, in Ontario we build marine engines. I am not sure whether engines of the desired

size are made in Nova Scotia. Cargo ships are equipped with low-speed engines, capable of developing a propelling force of about ten to fourteen knots an hour, the speed of the ordinary convoy. Because of the comparatively low speeds required, the engines are not as large as they otherwise would be. No doubt they could be made in Nova Scotia. In any event they are now made in Montreal and Toronto. In my younger days the plant of the John Inglis company was not only a boiler plant but was known for its production of marine engines. I am told they are now manufacturing steamship engines again in that plant. If they are doing so I am certain the engines will be of good quality. It would seem therefore that there would be no difficulty in securing engines for the ships either in Toronto, or at points on the coast.

In my discussion of this long-range plan I now turn to the west coast. Within a hundred miles of Vancouver are iron deposits. I am told that limestone and coal are to be found in close proximity. I am told that they are not rolling plate on the west coast. If that is so, then I do not know why they are not, because it is being rolled farther down the Pacific coast, at Seattle, Los Angeles and San Francisco. The same could be done on the Canadian Pacific coast. I would suggest that in a long-range plan for the west coast there should be equipment to roll plate for themselves. What they cannot roll we in Ontario could supply.

I was happy to learn that yesterday the new steel plant at Hamilton of the Steel company of Canada, capable of rolling up to 100-inch plate, began operations. How much they rolled, or whether only a test was made, I do not know, but if it was only a test it would seem that they have reached the point of production. That is an important development in Canada. In addition to this plant there is the other great steel plant in Hamilton, Dominion Foundries & Steel Limited, which has been rolling plate for years. I am not thoroughly familiar with all their output, but I do know that they roll up to 78 inches. That would be plate of sufficient size for cargo ships.

We have in Canada, therefore, ample production capacity for everything entering into the building of a ship. Greatly increased demand may necessitate the production of steel plate in Nova Scotia and British Columbia, where the cargo ships will have to be built. The great lakes lend themselves particularly to the construction of the two smaller types, mine-sweepers and corvettes. There is ample capacity there to build anything required of these types. These ships are of a size that would go through the St. Lawrence canal. I believe that canal will take ships up to 250 feet, depending upon the construction of the bow and stern.

Mr. HANSON (York-Sunbury): Fourteen foot draught.

Mr. MacNICOL: A corvette draws no more than that light. The canal will take ships up to a width of forty-three feet, and the corvettes are under 200 feet long.

Mr. MACDONALD (Kingston City): One hundred and ninety feet.

Mr. MacNICOL: And the mine-sweepers?

Mr. MACDONALD (Kingston City): A little less.

Mr. MacNICOL: They are from 700 to 750 tons displacement.

Mr. MACDONALD (Kingston City): The canal would take those.

Mr. MacNICOL: They would not draw more than fourteen feet, provided they were sent through light. Of course, when they are fully loaded and equipped, they would draw more, but it is not necessary to load them on the lakes for the sea. I suggest that the government should have a long-range plan with a view to building the cargo ships which will be required after the war to replace those which will have been destroyed. This plan should extend across Canada from the east to the west. The amount of steel that is required is enormous. I am not familiar with the set-up for blasting in Nova Scotia, but I do know something of the Bessemer production and ships must have Bessemer steel. It is amazing how the demand for this type of steel has grown. I believe it was in 1854 when this process was invented by Mr. Bessemer, who later became Sir Henry. At that time England produced only 50,000 tons per annum, but now the United States alone produces anywhere from 50,000,000 to 75,000,000 tons per annum. Canada has a great opportunity. We have the coal; we have the iron ore, and where coal is not available, we have electrical energy. We are well equipped to build these ships. If I have said anything to encourage the government and the departments to set up a long-range shipbuilding plan across Canada, apart altogether from our war production, then I shall feel that I have done my duty.

Mr. CHURCH: This supplementary war appropriation bill is to provide $135,000,000 in addition to the $700,000,000 which was charged against the consolidated revenue fund on March 31, 1941. Nearly all these appropriations are handled by order in council without any additional legislation. Fifty-two

boards have been appointed by the government of the day to control man-power, food, munitions and the actual conduct of the war. In addition to this cumbersome list of boards, we have parliament with all its powers and privileges, and added to that we have eighteen public departments, each with its minister and deputy minister. Every day new boards are being appointed by order in council to spend more money. We have the advisory economic board which is supposed to be the brain trust, and in addition we have boards to deal with coal, fish, dairy produce, bacon and so on. Last but not least, of blessed memory, we have the rags, bones and bottle board.

This is the occasion when members of the house are able to ventilate their war grievances before this money bill is passed. This is a money bill, and it is when such a bill is being discussed that we are permitted to air any grievance regarding the conduct of the war. I am sorry we have not the same rule as they have in the British house. I have before me the British *Hansard* for December 3 last. Instead of a prolonged debate on questions like this, they have a question and answer period on matters of great national importance, almost every day, from a quarter to three until a quarter to four o'clock. During that time members may ask questions about the war, and supplementary questions also, cross-examining the ministry. In this particular *Hansard* eight pages are taken up in a discussion on the orders of the day, about the non-delivery of parcels. Such a procedure eliminates prolonging the debate from day to day. It is charged that parcels do not reach prisoners of war in Germany, and that a private agency fails to distribute them.

There are two or three grievances which I wish to mention while this bill is under discussion. The first has to do with a matter relating to the department of the Minister of National Defence. I have great admiration and respect for the three defence ministers and anything I say will be in the form of constructive criticism. We seem to have learned nothing from the great war. Take the record office for instance. The militia department cannot tell us how many soldiers enlisted from Hamilton or from Toronto. Toronto seems to have been the stamping ground for recruiting officers from the Pacific coast to Halifax. That is all right and I am not objecting to it, but we should be able to get information. Last July the city of Toronto was requested by the head of No. 2 district to allow an appropriation for three or four clerks for four weeks to go over the records to find out how many soldiers came from Toronto.

The record office should be up to date like any other department of government. The Canadian Pacific railway and other large corporations work on the unit system, but here we are in the second war and we are using the same old system. The municipality should be able to get this information because it is necessary to prepare for the time when the troops come home. The same thing applies to all the civilian departments. It took me three or four days to find out something about the federal revenue collections from the city of Toronto. I was not able to get it from the minister's department, but last evening the Toronto *Telegram* contained a report from the customs head of Toronto that over $93,000,000 had been collected in customs, about ten per cent of this being from a subsidiary port which is now tacked on to that city for some unknown reason. This is no way to conduct a public utility. It is high time there was a change in business methods. These departments should be conducted from the commercial aspect just the same as the railways and other large public corporations are conducted, and the amount of business done recorded on a unit basis.

Some of this money is to be used for the purpose of aiding the erection of munitions plants, but Toronto is not getting its fair share. The only plants we have are the Anaconda Brass, Massey-Harris, John Inglis, Dunlop Tire, Goodyear Tire, Hepburn, Dominion Bridge and a few others. Toronto is the logical site for munitions plants because it has a ready supply of raw materials, labour and power. The government is trying to conduct its business with old-fashioned methods. In the first years that Sir Wilfrid Laurier was in power, this country spent only $36,000,000 on maintenance and capital expenditures, but to-day we provide, by two bills, for almost a billion dollars to be spent by order in council. Yet we have the same old system which was used forty or fifty years ago.

We should have the unit system which is used by private corporations like the Bell Telephone and the railroad companies. That is how they conduct their business. The government has spent nearly $9,000,000 on public buildings in the city of Ottawa. I am not objecting to this expenditure, but this city is not of sufficient size to handle the volume of business in peace time, let alone in war time. In order that economy may be effected, some of these public departments should be removed to nearby cities. Then the ministers would be able to effect considerable economy which they cannot under the present system.

There has been an agitation in the other house to take some of the work off the shoulders of members of the Commons, and that is the proper thing to do. The other chamber could deal, for instance, with some of the soldier problems and have a committee sitting from day to day. In Great Britain they are doing a great deal of war work in the House of Lords, and the same is true of the senate at Washington. In Great Britain they have reformed their whole parliamentary procedure to divide the work up between the two houses, but we have learned nothing in that line since the great war. I am of opinion that the business of parliament should be reorganized in such a way that the other chamber will be given more work to do. We need real parliamentary cabinet and law reform here in war time.

I wish to refer to one or two soldier matters because this is probably the last opportunity we shall have to bring them to the attention of the house. The Minister of Finance (Mr. Ilsley) has told us that since the passing of the lease-lend bill this government has not had time to do anything in the matter of bringing about parity between the Canadian and the United States dollar. Washington-minded as we are in Ottawa, the government have not even attempted to garner any of the fruits that should flow from the work which Canada has done for the north American continent as a pioneer in its defence. We all have a great respect for that great country to the south, but some of the people over there forget that for two hundred years the mother country protected their shores, enabling them to become the great industrial nation they are to-day—something everybody is happy about.

Last week we sent down to Washington a number of financiers. But what do these clerks, office boys and stenographers know about high finance, or peace and war, economic and international affairs in dealing with Henry Morgenthau, secretary of the United States treasury? The time has come for us to take up with Washington in a serious way this question of parity or near parity of the dollar, because to-day we are importing $40,000,000 worth more of United States goods than we did last year on which exchange has to be met. As I said last night, one can go into any of the large departmental stores of this country and see, on the counters, piles of United States goods, almost all of which could be manufactured in Canada, thus saving exchange. True, we have a treaty, a trade one, which expired last year but is kept on. I hope that something will be done about that, because, after all is said and done, the lease-lend bill applies to Canada as well as to our allies, China and other countries. This matter should be taken up in a big way and certainly be referred to in the coming budget, and a war-time agreement made and entered into as an economic necessity for stability.

I have a letter here from the personal services officer of the Canadian Legion war services, stating that a soldier of the Ontario Regiment at Camp Borden is apparently about to lose some property which represents his life savings. The soldier is expecting to leave shortly for overseas and is much concerned as to the outcome of an action which is pending to dispossess him of this property. If he loses it, the writer says, his chances of rehabilitating himself on his return to civil life are very doubtful. The writer enclosed twenty-six papers, which I have transmitted to the Minister of Pensions. I should like to see a moratorium on mortgage foreclosures declared in respect of the property of all members of his majesty's forces, to continue in force until eighteen months after the war, during which period there should be no foreclosures of soldiers' property, and where necessary the government should pay interest, charging it against the soldier's mortgage at a low rate, when he returns. I hope something will be done about the matter.

There is another question to which I referred the other day in the hope of securing some measure of redress for this soldier grievance. I refer to the charges for meals on trains. Our military training camps are far-flung from Vancouver to Halifax, and I should like some of the members of this house to come and see what Camp Borden is like with the water, rain, mud and all that kind of thing at this time of the year. The same conditions can be seen at Petawawa and other camps. We have spent between $9,000,000 and $10,000,000 on the camps, and I maintain that the soldiers should have been encamped near a city where sewerage, water supply, good roads, transportation and other conveniences which are a charge on the overburdened taxpayers would be available. What was the need of establishing camps at Newmarket, for instance, and Long Branch? Why do we need camps there when the Toronto exhibition buildings are available? Toronto has spent $24,000,000 on those buildings, grounds and permanent exhibits, and the soldiers could have been trained there and used the buildings in inclement weather. That would have permitted training to go on all during the winter without interruption. I do not blame the Minister of National Defence (Mr. Ralston) because I know he is a man of wisdom and great capacity, and he was not in charge of the department when all this was started, but I object to some of these expenditures as being secondary, not primary. The

battle of Britain is the vital thing. If that is lost and the battle of the Atlantic and the battle of the Mediterranean are lost, freedom and liberty are gone so far as the north American continent is concerned, and life will not be worth living unless we win the war.

With regard to the price of meals, we have in this building a cafeteria where one can get a big dinner for thirty-five cents, but a poor soldier travelling across Canada in inclement weather has to pay from $1 to $1.25 for a meal on the train. That is what they are charged by our two great railway corporations. I wish hon. members could see some of the boys on the public ownership road. I have complained in this house before with regard to these conditions. I complained also because the rules of the house were broken when a committee was appointed, without notice first being given on the order paper, to consider the annual budget of the national railways and merchant marine. The soldiers are fighting the battles of this country, and they may never come back, and they should have free fares from the railways, for all the federal aid they have had.

I have a return here showing what the Canadian Pacific Railway has received month by month for transporting soldiers, and in my opinion it is this corporation or the two railways which are the real authors of the hitch-hiking orders which have been issued. I know something of that matter from the returns which have been brought down and from what I have read.

This return also shows what was paid to the Canadian National Railways, which my former leader called a dead-head railway, and that is what it is. Everybody seems to have a pass over the road if he has pull. Lindbergh got a life pass, not just a pass from Camp Borden home. The return shows that the Canadian Pacific Railway received for the transportation of navy, army and air personnel in September, 1939, $78,000, in round figures; in April, 1940, $323,000; in September, 1940, $289,000; in October, 1940, $373,000. Altogether, from September 1, 1939, to February 28, 1941, that railway company received $2,628,832.90.

The Canadian National Railways received for the same period a total of $2,573,226.28.

The Canadian Pacific Railway, no matter what government is in power, always has the biggest pull of any corporation in this country. One only needs to be a member of parliament and attend the committees of this house to learn something about that railway. There is no doubt that they have done a great deal for Canada, and their services in war time could not be surpassed by any great corporation in the world, but I do ask that railway to give some consideration to six poor soldiers who stole five or six tickets costing about $18.90, especially when it is remembered that the railway got from the government $2,628,000 for transporting troops to camps all over this country, since the war started.

Turning to another matter, I challenge the right of any commanding officer of a camp, without the authority of parliament, to issue orders on the camp notice board making certain actions within the law taken by soldiers a military offence. Let me read these four paragraphs:

> Railway tickets and bus tickets must be purchased and handed into company office before 1200 hours Fridays. These tickets must be attached to the passes and given out at 1600 hours.
>
> Personnel proceeding by privately-owned motor cars must inform the C.S.M. of the name of the owner of the car, also the car licence number, before 1200 hours on Fridays.
>
> Do not get the idea that you must go on pass every two weeks.
>
> If you have not enough money—do not go. Save your money.

I have a letter protesting against these instructions. They are illegal and without authority. The Fairbanks branch of the Canadian legion writes me:

> Hitch-hiking is not the proper way a man in the king's uniform should travel, and we think the government ought to be big enough to provide a decent means of doing so.
>
> Every effort must be made to allow these men to visit their homes and loved ones while they are in Canada, because some will be a long time gone after they leave these shores.

Too much cannot be done for the boys who are willing to go over there for their country, and we have faith in the government that it will do something.

Some of the commanding officers are more reasonable than others with regard to applications from those who wish to be officers. In my opinion all officers should come from the ranks. I understand that the former commanding officer of one of the corps of engineers has given a ruling that nobody who has not had university training or graduated along those lines can get a commission.

Another matter which might be referred to is the inaction of the government with respect to enlisting the cooperation of members of parliament. So far as the Toronto district is concerned, I doubt whether any hon. member has ever been invited to attend a single camp or anywhere else to see what is being done or is hoped to be done by the government from 1940 to 1942. The only letter along these lines which we have had, so far as I know—and I have asked some other hon. members—came from the Department of National War Services, asking us to take part

in a "scrap" campaign. I have pointed out on another occasion that this work is covered, so far as our city goes, by the police commission and licensed peddlers. It is also handled by the Salvation Army, who have big trucks going to every house in Toronto to collect the week's scrap; by the Poppy day fund, which have a regular service also, and raised by this means a large sum of money to take care of its work; by some of the women's organizations, including the Imperial Order, Daughters of the Empire; by the National Council of Women; and last, but not least, by the street department. Then, why any further duplication of services? That was the only invitation we have received. It was dated March 17, which was probably a good day to send it out, because some people born under the colour which that date symbolizes are, in any event, very full of "scrap." Anyway, that is the only invitation we ever got, to go out and collect rags, bones, and bottles, and I suppose we got it because some of us are "Conservatives," although the government is supposedly conducting a "Liberal" war.

In my opinion the small loans act operates against the interests of our soldiers. At the pawnshops where they try to raise a few dollars, they are charged rates away in excess of two per cent a month; in some cases, up to three or four times that amount. These men should have protection, if needs be by some measure brought in by the Department of Finance to assure them a little better consideration or a lower rate under federal authority.

Another matter to which I wish to refer is the situation in respect of the buildings at the camps. It seems that at least three or four departments have charge of these buildings. The Minister of National Defence, who is always illuminating and informative, brought down a splendid report upon the cost of these camps, but some of the work is done by contract, some by the department of the Minister of Munitions and Supply, some by the Department of National Defence and the air force do a lot themselves. No doubt it was a rush job and the work was necessary. I am making no objection to it. But as regards the Department of National Defence for Air, I have in mind that at the foot of Yonge street to Sherbourne street on the Queen's quay, in Toronto, a large number of wooden huts have been constructed, and I have received many complaints from carpenters and builders and others in the district that they cannot get employment on this work, but that people from all over Canada have been brought in to do it, nobody being taken on who is over forty-five years of age; further, that the rates and labour conditions are not what they should be. I reported the matter to the Minister of Munitions and Supply, and his director of public relations—I do not know what that phrase means, because every department seems to have a "department of public relations"—

An hon. MEMBER: Poor relations!

Mr. CHURCH: —simply referred me to the commander of the Royal Canadian Air Force at Toronto, and his public relations branch. What is the idea of having these huts? As we go past, we see a large number of troops doing nothing except guard duty enough to protect a city hall, and all they do is to protect lumber which is already protected by the city police, by the harbour commissioners, and by the contractors. No wonder there are so many people in the unit suffering from throat trouble, as the return to an order of the house showed.

I have in mind another matter which should be looked into in the interests of recruiting and of the army in general. I want to find out about the large number of civilians who are doing nothing in the army but sitting in offices, wearing uniforms, and getting—some of them— double pay—men in the city of Ottawa for whom the Ottawa river is the first and last line of defence so far as the war goes. I have received a number of communications objecting to the use of civilians in the Department of National Defence, while returned soldiers are out of work. They complain regarding the "number of uniformed men in the naval department who are merely doing the work of clerks, but who first secure commissions as lieutenants, thus enabling them to draw military pay on civilian jobs and to wear naval uniforms." Some of these lads were never on a coal barge, to say nothing of any other craft; they are not like the able "admiral" we used to have here from the bay of Fundy, who was a real authority on the sea and shipbuilding. "They will perform civilian clerical duties only until the war ends, but instead of drawing $75 per month as clerks, they will draw lieutenant's pay and allowances."

Another objectionable feature is the press bureau of the Department of National Defence for Naval Services. The other day I got a magnificent booklet, or brochure, or album; there is nothing like it on the north American continent, although it emanates from what is known as the "silent arm of the service."

Did you ever hear, Mr. Chairman, of the Royal Navy making up a book of photographs of itself and sending them all over the country as a publicity stunt? I am here to pay tribute to the noble courage of the men who are writing a glorious record on land, sea and

air; the history of courage is being rewritten by them, and I particularly congratulate the Minister of National Defence for Air on the good work he is doing. But one feature of the work of these departments simply does not appeal to me at all, and that is the large number of people who have been engaged for publicity work. As I pointed out five years ago, when this matter of naval protection was under discussion and I was urging a national shipbuilding policy and the opening up of all shipyards to prepare for a vast merchant marine policy before it was too late, and that something be done, we found that at the last shipping conference and the previous imperial conference the Dominion of Canada sided with two other dominions, and did not side with New Zealand and Australia in an advanced, forward empire shipping policy to rebuild the merchant marine. We would not assist or give one dollar towards the Singapore base, and we said, at the last empire shipping conference, that as far as the Dominion of Canada was concerned, we had no commitments and did not intend to make any towards maritime freedom. I do not see why the departments should be loaded up with all these publicity people. It is ridiculous to have these civilians—for that is all they are—walking up and down Yonge street in Toronto, or Sparks street here, wearing the king's uniform.

I do not blame the three ministers in charge of this department for these conditions; they have made many improvements; but why should these people, who really are only civilians and wear uniforms, enjoy increased rates of pay, while the men who are going overseas, privates and N.C.O.s, have to salute these gentlemen who are simply sitting at home getting double rates of pay for working on publicity, pay branches, and similar civil service jobs in the various departments at Ottawa and not in actual war work? Why, the streets at times are filled with many of these people! One has only to walk into any hotel rotunda or departmental store in Toronto to see many of them. The ministers in charge of these departments, who know far more than I do about these matters, are capable men and no doubt are trying to make some changes. I suggest that there should be some division in this matter of personnel; that those officers who are performing only civilian duties on the staffs of various departments should not wear the uniform at all, unless enlisting for any theatre of war, and the returned men should fill these positions.

Regarding publicity in general, there is no doubt that Canada is not being properly advertised in the United States. I hope that parliament will take note that on the next St. George's day, the day we celebrate in honour of England, there is to be a visit by Mr. Menzies, the splendid Prime Minister of Australia. Australia is opening an office in New York which will operate as an information bureau and will supply data on all phases of Australian life and on what that commonwealth has done in the war, and Australia has a great story to tell of her war work. That bureau will deal with the press and put on a real publicity campaign, giving them proper information instead of some of the garbled information that is coming into Canada now of war and foreign affairs.

I have here a letter from a leading head of a big store in the west end of Toronto, complaining about our information bureau. He says he has written several times asking the head of this department not to send him any more of this information because he cannot distribute it; it just goes, he says, into the waste-paper basket. In view of the great shortage of paper in Great Britain and this country, he thinks this waste is regrettable. I think the point he makes is well taken.

This bill will be the last opportunity we shall have to go into all these questions. I wish to commend the government for a great deal of what it has done, especially during the last year, but I would direct its attention to one or two matters which should be looked into. One is with regard to British prisoners of war. I have here the British official *Hansard* of Tuesday, December 3, 1940, in which there are three pages of questions and answers, beginning at page 392. It is charged that owing to the United States having been more or less against Germany, the former policy under which the United States government looked after the distribution of Canadian Red Cross parcels and private parcels to prisoners of war is no longer being attended to. The British government was asked as to its intentions with regard to these privately run enterprises. They did operate through Lisbon, but now, since the lease-lend bill, it is difficult for them to do anything, or get Red Cross parcels delivered.

These parcels are not arriving. The following members took part in the debate: Captain McEwen, Mr. Law, Sir William Davison, Viscountess Astor, Major-General Sir Alfred Knox, Miss Ward, Mr. Lees-Smith, Mr. Robert Gibson, Mr. Bellenger, Sir Adam Maitland; and the reply is given. The government here should also look into this situation. If the British government are not delivering the parcels, how can we know with regard to any private organization in Canada who send parcels? We had the head of the Y.M.C.A. in America telling us here last fall

that parcels were being delivered by the Y.M.C.A. He came here from the United States to give his views. The debate in Britain is to the contrary. This, I believe, is an authentic report of the proceedings in the British house, and this question is creating a great deal of anxiety among the relatives of our own troops. I have had several letters from mothers and fathers and wives of these men wanting to know if they get the parcels. Sir William Davison said:

> . . . I hold in my hand a letter from a prisoner in Oflag VII camp, dated October 29, saying no Red Cross parcels of any kind had come to that camp . . .

The minister said that there was a great deal of difficulty due to shipping and the changes that had taken place, and deliveries were difficult. An inquiry should be held into the matter at once, and I refer the government to these pages of the British *Hansard* for a complete statement of the case. Action should be taken.

Another matter with regard to these prisoners of war is that when they are in the army they are allowed so much a day and sustenance. When they become prisoners of war they do not get any allowance, and they do not get proper clothing, although by our law they are still on active service and should be paid. The country should pay for it. There is discussion of that in the same *Hansard*. I hope the government will look into it. They pay for food and clothing and they do not get it, *Hansard* says.

Another matter is that the information the country is getting, both on the radio and in the press, is not what it should be. The proceedings of this house are not reported. I heard the other day a man on the BBC giving his views, and it is time we had a Who's Who so that we may know who these people are, even the BBC, that are giving Canadians information about the war and about this bill and other matters. One of the broadcasters is J. B. Priestley, one of the best-known pacifists Britain ever had, who, for some unknown reason, got this job. Here is what he said in 1938:

> The most dangerous lunatics we have had to do with in this century have been the "be prepared" agitators. . . . All those people who go about saying that war is inevitable, and giving us their views on the next war, are either dangerous lunatics or criminals. They ought to be locked up and fed on bread and water.

One has to understand who these people are and then one can know how much attention at times can be paid to them because they were wrong all the years before the war. So when we are told that parcels are being delivered, the authority for those statements should be looked into, and a survey made as a result of America not being now able to function in Germany.

This supplementary bill and the main war appropriation, reaching a total almost unthinkable, are the net result of the sham sort of world Canada lived in from 1921 to 1939. They thought of nothing but Geneva and all its works, and threw away not only our defence but our friends. They also misjudged the whole European and domestic situation. We were told that there would never be any more war and that a bill like this would never be necessary again. We were told that on all sides of this house; that is the result of pacifism, disarmament, Geneva, Stressa, Locarno, Kellogg pacts and Munich. Had we made ourselves secure and been prepared, we would not have had a bill for one-third of this amount. But this bill to-day, what is it? It is just preparing the way for the Marxian theory; it is simply heading for the totalitarian state. The ministers take pride in the magnitude of the figures, the dizzy height; it has almost gone up to the height of the tower of Babel, in geometrical progression, and they are very proud of it. But there has been altogether too much taxation, too much of the methods of the big stick, too much telling the people of Canada what they are going to do next fall and winter and all kinds of scarecrow publicity. The late Hon. J. Israel Tarte said "elections are not won by prayers"; and to wait until you see where Canada will be next year in taxes. With the present ministry and all the professors, we shall in time reach a totalitarian state. There never was a time in the history of this country when a vigorous opposition was more needed than it is to-day. Wait until you see how your bread and tea and groceries will be taxed next year; see how we are going to take from Mr. Hepburn and the other provinces and the municipalities the gasoline tax and the motor vehicle tax, with all the scarecrow and big stick methods. There never was a time when the opposition had a greater opportunity. The London *Economist* said recently:

> The fact is that an alternative administration in opposition—able and willing to become a government, but with no wish, real or professed, to disrupt the state itself—is a necessity of sound democratic government. Indeed, one of the chief items in any really satisfactory reconstruction of the post-war world would be the emergence of such an opposition, and certainly not its suppression. In the event, of course, the advocates of a straightjacketed "unity" and the place-seekers may conceivably have their way, for it is hard to see where a real opposition is to come from; but it would be a setback, not progress.

In short, what is wanted in our public life is not the blurring of outlines but their clearer definition. It is no gain to have a formula which misrepresents two opposite views. It would be much better to have both defined.

They refer to what is proposed for reconstruction afterwards. The government would be well advised to adopt the principles laid down in this British *Hansard;* if they did, the debates would not last half a day or a day, and allow an hour daily for questions and subsidiary questions on all features of the war and cross-examination of the ministry, thus giving the country the facts and preparing it for the difficult days ahead.

Mr. PICARD: Last night I intended, when the discussion centred on Nova Scotia, to say a few words, but I did not have an opportunity then. Since the subject has been brought up again this afternoon by the hon. member for Davenport, I wish to make a few remarks.

The hon. leader of the opposition said last night he wanted the government to put Halifax back on the map. Halifax is on the map now, very much on the map. A couple of weeks ago I was in that city for a few days and what I saw there proved to me that Halifax was definitely on the map. If every member of the house had a chance to go there, he would see what has been done by the government and it would convince him much more than by looking up figures, listening to complaints and voicing them again in this house. While in Halifax, I spoke to people in every walk of life. I admit that the conversation at times came back to the shipbuilding programme and the contracts that had been granted in Canada; but at no time did I hear, while I was in that city, such bitter complaints as we heard here at times last night. On the contrary, instead of complaining, most of the people I met in Halifax were proud of the role played by their city in the present war, and of the use made of the facilities of their wonderful harbour.

With regard to the explanation given by the minister last night as to this question of shipbuilding, I confess I am not an expert. I was not born on the Clyde, as was the hon. member for Weyburn (Mr. Douglas). I was born on the shores of the St. Lawrence where there was no shipbuilding industry, in a beautiful, small city, Rivière du Loup, whose people are ably represented in this house by the hon. member for Témiscouata (Mr. Pouliot). That city, by the way, has supplied to this present parliament six members, who are past or present citizens of that city—the Minister of Justice (Mr. Lapointe), the Minister of Fisheries (Mr. Michaud), the hon. member for Témiscouata, the hon. member for Lotbiniére (Mr. Lapointe), the hon. member for Kamouraska (Mr. Lizotte) and the member for Bellechasse.

Although, as I was saying, I was not born on the Clyde, strangely enough I was able last night to understand the clear explanation given by the Minister of National Defence for Naval Services (Mr. Macdonald) in such masterly fashion. Even in Halifax, most of the people I met, although some of them expressed the wish that more could be done if possible in that part of the country, understood the reasons which were indicated to the committee last night by the minister. One afternoon, after visiting the historic buildings that house the local assembly, I was invited by a hospitable Haligonian to his club. The reasons given by the minister last night were also voiced there by some business men. They said, "We have to admit that this is the position. We should like to have the specifications so drawn up that we could fulfil them, but we understand that they were put there not by Angus Macdonald but by the British government." So they admitted that the person responsible was not the minister; they understood that it was not the Canadian government but the British government that gave the specifications and that those specifications had to be complied with. It may have been hard for them to swallow, that they all tendered too high, but they understood the reasons that have been given by the minister.

As regards steel shipbuilding yards, the minister said there was only one. I was even privileged to visit this yard and to see the work that was being done there, and it is much more important than any new plan of shipbuilding. I am not at liberty to explain, but it may be inferred from what I say, that the work that is being done in this Halifax yard at the present time for the Canadian and the British governments is of much more importance than the building by this yard of one or two ships a year.

While there I had an opportunity to visit the British naval base. I am not at liberty to describe what I saw, but it was a heartening sight. I wish that more members could go there. They would better realize the situation. A visit to Rear Admiral Stuart Bonham-Carter would inspire anyone. He is a genial man and a fine personality. Coming in contact with a person like this makes one understand the success of the British navy. These men can be calm before and after battle, as shown by Admiral Cunningham who, after winning the last victory over the Italians, took his family to the moving pictures at

Alexandria. They are the sort of men who control the British navy, men who can be charming and entertaining on occasion, while being authorities in their own sphere.

I also had an opportunity to visit the Canadian naval base under Commodore Jones, and here, again, I was most favourably impressed. The Canadian navy has been enlarged tenfold. It is extraordinary to see what has been done in such a short time. It is a remarkable achievement, and it has been accomplished within a few months—because, after all, we cannot count in terms of years. Only a few months have elapsed since the start of the war, and such a change has been brought about in the Canadian navy that one must actually see it to realize what has been done. One must see it on the spot. Here, we simply look at figures and we hear of so many new ships and so many men; there you actually see what has been accomplished and you realize, more vividly than the reading of figures and statistics can make you realize, the change that has been brought about. This is due to the far-sightedness of the Department of National Defence, of the ministers, past and present, and mainly to the Minister of National Defence for Naval Services, who has given so much attention to the programme of the construction and expansion of the navy.

While I was there I visited the headquarters of the eastern air command under Air Commodore N. R. Anderson. Again, I am not at liberty to say much, but I can say that what I saw there is indeed remarkable, the coverage made by the air force, vast areas, their activities in so many ways, the wonderful organization they have within headquarters. You have to see it to realize what is being done. When you are there you realize that the petty criticism that is indulged in amounts to nothing. Some people will say that this has not been done and the other has not been done, but when you see it in actual operation you realize what the government has done. If more hon. members would go there they might be ashamed of voicing some of the petty criticism that we hear from time to time. They would see the magnitude of the work done.

I also visited Dartmouth air port under Group Captain A. L. Morfee. It is a splendid achievement both as regards material and as far as the men are concerned. They have a much larger number of men than I imagined, men not in transit overseas but defending the eastern portion of Canada. They are working for the defence of our own country. I suppose I can say that the achievements of the air arm so splendidly organized by the air ministry, are due, to a large extent, to the dynamic personality of the Minister of National Defence for Air (Mr. Power), who must have inspired his men, because a tremendous amount of work has been done and the men and the organization are thoroughly efficient.

I am not supposed to speak for Halifax; I have no brief to do so. I can tell the committee, however, something of what I have seen, and I think it would be well if others could see for themselves what the different branches of the Department of National Defence have done. It is heartening to see the material effort of Canada centralized in the activities that one sees in the harbour of Halifax. The few shortcomings can be excused in view of the shortness of the time in which the government has had to expand these facilities.

Someone referred the other night to the housing condition. I understand that this is being remedied. A number of houses are to be built under the housing programme and barracks are being erected so as to avoid the troubles complained about. I understand that barracks cannot be erected fast enough. If the expansion of such a programme is under consideration, I would advise that many more barracks be constructed for men in the different services.

Then, there is talk there about health services. Perhaps I might be permitted to say to the Minister of Pensions and National Health that the wish of the majority of the population is that one central authority should act in that connection. His department should get in contact with the provincial, municipal, army and navy health authorities, and get their consent so that there would be one central authority with power to apply regulations to prevent unhealthy conditions in Halifax.

In conclusion, may I state that Halifax is indeed a great city, a city full of enthusiasm for its war effort. Haligonians are proud of the men who hold three of the most important portfolios in the cabinet. In this regard I may say that while I was lecturing at Dalhousie university the chairman of the evening, referring to Dalhousie and Laval universities, stated that if the graduates of Dalhousie and Laval were withdrawn from the government, the administration would be crippled. It would mean that the Minister of Justice, the three Ministers of National Defence, the Minister of Public Works, the Minister of Finance, the Minister of Fisheries and the Secretary of State would be withdrawn.

Mr. HANSON (York-Sunbury): And do not forget the leader of the opposition.

Mr. PICARD: I am sorry I forgot to mention the leader of the opposition. His role may be more important than that of Mr. Willkie, although less sensational. A trip to Halifax would give any hon. member who had occasion to go there a feeling of absolute confidence in victory. He would have a better knowledge of Canadian defence problems and of the achievements of the government and the different national defence services for the defence of the country, and for help to Great Britain.

Mr. McCUAIG: The hon. member for Davenport (Mr. MacNicol) suggested this afternoon the advisability of formulating some policy whereby, after the war is over, shipbuilding in Canada might be continued. May I add my voice to that of the hon. member in that regard? When this war began we did not have sufficient capacity in our shipyards to supply the demand. We learned, and we have known for many years, that ships can be built in Great Britain for about fifty per cent less than they can in Canada. If therefore the shipbuilding industry is to be continued in Canada, as I believe it should, it will be necessary for some government to formulate a plan of assistance to shipbuilding. In time of war, when there is a heavy demand —in fact when the demand is greater than the supply—we are warranted in giving shipyards contracts at prices higher than those which could be justified in time of peace. Therefore if we are to see to it that the shipbuilding industry does not at the conclusion of the war decline almost to the zero mark, where it was prior to 1935, it will be necessary for some government to formulate a plan.

I am keenly interested in this matter because in my constituency of Simcoe North we have in Collingwood one of the largest shipbuilding industries in Canada. Before I came here as a member of this house in 1935 I came to Ottawa with a deputation from that district to interview the government. On that occasion we urged upon the government the necessity of formulating some plan to keep a certain nucleus of men working, so that if the time did come when it was necessary to do some shipbuilding the men would be available for that purpose.

A few days ago the hon. member for Dufferin-Simcoe (Mr. Rowe) asked why the Collingwood shipyards were not working more than one shift a day. No doubt the hon. member felt that if there was a demand for ships, a larger demand than we could supply, the shipyards should be working more than eight hours a day. Discussing the matter with officials of the Collingwood shipyards I learn that they have sufficient orders. They have orders ahead, and all they can handle at present. But if they changed from one shift to two or three shifts they would do so only at the expense of other shipyards in Canada. They require expert men in the building of their ships. They feel therefore that it is better gradually to build up their supply of skilled men, and to have those men trained in their own industry, rather than go out and draw them from other industries already engaged in the war effort.

I would urge upon the government, at this time when shipbuilding is urgently needed, the necessity of formulating some plan under which when the war is over we shall not be caught where we were three or four years ago, with our shipyards almost empty and with a lack of skilled men to work in them.

Mr. GILLIS: I should like first to make a few observations respecting what was said by the Minister of Labour when the orders of the day were called at the opening of this sitting. He stated that I had described as discourteous his failure to answer my question at an earlier date. I had no intention of conveying any such impression. I have found the Minister of Labour always ready and willing to cooperate. I had pointed out only that the system followed by the Minister of National Defence in answering questions asked in the house was a system which all departments should follow as closely as possible. Several days had elapsed since I had brought the matter to the attention of the minister, and I considered it of sufficient importance to bring it to the attention of the house. I thought I should have an answer. The reply given this afternoon does not answer the question I had intended to ask, which was this: What efforts are being made by the Department of Labour to find employment for the forty-six men who are unemployed as a result of their being replaced by girls in the plant in Hamilton?

When these men entered the plant to be trained as inspectors there was an understanding or agreement with the Canadian government that in the event of their having to go to the United States or other parts of Canada to do that kind of work they would be paid a subsistence allowance. When they were called in and informed that they were to take similar work in other parts of Canada —and some of them in the United States— they were told that the subsistence allowance did not apply. They were to be sent out of the country to work at 56 cents an hour which was six cents an hour more than they were receiving in Canada. They were objecting, not because they did not wish to leave the country but because the subsistence allowance had been taken from them. As a result

they are unemployed. I wanted the Minister of Labour to tell me what he or his department had done with respect to securing employment for men over whom they should have supervision and jurisdiction.

May I speak briefly respecting the statement made by the hon. member who recently visited Halifax. He would convey the impression to the house that conditions in that city apply to the entire province of Nova Scotia. The city of Halifax is a very small part of Nova Scotia. Undoubtedly the city of Halifax is making a valuable contribution to the war effort, but compared with the rest of the province they are faring well. The majority of people living in the eastern part of Nova Scotia look upon Halifax as the end of Canada. It is the end of the radio chain; it is the terminal of the Trans-Canada Air Lines, and the harbour commission is there. Halifax is well taken care of and is very well represented so far as government is concerned; it is the seat of government. The conditions have been correctly described by the hon. member, but they certainly do not reflect the conditions that exist throughout the rest of Nova Scotia. I am glad he was so well received. He was taken to the historic chamber which houses the legislative assembly. He was certainly treated better than I was the last time I was there. I went there toward the end of December 1940 at the request of the executive board of the united mine workers, to take part in a coal conference called by the provincial minister of labour. When I arrived in Halifax I met the minister, but I was refused permission to take part in that conference. Apparently the hon. member from Quebec had more pull or exerted more persuasive powers upon the local authorities in Halifax.

I listened with interest last evening to the discussion of shipbuilding as applied to Nova Scotia. Two statements were made which stand out and which should form the basis for any discussion of this question. The Minister of National Defence for Naval Services stated that at present the shipbuilding plants in Canada were not operating to full capacity and that there was no shortage of shipbuilding facilities. He said that until such time as the shipbuilding facilities of Canada were taxed to the full he did not see the necessity of the government subsidizing or forcing shipbuilding plants in Canada to take on orders. The hon. member for Cumberland (Mr. Black) read a statement last evening which had been made by Mr. D. B. Carswell, the controller of ship construction and repairs in the Department of Munitions and Supply. I imagine that Mr. Carswell, whose duty it is to examine into these questions of shipbuilding, should know something about the proposition. He stated:

> Principal problem facing an "all out" cargo and warship construction programme in Canada, which would involve establishment of new shipyards throughout the dominion, is the problem of finding the money for both ships and yards.

This statement on March 11 of the man charged with the responsibility of advising the Department of Munitions and Supply would indicate that shipbuilding is one of the major problems and perhaps one of the greatest contributions to our war effort that could be made at the present time. Yet on the other hand the minister, who of course was not speaking for his own department, makes the statement that shipbuilding plants in this country are not operating to capacity. Each of these men has a certain responsibility with respect to this particular question, but they have made opposite statements which should be clarified.

The hon. member for Weyburn (Mr. Douglas) emphasized the fact that food is being rationed in Great Britain when we have an abundance in Canada. Of course the reason for the rationing is that we cannot get the food to England. The people in Britain are fighting our battle and one of our major problems is getting the necessary supplies of foodstuffs and so forth to them. These two statements would lead one to believe that either the controller of shipping or the Minister of National Defence for Naval Services is mistaken. It is not my intention to make an analysis of these statements; I merely call them to the attention of those in charge. Statements of this kind going out to the people through the medium of the public press lead the man on the street to believe that those charged with the responsibility of carrying on such an important part of our war effort are not using their best judgment.

I was disappointed also at the statement made by the Minister of National Defence for Naval Services when he attempted to analyse the reason why shipbuilding has not been carried on more extensively in Nova Scotia. He pointed out that at one time shipbuilding was the major industry of this province. He said also that shipbuilding yards in Nova Scotia had been asked to tender, but that very few had even put in tenders, and those who did were twenty-five per cent higher in their prices than shipbuilding yards in other parts of Canada. He could give no reasonable explanation for this. The minister's statement amounted virtually to an accusation against the shipbuilders of Nova Scotia of sabotage or an attempt to obtain greater profits

than other shipbuilders. In the light of the present situation I think that is a serious statement to make.

Personally I do not believe that any such thing is true. It should be clear to anyone who makes an examination of the set-up in Canada why the shipbuilders of Nova Scotia are not in position to accept orders. The shipyards in Nova Scotia are small and their owners are not able to expand them because they have not the necessary capital. The minister doubted very much whether the spirit of those engaged in this industry was equal to the spirit which had actuated the shipbuilders of seventy-five years ago. I think the same spirit is there, but the economic set-up is different to-day from what it was seventy-five years ago. The industry lacks capital and it is not able to expand in order to handle the building of these ships.

Fifty or seventy-five years ago, when the shipbuilding industry in the province was flourishing, Nova Scotia controlled its own capital. At that time there were six or seven banks in the province—the Merchants bank, the bank of Nova Scotia, the Halifax Banking company, the bank of Yarmouth, the Commercial bank of Windsor and the Union bank of Halifax. These banks were all organized in the province and were ready to lend money for the carrying on of business. Through mergers the assets of these banks were transferred to Toronto. Eighty per cent of the capital invested in the manufacturing industry is concentrated in one province. The people of Nova Scotia no longer have control of their own capital.

You must have capital to expand. If you want capital the first thing you must do is apply for a loan. If the loan is for an amount over a certain figure the application must go to the head office in Toronto. You must state the reason why you require the loan. Generally the people who direct the banks are at the head of our manufacturing industries. If a loan is required to expand an industry in the eastern part of the country which will come into competition with one established already in Ontario, the logical thing to do is to refuse to lend the capital to expand that industry. I think this matter will be serious until such time as the government are prepared to take hold of this question of shipbuilding.

The plants in the eastern part of Nova Scotia will have to be subsidized if it is absolutely necessary—and this is admitted by all—for us to produce the ships. And we should not stick to wooden ships. Press reports have stated that an attempt was made to start a plant in the eastern end of Nova Scotia. I think that should be followed up. As I stated the last time I spoke on this question, if the government erected a plant and operated it themselves at no profit it would serve a twofold purpose; it would not only increase production but would provide employment for the many who have not employment to-day in the eastern end of that province. I think I am absolutely right in summing up the situation in this way, and I think the Minister of National Defence for Naval Services will admit—maybe off the record—that that is the true picture. The shipbuilders of Nova Scotia have been represented as people who are looking for enormous profits, but the actual situation is that control of our own resources in Nova Scotia has drifted into another province, into the hands of people who are not interested in creating in another part of the country competition for themselves.

The minister of naval services stated that so far it was not the intention of the government to subsidize the shipbuilding industry. But as the war is now developing, particularly on the sea, before very long ships will be the most important thing we shall need in the prosecution of the war, and the government would be well advised to take into consideration the question of subsidizing, where necessary, shipbuilding plants. According to the minister himself there are fifty in Nova Scotia.

Mr. MACDONALD (Kingston City): I never said fifty.

Mr. GILLIS: Then twenty-five. Several figures have been given.

Mr. MACDONALD (Kingston City): I never said twenty-five.

Mr. GILLIS: Various figures appear on *Hansard*. Some say fifty and some twenty-five. Assuming there are twenty-five, all of these plants could be put to some use, and many of them could be expanded, possibly at no great cost. On the other hand, there are thousands of boys on the road in Nova Scotia who have never had a day's work in their lives. Many of them are capable young men, and some of them could be trained at this very time while we are sitting and talking about it.

As I said a short time ago, Hitler had swept across France to the English channel before some people in Great Britain awoke to the seriousness of the war situation, and instead of debating these things we should be doing something about them. It will perhaps be too late when the war is brought closer to home. We all hope that will not happen, but in the light of the events of the past year and a half we should not take any chances. If millions of dollars can be invested in industry elsewhere I see no good reason

why money could not be expended in Nova Scotia to develop our shipbuilding plants, particularly when it would serve the two purposes of increasing the production of ships which are vitally needed and giving employment where it is sorely needed. Private industries should not be allowed to exploit at a profit. If it is necessary for the government to subsidize plants the government should receive the benefit, because in the final analysis it is the taxpayers who pay the bill, and if there are any profits accruing the taxpayers should receive the benefit.

I am emphasizing the importance of this question in order to bring it again to the attention of the government, with particular reference to the two statements that have been made from responsible quarters. One I presume was by an employee, and the other was by the minister. One said that an all-out effort in shipbuilding should be made even if it was necessary to subsidize the industry. Then there is the minister's statement that the shipbuilding plants of Canada are not being used to capacity. This is a matter that should be taken hold of at once by the responsible minister.

Mr. HOWE: I must apologize for not having been in my seat last evening, but I had an important meeting with departmental officers. I read the *Hansard* report of yesterday's debate, and I notice that the hon. member (Mr. Gillis) stated that I had not answered his question about the steel mill at Sydney. I thought I had answered it fully. I explained that it is well known to the department that there is a steel rolling mill at Sydney, which was established at the end of the last war, too late to be of use in that war. The mill which is still there has been partly dismantled, and part of the equipment I think has been used for other purposes. We have considered since the beginning of the war the desirability of putting that mill into operation, but the difficulty has been this, that the whole capacity of their ingot steel has been contracted for, and there is none available to turn into plate. I went further and took the matter up when I was in England, to see whether Britain would not prefer to release part of their ingot contract and take plate instead. But ingots were the type of steel most needed in Britain, and British officials were extremely anxious that there should be no reduction in the shipment of ingots from that mill to Britain

Mr. HANSON (York-Sunbury): Has the steel company ever made representations to this government with respect to the establishment of a plate mill there? Has the company that owns the mill not been willing to go into operation with government assistance?

[Mr. Gillis.]

Mr. HOWE: They are quite anxious to put their mill in operation, but that does not answer the question: what are you going to use for raw material? It would be violating the spirit of our relationship with Great Britain, violating the sanctity of contract, if we did not maintain the production Britain wants. The British government was responsible for putting in some of the capacity at Sydney for ingots, and they made a contract for the output to be used in Great Britain. I for one do not wish to be a party to deliberately setting up facilities which would divert that supply of ingots from Britain.

We have been discussing as an alternative, and I think this is the proper alternative, increasing the ingot capacity there by putting in another open hearth furnace. Plans are being drawn for that now.

Mr. HANSON (York-Sunbury): How much would that cost and how long would it take?

Mr. HOWE: It would cost about $1,500,000, and it takes eight months. To put the rolling mill in shape would cost $8,000,000 and take eighteen months.

Mr. MACDONALD (Kingston City): About $3,500,000, I think.

Mr. HANSON (York-Sunbury): Please do not guess over there.

Mr. HOWE: I will take that back. My recollection may have been at fault. It may have been a larger programme that was to cost $8,000,000, perhaps involving the power to operate the mill. It would cost as much as the original investment in the mill to put it in operation, and it would take a very considerable period of time. However, we are considering the basic requirement, which is more ingot capacity, and something will I think be done in that direction.

Coming to the question of shipbuilding, I appreciated the moderate tone of the address of the hon. member for Davenport (Mr. MacNicol), and I have read the *Hansard* report of what was said last night. I should like to make it clear that the government is going to build every ship in Canada that it is possible for us to build, using reasonable business judgment. We do not wish to start a number of building projects which cannot be successfully carried out and which will only have the effect of diverting effort from yards which have the experience and the equipment to do the job efficiently. We have placed up to the present contracts for twenty merchant ships of the 9,300-ton class.

Mr. HANSON (York-Sunbury): Twenty.

Mr. HOWE: Twenty, yes.

Mr. GREEN: Is that the British contract or is it—

Mr. HOWE: What is the difference between a British contract and a Canadian contract?

Mr. GREEN: I am simply asking the minister if that is the British contract to which there has been reference. There is no need for him to fly off the handle about the question.

Mr. HOWE: Well, we always have great distinctions drawn as to whether we are building for Britain or for Canada.

Mr. GREEN: I am merely asking if it is a British or a Canadian contract.

Mr. HANSON (York-Sunbury): What I was trying to envision—if the minister did me the honour to read the few remarks I made last night—was the establishment of a national shipbuilding policy for Canada to be effective from now on and after the war. I think it is very important. The present programme is for Britain.

Mr. HOWE: As a matter of fact a programme has been authorized for Canada. Unfortunately it takes time to organize an enterprise of this magnitude. A merchant ship costs around a million and a half dollars, and it is not sufficient just to step out of the door one morning and say, "I want to order ten of these ships." It takes a little prevision. But we have been studying the situation very intensely. The British government have spoken for the output of certain yards; and the Canadian government is going to have the output of the balance of the yards, and it is our intention to organize that output to the maximum extent which is reasonably possible.

Mr. HANSON (York-Sunbury): Now we are getting somewhere.

Mr. HOWE: I thought that in an earlier address I had made substantially that statement, because this project has been under way for some time.

We must organize not only the shipyards themselves but the raw materials, the plates, the boilers and engines, and all the innumerable fittings which go to make up a merchant ship. This is being done. We are studying sources of the required equipment. There is no use in building a hull if we cannot build a boiler which can be delivered to meet the hull when the boat is launched. The matter of brass fittings and other components of a merchant ship represents industries which must be expanded with the shipbuilding industry itself in order to prosecute a large programme of the kind. It is the intention to use existing yards to the fullest capacity, to build additional berths where additional berths can be built and manned, and after that, and only after that, to explore the situation as regards new shipyards.

Mr. HANSON (York-Sunbury): And the extension of the present shipyards.

Mr. HOWE: Well, as I say, extension of present shipyards comes first. That is what I referred to when I spoke about building new berths for existing shipyards.

We have not ceased from the commencement of the war to expand this industry. Anyone who will cast a look at employment figures in the shipbuilding industry will find that each month since the latter part of 1939 has seen a substantial increase in the number of employees in shipyards. We have expanded about as fast as we can expand, and therefore I suggest, because we have decided on an all-out shipbuilding programme, we cannot in a month double the number of men at work in the industry; it must expand as rapidly as possible, but in an orderly way. We must expand the supervision as we increase other types of labour, and that is what we are doing. We have had committees of experts on both the west and east coasts. The east coast committee arrrived back in town only last evening, and we shall have their report, as well as one from the west.

There is no difficulty about getting orders for boats. We have all the orders we can fill. There is no difficulty about steel. A modern plate mill of large capacity was started before the war and is coming into operation this month.

Mr. MacNICOL: Will the minister permit a question? I learned—I hope it is not true—that in order to keep our present plate mills in operation we shall have to import ingots from the United States. Is that true or not?

Mr. HOWE: If we have to, I think it is only a temporary situation. As my hon. friend knows, the ingot capacity at two of our large steel plants is being expanded very rapidly. I cannot say that there will not be a transition period when ingots must be imported, but we shall have a balanced operation very shortly, if not immediately.

We believe that we can expand boilermaking and engine-making facilities to meet requirements. That is being studied in a systematic way. We believe also that we can extend the facilities, which are at present overcrowded, for the making of brass ancillary equipment, so as to meet all requirements of that kind. But to approach a project of this sort, which will involve the expenditure of a great many millions of dollars, in any spirit but one of caution, would bring results,

I believe, which would be disappointing to hon. members and to those immediately responsible for the development.

We are placing this merchant shipbuilding in separate and, I think, most capable hands. I hope to be able to report in a day or two to hon. members the whole organization for carrying out the merchant shipbuilding programme, and I believe that the house will appreciate the fact that we have organized the operation on a very sound basis.

The matter of geography is, of course, important.

We have undertaken other programmes—for instance, a very large gun programme. Eventually guns will constitute about one-third of all the munitions made in this country.

Someone has said that we should have a shipbuilding industry at New Glasgow. I cite that city as an example, because it is being mentioned here. We are being asked to erect a great number of new houses in New Glasgow because the people engaged in industry there cannot find places to live. That indicates, it seems to me, a rather undesirable situation. It means that there has been a considerable transference of population from other locations to New Glasgow. To increase the congestion by adding yet another industry in that locality would, I assume, seem to all hon. members to be unsound.

We are undertaking in Halifax a large housing programme. That of course cannot be avoided, because there has been a large transference of population to the city from all parts of Nova Scotia. A great deal of activity centres in that area, and it must be the centre of an active ship-repairing industry. Almost every ship which comes into the harbour needs repairs of some kind, and we must have facilities there to effect those repairs promptly. Therefore it will I think be impossible to centre a great merchant shipbuilding industry at Halifax. To do so would mean further transfers of population to that point and a further considerable expansion in housing. I believe the people of Halifax themselves would consider such a mushroom expansion of that very fine old city a mistake. I am sure it would be in the long run.

Mr. HANSON (York-Sunbury): Why not go to Saint John, then?

Mr. HOWE: Well, in Saint John we are said to have a housing programme; we are not satisfied that that is the case, but there again we have a great deal of activity. Second to Halifax it is the busiest harbour in Canada; in fact the tonnage passing through the harbour of Saint John is greater than that loaded at Halifax, for the reason that Saint John is loading a great deal of bulk materials such as wheat and timber. We have at Saint John a shipbuilding industry and we are doing our best to expand it. We think it is possible to expand to a point where we shall be able to build merchant ships in Saint John; we hope so, although there has been very little surplus labour for assignment to the small programme of corvettes that we put on in that yard early in the war.

I can say to all hon. members that we are exceedingly anxious to make this programme of merchant shipbuilding the largest that Canada can possibly execute. If on examination we can find any way of enlarging the programme on sound lines and with reasonable prospect of success, I can assure the committee that that avenue will be followed to its end.

Mr. HANSON (York-Sunbury): I feel greatly heartened by the statement just made by the Minister of Munitions and Supply. I wish to convey to him my thanks for the clear, succinct way in which he has laid before the committee in general terms what it is proposed to do. We shall watch with interest the development of this programme of commercial shipbuilding, and for the announcement which he said he hoped to be able to make in a few days.

May I remind the committee that this statement was in marked contrast to the statement made by the Minister of National Defence for Naval Services last evening. On the one hand you have a sane, cautious statement of progress; on the other you have every evidence of defeatism.

Mr. MACDONALD (Kingston City): I thought I had dealt with the question of defeatism last night. If defeatism means looking at facts, of course I plead guilty to being a defeatist. But my hon. friend is not going to turn me into a defeatist simply by saying that I am one. I have never suggested at any time that ships of any size whatever could not be built in Nova Scotia. The question last night turned on remarks made by the hon. member for Cumberland and the leader of the opposition himself and the hon. member for Weyburn. As I understood the discussion, it turned on the attitude which the government had taken towards the shipbuilders of Nova Scotia. I endeavoured to state the reasons why these shipbuilders had not taken advantage of the opportunities which they had to construct ships—wooden ships, because that is the only sort of ships that in the circumstances could be constructed in Nova Scotia to-day. And for making that statement as frankly as I could make it my hon. friend

now borrows the phrase which the hon. member for Cumberland borrowed from a newspaper in Nova Scotia.

What I really wished to do was to commend the tone and temper and spirit of the remarks made by the hon. member for Davenport. My hon. friend did not traverse the ground gone over last night with regard to wooden ships; he confined his remarks to the question of cargo ships, and expressed the hope that a long-range plan would be evolved here which would permit the building of cargo ships in Nova Scotia. He was perfectly correct in his reference. He went on to refer to the great advantages of that province for cargo shipbuilding. He spoke of the steel plant at Sydney, which is capable—by the expenditure of some money, of course—of rolling plate; he spoke of the coal available near the plant and the great bodies of iron ore in Newfoundland within easy reach of Sydney by water. All of these essentials to the making of steel or the construction of ships are within the empire; all except the iron ore are within Canada. And that of course is a fact that must be given consideration.

My colleague the Minister of Munitions and Supply has made his statement on cargo ships. That matter comes within his province and I am not going to dwell on it further or say anything more at this stage, except that when in the heat and turmoil of debate hon. members sometimes make statements which they afterwards regret—as I know they do—it becomes all the more important that when an hon. member on the opposite side makes some remark with which his opponent can entirely agree, approbation should be expressed. I am delighted to say once more with what pleasure I listened to the remarks of the hon. member for Davenport, and with what benefit I think hon. members listened to his sane and careful analysis of the cargo shipbuilding situation in this country.

Mr. JOHNSTON (Bow River): I was pleased to hear the statement of the Minister of Munitions and Supply in regard to shipbuilding. It was somewhat reassuring. I would not attempt to minimize the importance of the task the government have on their hands in this matter. Probably under the circumstances the minister is doing about as well as could be expected. But as I listened to the ministers I could not help thinking that hon. members would have to decide which was right, because having heard the Minister of National Defence for Naval Services last night, and the Minister of Munitions and Supply this afternoon, I am convinced that one or the other is wrong. I am not satisfied with the statement made by the minister last evening, because if what he says is true—and I am by no means saying it is not—then there has been great and sad neglect of the shipbuilding industry in this country. And of all the industries that need to be well and efficiently conducted, the shipbuilding industry is foremost; for we have heard over the air on several occasions of Britain's great need of ships.

The minister for naval services told us last night that they could build more ships here than they had the personnel to handle. I recall a statement being made in a broadcast from England that they had sufficient personnel over there to man the entire United States fleet if it were turned over to them.

Mr. MACDONALD (Kingston City): I do not wish to interrupt my friend, but I should like to say when I spoke of personnel last night I was speaking of personnel for naval ships, not for merchant ships.

Mr. JOHNSTON (Bow River): That is exactly what I am speaking of. I believe it was Lord Beaverbrook, although I cannot say definitely, who made the statement, with reference to naval ships, that if the United States were to turn over their complete navy to Great Britain, she had already a trained personnel to man the whole fleet. For us to assert here that the reason we have not more ships is that we have not the personnel is to confess that there is something wrong, and that should not be an excuse. I was struck by one remark made by the Minister of Munitions and Supply a moment ago. He said we would carry on the largest programme—speaking of naval affairs, of shipbuilding—that Canada could afford. Surely we are not to infer from that statement that our shipbuilding will be curtailed or held back by the amount of money we have now for that purpose, because I am convinced that you cannot tax the people any more if you are going to have any regard to what they can afford. If we curtail our programme by the amount of money that we can tax out of the people, further than we are already doing, then we are not going to make much progress.

Mr. HOWE: Was my hon. friend quoting me as saying that we will build what we can afford?

Mr. JOHNSTON (Bow River): I understood the minister to say that we would have the largest programme that Canada could afford.

Mr. HOWE: No; could do physically.

Mr. JOHNSTON (Bow River): That is an entirely different thing.

Mr. HOWE: I said, do physically.

Mr. JOHNSTON (Bow River): I am glad of the correction; otherwise it would be a terrible state of affairs to have at this time.

Mr. HOWE: I did not say that.

Mr. JOHNSTON (Bow River): I accept the correction.

I turn now to *Hansard* of yesterday, and if I am wrong in my criticism I hope the Minister of National Defence for Naval Services will correct me. No one is more concerned about this problem than I am, because, as I have stated before, I think we should have one of the most efficient navies it is possible for us to build; and never on any occasion have we in this corner ever advocated any diminution in our defence. The opposite is true; we have insisted that our defence be carried on to the maximum. On page 2074 of *Hansard* the minister is reported as having said:

> If my hon. friend can name me any yard in Nova Scotia which is capable of building ships for war purposes and has not been given an opportunity of bidding on these ships, I should like to have its name.

That is a wrong attitude. It is not up to the minister to ask any member of the house whether he can find shipbuilders who are willing to build ships. That is definitely his responsibility, and if he does not know, it is time he ascertained. He says that there were twenty-four Fairmiles to be built at an average cost of $100,000 each. There was a need for Fairmiles, for twenty-four of them, and so great was this need that the department went to special pains to send a man to Nova Scotia to investigate the possibilities of shipbuilding there. Let me read what the minister said, as reported on the next page of *Hansard:*

> The department sent down the director of shipbuilding to examine the yards and see whether they were capable of undertaking this work.

They sent one of their own inspectors to Nova Scotia to see if they could handle this work, and he made a report to the effect that there were from six to ten shipyards there capable of making this type of ship. The government must have been desirous of getting this information, of finding out the number of shipyards that could build these ships—why? Because they needed them; Otherwise it would be foolishness to send a man there for that purpose.

Bids were asked for, but only three tendered. Out of the number ranging from six to ten, when bids were asked for, only three tendered. Let me point this out. The situation was urgent, because, as I say, they sent an inspector to investigate the possibilities of having ships built there. I repeat, they found from six to ten yards that could and should build these ships, and when tenders were called for, only three were received, and of that number only one was near the price. The minister said that there were in British Columbia bidders whose bids were $25,000 below that price. These people in Nova Scotia, this one who did put in his bid, did so at an excess profit of over $25,000. So the minister, rightly so, said, "I won't give you that contract." But my point is this. Here is an industry which is essential to Canada—taking the minister's own word for it—which would not take a contract unless they received, in the words of the Prime Minister, blood-money—absolutely. There is no question about it.

Some hon. MEMBERS: Order.

Mr. HOWE: Surely that is not a fair interpretation. The yard was not tuned up to build that type of boat, and I have every reason to believe the men gave an honest tender. They tendered on what they thought it would take to build a boat, giving their best opinion. But it is a different matter to bid against an existing yard that has the experience and personnel to build that type of boat, and that is what they were doing when they bid against the Pacific coast yard.

Mr. JOHNSTON (Bow River): The minister said they sent an inspector to investigate before the bids were put in and found that the yards were capable and efficient enough to do the job, and as a result of the investigation an opportunity was given them to bid. When they did submit the bid they were $25,000 in excess of the company in British Columbia. The price quoted by the minister was not to exceed $100,000 for the hull. I say, therefore, that there was an excess profit, a good big one of over $25,000, in the minister's own words. There is something wrong there, and it was so astounding to the minister, he was no nearly shocked to death, that he said:

> So amazed was I at the discrepancy in prices that I suggested to the Minister of Munitions and Supply and to the director of shipbuilding that Nova Scotia shipbuilders must have made some mistake, that presumably they had misunderstood the specifications, and that they should be given another opportunity.

They were given a second opportunity. If these companies could not have built these ships according to specifications, and in an efficient and economical way, why should they have been given a second chance? I am assuming that the minister investigated the matter, as he said he did, and found the companies efficient, and yet they were $25,000 over the other.

Mr. MACDONALD (Kingston City): May I ask the hon. member one question. Does he think that every efficient manufacturer of an article can always supply that article for the same price?

Mr. JOHNSTON (Bow River): Surely the minister does not contend that a difference of twenty-five per cent, one-quarter additional price, is anywhere near the same price —$25,000 in excess of the British Columbia price. Make no mistake about it, the British Columbia people were making a profit of at least ten per cent; they were not doing it for nothing. They were making at least ten per cent, or they would not bid, and this company raised that price by $25,000.

People who would do a thing like that in time of war should be classed as saboteurs, and nothing else. If the statement is true—and I am assuming the minister told the truth—that would be so. If the hon. member wishes to put a different interpretation upon it, I would not contradict him. The minister says that as a result of this careful investigation and placing these bids before these companies on two different occasions, the result is that of the twenty-four Fairmiles only two are being built in Nova Scotia. What is the conclusion? The conclusion must be this, that the government wanted twenty-four of these ships built, and could not get more than two built in that particular locality. It is not because these companies were not efficient, not because they were not capable of doing the work, but merely because they charged such a price that the government could not possibly give them the order. Yet the people of Canada have to subject themselves to military conscription. They have to go overseas and fight, possibly give their lives for their country for $1.30 a day. Then the minister asks us in the House of Commons if we would desire to have them taken by the necks. I say that is exactly the place to take them by—right by the necks, and literally, too.

Mr. POTTIER: May I ask a question?

Mr. JOHNSTON (Bow River): The hon. member will have his chance to speak.

Mr. POTTIER: Has the hon. member ever been in a shipyard? Has he had any experience in shipbuilding? Has he ever gone through a shipyard?

Mr. JOHNSTON (Bow River): I do not think the Minister of National Defence for Naval Services has, either.

Some hon. MEMBERS: Oh, oh.

Mr. MACKENZIE (Vancouver Centre): That is not an answer.

Mr. JOHNSTON (Bow River): If he has, then it brings strongly into question the capability of the Minister of Munitions and Supply, because they certainly do not agree, one with the other.

Mr. MACDONALD (Kingston City): Will the hon. member point out where the Minister of Munitions and Supply and I differ? Will he give one specific instance in connection with this matter?

Mr. JOHNSTON (Bow River): Please do not ask me to point out the difference, because I should not like to go that far.

Some hon. MEMBERS: Oh, oh.

An hon. MEMBER: That is drawing a red herring across the trail.

Mr. JOHNSTON (Bow River): I am just stating that that is the minister's own statement in *Hansard* of yesterday. I am saying this, that if it is not—

Mr. HOWE: In all fairness, I think my hon. friend is throwing words around recklessly. If he opened tenders as frequently as I do, he would not be shocked by seeing tenders that are 25 per cent above other tenders. Sometimes contractors are in a position to do a job cheaply, and sometimes they are not. Sometimes a contractor is organized for a particular kind of work that is going on, and sometimes he is not. It is our job in placing work to pick out contractors organized to do the job in hand. In that way we get the work done more cheaply. My hon. friend is talking with an inside view of a marine industry, and I suggest that anyone would hold the view that one should know his industry before making charges of incompetency and sabotage.

Mr. JOHNSTON (Bow River): I am not the Minister of Munitions and Supply, but I am going to put that interpretation upon it. I am using his own words, his own phraseology.

Mr. HOWE: The hon. member is talking about an industry.

Mr. RALSTON: And the hon. member is drawing an inference.

Mr. JOHNSTON (Bow River): If the Minister of Munitions and Supply wishes to put a particular interpretation upon those words, I will not prevent him. What I say is this: After the government sent their inspector there and satisfied themselves as to the capabilities of this industry, they asked for bids, and there was a difference of $25,000 on a $100,000 contract.

Mr. HOWE: I may say that the inspection was simply to determine whether, if they were given the contract, they would be able to carry it out. It was to determine whether their facilities would permit them to carry it out.

Mr. RALSTON: Whether they would make money is a different matter.

Mr. HOWE: Whether they would make money or not depends on a great many things. First of all, it would depend on the organization of the yard. We often have a contractor taking a first contract and losing money on it. After taking two or three duplicate contracts, they are willing to lower their price, and they make money. But for any yard which has not been in the habit of building a ship such as the Fairmile to compete against yards which have been building that type of ship on the Pacific coast, I do not know why it should be so surprising that they would not be close to the mark. I would have expected that there would be a compensating factor which would let them bid closer to the mark. It is, however, only fair to say that in bidding for anything, at least they would use their business judgment. I presume they wanted the business. I believe they use their best judgment as to what the job will cost, and allow a reasonable and modest profit.

Mr. JOHNSTON (Bow River): I think the minister is right, to a degree. There would necessarily be a difference between the estimated costs of one company and another. Unless there were collusion, I do not see how two companies could offer to work for the same price. But even if we allow for that, and take into consideration the fact that the company in British Columbia had to make their profit, and that the other company went $25,000 over that—well, it does not just work out; that is all.

Mr. HOWE: It is quite possible that the shipyard in British Columbia may have been able to make a profit out of its price, and that the Nova Scotia company might fail to make a profit on the other price. It is possible and it can happen, depending on how well a company is organized to do that class of work.

Mr. JOHNSTON (Bow River): Now, just to leave that for a moment—

Some hon. MEMBERS: Oh, oh.

Mr. JOHNSTON (Bow River): I think the facts as stated will speak well for themselves. If anyone has any doubt he can read *Hansard* for himself, and I believe he will agree with what I am saying.

Mr. MARTIN: It is contrary to the rules of the house, incidentally.

[Mr. C. E. Johnston.]

Mr. JOHNSTON (Bow River): Then the minister had this to say:

> So far as I know, the shipyards of this country are not yet taxed to the full capacity. They are capable of taking care of all the business that is being offered.

That would simply indicate to me that we are not building ships to our full capacity. After the investigation the minister's department made, and after their statement respecting their desire for ships, we are told here that the shipyards are not being used to full capacity. What is wrong? That is one of the things I should like to know. I thought this was an all-out war effort?

Mr. HOWE: I have explained that on several occasions. The physical capacity of a yard might permit three shifts being worked. If labour sufficient to work three shifts cannot be got, then the shipyard is not being used to capacity. We have found in connection with several yards that we have not been able to man them to the extent of having three shifts.

Mr. JOHNSTON (Bow River): As I said at the beginning, I was in the position of having to decide between the judgment of the Minister of Munitions and Supply and that of the Minister for Naval Services. Not flattering him at all—and I should not like to do that—I believe I can say the Minister of Munitions and Supply is a fairly good business manager and, under the circumstances, is doing a good job. But what I am trying to get at is this: Who is right? They cannot both be right. They could not possibly be, because their statements are opposite.

Mr. MARTIN: Show where they differ.

Mr. JOHNSTON (Bow River): I have been asking.

Mr. MARTIN: You have been asked a question, and you have dodged it, as you always dodge everything.

Mr. JOHNSTON (Bow River): Then on the next page the minister is reported as follows:

> We asked for bids for wooden mine-sweepers, and again I may say that I hoped that most of them might be built in Nova Scotia.

That is reiterating what he said before. Apparently he is trying to set up shipbuilding in Nova Scotia, with apparently little success. Then he continues:

> These five builders accepted a contract and undertook to build two mine-sweepers each, but they had scarcely undertaken the work when two of these Nova Scotia builders threw up the work and said they could not go on with it.

That was after the governmental inspection. We must keep in mind the fact that they had been refused the chance to bid because of the excess prices they were charging. I say there is something wrong with the shipbuilding industry down there. Then the leader of the opposition had this to say:

Mr. Hanson (York-Sunbury): For what reason?

Mr. Macdonald (Kingston City): For one reason or another.

And again:

What the full reasons are I do not know.

That shows a lack of careful management.

Mr. MACDONALD (Kingston City): From what page is the hon. member quoting?

Mr. JOHNSTON (Bow River): Page 2076 of *Hansard* of April 1.

Mr. MACDONALD (Kingston City): Where are the words "what the full reasons are I do not know"?

Mr. JOHNSTON (Bow River): Near the bottom of the first column. To have a responsible cabinet minister—somebody says "irresponsible"; I would not say that, but it certainly is a matter of misjudgment—say that, shows that something is radically wrong and needs investigating. Possibly the whole department needs investigating, according to the admissions of the minister, who said:

They have been coaxed again and again to take the work, and the result of it all is as I have indicated.

That is in the second column on the same page. Why in the world would a cabinet minister coax and coax these fellows to take the work after the government had sent an inspector down there to investigate? Why should they be given two chances to bid? I never heard of a company being treated that way before.

An hon. MEMBER: Faint heart ne'er won fair lady.

Mr. JOHNSTON (Bow River): Perhaps they are trying to build up a political machine, I do not know. The hon. member may know more than I do in that regard.

Mr. MACDONALD (Kingston City): Where is the suggestion that I coaxed them?

Mr. JOHNSTON (Bow River): In the second column of page 2076 of *Hansard*.

Mr. MACDONALD (Kingston City): My hon. friend has made the statement that I coaxed these builders. I am asking him where is that statement?

Mr. JOHNSTON (Bow River): The minister said:

They have been coaxed again and again to take the work.

May I ask the minister who coaxed them?

Mr. MACDONALD (Kingston City): The government of Nova Scotia coaxed these men and called them together on at least two occasions, and sent delegations to Ottawa accompanied by a Nova Scotia minister of the crown. They are the people who coaxed these builders, not I.

Mr. JOHNSTON (Bow River): That makes it all the worse. We have the admission that the government sent out inspectors to investigate and pass upon certain contractors in a certain province. Then the dominion government gives these companies an opportunity to bid twice and they are given contracts which they cannot fill. That looks pretty suspicious. Then the provincial government had to intercede and coax them and send delegations to Ottawa to insist further that they get contracts. It just does not look so good, in fact it looks worse than it did before. The minister then went on to say:

—but I do not think it is of any use to make general observations like "every shipyard should be busy and all Nova Scotia shipyards should be working," when in some respects the yards themselves have not taken full advantage of the opportunities that offered.

To have a minister make that statement in the middle of a war is certainly pretty discouraging to the people of Canada. Every shipyard that can possibly be used should be used at this time. There certainly should not be any further delay.

The minister ended his remarks by referring to the hon. member for Weyburn in the following words:

If my hon. friend thinks we should take people by the throat and gestapo them into building ships when they do not want to build them, that is another story.

From the facts which have been presented, and having in mind the great urgency of procuring ships, having in mind the fact that we conscripted the youth of this country to fight—

An hon. MEMBER: When?

Mr. JOHNSTON (Bow River): Do not ask me when or I may tell you. Right after the election is when. This government solemnly promised that they would not conscript people, but of course they did. Did not we have three cabinet ministers stand up in their places and say that they would resign from any government which put in conscription? Yet right after the election it was put in.

Some hon. MEMBERS: No.

Mr. JOHNSTON (Bow River): The mere fact that a Liberal government break their word is not the question here; they have done

it so often. The fact is that we have conscripted men in this war and under the authority of this government. These companies refused to do this work, or at least they did not do it, but they were coaxed and coaxed to do it. We coax industry to do work, but we pass the mobilization act to put our young fellows in the trenches. That is not playing fair with the people of Canada. There is certainly no equality of sacrifice in it.

An hon. MEMBER: You don't know what you are talking about.

Mr. JOHNSTON (Bow River): If the hon. member will get up and talk it will be quite interesting to hear what he has to say about it. We should have an explanation from the Minister of National Defence for Naval Services. He and the Minister of Munitions and Supply should get a little closer together on this thing.

Mr. FRASER (Northumberland): May I interject just one or two remarks in connection with the statements made by the hon. gentleman who has just taken his seat? There were reasons why the Nova Scotia yards did not bid on the Fairmile boats, and one reason was that they were not as well equipped to build that type of boat as the Ontario yards. I understand that the contracts for the Fairmile boats were let on the basis of an average price, taking a horizontal cut of the tenders given. These Fairmile boats, which are very fast, are made largely of mahogany. Spruce is the wood generally used in Nova Scotia for planking. There was no oak in Nova Scotia suitable for ribs or frames, so their timber would not be at all suitable for the construction of these boats.

Mr. JOHNSTON (Bow River): Inspectors were sent down to investigate all that.

An hon. MEMBER: Learn something about it.

Mr. JOHNSTON (Bow River): I am trying to learn from the Minister of National Defence for Naval Services.

Mr. FRASER (Northumberland): I am simply trying to place on the record why the Fairmile boats were not built in Nova Scotia yards or anywhere else in the maritimes. The yacht yards of Ontario were especially equipped to build these boats and they had the organization and technicians available. They could build them to better advantage than could the yards in the maritimes. This is the main reason why the Nova Scotia yards did not tender on these boats.

Mr. ILSLEY: I should like to tell the committee the position of the department and the government in connection with this particular matter which we are asking parliament to vote. I shall then have to leave it to the committee to decide what will be done about it.

The $135,000,000 which we are asking for by this bill should be—I was going to say "must be", but I do not think I have the right to say that—made available to the crown before the Easter recess at the latest. The same thing applies to the further supplementary estimates for the year ended March 31, 1941, which have been referred to the committee of supply. The consequence of either one of these measures going over beyond the Easter recess will be that accounts, many of which have been held up now for several weeks, will not be paid until the end of April or perhaps in May. If by any chance they went over until the Easter recess into the month of May, we would have to make special provision because there is only one month of grace for payment of the accounts of the fiscal year that is ended. I was hoping that the committee, having discussed pretty much the same matters on the main bill for several weeks and on this bill for quite a number of days, would now facilitate the passage of this measure.

There are some subsequent sections on which hon. members will probably want to say something, but I should like to make it clear that it would be a great inconvenience, not so much for the government as for the people with whom the government deals, if by any chance either of these measures should go over beyond the Easter recess without being enacted.

I hope that to-morrow and the next day further supplementary estimates may be placed before the house and that they may go through rapidly. I will give an undertaking that if any hon. member wishes to raise later on upon other estimates any question which should properly be raised under these supplementary estimates, I shall take no exception to their being discussed.

Mr. MacNICOL: But what about the chairman?

Mr. ILSLEY: I do not think the chairman would object if we had it understood among ourselves that it could be done. I say that because I should like to have these measures passed if possible before to-morrow night. I do not know whether we can pass this one before six o'clock this evening but I hope hon. members will cooperate in seeing that this measure passes before Friday night.

Mr. HANSON (York-Sunbury): The minister was good enough to speak to me about this matter and I have given him my assurance that so far as the official opposition is concerned the government's proposals and

requirements will not be held up. The minister has given an undertaking that consent will be without prejudice to future discussion. But I do not see how we can pass this measure before six o'clock, because there is an important section of this bill, section 4(1) (e), and the interpretation that has been given to it, on which I desire to make some observations.

So far as we are concerned, the appropriation will be available before the Easter adjournment, by consent if necessary, on the undertaking and understanding that the minister has given. I give him that assurance now, but it will take me about half an hour to make the protest I desire to make in connection with section 4(1) (e).

Mr. GREEN: There is one feature in connection with this shipbuilding question which I think should be explained to the house either by the Minister of Munitions and Supply or by the minister for naval services. But before I point out this feature to the ministers I should like to say to the committee that fortunately I represent a seacoast constituency where they do build ships, and that I have been through several shipbuilding yards, so that perhaps there will not be the objection to my making a few remarks that there was in the case of some other members.

Last night I understood the minister for naval services to say that as yet there had been no money advanced by way of capital advance to any shipyard. As hon. members know, over $300,000,000 has been advanced to different industries by way of capital advance for building plants, extensions to plants, and so on, but I understood the minister to say that nothing like that had been done in the case of shipbuilding yards. We have had complaints from members from different parts of Canada that advances of capital were required by some of the shipyards. I do not know whether that is so in British Columbia, but the suggestion has come from members in some of the other provinces. I do think therefore that the ministry should make it quite clear whether it has adopted the policy of not advancing money for the expansion of shipyards or for setting up new shipyards. Is the ministry prepared or is it not to advance money for these two purposes?

The Minister of Munitions and Supply stated this afternoon that our new shipbuilding policy is to build all the ships that can be built physically in Canada. I hope that that is correct, but his own controller of ship construction and repairs, Mr. D. B. Carswell, said in Vancouver just about three weeks ago, as quoted in the Vancouver *Sun* of March 11, under the heading "Lack of funds delaying ships":

> Principal problem facing an "all-out" cargo and warship construction programme in Canada, which would involve establishment of new shipyards throughout the dominion, is the problem of finding the money for both ships and yards.
>
> This statement was made to the *Sun* to-day by D. B. Carswell, controller of ship construction and repairs in the Department of Munitions and Supply.

Then Mr. Carswell was asked the question:

> Is there not some way this can be overcome? Germany seems to be building ships and other war materials without money. Why can we not do the same thing in Canada?

And Mr. Carswell's answer is significant. He replied:

> That is a question the government will have to answer.

It is a question which I think the government should answer clearly. I have never been quite satisfied with the attitude of the Minister of Munitions and Supply with regard to merchant shipbuilding in Canada. Last year on June 14 I suggested to him—members will find the discussion at page 785 of *Hansard* that:

> The present would seem to be a good time for Canada to inaugurate a steel shipbuilding programme.

That was last June. The minister's reply, the essence of his reply, was this:

> Whether at a time like this we should divert the productive capacity of Canada to the peacetime operation of building merchant ships is, I think, questionable.

That was an amazing reply. I remember the minister more or less laughing at my making the suggestion that Canada should build merchant ships. I hope that he has had a complete change of mind since, and that he means it when he says now that Canada is going to adopt an all-out programme of shipbuilding. I believe there is no other question on which there is so much unanimity among the Canadian people as on an all-out programme of shipbuilding at any cost. They want every ship built in Canada that can be built, regardless of cost. Our distinguished visitor to Canada the other day, Mr. Wendell Willkie, made a clear-cut and definite appeal to the Canadian people which should be answered by the Canadian government when he said—I am quoting from the Ottawa *Citizen* of March 25:

> I want to say to you, if I learned one thing in Britain it is that one of the keys to our victory depends upon the people of Canada, the people of the United States, supplying more and more ships.

Then he went on to point out what ships mean to Great Britain, and he said:

> I plead with you, citizens of Canada, I plead with my fellow countrymen across the border, give every ship, give more than every ship, give

more than every ship that is free and unnecessary, give ships until it hurts, keep them going, keep them going and victory, then, is sure.

To that appeal surely every Canadian says, amen. I hope the government will go all-out on this question. Perhaps the fate of our whole civilization depends upon whether or not ships can be produced in this western hemisphere, and I hope the Minister of Munitions and Supply or the Minister of National Defence for Naval Services will give us the definite, clear-cut assurance that Canada intends to go to the limit in building merchant ships, and that the matter of funds will not be allowed to hamper their construction.

Mr. MACDONALD (Kingston City): I should prefer that the question raised by my hon. friend in the last moment or two of his address be answered by my colleague the Minister of Munitions and Supply. He has made a statement here this afternoon, and if he wishes it amplified to-morrow to satisfy my hon. friend, he should, I think, undertake that duty himself.

With regard to the other question which the hon. member for Vancouver South (Mr. Green) asked, namely, whether the government has assisted shipyards, my statement last night was that, so far as I knew, the government had not. I have not had time to verify that at the Department of Munitions and Supply, but I am convinced the statement is correct.

As regards the remarks of the hon. member for Bow River (Mr. Johnston), I endeavoured to make the position clear, and I am sorry if it is not clear to any hon. members. Roughly speaking, there are two kinds of shipyards in this or any other country. There are those which build wooden ships, and those which build steel or iron ships. Very seldom does one find that the same yard undertakes the construction of both types; they are two separate businesses. All the Nova Scotia yards are wooden yards, and the only warships which they can build are these small types of warships, such as the Fairmile patrol boats and wooden mine-sweepers.

Mr. HANSON (York-Sunbury): That would not apply to Halifax.

Mr. MACDONALD (Kingston City): I excepted Halifax for the reasons which I gave last night. The Halifax yards are quite capable of building steel ships, but they are busy doing repairs. The Nova Scotia wooden shipbuilding yards form part of a group numbering throughout Canada, I estimate, from fifty to seventy-five. On the great lakes and the St. Lawrence there must be more than forty yards capable of turning out yachts, Fairmile patrol boats and mine-sweepers. On the west coast are located many wooden shipbuilding yards. I therefore assume that there are throughout Canada from fifty to seventy-five wooden shipbuilding yards. But what the hon. member for Bow River has not grasped is that these wooden shipbuilding yards are of no value in the present cargo ship emergency. We must build cargo ships of a sufficient size to justify their being put into transatlantic use. What these small yards can do is to build yachts or fishing schooners in peace time, and small boats in war time for naval purposes; that is, wooden boats about the size of the Fairmile craft.

The fact that certain builders in Nova Scotia did not undertake this work had no effect on the pace of the war effort in this country or in this empire. All that happened after the Nova Scotia builders, except one who took a contract for these Fairmile boats, were unable to undertake the work, was that we went to the builders on the great lakes and the west coast and said, "You do it." That did not in any way impede the progress or the speed of our war effort. It is as if my hon. friend went into a store in this city to-day and asked for a pair of boots of a certain style which the store did not have; presumably all he would have to do would be to go to another boot store and get what he required. It is entirely wrong to endeavour to create the impression, as set forth by the hon. member for Cape Breton South, that the Nova Scotia builders are saboteurs.

Mr. HANSON (York-Sunbury): He did not say that.

Mr. MACDONALD (Kingston City): Yes, he said that. He said they could be considered either as saboteurs or profiteers, because either they were reluctant to help the war effort or they wanted to make too much money.

Mr. HANSON (York-Sunbury): That is not as I heard it.

Mr. MACDONALD (Kingston City): There are no more loyal people in this country than the people of Nova Scotia, including the shipbuilders; but anyone who has had to do with tenders knows that among even the most reliable contracting firms there will be variations in bids up to fifty per cent. One man may be better equipped, or may be a little more venturesome, or may have a better store of supplies on hand than another There are a dozen reasons which prompt one man to submit a lower bid than another. That does not indicate in any way that the latter is a saboteur or is indifferent to the war effort.

So far as the urgency of this matter is concerned, let me say that wooden shipbuilding yards in Nova Scotia or in any other part of Canada have nothing to do with the merchant shipbuilding programme. They can only undertake to build small boats, and the diversion of certain orders for these small boats from Nova Scotia to other yards has had no effect upon the naval programme of this country.

Progress reported.

WHEAT

TABLING OF REGULATIONS RESPECTING PAYMENTS ON ACREAGE REDUCTION IN WESTERN PROVINCES

Hon. J. G. GARDINER (Minister of Agriculture): Before the house adjourns, I desire to lay on the table the regulations passed under the authority of the War Measures Act respecting payments in the provinces of Manitoba, Saskatchewan and Alberta, and the Peace river district of British Columbia, of specified sums per acre on the number of acres taken out of wheat production and seeded to grass or coarse grains or summer-fallowed in 1941.

These regulations are of necessity not complete in that there are certain cases which will require to be dealt with on a basis similar to that which is finally decided upon in setting up quotas. A case in point is the occasional farm which grew no crop prior to this year. Such a farm is not covered in these regulations, but must be covered. There may be experiences necessitating further amendments in due course.

It has been stated by a number of hon. members that they would like to see these regulations referred to a committee for review and report. Some have suggested a special committee and some, the committee on agriculture and colonization. I am having the regulations distributed to hon. members this evening. It will be understoood that the preliminary work will of necessity have to proceed. If, however, hon. members after reading over the regulations think a committee necessary, I have no objection, but I would hope that the committee could sit immediately and complete its sittings if possible before the easter adjournment. The government has adopted the policy outlined in the regulations and feels it must be made effective at the earliest possible date.

Mr. ROWE: A pretty vain hope.

Hon. R. B. HANSON (Leader of the Opposition): I should like to make this observation. I think it would probably be desirable to have them referred to a committee, but, in the light of what we are doing in this house, with the budget to come down possibly on Tuesday, I do not see how it will be possible to have proper consideration given to these regulations between now and then.

At six o'clock the house adjourned, without question put, pursuant to standing order.

Thursday, April 3, 1941.

The house met at three o'clock.

DEFENCE OF CANADA REGULATIONS

SECOND REPORT OF SPECIAL COMMITTEE

Hon. J. E. MICHAUD (Minister of Fisheries) presented the second report of the special committee on the defence of Canada regulations, as follows:

Your committee recommends that the defence of Canada regulations be amended by adding to regulation 26A, regulation 26B (1) and regulation 37A (1) the following:

Regulation 26A—add proviso

"and provided further that the provisions of this regulation shall not apply to persons who are nationals of and were born in Czechoslovakia, which, for the purposes of this regulation, means Czechoslovakia as it existed on the first day of January, 1938."

Regulation 26B (1)—add proviso

"and provided further that the provisions of this paragraph shall not apply to naturalized British subjects, who, at the time of their naturalization were nationals of and born in Czechoslovakia, which for the purposes of this regulation, means Czechoslovakia as it existed on the first day of January, 1938."

Regulation 37A (1)—add proviso

"Provided that the provisions of this paragraph shall not apply to naturalized British subjects who, at the time of their naturalization were nationals of and born in Czechoslovakia, which for the purposes of this regulation, means Czechoslovakia as it existed on the first day of January, 1938."

SUPPLEMENTARY ESTIMATES, 1940-41

SUSPENSION OF STANDING ORDER 28 ON THURSDAY AND FRIDAY, APRIL 3 AND 4

Hon. J. L. ILSLEY (Minister of Finance): Last night I spoke about the necessity of having the further supplementary estimates voted before the Easter recess. I should like to add that I think it essential that they be voted either to-day or to-morrow. The reason for this is that accounts are now in arrears, and if these supplementary estimates for the fiscal year just passed are not promptly voted, there will be rapidly increasing inconvenience. The same consideration exactly applies to the supplementary war appropria-

tion measure. Both these measures relate to expenditures for the fiscal year that is past, not the current year.

I spoke to the leader of the opposition (Mr. Hanson) about the matter, and he was good enough to say that he would do what he could to facilitate the passage of these measures in every way possible. I did not have an opportunity of explaining the matter to the leaders of the two other parties in the house, although I had a word with them just as I came to the chamber. I think, however, they will see the necessity for this procedure, now that I have explained it.

Mr. COLDWELL: We have no objection.

Mr. ILSLEY: I shall couple with my motion two undertakings for the protection of opposition parties in the house. Mr. Speaker, I move:

That the provision of standing order 28 relative to the consideration of estimates which have not been first taken up on any other day than Thursday or Friday be suspended on Thursday and Friday, the 3rd and 4th of April, 1941.

The reason why it is necessary to pass this motion is that in those supplementary estimates are votes for a number of departments which have not yet been taken up on Monday or Tuesday of any week during this session.

The first undertaking I would make is that we will use this motion only for the purpose of considering these further supplementary estimates; that it will not apply to the main estimates which we have not yet the right to take up.

Mr. HANSON (York-Sunbury): That is satisfactory.

Mr. ILSLEY: The second undertaking is this: Any questions hon. gentlemen would have the right to ask under these further supplementary estimates, but have not the time to ask or do not ask to-day or to-morrow, may be asked on some other item in the main estimates at a later time. I believe if the house understands this undertaking there will be no difficulty.

In view of those two undertakings I would hope that this motion might pass, and that we might pass the supplementary estimates for the past year, either to-day or to-morrow. It is our intention to have them taken up after the passage of the bill now before the house. I should hope it would be passed early to-day, for the reasons I have mentioned.

Hon. R. B. HANSON (Leader of the Opposition): Mr. Speaker, that arrangement is satisfactory to us, but on the further understanding that the chairman of the committee of supply will observe the undertaking.

[Mr. Ilsley.]

He is an officer of the house. I do not know what control the government has over him, but I have felt in recent days that perhaps he was just a little bit too anxious.

Mr. COLDWELL: I did not hear the minister's answer to what the leader of the opposition has just said. Will the chairman give some latitude as well?

Mr. ILSLEY: It would be impossible for the chairman to give an undertaking, or for the government to give one in his behalf. I feel sure, however, in view of what I have said, that there will be no difficulty.

Motion agreed to.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

CENSUS COMMISSIONERS

Mr. ROSS (Souris):

1. What salary, allowances or other remuneration will be paid to census commissioners?
2. What other officials will be appointed in each constituency in connection with the taking of the census?
3. What salary, allowance or other remuneration will be paid to such officials?

Mr. MacKINNON (Edmonton West):

1. Not yet available.
2. Census enumerators.
3. Form 33.

British Columbia

Tables of Rates and Allowances for Census Enumerators—Census 1941

Enumerators shall be entitled to the following allowances:—

(1) Population—For every living person recorded on the population schedule (form 1) and for every "closed dwelling card" (form 6) and "absentee household card" (form 7) forwarded to the dominion bureau of statistics, each enumerator shall be paid an allowance of five cents.

(2) Housing (Form 4)—For every tenth house as enumerated per this schedule, the enumerator shall be paid the sum of eight cents.

(3) Agriculture—For every farm of five acres and over recorded on the general farm schedule (form 2), the enumerator shall be paid thirty-five cents. For every farm under five acres, he shall be paid twenty-five cents. For every fruits and vegetables schedule (form 2A) filled as per instructions on the schedule, he shall be paid twenty-five cents. For every abandoned or idle farm (form 2B), he shall be paid the sum of ten cents. For

every entry of "animals, animal products, fruits, gardens, etc., not on farms" (form 3), he shall be paid five cents per family.

(4) Merchandising and Service Establishments (form 11)—For every record of merchandising and service establishments entered on form 11, the enumerator shall be paid five cents.

(5) Blind and Deaf-Mutes (form 8)—For every record of blind or deaf-mute persons on form 8, the enumerator shall be paid five cents.

(6) Allowances for Expenses—In localities outside of cities, towns and incorporated villages, enumerators shall be paid in lieu of horse and motor hire and all other expenses and in addition to the rates provided above, an allowance of $10 per one hundred (100) names of persons enumerated in the population schedule (form 1). But these allowances shall not apply to sub-districts or regions provided for in the following instruction.

(7) Special Cases—In census sub-districts or regions of sparse population, remote from settlement and deficient in means of communication, the rates and allowances to enumerators shall be such as the dominion statistician, with the approval of the minister, shall direct; and the same rule shall apply also in sub-districts or regions where the services of an interpreter, a guide or other assistant to an enumerator may be required. But in no case shall an interpreter or guide or other assistant to an enumerator be employed, except within the written authority of the dominion statistician.

(8) Travelling Expenses for Enumerators—Census enumerators called to receive instructions from commissioners before commencing enumeration work shall be entitled when on such duty to actual expenses of travel by railroad or other conveyance and to cost of living at hotels or other places from the time of leaving home to return thereto, as shown by vouchers, and to an allowance of three dollars per day for time spent in receiving instructions as certified by the commissioner.

Form 32.

Manitoba—Saskatchewan—Alberta

Tables of Rates and Allowances for Census Enumerators Census 1941

Enumerators shall be entitled to the following allowances:

(1) Population—For every living person recorded on the population schedule (form 1) and for every "closed dwelling card" (form 6) and "absentee household card" (form 7) forwarded to the dominion bureau of statistics, each enumerator shall be paid an allowance of five cents.

(2) Housing (form 4)—For every tenth house as enumerated per this schedule, the enumerator shall be paid the sum of eight cents.

(3) Agriculture—For every farm of five acres and over recorded on the general farm schedule (form 2), the enumerator shall be paid thirty-five cents. For every farm under five acres, he shall be paid twenty-five cents. For every fruits and vegetables schedule (form 2A) filled as per instructions on the schedule, he shall be paid twenty-five cents. For every abandoned or idle farm (form 2B), he shall be paid the sum of ten cents. For every entry of "animals, animal products, fruits, gardens, etc., not on farms" (form 3), he shall be paid five cents per family.

(4) Merchandising and Service Establishments (form 11)—For every record of merchandising and service establishments entered on form 11, the enumerator shall be paid five cents.

(5) Blind and Deaf-Mutes (form 8)—For every record of blind or deaf-mute persons on form 8, the enumerator shall be paid five cents.

(6) Allowances for Expenses—In localities outside of cities, towns and incorporated villages, enumerators shall be paid in lieu of horse and motor hire and all other expenses and in addition to the rates provided above, an allowance of $7 per one hundred (100) names of persons enumerated in the population schedule (form 1), provided, however, that there is in the township a minimum of one hundred (100) persons. In whole townships where there is a permanent resident population but it is less than one hundred (100) persons, the enumerator shall be paid $7 per township. In fractional townships where there are less than 100 persons the pay shall be in proportion to the size of the township. But these allowances will not apply to subdistricts or regions provided for in the following instruction.

(7) Special Cases—In census subdistricts or regions of sparse population, remote from settlement and deficient in means of communication, the rates and allowances to enumerators shall be such as the dominion statistics, with the approval of the minister, may direct; and the same rule shall apply also in subdistricts or regions where the services of an interpreter, a guide or other assistant to an enumerator may be required. But in no case shall an interpreter or guide or other assistant to an enumerator be employed, except within the written authority of the dominion statistician.

(8) Travelling Expenses for Enumerators—Census enumerators called to receive instructions from commissioners before commencing

enumeration work shall be entitled when on such duty to actual expenses of travel by railroad or other conveyance and to cost of living at hotels or other places from the time of leaving home to return thereto, as shown by vouchers, and to an allowance of three dollars per day for time spent in receiving instructions as certified by the commissioner.

Prince Edward Island—Nova Scotia—New Brunswick—Quebec and Ontario

Tables of Rates and Allowances for Census Enumerators Census 1941

Enumerators shall be entitled to the following allowances:

(1) Population—For every living person recorded on the population schedule (form 1) and for every "closed dwelling card" (form 6) and "absentee household card" (form 7) forwarded to the dominion bureau of statistics, each enumerator shall be paid an allowance of five cents.

(2) Housing (form 4)—For every tenth house as enumerated per this schedule, the enumerator shall be paid the sum of eight cents.

(3) Agriculture—For every farm of five acres and over recorded on the general farm schedule (form 2), the enumerator shall be paid thirty-five cents. For every farm under five acres, he shall be paid twenty-five cents. For every fruits and vegetables schedule filled as per instructions on the schedule, he shall be paid twenty-five cents. For every abandoned or idle farm (form 2B), he shall be paid the sum of ten cents. For every entry of "animals, animal products, fruits, gardens, etc., not on farm" (form 3), he shall be paid five cents per family.

(4) Merchandising and Service Establishments (form 11)—For every record of merchandising and service establishments entered on form 11, the enumerator shall be paid five cents.

(5) Blind and Deaf-Mutes (form 8)—For every record of blind or deaf-mute persons on form 8, the enumerator shall be paid five cents.

(6) Allowances for Expenses—In localities outside of cities, towns and incorporated villages, enumerators shall be paid in lieu of horse and motor hire and all other expenses and in addition to the rates provided above, an allowance of $5 per hundred names of persons enumerated in population schedule (form 1). But these allowances shall not apply to sub-districts or regions provided for in the following instruction.

(7) Special Cases—In census sub-districts or regions of sparse population, remote from settlement and deficient in means of communication, the rates and allowances to enumerators shall be such as the dominion statistician, with the approval of the minister, may direct; and the same rule shall apply also in sub-districts or regions where the services of an interpreter, a guide or other assistant to an enumerator may be required. But in no case shall an interpreter or guide or other assistant to an enumerator be employed, except within the written authority of the dominion statistician.

(8) Travelling Expenses for Enumerators—Census enumerators called to receive instructions from commissioners before commencing enumeration work shall be entitled when on such duty to actual expenses of travel by railroad or other conveyance and to cost of living at hotels or other places from the time of leaving home to return thereto, as shown by vouchers, and to an allowance of three dollars per day for time spent in receiving instructions as certified by the commissioner.

SALT FISH BOARD

Mr. HATFIELD:

1. What are the names of the members of the salt fish board?

2. What is the normal occupation of each such member?

3. What salary, allowances and/or other remuneration is paid to each such member?

Mr. MICHAUD:

1 and 2. Dr. D. B. Finn, Ottawa (Chairman), Deputy Minister of Fisheries.

Burke McInerney, Halifax, Central Secretary, United Maritime Fishermen.

William Deal, Lunenburg, Captain of Lunenburg fishing vessel.

3. Chairman—nil.

Members—$10 per meeting provided that when meeting extends beyond one day remuneration shall be at rate of $10 per day for duration of meeting. Reasonable travelling and living expenses during absence from place of residence on board's work are also paid.

CANADIAN NATIONAL RAILWAYS—MONTREAL TERMINAL

Mr. BLACKMORE:

1. How much money was spent on the new Canadian National Railways station in Montreal during 1939?

2. How much was spent on the same in 1940?

3. What is the estimated amount of expenditure on the same for 1941?

Mr. CARDIN:

1. $2,174,590.82.

2. $3,599,075.82.

3. $4,100,000.00.

*HALIFAX, N.S., FIRE BOAT

Mr. ISNOR:

1. Has a fire boat been placed in operation at the port of Halifax?

2. If so, on what date was it put into commission?

3. Was the mayor of Halifax or any other city official notified in respect to the boat?

4. What is the name of the fire boat?

5. What is the pumping capacity?

Mr. CARDIN: This matter has been under consideration for some time, and I expect that a final decision will be reached very shortly. I can, however, assure my hon. friend that, pending negotiations, the situation is being adequately taken care of.

Mr. CHURCH: Call Admiral Duff.

ST. LAWRENCE WATERWAY—WELLAND SHIP CANAL

Mr. STOKES:

1. What was the original estimate of the cost of the new Welland ship canal?

2. What was the final cost of the canal?

3. What is the estimate of the cost of the work required to be done at the Welland ship canal under the St. Lawrence waterway agreement?

Mr. CARDIN:

1. No advance detailed estimate of the cost of the Welland ship canal was ever made. A rough preliminary estimate made in 1912 based on incomplete plans and quantities totalled $50,000,000.

2. The net capital cost of the Welland ship canal to March 31, 1939, was $131,899,609.59. The above figure includes the added cost incident to the shut-down for several years due to the war of 1914-1918, the abrogation of the original contracts and settlement with the contractors, the resumption of the work following the war, on a cost-plus basis, and, later, the reletting of the work to contract.

3. The estimated cost of the work required to be done on the Welland ship canal under the St. Lawrence waterway agreement is $1,100,000. This amount is necessary to complete the dredging in the canal to a depth of twenty-seven feet.

NATIONAL REVENUE—INCOME AND CORPORATION TAXES

Mr. BENCE:

What revenue has been produced by, (a) the individual income tax, and (b) the corporation tax, in each fiscal year since 1917?

Mr. GIBSON:

(a) Individuals

Fiscal Year	Amount
1917-1918	nil
1918-1919	$ 7,972,890 33
1919-1920	13,195,313 59
1920-1921	32,532,526 36
1921-1922	39,820,597 01

PRICES OF MEATS

Mr. FRASER (Peterborough West):

1. Has the war-time prices and trade board made any investigations into the retail price of meats?

2. If so, what increases have been discovered in the average retail price of, (a) beef; (b) pork; (c) hams; (d) lamb, in each of the cities

of Ottawa, Toronto, Montreal, Halifax, Saint John, Winnipeg, Regina, Calgary and Vancouver?

3. To what extent, if at all, have such increases enured to the benefit of the primary producer?

Mr. McLARTY:

1. The war-time prices and trade board maintains a continuous surveillance of the retail prices of meats in more than 200 cities, towns and villages in Canada.

2. Average retail prices for twelve different cuts or types of meats in Ottawa, Toronto, Montreal, Halifax, Saint John, Winnipeg, Regina, Calgary and Vancouver and for sixty other cities and towns are collected by the dominion bureau of statistics and are published each month in the *Labour Gazette*.

3. Average prices paid for live stock at all principal live stock marketing centres appear weekly in the *Livestock Market Review* issued by the Department of Agriculture and are published monthly in the *Monthly Bulletin of Agricultural Statistics* also issued by the Department of Agriculture.

NATIONAL FILM BOARD

Mr. TUSTIN:

1. What are the names of the members of the national film board?

2. What is the normal occupation of each member?

3. What allowances and/or other remuneration is paid to each member of the board?

4. What are the names, duties and salaries of all officials and employees of the board in receipt of a salary in excess of $1,200 per annum?

5. How was each such person appointed to his present position?

6. What number of officials or employees of the board are in receipt of a salary of less than $1,200 per annum?

Mr. MacKINNON (Edmonton West):

1. Hon. James A. MacKinnon, chairman; Hon. T. A. Crerar, Mr. L. D. Wilgress, Mr. C. G. Cowan, Mr. Edmund Turcotte, Mr. Donald Cameron, Dr. Georges Bouchard, Mr C. P. Edwards.

2. Hon. James A. MacKinnon—Minister of Trade and Commerce, Ottawa; Hon. T. A. Crerar—Minister of Mines and Resources, Ottawa; Mr. L. D. Wilgress—Deputy Minister of Trade and Commerce, Ottawa; Mr. C. G. Cowan—Managing Director, British American Bank Note Company, Ottawa; Mr. Donald Cameron—Director of Extension University of Alberta; Mr. Edmund Turcotte—Deputy Director, Board of Economic Reconstruction, Province of Quebec; Dr. Georges Bouchard, Assistant Deputy Minister of Agriculture, Ottawa; Mr. C. P. Edwards, Deputy Minister of Transport, Ottawa.

[Mr. Fraser.]

3. Payment of travelling and living expenses of out of town members attending meetings of the national film board at Ottawa.

4. John Grierson, Government Film Commissioner, executive officer of the national film board. Salary, $6,600 per annum.

5. Appointed by order in council.

6. None.

NATIONAL GALLERY

Mr. TUSTIN:

Who are the members of the board of trustees of the National Gallery of Canada?

Mr. CARDIN: H. S. Southam, C.M.G., chairman; Hon. Vincent Massey, P.C., Elwood B. Hosmer.

QUESTIONS PASSED AS ORDERS FOR RETURNS

AVERAGE REMUNERATION OF GOVERNMENT EMPLOYEES

Mr. ROSS (Souris):

1. What was the total number of employees of the government of Canada, including employees of commissions appointed by federal authority, on the following dates, viz.: July 1, 1930; September 1, 1935; September 1, 1939; January 1, 1941?

2. What was the average salary remuneration of such employees on each of the above dates?

PURCHASE OF BOOKLET FROM COCKFIELD, BROWN AND COMPANY

Mr. ISNOR:

1. Was the amount $40,147 paid to Cockfield, Brown and Company, Limited, Montreal, in 1939-40 the result of tender?

2. If so, what are the names and addresses of those who tendered and the respective amounts of their tenders?

3. If not by tender, how was the work assigned or arranged, and how much of the total amount was for, (a) lithographing; (b) printing; (c) designing?

4. What were the names of the firms who supplied half-tones, and at what cost?

5. Were any firms in the maritime provinces given an opportunity to tender on this work? If so, what are their names and addresses?

6. What was the name of the booklet purchased from Cockfield, Brown and Company, and how many were purchased?

7. Was a similar order placed by the bureau in the fiscal year 1940-41?

8. If so, (a) what was the amount; (b) who received the order; (c) was it by tender or how was it arranged?

RELIEF OF CHETICAMP, N.S., FISHERMEN

Mr. BLACK (Cumberland):

1. What sums of money have been expended for relief of fishermen in the district of Cheticamp, Inverness county, Nova Scotia, since September 1, 1940?

2. Who was responsible for the distribution of these relief funds?

3. Was a committee established to supervise the distribution of these funds?
4. If so, what were the names of the persons who served or are serving on such committee?

GOVERNMENT-OWNED PRIVATE RAILWAY CARS

Mr. SENN:

1. How many private railway cars are owned by the dominion government?
2. What was the purchase price of each such car?
3. What was the cost of maintenance and operation of such cars during the fiscal years 1940 and 1941?
4. What persons are entitled to use such cars and upon what terms and conditions?
5. What number of persons are employed by the dominion government to act as stewards, cooks, porters or in any other capacity on such cars?
6. What was the total amount of the salaries paid to such persons during the fiscal years 1940 and 1941?

THE BUDGET

PRESENTATION AFTER EASTER RECESS—STATEMENT AS TO EXCESS PROFITS TAX ACT

On the orders of the day:

Hon. J. L. ILSLEY (Minister of Finance): Mr. Speaker, I regret to inform the house that it will be impossible to have the budget prepared and brought down before the Easter recess. Before the recess, however, I will make a statement with regard to the Excess Profits Tax Act. I shall do so for the purpose of clearing up uncertainties in the minds of many taxpayers regarding this act.

Mr. HANSON (York-Sunbury): That is to say, the statement will cover what the policy will be in the budget?

Mr. ILSLEY: Not altogether, but it will deal partly with what we intend to do this session in reference to amendment to the Excess Profits Tax Act.

Mr. CHURCH: We will scare the taxpayers soon enough.

WAR APPROPRIATION

SUPPLEMENTARY PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Wednesday, April 2, consideration in committee of Bill No. 25, for granting to His Majesty aid for national defence and security—Mr. Ilsley—Mr. Vien in the chair.

On section 2—Appropriation.

Mr. POULIOT: Mr. Chairman, there are a few questions I should like to ask in connection with these vast expenditures of money. Some days ago I referred to the fact that the report of the auditor general did not give particulars of expenditures below $5,000. If a man has several contracts for less than $5,000, or for $4,999.99, no particulars of those contracts will appear in the public accounts. I do not agree with that system. If the electors of this country want complete information about expenditures, and members of parliament are unable to supply that information from official publications, then it seems to me our present system is not fair to the electors who are entitled to information. The answer will probably be given that the Department of Munitions and Supply is furnishing monthly statements which give the names of persons, firms or companies which have received payments, and the amounts. For instance, these monthly statements will show payments to Swifts, to Canada Packers and to many other corporations. But this is not satisfactory information. It takes up a lot of space, but no hon. member can tell from the information how much money has been paid, say in six months, to Swifts, to Canada Packers, to the Dominion Steel corporation or to any other corporation or individual. A member of parliament would have to be an adding machine to know all the amounts paid to these corporations or individuals.

Even to supply members of parliament with the amounts paid would still not be satisfactory, because we would not know for what the payments had been made. Take Swifts and Canada Packers as an example. We know that they sell bacon, ham, beef, perhaps vegetables and many other items, and we should be told why money has been paid to them. It is not enough simply to know that such an amount has been paid to a certain firm; we should be told why it has been paid. The only way an hon. member can understand what has happened is to know the quantity of meat or food or clothing or munitions which has been bought from each firm or individual during a certain period. But that still is not enough information for hon. members. We should be told how many soldiers have been fed with that food. We should be told the price per pound in order that we may see if there is extravagance or graft.

We have nothing of that kind. I have a whole library of publications in my room but they mean nothing. I defy the minister to give me the information I asked for. That is the only way we can have a full understanding of the matter. There is no hon. member who would be crazy enough to take this library of books and play the role of an adding machine in order to get information.

Once there was a great mathematician who used to solve the most difficult problems. One day someone gave him a problem. There was a ship 515 feet long, 55 feet wide and with a depth of 16 feet; it had on board 9,000 tons of merchandise; there were 356 passengers, a crew of 125 men and 25 officers; the vessel had three masts, three funnels, two anchors and two propellers—what was the age of the captain? The mathematician worked on that problem for three days and finally found that the age of the captain was 56 years, 10 months, three days, six hours and ten minutes at the moment he dropped his pencil. It is not possible for members of parliament to make such calculations from the information we have. I do not pretend to be a good enough mathematician to discover the age of the captain from the information supplied to us monthly.

I do not say this in a critical way; I offer it as constructive criticism. For what was this money paid? We are not here to pass legislation, although there are a few bills on the order paper. Everything is being done by order in council by virtue of the War Measures Act. We are informed of what has been done six months after it has been done. We are here simply to vote subsidies, and in order to do that intelligently we should have the right kind of information. We are given what is supposed to be information, but what is only a mass of figures that run together. No one can use them to make intelligent comparisons or to obtain necessary information. How many soldiers are being fed with this food? How many soldiers are being equipped with this equipment? How many soldiers are being supplied with this ammunition, and what is the ammunition? These are not secrets of war. Since we have had no secret sessions I do not see why we cannot discuss these matters in the house.

I suggest to the government that they should change completely their method of giving out information. Instead of supplying us with large books containing information which is impossible to digest, we should be given statements that will convey real information to us and put us in a position to defend the policy of the government. What interest is it to the electors of any constituency to know that so much money has been paid each week to Swifts or to any other company? The people are not interested in that. They want to know how our soldiers are being fed, how they are being equipped, how they are being armed. I do not belong to that legion of *superiores* and *sapientes* which has invaded Ottawa. I am just a plain man who wants some information and who wants to be able to vote intelligently upon these expenditures of money.

There is another thing which is equally interesting. What amount of the money that has already been spent since the beginning of the war has been spent in Canada for the defence of Canada, and how much has been spent in England for the defence of England? That is a fair question. There are, of course, two schools of thought, one proclaiming that the defence of England is the defence of Canada, and the other proclaiming that the defence of Canada is the defence of Canada alone. These are two divergent views and I respect them both. But as representatives of the taxpayers we are interested in knowing how much money has been spent here for the defence of Canada, and how much money has been spent over there or in Canada for the defence of Great Britain. This is a question that any elector may ask of any one of us, and whether you are an imperialist or not you are bound to give an immediate answer. But we cannot obtain that information from the public accounts, and I regret that my hon. friend the Minister of Munitions and Supply is unable to answer that question, because the figures are not disclosed in such a way that even the minister himself could be informed on that question.

I want a hierarchy in each department, and I want a hierarchy in the government. My view is that the Prime Minister of Canada is the boss of this country and that each one of his ministers should be boss in his own department. So long as that condition obtains I am all for it.

But there is something else. It is not necessary to be an expert to study the tabulations and charts which have been furnished to us. I notice, of course, that there have been some changes in the Department of Munitions and Supply. I am not in a position to say whether they are for the better or the worse, but evidently what was done in the first place was not perfect because it has been changed. What has been changed may now be perfect, but I am not quite sure about that. We will see what happens later on. My remarks are made in a friendly spirit.

I have here two charts of the Department of Munitions and Supply. One of them, dated November, 1940, appeared in a periodical published in the queen city of Toronto, and the other was put on *Hansard* by the minister on February 26 last. A comparison shows that there have been some changes. In the first place Mr. Gordon Scott was financial adviser. After his untimely death he was not replaced. There is no longer any financial adviser. On the other hand there was a Mr. Aubrey Davis, who was technical

consultant on leather. He has since been promoted as special adviser to the minister. I wonder why Mr. Gordon Scott has not been replaced by another gentleman as financial adviser.

There are many other things I could mention, but I shall mention only one after a short preamble. The members of the house who sat here from 1935 to 1940 must remember that I protested vehemently when the power of purchase was taken from the Minister of National Defence and transferred to the Minister of Finance. I opposed it for the same reason that I opposed the policy respecting the comptroller of the treasury. It was altogether too much for the Minister of Finance to make the purchases required for national defence, and in fact for a time the Minister of National Defence was unable to purchase even a cap for a soldier or a can of bully beef or anything else because he was not responsible for payment for these purchases. As my hon. friends know who are in the legal profession or in business, no commercial transaction is completed unless there is a payment specified and authorized by one of the contracting parties. Therefore the whole matter of purchases with regard to national defence was for a certain time put under the Minister of Finance, and it was a real scandal. Some day I shall tell the house all the reasons why I objected so strongly. Finally, when the present Minister of National Defence became Minister of Finance he realized the absurdity of the whole thing, and shortly afterwards the defence purchasing board became the Department of Munitions and Supply, with a minister in charge.

That is all right. I have often advocated in this house that we should have ministers in charge of purchases for the war departments. The *raison d'être* of the department of munitions was precisely those purchases and the manufacture of munitions under the authority of a minister of munitions, a power which before was under the jurisdiction of the Minister of National Defence.

But when I turn to look at the most recent chart of February 26, I see that purchases are now made in a very different way. There is a purchasing branch. There are two directors general; a director, Mr. John Eaton, and a general purchasing agent; and there are divisions corresponding to a certain extent with the divisions for the production branch of the department of munitions. In law, one of the most interesting matters is the study of comparative legislation; and of course we must proceed by comparison to understand anything in the charts which are submitted to us.

There is shown, at the left, the munitions production branch; then there is shown the aircraft production branch. In the middle is shown the purchasing branch for all materials which the department is not manufacturing itself and which are to be supplied through the Department of National Defence.

I shall not at present discuss the production branch. I shall deal only with the purchasing branch, which is divided into: barrack stores; building and office supplies; clothing, foodstuffs; fuels, paints, lubricants, electrical supplies; government and controlled companies; mechanical tools and hardware; mechanical transport; medical and dental supplies; miscellaneous militia and naval stores. Those are the divisions of the branch. Besides there are the local purchasing offices.

Hon. members may be under the impression that all purchases are made by that branch. We have, however, representatives abroad who are responsible, not to that purchasing branch, but to the deputy minister. We have overseas accounting which is in the comptroller's branch, which has not—on the chart—to do with representatives abroad. I cannot see why the overseas accounting should not be on the chart with the representatives abroad; it is the same thing.

There is something else. In order to be fair to the gentlemen who are in charge of the purchasing branch of the department, all purchases should be made by them. There should be a hierarchy of that branch; the subchiefs should be responsible to Mr. Price, Mr. Price should be responsible to Mr. Eaton, and Mr. Eaton should be responsible to Mr. Gagnon and Mr. Malkin. Well, it is not so, according to that chart, and this seems to me to be fundamentally wrong. But there is more to it. Some other corporations have been constituted to make particular purchases independently of the purchasing branch. They are not responsible to the purchasing branch; they are responsible also to the deputy minister.

These government-owned companies are: Allied War Supplies Corporation; Citadel Merchandising Company, Limited; Fairmont Company, Limited; Federal Aircraft, Limited; Research Enterprises, Limited; Small Arms, Limited; and two new ones, Melbourne Merchandising, Limited, and Plateau Company, Limited. I have no information regarding the composition of these branches, but I have here the names of the gentlemen who form those government-owned companies. I will mention the name of the company, its purpose, the names of the president and the directors of

each except the two last ones, which I have not got, and I hope the minister will kindly supply them.

Company—
Allied War Supplies Corporation,
420 Lagauchetière street west,
Montreal, P.Q.
(Plateau 2151).

President—
Harold Crabtree.

Directors—
C. A. Dunning, Chairman,
W. D. Black,
Beaudry Leman,
Ross H. McMaster,
James Y. Murdoch,
J. S. Norris,
D. R. Turnbull,
E. A. Wilson.
(To supervise chemical and explosive programme.)

Company—
Citadel Merchandising Co. Limited,
333 Canada Cement Building,
Montreal, P. Q.,
(Plateau 9051).

President—
Thos. Arnold.

Directors—
L. J. Belnap, Vice-President.
John Johnson,
C. E. Gravel,
F. K. Morrow.
(Machine tools.)

Company—
Federal Aircraft Limited,
276 St. James street west,
Montreal, P.Q.
(Plateau 7111).

President—
Ray Lawson.

Directors—
A. Sidney Dawes, Vice-President,
Blair Gordon,
Russell Smith,
Allan Aiken,
Miller Hyde.
(To supervise Anson programme.)

Company—
Research Enterprises Limited,
701 Atlas Building,
Corner Bay and Temperance streets,
Toronto, Ont.,
(Adelaide 8817).

President—
Col. W. E. Phillips.

Directors—
G. H. Rainville,
W. E. Ross,
A. L. Ainsworth,
O. M. Biggar,
G. W. Sweny, Managing Director,
E. E. Burton (Prof.).
(To manufacture optical equipment.)

We like temperance streets in Toronto. I do not know what "Prof." is.

Company—
Small Arms Limited,
Long Branch, Ontario, and 1941 Yonge street,
Toronto, Ont.
(Mohawk 4319; Mayfair 4537).

President—
G. S. Braden.

Directors—
P. G. Bourget,
N. P. Peterson,
J. I. Simpson.
(To manufacture rifles.)

So we have these gentlemen in charge of companies for purchases, while there is already an organization in the department for that purpose. I do not understand it. Why this duplication? Later on I may show the business connection which exists between these men,—the ordinary business connections of these men whom we are asked to believe are supermen and in a position to handle this business better than anyone else. Well, there is one thing we all know. It is that these people, although they may be public-spirited to a certain extent, have been working until the war, and legitimately so, for personal gain. And this is not an attack, it is just an observation based on knowledge of human nature. No one can blame a man who is in business for trying to succeed as well as he can and to make personal gains which are legitimate. But the question is here. There are those who make real sacrifices for this country. Immediately behind those who are in the theatre of war are the politicians with the right spirit, who, very often, have to sacrifice their own personal interest to do the right thing, to serve their people aright, and to represent them as they are worthy to be represented.

Without casting aspersions on anyone, do you think, sir, that the amalgamation of personal interests can be mysteriously changed into public spirit? It is hard to say. Of course, we must consider human nature as it is; and if we are sitting here now it is because our constituents at the last election gave us a mandate, and the checking of public expenditures is something that we do in our capacity as members of parliament. Therefore we are entitled to all information. Members of the House of Commons ought not to be regarded as country cousins. I have said that once before and I repeat it. Although no one of us of the rank and file pretends to be gifted with superior qualities, we can all claim to be at least of the average, otherwise thousands of people would not have voted for us in the last election. When I say that I pay a compliment not only to my Liberal friends but also to the leader of the opposition and his supporters, to the leader of the Cooperative Commonwealth group and his supporters and to the leader of the Social Credit group and his supporters. It is a compliment I pay to all.

It is said that there is more wisdom in two heads than in one. How much more wisdom,

therefore, should there be in 229 heads than in 16? I should like to have some information from the minister about the regulations with respect to these government-owned companies. We know only that a company has been formed and certain gentlemen are in it. What are the regulations with respect to these companies, and why is it that the purchases have to be made by these people? I find it very strange. There is a good deal of mystery, particularly about the Allied War Supplies Corporation, and I am not the first one to notice it. The Ottawa *Journal* said so last year and wanted some information, and I have asked for a bit of information. But now that that company supervises the chemical and explosives programme I want to know more about it. I have expressed my views and made a few suggestions, and I have asked some questions. There are many liaison officers in the department. What are their particular duties? I do not say that in a purely critical mood; I say it by way of constructive criticism, for two reasons—so that members may have intelligible information given to them, and so that there can be a check upon foolish expenditure, or expenditure that is not for the real purpose of the war, but just to enrich a few. Such information would give members an opportunity to check what is being done and might prevent scandal and great embarrassment to the ministry. I notice that since I have been speaking the hon. member for Waterloo South (Mr. Homuth) has been sitting on our side, but I do not know whether he would be accepted by the party.

Mr. HOMUTH: It is because the hon. member quit that I came back.

Mr. BLACKMORE: I hesitate to take up the time of the committee, but there is a matter which I believe should be discussed under paragraph (c) of section 2, which reads:

(c) promoting the continuance of trade, industry and business communications, whether by means of insurance or indemnity against war risk or in any other manner whatsoever.

Men everywhere are speaking of the need of cutting down our wheat acreage. Why? Because we cannot use our wheat production. We must stop growing wheat and start growing something else. But what shall that something else be? That is the question, and the answer no one seems to know.

Word has now come from Alberta that Canadian Sugar Factories Limited, with plants at Raymond and Picture Butte, have demanded a reduction of 1,300 acres in the sugar beet acreage in Alberta for 1941. The company says it has 200,000 hundredweight of sugar unsold; and yet Canadians in 1939 consumed 1,163,000,000 pounds of sugar! Of that amount only one-eighth was beet sugar!

Why should Canada not devote more acres to the production of sugar? This question must arise in every normal mind. People should exact a most searching, candid and minute answer from every minister in the government who is in any way concerned with the question.

Canada is raising each year about three times as much wheat as she can consume. She is storing it. Why should Canada not produce twice as much sugar each year as she is able to consume, and store it? Why is it that this question has not occurred to more people in the country? Sugar to Canadians seems one of the absolute necessities of life. Sugar will keep in Canada for a long time. Sugar can be produced in Canada cheaply, surely, plentifully, and in every way profitably to Canadians. In the name of common sense, why not?

To decrease our wheat acreage, a good method would be to increase our sugar beet acreage.

During the last few years Canadian total consumption of all sugar and Canadian total production of beet sugar have been as follows:

	Consumption (pounds)	Production (pounds)
1936.....	1,094,000,000	156,000,000
1937.....	1,031,000,000	120,000,000
1938.....	1,050,000,000	143,000,000
1939.....	1,163,000,000	169,000,000
1940 (estimated)..	1,155,000,000	.....

In 1939 our beet sugar production constituted 12½ per cent of our consumption!

To get a true picture of the beet sugar industry as a potential means of relief to our wheat problem, I point out that at least 300,000 acres of beet land would have to be used to produce Canada's total 1940 sugar consumption. At the same time at least 3,000,000 acres of land would have to be used in raising alfalfa or some other crop in order to provide the beet land.

The 300,000 acres of beets would have yielded the government during this last year, if we had been raising our own beet sugar, $52 an acre in revenue, which would amount to $15,600,000. It would, moreover, have saved the government 70 cents on each bushel of twenty bushels to the acre, at least, on 300,000 acres, or an amount of $4,200,000 for the wheat alone. In addition to that, there is the storage yet to be paid.

Some may ask, how do we estimate the amount of land necessary to produce the sugar that Canada would require? Eight per cent of Canada's 1940 estimated consumption

required 24,000 acres in my constituency. This I compute from a letter I received from W. F. Russell, secretary of the Alberta Cooperative Beet Growers Association, dated March 14, 1941, stating that 24,000 acres produced last year in the Lethbridge area, 934,664 hundredweight of beet sugar. Now 93,466,400 pounds is approximately eight per cent of Canada's estimated 1940 consumption of 1,155,000,000 pounds. To produce all of Canada's supply on land as good, and under conditions as favourable, as obtained in the Lethbridge area last year, would require 300,000 acres of beets.

What amount of land would have been removed from the production of wheat? How do we compute that? The total amount of land diverted from wheat or other production by the use of this 300,000 acres for sugar beets I arrive at as follows. Mr. Russell in the above-mentioned letter says:

> Every acre seeded to sugar beets will take at least ten acres out of wheat with a revenue to the government of at least $52 per acre from every acre seeded to beets.

Computing from these figures, we find that to raise the 300,000 acres of beets would take out of wheat production in Canada ten times 300,000 or 3,000,000 acres. This land would be the choicest of land. Upon it would normally be raised at least thirty to thirty-five bushels of wheat an acre.

Mr. MacNICOL: Does the growing of beets on the land take more strength from it than the growing of wheat, or does it benefit the land?

Mr. BLACKMORE: Growing of beets greatly improves the land. In the first place, there are, on the beets, numerous little roots which, when the beets are pulled, are left in the ground. These little roots tend to enrich the soil. Then, again, the beets strike roots deep into the soil, opening it up and admitting the air, this again greatly improving the friability of the soil.

Estimating the wheat yield on our ten times 300,000 acres at only twenty bushels to the acre, so as to be very conservative, we arrive at twenty times 3,000,000, or 60,000,000 bushels of wheat. That much less wheat to worry about should be a considerable relief to the government.

An hon. MEMBER: Could we use all the sugar?

Mr. BLACKMORE: I am talking on the basis of Canada's sugar consumption. I pointed out that Canada consumes as much sugar as, on the basis of Canada's 1940 consumption, it would take 300,000 acres of beet land a year to produce.

[Mr. Blackmore.]

Suppose Canada began to raise her sugar to some such extent as she is raising wheat, and stored the sugar against an evil day, which might easily come. If I might break in here just to say a word to the government, I would say I believe that as a government and as a people we are altogether too lethargic, altogether too self-assured; we assume that because things always have been all right, they are going to continue to be so. What would be the condition if German sea-raiders should get abroad upon the seas to the extent that they were able to destroy the ships that bring our sugar to Canada? There are other things which could occur in Canada which would destroy our present sources of sugar. Would the government not feel altogether blameworthy if it were found, in an emergency of that sort, that there was no sugar in the bowl, no sugar in the bin, and the people of Canada were without sugar? That is quite possible. We take great satisfaction in the fact that we have all this wheat as an assurance against future contingencies; we should be just as glad to have a similar store of sugar; for sugar is almost as near to being a basic necessity as wheat.

I proceed. Should Canada decide, in order to build up a reserve, to raise twice as much sugar as is required to supply her needs for a year, she could reduce her wheat production between 100 and 120 million bushels a year, at a conservative estimate. But, someone will object, the cost of buying and storing the sugar, as we now buy and store wheat, might be prohibitive. Let us turn to that matter for a moment or two. On the 1937 refiners' price basis of $4·006 per hundred, the cost of buying a year's sugar supply would be about $46,200,000 in a year. I multiply by four the 1,155,000,000 pounds which Canada consumed in 1940. Roughly, that is the means of making the computation. We arrive, then, at about $46,000,000 a year to provide Canada complete security with respect to sugar in that year. Storage could be provided at the factories in much the same way as we now provide extra storage at elevators for wheat.

To decrease our wheat acreage, our potential wheat carryover and our wheat storage problem; to build up a productive machine to provide our sugar supply; and to collect a safe sugar reserve, must surely offer a most attractive prospect to any loyal Canadian who is really interested in Canada's welfare.

Blessed is the nation that does not have to buy abroad. Blessed is the nation that can produce its needs of wheat, sugar, coal, wool, fruits and vegetables, lumber, and animal products. Hon. members will note that in that list the ones of which we do not produce

adequate supplies are sugar and wool. Such a nation can be rich and economically free, much as a farmer on a good, mixed, well equipped farm can be economically free.

John Maynard Keynes is reported to have said recently:

> Do not be deceived by the bogy of finance. It is no longer what it was. To-day it rears only a timid head. That is not the way it behaved in 1918 and 1919. In post-war reconstruction it is the physical things that will matter most, our man-power and our will-power and our capacity to have the necessary materials. We must go ahead on the basis of the physical realities of the situation.

If that means anything for Canada, it means surely that Canada should provide herself with the means of producing her sugar supply. Lord Balfour, acting as chairman of the meeting at which John Maynard Keynes is reported to have made those observations, is reported to have said that it was—

> —like a breath of fresh air to hear Mr. Keynes speak on finance as he did that day.

He was speaking at the housing centre in London, and the excerpt is reported in the Ottawa *Citizen* of March 26, 1941.

Surely an attractive prospect is possible for Canada; but Canada thus far has chosen to turn aside from the path to such an obviously sound objective. Her sugar beet acreage has been reduced 1,300 acres for 1941. Let us reflect for a moment upon the loss of finance and income she is to sustain by this ill-advised move. Let us study the meaning of these 1,300 acres of beets to the Canadian government.

What will that move cost the federal government in direct outlay? Those 1,300 acres will go into wheat on prepared, choice land, and will yield at least 35 bushels to the acre. This is in the Lethbridge area, where the record at the experimental farm respecting wheat produced on irrigated land for twenty-seven years has been an average of 52·8 bushels to the acre on one plot and 40·8 bushels on another.

The result will be that there will be produced on that land 45,500 bushels, which the federal government will be called upon to pay for at the rate of 70 cents a bushel, costing that government $31,850 in hard cash. That is the first payment we must make.

By next year there will be ten times 1,300 acres going back into wheat. One-half at least of the 13,000 acres, (the result of multiplying 1,300 by ten) or 6,500 acres will be planted to wheat, yielding 35 bushels to the acre, totalling 227,500 bushels. That quantity, at 70 cents a bushel, will total $159,250 the government will have to pay in 1942. That amount would buy a good many Spitfires.

In addition to that, the government will lose revenue estimated at 1,300 times $52, or $67,600. Besides that, it will lose its income tax and sales tax. It will lose the war savings people would have bought, and the revenues derived from tariffs on goods people in that area would have bought. When the computation is made, I believe the government will find that it is a good deal worse off because somebody blundered over sugar last year.

What will be the cost of that manoeuvre to the farmers and to the people generally? In the first place, there will be a loss of beets. We find that 1,300 acres yielding 14·10 tons to the acre—the 1940 yield—would amount to 18,330 tons. That amount, valued at $6.69 a ton, the 1938 price—and it will be noticed that I am attempting to produce the figures for years before the war—would bring about $122,627.70. This means that in 1941 there will be taken from the hands of the people who might buy war savings certificates an amount of $122,627.70, which might have been derived from beets alone in the Lethbridge federal riding.

In addition to beets there would be by-products—beet tops, beet pulp and molasses—equivalent to the meat-producing value of 1,300 acres of corn. The ordinary member of the house indicates quite clearly by his attitude while I am talking that he does not even dream of the possibility of the beet industry in Canada. It has not dawned on hon. members that the value of the by-products alone from an acre of beets is as great in the production of meat as is the value of an acre of corn, a product which has made so many states in the United States wealthy.

The beets, beet tops, molasses and pulp from 1,300 acres of beets will be lost to the people of Canada. Beet tops alone, when fed to lambs in an experiment extending over three years in Wyoming and Montana, where they are using a little better sense than we are using in Canada, were found to be valued at $1.30 for every ton of beets. That, again, is a complete loss right at a time when the mother country needs meats of various kinds.

The loss of sugar on the 1,300 acres, if we figure a yield of fourteen tons to the acre, which is a little less than last year, will amount to 18,200 tons. With a yield of 306 pounds of sugar per ton, which yield was obtained in 1939, this would represent 5,569,200 pounds of sugar. Taking a price of $6.15, which

was the price prevailing on March 29 before the government so ill-advisedly raised it, this would amount to $342,505.80.

In addition, as a result of this move, markets will be lost for certain raw materials. In the case of coal this would be worth $6,111. This would be all-Canadian coal, not coal brought in from Pennsylvania. In the case of lime rock the lost market would be $2,222. This also is a Canadian product. In the case of coke the value would be $1,000; boxes, et cetera, $11,666; bags and other essentials, $11,111; freight, $36,666, and labour, $19,444. That is the amount of the payroll of the men who would work in the factory processing the product of these 1,300 acres. Payments to growers and farmers would be $104,444. The figures I am giving are based upon statistics which will be found on page 15 of "Why Canada Needs Sugar Beets."

In addition, there will be lost in that area sales of clothing, shoes and other products of eastern manufacturers to an amount which no one can conceive.

A still further loss is the soil improvement which would come by way of increased fertility, increased fibre and increased tilth, as I indicated in my answer to the hon. member for Davenport.

As a result of this move, there will be fed in the Lethbridge riding 2,000 fewer sheep and 500 fewer cattle in the coming year, a year when we shall be needing sheep and cattle produced in the west.

What will be the cost to the Canadian economy? First, there will be increased unemployment; second, there will be less real wealth; third, there will be less price stability. May I stop for a moment to point out once more, as I have done scores of times in this house, that the cause of inflation in a country is the decrease of goods. This move will decrease goods in Canada, and therefore, will endanger the stability of our dollar and will be risking inflation. Fourth, there will be less economic security; fifth, less economic freedom and independence, and, sixth, less effectiveness in the war. These will be the effects upon our Canadian economy. In the case of 1,300 acres they may not be serious, but in the case of 13,000 acres they would be quite serious, in the light of conditions during and after the war.

Who is responsible for this magnificent achievement? He has small cause for pride. He has achieved something that will long stand to his shame. In the first place, the responsibility must rest upon the sugar controller; next, upon the war-time prices and trade board and, next, upon whoever gives them orders: first, in the government; second, through the government and, third, outside the government. In order to show that what I am saying is based upon good evidence, I should like to read from order in council P.C. 1983. I quote:

> All sugar refiners in Canada shall sell to the sugar administrator as and when required by him, all raw sugar, and all refined sugar, syrups, liquid sugar and molasses manufactured from beet or cane now or hereafter in their possession at such prices as the sugar administrator, under the direction of the war-time prices and trade board, from time to time may prescribe and, to effectuate such power, the sugar administrator, under the direction of the board, shall have power to take possession of all or any such sugars accordingly.

I think the wording of that passage places responsibility directly upon the shoulders of the sugar administrator and the war-time prices and trade board. If they have received instructions from someone else, I believe they are entitled to have the Minister of Labour tell us about it when he gives his statement on sugar. I do not think it is quite fair to let people like them bear the odium of such a mischievous manoeuvre.

What can be the reason for this move to reduce this acreage by 1,300 acres at a time like this? Is it done in order that we may have cheaper prices in Canada? That seemed to be the idea conveyed in the minister's vague expressions we heard in the house the other day. If the move was designed to bring about cheaper prices in Canada, will someone tell me why there have been so many increases in the price of sugar since the war broke out? Why was there an increase of 35 cents on May 20, 1940? It might be said that this was brought about by the sugar administrator of Great Britain; I shall have more to say about that later on. Evidently the object of this scheming in Canada is not to make prices lower for the Canadian people. If it were, why the excise taxes by which the Liberal government has taken away from the people of Canada a total of $11,000,000 during every year of Liberal administration? It has taken it away from the poorest people. The tax is inevitable; everyone must pay. The suffering returned soldier getting $8 a month by way of pension has to pay his share, almost as great a share as that of the fortunate millionaire. Yet we have been talking about equality of sacrifice in this country!

Was this move made in order to ensure a stable supply of sugar? That was the next hint conveyed by the vague expressions the other day. If it was designed to ensure stable supplies, then why this move in the direction of placing Canada at the mercy of a group of bankers and big interests, of outsiders and foreigners who control, directly or

indirectly, the sugar establishments in the great sugar producing areas from which Canada is being made to draw her cane supplies? A real stability of sugar supplies for Canada lies in the establishment of a beet sugar industry. Let the government expend $35,000,000 in building factories of 1,600 ton slicing capacity in Ontario, Quebec, Manitoba, British Columbia and Alberta as a war measure. In ten years those factories, without exorbitant prices being charged, will all be paid for out of the profits, and there will be established in Canada a splendid stability, a source of wealth, security, power, financial integrity, good homes, population, prosperity, happiness and independence.

Mr. MacNICOL: May I ask, for information, whether as high a grade of sugar can be made from sugar beets as from cane sugar?

Mr. BLACKMORE: Yes. I went into that at length and with great care in my speech in this house on June 26, last year, and the hon. member will find in *Hansard* of that date that the evidence is conclusive that beet sugar is in every sense a complete equivalent of cane sugar.

Mr. MARTIN: From a nutrition point of view.

Mr. BLACKMORE: From every point of view.

Mr. MARTIN: I am with you.

Mr. BLACKMORE: Would such a proposition be a sound one for the government? The government is investing huge amounts of money in munitions plants and, before the war is much older, will be investing a great amount of money in homes, and in so doing, the dominion government are taking a highly commendable step. It is completely right that they should do so. To invest money in beet sugar factories would be to insure not only Canada's war supply of sugar but, as well, her post-war supply.

We can gather an idea of the soundness of the proposal from the record of the Raymond sugar factory in my constituency. It was established in 1925, when wheat prices were high, in the period called the "roaring twenties" in the United States, when not only wheat prices but prices of labour to harvest and handle wheat were high. It was an exceedingly difficult time in which to get people to plant and to handle beets cheaply enough to enable the producers to make a profit sufficient to carry on; but the Raymond sugar factory came serenely through those trying years, notwithstanding the fact that in 1928 in the early days of October a most unprecedented mishap occurred, a very severe frost which froze the beets into the ground and caused a tremendous loss to the sugar factories. Notwithstanding that, the Raymond sugar factory rode triumphant through the storm. More than that, it not only survived but competed successfully against cane sugar when prices to the refiner in Montreal were at the following rates, and I should like it to be noted that these are prices to the refiner—not wholesale prices—and less excise taxes:

Year	Price (cents)
1930	4·754
1931	4·552
1932	4·378
1933	4·323
1934	3·875
1935	3·832
1936	3·626
1937	4·006
1938	3·895
1939	4·109
1940	4·754

During all those years the price of sugar in Canada was as low as in practically any other country in the world. Canada was among the lowest in all the low-priced sugar producing countries. Yet the beet sugar factory in Raymond, and later in Picture Butte, competed successfully and came through with flying colours, and it is prepared to-day to be bigger and better than ever, if only there were people in Canada with the necessary intelligence to let them do it.

Mr. CASTLEDEN: Who is trying to stop them?

Mr. BLACKMORE: That is an interesting question which I shall deal with in a few minutes. The Canadian sugar factories have ordered their beet producers to plant 1,300 acres less this year than they did last year, the reason being given that they have 200,000 one hundred pound bags of sugar in their storerooms which the sugar controller, under the terms of the order in council, should have taken from them but which he chose to leave with them, thereby making it impossible for them to produce as much sugar next year, because they feared they would be unable to sell it. Thus it appears the industry is to be strangled to death.

Mr. CASTLEDEN: I am glad to get that statement. Is there any explanation why that action was taken by the controller?

Mr. BLACKMORE: I am going to examine that question. My hon. friend is asking a question which all the people of Canada should be asking. It was an unthinkable step for the controller to take, and that is the reason for my displeasure. That is why I rise to air the grievance of my constituency before we grant the king this money.

The Raymond sugar factory has a splendid record. Let me read to the committee some figures which will be enlightening to all who are interested to know, and which I have in previous times placed on *Hansard*. These figures deal with the 1937 beet sugar crop and are taken from the submission to the Rowell-Sirois commission by the Alberta Cooperative Sugar Beet Growers' Association. I quote:

Importance of the Industry

To indicate the value of this industry to the agriculture of our district, the community in general and the Dominion of Canada, we submit the following figures relating to the 1937 beet crop:

235,481 tons of beets were produced from 19,829 acres of irrigated land—an average of 11·88 tons per acre.

75,603,700 pounds of sugar were manufactured.

3,813 pounds was the per acre yield of refined sugar.

$3,040,000 worth of sugar was manufactured.

$155 was the total gross return per acre.

$77.50 was the gross return to the manufacturer.

$77.50 was the gross return per acre to the farmer.

The farmers' costs approximated $60 per acre, which includes $25 per acre paid for hand labour by the farmer. These figures were given in a speech made by T. George Wood, manager, Canadian Sugar Factories Limited, at Lethbridge, Wednesday, March 23, 1938. We believe that this land is producing more food value per acre than any other land in the dominion.

That is the record.

The CHAIRMAN: I wish to remind the hon. gentleman that his time has expired.

Mr. BLACKMORE: I have not finished, Mr. Chairman. I was interrupted several times.

Mr. GERSHAW: Mr. Chairman, I want to stay well within the rules of the house, but I should like to discuss a few problems connected with our war-time economy.

Mr. BLACKMORE: May I not finish my speech, Mr. Chairman? I was interrupted several times.

The CHAIRMAN: If the hon. member asks for unanimous consent and it is granted, he may proceed.

Some hon. MEMBERS: Go on.

Mr. RALSTON: Could the hon. member not curtail his remarks now and deal with this matter on the budget if, in it, there should be a tax on sugar? If not, then may I suggest that all that my hon. friend has said is just so much surplusage. If there is in the budget a tax on sugar, my hon. friend will be quite free to present his argument then. I say that not only because of what my colleague the Minister of Finance has said but because of my own position. I have been sitting here for a good while. It has been said that the discussion of this matter has not been properly organized, but I find it difficult to see how it could have been organized in view of the desire of members to express their opinions on all sorts of subjects. It is, however, going pretty far afield, on this particular bill, to discuss really not the operations of the war-time prices and trade board, but the defects and merits of a tax on sugar. If my hon. friend, having consumed his forty minutes, could leave the matter to be discussed on the budget if the necessity should arise, speaking as one who is interested in this bill and in seeing it go through, and who has to sit here until it does go through, I would appreciate it.

Mr. BLACKMORE: I should be very glad to comply with the request of the Minister of National Defence, but I believe that at the present time this problem is of such great importance that it is worth while taking the time of the committee to discuss it. It will be noticed that our group has taken very little part in this long and rambling debate, which has now lasted for about six weeks, but there are some matters which we consider vital. I regard this particular question as vital, and there are several other hon. members who are deeply interested in it. If I were to finish my remarks, which probably would take only a few more minutes, they would serve as a basis on which to carry on a discussion of the sugar question. I do not feel that we can get an adequate discussion of the subject on the budget, when we cannot talk back and forth about the question; so, if it is not against the rules, I should like the privilege of finishing my speech.

Mr. ILSLEY: I have not raised any point of order. I do not know that there is any point of order to raise. I would, however, just suggest to hon. members that to some extent the eyes of the country are at present on parliament. If we are going to convert a discussion on a bill for granting to his majesty aid for national defence and security, into a long rambling debate on every conceivable subject—and they are as numerous as the sands of the sea, these speeches which are of tremendous constituency importance—

An hon. MEMBER: National importance.

Mr. ILSLEY: The hon. gentleman is making a constituency speech, and frankly says so. I do not see why, if he avails himself of this opportunity to make that kind of speech—and perhaps he can do so under the rules—every other hon. member cannot follow his example and make constituency speeches for weeks.

I would ask hon. members to exercise a little restraint in connection with a bill of this kind. Two general opportunities for discussion are provided for by the rules of the House of Commons. One is the discussion on the address in reply to the speech from the throne, and the other is on the budget. Beyond those two, I would kindly request hon. members, in the interests of the reputation of parliament, not to take this afield to an unlimited extent and with the enormous repetition which has been the case in this debate.

Mr. BLACKMORE: I appreciate the import of every word that the Minister of Finance has said, and I have sat quietly in my seat for weeks and weeks and never said a word. Other social crediters have done the same thing. This problem which is being discussed is not merely of importance to my constituency; it is of dominion importance. I have pointed that out time and time again. My constituency happens to be vitally concerned, and therefore I understand this situation to some extent, so that I look upon it as my duty as a member of this house to bring this matter of sugar to the attention of the committee at the present time. Why, it looks as though the people of Canada are going to be gouged and gouged and gouged to no limit in this matter of sugar. Therefore, with all deference to the ministers, I have made my request, and if it is within the rules, I am going to continue my remarks.

The CHAIRMAN: Order. The forty minutes allowed by the rules having been exhausted, and it being apparent that there is no unanimous consent, the hon. member must yield the floor to the hon. member for Medicine Hat.

Mr. BLACKMORE: This is now another speech. There have been two or three speeches since I spoke.

The CHAIRMAN: I have no latitude. It is the duty of the chairman to see that the rules are adhered to. The chairman is in the hands of the committee. The committee can at any time by unanimous consent suspend the rules, and the chairman is quite pleased when the committee sees fit to do that. Unless, however, the committee sees fit to do it, I must say that the hon. member's time is exhausted and I must give the floor to the hon. member for Medicine Hat, who was on his feet when the request was made.

Mr. BLACKMORE: Mr. Chairman, the only reason why I sat down was to listen while you gave your ruling. I had not finished my speech. If the committee chooses to make a special ruling or to rescind the rules in order to stop me from making a speech on beet sugar, I must bow to the committee's ruling. But I certainly believe that, in view of everything which has passed in the last six weeks, it would be a downright shame to do it.

The CHAIRMAN: The Minister of National Defence and the Minister of Finance have explained to the committee the urgency of the measure now before us and the reasons why unanimous consent cannot be granted at this hour, and that there will be other opportunities this session further to discuss the beet sugar industry. I think it would be hardly fair to express an opinion on the refusal of the committee to give unanimous consent, and necessarily I must apply the rule. I call on the hon. member for Medicine Hat.

Mr. McLARTY: The hon. member for Medicine Hat was kind enough to give me a few moments before he addressed the committee.

I do not intend to enter to-day into any debate on the problem of sugar. I wish to refer to only one statement that was made by the hon. member for Lethbridge. Most of his address has more reference to the Department of Agriculture and the Department of Finance than to the war-time prices and trade board. In connection, however, with the question of why a wider expansion of the sugar beet industry was not taking place, he cited as a primary cause the passing of order in council P.C. 1983. That order in council provides that all sugar refineries in Canada shall sell to the sugar administrator, as and when required by him, all raw sugar, et cetera; I shall not take up the time of the committee to read the whole paragraph. The hon. member has entirely misconceived the purpose for which that order in council was passed. It was passed for one specific purpose which has nothing to do with a limitation of sugar beet acreage.

At the time it became apparent that, in accordance with our dealings with the British sugar controller, there would be an increased price of sugar. It was well known that if that fact became widespread, the price of sugar would assuredly rise, that is both the retail and the wholesale prices, with the inevitable result that the refineries would make large inventory profits to which it was felt they were not entitled. The order in council had nothing to do with a limitation of sugar beet acreage. It had nothing whatever to do with any other purpose than that for which it was specifically passed. In order to avoid these profits on sugar which had heretofore been sold by the administrator to the refineries, it was provided that the administrator would repurchase that sugar at the

prices at which he had sold it to the refineries, and would immediately thereafter resell it to the refineries at the enhanced price. In other words, it was simply a method of giving to the government and the people of Canada the inventory rise which, in the normal course, would otherwise have accrued to the refineries.

I do not think there is in the hon. member's speech another point to which I need now refer. No doubt an occasion will arise when we shall have a more appropriate opportunity of debating the sugar question, and at that time I shall be glad to participate.

Mr. GERSHAW: I shall be extremely brief, but I do realize that the matter which was brought up by the hon. member for Lethbridge is one of urgency and extreme importance in a large part of this country.

We find that, in England, some 22 per cent of the sugar is made from home-grown material; in the United States, 25 per cent; whereas in Canada it is only 12·40 per cent. Furthermore, we find that the refiners are reducing and forcing the growers to reduce their sugar beet acreage. This is going to have a disastrous effect upon the economy of the people of that district. This is an industry which would help in some measure to bring up the income of agriculture, because figures have been produced in this house to show that the agricultural population of the country are not getting their share of the national income at the present time.

We have irrigation districts and there is great need for development of more irrigation. In years gone by, irrigation systems have been started and not completed, and in order to produce more sugar beets to balance our economy, if these irrigation districts could be completed a great benefit would result. With regard to the cattle industry, this government was fortunate enough to make an agreement with the United States—and the government deserves credit for it—whereby we are allowed a generous quota in the United States markets at half the previous rate of duty. We are not, however, altogether filling that quota, and the encouragement of the beet sugar industry would help the cattle industry through the use of tops, pulp, molasses and other by-products. A great benefit could be derived from this source.

In recent years the great unemployment menace was one of the worst things that struck this and other countries. Producing sugar from home grown raw material would provide employment for twenty times the number of people for whom producing the same amount of sugar from imported cane would provide employment. That is one big factor. Again, it has been rumoured and hinted that there in the near future will be a tax on sugar. I would appeal to the Minister of Finance so to regulate that tax that it will bear less heavily upon sugar produced from home-grown raw materials. I believe that, if the tax could be adjusted in that way, great benefit would result.

Someone has questioned the quality of beet sugar. I am quite sure that it compares favourably with that of cane sugar; it conforms exactly to the same chemical formula, and the people who are using it do not object to it. The prejudice against it is dying out and, under modern methods of manufacture, it is exactly the same as cane sugar.

We are engaged in a war of such magnitude that the very foundations of the temple of liberty and freedom are being threatened. We know that the months ahead may be dark, but beyond those months there are surely brighter things coming, and we hope that there will be a more ample life, more equality of opportunity, and better home conditions.

It has been said, and said by the Prime Minister, that we look for a new order to replace the old order; but if we wait until the war is over for that new order to come, we shall look in vain for it. It must be planned and prepared for and worked on. It cannot be reduced to writing at a conference, and so in preparing for the great rehabilitation problem which will face this country, some of the things I have mentioned will be of great value—irrigation schemes to provide homes, security for the people in those homes, and the encouragement of the beet sugar industry, the sheep industry, the cattle industry, to balance our economy and provide employment for those who will be released from war activities and for the strangers who will come to our land at that time.

Mr. GILLIS: When the house rose last evening, I was out of the chamber for a few moments, but on looking over *Hansard* to-day I find that the Minister of National Defence for Naval Services (Mr. Macdonald), in concluding his observations just prior to the adjournment, made the following statement with reference to the contribution that I had made to the debate. I wish to correct the impression he left. As reported at page 2114 of *Hansard,* he said:

> It is entirely wrong to endeavour to create the impression, as set forth by the hon. member for Cape Breton South, that the Nova Scotia builders are saboteurs.

Mr. Hanson (York-Sunbury): He did not say that.

Mr. Macdonald (Kingston City): Yes, he said that. He said they could be considered either as saboteurs or profiteers, because either they were reluctant to help the war effort or they wanted to make too much money.

With regard to what I did say, I will let *Hansard* speak for itself. I will quote the reference I made on that particular point, as reported at page 2102 of *Hansard*:

I was disappointed also at the statement made by the Minister of National Defence for Naval Affairs, when he attempted to analyse the reason why shipbuilding has not been carried on more extensively in Nova Scotia. He pointed out that at one time shipbuilding was the major industry of this province. He said also that shipbuilding yards in Nova Scotia had been asked to tender, but that very few had even put in tenders, and those who did were twenty-five per cent higher in their prices than shipbuilding yards in other parts of Canada. He could give no reasonable explanation for this. The minister's statement amounted virtually to an accusation against the shipbuilders of Nova Scotia of sabotage or an attempt to obtain greater profits than other shipbuilders. In the light of the present situation I think that is a serious statement to make.

Personally I do not believe that any such thing is true.

I proceeded to elaborate on what I thought were the real reasons why shipyards in Nova Scotia were not able to compete with shipyards in other parts of Canada. Perhaps the minister misunderstood, in listening to the debate, exactly what I said. At any rate, I regard his remarks on that particular point as a misrepresentation of what I did actually say.

Mr. COLDWELL: On behalf of our group I support the representations that have been made by the hon. member for Lethbridge (Mr. Blackmore) and the hon. member for Medicine Hat (Mr. Gershaw). I agree particularly with the hon. member for Medicine Hat, who said that we should be planning now for the after-war situation, and I am in thorough agreement with those who hold the view that the sugar beet industry of Canada is one that can be expanded to a very large degree during the war in order to save ship bottoms and supply our people with home grown sugar, transferring perhaps some of those who to-day are growing wheat and other commodities into a new line of production to meet the Canadian need. As has been shown by previous speakers, sugar beets would also provide valuable by-products. The by-products used for the feeding of cattle and so on are of material aid to the country at this time.

I do not wish to make a long speech; I think all that need be said in this matter is that we urge upon the government a reconsideration of the suggestion for acreage reduction in this regard; indeed, we go one step further and say that we believe the government should be giving every encouragement to the expansion of the sugar beet industry in Canada both as a war effort and as a valuable industry and asset to the country after the war.

Mr. RYAN: I think we should concur in the request made by the Minister of National Defence and the Minister of Finance to put off this discussion until some future date, because I understand the discussion this afternoon should not have taken place on this bill. I should, however, just like to say that it is not only Alberta, Manitoba and Ontario that are interested in the development of this industry; the province of Quebec is very much interested. I regret that more attention was not given by the government of Canada before to-day to this important industry in the interests of the farmer and also as something worth-while in the economics of Canada. I do not intend to take any more time at present, for the reason I gave at first, but I am pleased to note what the Minister of National Defence and the Minister of Finance and the Minister of Labour said, that we are going to have a further opportunity to discuss this problem of the beet sugar industry in Canada during the present session.

Mr. BLACKMORE: I think I am now in order to continue my remarks. It will take me a very short time to finish, but there are a few things to be said which I consider important.

When my time expired I was discusing the soundness of the proposal that the dominion government should either invest $35,000,000 in first-class beet sugar refineries or cause other people to invest that amount in order that we should have production in Canada of a sufficient amount to enable all the sugar needs of Canada to be met from Canadian production. I had just cited the record of Canadian Sugar Factories Limited in 1937, which I think was a most excellent record.

There are other reasons why the proposal that the dominion should support the beet sugar industry is sound. The costs of production of beet sugar are falling rapidly, contrary to the commonly accepted idea. There is at the present time, I read, a machine invented by a man named Hardy in the United States which will enable a man and a boy with one machine to top five acres of beets a day. Anyone who knows anything about the cost of topping beets will realize that this will greatly reduce the cost of producing beet sugar.

There is another machine which is described in the United States department of agriculture bulletin No. 488. This machine is designed to plant and block sugar beets much more cheaply. Then there are unusually fine machines being developed to unload and pile and handle sugar beets. All these dispense with labour and greatly speed up the process of making beet sugar and will unquestionably reduce the cost. Larger mills of 1,600 tons slicing capacity will cut down the unit overhead cost far below that possible for a 1,200 ton mill such as Raymond has. A longer campaign, say 120 days, will greatly decrease the cost of production, the overhead being much the same, and the number of days the factory runs being increased. The climate of Canada is especially adapted for a long run; in that respect being greatly superior to the climate of the main European sugar producing countries like Germany, Czechoslovakia and Roumania.

The explanation being given for this reduction of 1,300 acres is that it was brought about to help Britain win the war. It has been argued that the desire was to enable Canada to help to take the empire sugar supply. If that were the case, then will someone tell me why 200,000,000 pounds of sugar were imported in 1940 from Santo Domingo, 50,000,000 pounds from Cuba and 6,000,000 pounds from Haiti, all three non-British countries? And why were British ships used with the risk of shortage for Great Britain, and why was valuable foreign exchange which Canada could ill-afford spent for the buying of foreign sugar?

It is said that the reasons for this procedure are that the United Kingdom did not ration sugar until January, 1940; that the people, expecting rationing, bought heavily in Britain, and that during the last year the British West Indies crop was about 250,000 tons short and the Australian crop about 150,000 tons short. Every one of these is a reason why the sugar of the Raymond and Picture Butte factories should have been taken by the sugar administrator!

The Minister of Labour rose in his place in support of the administrator; I will ask him to deny this statement: that the sugar administrator is given control of everything pertaining to sugar in Canada, and could have taken the sugar from the Canadian sugar factories if he had so chosen. But he did not so choose.

Mr. McLARTY: He is under no obligation to take any definite amount of either preferential or full duty sugar whatever.

Mr. BLACKMORE: That is, he has a perfectly free hand. That is to his condemnation, that, having a free hand, he neglected to take the sugar off the hands of the Canadian sugar factories, thereby forcing them to cause their growers to reduce acreage by 1,300 acres in one year. The blame must be assumed either by that gentleman or by the war-time prices and trade board or by the men who gave them orders, whoever those men may be.

If Great Britain has to sell her sugar to Canada in order to pay for goods that she has to buy from Canada, if the price which Canada has to pay to help Britain is the destruction of the Canadian beet sugar industry, then I say that the British are asking too great a price from Canada. I do not believe the British asked it. That is not necessary. The dominion government could far better afford to give commodities to Great Britain to the amount that would be paid for by the sugar which Canada is buying from Great Britain than she can afford to take the sugar and deplete her own sugar producing resources.

The argument is sometimes advanced that Canada must trade. I challenge that statement. The big question is, can Canada be self-sufficient? If the reason why she must trade is that she cannot be self-sufficient, then why in the name of reason is it that sugar, which is a main item that prevents Canada from being self-sufficient, is the one item which is being sacrificed at the present time?

Also, why is someone in Canada managing matters in such a way that Canada is not producing the wool she needs, so that Canada has to import much of her wool from other countries when she is one of the best wool growing countries on the face of the earth? I use this just to show that it is not a sincere argument to say that Canada must inevitably trade. Canada, properly managed, does not have to trade. Canada is equipped by Providence to enable herself to live largely without having to trade with other people. And if we are going to be independent and economically free in this country, we must develop our potentialities.

We are importing a lot of corn from abroad when we can raise corn here. We are importing coal when we can produce coal, oil when we can produce oil. The argument that Canada must inevitably trade is hypocrisy, Mr. Chairman. Canada can be self-sufficient, if certain overpowerful men in Canada will let her. Has Canada any insuperable necessity? If so, what is it? I will hear the answer, "Oh, rubber, citrus fruits, coffee, tea, bananas and so on." I freely grant all those, but—

Mr. ILSLEY: And cotton and tin.

Mr. BLACKMORE: Yes, I am glad to have them all—and rubber.

Mr. ILSLEY: And I can think of a good many more.

Mr. BLACKMORE: That is all fine; I am glad to have them. But I ask you, Mr. Chairman, how in the name of common sense can we overcome our disability with respect to tin by putting ourselves under the disability of having to import sugar? That does not make sense.

Is the self-sufficiency policy unsound? I point to the United States and her experience in the last war. When the last war came, the United States found herself unable to produce her own rubber. Greatly to her embarrassment she found herself unable to produce her own dyes, because she had been tricked into depending upon German sources for her dyes. The result was that the United States was in a most precarious position with respect to dyes. She was in the same position with respect to chemicals, and for the same reason. The United States was in a desperate condition with respect to sugar during the last war, because she had not got herself into the position where she could produce her own sugar.

May I read to the committee a statement in which I believe everyone would be interested. This comes from an article entitled "The Sugar Bowl is Mended", by Charles Morrow Wilson, and appears in the *Country Gentleman* for April, 1940. It contains words which have great significance for us at this time, and sets forth one of the reasons for my insisting upon debating this question at the present time. The article reads, in part:

> When the first world war began Europe was growing almost enough sugar for its own use. But when the beet fields turned to battle fields Cuban production shot from 2,000,000 to more than 5,000,000 tons a year, and Cuba was sugar bowl for the world.
>
> After the armistice tens of millions of war-rationed people were frantic for sweets, and sugar bins were empty. So in the early twenties Cuban sugar prices boomed to 24 cents per pound at the mills.

Mr. Chairman, it needs to be shown by the Minister of Labour, and by anyone else who is interested, whether or not the same gentlemen who were in charge of Cuba at that time are not in charge of Cuba to-day, and are not exercising a very strong influence over the British sugar control.

Mr. ILSLEY: There is nothing to that.

Mr. BLACKMORE: It is sometimes argued that Canada by importing sugar from abroad would—

Mr. McLARTY: Is the hon. member acquainted with the number of tons of sugar we imported from Cuba?

Mr. BLACKMORE: This year?

Mr. McLARTY: Yes.

Mr. BLACKMORE: I have already put the figure on *Hansard*.

Mr. McLARTY: What was it?

Mr. BLACKMORE: It is not a question of how much we import this year, but rather a question of how much we shall be called upon to import next year.

Mr. McLARTY: The reason for importation of Cuban sugar is the trade arrangements whereby we maintain, by that method, our preference for the goods we ship to Cuba, goods such as flour, and so on.

Mr. BLACKMORE: That may all be true, but it does not in any way alter the validity of my argument that we cannot afford to leave sugar unused in the storehouses of our own Canadian beet sugar factories while we import sugar from abroad.

I happen to be somewhat familiar with this sugar question, I may tell the Minister of Labour. This is his first experience with me. Probably after a while he will realize that. I have now in my hand figures showing the importations from Cuba, and I find that they are placed at 50,000,000 pounds for this year.

It is sometimes argued that by increasing our importation of sugar from abroad we would increase our market for potatoes and salt fish from the maritime provinces. I have every sympathy with the maritimes; far be it from me to say anything which would jeopardize their position. But may I tell hon. members from the maritimes that in this respect they have been deluded. Much propaganda has been spread to confuse maritime minds. The arguments about potatoes and salt fish by such propagandists are devastatingly dealt with by Mr. Ralph P. Bell in an article of February 8, 1938 appearing in the Halifax *Herald*. I commend that article to hon. members from the maritimes. They will find that all this talk about sugar beet production impairing the position of the maritime salt-fish and potato markets is just pure piffle, and worse; it is sheer delusion.

Mr. HANSON (York-Sunbury): Anything else?

Mr. BLACKMORE: From all the facts I have set forth it would certainly appear, first, that the Canadian government is selling Canada into bondage in the matter of Canada's sugar supply.

Second, someone is bartering Canada's birthright for worse than a mess of pottage, betraying her future for dross as base as the famous thirty pieces of silver; for any nation that must buy from abroad any necessity of

life is, in respect of that necessity, a potential slave of external circumstances.

Third, the interests that control our sugar supply, once our beet sugar industry is destroyed, can raise the price to any level their unprincipled cupidity dictates, and, as they did after the last war, force Canadians to pay that figure.

Fourth, the sugar situation looms through the storm clouds as one of the blackest and most imminent threats to Canadian economic freedom.

The other day the Minister of Labour promised a statement in connection with the sugar situation. He will have to canvass the whole question carefully, for in his report he will have to show, first, why the Canadian beet sugar industry has been restricted in war time. He will find that a thorny question, and more thorny the more deeply he goes into it.

Second, why has Canada spent good exchange for foreign sugar, and left Canadian-grown sugar unused, with agriculture in the tragic condition in which it finds itself, and with a trade balance so dangerously against us, as it now is?

Third, why are prices of sugar rising, when raw cane can be bought for 75 cents per hundredweight in Haiti, Cuba, and Santo Domingo?

Fourth, why is the Canadian government apparently preparing to give Canada over to the spoilers who robbed her at the close of the last great war?

Fifth, why must Canada's consumer prices depend upon the will of the British sugar controller, when Canada could produce twice her needs at greatly reduced costs?

Sixth, while even the United States insists that 55·59 per cent of her domestic consumption shall be domestically produced, why can Canada afford to decrease even her meagre 12½ per cent?

Seventh, who selected the present sugar controller? On whose instigation was the selection made, and why?

Eighth, is there not cause for grave suspicion that certain overpowerful Canadians are manipulating Canada's sugar supply to enrich themselves, to enslave Canadians and to exploit our people immeasurably?

The first question the ministers of Labour, Trade and Commerce, Agriculture, and Finance, and their colleagues need to answer is this: Do they intend to keep and to make Canada a free and independent democracy, or did Canadian unity in their election platform a year ago mean Canadian unity with the United States, or with the United States and some other nation or nations? If the latter is the case, are they rendering such unity unavoidable by policies tending to reduce Canada to economic helplessness? If they really desire a free Canada, then they must make her economically free. To do this, they must take steps to build up within Canada an adequate all-Canadian sugar supply. This they can do only by expanding the beet sugar industry.

[Mr. Blackmore.]

Mr. POULIOT: I asked some questions of the Minister of Munitions and Supply. I would be thankful if he could give me the information I asked for.

Mr. HOWE: Mr. Chairman, I believe the questions asked by my hon. friend had to do with government-owned companies which he named. These companies operate just as any public company. They accept contracts from the government, execute them and carry out whatever duties are assigned to them by order in council, just as would any private business firm. In each case the treasurer of the company is an officer of the treasury branch of the government. The auditor of each company is an appointee of the auditor general of Canada. The procedure of these companies conforms to the best practice of corporations operating in this country.

The largest organization is the Allied War Supplies Corporation which deals with the explosives and chemical operations of the government. This company retains experts in the different branches of the work. Contracts are made with reputable contractors for the construction work involved, and in most instances contracts are made with the leading firms in the chemical and explosives business to operate plants on a management fee basis.

There are other companies, but I have told the house on several occasions that it is not desirable to elaborate on their operations too fully. These companies are doing the work of protecting the government against supplies of materials which come from foreign countries, and the sources of which may be subject to interruption from war causes. There is the Melbourne Merchandising Company Limited, the Plateau Company Limited, and one or two other commodity companies. These companies have the duty of making available supplies of such things as rubber, silk and other items, the names of which escape me at the moment. These companies operate just as any commodity company would. Purchases and sales are made, commodities are bought at the best market price obtainable and are sold at the current Canadian price. But in between the purchase and sale of commodities, considerable stocks are maintained to make sure that supplies will be available

for several months should there be an interruption because of the war. As I remember, this covers questions asked by my hon. friend. If he mentioned other points which have escaped my memory at the moment, I shall be glad to answer them.

Mr. MACDONALD (Kingston City): I heard the explanation given by the hon. member for Cape Breton South (Mr. Gillis). If the words which he used were capable of the interpretation which I put upon them, I am glad to know that it was not his intention that they should have any such interpretation.

Mr. POULIOT: Mr. Chairman, I want to thank the minister for what he has just said. However, referring to experts, I cannot see what particular experience Mr. Biggar has had. He may be a good lawyer, but I cannot understand what experience he would have in the manufacture of optical equipment. I should like to know what experience Mr. Dunning, who has been a trader, has had in supervising chemical and explosives manufacturing. I do not know what experience he has had in that respect, apart from being the understudy of that international Vulcan, Mr. Purvis. That is all there is in it. The minister must take what I say in the spirit in which I say it. I am simply trying to help him in his work, which I realize is quite heavy. He is, however, surrounded by a few men who think they can read before they learn their alphabet. They are somewhat like children who sometimes try to read upside down. The points I raised were not quite along the line of his answers.

There is one branch of the department—it does not matter whether you call it a branch or a division—which is responsible for purchases. In order that this branch should be treated fairly, they should have the entire responsibility; it should not be shared with another branch which is directly responsible to the deputy minister. These branches are asked to deal with all purchases of chemicals and so on. I shall read what the minister said and take this matter up with him privately in order to save the time of the committee. I would, however, remind the minister of one thing. We do not impute motives when we ask for information. We do this simply to satisfy those people who come to us for information, whether they live in or outside of our own constituencies.

I want to protect this purchasing branch. I do not wish to see them suffer by any encroachment on the part of these so-called companies. The Minister of Munitions and Supply is not a corporation lawyer, and I congratulate him. I think he will admit that most of the wrong which has been done in the financial world has been done by corporation lawyers. Ninety-nine per cent of them are crooks. What are these blue-sky laws we hear about? What about the watered stock in these companies which have been organized by lawyers, who take a portion of it as their fee and retainers? Many companies have been ruined because of watered stocks, a large portion of which went into the pockets of the corporation lawyers.

I think it is all wrong to organize government business along corporation lines. You can go to any stock broker's office and look at the stocks, and see how people have been robbed through the formation of these companies. They do not offer a good example to be followed in government business. Any lawyer who knows the law and who knows the principles underlying our law will not do this sort of thing. Corporation practice in government is wrong. It is also wrong to canonize those who are part of the scheme, to make saints of them, to place halos upon their heads and then tell us that we must not criticize them. There is not a single item of information about expenditures that can properly be refused to members of parliament when we are sitting in committee like this. We are entitled to information about all expenditures. What should be secret?

There is no need for secrecy about the spending of public money. Secrecy is necessary about the plans by virtue of which certain kinds of arms and ammunition are being made and the places where they are being manufactured, and also as to war tactics. I want no information on these things because I admit they must be kept secret. But when it comes to the purchase of any kind of munitions, we must know how much is paid for them, and even if Hitler gets to know how much we pay for shells and guns and other munitions it will not endanger our position in the war. It might, however, embarrass some profiteers, and we ought to embarrass them and prevent them from getting too much money from the public exchequer. This distinction should be made in determining what shall and what shall not be kept secret.

In the first place, no one in public business should be kept sacrosanct until after he is dead. So long as he is living and engaged in public business, he must be man enough to suffer criticism no matter where it comes from. In the second place, there should be no hiding place, no secrecy regarding public expenditures, which we are supposed to check in this house and not vote blindfold. Third, I want my constituency to be protected from any attack by land, sea or air. I asked a question on that point the other day. The

question was clear, but I got no answer. I repeat my question: How are Témiscouata county and Rivière du Loup being defended against any possible attack by land, sea or air? I also asked for information about military camps. No answer. I asked for information about aviation fields. No answer. I asked for information about roads. No answer. But I will get this information for the people of my county and my province just as I got a station at Rivière du Loup, however stubborn anyone may be who will not give a satisfactory answer, and I warn the minister I will get this information for my people.

Section agreed to.

On section 3—Government may act as agent.

Mr. GREEN: Yesterday the Minister of Munitions and Supply in dealing with the question of shipbuilding, as reported at page 2104 of *Hansard*, said:

> We have placed up to the present contracts for twenty merchant ships of the 9,300-ton class.

I interjected to ask whether that was a British contract. Then there was some heated flurry between the minister and myself, and I thought I heard him say that it was a British contract but apparently the *Hansard* reporter did not get it. I should like to have it made clear whether these twenty ships are or are not for the British government.

Mr. HOWE: We have received a requisition from the British government for twenty ships, and contracts have been placed for twenty ships. Whether the twenty ships that are to be delivered to the British government are what we have here, I am not sure, but in any event the Canadian government has placed contracts for twenty ships and we hold a requisition from the British government for the same number of ships.

Mr. RALSTON: I wish to say to the hon. member for Temiscouata (Mr. Pouliot), who said that there were some questions he had asked which were not answered—he had asked with regard to the defence of the county of Témiscouata and the city of Rivière du Loup —that he knows, without my saying it, that we do not disclose on the floor of parliament the defence plans for Canada or any portion of it. I do not propose to make a statement in the house on our means of defence. I only say to him that I have consulted the officers of my department—I know he has not the highest regard for them; nevertheless I have —and I am satisfied that their plans are sound with regard to the defence of Canada generally. I assure him from what I am advised that steps are being taken against any possible, likely and prospective attack on Témiscouata county or Rivière du Loup.

With regard to the location of a military training centre, my hon. friend said, as reported in *Hansard* at page 1807, that he had asked for a military training centre and—the way *Hansard* has it—"the experts of the department have not yet answered." I wrote him a letter at once and pointed out that I had written him myself personally over a month ago with regard to the matter, and he sends me to-day a copy of *Hansard* in which he has inserted after the word "yet" the word "satisfactorily," indicating that what he meant to say was that he had not been satisfactorily answered. He has used that term again to-day. I am sorry that the answer is not satisfactory in his opinion, but the answer I have given him is my own answer and that of my officers. The training centres were established in the locations where it was thought that the interests of the country would be best served having regard to the likely number of men to be trained in the different districts, and to a fair distribution of the facilities available. A great many members have made representations, but none except the member for Témiscouata has risen in his place to make the complaint that a training centre was not established in a particular constituency. But that, as the hon. member says, is his right, and I make no objection to that. I only say that the training centres were selected after the most careful and serious consideration having regard to the needs, and I am sorry that Témiscouata was not included in the selection.

Mr. POULIOT: I am sorry too, Mr. Chairman.

Mr. ROSS (St. Paul's): On Tuesday I addressed a question to the Minister of National Defence for Air, who was not then present, and the Minister of National Defence said that he would get an answer to the question.

Mr. POWER: May I answer it right away, because I have the answer here. The question was somewhat involved, and I am not quite sure just what my hon. friend wished to know. I have here so much information that I think I had better just file this memorandum with *Hansard* because it runs to three pages. His question as reported at page 2072 of *Hansard* was this:

> Mr. Ross (St. Paul's): I have one or two questions in connection with rumours which I suggest ought to be straightened out. Would the Minister of National Defence for Air or the Minister of Munitions and Supply give a com-

parison with regard to the hours necessary to ground planes of various classes for purposes of overhaul. I understand there is some dissatisfaction with some of the planes being made.

He goes on, and then the Minister of National Defence said:

Mr. Ralston: Is the hon. member asking as to the regulations concerning the number of flying hours before an overhaul is ordered?

Mr. Ross (St. Paul's): No; there are various classes of planes used in connection with the air training plan. There is dissatisfaction, or at least it is rumoured that there is dissatisfaction with certain makes. How many hours are granted for the overhaul of these different classes of planes?

I take it that that is the question to which he now refers, and I have here a memorandum covering the question:

1. Herewith are given under appendix "A" the approximate man-hours required for minor and major inspections. Under appendix "B" the maximum running hours for engines and airscrews for the various types of engines. Appendix "C" number of flying hours after which a complete overhaul is required.

2. It is to be noted that the types of aircraft and engines are those in use in the B.C.A.T.P.

I will file, if I may, these three appendices "A", "B" and "C" for inclusion in *Hansard:*

Appendix "A"

Minor and Major Inspections—Aircraft J.A.T.P.

Aircraft type	Periodicity (hours)	Approx. man-hours per minor inspection	Approx. man-hours per major inspection
Yale	40-240	50	150
Harvard ..	40-240	50	150
Battle	40-240	100	350
Anson	40-240	75	250
Fleet	30-180	25	75
Moth	30-180	25	75
Cessna	30-180	75	250

Note.—Periodicity as follows:

40-240—All inspections at intervals of 40 hours up to 240 are minors. 240 is a major.

30-180—All inspections at intervals of 30 hours up to 180 are minors. 180 is a major.

Appendix "B"

Table "A" C.A.P. 78/C.1

Engines and Airscrews

Engine type	Max. running hours between overhauls	Airscrews max. hours at overhaul
Cheetah IX	960	Fixed pitch
Cheetah X	780	Fixed pitch
Civet	540	Fixed pitch

Mr. ROSS (St. Paul's): I wish to ask a question of the Minister of Munitions and Supply. A few days ago when speaking in the house I suggested that the government had no policy in connection with the future production of aeroplanes and that some manufacturers were getting a little worried, not knowing what the policy was to be. I was told by the Minister of National Defence for Naval Services that of course the government had a policy and that it had been outlined by the Minister of Munitions and Supply some time ago. I do not recall, Mr. Chairman, that it has been outlined, and I think the Minister of Munitions and Supply should give us at some time an outline of what the government proposes to do in connection with the future production of aeroplanes in this country. I do mean, not just to the end of this year, but farther on, because these companies require to have some knowledge of what is going to happen, so that they can carry on their work.

Mr. HOWE: I believe that every aeroplane company knows the policy of the government in that regard until at least the end of 1942, provided that in the meantime there is no change in the war situation. In general, the policy will be to keep the plant in production on the plan upon which it is producing to-day, or on another plan which the plant has coming into production in the meantime. There is only one uncertainty; it relates to the development of a new type of engine in the United States, and we expect to have that determined shortly. Aside from that, I believe that any and every plant could give my hon. friend its programme up to the end of next year.

Mr. POULIOT: Mr. Chairman, I have just one word to say in reply to my hon. friend the Minister of National Defence. It is that the defence of any part of a country can be a military secret only in so far as it exists. Where there is no defence there can be no military secret; and I complain bitterly that we do not have enough protection in my county. That is why I insist upon a military camp.

There is something else. I have noticed in a certain committee that it was the practice of the high-ups of the civil service commission to come with a brush and a can of rose paint to paint everything in rosy colours and defend everything that was done within the civil service commission. Of course it would be a very bad thing if the brass hats of the Department of National Defence were not afraid of the criticism which hon. members can make in this chamber, just as is the practice at Westminster; and, although I have a high regard for the Minister of National Defence, he will never make me believe that the men who surround him in the Department of National Defence are perfect.

Mr. RALSTON: Nobody has ever suggested such a thing.

Mr. POULIOT: I am glad the minister admits that. That is a step in the right direction.

Mr. RALSTON: I have never said so in my life.

Mr. POULIOT: I am glad to hear that. We are making great progress. I thank the minister and I congratulate him on that statement. I noticed in *Hansard* that the hon. member for Regina City said he wanted to teach geography to these high-ups. I want that too, and I want them to learn the alphabet so that they can read properly. They need the alphabet in order to read, but they seem to ignore it.

The minister has said it was decided there would be no appeal. I am not in favour of inflexible rules in the militia or anywhere else. The Department of National Defence should not be a privy council in the legal sense of the word, a court from which there is no appeal. All matters should be discussed and everybody heard before a final decision is made, and even when a final decision is made it must always be subject to review in the light of events and considerations which cannot be foreseen. I say that on behalf of my constituents and my own people, and I shall never be afraid to speak for them.

I wish the Minister of National Defence good health. If, however, his health is failing, I can make a suggestion of a gentleman who

is not sympathetic to Mr. Bennett, is of independent means, has a fine military record, is the best organizer in the land, and has been praised recently by the Minister of National War Services. I do not mention him more precisely to-day; but it shows that if no men are infallible, no men are indispensable. If the Minister of National Defence does not like the way I voice the sentiments and feelings of my people, well, a time may come when someone in the Department of National Defence will grant us justice.

Mr. RALSTON: I just want to say that I will convey to the right hon. the Prime Minister my hon. friend's sentiments.

Mr. MacINNIS: I wish to say a few words before this section carries. For several weeks we have been trying to get an idea of the government's war programme, and it seems to be disclosed in little bits here and there. I have before me this evening's Ottawa *Journal,* in which I notice a news item stating that the hon. member for Vancouver-Burrard has given out a statement about a six-man committee that has been appointed to study British Columbia's war capacity. Could the minister give us a little more information on this—when the committee was set up, and what are the various things it is going to investigate? There is mention here of two items which are termed "major" items, namely, an investigation into the possibilities of developing steel from scrapiron, and of the establishment of an electric furnace.

First of all, why could the minister himself not have announced this to the members of the committee? Next, what further matters are subject to investigation in British Columbia?

Mr. HOWE: My hon. friend is not reading from a press release of the Department of Munitions and Supply.

Mr. HANSON (York-Sunbury): It is a report from the hon. member for Vancouver-Burrard.

Mr. HOWE: The hon. member for Vancouver-Burrard has his publicity arrangements and I have mine. I hope he will not hold me responsible for his, and I will not hold him responsible for mine. I may say, however, that we had a committee go out some months ago to investigate capacities in British Columbia. As my hon. friend knows, British Columbia industries, that is, industries capable of taking on war work, are for the most part in small units. After the investigation, a good many people in Vancouver felt that these men from Ottawa had not reported fairly on the capacity of British Columbia to handle war work. We decided that this time not only would we assign to the investigation three technical experts from here, but we would ask three men in British Columbia, who know a good deal about the industrial capacity of the province, to look over the situation with our men, in the hope that we might find additional means of placing war work in that province.

Mr. HANSON (York-Sunbury): Does that include the hon. member for Vancouver-Burrard, may I ask?

Mr. HOWE: The hon. member for Vancouver-Burrard is not a member of that committee.

Mr. HANSON (York-Sunbury): He seems to be taking charge of it.

Mr. HOWE: It is simply a committee sent out to gather information for the purposes of the department. We looked upon it, not as a public inquiry, but simply as a departmental inquiry as to additional capacity. We have had committees travelling over a good part of Canada; I think they have visited every province, perhaps every industrial centre in each province. Various officers of the department have travelled together as a committee. This is not a matter which would seem to require any great formal announcement. We have asked the committee to study every matter affecting production there, to look into certain plants from the point of view of labour organization and of skilled workmen who are out of employment, and we hope that when the committee reports we shall have a better picture of the situation.

The CHAIRMAN: I have allowed a number of questions, but I must point out that section 2 has been carried and we are now on section 3.

Mr. MacINNIS: What I have to say can be said equally well under section 3. I do not intend to speak at any length. I am not objecting to the committee that has been set up; in fact, I am glad that it has been set up. What I do object to is the way in which information comes to me as a member of this house and a member from British Columbia. Here we have this statement in to-day's Ottawa *Journal:*

> G. G. McGeer (Lib.-Vancouver-Burrard), announced on Wednesday that a six-man committee had been appointed by the government to investigate British Columbia's potential war industrial capacity. It will begin work next week.

I skip the second paragraph. The third paragraph reads:

> Mr. McGeer, who made the anouncement on authority of Munitions Minister Howe, said Colonel W. C. Woodward, of Vancouver, executive assistant to the munitions minister, will attend the meetings at the coast.

There have been suggestions in this house that the government was trying to carry on a Liberal party war effort. I have never made any such statement either in the house or outside, and I would not want to make a statement of that kind. I should be sorry if there were grounds on which I could make such a statement. But when we see such a thing as this, after we have been discussing the matter in the house for a month or more, I think members have a right to ask for more definite information and to know why they are not taken into the confidence of the government. It should not be left to private members to make announcements such as I have quoted.

Mr. HOWE: Members on all sides have asked me to look into matters in the districts they represent in parliament, and we try to do that. The hon. member for Vancouver-Burrard (Mr. McGeer) said that he did not think the original committee gave a fair statement of the potentialities of British Columbia, and it was largely on his representations that this second committee was set up. My hon. friend knows British Columbia politics better than I do, and if he will look over the British Columbia representation I do not think he will suggest that the committee is political. It is a committee of industrialists, two of whom are so far as I know, not supporters of this government.

Mr. HANSON (York-Sunbury): Did the minister name the members?

Mr. HOWE: I believe the representatives are Gordon Farrell, president of the British Columbia Telephone company, R. W. Mayhew, and Lawrence Killam, who is not a supporter of the government. I was not aware that he was a supporter of the government.

Mr. HANSON (York-Sunbury): He comes from an old Liberal family.

Section 3 agreed to.

On section 4—Orders and regulations.

Mr. HANSON (York-Sunbury): I desire for a few moments to deal with a matter that is of considerable importance; otherwise I would not venture to delay the passage of the bill, which I regret has been delayed altogether too long.

Prior to 1931 the system of treasury control in this country was exceedingly inadequate. A system had grown up whereby parliament voted moneys, in the estimates or supplementary estimates, which were allocated to departments, but there was no treasury control of expenditures and frequently accounts were overdrawn. The situation became rather acute in 1931 with the fall of the national revenues during the depression. The government of the day decided that the situation had to be grappled with and they introduced the Consolidated Revenue and Audit Act, which is to be found in chapter 27 of the statutes of 1931. I remember that bill very well. I had something to do with piloting it through the banking and commerce committee to which it was referred, and it was given thorough consideration by everyone and treated entirely in a businesslike manner. Section 29 of the act contains an important clause:

No contract, agreement, or undertaking of any nature, involving a charge on the consolidated revenue fund, shall be entered into, or have any force or effect, unless the comptroller—

That is, the comptroller of the treasury appointed under the authority of the act.

—or an officer of the Department of Finance designated by him and approved by the treasury board, shall have certified that there is a sufficient unencumbered balance available, out of the amount authorized by parliament for the particular service, to pay any commitments under such contract, agreement or undertaking which would, under the provisions thereof, come in course of payment during the fiscal year in which such contract, agreement or undertaking is made or entered into.

That was notice to these departments that the deputy ministers could not overdraw, and I remember that word went out at that time to the departments that any infraction of the law might call for the resignation of the deputy minister. That was the impression left on them, and a great evil was corrected.

At that time Mr. Watson Sellar, the present auditor general of Canada, was appointed comptroller of the treasury. He was appointed after the act was placed in the statutes by the Bennett government, and I was impressed, before the banking committee, with the knowledge he had of the proposed measure and the way it should work. I think that in every way he was an important official. He is now auditor general of Canada.

Recently I have been amazed to learn that by reason of the provisions of the War Appropriation Act 1940, which are similar to subsection 4 (1) (e) of the bill now before us, and presumably also from time to time under the authority of the War Measures Act, that provision of parliament has been set aside by the government by order in council, at times when this parliament was in session. I challenge the position that the government has taken. I can readily understand that in a time of war a statute might be found too inflexible and that at a time when parliament was in recess it might be necessary—in fact, I could imagine circumstances in which I think it would be absolutely necessary—that some extraordinary provision be taken to

cover any given commitment in war time. I suggest to the committee, however, that when parliament is in session, the setting aside by order in council of a statute of that kind, intended to be the safeguard of the public treasury, to protect the taxpayers of the country, is absolutely indefensible and cannot be justified on any ground of expediency or of war requirement or anything of the sort. If occasion is found when the provisions of the statute are too inflexible at a time when the House of Commons is in session, all the government have to do is to come to parliament and say so and explain the position, and power will be given to them. But to-day that is not the position. What has happened? An important section of the statutes of this country, intended to protect the public treasury, has been flouted by the minister, at a time when the people's representatives are in session and could correct the position if it absolutely needed to be corrected.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. HANSON (York-Sunbury): Mr. Chairman, when the committee rose for the dinner recess, I had discussed briefly the changes which I understand have taken place concerning treasury control of government expenditure, and I had detailed the steps that had been taken in 1931 to protect the public treasury against overexpenditure, and to set up a proper system of accounting.

When we passed the war appropriation act in 1940 there was a clause in the measure in practically the same terms as paragraph (e), subsection (1), of section 4 of the present bill, namely:

> The governor in council may make, from time to time, such orders or regulations as may be deemed necessary to give effect to the purposes of this act—

Of course the meaning of that is quite clear.

> —and for greater certainty, but not so as to restrict the generality of the foregoing terms, the governor in council may, by order or regulation . . .
>
> (e) prescribe administrative practices with respect to the making of financial commitments, the taking of security for the performance of contracts and agreements, and the recording and paying of accounts.

If hon. members followed me with respect to the provisions of subsection 1 of section 29 of the Consolidated Revenue and Audit Act, they will, I believe, agree with me that the powers given under paragraph (e) subsection 1, section 4 of the bill at present before us do not in any way override the provisions of the audit act, but empower the governor in council to prescribe, by order in council, administrative practices with respect to the making of financial commitments.

At the time that provision was placed in the 1940 act, I did not appreciate the extent to which it might enable the government, if it does so enable it, to change the statutes not of this house but of parliament.

Mr. MACKENZIE (Vancouver Centre): Those are the only statutes we have.

Mr. HANSON (York-Sunbury): Perhaps that was a redundant statement to make. I was referring, however, to changing a provision which has been concurred in not only by the House of Commons but by parliament as a whole, and is therefore the law of the country.

Under the War Measures Act numerous orders in council have been passed. I believe it is absolutely impossible for any person, individually, and least of all for myself, to keep track of all those orders in council. The government is commanded by law to send some of them to members of the House of Commons. But we do not know anything about most of those orders in council until after they have become operative for a long time, and what has taken place becomes known.

I held the view, and still hold it, that, as a matter of right, all orders in council should come to the office of the leader of the opposition. I applied to the leader of the government for a direction that this might be done, and to my surprise it has been refused. I find also upon examination of the records that this is a rather old story, and that from time to time—

Mr. POWER: I should like to have that point cleared up. At one time I was in charge of the legislative committee and, as I recall them, my instructions were to send copies of all orders in council having the force of statutes to the leader of the opposition and the leaders of the different groups in the house.

Mr. MACKENZIE (Vancouver Centre): That is still being done.

Mr. HANSON (York-Sunbury): I am not going to say that it is not being done. I shall have to make further inquiries at my office.

Mr. MACKENZIE (Vancouver Centre): That practice is still being followed.

Mr. HANSON (York-Sunbury): That may be true; I will not contradict the hon. member, unless I am advised to the contrary by my

office. But what I was saying was that I hold that, as a matter of public policy, all orders in council ought to be sent to the leader of the opposition. I applied to the Prime Minister to have that put into effect, and I have been refused.

I shall not traverse that ground to-night. I found to my surprise that this is an old problem, and has been considered between leaders of governments and leaders of oppositions for almost a generation. It has always been held, by whoever was prime minister, that it was not a proper practice. I shall leave it at that.

But because that practice has been pursued and because we are not given all orders in council, one has his attention drawn only to particular orders in council on certain occasions. Personally I should very much dislike having to read the reams of orders in council passed by the government, and especially in war time. But it certainly would be a matter of great convenience to have a clerk in one's office go through them each day as they come in, and call attention to the important ones. That, however, is not the point I have in mind at the moment.

It appears that as long ago as November last, while the house was in session, a most important order in council was passed, overriding the provisions of the Consolidated Revenue and Audit Act. I desire to call the attention of hon. members to evidence given by Mr. McIntyre, comptroller of the treasury on March 27 last, before the special committee on war expenditures. It will be observed that in his statement he was explaining what the practice had been and what it now was Speaking of the treasury board, he said:

As to the origin of the office, prior to 1932 each department or other division of the service had its own accounting organization and made payments from the consolidated revenue fund, chargeable to the appropriation granted by parliament. This system had some weaknesses, among them the position in which departments were placed to over-incur expenditures with their resultant overdrafts in the appropriations at times. These overdrafts were sometimes substantial.

That was one of the evils the present act sought to correct. I have the order in council here. Then, he continued:

In addition, the departments were the sole auditors of their own accounts before they were paid.

That was a weakness of the old system.

The auditor general carried out his post-audit, but there was no independent audit before payment.

In other words, the auditor general made a post-audit which, we all know, is not nearly as valuable as a pre-audit. Then Mr. McIntyre proceeds to say—and I do not intend to read very much of it:

[Mr. R. B. Hanson.]

The amendments to the Consolidated Revenue and Audit Act, approved by parliament in 1932, were designed to correct the shortcomings of the old act. The amendments provided for the appointment of a comptroller of the treasury, and placed on this officer certain controlling functions, such as exclusive power to make payments out of the consolidated revenue fund.

That is to say, there was one central accounting branch and one central paying branch.

This change over from the departments to the comptroller involved the transfer of certain accounting staffs of the departments to the Department of Finance, and placed them under the direction and control of the comptroller of the treasury. The authority for this transfer was contained in section 36 of the act.

I read the first clause of that section. The witness is explaining to the members of the committee the practice which had been followed from the time the Consolidated Revenue and Audit Act was passed until the outbreak of war.

During 1939-40—

I assume, by that, that he is speaking of the fiscal year.

—we carried on—

He is speaking for the treasury.

—with the peace-time method of accounting for expenditures and commitments under the war appropriation, but early in 1940 it was found that conditions—

Mr. MACKENZIE (Vancouver Centre): From what is my hon. friend reading?

Mr. HANSON (York-Sunbury): From the evidence of Mr. McIntyre, the comptroller of the treasury.

Mr. MACKENZIE (Vancouver Centre): Of course that is entirely out of order.

Mr. HANSON (York-Sunbury): It may be out of order, but I can give it in my own terms. There was detailed before this committee the practice which had been followed and the defects which were found in respect of it. It was through reading this evidence that I discovered order in council P.C. 6695 which was passed on November 19, 1940, by the governor in council. This order in council will be found as an appendix to the minutes of proceeding and evidence, No. 7, and it recites:

That section 29 of the Consolidated Revenue and Audit Act sets out the existing procedure to be followed before financial commitments are entered into and provides that no contract, agreement or undertaking of any nature involving a charge on the consolidated revenue fund shall be entered into or have any force or effect unless the comptroller of the treasury or an officer of the Department of Finance designated by him and approved by the treasury board shall have certified that there is a sufficient unencumbered balance available, out of the amount authorized by parliament for the par-

ticular service, to pay any commitments under such contract, agreement or undertaking which would under the provisions thereof come in course of payment during the fiscal year in which such contract, agreement or undertaking is made or entered into.

It recites further:

That the appropriations asked for from parliament would be unduly inflated and unrealistic—

I do not know whose language that is.

—if they were to include estimates of the total cost of projects which will only come in part for payment within the current fiscal year.

I pause here to make a little examination of that language. Why should that be put in an order in council? Why should parliament not know realistically just what the appropriation is to be even in war time, assuming that a proper estimate can be made by the department, which I agree is not always possible?

Mr. ILSLEY: That is the answer.

Mr. HANSON (York-Sunbury): The Minister of Finance made it quite clear that only estimates could be made and that they would have to have wider powers. We find now that although we passed only $700,000,000 last year, and the expenditures grew with great rapidity, the requirements needed under this legislation amount to only $135,000,000. That seems surprisingly low, having regard to the rate at which we have been spending money. I am not making any observations with respect to what value we are getting for our money; I am only commenting on the rate at which we are spending money. I quote again:

That paragraph (e) of subsection 1 of section 5 of the War Appropriation Act, 1940, empowers the governor in council to make regulations prescribing administrative practices with respect to the making of financial commitments.

Paragraph (e) of subsection 1 of section 5 of last year's act was, I believe, identical with paragraph (e) of subsection 1 of section 4 of the bill now before us. On the basis of that statement contained in paragraph (e), which I have read more than once, His Excellency, the Governor General in Council, on the recommendation of the Minister of Finance, proceeds to change the law of this country while parliament is in session. I protest against any such practice, especially in connection with treasury expenditures and commitments. I quote again:

Now, therefore, His Excellency the Governor General in Council, on the recommendation of the Minister of Finance, is pleased to make the following regulations regarding the making of financial commitments with respect to expenditures for war purposes, and they are hereby made and established accordingly:

1. War programmes shall, in the first instance, be submitted for the approval of the governor in council or the war committee and any major changes in or additions to an approved programme shall also be submitted for the approval of the governor in council or the war committee. When submitting any original programme or changes in or additions to an approved programme the department concerned shall furnish in as much detail as is practicable at that time the information required under the next succeeding regulation.

On the basis of that, the government of this country has gone ahead and altered the statute law of Canada. We have no longer any regard for the Consolidated Revenue and Audit Act. I admit at the very outset that in war time, when parliament is in recess, I can quite understand the necessity of having some additional authority. I question very much if the additional authority is to be found in paragraph (e) of subsection 1 of section 4, but it may be that the government has an opinion from the Department of Justice that they can do that.

This is what I want to put to the minister: If we still have responsible government in Canada, why should a government of this country override the laws of Canada by order in council, while parliament is in session, especially with respect to the expenditure of money? There is a great principle at stake here, the principle of parliamentary control and the supremacy of parliament. I never thought that I would live to see the day, even in war time, when a government led by my right hon. friend would take authority, under the flimsy pretext contained in that clause of the statute, to override the considered opinion of parliament as to what is necessary to protect the public treasury with regard to financial commitments. That principle cannot be defended on any other theory than that of *ex necessitate*. While I am quite willing to admit that in war time the necessity may arise to do this or that by order in council while the house is in recess, and the government might be able to justify it; but when parliament is in session, as it was on the date when this order in council was passed, there is absolutely no justification for legislating by order in council on matters of this kind.

I have not been able to go through all the cases in connection with which this government has acted in this manner, but I have a sample lot here. Some of them are important and others are of no importance at all. But all of them were acted upon while parliament was in session. The last one I have here is dated March 18 and refers to the reserve army regulations, 1941. I do not suppose that it was necessary as a matter of practice to come to parliament to get approval of these reserve army regulations, 1941. That procedure might delay parliament, but the fact

remains that this was passed on March 18 while the house was in session. And mark these words, "notwithstanding the provisions of any other statute or law". Can my hon. friend, the Minister of National Defence, defend that principle?

Let me go back a little bit. P.C. 6695 was passed on the 19th of November. We find a whole series of them following. I do not believe I have by any means exhausted the list. On November 27, while parliament was still in session, the government passed P.C. 6282, establishing the veterans welfare division to assist former members of the forces in matters pertaining to reestablishment in civil life. This was passed by virtue of the War Measures Act and "notwithstanding anything to the contrary contained in any other act or regulation". I wonder why that provision was not brought before parliament by my hon. friend the Minister of Pensions and National Health. Was he afraid to consult parliament, or was it done so hurriedly as a result of the pressure brought to bear upon him by members of this house on behalf of the 20,000 soldiers who had been set adrift in this country that he acted in defiance of and flouted the will of parliament? He had no authority at all on principle to do this by order in council.

The War Measures Act, Mr. Chairman, under this government has set aside the constitution of this country, and I submit in all fairness that it ought not to be used for all the purposes for which it has been used. I have given two cases. The last one I will not question at all, but the first case I do question.

There is another case which comes in order of sequence that I would not question. Here is P.C. 6645, passed on the recommendation of my hon. friend the Minister of National Defence. I have them all here, but I am not going to take time to read them all. I will just put them on the record. P.C. 6645 was approved on November 19, designating the military forces of Canada as the Canadian Army. This was passed under the provisions of the War Measures Act and "notwithstanding the Militia Act, chapter 132 of the revised statutes of Canada or any other act or law". Aside from the principle involved, I would not raise one word of protest if the government want to change the name of the army. But there is a principle involved, and I submit that the War Measures Act was not set up to cover any of these proceedings.

I wish to call attention to another one, P.C. 6647, approved on the same day, November 19, 1940, containing regulations to govern the air cadet corps. This was passed pursuant to the War Measures Act and "notwithstanding the provisions of the Militia Act or any other act or law". I assume that it is not an important matter except for the regulations, but it violates the principle just the same.

Then there was P.C. 6879, approved on November 28—all of these were passed while parliament was in session—authorizing certain regulations to govern civilian claims against members of the Canadian forces in Iceland, Newfoundland and the West Indies. This was passed pursuant to the War Measures Act and "notwithstanding the provisions of any other act, law, statute or regulation".

We have even altered the Radio Act and the Canada Shipping Act under the guise of war necessity. P.C. 1014, amending the defence of Canada regulations, was approved on February 22, 1941, when this house, if my memory serves me aright, was in session. This order in council amended regulation 11 of the defence of Canada regulations and provided that "notwithstanding anything contained in the Radio Act, 1938, or in the Canada Shipping Act, 1934, or in any regulation made under such acts, the Minister of Transport might prohibit the use of radio apparatus on any ship within Canadian waters". That probably was necessary, and as a matter of practicability no one would greatly object to it. But it was a violation of the principle just the same.

Mr. ILSLEY: Is the hon. member arguing that these matters should have been brought before parliament?

Mr. HANSON (York-Sunbury): No; I have tried to make a reasoned argument. I am not asking that every "i" should be dotted and every "t" crossed, but what I am objecting to is the brutal way, if I may call it that, in which the treasury department has taken into its hands the powers contained in section 4 (1) (e) to override the Consolidated Revenue and Audit Act. That is the gravamen of my complaint. These other matters are merely illustrations of what the government has done by order in council under the so-called authority of the War Measures Act in matters that are not relative to the war and are not of nearly as much importance as this question of finance. The question of finance is important.

I wish to say to the Minister of Finance that if the provisions of section 29 of the Consolidated Revenue and Audit Act were too inflexible, if they were not sufficiently wide and it was necessary to enlarge the scope of that section for a given contingency or a given period in relation to war expendi-

tures, all the government had to do was to come to this House of Commons and introduce a bill, tell this house of the necessities of the situation, and the bill would have been passed in thirty minutes.

Mr. ILSLEY: Oh, no, thirty days.

Mr. HANSON (York-Sunbury): All right. I will give you an example. How long did it take to put the $700,000,000 war appropriation bill through last year?

Mr. ILSLEY: Take this year.

Mr. HANSON (York-Sunbury): All right; I know it has taken a long time this year, and it is the minister's own fault because he did not take parliament into his confidence. He abused the privilege that was given to him last year.

Some hon. MEMBERS: No.

Mr. MACKENZIE (Vancouver Centre): Is that a reasoned argument?

Mr. HANSON (York-Sunbury): That is declamatory. The minister took advantage of the innocence of some of us last year to try to pass this thing through, but I declare that so long as I am here, it will never be done again. I tell the minister to his face that on any reasonable interpretation of section 4 (1) (e) of this bill, he cannot do what the government is doing, setting aside the provisions of the Consolidated Revenue and Audit Act. I should like to have this thing go to the Supreme Court of Canada to test its validity.

Mr. POTTIER: And hold up the war.

Mr. HANSON (York-Sunbury): The hon. gentleman who said that does not know what the whole argument is about. He does not know what the principle at stake is.

Mr. RALSTON: That is another reasoned argument.

Mr. HANSON (York-Sunbury): I am trying to make a reasoned argument. I know it is not much use to appeal to gentlemen who have done a thing and are determined to support and stand by it to the last shot. Hon. gentlemen opposite throughout the whole of this session have never once admitted, except the Minister of National Defence for Air, that anything they have ever done is wrong. But the country knows better, and so do I.

An hon. MEMBER: How about the Bren gun contract?

Mr. HANSON (York-Sunbury): I am not going to enter into a discussion of the Bren gun contract, but I would say that it is a classic case of the government never admitting to an error.

I suggest to the minister that he review the whole position with respect to these orders in council. I am not going to follow the question along any further. I am going to make my statement and sit down.

I close by asking the minister to tell us the necessity for the changes and the reasons why he did not come to parliament and ask for the imprimatur of the House of Commons. Then I am going to ask the government generally to justify this class of legislation. The Liberal party, led by the Right Hon. William Lyon Mackenzie King, the champion of liberty in Canada, the man who above everybody else in Canada has clearly stood for the supremacy of parliament, has thrown the supremacy of parliament out of the window at the first opportunity. What a spectacle!

I invite the Minister of Finance to justify the position, and I say to him that on no occasion has this government, during the last ten months since the first session of this parliament, ever made a reasoned appeal to this opposition for support and assistance to put through a matter which was of present necessity. If they had come to us and said, "We find that these provisions of the audit act are too inflexible; they served a purpose in peace time, but they are not sufficient in war time," they would have had the united support of those on this side of the chamber. Have we at any time refused to help this government vote money to carry on the war? Why, from the day we entered the house, we of this party have pressed to get on with the war and let us have an all-out war effort; and I tell these hon. gentlemen to their faces that the Canadian people will give them all the money they want, but we shall demand an accounting of how it shall be spent, and it will come as a great surprise to the people of Canada when they learn that, by a turn of the hand, the considered statute laws of this country protecting the treasury have been overridden under the guise of war necessity.

Mr. ILSLEY: Mr. Chairman, the first observation I should like to make is that the hon. gentleman has been a long time getting angry over this infringement of the principles of the constitution.

Mr. HANSON (York-Sunbury): Oh, I was not angry.

Mr. POWER: Progressive wrath.

Mr. ILSLEY: On February 20, 1941, I brought to the hon. gentleman's attention this order in council. I have been able to find what I said to him; it is on page 888 of *Hansard* of that date. It is not very long,

and I will read it. It shows clearly that at the first opportunity I made the House of Commons aware of this order in council and why it was passed.

Mr. HANSON (York-Sunbury): "The first opportunity"! It was passed in November.

Mr. MACKENZIE (Vancouver Centre): A copy was sent to my hon. friend a week after it was passed.

Mr. HANSON (York-Sunbury): How does the minister know?

Mr. MACKENZIE (Vancouver Centre): I do know.

Mr. HANSON (York-Sunbury): How does the minister know?

Mr. MACKENZIE (Vancouver Centre): I have just checked it up.

Mr. ILSLEY: I have no doubt that a copy of this order in council was sent to the hon. gentleman. Before I come to the passage to which I referred, I would point out that, when parliament met on Monday, February 17, the Prime Minister laid upon the table of the house copies of all orders in council passed after November 2, 1940, down to February 7, 1941. Among those orders in council was this order in council. So the hon. gentleman not only received a copy of the order in council as soon as it was passed, by having it sent to him direct, but it was laid on the table at the beginning of the session, and then it was specifically brought to the attention of the hon. gentleman in debate by myself on February 20, 1941.

Mr. MACKENIE (Vancouver Centre): And further, if I may interrupt my hon. colleague, the leader of the opposition said to-night that he had never seen the order in council until he had read the proceedings of the committee on expenditures.

Mr. ILSLEY: I will go further, and say that I either sent the order in council to the hon. gentleman or took it across the floor of the house and handed it to him. It was printed in a blue book; I handed it to him and showed it to him, and if I remember correctly, he thanked me for it.

Mr. HANSON (York-Sunbury): I would do that, anyway.

Mr. ILSLEY: I did that on the 20th or 21st of February. The reason why I know it is that it was just after the remarks I made in the house about this particular order in council. This is what I said, as reported at page 888 of *Hansard*:

[Mr. Ilsley.]

Mr. Ilsley: I think the treasury board is adequately and sufficiently advised; I do not think they require any more advisers on this point. I volunteer this information to the hon. gentleman, which again perhaps is not wise, that he should have a copy, as perhaps he has already, of an order in council that was passed last October or November, if I remember correctly, after a great deal of consideration, setting out the procedure to be followed in the approval of draft estimates and subsequent allotments.

Mr. HANSON (York-Sunbury): Did the minister say that that was overriding the Consolidated Revenue and Audit Act?

Mr. ILSLEY: I took it across the floor of the house and handed it to him.

Mr. HANSON (York-Sunbury): Nowhere did he inform parliament that the act was being overridden.

Mr. ILSLEY: I think so. Just a minute. One can only go so far in conveying information to people. Let me go on now:

Mr. Hanson (York-Sunbury): That is a very interesting statement. I confess at once that I cannot possibly read all the orders in council that have been passed by this government, some thousands in the course of the year. No human being could undertake to do it. I should be glad if the minister would have a copy of that order in council sent to me. It might have been useful if he could have read it to us here to-night. But the statement that the matter has been given great consideration is reassuring.

Mr. HANSON (York-Sunbury): Ah, that was the topic—whether that was a peace-time or war-time appropriation. That is what we were talking about.

Mr. ILSLEY:

Mr. Hanson (York-Sunbury): The allocation?

Mr. Ilsley: Yes, out of the money voted by the War Appropriation Act. If the hon. gentleman thinks a great deal of thought has not been given to that, he is wrong.

Mr. Hanson (York-Sunbury): I am not suggesting anything of the sort. I am just asking for information.

Mr. Ilsley: There is a long and very carefully worked out order in council which sets out the procedure, but that does not do away with the necessity of judgment being exercised at some point as to whether certain items should be paid out of the war appropriation or not.

I do not think the rest has any relevancy. As I say, I took the blue book with the order in council in it and either handed it personally to the hon. gentleman or sent it across the floor of the house; I cannot be sure which, but I think I handed it to him myself.

Mr. HANSON (York-Sunbury): Is there any word or suggestion in anything he has said that the order in council related to the overriding of a statute of this house?

Mr. ILSLEY: I am not sure, but it is recited in the second paragraph of the preamble, the very one he read to-night. The whole story is set out.

So much for the matter of the hon. gentleman being kept in the dark about it. He was not, at any stage.

Mr. HANSON (York-Sunbury): Certainly, then, the public were kept in the dark.

Mr. ILSLEY: The next point I should like to make is as to the power to pass this order in council. I do not believe there is any opinion of the Department of Justice as to whether it is authorized by the section to which he has referred, but I am satisfied that the government had the power to pass this particular order in council, either under that subsection of the War Appropriation Act, or under the War Measures Act.

Mr. HANSON (York-Sunbury): Will the minister state that under that subsection they have the power to do it?

Mr. ILSLEY: I do not know.

Mr. HANSON (York-Sunbury): I do not think he will.

Mr. ILSLEY: Well, I do not know. It was assumed perhaps rather than decided that they had the power. Apparently the power is granted by that. The hon. gentleman says that we should have some litigation on it, take it to the supreme court, or the privy council, or something like that.

Mr. HANSON (York-Sunbury): I did not say anything of the sort.

Mr. ILSLEY: I do not want to ask the hon. gentleman to hold his peace, because that would be disrespectful.

Mr. HANSON (York-Sunbury): I object to the minister putting into my mouth words which I did not use.

Mr. MACKENZIE (Vancouver Centre): That is my impression, most definitely, of what was said.

Mr. HANSON (York-Sunbury): Oh, well, I cannot be responsible for what impression it would make on the minister's mind.

Mr. MACKENZIE (Vancouver Centre): I rise to a point of order. The hon. gentleman did make the observation referred to by the hon. gentleman in this corner of the house, and the hon. gentleman sustained his position.

Mr. MacKINNON (Edmonton West): And he knows it.

Mr. HANSON (York-Sunbury): I should not have said that.

Mr. ILSLEY: I should like hon. members to obey the rules of the house. Nobody has a right to interrupt, except to put a question, without asking leave.

Mr. HANSON (York-Sunbury): Then the Minister of Finance had better refer to the hon. member for Vancouver Centre.

Mr. ILSLEY: I do not object so much to interruptions as to the running fire of almost muttered comment which I cannot hear and which, I am afraid, gets on the record. If the hon. gentleman will just stop that, I will proceed. I would ask him respectfully to stop that kind of thing in this chamber. I cannot hear it, and if it gets into *Hansard* and I have not answered it, it creates an entirely wrong impression. If at any stage of my remarks he would like to say something to me, would he ask me to stop? We are in committee. I cannot be talking at the same time that he is and expect to make my points at all. What I was saying was that I have no doubt the power is conferred on the governor in council to pass these orders in council, either by the section to which the hon. gentleman has referred, namely, the section of the War Appropriation Act, or by section 3 of the War Measures Act. Section 3 of the War Measures Act reads:

> The governor in council may do and authorize such acts and things, and make from time to time such orders and regulations, as he may by reason of the existence of real or apprehended war, invasion or insurrection deem necessary or advisable for the security, defence, peace, order and welfare of Canada . . . .

I cannot think there should be the slightest doubt about the power of the government to have done what they did. I do not know that the hon. gentleman argued that we did not have power, but there can be no doubt as to the power.

The next position, I thought, was that under the powers conferred by the War Measures Act and by the War Appropriation Act we should never pass orders in council which had the effect of amending acts of parliament. But when I questioned the hon. gentleman on that, he said, no; he did not go to that length. Of course, it would be impossible for us to carry on a war if we had to go that length. We are passing hundreds, it may be thousands, of orders in council a month—I do not know how many, but a great many—and situations have to be met from day to day, and to be met in such a way as to provide the provisions of certain existing statutes. We could not bring these into the house; we could never make headway if we did. We have, therefore, to pass a good many of these orders in council, and we have the power to pass them under those acts which parliament has passed. Be it remembered, however, that these

eventually rest upon the authority of parliament, and we have to act upon them to meet these emergent situations.

The position of the hon. gentleman, therefore, comes down to this, that in this case the matter was so important, it was of such a character, perhaps by reason of its financial nature, that we could not have exercised the powers which it is admitted we ought to exercise in a great many other instances—

Mr. HANSON (York-Sunbury): While the house is in session.

Mr. ILSLEY: I have taken that into account.

Mr. HANSON (York-Sunbury): The minister has not said so.

Mr. ILSLEY: I put the question to him, did he think that while the house was in session we should make a rule of never passing orders in council which had the effect of amending an act of parliament?

Mr. HANSON (York-Sunbury): I did not understand it that way. I would not think it was necessary in certain cases to come to parliament—

Mr. ILSLEY: Right.

Mr. HANSON (York-Sunbury): —with regard to certain small matters. But anything affecting the protection of the public treasury should come to parliament while the house is in session. That is the point I am really trying to make.

Mr. ILSLEY: Then we are in agreement as to the hon. gentleman's position. I have got rid of a lot of other positions which he appeared to me to occupy from time to time throughout his address: First, the position that we had no power—there is nothing in that. Then there is the position that we should never amend an act of parliament by order in council while parliament is in session. We have got rid of that. We are down now to the question whether this particular matter is of such a nature that we should not have taken this action while parliament was in session. That is a question as to which there might be two opinions. I can tell the hon. gentleman and the committee exactly what happened. We were drifting into a state of administrative chaos, because it was simply impossible to operate under section 29 of the Consolidated Revenue and Audit Act. It is utterly impossible to estimate what will come for payment within the fiscal year and what will not.

Mr. HANSON (York-Sunbury): Why not come to parliament and say so?

[Mr. Ilsley.]

Mr. ILSLEY: Perhaps we can divest this controversy still further of any elements of disagreement between us. Is the hon. gentleman now saying that he has no objection to what we did, because I will not argue in favour of our action if he does?

Mr. HANSON (York-Sunbury): That is not very complimentary; it is equivalent to asking me to say whether I had made out a case. I think I made a good case, and I believe the people will think I made a good case. With regard to the question of financial control when parliament is in session, I tried to make it plain that in my opinion the government should have come to the house and told us what the difficulty was and they would have obtained relief at once. In respect of this and other cases, I still hold that the principle which I enunciated was good. Whether you should call it the Canadian reserve army or the Canadian army is a matter of no consequence, although the principle is there.

Mr. ILSLEY: If there is no—

Mr. MACKENZIE (Vancouver Centre): With respect to the one passed by my department, parliament was informed within two or three days.

Mr. HANSON (York-Sunbury): It took the minister a week to get it out, and the country did not understand what it was.

Mr. ILSLEY: May I have order, Mr. Chairman.

The CHAIRMAN: Order.

Mr. ILSLEY: If the hon. gentleman is making no claim that what we did was wrong, that it was a bad thing to do; if he is merely arguing about the way we did it, let us have that understood.

Mr. HANSON (York-Sunbury): I said that what you did was wrong and illegal.

Mr. ILSLEY: Well, all I can say is that the procedure worked out by this order in council was not only necessary but was well considered and long considered.

Mr. HANSON (York-Sunbury): Why did you not bring it to parliament if you took a long time to consider it?

Mr. ILSLEY: Will the hon. gentleman wait until I come to that. We cannot have it agreed, I suppose, can we, in order to avoid jumping from one point to another, that the hon. gentleman has no objection to the procedure?

Mr. HANSON (York-Sunbury): I am not sure that I know exactly what the procedure is. I never sat in with treasury board. I never had any accountant come to me and explain the procedure. I can only try to interpret the language for myself, and I am not an accountant. The point I make—and I want to repeat it—is that I do not think the government should have changed the law of the country without coming to parliament with respect to treasury commitments. That is the point I make.

Mr. ILSLEY: The hon. gentleman has repeated that over and over again.

Mr. HANSON (York-Sunbury): Yes, and the minister ignores it.

Mr. ILSLEY: But I wish to point out that the hon. gentleman does not criticize what we did. He does not criticize the procedure we set up. He has made no case; he has not attempted to make a case, that we did not do the wise thing in making this change.

Mr. HANSON (York-Sunbury): That is a matter of opinion; I do not know. I never argued that at all.

Mr. ILSLEY: He is not arguing the point.

Mr. HANSON (York-Sunbury): I did not say that. Do not put words into my mouth.

Mr. ILSLEY: He is not criticizing the government for having set up a bad procedure or for having done anything wrong.

Mr. HANSON (York-Sunbury): May I ask the minister a question? Is it his argument that the end justifies the means?

Mr. ILSLEY: Not at all.

Mr. HANSON (York-Sunbury): That is exactly what the minister argues.

Mr. ILSLEY: I am trying to find out what the hon. gentleman is driving at, and apparently he is saying something like this: "You may have done a very good thing; I do not know whether it is or not."

Mr. HANSON (York-Sunbury): I did not say that.

Mr. ILSLEY: Well, he does not take any exception at all to what we did here.

Mr. HANSON (York-Sunbury): I am making no commitments.

Mr. ILSLEY: If the hon. gentleman wishes to argue as to whether we made an improvement in financial control and in financial procedure, we can argue that question at any time, and I may say that I do not think there are two sides to that argument. I was proud of what we did, because it brought order out of what would have been administrative chaos if the thing had gone on. We were working on this for quite a long time. I think work began on this order in council in September or October; draft after draft was prepared, and finally in November it was passed. When I came to look at the date I was surprised to learn that the house was in session at that time.

The hon. gentleman asks why we did not bring it before the House of Commons. Because we had the power to do it this way, abundant power. There was no doubt in the mind of anyone who knew anything about it that what we were doing was a good and wise thing to do; so we went ahead and did it, and got on with our business. The hon. gentleman can make a great deal of it, but I think that is about all there is to the story.

Mr. RALSTON: I wish to say one word. From what the hon. gentleman has said, I take it that as far as the order in council changing the name of the army was concerned, he will admit that it was perfectly legal in every way under the authority of the War Measures Act.

Mr. HANSON (York-Sunbury): I would say it did not matter whether it was or not; it was all right to do it. I am thinking principally about the public treasury.

Mr. RALSTON: The same, I think, could be said with regard to the matter of claims arising in Iceland. There we provided machinery whereby small claims could, after being considered and approved by a joint committee, be settled by the paymasters of the forces and then reported to national defence headquarters. That was in connection with claims not exceeding $250 with regard to accidents and matters of that kind, which would take literally months if referred to national defence headquarters. Then, after that length of time, when you were through with them, you still would have claims for only $250. In the meantime a situation was arising in Iceland under which the population felt that the Canadian forces were not honouring their obligations. Therefore, with regard to that far-flung territory it was decided to make that provision in order that small claims might be settled by officers expressly authorized in this connection; that is to say, the officer commanding, in cooperation with a joint civilian and army committee established to pass upon these small claims. I do not think my hon. friend will suggest that it would have been worth while

taking the time of this house by coming here and asking for legislation to set up a claims commission in Iceland to deal with these small claims. I am sure, when this discussion has blown over, my hon. friend will quite frankly admit that this was a proper departmental regulation for the purpose of facilitating administrative procedure.

The only other matter the hon. member has left, the one on which he was ringing the changes and in connection with which he wanted the Minister of National Defence to have something to say, was the matter of the four months training plan, the regulations in connection with which were tabled in this house a few days ago. I have not read the order in council since I secured the recommendation; I heard my hon. friend read it, but I have not the exact wording before me.

Mr. HANSON (York-Sunbury): I did not read it; I just referred to it.

Mr. RALSTON: While this order in council may have mentioned the War Measures Act, let me call the hon. gentleman's attention, so that there may be no doubt about it, to the fact that the order in council is expressly authorized by a statute of this parliament, the National Resources Mobilization Act; nobody ever thought of bringing down a bill in this house for the purpose of providing the procedure under that act.

Mr. HANSON (York-Sunbury): I made no reference to the thirty-day training scheme.

Mr. RALSTON: The regulations to which my hon. friend referred—

Mr. HANSON (York-Sunbury): Oh, the reserve army regulations.

Mr. RALSTON: Yes, the reserve army regulations. They are with respect to the four months' training plan. My hon. friend rang the changes and defied the Minister of National Defence, asking if he would dare rise in his place in the house and defend a thing like that.

Mr. HANSON (York-Sunbury): I do not think I said that.

Mr. RALSTON: Well, the record will show what was said.

Mr. HANSON (York-Sunbury): I was referring principally to the financial end.

Mr. RALSTON: My hon. friend brought me into it. He expressly pointed to me, and in the most emphatic terms indicated that it was something that no one would dare defend; that is, the making of these reserve army regulations by order in council. Here is the statute, which is chapter 13 of the statutes of 1940. This is not the War Measures Act; this is an act that was passed by this parliament, an act for which my hon. friend voted. It provides:

> Subject to the provisions of section three hereof, the governor in council may do and authorize such acts and things, and make from time to time such orders and regulations, requiring persons to place themselves, their services and their property at the disposal of his majesty in the right of Canada, as may be deemed necessary or expedient for securing the public safety, the defence of Canada, the maintenance of public order, or the efficient prosecution of the war, or for maintaining supplies or services essential to the life of the community.

Then section 5 provides:

> Every order or regulation passed under the authority of this act shall be tabled in parliament forthwith if parliament is in session and a copy thereof sent to every member of the House of Commons and of the Senate and if parliament is not in session then every such order or regulation shall be forthwith published in the *Canada Gazette* and copies thereof sent to every member of the House of Commons and of the Senate forthwith; provided that any of the steps specified in this section may be omitted or deferred if the governor in council considers such omission or deferment necessary in the national interest having regard to the special circumstances.

Those regulations were passed under that statute, not under the War Measures Act. My hon. friend says the War Measures Act was mentioned; I presume that would be for the sake of greater certainty, but those regulations were made under the express authority of the act I have just quoted, and brought down by me, and they have been laid on the table of this house, as the statute required. I say to my hon. friend that I am sorry I cannot get into the frame of mind that he wants me to get into, namely, that of making this committee a confessional, of coming here and saying, "Mea culpa" and bringing myself to the state of penitence which he has commended in referring to my hon. friend the Minister of National Defence for Air. I am not to blame in connection with this matter; the regulations were made under this statute. I stand by them, and I say that my hon. friend can have no objection in the world to them. I say that his point is absolutely ill-founded, that there was complete power under that statute to make these regulations.

Mr. CASTLEDEN: This section 4 deals with the power of the governor in council from time to time to make orders and regulations with respect to various matters, among them to provide for the utilization, disposal and control of equipment. Under such regula-

tions a great deal of power has been given the various controllers. On March 6, a question was asked as an order for return having to do with the work of the oil controller, and part of that question was as follows:

10. How many applications have been made for new service stations or retail gasoline outlets since the appointment of such controller, and by whom?

11. How many applications have been approved of and to what individuals, company or companies were permits issued?

12. How many applications have been rejected, and what were the names of the applicants in each case?

13. How many retail outlets have been erected since applications have been approved, how many have yet to be started, as of this date, and to what individuals, company or companies were these permits issued?

14. Have applications been made by any oil company on behalf of any applicants? If so, by what company, and have such applications been granted?

When the answer to this question was tabled, it was found that the answer to paragraphs 10 to 14, which I have quoted, was that it was not in the public interest to reply to these questions. It seems to me this is rather an arbitrary denial of the right of hon. members to information, and I wondered whether any minister here would be willing to make a statement as to why it was not considered in the public interest to reply to these questions. The Minister of Munitions and Supply is not in the house at the moment, but would any other minister care to answer for him? If so, I should be glad to have a reply.

Mr. ILSLEY: I do not know that I caught the question. Was there some complaint that certain information was not made public, and that it was stated that it was not in the public interest so to do?

Mr. CASTLEDEN: A number of questions were asked with regard to the oil controller, and I quoted five paragraphs to which the answer was that it was not in the public interest to give this information.

I wish to know whether the minister would be willing to make a statement as to why it is considered not in the public interest to reply to such questions.

Mr. ILSLEY: The Minister of Munitions and Supply is not in his seat at the moment. I could think of some reasons why it would not be in the public interest to reply to one or two of these questions. I believe, however, it is not usual to state the reasons. That is a matter left to the ministry to decide.

Mr. CASTLEDEN: I was merely drawing attention to what would seem to be a rather arbitrary denial of the right of a member to secure information. I cannot, for the life of me, see why it would not be in the public interest to give these answers.

Mr. ILSLEY: The best I can do is to direct my colleague's attention to the complaint. If the numbers to which the hon. member referred include the questions I think they include, it would seem—and of course I cannot say this for certain—that one or two might have been answered without any conflict with the public interest. There are, however, certainly one or two of them which should not be answered. I refer to one question asking for the names of applicants and the names of those rejected. I can see why that should not be answered. I shall, however, bring the matter to the attention of my colleague.

Section agreed to.

Section 5 agreed to.

Bill reported, read the third time and passed.

SUPPLY

The house in committee of supply, Mr. Vien in the chair.

DEPARTMENT OF FINANCE

427. Departmental administration—further amount required, $25,000.

Mr. STIRLING: To what coin shipments does the item refer?

Hon. J. L. ILSLEY (Minister of Finance): Mr. Chairman, this amount is entirely for additional express on shipments of coin from the Royal Canadian Mint to the various agencies of the Bank of Canada, certain movements between the chartered banks and such agencies, and the return to the Bank of Canada of worn and mutilated coin. The value of the coin moved has increased from $2,800,000 in 1939 to over $4,800,000 in 1940. The amount provided in the main estimates for this purpose was $38,000. The amount of $70,000 is included in the estimates for 1941-42.

Expenditures in recent years have been as follows:

Year	Expenditure
1937-38	$25,948 97
1938-39	26,341 95
1939-40	40,201 57

Item agreed to.

429. General; expenses of completing the work of the royal commission on dominion-provincial relations—further amount required, $27,000.

Mr. COLDWELL: I assume there will be an opportunity of discussing this matter on the main estimates?

Mr. ILSLEY: Yes, I have undertaken to give an opportunity later.

Item agreed to.

DEPARTMENT OF PENSIONS AND NATIONAL HEALTH

Pensions branch—Services to veterans and dependents.

438. Employers' liability compensation—further amount required, $15,000.

Mr. GREEN: Why is this further amount required?

Hon. IAN A. MACKENZIE (Minister of Pensions and National Health): Mr. Chairman, each year it is impossible to estimate the amount of money which will be required. This vote arises as a result of an order in council passed in 1922, and is renewed from time to time. Pensioners with 25 per cent disability may be taken on in industrial work. If they are injured seriously, compensation is paid, and it is assumed by the state.

Mr. GREEN: What is the total vote for this purpose?

Mr. MACKENZIE (Vancouver Centre): It is $40,000 in the main estimates.

Mr. GREEN: The total is $40,000, including this $15,000.

Mr. MACKENZIE (Vancouver Centre): The amount in the main estimates for this year is $40,000.

Item agreed to.

Health branch—

439. Opium and narcotic drugs—further amount required, $15,000.

Mr. GREEN: What is the reason for this vote?

Mr. MACKENZIE (Vancouver Centre): This is for unpaid legal accounts in connection with prosecutions under the Opium and Narcotic Drugs Act.

Item agreed to.

Health branch.

440. Treatment of sick mariners—further amount required, $160,000.

Mr. ROSS (Souris): What does this expenditure cover?

Mr. MACKENZIE (Vancouver Centre): The annual vote for the treatment of sick mariners has expanded considerably since the beginning of the war. This is all covered by dues received under part V of "An Act respecting Shipping". As a matter of fact, the dues received exceed in every year the amount paid out. But they go to the consolidated revenue fund, and therefore it is necessary to have an item in the estimates to give authority to pay out for the treatment of sick mariners.

Mr. HAZEN: What provision is made for dental treatment of mariners? Would that come under this item? I would call the minister's attention particularly to X-rays connected with dental treatment. I am informed that at the present time there is no provision for X-rays for seamen suffering from dental troubles, and in some instances an X-ray is absolutely necessary if a man is to receive proper treatment. For example, where a man has an impacted tooth, it is impossible for a dentist to discover this unless he takes an X-ray. As I understand it, no provision is made for X-rays, although I may not be correct in that. If I am, I draw this matter to the attention of the minister and ask him if arrangements cannot be made to provide for X-rays.

Mr. MACKENZIE (Vancouver Centre): The matter has not been brought to my attention before, but I shall look into the question and let my hon. friend know.

Mr. GREEN: Does this vote provide for any dental treatment? I notice that in the last annual report of the department the following words appear on page 132:

> The act provides medical and surgical treatment to all members of the crews of those vessels that pay dues under its authority.

Reading those words, one would take it that dental treatment is not provided. Is that the situation?

Mr. MACKENZIE (Vancouver Centre): That is not my impression, but I am not definite. I shall look into the matter.

Mr. HAZEN: I think there is provision somewhere for dental treatment by the dominion government, and perhaps the minister could make a statement at a later date.

Mr. MACKENZIE (Vancouver Centre): I shall be glad to do so when the main estimates are being considered.

Mr. POULIOT: I wish to commend the minister for the publication of a book which should be widely distributed, which should be sent to each member. This is the best publication that has come out of his department. It is entitled "Mother and Child", by Doctor Couture. I hope it will soon be translated. I cannot praise the minister too highly for the publication of this excellent book.

Mr. GREEN: As I understand it, this vote provides for assistance to merchant seamen. I represent a constituency on the Pacific coast, and accordingly I hesitate to bring up a matter concerning the Atlantic coast. I understand, however, that in Halifax there are not adequate facilities to care for the merchant seamen who are flocking there in such great

numbers at this time. There has been a great increase in the number of men coming to that port. The way this war has developed has meant that our merchant seamen are in the front line perhaps to a greater degree than any other men serving the empire. I suggest to the minister that steps should be taken by the government to ensure that when these men are in port they are given every opportunity for recreation and receive proper care.

Mr. MACKENZIE (Vancouver Centre): Extensions have been made in the hospital accommodation to meet this and other purposes. If my hon. friend knows of any case where a sick mariner has received inadequate treatment, I shall be glad to hear of it. I understand that ample facilities are available.

Mr. GREEN: I was not referring so much to the treatment of merchant seamen who are sick as I was to the provision of facilities for the care of these men when they are on shore. Are any steps being taken to provide such facilities?

Mr. MACKENZIE (Vancouver Centre): I think hostels are being provided for that very purpose.

Mr. MACDONALD (Kingston City): While the care of merchant seamen, whether sick or otherwise, is not related to the work of the Department of National Defence for Naval Services, I happen to know something about what is being done in Halifax in order to provide hostel accommodation. Three new hostels are being built, one by the Canadian Legion, one by the Knights of Columbus and one by the Salvation Army to care for soldiers, sailors and airmen who may wish hostel accommodation in that city. I am sure my hon. friend is familiar with the work being done by the Navy League of Canada. The Navy League proposes to build a building there which will be devoted primarily to the care of sailors and merchant men. Before the war, they had a splendid building which was used for that purpose, but it has been expropriated by the air force. At first the air force rented it, but later on they decided to buy it and they got a good bargain. I agree in full with what my hon. friend has said about the work the men of the merchant marine are doing. In my opinion no other body of men, in either the air force, the army or even the naval service itself, are undergoing such hardships, dangers and difficulties with so little glory. None of these others is doing work which is in any way superior to that done by the merchant marine. No praise is too high for the courage and fortitude of these men.

Mr. BLACK (Cumberland): Has provision been made to construct this new building to take care of these men?

Mr. MACDONALD (Kingston City): The hostels to which I have referred will be of the ordinary type, and I understand they will be finished next month.

Mr. BLACK (Cumberland): I was referring to the new building which is to take the place of the one which was expropriated by the air force.

Mr. MACDONALD (Kingston City): The three hostels will be open to the men in the services as well as to the men of the merchant marine. I can give my hon. friend no definite information as to when the Navy League building will be completed—I do not know if they have undertaken its construction as yet—but it is intended primarily for the men of the merchant marine and the navy. It will be in addition to the three hostels.

Mr. MacINNIS: Will the Minister of Pensions and National Health state if in his opinion the facilities in the various seaports of Canada for taking care of sick mariners are sufficient at the present time to meet the demands upon them?

Mr. MACKENZIE (Vancouver Centre): Yes, that is my definite opinion. If my hon. friend knows of any case where it is inadequate, I shall be most happy to have the condition improved immediately.

Mr. COLDWELL: Between now and the time the main estimates will be considered, will the minister look into conditions at Halifax with regard to accommodation for sick mariners? I think it will be found that there has been considerable difficulty and congestion there in recent months.

Mr. MACKENZIE (Vancouver Centre): I shall look into the matter immediately, but the information I have received from my officers is that there is ample accommodation.

Item agreed to.

POST OFFICE DEPARTMENT

441. Post offices, including salaries and other expenses of headquarters and staff post offices and supplies and equipment for revenue post offices—further amount required, $149,500.

Mr. PERLEY: Could we have a breakdown of this item? Why is this increase necessary?

Hon. W. P. MULOCK (Postmaster General): There is an increase of $149,500. The main appropriation for 1940-41 was $14,155,190, and the estimated expenditure $14,302,065. This is in the neighbourhood of $158,000 less than for the year 1939-40, but a comparison of the figures does not serve any useful purpose, for the reason that as a measure of economy the department effected certain reductions in

service in 1940-41, such as the non-delivery of mail on Saturday afternoons and statutory holidays. On the other hand, there has been a very large increase in postal revenue during the year. The latest figures show that for the nine months ended December 31, 1940, the gross revenue increased by $2,739,313 over the corresponding period of the previous year. This augmented income involves a corresponding increase in the volume of mail, the handling of which necessitates increased staff and expenditure not only for salaries but for conveyance of the mail by railway and in other ways.

Mr. BLACK (Cumberland): What is the estimated saving for the ensuing year from the doing away of the Saturday afternoon mail delivery?

Mr. MULOCK: It is a substantial sum running into several hundred thousands of dollars, but I would prefer the hon. member to raise that question on the main estimates.

Mr. LOCKHART: Have there been any complaints about the pilfering of packages sent through the post to our soldiers in the old country? I refer more particularly to cigarettes and small luxuries for the soldiers. I have had reports that there is much pilfering going on.

Mr. MULOCK: Early last spring and in the early part of last summer there were a great many complaints from people who had sent parcels, and there were also a considerable number of complaints in the press. Since then, a wholly new system has been inaugurated for handling cigarettes and tobacco parcels for the troops overseas. Most of the cigarette and tobacco parcels are sent through the four large tobacco companies, which now list these parcels. Under the supervision of post office officials they are cleared through customs, brought to the base post office and given unit sortation, and the bags are then sealed. Therefore these parcels are now receiving identically the same treatment as registered mail. There has been a great improvement, and only a very small fraction of the number of complaints that were received some time ago are now received.

An assistant of Mr. Fortier, the chief inspector, is at the base post office at Ottawa in charge, with assistants, of making investigations into all complaints received. At the present time we know the dispatch number, the train the parcel goes on and the ship, and the contents of the respective bags. Most of these cigarettes and tobacco parcels go through the four large tobacco companies. A list of the contents of the bag is sent overseas.

I hope hon. members will not ask for further details because we do not want to give too much detail. I can assure hon. members, however, that a close check is being made on these parcels. I might add that all the employees in the postal corps overseas are former employees of the Post Office Department, and there has been no case of any employee of the Post Office Department or of the postal corps overseas having been guilty of any irregularity in the handling of cigarette and tobacco parcels.

Mr. ROSS (Souris): Was it discovered why parcels were going astray?

Mr. MULOCK: I shall be glad to explain some of the troubles. At the beginning of the war it was found that as high as 10 and 15 per cent of the letters and parcels addressed to the soldiers were being improperly addressed, and it was taking a large staff to correct the addresses. In some instances this was impossible on account of lack of identification. That has been improved considerably, because we have sent out approximately 150,000 notices to the dependents of the men serving overseas, giving detailed instructions and examples of how parcels should be addressed. The press of this country, particularly the press gallery, were extremely helpful in that matter. The press gallery went down to the base post office and saw how the mails were handled, and then they assisted in bringing home to the public the proper way to address the mail. They saw examples before them of improper addressing.

Item agreed to.

442. Railway mail service—further amount required, $593,677.

Mr. ROSS (Souris): What is this large amount for?

Mr. MULOCK: The first item is $19,820 for salaries, $17,500 of which is due to an arrangement with regard to the railway mail service, but we can deal with that better on the main estimates if the hon. member would wait until then, because it is a long and complicated matter.

Mr. GREEN: Is that the question of regrading the staff?

Mr. MULOCK: Yes. The next part of the vote is an item of $111,000 for mail service by railway. The amount originally requested in the 1940-41 main estimates was $7,200,000, but this was cut to $6,975,000. The expenditure to January 31, 1941, amounted to $5,938,285, leaving an unexpended balance of $1,036,715 for the months of February and March. January expenditure amounted to $597,477, but it was not expected that the outlay would

be maintained at that rate during February and March. Careful calculations indicate that a minimum of $111,000 will be required to supplement the main appropriation.

The next item is $452,857 for mail service by steam boat. This is due largely to the fact that the Department of Trade and Commerce formerly gave subsidies to steamship companies. Since the war, most of the ships have been taken over by the British Admiralty, and the Post Office Department has now to pay for space on board ships, at so much per cubic foot.

Mr. LOCKHART: In the main and supplementary estimates combined, there is an increase of over a million dollars for railway mail services. The minister said something about reductions, but taking the main and the supplementary estimates—

Mr. MULOCK: I was taking the supplementaries.

Mr. LOCKHART: I am taking the whole thing. The increase is $691,000 on the main estimates, and the minister has added another $593,000 now.

Mr. MULOCK: I was speaking to one of the hon. members who brought that question up, and suggested that he be good enough to let the whole question of railway mails stand until the main estimates, because it is quite a long matter to go into.

Mr. GREEN: On this figure of $452,857 for mail service by steamboat, to what companies is that paid out? Does part of it consist of subsidies, or just how is it paid? That is a very big increase.

Mr. MULOCK: As I said, formerly there were subsidies paid by the Department of Trade and Commerce, but now the Post Office Department has to pay for space at so much per cubic foot for mail and parcels sent overseas. We pay on the basis of the space occupied.

Mr. GREEN: Is that to Great Britain, or is it to other countries, say in south America and the orient?

Mr. MULOCK: A great part of this is on the Atlantic service. There is some on the Pacific, Australia particularly, and New Zealand.

Mr. GREEN: Is any of it paid out in the form of a ship subsidy?

Mr. MULOCK: No; this is paid on space, so much per cubic foot of space occupied.

Mr. GREEN: When the main estimates are before the committee, will the minister give us a detailed statement showing how this money is paid out?

Mr. MULOCK: Absolutely. I will give full particulars of the arrangements with regard to the Atlantic and also the Pacific.

Item agreed to.

DEPARTMENT OF MINES AND RESOURCES

Mines and geology branch.

437. Payments in connection with the movements of coal under conditions prescribed by the governor in council—further amount required, $450,000.

Mr. STIRLING: Why is this extra amount required?

Hon. T. A. CRERAR (Minister of Mines and Resources): The estimates submitted were for $4,000,000 for assistance in moving coal, under the subvention principle which has been in operation for a good many years. That amount was found to be inadequate, and $450,000 more is required for this purpose. I may say that it was all required for the movement of Alberta coal to Manitoba and Ontario points.

Mr. JOHNSTON (Bow River): Is that an increase in the subsidy, or is it just the regular amount?

Mr. CRERAR: As I stated a moment ago, the appropriation was $4,000,000, but that was found to be inadequate, and it has had to be supplemented to the extent of $450,000.

Mr. JOHNSTON (Bow River): To what provinces is this going? To the western provinces, or to the eastern provinces as well?

Mr. CRERAR: It is not allotted to any province; it is used as it may be required. As a matter of fact, in working it out, the whole amount went to Alberta, as I stated a moment ago, for the movement of Alberta coal to Manitoba and Ontario points.

Mr. NEILL: May I ask the minister if there is any reduction in the subsidy for bunker coal loaded at Nanaimo and Union Bay?

Mr. CRERAR: No, I think not.

Mr. TUSTIN: Under governor general's warrants there is another item of $1,040,000 for the movement of coal. Would the minister explain that?

Mr. CRERAR: Well, we can take item *461* now.

Mr. STIRLING: Does this mean that two million dollars extra is being asked for? Apparently there is half a million dollars in the main estimates, $450,000 in this item, and a governor general's warrant for a million dollars on top of that?

Mr. CRERAR: No. The amount of $450,000 which we have just been discussing is a supplementary required for the estimates of 1940-41. Item *461* of $1,040,000 was required for the year 1939-40. It will be recalled that at the time when ordinarily the supplementary estimates for the current year would have been brought down, we were in the midst of an election, and consequently this amount has had to be provided to supplement the vote for 1939-40, which, as I recall, was three and a half million dollars.

Mr. STIRLING: At the beginning of this fiscal year? The governor general's warrant is April 5, 1940.

Mr. CRERAR: Yes.

Mr. STIRLING: That comes into the fiscal year just ended.

Mr. CRERAR: No, that was appropriated for the fiscal year 1939-40.

Mr. STIRLING: And paid for on April 5, 1940.

Mr. CRERAR: Yes. Owing to the expansion of business due to the war, the movement of coal increased very much more rapidly than was anticipated. The payments have now to be met. Ordinarily, if parliament had been sitting and had not been dissolved for the election, the supplementaries would have been brought down before the end of the fiscal year 1939-40, or immediately after. This item is to cover the additional amount required over and above the amount voted in 1939-40.

Mr. McCANN: The minister referred to some of this coal having been moved to Ontario. What quantity was moved to Ontario? Is it not a fact that this subvention is not paid either to the provinces or to the coal companies, but is paid to the railway companies?

Mr. CRERAR: Yes. I do not think I have the tonnage moved, if that is what my hon. friend is inquiring about. If he will keep that in mind, when my ordinary estimates are up, I shall be in a position to give that information when the officers of the department are here.

Mr. HANSELL: What is the approximate percentage of increase in the movement of Canadian coal since the outbreak of the war, or, regardless of the last three months of 1939; say, 1940 up to date?

Mr. CRERAR: No, I cannot give the percentage increase. As a matter of fact, it would require a bit of mathematical calculation to work it out, and I have not the data wherewith to work it out even if I were to undertake it. There has been a considerable increase in the movement of Alberta coal eastward.

Item agreed to.

Governor General's warrants, 1939-40.

462. Indian hospitals and general care of Indians, $200,000.

Mr. PERLEY: Would the minister give us the break-down of this?

Mr. CRERAR: I have not the details of the $200,000, but I may explain it in this way. Hospitals are being operated in the more remote parts of the country, but sometimes it is not possible to have the accounts in until some months afterwards. I discovered, shortly after I came to the department, that accounts for expenditures which had occurred before the end of the fiscal year were coming in subsequently to that, sometimes months afterwards, and were charged against the following year. We have endeavoured to overtake that, and this $200,000 is to enable the Indian Affairs branch to provide the necessary funds to meet all the accounts outstanding at the end of the fiscal year for which the vote is asked. As to where it is apportioned, I am not in a position to say.

Mr. PERLEY: Can that be given on the main estimates?

Mr. CRERAR: Probably it could, but it would be difficult. If possible, we will do it.

Item agreed to.

Governor General's warrants, 1939-40.

463. Grants to residential schools, $62,662.86.

Mr. PERLEY: How is this divided among the residential schools?

Mr. CRERAR: The list is as follows:

Quebec—	
Fort George	$ 5,000 00
Fort George	2,000 00
Ontario—	
Albany	5,508 50
Fort William	3,200 00
Sioux Lookout	5,494 50
Manitoba—	
Cross Lake	1,400 00
Saskatchewan—	
Round Lake	3,071 06
Alberta—	
Grouard	1,103 50
Holy Angels	8,618 00
Joussard	1,968 75
Old Sun	3,589 57
Sturgeon Lake	1,562 60
Vermilion	1,015 00
Wabasca	1,575 00
Wabasca	1,937 40
Whitefish Lake	1,350 00

Northwest Territories—	
Aklavik	3,200 00
Aklavik	1,215 00
Providence Mission	750 00
	3,250 00
Resolution	2,041 50
British Columbia—	
Kitamaat	1,312 50
Yukon—	
Carcross	2,500 00
Total	$62,662 88

It will be observed that most of these are amounts ranging from $1,000 to $3,000. Returns from schools in the more remote districts are often considerably delayed. They are paid by the department certain fees in connection with their pupils, and the amount paid of course depends on the number of pupils that are enrolled. That cannot always be determined at the moment the estimates are made up, but the department tries to estimate as accurately as possible. In this particular instance, however, we were short the amount mentioned for the various schools I have enumerated, and the vote is to cover that shortage.

Mr. PERLEY: Generally speaking, is the enrolment increasing or decreasing at these residential schools?

Mr. CRERAR: The tendency is towards an increase. That touches another question which has to do with general Indian welfare. There is no doubt that improvements in recent years in the medical care of Indians, and in supplying them with those necessaries of life which perhaps they lacked before, have tended to bring about an increase in the Indian population, and as the population increases, the number of children for whom school facilities have to be provided also increases. It is estimated that the Indian population is increasing at the rate of one and a half or two per cent a year.

Mr. FRASER (Peterborough West): The Indians at Burleigh Falls are squatting on government land, the canal property, and the children have no school to go to. There are about seventeen children. These Indians are not paying taxes to anyone and the government refuses to recognize them. The Children's Aid Society of Peterborough have written to me with regard to them. There should be a school for these children. The Indian Affairs branch contend they are not Indians but half-breeds, although on the registration cards they are put down as Indians. The township will not take responsibility for them. Is there any chance of the department looking into the matter with a view to making a small grant? I know the province or perhaps the county would help. At present the school inspector goes there once a week and holds school in the dining room of a little store, but these children need education.

Mr. CRERAR: Perhaps my hon. friend has given the reason in the remarks he has made. He says that the Indian Affairs branch contend that these particular people are not Indians but half-breeds. If they are, we must decline responsibility for them. If we accepted responsibility for half-breeds, it would land us in a sea of troubles. Consequently, they are the responsibility not of the Indian Affairs branch, but of the province.

Mr. LEADER: Is there in this item anything that would take care of the situation at Portage la Prairie? I assume the minister has been informed of the situation that exists there. The sewerage system of the residential school is out of repair and has been for at least two years, but I failed to hear the minister mention Portage la Prairie in the list he read out. Is it taken care of in the main estimates? I have been assured by his secretary that an amount had been placed in the estimates to meet the situation there, but the minister did not mention it in detailing the items, and I was wondering whether it would be provided for in the main estimates.

Mr. CRERAR: At the moment I do not recall the problem, if I may so term it, mentioned by my hon. friend. As the committee knows, this is a supplementary vote required to make good a deficiency in the supply voted last year. I should think it altogether likely that in the main estimates for the current year an item could be found to cover the point raised by the hon. gentleman.

Mr. LEADER: Thank you.

Mr. CASTLEDEN: What is the grant that is paid each year for each child in these residential schools?

Mr. CRERAR: It varies considerably. My recollection at the moment is that it will vary from $150 per pupil to something over $200.

Mr. CASTLEDEN: Per annum?

Mr. CRERAR: Yes.

Mr. CASTLEDEN: Is there a school on each reserve?

Mr. CRERAR: No.

Mr. CASTLEDEN: I understand that under the original treaties with the Indians, they were assured that there would be a school on each Indian reserve.

Mr. CRERAR: I very much question my hon. friend's information on that point. In most instances I think the schools are on the reserves, but in some instances they are not.

Mr. CASTLEDEN: Are these residential schools run by various church organizations?

Mr. CRERAR: Practically all.

Mr. CASTLEDEN: How is it decided which organization or church shall have charge of the school on a certain reserve?

Mr. CRERAR: That will depend on the religious faith of the Indians.

Mr. CASTLEDEN: And what if they vary?

Mr. CRERAR: As a matter of fact, they do not vary very much. There are no serious difficulties in that respect.

Item agreed to.

DEPARTMENT OF TRANSPORT

Railway service.

Hudson Bay railway—To provide for the difference between expenditures for operation and maintenance, and revenue accruing from operation during the year ending March 31, 1941—further amount required, $68,000.

Mr. PERLEY: Could we have a little information about this item?

Hon. P. J. A. CARDIN (Minister of Transport): This is to cover a greater deficit than was expected in the operation of the Hudson Bay railway. When the item was placed in the estimates of last year, it was expected that about 2,500,000 bushels of grain would be moved over that railway. That expectation, however, has not been realized. The additional deficit on operation is in the neighbourhood of $100,000, but due to the reduction in expenditures, the amount has been reduced to $68,000. There has been no movement of grain to the elevators at Churchill this year.

Mr. PERLEY: How much grain is in the elevators at the present time?

Mr. CARDIN: They are full.

Mr. PERLEY: How many incoming cargoes were there to Churchill last year?

Mr. CARDIN: I do not think there were any.

Mr. NICHOLSON: Last year I directed several questions to the former Minister of Transport in connection with the more extensive use of the port of Churchill and the Hudson Bay railway. It is my opinion that even in war time this route might be used for the more economical transportation of grain and timber, in spite of the fact that it might involve the convoying of certain shipments. Could the minister give us any information as to the possibility of this port being used during the current year to move wheat and timber from northern Manitoba and Saskatchewan to the United Kingdom?

Mr. CARDIN: Unfortunately I am not in a position to give my hon. friend a great deal of encouragement in that regard. I do not recall what explanation was given by my predecessor when the question was raised last year, but I think I would be safe in saying that so far as boats using that harbour are concerned, we are more or less in the hands of the shipping companies. It is not a matter that can be controlled to any great extent by the federal government. The facilities are there, but we cannot force the shipping companies to take advantage of them, if advantage there be. At all events, when the estimates for the present year are under consideration I shall try to give a more complete explanation or answer to my hon. friend.

Mr. BLACK (Cumberland): I think in this case we might paraphrase the words of Churchill: "Never did so many people pay so much for so little as for Churchill."

Item agreed to.

Government-owned enterprises—Special deficits
Canadian National Railway Company

453. Additional amount, in excess of the sum of $15,000,000 already appropriated, required to provide for the payment during the fiscal year 1940-41 to the Canadian National Railway Company (hereinafter called the national company) upon applications approved by the Minister of Transport, made from time to time by the national company, to the Minister of Finance and to be applied by the national company in payment of the deficit (certified by the auditors of the national company) arising in the calendar year 1940, including such supplementary contribution to the Intercolonial and Prince Edward Island railways employees' provident fund as may be necessary to provide for payment in full of monthly allowances under the provisions of the Intercolonial and Prince Edward Island Railways Employees' Provident Fund Act, notwithstanding the limitation contained in section four of the said act, and including such supplementary contribution to the Grand Trunk Railway of Canada superannuation and provident fund as may be necessary to enable payment to be made of monthly allowances under the rules and regulations of the fund, notwithstanding the limitation contained in section thirteen of chapter sixty-five of the statues of Canada, 1874, but not including amounts charged to proprietor's equity of the national railway system as defined in chapter twenty-two of the statutes of Canada, 1937: Canadian National Railways, exclusive of eastern lines, $1,476,174.42; eastern lines, $488,869.76.

Total, $1,965,044.18.

Mr. BLACK (Cumberland): I should like to know where we are, Mr. Chairman. You are carrying these items so quickly that even the numbers are not being read.

Item agreed to.

Prince Edward Island Car Ferry and Terminals.

454. Additional amount, in excess of the sum of $327,000 already appropriated, required to provide for the payment during the fiscal year 1940-41 to the Canadian National Railways Company (hereinafter called the National Company) upon applications approved by the Minister of Transport, made from time to time by the National Company, to the Minister of Finance and to be applied by the National Company in payment of the deficit (certified by the auditors of the National Company) in the operation of the Prince Edward Island Car Ferry and Terminals arising in the calendar year 1940, $133,773.48.

Mr. BLACK (Cumberland): I am going to ask the chairman to read these items, or at least to give us time to turn the pages so that we may see what is being passed. I think this is being carried to an extreme.

The CHAIRMAN: I have no objection to waiting, but every hon. member has a copy of the estimates. If, when an item is called, someone desires me to wait, certainly I shall do so, but when no one raises his voice I take it that the item is carried.

Mr. DOUGLAS (Weyburn): We cannot very well raise our voices when we do not know what the item is.

Mr. CARDIN: This item is to provide for a greater deficit than was expected in connection with the operation of the Prince Edward Island ferry.

Item agreed to.

DEPARTMENT OF PUBLIC WORKS

Governor General's warrants, 1939-40.

459. To provide additional amount for construction of supreme court building (governor general's warrant of March 18, 1940), $390,000.

Mr. PERLEY: Is this to provide for inside equipment or something like that, not covered by the original contract?

Mr. CARDIN: No. As hon. members will remember, at one time it was decided not to complete the construction of the supreme court building because of the situation in which the war had placed the country. Later on, after investigation, it was ascertained by the officers of the department that we might proceed with the completion of the building with a view to providing space for various branches of the government. Therefore the construction was proceeded with, and as a result of what has been done, six or eight government services are at present housed in the supreme court building. Had we not had that building, we would have found it necessary to provide additional temporary building space to house the services now functioning in that building.

Mr. LOCKHART: What is the total cost?

Mr. CARDIN: Up to the present the expenditures have reached the sum of $3,075,000.

Mr. LOCKHART: Does that include equipment?

Mr. CARDIN: No, that does not include the furniture which will be used by the judges when they are there.

Mr. PERLEY: How many departments are being housed there?

Mr. CARDIN: Six or eight departments.

Mr. MARTIN: When will the court be moved from its present quarters to the new building?

Mr. CARDIN: My hon. friend is raising a delicate question. If we moved the supreme court to its new quarters, it would involve the moving out of the services which are now using the building. We would have to provide additional space for those six or eight services which are particularly connected with the carrying on of the war. Therefore, I fear very much that the supreme court will not go into the new building until the war is over.

Mr. MARTIN: I do not wish the minister to think I am trying to increase the comforts of the judges on the appeal court. I was only asking the question.

Item agreed to.

DEPARTMENT OF TRANSPORT

Governor General's warrants, 1939-40.

465. Additional amount required to provide for Canada's share of the cost of the North Atlantic ice patrol (governor general's warrant of April 5, 1940), $972.

Mr. CARDIN: This is an additional amount to cover a greater contribution by Canada to the patrolling of the north Atlantic in connection with ice conditions. Ten or twelve countries have signed a convention providing for the patrolling of the north Atlantic. The share carried by Canada amounts to three per cent of the expenditure. The United States are charged with the patrolling of these waters. The amount required last year for our contribution was larger than expected. This is to make up the deficit.

Item agreed to.

DEPARTMENT OF FINANCE

Governor General's warrant, 1940-41.

469. Expenses for maintenance of essential war services for the first six weeks of the fiscal year 1940-41, parliament not being called until May 16, 1940 (governor general's warrants of April 3, 1940 and April 9, 1940), $71,063,265.75.

Mr. STIRLING: Would the minister explain this item?

Hon. J. L. ILSLEY (Minister of Finance): This is the cost of carrying on the war for the period when parliament was not in session. I believe it is self-explanatory. It is for the maintenance of essential war services for the first six weeks of the fiscal year 1940-41.

Mr. STIRLING: Is that for the Department for National War Services?

Mr. ILSLEY: No, it is for the war. There was a time between the election and the time parliament was called when there was no money and no parliament.

Item agreed to.

Governor general's warrants, 1940-41.

470. Expenses of completing the work of the royal commission on dominion-provincial relations (governor general's warrant of April 9, 1940), $30,000.

Mr. LOCKHART: What is the total amount?

Mr. HANSON (Skeena): I should like to have an explanation of this.

Mr. GRAYDON: I thought three men did that free.

Mr. ILSLEY: I have not the particulars before me. However, this has to do with the royal commission on dominion-provincial relations. It was necessary to issue a governor general's warrant to pay this comparatively small sum.

An hon. MEMBER: Page Hepburn!

Mr. ILSLEY: That was for the year 1939-40.

Mr. LOCKHART: What is the total amount?

Some hon. MEMBERS: Carried.

Mr. HANSON (Skeena): It is not carried. It is a small amount, but I am entitled to have an explanation why it is in the estimates. I want reasonable particulars.

Mr. ILSLEY: There is a return in *Votes and Proceedings* giving the detail as to the total cost of the commission. The amount is quite large: I believe it is a little more than $500,000, if I remember correctly.

Mr. MACDONALD (Brantford City): Previous items have passed?

Mr. ILSLEY: Yes. Unless there is some reason for producing this information now, I should prefer to give it later under the main estimates for the Department of Finance. If, however, the hon. member wishes to have it immediately, the item will have to stand over until to-morrow.

Mr. HANSON (Skeena): That will not be necessary.

Mr. ROSS (Souris): May we go into details as to the conference when we are discussing the minister's estimates?

Mr. ILSLEY: The hon. member for Rosetown-Biggar (Mr. Coldwell) raised that point about an hour ago, I now agree that the discussion may be had under the item for departmental administration for the Department of Finance, if, indeed, there is no more specific item under which it may discussed.

Mr. GRAYDON: Is the chairman agreed, too?

Item agreed to.

DEPARTMENT OF AGRICULTURE

Production service.

423. Health of animals—administration of Animal Contagious Diseases Act and Meat and Canned Foods Act—further amount required, $39,300.

Mr. PERLEY: I notice in the details on page 7 of the supplementaries the largest amount is for travelling expenses. Would the minister break down that amount of $33,000, and also the $4,000 for equipment?

Hon. J. G. GARDINER (Minister of Agriculture): Both those items are connected with expenses in connection with fighting hog cholera, largely in Ontario. The sum of $4,000 from this allotment was transferred to the allotment for travelling expenses to meet an emergency caused by outbreaks of hog cholera. This money is now required to replace automobiles used by inspectors in carrying out their official duties.

The item of $33,000 under the heading "travelling expenses" has to do with the withdrawal of a large number of inspectors from general area testing in the control of bovine tuberculosis, to deal with outbreaks of hog cholera. That has increased the expenditure for travelling considerably. When inspectors are engaged in controlling outbreaks of hog cholera, their transportation from farm to farm is paid by this department, whereas the various provincial governments pay those expenses when they are conducting general tests of cattle for tuberculosis in restricted areas.

Mr. PERLEY: What success is the department having in controlling hog cholera?

Mr. GARDINER: It has been fairly successful. Quite a number of hogs had to be destroyed, and other action had to be taken to prevent the spread of the disease.

Mr. PERLEY: There is very little of that in western Canada.

Mr. GARDINER: Very little.

Mr. QUELCH: Can the minister say whether or not the department is going ahead with testing for tuberculosis in Alberta? The minister said the work was to be curtailed.

Mr. GARDINER: There is no money provided this year for carrying on any further work in that connection. The work under way is being completed, but no provision is made for further work.

Mr. REID: Is compensation paid for hogs slaughtered?

Mr. GARDINER: No, I think not.

Mr. CASTLEDEN: Is the hog cholera menace fairly well under control, or has it increased?

Mr. GARDINER: Yes, it is fairly well under control now, although there was some difficulty with it for some time.

Mr. CASTLEDEN: Has there been an increase or a decrease this year?

Mr. GARDINER: It is on the decrease now, but there was an increase last year up to a certain date.

Mr. GRAYDON: The hon. member for New Westminster asked a question, and as I heard it, it was as to whether or not compensation was paid for hogs killed or slaughtered for cholera. If the minister looks it up, I think he will find that compensation is paid when the government actually orders the killing.

Mr. GARDINER: Perhaps my answer was only partly correct. I shall get full information on that and give it to the committee when we are on the main estimates.

Mr. GRAYDON: Where a hog dies from cholera without the government ordering its slaughter, the farmer must bear the loss himself. But where a government inspector comes in and orders the slaughter of all the hogs owned by a man because of an outbreak of cholera, then I believe compensation is paid.

Item agreed to.

Marketing service.

424. Subsidies for cold storage warehouses under the Cold Storage Act, and grants, in the amounts detailed in the estimates—further amount required, $3,379.

Mr. HANSON (Skeena): Could we have details of this vote?

Mr. GARDINER: This is to cover a payment to the Kelowna growers' exchange, in excess of the funds provided by vote *27*. The treasury board has ruled that funds in vote *27* can be used only for the payment of subsidies to organizations named and in the amounts stated in the estimates. Therefore, because of the ruling of the treasury board, it will not be possible to charge amounts paid out in excess of the amount voted, and a special vote must be put through in order to make this payment.

Mr. HANSON (Skeena): What subsidies have been paid to cold storage warehouses in Canada?

Mr. GARDINER: The total amount paid last year was $188,987.87. This is a supplementary vote, but I am not certain that it is in addition to that. It may only be because one item was overexpended.

Mr. ROWE: Is this for apples or fruits?

Mr. GARDINER: I should think it would be largely for apples at Kelowna.

Mr. HANSON (Skeena): What are the amounts paid to the different cold storage companies throughout the dominion?

Mr. GARDINER: I can give that on the main estimates. This vote deals with only one item.

Item agreed to.

Special.

425. Prairie Farm Assistance Act—administration—further amount required, $98,675.

Mr. PERLEY: No details of this item are given, and no details of the item in the main item are given and were not given last year. I think the minister would be well advised to furnish details of this item. Is this $98,675 to take care of cases which have not been adjusted? I understand there is quite a large number of cases which have not been adjusted. I have three or four in mind, but I should like the minister to state what this vote is for. I notice in the main estimates there is an increase of $250,000.

Mr. GARDINER: This item is for administrative expenses. The amount provided in 1940-41 was $250,000, but if I remember correctly—and I am speaking from memory only—the amount actually expended was $268,000. At the time the estimates were made up, it was considered that this cost would be less this year, but members will recall that last year a board was appointed to administer the act, and additional responsibilities were placed upon this board of checking to see that

persons had 3,000 bushels or more. This greatly increased the amount of inspection required, and this additional amount is necessary. It represents largely the increase in inspection expenses brought about by the amendments made last session. I could give the items making up the $250,000 if that is desired.

Mr. PERLEY: We can get that on the main estimates.

Mr. GARDINER: Yes, I have it here.

Mr. PERLEY: Are there any great number of cases not adjusted yet?

Mr. GARDINER: There are not as many this year as there were a year ago. Some cases are being dealt with from day to day.

Mr. ROSS (Souris): I take it that this vote is to cover both office and field administration. Upon what basis are field inspectors paid?

Mr. GARDINER: They are paid on a per diem basis, but I am not just sure of the exact amount per diem. I can get that when the main estimates are before the committee. The total amount for salaries is $42,500; the total amount for wages, field and office, is $130,000, while other items, such as travelling and field expenses, total $149,000.

Mr. McNEVIN: What were the total expenditures under this item?

Mr. GARDINER: The total amount for administration expenses is $348,675. I have not the detailed items here, and I can give them only from memory. It was nine million and some odd dollars for the first year, and between six and seven million for the second year up to date. There are, however, still some expenditures to be made.

Mr. COLDWELL: There has been considerable dissatisfaction over the operation of this act. With the experience we are getting with this new form of crop insurance, if I may call it that, I think it will be realized that there is need for some adjustment in the legislation from year to year. I am simply expressing the hope, which I know is shared by a number of hon. members, that after the Easter recess the minister will see fit to suggest some amendments to this measure in order to make it more workable and more just to the individual farmer. There should be some legislation to iron out some of the difficulties which have been encountered in the operation of this act during the past year.

Mr. DOUGLAS (Weyburn): When the main estimates are before the committee, perhaps the minister could let us have a list of these field men and particulars of salaries and expenses paid.

Mr. GARDINER: I believe there is on my desk now, waiting for my approval, a return which gives that information.

Mr. PERLEY: I asked for that return on February 27 and I intended to inquire about it to-day.

Mr. DOUGLAS (Weyburn): The convention of rural municipalities of Saskatchewan urged upon the government and upon the Saskatchewan members consideration of having this whole scheme placed upon an individual farm unit basis. I am not going to take the time to argue the advantages of that. I believe administrative costs would be reduced considerably and the whole plan would be on a much fairer basis.

Mr. GARDINER: Consideration is being given to the possibility of bringing down amendments as suggested by the hon. member for Rosetown-Biggar. Amendments would, of course, bring up the question which has just been raised by the hon. member for Weyburn. I am not at all sure that we can go as far as the municipalities suggest. I would say that if we did, it would multiply the cost of doing the work in just the same way as adding the three thousand last year added $98,000 this year. This has put it partly on an individual basis.

Mr. FAIR: If the return on the minister's desk is for the hon. member for Qu'Appelle, I would suggest that the minister look in another corner and see if he cannot find a return there for me.

Mr. GARDINER: I think the return referred to is also there.

Mr. QUELCH: Has there been any change in the attitude of the government regarding applications? I mentioned this to the minister the other day, and he said that the government were not going to change their decision, but I have recently received a letter from Alberta stating that a letter has been received from Regina to the effect that this question is being reconsidered. That impression has got around, and I should like a definite statement from the minister as to whether there will be a reconsideration of applications made after October 31.

Mr. GARDINER: So far as I know, no reconsideration is being given to applications made by municipalities or provincial governments after October 31. I think it has been definitely decided both by the board and by

the department that the date should not be moved forward. There may be a misunderstanding in this respect. There are, within the municipalities, individual cases which it was decided at one time should not be considered because the applicant had not, on the date fixed, put in his return indicating his acreage. These are being reconsidered, but not applications so far as municipalities and provinces are concerned.

Mr. GERSHAW: Some farmers who have been found ineligible for the bonus declare that they never at any time saw an inspector. The inspectors probably drove through, but apparently they failed to get in touch with the residents of the township.

There is another point. This bonus is on the individual basis so far as the 3,000 bushels are concerned. It would seem that it could be more easily administered if it were on the individual basis all the way through, because it causes resentment and bad feeling when one farmer with a fairly good crop gets a bonus as well while his neighbour across the way gets no crop and no bonus just because he happens to be in a township where the average yield was about twelve bushels to the acre. In the district from which I come there has been a great deal of dissatisfaction regarding inspection. I am convinced that the secretaries of municipalities and the corresponding provincial officers were notified, but in talking to some of these men I find that they did not realize how important it was to get in the notification, and consequently the matter was neglected. This causes a lot of bad feeling, because a whole community will be declared ineligible for the bonus just because of failure to have the notification in by the date set, October 31.

Mr. PERLEY: I did not hear what the minister said when he was replying to an hon. member on my left. Did I understand him to say that there were certain cases yet to be considered with respect to the bonus for 1940? I gave a case this afternoon of a man who had summer-fallowed his cultivated acreage last year, and it was ruled by the treasury department that since he had no wheat in, he would not be eligible for the bonus, although the township received a bonus of 90 cents an acre. Would a case like that be reconsidered and an adjustment be made?

Mr. GARDINER: Cases of that kind are being considered from day to day. It is the type of case that was referred to a moment ago. They are still coming up continuously with regard to the 1940 season. Some are being further examined; some are being turned down, and some are being passed. But cases of the kind just referred to are still being considered unless a final decision has already been made in the case of the individual.

Mr. CASTLEDEN: Cases of great hardship have been drawn to my notice, where people whose production was practically nothing, but who, because of the average production of the township, got no bonus. These people have been having difficulty in getting seed and feed. One farmer lost four out of six horses which died for lack of feed. What steps will be taken to take care of cases of that kind?

Mr. GARDINER: That is a question which was raised by the hon. member for Rosetown-Biggar. It was one of the things in his mind when he spoke, whether the act should be amended to take care, in part at least, of these cases. I would remind the committee that when this act was passed, it was not expected that it would take care of the responsibilities of the provinces and municipalities. It was only expected that the act would take care of what was considered to be the responsibility of the federal government. We believe that in taking care of townships or full areas—if the township is not the proper area—this government is assuming its full responsibility, and that individual cases which result in areas either because the man is on poor land or is for some other reason unfortunate, are cases that remain the responsibility of the municipality or the province and must be taken care of by them. It is not the responsibility of this government.

Mr. CASTLEDEN: Is a grant being made by this government for feed and seed this year under this act?

Mr. GARDINER: Not under this act, and there will not be under any act; but if there were, that would not relieve the responsibility of the municipality and the province for doing something in that regard.

Mr. FAIR: The hon. member for Qu'Appelle asked the minister whether a bonus would be paid to a farmer who had summer-fallowed in 1940. I did not catch the minister's answer clearly. Would he mind repeating it?

Mr. GARDINER: My answer was that those cases would be under consideration. I would say that some cases would not be passed, and some would be. If, for instance, a person went out and summer-fallowed an area of land that had been in Russian thistles, tore them up and made it look like summer-fallow, he would not be paid if the inspector did his work properly. But in other cases, where a man has summer-fallowed all his land and

farmed properly while he was doing it, he might be paid. It would depend on the circumstances surrounding the case.

Mr. FAIR: I am very glad to hear that because I know of a case where a farmer has been diligently farming, and he summer-fallowed his land last year for the purpose of getting better production, and was denied the bonus. I am glad to hear from the minister that a person who is farming properly and who summer-fallowed in 1940 will get the bonus.

Mr. GARDINER: All these cases are under consideration, and they are settled on what the board considers to be the merits of the case. I should not like to say that the bonus will be paid in any particular case.

Item agreed to.

Special.

426. To provide for assistance to encourage the improvement of cheese and cheese factories —further amount required, $300,000.

Mr. TUSTIN: Last year the government set aside a certain sum of money to bonus the improvement of cheese, and many cheese factories included the bonus to the producers with their milk cheques on receiving the grade of the cheese. They now find themselves out a considerable amount of money, because they paid the last bonus with the last milk cheque. Is an item included in this amount to pay the factories for the last bonus on cheese, which was made last fall?

Mr. GARDINER: This amount is to make up the shortage in the estimate of last year for the payment of bonuses under the act. I am not just sure what the type of case is. If the cheese factory is entitled to a further payment, and it was only because there was a shortage of money at the time the application was made, then this sum of money being provided will make it possible to make that payment. The explanation in connection with the requiring of more money is largely to be found in the fact that there was a considerable increase, namely, fifteen per cent, in the production of cheese last year over the previous year, which increase was not estimated at the time. In addition, there has been quite an increase in the number of boxes of cheese which have gone into 94 and 93 as compared with the year before, 148,098 more boxes going into 94, and 192,873 more boxes scoring 93.

Mr. TUSTIN: That answers what I wished to know. The factories have paid the farmers the bonus on the quality cheese. I quite appreciate the fact that that quality has improved considerably.

Item agreed to.

[Mr. Gardiner.]

Governor general's warrants, 1939-40.

456. To provide for expenses of administration of the Prairie Farm Assistance Act (governor general's warrants of November 22, 1939, and January 10, 1940), $150,000.

Mr. DOUGLAS (Weyburn): This relates to 1939-40. Why does that come now, rather than at the last session?

Mr. GARDINER: As the hon. gentleman will remember, this act went through the house very late in the session, and there was no estimate. The act was passed after the estimates for agricultural purposes had practically all gone through the house. It was considered at that time that there was provision for the administration costs. We found out later that, legally, provision had not been made, and we had to find sums from other sources to pay costs of administration. To the extent that they could not be obtained from other sources, we had to pass warrants for them. The two warrants amounted to $150,000.

Mr. DOUGLAS (Weyburn): What would that make the total expenses?

Mr. GARDINER: It would be $266,595.62.

Mr. DOUGLAS (Weyburn): How does that compare with the crop year 1940-41?

Mr. GARDINER: The amount was $348,675.

Mr. DOUGLAS (Weyburn): The difference is largely because of the extra supervision connected with this 3,000 bushel limitation?

Mr. GARDINER: Yes.

Mr. McNEVIN: In connection with these administration costs, are the moneys paid entirely to individuals, or are the municipalities reimbursed for any expense in connection with the matter?

Mr. GARDINER: Under the Prairie Farm Assistance Act the municipalities do not do any of the administration work. The administration work is carried on by the staffs and inspectors who are put out by the government.

Mr. FAIR: When the regulations governing the Prairie Farm Assistance Act are being reconsidered, I hope the minister will again consider the 3,000 bushel limit, because in many instances it has worked great hardship on farmers. For example, a man who is farming with one, two, or three sons working with him, can have the benefit of the acreage bonus only if his yield is under 3,000 bushels.

Mr. GARDINER: I should point out that this limitation is in the act; it is not in the regulations.

Mr. FAIR: The act might be amended to fix that up.

Item agreed to.

DEPARTMENT OF LABOUR

432. Industrial Disputes Investigation Act—further amount required, $20,000.

Mr. MacINNIS: Before this item carries, I wish to draw attention to what I consider to be a vicious and pernicious principle which has entered into the matter of conciliations in labour disputes. I would not take the time to place it before the committee to-night were it not for the fact that I have in mind a board decision which has not been satisfactory to the employees concerned, who at the present time are on strike. It does not follow that I think all decisions should be in favour of the employees. That is a chance they must take in accepting the principle of conciliation, a principle which I believe to be a very good one. What I am objecting to now is the principle laid down in section 10 of order in council P.C. 7440. The section reads as follows:

In the case of any dispute in which a contract with a government department is involved, the board of conciliation and investigation to which the dispute is submitted shall afford to the department concerned the privilege of submitting to the board a brief in writing as to the views of the department on any matter touching the dispute.

The way in which that works is this. A dispute develops with regard to wages and working conditions, or any matter which affects employees, in a certain work in which the government is concerned. Either side makes application to the Department of Labour for a board. In the course of time a board is granted, and then another department of the government, the same government which has granted the application for the board, and has appointed the chairman of the board, sends its representative to appear before the board—

Hon. N. A. McLARTY (Minister of Labour): I do not think the hon. member means "the chairman"; he means the representative of the employer.

Mr. MacINNIS: Yes, that is right. But I am pointing out that the government appoints the board; it may appoint the chairman, and then a representative of the government appears before this board. The minister shakes his head, but I happen to have under my hand proof that this takes place. The representative appears before the board. This order in council says that he shall place the representations of the department concerned in writing. That is bad enough; as a matter of fact, it should not be done.

The case I have under my hand is that of a board which was granted in a dispute between H. F. McLean, Limited, and its plumbers, steam-fitters, sprinkler-fitters and general pipefitters employed at Ile de Salaberry, Quebec, members of local 144, United Association of Journeymen Plumbers and Steam Fitters. I am reading from a copy of the majority findings and the minority findings of the board, with a covering letter signed by the assistant deputy minister of labour and registrar.

In this case, H. B. Chase, director general of labour relations in the Department of Munitions and Supply, made, according to section 10 of order in council P.C. 7440, a submission to the conciliation board, and he not only made the submission in writing, but, according to the minority report appeared and made argument before the board. I shall show, before I have finished, that he went so far as to point out to the board that it would be illegal under order in council P.C. 7440 for the board to grant an increase of wages in the case. The minority report in the dispute is signed by the representative of the employees. I quote:

In accordance with clause 10 of order in council P.C. 7440, dated December 16, 1940, Mr. Howard Chase submitted a brief in writing on behalf of the Department of Munitions and Supply of the Dominion of Canada. Not only did Mr. Chase submit his brief, as provided for in section 10 of order in council P.C. 7440, but he furthermore read it, added comments, made comparisons and even touched the legal aspect of the fair wages policy of the government of Canada, together with possible legal rights being derived from a collective labour agreement, now in force in the district of Montreal.

That statement from the employees' representative bears out the point I made. The government sets up a board, appoints a chairman, and another government department appears before the board and declares that the board cannot make a certain award because it would be illegal according to order in council P.C. 7440. It seems to me that such procedure reduces the conciliation boards, in any industry in which the government is concerned, to a farce. They cannot in the circumstances be of the slightest value whatever. As a matter of fact, any one who reads the submission made by Mr. Chase to the board and then reads the majority findings of the board and compares the two, will find that the majority findings carry out every suggestion made by Mr. Chase. Let me read two sections on page 4:

The attention of your board is directed to order in council P.C. 7440, which has at least an indirect bearing on the case before you. It is true that the request is for an allowance for board and transportation expenses and it is equally true that an allowance for board is equivalent to an increase in wages.

With regard to sprinkler-fitters, the provincial decree above referred to specifies that when employed outside of the city of Montreal they will receive an extra 20 cents per hour. It is not referred to as an allowance for board—it

is a flat increase in the wage rate. Therefore, in the present instance while the request of the applicants is for an allowance for board, it is in effect a request for an increase in the wage rates, and as such, falls within the terms of P.C. 7440.

It seems to me it would be better, instead of stringing the employees along, to use the language of the street, and allowing them to think that they will get something in this way, for the Department of Labour or the Department of Munitions and Supply, or both, to tell the representatives of these labour organizations that there is no use in their applying for a board, that under order in council P.C. 7440 it is illegal for a board to give an increase in wages. It is an amazing fact. I have brought to the attention of this house several times during the last twelve months the lack of labour representation on the war boards apart from the national labour supply council. This is the only war board set up on which there was a representative of labour, and we find that this representative is used by the government to beat down the wages and impair the conditions of employees instead of helping them. I submit to the Minister of Labour that he give this matter careful consideration. It is, as I said before, nothing more than a farce to have a condition of affairs such as this. If it continues sooner or later labour will become so exasperated that not only a small number of workers as in this case, but a large number, will be involved in labour disputes and may to a very great extent interfere with war production.

Mr. McLARTY: I do not think I shall require many minutes to reply to the remarks of the hon. member. I quite agree with him that the reason why section 10 of the order in council was put in was to obviate the very thing that happened at Valleyfield. There is no question about it. The labour supply council went into the matter thoroughly, and it was their idea that putting that clause in, and allowing a memorandum to be submitted to the board by any interested department, was the farthest that the government should go. That condition was not observed in Valleyfield. I did not know of it at the time the board was sitting. Had an application been made for a rehearing, it might have been necessary to grant it, but no such application was made. I can assure the hon. member that the situation will not recur, because it is not in accordance with the section of the order in council.

Mr. MacINNIS: This is not the first instance in which the activities of Mr. Chase have been drawn to my attention. When the application of the employees of National Steel Car Corporation was before the Department of Labour for a board, Mr. Chase was sent, either by the Department of Labour or by the Department of Munitions and Supply, to Hamilton. The men understood that he had the granting of the request for a board with him. When he got to Hamilton, however, he told the employees that they could not get a board, and that even if they did, they could not get an award because of order in council P.C. 7440. That is the information I have from representatives of the employees of the National Steel Car Corporation. If the minister has information on the discussions which took place at the trades and labour congress at Vancouver last September, he will know as well as I do the statements that were made there with regard to Mr. Chase's activities respecting wages in the shipyards. I think it is time the Department of Labour told Mr. Chase where he gets off at.

Mr. McLARTY: I can assure the hon. member that Mr. Chase was not sent to Hamilton by the Department of Labour. I do not know what representations he made, but if he made a representation that they should not have a board he was certainly mistaken, because they have a board. I do not know what representations he made in Hamilton, nor do I know the purpose of his visit. Certainly I can assure the hon. member that he was not sent by the Department of Labour.

Mr. GILLIS: May I ask the minister who Mr. Chase is, where he comes from, how he came to get into the department as a representative of labour, and who recommended him? His activities have not been in the best interests of organized labour.

Mr. McLARTY: I can hardly be expected to say who recommended Mr. Chase for that department. It is not a department over which I have any jurisdiction whatever. I believe he was a member of one of the railroad brotherhoods.

An hon. MEMBER: The locomotive engineers.

Mr. McLARTY: I was not sure, but one of those. When the war supply board was originally set up, he came to Ottawa, I believe, and while he was not a member of the board he was active in labour relations. What his antecedents are, or the recommendations that were made respecting him, I do not know.

Mr. COLDWELL: He was not recommended to the government by organized labour as its representative. That, I think, is the point which is being made.

Mr. McLARTY: So far as I know, that would be correct.

Item agreed to.

Resolutions reported, read the second time and concurred in.

WAYS AND MEANS

SUPPLY BILL

The house in committee of ways and means, Mr. Vien in the chair.

Mr. ILSLEY moved:

Resolved, that towards making good the supply granted to His Majesty on account of certain expenses of the public service for the fiscal year ending March 31, 1941, the sum of $78,744,584.32 be granted out of the consolidated revenue fund of Canada.

Motion agreed to.

Resolution reported, read the second time and concurred in. Mr. Ilsley thereupon moved for leave to introduce Bill No. 57, for granting to his majesty certain sums of money for the public service of the financial year ending the 31st March, 1941.

Motion agreed to, bill read the first and second times and the house went into committee thereon, Mr. Vien in the chair.

Section 1 agreed to.

On section 2:

Mr. DOUGLAS (Weyburn): We have not copies of this bill. This is for the $78,000,000, is it?

Mr. ILSLEY: Yes.

Section agreed to.

Section 3 agreed to.

Schedule agreed to.

Bill reported.

Mr. ILSLEY moved the third reading of the bill.

He said: On this motion I should like to thank hon. members for their great consideration and kindly cooperation in permitting the passage of these supplementary estimates so speedily to-night.

Mr. CASTLEDEN: I should like to direct the minister's attention to the fact that the members of the Cooperative Commonwealth Federation party have been here one hundred per cent in dealing with these estimates.

Motion agreed to and bill read the third time and passed.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Friday, April 4, 1941.

The house met at three o'clock.

THE ROYAL ASSENT

Mr. SPEAKER: I have the honour to inform the house that I have received the following communication:

Ottawa, April 4, 1941.

Sir:—I have the honour to inform you that the Right Hon. Sir Lyman P. Duff, Chief Justice of Canada, acting as deputy of His Excellency the Governor General, will proceed to the Senate chamber to-day at 3.15 p.m., for the purpose of giving the royal assent to certain bills.

I have the honour to be
Sir,
Your obedient servant,
F. L. C. Pereira,
Assistant Secretary to the
Governor General.

BUSINESS OF THE HOUSE

EASTER ADJOURNMENT

Hon. R. B. HANSON (Leader of the Opposition): Mr. Speaker, as the house is already aware, a motion has been passed for the adjournment of this house at six o'clock on Wednesday for a substantial period. I understand the date of the adjournment was fixed on the conditional understanding that possibly the budget would be brought down the first of the coming week. The Minister of Finance (Mr. Ilsley) has announced that this is not now physically possible. It has been represented to me from both sides of the house that a large number of hon. members would desire, if possible, to have this house adjourn to-night at six o'clock for the Easter vacation, thus anticipating the adjournment by three days.

I understand a large number of hon. members have either departed or are about to depart by afternoon or evening trains. I would ask the Prime Minister (Mr. Mackenzie King) if the government would consider making a motion that when the house do adjourn at six o'clock to-night it shall adjourn for the Easter vacation, rather than having the adjournment on Wednesday next.

Mr. M. J. COLDWELL (Rosetown-Biggar): Mr. Speaker, may I interject that until five minutes ago I had no knowledge that this suggestion was going to be made. I should like it to be clearly understood that, so far as our group is concerned, we are not asking that this be done; indeed, we are opposed to it.

We consider that the wheat regulations require a thorough discussion before we leave this house for the Easter vacation. We have

had no opportunity to discuss these proposals and regulations. The policy was announced on March 12, and it was discussed briefly on March 27. The regulations were distributed in our mail-boxes on the afternoon of April 2. So far as my own constituents are concerned, this is the gravest problem which confronts them, and I am absolutely opposed to leaving this house until we have had an opportunity of discussing this matter thoroughly, in order that, before they put their seed in the ground, they may know exactly where they stand.

One other suggestion I would advance is this: Owing to the economic circumstances brought about by the agricultural situation in western Canada, the provinces of Saskatchewan and Manitoba particularly, and probably the other prairie province of Alberta, are faced with a grave relief situation which has not yet received any consideration at this session. Therefore we do not feel that we can consent to such a motion, if it is introduced by the Prime Minister.

Mr. J. H. BLACKMORE (Lethbridge): Mr. Speaker, I am of the same opinion as the hon. member for Rosetown-Biggar (Mr. Coldwell). I have not been at all satisfied with the way in which we have been able to deal with the problems which face us this year. I do not think anyone is to blame for this, but I believe that several matters which are vital to this country at the present time should be discussed. Not only is the wheat situation a grievous one, but the agricultural situation generally throughout the country is precarious. I see no reason why we should not stay here for three or four more days in order to let hon. members express their opinions concerning these problems, even though we do nothing about them.

When it was proposed that we should take a recess from April 9 until April 28, I raised no particular objection, but the thought passed through my mind that we were throwing away a great deal of valuable time. When we come back on April 28, the time left to discuss vital matters will, in my opinion, be altogether inadequate. Therefore, I am inclined to disagree with the suggestion that we lengthen the recess, although I have no desire to be an obstructionist in this regard. I merely express the feeling which, I am sure, prevails throughout my constituency and province.

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, as Your Honour has just announced, the deputy of His Excellency the Governor General will proceed to the Senate at a quarter past three o'clock to give the royal assent to the bills which have passed both houses. The proceedings of this house will be interrupted at that time. As has been mentioned, this matter of adjournment has come up rather suddenly. I think it has come up as the result of a feeling which is general with respect to the desirability, all circumstances considered, of extending by two days and a half the vacation which has been arranged for Easter. It really means an accommodation of more than two days and a half because hon. members will be able to take advantage of Saturday and Sunday.

As the proceedings of the house may be interrupted at any moment, I was going to suggest that this matter might stand until after the deputy of His Excellency the Governor General has given royal assent. Possibly in the intervening period one or two of my colleagues could hold a conference with the hon. members who have spoken and, if thought advisable, I could, later on, introduce a motion which would permit adjournment to-day until the time fixed for reconvening after Easter. May I point out to my hon. friends who have taken some exception to a longer recess, that by the rules the matters which would come up for discussion next week would be the motion of the hon. member for Haldimand (Mr. Senn) in the nature of amendment to the house resolving itself into a committee of supply. In all probability the debate on that particular motion would not be concluded by Wednesday afternoon, and there would not be a chance for the Minister of Agriculture (Mr. Gardiner) to go on next week with the matters to which my hon. friend has referred. The minister is, I understand, quite prepared to go on with those matters this afternoon. So far as the government is concerned, we have no desire to press consideration this afternoon of the other bills on the order paper. By having the Minister of Agriculture go on immediately with his estimates, by having a full discussion on the matters referred to, I would hope that it might be possible to meet the objections which hon. gentlemen opposite have raised and bring about a general agreement as to adjournment at six o'clock to-day. I shall have something more to say on this after the royal assent has been given.

SUPPLY

The house in committee of supply, Mr. Fournier (Hull) in the chair.

DEPARTMENT OF AGRICULTURE

Special

422. To provide for payments on reductions in wheat acreages, under conditions prescribed by the governor in council, for administration expenses in connection therewith, and for tem-

porary appointments that may be required notwithstanding anything contained in the Civil Service Act, $35,000,000.

Mr. LEADER: I am sure that my constituents will expect me to have something to say on this vital question of reduction in wheat acreages. Having spent all my life on the farm, for over half a century working and tilling the soil, I should know something about farming; and so far as the wheat problem is concerned, I have solved that problem for myself. Years ago we decided to curtail our wheat acreage and to go into more diversified farming, and I am glad to be able to say that after twenty-two years in the cattle business, the wheat problem does not worry me at all. I believe that the same thing could be said of thousands, yes thousands, of farmers in the Canadian northwest, that those who have taken up diversified farming have been able to stand up in the trying times that we have endured in the last ten years.

The memories of hon. members may go back to November 21 of last year to the speech I made in this house outlining what I thought the government should do with regard to the wheat problem. At that time I took the stand that we had come to the position where the farmers themselves must realize that we cannot continue to raise wheat in this country to the same extent that we have done in late years. This huge surplus must be reduced if we are to have any hope of ever getting the price up to where it should be.

THE ROYAL ASSENT

A message was delivered by Major A. R. Thompson, Gentleman Usher of the Black Rod, as follows:

Mr. Speaker, His Honour, the deputy of His Excellency the Governor General, desires the immediate attendance of this honourable house in the chamber of the honourable the Senate.

Accordingly, the house went up to the Senate.

And having returned,

Mr. SPEAKER informed the house that the deputy of His Excellency the Governor General had been pleased to give in His Majesty's name the royal assent to the following bills:

An act to authorize an agreement between His Majesty the King and the corporation of the city of Ottawa.

An act to amend the Meat and Canned Foods Act. (fish and shellfish)

An act to amend the Precious Metals Marking Act.

An act respecting the appointment of auditors for national railways.

An act to amend the Trans-Canada Air Lines Act, 1937.

An act for granting to His Majesty certain sums of money for the public service of the financial year ending the 31st March, 1942.

An act for granting to His Majesty certain sums of money for the public service of the financial year ending the 31st March, 1941.

An act for granting to His Majesty aid for national defence and security.

An act for granting to His Majesty aid for national defence and security.

SUPPLY

The house resumed in committee of supply, Mr. Fournier (Hull) in the chair.

The ACTING CHAIRMAN (Mr. Fournier, Hull): When the proceedings were interrupted for the royal assent, we were considering item *422*.

Mr. LEADER: Consequently I recommended a reduction in wheat acreage which would carry with it a higher initial price for the number of bushels which we were allowed to deliver. I also recommended that farm storage be continued on an equal basis of payment to that made to line elevators. I also urged that a policy be announced by the government as soon as possible, in order that farmers might have this information and govern their seeding operations accordingly.

I went home shortly after I made that speech, as all hon. members did, and I undertook to hold meetings throughout my constituency. We had some six meetings. My constituents had digested my speech, and I assure the committee that they were fairly well satisfied with it. One thing I advocated in that speech was to lend some encouragement to the smaller farmers of the country. I advocated a higher initial price on a stated number of bushels which the government would take from each farmer, allowing the smaller farmers to contribute so much; and then if the government could take any wheat above that quota, they would take it from the larger farmers. I had no reason to think otherwise than I did in November last; so, when this policy that has been announced by the government fell upon my ears, it is reasonable to expect that I would have this reaction, namely, that I am not in favour of this policy, and I will try to give my reasons.

I believe that when the government announced that they were going to pay only 70 cents a bushel as an initial price on this year's crop, that that had the effect of lowering the price of wheat. On March 13, the day after the announcement was made, May wheat was selling in Winnipeg at 77¾ cents, and Chicago wheat on that date was 85¾ cents. On April 2, Winnipeg May wheat was selling at 76⅞ and Chicago wheat at 92⅛ cents. In other words,

since the announcement was made, Winnipeg May wheat had dropped ⅞ths of a cent, and Chicago had advanced 6⅝ths cents. This is conclusive proof that the announcement by the government of that policy of 70 cents had the effect of lowering the price of our wheat and keeping it down.

This is what the Ottawa *Citizen* had to say:

It was believed that the lower basic wheat board price for western Canada's 1941 wheat crop than had been anticipated was largely responsible for the buying apathy.

The Winnipeg *Free Press* the next day said practically the same thing. The point I wish to make is that while our wheat has gone down since the announcement was made, Chicago wheat has gone up, and that is conclusive proof that the announcement had the effect of bearing down our price.

I was surprised when the Minister of Agriculture declared that he had embodied in this government proposal a large part of the recommendations made by the advisory committee of the wheat board and the Canadian Federation of Agriculture. Well, he may have adopted some of the minor suggestions but certainly none of the essentials. The essentials advocated by these two bodies of which I have spoken called most definitely, for a higher initial price, and that is the one point on which the whole thing hangs. Not only these organizations, but every other organization that I have been able to read about, have declared that we should have a higher initial price.

The minister put on *Hansard* the recommendations of the Canadian Council of Agriculture and also, I believe, of the advisory wheat board. I will give the recommendations made by the Saskatchewan government. These are extracts from the *Western Producer*, and I have no doubt they are authentic. They are condensed and are quite brief:

1. An increase in the wheat board statutory initial payment from 70 cents to 85 cents per bushel.

2. An increase in the amount of the processing tax from 15 cents to 50 cents per bushel on all wheat processed for domestic consumption.

3. Continuation of the quota system of deliveries as and when storage space becomes available.

4. Federal assistance for the construction of suitable farm storage facilities where this is required.

5. Advances to the farmers against that portion of their quota which they may not be able to deliver immediately.

6. The maintenance of the wheat carryover at the end of the present grain year to be regarded as an essential part of Canada's war effort.

I call attention to the fact that the Saskatchewan government asked for a higher initial price and named the price, which was 85 cents a bushel. The Canadian Federation of Agriculture declared that the Saskatchewan recommendations were just about what they themselves proposed to the government. The federation have an association in British Columbia, one in Alberta, one in Saskatchewan, one in Manitoba, one in Ontario, one in Quebec and others in the maritime provinces, so that the organization is representative throughout the dominion; and they have declared that the Saskatchewan proposals were practically what they recommended, only they did not state the initial price.

All of us, including these associations I have mentioned, were disappointed, and they have not been shy in expressing their disappointment. I have here a letter from the president of the Canadian Federation of Agriculture in Winnipeg. He says:

During the coming crop season higher costs of production are inevitable, which further warrants an increase in the guaranteed price.

We respectfully urge you to press for further consideration of the price feature of the proposed wheat policy.

I picked up a newspaper and came across a heading which just about covers the point I am making about the disappointment that exists. It is headed: "Wheat policy blasted." It goes on to say:

The prairie wheat pools in a joint statement issued from Regina said that the recent federal government wheat policy for 1941-42 crop year was received on the prairies with surprise and dismay, and urged the government to reconsider and bring it in line with the needs of Canadian agriculture.

There is, however, something else which to me is of more importance. On March 18 this resolution was drafted and sent to me:

That we the Poplar Heights local of the Manitoba Federation of Agriculture hereby declare our disapproval of the wheat policy as announced by Mr. Gardiner and Mr. MacKinnon on the grounds that it would not work with equality or relieve the wheat storage situation. Therefore we respectfully ask our member, Mr. Harry Leader, to urge upon the government reconsideration of the policy, and adoption of the proposals as contained in the brief submitted by the Canadian Federation of Agriculture of January 27 last.

That is signed "Mrs. Thomas Tully."

With the advice of all these organizations and with my speech before them, the government decided to bring in this policy. There is a saying that when a man gets an idea in his head and someone else expresses it, he says: "That is my baby." Evidently this is not the baby of the farm associations across Canada. I do not think the Minister of Agriculture (Mr. Gardiner) and my respected friend the Minister of Trade and Commerce (Mr. MacKinnon) will be offended if I say it is their baby, because they brought before

the house this fantastic proposal; I can think of no better term for it. It is their baby, Mr. Chairman; its parentage cannot be questioned.

I wish now to deal with a question which has disturbed me, as I know it has disturbed many members of this house in recent years, namely, the constant reiteration from all sides that the east is bucking the west and the west is bucking the east. If we are going to have unity in this, one of the finest countries in the world, then we must have more harmony. We should have a policy devised that will be acceptable to both east and west, something on which we can compromise. We cannot get all we want, but let us settle on something and be good nationals; I almost said good neighbours. There is an old saying that the farmers must hang together or they will hang separately. The other night I was pleased to hear the hon. member for Victoria, Ont., say he realized the problems and disabilities from which the west was suffering, and that he was willing to help us solve those problems. Perhaps I should read what he had to say:

I have great sympathy for the western Canadian farmer. Let me add that when the Minister of Trade and Commerce brings down his wheat legislation, if he will increase the 70 cents a bushel to 75 cents—

Mr. Leader: Eighty-five.

Mr. McNevin: We will discuss that suggestion later, but for the purpose of this illustration I will say 75 cents.

I believe—and I am now talking right at the Minister of Agriculture—that if the government had been bold enough to say, "We will pay 85 cents a bushel on 230,000,000 bushels," that proposal would have carried in this house. I firmly believe the Ontario members, realizing our disabilities out west, with their desire to help, would have said, "We will support that suggestion." I wish now to ask why the government did not bring in that recommendation. That is what the people of this country asked for; and I believe—I speak subject to correction—that every member of this house would have supported it. It is only right and just that the western Canadian farmers should have this concession, if that is the proper term for it.

May I now discuss the proposed bonuses. I contend, Mr. Chairman, that they will not benefit the average farmer. They may be of assistance to the man operating a large, mechanized farm; but, do you know, sir, that is the very guy who brought this problem upon us. I say that without intending to be disrespectful. I have just as much regard and good-will for the large farmers as I have for the smaller ones; they have just as much right to live in this country, but they are the people who have heaped up this huge surplus. The smaller farmers and their families, living on the land, are the greatest asset of the nation. Many hon. members representing rural constituencies have said to their electors that the farmers are the backbone of this country. I have made that statement; and I have declared that agriculture is the basic industry of the country. Therefore the smaller farmer and his family, making a living on the land, is really the one who should be considered. What percentage of the population of this country live on the farms? I am informed that it is at least one-third.

In that connection I should like to repeat some figures which I placed on *Hansard* on a previous occasion. According to the table which I placed on record at that time, thirty-five per cent of the farmers in the three prairie provinces sow less than fifty acres of wheat a year; that is according to the 1935 census. Those farmers have a slim chance of reaping any benefit from this bonus, after having had no wheat for perhaps three or four years. Why, I know several farmers who have not sown wheat for the last ten years, and they do not come into the picture at all, although I believe some regulations will be drawn up to take care of them. Further than that, sixty-two per cent of the farmers of the west sow less than one hundred acres of wheat a year. Therefore I think there is truth in the statement that this policy will not benefit the smaller farmers of this country.

I should like to give an example of how this policy will work. When some people speak of summer-fallowing, and being paid a bonus for it, it occurs to me that they think we can summer-fallow for nothing. It costs money to summer-fallow. As a rule, in farm leases in Manitoba they allow $5 an acre for any summer-fallow the tenant has not done, but I am going to be conservative and place the figure at $2 an acre. That is not all velvet. I can assure you, Mr. Chairman, that it costs a great deal more than $2 in my district if you do the summer-fallowing right, but we will put it at that figure. The bonus on one hundred acres of wheat at $4 an acre will be $400. The cost to the farmer would be at least $200, which would leave him a net revenue of $200 from his summer-fallowing.

This is what I would do; this would be my alternative. I would take that one hundred acres and sow it in wheat if the government had a policy that would allow me to do so. It is a poor field of summer-fallow that will not produce at least twenty bushels to the acre. That would give me two thousand

bushels from the one hundred acres. Of that two thousand bushels the government will take only two-thirds, or 1,333 bushels, which at 15 cents a bushel would amount to $199.80, or almost equal to the summer-fallow bonus. This will leave me 666 bushels, which the government does not want. What is the farmer going to do with those 666 bushels of wheat? Well, he will just put them in his granary. Can you think of any form of crop insurance, Mr. Chairman, that would stand a man in better stead than a binful of wheat; and can you think of anything that would bring this problem to the mind of the farmer more vividly than to find himself with a binful of wheat which he could not deliver? The next year he would hesitate before putting in much more wheat.

The coarse grain bonus is, I think, the most attractive of the three proposals. If I have to make a decision between summer-fallowing, sowing to grass or sowing to coarse grains, I will sow to coarse grains. If I take one hundred acres of summer-fallow, I can produce forty-five bushels to the acre. We usually sow barley on the second crop, some of it on the poorest land we have; but if we sow barley on the good summer-fallow, we can just double the bushelage of barley in this country right under this very plan. If we do that, what will be the result? We are just going to have the wheat problem transferred to a barley or some other coarse grain problem. That result is inevitable.

I believe the bonus relative to pasture land has some merit, but it is a long-range programme. It is something which cannot be of much benefit to the farmers this year, beyond the $2 bonus which is to be paid. There is certainly room in Canada for more grass land; that is where diversified farming comes in. We could develop our cattle industry and our sheep industry away beyond its present size, if that development were permitted. The other evening and afternoon when I listened to some of my good friends on the Conservative side of the house arguing that there should be more restrictions on trade with the United States—they referred particularly to fresh fruits—and when they were told by the Minister of Finance that such restrictions would endanger the Canada-United States trade agreement, I could not help thinking they had not realized what that agreement meant to western Canada—yes, to the whole of Canada.

In these days, statesmen do not talk about restrictions in trade. The tendency is altogether the other way. Men are talking about cooperation, and the possibility of removing barriers of trade between nations. The United States trade agreement of 1936 and again renewed in 1939, proved a godsend to the cattle raisers of Canada. Where would we be to-day, with our markets across the ocean shut off, were it not for that trade agreement? Now that we have not the market in the old country, where would we be if we did not have that outlet to the south? Some will argue, "You cannot even fill your quota." No, we cannot; but that outlet is removing the surplus from the domestic market, and assures us of a higher price all round. There is no doubt about that.

It is wrong, therefore, for us to suggest anything which would interfere with the Canada-United States trade agreement. That arrangement stands out as an oasis in a desert, so far as the legislation of this government is concerned. The farmers' position is not good, and I am satisfied it is not going to be any better under this new policy. The farmers are willing to shoulder their responsibilities in this war. They are willing to pull more than their weight, and, indeed, they are doing so. But why should farmers be asked to be the shock-absorbers of the whole nation? That is what has happened. All other prices are rising. Look at the profits being paid by every company in Canada, and then look at the position of agriculture, the basic, backbone industry of the country.

Farmers cannot do other than keep on tilling the soil; that is their occupation. We cannot pull up stakes and go somewhere else. We just have to keep on going, whether we do or do not receive a fair price, and take our chance on the next crop. I find, upon looking into figures received by farmers in recent years, that although those living on the land comprise one-third of our population, they enjoy only ten per cent of the national income. Nevertheless, while agriculture is not prospering, many secondary industries, founded upon the work of the agriculturists, are making money.

I shall mention some of those industries. Take the meat packers, the milling companies, the farm machinery companies and the grain trade. Each of those industries is dependent upon agriculture, and to-day each is prospering. Why? Because they can transfer their energies to something else.

I have before me figures showing that in 1939 Canada Packers had a net surplus of $1,238,736, and, in 1940, a net surplus of $1,667,809. In 1939 Swift Canadian had a net surplus of $376,598, and in 1940, $394,109. Lake of the Woods Milling company is a firm which has suffered in recent years, but,

on account of the war, its business is improving. In 1939 that company had a surplus of $596,691, and, in 1940, $476,601. The Massey-Harris company, too, suffered in past years, but now they are making money, and they made money for several years before the war. In 1939 they had a surplus of $705,337, and in 1940 they had an operating surplus of $3,132,158. But through their method of bookkeeping, which no doubt is a correct one, they show, in 1940, a net income of $805,568.

Mr. MARTIN: Have they paid dividends recently?

Mr. LEADER: Just to the preferred shareholders, I believe. If hon. members wish, I could give the source from which I have obtained these figures.

I should like now to say something concerning the grain trade. Before dealing with that trade, may I correct a statement I made in the speech I delivered last November. At that time I said that the storage paid to the line elevator companies was three-quarters of a cent a bushel. That was an unintentional mistake, and I am glad to correct it at this my first opportunity. Instead of stating that it was three-quarters of a cent, I should have said it was two-thirds of a cent. This amounts to one cent a bushel per annum. This does not look like very much, but on hundreds of millions of bushels on which storage is paid, it can be readily understood that the total amount involved will be considerable.

The grain trade have been pretty well looked after by the parliament of Canada. I refer not only to recent years. They have been looked after as long as I can remember, and they are being well looked after to-day. They are making money; in some departments they never made as big dividends as they are making at the present time, right in the midst of this war. The charges the nation will have to pay the line elevator companies—and in that I include the pool elevators and the United Grain Growers—to carry the surplus will amount to approximately $65,000,000 a year.

When the Minister of Trade and Commerce made his announcement he said, speaking of the surplus and the problem of taking care of it:

> To meet this situation the government entered into an arrangement with western elevator companies for the construction of approximately 50,000,000 bushels of temporary terminal storage space at Fort Willian-Port Arthur. The arrangements made were approved by order in council of February 19, 1941. I am assured a large part of this new space will be ready by July 31 of this year and the remainder in August and September. These facilities are being constructed by the elevator companies. The government has agreed to maintain all elevator tariff charges now prevailing without reduction until July 31, 1943, and to allow the companies to write off as depreciation for income tax purposes 50 per cent of the actual cost of construction in each of two successive years.

The point I make is this, that the government of Canada have guaranteed to the elevator companies two years' storage, whether we get rid of this surplus or not. Someone has said that the old country will be bombed, that the wheat fields will be set on fire, that the grain will be destroyed and that this wheat will be needed. If that comes true, it means that we have entered into a contract, if not written, at least oral, by which we undertake to continue paying these storage elevators for the next two years at the rate of approximately $65,000,000 a year. The minister goes on to say:

> It is further agreed by the companies that after the 31st day of July, 1943, they will, upon request, each enter into agreements (upon the basis of payment of reasonable remuneration for each operation) as may be mutually satisfactory in the light of the operating experience gained during the period up to July 31, 1943, for the operation of its temporary facilities during the balance of the time such facilities are needed.

There are hon. members who will argue that it will be four years before we can get rid of our surplus wheat, so this will be rather an expensive proposition for the government and the people of this country. A meeting was held at Portage la Prairie and a resolution was passed asking the government to provide some means of assistance, even if only to aid us in providing storage facilities on the farm where this is needed. Of this $65,000,000 that we are paying out to the elevator companies, not one dollar is going to the farmer. There was a time when we hoped that we were going to get another ten cents a bushel on our 1939 crop, but we did not get it. Why? Because it had been eaten up in the payment of these storage charges. I know this may be something the government cannot help at the present time, but they seem to have slipped a cog in this connection by not paying attention to the necessity of providing more storage facilities on the farm where this is needed. We need these granaries, and we need them filled with grain as a security against crop failures.

Mr. WOOD: Does the farmer of the west really believe that it is an obligation of the government to build granaries on the farms?

Mr. LEADER: No, he does not, but the suggestion was made that loans should be made to the farmers or they should be provided with lumber for that purpose. Then

storage charges could be paid to them instead of to the line elevator company, and the government would get their money out of the storage charges when the wheat was sold. That is all we are asking for.

Mr. WOOD: It is a wonderful thing if you can get it. We in Ontario do not take eagerly to having the government provide granaries for the farmers in the west. We have had to erect expensive buildings to carry on our operations, and we are always glad to have a little wheat in our granaries. We do not expect the government to lend us money. We find it somewhere.

Mr. LEADER: I am sure the hon. member for Brant is one of those who would be willing to cooperate with western members in order to try to understand our problems and to arrive at some solution which would be beneficial both to the east and to west. We do not want the government to build our granaries; all we ask is that it be made a little easier for us, especially when they are ready to pay out this money to the line elevators.

Mr. DOUGLAS (Weyburn): Is it not true that wheat is the only commodity which the farmers of Canada have been denied the right to sell? Consequently there is some obligation to the farmer.

Mr. LEADER: One could make a whole speech on that question. There is no doubt there is something in what the hon. member has said.

Mr. WOOD: That is not so.

Mr. DOUGLAS (Weyburn): What other commodity is there?

Mr. LEADER: I should like to say something about the barley industry. I believe we can grow as good barley in Canada as can be grown anywhere. If the seed is sown on good ground, if the barley is properly harvested, the product will be as good as that grown any place in the world and will be sought after by the distilling interests. There is a market for more good barley in this country, and barley is a revenue producer for the government. According to the figures which I have secured from one of the blue books, in 1939 the government obtained, through the excise tax on malt, a total of $8,177,299.20; in 1940 the revenue from this source was $11,402,150.76. While all that did not come from barley, almost all did. About 95 per cent of the grain used to produce malt is barley, and 97 per cent of the malt entered for consumption is used in the production of beer. The beer manufacturers do not get any revenue from me in that connection, but it is interesting to note that a bushel of barley produces thirty-six pounds of malt. The excise tax is ten cents per pound on malt, which means that a bushel of malting barley provides a revenue of $3.60. Yet we have been selling this for thirty cents a bushel. There is some room for thought right there.

There is, in connection with barley, a matter which I have brought to the attention of the government on three or four occasions. The grain trade charge $15 for selling a carload of wheat, but to sell a car of barley of the same capacity, they charge $18.75. They have been able to get away with this. I do not know how long it will continue, but I have brought it before this house and to the attention of the government privately. The answer I have been given is that this is a matter to be settled by the grain trade. I took it up with the grain trade, and the counsel of the grain exchange told me that they believed the charge was reasonable. If we leave it to the grain trade, we shall continue to pay $3.75 more selling commission on a carload of barley than we do on a carload of wheat.

The ACTING CHAIRMAN (Mr. Fournier, Hull): I am sorry to interrupt the hon. gentleman, but he has spoken for more than forty minutes.

Some hon. MEMBERS: Go on.

Mr. LEADER: I thank the committee for listening to me, and I shall conclude right away. I have been speaking as a farmer and as a representative of farmers. I am speaking not only for myself, but also for my constituents. On several occasions I have found it necessary to oppose the government. That is not because I wanted to; it was simply because I believed honestly that I am here to represent my people before supporting the government or any other party. That is my honest belief. I am simply trying to discharge the duty which has been imposed upon me.

Mr. FAIR: Mr. Chairman, on March 27 I had an opportunity to discuss the wheat question, but eleven o'clock came along before I had completed my remarks and we were sent home for the day. Under the policy laid down by the government this year, a price of 70 cents a bushel will be paid on 230,000,000 bushels. This will net the farmers of the west less than $115,000,000. We know from past experience that we cannot get along on that amount. If we do not get enough to live on from the sale of our products, we shall have to have relief or something of that kind. We do not want relief. I think I stressed this point when speaking on the last occasion. I

have here some figures showing the average price received for wheat over a number of years. The figures are as follows:

	Average price received per bus.
1908 to 1913, inclusive	$0.71
1908 to 1929, inclusive	1.05
1930 to 1939, inclusive	0.55
1908 to 1939, inclusive	0.90

When speaking on a previous occasion I pointed out that despite the fact that No. 1 averaged $1.17 at Fort William, over a 64-year period, we still had to have the Farmers' Creditors Arrangement Act, and millions of dollars were spent on relief. I am now suggesting once more that the initial price of wheat be increased, and increased considerably.

I should like at this time to place on *Hansard*, if I may, a table which was issued by the Canadian Federation of Agriculture. I shall not take the time of the house to read it, but by consent will place it on *Hansard*. It contains much valuable information in which I am sure hon. members will be interested. It is as follows:

Wheat Prices and Value Per Acre of Wheat Production for the Period 1908 to 1939 inclusive

	Average price received per bus.	Average value per acre
1908 to 1913, inclusive ..	·71	13·87
1908 to 1929, inclusive ..	1·05	18·15
1930 to 1939, inclusive ..	·55	6·95
1908 to 1939, inclusive ..	·90	13·84

The purpose of this table is to show the range of wheat prices prevailing in the prairie provinces from 1908 to 1940.

The thirty-two year average price to the farmer at his local shipping point was 90 cents per bushel.

Under the present proposal, the estimated price to the farmer would be 50 cents per bushel (plus whatever storage charges he may earn) for greatly reduced deliveries.

The situation disclosed by these figures shows very clearly the need for a higher price to the farmer for the wheat he can deliver in the coming crop year.

The attached statement of acreage, production, value per acre and per bushel were secured from the dominion bureau of statistics.

Acreage, Production, Value per Acre and per Bushel of Wheat in the Prairie Provinces, 1908 to 1940

	Acreage of wheat	Production of wheat	Yield per acre	Value of Production In Manitoba	In Saskatchewan	In Alberta
	acres	bus.	bus.	$	$	$
1908	5,624,000	91,853,000	16·33	41,924,000	25,883,000	4,617,000
1909	6,878,000	147,482,000	21·44	45,854,000	68,669,000	7,037,000

1940	266,180,000	10·337	·507	70·4	129·5	7·407	54·4

I come now to the summer-fallowing proposals. A bonus of four dollars an acre is to be paid on summer-fallow and two dollars an acre if coarse grains are sown. The suggestion is that we shall have an increase of 9,000,000 acres during the present year. I do not for one moment agree with that suggestion. We are expecting to have approximately 15,500,000 acres of summer-fallow, exclusive of the 9,000,000 increase, and according to the figures given by the speaker who has just resumed his seat (Mr. Leader), 35 per cent of our farmers sow less than 50 acres of wheat, and 62 per cent, less than 100 acres. Therefore hon. members will readily understand that our farmers cannot afford to summer-fallow a much greater acreage than they are doing at the present time. The farmer, like everybody else, much have a certain amount of money upon which to live, and when prices are cut, the practice of the farmer is to sow more grain, because, of course, he must have a certain amount of income anyway. Therefore I do not think the programme outlined by the government is going to do us very much good.

Coarse grain prices are at the present time and have been for the past number of years so low that it did not pay to raise them. I know several farmers in my district who have been holding grain in storage for the past two or three years because it was not worth much more than the price of hauling it to the elevator, and that applies particularly to low-grade oats. Barley was in approximately the same category.

Again, if the government's programme is carried out, I wonder whether the Minister of Trade and Commerce (Mr. MacKinnon) or the Minister of Agriculture (Mr. Gardiner) has considered where the wheat crop of 1942 is to

be stored. We realize that there should be some reduction in wheat acreage because until we reduce the surplus on hand, we cannot get the prices to which we are entitled. I think, Mr. Chairman, that is all I need say upon that at present, because we shall have an opportunity later to go into the matter in greater detail.

The Minister of Agriculture has given us a part of the report of the advisory committee on wheat, but since all members are, I think, greatly interested in that report, I should like to see it placed on *Hansard* in full, or at least tabled.

I would also suggest that the Minister of Trade and Commerce investigate the reasons why grades have been cut down during the past months. Several of my neighbours, when they threshed their grain, got grade No. 1, but afterwards that was cut down, in some instances, to No. 3—a lower grade for exactly the same wheat. There is something rotten in Denmark, if I may use the expression, something radically wrong with our grading system when that kind of thing is permitted to go on. It means that our farmers are being robbed, and I would suggest that the minister provide a remedy.

When our group came here last November, we placed on the order paper, in the name of the hon. member for Bow River (Mr. Johnston), a resolution reading as follows:

> Whereas the price of farm machinery, all costs of living and farm wages have increased due to the war;
>
> Therefore be it resolved,
>
> That in the opinion of this house, parliament should immediately take such steps as are necessary to ensure the farmers of Canada a fixed price of not less than one dollar per bushel for number one northern wheat at their local elevator, on at least the first 2,000 bushels of the 1941 crop.

In case the Minister of Agriculture or the government and its supporters should think that is an extravagant price, I should like to quote from a pamphlet of the Saskatchewan Liberal Association, printed by Commercial Printers Limited, Regina. It reads:

> European countries are willing to trade.
> The Liberal party is willing to trade.
> Trade will bring dollar Wheat.
> Dollar wheat will end your troubles.
> Wear shirts, wear shoes, wear pants, wear coats, traded from those who eat your wheat.

Mr. TRIPP: We have had dollar wheat since that circular was issued.

Mr. FAIR: If the hon. member in the corner will keep quiet, he will have his chance to say all he wishes when I have finished. I was going on to say, Mr. Chairman, that dollar wheat is exactly what we are recommending. The circular continues:

> Dollar wheat will run your farm and pay your taxes.
> Dollar wheat will pay the hired help and pay your repair bill.
> Dollar wheat will pay your insurance and buy your wife a new dress.

The circular ends with the words in large type, "Vote Liberal."

Mr. TRIPP: They did vote Liberal.

Mr. FAIR: And they have been sorry ever since. I may say, in answer to the hon. member who interrupted, that it is a good thing we have an election every few years because, while the people may make a mistake once we remember the old saying, "You can fool some of the people all of the time, and all of the people some of the time, but you cannot fool all of the people all of the time."

An hon. MEMBER: You have done it twice.

Mr. FAIR: I have represented fairly—and I say "fairly" advisedly—the people who sent me here, and I shall continue to do so for as long as they see fit to send me here.

The group with which I am associated recommend that the government take immediate steps to pay one dollar a bushel at the local elevator for the first 2,000 bushels of wheat. Again, this may be claimed to be impossible. According, however, to the figures just given by the hon. member for Portage la Prairie, 35 per cent of our farmers sow less than 50 acres, and 62 per cent, less than 100 acres. We cannot expect a number of these farmers to raise 2,000 bushels, and if they do not raise it, naturally they cannot deliver it. Quite a number of them will not deliver more than one or two hundred bushels. I believe that our proposal is fair and will give agriculture a chance to pay its way; and if agriculture prospers, I believe that the rest of Canada will prosper as well, because, as I have pointed out on several occasions, when the west is prosperous, eastern Canada is prosperous also. I have on former occasions quoted figures in this house showing that in 1926, when wheat averaged $1.40 a bushel, western Canada purchased from eastern Canada approximately $82,000,000 worth of farm machinery. That was just one item alone. Then in 1932 and 1933 when wheat was away down in price, to the lowest price in three or four hundred years, the west's purchases of farm implements dropped to around $8,000,000, or only ten per cent of what we purchased in reasonably good times.

I think any sane, sound business man must take cognizance of facts such as these, and act accordingly.

The government, I believe, should continue to pay storage on the balance of the quota of wheat on the farm, as is being done at the present time. I also believe that the government should pay an advance on that part of the quota which the farmer holds on his farm because he cannot deliver it. The farmer must get a living anyway, and if the wheat is there to be delivered, the government would not be taking any great chances in making an advance.

The question of storage was brought up by the hon. member for Portage la Prairie. If we allow something like ten per cent for working space, the elevators have a storage capacity of 582 million bushels, and paying eight cents a bushel on their full capacity means that somebody will have to pay $46,560,000 a year for storage. As we are now in a war period, I think the people of Canada should pay this charge rather than that the farmers themselves should be made to stand this expense.

Agriculture is pretty well wrecked now. If this is allowed to go on, complete wrecking of the industry will be the result. I do not think Canada can afford to have agriculture in any worse plight than it is at the present time. Do not forget that there are war debts to pay, and that all taxes are paid either directly or indirectly by the agricultural industry.

In addition, I believe the government should continue where it left off, with international cooperation with the wheat producing countries. This has been advocated for the past three or four years by the hon. member for Acadia (Mr. Quelch), myself and others.

I should also like to see the grain exchange closed. We have been told that it is being kept open at the request of the cereals board in England. That argument does not appear to me to have any force, because seemingly the British government has closed the exchanges over there since the war started, and if that course is good for England, why is it not good for Canada? Perhaps we are yet capable of being skinned a little more. That skinning should cease, and cease right away.

In conclusion, may I allude to that old theme, Canadian unity. We have heard the Prime Minister (Mr. Mackenzie King), several of the cabinet ministers and private members plead for national unity. We have been told by others that unity is impossible while one part is slave and the other part free. I suggest that it is about time to free a very large percentage of our people who have been and are slaves, and I make this plea to the government now, that they take into consideration this group's recommendations which I have just placed on record.

Mr. ROSS (Souris): Like the hon. member for Portage la Prairie (Mr. Leader), I am probably not so much concerned personally about the wheat problem because, as in his case, cattle has solved my problem. As a Canadian citizen, however, I am vitally concerned about this very important matter of wheat.

The Minister of Agriculture (Mr. Gardiner), speaking on the floor of this chamber on Wednesday, March 26, in reply to the hon. member for Haldimand (Mr. Senn), attempted to place the blame on the opposition in this house for the fact that we have not had an opportunity to discuss agriculture, and all its difficulties, at a much earlier date. He stated that when he first attempted to bring in his estimates, on February 27, I asked him to make a statement. I did ask him at half-past ten on that evening, as he stated, if he would make a statement in order to give some lead to the agricultural producers of the country as to what might be expected of them, in the matter of agricultural production, to assist in the war effort during this coming year; and I suggest that that request was very much in order. Then, on March 5, the hon. member for Haldimand rose to introduce an amendment to the motion to go into supply. He was not allowed to complete his speech until March 26. During the interval, on March 12, the Minister of Agriculture announced this acreage bonus scheme which we are now discussing.

May I say that, as a result of my experience as a member for three or four years of the advisory committee under the Prairie Farm Rehabilitation Act, I, speaking on November 14 last in this chamber, advocated a scheme somewhat similar in principle to this one, but on a much broader basis. I am convinced that something must be done to reduce the wheat acreage of this country, but, like other speakers, I also am convinced that the producers, on the quota which they are allowed to deliver, must receive somewhere near a parity price for what they are allowed to deliver. I spoke several times last year and, I think, proved conclusively that the parity price at that time was approximately $1.25 a bushel, Fort William—certainly a great contrast to this allowance of 70 cents.

I am opposed to handling this matter in the manner proposed by the government. I was disappointed that the minister did not introduce a bill covering these regulations or the operation of this scheme. Such dictatorial

powers as are involved in a matter of this kind should not be given to one individual by order in council.

May I also point out that, notwithstanding the difficult plight of agriculture from coast to coast, the agriculture committee of this house has not met once during the last two sessions of parliament. It is hard to understand why that committee has not been called together to discuss the serious condition of agriculture, about which the government professes to be so much concerned.

Under the Prairie Farm Assistance Act the Minister of Agriculture is almost a dictator, but only farmers producing under twelve bushels an acre have come under his rule. Under this new scheme all the farmers of the prairie provinces will come under his dictate. I am certainly of opinion that this authority should not be given one who enjoys the reputation of a great partisan administrator. As some evidence of what may happen, let me quote from the report of the auditor general for the period ended March 31, 1940. Referring to the Prairie Farm Rehabilitation Act, he states on page 61—to cite just one case—

> Commitments of approximately $1,315,575.20 were incurred in excess of the amount appropriated without certificates of the comptroller of the treasury being secured in the manner provided for by sections 26 and 29 of the Consolidated Revenue and Audit Act, 1931. These overcommitments, by group classifications, are made up of: land utilization, $22,036.47; water development, small projects, $909,553.00, large projects $384,185.73.
>
> By an amendment to the Prairie Farm Rehabilitation Act (chap. 7 assented to 5th April, 1939), the minister may, subject to the approval of the governor in council, enter into agreements with provinces, cities, towns, persons, etc., for projects or schemes for the conservation of water. Payments during the year were made in several cases on ministerial authority only. . . .

The report goes on to quote examples. I would point out that this was taking place during the latter part of 1939—not so many months prior to the general election of March, 1940.

Turning to page 66, we find, with reference to the Prairie Farm Assistance Act:

> Regulations made under the act and approved by order in council dated November 23, 1939 (P.C. 3820) provided for the establishment of a committee of review, the duties of the committee to be to examine data, to review yield categories, to consider applications open to question and to report its findings to the Minister of Agriculture. Under the statute before it was amended in 1940, the determining of the acreage yield, which formed the basis of acreage awards, rested with the Minister of Agriculture and the law officers expressed their opinion that the non-concurrence of the committee did not preclude the minister from awarding assistance. Several awards were made by the minister covering yields not accepted by the committee. Farmers were not required to make applications for assistance. While section 5 of the act gives the power to make regulations to require farmers to furnish information and section 11 makes it an offence if any person falsely claims assistance, the farmers filed only acreage reports and the value of the certification to these reports was often negatived by changes unsigned by the farmers.

There are many other similar references on these pages, all illustrating the great extent of the authority which is vested in one minister under regulations brought in as these have been. I am very much of the opinion that there should be a minimum clause in these regulations in order to protect the small producers. It was pointed out by one of the previous speakers that the average number of acres of wheat produced by the farmers is fifty. Throughout a large part of Manitoba a minimum of eighty acres would not be too much for the farmers, and I do not think any farmer should be compelled to reduce below that acreage. There should also be some restrictions on the large farmers with an opportunity to cash in on this scheme. Moreover, when this scheme was being considered by the government, the Minister of Agriculture, I believe, invited the provincial departments of agriculture and municipal officials to Ottawa. They were amazed to read on the train, coming to Ottawa, the announcement of the policy before they had been consulted.

The three provincial governments have taken the stand that the initial payment on wheat should be at least 85 cents. The western union of municipalities, after due consideration, recommended that the payment should be 95 cents a bushel on this quota basis, and I believe the quota they advocated was approximately that which has been arrived at.

The Sirois commission in their report point out that from 1896 to 1913, under a vigorous immigration policy carried out by the government of that day, assisted by the railways and the real estate companies, a vast expansion took place in western Canada, and land ranging from 10,000,000 acres to 70,000,000 acres was settled, with the result that wheat acreage expanded accordingly. The officials under the Prairie Farm Rehabilitation Act contend that there has been conducted throughout a considerable part of that area a soils survey by the soils experts of the three provincial governments, and they suggest that 6,000,000 acres of land should be taken out of grain production. Some headway has been made in this direction. A large part of that land lies within the boundaries of Saskatchewan. The statement is often made that, from patriotic

motives, this great expansion in wheat production took place during the last war. On going over some of the records, I find that wheat acreage in 1914 in the prairie provinces was 9,335,400 acres. In 1918, at the conclusion of the war, it was 16,125,451 acres. In 1939 it was 25,813,000 acres, and in the last year, 1940, it was 27,750,000 acres. Therefore, by far the greatest expansion has taken place since the last war.

In the last two years, when international prices were tumbling because of oversupply, Canada has increased acreage by 11½ per cent, while the rest of the world has been reducing acreage by 10 per cent. We must, therefore, face, in some manner, the issue of wheat production. More than that, while the peoples of the world procured their wheat requirements from an average of seventeen acres out of every 100 cultivated acres, we in Canada have been attempting to produce wheat on every sixty out of 100 cultivated acres in the prairies. That should convince us that we ought to cease burying our heads in the sand and face the situation.

Whether we like it or not, the economy of western Canada is facing a radical change at this time, and we must give some thought to what lies ahead of us in this regard. In the four-year period from 1925 to 1928 inclusive, we produced in the prairies 1,745,000,000 bushels of wheat. At that time the index purchasing power was 96 compared with 100 in 1913. In the recent period, from 1937 to 1940, we produced 1,511,000,000 bushels, and the index purchasing power was 50·2. In other words, in the previous four years, 1925 to 1928, we produced a quantity in excess of this year's quota requirements, and the price was still considerably more than the index is now at this particular time. Moreover, in 1928 Canada was supplying 40 per cent of the world's exports of wheat, according to the Sirois report, book I, page 144. Therefore, at that time, before people were preparing for the war—and they have been doing it for the past ten years—this unusually large surplus threatened a slump in the prices. Germany, Italy and France began to erect tariffs of $1.62, $1.07 and $1.85 a bushel respectively, which added to our difficulties during that time.

The hon. member for Portage la Prairie suggested that the chap who operated the tractor was more responsible for our difficulties than anyone else to-day, and there is some truth in that statement. I would point out, however, the great transformation that has taken place in agricultural production in

[Mr. Fair.]

recent years. Mechanization has affected that production to a considerable extent. The following extract is illuminating:

> It is stated on good authority that in 1830, unaided by machinery, it required about 57 hours of man labour to grow and harvest an acre of wheat yielding 20 bushels. The introduction and use of machinery brought the hours of labour required to grow an acre of wheat down to 3·3 in 1930.

It has been accelerated since then.

> Having once made the change from horses to tractors, land formerly used for forage, pasture and coarse grains is converted to wheat production to obtain a larger cash crop, and one which can best be depended upon where rainfall is scarce.

I quote still further:

> Notwithstanding criticism to the contrary agriculture has kept pace with industry so far as efficiency is concerned. In the United States between 1910 and 1930, output per worker increased 39 per cent in manufacturing and 41 per cent in agriculture. A long-range contrast shows that 150 years ago it took 19 persons living on farms to produce enough for themselves and for one person in town. To-day 19 persons on farms can produce enough for themselves and for 66 living in towns. That condition is undoubtedly comparable with the situation which obtains in this country as well.

People have been forced into mass production by machinery owing to the necessity of having to reduce cost of production. According to the *Canadian Cooperative Farm Implements Journal*, a binder in 1913 sold at Regina for $167, and it took 261 bushels of wheat to pay for it. In 1936 the same binder sold for $281, and required 319 bushels to pay for it. In 1940 it sold for $340 and required 637 bushels to pay for it. That is conclusive proof of the position into which producers have been forced, to some extent perhaps against their better judgment.

Since the outbreak of war, labour in this country has been placed in a highly protected position. Those in industry are protected by the government of the day, but agriculture is left to look after itself. The farmers would be content with the prices that prevailed before the great depression. They would be more than content; they would be delighted if returns from farming were on the basis of 1929. This government has seen fit to place labour on the basis of the wages prevailing from 1926 to 1929, plus any increase which may be brought about during this war effort. The yearly average of agricultural prices on this basis, taking Winnipeg as the index, would be as follows:

Wheat	$ 1.20
Hogs, live weight	11.00
Cattle, best killing	9.20
Butter fat	.40

I would point out that cattle is the only agricultural product to-day on anything like equality with the prices prevailing before 1930. If we take the index of all farm products for the period from 1926 to 1929 as 100, the figure for 1940 would be 69. Costs are down, but not to anything like the same extent, and those costs have increased considerably since the beginning of the war. The exchange situation alone has automatically increased the price on important machinery such as tractors.

The situation, then, is that labour is in a sheltered position; industry is booming; finance is thriving because industry is active, but agriculture is left to look after itself. According to the Searle index, labour in 1939 received wages 91 per cent higher than those of 1913-14. Further than that, we have the statement of the Minister of Munitions and Supply (Mr. Howe) on Februray 25, that some $307,000,000 has been supplied by the government to industry in this country by way of capital assistance. Of that total, approximately $10,000,000 went to British Columbia; $16,000,000 to the three prairie provinces, and by far the greater part of the remainder to Ontario and Quebec.

I had the privilege of visiting the city of Hamilton not long ago. I was amazed at the work being carried on there, but I was later surprised to learn that that city, with a population of approximately 160,000, had received something like $26,000,000 by way of capital assistance to industry. Why, even the city of Niagara Falls, which is not very large, received $14,000,000 for this purpose. So, Mr. Chairman, you see how all this money which has been put into circulation by the government has intensified the difficulties of agriculture at the present time. It was pointed out by the hon. member for Haldimand that even before the outbreak of this war, agriculture, which includes approximately one-third of the population of this nation, received only about one-twelfth of the national income, and this great disparity has been increased since the war.

I believe farming should be considered, first, as a way of life and, second, as a business; that is, the farmer should be encouraged in every way to produce a livelihood for himself and his family. In this regard I should like to make some reference to the processing tax. Last year this matter was discussed; and, if I remember correctly, the Minister of Agriculture expressed the opinion that the producer who took his own grist to the mill should not have to pay this tax. On September 3, however, 1940, order in council P.C. 4387 was passed setting up the regulations governing the payment of this processing tax and, after some protest by producers throughout the country, on February 1, 1941, order in council P.C. 134/813 was passed, rebating this tax to the producers of Quebec, New Brunswick, Nova Scotia and Prince Edward Island.

In Manitoba, from which I come, we have forty-three flour mills, two of them located in my own constituency. The secretary of the provincial millers' association is also one of my constituents. I communicated with the various millers through the province in order to ascertain what they had collected from the producers and turned over to the government during the first six months of the operation of this tax; and after having received that information, I am satisfied that, if this policy is continued, these local grist mills will be forced out of business, which will be an added hardship on those farmers who normally have their gristing done in this way. I have here the information from fifteen of these mills as to the amount collected by them from July 20, 1940, to February 1, 1941, as follows:

Turtle Mountain Milling Company—Deloraine	$ 3,200 00
Steinbach Flour Mills—Steinbach	4,333 70
A. W. Snider—Wawanesa	1,012 20
Treherne Flour Mills—Treherne	585 22
Holland Flour Mills—Holland	459 40
Morden Milling Company—Morden	1,527 15
Somerset Flour Mills—Somerset / B. P. Kent Milling Company—Virden	6,000 00
Harrison Milling and Grain Company—Holmfield	1,200 00
Winkler Milling Company—Winkler	1,700 00
Morris Milling Company—Morris	5,331 55
Gardenton Flour Mills—Gardenton	3,318 00
Roblin Flour Mills—Roblin	889 65
Hamiota Flour Mills—Hamiota	4,445 54
Pine River Milling Company—Pine River	1,452 45
Total	$35,454 86

Average per mill tax paid on gristing, July 20, 1940, to January 31, 1941, $2,363.

I do not know why there should be this discrimination as between these four eastern provinces and the rest of the country; and I think some consideration should be shown those producers who wish to have their own gristing done. They should not be taxed for having their own flour produced for their own consumption.

I am convinced that somebody must endeavour to create a plan for agriculture in this country from coast to coast. During the early years in western Canada, such a plan was not needed, but to-day the situation has entirely changed. On those prairies we have some three million people, many of whom were born and raised there and who desire to

continue living there. We have many scientists of one kind and another, experts in agriculture, and I believe the government should get these people together and evolve some policy to assist in that new economy which is coming to this country whether we like it or not. The other day it was pointed out by one hon. member that seldom was a war lost by a country having a surplus of foodstuffs on hand. We are fortunate in having the great surplus that at present exists in this country. I should like to quote what was said by Mr. Winston Churchill, Prime Minister of England, on August 20, 1940:

Wheat for Victory

We shall do our best to encourage the building up of reserves of food all over the world so that there will always be held before the eyes of the people of Europe, including—I say it deliberately—the German and Austrian peoples, the certainty that the shattering of nazi power will bring to them all immediate food, freedom and peace.

Mr. David Lloyd George, speaking quite recently, has made statements along similar lines. It is interesting to note that when Canadian farmers are endeavouring to better their conditions, one of their spokesmen in Great Britain, no less a personage than Mr. David Lloyd George had this to say, speaking as one farmer to others at a meeting held recently in Carnarvonshire:

We must see that the farmer gets a reasonable return; it is no use thinking you can compel him to cultivate his land to the utmost, you can't; you must make it worth his while, you must bring him along as a willing helper.

That is essential, for the security of the nation, according to Mr. Lloyd George. Furthermore, as proof of the fact that in Great Britain they consider agricultural products as munitions of war, I believe the British Minister of Agriculture puts in requisitions to the government of Great Britain, which are forwarded to the Minister of Munitions and Supply at Ottawa, for all agricultural implements required from Canada to be delivered in the old land. That is significant proof of the fact that they consider agricultural production as being in the same category as all other munitions of war.

I am much of the opinion that in these times, in connection with storage on grain surpluses, we are paying altogether too much to the grain trade. On February 19, order in council P.C. 1125 was passed permitting the grain trade to erect storage facilities at the head of the lakes for an additional 50,000,000 bushels of wheat. In that order in council they guarantee a certain period of storage, and also point out that the cost of construction may be written off in a period of two years. There is an additional provision whereby they may deduct 50 per cent a year in the filing of income tax returns.

May I remind the committee that when a farmer wishes to erect facilities for grain storage on his own farm, he must, when filing his income tax returns, spread the cost of that construction over twenty years. He is allowed a deduction of only 5 per cent, whereas by this government the grain trade is allowed 50 per cent. Certainly that is not very much encouragement for the producer to erect his own storage on his own farm.

Concerning what the grain trade has cost us in the handling of grain, I would quote from a speech delivered by the hon. member for Wood Mountain (Mr. Donnelly) at the last session. His speech is recorded in *Hansard* of July 25, at page 1960, as follows:

I should like to say a word with regard to the handling charges on wheat. These charges, to me, particularly this year, are absolutely ridiculous. I believe the handling charges during the past year were far too high. They may be all right with wheat at $1.50 a bushel; they may be all right in ordinary years, when our elevators may be only partly full for a few months and almost empty for the rest of the year. But in a year like last year, when they were three-quarters full all year, and next year, when they will be full all year, these charges are absolutely ridiculous. Let me give the committee an example of what I mean. We are told that the amount paid by the board to the elevators for storage alone was something like $14,612,000. That was on 318,000,000 bushels of wheat. There was an additional 100,000,000 bushels or so not handled by the board, so the total amount paid for storage alone by the grain trade and by the board must have been well over $16,000,000. But there is something else in addition. The other day the statement was made that only one-third of the income of the elevators came from storage, the other two-thirds coming from other, additional charges. So there must have been another $32,000,000 received from other sources, making in all something like $50,000,000 paid for handling our wheat last year. If anyone tells me that is a reasonable amount to pay for the storage and handling of our wheat in one year, all I say is that he does not know the condition of our farmers. We sold something like 400,000,000 bushels, for which we received approximately 50 cents a bushel, or in round figures about $200,000,000. But we paid $50,000,000 or one-quarter of the selling price, just for the handling of that wheat.

Then, at page 1961 he is reported as follows:

All the act says is that the board of grain commissioners shall fix the maximum rates that may be charged for the handling, cleaning and storage of grain. If that board does not cut this price to the bone—I say it should be cut in two—then we should amend the Canada Grain Act in that respect, because I do not consider these prices either reasonable or right. I say that the cost of handling our wheat was $50,000,000, not only on the authority of the statements I have mentioned but because of other statements I have heard to the effect that the

grain people received in the neighbourhood of 13 or 14 cents a bushel on all the wheat they handled. I can give the committee those figures if necessary, because I know what they are.

Mr. Crerar: Does that include freight?

Mr. Donnelly: No, that does not include freight at all. That is something else which the farmer has to pay. This is just for elevation, storage, cleaning, loading into cars, service charges, diversion charges and matters of that kind.

That is, I think, proof enough for this committee that the grain trade have been well looked after by the government of the day. I well remember looking over the contract the grain trade received the year prior to this from the wheat committee. In that contract the trade was allowed storage from the time the wheat was dumped in the pit, irrespective of the fact that the farmer is entitled to two weeks' free storage, and usually for some thirteen days while it is in freight cars en route to terminals. Irrespective of these facts, that contract allowed the grain trade storage for those two weeks, and allowed storage while the grain was in freight cars in transit to terminals. That is something which I do not think can be justified under present conditions.

Mr. WOOD: With regard to the cost of storing wheat in elevators in western Canada, is it a fact that the major portion of the holdings is held by United Grain Growers and pool elevators? Is it not also a fact that the great majority of the stockholders of those two companies are farmers, and that the $66,000,000 paid for storage, or a large portion of it, would go back to the farmers who are the shareholders in those companies?

Mr. ROSS (Souris): Not to my knowledge. I have not the figures before me to answer that question properly. However, it is not so, to my knowledge.

Mr. WOOD: That is a pertinent question, when the hon. member is speaking about farmers' incomes.

Mr. ROSS (Souris): My time is almost up, and I should like to finish what I have to say.

Mr. WOOD: Perhaps the committee would give the hon. member extra time.

Mr. ROSS (Souris): I have not the figures before me. I will say, however, that I am opposed to the deal which has been given the grain trade, although I have not time to go into it in detail at the moment.

As I said earlier, I am firmly convinced that if we are to deliver this wheat on a quota basis, then we should be guaranteed somewhere near the parity price which, it has been admitted elsewhere by many people, is approximately $1.25, basis Fort William. The provincial governments, the municipal unions, the pools—all organizations on the prairies connected with the welfare of the farmer are practically in unison that the farmer should have what would be the equivalent of at least 95 cents a bushel. As I said, they asked that the initial payment be at least 85 cents a bushel, other amounts being taken into consideration to reimburse them as time went on.

I have said I am firmly convinced that what is needed more than anything else in Canada is a great national agricultural policy. We have anything but that at the present time. Throughout Canada we have a great economic disunity. I hate to think of what might happen in the country were it not for the fact that Canadians are determined to win this war, irrespective of whether or not they are given leadership. That is one factor which is saving the great economic difficulty in our midst at this particular time. There is no doubt in my mind as to that fact.

The Sirois commission report makes fine reference to agricultural conditions in Canada. I was very disappointed that more did not come out of that conference which was held on January 14 and 15. There has never been a greater lack of leadership displayed in the history of Canada than was displayed at that conference by the Prime Minister. Much good would have come out of that conference if the federal and provincial authorities had sat round this table and discussed the economic situation. I think we might, after further consideration, give an advanced price to the producers of this country on the quota which they will be forced to deliver this year.

Mr. ROWE: It is not my intention to keep the committee at any great length at this time; in fact, from the appearance of the committee it would appear that it is not its desire that I should. I wish, however, to conclude what I was saying the other evening. Since receiving the regulations which were brought down by the Minister of Agriculture (Mr. Gardiner), I feel more alarmed than ever over this new fantastic type of policy which is being enunciated in this proposed vote. I realize, as does every hon. member, that for some years the wheat problem has been of grave concern to everyone interested in the welfare of this dominion. It has interested those of the banking profession; it has certainly interested those of the bond and mortgage houses, and it has interested those who are dependent upon the wheat fields. On the other hand, there are those in the country who believe that bonuses and subsidies are vicious in principle and should never be applied to agriculture.

I feel that we have long since adopted the principle of bonuses and subsidies in our

present organized society from coast to coast. As a supporter of the party that sits to your left, Mr. Chairman, while I have been interested chiefly in agriculture, I have also been strongly in favour of a reasonable protective policy in order that industry may develop and thus increase our home markets. There are those who still cling to old free trade ideas, but this is not evidenced so much by the party that sits to your right. It may be said that by our support of a protective policy we have given bonuses and subsidies to industry. I have heard this argument advanced in the house on many occasions.

At times there has been great difficulty in connection with our iron and steel industry, and bonuses have been paid. A much greater percentage of bonus is paid to the iron and steel industry. We have given bonuses or subsidies, whatever you may wish to call them, to the coal industry.

Mr. HANSON (York-Sunbury): Subventions.

Mr. ROWE: The leader of the opposition says that "subvention" is a more modest term. This principle has been long since established. The labouring man who carries a dinner-pail to his work is given something in the way of security. While we may not call this a subsidy or a subvention, he is given the assurance that he will have to work only so many hours for which he will receive so much money. We recognize the principle of collective bargaining so that his labour may not be exploited for the advantage of those who hold stock.

Mr. GOLDING: What assurance has he of a job?

Mr. ROWE: His union will be ready to tell you whether or not you can fire him. I am merely referring to the principle, and I doubt if even my hon. friend will disagree when I say that is the situation at the present time. I have referred to the protective policies in connection with industry. Such a policy was encouraged by the party that sits to your left, Mr. Chairman, and it has been followed by the party that sits to your right. Labour is given this security; but when this principle is applied to agriculture, there are many people in the country who hold up their hands in holy horror and say that it is unsound and vicious and should not be applied.

Why? Evidently the farmer is not organized sufficiently to carry out collective bargaining. The payment of bonuses and subsidies to agriculture under depressed conditions is just as justifiable as the payment of any other bonus or subsidy. It may be that we have too many of these artificial supports for industry; it may be that wages paid to labour are too high, but the fact is that this is the present trend of society. It is the result of the effort on the part of all governments to equalize the conditions of all classes of our people. I do not wish to repeat what I said the other night, but I have been in favour of the payment of bonuses and subsidies when agriculture is depressed. Hon. members on the other side will recall that I was among the first, if not the first, to propose the payment of bonuses to agriculture some years ago. I urged that on different occasions on the government of the day, of which I was a supporter.

At that time I proposed bonuses for cheese, for bacon, for beef and for poultry products. This was at a time when the price of sterling meant that we were receiving low prices for our bacon, cheese and other products. Our farmers could not meet their obligations, and I made the suggestion I did at that time. It would have been a sound policy to follow, much sounder than the fantastic type of policy being presented to this committee. I suggested that, in addition to a grain commission, there be set up a live stock commission. I suggested also the establishment of an export marketing board to consider the securing of overseas markets and to supervise the inspection of grades in order to make sure that producers of live stock products were not exporting a poor class of product to the market upon which they were dependent and thus automatically forcing down the price.

I think it would be a sound policy to pay a bonus only for high grade products. This bonus could be secured from the producer, and when the price rose to a certain point it would be eliminated automatically. Such a policy would have some tinge of soundness, some tinge of permanency and some tinge of economic advantage for this country. As the hon. member for Souris (Mr. Ross) has said, for a long time this country has been pleading for a national agricultural policy. I think we have tended too much toward being wheat-minded, and I say that with all respect for those who are struggling with the desperate problem of a surplus which is costing this country millions of dollars a year to carry.

I have had some experience in the growing of wheat, but I have not been fortunate enough to grow it in a district where I was paid for growing it or paid for not growing it. Wheat has been an important part of the crop of old Ontario, but I suppose we shall just carry on as usual. This $35,000,000 is to be paid to people for not growing wheat, but there is no particular indication in this legislation that we shall not have a drought and that wheat will not go up again to $1 a bushel. I suggest that what we need in this country

is a policy which will encourage farmers to produce what they can sell, rather than to try to sell what they produce.

We know that this year the Department of Agriculture will spend from nine to ten millions in order to protect our animals from parasites, and to develop more scientific methods of production, in order to increase production and lower costs, all of which the industrialist might consider was a bonus. A great deal more can be done, and certainly the farmers of this country will have to learn to produce more cheaply. I think it will be generally agreed that farmers should be encouraged to produce other products than wheat. Take, as an example of what can be done, the development of soya beans by the Ford Motor Car company. The manufacture of alcohol and several other lines of production which have not so far been given much consideration might well be opened up. I know it might be said that it is no use mentioning other lines of activity in which the farmers might engage, because that still leaves the problem of the wheat crop. I realize that diversification would not be the whole solution; but undoubtedly we need more research, more expansion of production and more support for the diversification of agriculture so that we can produce the things we can sell, rather than trying to sell what we produce.

In connection with these proposals of the government, we find members who have formerly criticized any form of bonus or subsidy as the most vicious form of policy, actually supporting a policy which does not subsidize or bonus the farmers to do something but bonuses them to do nothing, and that at a time when the nation is pleading for an all-out war effort, at a time when there will very soon be a shortage of labour. At this very time we are inaugurating a policy embodying a vicious principle similar to the dole, giving people something for nothing. I feel that in this policy we have the greatest political gunshot prescription for agriculture that I have ever seen brought before the house. When one thinks for a moment of what the Minister of Agriculture can do with it—he smiles, and I would smile too if I could see any hope ahead for agriculture in these policies—

Mr. GARDINER: I see a lot of trouble ahead for me.

Mr. ROWE: The minister says he sees a lot of trouble ahead for him. I can see in the far distance—I do not like to state it in advance—

Mr. GARDINER: Say it.

Mr. ROWE: The minister says, "Say it." I can see plenty of possibilities for political corruption in it too, in western Canada.

Some hon. MEMBERS: Oh.

Mr. ROWE: Some hon. members say "oh". Here is the government bringing down its proposals for agriculture, and the hon. member for Portage la Prairie (Mr. Leader) says that he does not want to have anything to do with the baby. The hon. member for Wellington North (Mr. Blair) also said that he did not want to have anything to do with this baby. No wonder that, as I said the other evening, neither the Minister of Agriculture nor the Minister of Trade and Commerce (Mr. MacKinnon) was courageous enough to father this child alone, so they introduced it jointly. I do not know which of the two might best be called its father, but it looks to me more like the Minister of Agriculture.

Mr. LAPOINTE (Quebec East): Does the hon. member want to adopt it?

Mr. ROWE: No, I would not want to adopt it, because I think it will prove the most difficult child that has ever been raised by this house.

An hon. MEMBER: You would bring it up a Tory.

Mr. ROWE: No, there is nothing Tory about it. It is a wild political idea framed to get votes in western Canada and to strengthen the machine that has been built up in Saskatchewan. It is useless so far as being any solution of the wheat problem is concerned. I am not surprised that it has been said that this is more of a ministerial child than a party child, and I am not surprised that it was more or less introduced to the public before being introduced to parliament. The minister shakes his head, but his henchmen in western Canada had certificates printed—

Mr. GARDINER: The certificates are not printed yet.

Mr. PERLEY: The applications then.

Mr. GARDINER: The applications are not printed yet.

Mr. ROWE: The western papers, the Regina *Leader Post*—I do not have it here, but no doubt the minister has seen it—says that the machinery is all set up.

Mr. GARDINER: There is not even one of the forms drafted yet, let alone printed.

Mr. HANSON (York-Sunbury): The secretaries of the municipalities said that the scheme was all arranged.

Mr. GARDINER: They said that they were going to carry out the plan. What I have stated is the absolute fact, that not one of the forms is even drafted yet, let alone printed.

Mr. ROWE: I am glad that parliament has had something to do with the matter, because, after all, parliament is in session.

Mr. GARDINER: That is absolutely right, and parliament has something to do with it.

Mr. ROWE: Certainly I am right. That child is going to be handled like other children have been handled in the past. The hon. member for Souris has told the committee what happened in connection with some of the other expenditures. I notice by page 66 of the auditor general's report that, under the old assistance act, several awards were made by the minister as to yields which were not accepted by the committee.

Mr. GARDINER: I should like to add that thousands of them were made before the committee was even set up.

Mr. ROWE: I would expect that, and thousands were made just before the election in 1940.

Mr. GARDINER: They were made before the election was even heard of.

Mr. DONNELLY: Someone has to make the decision.

Mr. ROWE: I am not taking the word of the Minister of Agriculture; I take his word, of course, in a general sense, but I am not taking his word as to the soundness of the awards.

Mr. LAPOINTE (Quebec East): What an evil mind for a nice fellow!

Mr. ROWE: I thank the Minister of Justice for his compliment of even assuming that I am a nice fellow, but, after all the evils I have seen—

Mr. GARDINER: If I might be permitted, for I am sure my hon. friend does not want to be unfair, I should like to point out that everything stated either in the auditor general's report or in the discussion this afternoon was provided for by legislation. I understand that my hon. friend's objection is that something is not being done by legislation, but everything referred to there was done by legislation.

Mr. ROWE: The letter killeth and the spirit giveth life. We were told that awards were to be made on acreages that would be assented to here. We know there were regulations. I am not suggesting that the minister has done something that he did not have power to do. As a matter of fact, he gets power to do almost anything he likes with this type of farm expenditure. But I ask, what is the use of setting up a committee if you are not going to take its recommendations? Does the minister mean to tell this committee that he knows better than a committee on the ground what Tom Jones is producing in a garden that always grew potatoes?

Mr. GARDINER: Under the act as it was at that time, no committee was provided for. I set up the committee myself by virtue of having power to make regulations.

Mr. ROWE: Surely the minister does not think the committee is so dumb as not to understand that. Let me quote from page 66 of the auditor general's report. It reads:

> Regulations made under the act and approved by order in council dated November 23, 1939 (P.C. 3820) provided for the establishment of a committee of review, the duties of the committee to be to examine data, to review yield categories, to consider applications open to question and to report its findings to the Minister of Agriculture. . . . Several awards were made by the minister covering yields not accepted by the committee.

Mr. GARDINER: On a point of order, Mr. Chairman, my hon. friend a few moments ago threw out the insinuation that there had been some corruption in connection with this act. As I understand parliamentary procedure, any member who makes a charge of corruption in connection with anything having to do with the administration of a department places his seat at the disposal of the house.

Mr. ROWE: Mr. Chairman, on a point of order—

Mr. GARDINER: I should like to suggest to my hon. friend that if he is prepared to do the only thing which is called for under the circumstances, we can settle the question whether there is any such corruption.

Mr. ROWE: That is pretty cheap. On a point of order, let me state to the Minister of Agriculture that if we were to stake our seats upon the mercy of the public at the present time, I would take my chances with his popularity in the country at this time.

Mr. GARDINER: On a point of order—

Mr. ROWE: No, Mr. Chairman, I am speaking on a point of order.

Mr. GARDINER: —I ask the hon. gentleman to withdraw the word "corruption."

Mr. ROWE: Speaking on the point of order, I did not use the word "corruption."

Mr. GARDINER: The word "corruption" is not parliamentary, and I ask the hon. gentleman, if he does not want to make a charge, to withdraw the expression.

Mr. ROWE: I do not withdraw a statement I did not make. If you, Mr. Chairman, in your good judgment consider that by my saying I can visualize in the far distant future the possibilities of political corruption, that is a charge of corruption, I withdraw it. But I made no representation in this particular instance that there is any political corruption reported in the auditor general's report. I leave it to the committee if I did not say this,—I do not think he wants to do me an injustice, and I believe he misunderstood me—

Mr. GARDINER: I did not misunderstand the hon. member, and I wish to state the point of order again. My hon. friend referred to these particular regulations, and inferred that they made provision for corruption.

Mr. HANSON (York-Sunbury): No, no.

Mr. GARDINER: Then he proceeded to read this report to prove that such things had been done before.

Mr. HANSON (York-Sunbury): What the hon. member said was that, in the vote now before the committee, he could visualize political corruption in the future. That is what he said.

Mr. GARDINER: And then he immediately proceeded to illustrate it by what he is going to read from this particular report.

Mr. HANSON (York-Sunbury): He is referring to another topic altogether.

Mr. GARDINER: So long as my hon. friend agrees that he is not trying to prove any such thing, that is quite satisfactory to me.

Mr. HANSON (York-Sunbury): All right.

Mr. LAPOINTE (Quebec East): All right.

Mr. ROWE: I notice that the Minister of Justice says, "All right." I know he heard it the right way. I do not want to charge the minister with being hard of hearing; but with being too keen. It has not been my practice to charge corruption across the floor of the house, and I had no thought of charging corruption as such.

I wish to say that, in reading this further, I found that farmers were not required to make applications for assistance at all. I quote:

> While section 5 of the act gives the power to make regulations to require farmers to furnish information and section 11 makes it an offence if any person falsely claims assistance, the farmers filed only acreage reports and the value of the certification to these reports was often negatived by changes unsigned by the farmers.
>
> Under the act, farmers are paid awards when their yields are in excess of 12 bushels to the acre. . . .

That has been mentioned.

> Awards have been made on summer-fallow acreage where in many cases the summer-fallow exceeds the seeded acreage. A limited test audit showed that of the total cultivated acreage approximately 35 per cent was in summer-fallow. In this respect, the levy on grain sold has no relationship to the award.

I merely wish to say, Mr. Chairman, that this was not the impression which was left in this house at the time the bill was passed.

> That is to say, the levy is collected on grain harvested from 65 per cent of the acreage while the award is based on 100 per cent.
>
> Awards have been made on the basis of wheat yields in districts where wheat represented but a small percentage of seeded acreage. In one town in Manitoba awards were paid on 113 cultivated acres, of which 25 acres were seeded to wheat. The act provides for regulations covering this feature, but no regulations have been made.
>
> Payments have been made in many cases where the cultivated acreage was too small to put persons in the category of farmers. These cases ranged from 25 acres to 2 acres.
>
> Payments have been made to persons who, in no sense, were grain farmers, i.e., persons who owned small plots and eked out a living by selling milk, cutting wood, et cetera.

And they got the bonus.

An hon. MEMBER: The preachers could get the bonus.

Mr. ROWE: My hon. friend says that the preachers could get the bonus. I should be glad to see some of them get the bonus if it is to be passed all round.

> Farmers have received awards on dry land acreage while they may have garnered crops from irrigated lands so long as the latter did not exceed 300 acres.
>
> Awards may be paid where hail is the cause of the low yield and consequently hail insurance is also payable.
>
> Awards have been made covering land for which rent is paid from the Prairie Farm Rehabilitation Act vote. Under this arrangement the farmer is paid $5 an acre for land to be put in small plots and $1 an acre for other land.

I remember that when that was up in the house I assumed it was for strip farming, to avoid drifting. This farmer was to be paid $5 an acre in those cases, and $1 an acre for the larger areas. I remember that being discussed in this chamber. What do we find is happening under these regulations?

> The farm is supervised by the department and the farmer retains his crop.

That, I assume, was under the regulations, and is quite justified. But in one case, $640 was paid under this arrangement for a section of land rented by the government, and the farmer was paid $500 because he did not grow any crop.

I point out these instances merely to indicate what can happen under this prescription which is now employed to cure the ills of the wheat farmers. Am I in order when I say that I can visualize the possibility of the greatest political racket which has ever been carried on in any part of Canada? Every other man is to be an inspector, with a long list of regulations. When we did have regulations, the minister had the power, he said, to do what he liked with them. When we had a committee to find out who was entitled to collect, he still had the power to pay, whether the man was a potato farmer, whether he sawed wood, whether he grew wheat, whether he got rent from the government, or whether he got hail insurance.

Thirty-five million dollars is a great deal of money, and we have no assurance that that is all; for this is the lowest possible estimate in order to put it through this house. It may go to seventy million dollars. The Lord only knows where it will go to. Somebody said that it should go to a hundred million dollars. Yes, probably you get so accustomed to taking it, you feel you had better keep it. I submit, however, that this kind of thing is no solution. It is a retrograde, defeatist type of policy. The kind of bonus that I suggest to my hon. friend is a bonus for the production of the highest class of products rather than a bonus for reduction and no production of anything, by summer-fallowing at $4 an acre. We find that summer-fallowing means the cultivation of fallow land before August 1, 1941, in such a way as to conserve soil moisture and prevent soil drifting. Is there an hon. member in this chamber who would rent a farm on a lease drawn up as loosely as that? What is to constitute a summer-fallow? Any one who has farmed knows what a summer-fallow is.

Mr. GARDINER: What is it? Just what is it?

Mr. ROWE: I am not going to take the time of the committee in defining it, although I know what one is, probably better than the Minister of Agriculture, and have summer-fallowed just as much land as he has. I wish to say, however, that this leaves an opening for a man to run over a large tract of land with a wide spring-tooth cultivator, hitting it here and there, so that from over yonder you can call it "all black and $4 an acre."

It is not a question of assistance to western Canada. It is not a case of a policy dividing east and west. It is not a question of doing something for those who, I know, require help. I do know, I think, the position of the farmers, at least throughout my own district in Ontario, and I have some idea of what conditions must be in western Canada. I have seen hardships, and I submit that the farmers of Ontario are having their difficulties. I know of many people who have lowered their standards of living, many who have broken their health, many who have lived in a condition of privation such as they never before experienced until the last few years, and who are struggling with their backs to the wall to try to support the Red Cross, the war services drive, and doing their level best. I know women who are knitting provided they can get the yarns, and people who are humiliated because they cannot contribute to these worthy causes as they did in the past, on account of the fact that they are struggling, with their heads up, trying to solve their own problems.

Talk about national unity! This sort of thing divides us province from province across the dominion. We set up a vote and we loosely draw the regulations. It leaves it wide open to all sorts of manoeuvring and twisting, which the Minister of Agriculture would not do, but probably some of his friends or my friends might do if they had the opportunity.

Mr. TRIPP: Is the hon. member questioning the good faith of the western farmer?

Mr. ROWE: I cannot help it if the hon. gentleman does not understand my speech, but I can say that I have never questioned the good faith either of himself or of his supporters in western Canada, because, I too, am a farmer. Why should I question the good faith of farmers? I do, however, question the soundness of this as a farm policy, because it is ridiculous on the face of it. As the hon. member for Souris has pointed out, this is a time of war, and the Right Hon. Mr. Churchill is pleading to this country for ships and more ships. He is asking that every man should go to work. He is asking every working man and working woman in England to help. He is asking old men who have not worked for years, to bend their energies to the prosecution of the war. Even boys are engaged in putting out fires. He is pleading with the people of every part of the empire to produce and produce in enormous quantities so that when the post-war days come, we can point out to the nazis, the Italians and every other nation in the world that we, under a democratic system, have a bread-basket big enough to give a lunch to every man who is hungry.

What are we doing in the face of all that? We are bonusing our farmers to stop growing wheat, simply because it is difficult to get it across the seas. Well, Britain is eating

wheat; Europe would like to eat wheat, and Britain is eating wheat from foreign countries at this very time. The countries of Europe, Poland, Czechoslovakia, Belgium, Norway, Denmark, the Scandinavian countries, are all pleading for bread; and even under the Red Cross, with the help of the United States, they cannot get it. I ask, is it not a good time for us to prepare for a full bread-basket? Would it not be better to spend even $100,000,000 instead of $35,000,000, if it were necessary for the purpose, so as to keep these farmers going, to keep body and soul together, and to give them a reasonable price for their wheat?

As the hon. member for Weyburn (Mr. Douglas) well said the other night, this is not the policy that Joseph followed when he built storehouses. This is a short-sighted political policy, which has very little merit in it except to please some people in the industry by saying to them, "In a few years when people are short of bread and the children of Europe are in crying need of it, the farmers will be able to collect a big price." Our boys are flying over the English channel; many of them are risking their lives at this very moment, and as I said last year, this country might well give 100,000,000 bushels away and pay for it out of the treasury. I would as soon feed the children of Europe when the proper time comes, and vote in support of such a proposal, as I would vote for the shells that will win the war, because it is all in the larger scheme.

When we are voting $1,300,000,000, why stop at $35,000,000? You will not stop there anyhow. It is a paltry sum. For the sake of Britain, for the sake of our own country's future prestige, I appeal to the government and say to them, "Do not let it be said that we summer-fallowed while our boys were dying for their country. Do not let it be said that while the Prime Minister of Great Britain was pleading for huge supplies of foodstuffs, we actually paid our farmers to refrain from producing, paid them to do nothing, so that there might be a shortage of wheat in a few years and they might get higher prices."

When did a surplus of foodstuffs ever lose a war? Far from having a surplus, we will have a huge shortage; we will have an empty treasury in this country. We are wondering what we are going to do. We are going to tax our people to the limit; we are, perhaps, going to increase the income tax. We may increase other taxes and almost strangle industry. We are going to change the standard of living of the people, and on top of all that, before the war is over we may have to borrow a billion dollars from another country.

An hon. MEMBER: Where from?

Mr. ROWE: "Where from?" some one asks. I am not going to enter into that question now. The hon. member knows we can get it, because this country is rich, and it will not hurt our credit even if we do borrow a billion dollars so long as we have our granaries full. It will not hurt us to have our granaries full of unsold wheat; it will not hurt our credit to build storage facilities, but it will hurt us if we cease producing and face the possibility of an ensuing drought. In another country they killed pigs one year and paid exorbitant prices for them the following year, and the same with cattle. We have seen countries plough under cotton and burn coffee; we have seen them deliberately destroy foodstuffs, and this fantastic new policy is no different in principle from the ploughing under of wheat. I urge upon the government that, with a view to meeting post-war needs, they do not persist in this policy.

Who knows what the weather will be next year? Who knows but we may face the most terrible drought we have ever had in this country? We have in this bill a provision for paying $4 to summer-fallow, $2 for sowing oats and barley, and $2 for sowing grasses. Well, that is what the farmers should do anyhow. That is what we do in old Ontario, and if it is good for one province it ought to be good for another. We grow coarse grains in Ontario and produce live stock and live stock products in vast quantities, and what is sound for one part of the country ought to be sound for another. Under this bill a man can make twice as much for doing nothing as for doing something. After all, oats and barley are little different from wheat, regarded as feed. I have fed hogs and dairy cattle on wheat, and this grain may be classified as a feed product. I would as soon grow wheat for feed as barley. In Ontario they get sixty pounds to the bushel, and hogs will fatten on it. We can make animal fats. If the minister is anxious to help the farmers, then I assure him that the farmers in Quebec and Ontario would be very glad to feed a great deal more wheat. They could produce animal fats to take the place of vegetable oils that are now entering Canada. The treasury would make a great deal of money, and the farmers would collect $12,000,000 or $15,000,000 more. That would be something constructive.

We are told that we should not go to the United States except on business; that our wives and daughters should not go there. They are not going there to any great extent, but we are trying to encourage tourist traffic to Canada. Our United States friends are coming to this country, and they will be helping us in that regard. We are saving money, or we are trying to save money, with a view to conserving exchange; and yet this

government will bring in millions of dollars' worth of vegetable oils that might be produced out of surplus wheat.

What Canada needs is some constructive policy with regard to agriculture instead of the most destructive type of policy one could well imagine. The policy at present before us not only will result in a reduction of wheat acreage but will encourage reduction in many other lines. I say again, the government might well reconsider this fantastic type of policy. As a member from Ontario, I am prepared to support the government if they bring down a bill for $100,000,000, even for western Canada, and have the older provinces carry on as they are, provided it is a constructive bill. I would suggest that the two foster parents of this strange, imbecile child should study the matter again and bring in something else. I do not know where they got their advice, but this afternoon the hon. member for Portage la Prairie said they did not get it from their own members and that they did not get it from the farmers of western Canada.

An hon. MEMBER: How do you know?

Mr. ROWE: The hon. member for Portage la Prairie knows as much about the matter as my hon. friend does.

An hon. MEMBER: But he speaks for only a small part of the west.

Mr. ROWE: He may not speak for the hon. member, but the hon. member cannot speak for him, nor can he speak for me. I say, however, that this matter should be reconsidered and that these two hon. gentlemen should take into their confidence some of the stalwarts in the front row opposite, with all their administrative ability. They might even consult the hard-pressed Minister of Munitions and Supply, or the Minister of Justice, who knows something about agriculture. Get them all together and talk it over with them; see if you cannot get a child that you will all be willing to adopt, rather than one that will be opposed by half your supporters.

Mr. LAPOINTE (Quebec East): Will you be godfather?

Mr. ROWE: I do not know; I am afraid the child would still look like my hon. friend.

In all seriousness, Mr. Chairman, I say this is no solution to the problem. This will only add to the confusion; it will be detrimental to the agricultural interests of the older parts of Canada and a hindrance to the greater development of western Canada. It is destructive and defeatist, instead of being constructive and adhering to the principle in force in these days, when every man should do his duty and produce something. If he cannot produce where he is, a place should be found where he can produce. The relief rolls have been almost eliminated.

Someone may say that the relief rolls were established years ago by the party I supported in this house. But between that government and this one, we have paid a billion dollars in the last ten years in order to give men something for nothing. Unfortunate and terrible as this war may be, with all the young lives that will be lost, it has changed our whole outlook. Before this war is over, we believe, as the Minister of Munitions and Supply said the other day, that every man able to work will have work to do, and our relief rolls will entirely disappear. In the post-war period, let us start from scratch. Then we expect a development in Canada such as no other great country has ever seen, with millions of people coming from war-ridden Europe. Let us have something with which to feed them, and let us have food to send their friends at home. Let us start a constructive policy; let us give men employment in order that they may produce something, and let us stop this policy of the dole.

If we can do that, the wheat problem of Canada will disappear like snow on a spring day. I am not such a defeatist as the Minister of Agriculture. I know he has struggled with this problem; but if we have the development in Canada that many people visualize already, we shall see this country changed from a great agricultural land to what perhaps the Lord intended it to be, with our cold winters—a manufacturing and mining country. There are other interests than agriculture in Canada, and it is high time that this government, and the government that will follow when this government is defeated after the war is over, should discard the old policy under which every man who sought to enter Canada had to be a farmer. Let us bring in artisans, mechanics and other people who will keep abreast of the times and help bring about steady progress, with an equalization of conditions as between the city and the country. In that way we shall develop a home market which eventually will consume almost everything we can grow. We should have thirty million people in Canada. The late Right Hon. Sir Wilfrid Laurier, in his great vision which was, indeed, different from that of the present Minister of Agriculture, visualized the time when this country would have that population. The late Right Hon. Sir John A. Macdonald, who was also well known by the Minister of Justice, believed that in another forty years Canada should have a population

of fifty million. These great men were looking ahead. They were not worrying about whether or not we might have a little surplus of foodstuffs. They had no fear as to our potentialities as a great industrial nation as well as a wheat growing country, a great producer of live stock as well as of flour.

I thank you, Mr. Chairman, and the committee for having listened so attentively. In all seriousness, and not in a political sense at all, I say this government should stop, look and listen. Look at the signs of the times and ask yourselves again if you think it is wise to provide an amount of $35,000,000 which amount may be increased to $100,000,000, in order to pay people for doing nothing, while this empire is pleading with us to fill up the bread-basket and be ready to receive those hungry people who will be anxious to come here after the war.

Mr. GARDINER: Before moving that the committee rise and report progress, Mr. Chairman, I should like to say a word in reply to the latter part of the remarks of the hon. gentleman who has just spoken, which were in elaboration of statements made earlier in the hon. gentleman's speech. There is no one on this side of the house, least of all the Minister of Trade and Commerce, or the Minister of Agriculture, who believes that this policy is putting anything into the pockets of the people of western Canada. When the hon. member makes a plea to the effect that someone in Canada should give up something in order that those engaged in fighting the war might have more with which to fight, I think he might choose a much better subject than the one on which he has been speaking for the last half hour. The farmers of western Canada know that this policy is not putting money into their pockets, whether the money comes from the treasury of Canada or from any other source. They know that this policy is taking money out of their pockets and making it possible for this dominion to finance the war to the extent of at least $100,000,000 more than would be the case if the government did for the wheat growers of the west what they are doing for most of the other people of Canada.

We are not begging for the west. We are not asking members from any part of this country to put money into the pockets of the western wheat growers. The wheat producer of the west is denied the right to sell his wheat to Japan, Russia, Spain and many other countries with which we are not at war, in order to assist Britain in carrying out the blockade which, if it were not carried out, would result in the destruction of the empire and of democracy. That being so, we do not feel that we are asking this house for money to be distributed among the people of western Canada. We are asking the people of this country—and we believe we have the support of at least ninety per cent of them—to help the farmers over one of the most difficult years they have ever experienced; and, in helping them, to lessen the need for the government to pay storage on large quantities of wheat. I quite agree with what was said the other day by the hon. member for Moose Jaw. This is the cheapest method of storing wheat that can be evolved. Under this method, moisture is stored in the ground, making it unnecessary to protect grain against mites and other kinds of damage; making it unnecessary to build storage facilities in order to keep the grain, and making certain that wheat can be grown when wheat is needed.

On this occasion, as on previous occasions, we in western Canada are not begging. With regard, however, to the hon. member who has just resumed his seat, I should like to say that during the six sessions I have been in this parliament I have never known him to support anything this government has proposed for western Canada. He is always prepared to do something else; never the thing that is proposed. He is prepared to spend $100,000,000 to help the farmers of western Canada, but he has never suggested how he would like to spend that amount. He has only said that the way we were proposing to spend money was not the correct way, that he would like to have it done by some other method.

There is not time to say more this evening. In due course I shall deal with the remarks that have been made concerning the Prairie Farm Assistance Act and other criticisms which have been made. I shall, however, select another day, when there is sufficient time to deal with those matters.

Progress reported.

BUSINESS OF THE HOUSE

Mr. HANSON (York-Sunbury): What is the business on Monday?

Mr. LAPOINTE (Quebec East): I understand there is an agreement that this debate will proceed on Monday.

Mr. HANSON (York-Sunbury): I do not know of any agreement; the right hon. gentleman had better state his programme.

Mr. LAPOINTE (Quebec East): If not, we shall go into supply, and of course the motion of the hon. member for Haldimand (Mr. Senn) will be taken up. There seems, however, to be a feeling that this debate should continue, and we are absolutely in agreement with that.

Mr. HANSON (York-Sunbury): That suggestion was made.

On motion of Mr. Lapointe (Quebec East) the house adjourned at 6.05 p.m.

END OF VOLUME II
